Name of File: Stop_Zenith_Petitions_10.pdf

Number of Names in the File: 405

Date Scanned: 9/14/2019

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a **"Toxic Inhalation Hazard"** warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "**Toxic Inhalation Hazard**" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

Endorsed by: 350PDX, Center for Sustainable Economy, OPAL Environmental Justice Oregon, Columbia Riverkeeper, Neighbors for Clean Air, SW HOPE, Sustainable Energy and Economy Network, Sunrise PDX, Oregon Physicians for Social Responsibility, Friends of the Columbia Gorge, Portland Youth Climate Council, Stop Fracked Gas/PDX, Oregon Chapter of the Sierra Club

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland. **We urge the City of Portland to stop issuing new permits for Tar Sands shipments through our City.**

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and our air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

We urge you to use your authority to protect Pacific Northwest residents from these risks by halting Zenith Tar Sands oil trains in Portland.

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: ~~July 4th~~ *To be delivered to City Sept 18, 2019*

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: August 29.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a **"Toxic Inhalation Hazard"** warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- *Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.*
- *Deny any upcoming permits, appeals, and exemptions for Zenith's facility.*
- *Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.*

Deadline to return: ~~July 4~~ August 29th

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "**Toxic Inhalation Hazard**" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 15th.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a **"Toxic Inhalation Hazard"** warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- *Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.*
- *Deny any upcoming permits, appeals, and exemptions for Zenith's facility.*
- *Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.*

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland. **We urge the City of Portland to stop issuing new permits for Tar Sands shipments through our City.**

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and our air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

We urge you to use your authority to protect Pacific Northwest residents from these risks by halting Zenith Tar Sands oil trains in Portland.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 1st.

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: July 1st.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.

Deadline to return: August 29.

Return Petition by mail or in person to: 350pdx, 1820 NE 21st, Portland OR 97212

TO: Mayor Ted Wheeler & Portland City Council:

We are deeply concerned that Zenith Energy's expansion contradicts the City of Portland's stated opposition to increased oil train traffic by adding rail unloading infrastructure that will facilitate more frequent Tar Sands Crude oil shipments through Portland.

Allowing Zenith to handle up to 2 trains per week, each a mile long, with up to 100 cars loaded with Tar Sands Crude oil containing concentrations of flammable, toxic compounds are a threat to public health and the environmental safety of our community. Oil trains transport materials marked with a "Toxic Inhalation Hazard" warning, pose a severe risk to our people, waterways, land and air, all of which will be contaminated in the event of a spill, blast, earthquake or other natural or man-made disaster.

In accordance with the City of Portland's policy of opposing oil trains, and the City's banning of new fossil fuel infrastructure, we urge the City of Portland to...

- Issue an immediate stop work order on Zenith Energy's operations, construction, and expansion. There should be no further work at the Zenith facility until a full health and safety review is conducted and public hearing occurs where representatives from Zenith will meet with Portland residents and local government officials to hear their concerns.
- Deny any upcoming permits, appeals, and exemptions for Zenith's facility.
- Place an immediate moratorium on fossil fuel infrastructure in the City of Portland.
