a standard). 33.248.090,

Mitigation and Restoration Planting, **will still**  
**be referenced but the 1**  
**year requirement will be**  
**expanded to 3 years in**  
**the River Environmental**

overlay zone.

Additionally, we recommend updating the requirements of River Review (33.865) to more

clearly state the  
expectation that the  
operation and long-term  
maintenance plan ensure  
the maintenance and  
protection of resources

and function values and  
to add a requirement for  
annual monitoring  
reports for up to 5 years.  
The length of monitoring  
will be at the discretion of

BDS, based on the size and scope of the mitigation or remediation required. This would apply to all mitigation required through River

Review, as well as any corrections to violations that require River Review (Option 3).

As a part of these

enforcement discussions,  
the potential role of  
performance guarantees  
came up. Performance  
guarantees require an  
applicant to pay a fee

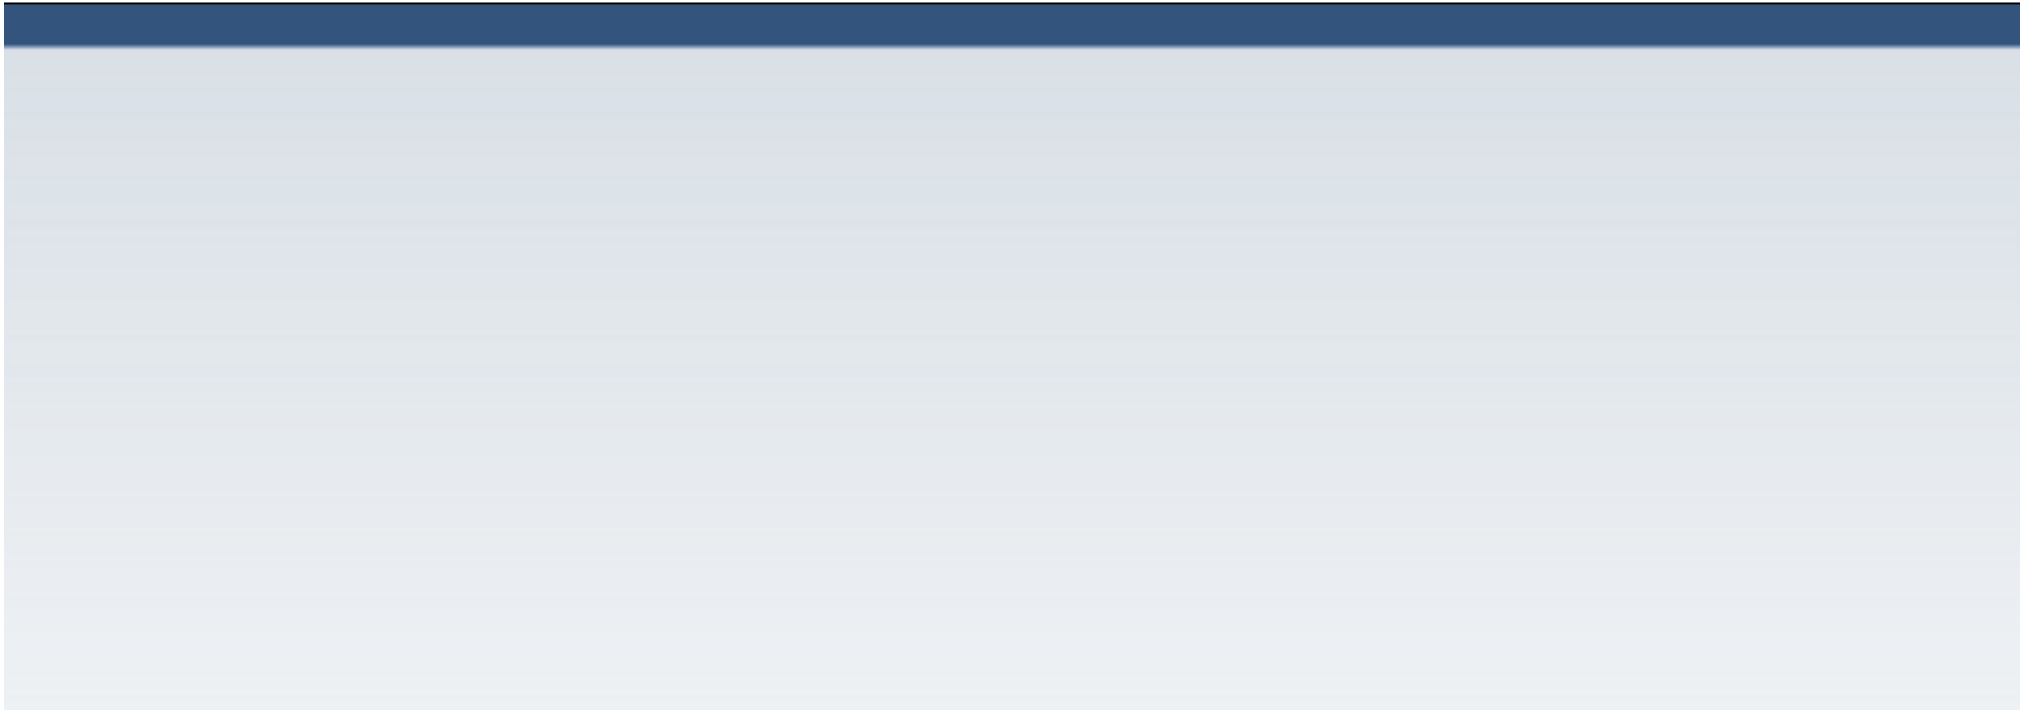

based on the cost of  
required work that is then  
returned once the work is  
complete. Existing  
language in the River  
Review chapter allow for

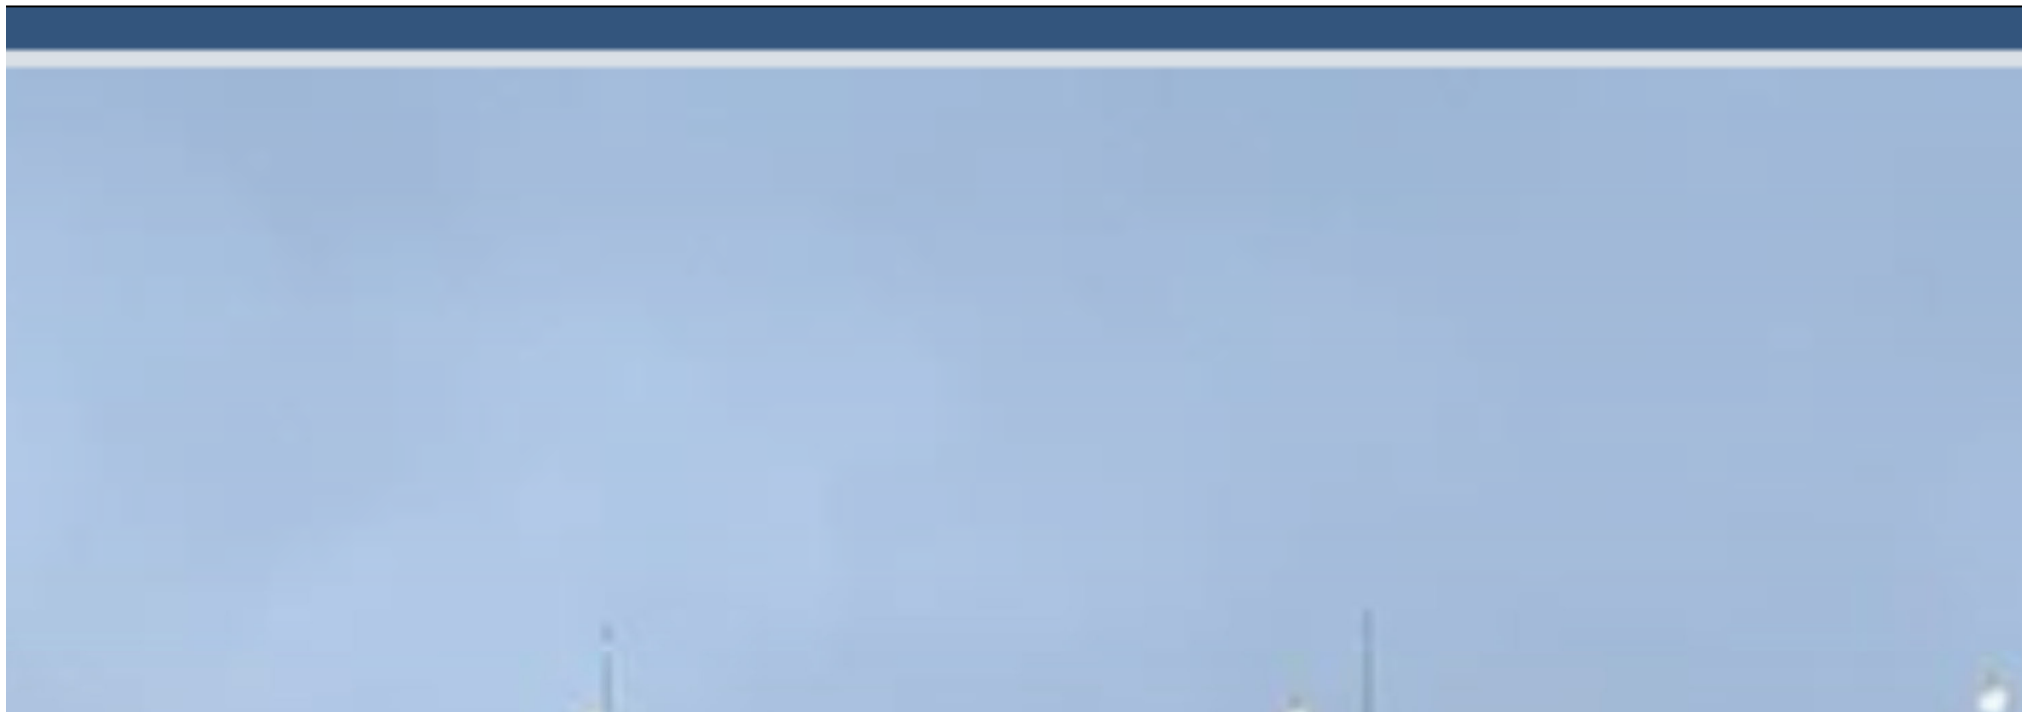

the use by BDS of performance guarantees, when warranted. In cases where it is deemed useful, BDS will require a performance guarantee

to ensure compliance.
