

Appendix D

Capability Assessment Matrix

The example Capability Assessment on the following page is designed to assess the operations, readiness, and capabilities of those organizations associated with the plan's action items to assess which items in the prioritized list can be implemented using existing resources and which items require outside funding. It can be used to help the DPC answer the question, "Does the coordinating agency have the capability needed to implement the action item?" This matrix is intended to be used as part of the prioritization process.
