RE: Portland Harbor

Enclosed are the results of analyses for samples received by the laboratory on 04/04/08 13:20. The following list is a summary of the Work Orders contained in this report, generated on 04/30/08 15:47.

If you have any questions concerning this report, please feel free to contact me.

Work Order	Project	ProjectNumber
PRD0178	Portland Harbor	36238

TestAmerica Portland

Howard Holmes, Project Manager

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report shall not be reproduced except in full, without the written approval of the laboratory.

Notes and Definitions

Report Specific Notes:

J - Estimated value. Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). The user of this data should be aware that this data is of limited reliability.

RL1 - Reporting limit raised due to sample matrix effects.

Laboratory Reporting Conventions:

DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.

ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).

NR/NA - Not Reported / Not Available

dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.

wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.

RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).

MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.

Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.

Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

DISCUSSION

This report presents the results from the analyses performed on eight samples submitted by a representative of the Test America. The samples were analyzed for the presence or absence of polychlorinated biphenyl (PCB) congeners using USEPA Method 1668A. Reporting limits were set to approximately 0.5 ppt and were corrected for the amount of sample extracted.

The recoveries of the isotopically-labeled PCB internal standards in the sample extracts ranged from 0-162%. With thirty exceptions, flagged "P" on the results tables, the labeled standard recoveries obtained for this project were within the target ranges specified in Method 1668A. Also, since the quantification of the native PCB congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained. However, target analyte concentrations associated with poorly recovered internal standards should be considered as estimated levels. The client was contacted concerning the low recoveries of selected analytes and approved the results for submission.

Selected native and labeled analytes in the extracts exhibited isotope ratios outside of the target ranges for this method and were flagged "I" on the results tables.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCB congeners at the reporting limits. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field samples.

Laboratory spike samples were also prepared with the sample batch using reference material that had been fortified with native standards. The results show that the spiked native compounds were recovered at 95-114%, with relative percent differences of 0.9-6.8%. These results indicate high levels of accuracy and precision for this project.

This report shall not be reproduced, except in full,

Laboratory Data QA/QC Review
Upland Source Control Investigation
May 13, 2008 Stormwater Sampling

To: File

From: Karen Demsey, GSI

Date: June 2, 2009

This memorandum presents a quality assurance/quality control (QA/QC) review of the laboratory data generated during a source control investigation sampling event conducted by the City of Portland (City) on May 13, 2008. Three stormwater samples were collected from Outfall Basins 22C, 22D, and 53A and submitted for analyses.

The laboratory analyses for these source control program samples were completed by the City's Bureau of Environmental Services (BES) Water Pollution Control Laboratory (WPCL) and subcontracted laboratories. The following laboratories conducted the analyses listed:

- BES WPCL
    - Total Metals – EPA 200.8
    - Total Mercury – WPCL SOP M-10.02
    - Total suspended solids (TSS) – SM 2540D
- Test America (TA)
    - Polynuclear Aromatic Hydrocarbons (PAHs) – EPA 8270M-SIM
    - Phthalates – EPA 8270M-SIM
- Columbia Analytical Services (CAS)
    - Semivolatile Organic Compounds (SVOCs) – EPA 8270C
- Pace Analytical Services (Pace)
    - Polychlorinated Biphenyls (PCB) Congeners – EPA 1668A

The WPCL summary report for all analyses associated with this stormwater sampling event and the subcontracted laboratory's data reports are attached. The WPCL summary report comments that, with some exceptions (included in the following sections below), all analytical QA/QC

criteria were met for these samples including holding times, calibration, method blanks, laboratory control sample recoveries, duplicate precision, matrix spike recoveries, and surrogate recoveries, as applicable.

The following QA/QC review is based on the available documentation supplied from each subcontracted laboratory and on exceptions noted in the WPCL summary report. The QA/QC review of the analytical data consisted of reviewing the following for each laboratory report, if available:

- Chain-of-custody for completeness and continuous custody
- Analysis conducted within holding times
- Chemicals of interest detected in method blanks
- Surrogate recoveries within laboratory control limits
- Internal standard recoveries within laboratory control limits
- Matrix spike and matrix spike duplicate results within laboratory control limits
- Laboratory control sample and duplicate laboratory control sample recoveries within control laboratory limits

The results of the laboratory QA/QC review of the subcontracted laboratory reports are presented below.

Chain-of-Custody

The chain-of-custody forms showed continuous custody of the samples. The chain-of-custody procedures appear to have been adequate indicating that sample integrity was maintained throughout the sample collection and delivery process.

Analysis Holding Times

The samples were extracted and analyzed within the required method-specific holding times.

Method Blanks

Method blanks were processed during the subcontracted laboratory analyses of PAHs, phthalates, SVOCs and PCB congeners. No analytes were detected in the method blanks.

Surrogate Recoveries

Surrogate recoveries were completed during the subcontracted laboratory analysis of PAHs and SVOCs. The control criteria were exceeded during SVOC analysis by EPA 8270C for two surrogates in sample FO080654. CAS reports that there was insufficient sample volume to reanalyze the sample and thus no further corrective action was possible. The WPCL report indicates that the low recovery for these surrogates indicates matrix interference for the phenolic compounds. Phenolic compounds were not detected in sample FO080654; however, the resulting method reporting limits (MRLs) should be considered biased low.

Internal Standard Recoveries

Internal standard recoveries were processed during the laboratory analysis of PCB congeners. The recoveries were within control limits for all internal standards.

Matrix Spike/Matrix Spike Duplicates

CAS reports there was insufficient volume to perform a matrix spike/matrix spike duplicate (MS/MSD) analysis for SVOCs by EPA 8270C. A laboratory control sample/duplicate laboratory control sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

Laboratory Control/ Duplicate Laboratory Control Samples

Laboratory control/duplicate laboratory control samples (LCS/DLCS) were processed during the laboratory analysis of PAHs, phthalates, SVOCs, and PCB congeners. All laboratory control sample recoveries were within laboratory control limits.

The relative percent difference for 2,4-dimethylphenol and benzoic acid in the replicate LCS/DLCS were outside control criteria. CAS notes that these exceptions are not applicable because the analyte concentration in both cases was not significantly greater than the MRL and therefore are not subject to the same accuracy and precision criteria as results derived from measurements higher in the calibration range for the method.

The RPD also was outside the control limits for 4-methylphenol and 3,3'-dichlorobenzidine. CAS notes that because spike recoveries were within the acceptance limit, the analytical batch was in control, and no further corrective action was appropriate.

Other

The TA laboratory reports for PAHs and phthalates indicate that the method reporting limit was elevated for fluoranthene in Sample FO080652 due to sample matrix effects.

Comments:
QA/QC: Except as follows, all analytical QA/QC criteria were met for this sample including holding times, calibration, method blanks, laboratory control sample recoveries, duplicate precision, matrix spike recoveries, and surrogate recoveries, as applicable. For Semivolatile Organics analysis, 2 of 3 phenolic surrogate compounds exhibited low recoveries, indicating matrix interference for the phenolic compounds.

Collected By: MJS/LAP

Comments:
QA/QC: Except as follows, all analytical QA/QC criteria were met for this sample including holding times, calibration, method blanks, laboratory control sample recoveries, duplicate precision, matrix spike recoveries, and surrogate recoveries, as applicable. For Semivolatile Organics analysis, 2 of 3 phenolic surrogate compounds exhibited low recoveries, indicating matrix interference for the phenolic compounds.

June 10, 2008 Analytical Report for Service Request No: K0804187

Jennifer Shackelford
Portland, City of
1120 SW Fifth Avenue # 1000
Portland, OR 97204

RE: Portland Harbor Stormwater

Dear Jennifer:

Enclosed are the results of the samples submitted to our laboratory on May 14, 2008. For your reference, these analyses have been assigned our service request number K0804187.

All analyses were performed according to our laboratory's quality assurance program. Where applicable, the methods cited conform to the Methods Update Rule (effective 4/11/2007), which relates to the use of analytical methods for the drinking water and waste water programs. The test results meet requirements of the NELAC standards. Exceptions are noted in the case narrative report where applicable. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3281. You may also contact me via Email at LVo@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Loan Vo, Ph.D.
Project Chemist

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
B	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.
*	The duplicate analysis not within control limits. See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a chromatographic interference.
X	See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Case Narrative

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Portland, City of	**Service Request No.:**	K0804187
Project:	Portland Harbor Stormwater	**Date Received:**	05/14/08
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Matrix/Duplicate Matrix Spike (MS/DMS), and Laboratory Control Sample (LCS).

Sample Receipt

Three water samples were received for analysis at Columbia Analytical Services on 05/14/08. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Semivolatile Organic Compounds by EPA Method 8270C

Surrogate Exceptions:
The control criteria were exceeded for the following surrogates in F0080654: 2-Fluophenol, 2,4,6-Tribromophenol. A reanalysis was not performed because insufficient sample was available. No further corrective action was possible.

Laboratory Control Sample (LCS) Exceptions:
The advisory criterion was exceeded for the following analyte in Laboratory Control Sample (LCS) KWG0804567-1: 2,4-Dimethylphenol. As per the CAS/Kelso Standard Operating Procedure (SOP) for this method, these compounds are not included in the subset of analytes used to control the analysis. The recovery information reported for these analytes is for advisory purposes only (i.e. to provide additional detail related to the performance of each individual compound). No further corrective action was required.

Relative Percent Difference Exceptions:
The Relative Percent Difference (RPD) criterion for 2,4-Dimethylphenol and Benzoic Acid in the replicate Laboratory Control Samples (LCS/DLCS) KWG0804567-1 and KWG0804567-2 is not applicable because the analyte concentration was not significantly greater than the Method Reporting Limit (MRL). Analytical values derived from measurements close to the detection limit are not subject to the same accuracy and precision criteria as results derived from measurements higher on the calibration range for the method.

The Relative Percent Difference (RPD) for the following analytes in the replicate LCS analyses (KWG0804567-1 and KWG0804567-2) was outside control criteria: 4-Methylphenol, 3,3'-Dichlorobenzidine. All spike recoveries for the analytes in question were within acceptance limits in the MS, DMS, and associated Laboratory Control Sample (LCS), indicating the analytical batch was in control. No further corrective action was appropriate.

Sample Notes and Discussion
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

Approved by HS **Date** 6/14/08

Surrogate Recovery Summary
Semi-Volatile Organic Compounds by GC/MS

Extraction Method: EPA 3520C
Analysis Method: 8270C

Units: PERCENT
Level: Low

Sample Name	Lab Code	Sur1		Sur2	Sur3	Sur4	Sur5		Sur6
F0080652	K0804187-001	65		64	68	70	106		70
F0080653	K0804187-002	22		40	70	62	34		85
F0080654	K0804187-003	15	*	36	69	67	24	*	74
Method Blank	KWG0804567-3	66		73	76	71	73		84
Lab Control Sample	KWG0804567-1	67		74	78	72	73		81
Duplicate Lab Control Sample	KWG0804567-2	65		71	71	69	77		81

Surrogate Recovery Control Limits (%)

Sur1 = 2-Fluorophenol	21-119	Sur5 = 2,4,6-Tribromophenol	30-131
Sur2 = Phenol-d6	31-121	Sur6 = Terphenyl-d14	20-140
Sur3 = Nitrobenzene-d5	29-121		
Sur4 = 2-Fluorobiphenyl	25-109		

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

RE: Portland Harbor

Enclosed are the results of analyses for samples received by the laboratory on 05/14/08 15:30. The following list is a summary of the Work Orders contained in this report, generated on 06/29/08 13:31.

If you have any questions concerning this report, please feel free to contact me.

Work Order	Project	ProjectNumber
PRE0507	Portland Harbor	36238

TestAmerica Portland

Howard Holmes, Project Manager

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report shall not be reproduced except in full, without the written approval of the laboratory.

Notes and Definitions

Report Specific Notes:

J - Estimated value. Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). The user of this data should be aware that this data is of limited reliability.

RL1 - Reporting limit raised due to sample matrix effects.

Laboratory Reporting Conventions:

DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.

ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).

NR/NA - Not Reported / Not Available

dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.

wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.

RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).

MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.

Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.

Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

REPORT OF LABORATORY ANALYSIS FOR PCBs

Report Information:

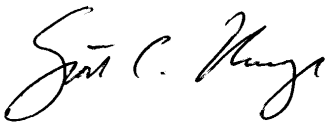
Pace Project #: 1073389
Sample Receipt Date: 05/16/2008
Client Project #: PRE0507
Client Sub PO #: N/A
State Cert #: MN200001-004

Invoicing & Reporting Options:

The report provided has been invoiced as a Level 2 PCB Report. If an upgrade of this report package is requested, an additional charge may be applied.

Please review the attached invoice for accuracy and forward any questions to Scott Unze, your Pace Project Manager.

This report has been reviewed and prepared by:



Scott Unze, Project Manager
(612) 607-6383
(612) 607-6444 (fax)

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

Report Prepared Date:
June 11, 2008

Pace Analytical Services, Inc.
1700 Elm Street
Minneapolis, MN 55414
Phone: 612.607.1700
Fax: 612.607.6444

DISCUSSION

This report presents the results from the analyses performed on three samples submitted by a representative of Test America - Portland. The samples were analyzed for the presence or absence of polychlorinated biphenyl (PCB) congeners using USEPA Method 1668A. Reporting limits were set to approximately 0.5 parts per trillion and were adjusted for sample volume.

The isotopically-labeled PCB internal standards in the sample extracts were recovered at 59-114%. All of the labeled internal standard recoveries obtained for this project were within the target ranges specified in the method. Since the quantification of the native PCB congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCB congeners at the reporting limits. This demonstrates that the analytical process did not introduce significant levels of PCB congeners to the sample extracts.

Laboratory spike samples were also prepared with the sample batch using reference water that had been fortified with native standards. The results show that the spiked native compounds in the lab spikes were recovered at 102-122% with relative percent differences of 0.0-5.7%. These results indicate high degrees of accuracy and precision for these determinations. Matrix spikes were not prepared with this extraction batch.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc.

Laboratory Data QA/QC Review
Upland Source Control Investigation
January 26, 2008 Outfall Basin 53 Composite Stormwater Sampling

To: File

From: Karen Demsey, GSI

Date: June 2, 2009

This memorandum presents a quality assurance/quality control (QA/QC) review of the laboratory data generated during a source control investigation sampling event conducted by the City of Portland (City) on January 26, 2008. One composite stormwater sample (FO080172) and one field decontamination blank sample (FO080171) were collected from Outfall Basin 53 by the City and submitted for analyses.

The laboratory analyses for these source control program samples were completed by the City's Bureau of Environmental Services (BES) Water Pollution Control Laboratory (WPCL) and subcontracted laboratories. The following laboratories conducted the analyses listed:

- BES WPCL
  - Total Metals – EPA 200.8
  - Total Mercury – WPCL SOP M-10.02
  - Total suspended solids (TSS) – SM 2540D
  - Polychlorinated Biphenyls as Aroclors (PCB Aroclors) – EPA 8082
  - Total Organic Carbon (TOC) – EPA 415.2
- Test America (TA)
  - Polynuclear Aromatic Hydrocarbons (PAHs) – EPA 8270M-SIM
  - Phthalates – EPA 8270M-SIM
  - Total Organic Carbon (TOC) – EPA 9060
- Columbia Analytical Services (CAS)

    - Semivolatile Organic Compounds (SVOCs) – EPA 8270C
- Pace Analytical Services (Pace)
    - Polychlorinated Biphenyls (PCB) Congeners – EPA 1668A

The WPCL summary report for all analyses associated with this stormwater sampling event and the subcontracted laboratory's data reports are attached. The WPCL summary report comments that, with some exceptions (included in the following sections below), all analytical QA/QC criteria were met for these samples including holding times, calibration, method blanks, laboratory control sample recoveries, duplicate precision, matrix spike recoveries, and surrogate recoveries, as applicable.

The following QA/QC review is based on the available documentation supplied from each subcontracted laboratory and on exceptions noted in the WPCL summary report. The QA/QC review of the analytical data consisted of reviewing the following for each laboratory report, if available:

- Chain-of-custody for completeness and continuous custody
- Analysis conducted within holding times
- Chemicals of interest detected in method blanks
- Surrogate recoveries within laboratory control limits
- Internal standard recoveries within laboratory control limits
- Matrix spike and matrix spike duplicate results within laboratory control limits
- Laboratory control sample and duplicate laboratory control sample recoveries within laboratory control limits

The results of the QA/QC review of the subcontracted laboratory reports are presented below.

Chain-of-Custody

The chain-of-custody forms showed continuous custody of the samples. The chain-of-custody procedures were adequate indicating that sample integrity was maintained throughout the sample collection and delivery process.

Analysis Holding Times

The samples were extracted and analyzed within the required method-specific holding times.

Method Blanks

Method blanks were processed during the subcontracted laboratory analyses of PAHs, phthalates, SVOCs, PCB congeners and TOC. One congener (PCB 209) was detected in the method blank at a low concentration and at a similar concentration (less than 5 times the method blank concentration) in the associated primary stormwater sample. The sample result is flagged with a "B". The total PCB congener value for this sample is therefore likely biased slightly high.

Surrogate Recoveries

Surrogate recoveries were completed during the subcontracted laboratory analysis of PAHs and SVOCs. All surrogate recoveries were within laboratory control limits, and the data are not qualified.

Internal Standard Recoveries

Internal standard recoveries were processed during the laboratory analysis of PCB congeners. The recoveries were within control limits with the exception of seven low values in the laboratory control and duplicate laboratory control samples, which are flagged "P" in the sample specific quality control measurements results in the laboratory report. Pace Analytical reports that the data were automatically corrected for variation in recovery and accurate values were obtained. Refer to the Pace report for further discussion.

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were processed during the laboratory analysis of SVOCs and TOC. All results were within the control limits.

Laboratory Control/ Duplicate Laboratory Control Samples

Laboratory control/duplicate laboratory control samples (LCS/DLCS) were processed during the laboratory analysis of PAHs, phthalates, PCB congeners, and TOC, and a LCS was processed during the analysis of SVOCs by EPA 8270C. All laboratory control sample recoveries were within laboratory control limits.

Other

A field decontamination blank (FDB) was collected and analyzed for metals, PAHs, phthalates, SVOCs, PCB Aroclors, and PCB congeners. BEHP was detected by EPA 8270M-SIM in the FDB at a concentration of 1.38 ug/L. The BEHP result for the sample is less than 10 times the FDB concentration and is therefore considered biased high.

The WPCL report indicates that the reporting limits were doubled for low-level PCB Aroclor analysis due to matrix interferences.

Portland, OR 97204

RE: Portland Harbor Stormwater Samp

Dear Jennifer:

Enclosed are the results of the samples submitted to our laboratory on January 29, 2008. For your reference, these analyses have been assigned our service request number K0800793.

All analyses were performed according to our laboratory's quality assurance program. Where applicable, the methods cited conform to the Methods Update Rule (effective 4/11/2007), which relates to the use of analytical methods for the drinking water and waste water programs. The test results meet requirements of the NELAC standards. Exceptions are noted in the case narrative report where applicable. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3281. You may also contact me via Email at LVo@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Loan Vo, Ph.D.
Project Chemist

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
B	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.
*	The duplicate analysis not within control limits. See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a chromatographic interference.
X	See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Cooler Receipt and Preservation Form

Client / Project: Portland Harbor Service Request K08 00793

Received: 1/29/08 Opened: 1/29/08 By: T. Lewis

1. Samples were received via? *US Mail* *Fed Ex* *UPS* *DHL* *GH* *GS* *PDX* (*Courier*) *Hand Delivered*
2. Samples were received in: (circle) (*Cooler*) *Box* *Envelope* *Other*_____ *NA*
3. Were custody seals on coolers? NA Y (N) If yes, how many and where?_____
   If present, were custody seals intact? Y N If present, were they signed and dated? Y N
4. Is shipper's air-bill filed? If not, record air-bill number:_____ (NA) Y N

5. **Temperature of cooler(s) upon receipt (°C):** 5.1
   Temperature Blank (°C): N/A
6. If applicable, list Chain of Custody Numbers:
7. Were custody papers properly filled out (ink, signed, etc.)? NA (Y) N
8. Packing material used. *Inserts* *Bubble Wrap* *Gel Packs* *Wet Ice* *Sleeves* *Other*_____
9. **Did all bottles arrive in good condition (unbroken)?** *Indicate in the table below.* NA (Y) N
10. Were all sample labels complete (i.e analysis, preservation, etc.)? (Y) N
11. Did all sample labels and tags agree with custody papers? *Indicate in the table below* (Y) N
12. **Were the correct types of bottles used for the tests indicated?** NA (Y) N
13. Were all of the preserved bottles received at the lab with the appropriate pH? *Indicate in the table below* (NA) Y N
14. Were VOA vials and 1631 Mercury bottles checked for absence of air bubbles? *Indicate in the table below.* (NA) Y N
15. **Are CWA Microbiology samples received with >1/2 the 24hr. hold time remaining from collection?** (NA) Y N
16. Was C12/Res negative? (NA) Y N

RE: Portland Harbor

Enclosed are the results of analyses for samples received by the laboratory on 01/28/08 15:25. The following list is a summary of the Work Orders contained in this report, generated on 02/29/08 07:53.

If you have any questions concerning this report, please feel free to contact me.

Work Order	Project	ProjectNumber
PRA0737	Portland Harbor	36238

TestAmerica Portland

Howard Holmes, Project Manager

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report shall not be reproduced except in full, without the written approval of the laboratory.

Notes and Definitions

Report Specific Notes:

None

Laboratory Reporting Conventions:

DET	-	Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
ND	-	Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
NR/NA	-	Not Reported / Not Available
dry	-	Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
wet	-	Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
RPD	-	RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
MRL	-	METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
MDL*	-	METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
Dil	-	Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
Reporting Limits	-	Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
Electronic Signature	-	Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

DISCUSSION

This report presents the results from the analyses performed on two samples submitted by a representative of Test America - Portland. The samples were analyzed for the presence or absence of polychlorinated biphenyl (PCB) congeners using USEPA Method 1668A. Reporting limits were set to approximately 500 pg/L and were adjusted for sample volume.

The isotopically-labeled PCB internal standards in the sample extracts were recovered at 28-105%. With the exceptions of seven low values, which were flagged "P" on the LCS/LCSD results tables, the labeled internal standard recoveries obtained for the project were within the target ranges specified in the method. However, since the quantification of the native PCB congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCB congeners at the reporting limits, with the exception of a low level of PCB #209. Sample PRA0737-02 was found to contain a similar level of PCB #209 and was flagged "B" on the results table. In general, levels less than ten times the background are not considered statistically different from the background. Therefore, the PCB #209 level should be considered to have, at least partially, originated from the background.

Laboratory spike samples were also prepared with the sample batch using clean water that had been fortified with native standard materials. The results show that the spiked native compounds were recovered at 91-150%, with relative percent differences of 0.0-22.6%. These results indicate generally high degrees of accuracy and precision for these determinations.

Laboratory Data QA/QC Review
Upland Source Control Investigation
February 6, 2008 Outfall Basin 53 Composite Stormwater Sampling

To: File

From: Karen Demsey, GSI

Date: June 2, 2009

This memorandum presents a quality assurance/quality control (QA/QC) review of the laboratory data generated during a source control investigation sampling event conducted by the City of Portland (City) on February 6, 2008. One composite stormwater sample (FO080264) was collected from Outfall Basin 53 by the City and submitted for analyses.

The laboratory analyses for these source control program samples were completed by the City's Bureau of Environmental Services (BES) Water Pollution Control Laboratory (WPCL) and subcontracted laboratories. The following laboratories conducted the analyses listed:

- BES WPCL
  - Total Metals – EPA 200.8
  - Total Mercury – WPCL SOP M-10.02
  - Total suspended solids (TSS) – SM 2540D
  - Polychlorinated Biphenyls as Aroclors (PCB Aroclors) – EPA 8082
  - Total Organic Carbon (TOC) – EPA 415.2
- Test America (TA)
  - Polynuclear Aromatic Hydrocarbons (PAHs) – EPA 8270M-SIM
  - Phthalates – EPA 8270M-SIM
  - Total Organic Carbon (TOC) – EPA 9060
- Columbia Analytical Services (CAS)
  - Semivolatile Organic Compounds (SVOCs) – EPA 8270C

- Pace Analytical Services (Pace)
    - Polychlorinated Biphenyls (PCB) Congeners – EPA 1668A

The WPCL summary report for all analyses associated with this stormwater sampling event and the subcontracted laboratory's data reports are attached. The WPCL summary report comments that, with some exceptions (included in the following sections below), all analytical QA/QC criteria were met for these samples including holding times, calibration, method blanks, laboratory control sample recoveries, duplicate precision, matrix spike recoveries, and surrogate recoveries, as applicable.

The following QA/QC review is based on the available documentation supplied from each subcontracted laboratory and on exceptions noted in the WPCL summary report. The QA/QC review of the analytical data consisted of reviewing the following for each laboratory report, if available:

- Chain-of-custody for completeness and continuous custody
- Analysis conducted within holding times
- Chemicals of interest detected in method blanks
- Surrogate recoveries within laboratory control limits
- Internal standard recoveries within laboratory control limits
- Matrix spike and matrix spike duplicate results within laboratory control limits
- Laboratory control sample and duplicate laboratory control sample recoveries within laboratory control limits

The results of the QA/QC review of the subcontracted laboratory reports are presented below.

Chain-of-Custody

The chain-of-custody forms showed continuous custody of the samples. The chain-of-custody procedures were adequate and sample integrity was maintained throughout the sample collection and delivery process.

Analysis Holding Times

The samples were extracted and analyzed within the required method-specific holding times.

Method Blanks

Method blanks were processed during the subcontracted laboratory analyses of PAHs, phthalates, SVOCs and PCB congeners. Di-n-butyl phthalate was detected in the method blank for the EPA 8270C analysis and at a similar concentration (less than 10 times the method blank concentration) in the associated stormwater sample. The sample result is flagged with a "B". The sample result is likely biased high.

Low concentrations of 61 PCB congeners (in 45 congener coelution groups) were detected in the method blank and in the sample. For those congeners that were detected in the stormwater samples and the method blank, the sample results are flagged with a "B". The concentrations of

all PCB congener coelutions detected in the method blank were greater than 5 times the concentrations in the sample, and in many cases were greater than the sample concentrations. The total PCB congener concentration for this sample is considered significantly biased high.

Surrogate Recoveries

Surrogate recoveries were completed during the subcontracted laboratory analysis of PAHs and SVOCs. All surrogate recoveries were within laboratory control limits.

Internal Standard Recoveries

Internal standard recoveries were processed during the laboratory analysis of PCB congeners. The recoveries were within control limits with the exception of five low values, which were flagged "P" on the sample specific quality control measurements results in the laboratory report. Pace Analytical reports that the data were automatically corrected for variation in recovery and accurate values were obtained. Refer to the Pace report for further discussion.

Matrix Spike/Matrix Spike Duplicates

CAS reports there was insufficient volume to perform a matrix spike/matrix spike duplicate (MS/MSD) analysis for SVOCs. A MS and laboratory control sample/duplicate laboratory control samples (LCS/DLCS) were analyzed and reported in lieu of the MS/MSD for these samples. MS/MSD samples were analyzed for TOC. All results were within the control limits.

Laboratory Control/ Duplicate Laboratory Control Samples

Laboratory control/duplicate laboratory control samples (LCS/DLCS) were processed during the laboratory analysis of PAHs, phthalates, SVOCs, and PCB Congeners. All laboratory control sample recoveries were within laboratory control limits except 4-chloroanaline and 3,3'-dichlorobenzidine, both of which were not detected in the stormwater sample. CAS reports the recovery information is reported for advisory purposes only and that no further corrective action was required.

Comments:
QA/QC: Except as follows, all analytical QA/QC criteria were met for this sample including holding times, calibration, method blanks, laboratory control sample recoveries, duplicate precision, matrix spike recoveries, and surrogate recoveries, as applicable. Semivolatile target analyte Di-n-butyl phthalate was detected in the Method Blank at 0.23 ug/L; the result for this sample may be a false positive.

Comments:
QA/QC: Except as follows, all analytical QA/QC criteria were met for this sample including holding times, calibration, method blanks, laboratory control sample recoveries, duplicate precision, matrix spike recoveries, and surrogate recoveries, as applicable. Semivolatile target analyte Di-n-butyl phthalate was detected in the Method Blank at 0.23 ug/L; the result for this sample may be a false positive.

March 6, 2008 Analytical Report for Service Request No: K0801145

Jennifer Shackelford
Portland, City of
1120 SW Fifth Avenue # 600
Portland, OR 97204

RE: Portland Harbor Stormwater Samp.

Dear Jennifer:

Enclosed are the results of the sample submitted to our laboratory on February 08, 2008. For your reference, these analyses have been assigned our service request number K0801145.

All analyses were performed according to our laboratory's quality assurance program. Where applicable, the methods cited conform to the Methods Update Rule (effective 4/11/2007), which relates to the use of analytical methods for the drinking water and waste water programs. The test results meet requirements of the NELAC standards. Exceptions are noted in the case narrative report where applicable. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3281. You may also contact me via Email at LVo@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Loan Vo, Ph.D.
Project Chemist

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
B	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.
*	The duplicate analysis not within control limits. See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a chromatographic interference.
X	See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Case Narrative

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	City of Portland	**Service Request No.:**	K0801145
Project:	Portland Harbor Stormwater Samp.	**Date Received:**	02/08/2008
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier I data deliverables. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

One water sample was received for analysis at Columbia Analytical Services on 02/08/2008. The sample was received in good condition and consistent with the accompanying chain of custody form. The sample was stored in a refrigerator at 4°Cupon receipt at the laboratory.

Semivolatile Organic Compounds by EPA Method 8270C

Method Blank Exceptions:
The Method Blank KWG0801375-4 contained low levels of Di-n-butyl Phthalate above the Method Reporting Limit (MRL). In accordance with CAS QA/QC policy, all sample results less than twenty times the level found in the Method Blank are flagged as estimated.

Lab Control Sample (LCS) Exceptions:
The advisory criterion was exceeded for 4-Chloroaniline and 3,3'-Dichlorobenzidine in LCS KWG0801375-2. As per the CAS/Kelso Standard Operating Procedure (SOP) for this method, these compounds are not included in the subset of analytes used to control the analysis. The recovery information reported for these analytes is for advisory purposes only (i.e. to provide additional detail related to the performance of each individual compound). No further corrective action was required.

Relative Percent Difference Exceptions:
The Relative Percent Difference (RPD) criterion for the replicate analysis of 4-Chloroaniline in the replicate Laboratory Control Samples (LCS/DLCS) KWG0801375-2 and KWG0801375-3 is not applicable because the analyte concentration was not significantly greater than the Method Reporting Limit (MRL). Analytical values derived from measurements close to the detection limit are not subject to the same accuracy and precision criteria as results derived from measurements higher on the calibration range for the method.

Sample Notes and Discussion
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A MS and Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) were analyzed and reported in lieu of the MS/MSD for these samples.

No other anomalies associated with the analysis of these samples were observed.

Approved by LW Date 3/6/08

Notes and Definitions

Report Specific Notes:

RL3 - Reporting limit raised due to high concentrations of non-target analytes.

Laboratory Reporting Conventions:

DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.

ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).

NR/NA - Not Reported / Not Available

dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.

wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.

RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).

MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.

Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.

Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

DISCUSSION

This report presents the results from the analyses performed on one sample submitted by a representative of Test America-Portland. The sample was analyzed for the presence or absence of polychlorinated biphenyl (PCB) congeners using USEPA Method 1668A. Reporting limits were set to correspond to the lowest calibration concentration and were adjusted for sample volume.

The isotopically-labeled PCB internal standards in the sample extract were recovered at 44-103%. With the exceptions of five values, which were flagged "P" on the results tables, the labeled internal standard recoveries obtained for this project were within the target ranges specified in the method. However, since the quantification of the native PCB congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to contain background levels of selected PCB congeners. Sample levels similar to the corresponding blank levels were flagged "B" on the results table and may be, at least partially, attributed to the background. It should be noted that levels less than ten times the background are not generally considered to be statistically different from the background.

Laboratory spike samples were also prepared with the sample batch using a reference matrix that had been fortified with native standards. The results show that the spiked native compounds were recovered at 91-123%, with relative percent differences of 0.0-5.9%. These results indicate high degrees of accuracy and precision for these determinations.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc.

Laboratory Data QA/QC Review
Upland Source Control Investigation
March 12 – 13, 2008 Outfall Basin 53 Composite Stormwater Sampling

To: File

From: Karen Demsey, GSI

Date: June 2, 2009

This memorandum presents a quality assurance/quality control (QA/QC) review of the laboratory data generated during a source control investigation sampling event conducted by the City of Portland (City) on March 12 and March 13, 2008. One composite stormwater sample and one duplicate stormwater sample (FO080409 and FO080414, respectively) were collected from Outfall Basin 53 by the City and submitted for analyses.

The laboratory analyses for these source control program samples were completed by the City's Bureau of Environmental Services (BES) Water Pollution Control Laboratory (WPCL) and subcontracted laboratories. The following laboratories conducted the analyses listed:

- BES WPCL
  - Total Metals – EPA 200.8
  - Total Mercury – WPCL SOP M-10.02
  - Total suspended solids (TSS) – SM 2540D
  - Polychlorinated Biphenyls as Aroclors (PCB Aroclors) – EPA 8082
  - Total Organic Carbon (TOC) – EPA 415.2
- Test America (TA)
  - Polynuclear Aromatic Hydrocarbons (PAHs) – EPA 8270M-SIM
  - Phthalates – EPA 8270M-SIM
  - Total Organic Carbon (TOC) – EPA 9060
- Columbia Analytical Services (CAS)

    - Semivolatile Organic Compounds (SVOCs) – EPA 8270C
- Pace Analytical Services (Pace)
    - Polychlorinated Biphenyls (PCB) Congeners – EPA 1668A

The WPCL summary report for all analyses associated with this stormwater sampling event and the subcontracted laboratory's data reports are attached. The WPCL summary report comments that, with some exceptions (included in the following sections below), all analytical QA/QC criteria were met for these samples including holding times, calibration, method blanks, laboratory control sample recoveries, duplicate precision, matrix spike recoveries, and surrogate recoveries, as applicable.

The following QA/QC review is based on the available documentation supplied from each subcontracted laboratory and on exceptions noted in the WPCL summary report. The QA/QC review of the analytical data consisted of reviewing the following for each laboratory report, if available:

- Chain-of-custody for completeness and continuous custody
- Analysis conducted within holding times
- Chemicals of interest detected in method blanks
- Surrogate recoveries within laboratory control limits
- Internal standard recoveries within laboratory control limits
- Matrix spike and matrix spike duplicate results within laboratory control limits
- If applicable, laboratory control sample and duplicate laboratory control sample recoveries within laboratory control limits

The results of the QA/QC review of the subcontracted laboratory reports are presented below.

Chain-of-Custody

The chain-of-custody forms showed continuous custody of the samples. The chain-of-custody procedures were adequate and sample integrity was maintained throughout the sample collection and delivery process.

Analysis Holding Times

The samples were extracted and analyzed within the required method-specific holding times.

Method Blanks

Method blanks were processed during the laboratory analyses of PAHs, phthalates, SVOCs and PCB congeners. Bis(2-ethylhexyl)phthalate (BEHP) was detected in the method blank for the EPA 8270M-SIM analyses at a concentration that is significant relative to the sample results. The BEHP detections in the associated samples are flagged with a "B". The result for the primary stormwater sample is considered a result of laboratory contamination (less than the blank concentration). The result for the duplicate sample is considered biased high (less than 10 times the blank concentration).

Surrogate Recoveries

Surrogate recoveries were completed during the subcontracted laboratory analysis of PAHs and SVOCs. All surrogate recoveries were within laboratory control limits.

Internal Standard Recoveries

Internal standard recoveries were processed during the laboratory subcontracted analysis of PCB congeners. Pace reports that all of the recoveries were within the target ranges and accurate values were obtained.

Matrix Spike/Matrix Spike Duplicates

CAS reports there was insufficient volume to perform a matrix spike/matrix spike duplicate (MS/MSD) analysis for SVOCs by EPA 8207C. Laboratory control sample/duplicate laboratory control samples (LCS/DLCS) were analyzed and reported in lieu of the MS/MSD for these samples.

MS/MSD samples were analyzed for TOC. All results were within the control limits.

Laboratory Control/ Duplicate Laboratory Control Samples

Laboratory control/duplicate laboratory control samples (LCS/DLCS) were processed during the laboratory analysis of PAHs, phthalates, and PCB congeners. All LCS recoveries were within laboratory control limits with one exception. The percent recovery advisory criteria were exceeded for bis(2-ethylhexyl)phthalate (which was also detected in the laboratory method blank). As discussed in the Method Blanks section, the results for this analyte are flagged ("B") and should be considered biased high.

LCS/DLCS were also processed during the laboratory analysis of SVOCs. All laboratory control sample recoveries were within laboratory control limits with one exception. The percent recovery advisory criteria were exceeded for hexachlorochlopentadiene in the LCS and DLCS. Therefore, the MRL for this compound may be biased low, as indicated in the WPCL report.

Proj./Company Name: PORTLAND HARBOR STORMWATER SAMP
Address/Location: SW-53-AAC614
N DECATUR & RENO
Sample Point Code: 53_SW1
Sample Type: COMPOSITE
Sample Matrix: STORMWTR

Report Page: Page 1 of 4
System ID: AM02574
EID File # : 1020.005
LocCode: PORTHASW
Collected By: DJH

Comments:
QA/QC: Except as follows, all analytical QA/QC criteria were met for this sample including holding times, calibration, method blanks, laboratory control sample recoveries, duplicate precision, matrix spike recoveries, and surrogate recoveries, as applicable. PAH/phthalate analyte bis(2-Ethylhexyl)phthalate was found in the Method Blank at 10.2 ug/L and recovered high in the LCS and LCS duplicate; the result for this analyte may be a high estimate. Based on low LCS and LCS duplicate recoveries, the result for Semivolatile Organics compound Hexachlorocyclopentadiene may be biased low.

LABORATORY ANALYSIS REPORT

Sample ID: **FO080414** **Sample Collected:** 3/12/2008 21:01 **Sample Received:** 03/13/08 **Sample Status:** **COMPLETE AND VALIDATED**

Proj./Company Name: PORTLAND HARBOR STORMWATER SAMP
Address/Location: FIELD DUPLICATE

System ID: AM02575
Sample Point Code: DUP
EID File # : 1020.005
Sample Type: COMPOSITE
LocCode: PORTHASW
Sample Matrix: STORMWTR
Collected By: DJH

Comments:
QA/QC: Except as follows, all analytical QA/QC criteria were met for this sample including holding times, calibration, method blanks, laboratory control sample recoveries, duplicate precision, matrix spike recoveries, and surrogate recoveries, as applicable. PAH/phthalate analyte bis(2-Ethylhexyl)phthalate was found in the Method Blank at 10.2 ug/L and recovered high in the LCS and LCS duplicate; the result for this analyte may be a high estimate. Based on low LCS and LCS duplicate recoveries, the result for Semivolatile Organics compound Hexachlorocyclopentadiene may be biased low.

RE: Portland Harbor Stormwater

Dear Jennifer:

Enclosed are the results of the samples submitted to our laboratory on March 14, 2008. For your reference, these analyses have been assigned our service request number K0802263.

All analyses were performed according to our laboratory's quality assurance program. Where applicable, the methods cited conform to the Methods Update Rule (effective 4/11/2007), which relates to the use of analytical methods for the drinking water and waste water programs. The test results meet requirements of the NELAC standards. Exceptions are noted in the case narrative report where applicable. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3281. You may also contact me via Email at LVo@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Ed Wallace for

Loan Vo, Ph.D.
Project Chemist

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
B	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.
*	The duplicate analysis not within control limits. See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a chromatographic interference.
X	See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Case Narrative

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	City of Portland	**Service Request No.:**	K0802263
Project:	Portland Harbor Stormwater	**Date Received:**	3/14/08
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory Duplicate (DUP), Matrix Spike (MS), and Laboratory Control Sample (LCS).

Sample Receipt

Two water samples were received for analysis at Columbia Analytical Services on 3/14/08. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Semivolatile Organic Compounds by EPA Method 8270C

Lab Control Sample Exceptions:
The advisory criterion was exceeded for the following analyte in the replicate Laboratory Control Samples (LCS/DLCS) KWG0802505-1 and KWG0802505-2: Hexachlorocyclopentadiene. As per the CAS/Kelso Standard Operating Procedure (SOP) for this method, these compounds are not included in the subset of analytes used to control the analysis. The recovery information reported for these analytes is for advisory purposes only (i.e. to provide additional detail related to the performance of each individual compound). No further corrective action was required.

Sample Notes and Discussion
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

Approved by EMW **Date** 4/22/08

Semi-Volatile Organic Compounds by GC/MS

Sample Name: FO080409
Lab Code: K0802263-001

Units: ug/L
Basis: NA

Extraction Method: EPA 3520C
Analysis Method: 8270C

Level: Low

Analyte Name	Result	Q	MRL	Dilution Factor	Date Extracted	Date Analyzed	Extraction Lot	Note
Bis(2-chloroethyl) Ether	ND	U	0.20	1	03/19/08	04/08/08	KWG0802505

RE: Portland Harbor

Enclosed are the results of analyses for samples received by the laboratory on 03/14/08 11:30. The following list is a summary of the Work Orders contained in this report, generated on 04/15/08 09:13.

If you have any questions concerning this report, please feel free to contact me.

Work Order	Project	ProjectNumber
PRC0451	Portland Harbor	36238

TestAmerica Portland

Howard Holmes, Project Manager

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report shall not be reproduced except in full, without the written approval of the laboratory.

PRC0451

8270 SIM PDX-UIC
The Method Blank for Batch 8030552 was contaminated with Bis(2-ethylhexyl)phthalate. The save vial was analyzed and confirmed the MB contamination. The samples were not re-extracted due to insufficient sample volume. The data was flagged and reported.

Notes and Definitions

Report Specific Notes:

A-01	-	Laboratory contamination.
B	-	Analyte was detected in the associated Method Blank.
L1	-	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above acceptance limits.
N1	-	See case narrative.

Laboratory Reporting Conventions:

DET	-	Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
ND	-	Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
NR/NA	-	Not Reported / Not Available
dry	-	Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
wet	-	Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
RPD	-	RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
MRL	-	METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
MDL*	-	METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
Dil	-	Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
Reporting Limits	-	Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
Electronic Signature	-	Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy.* Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

DISCUSSION

This report presents the results from the analyses performed on two samples submitted by a representative of the Test America. The samples were analyzed for the presence or absence of polychlorinated biphenyl (PCB) congeners using USEPA Method 1668A. Reporting limits were set to approximately 0.5 ppt and were corrected for the amount of sample extracted.

The recoveries of the isotopically-labeled PCB internal standards in the sample extracts ranged from 33-146%. All of the labeled standard recoveries obtained for this project were within the target ranges specified in Method 1668A. Also, since the quantification of the native PCB congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCB congeners at the reporting limits. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field samples.

Laboratory spike samples were also prepared with the sample batch using reference material that had been fortified with native standards. The results show that the spiked native compounds were recovered at 91-117%, with relative percent differences of 2.1-8.9%. These results indicate high degrees of accuracy and precision for these determinations.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc.

Conc = Concentration
EML =Method Specified Reporting Limit (1668A)
EMPC = Estimated Maximum Possible Concentration
A = Limit of Detection based on signal to noise
B = Less than 10 times higher than method blank level
P = Recovery outside of Method 1668A control limits
Nn = Value obtained from additional analyses

ND = Not Detected
NA = Not Applicable
NC = Not Calculated
* = See Discussion
! = Outside QC Limits
RT = Retention Time
I = Interference
ng's = Nanograms

OF19 Event 3: May 23-24, 2006

INTRODUCTION

This report presents the results of the six discrete storm sampling events conducted at two different mixed land use stations in fiscal year (FY) 2005-06 to comply with the City of Portland's (City) National Pollutant Discharge Elimination System (NPDES) municipal stormwater discharge permit. In response to increased monitoring requirements of the City's reissued MS4 permit, City of Portland outfall 19 (OF19) was added to the project. These events represent the 40th through 42nd storm monitoring events conducted at M1 and events 1 through 3 at OF19 for this project. Samples were also collected for additional analytes during OF19 event 3 at the request of the Portland Harbor Superfund program in order to characterize potential stormwater impacts in the Portland Harbor. The Environmental Investigations Division performed the work for the Environmental Management Division's Regulatory/Policy section. Field and analytical costs were billed to center code 145-31-043.

BACKGROUND INFORMATION

In 1991, the City implemented a stormwater monitoring program as required by the municipal NPDES stormwater discharge permit application process. Ten stations throughout the city representing residential, commercial, industrial, state highway corridor, open space, and mixed land

uses were selected for stormwater monitoring. In FY 1996-97, the monitoring plan was reduced to four land use stations so limited City resources could be allocated to other stormwater monitoring projects. Three of the four selected stations represented instream conditions, providing an overall measure of water quality in the watersheds. The fourth station, site M1, was located in manhole in a subbasin pilot project area, which is the site of several planned stormwater treatment facilities. In FY 1999-00, one of the three instream sites was dropped in order to fund a best management practice (BMP) monitoring project in that watershed. In FY 2002-03, the two remaining instream sites were dropped from the monitoring plan leaving only the manhole location for continued monitoring for this project. In FY 2005-06, the Stormwater characterization data for many land uses are now obtained from other monitoring projects. Location of an additional land use station is pending. Overviews of the current monitoring locations are shown in Figures 1A and 1B.

OF19 historically has been monitored to identify potential sources of industrial stormwater pollution and to measure the effectiveness of the City's Industrial Stormwater Program. The Industrial Stormwater Program was developed in response to 40 CFR 122.26 "Storm water discharges", which requires certain municipalities to implement a program to control and monitor stormwater runoff associated with industrial activity. OF19 has been monitored for at least three events per year over seven consecutive years starting in FY 1998-99. Industrial Stormwater Program monitoring of OF19 was switched to a biannual schedule in FY 2005-06 with FY 2005-06 being the "off" year. Future monitoring events will be coordinated to meet monitoring objectives of both programs.

SAMPLING LOCATIONS, FIELD PROCEDURES, AND ANALYTICAL PARAMETERS

Sample collection and field parameter measurements are performed by the BES Field Operations section. The BES Water Pollution Control Laboratory (WPCL) provides analytical services. Organic analytical services are provided by STL for the OF19 site.

Sampling Locations

The remaining monitoring site selected from the original ten land use stations is considered to best represent urban stormwater runoff quality from a mixed land use area. Site M1, located at 5241 NE 122nd Ave., is an in-pipe station receiving runoff from 144 acres of residential, commercial, industrial, and open space land uses. The sampling site is located in a 60-inch municipal separate storm sewer pipe accessed by a manhole on the west shoulder of NE 122nd Avenue. A site map is provided in Figure 2A.

OF19 is ranked by the City as one of the "Top Ten" outfalls for potential impacts on water quality and the outfall basin contains a significant number of industrial facilities. Monitoring is conducted in the 475-acre outfall 19 basin located in northwest Portland (Figure 1B). The basin is approximately 20 percent impervious due to significant industrial land use. Stormwater from this basin discharges to the Willamette River through a 42-inch outfall. The sampling manhole is located on the northwest corner of the intersection at NW Front and Kittridge Avenues (Figure 2B). Sampling and flow monitoring are performed in the 42-inch outlet pipe of this manhole.

Field Procedures

Storm Criteria

In order to meet the data quality objectives of this project, monitoring is attempted for storms that are predicted to fulfill specified criteria. Currently, these criteria include a 6-hour antecedent dry period and a minimum of 0.20 inches of precipitation in a 12-hour period.

Flow Monitoring

Both sites have uniformly shaped pipes, well suited for electronic flow quantification. Flow monitoring data are obtained through the use of a Sigma 950 Flow Meter. The flow sensor in the pipe collects level and velocity data, which are used in conjunction with pipe geometry information to calculate flow using the area-velocity method. During a sampling event, the flow meter calculates and records data at five-minute intervals.

Water Quality Sampling

Grab Samples
Grab samples are collected with a decontaminated stainless steel bailer suspended from a nylon rope. The bailer is rinsed once with water from the sampling stream prior to filling the sample bottles and measuring the field parameters. Oil and grease samples are collected directly into the sample bottles.

Composite Samples
An Isco 6700 Portable Sampler is used for sample collection. Site M1 and OF19 are located in a storm sewer lines where a sampler and a flow meter are secured in a manhole. At M1, reinforced vinyl tubing extends from the sampler onto the pipe floor, where a stainless steel sample head is secured. With the additional Portland Harbor Sediment analytes, Teflon-lined tubing is used at OF19 to avoid potential organics contamination. The sampler utilizes a peristaltic pump to draw sample up the tubing and distribute it into composite bottles in the sampler base.

The flow meter is programmed to trigger the sampler every time a specified volume flows past the sensor. In an attempt to divide the storm runoff into 24 volume-proportioned aliquots, the trigger volume is calculated as one twenty-fourth of the expected runoff volume for the event. The expected runoff is calculated using the predicted rain amount for the event, basin size and a basin-specific runoff coefficient. For OF19, the flow meter is programmed to activate the sampler when the water level rises from base flow level to the predetermined trigger level. In order to prevent the sampling program from activating during the minor level increases that often occur before the main storm arrives, a minimum of 0.5 inches is added to the base flow level when calculating trigger level. Eight 1.9-liter decontaminated plastic composite bottles are used in the M1 sampler. Eight 1.9-liter organics decontaminated glass composite bottles are used in the OF19 sampler. For each trigger sent from the flow meter to the sampler, one 600-milliliter aliquot is pumped into a composite bottle. Each bottle receives three aliquots, whereupon the sampler distributor arm advances to the next bottle. Full bottles are removed and replaced with empty bottles as necessary over the course of the event. At the end of the event, a final composite is created by combining bottles that represent greater than 75 percent of the storm flow as recorded by the meter. At site M1, representative bottles are

combined into a churn splitter where analyte-specific sample bottles are then filled from a spigot during churn agitation.

Decontamination Procedures

All equipment that comes in contact with water samples is decontaminated in accordance with Field Operations SOP 7.01a – Decontamination of Sampling Equipment by the following procedure.

1. Wash in non-phosphate detergent (e.g., Alconox Detergent 8 or Liqui-nox).
2. Rinse in tap water.
3. Rinse in 10 percent nitric acid.
4. Rinse with deionized water.
5. Rinse with 10 percent Acetone solution (OF19 only).
6. Rinse with ultrapure water.

Prior to the storm event, both the peristaltic pump tubing and reinforced vinyl tubing at M1 is decontaminated by pumping through the same series of solutions listed above. At the OF19 site, an additional 10 percent Acetone rinse is pumped through Teflon-lined tubing after Step 4.

Analytical Constituents

Grab Samples

Grab samples are monitored in the field for conductivity, pH, and temperature using portable analytical meters. Dissolved oxygen is no longer measured. Grab samples are submitted to the laboratory for analysis of *Escherichia coli* and total oil and grease. Nonpolar oil and grease is measured if total oil and grease is greater than or equal to 10 milligrams per liter (mg/L).

Composite Samples

Composite samples are submitted to the laboratory for analysis of ammonia-nitrogen, nitrate-nitrogen, orthophosphate phosphorus, total dissolved solids, total phosphorus, total solids, total suspended solids, hardness, total metals (chromium, copper, lead, and zinc) and dissolved metals (copper, lead, and zinc). Additional samples were submitted from all three events at OF19 for polynuclear aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), semi-volatile organic compounds (SVOCs), and metals (total and dissolved arsenic, silver, and cadmium, and dissolved chromium).

WEATHER AND SAMPLING SUMMARY

The following section summarizes the weather and sampling information for each of the three events. Weather forecasts were obtained through the City-contracted ERF Company, Inc (ERF). Tables 1 and 2A present the complete rain gauge data as recorded by the City's Hydrological Data Retrieval and Alarm System (HYDRA) for the three storm events and the corresponding 72-hour antecedent dry periods for both sampling locations. While City rain gauges provide the best available estimation of rainfall at monitoring sites they can be located several miles from study areas. Hence, rain gauge data may not accurately depict rainfall conditions at particular sites, especially during events with sporadic, localized rain activity. Gauge 111 (NE Airport Way) is used for the M1 sample location

and is located approximately one and a half miles west of the monitoring site. The previous rain gauge used for M1, Gauge 9 (PDX Business Park), was retired on September 21, 2004. Gauge 121 (Yeon) is used for monitoring site OF19 and is located within two miles of the sampling site. For monitoring conducted at OF19 for the Industrial Stormwater Program, rainfall at OF 19 was formerly estimated as an average of rainfall totals measured at Gauges 121 and 125 (Guilds Lake). Gauge 125 was retired on March 23, 2005. No additional gauges were used for rainfall estimates in the area since Gauge 121 and former Gauge 125 are the only gauges in the vicinity of the sampling site that represent the slight rain shadow in the NW industrial district caused by the West Hills. The river level gauge at Ankeny Pump Station is used to determine Willamette River levels in order to insure that river water has not backed up into the outfall sampling location. The river level must be below 20 feet above mean sea level to avoid potential commingling of OF19 stormwater with Willamette River water. Hourly river level data are presented in Table 2B. All times in this report text, figures and tables are listed in 24-hour, Pacific Standard Time.

Summaries of antecedent, storm event, and sample collection time rainfall for both monitoring locations are presented in the tables below. Detailed descriptions of each monitoring event are also included below in the Events Summary section.

M1 Dry Period Summary

Event	Date	72-Hour Antecedent Rainfall (inches)	24-Hour Antecedent Rainfall (inches)	6-Hour Antecedent Rainfall (inches)	Total Event Rainfall (inches)	Sample Collection Time Rainfall (inches)
40	3/31-4/1/06	0.29	0.12	0.00	0.33	0.33
41	5/7/06	0.13	0.13	0.04	0.29	0.29
42	5/23-24/06	0.46	0.26	0.00	0.59	0.59

OF19 Dry Period Summary

Event	Date	72-Hour Antecedent Rainfall (inches)	24-Hour Antecedent Rainfall (inches)	6-Hour Antecedent Rainfall (inches)	Total Event Rainfall (inches)	Sample Collection Time Rainfall (inches)
1	3/8/06	0.67	0.50	0.04	0.44	0.42
2	3/15-16/06	0.25	0.03	0.00	0.35	0.33
3	5/23-24/06	1.07	0.28	0.07	0.37	0.36

M1 Events Summary

Event 40

ERF predicted moderate rainfall on April 1, 2006 totaling approximately 0.22 inches. Minimal precipitation with a dry period of 17 hours was recorded during the 24 hours preceding the storm.

The sampling equipment was decontaminated, calibrated, and programmed during the afternoon of March 31 with the intent to capture storm activity forecasted to occur within the following 24 hours. Rainfall began around 1700 on March 31 and continued steadily until approximately 0400 on April 1. A total of 0.33 inches of rain fell during the course of the storm event.

A grab sample was not collected for this event due to weekend scheduling conflicts. The sampler collected 21 aliquots with the first aliquot taken at 1805 on March 31 and the final was collected at 0416 on April 1. The final composite sample was made by combining all aliquots into a churn splitter. Subsequent analyte-specific bottles were filled during churn agitation.

With the exception of the missed grab sample, sampling operations went smoothly for this event with no significant problems encountered. The majority of the storm duration was captured and is well represented by the composite sample.

Event 41

ERF predicted surges of light rainfall for the evening of May 7, 2006 and totaling roughly 0.3 inches. Minimal precipitation was recorded during the 72 hours preceding the storm. About 0.04 inches of rain fell during the six hours before sample collection.

The sampling equipment was decontaminated, calibrated, and programmed during the afternoon of May 4 to prepare for the storm event forecasted to occur later that weekend. Morning precipitation on May 7 was enough to initiate sampler, however the bulk of the substantial rainfall began around 1600 and lasted only two hours with a total accumulation of 0.29 inches.

The grab sample was collected at 1714 on May 7 during a heavy downpour, which also coincided with the peak of the event. The sampler collected 24 aliquots with the first representative aliquot taken at 1539 and the last at 1803. The final composite sample was made by combining all aliquots from the afternoon storm event into a churn splitter. Subsequent analyte-specific bottles were filled during churn agitation.

Sampling operations went smoothly for this event with no significant problems encountered. The majority of the storm duration was captured and is well represented by the composite sample.

Event 42

ERF predicted significant rainfall for the morning of May 23, 2006 turning to intermittent showers in the afternoon totaling 0.35 inches. Minimal precipitation with a dry period of 16 hours was recorded during the 24 hours preceding the storm.

The sampling equipment was decontaminated, calibrated, and programmed on the afternoon of May 22 to prepare for anticipated storm activity. Initial rainfall began on May 23 at 0400 and turned to showers continuing through 1900 the following day. The rainfall total for the storm event was 0.59 inches with the most intense showers occurring from 1800 to 2000.

A grab sample was not collected for this event due to peak storm activity occurring during late evening hours. The sampler collected a total of 23 aliquots with the first aliquot taken at 0617 on May 23 and the last at 1901 the following day. The final composite sample was created by combining all 23 aliquots into a churn splitter. Subsequent analyte-specific bottles were filled during churn agitation.

With the exception of the missed grab sample, sampling operations went smoothly for this event with no significant problems encountered. The majority of the storm duration was captured and is well represented by the composite sample.

OF19 Events Summary

Event 1

ERF predicted heavy rainfall for the afternoon of March 8, 2006 and continuing through the morning totaling roughly 0.7 inches. Approximately 0.17 inches of rain was recorded during the 24 hours preceding the storm. About 0.04 inches of rain fell during the two hours before the sampler collected the first aliquot.

The sampling equipment was decontaminated, calibrated, and programmed during the afternoon of March 8 to prepare for the forecasted storm event later that day. Initial rainfall began earlier that morning at 1100. The majority of rain falling between 1300 to 1600 and then turned to showers through the evening. The rainfall total for the storm event was 0.44 inches.
The grab sample was collected on March 8 at 1635 as the intensity of the showers decreased. The first composite aliquot was collected at 1341 on March 8 and the last at 2106. The flow meter paced the sampler accurately as most of the aliquots were collected during the peak of the storm. The final composite sample was created by combining equal volumes of the 24 aliquots collected during the storm event.

Sampling operations went smoothly for this event with no significant problems encountered. The majority of the storm duration was captured and is well represented by the composite sample.

Event 2

ERF predicted minimal showers for the afternoon of March 15, 2006 turning to rain through the following evening of March 16 totaling 0.4 to 0.8 inches. Approximately 0.03 inches of rain was recorded during the 24 hours preceding the storm. No rain fell during the ten hours before sample collection.

The sampling equipment was decontaminated, calibrated, and programmed on the morning of March 14 to prepare for an anticipated 0.5 inch storm event. A slight drizzle began just prior to the first aliquot collection on March 15 around 2130, then turned to steady rain through the following morning on March 16. A second pulse of rain occurred from 0400 to 0900 on March 16 with the

final aliquot collected at 0848. The rainfall total for the storm event was 0.35 inches, which primarily fell in two separate events on March 15 and 16 respectively.

The final composite sample was created by combining bottles 5-8 which represented aliquots collected from 2232 on March 15 to 0848 on March 16. Grab samples were not collected for this event due to staffing limitations. The forecasted rainfall amount was more than the actual rainfall as measured by the raingage. Since the flow meter was programmed with a trigger volume based on the forecasted rainfall amount, the sampler only filled four bottles, which were primarily collected during the storm peaks and are an accurate capture of the bulk of the storm.

Aside from the missed grab sample and inaccurate forecasting which resulted in reduced composite volume, the sampling for this event went smoothly.

Event 3

ERF predicted steady rainfall for the morning of May 23, 2006 and then turning sporadic in the afternoon totaling roughly 0.4 inches. Due to difficulties with Teflon-lined tubing, the dry period for this event was not ideal.

The sampling equipment was decontaminated, calibrated, and programmed during the afternoon of May 22 to prepare for the forecasted storm event later that day. Morning storm runoff on May 23 of approximately 0.38 inches was recorded accurately by the flow meter, however the Teflon lining inside the tubing had inadvertently been kinked causing sampler errors. The meter was reprogrammed based on 0.35 inches of rain expected to continue through the remainder of the day. Site visits on the mornings of May 24, after 0.21 inches of rain and May 25 after an additional 0.16 inches of rain, concluded that the sampler had collected enough volume to consider the event an accurate representation of storm activity.

The composite sample represents a continuous shower period from 1300 on May 23 through 1500 on May 24 totaling approximately 0.36 inches of rain. The final composite sample was created by combining equal volumes of the 18 aliquots collected during the storm event.

Sampling operations were not ideal for this event due to the difficulties with the Teflon-lined tubing, missed grab samples as a result of site visits not coinciding with elevated runoff and sporadic nature of spring storms. The majority of the storm duration was captured and is well represented by the composite sample.

MONITORING AND SAMPLING RESULTS

Hydrographs summarizing flow, rainfall, and sampling information for each storm event are presented in Figures 3A through 3C and 4A through 4C. The individual sample triggers sent from the flow meters to the samplers, which represent aliquots of the composite samples, are represented by the ▲ on the x-axis of the graph. The grab sample collection times are also included on the graphs.

Tables 3 and 4A through 4C presents a summary of all field and laboratory analytical data for the three events. The complete Laboratory Analysis Reports and chain-of-custody records are included in the attachments. Refer to the laboratory reports for information regarding the analytical methods

used and the corresponding method reporting limits. Note that in the attached lab reports for the OF19 site, PAHs are reported twice with two different sets of method detection limits. PAHs were reported as part of the full EPA Method 8270SIM suite; however, in order to achieve lower detection limits for PAHs, additional sample clean-up is performed which removes some of the EPA 8270SIM method target analytes. Subsequently, the analysis must be performed twice in order to report all analytes and achieve desired detection limits for PAHs. Since no PAHs were detected, only the lower detection limits are shown in Table 4B.

DATA EVALUATION

A statistical evaluation of the data will be performed using Minitab Statistical Software, Release 14. The results from this evaluation will be presented in a separate document.

DATA VALIDATION & USABILITY

No problems were encountered with data validation.

CONCLUSION

The 40th through 42nd stormwater sampling events at land use station M1 were conducted on March 31-April 1, May 7, and May 23-24 in 2006. The 1st through 3rd stormwater sampling events at land use station OF19 were conducted on March 8, March 15-16, and May 23-24 in 2006. These were good storm events with sufficient rainfall. All storm criteria were met for all events except Event 3 at land use station OF19. Due to kinked sample tubing, aliquots were not collected for the first part of the storm. Even though the Event 3 did not meet the antecedent dry period criterion and the initial part of the storm was missed, sampling proceeded in order to ensure project completion by the end of the fiscal year. Grab samples were not collected for M1 Events 40 and 42 and OF 19 Events 2 and 3 due to overnight storm events, intermittent rainfall, and staffing conflicts.

GENERAL

The Field Operations and Investigations and Monitoring Services sections of BES prepared this summary report. For any questions concerning this report, contact Aaron Wieting at 503-823-5437.

DAILY FIELD REPORT

Page 1 of

Project NPDES Stormwtr Mon
Location OF 19 NW Kittridge : Front
Subject Event 1 FY05-06

Project No. 4010.001
Date 3/8/2006, 3/9/2006
By JTM, WCR

1725 Arrived on site to setup for 0.8" of anticipated rainfall (will calculate runoff trigger volume based on 0.7" → 10863cf.) Removed bottles filled since yesterday's visit (@ 1340 on 3/7/06). Pump/Sampler tubing was decon'd yesterday by the following wash/rinse: non-Phosphate soapy, tap water, nitric solution, DI water, acetone solution, DI water, Ultrapure DI water.
- Uploaded flow meter, reprogrammed w/ updated trigger volume
- swapped meter/sampler batteries
- staged sampler and left site.

1630 Arrived on site after 0.31" of rain since previous visit. Sampler filled 5 bottles, missed last aliquot @ 1635 in bottle 5. Swapped out bottles 1-5 w/ bottles 9-13. Collected grab samples - OG, ecoli, field parameters @ 1635
1656 Left site

3/9/06
1400 Arrived on site after ~ 0.60" of rainfall since visit yesterday. Sampler display reads "program complete". Sampler filled all 8 bottles. Uploaded FM - data appear accurate, meter paced the sampler perfectly. Removed sampler + bottles to return to WPCL
FM filename 03091403.GM4
1415 Left site

@ WPCL Submitted bottles 1-8 composited on 3/8/06. Storm accumulation approximately 0.34" - 0.35"

FO 060332 grab FO 060333 composite

Composite Bottle Data Sheet

ANALYTICAL REPORT

Job Number: 580-1816-1

Job Description: Portland Harbor Inline Samp

For:
City of Portland BES
6543 N. Burlington Ave
Portland, OR 97203

Attention: Atina Casas

Heather Curbow
Project Mgmt. Assistant
hcurbow@stl-inc.om
03/28/2006

Project Manager: Tom Coyner

STL Seattle is a part of Severn Trent Laboratories, Inc.

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender immediately at 253-922-2310 and destroy this report immediately.

Case Narrative for job: 580-J1816-1

Date: 03/28/2006

Method: 8270C
Batch: 580-4734

Several analytes in the LCS and LCSD analysis had recoveries within the QC limit range, however the relative percent difference (RPD) for both was above the QC RPD limit. The associated sample analysis results were non detect for these analytes. No further action was taken.

8082 Polychlorinated
Batch: 580-4740

Recovery of surrogate compound DCB Decachlorobiphenyl was below the lower QC limit in the sample analysis. The other surrogate was within range and all QC analyses were within QC limits. No further action was taken

Login Number: 1816

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

DAILY FIELD REPORT

Project NPDES Stormwtr Mon
Location NW Killingsworth: Front — OF19
Subject Eventz

Project No. 4010.001
Date 3/14/06
By JTM, WCR

1113 Arrived on site to setup for storm event. Modest trigger volume of 7759 cf was calculated based on a forecasted rainfall amount of 0.5".

— Sampler has 8 decon'd bottles (organics decon)
— Installed new sampler harness w/ wall hooler & ascender
— uploaded FM
— decon'd sampler tubing w/ soapy (non-phosphate), tap, nitric, DI, acetone (organics) wash, DI, Ultrapure DI wash cycle
— changed battery on sampler, ~~programmed w/ a delay to start on 3/15/06 @ 0600~~
— Programmed meter after a field test to ensure setpoint sampling w/ level enable is working properly. Made entry.
SOME BIOFILM ON PROBE, SCRUB. NO CHANGE, ADJUST LEVEL FROM 6.3 TO 4.25"
— Set meter w/ setpoint low level of 4.0", deadband @ 0". Meter appeared to be enabling and disabling sampler according to setpt. setup. JTM maneuvered sensor in & out of setpoint criteria as sampler enabled/disabled.
— Programmed FM w/ setpoint low level enable @ 6.0" w/ deadband at 4.0". Entered pacing of 7759 cf. Swapped battery
— Initiated sampler programming. Display reads "disabled"

1310 left site

DAILY FIELD REPORT

Project NPDES Stormwtr Mon
Location NW Willbridge : NW Front — OF19
Subject Event 2 FY05-06

Project No. 4010.001
Date 3/15/06, 3/16/06
By JTM, RCB

1516 Arrived on site after 0.21" of rainfall. Sampler display reads program disabled as expected — meter level @ 4.1" w/ level enable set to 6.0". Sampler filled 4 full bottles, 12 aliquots Recorded bottle trigger times.
enabled 1619
disabled 1939
Replaced bottles 1-4, w/ 9-12. Distributor arm positioned above bottle 5.

1536 Left site

3/16/06
1446 Arrived on site after ~ 0.3" of rain since previous visit. Sampler display reads "program disabled" in agreement w/ meter level @ 5.6" (below setpoint enable of 6.0"). Uploaded meter, recorded trigger times — sampler filled 4 bottles. No rain since 1240, so grab samples were not collected today. Swapped out full bottles w/ bottles 13-16. Continued program w/ 0.5" accumulation - 1759

1309 Lef site.

3/17/06
1030 Consulted w/ R. Chowdhury to determine whether adequate volume was collected on 3/15-16/06, Sufficient volume was collected. Submitted bottles 5-8 w/ aliquot time frame 2232 @ 3/15 — 0848 @ 3/16, corresponding rainfall 0.37" accumulation w/ in 12hr. No grabs were collected due to storm occurring during early AM hours.

ANALYTICAL REPORT

Job Number: 580-1915-1

Job Description: Portland Harbor Inline Samp

For:
City of Portland BES
6543 N. Burlington Ave
Portland, OR 97203

Attention: Peter Abrams

Tom Coyner
Project Manager I
tcoyner@stl-inc.com
04/04/2006

Project Manager: Tom Coyner

STL Seattle is a part of Severn Trent Laboratories, Inc.

Case Narrative for job: 580-J1915-1

Client: City of Portland BES
Date: 04/04/2006

Semivolatile GC-MS

Method Blank Contamination

8270 SIM PAH
The method blank is greater than the MDL but less than 1/2 the RL for Phenanthrene.

Affected Items
MB 580-4927/1-A

Batch: 580-4977
Method: 580-8270C_SIM

METHOD / ANALYST SUMMARY

Client: City of Portland BES

DCB Decachlorobiphenyl	54	*	55 - 128

DATA REPORTING QUALIFIERS

Client: City of Portland BES Job Number: 580-1915-1

Lab Section	Qualifier	Description
GC/MS Semi VOA		
	B	Compound was found in the blank and sample.
	*	LCS, LCSD, MS, MSD, MD, or Surrogate exceeds the control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA		
	*	LCS, LCSD, MS, MSD, MD, or Surrogate exceeds the control limits

QUALITY CONTROL RESULTS

Client: City of Portland BES

Job Number: 580-1915-1

Method Blank - Batch: 580-4925

Method: 8270C
Preparation: 3510C

LOGIN SAMPLE RECEIPT CHECK LIST

Client: City of Portland BES

Job Number: 580-1915-1

Login Number: 1915

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	NA	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

DAILY FIELD REPORT

Project NPDES Stormwater
Location OF 19 - NW Kittridge & Front
Subject FY05-06 Event 3

Project No. 4010.001
Date 5-23-06
By LAP, JJM

1240 (PST): Arrive on-site (OUTFALL 19). Prepare CSE permit & assemble necessary equipment. JJM enters manhole and calibrates volume using a 500 ml gradvated cylinder. JJM visually inspects sampler tubing & decides to leave it in place (as opposed to replacing). - no crimping or kinks!!!

Checked level (manual = 3.25, meter = 3.15).
- Uploaded FM, meter paced sampler perfectly. (on sec)

1259 Reprogrammed sampler trigger/pacing volume as 5431cf (based on anticipated 0.35" of rain). Restarted flow meter w/out low level setpoint enable.

JJM re-entry to start sampler. All tubing 'areas of concern' are free of obstruction/kink. Fingers crossed.

1309 Left site.

DAILY FIELD REPORT

Project NPDES Stormwtr Mon
Project No. 4010.001
Location OF19
Date 5/25/06
Subject FY05-06 Event 3 (wrap-up?)
By JJM, WCR

1030 Arrived on site to assess progress of storm event sampling. Sampler filled bottles 6 & 8. Downloaded all data from flow meter — 05251036. GM4. Hydrograph looks good although we may not have enough volume to consider event successful. Will analyze hydrograph @ WPCL

Recorded trigger times, replaced bottles & capped. Removed batteries & staged equipment.

1048 Left site.

Review of flow data shows that program on 5/22 – 5/23/06 has a data gap due to powering off sampler. This poweroff was done because sampler tubing was kinked and all triggers from 5/22 – 23/06 event resulted in null aliquots.

Data gap span 5/23/06 @ 0715 — 5/23/06 @ 1325

Bottles 1-6 submitted to lab for analysis. No grab samples submitted due to staffing (event overnight) and scattered nature of spring storms (site visits did not happen during elevated storm activity — grabs would have been baseflow)

FO 060674

Curbow, Heather

From: Shackelford, Jennifer [JENNIFERS@BES.CI.PORTLAND.OR.US]
Sent: Friday, May 26, 2006 12:56 PM
To: Curbow, Heather
Subject: City of Portland

Hello Heather,

My name is Jennifer Shackelford and I'm with the Water Pollution Control Lab for the City of Portland, Oregon. Howard Holmes at Test America forwarded me a question that you had regarding project PPE1227 (Test America ID, FO060674 Portland ID). STL analyzed a similar sample in March, STL ID 580-1915-1 (Test America ID P2C0815-01) for PAH, PCB, and SVOC 8270. Please use the same analyte lists and detection limits for this current sample as were used for the previous sample.

If you have further questions, I will be in until 3pm.

Thank you,

Jennifer Shackelford

S45U Event 3: March 7, 2007

INTRODUCTION

This report presents the results of the nine discrete storm sampling events conducted at three different mixed land use stations in fiscal year (FY) 2006-07 to comply with the City of Portland's (City) National Pollutant Discharge Elimination System (NPDES) municipal stormwater discharge permit. In response to increased monitoring requirements of the City's reissued MS4 permit, sampling location S45U in the Johnson Creek Watershed was added to the project. For this project, these monitoring events represent M1 Events 43 through 45, OF19 Events 4 through 6 (Industrial Stormwater Events 23 through 25), and S45U Events 1 through 3. Samples were also collected for additional analytes at the OF19 monitoring location at the request of the Portland Harbor Superfund program in order to characterize potential stormwater impacts in the Portland Harbor. The Environmental Investigations Division performed the work for the Environmental Management Division's Regulatory/Policy section.

Land Use Stormwater Monitoring: FY 2006-07

BACKGROUND INFORMATION

In 1991, the City implemented a stormwater monitoring program as required by the municipal NPDES stormwater discharge permit application process. Ten stations throughout the city representing residential, commercial, industrial, state highway corridor, open space, and mixed land uses were selected for stormwater monitoring. In FY 1996-97, the monitoring plan was reduced to four land use stations so limited City resources could be allocated to other stormwater monitoring projects. Three of the four selected stations represented instream conditions, providing an overall measure of water quality in the watersheds. The fourth station, site M1, is an in-pipe monitoring point located in a subbasin pilot project area (City outfall 99 basin), which is the site of several planned stormwater treatment facilities. In FY 1999-00, one of the three instream sites was dropped in order to fund a best management practice (BMP) monitoring project in that watershed. In FY 2002-03, the two remaining instream sites were dropped from the monitoring plan leaving only the in-pipe location for continued monitoring for this project.

OF19 was added to the monitoring program to represent industrial areas and stormwater discharges to the Lower Willamette watershed. OF19 historically has been monitored to identify potential sources of industrial stormwater pollution and to measure the effectiveness of the City's Industrial Stormwater Program. The Industrial Stormwater Program was developed in response to 40 CFR 122.26 "Storm water discharges", which requires certain municipalities to implement a program to control and monitor stormwater runoff associated with industrial activity. OF19 has been monitored for at least three events per year over seven consecutive years starting in FY 1998-99. The list of analyses for samples collected at OF19 has been expanded to meet the objectives of both programs.

S45U was added in FY 2006-07 as a sampling location representative of stormwater discharges to Johnson Creek. S45U was monitored previously for five storm events as part of the Johnson Creek Pesticide Source study conducted in FY 2003-04.

Overviews of the current monitoring locations are shown in Figures 1 and 2A through 2C.

SAMPLING LOCATIONS, FIELD PROCEDURES, AND ANALYTICAL PARAMETERS

Sample collection and field parameter measurements are performed by the BES Field Operations section. The BES Water Pollution Control Laboratory (WPCL) provides primary analytical services. Selected analyses are performed by Test America in Beaverton, Oregon. Low-level organics analyses services are performed by STL (Test America as of January 2007) in Seattle, Washington for the OF19 site.

Sampling Locations

The remaining monitoring site selected from the original ten land use stations is considered to best represent urban stormwater runoff quality from a mixed land use area. Site M1, located at 5241 NE 122nd Ave., is an in-pipe sampling location receiving runoff from 144 acres of residential, commercial, industrial, and open space land uses. The sampling site is located in a 60-inch municipal separate storm sewer pipe accessed by a manhole on the west shoulder of NE 122nd Avenue. A site map is provided in Figure 3A.

OF19 is ranked by the City as one of the "Top Ten" outfalls for potential impacts on water quality and the outfall basin contains a significant number of industrial facilities. Monitoring is conducted in the 475-acre outfall 19 basin located in northwest Portland (Figure 2B). The basin is approximately 20 percent impervious due to significant industrial land use. Stormwater from this basin discharges to the Willamette River through a 42-inch outfall. The sampling manhole is located on the northwest corner of the intersection at NW Front and Kittridge Avenues (Figure 3B). Sampling and flow monitoring are performed in the 42-inch outlet pipe of this manhole.

S45U is located in the Johnson Creek watershed and represents a mix of residential, commercial, and industrial land use. The sampling manhole is location in the intersection of SE Umatilla and SE 45th Avenue (Figure 3C). Stormwater from this basin discharges to Johnson Creek through a 48-inch outfall.

Field Procedures

Storm Criteria

In order to meet the data quality objectives of this project, monitoring is attempted for storms that are predicted to fulfill specified criteria. Currently, these criteria include a 6-hour antecedent dry period and a minimum of 0.20 inches of precipitation in a 12-hour period for the M1 and S45U sampling locations. For the OF19 site, the criteria include a 72-hour antecedent dry period and a minimum 0.20 inches of precipitation over a 3 to 24-hour sample collection period. An antecedent dry period is defined as less than 0.10 inches of precipitation in the specified period preceding the storm event.

Flow Monitoring

All three sites have uniformly shaped pipes, well suited for electronic flow quantification. Flow monitoring data are obtained through the use of a Sigma 950 Flow Meter. The flow sensor in the pipe collects level and velocity data, which are used in conjunction with pipe geometry information to calculate flow using the area-velocity method. During a sampling event, the flow meter calculates and records data at five-minute intervals.

Water Quality Sampling

Grab Samples

Grab samples are collected with a decontaminated stainless steel bailer attached to a telescoping sampling pole. The bailer is rinsed once with water from the sampling stream prior to filling the sample bottles and measuring the field parameters. Oil and grease samples are collected directly into the sample bottles.

Composite Samples

An Isco 6700 Portable Sampler is used for composite sample collection. All three sites are located in storm sewer lines where a sampler and a flow meter are secured in a manhole. At M1 and S45U, reinforced vinyl tubing extends from the sampler onto the pipe floor, where a stainless steel sample head is secured. With the additional low-level organics analyses, Teflon-lined tubing is used at

location OF19 to avoid potential organics contamination. The sampler utilizes a peristaltic pump to draw sample up the tubing and distribute it into composite bottles in the sampler base.

The flow meter is programmed to trigger the sampler every time a specified volume flows past the sensor. In an attempt to divide the storm runoff into 24 volume-proportioned aliquots, the trigger volume is calculated as one twenty-fourth of the expected runoff volume for the event. The expected runoff is calculated using the predicted rain amount for the event, basin size and a basin-specific runoff coefficient. For OF19, the flow meter is programmed to activate the sampler when the water level rises from base flow level to the predetermined trigger level. In order to prevent the sampling program from activating during the minor level increases that often occur before the main storm arrives, a minimum of 0.5 inches is added to the base flow level when calculating trigger level. Eight 1.9-liter decontaminated plastic composite bottles are used in the M1 sampler. Eight 1.9-liter organics decontaminated glass composite bottles are used in the OF19 sampler. For each trigger sent from the flow meter to the sampler, one 600-milliliter aliquot is pumped into a composite bottle. Each bottle receives three aliquots, whereupon the sampler distributor arm advances to the next bottle. Full bottles are removed and replaced with empty bottles as necessary over the course of the event. The number of aliquots collected may vary from the desired 24 as storm event rainfall totals often vary significantly from predictions. At the end of the event, a final composite is created by combining bottles that represent greater than 75 percent of the storm flow as recorded by the meter. At site M1, representative bottles are combined into a churn splitter where analyte-specific sample bottles are then filled from a spigot during churn agitation.

Decontamination Procedures

All equipment that comes in contact with water samples is decontaminated in accordance with Field Operations SOP 7.01a – Decontamination of Sampling Equipment by the following procedure.

1. Wash in non-phosphate detergent (e.g., Alconox Detergent 8 or Liqui-nox).
2. Rinse in tap water.
3. Rinse in 10 percent nitric acid.
4. Rinse with deionized water.
5. Rinse with 10 percent Acetone solution (OF19 only).
6. Rinse with ultrapure water.

Prior to the storm event, both the peristaltic pump tubing and reinforced vinyl tubing at M1 is decontaminated by pumping through the same series of solutions listed above. At the OF19 site, an additional 10 percent Acetone rinse is pumped through Teflon-lined tubing after Step 4.

Analytical Constituents

Grab Samples

Grab samples are monitored in the field for conductivity, pH, and temperature using portable analytical meters. Dissolved oxygen is no longer measured. Grab samples are submitted to the laboratory for analysis of *Escherichia coli* and total oil and grease. Nonpolar oil and grease is measured if total oil and grease is greater than or equal to 10 milligrams per liter (mg/L).

Composite Samples

Composite samples are submitted to the laboratory for analysis of ammonia-nitrogen, nitrate-nitrogen, orthophosphate phosphorus, total dissolved solids, total phosphorus, total solids, total suspended solids, hardness, total metals (chromium, copper, lead, and zinc) and dissolved metals (copper, lead, and zinc). Additional samples were submitted from all three events at OF19 for polynuclear aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), semi-volatile organic compounds (SVOCs), and additional metals (total and dissolved arsenic, silver, and cadmium, and dissolved chromium).

WEATHER AND SAMPLING SUMMARY

The following section summarizes the weather and sampling information for each of the three events. Weather forecasts were obtained through the City-contracted ERF Company, Inc (ERF). Tables 1 through 3 present the complete rain gauge data as recorded by the City's Hydrological Data Retrieval and Alarm System (HYDRA) for the three storm events and the corresponding 72-hour antecedent dry periods for the three sampling locations. While City rain gauges provide the best available estimation of rainfall at monitoring sites they can be located several miles from study areas. Hence, rain gauge data may not accurately depict rainfall conditions at particular sites, especially during events with sporadic, localized rain activity.

Gauge 111 (NE Airport Way) is used for the M1 sample location and is located approximately one and a half miles west of the monitoring site. The previous rain gauge used for M1, Gauge 9 (PDX Business Park), was retired on September 21, 2004. Gauge 121 (Yeon) is used for monitoring site OF19 and is located within two miles of the sampling site. For monitoring conducted at OF19 for the Industrial Stormwater Program, rainfall at OF 19 was formerly estimated as an average of rainfall totals measured at Gauges 121 and 125 (Guilds Lake). Gauge 125 was retired on March 23, 2005. No additional gauges were used for rainfall estimates in the area since Gauge 121 and former Gauge 125 are the only gauges in the vicinity of the sampling site that represent the slight rain shadow caused by the West Hills in the NW industrial district. Gage 64 (2033 SE Harney St) is used for S45U and is located approximately 1.4 miles west of the monitoring location.

The river level gauge at Ankeny Pump Station is used to determine Willamette River levels in order to insure that river water has not backed up into the outfall sampling location. The river level must be below 20 feet above mean sea level to avoid potential commingling of OF19 stormwater with Willamette River water. River level data is checked by the Field Operations team leader prior to sample collection. All times in this report text, figures and tables are listed in 24-hour, Pacific Standard Time.

Events Summary

Summaries of antecedent, storm event, and sample collection time rainfall for the three monitoring locations are presented in Table 4. Additional information regarding each monitoring event is summarized below and includes specific comments for each event and descriptions of any deviations from proposed monitoring.

Sampling equipment including bailers and composite samplers are typically decontaminated, calibrated, and programmed during the 24-hour period prior to a predicted storm event. Sampling preparation may occur up to 72 hours prior to predicted weekend storm events. Final composite samples are prepared by combining all aliquots into a churn splitter in the laboratory and subsequently filling analyte-specific bottles through churn agitation.

Sampling went smoothly for all events and no significant problems were encountered except as described below. Storm durations were generally captured and storms are well-represented by composite samples. As described below, two events sampled were less than the target storm event rainfall totals.

M1 Events Summary

Event 43: No problems encountered.

Event 44: Event 44 was initially attempted on November 19, 2006; however, no velocity data or samples were collected due to a faulty sensor. The sensor was replaced upon discovery.

Event 44 was completed on January 9, 2007. Sampling operations went smoothly for this event with no significant problems encountered. The majority of the storm duration was captured and is well represented by the composite sample. At 0.13 inches of total precipitation, the storm event was less than the desired rainfall total of 0.20 inches and predicted total of 0.25+ inches. However, the event was a good representation of a short (5 hours), light event with a sufficient dry period (54 hours).

Event 45: No problems were encountered other than one missed trigger ("no more liquid" registered on the autosampler).

OF19 Events Summary

Event 4: No problems were encountered other than one missed trigger ("no more liquid" registered on the autosampler) and the sampler was inadvertently programmed to collect 300 rather than 600 ml for each aliquot. Thirty aliquots were collected which was more than sufficient to complete all analyses.

Event 5: No problems were encountered other than some variation in sample bottle volumes. The field team leader suggested that the likely cause was air entrained in stormwater as aliquots were collected by the autosampler. This could be caused either through turbulence or fluctuations in water levels in the storm sewer. The seven sample bottles filled by the autosampler were fairly evenly distributed between ½ full to full. Though sample aliquots apparently were of different volumes, the differences are spread out through the event and the Event 5 composite sample is likely still representative of the bulk of the storm event.

Event 6: No problems encountered.

S45U Events Summary

Event 1: Sampling operations went smoothly for this event with no significant problems encountered. At 0.18 inches of total precipitation, the storm event was slightly less than the desired rainfall total of 0.20 inches and predicted total of 0.25+ inches. However, the rising limb, peak, and falling limb were caught and the composite sample was considered a good representation of a short-duration storm event.

Event 2: No problems encountered.

Event 3: Field parameters were not measured as a field meter was not available at the time grab samples were collected. No other problems were encountered. The storm event rainfall total was greater than 0.20 inches; however, less than 75% of the total event was captured. The rising limb, peak, and falling limb were caught and the composite sample was considered a good representation of a short-duration storm event.

MONITORING AND SAMPLING RESULTS

Hydrographs summarizing flow, rainfall, and sampling information for each storm event are presented in Figures 4A through 6C. The individual sample triggers sent from the flow meters to the samplers, which represent aliquots of the composite samples, are represented by the ▲ symbol on the x-axis of the graph.

Tables 5 through 7 present a summary of all field and laboratory analytical data for the three events. The complete Laboratory Analysis Reports and chain-of-custody records are included in the attachments. Refer to the laboratory reports for information regarding the analytical methods used and the corresponding method reporting limits. Note that in the attached lab reports for the OF19 site, PAHs are reported twice with two different sets of method detection limits. PAHs were reported as part of the full EPA Method 8270 suite; however, in order to achieve lower detection limits for PAHs using the 8270 SIM method, the instrument must be calibrated for a narrower range such that only PAHs are reportable. Subsequently, the analysis must be performed twice in order to report all analytes and achieve desired detection limits for PAHs. Only the PAH-SIM results are shown in Table 4B as more analytes are detected with lower the MDLs for the PAH-SIM method. Several analytes were detected in both analyses and the results met precision goals for field duplicate samples, thus, only one result for each analyte is reported here.

DATA VALIDATION & USABILITY

No problems were encountered with data validation except for the following:

- Several PAHs and phthalates were detected in method blanks for the EPA 8270 PAH-SIM and SVOC analysis at the OF19 monitoring location. All method blank detections were below the MRLs and the concentrations detected in the associated sample. Sample concentrations less than 10x the blank concentration are qualified with "JB" for estimated due to blank contamination. Typically, data is only qualified as estimated due to blank

contamination if sample concentrations are less than 5x the blank concentration. If the analytes are recognized as common laboratory contaminants, such as acetone or phthalates, the "10x rule" is used. 10x is used here for both phthalates and PAHs as these laboratory contaminants tend to be more common as MDLs approach the ng/l range.

- The e. coli result for the OF19 Event 4 sample is qualified with "J" for estimated as the sample was analyzed slightly outside the holding time due to a sample coordination error.
- The M1 BOD result for the sample collected on June 5, 2007 was qualified as estimated with potential high bias due to detects in the method blanks.

Also note that some of the low-level organics data is reported below the MRL but above the MDL and is subsequently qualified with "J" for estimated. Other than as noted above, none of the other low-level organics data were qualified. All data are usable as reported or with associated qualifiers. No data were rejected.

DATA EVALUATION

Long-term trend analysis will be completed at a future date to be determined. The results from this evaluation will be presented in a separate document.

CONCLUSIONS

Grab and composite stormwater samples were collected during three storm events at each of the three sampling locations, except for S45U Event 3 where no field parameters were measured (see above). The current MS4 monitoring plan requires at least two events at each site. Storm criteria were met during all sampling efforts except that the rainfall totals for the first event at S45U and second event at M1 were less than specified, and less than 75% of the storm was captured during the third event at S45U. However, all samples collected were still generally representative of storm events monitored, therefore, sampling objectives for FY 2006-07 were met. All analytical data are considered usable except as noted above.

GENERAL

The Field Operations and Investigations and Monitoring Services sections of BES prepared this summary report. For any questions concerning this report, contact Aaron Wieting at 503-823-5437.

Comments:
QA/QC: Results for PAH compounds Fluoranthene and Pyrene may be high estimates; these compounds were detected in the method blank at concentrations more than one tenth the amounts found in the sample. LAB: Reporting limits for PCB Arochlors are higher than requested due to communication error. The MDL for each Aroclor is 0.083 ug/L, and none were detected at the MDL level.

Proj./Company Name: NPDES STORMWTR WQ & FLOW MON
Address/Location: 4900 NW KITTRIDGE AVE (OF19) MANHOLE COMPOSITE
Sample Point Code: OF19
Sample Type: COMPOSITE
Sample Matrix: STORMWTR

Report Page: Page 3 of 4
System ID: AK09942
EID File # : 4010.001
LocCode: NPDESSTM
Collected By: MJH/LAP

Comments:
QA/QC: Results for PAH compounds Fluoranthene and Pyrene may be high estimates; these compounds were detected in the method blank at concentrations more than one tenth the amounts found in the sample. LAB: Reporting limits for PCB Arochlors are higher than requested due to communication error. The MDL for each Aroclor is 0.083 ug/L, and none were detected at the MDL level.

Comments:
QA/QC: Three semivolatile compounds on the full-scan list exhibited slightly low recoveries in the LCS and LCS duplicate. One of the two surrogate compounds for PCB analysis recovered low in the sample, but a second surrogate (Decachlorobiphenyl) had acceptable recovery. All other QC parameters had acceptable results. Results are reported down to method reporting limits. Lower traces of some organic parameters were detected, notably Pentachlorophenol and PCB Aroclor 1260. These estimated values are listed on the original report from STL, Inc.

QA/QC: Three semivolatile compounds on the full-scan list exhibited slightly low recoveries in the LCS and LCS duplicate. One of the two surrogate compounds for PCB analysis recovered low in the sample, but a second surrogate (Decachlorobiphenyl) had acceptable recovery. All other QC parameters had acceptable results. Results are reported down to method reporting limits. Lower traces of some organic parameters were detected, notably Pentachlorophenol and PCB Aroclor 1260. These estimated values are listed on the original report from STL, Inc.

DAILY FIELD REPORT

Project NPDES Stormwtr | Project No. 4010.001
Location OF19, M1 | Date 11/1/06
Subject FY06-07 Event 1 setup | By WM, MJS

1016 Arrive on site to setup for 0.5" anticipated storm event. Uploaded FM which has been logging since previous visit on 10/25 site file: 11011029.FEY Hydrograph looks good, weather has been mostly dry since last visit

Programmed meter w/ trigger volume of 7759 cf. Meter level currently 0.9". MJS entered, manual level 1.1", cleaned sensor - meter responded. Manual/meter in agreement.

Decontaminated sampler w/ following steps:
① Alconox non-phosphate soapy rinse ② Tap water rinse ③ Acetone wash ④ DI water rinse ⑤ 10% Nitric acid wash ⑥ Ultrapure DI water rinse.
Lowered sampler w/ new battery, MJS calibrated sampler at bottom of MH, confirmed kink-free Teflon-lined tubing. New battery installed on meter - started programming. Started sampler.
1128 Left site.

1430 - On site @ M1. Uploaded meter, nothing significant in data - dry weather since visit on 10/25. Decontaminated sampler w/ following steps: ① Alconox non-phosphate soapy rinse ② Tap water rinse ③ ~~Acetone~~ WM wash ④ DI water rinse ⑤ 10% nitric acid wash ⑥ ultrapure DI rinse.
Calibrated sampler programmed flow meter w/ a trigger volume 3689 cf based on 0.5" anticipated rain. New batts. Ready to go.

DAILY FIELD REPORT

Project NPDES Stormwtr
Project No. 4010.001
Location OF19, M1
Date 11/2/06
Subject FY06-07 event 1
By JJM, MJH

0759 Arrive @ OF19 after approx. 0.17" of rain. Sampler is running, filled bottle 1. Meter level is 6.4". Meter is pacing sampler based on 0.5" of rain, therefore sampler program should ~~be~~ have filled at least 3 to 4 bottles. However, this event is the first substantial rainfall of the season and the basins pervious surfaces may be absorbing most of the precipitation.

0812 Collected grab samples, returned sampler to staging platform @ bottom of MH. Programming/trigger volume not adjusted as more rain is forecasted for remainder of the day.

0826 Left site

0850 Arrive @ M1 after approx. 0.19" of rain. Sampler is pacing perfectly - 11,000 cf of flow via totalizer which is consistent w/ trigger volume of 3689cf based on 0.5" of rain. Sampler has collected 1 full bottle after approx. 12,000 cf of flow since yesterday's visit. No grabs collected, no rain during visit. Returned sampler/meter to MH. Will return later as more rain is expected.

1115 Returned to M1 after substantial rain in NE PDX. Rain has subsided to light showers. Sampler has collected 2 1/3 bottles. ~~Will wait for sampler to finish bottle 3.~~ swap

1117 Collected grab samples and field parameters. Meter flow totalizer @ 26 cf (x 1000) - will take more than 40 min @ current flow rate to finish bottle 3. Recorded sampler trigger times, swapped bottles/sampler battery. Re-staged equipment

Attachments

1134 Left site.

DAILY FIELD REPORT

Project NPDES Stormwtr
Location OF19
Subject FY06-07 Event 1

Project No. 4010.001
Date 11/2/06
By JJM, MJH

1237 Arrive @ OF19. Sampler has filled 3 1/3 bottles. Sampler display reads "errors have occurred". Paused sampler to record trigger times. Sampler aliquot volume is less than 600mL approx. 300mL at each trigger. Full bottle volume is more like 900mL not 1800mL.
Sampler had "No More Liquid" error @ 1035, therefore bottle 7 had two aliquots, volume ≈ 600mL total.
Swapped bottles, left calibration as is - expecting more rain.
Meter totalizer at 83,000 cf and pacing perfectly.
~~1251 Returned equipment, left site.~~
↳ After staging sampler, JJM entered to ensure Teflon-lined tubing is free of obstruction/kinks. Tubing is in good shape, had sampler take a grab sample into a graduated cylinder volume 350mL which is consistent w/ aliquots taken ~~previously~~ this morning. Left calibration w/out altering.
1309 Now, left site.
1328 Arrive @ WPCL, stored samples in cooler.

Next time, double head in sampler programming.

Project NDPES STORM WATER MON
Location OC19, M1
Subject FIELD NOTES - EVENT 1

Project No. 4010.001
Date 11/3/06
By MJJ

0730 SUBMIT YESTERDAYS GRABS TO THE WPCL LAB

0852 ARRIVE AT M1, PROGRAM STILL RUNNING SAMPLER ON BOTTLE 8. STOP SAMPLER, RECORD ALIQUOT TIMES DOWNLOAD METER. BOTTLES HAVE GOOD VOLUME AMOUNTS IN THEM.
REMOVED BATTERYS FROM METER AND SAMPLER.

0910 GO TO OC19.

0948 ARRIVE AT OC19. SAMPLER WAITING ON BOTTLE 8, SECOND ALIQUOT. REMOVED BOTTLE FROM SAMPLER.
SAMPLER SET TO PDT!
ALL ALIQUOT TIMES ARE IN PDT.
DOWN LOAD METER.
BATTERIES REMOVED FROM METER + SAMPLER.

1047 RETURN TO WPCL, ORGANIZE BOTTLES.

1136 SAMPLES SUBMITTED TO WPCL LAB FOR ANALYSIS.

NOTE: SSC ANALYSIS ON M1C

LABORATORY ANALYSIS REPORT

Sample ID: **FO061423** **Sample Collected:** 11/2/2006 04:18 **Sample Received:** 11/03/06 **Sample Status:** **COMPLETE AND VALIDATED**

Proj./Company Name: NPDES STORMWTR WQ & FLOW MON
Address/Location: 4900 NW KITTRIDGE AVE (OF19) MANHOLE COMPOSITE
Sample Point Code: OF19
Sample Type: COMPOSITE
Sample Matrix: STORMWTR

Report Page: Page 1 of 4
System ID: AK09942
EID File # : 4010.001
LocCode: NPDESSTM
Collected By: MJH/LAP

Comments:
QA/QC: Results for PAH compounds Fluoranthene and Pyrene may be high estimates; these compounds were detected in the method blank at concentrations more than one tenth the amounts found in the sample. LAB: Reporting limits for PCB Arochlors are higher than requested due to communication error. The MDL for each Aroclor is 0.083 ug/L, and none were detected at the MDL level.

ANALYTICAL REPORT

Job Number: 580-4193-1

Job Description: Semivolatiles-city of Portland

For:
TestAmerica Analytical Testing Corp
9405 SW Nimbus Ave
Beaverton, OR 97008

Attention: Howard Holmes

Heather Curbow
Project Manager I
hcurbow@stl-inc.com
11/22/2006

cc: Aaron Wieting

Project Manager: Heather Curbow

STL Seattle is a part of Severn Trent Laboratories, Inc.

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender immediately at 253-922-2310 and destroy this report immediately.

Case Narrative for job: 580-J4193-1

Client: TestAmerica Analytical Testing Corp
Date: 11/22/2006

8270C Semivolatile
The recovery of several analytes exceeded quality control limits in the LCS and LCSD. Minimal outliers are expected in full volatile list analyses. The method blank and surrogate recoveries were within control limits. No further action was taken on this outlier.

8082 PCB
LCS/LCSD Aroclor spike recoveries were high, but the sample was ND for Aroclors.

Login Number: 4193

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	NA	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

DAILY FIELD REPORT

Page 1 of 4

Project NPDES | Project No. 4010.001
Location OF 19 M 1 | Date 11-17-06
Subject FIELD NOTES | By MDJ

11-17-06 0800 ASSEMBLE EQUIPMENT NEEDED TO PREPARE M1 AND OF 19 FOR A STORM SAMPLING EVENT EXPECTED TO ARRIVE SUNDAY. DJH TALKS TO ERF AND HE INFORMS ME TO EXPECT 0.7-0.9" OF RAIN. USE SPREADSHEETS TO CALCULATE TRIGGER VOLUMES FOR 0.75" OF EXPECTED RAIN FALL

0830 HELP JEREMIAH W/ COMPOST SAMPLING AT SUNDERLAND rd.

1115 ARRIVE AT M1. DECON SAMPLE TUBING USING SOAP/TAP/NITIC/DI/NANOPURE SOLUTIONS. NO CHANGES MADE TO ISCO SAMPLER PROGRAMMING
LEVEL SENSOR IS MALFUNCTIONING SWAP" OUT. PROGRAM METER FOR TRIGGER VOLUME OF 5547 CF.
INSTALL 8 BOTTLES IN SAMPLER W/ LIDS OFF, LABELED M1-1 THRU M1-8. START PROGRAM. "Log3, Bottle1"
NEW BATTERIES ON EVERYTHING. METER AND SAMPLER RUNNING. UPON DEPARTURE.

1:15 DEPART M1 FOR WPCL.

2:30 ARRIVE AT OF 19 W/ MJS.
Lift sampler and meter to surface.
DECON SAMPLE TUBING W/ SOAP-TAP-NITRIC-DI-ACETON-NANOPURE SOLUTIONS.
SAMPLER LOOKS GOOD. INSTALL GLASS BOTTLES LABELED THRU 8

Project NPDES STORM MON
Project No. 4010.001
Location
Date 11-17-06
Subject FIELD NOTES
By MJP

METER LOOKS OK. MATT ENTERS MH. CHECK LEVEL. METER MATCHES NICELY.
ENTER TRIGGER VALUE OF 6466. LEVEL IS AT 2.3". SET THE LEVEL ENABLE VALUE TO BE GREATER THAN 4.0".
MATT CHECKS THE SAMPLER ALIQUOT SIZE WHILE SAMPLER IS AT BOTTOM OF MH. LOOKS GOOD.
MATT RIGS SAMPLE TUBING TO AVOID ANY KINKING.
EVERYTHING LOOKING GOOD. SAMPLER PROGRAM STARTED.

1530 OPS SITE BACK TO LAB.

DAILY FIELD REPORT

Project NPDES stormwtr Mon | Project No. 4010.001
Location M1 - NE 122nd Ave | Date 11/20/06
Subject Event 2 Capture. | By TJM, RCB

0950 M1 Arrived on site to check status of Event 2. Hydra rain gage indicates " of rain fell since setup on 11/17. Sampler display reads "Program Disabled." Program report:-

1311 11/17 Started
1314 11/17 Disabled
1317 11/17 Enabled
1319 11/17 Disabled
0735 11/19 Enabled (Sunday)
2154 11/19 Disabled — no aliquots collected!? Uploaded FM, no velocity data logged; velocity flat line throughout hydrograph. Level data are excellent, sensor is bad. Entered MH to replace sensor

DAILY FIELD REPORT

Page 4 of 4

Project NPDES Stormwtr Mon
Location OF 19 - NW Kittridge & Front
Subject Event 2

Project No. 4010.001
Date 11/20/06
By JJM, RCB

OF19 1122

Arrive @ OF19 after approx. 0.47" rain. Sampler appears to have been paced successfully, however bottle volume varies; seven bottles have sample, w/ variation in volume. Uploaded meter sampler report shows that all aliquots were successfully collected. Volume discrepancy most likely due to sampler pulling aliquots entrained w/ air.

~~1145~~ Left site

1151 Submitted samples to lab.

ANALYTICAL REPORT

Job Number: 580-4322-1

Job Description: Semivolatiles-city of Portland

For:
TestAmerica Analytical Testing Corp
9405 SW Nimbus Ave
Beaverton, OR 97008

Attention: Howard Holmes

Terri L Torres
Project Manager II
ttorres@stl-inc.com
12/06/2006

cc: Aaron Wieting

Project Manager: Heather Curbow

STL Seattle is a part of Severn Trent Laboratories, Inc.

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender immediately at 253-922-2310 and destroy this report immediately.

Case Narrative for job: 580-J4322-1

Client: TestAmerica Analytical Testing Corp
Date: 12/07/2006

Method: 8082 Polychlorinated Biphenyls (PCBs) by Gas Chromatography
Analytical Batch: 580-13511
Affected Sample: LCSD 580-13417/3-AA

The recoveries of PCB-1016 and PCB-1260 exceeded quality control limits in the LCSD. The associated LCS was within control limits. The recovery of this compound in the LCSD was high and the analyte was not detected in the associated sample. No further action was taken on this outlier.

DAILY FIELD REPORT

Page 1 of 3

Project NPDES Stormwater WQ: FM
Location NW, NE, SE Portland
Subject

Project No. 4010.001
Date 2/14/2007
By TJM, MJS

BF 19 0936 Arrive to setup for anticipated 0.5" storm event. Meter currently running for Stormwater System FM project. Halted meter, programmed w/ trigge/pacing volume of 6897 cf w/ low level setpoint enable at 3.5" (baseflow currently 2.9"). Decon'd tubing w/ non-phosphate soapy, tap, organics wash (acetone 5%), tap, nitric acid wash (10%), DI water, ultrapure DI. Calibrated aliquot volume. Initiated program, left site.

S450 1005 Arrive to setup for anticipated 0.8" storm event. Meter/sampler appear to have worked perfectly during last attempt which was discarded due to insufficient storm volume. Programmed meter w/ pacing volume of 5335 cf. Baseflow currently 3.0", programmed low level setpoint enable at 3.5". Decon'd sampler tubing w/ soapy, tap, nitric, DI, ultrapure DI. Initiated program, left site.

MI 1108 Arrive to setup for anticipated 0.8" storm event, w/ pacing volume of 5917 cf. Baseflow is currently 0.4" as expected, so low level setpoint enable of 1.0" will suffice. Decon'd tubing w/ soapy, tap, nitric, DI water, ultrapure DI water. Initiated sampler and meter, left site.

DAILY FIELD REPORT

Page 2 of 3

Project NPDES Stormwtr Mon
Location NE
Subject

Project No.
Date 2/15/2007
By JJM, MJS

0933 Arrive @ MI after minimal rainfall since previous visit. Rain is currently moderate w/ ample curb runoff. Sampler has collected 6 aliquots (2 full bottles). Recorded aliquot times. First aliquot was "No Liquid Detected". Meter appears to be pacing sampler accurately.
0939 Collected Grab samples FO 070193
Swapped composite bottles, restarted sampler on bottle 3.
0958 Left site

1037 Arrive @ SA5U. Steady rain currently, ample and turbid curb runoff. Sampler has filled 3 + 1/3 bottles. Recorded aliquot times and swapped in 4 decond bottles.
1041 Collected Grab samples. FO 070194
Restaveted sampler on bottle 5.
1050 Left site

1130 Arrive @ OF19. heavy rain currently. Sampler program complete. Recorded aliquot times, all bottles @ 1800ml w/ last aliquot collected @ 1110. Swapped in decond bottles and restarted sampler program.
1145 Collected grab samples. FO 070195
1155 Left site.

Proj./Company Name: NPDES STORMWTR WQ & FLOW MON
Address/Location: 4900 NW KITTRIDGE AVE (OF19) MANHOLE COMPOSITE
Sample Point Code: OF19
Sample Type: COMPOSITE
Sample Matrix: STORMWTR

Report Page: Page 1 of 4
System ID: AL01611
EID File # : 4010.001
LocCode: NPDESSTM
Collected By: MJS/JJM

Comments:
QA/QC: Three semivolatile compounds on the full-scan list exhibited slightly low recoveries in the LCS and LCS duplicate. One of the two surrogate compounds for PCB analysis recovered low in the sample, but a second surrogate (Decachlorobiphenyl) had acceptable recovery. All other QC parameters had acceptable results. Results are reported down to method reporting limits. Lower traces of some organic parameters were detected, notably Pentachlorophenol and PCB Aroclor 1260. These estimated values are listed on the original report from STL, Inc.

Case Narrative for job: 580-J5008-1

Client: TestAmerica Analytical Testing Corp
Date: 03/09/2007

Method: 8270C
The recovery of Diethyl phthalate and 3,3'-Dichlorobenzidine exceeded quality control limits in the LCS and LCSD. Minimal outliers are expected in full semivolatile list analyses. The method blank and surrogate recoveries were within control limits. No further action was taken on these outliers.

The recovery of N-Nitrosodiphenylamine exceeded quality control limits in the LCS. The associated LCSD was within control limits. No further action was taken on this outlier.

METHOD SUMMARY

Client: TestAmerica Analytical Testing Corp Job Number: 580-5008-1

Description	Lab Location	Method	Preparation Method
Matrix: Water			
Semivolatile Compounds by Gas Chromatography/Mass Spectrometry (GC/MS)	STL SEA	SW846 8270C	
Separatory Funnel Liquid-Liquid Extraction (Low	STL SEA		SW846 3510C
Semivolatile Organic Compounds by GC/MS (Selective Ion Monitoring)	STL SEA	SW846 8270C	
Separatory Funnel Liquid-Liquid Extraction (Low	STL SEA		SW846 3510C
Polychlorinated Biphenyls (PCBs) by Gas Chromatography	STL SEA	SW846 8082	
Separatory Funnel Liquid-Liquid Extraction	STL SEA		SW846 3510C

INTRODUCTION

This report presents the results of the nine discrete storm sampling events conducted at three different mixed land use stations in fiscal year (FY) 2007-08 to comply with the City of Portland's (City) National Pollutant Discharge Elimination System (NPDES) municipal stormwater discharge (MS4) permit. For this project, these monitoring events represent M1 Events 46 through 48, OF19 Events 7 through 9, and S45U Events 4 through 6. Samples were also collected for additional analyses to support other City Programs and objectives:

OF19: Portland Harbor Superfund Program
M1: Columbia Slough Sediment Program (first two events only)
S45U: evaluate TMDL and 303(d) list parameters for Johnson Creek

The Environmental Investigations Division performed the work for the Environmental Management Division's Regulatory/Policy section.

BACKGROUND INFORMATION

In 1991, the City implemented a stormwater monitoring program as required by the municipal NPDES stormwater discharge permit application process. Ten stations throughout the city representing residential, commercial, industrial, state highway corridor, open space, and mixed land uses were selected for stormwater monitoring. In FY 1996-97, the monitoring plan was reduced to four land use stations so limited City resources could be allocated to other stormwater monitoring projects. Three of the four selected stations represented instream conditions, providing an overall measure of water quality in the watersheds. The fourth station, site M1, is an in-pipe monitoring point located in a subbasin pilot project area (City outfall 100 basin), which is the site of several planned stormwater treatment facilities. In FY 1999-00, one of the three instream sites was dropped in order to fund a best management practice (BMP) monitoring project in that watershed. In FY 2002-03, the two remaining instream sites were dropped from the monitoring plan leaving only the in-pipe location for continued monitoring for this project.

City of Portland stormwater outfall (OF19) was added to the monitoring program to represent industrial areas and stormwater discharges to the Lower Willamette watershed. OF19 historically has been monitored to identify potential sources of industrial stormwater pollution and to measure the effectiveness of the City's Industrial Stormwater Program. The Industrial Stormwater Program was developed in response to 40 CFR 122.26 "Storm water discharges", which requires certain municipalities to implement a program to control and monitor stormwater runoff associated with industrial activity. OF19 has been monitored for at least three events per year since FY 1998-99. The list of analyses for samples collected at OF19 has been expanded to meet the objectives of both programs.

S45U was added in FY 2006-07 as a sampling location representative of stormwater discharges to Johnson Creek. S45U was monitored previously for five storm events as part of the Johnson Creek Pesticide Source study conducted in FY 2003-04. Overviews of the current monitoring locations are shown in Figures 1 and 2A through 2C.

SAMPLING LOCATIONS, FIELD PROCEDURES, AND ANALYTICAL PARAMETERS

Sample collection and field parameter measurements are performed by the BES Field Operations section. The BES Water Pollution Control Laboratory (WPCL) provides primary analytical services. Selected analyses are performed by Test America in Beaverton, Oregon, Columbia Analytical Services (CAS) in Kelso, Washington, and Pace Analytical Services in Minneapolis, Minnesota.

Sampling Locations

The remaining monitoring site selected from the original ten land use stations is considered to best represent urban stormwater runoff quality from a mixed land use area. Site M1 (OF100), located at 5241 NE 122nd Ave., is an in-pipe sampling location receiving runoff from 144 acres of residential, commercial, industrial, and open space land uses. The sampling site is located in a 60-inch municipal separate storm sewer pipe accessed by a manhole on the west shoulder of NE 122nd Avenue. A site map is provided in Figure 3A.

OF19 is ranked by the City as one of the "Top Ten" outfalls for potential impacts on water quality and the outfall basin contains a significant number of industrial facilities. Monitoring is conducted in the 475-acre outfall 19 basin located in northwest Portland (Figure 2B). The basin is approximately 20 percent impervious due to significant industrial land use. Stormwater from this basin discharges to the Willamette River through a 42-inch outfall. The sampling manhole is located on the northwest corner of the intersection at NW Front and Kittridge Avenues (Figure 3B). Sampling and flow monitoring are performed in the 42-inch outlet pipe of this manhole.

S45U is located in the Johnson Creek watershed and represents a mix of residential, commercial, and industrial land use. The sampling manhole is located in the intersection of SE Umatilla and SE 45th Avenue, just upstream of City of Portland outfall JCF (Figure 3C). Stormwater from this basin discharges to Johnson Creek through a 48-inch outfall.

Field Procedures

Storm Criteria

In order to meet the data quality objectives of this project, monitoring is attempted for storms that are predicted to fulfill specified criteria. Currently, these criteria include a 6-hour antecedent dry period and a minimum of 0.20 inches of precipitation in a 12-hour period for the M1 and S45U sampling locations. For the OF19 site, the criteria include a 72-hour antecedent dry period and a minimum 0.20 inches of precipitation over a 3 to 24-hour sample collection period. An antecedent dry period is defined as less than 0.10 inches of precipitation in the specified period preceding the storm event.

Flow Monitoring

All three sites have uniformly shaped pipes, well suited for electronic flow quantification. Flow monitoring data are obtained through the use of a Sigma 950 Flow Meter. The flow sensor in the pipe collects level and velocity data, which are used in conjunction with pipe geometry information to calculate flow using the area-velocity method. During a sampling event, the flow meter calculates and records data at five-minute intervals.

Water Quality Sampling

Grab Samples
Grab samples are collected with a decontaminated stainless steel bailer attached to a telescoping sampling pole. The bailer is rinsed once with water from the sampling stream prior to filling the sample bottles and measuring the field parameters. Oil and grease samples are collected directly into the sample bottles.

Composite Samples
An Isco 6700 Portable Sampler is used for composite sample collection. All three sites are located in storm sewer lines where a sampler and a flow meter are secured in a manhole. Teflon-lined tubing extends from the sampler onto the pipe floor, where a stainless steel sample head is secured. For samples where low-level organics analyses are not required, reinforced vinyl tubing is used. The sampler utilizes a peristaltic pump to draw sample up the tubing and distribute it into composite bottles in the sampler base.

The flow meter is programmed to trigger the sampler every time a specified volume flows past the sensor. In an attempt to divide the storm runoff into 24 volume-proportioned aliquots, the trigger volume is calculated as one twenty-fourth of the expected runoff volume for the event. The expected runoff is calculated using the predicted rain amount for the event, basin size and a basin-specific runoff coefficient. For OF19 and S45U, the flow meters are programmed to activate the sampler when the water level rises from base flow level to the predetermined trigger level. In order to prevent the sampling program from activating during the minor level increases that often occur before the main storm arrives, a minimum of 0.5 inches is added to the base flow level when calculating trigger level. Eight 1.9-liter organics decontaminated glass composite bottles are used in the samplers. Decontaminated plastic composite bottles are used when low-level organics analyses are not required. For each trigger sent from the flow meter to the sampler, one 600-milliliter aliquot is pumped into a composite bottle. Each bottle receives three aliquots, whereupon the sampler distributor arm advances to the next bottle. Full bottles are removed and replaced with empty bottles as necessary over the course of the event. The number of aliquots collected may vary from the desired 24 as storm event rainfall totals often vary significantly from predictions. At the end of the event, a final composite is created by combining bottles that represent greater than 75 percent of the storm flow as recorded by the meter. Representative bottles are combined into a Teflon-lined churn splitter where analyte-specific sample bottles are then filled from a spigot during churn agitation.

Decontamination Procedures

All equipment that comes in contact with water samples is decontaminated in accordance with Field Operations SOP 7.01a – Decontamination of Sampling Equipment by the following procedure.

1. Wash in non-phosphate detergent (e.g., Alconox Detergent 8 or Liqui-nox).
2. Rinse in tap water.
3. Rinse in 10 percent nitric acid.
4. Rinse with deionized water.
5. Rinse with 10 percent Acetone solution.
6. Rinse with ultrapure water.

Prior to the storm event, both the peristaltic pump tubing and reinforced vinyl tubing at M1 is decontaminated by pumping through the same series of solutions listed above. Step 5 is skipped when low-level organics analyses are not required.

Analytical Constituents

Grab Samples

Grab samples are monitored in the field for conductivity, pH, and temperature using portable analytical meters. Dissolved oxygen is no longer measured. Grab samples are submitted to the laboratory for analysis of *Escherichia coli* and total oil and grease. Nonpolar oil and grease is measured if total oil and grease is greater than or equal to 10 milligrams per liter (mg/L).

Composite Samples

Composite samples are submitted to the laboratory for analysis of ammonia-nitrogen, nitrate-nitrogen, orthophosphate phosphorus, total dissolved solids, total phosphorus, total solids, total suspended solids, hardness, total metals (chromium, copper, lead, and zinc) and dissolved metals (copper, lead, and zinc). Additional samples from each site were submitted for selected analyses and analytes as follows:

M1: PAHs, organochlorine pesticides, and PCB Aroclors (Events 46 and 47 only)
OF19: PAHs, SVOCs, PCB Congeners, and arsenic, silver, cadmium, and chromium
S45U: PAHs, organochlorine pesticides, and PCB Aroclors

WEATHER AND SAMPLING SUMMARY

The following section summarizes the weather and sampling information for each of the three events. Weather forecasts were obtained through the City-contracted ERF Company, Inc (ERF). Tables 1 through 3 present the complete rain gauge data as recorded by the City's Hydrological Data Retrieval and Alarm System (HYDRA) for the three storm events and the corresponding 72-hour antecedent dry periods for the three sampling locations. Rainfall data from HYDRA is reported as hourly totals. While City rain gauges provide the best available estimation of rainfall at monitoring sites they can be located several miles from study areas. Hence, rain gauge data may not accurately depict rainfall conditions at particular sites, especially during events with sporadic, localized rain activity.

Gauge 111 (NE Airport Way) is used for the M1 sample location and is located approximately one and a half miles west of the monitoring site. The previous rain gauge used for M1, Gauge 9 (PDX Business Park), was retired on September 21, 2004. Gauge 121 (Yeon) is used for monitoring site OF19 and is located within two miles of the sampling site. For monitoring conducted at OF19 for the Industrial Stormwater Program, rainfall at OF 19 was formerly estimated as an average of rainfall totals measured at Gauges 121 and 125 (Guilds Lake). Gauge 125 was retired on March 23, 2005. No additional gauges were used for rainfall estimates in the area since Gauge 121 and former Gauge 125 are the only gauges in the vicinity of the sampling site that represent the slight rain shadow caused by the West Hills in the NW industrial district. Gage 64 (2033 SE Harney St) is used for S45U and is located approximately 1.4 miles west of the monitoring location.

The river level gauge at Ankeny Pump Station is used to determine Willamette River levels in order to insure that river water has not backed up into the outfall sampling location. The river level must be below 20 feet above mean sea level to avoid potential commingling of OF19 stormwater with Willamette River water. River level data during sampling are shown in Figure 4 (note that there are five plots since two of the grab samples were collected separately from composite samples). River levels are measured approximately once per minute. All times in this report text, figures and tables are listed in 24-hour, Pacific Standard Time.

Events Summary

Summaries of antecedent, storm event, and sample collection time rainfall for the three monitoring locations are presented in Table 4. Additional information regarding each monitoring event is

summarized below and includes specific comments for each event and descriptions of any deviations from proposed monitoring.

Sampling equipment including bailers and composite samplers are typically decontaminated, calibrated, and programmed during the 24 hour period prior to a predicted storm event. Sampling preparation may occur up to 72 hours prior to predicted weekend storm events. Final composite samples are prepared by combining all aliquots into a churn splitter in the laboratory and subsequently filling analyte-specific bottles through churn agitation. A Teflon churn splitter was used for all composite samples that are submitted for low-level organics analyses.

Sampling went smoothly for all events and no significant problems were encountered except as described below. Storm durations were generally captured and storms are well-represented by composite samples.

M1 Events Summary

Events 46 through 48: No problems encountered.

OF19 Events Summary

Event 7: The storm event duration of 2 hours, 39 minutes was slightly less than the desired minimum duration of 3 hours specified for Industrial Stormwater Program monitoring. However, the rising limb, peak, and falling limb were caught and the rainfall total of 0.32 inches exceeded the minimum of 0.20 inches. Subsequently, the composite sample was considered a good representation of a short-duration storm event with a distinct peak. No other problems were encountered.

Event 8: No problems encountered.

Event 9: Antecedent rainfall exceeded 0.10" in 72 hours, though accumulation was less than 0.10" in the 55 hours prior to sampling. Therefore, storm criteria for MS4 permit sampling were met; though, Industrial Stormwater storm criteria were not. However, FY 2007-08 is an off-year for Industrial Stormwater.

During sampling events, the river level must be below 20 feet in elevation to prevent commingling of river water with stormwater at the OF19 sampling location. The river level was below 10 feet in elevation during all sampling activities including both grab and composite sampling. River elevation plots during sampling efforts are shown in Figure 4.

S45U Events Summary

Event 4: No problems encountered.

Event 5: No problems were encountered other than eight missed triggers at the beginning of the storm due to delayed program enable and six missed triggers at the end due to all autosampler bottles being full. A total of 57 aliquots were collected by the autosampler, and the rainfall total during sample collection was greater than 75% of the storm, therefore, the sample still met the sampling criteria.

Event 6: No problems encountered.

MONITORING AND SAMPLING RESULTS

Hydrographs summarizing flow, rainfall, and sampling information for each storm event are presented in Figures 5A through 7C. The individual sample triggers sent from the flow meters to the samplers, which represent aliquots of the composite samples, are represented by the ▲ symbol on the x-axis of the graph. The grab sample collection times are also included on the graphs.

Tables 5A through 7B present a summary of all field and laboratory analytical data for the three events. Since the PCB Congener data is not currently entered into LabWorks or Janus, the Pace laboratory reports are included as an attachment to this report. The complete Laboratory Analysis Reports and chain-of-custody records are kept on file at WPCL. Refer to the laboratory reports for information regarding the analytical methods used for all analyses and the corresponding method reporting limits. Note that in Table 6B, PAHs are reported twice for the OF19 site with two different sets of method detection limits. PAHs were reported as part of the full EPA Method 8270 suite; however, in order to achieve lower detection limits for PAHs using the 8270 SIM method, the instrument must be calibrated for a narrower range such that only PAHs are reportable. PAH data usability issues are discussed below.

DATA VALIDATION & USABILITY

No problems were encountered with data quality except for the following:

Sample Date	Sample Location	Issue	Analysis	Analyte	Actions Taken, Comments
11/26/07	OF19, M1, S45U	method blank contamination	pesticides	4,4'-DDT beta-BHC	Analytes not detected in associated samples, no action taken
11/26/07	OF19	method blank contamination	SVOCs	di-n-butyl phthalate (1.1 ug/l)	OF19 Event 7, sample concentration 0.52 ug/l, qualified with "UB" to indicate blank concentration exceeded sample concentration
11/26/07	OF19	split sample precision failure	SVOCs/ PAHs	bis (2-ethyl-hexyl) phthalate (SVOCs 3.2 ug/l, PAHs 173 ug/l)	split samples sent to different labs to achieve lower MDLs for selected analytes—gross precision failures likely due to laboratory contamination based on issues documented for analyses performed for UIC Program. Both results qualified as estimated, high result qualified as "JH" for high bias.
1/8/08	M1, S45U	method blank contamination	SVOCs	bis (2-ethyl-hexyl) phthalate (0.819 ug/l)	M1 Event 47 and S45U Event 5 sample concentration 2.71 and 1.19 ug/l, qualified with "JB" to indicate sample concentrations less than 10x blank concentration

Sample Date	Sample Location	Issue	Analysis	Analyte	Actions Taken, Comments
3/7/08	OF19	method blank contamination	PAHs	pyrene (0.0286 ug/l)	OF19 Event 8, sample concentration 0.126 ug/l, qualified with "JB" to indicate sample concentration less than 10x blank concentration
3/7/08	OF19	split sample precision failure	SVOCs/ PAHs	bis (2-ethyl-hexyl) phthalate (SVOCs 7.3 ug/l, PAHs 2.12 ug/l), butyl benzyl phthalate (SVOCs 7.0 ug/l, PAHs < 1.0 ug/l)	split samples sent to different labs to achieve lower MDLs for selected analytes—gross precision failures likely due to laboratory contamination based on issues documented for analyses performed for UIC Program. Both results qualified as estimated, high results qualified as "JH" for high bias.
3/25/08	OF19	method blank contamination	SVOCs	di-n-butyl phthalate (0.23 ug/l)	OF19 Event 9, sample concentration 0.32 ug/l, qualified with "JB" to indicate sample concentration less than 10x blank concentration

In addition, matrix effects resulted in slightly elevated detection and reporting limits for low-level organochlorine pesticide analyses. Other than as noted above, none of the other low-level organics data were qualified. For the second OF19 event, the sample submitted to Pace Analytical Services for PCB Congener analysis was "lost" by the laboratory. WPCL typically saves leftover composite sample, therefore, additional sample was submitted to Pace for analysis. The current hold time for PCB Congener analysis (EPA Method 1668) is one year.

All data are usable as reported or with associated qualifiers. No data were rejected though phthalate data should be used with caution.

CONCLUSIONS

Grab and composite stormwater samples were collected during three storm events at each of the three sampling locations. The current MS4 monitoring plan requires at least two events at each site. Storm criteria were met during all sampling efforts except that the first event at OF19 was of slightly shorter duration than specified, and there were a number of missed triggers in the second event at the S45U site. However, all samples collected were generally representative of storm events monitored, therefore, sampling objectives for FY 2007-08 were met. All analytical data are considered usable except as noted above.

GENERAL

The Field Operations and Investigations and Monitoring Services sections of BES prepared this summary report. For any questions concerning this report, contact Aaron Wieting at 503-823-5437.

REPORT OF: CHEMICAL ANALYSES

PROJECT: **PCB CONGENER ANALYSES**

DATE: December 21, 2007

ISSUED TO: Test America
Attn: Howard Holmes
9405 SW Nimbus Avenue
Beaverton, OR 97008

REPORT NO: 07-1064070

INTRODUCTION

This report presents the results from the analysis performed on one sample submitted by a representative of Test America. The sample was analyzed for the presence or absence of polychlorobiphenyl (PCB) congeners using USEPA Method 1668A.

SAMPLE IDENTIFICATION

Client ID	Sample Type	Date Received	Pace ID
PQK0981-01	Water	11/30/07	1064070001

RESULTS

The results from the analyses are included in the following:

Appendix A - Documentation
Appendix B - Sample Analysis Results

REPORT OF: CHEMICAL ANALYSES

PROJECT: PCB CONGENER ANALYSES **DATE:** December 21, 2007

 REPORT NO: 07-1064070

DISCUSSION

The recoveries of the isotopically labeled PCB internal standards in the sample extract ranged from 71-163%. With one exception, flagged "P" on the results table, the labeled standard recoveries obtained for the sample were within the target ranges specified in the method. Since the quantification of the native PCB congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCB congeners at the reporting limits. Six internal standard recoveries for the method blank were below the target range for this method. With the one exception noted above, the sample recoveries were within the target range. None of the affected analytes were present within the reporting range for this project. The results show that the sample preparation procedures did not significantly impact the results of the sample analyses.

Laboratory spike samples were also prepared with the sample batch using clean reference matrix that had been fortified with native standards. The results show that spiked native compounds were recovered at 90-115%, with relative percent differences of 0.0-17.0%. These results indicate high degrees of accuracy and precision for these determinations.

REMARKS

The sample extracts will be retained for a period of 15 days from the date of this report and then discarded unless other arrangements are made. The raw mass spectral data will be archived on magnetic tape for a period of not less than one year. Questions regarding the data contained in this report may be directed to the author at the number provided below.

DISCUSSION

This report presents the results from the analyses performed on two samples submitted by a representative of the Test America. The samples were analyzed for the presence or absence of polychlorinated biphenyl (PCB) congeners using USEPA Method 1668A. Reporting limits were set to approximately 0.5 ppt and were corrected for the amount of sample extracted.

The recoveries of the isotopically-labeled PCB internal standards in the sample extracts ranged from 33-85%. All of the labeled standard recoveries obtained for this project were within the target ranges specified in Method 1668A. Also, since the quantification of the native PCB congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCB congeners at the reporting limits. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field samples.

Laboratory spike samples were also prepared with the sample batch using reference material that had been fortified with native standards. The results show that the spiked native compounds were recovered at 88-118%, with relative percent differences of 0.0-17.6%. These results indicate high degrees of accuracy and precision for these determinations.

DAILY FIELD REPORT

FY 07-08 EVENT 1

Project NDDES STORMWATER
Location OF 19
Subject PRE STORM SET UP -

Project No. 4010.001
Date 11/26/07
By DJH

BACKGROUND - DRY FOR 4 6+ DAYS NOW WITH SMALL FRONT FORECASTED FOR TONIGHT (0.2-0.3" TOTAL) BETWEEN 4-10 PM. MSS/JSM ARE PREPPING M1 + S45U WHILE DJH/WCR PREP OF 19.

1500 PST. DJH/WCR ARRIVE AT OF 19 TO SETUP FOR FIRST STORM OF FY 07-08.

FLOW METER - NO BATT ON METER. INSTALLED BATT AND RE-STARTED PROGRAM.
SAMPLER PACING = 2586 CF (0.3" STORM)

CURRENT LEVEL = 1.6", SET "LOW LEVEL SETPT" AT 1.9" AND DEADBAND AT 1.5" (1.5")

- LEVEL ON METER IS ACCURATE NO ADJUST.
- CALIBRATED SAMPLER. FOR 600 mL ALIQUOTS
- DECON TUBING: SOAP, TAP, NITRIC, ORGANICS SOAK, DI, UPDI
- FRESH BATTERY ON SAMPLER FOLLOWING DECON
- TURN SAMPLER, PROGRAM ON; "DISABLED"

1545 - OFFSITE

DAILY FIELD REPORT

Project NPDES Stormwtr WQ: FM
Location NE, SE, NW PDX
Subject FY07-08 Event 1

Project No. 4010.011
Date 11/26/2007, 11/27/07
By TJM, MJS

2049 Arrive @ OF19, rain; showers have ceased entirely, yet still ample elevated flow.
Collected grab sample @ 2054
pH = 7.4, temp = 8.3, cond = 96
Program is done, enabled @

1654	1712	1729	1747	1804	1824	1848	1912
1701	1718	1735	1752	1810	1832	1856	1921
1707	1724	1741	1758	1817	1841	1904	1937
Bottle # 1	2	3	4	5	6	7	8

2106 Restarted sampler on bottle 9.

11/27/07

0943 Arrive @ OF19 after ~0.35" of rain since setup yesterday afternoon. Uploaded FM, hydrograph looks excellent. Meter appears to have paced the sampler perfectly, accurately capturing peak flow. Sampler collected two aliquots in bottle 9 @ 2209 and on 11/27 @ 0917.

1009 Left site

1146 Arrive @ S450. Sampler has collected an additional 9 aliquots in bottles 8-10. Uploaded FM, hydrograph looks great! Meter paced sampler perfectly, capturing entire duration of storm. Recorded bottle 8-10 aliquot times.

1210 Left site

1247 Arrive @ M1, Sampler has not collected any additional aliquots since previous visit. A total of 10 aliquots were collected, insufficient volume for analysis.

January 14, 2008 Analytical Report for Service Request No: K0711118

Jennifer Shackelford
Portland, City of
1120 SW Fifth Avenue # 600
Portland, OR 97204

RE: NPDES Stormwater Mon

Dear Jennifer:

Enclosed are the results of the samples submitted to our laboratory on November 28, 2007. For your reference, these analyses have been assigned our service request number K0711118.

All analyses were performed according to our laboratory's quality assurance program. Where applicable, the methods cited conform to the Methods Update Rule (effective 4/11/2007), which relates to the use of analytical methods for the drinking water and waste water programs. The test results meet requirements of the NELAC standards. Exceptions are noted in the case narrative report where applicable. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3281. You may also contact me via Email at LVo@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Loan Vo, Ph.D.
Project Chemist

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
B	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.
*	The duplicate analysis not within control limits. See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a chromatographic interference.
X	See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	City of Portland	**Service Request No.:**	K0711118
Project:	NPDES Stormwater Mon	**Date Received:**	11/28/2007
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier I data deliverables. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Three water samples were received for analysis at Columbia Analytical Services on 11/28/2007. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Organochlorine Pesticides by EPA Method 8081A

Continuing Calibration Verification (CCV) Exceptions:
The primary evaluation criterion was exceeded for Heptachlor Epoxide, alpha-BHC, gamma-BHC, Heptachlor, Endosulfan Sulfate, Endosulfan II, alpha-Chlordane, gamma-Chlordane, Dieldrin, Endrin, Endosulfan I, Chlorpyrifos, and Methoxychlor in CCV 1217F004, 1217F007, and 1217F037. In accordance with CAS standard operating procedures, the alternative evaluation specified in the EPA method was performed using the average percent recovery of all analytes in the verification standard. The standard meets the alternative evaluation criteria.

Results for gamma-BHC and Endosulfan II in LCS and DLCS of workgroup KWG0713122 have been reported from a column using average percent recovery of all analytes in the verification standard.

Method Blank Exceptions:
The Method Blank KWG0713122-9 contained low levels of beta-BHC and 4,4'-DDT above the Method Reporting Limit (MRL). In accordance with CAS QA/QC policy, all sample results less than twenty times the level found in the Method Blank are flagged as estimated. The samples were not re-extracted and reanalyzed because insufficient sample remained for additional testing.

Elevated Method Reporting Limits:
The reporting limit is elevated for beta-BHC, delta-BHC, 4,4'-DDT, and Toxaphene in samples F0071457 and F001458. The sample extract was diluted prior to instrumental analysis due to relatively high levels of non-target background components. Clean-up of the extract was performed within the scope of the method, but did not eliminate enough of the background components to prevent dilution. (if applicable: A semiquantitative screen was performed prior to final analysis. The results of the screening indicated the need to perform a dilution.) The results are flagged to indicate the matrix interference.

No other anomalies associated with the analysis of these samples were observed.

Approved by LV **Date** 1/14/08

Semivolatile Organic Compounds by EPA Method 8270C

Method Blank Exceptions:
The Method Blank KWG0713135-3 contained low levels of Di-n-butyl Phthalate above the Method Reporting Limit (MRL). In accordance with CAS QA/QC policy, all sample results less than twenty times the level found in the Method Blank are flagged as estimated.

Lab Control Sample Exceptions:
The advisory criterion was exceeded for Hexachlorocyclopentadiene and Di-n-butyl Phthalate in the replicate Laboratory Control Samples (LCS/DLCS) KWG0713135-1 and KWG0713135-2. As per the CAS/Kelso Standard Operating Procedure (SOP) for this method, these compounds are not included in the subset of analytes used to control the analysis. The recovery information reported for these analytes is for advisory purposes only (i.e. to provide additional detail related to the performance of each individual compound). No further corrective action was required.

No other anomalies associated with the analysis of these samples were observed.

Approved by LV **Date** 1/14/08

Notes and Definitions

Report Specific Notes:

RL1 - Reporting limit raised due to sample matrix effects.

Laboratory Reporting Conventions:

DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.

ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).

NR/NA - Not Reported / Not Available

dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.

wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.

RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).

MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.

Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.

Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy.* Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Project NPDES STORMWATER Project No. 4010.001

Location OF 19 (NW KITTRIDGE & FRONT) Date 3/7/08

Subject EVENT 2 SET UP By DJH

BACKGROUND - IT HAS BEEN DRY FOR 74 DAYS. TONIGHT (FRI) A SMALL STORM (0.1-0.15) IS EXPECTED, FOLLOWED BY A LARGER STORM BEGINNING LATE SUN OR MONDAY A.M., TODAY, WE WILL START SAMPLER TO RUN FOR WEEKEND, BUT ASSUME WE MAY NOT RUN SAMPLES COLLECTED TONIGHT.

1230 - MJS/DJH ARRIVE TO PROGRAM, CLEAN + START EQUIPMENT

ARRIVAL METER MEASUREMENTS @ 1241
L = 2.5" V = 1.2 fps F = 0.3 CFS

SET LOW LEVEL SET PT TO 3.5" CA LITTLE HIGHER THAN TYPICAL 0.5"-OVER BASE LEVEL TO AVOID SAMPLING FRT SHOWERS

SAMPLER PACING = 7057 CF = 0.4"

DECON'D TUBING W/ NITRIC + ACETONE
TESTED SAMPLER CAL. = PERFECT
ICE SAMPLER, REMOVED BOTTLE LIDS, STARTED SAMPLER

LABORATORY ANALYSIS REPORT

Sample ID: **FO080358** **Sample Collected:** 3/7/2008 22:07 **Sample Received:** 03/08/08 **Sample Status:** **COMPLETE AND VALIDATED**

Proj./Company Name: NPDES STORMWTR WQ & FLOW MON
Address/Location: 4900 NW KITTRIDGE AVE (OF19) MANHOLE COMPOSITE
Sample Point Code: OF19
Sample Type: COMPOSITE
Sample Matrix: STORMWTR

System ID: AM02348
EID File # : 4010.001
LocCode: NPDESSTM
Collected By: DJH

Comments:
FO: The sample is a stormwater composite collected beginning on 03/07/08 at 2207 and ending on 03/08/08 at 0516. QA/QC: The result for PAH analyte Pyrene should be considered an estimate because this compound was detected in the Method Blank at 0.0286 ug/L.

March 28, 2008 Analytical Report for Service Request No: K0802045

Jennifer Shackelford
Portland, City of
1120 SW Fifth Avenue # 600
Portland, OR 97204

RE: NPDES STORMWTR MON

Dear Jennifer:

Enclosed are the results of the sample submitted to our laboratory on March 10, 2008. For your reference, these analyses have been assigned our service request number K0802045.

All analyses were performed according to our laboratory's quality assurance program. Where applicable, the methods cited conform to the Methods Update Rule (effective 4/11/2007), which relates to the use of analytical methods for the drinking water and waste water programs. The test results meet requirements of the NELAC standards. Exceptions are noted in the case narrative report where applicable. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3281. You may also contact me via Email at LVo@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Loan Vo, Ph.D.
Project Chemist

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
B	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.
*	The duplicate analysis not within control limits. See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a chromatographic interference.
X	See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Case Narrative

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	City of Portland	**Service Request No.:**	K0802045
Project:	NPDES Stormwater Monitoring	**Date Received:**	03/10/08
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory/Duplicate Laboratory Control Sample (LCS/DLCS).

Sample Receipt

One water sample was received for analysis at Columbia Analytical Services on 03/03/08. The sample was received in good condition and consistent with the accompanying chain of custody form. The sample was stored in a refrigerator at 4°C upon receipt at the laboratory.

Semivolatile Organic Compounds by EPA Method 8270C

Elevated Method Reporting Limits:
Sample FO 080358 required dilution due to the presence of elevated levels of target analyte. The reporting limits are adjusted to reflect the dilution.

Sample Notes and Discussion
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

No other anomalies associated with the analysis of these samples were observed.

Approved by Gregory Meletta **Date** 4/1/08

RE: NPDES

Enclosed are the results of analyses for samples received by the laboratory on 03/26/08 13:40. The following list is a summary of the Work Orders contained in this report, generated on 04/30/08 13:19.

If you have any questions concerning this report, please feel free to contact me.

Work Order	Project	ProjectNumber
PRC0836	NPDES	36238

TestAmerica Portland

Howard Holmes, Project Manager

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report shall not be reproduced except in full, without the written approval of the laboratory.

Notes and Definitions

Report Specific Notes:

RL1 - Reporting limit raised due to sample matrix effects.

Laboratory Reporting Conventions:

DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.

ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).

NR/NA - Not Reported / Not Available

dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.

wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.

RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).

MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.

Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.

Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

DAILY FIELD REPORT

Page 1 of

Project NPDES Stormwater FM? WQ
Location NEPDX, SEPDX, NWPDX
Subject FY07-08 Event 3

Project No. 4010.001
Date 3/25/08
By JJM, MJS

Time recorded in PST

0915 Arrive at M1, setup traffic control. On site to setup for anticipated 0.35" storm event forecasted for later this afternoon. Upload flow meter, site file looks representative. Meter level currently 1.3" which is in agreement with manual topside approximation and previous site visits.

0923 Calibrated sampler volume to 600mL aliquots.

0928 Decontaminated tubing with non-phosphate soapy rinse, tap water, nitric acid wash, DI water and Ultrapure DI water.

0935 Programmed flow meter with setpoint enable at 1.55", meter level currently 1.4". Programmed sampler pacing at 1985cf.

0942 Started meter, sampler LCD reads "disabled"

0959 Left site.

1040 Arrive at S450 to setup for anticipated 0.35" storm event. Decontaminated sampler tubing with non-phosphate soapy wash, tap water rinse, nitric acid wash, DI water rinse, Acetone wash, DI rinse, Ultrapure DI rinse.

1055 Programmed flow meter with setpoint enable of 4.5", level currently 4.0". Programmed trigger volume of 3388cf.

1111 Adjusted flow meter up by ~0.5" to match manual reading of 4.0"

1120 Departed site.

1235 Arrive at OF19 to setup for anticipated 0.35" storm event. Entrant decontaminated sampler tubing following the same steps as at S450.

1240 Programmed flow meter sampler pacing at 6175cf. Meter level currently 4.3", manual 4.5". Programmed setpoint enable at 4.8". Ran both programs

1349 Left site.

DAILY FIELD REPORT

Page 1 of

Project NPDES Stormwater Mon. Project No. 4010.001
Location OF 19 Date 3-26-08
Subject Event 3 Stormwater Sampling By DJH, LAP

Background: 3/25/08 set up composite sampler for showery storm forecasted to begin late on 3/25/08 & continue overnight throughout today.

Wx: Rain began @ 1700 hrs. We received 0.19" from 1700 through 2400. Then an intense burst of rain from 0000 through 0300 (0.24" accumulation) afterwhich rain tapers off. YEON RG

0720 PST: DJH & LAP arrive to check sampler. Program complete w/ all 8 bottles full. Last sample collected at 0541 hrs. 3/26/08. Currently not raining & flow has almost returned to baseflow. May have missed one aliquot on falling limb of hydrograph, but storm capture was nearly perfect. (over 95%) Removed all 8 bottles and sampler (since this is the final event of FY 07-08).

* Still need to collect Event 3 grabs when rain returns, possibly later today.

0800 PST: Left site to relinquish samples to the WPCL.

Collected By: DJH/LAP

Comments:
FO: THE SAMPLE IS A COMPOSITE OF ALIQUOTS COLLECTED FROM 1733 ON 03/25/08 THROUGH 0541 ON 03/26/08.
QA/QC: Semivolatile Organic analyte Di-n-butyl Phthalate was detected in the Method Blank at 0.23 ug/L; the result for the sample may be a false positive or high estimate. Benzoic Acid, 2,4-Dinitrophenol, 2-Methyl-4,6-dinitrophenol, Pentachlorophenol, and 3,3-Dichlorobenzidine exhibited low recovery in the LCS and/or LCS duplicate, indicating possible low bias for these compounds.

LABORATORY ANALYSIS REPORT

Sample ID: **FO080442** **Sample Collected:** 3/25/2008 17:33 **Sample Received:** 03/26/08 **Sample Status:** **COMPLETE AND VALIDATED**

Proj./Company Name: NPDES STORMWTR WQ & FLOW MON
Address/Location: 4900 NW KITTRIDGE AVE (OF19) MANHOLE COMPOSITE
Sample Point Code: OF19
Sample Type: COMPOSITE
Sample Matrix: STORMWTR

System ID: AM02955
EID File # : 4010.001
LocCode: NPDESSTM
Collected By: DJH/LAP

Comments:
FO: THE SAMPLE IS A COMPOSITE OF ALIQUOTS COLLECTED FROM 1733 ON 03/25/08 THROUGH 0541 ON 03/26/08.
QA/QC: Semivolatile Organic analyte Di-n-butyl Phthalate was detected in the Method Blank at 0.23 ug/L; the result for the sample may be a false positive or high estimate. Benzoic Acid, 2,4-Dinitrophenol, 2-Methyl-4,6-dinitrophenol, Pentachlorophenol, and 3,3-Dichlorobenzidine exhibited low recovery in the LCS and/or LCS duplicate, indicating possible low bias for these compounds.

Test Parameter	Result	Units	MRL	Method	Analysis Date
2-Chlorophenol	<0.49	µg/L	0.49	EPA 8270	03/28/08

April 18, 2008 Analytical Report for Service Request No: K0802654

Jennifer Shackelford
Portland, City of
1120 SW Fifth Avenue # 600
Portland, OR 97204

RE: NPDES STORMWTR MON

Dear Jennifer:

Enclosed are the results of the samples submitted to our laboratory on March 27, 2008. For your reference, these analyses have been assigned our service request number K0802654.

All analyses were performed according to our laboratory's quality assurance program. Where applicable, the methods cited conform to the Methods Update Rule (effective 4/11/2007), which relates to the use of analytical methods for the drinking water and waste water programs. The test results meet requirements of the NELAC standards. Exceptions are noted in the case narrative report where applicable. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3376. You may also contact me via Email at GSalata@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Gregory Salata, Ph.D.
Project Chemist

GS/lb

DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
B	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.
*	The duplicate analysis not within control limits. See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a chromatographic interference.
X	See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Case Narrative

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	City of Portland	**Service Request No.:**	K0802654
Project:	NPDES STORMWTR MON	**Date Received:**	03/27/08
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory/Duplicate Laboratory Control Sample (LCS/DLCS).

Sample Receipt

Two water samples were received for analysis at Columbia Analytical Services on 03/27/08. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Organochlorine Pesticides by EPA Method 8081A

Matrix Spike Recovery Exceptions:
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

Sample Confirmation Notes:
The confirmation comparison criterion of 40% difference for Endosulfan I and Endrin Ketone was exceeded in sample FO 080448. The higher of the two values was reported when both peaks were within the expected retention time window for this analysis and Gaussian in shape. The lower of the two values was reported when there was an apparent interference on the alternate column that produced the higher value.

Elevated Method Reporting Limits:
The reporting limits are elevated for several analytes in sample FO 080448. The chromatogram indicated the presence of non-target background components. The matrix interference prevented adequate resolution of the target compounds at the reporting limits. The results are flagged to indicate the matrix interference.

No other anomalies associated with the analysis of these samples were observed.

Semivolatile Organic Compounds by EPA Method 8270C

Method Blank Exceptions:
The Method Blank KWG0802876-3 contained low levels of Di-n-butyl Phthalate above the Method Reporting Limit (MRL). In accordance with CAS QA/QC policy, all sample results less than twenty times the level found in the Method Blank are flagged as estimated. The samples were not re-extracted and reanalyzed because insufficient sample remained for additional testing.

Lab Control Sample Exceptions:
The advisory criterion was exceeded for Benzoic Acid and 3,3'-Dichlorobenzidine in Laboratory Control Sample (LCS) KWG0802876-1. The advisory criterion was exceeded for Benzoic Acid, 2,4-Dinitrophenol, 2-Methyl-4,6-

Approved by _____ **Date** 4/21/08

dinitrophenol, and 3,3'-Dichlorobenzidine in Duplicate Laboratory Control Sample (DLCS) KWG0802876-2. As per the CAS/Kelso Standard Operating Procedure (SOP) for this method, these compounds are not included in the subset of analytes used to control the analysis. The recovery information reported for these analytes is for advisory purposes only (i.e. to provide additional detail related to the performance of each individual compound). No further corrective action was required.

The spike recovery of Pentachlorophenol for Duplicate Laboratory Control Sample (DLCS) KWG0802876-2 was outside the lower control criterion. The analyte in question was not detected in the associated field samples. The error associated with reduced recovery equates to a potential low bias. Additional analysis of the associated field samples could not be performed because insufficient sample remained for testing. The data is flagged to indicate the problem.

Relative Percent Difference Exceptions:
The Relative Percent Difference (RPD) criterion for Pentachlorophenol in the replicate Laboratory Control Samples (LCS/DLCS) KWG0802876-1 and KWG0802873-2 is not applicable because the analyte concentration was not significantly greater than the Method Reporting Limit (MRL). Analytical values derived from measurements close to the detection limit are not subject to the same accuracy and precision criteria as results derived from measurements higher on the calibration range for the method.

Sample Notes and Discussion
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

No other anomalies associated with the analysis of these samples were observed.

____ Provide FAX Results

Requested Report Date

Circle which metals are to be analyzed:

SMS Metals: As Cd Cr Cu Pb Hg Ag Zn
CA Metals: Ag As Cd Cr Cu Hg Ni Pb Se Zn

SPECIAL INSTRUCTIONS/COMMENTS:

Please run Low Level analysis for pesticides (8081) and for full 8270 list. Thanks.

Cooler Receipt and Preservation Form

PC UH

Client / Project: City of Portland Service Request K08 0826S4

Received: 3.27.08 Opened: 3.27.08 By: BW

1. Samples were received via? *US Mail* *Fed Ex* *UPS* *DHL* *GH* *GS* *PDX* (*Courier*) *Hand Delivered*
2. Samples were received in: (circle) (*Cooler*) *Box* *Envelope* *Other* _____ *NA*
3. Were custody seals on coolers? (NA) Y N If yes, how many and where? NA
   If present, were custody seals intact? Y N If present, were they signed and dated? Y N
4. Is shipper's air-bill filed? If not, record air-bill number: _____ (NA) Y N

5. **Temperature of cooler(s) upon receipt (°C):**	14.4			
Temperature Blank (°C):	11.8			
6. If applicable, list Chain of Custody Numbers:				

7. Were custody papers properly filled out (ink, signed, etc.)? NA Y N
8. Packing material used. *Inserts* *Baggies* *Bubble Wrap* *Gel Packs* *Wet Ice* *Sleeves* *Other* NA
9. **Did all bottles arrive in good condition (unbroken)?** *Indicate in the table below.* NA (Y) N
10. Were all sample labels complete (i.e analysis, preservation, etc.)? (Y) N
11. Did all sample labels and tags agree with custody papers? *Indicate in the table below* (Y) N
12. **Were appropriate bottles/containers and volumes received for the tests indicated?** NA (Y) N
13. Were the pH-preserved bottles tested* received at the appropriate pH? *Indicate in the table below* (NA) Y N
14. Were VOA vials and 1631 Mercury bottles received without headspace? *Indicate in the table below.* (NA) Y N
15. **Are CWA Microbiology samples received with >1/2 the 24hr. hold time remaining from collection?** (NA) Y N
16. Was C12/Res negative? (NA) Y N

QA/QC Report

Client: Portland, City of
Project: NPDES STORMWTR MON
Sample Matrix: Water

Service Request: K0802654

Surrogate Recovery Summary
Semi-Volatile Organic Compounds by GC/MS

Extraction Method: EPA 3520C
Analysis Method: 8270C

Units: PERCENT
Level: Low

Sample Name	Lab Code	Sur1	Sur2	Sur3	Sur4	Sur5	Sur6
FO 080442	K0802654-001	72	73	67	72	110	96
Method Blank	KWG0802876-3	82	87	83	84	87	103
Lab Control Sample	KWG0802876-1	82	84	77	74	101	95
Duplicate Lab Control Sample	KWG0802876-2	68	67	61	62	83	79

Surrogate Recovery Control Limits (%)

Sur1 = 2-Fluorophenol	16-122	Sur5 = 2,4,6-Tribromophenol	22-148
Sur2 = Phenol-d6	25-118	Sur6 = Terphenyl-d14	28-144
Sur3 = Nitrobenzene-d5	24-131		
Sur4 = 2-Fluorobiphenyl	26-114		

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Results flagged with an asterisk (*) indicate values outside control criteria.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

RE: NPDES

Enclosed are the results of analyses for samples received by the laboratory on 03/26/08 13:40. The following list is a summary of the Work Orders contained in this report, generated on 04/30/08 13:19.

If you have any questions concerning this report, please feel free to contact me.

Work Order	Project	ProjectNumber
PRC0836	NPDES	36238

TestAmerica Portland

Howard Holmes, Project Manager

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report shall not be reproduced except in full, without the written approval of the laboratory.

Notes and Definitions

Report Specific Notes:

RL1 - Reporting limit raised due to sample matrix effects.

Laboratory Reporting Conventions:

DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.

ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).

NR/NA - Not Reported / Not Available

dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.

wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.

RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).

MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.

Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.

Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

S45U Event 8: February 23-24, 2009
S45U Event 9: March 14-15, 2009

INTRODUCTION

This report presents the results of the nine discrete storm sampling events conducted at three different mixed land use stations in fiscal year (FY) 2008-09 to comply with the City of Portland's (City) National Pollutant Discharge Elimination System (NPDES) municipal stormwater discharge (MS4) permit. For this project, these monitoring events represent M1 Events 49 through 51, OF19 Events 10 through 12, and S45U Events 7 through 9. Samples were also collected for additional analyses to support other City Programs and objectives:

OF19: Portland Harbor Superfund Program
S45U: evaluate TMDL and 303(d) list parameters for Johnson Creek

The Environmental Investigations Division performed the work for the Environmental Management Division's Regulatory/Policy section.

Land Use Stormwater Monitoring: FY 2008-09

BACKGROUND INFORMATION

In 1991, the City implemented a stormwater monitoring program as required by the municipal NPDES stormwater discharge permit application process. Ten stations throughout the city representing residential, commercial, industrial, state highway corridor, open space, and mixed land uses were selected for stormwater monitoring. In FY 1996-97, the monitoring plan was reduced to four land use stations so limited City resources could be allocated to other stormwater monitoring projects. Three of the four selected stations represented instream conditions, providing an overall measure of water quality in the watersheds. The fourth station, site M1, is an in-pipe monitoring point located in a subbasin pilot project area (City outfall 100 basin), which is the site of several planned stormwater treatment facilities. In FY 1999-00, one of the three instream sites was dropped in order to fund a best management practice (BMP) monitoring project in that watershed. In FY 2002-03, the two remaining instream sites were dropped from the monitoring plan leaving only the in-pipe location for continued monitoring for this project.

City of Portland stormwater outfall (OF19) was added to the monitoring program to represent industrial areas and stormwater discharges to the Lower Willamette watershed. OF19 historically has been monitored to identify potential sources of industrial stormwater pollution and to measure the effectiveness of the City's Industrial Stormwater Program. The Industrial Stormwater Program was developed in response to 40 CFR 122.26 "Storm water discharges", which requires certain municipalities to implement a program to control and monitor stormwater runoff associated with industrial activity. OF19 has been monitored for at least three events per year since FY 1998-99. The list of analyses for samples collected at OF19 has been expanded to meet the objectives of both programs.

S45U was added in FY 2006-07 as a sampling location representative of stormwater discharges to Johnson Creek. S45U was monitored previously for five storm events as part of the Johnson Creek Pesticide Source study conducted in FY 2003-04. Overviews of the current monitoring locations are shown in Figures 1 and 2A through 2C.

SAMPLING LOCATIONS, FIELD PROCEDURES, AND ANALYTICAL PARAMETERS

Sample collection and field parameter measurements are performed by the BES Field Operations section. The BES Water Pollution Control Laboratory (WPCL) provides primary analytical services. Selected analyses are performed by Test America in Beaverton, Oregon, Columbia Analytical Services (CAS) in Kelso, Washington, and Pace Analytical Services in Minneapolis, Minnesota.

Sampling Locations

The remaining monitoring site selected from the original ten land use stations is considered to best represent urban stormwater runoff quality from a mixed land use area. Site M1 (OF100), located at 5241 NE 122nd Ave., is an in-pipe sampling location receiving runoff from 144 acres of residential, commercial, industrial, and open space land uses. The sampling site is located in a 60-inch municipal separate storm sewer pipe accessed by a manhole on the west shoulder of NE 122nd Avenue. A site map is provided in Figure 3A.

OF19 is ranked by the City as one of the "Top Ten" outfalls for potential impacts on water quality and the outfall basin contains a significant number of industrial facilities. Monitoring is conducted in the 475-acre outfall 19 basin located in northwest Portland (Figure 2B). The basin is approximately 20 percent impervious due to significant industrial land use. Stormwater from this basin discharges to the Willamette River through a 42-inch outfall. The sampling manhole is located on the northwest corner of the intersection at NW Front and Kittridge Avenues (Figure 3B). Sampling and flow monitoring are performed in the 42-inch outlet pipe of this manhole.

S45U is located in the Johnson Creek watershed and represents a mix of residential, commercial, and industrial land use. The sampling manhole is located in the intersection of SE Umatilla and SE 45th Avenue, just upstream of City of Portland outfall JCF (Figure 3C). Stormwater from this basin discharges to Johnson Creek through a 48-inch outfall.

Field Procedures

Storm Criteria

In order to meet the data quality objectives of this project, monitoring is attempted for storms that are predicted to fulfill specified criteria. Currently, these criteria include a 6-hour antecedent dry period and a minimum of 0.20 inches of precipitation in a 12-hour period for the M1 and S45U sampling locations. For the OF19 site, the criteria include a 72-hour antecedent dry period and a minimum 0.20 inches of precipitation over a 3 to 24-hour sample collection period. An antecedent dry period is defined as less than 0.10 inches of precipitation in the specified period preceding the storm event.

Flow Monitoring

All three sites have uniformly shaped pipes, well suited for electronic flow quantification. Flow monitoring data are obtained through the use of a Sigma 950 Flow Meter. The flow sensor in the pipe collects level and velocity data, which are used in conjunction with pipe geometry information to calculate flow using the area-velocity method. During a sampling event, the flow meter calculates and records data at five-minute intervals.

Water Quality Sampling

Grab Samples

Grab samples are collected with a decontaminated stainless steel bailer attached to a telescoping sampling pole. The bailer is rinsed once with water from the sampling stream prior to filling the sample bottles and measuring the field parameters. Oil and grease samples are collected directly into the sample bottles.

Composite Samples

An Isco 6700 Portable Sampler is used for composite sample collection. All three sites are located in storm sewer lines where a sampler and a flow meter are secured in a manhole. Teflon-lined tubing extends from the sampler onto the pipe floor, where a stainless steel sample head is secured. For samples where low-level organics analyses are not required, reinforced vinyl tubing is used. The sampler utilizes a peristaltic pump to draw sample up the tubing and distribute it into composite bottles in the sampler base.

The flow meter is programmed to trigger the sampler every time a specified volume flows past the sensor. In an attempt to divide the storm runoff into 24 volume-proportioned aliquots, the trigger volume is calculated as one twenty-fourth of the expected runoff volume for the event. The expected runoff is calculated using the predicted rain amount for the event, basin size and a basin-specific runoff coefficient. For OF19 and S45U, the flow meters are programmed to activate the sampler when the water level rises from base flow level to the predetermined trigger level. In order to prevent the sampling program from activating during the minor level increases that often occur before the main storm arrives, a minimum of 0.5 inches is added to the base flow level when calculating trigger level. Eight 1.9-liter organics decontaminated glass composite bottles are used in the samplers. Decontaminated plastic composite bottles are used when low-level organics analyses are not required. For each trigger sent from the flow meter to the sampler, one 600-milliliter aliquot is pumped into a composite bottle. Each bottle receives three aliquots, whereupon the sampler distributor arm advances to the next bottle. Full bottles are removed and replaced with empty bottles as necessary over the course of the event. The number of aliquots collected may vary from the desired 24 as storm event rainfall totals often vary significantly from predictions. At the end of the event, a final composite is created by combining bottles that represent greater than 75 percent of the storm flow as recorded by the meter. Representative bottles are combined into a Teflon-lined churn splitter where analyte-specific sample bottles are then filled from a spigot during churn agitation.

Decontamination Procedures

All equipment that comes in contact with water samples is decontaminated in accordance with Field Operations SOP 7.01a – Decontamination of Sampling Equipment by the following procedure.

1. Wash in non-phosphate detergent (e.g., Alconox Detergent 8 or Liqui-nox).
2. Rinse in tap water.
3. Rinse in 10 percent nitric acid.
4. Rinse with deionized water.
5. Rinse with 10 percent Acetone solution.
6. Rinse with ultrapure water.

Prior to the storm event, both the peristaltic pump tubing and reinforced vinyl tubing is decontaminated by pumping through the same series of solutions listed above. Step 5 is skipped when low-level organics analyses are not required.

Analytical Constituents

Grab Samples

Grab samples are monitored in the field for conductivity, pH, and temperature using portable analytical meters. Dissolved oxygen is no longer measured. Grab samples are submitted to the laboratory for analysis of *Escherichia coli* and total oil and grease. Nonpolar oil and grease is measured if total oil and grease is greater than or equal to 10 milligrams per liter (mg/L).

Composite Samples

Composite samples are submitted to the laboratory for analysis of ammonia-nitrogen, nitrate-nitrogen, orthophosphate phosphorus, total dissolved solids, total phosphorus, total solids, total suspended solids, hardness, total metals (chromium, copper, lead, and zinc) and dissolved metals (copper, lead, and zinc). Additional samples from two of the sites were submitted for additional analyses and analytes as follows:

OF19: PAHs, SVOCs, PCB Congeners, and arsenic, silver, cadmium, and chromium
S45U: PAHs, organochlorine pesticides, and PCB Aroclors

WEATHER AND SAMPLING SUMMARY

The following section summarizes the weather and sampling information for each of the three events. Weather forecasts were obtained through the City-contracted ERF Company, Inc (ERF). Tables 1 through 3 present the complete rain gauge data as recorded by the City's Hydrological Data Retrieval and Alarm System (HYDRA) for the three storm events and the corresponding 72-hour antecedent dry periods for the three sampling locations. Rainfall data from HYDRA is reported as hourly totals. While City rain gauges provide the best available estimation of rainfall at monitoring sites they can be located several miles from study areas. Hence, rain gauge data may not accurately depict rainfall conditions at particular sites, especially during events with sporadic, localized rain activity.

Gauge 111 (NE Airport Way) is used for the M1 sample location and is located approximately one and a half miles west of the monitoring site. The previous rain gauge used for M1, Gauge 9 (PDX Business Park), was retired on September 21, 2004. Gauge 121 (Yeon) is used for monitoring site OF19 and is located within two miles of the sampling site. For monitoring conducted at OF19 for the Industrial Stormwater Program, rainfall at OF 19 was formerly estimated as an average of rainfall totals measured at Gauges 121 and 125 (Guilds Lake). Gauge 125 was retired on March 23, 2005. No additional gauges were used for rainfall estimates in the area since Gauge 121 and former Gauge 125 are the only gauges in the vicinity of the sampling site that represent the slight rain shadow caused by the West Hills in the NW industrial district. Gage 64 (2033 SE Harney St) is used for S45U and is located approximately 1.4 miles west of the monitoring location.

The river level gauge at Ankeny Pump Station is used to determine Willamette River levels in order to insure that river water has not backed up into the outfall sampling location. The river level must be below 20 feet above mean sea level to avoid potential commingling of OF19 stormwater with Willamette River water. River level data during sampling are shown in Figure 4 (note that there are five plots since two of the grab samples were collected separately from composite samples). River levels are measured approximately once per minute. All times in this report text, figures and tables are listed in 24-hour, Pacific Standard Time.

Events Summary

Summaries of antecedent, storm event, and sample collection time rainfall for the three monitoring locations are presented in Table 4. Additional information regarding each monitoring event is summarized below and includes specific comments for each event and descriptions of any deviations from proposed monitoring.

Sampling equipment including bailers and composite samplers are typically decontaminated, calibrated, and programmed during the 24 hour period prior to a predicted storm event. Sampling preparation may occur up to 72 hours prior to predicted weekend storm events. Final composite samples are prepared by combining all aliquots into a churn splitter in the laboratory and subsequently filling analyte-specific bottles through churn agitation. A Teflon churn splitter was used for all composite samples that are submitted for low-level organics analyses.

Sampling went smoothly for all events and no significant problems were encountered except as described below. Storm durations were generally captured and storms are well-represented by composite samples.

M1 Events Summary

Event 49: For some unknown reason, only half of the programmed sample volume was collected by the autosampler for the first 9 aliquots. To compensate, only half the subsequent sample volume was used when aliquots were combined at WPCL using a churn splitter.

Event 50: The first 10 out of 34 aliquots were missed due to clogged sample tubing. Following the 10 missed triggers, there was an approximate 4-hour dry period prior to relatively intense rainfall (0.18" per hour) at the beginning of the next extended pulse.

Event 51: No problems encountered.

OF19 Events Summary

Event 10: No problems encountered.

Event 11: No problems encountered. Approximately half of the aliquots were discarded due to a five-hour break in precipitation late on February 23, 2009. Based on flow and precipitation data, it appeared that two separate storm events had been captured. The last sample bottle submitted (bottle #7) included two aliquots from the first storm and one from the second. The first 7 bottles (21 aliquots) collected were submitted, therefore, this was not anticipated to impact representativeness of the composite sample.

Event 12: No problems encountered.

During sampling events, the river level must be below 20 feet in elevation to prevent commingling of river water with stormwater at the OF19 sampling location. The river level was below 10 feet in elevation during all sampling activities including both grab and composite sampling. River elevation plots during sampling efforts are shown in Figure 4.

S45U Events Summary

Events 7 through 9: No problems encountered.

A number of events were aborted for various reasons as described below. In some cases, grab samples were collected and submitted for analysis prior to the decision to abort the event. Subsequently, additional grab sample data for these aborted events are included in the various data tables attached to this report.

Date	Sample Location	Comments
10/31-11/2/08	OF19	Insufficient sample volume, grabs collected
12/12/08	M1, OF19, S45U	Insufficient rainfall, grabs collected
2/6/09	OF19	Insufficient sample volume
2/8/09	S45U	Insufficient rainfall, less than predicted
2/23/09	M1	Clogged sampler head
3/2/09	M1	Insufficient sample volume
3/12/09	M1	Missed triggers
3/23/09	M1	Insufficient rainfall, grabs collected

MONITORING AND SAMPLING RESULTS

Hydrographs summarizing flow, rainfall, and sampling information for each storm event are presented in Figures 5A through 7C. The individual sample triggers sent from the flow meters to the samplers, which represent aliquots of the composite samples, are represented by the ▲ symbol on the x-axis of the graph. The grab sample collection times are also included on the graphs.

Tables 5A through 7B present a summary of all field and laboratory analytical data for the three events. Since the PCB Congener data is not currently entered into LabWorks or Janus, the Pace laboratory reports are included as an attachment to this report. The complete Laboratory Analysis Reports and chain-of-custody records are kept on file at WPCL. Refer to the laboratory reports for information regarding the analytical methods used for all analyses and the corresponding method reporting limits. Note that in Table 6B, PAHs and phthalates are reported twice for the OF19 site with two different sets of method detection limits. PAHs were reported as part of the full EPA Method 8270 suite; however, in order to achieve lower detection limits for PAHs using the 8270 SIM method, the instrument must be calibrated for a narrower range such that only PAHs are reportable. PAH data usability issues are discussed below.

DATA VALIDATION & USABILITY

No problems were encountered with data quality except for the following:

Sample Date	Sample Location	Analysis & Issue	Actions Taken, Comments
11/2/08	S45U	(8081A) Endrin ketone (0.47 ng/l) detected in method blank slightly below MRL	Not detected in sample, no action taken
11/2/08	S45U	(8081A) LCS/LCSD RPD failures for most analytes, gamma-chlordane confirmation criteria exceeded	Gamma-chlordane only analyte detected in sample, qualified with "J" for estimated

Land Use Stormwater Monitoring: FY 2008-09

Sample Date	Sample Location	Analysis & Issue	Actions Taken, Comments
11/20/0	OF19	(8270C) Benzoic acid (0%, 4%) LCS/LCSD recoveries below acceptance criterion	To date, analyte has not been detected at this sampling location. Non-detect results qualified with "UJ" for detection limit inaccurate or imprecise.
11/20/0	OF19	(8270C) Pentachlorophenol (24%, 26%) LCS/LCSD recoveries slightly below acceptance criterion	To date, analyte has not been detected at this sampling location. Non-detect results qualified with "UJ" for reporting limit inaccurate or imprecise.
2/23/09	OF19, S45U	(8081A) Gamma-chlordane and 4,4'-DDD confirmation comparison RPD exceeded for OF19 sample, criteria exceeded for endosulfan I in S45U sample	CAS reported higher of two values, sample values qualified with "J" for estimated
2/23/09	OF19, S45U	(8081A) Method blank contamination by 4,4'-DDE (0.24 ng/l)	Value slightly above MDL, analyte not detected in associated samples, no action taken
2/23/09	OF19	(8270C) Method blank contamination by diethyl phthalate (0.045 J ug/l), di-n-butyl phthalate (0.095 J ug/l), butyl benzyl phthalate (0.052 J ug/l), bis(2-ethylhexyl) phthalate (0.33 J ug/l), and phenol (0.82 ug/l)	Most blank values below MRL, sample values <10x method blank concentration qualified with "JB" for estimated due to blank contamination (note: all qualified sample values below MRL)
2/23/09	OF19	(8270C) Extraction hold time exceeded by 2 days	For analytes detected, results from 8270-SIM analysis are used and are generally comparable. All detects qualified with "J" for estimated to indicate that 8270-SIM results should be used. Non-detect results are for analytes generally not detected at this location, non-detects qualified with "UJ" for reporting limit inaccurate or imprecise.
2/23/09	OF19	(8270C) Benzoic acid LCSD recovery (8%) and RPD (38%) outside acceptance criteria	LCS recovery acceptable, to date analyte has not been detected at this sampling location. Non-detect results qualified with "UJ" for reporting limit inaccurate or imprecise.
2/23/09	OF19	(8270C) LCS/LCSD RPD failed for 2,4-dimethylphenol (38%)	LCS/LCSD recoveries acceptable, analyte not detected, no action taken.
2/23/09	OF19	(8270C/8270-SIM) butyl benzyl phthalate split sample value RPD (56.3%) failed	8270C value already qualified due to missed extraction hold time, use 8270-SIM result
3/14/09	OF19, S45U	(8270-SIM) Batch 9030570 di-n-octyl phthalate MS result outside acceptance limits	MSD recovery and RPD acceptable, no other QC issues, analyte not detected in associated sample, no action taken
3/14/09	OF19, S45U	(8270-SIM) Batch 9030570 DEHP (-8.46%, -29.2%) MS/MSD results outside acceptance limits (sample value 7.89 ug/l, spike amount 4.21 ug/l; 7.53, 6.72 ug/l recovered), RPD failed (110%).	No other QC issues associated with this batch. Original sample value (source sample from different project) qualified with "JH" for potential high bias. No additional action taken.

Sample Date	Sample Location	Analysis & Issue	Actions Taken, Comments
3/14/09	OF19	(8270C) method blank contamination by diethyl phthalate (0.022 J ug/l), di-n-butyl phthalate (0.091 J ug/l) and butyl benzyl phthalate (0.047 J ug/l)	Most blank values below MRL, sample values <10x method blank concentration qualified with "JB" for estimated due to blank contamination (note: di-n-butyl phthalate value below MRL and was only value qualified)

All data are usable as reported or with associated qualifiers. No data were rejected though phthalate data should be used with caution. Where two values for single analytes were provided (i.e., PAHs and phthalates), EPA Method 8270-SIM results should be used due to generally lower detection limits and miscellaneous QC issues with Method 8270C analyses.

CONCLUSIONS

Grab and composite stormwater samples were collected during three storm events at each of the three sampling locations. The current MS4 monitoring plan requires at least two events at each site. Storm criteria were met during all sampling efforts except that the first event at OF19 was of slightly shorter duration than specified, and there were a number of missed triggers in the second event at the S45U site. However, all samples collected were generally representative of storm events monitored, therefore, sampling objectives for FY 2008-09 were met. All analytical data are considered usable except as noted above.

GENERAL

The Field Operations and Investigations and Monitoring Services sections of BES prepared this summary report. For any questions concerning this report, contact Aaron Wieting at 503-823-5437.

Notes:
All rainfall totals in inches. All rainfall data from City of Portland HYDRA network except as noted
[a] less than 0.10 inches of rain
[b] provided by Extended Range Forecasting (ERF), Inc. For delayed storms or storms lasting longer than one day, forecasts for each day are listed in chronological order.
[c] 10 aliquots missed at beginning due to clogged sample tubing, dry periods are for both prior to first successful sample collection and prior to beginning of storm event
[d] value in parentheses are dry periods and rainfall totals for period prior to the beginning of the storm event (other values are for actual time that sample was collected)

Project UPDES Event 2 Project No. 4010.001

Location M1 5454 OF 19 Date 2/20/09

Subject Set up notes. By PTB / AJA

1130 On site at M1 to set up for predicted storm. Set pacing at 2835 cf (0.5" storm) as per ERF forecast of 0.4 - 0.7" storm. (Fri 2/20 forecast). Renewed all plastic comp bottles, removed Lids, iced Sampler, started program (ensured sampler arm was positioned at Bottle 1). Sampler and Meter both running upon departure.

1315 (44)
1400 On site at 5454 to set up for predicted storm. Set pacing at 4840 cf (0.5" storm) Renewed all Deconed glass comp bottles removed Lids, iced sampler, ensured sampler arm was in Bottle 1 position, and started program. Base flow was at 3.6", so the low level set point was 4.2". Program was running but disabled upon our departure.

1445 OF 19 On site. Baseflow = 1.9" Low point delay set = 2.6". Set pacing at 7351 cf (for 0.5" storm). Renewed all Glass bottles, removed Lids, and ran programs on Sampler and Meter. Sample LCD Program Disabled upon departure.

DAILY FIELD REPORT

Project NPDES Stormwtr WQ FM
Location NE, NW, SE Portland
Subject Event 2

Project No. 4010.001
Date 2/23/09
By JTM, AJA

0820 MJS, JKB arrive @ OF19 to reprogram flow meter to capture ~0.25" storm event forecasted for today. Setup on 2/20/09 was a failure as no significant rainfall materialized (Veon rain gage reported 0.0").
Arrival baseflow ~7.0", yet sampler had not yet collected any aliquots.

0844 Re-programmed meter w/ pacing volume of 3675 cf.

0858 Arrive @ MI. Rain has stopped since leaving WPCL. Meter level currently 2.1", so flow is somewhat elevated.
Meter collected two aliquots, but since they represent different storms,
1558 2/22
0847 2/23
they are to be discarded.
Replaced bottle w/ clean bottle, restarted sampler.

0908 Exacted TM flow meter time. Reset pacing to 1415 cf to reflect ~0.25" storm event. (Meter set to 0.5" storm on 2/22/09).
Departure level 1.6".

0915 Departed site.

0940 Arrive @ SASV. Increasing showers, radar shows storms approaching. Baseflow level currently 3.9", which is elevated from baseflow on 2/20/09.
Sampler LCD "disabled", low level setpoint of 4.2" not yet activated.
Sampling report, sampler collected 2 aliquots this morning.

0951 Re-set pacing for ~0.25" storm to 2470 cf.

Location Portland - SA50, MI, OF19 | Date 2/23/09
Subject Event 2 FY08-09 | By AJA, JDM

0956 Showers turning to rain. Replaced all 9 bottles w/ fresh decond glass. Returned meter/sampler to manhole, departed site. Denoted properly decond bottles with a * adjacent to number.

1040 Arrive @ OF19. Rain/showers have ceased. Meter indicates that sampler has collected some aliquots since MJS, JXB visit earlier this morning.
Baseflow currently 7.0" about the same as it was during visit earlier this morning to reduce pacing volume.

Trigger times: OF19

Batt 1, 1 841
2 842
3 932
Batt 2 1 1036

} all on 2/23/09

Replaced all unused bottles w/ properly decond (+ acetone, + meth) labels. Previous bottles (including 1 : 2) may not have gone through complete decontamination as some labels were missing the "+ acetone, + Methanol" labeling.

1100 Departed site.

1330 Arrive @ MJ. Ample rain in last 30 min. Sampler LCD indicates additional aliquots. After opening sampler, only ~ 200 ml in one bottle collected. Pulled grab sample w/ sampler no liquid pulled. It appears sample head may be clogged, ragged (?). Did not enter due to time constraints. This event aborted, failed.

Subject 3/14/09

Project No. 4010.001
Date 3/12/09
By MJS, RAP

1100 (PST): on site @ OF-19 to set up for event anticipated for Saturday, (3/16) early AM. Current level is 2.4", programmed a low level set point for 3.4" and programmed the trigger value for 5146 cf, which corresponds to a 0.35" storm. De-conned sample tubing, installed new glass bottles (de-conned w/ organics + nitric), tested sample volume and started flowmeter and sampler programs. Sampler was disabled upon departure.

1320 - on-site @ S45D to set-up for event on Saturday. Current level is 3.3", set low level set point for 4.3" and set the trigger value for 3388 cf, which corresponds to a 0.35" storm.

1439 - on site @ M1 - Replaced batteries on flowmeter sampler and modem. Changed trigger volume to 1985 cf which reflects a 0.35" storm.

1806: On-site @ OF19. Uploaded data file - 8 triggers upon arrival. Flow is still slightly elevated - will take grabs. Current wx = light rain. Installed 3 new bottles.

1938: On-site @ S45U. Uploaded data file -

By MJS, LAP

(S45U cont.) 11 triggers upon arrival. Flow is elevated. Current weather = light → moderate rain. Swapped bottles - installed (4) new bottles. Flow is increasing w/ recent rainfall. Took grabs @ 1950 hrs. Upon departure program had re-enabled from most recent rain.

2023: On-site @ MI. Although 10 triggers were registered, no samples were collected. Could not manually pump sample. Made an entry to investigate and found ~18" of tubing was packed w/ sediment, completely blocking it. Attempted to clear tubing by pumping and purging w/ water while hammering on obstruction. Eventually cleared blockage. Cut tubing end off (~3" from invert) in hopes of avoiding drawing more sediment in. Will need to install a sample strainer for future events. Re-started program. Did not collect grab samples.

3/15/09 0705 - uploaded data from MI. Appears that flow increased an hour or so after last night's visit and samples were collected through ~0230 this morning when all bottles were filled. Appears that ~0.75"

Project NPDES stormwater | Project No. 4010.001
Location M1, OF-19, S45U | Date
Subject | By MJS

fell since visit last night. It appears that we captured the peak and a bulk of the remainder of this discrete pulse.

0826: On-site @ M1. All bottles full. Uploaded data file.

0844: Took M1 grabs.

0921: On-site @ S45U. All bottles full. Uploaded data file.

1003: On-site @ OF19. Uploaded data file.

1210: Back at WPCL. Will relinquish grab samples and check in field meter

Composite Notes:
M1 - has 8 full bottles, will composite all 8 in large (8gal) poly churn and fill analyte bottles

OF-19 collected 32 aliquots total and have 10 2/3 bottles of sample, which will not fit in teflon churn which has a capacity of 14L. Will target a final composite size of 13 L, which will be enough for analytes and won't overfill the teflon churn. So, target volume of 14,000 ml. Each trigger will be represented in churn by 437.5 ml.

DAILY FIELD REPORT

Project NPDES Stormwater
Project No. 4010.001
Location M-1, OF-19, S45U
Date 3/15/09
Subject event 2/3
By MJS, LAP

will first churn bottles 1 - 6 (17 aliquots - bottle 3 has only 2 aliquots) and will retain 17 • 437.5 = 7437.5 ml
Then bottles 7 - 11 (15 aliquots) and will retain 6562.5 ml
Due to difficulty in measuring the graduations on the large beaker will target 7.4L for bottles 1-6 and 6.6L for bottles 7-11.

S45U - 35 aliquots total; target 13L; 371.4ml per trigger
bottles 1-6 = 17 triggers = 6,314ml ≈ 6.3L
bottles 7-12 = 18 triggers = 6,685ml ≈ 6.7L

DAILY FIELD REPORT

Project NPDES Event 2
Location M1 5454 OF 19
Subject Set up notes.

Project No. 4010.001
Date 2/20/09
By PTB / AJA

1130 On site at M1 to set up for predicted storm. Set pacing at 2835 cf (0.5" storm) as per ERF forecast of 0.4 - 0.7" storm (Fri. 2/20 forecast). Renewed all plastic comp bottles removed Lids, iced Sampler, started program (ensured Sampler arm was positioned at Bottle 1). Sampler and Meter both running upon departure.

1315 (EA)
1400 On site at 5454 to set up for predicted storm. Set pacing at 4840 cf (0.5" storm) Renewed all Decomed glass comp bottles removed Lids, iced sampler, ensured Sampler arm was in Bottle 1 position, and started program. Base flow was at 3.6", so the low level set point was 4.2". Program was running but disabled upon our departure.

[redacted] On site. Baseflow = 1.9" Low point delay set = 2.6". Set pacing at 7351 cf (for 0.5" storm). Renewed all Glass bottles, removed Lids, and ran Programs on Sampler and Meter. Sample LCD Program Disabled upon departure.

DAILY FIELD REPORT

Project NPDES Stormwtr WQ FM
Location NE, NW, SE Portland
Subject Event 2

Project No. 4010.001
Date 2/23/09
By JTM, AJA

0820 MJS, JKB arrive @ [redacted] to reprogram flow meter to capture ~0.25" storm event forecasted for today. Setup on 2/20/09 was a failure as no significant rainfall materialized (Yeon rain gage reported 0.0").
Arrival baseflow ~7.0", yet sampler had not yet collected any aliquots.
0844 Re-programmed meter w/ pacing volume of 3675 cf.

0858 Arrive @ MI. Rain has stopped since leaving WPCL. Meter level currently 2.1", so flow is somewhat elevated.
Meter collected two aliquots, but since they represent different storms,
1558 2/22
0847 2/23
they are to be discarded.
Replaced bottle w/ clean bottle, restarted sampler.
0908 Exacted TM flow meter time. Reset pacing to 1415 cf to reflect ~0.25" storm event. (Meter set to 0.5" storm on 2/22/09).
Departure level 1.6".
0915 Departed site.

0940 Arrive @ S45U. Increasing showers, radar shows storms approaching.
Baseflow level currently 3.9", which is elevated from baseflow on 2/20/09.
Sampler LCD "disabled", low level setpoint of 4.2" not yet activated.
Sampling report, sampler collected 2 aliquots this morning.
0951 Re-set pacing for ~0.25" storm to 2420 cf.

DAILY FIELD REPORT

Project NPDES Stormwtr WQ/FM | Project No. 4010.001
Location Portland - 5450, MI, OF19 | Date 2/23/09
Subject Event 2 FY08-09 | By AJA, JDM

0956 Showers turning to rain. Replaced all 9 bottles w/ fresh decond glass. Returned meter/sampler to manhole, departed site. Denoted properly decond bottles with a * adjacent to number.

1040 Arrive @ OF19. Rain/showers have ceased. Meter indicates that sampler has collected some aliquots since MJS, JXB visit earlier this morning.
Baseflow currently 7.0" about the same as it was during visit earlier this morning to reduce pacing volume.

Trigger times: OF19

Bott 1, 1 841
2 842
3 932
Bott 2, 1 1036

} all on 2/23/09

Replaced all unused bottles w/ properly decond (+ acetone, + meth) labels. Previous bottles (including 1 : 2) may not have gone through complete decontamination as some labels were missing the "+ acetone, + Methanol" labeling.

1100 Departed site.

1330 Arrive @ MI. Ample rain in last 30 min. Sampler LCD indicates additional aliquots. After opening sampler only ~ 200 ml in one bottle collected. Pulled grab sample w/ sampler no liquid pulled. It appears sample head may be clogged, ragged (?). Did not enter due to time constraints. This event aborted, failed.

DAILY FIELD REPORT

Project NPDES Stormwater
Location OF 19
Subject Storm setup FY08-09 Event 1

Project No. 4010.001
Date 11/19/08
By RCB, ECH

* All times PST

1100 Arrived on site to set up for NPDES storm at OF 19. ERF predicted approx 0.3-0.47" of rain to fall overnight and continuing until about noon tomorrow. Heaviest rain should hit Portland around 0300-0600.

1105 Entered MH. Placed fresh bottles in sampler and added ice. Checked sensor and compared manual measurements to meter meter reading ~0.2-0.5" too low at base flow, but responded well and became accurate when dammed to a level of 2.0". Decon'd sampler tubing w/ Soapy → Tap → Nitric → DI → Acetone → Methanol → DI → UPDI. Calibrated sampler aliquot size w/ DI water.

Entered trigger volume of 4410 cF (0.3" storm), and set low level set point @ 1.5" on meter

Checked sampler programming. The "Flow Between Sample Events" option was set at [3] pulses and the instructions say to set it at [1] pulse. I changed the programming to [1] pulse.

Double checked flow level in pipe and the meter responded well when flow was dammed at 2.0", but was still about 0.3" too low on meter during baseflow. NO level adjustments made. Started meter, started sampler program.

1215: Offsite

0810 Arrive @ OF19 to heavy rain. Meter flow rate >500 cfm, meter says sampler has collected 5 samples.
0826 Collected grab samples
1127 Submitted grab samples to WPCL.

1310 Arrive @ OF19 after substantial rain today ~0.37". Sampler has collected 6 bottles.
Swapped bottles 1-6 w/ 7-12 and continued program as hydrograph is still elevated, so will allow program to continue.
1350 Return to WPCL.

1540 Return to OF19. Sampler filled bottle 7. Hydrograph has returned close to baseflow. Storm complete, successful.

1620 Composited all bottles 1-7 in decon'd Teflon lined churn splitter where analyte specific bottles were filled.

FO 081427

Submitted samples to WPCL 1630

Location NEPDX, SEPDX, NWPDX Date 10/30/08
Subject FY08-09 Event 1 By GTJM, ECH

PST 1100 Arrive @ M1. Uploaded flow meter, file name 10301106.FEV. Hydrograph appears as expected, no significant storm events since install on 10/6. Decon'd tubing w/ Soapy, tap, nitric, DI, VPDI per SOP.
- Very minimal baseflow upon arrival. Meter reading 0", 0 fps, 0 cfs as expected. Confirmed time in PST. Setpoint sampling set to 0.75".
- Programmed flow meter for an approximate 0.35" storm event that is expected to last through Saturday. Trigger volume determined to be 1985 cf. Started meter running
- Sync meter & sampler time to PST. ✓
- Started sampler, "Program Disabled"

1208 Departed site.

1227 Arrive @ S45U, setup traffic control. No need to upload meter, no significant storm events since install on 10/6/08.
- Meter level currently 3.7" which is in agreement with manual confirmations on 10/6/08.
- Decon'd tubing (w/ organics) via Soapy, tap, nitric, DI, acetone (5%), methanol (5%) DI, VPDI.
- sync meter w/ sampler time ✓
- Programmed FM w/ setpoint sampling enable @ 4.0".
- Programmed sampler pacing/trigger volume as 3388 cf based on an anticipated 0.35" storm event predicted to run through Sat. AM
- Started meter, sampler display "Program Disabled"

1300 departed site.

By JJM, AJA

1257 Arrive @ M.1. Approximately 0.24" of rain since setup on 10/30/08. Sampler LCD reads 1, 3 bottle 4 Sampler collected 3 bottles, yet only bottles 1 & 2 are full? Checked base of sampler, alignment is correct. No missed trigger error codes in sampler report? ~~Event aborted due to unknown sampler error. Bring sampler back to WPCL for testing.~~
Decided to perform field test by halfing trigger volume to 1000 cf, which is approximately equivalent to a 0.2" storm event. Rain is forecasted for later this evening / tomorrow, so we will try and shoot for a second attempt.
Started sampler at bottle 1.
1329 Departed site.

1413 Arrive @ S45U. Sampler LCD says Program Disabled, meter level at 3.0".
Sampler successfully collected to full bottles. Recorded trigger times. Replaced bottles 1 & 2. Restarted sampler.
1440 Departed site.

1454 Arrive at OF19. No significant wet weather since ~1230. Sampler has collected only 2 aliquots, storms since setup have not been intense enough to create decent runoff.
Removed bottle 1, re-started program.
1509 Departed site. Substantial rain during departure.

Project NPDES Stormwtr Mon
Location SE PDX, NE PDX, NW PDX
Subject FY08-09 Event 1

Project No. 4010.001
Date 11/2/08
By JJM, MTS

~~0922~~ 1022 Arrive @ S45U. Sampler LCD "Program Disabled", Meter level now reading 2.7" baseflow which is mysteriously lower than historic conditions (ie sensor install on 10/6, storm setup on 10/30). Velocity considerably higher as well
Sampler collected additional 4 + 1/3 bottles since visit on 11/1
Uploaded FM, recorded trigger times.
Sampler loaded w/ 8 clean/decon'd capped glass bottles
1040 Departed site.
1100 Arrive @ M1. Sampler LCD reads "Program ~~Done~~ Complete". Meter level/velocity 0 as expected, currently not raining.
Sampler collected 8 full bottles, but missed small storm event this morning at ≈ 0600.
Recorded trigger times, removed batteries.
1130 Departed site.
1146 Arrive @ OF19. Uploaded FM.
Sampler collected additional 1 + 1/3 which indicates that pacing volumes may be high/runoff coefficient may not account for ample vegetation still present on trees. Rain has also not been very intense which may also account for slow pacing.
Hydrograph looks great, pacing sampler well.
Will continue event through tomorrow to capture more volume.
1206 Left site.

By JJM, MJS

0745 PST Arrive @ M1. Sampler LCD "Program Complete". Review of rain gage earlier this morning approximated 0.25" of rain since setup on 3/24/09. Meter appears to have paced sampler well.

0752 Recorded aliquot times for bottles 1-8. Replaced bottles w/ 9-16. Restarted sampler. Changed sampler battery.

0800 Collected grab samples, parameters.

0810 Departed site.

1111 PST Return to M1 after prolonged break in rain. Sampler LCD indicates additional 2 bottles collected. Meter level currently 0.3", sampler disabled.
Uploaded meter, file name 03251111.FEV. Hydrograph looks great. Event 3 successful.

1129 Removed all equipment from node, departed site.

1320 Relinquished analyte specific bottles to WPCL after churn splitting all bottles (1-10).

By MJS, LAP

(S45U cont.) 11 triggers upon arrival. Flow is elevated. Current weather = light → moderate rain. Swapped bottles – installed (4) new bottles. Flow is increasing w/ recent rainfall. Took grabs @ 1952 hrs. Upon departure program had re-enabled from most recent rain.

2023: ~~On site @ MH~~ Although 10 triggers were registered, no samples were collected. Could not manually pump sample. Made an entry to investigate and found ~18" of tubing was packed w/ sediment, completely blocking it. Attempted to clear tubing by pumping and purging w/ water while hammering on obstruction. Eventually cleared blockage. Cut tubing end off (~3" from invert) in hopes of avoiding drawing more sediment in. Will need to install a sample strainer for future events. Re-started program. Did not collect grab samples.

3/15/09 0705 – uploaded data from MH. Appears that Flow increased an hour or so after last night's visit and samples were collected through ~0230 this morning when all bottles were filled. Appears that ~0.75"

Location M1, OF-19, S45U | Date
Subject | By

fell since visit last night. It appears that we captured the peak and a bulk of the remainder of this discrete pulse.

0826: On-site @ M1. All bottles full. Uploaded data file.

0844: Took M1 grabs.

0921: On-site @ S45U. All bottles full. Uploaded data file.

1003: On-site @ OF19. Uploaded data file.

1210: Back at WPCL. Will relinquish grab samples and check in field meter.

Composite Notes:

~~M1 — has 8 full bottles, will composite all 8 in large (8gal) poly churn and fill analyte bottles~~

OF-19 collected 32 aliquots total and have 10 3/3 bottles of sample, which will not fit in teflon churn which has a capacity of 14L. Will target a final composite size of 13L, which will be enough for analytes and won't overfill the teflon churn. So, target volume of 14,000 ml. Each trigger will be represented in churn by 437.5 ml.

Eventually cleared blockage. Cut tubing end off (~3" from inverted) in hopes of avoiding drawing more sediment in. Will need to install a sample strainer for future events. Re-started program. Did not collect grab samples.

3/15/09 0705 - uploaded data from M1. Appears that flow increased an hour or so after last night's visit and samples were collected through ~0230 this morning when all bottles were filled. Appears that ~0.75"

DAILY FIELD REPORT

Project NPDES Stormwater
Location M-1, OF-19, 545U
Subject event 2/3

Project No. 4010.001
Date 3/15/09
By MJS, LAP

will first churn bottles 1 – 6 (17 aliquots - bottle 3 has only 2 aliquots) and will retain 17 · 437.5 = 7437.5 ml
Then bottles 7 – 11 (15 aliquots) and will retain 6562.5 ml
Due to difficulty in measuring the graduations on the large beaker will target 7.4L for bottles 1-6 and 6.6L for bottles 7-11.

545U – 35 aliquots total; target 13L; 371.4ml per trigger
bottles 1-6 = 17 triggers = 6,314ml ≈ 6.3L
bottles 7-12 = 18 triggers = 6,685ml ≈ 6.7L

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

Report Prepared Date:
January 20, 2009

Pace Analytical Services, Inc.
1700 Elm Street
Minneapolis, MN 55414
Phone: 612.607.1700
Fax: 612.607.6444

DISCUSSION

This report presents the results from the analysis performed on one sample submitted by a representative of Test America - Portland. The sample was analyzed for the presence or absence of polychlorinated biphenyl (PCB) congeners using USEPA Method 1668A. Reporting limits were set to approximately 0.5 parts-per-trillion and were adjusted for sample volume.

The isotopically-labeled PCB internal standards in the sample extracts were recovered at 63-166%. With one exception, the labeled internal standard recoveries obtained for this project were within the target ranges specified in the method. Since the quantification of the native PCB congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCB congeners at the reporting limits. This indicates that the analytical process did not introduce significant levels of PCB congeners to the sample extract.

Laboratory spike samples were also prepared with the sample batch using reference material that had been fortified with native standards. The results show that the spiked native compounds in the lab spikes were recovered at 87-116% with relative percent differences of 11.9-18.8%. These results indicate high degrees of accuracy and precsion for these determinations. Matrix spikes were not prepared with the sample set.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc.

Scott—
You have already tested this sample for 1668 Coplanar PCBs.
However, they made a mistake on the COC & really needed the "209" Congener list.
Please contact me if you have any questions.

Thanks

REPORT OF LABORATORY ANALYSIS FOR PCBs

Report Information:

Pace Project #: 1090118
Sample Receipt Date: 02/27/2009
Client Project #: PSB0768
Client Sub PO #: N/A
State Cert #: MN200001-005

Invoicing & Reporting Options:

The report provided has been invoiced as a Level 2 PCB Report. If an upgrade of this report package is requested, an additional charge may be applied.

Please review the attached invoice for accuracy and forward any questions to Scott Unze, your Pace Project Manager.

This report has been reviewed and prepared by:

Scott Unze, Project Manager

DISCUSSION

This report presents the results from the analyses performed on one sample submitted by a representative of Test America - Portland. The sample was analyzed for the presence or absence of polychlorinated biphenyl (PCB) congeners using USEPA Method 1668A. Reporting limits were set to approximately 0.5 parts-per-trillion and were adjusted for sample volume.

The isotopically-labeled PCB internal standards in the sample extracts were recovered at 59-109%. All of the labeled internal standard recoveries obtained for this project were within the target ranges specified in the method. Since the quantification of the native PCB congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In one case, an incorrect isotope ratio was obtained for a labeled PCB congener. The affected value was flagged "I" on the results table.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCB congeners at the reporting limits. This indicates that the analytical process did not introduce significant levels of PCB congeners to the sample extract.

Laboratory spike samples were also prepared with the sample batch using reference material that had been fortified with native standards. The results show that the spiked native compounds in the lab spikes were recovered at 80-109% with relative percent differences of 0.0-6.6%. These results indicate high degrees of accuracy and precision for these determinations. Matrix spikes were not prepared with the sample set.

This report shall not be reproduced, except in full,

DISCUSSION

This report presents the results from the analyses performed on one sample submitted by a representative of Test America - Portland. The sample was analyzed for the presence or absence of polychlorinated biphenyl (PCB) congeners using USEPA Method 1668A. Reporting limits were set to approximately 0.25-0.75 parts-per-trillion and were adjusted for sample volume. The sample was received within the temperature range of this method.

The isotopically-labeled PCB internal standards in the sample extract were recovered at 37-115%. All of the labeled internal standard recoveries obtained for this project were within the target ranges specified in the method. Since the quantification of the native PCB congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCB congeners at the reporting limits. This indicates that the analytical process did not introduce significant levels of PCB congeners to the sample extract.

Laboratory spike samples were also prepared with the sample batch using reference material that had been fortified with native standards. The results show that the spiked native compounds in the lab spikes were recovered at 98-122% with relative percent differences of 0.0-6.8%. These results indicate high degrees of accuracy and precision for these determinations. Matrix spikes were not prepared with the sample set.

Comments:
QA/QC: Low recoveries in the LCS and LCSDup for semivolatile compounds Benzoic Acid and Pentachlorophenol indicate a low bias for these components.

December 15, 2008 Analytical Report for Service Request No: K0811463

Peter Abrams
Portland, City of
1120 SW Fifth Avenue # 600
Portland, OR 97204

RE: City of Portland

Dear Peter:

Enclosed are the results of the samples submitted to our laboratory on November 21, 2008. For your reference, these analyses have been assigned our service request number K0811463.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.caslab.com. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3281. You may also contact me via Email at PDivvela@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

12/15/08

Pradeep Divvela
Project Chemist

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
B	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.
*	The duplicate analysis not within control limits. See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a chromatographic interference.
X	See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Case Narrative

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Portland, City of	**Service Request No.:**	K0811463
Project:	City of Portland	**Date Received:**	11/21/2008
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory/Duplicate Laboratory Control Sample (LCS/DLCS).

Sample Receipt

One water sample was received for analysis at Columbia Analytical Services on 11/21/2008. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Semivolatile Organic Compounds by EPA Method 8270C_LL

Lab Control Sample Exceptions:
The advisory criterion was exceeded for Benzoic Acid in the replicate Laboratory Control Samples (LCS/DLCS) KWG0812669-1 and WKG0812669-2. As per the CAS/Kelso Standard Operating Procedure (SOP) for this method, these compounds are not included in the subset of analytes used to control the analysis. The recovery information reported for these analytes is for advisory purposes only (i.e. to provide additional detail related to the performance of each individual compound). No further corrective action was required.

The spike recovery of Pentachlorophenol for the replicate Laboratory Control Samples (LCS/DLCS) KWG0812669-1 and WKG0812669-2 was outside the lower control criterion. The analyte in question was not detected in the associated field samples. The error associated with reduced recovery equates to a potential low bias. Additional analysis of the associated field samples could not be performed because insufficient sample remained for testing. The data is flagged to indicate the problem.

Elevated Method Reporting Limits:
The reporting limits are elevated for sample FO 081427. The sample extract was diluted prior to instrumental analysis due to relatively high levels of non-target background components. The extract was highly colored and viscous, which indicated the need to perform a dilution prior to injection into the instrument. Clean-up of the extract was performed within the scope of the method, but did not eliminate enough of the background components to prevent dilution. A semi-quantitative screen was performed prior to final analysis. The results of the screening indicated the need to perform a dilution.

Sample Notes and Discussion
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

No other anomalies associated with the analysis of these samples were observed.

Notes and Definitions

Report Specific Notes:

None

Laboratory Reporting Conventions:

DET	-	Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
ND	-	Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
NR/NA	-	Not Reported / Not Available
dry	-	Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
wet	-	Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
RPD	-	RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
MRL	-	METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
MDL*	-	METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
Dil	-	Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
Reporting Limits	-	Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
Electronic Signature	-	Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy.* Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

March 19, 2009 Analytical Report for Service Request No: K0901594

Jennifer Shackelford
Portland, City of
1120 SW Fifth Avenue # 1000
Portland, OR 97204

RE: NPDES Stormwater Mon

Dear Jennifer:

Enclosed are the results of the samples submitted to our laboratory on February 25, 2009. For your reference, these analyses have been assigned our service request number K0901594.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.caslab.com. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3281. You may also contact me via Email at PDivvela@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

3/20/2009

Pradeep Divvela
Project Chemist

DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
B	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.
*	The duplicate analysis not within control limits. See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a chromatographic interference.
X	See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	POrtland, City of	**Service Request No.:**	K0901594
Project:	NPDES Stormwater Mon	**Date Received:**	02/25/2009
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory/Duplicate Laboratory Control Sample (LCS/DLCS).

Sample Receipt

Two water samples were received for analysis at Columbia Analytical Services on 02/25/2009. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Organochlorine Pesticides by EPA Method 8081A_ULL

Second Source Exceptions:
The analysis of Chlorinated Pesticides by EPA 8081 requires the use of dual column confirmation. When the Initial Calibration Verification (ICV) criteria are met for both columns, the higher of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for Methoxychlor. The ICV results are reported from the acceptable column. The data quality is not affected. No further corrective action was necessary.

Continuing Calibration Verification (CCV) Exceptions:
The analysis of Chlorinated Pesticides by EPA 8081 requires the use of dual column confirmation. When the CCV criteria is met for both columns, the higher of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for 0304F005 and 0304F018. The results are reported from the column with an acceptable CCV. The data quality is not affected. No further corrective action was necessary.

Sample Confirmation Notes:
The confirmation comparison criteria of 40% difference for gamma-Chlordane and 4,4'-DDD was exceeded in sample F0095243; Endosulfan I in sample F0095244. The higher of the two values is reported because no evidence of a peak anomaly was observed.

Elevated Method Reporting Limits:
The reporting limit is elevated for all analytes in both field samples. The sample extract was diluted prior to instrumental analysis due to relatively high levels of non-target background components. Clean-up of the extract was performed within the scope of the method, but did not eliminate enough of the background components to prevent dilution. A semiquantitative screen was performed prior to final analysis. The results of the screening indicated the need to perform a dilution. The results are flagged to indicate the matrix interference.

The reporting limit is further elevated for a few analytes in both field sample. The chromatogram indicated the presence of non-target background components. The matrix interference prevented adequate resolution of the target compounds at the reporting limit. The results are flagged to indicate the matrix interference.

Approved by_____ **Date** 03/27/09

Semivolatile Organic Compounds by EPA Method 8270C LL

Holding Time Exceptions:
Sample F0095243 was originally received on 02/25/2009. Laboratory inadvertently analyzed the sample container for Pesticides by 8081 instead of SVOCs by 8270C. Client was notified of this error on 03/02/09. A replacement bottle for sample F0095343 was received on 03/03/09. The analysis was performed as soon as possible after receipt by the laboratory. The data is flagged to indicate the holding time violation.

Lab Control Sample Exceptions:
The advisory criterion was exceeded for Benzoic Acid in duplicate Laboratory Control Sample (DLCS) KWG0901826-1. As per the CAS/Kelso SOP for this method, these compounds are not included in the subset of analytes used to control the analysis. The recovery information reported for these analytes is for advisory purposes only (i.e. to provide additional detail related to the performance of each individual compound). No further corrective action was required.

Relative Percent Difference Exceptions:
The Relative Percent Difference (RPD) criterion for 2,4-Dimethylphenol and Benzoic Acid in the replicate Laboratory Control Samples (LCS/DLCS) KWG0901826-1 and KWG0901826-2 is not applicable because the analyte concentration was not significantly greater than the Method Reporting Limit (MRL). Analytical values derived from measurements close to the detection limit are not subject to the same accuracy and precision criteria as results derived from measurements higher on the calibration range for the method.

Elevated Method Reporting Limits:
The reporting limits are elevated for all analytes in sample F0095243. The sample extract was diluted prior to instrumental analysis due to relatively high levels of non-target background components. The extract was highly colored and viscous, which indicated the need to perform a dilution prior to injection into the instrument. Clean-up of the extract was performed within the scope of the method, but did not eliminate enough of the background components to prevent dilution. A semi-quantitative screen was performed prior to final analysis. The results of the screening indicated the need to perform a dilution.

No other anomalies associated with the analysis of these samples were observed.

Surrogate Name	%Rec	Control Limits	Date Analyzed	Note
Tetrachloro-m-xylene	50	10-121	02/28/09	Acceptable
Decachlorobiphenyl	78	17-150	02/28/09	Acceptable

† **Analyte Comments**

gamma-Chlordane	For this analyte (CAS Registry No. 5103-74-2), USEPA has corrected the name to be beta-Chlordane, also known as trans-Chlordane.

Comments:

Client: Portland, City of
Project: NPDES Stormwater Mon
Sample Matrix: Water

Service Request: K0901594

Surrogate Recovery Summary
Organochlorine Pesticides

Extraction Method: EPA 3535
Analysis Method: 8081A

Units: PERCENT
Level: Low

Sample Name	Lab Code	Sur1	Sur2
F0095243	K0901594-001	86 D	131 D
F0095244	K0901594-002	97 D	144 D
Method Blank	KWG0901589-5	50	78
Lab Control Sample	KWG0901589-1	44	72
Duplicate Lab Control Sample	KWG0901589-2	41	76

Surrogate Recovery Control Limits (%)

Sur1 =	Tetrachloro-m-xylene	10-121
Sur2 =	Decachlorobiphenyl	17-150

Results flagged with an asterisk (*) indicate values outside control criteria.
Results flagged with a pound (#) indicate the control criteria is not applicable.

RE: NPDES

Enclosed are the results of analyses for samples received by the laboratory on 02/25/09 18:15. The following list is a summary of the Work Orders contained in this report, generated on 03/17/09 20:49.

If you have any questions concerning this report, please feel free to contact me.

Work Order	Project	ProjectNumber
PSB0768	NPDES	36238

TestAmerica Portland

Howard Holmes, Project Manager

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report shall not be reproduced except in full, without the written approval of the laboratory.

Notes and Definitions

Report Specific Notes:

RL3 - Reporting limit raised due to high concentrations of non-target analytes.

Laboratory Reporting Conventions:

DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.

ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).

NR/NA - Not Reported / Not Available

dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.

wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.

RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).

MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.

Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.

Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy.* Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

April 3, 2009 Analytical Report for Service Request No: K0902283

Jennifer Shackelford
Portland, City of
1120 SW Fifth Avenue # 1000
Portland, OR 97204

RE: NPDES Stormwater

Dear Jennifer:

Enclosed are the results of the samples submitted to our laboratory on March 17, 2009. For your reference, these analyses have been assigned our service request number K0902283.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.caslab.com. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3281. You may also contact me via Email at PDivvela@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

24/03/09

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
B	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL has been elevated due to a matrix interference.
X	See case narrative.
*	The duplicate analysis not within control limits. See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results (25% for CLP Pesticides).
U	The compound was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
i	The MRL/MDL has been elevated due to a chromatographic interference.
X	See case narrative.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Project:	NPDES Stormwater	**Date Received:**	03/17/2009
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory/Duplicate Laboratory Control Sample (LCS/DLCS).

Sample Receipt

Two water samples were received for analysis at Columbia Analytical Services on 03/17/2009. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Organochlorine Pesticides by EPA Method 8081A_ULL
