June 25, 2024

To: Portland City Council

From: Emily Kemper, AIA, Senior Practice Director at CLEAResult & Portland resident

Date: June 25, 2024

Re: June 26, 2024 Portland City Council Meeting, Agenda item #596

To the members of Portland City Council, I thank you for the opportunity to submit testimony on agenda item #596, Authorization of the PCEF E-bike Program RFPs. PCEF's funding presents an unprecedented opportunity to lift priority populations throughout the city of Portland while giving us the boost we need to achieve our aggressive GHG emission reduction goals and helping Portland to solidify its place as a climate leader among North American cities. As such, my written testimony today is in strong and enthusiastic support of this authorization ordinance.

As an energy program design and implementation professional, I see in the three types of programs for Strategic Program 6 a thoughtful and feasible framework for realizing our city's equity goals:

1. **Providing incentives for a minimum of 6,000 electric and adaptive e-bikes** with low and moderate-income residents will expand Portland's already robust and energetic cycling community even further, inviting in those who previously could not afford such an expense. It will also immediately provide a low carbon transportation option for commuting or running errands. Most U.S. cities see 40% or more of their total carbon emissions come from the transportation sector, and demonstrating the feasibility of e-bikes at this scale will directly reduce emissions, save participants on their transportation-related expenses, and serve as an important precedent for a broader market transformation.
2. **Developing and implementing training of 50 e-bike technicians/mechanics** is a critically important piece of the program. Workforce development is itself an often-overlooked component of programs, but with a relatively new technology that continues to increase in popularity, such as e-bikes, it is crucial that funding be allocated towards this. Our bike stores throughout Portland are for the most part independently owned, so they also need support and investment to maintain and improve their level of service to the larger community.
3. **Piloting the storage and charging of e-bikes in multifamily buildings** is the right approach in an environment where more multifamily and affordable housing is needed but perhaps not enough is in the pipeline. Allocation of PCEF funding to explore this option will give developers or existing building owners the flexibility needed to consider adaptation to this new use of space. It's also an opportunity to help address concerns that have arisen from poor quality equipment with qualified product standards and education.

On a personal level, I have been an active member of Portland's cycling community for 15 years and I think that e-bikes are the future of urban transportation. My colleagues, my family, my neighbors, and I look forward to supporting this program in whatever way we can.

Sincerely,

[Emily Kemper](#), South Portland

To: Mayor Wheeler and esteemed City Council members

Re: support for PCEF ebike rebate, Agenda item 596, June 26th 2024

I'm writing today on behalf of BikeLoud to voice our support for the PCEF ebike rebate program.

This program will reduce carbon emissions by getting people out of cars, will reduce vehicular traffic, and will keep money in our local economy. Not only that, but it will also give our community members transportation and financial independence, whether it be from the schedule limitations and uncomfortable situations faced on Trimet, or the debilitating weight of monthly car costs or surprise repairs. We are excited that this grant would also provide training for 50 ebike mechanics, strengthening our local ecosystem of locally owned and operated bike shops.

We see the future of transportation in ebikes. They are efficient, easy to maneuver, compact, and accessible for a broad range of ages and abilities. Their range and versatility means they work just as well to ride across town to work, as they do to pick up your toddler at preschool on the way home from the supermarket. Compared to owning a car, an ebike costs pennies on the dollar and requires little space to operate and store. Studies show that people who use active transportation are healthier and more productive at work and spend more money in their local communities. Not only that, but people who use bikes for transportation are more engaged with their neighbors and in their communities because they're spending time on the streets outside of the confines of a car. These are just a few of the reasons that we, as a city, should be doing everything we can to enable Portlanders to go by bike.

Sincerely,
Eva Frazier

Executive board member of BikeLoudPDX
Retired Portland bike shop owner

June 26, 2024

Dear Mayor Wheeler and Commissioners,

Our organization strongly supports Portland Clean Energy Community Benefits Fund's mission and we encourage you to advance the E-bike Access and Support Program.

Many of our members transport kids with ebikes on a daily basis and recognize that the up front cost of this technology is a major barrier to most Portland families. Another barrier is the need to fully build out protected bike lanes, which will be needed if an additional six thousand multigenerational cyclists on our streets.

Electric bikes open up a world of independent transportation possibilities for people with disabilities and caregivers as they commute to work and move children across our city to/from school, sports activities/medical appointments, haul groceries, commute to work, and bring everyone home at the end of the day.

This is particularly critical for families and people with disabilities living in neighborhoods underserved by Tri-Met and where grocery stores and basic services are harder to access. Families and individuals living in areas with hills will also benefit, as electric assist makes it possible to go farther, safely.

We believe that this is an important carbon mitigation investment that will make life easier for families today; and grow private sector capacity for the decarbonized transportation system that our kids need for a healthy tomorrow.

Thank you for your leadership,

Families for Climate Board of Directors

Agenda Item	Name or Organization	Position	Comments	Attachment	Created
625	Joseph Perez	Support	<p>I moved to Portland to work, ride bicycles, and help build a better city. It has been quite an amazing ride so far. Every week I attend Tapas Tuesday at SE 6th and Davis AND Bicycle Happy Hour at Rainbow plaza at SE 28th and Ankeny just south of Burnside. Myself and fellow bicyclists spend lots of money at the businesses on the plaza. I go there because it is on a Neighborhood Greenway, has really good bicycle parking, and I feel welcomed by the businesses there.</p> <p>According to TravelPortland.com: Portland is perhaps best known for being a sustainability-minded, bike-friendly city with easy access to nature; plentiful coffee, art, craft beer, delicious food, live music, and crafty people who celebrate individuality and creativity.</p> <p>Travel Portland mentions the things that people love about Portland, a bicycle-friendly city! Coffee, art, beer, music and crafty people. All of these activities involve economic benefits for businesses and non-profits. Behind me is a list of other benefits, yes?</p> <p>The impact of bike lanes goes beyond creating comfortable facilities for bicyclists. Safe and attractive spaces for getting around downtown by foot and bike brings an entirely different sense of place to the area; Build a place where people travel through more slowly, with more awareness of what's around them, and often stay a while to shop, dine, and gather.</p> <p>Model the Way – Ride a bicycle and share the experience with your friends and family and on social media Set the example by behaving in ways that reflect the shared values. Achieve small wins that build confidence, commitment and consistent progress. The leader sets an example. Define the shared behavioural standards and then exemplify them. Kouzes and Posner also believe it is essential to achieve some small wins to build momentum.</p> <p>Inspiring a Shared Vision – See a healthy thriving Portland where people ride bicycles, walk and take transit as was asked for in the Portland Insights Survey last year. Envision an uplifting, exciting, meaningful future. Enlist others in a common vision by appealing to their values, interests, hopes and dreams. Leaders should begin work on their vision before enlisting others to refine it and make it theirs. Emphasis on visualisation and the use of powerful evocative language to capture the vision to inspire others.</p> <p>Challenge the Process/Status Quo – Find ways to say yes to new ideas and projects that improve the safety and attractiveness of riding bicycles, walking, and taking transit in Portland Search out challenging opportunities to change, grow, innovate and improve. Experiment, take risks and learn from any mistakes. The leader is an agent for change - questioning, challenging and seeking new ideas. Taking risks, experimenting, learning from and allowing for mistakes. Importantly, encouraging new ideas to flourish.</p> <p>Enabling Others to Act – About 40% of Portlanders cannot or do not want to drive. They need you to help them make connections, build community and get where they need to go without driving. Foster collaboration by promoting cooperative goals and building trust. Strengthen people's ability by delegating power, developing their competence and offering visible support. Building a spirit of trust and collaboration. Encouraging people to share information. Kouzes and Posner believe that leaders must disclose what they believe and care about and, when necessary, show some vulnerability. This also entails delegating power, believing in others, and investing in followers' training and education.</p> <p>Encourage the Heart – be kind and loving to all Portlanders and visitors who make this city amazing and who are doing their best. Do everything you can to help Portland be the City that works and Keep Portland Weird. Recognise individual contributions to the success of the project. Celebrate team accomplishments regularly. Praise and celebration</p>	Yes	07/03/24 10:22 AM

Benefits	<ul style="list-style-type: none"> • Improved user convenience, comfort and safety. • Improved accessibility for non-drivers, which supports equity objectives. • Option value. • Higher property values. • Improved public realm (more attractive streets). 	<ul style="list-style-type: none"> • User enjoyment. • Improved public fitness and health. • More local economic activity. • Increased community cohesion (positive interactions among neighbors). • More neighborhood security (“eyes on the street”). 	<ul style="list-style-type: none"> • Reduced traffic congestion. • Road and parking facility cost savings. • Consumer savings. • Reduced chauffeuring burdens. • Increased traffic safety. • Energy conservation. • Pollution reductions. • Economic development. 	<ul style="list-style-type: none"> • Improved accessibility, particularly for non-drivers. • Transportation cost savings. • Reduced sprawl costs. • Openspace preservation. • More livable communities. • Higher property values

afternoon

Good ~~morning~~. For the record my name is Michael Harrison.

I do not own or use a car. I live in Gresham and I use my bicycle to get around everywhere in the Portland area in conjunction with the bus. With costs rising it is difficult to purchase an e-bike.

I can use an e-bike myself.

I am also a bicycle activist. I promote bicycle infrastructure for the Portland area and I would like to talk about bicycle infrastructure for a little bit.

A raised bicycle platform is a good investment for the city of Portland. It can increase commercial retail traffic if the off-ramps are nearby and it equates out to more cash in the pockets of the average consumer. With costs rising (for example, car payments, gas, insurance and repairs) e-bikes and bicycles are much more affordable for the average consumer and a bicycle skyway system helps promote that. There must have been 10,000 bicyclists on the streets of Portland during the Portland Bridge Pedal event last summer. It goes to show how many bicyclists get out when there are safe bicycle paths available.

I have an unofficial signed petition with 500 signatures I have collected that I'm delivering in support of a bicycle skyway system. These signatures were collected at the PSU farmer's market over the summer of 2022. Generally speaking, the public seems to like the idea of a raised bicycle platform from what I can tell at my petition signing events. Similar infrastructure already exists around the world or is being proposed elsewhere around the country.

around

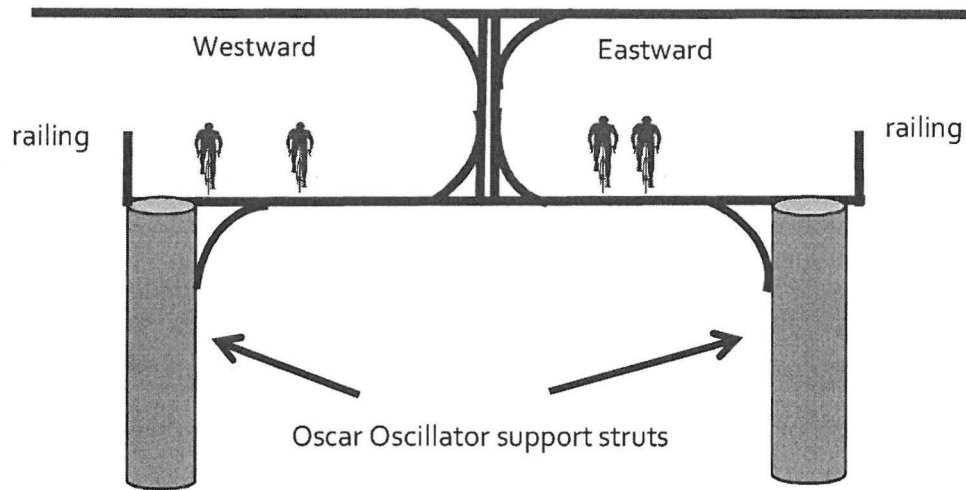

If our transportation agencies can dish out over \$100 million for the Tilikum Crossing bridge (which is a non car bridge) then we certainly have the capability for a raised bicycle platform which in this case extends for several miles.

If you have any questions there is more information in these signed petitions and packets I'm delivering. Thank you for your time

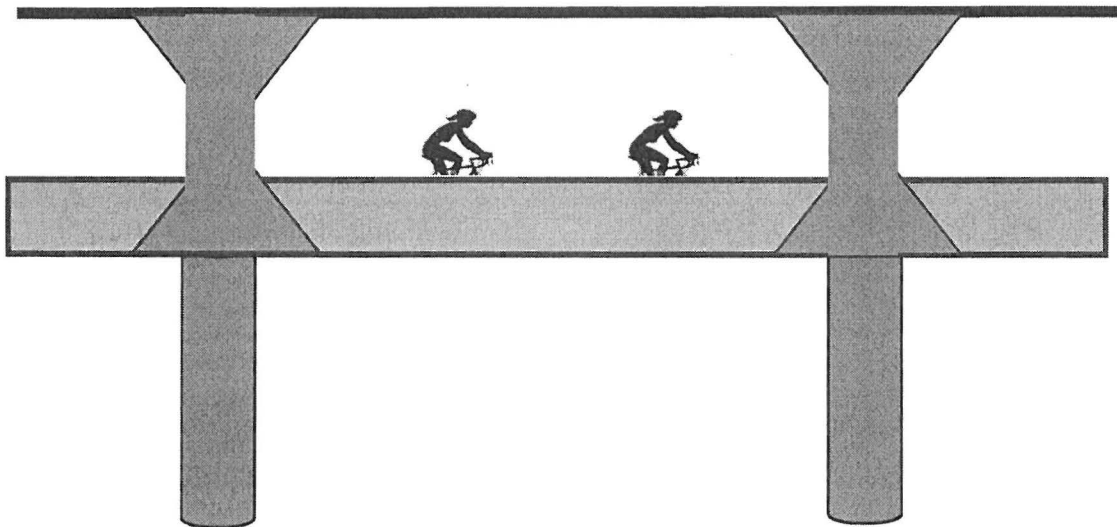

* We ~~need to~~ ^{really should} take this kind of infrastructure much more seriously.

Centerline view

Transparent roof with solar panels along centerline
for lighting at night

Side view

Notes: visit bikeskyway.org for more info, images, and video

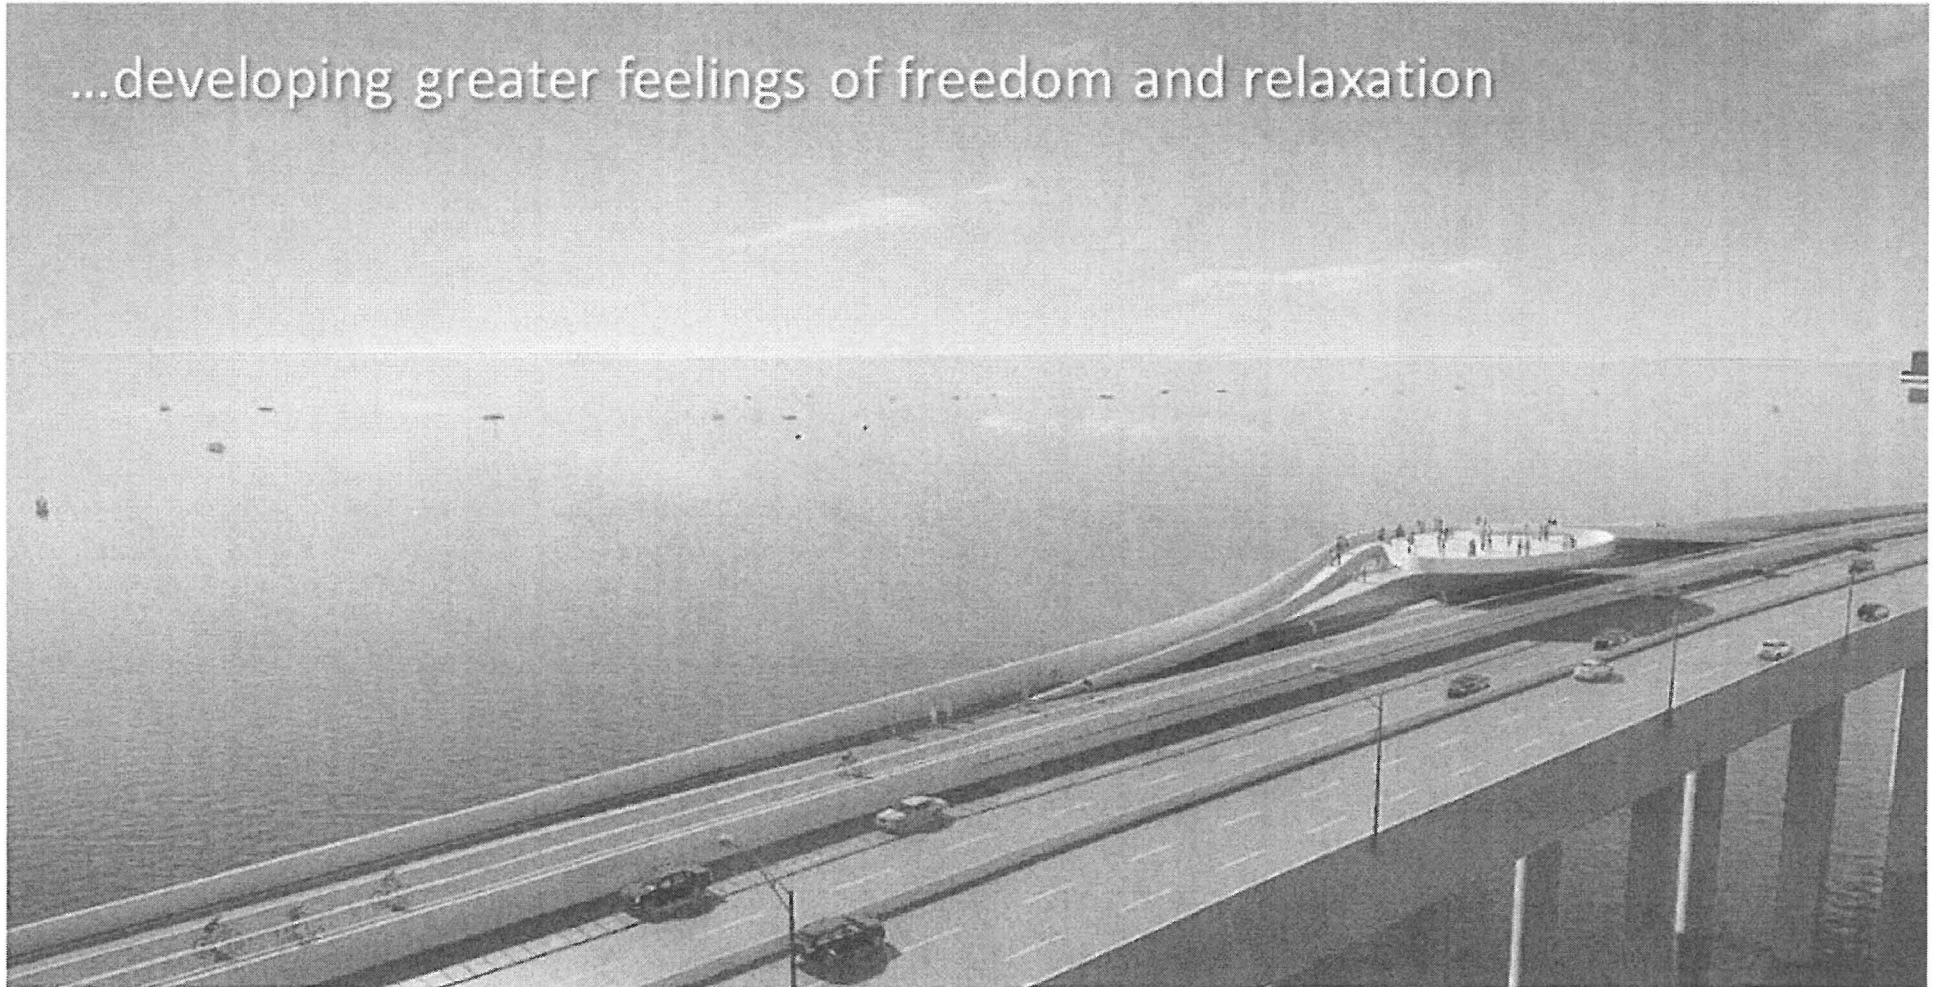

*transparent roof is mandatory (preferably with solar panels) It rains fairly often in Portland.

*If you want a tunnel, dig one into the ground. This is a skyway. It has a transparent roof and solid railing but is otherwise completely open to the air.

*The bicycle skyway needs to be big (over-sized) to accommodate a growing bicycle demographic

Other cities across the country are proposing similar infrastructure;
Plan Z for Miami, a not for profit organization in South Florida, has been proposing an adjacent bicycle pathway to the Rickenbacker Causeway next to Miami. Their 4 minute youtube video 'Plan Z for Miami' graphically displays the entire course.

...developing greater feelings of freedom and relaxation

Raised bicycle platform in Denmark (Oops they forgot the roof, but we can install that on ours in Portland)

Top 11 reasons for a bicycle skyway system

1. No more wasting money on gas or car insurance

As Americans we waste about \$5,000 per year on gas

2. We can travel to school or work or do our food shopping through the use of a bicycle skyway system and bypass the conventional car traffic grid

3. We have to ask ourselves, "How much longer will the gasoline last?"

A bicycle skyway system operates completely free from the oil industry (no exploding oil rigs needed for e-bikes or bicycle infrastructure)

4. Can increase commercial retail traffic if the off-ramps are near local businesses

5. Engineering weight advantage as this infrastructure supports e-bikes and bicycles (not cars or trucks) Fewer support struts are needed.

The infrastructure itself can be routed nearly anywhere, not only over streets, but empty land-space, rivers, water and even over trees.

6. No more 50mph car traffic whizzing past bicyclists elbows. Much safer transportation system since it is completely separate.

7. Reduces traffic congestion (incentive for more people to use e-bikes) especially for a growing population and city.

8. E-bike/bicycle usage reduces carbon emissions

9. Wonderful for personal health, more exercise

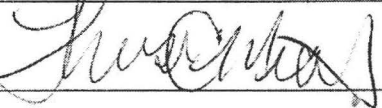

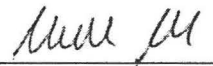

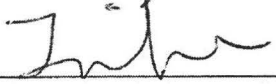

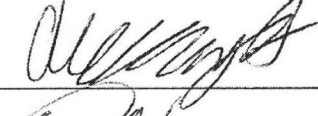

10. With costs rising overall (car payments, gas, insurance and repairs) e-bikes and bicycles are much more affordable for the average consumer

11. Extensive roof space for solar panels. Power can be used not only for nighttime lighting on the skyway, but can be diverted to nearby local businesses, strip malls, etc.

Petition for a bicycle skyway system for Portland, Oregon

Yes! I support ODOT funds to be appropriated for the construction of a true, miles-long bicycle skyway system for Portland, Oregon which separates the bicycle traffic from the car traffic. The skyway shall be elevated above ground level and connect the city center riverfront area to multiple public parks in suburban areas.

Petition for a bicycle skyway system for Portland, Oregon

Yes! I support ODOT funds to be appropriated for the construction of a true, miles-long bicycle skyway system for Portland, Oregon which separates the bicycle traffic from the car traffic. The skyway shall be elevated above ground level and connect the city center riverfront area to multiple public parks in suburban areas.

Petition for a bicycle skyway system for Portland, Oregon

Yes! I support ODOT funds to be appropriated for the construction of a true, miles-long bicycle skyway system for Portland, Oregon which separates the bicycle traffic from the car traffic. The skyway shall be elevated above ground level and connect the city center riverfront area to multiple public parks in suburban areas.
