Please direct the appropriate bureau to send the public stormwater runoff from SE Foster Road to the existing BES public stormwater facility. Here is what happened. The City of Portland issued a building permit for a new house on a lot adjacent to ours. In order to build that house, the existing drainageway on that property had to be blocked. When the drainageway was blocked, the public stormwater runoff from SE Foster road was diverted onto our private property without our permission. I want to be clear, we did not and we do not consent to Public stormwater runoff being directed onto our private property. Our property does not meet the code requirements for a public or private stormwater facility, especially when there is an existing BES Public Stormwater facility approximately 75 feet to the East of our property. The BES facility is quite large at 32,234 feet or three quarters of an acre. In *summary*,
