APPEAL SUMMARY

Status: Decision Rendered - Held over from ID 21898, items 1 and 5 (9/18/19), for additional information

Appeal ID: 21924	Project Address: 1725 SW Salmon St
Hearing Date: 9/25/19	Appellant Name: Tom Jaleski
Case No.: B-017	Appellant Phone: 9712385266
Appeal Type: Building	Plans Examiner/Inspector: Brian McCall, Joe Thornton, Corey Stanley
Project Type: commercial	Stories: 8 Occupancy: R-2 Construction Type: III-A, I-A
Building/Business Name: 18S Apartments	Fire Sprinklers: Yes - Throughout
Appeal Involves: Erection of a new structure, Reconsideration of appeal	LUR or Permit Application No.: 19-106743-CO
Plan Submitted Option: pdf [File 1] [File 2] [File 3] [File 4] [File 5] [File 6] [File 7]	Proposed use: Mixed use multi-family housing

APPEAL INFORMATION SHEET

Appeal item 1

Code Section	2014 OSSC 703.3, 704.3 704.10
Requires	<p>Reconsideration Appeal #21898, Item #1</p> <p>Original Text</p> <p>704.3 requires individual encasement for primary structural frame.</p> <p>704.10 requires that load-bearing structural members in exterior walls of type IIIA construction be provided with 2-hr fire protection.</p> <p>703.3 addresses alternative methods for determining fire resistance. The section allows that the fire resistance of a building element, component or assembly be established by any of the following methods:</p> <ul style="list-style-type: none"> Fire resistance designs documented in sources. Prescriptive designs of fire-resistance-rated building elements, components, or assemblies as prescribed in section 721. Calculations in accordance with Section 722. Engineering analysis based on a comparison of building element, component or assemblies designs having fire-resistance ratings as determined by the test procedures set forth in ASTM E119 or UL 263 Alternative protection methods as allowed by section 104.11.
Proposed Design	<p>Original Text</p> <p>The building design is comprised of type IIIA wood construction over a type IA concrete podium and is protected by a full NFPA 13 sprinkler system. In limited areas in the IIIA construction steel</p>

structural members are utilized in and supporting 2-hr rated exterior walls. Per table 601 and section 704.10 these members require 2-hr fire protection. The fire protection is provided by intumescent fireproofing.

For HSS and wide flange beams intumescent fireproofing is being used to meet the 2-hr protection requirements of 704.3 and 704.10. Listed assemblies for steel columns are being utilized to determine the intumescent coating thickness for beams. Refer to exhibit 1.A for project details of the conditions in question. Refer to exhibit 1.B for supporting documentation from the manufacturer showing application thicknesses to achieve 2-hr protection for corresponding steel member types. Refer to the attached tested assemblies for design 180-2 for wide flange columns and 180-3 for HSS columns.

(Reconsideration Text)

The building design is comprised of type IIIA wood construction over a type IA concrete podium and is protected by a full NFPA 13 sprinkler system. In limited areas in the IIIA construction steel structural members are utilized in and supporting 2-hr rated exterior walls. Per table 601 and section 704.10 these members require 2-hr fire protection. The fire protection is provided by intumescent fireproofing.

For HSS and wide flange beams intumescent fireproofing is being used to meet the 2-hr protection requirements of 704.3 and 704.10. Listed assemblies for steel columns are being utilized as a basis for comparison to the required intumescent coating thickness for beams.

Fireproofing for the referenced beams will match Intertek design CC-IF180-01 with the exception that the top surface of the beam is adjacent to wood blocking as opposed to the concrete decking as in the tested assembly. Additionally, the intumescent fireproofing will be provided on all faces and Type X GWB membrane protection will be provided to conceal and increase the fire protection for the members.

Refer to attached Engineering Judgement letter (EJ#1) from an Oregon licensed Fire Protection Engineer for analysis. Additionally, see architectural plan attachments with annotations identifying where EJ#1 is relevant.

Reason for alternative (Original Text)

Neither standard UL encasement assemblies, nor standard UL assemblies for intumescent fire protection are available for HSS and wide flange beams integrated into wood construction. As a conservative measure, the proposed design uses listed column assemblies for intumescent coating at these beams. Fire testing for columns assumes fire exposure on all sides, where testing for beams assumes some protection or heat sink provided by the floor assembly above. In terms of structural loading, columns are considered a worst-case situation for vulnerability to failure in a fire. As a result, the prescribed thickness of intumescent coating is greater for listed column designs than for beams. For the beams in question here, the documentation in exhibit 1.B establishes a conservative approach to equivalence to standard UL listed assemblies by utilizing column designs for beams. Using this approach, the proposed intumescent fireproofing design provides equivalent if not greater protection for the steel members.

(Reconsideration Text)

The protection of the proposed beams are equivalent or superior as shown by comparison to Intertek listed assembly Design No. CC/IF 180-01. The difference between the proposed design and the listed assembly are (See EJ): Fig 1A, wood has been substituted in the proposed assembly for the concrete floor above in the listed design. With additional membrane protection below and wood above, the proposed assembly is far superior to the tested assembly. Fig. 1B, Although the Intertek design has not tested an HSS beam in the horizontal/ loaded configuration, the proposed design will far exceed the performance of a similar weighted wide

flange member as evaluated above.

Fig 1C, the proposed design utilized members lighter than the tested design. With additional membrane protection below, as well as wood and compressed mineral wool, the proposed assembly is far superior to the tested assembly.

Therefore, as detailed in the attached EJ#1, the proposed protection of the beams will meet the minimum required 2-hour rating per OSSC.

Appeal item 2

Code Section 2014 OSSC 703.3, 704.3 704.10

Requires Reconsideration Appeal#21898, Item #5
(Original Text)

704.3 requires individual encasement for primary structural frame.

704.10 requires that load-bearing structural members in exterior walls of type IIIA construction be provided with 2-hr fire protection.

Proposed Design Original Text)

The building design is comprised of type IIIA wood construction over a type IA concrete podium and is protected by a full NFPA 13 sprinkler system. As part of a building feature in the IIIA construction, a glulam beam connects to a 4x4 HSS and is proposed supporting 2-hr rated construction.

Per table 601 and section 704.10 both elements and their connection requires 2-hr fire protection. The protection of the 4x4 HSS is described in item 1 of this appeal. The protection of the glulam beam is described in item 4 of this appeal.

The required fire protection of the connection is provided per exhibit 5.A. Please see exhibit 0.B for connection location.

*** (Reconsideration Text) ***

A steel beam support assembly is incorporated in the design of Glulam beams. They are required by OSSC Section 704.3 to be individually encased on all sides by 2-hour fire-resistant construction.

The connection of the Glulam beam support is required to have 2-hour protection on all sides, equivalent to an encased structural member since it is supporting a primary structural member. The assembly is constructed with a 1/4" x 4 x 9 vertical knife plate, welded to a 1/4" x 6" x 4" horizontal bearing plate. An evaluation is provided to calculate an equivalent W/D ratio for the assembly. The assembly is then compared to a Intertek tested beam assembly heated on all exposed sides. See attached EJ#2 developed by an Oregon Licensed Fire Protection Engineer.

Reason for alternative Original Text)

Standard UL encasement assemblies are not provided for connections of differing systems. As no UL assemblies exist for this condition, this appeal proposes using the protection provided by the structural members themselves to provide protection for the connection.

*** (Reconsideration Text) ***

The protection of the proposed connection is equivalent to an encased structural member as shown by comparison. The proposed assembly consists of steel knife plate bearing member inserted into a Glulam Beam. The wood, through NDS evaluation, provides roughly of 90 minutes of fire resistance through charring, while the 2 layers of GWB provide an additional 60 minutes on

the sides. The bottom bearing play will be protected with more than 2 hours of Intumescent protection. The top of the bolt holes, attaching knife plates, shall be filled with fire caulking to complete protection of gaps.

Therefore, as detailed in the attached EJ#2., the proposed protection of the bearing plate member will exceed the minimum required 2-hour rating per OSSC.

APPEAL DECISION

1. Alternate 2 hour fire rated steel beam assemblies with engineering analysis: Granted as proposed.

2. Alternate 2 hour fire rated glulam beam support connection with engineering analysis: Granted as proposed.

The Administrative Appeal Board finds that the information submitted by the appellant demonstrates that the approved modifications or alternate methods are consistent with the intent of the code; do not lessen health, safety, accessibility, life, fire safety or structural requirements; and that special conditions unique to this project make strict application of those code sections impractical.

Pursuant to City Code Chapter 24.10, you may appeal this decision to the Building Code Board of Appeal within 90 calendar days of the date this decision is published. For information on the appeals process, go to www.portlandoregon.gov/bds/appealsinfo, call (503) 823-7300 or come in to the Development Services Center.

CODE UNLIMITED, LLC

Steel Beam Protection-EJ#1 Reconsideration of Item #1

Client Name: SERA Architects, Inc.

Client Address: 338 NW 5th Ave., Portland, OR 97209

Date: 9/22/2019

PROJECT OVERVIEW

The 18th & Salmon building is a new 8-story, residential apartment of Type I-A and III-A construction that is protected throughout with an automatic sprinkler system.

Steel components of Beams supporting primary structural members are required to be individually encased on all sides with materials having a 2-hour fire-resistance rating.

Code Unlimited has been asked to provide Engineering Judgment letter for these conditions. The scope of our evaluation is limited to the analysis of the required fire-resistance for the proposed beam assemblies previously submitted under Appeal # 21898, (Item# 1).

APPLICABLE CODES, STANDARDS, AND REFERENCES

- 2014 Oregon Structural Specialty Code (OSSC)
- Chapter 16 of ANSI/AF&PA *National Design Specification for Wood Construction (NDS)*
- *Technical Report No. 10, Calculating the Fire Resistance of Exposed Wood Member*, American Wood Council, 2015

APPROACH

- Referenced beams will be protected with Intertek ASTM E119 designs on all sides (including concealed faces). See Fireproofing Schedule. (Table 1)
- Three beams require additional evaluation as tested data is not available: W10x15, W10x12, HSS 8x4x3/8. Fire Protection equivalency analysis is performed on the thinnest of these W-members, the W10x12 as well as the HSS Beam.
- The proposed beams are analyzed in accordance with OSSC Chapter 7
- The protection of the beams is compared to the requirements for OSSC Section 704
- The beam assembly is reviewed with partial exposure and additional membrane protection, then compared with the Intertek assembly.

PROPOSED FIREPROOFING

Fireproofing for the referenced beams will match Intertek design CC-IF180-01 with the exception that the top surface of the beam is adjacent to wood blocking as opposed to the concrete decking as in the tested assembly. Additionally, the intumescent fireproofing will be provided on all faces and Type X GWB membrane protection will be provided to conceal and increase the fire protection for the members.

Fireproofing Schedule

Member	W/D Ratio	Rating(min)	Mils	mm	Basis Design	
					Intertek	Notes
Columns						
HSS 6x6x1/4	0.77	120	410	10.4	CC/IF 180-03	Equivalent
HSS 6x4x1/4	0.76	120	410	10.4	CC/IF 180-03	Equivalent
HSS 4x4x1/4	0.76	120	410	10.4	CC/IF 180-03	Equivalent
HSS 6x4x3/8	1.14	120	330	8.4	CC/IF 180-03	Equivalent
Beams						
W8x18	0.499	120	380	9.7	CC/IF 180-01	See Section#1A
W12x79	1.11	120	240	6.2	CC/IF 180-01	See Section#1A
W10x26	0.612	120	340	8.7	CC/IF 180-01	See Section#1A
W10x15	0.43	120	410	10.3	CC/IF 180-01	See Section#1C

Carboline Thermo-Lag E100- Thin Film Intumescent

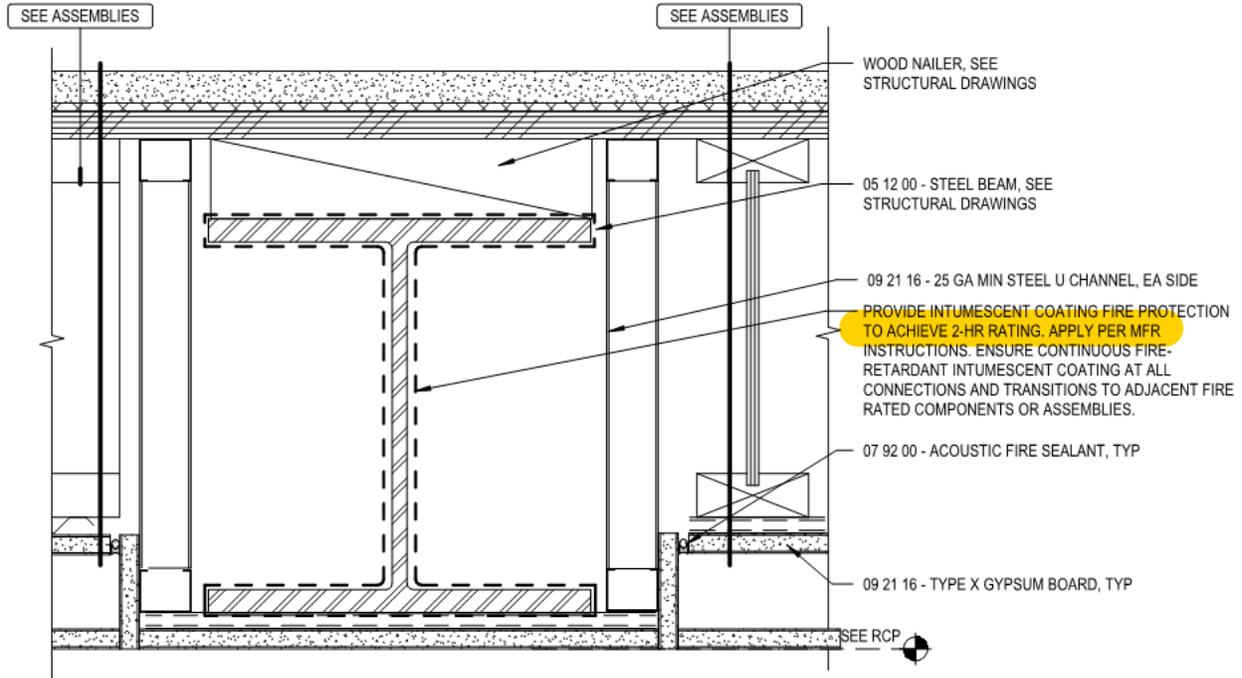

**Column Data included for Reference only.

Table 1: Fireproofing Schedule

PROPOSED DESIGN

Proposed Design 1A

Three typical steel beam assemblies are incorporated in the design (W8x18, W12x79,W10x26). They are required by OSSC Section 704.3 to be individually encased on all sides by 2-hour fire-resistant construction. A typical steel beam is shown in Figure 1A.

8 2-HR STEEL BEAM PROTECTION
NTS

Figure 1A: Typical steel beam above ceiling

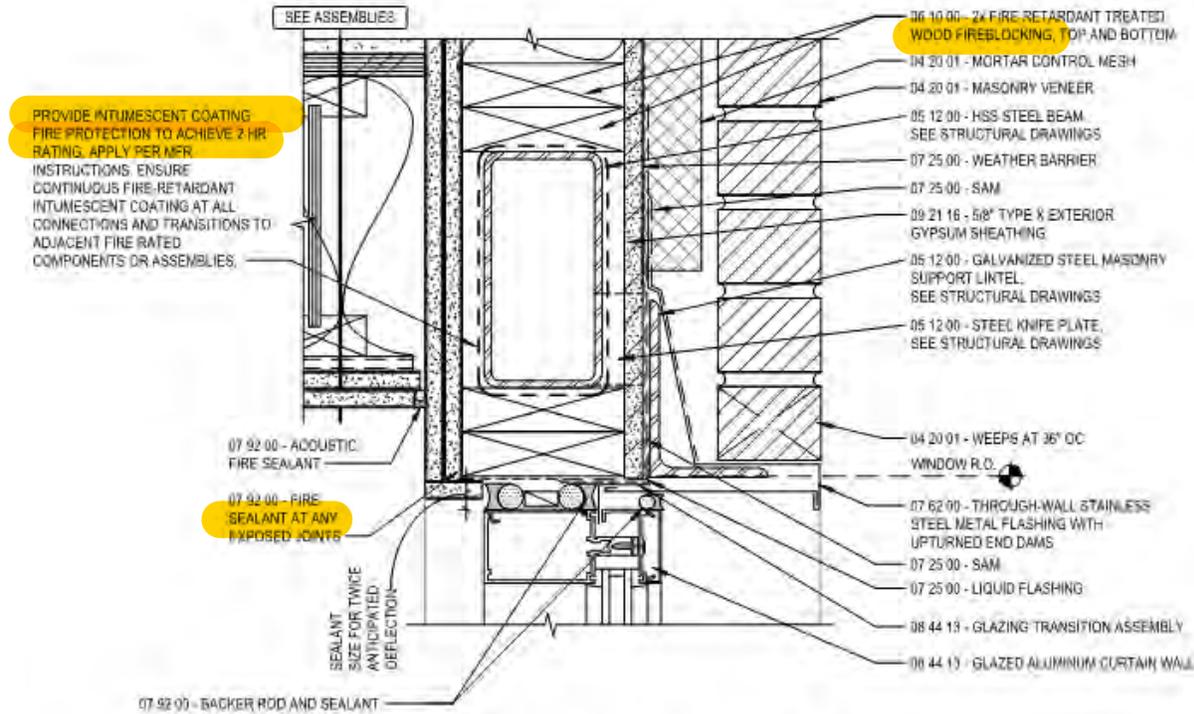

ASSEMBLY ANALYSIS-FIG. 1A

The protection of the beam members far exceeds the 2-hour Intertek design as the beam will have intumescent fire proofing on all faces, 1 hour of additional protection from the FRT wood blocking on the top surface and a 1 hour ceiling membrane below the beam delaying exposure to heat from below.

It should be noted the Intertek design is an unrestrained beam, exposed directly to heat for 2 hours while supporting a concrete deck. While the concrete above provides a thermal heat sink, drawing heat away from the beam and delaying failure. The beneficial effects of the concrete, after 30 minutes, are minimal as the concrete will absorb heat from the fire also.

Proposed Design 1B

Typical steel HSS 8x4x3/8 beam assemblies are incorporated in the design at the exterior wall. They are required by OSSC Section 704.3 to be individually encased on all sides by 2-hour fire-resistant construction. A typical steel beam is shown in Figure 1B.

2 BRICK SUPPORT AT SW CORNER (WOOD)
NTS

Figure 1B: Typical HSS steel beam above ceiling

ASSEMBLY ANALYSIS-FIG. 1B

The protection of the beam members significantly exceeds the 2-hour Intertek design as the beam will have intumescent fire proofing on all faces, 2 hour of additional protection (assume 1.5"/Hr nominal per NDS) from the FRT wood blocking on the top surface and below and a 1 hour membrane (per component additive method of OSSC) on left side. The right side of the assembly is facing the exterior of the building and will not be subjected to heat from an assumed fire directly below the beam. The beam heating will be delayed, while the intumescent thickness applied will match a similar weight wide flanged beam per W/D comparison.

It should be noted the Intertek design is an unrestrained beam, exposed directly to heat for 2 hours while supporting a concrete deck. While the concrete above provides a thermal heat sink, drawing heat away from the beam and delaying failure. The beneficial effects of the concrete, after 30 minutes, are minimal as the concrete will absorb heat from the fire also.

Proposed Design 1C

Typical steel beam assemblies are incorporated in the design at the spandrel head. They are required by OSSC Section 704.3 to be individually encased on all sides by 2-hour fire-resistant construction. A typical steel beam is shown in Figure 1A.

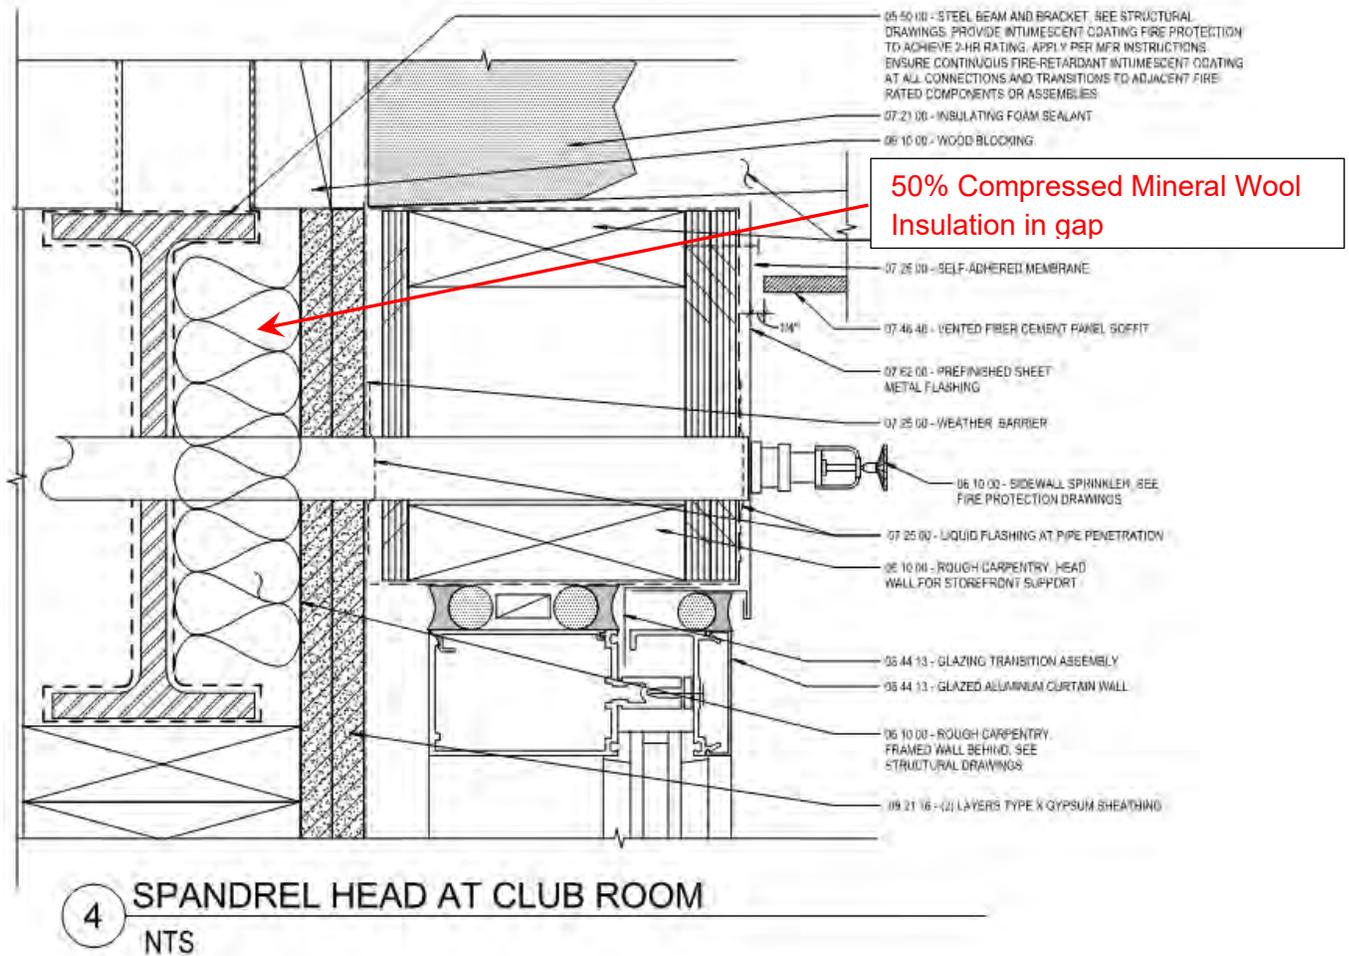

Figure 1C: Typical steel beam at Spandrel Head

ASSEMBLY ANALYSIS-FIG. 1C

The protection of the beam members exceeds the 2-hour Intertek design as the beam will have intumescent fire proofing on all faces, 2 hour of additional protection (assume 1.5"/Hr nominal per NDS) from the FRT wood blocking on the bottom surface and a 2 hour membrane to the right. The top side of the assembly is supporting a roof. The heating of the beam will be delayed on the bottom and right sides, while the intumescent thickness applied would match a similar wide flanged beam per W/D comparison heated on 2 faces. (see below for W/D analysis). The analysis below is focusing on the W10x12 beam, while the W10x15

beam ($W/D=0.43$) is assumed to be sufficiently protected as the W/D ratio is only 2.25% less than thinnest beam tested ($W/D=0.44$) for the fully exposed tested beam.

It should be noted the Intertek design is an unrestrained beam, exposed directly to heat for 2 hours while supporting a concrete deck. While the concrete above provides a thermal heat sink, drawing heat away from the beam and delaying failure. The beneficial effects of the concrete, after 30 minutes, are minimal as the concrete will absorb heat from the fire also.

W/D Ratio Analysis (W10x12)

W10x12.

Weight per lineal ft. = 12.0

Heated Perimeter as Proposed (Left and Top Sides) = 17.3

Effective W/D Ratio = 0.69

As a conservative measure, protect the beam with an applied thickness for $W/D = 0.44$ beam.

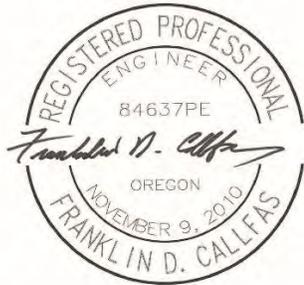

CONCLUSION

The protection of the proposed beams are equivalent or superior as shown by comparison to Intertek listed assembly Design No. CC/IF 180-01. The difference between the proposed design and the listed assembly are: Fig 1A, wood has been substituted in the proposed assembly for the concrete floor above in the listed design. With additional membrane protection below and wood above, the proposed assembly is far superior to the tested assembly.

Fig. 1B, Although the Intertek design has not tested an HSS beam in the horizontal/ loaded configuration, the proposed design will far exceed the performance of a similar weighted wide flange member as evaluated above.

Fig 1C, the proposed design utilized members lighter than the tested design. With additional membrane protection below, as well as wood and compressed mineral wool, the proposed assembly is far superior to the tested assembly.

Therefore, as detailed above, the proposed protection of the beams (see Table 1) above will be meet the minimum required 2-hour rating per OSSC.

CODE UNLIMITED, LLC

Steel Beam Protection-EJ#2 Reconsideration of Item #5

Client Name: SERA Architects, Inc.

Client Address: 338 NW 5th Ave., Portland, OR 97209

Date: 9/22/2019

PROJECT OVERVIEW

The 18th & Salmon building is a new 8-story, residential apartment of Type I-A and III-A construction that is protected throughout with an automatic sprinkler system.

Steel components of Beams supporting primary structural members are required to be individually encased on all sides with materials having a 2-hour fire-resistance rating.

Code Unlimited has been asked to provide Engineering Judgment letter for these conditions. The scope of our evaluation is limited to the analysis of the required fire-resistance for the proposed beam support assembly previously submitted under Appeal # 21898, (Item# 5).

APPLICABLE CODES, STANDARDS, AND REFERENCES

- 2014 Oregon Structural Specialty Code (OSSC)
- Chapter 16 of ANSI/AF&PA *National Design Specification for Wood Construction (NDS)*
- *Technical Report No. 10, Calculating the Fire Resistance of Exposed Wood Member*, American Wood Council, 2015

APPROACH

- Referenced beam support will be protected with Intertek ASTM E119 designs on exposed sides.
- Glulam Beam supports require additional evaluation as comparable test designs are not available.
- The proposed members are analyzed in accordance with OSSC Chapter 7
- The protection of the members are compared to the requirements for OSSC Section 704
- The member protection is reviewed with partial exposure, then compared with the Intertek assembly.

PROPOSED DESIGN

A steel beam support assembly is incorporated in the design of Glulam beams. They are required by OSSC Section 704.3 to be individually encased on all sides by 2-hour fire-resistant construction. A typical steel support is shown in Figure 1.

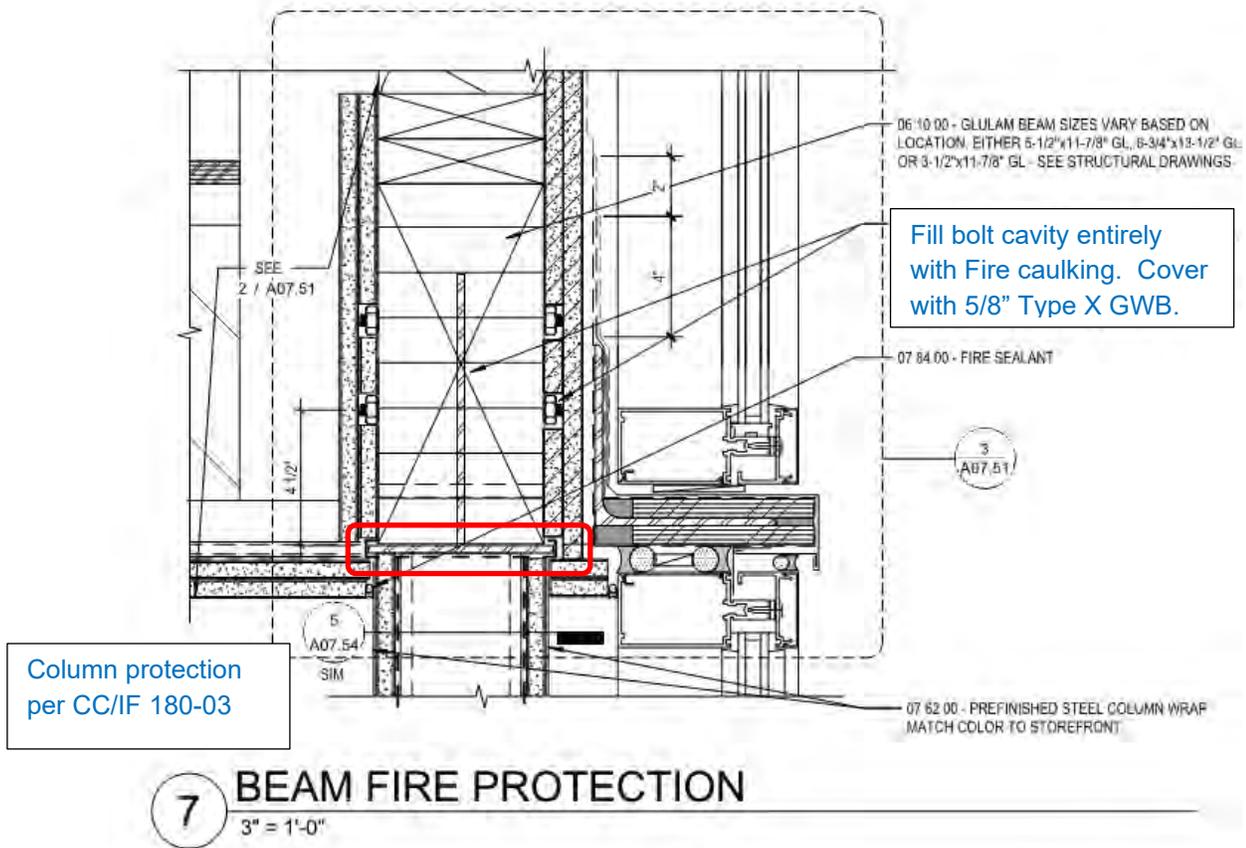

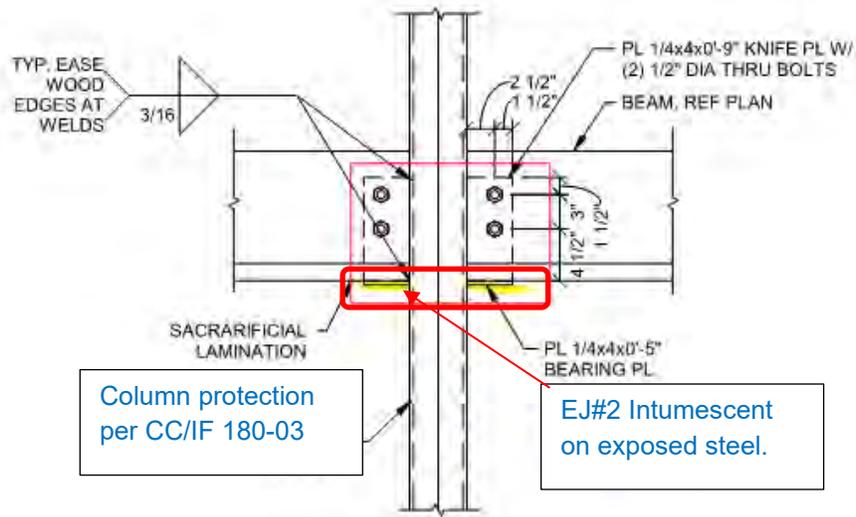

Figure 1: Steel beam support at HSS connection

EJ#2 Intumescent on exposed steel.

A

18 BEAM CONN TO HSS COLUMN
S06.11 1" = 1'-0"

Figure 2: Steel beam support at HSS connection (Cross-Section)

ASSEMBLY ANALYSIS

The connection of the Glulam beam support is required to have 2-hour protection on all sides, equivalent to an encased structural member since it is supporting a primary structural member. The assembly is constructed with a 1/4" x 4 x 9 vertical knife plate, welded to a 1/4"x 6" x 4" horizontal bearing plate. An evaluation is provided below to calculate an equivalent W/D ratio for the assembly. The assembly is then compared to a tested beam assembly heated on all exposed sides. See Table 1 below for analysis from each face.

It should be noted the Intertek design is an unrestrained beam, exposed directly to heat for 2 hours while supporting a concrete deck. While the concrete above provides a thermal heat sink, drawing heat away from the beam and delaying failure. The beneficial effects of the concrete, after 30 minutes, are minimal as the concrete will absorb heat from the fire also.

W/D Ratio Analysis (Bearing plate)

Knife Plate.

$$\text{Area} = .2475 \text{ Ft}^2 (10.2 \text{ lb/ft}^2) = 2.52 \text{ lbs}$$

Bearing Plate.

$$\text{Area} = .165 \text{ Ft}^2 (10.2 \text{ lb/ft}^2) = 1.68 \text{ lbs}$$

$$\text{Total Weight} = 4.275 \text{ lbs}$$

$$\text{Total length} = 4" \text{ or } .33 \text{ ft.}$$

$$\text{Lineal Weight} = 12.75 \text{ lb/ft}$$

$$\text{Heated Perimeter as Proposed (Bottom Side)} = 6"$$

$$\text{Effective W/D Ratio} \Rightarrow 12.75/6 = \mathbf{2.12}$$

As a conservative measure, protect the beam with the same thickness as required for the HSS Column (Intertek design CC/IF 180-03) (410 Mils).

This will provide continuity of intumescent thickness for the direct attachment to the column. The applied thickness will be twice the minimum required for the W/D ratio of 2.12 per the Intertek design CC/IF 180-01.

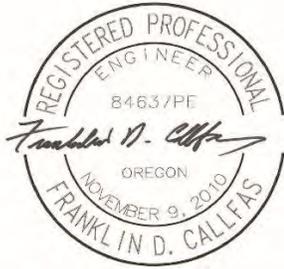

Table 1: Comparison of the member directional fire resistance

Location	Proposed Design	Fire Resistance
1. Top of Assembly	More than 4" of Wood the that is covered by (2) layers of 5/8" Type X GWB Membrane	More than 120 Minutes (Per NDS & CAM-OSSC)
2. Sides of assembly	2.75" of Wood, (2) layers of 5/8" Type X GWB. Fill bolt holes with fire caulking and cover with (1) layer of 5/8" Type X GWB.	More than 120 Minutes (Per NDS & CAM-OSSC).
3. Exposed Base Plate (Recessed into the GLB.)	410 Mils of Intumescent Paint, then covered by 1 layer of GWB.	More than 120 Minutes (See evaluation above)
Fire-Resistance Rating	Minimum 2-hours	Exceeds 2-hours

CONCLUSION

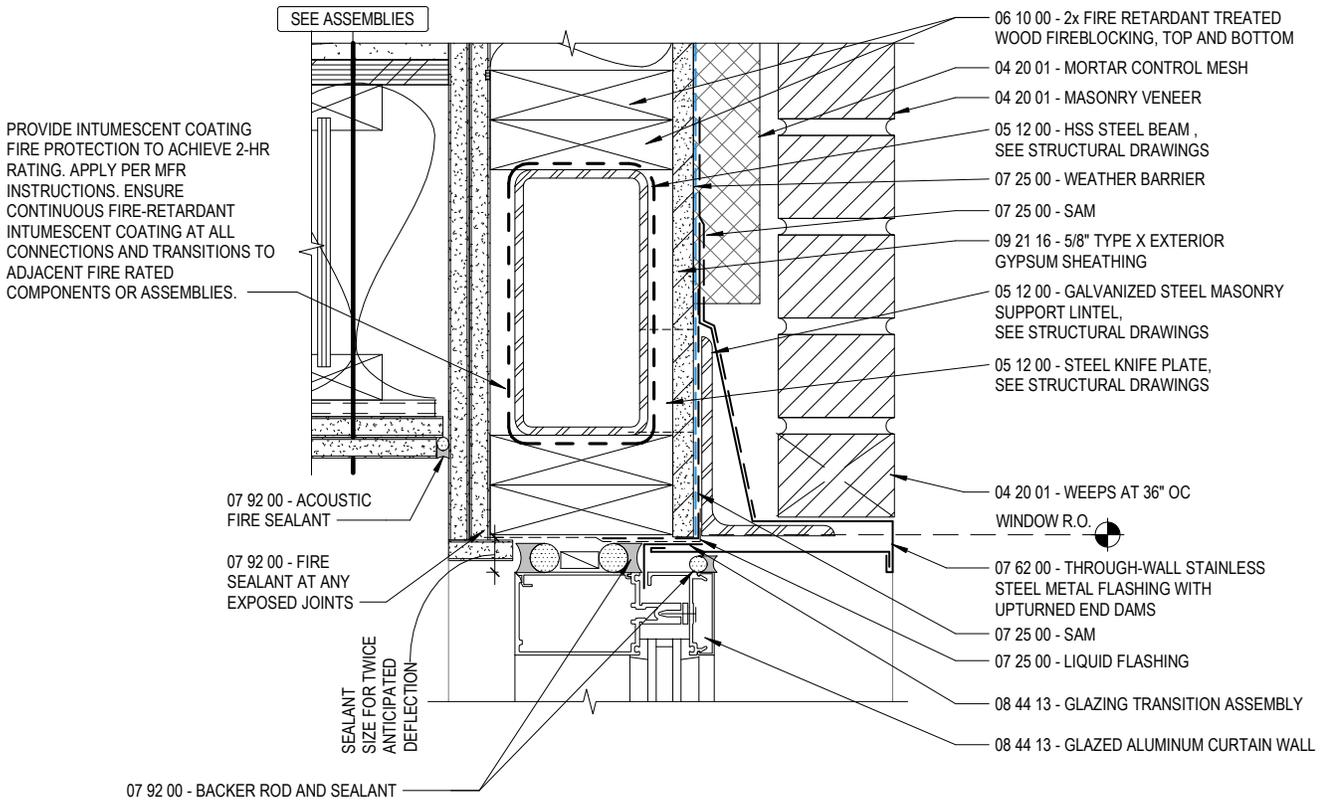

The protection of the proposed connection is equivalent to an encased structural member as shown by comparison in Table 1. The proposed assembly consists of steel knife plate bearing member inserted into a Glulam Beam. The wood, through NDS evaluation, provides roughly of 90 minutes of fire resistance through charring, while the 2 layers of GWB provide an additional 60 minutes on the sides. The bottom bearing play will be protected with more than 2 hours of Intumescent protection. The top of the bolt holes, attaching knife plates, shall be filled with fire caulking to complete protection of gaps.

Therefore, as detailed above, the proposed protection of the bearing member (see Table 1 above) will exceed the minimum required 2-hour rating per OSSC.

SHEAR WALL GENERAL NOTES (APPLICABLE TO ALL SHEAR WALL TYPES):

1. IF ANCHOR BOLT SPACING IS GREATER THAN SHEAR WALL LENGTH INSTALL (1) ANCHOR WITHIN 12" OF EACH END.
2. SHEAR WALLS ARE TO BE BLOCKED AT ALL PANEL EDGES UNLESS NOTED OR DETAILED OTHERWISE.
3. GALVANIZED NAILS SHALL BE USED FOR THE NAILS INTO PT OR FRT LUMBER.
4. ANCHOR BOLTS SHALL BE GALVANIZED AND SHALL HAVE A 1/4"x3"x3" GALVANIZED PLATE WASHER BETWEEN THE SILL PL AND NUT. REFERENCE SHEAR WALL DETAIL 3/S06.01 FOR PLACEMENT REQUIREMENTS OF AB AND PL WASHER.
5. PENETRATIONS - NO BLOCKING REQUIRED AT 4 1/2" x 4 1/2" MAXIMUM OPENINGS PROVIDED OPENINGS ARE SEPARATED BY 8" MINIMUM. HOLE IS CIRCULAR OR SQUARE CUT WITH RADIUS CORNERS. NO OVERCUTTING. HOLES ARE NOT WITHIN LAST 16" OF SHEARWALL LENGTH. AND ACCUMULATED LENGTH OF THE OPENINGS IN THE SHEARWALL DOES NOT EXCEED THE LESSER OF 20% OF THE WALL LENGTH AND 18". 2x BLOCKING SHALL BE PROVIDED ABOVE AND BELOW THE OPENING. FOR THE WIDTH OF THE STUD BAY. SHEAR WALL SHEATHING SHALL BE EDGE NAILED TO THIS BLOCKING. OPENINGS BEYOND THESE PARAMETERS REQUIRE APPROVAL BY THE ENGINEER OF RECORD PRIOR TO CUTTING AND DRILLING.
6. PENETRATIONS - BLOCKING REQUIRED AT 9" x 9" MAXIMUM OPENINGS PROVIDED OPENINGS ARE SEPARATED BY 16" MINIMUM. HOLE IS CIRCULAR OR SQUARE CUT WITH RADIUS CORNERS. NO OVERCUTTING. HOLES ARE NOT WITHIN LAST 16" OF SHEARWALL LENGTH. AND ACCUMULATED LENGTH OF THE OPENINGS IN THE SHEARWALL DOES NOT EXCEED THE LESSER OF 20% OF THE WALL LENGTH AND 18". 2x BLOCKING SHALL BE PROVIDED ABOVE AND BELOW THE OPENING. FOR THE WIDTH OF THE STUD BAY. SHEAR WALL SHEATHING SHALL BE EDGE NAILED TO THIS BLOCKING. OPENINGS BEYOND THESE PARAMETERS REQUIRE APPROVAL BY THE ENGINEER OF RECORD PRIOR TO CUTTING AND DRILLING.
7. REFERENCE THE HOLDDOWN SCHEDULE OR CONTINUOUS THREADED ROD HOLDDOWN SCHEDULE (WHICHEVER APPLIES) FOR END POST REQUIREMENTS AT EACH END OF SHEAR WALLS. EDGE NAIL SHEATHING TO END POSTS.

ROOF FRAMING PLAN NOTES

- A FOR A COMPLETE LEGEND OF ALL CALLOUTS AND SYMBOLS REF COVER SHEET AND SCHEDULES.
- B REFERENCE DETAIL 4/S06.20 FOR TYPICAL DOUBLE TOP PL SPLICE CONNECTION.
- C ALL POSTS FOR GIRDER TRUSSES, BEAMS, HEADERS AND / OR PURLINS SHALL CONTINUE DOWN FLOOR TO FLOOR TO FT SLAB, FOUNDATION OR LOWER BEAM / HEADER.
- D VERIFY SIZE AND LOCATION OF ALL MECHANICAL AND WALL PENETRATIONS.
- E TRUSS MANUFACTURER TO REVIEW ALL DETAILS AND PLANS TO ACCOUNT FOR SPECIFIC CONDITIONS.
- F ALL GIRDER TRUSSES SHALL BE SECURED TO SUPPORTING POSTS BELOW WITH SIMPSON LG1 TIEDOWNS. 2-PLY GIRDER TRUSSES WILL REQUIRE A MINIMUM SUPPORT POST SIZE (2) 2x6 DF#2. 3-PLY GIRDER TRUSSES WILL REQUIRE A MINIMUM SUPPORT POST SIZE (3) 2x6 DF#2, ETC. REF DETAIL 27/S07.02.
- G PROVIDE HEADER TYPE H1 AT ALL OPENINGS, TYP AT BEARING WALLS UNO. REF DETAIL 1/S06.20 FOR TYPICAL HEADER CONSTRUCTION, UNO.
- H CONTRACTOR TO COORDINATE LOCATION OF FALL PROTECTION WITH TRUSS MANUF. REF DETAIL 25/S07.02 FOR CONNECTION AND REQUIRED TRUSS LOADING.
- I REFERENCE DETAIL 26/S07.02 FOR TYPICAL INTERIOR NON-BEARING WALL CONNECTIONS TO ROOF TRUSSES.
- J TRUSS MANUFACTURER TO COORDINATE ALL MECHANICAL LOADS WITH MECHANICAL DRAWINGS.

KEYED NOTES

- 2 5/8" APA RATED SHEATHING WITH 2x4 FLAT BLOCKING ALONG ALL UNSUPPORTED PANEL EDGES. AT EACH SHEATHING TO FRAMING AND BLOCKING WITH 0.148 DIA x 3" NAILS AT 6" OC PANEL EDGES, 12" OC FIELD, REF DETAIL 8/S06.20.
- 20 PRE-MANUFACTURED DRAG/GIRDER TRUSS ALIGNED WITH WALL BELOW AND AT CORRIDOR LOCATION. DRAG/GIRDER TRUSS TO RUN ENTIRE LENGTH OF CORRIDOR. TRUSS TO BE DESIGNED FOR A SHEAR LOAD 260 PLF/A.
- 21 SIMPSON CS14 COIL STRAP x AS SHOWN NAILED THROUGH SHEATHING IN TO GIRDER TRUSSES AND 2x CORRIDOR JOIST. REFERENCE DETAIL 04/S07.01.
- 22 SIMPSON CS14 COIL STRAP x AS SHOWN NAIL TO GIRDER TRUSS AND ROOF TRUSS BLOCKING. REFERENCE DETAIL 04/S07.01 AND DETAIL 30/S7.03.
- 23 SIMPSON CS14 COIL STRAP x 8" LONG NAILED ON TOP OF BEAM AND BOTTOM OF ROOF TRUSS. REFERENCE DETAIL 12/S07.01.
- 24 SIMPSON CSM14 COIL STRAP x 8" LONG NAILED ON TOP OF SHEATHING W/ 0.162" DIA x 2 1/2" NAILS TO TOP OF DBL TOP PL OR TOP OF BEAM AND TO BOTTOM OF ROOF TRUSS. REFERENCE DETAIL 12/S07.01.
- 25 SIMPSON CSM14 COIL STRAP x 8" LONG NAILED ON TOP OF SHEATHING W/ 0.162" DIA x 2 1/2" NAILS TO TOP OF DOUBLE TOP PLATE AND BOTTOM OF GIRDER TRUSS. REFERENCE DETAIL 12/S7.01.
- 26 SIMPSON CSM14 COIL STRAP x 8" LONG NAILED ON TOP OF SHEATHING W/ 0.162" DIA x 2 1/2" NAILS TO TOP OF TRUSSES. REFERENCE DETAIL 24/S7.02.
- 27 SIMPSON CS14 COIL STRAP x AS SHOWN NAIL W/ 0.162" x 2 1/2" NAIL TO TOP OF SHEATHING ON GIRDER TRUSS AND NAIL TO 3x BLOCKING. REF DETAILS 04/S07.01 AND 30/S07.03.
- 28 SIMPSON CSM14 COIL STRAP x 10" LONG, NAIL W/ 0.162" DIA x 2 1/2" NAILS TO TOP OF SHEATHING ON TOP OF GIRDER DRAG ROOF TRUSS AND CORRIDOR JOISTS. REFERENCE DETAIL 04/S07.01.
- 31 SIMPSON CS14 COIL STRAP x 6" LONG, NAIL W/ 0.162" DIA x 2 1/2" NAILS ON BOTTOM OF ROOF TRUSS AND TO TOP OF BEAM. ALIGN TRUSS WITH WALL BELOW. REFERENCE DETAIL 12/S07.01.
- 32 SIMPSON CS14 COIL STRAP x 6" LONG, NAIL W/ 0.162" DIA x 2 1/2" NAILS TO TOP OF DRAG TRUSSES. REFERENCE DETAIL 30/S07.03.
- 33 SIMPSON CS14 COIL STRAP x AS SHOWN, NAIL W/ 0.162" DIA x 2 1/2" NAIL TO TOP OF DRAG TRUSSES. REFERENCE DETAIL 30/S07.03.
- 49 PRE-MANUFACTURED DRAG/GIRDER TRUSS. DRAG TRUSS TO BE DESIGNED FOR A LOAD OF 2,500 LBS TO TRANSFER FROM TOP CHORD TO BOTTOM CHORD. EDGE NAIL SHEATHING TO DRAG TRUSSES.
- 50 PRE-MANUFACTURED DRAG/GIRDER TRUSS. DRAG TRUSS TO BE DESIGNED FOR A LOAD OF 3,200 LBS TO TRANSFER FROM TOP CHORD TO BOTTOM CHORD. EDGE NAIL SHEATHING TO DRAG TRUSSES.
- 52 PRE-MANUFACTURED DRAG TRUSS. DRAG TRUSS TO BE DESIGNED FOR A LOAD OF 1,500 LBS TO TRANSFER FROM TOP CHORD TO BOTTOM CHORD. EDGE NAIL SHEATHING TO DRAG TRUSSES.
- 77 TRUSS MANUFACTURER TO DESIGN TRUSS FOR 3750LB POINT LOAD FOR HOT WATER TANKS.
- 80 SIMPSON CS14 COIL STRAP x 6" LONG NAILED TO DBL TOP PL AND TO CORRIDOR JOISTS AS SHOWN. REFERENCE DETAIL 45/S07.01.
- 81 SIMPSON CS14 COIL STRAP x AS SHOWN NAILED TO TOP OF TRUSS BLOCKING. REFERENCE DETAIL 11/S07.01 AND DETAIL 30/S7.03.
- 82 SIMPSON CSM14 COIL STRAP x 4'-0" LONG. STRAP TO BE CENTERED ON HSS COLUMN. REFERENCE DETAIL 35/S2.22. PROVIDE 3x JOIST BLOCKING. PROVIDE STRAP AT FLOOR/ROOF DIAPHRAGM WHERE HSS COLUMN SUPPORTING BALCONY OCCURS. STRAP REQUIREMENTS TYPICAL AT ALL BALCONIES SUPPORTED BY HSS COLUMNS. REF SHEET S05.21.
- 84 STRAP BEAM TO COLUMN USING SIMPSON M520 STRAP ON EITHER SIDE OF THE BEAM.

Carboline Company
CC/IF 180-01
Restrained or Unrestrained Beam
Thermo-Lag E100, Thermo-Lag E100 S
ASTM E119-12a
CAN/ULC S101-07 Restricted Load Maximum 65% of design load
Assembly Rating – See Table CC/IF 180-01

1. **FLOOR/CEILING ASSEMBLY** - Use a fire-rated floor/ceiling assembly consisting of normal weight or lightweight (minimum 105 pcf, 1682 kg/m³) reinforced concrete. Thickness of concrete Floor ceiling assembly must comply with designated fire resistive rating.
2. **FLUTED STEEL FLOOR UNITS** – Corrugated steel decking, minimum 1-1/2 inch deep (38 mm), minimum 20 Ga.
3. **STEEL STRUCTURAL BEAM** – Use steel sections, I-beam or W-beam, sized in accordance with the Table CC/IF 180-01.

4. **FIRE-RESISTIVE COATING** – Refer to Table CC/IF 180-01 for specific application thickness of fire resistive coating.

CERTIFIED MANUFACTURER:
Carboline Company

CERTIFIED PRODUCT: Fire-
resistive Coating

MODEL: Thermo-Lag E100,
Thermo-Lag E100 S

Intumescent Fireproofing - Spray
or paint in one or more coats
according to manufacturer's

07 80 00 Fire and Smoke Protection
07 81 00 Applied Fire Proofing
07 81 23 Intumescent Fireproofing

CC/IF 180-01

Page 2 of 2

instructions to the required thickness.

MODEL: Any Intertek certified mineral wool or ceramic fiber blanket model that meets the criteria below.

5. LISTED MANUFACTURER: Any Intertek certified mineral wool or ceramic fiber blanket manufacturer that meets the criteria below.

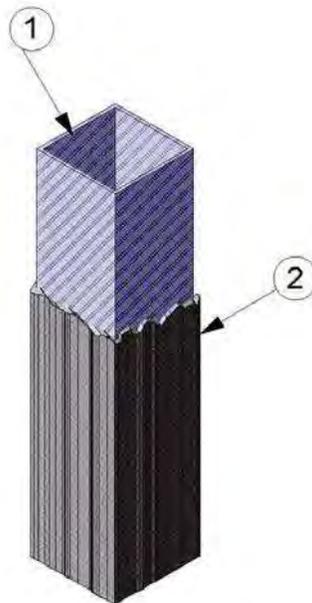

FLUTE FILLER – Completely fill the flutes between steel structural beam (Item 3) and the fluted steel floor unit (Item 2) with 4 pcf mineral wool or 4 pcf ceramic fiber blanket.

CERTIFIED PRODUCT: Insulation

Assembly Rating – See Table CC/IF 180-03

- 1. HOLLOW RECTANGULAR STRUCTURAL STEEL COLUMN** – Use hollow steel sections, rectangular-shape, having nominal H_p/A , W/D , or A/P section factors based on four sided exposure. Refer to Table CC/IF 180-03 for specific application thickness of intumescent mastic fireproofing (Item 2B) based on nominal H_p/A or W/D section factors. This table is applicable for circular-shape hollow steel sections as well.
- 2. FIRE-RESISTIVE COATING** – Refer to Table CC/IF 180-03 for specific application thickness of fire resistive coating.

SELECTION & SPECIFICATION DATA

Generic Type	A two component, 100% solids epoxy intumescent fireproofing.
Description	An epoxy intumescent fireproofing for commercial and light industrial applications. It was specifically designed with an advanced formulation to provide 1-3 hour cellulosic fire protection for structural steel beams, I-section columns, tubular columns and pipes without the need for reinforcing mesh. It provides a fast curing, aesthetically pleasing fire protection solution and is rated for both exterior and interior applications.
Features	<ul style="list-style-type: none"> • Certified to UL 263 / ASTM E119 / NFPA 251 • Exterior and interior rated • High quality aesthetic finish • Does not require reinforcing mesh • Low thickness requirements • High build, fast recoat • Saves application time, lowering installation cost • Rugged durable material suitable for onsite or offsite applications • LEED compliant, low VOC • Low outgassing properties for clean room environments
Color	Grey
Finish	Slightly Textured
Primer	<p>Must be applied over a compatible primer. If the steel has already been coated with an existing primer, refer to Carboline Technical Service for advice before applying. Contact Carboline Technical Service for a complete list of approved primers.</p> <p>Carboline approved primers must be sufficiently cured prior to application of Thermo-Lag E100. The general requirement for epoxy primers is a 24 hour cure. Material must be applied after 24 hours and not to exceed the approved primer's maximum recoat window.</p>
Film Build	60-200 mils (1.5-5 mm)
Solids Content	By Volume 100%
Theoretical Coverage Rates	1604 ft ² at 1 mil (149 m ² at 25 microns)
VOC Values	As Supplied : 0.11 lb/gal (13 g/L)
Limitations	Not recommended for steelwork subject to long-term surface temperatures over 175°F (79°C) in normal use.
Topcoats	For interior conditioned space, topcoats are optional. For interior general purpose and exterior use, Carboline approved topcoats are required. Product must be applied to the specified DFT prior to applying a topcoat. The choice of topcoat will depend on project requirements. Contact Carboline Technical Service for a complete list of approved topcoats.

SUBSTRATES & SURFACE PREPARATION

General	Remove all oil or grease from the surface to be coated using Thinner 2 or Carboline Surface Cleaner 3.
----------------	--

SUBSTRATES & SURFACE PREPARATION

Steel | The general requirement for steel preparation before the application of an approved primer should meet SSPC-SP6, with a 1.5-2.0 mil (37-50 micron) angular profile. Contact Carboline Technical Service for recommendations and specific primer requirements.

Galvanized Steel | The general requirement for steel preparation before priming should meet SSPC-SP7. 1.5-2.0 mil (37-50 micron) angular profile required. Prime with Carboline approved primer. Contact Carboline Technical Service for recommendations.

Non-Ferrous Metals | Contact Carboline Technical Service for recommendations.

PERFORMANCE DATA

Test Method	Results
ASTM D2240 Hardness	> 40 Shore D
ASTM D256 Impact Resistance	0.75 ft*lbs/in
ASTM D4541 Bond Strength	600-1200 psi (4.14-8.27 MPa)
ASTM D4541 Bond Strength	Typical Field Value 300 psi (2.07 MPa)
ASTM D695 Compressive Strength	> 2,330 psi (> 16.0 MPa)
ASTM D790 Flexural Strength	> 1,220 psi (> 8.4 MPa)
ASTM E84 Surface Burning	Class A

All values derived under controlled laboratory conditions unless otherwise noted.

MIXING & THINNING

Mixer | Use 1/2" electric or air driven drill with a slotted paddle mixer. Must be 300 rpm under load (minimum).

Plural Component Application:

For plural component applications, the part A and part B components must be pre-mixed separately before introduction into the plural equipment.

Trowel Application:

The product is supplied in 9 gallon (34.0 liter) kits. The product must be mixed in equal volumes of part A and part B. It is recommended to split each kit in half and mix 2.25 gallons (8.5 liters) of part A and 2.25 gallons (8.5 liters) of part B to achieve a maximum mixing volume of 4.5 gallons (17.0 liters). Add up to 1 quart (1 liter) of Carboline Plasite Thinner 19, Thinner 242E or Carboline approved equivalent to part B and mix until fully incorporated. Thinning is not required for this application and material should only be thinned as necessary to achieve the desired working time and consistency. Stage material by adding part B on top of part A.

Mix staged material with slotted paddle mixing blade for approximately 2 minutes or until completely blended and consistent color is achieved. Once mixed, material should be immediately poured out of mass onto a clean table or flat working surface to extend the pot life. Mixed material left in the pail will begin to exotherm and diminish pot life. For small areas, equal volumes of part A and part B can be mixed as needed. Trowel application should commence immediately after mixing.

Thinning

Plural Component Application:

Do not thin

Trowel Application:

Only thin as required with Plasite Thinner 19, Thinner 242E or Carboline approved equivalent – Maximum 1 quart (1 liter) per 4.5 gallon (17.0 liter) kit.

Ratio | 1:1 (by volume)

MIXING & THINNING

Working Time	30-45 minutes @ 75°F (25°C) 15-20 minutes @ 100°F (38°C)
---------------------	---

APPLICATION EQUIPMENT GUIDELINES

Listed below are general equipment guidelines for the application of this product. Job site conditions may require modifications to these guidelines to achieve the desired results.

General	Thermo-Lag E100 is applied by plural component application. Use only plural component equipment specifically designed for epoxy based PFP. Consult the manufacturers for specific information and models: AirTech Spray Systems ECCO Spray Quip Spray Pump Services Graco WIWA
Spray Gun	WIWA 500F PFP or equivalent Must have non-wetted spring assembly.
Gun Swivel	5,000 psi (34.4 MPa) 1/2" - 3/8" (12.7 mm - 9.5 mm)
Spray Tips	0.027-0.035" (Use heavy duty RAC non diffuser tips and housing)
Fan Size	6-10" (152-254 mm) depending on section being sprayed
Static Mixer	Standard Static 12 turn 3/4" (19 mm) I.D.
Material Hose	Plural Component: 100' (30.4 m) heated hose bundle with 3/4" (19 mm) I.D. minimum and 3/4" (19 mm) mixer manifold
Whip Hose	20' (6.1 m) of 1/2" (12.7 mm) I.D. minimum
Compressor	185 cfm @ 100 psi (6.9 kPa) minimum

APPLICATION PROCEDURES

General	<p>Plural Component Application: Prior to introduction into the plural component equipment, the product must be preheated to 70-100°F (21-38°C). Perform at least two ratio checks per day and also after any equipment maintenance. Apply first coat at 60-200 mils (1.5-5 mm). Lighter coats will achieve a smoother finish for higher quality aesthetics. Allow material to gel for 15 minutes before backrolling (only if required). If backrolling, use solvent resistant mohair rollers. Use Carboline Plasite Thinner 19, Thinner 242E or approved equal as rolling solvent to mist down rollers to prevent them from sticking to the material. Allow material to cure for approximately 30 minutes (depending upon temperature) between coats. Continue building material at 60-200 mils (1.5-5 mm) per coat to specified thickness.</p> <p>Trowel Application: Prior to trowel application, the material must be preheated to a minimum of 70°F (21°C) to achieve a workable consistency. Once material is mixed, it must be poured out of mass onto a clean table or flat working surface to extend the pot life. The material can then be divided into workable amounts. Trowel apply first coat at 60-200 mils (1.5-5 mm). Allow material to gel for 15 minutes before</p>
----------------	--

APPLICATION PROCEDURES

backrolling (only if required). If backrolling, use Carboline Plasite Thinner 19, Thinner 242E or approved equal as rolling solvent to mist down rollers to prevent them from sticking to the material. Allow material to set up sufficiently to support the next trowel applied coat. This will range between 1-4 hours between coats. Continue building material at 60-200 mils (1.5-5 mm) per coat to specified thickness.

Avoid using excessive solvent when backrolling as this can lead to solvent entrapment and lengthen the cure time of the material. Use solvent moistened rollers to back roll material after each subsequent coat to improve finish and level surface if required. Lighter coats will achieve a smoother finish. Contact Carboline Technical Service or refer to the product application manual for more detailed information.

Wet Film Thickness Frequent thickness measurements with a wet film gauge are recommended during the application process to ensure uniform thickness.

Dry Film Thickness For recommended methods of thickness determination and tolerances refer to: AWCI Technical Manual 12-B (Standard Practice for the Testing and Inspection of Field Applied Thin Film Intumescent Fire Resistive Materials) or SSPC-PA 2 (The Society for Protective Coatings Paint Application Standard No. 2).

APPLICATION CONDITIONS

Condition	Material	Surface	Ambient	Humidity
Minimum	70°F (21°C)	41°F (5°C)	41°F (5°C)	0%
Maximum	140°F (60°C)	125°F (52°C)	110°F (43°C)	85%

Air and substrate temperature must be at least 41°F (5°C) and rising. Steel surface temperature should be a minimum of 5°F (3°C) above the dew point. The maximum humidity is 85%. Material must be protected from direct rain until it has reached sufficient cure.

CURING SCHEDULE

Surface Temp.	Touch	Handle	Minimum Recoat Time	Maximum Recoat Time	Minimum Topcoat Time	Maximum Topcoat Time
50°F (10°C)	1 Hour	24 Hours	1 Hour	7 Days	24 Hours	7 Days
70°F (21°C)	30 Minutes	24 Hours	30 Minutes	7 Days	10 Hours	7 Days
95°F (35°C)	30 Minutes	24 Hours	30 Minutes	7 Days	10 Hours	7 Days

*Above cure times are based on 50% relative humidity. Curing times are dependent upon temperature, air movement and humidity. Lower temperatures will slow down the curing process and increase recoat intervals, higher temperatures will speed up the curing process and shorten the recoat intervals. The material can be heated to achieve a quicker recoating and curing schedule. For optimum curing, it is recommended to apply coats at 60-200 mils (1.5-5 mm) wet per coat. If maximum recoat or topcoat times are exceeded, the surface must be mechanically abraded and solvent wiped prior to applying additional coats. Consult Carboline Technical Service for specific details.

CLEANUP & SAFETY

Cleanup Flush static mixer, whip hose, gun and tips with hot water or Carboline approved thinner immediately after each use (depending on pump set up). Use Carboline Plasite Thinner 19, Thinner 242E or approved equal for cleaning solvent. Break down static mixer, gun and tip assembly and hand clean.

CLEANUP & SAFETY

Safety	Read and follow all caution statements on this product data sheet and on the SDS for this product. Employ normal workmanlike safety precautions. Use adequate ventilation. Keep container closed when not in use.
Overspray	All adjacent and finished surfaces shall be protected from damage and overspray.
Ventilation	When used in enclosed areas, thorough air circulation must be used during and after application until the coating is cured. The ventilation system should be capable of preventing the solvent vapor concentration from reaching the lower explosion limit for the solvents used. User should test and monitor exposure levels to insure all personnel are below guidelines. If not sure or if not able to monitor levels, use MSHA/NIOSH approved respirator.

MAINTENANCE

General	For patches and repairs, the material can be applied by spray or trowel. Repair areas must be abraded back to a firm edge by sanding or scraping. Remove product from areas in need of repair back to solidly adhered material. Ensure that the primer system is still in tact as well. If not, the primer system shall be reinstated to its original specification. All edges can be left as butt joints at a 90 degree angle or beveled at a 45 degree angle. The topcoat should be abraded back by 1" (25.4 mm) from the repair area. All edges must be solvent cleaned and allowed to dry before commencing application. It is important that the patch area blends into the existing material to achieve a uniform appearance. The product shall then be troweled or spray applied to the appropriate thickness based on the project specification and fire test certification. Once the material has been allowed to sufficiently cure, the specified topcoat system shall be applied, based on the original specification, in strict accordance with Carboline's written instructions.
----------------	---

TESTING / CERTIFICATION / LISTING

Underwriters Laboratories, Inc.	This product has been tested in accordance with the UL Environmental Test Program and is listed and classified by UL for both exterior and interior use.
Intertek	This product has been tested in accordance with ASTM E-119 at Intertek Laboratories and is listed in the following designs: Wide Flange Columns: CC/IF 180-02 HSS Columns: CC/IF 180-03 Restrained / Unrestrained Beams: CC/IF 180-01
City of Los Angeles	Report: RR 25484

PACKAGING, HANDLING & STORAGE

Packaging	Full Kits: 9.0 gallons (34.0 liters) Part A: 4.5 gallons (17.0 liters) Part B: 4.5 gallons (17.0 liters)
Shelf Life	12 Months Shelf life when kept at recommended storage conditions and in original unopened containers.
Storage	Store indoors in a dry environment between 32-120°F (0-49°C). Can be stored down to 20°F (-7°C) for no longer than 30 days. 0-100% Relative Humidity

Thermo-Lag[®] E100
