

Portland Harbor Fish Advisory Program

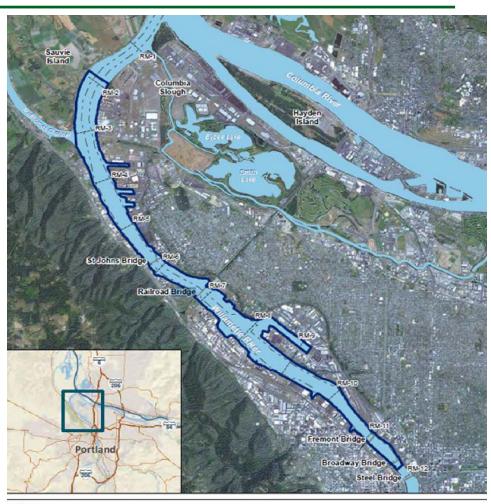

Annie Von Burg | Senior Program Manager | Bureau of Environmental
Services
December 20, 2017

Portland Harbor Superfund

- 10 mile stretch of the lower Willamette River from Sauvie Island to the Broadway bridge.
- Final Cleanup Plan released in Jan of 2017.
- EPA estimates that the cleanup will take 13 years of active construction and 17 years of active
 monitoring.

Contamination and risk to people

- Contamination at the site is primarily in the sediment at the bottom of the river as a result of decades of industrial use.
- EPA evaluated the risks to people and wildlife from the contaminants and determined the greatest health risk to people is from eating resident fish like carp, bass and catfish.
- Communities most impacted by health risks are largely vulnerable populations, subsistence fishers including Native Americans, minority communities, immigrant and refugees, and, low-and no-income residents.

Community Feedback

- Current fish advisories are inadequate and hard to understand.
- More community involvement and outreach is necessary.
- Better coordination among government agencies when informing the public of risk.

Fish Advisories for a superfund site

Environmental Protection Agency

Provides data

Oregon Health Authority

Develops advisory

Multnomah County Health Dept.

Local outreach

Public

Partnership to support local outreach

Performing partner

 Multnomah County Health Department

Funding partners

- State of Oregon
- Port of Portland
- City of Portland

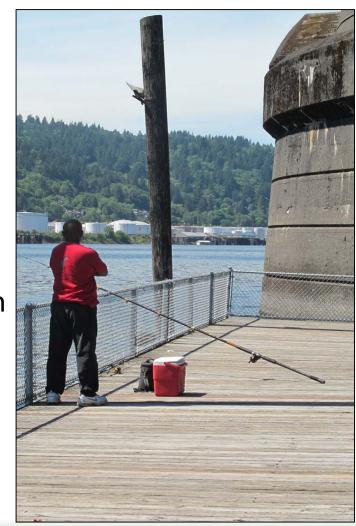

Coordinating partners

- Environmental Protection Agency
- Oregon Health Authority

Main components of this program

- Full time health educator dedicated to the program
- Culturally-specific communication plans and materials to ensure public safety during Portland Harbor Cleanup
- Development of work plan in consultation with community partners
- Development of a small grants program for community partners

Budget and timeline

- Two year effort to establish the program and start outreach.
- Program cost for two years \$345,000.
- The three funding partners will share the cost evenly at \$115,000 over two years.
- Recruitment for the health educator will start in mid-January.
