Annual Report of The Commission of Public Docks

February 15, 1926.

Hon. George L. Baker, Mayor of the City of Portland, Oregon.

Sir: The Commission of Public Docks begs herewith to submit its annual report for the fiscal year ending November 30, 1925.

At this time the organization of The Commission of Public Docks consists of the following members: John H. Burgard, Chairman; F. C. Knapp, Vice-Chairman; A. H. Averill, Ira F. Powers and J. O. Elrod. There was no change in the personnel of the Commission, Mr. Powers having been reappointed by you to succeed himself for the five-year period commencing December 7, 1924.

The total authorized bond issues for the provision of municipal, commercial port facilities have been \$10,500,000.00. Of this amount there has been expended to December 1, 1925, in the acquisition of terminal sites, dredging and filling operations, construction, equipment, and for all other purposes, \$9,994,179.34. At this time the Commission had available in its Capital Fund \$393,000.00 Port of Portland, 20-year Series "D" Port Improvement and Equipment Bonds, \$13,020.66 in the Construction Fund and \$99,800.00 unsold Dock Bonds of the issue authorized in 1910, or a total of \$505,820.66 for construction purposes.

The Commission of Public Docks was created a separate department of the City of Portland by an amendment to the City Charter, adopted November 10, 1910. The more important duties and powers delegated to the Commission by Charter Amendment are:

1. To prepare for publicly owned docks and other shipping facilities of such number, and in such places as it may deem feasible and proper.
2. To purchase or acquire by condemnation, such lands as may be necessary for the use in construction of any publicly owned docks or any other structure.
3. To have exclusive charge and control of all of the port's property belonging to the city and waters adjoining thereto, together with the operation of said property.
4. To have exclusive government and control of the entire waterfront of the city not owned by it.
5. To regulate the building, repairing, etc., of all structures on the waterfront, within the limits of the City of Portland.
6. To establish, regulate and alter wharfage, dockage, storage and all other rates and charges on all publicly owned and operated waterfront facilities.

MUNICIPAL TERMINAL NO. 4, SLIP NO. 1

MUNICIPAL PORT FACILITIES

From the above expenditures the Commission has constructed and has in operation the following terminal facilities:

Terminal No. 1: Quay dock 955 feet long, with transit shed 935 feet long and 147 feet wide.

Pier A—484 feet long, with transit shed 176 feet wide.

Pier B—500 feet long, with transit shed 187 feet wide.

Warehouse No. 1: One-story structure about 190x200 feet, having covered area of 37,600 square feet.

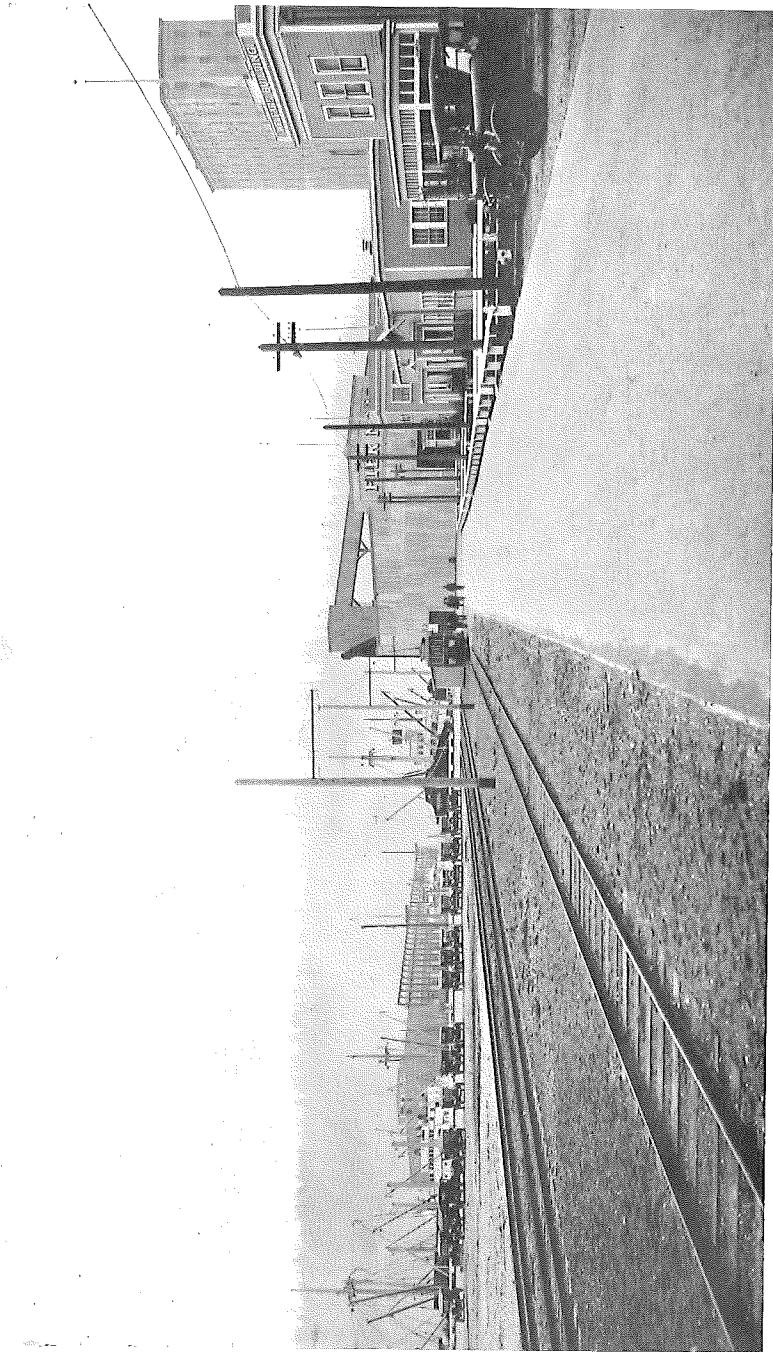

This terminal has berthing space for five major ships, area under shed 349,600 square feet, and open storage of 78,500 square feet. It is situated in the west side central railroad terminal and warehouse district, and has rail trackage accommodations for 140 cars. The mechanical equipment consists of 20-ton locomotive crane, electric dock winches, cargo hoists, electric freight elevators, adjustable ramps, electric and gasoline tractors, gravity conveyors, freight piling machines and large supply of trucks and trailers. All the structures are automatically sprinklered, giving low insurance rate. Accommodates Intercoastal business and European and Trans-Pacific local.

Terminal No. 2: Situated in the East Side industrial and jobbing center, it is used both by Intercoastal and Coastwise shipping. It has a two-level quay dock, 526 feet long, with transit shed 100 feet wide and trackage for 20 cars. It is provided with cargo masts, electric freight elevators, adjustable ramps, freight piling machines, etc., and automatic sprinkler system. There is about 50,000 square feet open storage in rear of the quay dock.

Terminal No. 3: A quay dock 560 feet long, transit shed 100 feet wide and trackage for 27 cars. It is used mostly for storage of slow-moving commodities, for which space is not available at the other municipal terminals.

Municipal Terminal No. 4: This is the largest and most important of the municipal terminals. The site contains 165 acres, with a harbor frontage of 3035 lineal feet, on which there has been constructed the following facilities:

Pier No. 1: This pier has a length along slip No. 1 of 1500 feet and is 221 feet wide, the outer end being a two level structure for a length of 615 feet. The harbor face of this pier has a frontage of 605 feet, which gives a total berthing space of this pier of 2105 lineal feet. The main transit shed on the pier is 1500 feet long and 180 feet wide, and on the harbor face extension it is 150 feet wide, a total cargo storage area under shed of 401,440 square feet, which, with proper allowance for gangways and trucking space, permits the handling of

ENTRANCE TO MUNICIPAL TERMINAL NO. 4
Ship No. 1, with Piers Nos. 1, 2 and Grain Elevator in Background. Administration and Welfare Buildings and Restaurant in Foreground. Street Car Service is Maintained Directly to the Terminal.

40,000 tons of general cargo, or 64,000 tons of grain and flour at one time.

The outer, or grain section of Pier No. 1, has six sacking bins, filled from the elevator by the shipping belts. Under the pier shed floor there is a conveyor belt running the full length of the pier, onto which grain from sacks stored on the pier can be cut in and carried to the elevator for cleaning or smutting and storage, if so required. From the two-belt shipping gallery along the front of the pier, with four movable trippers and thirteen spouts, two vessels can be loaded with bulk grain at one time.

Track facilities are provided in both front and rear of the pier, the tracks in rear having placement for 105 cars.

The pier has cargo masts along its entire face, electric elevators and electrically operated ramps, or inclines, for handling freight to and from river steamers and barges, and is automatically sprinklered.

Pier No. 2: This pier, which also is 1500 feet long, and has a width of 214 feet, is covered with a transit shed, on its outer half, 715 feet long and 166 feet wide. The inner one-half open pier is used mostly for the handling of bulk freight and lumber. Trackage is provided both at the front and rear of the pier, the rear tracks accommodating 100 cars. The cargo capacity of the shedded portion of the pier is proportionally the same as that of Pier No. 1. This pier has automatic sprinkler system, cargo masts and electric freight elevator. Slip No. 1, which serves Piers Nos. 1 and 2, is 1500 feet long and 280 feet wide.

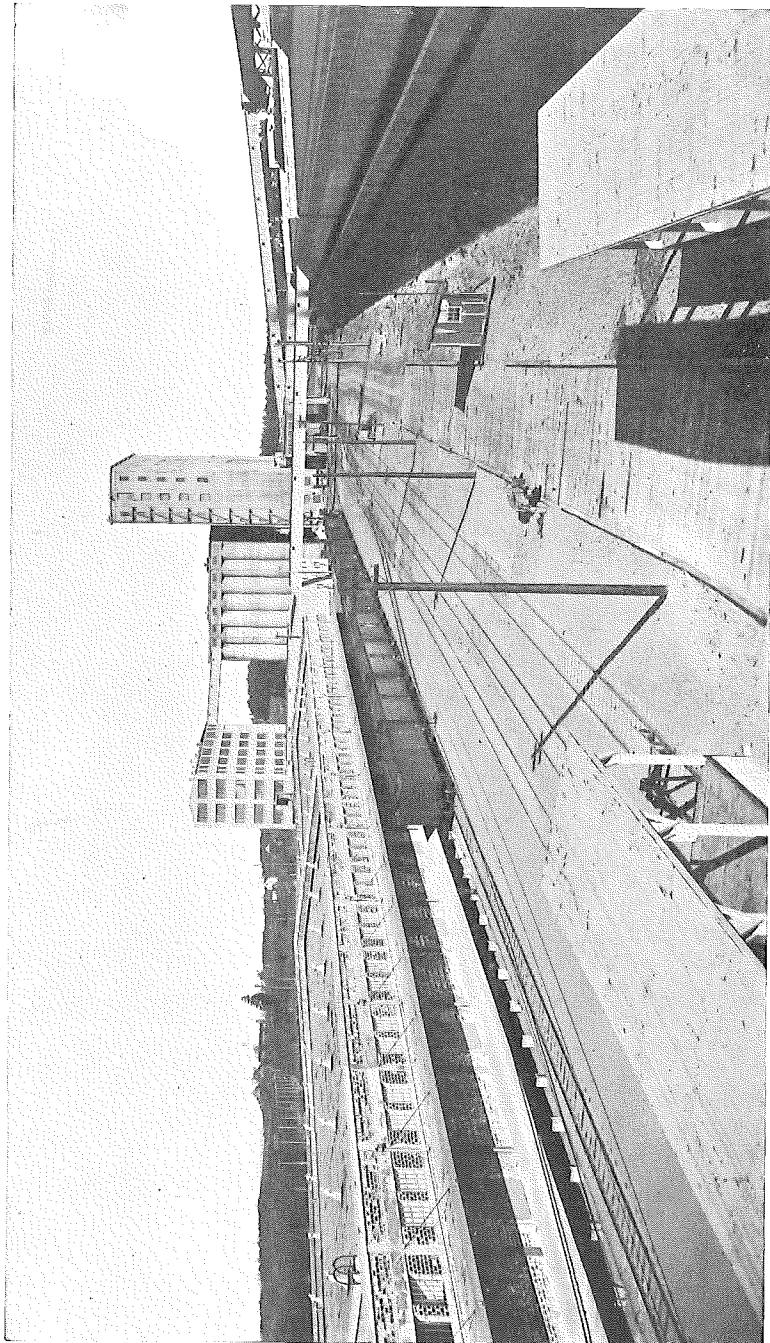

Pier No. 5: This pier has a total berthing space of 1565 lineal feet, of which 665 feet is along the quay portion of the pier and 900 feet along the slip. In rear of the quay dock is constructed a large bulk storage plant for handling of coal, phosphate rock, etc., and on an area of filled ground back of the pier and quay dock, consisting of approximately three and one-half acres, storage space is available for lumber, logs, sulphur, steel, etc.

A trackage of nearly two miles has been provided on this pier and the filled ground. Piers Nos. 4 and 5 are served by Slip No. 3, which is 1000 feet long and 220 feet wide.

Grain Elevator: This elevator, which is of fireproof construction throughout, was completed in 1920. It was designed especially with the view of successfully handling and cleaning wheat of the many grades and varieties produced in the Pacific Northwest. The general details of this elevator are as follows:

It consists of a track shed, operating house and storage annex. Reinforced concrete construction is used throughout, and the present capacity is 1,053,800 bushels.

The track shed has six power shovels for unloading bulk grain into six track hoppers, with an unloading capacity of about 120,000 bushels

VIEW IN REAR OF PIER NO. 1, MUNICIPAL TERMINAL NO. 4 VENTILATED AND COLD STORAGE WAREHOUSE AT LEFT, GRAIN ELEVATOR AND TERMINAL FLOUR MILLS IN BACKGROUND, WITH CONVEYORS LEADING TO PIER NO. 1

in eight hours. For the convenient unloading of sacked grain, of which a very considerable quantity is brought in from the producing sections, from cars in the track shed, a concrete platform has been provided between the two unloading tracks, on which the sacks are piled and later cut into the track hoppers for transfer and storage in the elevator, and this is done without slowing up the unloading of bulk wheat from cars. Two car pullers operate to handle cars on either of the two tracks passing through the unloading shed.

The operating house is divided into 79 bins, varying in capacity from 300 to 5150 bushels. Fifty of these bins have a capacity of more than 4000 bushels. The total capacity of the operating house bins is 298,700 bushels. The operating house and its machinery were designed of sufficient capacity to handle a proposed 1,000,000 bushel additional storage.

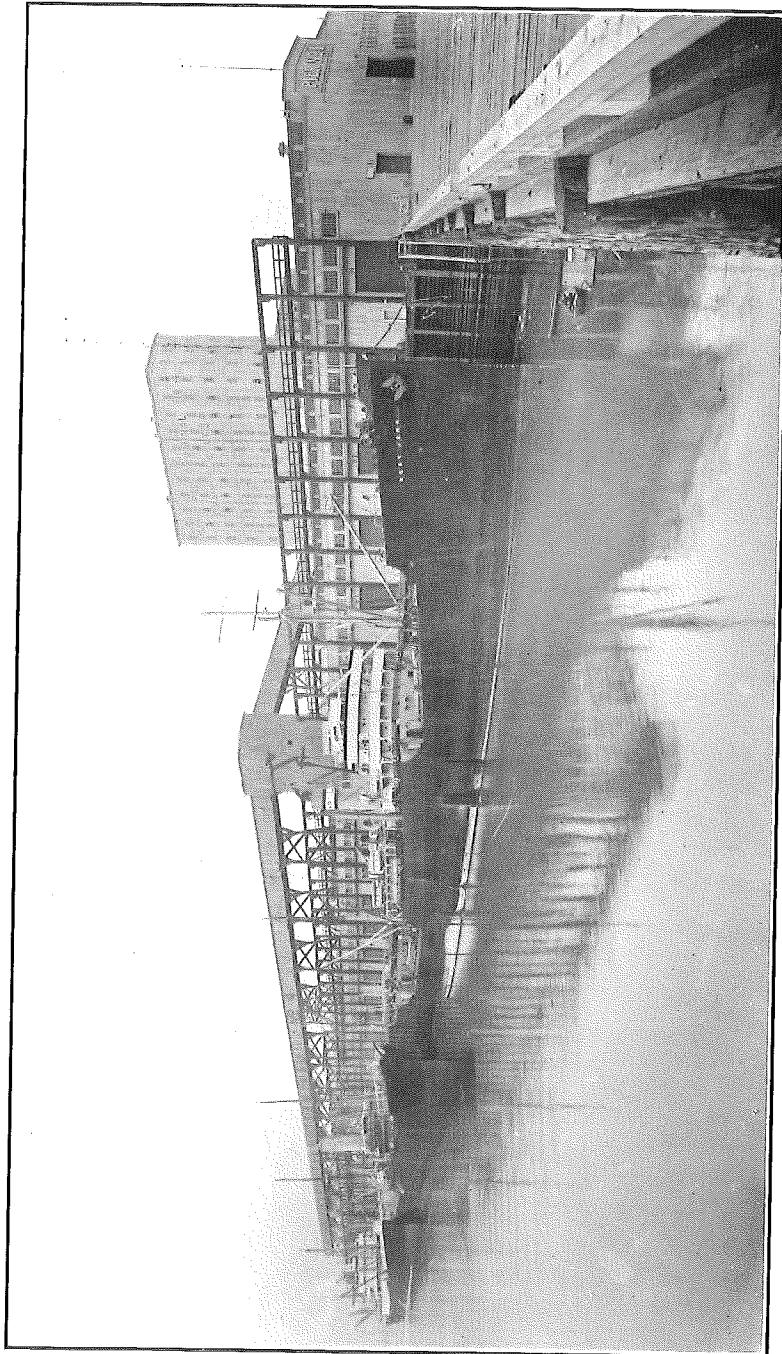

The storage annex has 63 bins 15 feet in diameter and 85 feet in height, of a capacity varying from 12,200 bushels to 10,300 bushels, and 36 interspace bins, each holding 2200 bushels, or a total bin capacity of 755,100 bushels in the annex.

The elevator equipment as now installed consists of the following, which includes the two wheat washing machines installed during the year:

	Bu. per Hr. Each
3 receiving legs	12,000
2 receiving legs, handling grain from pier shed.....	6,000
3 shipping legs	12,000
2 separator legs	6,000
2 smutter legs	4,000
3 receiving conveyor belts.....	12,000
3 shipping conveyor belts under annex.....	12,000
2 conveyor gallery shipping belts.....	10,000
3 distributing conveyor belts over annex.....	10,000
2 distributing conveyor belts operating house cupola	10,000
5 smutters	
2 separators	
2 aspirating separators	
9 hopper scales	2,000
1 hopper scale	1,000
1 passenger elevator	
1 Humphrey elevator	
13 ship delivery spouts	
Dust collecting system	
Sweeper system	
2 Wolf Dawson double cylinder wheat washers, with necessary legs, spouting and driving machinery. Each machine has an average capacity of washing 820 bushels per hour.	

Electric power is used in operation, each operating unit being independently motored, with electric signals and telephones throughout the plant.

Loading bulk grain to ships is at the rate of 30,000 bushels per hour.

PIER NO. 1, MUNICIPAL TERMINAL NO. 4, WITH MILLION BUSHEL GRAIN ELEVATOR IN REAR

Oil Bulk Handling and Storage Plant: For the handling and storage of vegetable oils and molasses, fourteen steel tanks on concrete foundation were constructed and have a combined capacity of 1,486,800 gallons. Seven of these tanks were designed especially heavy for storage of molasses, which commodity is shipped in as full cargoes from the Hawaiian Islands. To furnish the necessary facilities for weighing oil and molasses as it is being pumped from vessels to the tanks, there are installed two tank scales, each of a capacity of 60 tons. The bulk storage plant is fully equipped with pumping mains from Piers Nos. 1 and 2, hot water, steam and compressed air pipes, tank car cleaning, filling and barreling facilities. Ten tank cars can be filled at one time. Electric and steam operated pumps are provided for pumping molasses and vegetable oils from vessels' tanks through the oil storage pipes.

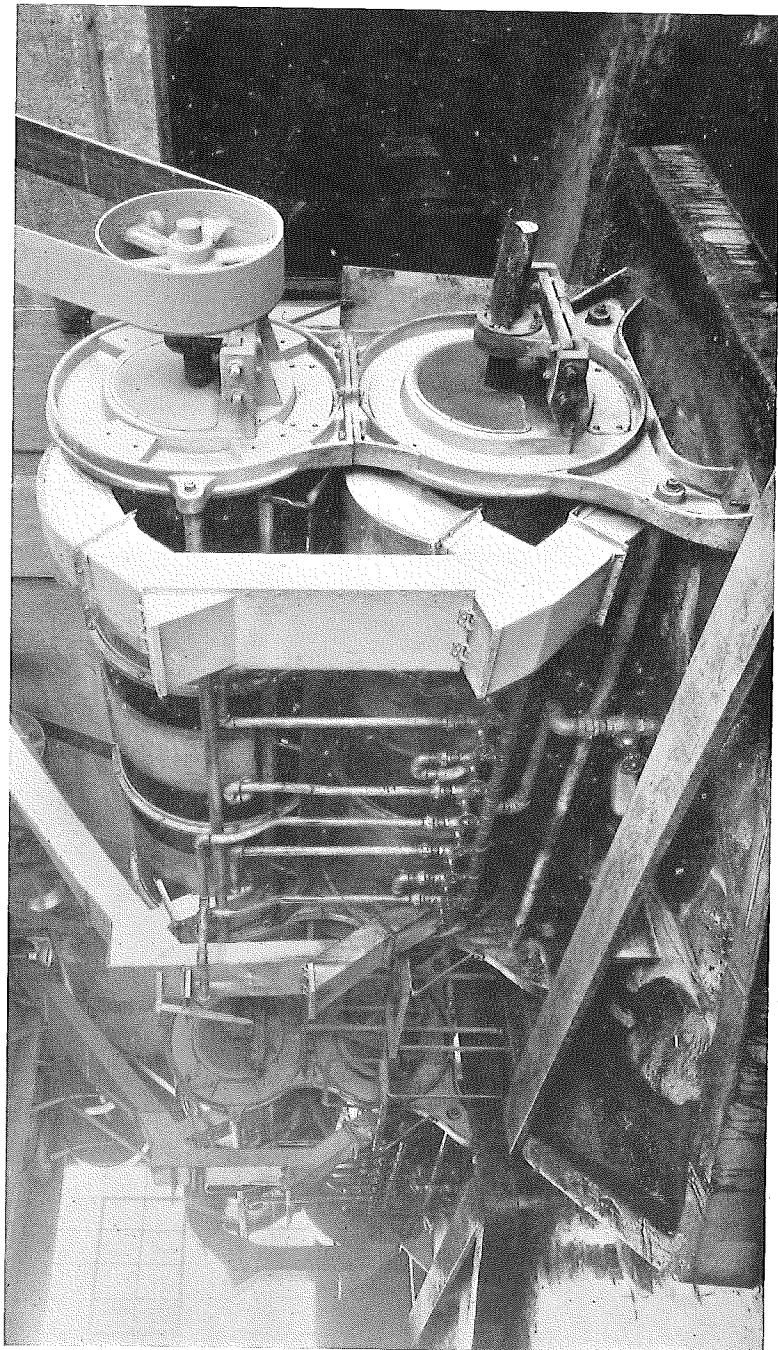

A sinking type, motor-driven, two-stage turbine pump, recently purchased, has a capacity of 650 gallons per minute, or 150 tons per hour.

Bulk Handling and Storage Plant: This installation consists of covered concrete bunkers, together with necessary car unloading devices and conveyors for handling materials. It was constructed primarily for the purpose of handling bulk phosphate rock, of which immense high-grade quantities are available in the port's tributary territory, but is capable also of handling other bulk material, such as coal, ore concentrates, manganese ore, etc. The storage facilities consist of eight separate concrete bins, which have a combined normal capacity of 18,000 tons of phosphate rock, or 9000 tons of coal, with delivery to vessel at the rate of 300 tons of phosphate rock or 200 tons of coal per hour, through two traveling ship's towers operating along the harbor face of Pier No. 5. In addition to an extensive belt conveyor system, a special box car unloader is provided which discharges the contents of a box car into a hopper in about eight minutes.

Cold Storage Plant: This plant was constructed in 1923 to provide refrigerated space for transit shipments of apples, received for export. The refrigerated space is 120 feet by 200 feet, divided into four rooms, with a capacity of 105,000 boxes. The brine system of refrigeration is used, and the plant is provided with special fan circulating device.

Ventilated Apple Storage Warehouse: This adjoins the cold storage plant and is 410 feet by 200 feet, with a maximum capacity for about 350,000 boxes of apples. During two seasons' operation it has handled the apples passing through and stored in a very satisfactory manner.

Fumigating Plant: This plant was put in operation in April, 1923, and has since been used in fumigating all of the oriental cotton arriving in this port, in addition to other commodities received requiring reconditioning. The plant has a capacity of 250 tons per day and is also equipped for reconditioning of rice, peanuts, beans and other foodstuffs.

TWO DOUBLE CYLINDER WASHING MACHINES ARE PROVIDED IN THE GRAIN ELEVATOR AT MUNICIPAL TERMINAL NO. 4 FOR THE WASHING OF WHEAT

Fuel Oil Tanks: The General Petroleum Corporation has two 55,000-barrel oil tanks in rear of Pier No. 5 and immediately adjoining the terminal site, from which deliveries of fuel oil are made to steamers at two berths of this pier through 10-inch pipe lines.

Track Scale: To avoid the necessity of having to transport cars to railroad yards, which are some distance from this terminal, to be weighed before being loaded, a 150-ton standard railroad track scale has been installed, and is being operated under the supervision of the Weighing and Inspection Department of the Transcontinental Freight Bureau.

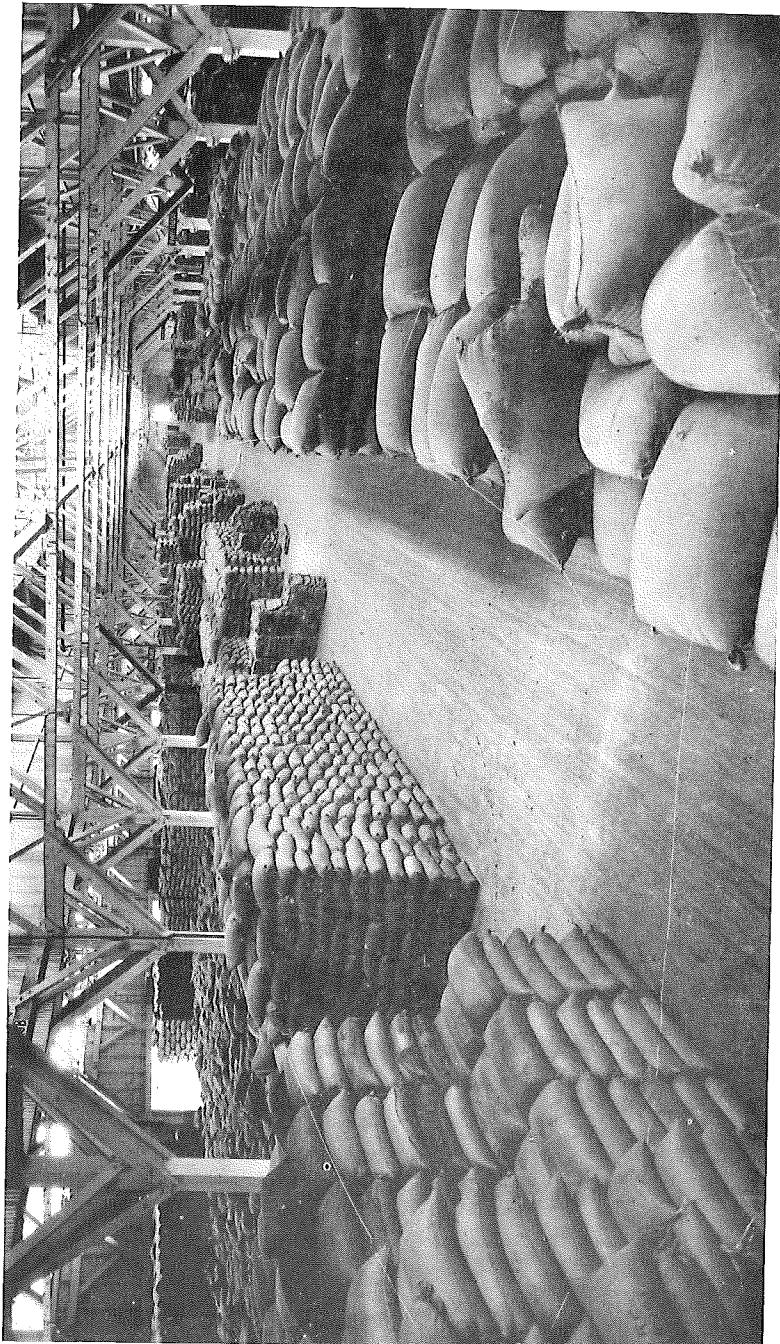

Administration and Other Buildings: For the accommodation of the terminal forces, Government grain research work and branch office of the State Grain Inspection Bureau, a large two-story office building was constructed, and for the purpose of enabling employes and others to obtain meals while working at this terminal, the Commission has for several years had a restaurant in operation, seating 200 people, where meals are served at reasonable prices at all hours, when work of loading or discharging vessels is being done. There is also a welfare building, with hot and cold shower baths, lounging rooms, etc.

Street Car Service: The Commission operates a street car line, about 1½ miles long, connecting Terminal No. 4 with the main street car service of the city, cars being operated continuously from 7 A. M. to 7 P. M. Special cars are run at any time thereafter when vessels are working. There is a five-cent fare each way on this line.

Industrial Section: The only industry which has been so far located on that portion of the terminal site set aside for industrial purposes is a flour mill of 1500 barrels daily capacity, with adjoining warehouse. These structures are of reinforced concrete and are directly connected with Pier No. 1 by belt conveyors for delivery of the manufactured mill products for water shipments. This mill has been in operation most of the time during the year, the output from which is nearly entirely for export.

Mechanical Cargo Handling Equipment: In addition to the cargo masts or cargo hoists provided along the face of the transit sheds on Piers Nos. 1 and 2, there is available at this terminal one 15-ton and one 20-ton locomotive crane, switch engine with flat cars and dumpers, electric and gasoline tractors with trailers, electric elevators, freight piling and stacking machines and gravity and powered conveyors, to facilitate the handling, loading and unloading of cargo.

All structures at this terminal, with the exception of the grain elevator, bulk storage plant and the ventilated apple warehouse, are protected by automatic sprinkler systems and, in addition, all pier structures have concrete fire walls, at about 400-foot intervals, extending

CARGOES OF SACKED GRAIN ASSEMBLED ON PIER NO. 1, MUNICIPAL TERMINAL NO. 4

from low water to several feet above the shed roofs. The terminal has a large equipment of fire extinguishers, both hand and on wheels, fire engine, fire hose, fire trucks, etc., and a fire marshal is permanently employed to supervise fire prevention, fire control and fire fighting measures at all of the municipal terminals, where fire drills are regularly held at frequent occasions.

With Piers Nos. 1, 2 and 5 constructed at this terminal, there have been at this time provided a berthing space of 5500 lineal feet with area under shed on Piers Nos. 1 and 2 of 513,160 square feet and 8.4 acres of open storage on Piers 2 and 5, with a large additional area in rear of these piers. The approved plans for the full development of this terminal on the original site call for the construction of five piers and three slips, which will have a combined accommodation for seventeen 500-foot vessels. In anticipation, however, of possible early provision of Piers Nos. 3 and 4, the Commission has already undertaken the construction of necessary bulkheads and fills for these piers and the partial excavation of Slip No. 2 serving Piers 3 and 4, so that no delays will be encountered in completing these piers when a decision is made to proceed with their construction.

The Commission, in purchasing this extensive site of 165 acres for this large terminal development, had in mind the necessity of supplying a large trackage which would adequately serve the completed piers, elevator, oil and bulk storage and other important facilities included in the approved plans. In the approved terminal it was figured that a total trackage of approximately 30 miles would be required, and of this about 15 miles have at this time been constructed, which permits in excess of 300 cars being handled at one time without congestion and with ample surplus trackage for convenient intra-plant switching and direct handling of cargo from car to ship and vice versa. The general plan of Terminal No. 4, accompanying this report, clearly illustrates this important feature of the terminal trackage. Because of the magnitude of this terminal the transcontinental railroads of the port—the Union Pacific, Northern Pacific, Southern Pacific and the Great Northern—have established a joint agency there, through which is handled all matters pertaining to billing and routing of the cars passing through the terminal.

General: At all of the municipal terminals vessels are supplied with city water at ship's side. The charge for supplying water to vessels is at the rate of \$1.00 for five thousand gallons or less, and for amounts in excess of five thousand gallons, 20 cents for each one thousand gallons.

For the accommodation of vessels berthed at Terminals Nos. 1, 2 and 4, facilities have been provided for connecting such vessels to the terminal light circuits, the charge for such service being based on meter consumption, and for the convenience of vessels berthed at Terminals Nos. 1 and 4, a number of telephones have been installed along the

SPOUTING BULK GRAIN FROM GRAIN ELEVATOR INTO VESSEL'S HOLD
AT PIER NO. 1, MUNICIPAL TERMINAL NO. 4

face of the transit sheds, where they are available for the use of the ship's crew at any time.

The municipal terminals have a depth alongside the docks and piers varying from 30 to 35 feet at low water.

DRY DOCKS

There are two floating dry docks in the port, both owned and operated by The Port of Portland. These dry docks, together with the repair plant, are always kept in excellent repair and operating condition, and available for immediate use. The general description of this complete plant is given herewith:

Dry Dock No. 1:

Length	468 feet
Width between wings.....	82 feet
Depth of water over keel blocks.....	25 feet
Lifting capacity, deadweight.....	10,000 tons
Number of pontoons.....	5

Dry Dock No. 2:

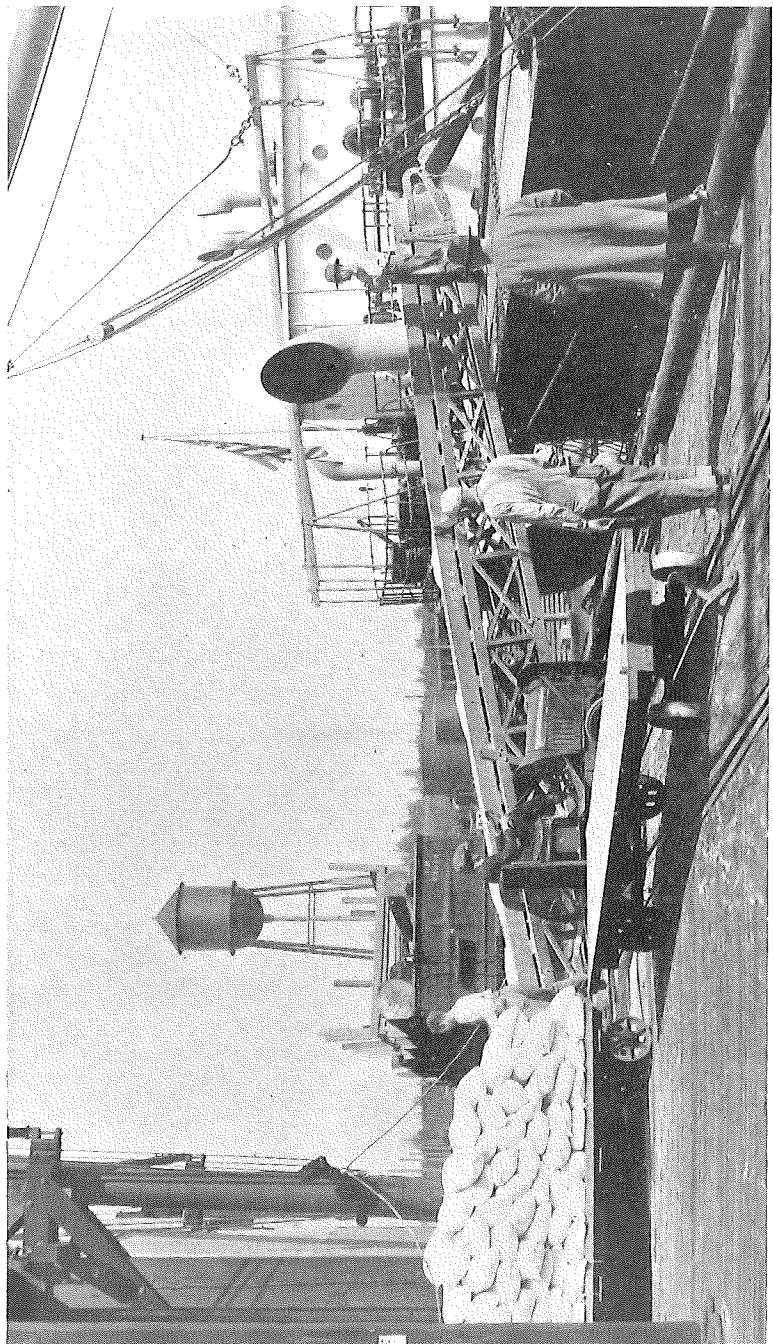

Length	492 feet
Width between wings.....	94 feet
Depth of water over keel blocks.....	27 feet
Lifting capacity, deadweight.....	15,000 tons
Number of pontoons.....	5

These dry docks are a publicly owned utility. All vessels and ship repairers use the docks on equal terms. The Port of Portland Commission does no work on vessels, but local contractors are equipped to perform all kinds of ship repairs. Competitive bids for repair work can readily be obtained at this port.

In connection with the dry docks, The Port of Portland Commission has available for use by contractor quite a complete repair plant, consisting of locomotive cranes for lifting propellers, tail shafts and for other purposes; also air compressors, drills, forges, lathes, shapers and other tools. Compressed air and electric current for operating tools are supplied at current rates.

PRIVATE WATERFRONT FACILITIES

The principal private construction added during the year consisted mainly of facilities for the handling of wheat, two elevators, each of 8000-ton capacity having been built and placed in operation in time to handle the 1925 crop. The lumber interests of the port also enlarged their dock structures to accommodate their expanding business and this applied as well to oil companies. The private docks handling off shore cargoes generally have a depth alongside of 30 feet or more at low water. All of the private docks and piers used for ocean commerce are listed below:

FLOUR IS EXPEDITIOUSLY AND ECONOMICALLY HANDLED AT MUNICIPAL TERMINAL NO. 4 BY USE OF LARGE CAPACITY FLAT DOCK TRUCKS, TRACTORS AND CONVEYORS

GENERAL CARGO DOCKS

Oregon-Washington Dock (Union Pacific): Quay dock 420 feet long, with cargo space under shed of 49,000 square feet and trackage for 20 cars.

McCormick Terminal (Union Pacific Dock): Quay dock 1071 feet long, with cargo space under shed of 85,775 square feet, adjustable ramps for side port loading and unloading and trackage for 80 cars.

Albers Dock No. 1: Quay dock 310 feet long, partly two-level, with a total cargo space under shed of 64,000 square feet and trackage for six cars.

Albers Dock No. 3: Quay dock 305 feet long, partly two-level, with total cargo space under shed of 79,200 square feet and trackage for six cars. Ample berthing space for this dock for large vessels by overlapping on Albers Dock No. 2.

Supple's Dock: Plant consists of two slips, each 310 feet long and 110 feet wide and one pier 310 feet long and 125 feet wide, covered with shed 100 feet by 465 feet.

Admiral Line Terminal—Pacific Steamship Company (Spokane, Portland and Seattle Railway): Quay dock 1000 feet long, two level, with total cargo space under shed of 304,200 square feet, and trackage for 150 cars.

Luckenbach Terminal: Quay dock 550 feet long, with total cargo space under shed of 145,600 square feet and trackage for 33 cars.

GRAIN DOCKS (ALSO FLOUR)

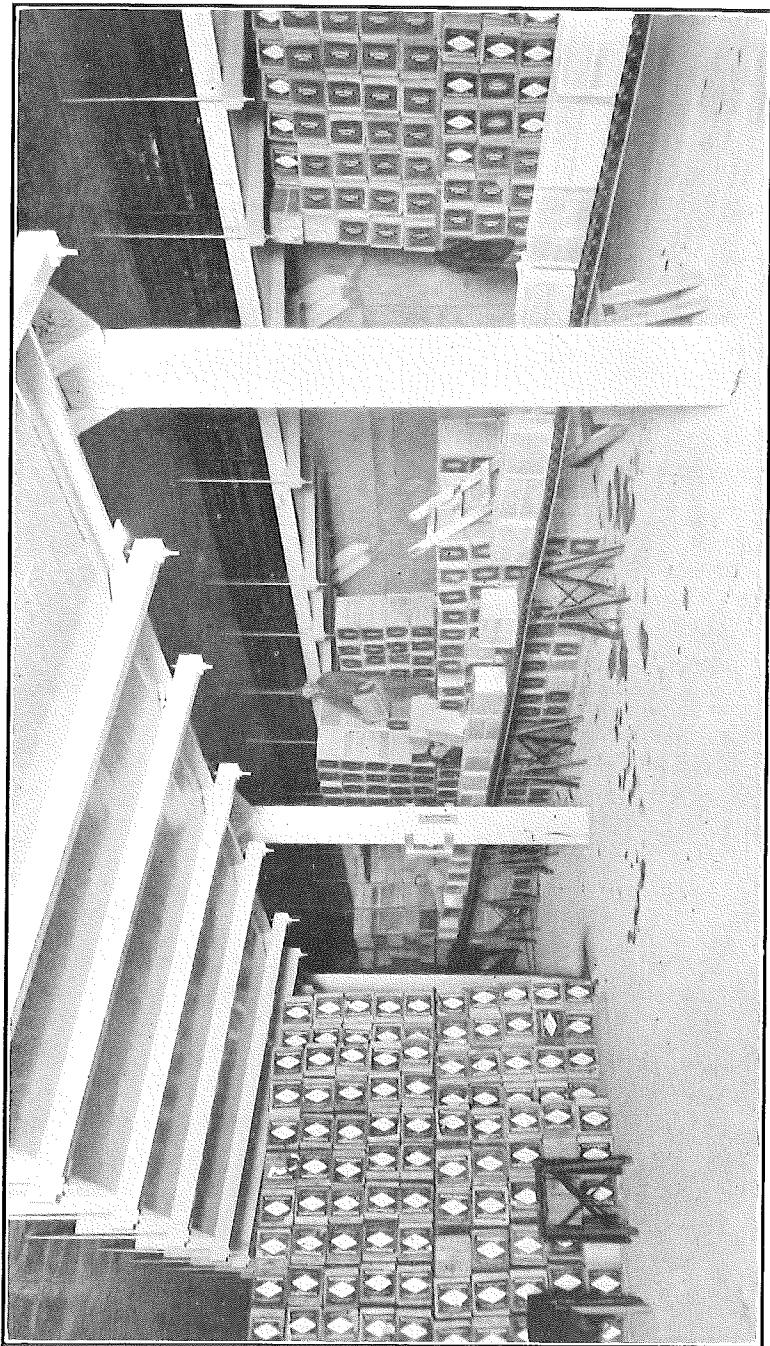

Portland Flouring Mills Dock: Two-level quay dock, 560 feet long, with total cargo space under shed of 86,000 square feet and trackage for 40 cars.

Pacific Coast Elevator Dock: Quay dock 560 feet long, with total cargo space under shed of 58,000 square feet and trackage for 30 cars.

Albina Dock: Quay dock 775 feet long, with total cargo space under shed of 66,700 square feet and trackage for 30 cars.

Crown Mills Dock: Two-level quay dock, 400 feet long, with total cargo space under shed of 71,000 square feet and trackage for eight cars.

Mersey Dock: Two-level quay dock, 325 feet long, with total cargo space under shed of 83,300 square feet and trackage for eight cars.

FOUR COLD STORAGE ROOMS WITH CAPACITY OF 100,000 BOXES OF APPLES ARE PROVIDED IN THE COLD STORAGE PLANT
AT MUNICIPAL TERMINAL NO. 4

Albers Dock No. 2: Two-level quay dock, 178 feet long, with a total cargo space under shed of 41,200 square feet and trackage for eight cars. Ample berthing space at this dock for large vessels by overlapping on Albers Dock No. 3.

Columbia Dock No. 1: Two-level quay dock, 355 feet long, with a total area under shed of 95,600 square feet and trackage for eight cars.

Irving Dock: Quay dock, 400 feet long, with total cargo space under shed of 101,000 square feet and trackage for ten cars.

Globe Milling and Elevator Dock: Two-level quay dock, 380 feet long, with total cargo space under shed of 66,500 square feet and trackage for 32 cars.

Northwestern Dock (Union Pacific): Quay dock 580 feet long, with total area under shed of 67,200 square feet and trackage for 28 cars.

These private general cargo and grain docks have a combined cargo capacity of 230,000 tons at one time. The grain docks are provided with cleaning facilities and electrical conveyors for delivering sacked grain and flour to vessels.

PRIVATE GRAIN ELEVATORS

Kerr-Gifford Company (operators): Elevator of fire-proof construction of 250,000 bushels capacity for bulk grain, with ship loading facilities.

Strauss & Company (operators): Elevator with capacity for bulk grain of 300,000 bushels, with two ship loading spouts.

Balfour, Guthrie & Co. (owners): Two elevators each of 270,000 bushels capacity. One of these elevators is provided with ship loading spouts.

LUMBER DOCKS

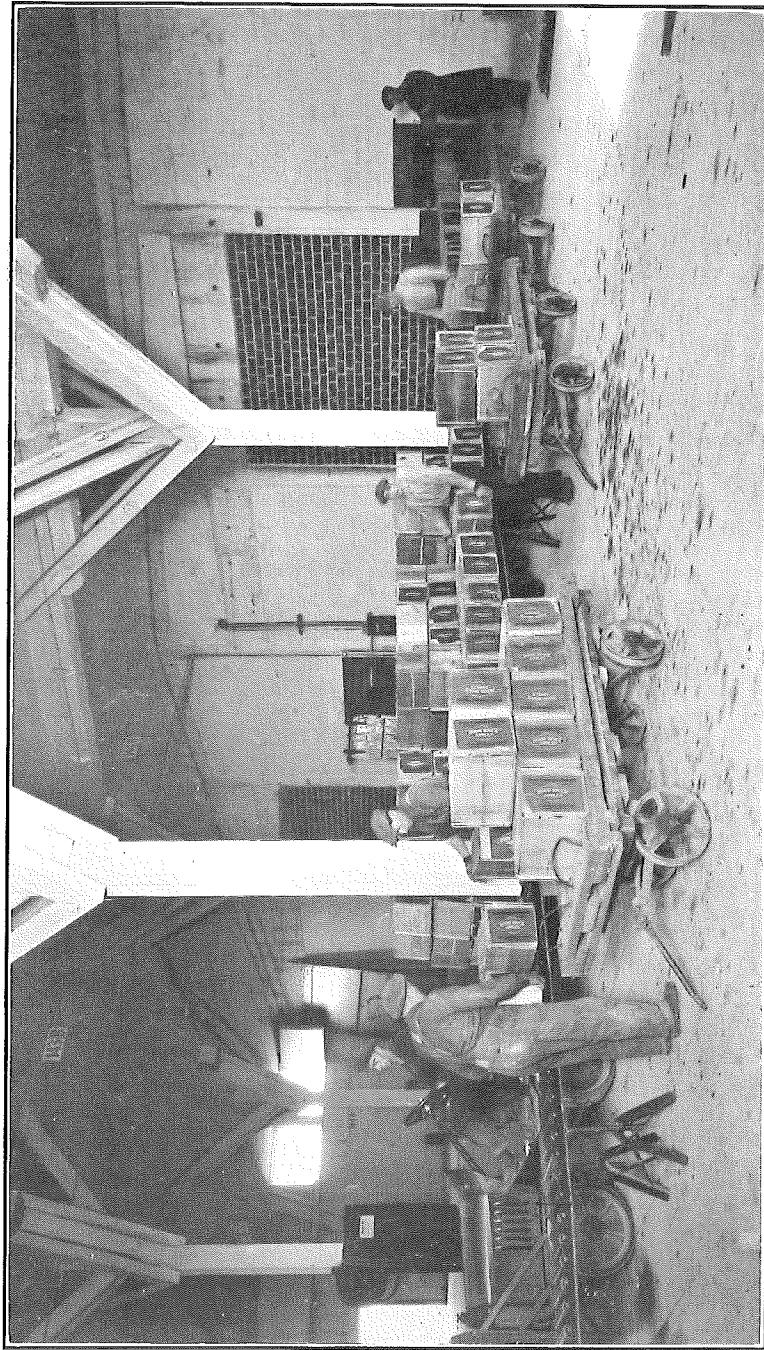

West Oregon Lumber Company Dock: Quay dock 742 feet long and 134 to 210 feet wide.

Beaver-Linnton Mills Co. Dock: Quay dock 300 feet long and 75 feet wide.

St. Johns Lumber Company Dock: Quay dock 670 feet long and 90 feet wide.

Clark & Wilson Lumber Company Dock: Quay dock 980 feet long and 90 feet wide.

Peninsula Lumber Company Dock: Quay dock 1012 feet long and 125 feet wide.

APPLES FOR EXPORT SHIPMENT BEING LOADED ON CARGO BOARDS FROM GRAVITY CONVEYORS LEADING OUT FROM COLD STORAGE ROOMS AT TERMINAL NO. 4 FOR DIRECT TRANSFER TO SHIP'S SLINGS

Duluth Oregon Lumber Company Dock: Quay dock 650 feet long and 105 feet wide.

Eastern & Western Lumber Company Dock: Quay dock 655 feet long and 156 feet wide, and Pier 100 feet wide with slip frontage of 598 feet.

Dollar Portland Lumber Company Dock: Quay dock 455 feet long and 138 feet wide.

Inman-Poulsen Lumber Company Dock: Quay dock 1470 feet long and 188 feet wide.

Harvey Dock: Lumber storage and shipping, quay dock 620 feet long and 200 feet wide.

The Shanghai Building Company Dock: Quay dock 571 feet long and 110 feet wide.

OIL DOCKS

Associated Oil Company: Quay dock 395 feet long. Tank storage capacity:

Crude oil	6,720,000 gallons
Refined oil	430,920 gallons

Standard Oil Company: Quay dock 400 feet long. Tank storage capacity:

Crude oil	2,726,346 gallons
Refined oil	3,191,958 gallons

Union Oil Company of California: Quay dock 400 feet long. Tank storage capacity:

Crude oil	3,690,000 gallons
Refined oil	840,000 gallons

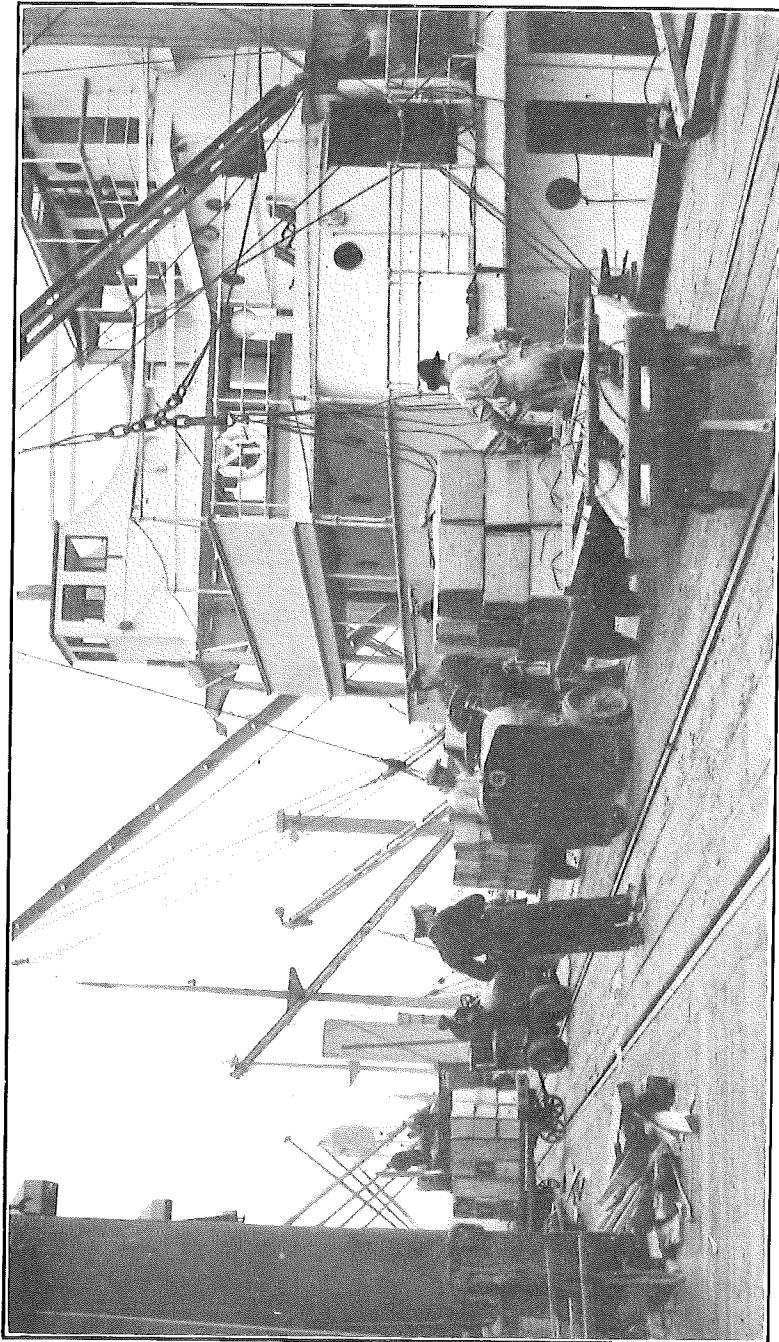

The Shell Company: Quay dock 350 feet long. Tank storage capacity:

Crude oil	4,620,000 gallons
Refined oil	2,100,000 gallons

General Petroleum Corporation: Quay dock 600 feet long at Municipal Terminal No. 4 for crude oil, and quay dock 500 feet long for gasoline delivery. Tank storage capacity:

Crude oil	4,620,000 gallons
Refined oil	2,814,000 gallons

The facilities of these oil companies include convenient delivery of fuel oil to vessels, at their docks. For delivering fuel oil to vessels from

DELIVERING APPLES FOR EXPORT SHIPMENT FROM STORAGE AT VESSEL AT PIER NO. 1, TERMINAL NO. 4

floating equipment there are available barges, with pumps, capable of delivering 42,000 gallons per hour.

The bunkering of vessels with coal in the port is practically all done at the Commission's bulk storage plant at Terminal No. 4. This plant has a storage capacity of about 10,000 tons and delivery to vessel of about 200 tons per hour. Besides these fixed coal fueling facilities there are available in the port a number of lighters and barges for coaling vessels while at berth, discharging or receiving cargo.

Crane Facilities: The municipal terminals are supplied with locomotive cranes of 15 to 25 tons capacity. Centrally located in the harbor there are available for commercial work, a 75-ton sheer-leg and 35-ton stiff-leg derrick.

Harbor Protection: The harbor is under the protection of an efficient day and night patrol, acting under the direction of the harbor-master. Two powerful fire boats, maintained by the city, are always available for immediate use.

As experienced by most other Pacific Coast ports, Portland's water-borne commerce showed a slight falling off as compared with 1924, when the city's commerce surpassed all previous marks. The total tonnage of the port for 1925 as per statistics of the Merchants Exchange, exclusive of local and river traffic, was 4,110,897 tons, valued at \$259,106,183.00, while in 1924 these figures were 4,564,951 tons, valued at \$268,670,058.00.

The principal reason for the decrease in the tonnage handled was due to the small percentage of the wheat crop shipped out during the calendar year, the wheatgrowers holding their crops for an increased price. This is shown by the following figures: During the calendar year 1924, 22,847,211 bushels were shipped as against 9,897,303 bushels during 1925, a decrease of about 60 per cent. As the 1925 wheat crop was considerably greater than that of 1924, approximately 80,000,000 bushels as against 60,000,000 bushels, in the territory covered by Oregon, Washington and Idaho, it is expected that with this great carry-over, the 1926 wheat shipments from this port will be in excess of any previous year, if the 1926 wheat crop equals or exceeds the average yearly production.

The falling off in wheat shipments has been entirely in the foreign trade, domestic shipments having increased about five per cent.

Contrary to all expectations at the time the elevator was constructed, the wheat received in sacks at the elevator as well as for the port as a whole has steadily increased, having been about 54 per cent in 1922 as against 75 per cent in 1925, while the shipping out of wheat in bulk for export was 96 per cent, and the combined export and domestic shipments in the latter year was 79 per cent.

A complete equipment for the removal of smut by the washing process was installed in the elevator at Terminal No. 4 in 1924, in which

INTERIOR PIER NO. 1, MUNICIPAL TERMINAL NO. 4—WOOL CARGO IN FOREGROUND

year out of a total of 1,848,000 bushels of wheat to be smutted, 938,000 bushels were washed and 910,000 lime scoured. In 1925, out of a total of 1,131,500 bushels to be smutted, 764,477 bushels were washed and 367,023 bushels lime scoured, showing a decided preference for the washing process by the exporter.

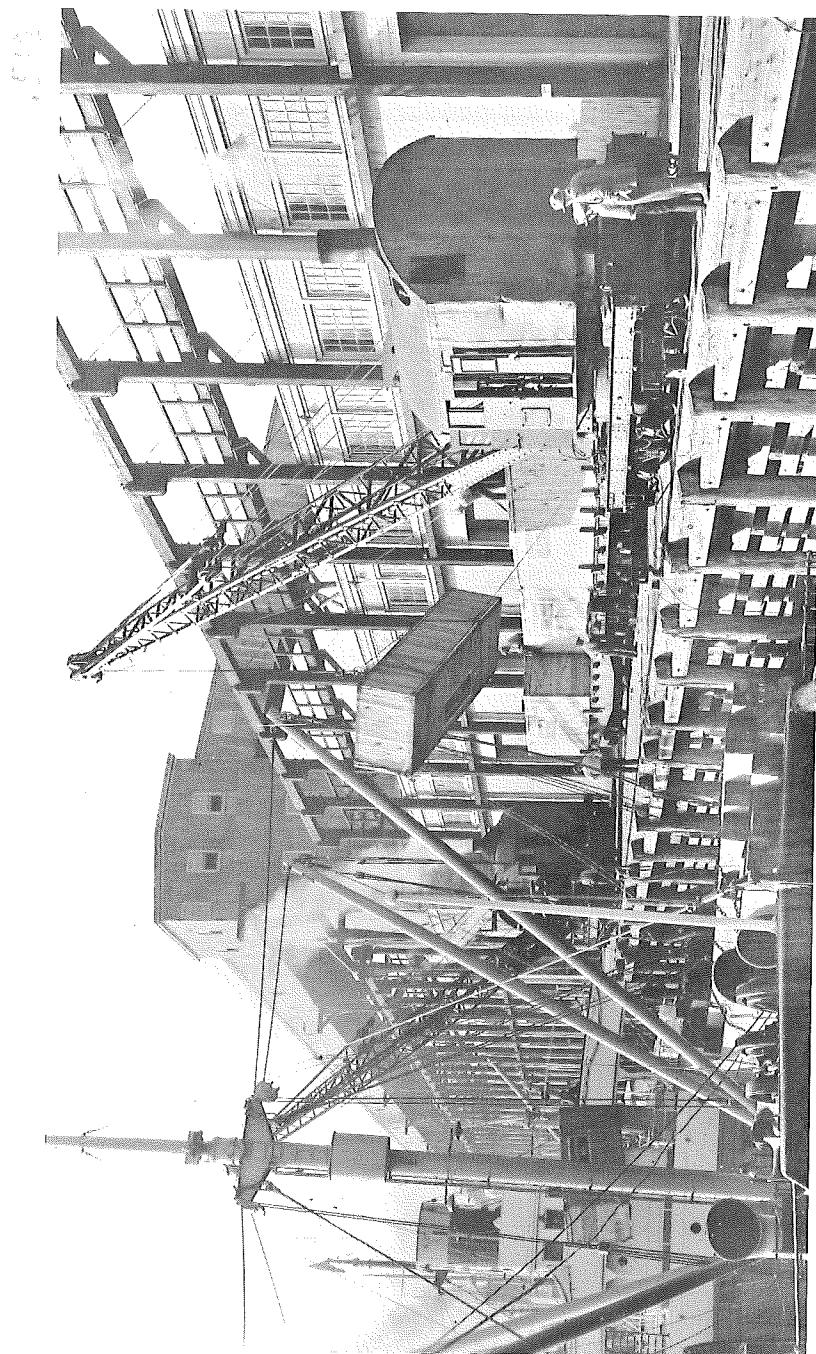

One of the new commodities for export which developed during the year was zinc concentrates drawn from Idaho and Montana principally, with some of Oregon's mineral activities in the Homestead district. These concentrates are destined to Europe, principally Belgium, and their shipments are so regulated as to afford a part cargo for vessels, permitting lumber and general freight to be loaded as well, and insures more parcels with which to support such steamship services, supplied from the port's tributary territory.

The Commission several years ago constructed an extensive bunker plant at Terminal No. 4 for the handling of phosphate rock, manganese ore, coal and other bulk freight. Therefore, when this new business of concentrates was offered the Commission was prepared to receive and dispatch the same without any added outlay. The first shipment was made in June and by the end of November, eleven vessels had been loaded, the total export for the period amounting to 19,506 tons.

In the way of inbound freight a gain was registered in vegetable oils from the Philippines and China, 12,410 tons having been received for the year just closed, which is an increase of 19 per cent over the previous year. The largest single shipment was 4305 tons of cocoanut oil from the Islands. The receipts of vegetable oils up to the present time have been irregular, but as part of the freighter fleet operating under Shipping Board direction to the far East recently has been fitted for the transportation of vegetable oils with other cargo, each vessel having tankage for 700 tons, while others of the fleet will be changed to accommodate oil as they arrive home, the coming year's receipts will be regular, and no doubt include a resumption of wood and peanut oil imports.

Storage tanks at the terminal provide ample space for holding of oils until reloaded into tank cars for distribution to local plants as well as to the East. Installation of highly efficient pumping equipment at the terminal early in the year has increased the speed of discharge so that it is not surpassed by any port on the Coast.

Lumber being the principal export commodity of the port, the following statistics are given concerning the amounts handled during the 1925 calendar year as compared with the 1924 shipments. In 1925 the combined export and domestic shipments amounted to 616,517,000 feet B. M., of which 270,444,000 feet B. M. were export and 346,073,000 feet B. M. sent to domestic ports. The corresponding figures for 1924 were 577,595,000 feet B. M., of which 333,000,000 feet B. M. were export and

LOADING AUTOMOBILES AT PIER NO. 1, MUNICIPAL TERMINAL NO. 4, FOR SHIPMENT TO THE ORIENT

244,595,000 feet B. M. domestic, the total increase being about nine per cent.

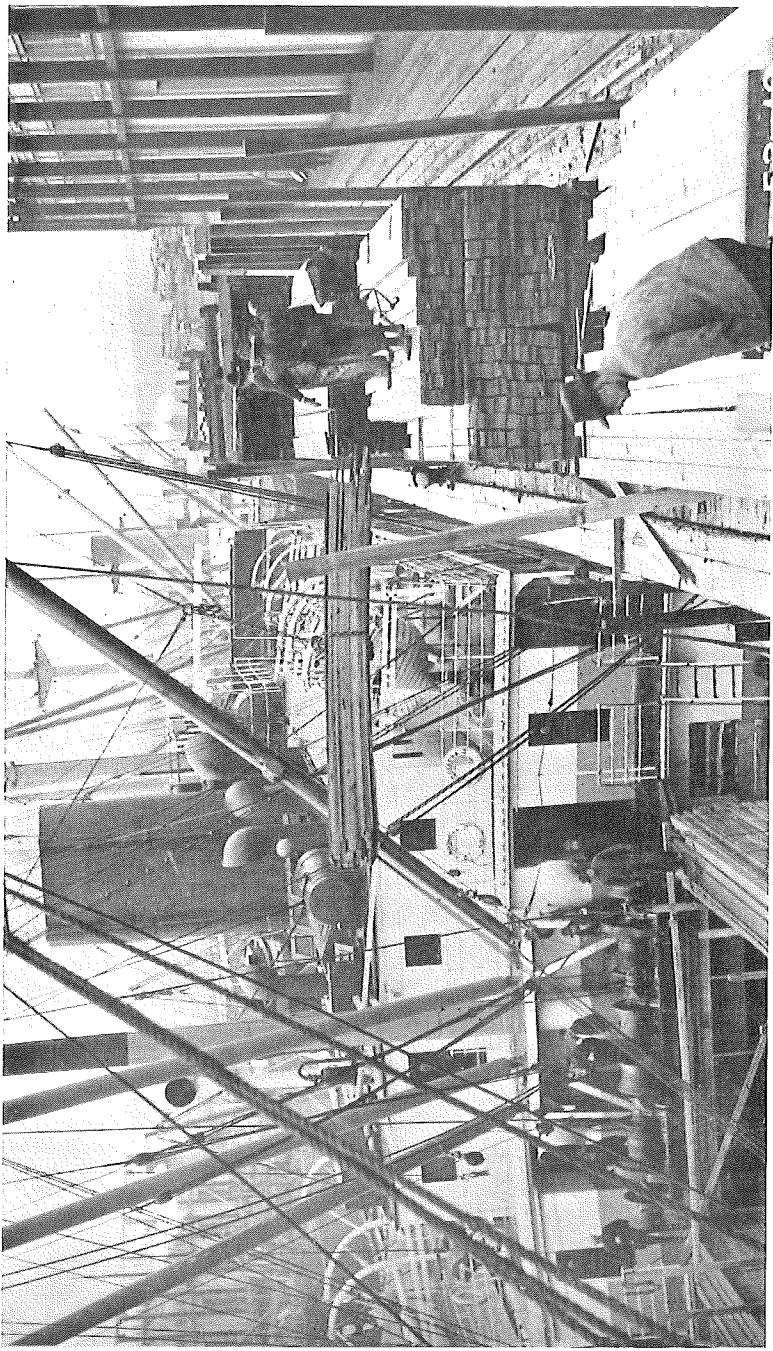

As a comparison of the total Columbia River territory lumber shipments for these years, the following figures are of interest: In 1925 a total of 1,179,717,000 feet was shipped out, while in 1924 the total was 1,001,934,000 feet.

An important export business of the port is shipment of apples, in which Portland leads all other United States ports, with the single exception of New York. During the 1925 export season several countries received apples from Portland which heretofore had received none from this port. The largest buyers of apples, exclusive of Great Britain, the best market of them all, were Belgium, Holland, Germany, France, Norway, Denmark and Finland. The total export of apples in 1925 was 986,720 boxes, and in 1924 963,480 boxes, an increase for 1925 of about 2 per cent.

As elsewhere noted, the facilities provided by the Commission for the handling and storage of apples at Terminal No. 4 consists of a ventilated warehouse 120 feet by 410 feet and a cold storage warehouse 120 feet by 200 feet. Demands were made on the Commission during the year to double the capacity of the cold storage plant, but after a close study of the subject the Commission decided that the present facilities were sufficient to accommodate all transit shipments of apples through this terminal, and that if long time storage of apples were desired by growers or exporters same could be obtained from local and private cold storage plants. During the years 1923 and 1924 the entire space in the cold storage plant at this terminal was used by only three concerns engaged in the growing or exporting of apples. By a re-distribution of this space in 1925 thirteen different concerns were regular users of the cold storage plant, which resulted in a greater turnover and gave accommodation to many small growers who heretofore had been excluded. The 1925 operation of the cold storage plant was generally endorsed by shippers and growers.

Portland is the export center for the canned goods and dried fruit produced in the great Willamette Valley and throughout Oregon, and parts of Washington. Canned goods shipped in 1925 amounted to 41,080 tons. In 1924 it was 33,498 tons. A short crop reduced the dried fruit shipments for 1925, during which year the total shipments amounted to 14,511 tons as against a total of 25,769 tons for 1924. Most of the shipments during 1925 were to the Atlantic Coast.

Door factories were busy during the past year, and exports for that year were double that of 1924, the principal markets for this commodity being United Kingdom, Belgium and France, but large shipments were made also to Australia, Japan and China, exports having increased each year in spite of competition from such manufacturing districts as the Scandinavian countries. Shipments to the Atlantic Coast also show a large increase. A total of 13,169 tons of doors were shipped out in

AT MUNICIPAL TERMINAL NO. 4 A VERY COMPLETE PLANT IS PROVIDED FOR THE HANDLING AND STORAGE OF VEGETABLE OILS AND MOLASSES. PLANT INCLUDES PIPE LINES, TANK SCALES, PUMPS, STEAM PLANT, TANK CAR CLEANING FACILITIES, ETC.

burg, Oslo, Gothenburg, Malmo, Copenhagen, Stockholm and Helsingfors, placed additional ships in commission during the latter part of the year. They have increased passenger accommodations and are fitted with the latest designed refrigerated equipment.

The Furness fleet, the Harrison direct line, the Ben Line, and others added vessels to their fleet.

Toward the Orient a more marked activity has been developed and the Shipping Board service under the operating management of the Columbia Pacific Shipping Company has been increased from 10 to 11 steamers. During previous seasons as many as 14 units have been maintained in the fleet and to meet the rush resulting from the Japanese earthquake there were 17 operated. The Yamashita Company, Toyo Kisen Kaisha, Tatsuma line, Suzuki & Co. and Mitsui & Co. are among others operating trans-Pacific from Portland.

Winge & Co. have expanded their service to the west coast of South America, so have six vessels instead of four. The Latin-America and Pan-Pacific fleets also figure in the west coast trade.

The Shipping Board has added tonnage to meet requirements for the Pacific-Argentine-Brazil line, managed by Swayne & Hoyt, reaching the east coast of Latin-America.

In the Australian trade are the Shipping Board's Pacific-Australian line and that of the Trans-Atlantique Steamship Company.

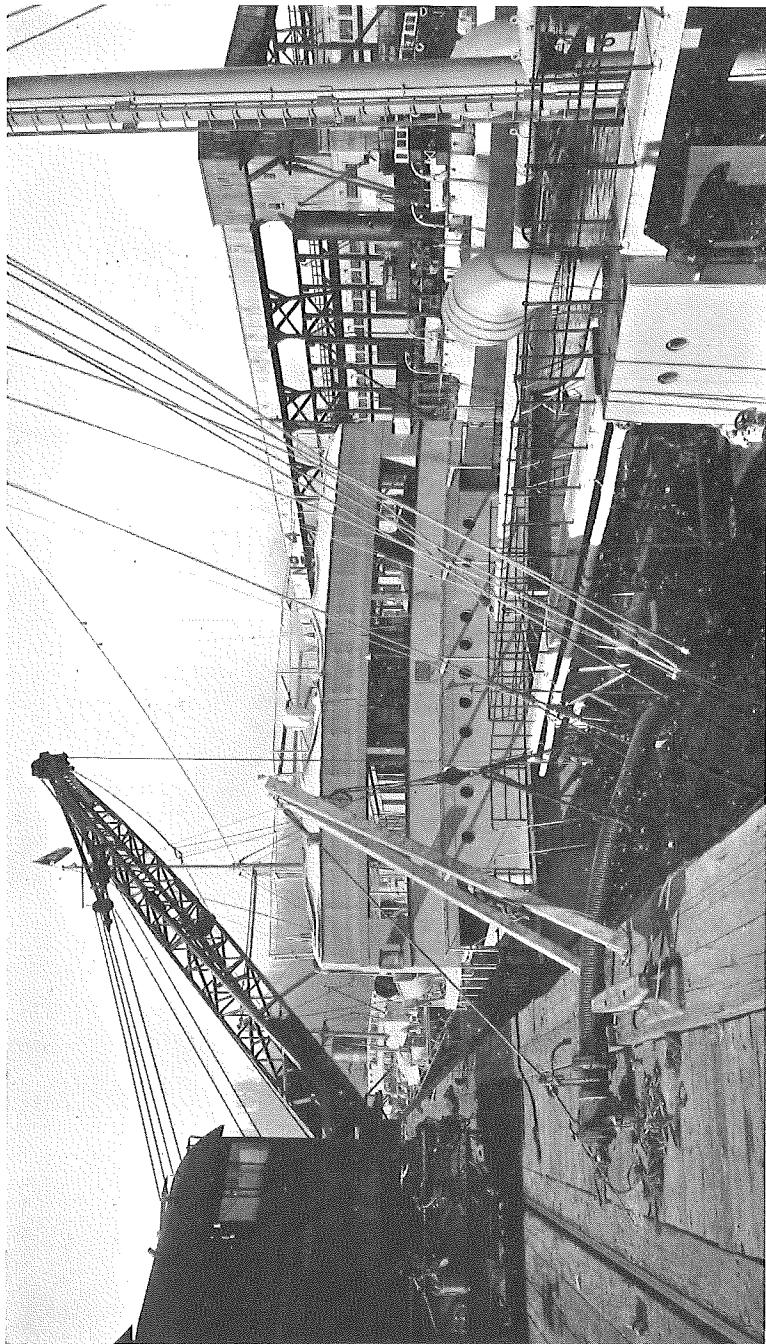

In the Intercoastal field the purchase by the American Hawaiian Steamship Company of six vessels during the year has resulted in speeding its service and a rearrangement of schedules made Portland the termini of one line, while another ends its route on Puget Sound. The Luckenbach Steamship Co. also worked out advantages in the steaming time of its north Atlantic coast vessels and serves Portland with a ship a week, while improvement in the gulf fleet has been brought about. Added calls in the south have followed and that is true as well in the operation of the Swayne & Hoyt vessels. The Munson-McCormick flag has loaded additional carriers at times during the year to take care of space demands. Among other operators in the coast-to-coast trade are the Argonaut, Isthmian and United American lines.

From the standpoint of ocean services engaged in the movement of diversified wares, it would appear as if the commerce of the port and district was in a general healthy state.

During the fiscal year vessels of the following lines engaged in the various services from the port and, in addition, there were a large number of tramp vessels which carried away a considerable portion of the local products of the port and its tributary territory:

During the year the Commission has, in co-operation with the Portland Traffic and Transportation Association, Chamber of Commerce, and others, actively represented the community's interests in several rate cases directly affecting the commerce of the port, as follows:

The Montana Export Rate Case: This case involved the right of the railroad to name a tariff for export lower than the local rate. This Commission intervened to sustain the rate. The rate was sustained.

Walla Walla Grain Case: This case was a direct attack upon the Portland differential, adjudged in the Columbia Basin Rate Case. The Commission, through its counsel, intervened. Teal, Winfree, Johnson and McCulloch were the leading attorneys for the Portland interests. The Portland differential was re-affirmed on appeal by the Interstate Commerce Commission.

Utah and Idaho Grain Cases: These cases attacked the then existing grain rates. The examiner reported in favor of the rates, upholding the Portland contention. As yet no word has been received from the Interstate Commerce Commission regarding final decision.

Wool Rate Case: The Commission intervened under the advice of Mr. Teal, attorney for the Portland Traffic and Transportation Association. This case has been decided by the Interstate Commerce Commission, and in effect the decision of that body restricted rail rates based on the Fourth Section of the Commerce Act. This decision has not been agreeable to the Portland interests or to the woolgrowers. It is too early to tell the exact effects resulting from the decision.

Early in the year the Commission, in co-operation with the Portland Chamber of Commerce and The Port of Portland Commission, was instrumental in having a provision included in the Rivers and Harbors Act of March 3, 1925, authorizing the examination and survey by the United States Engineers, of the Columbia River ship channel from Portland to the sea, with the view of the adoption of a new project calling for a channel depth of 35 feet at low water for a width of not less than 500 feet, the present and completed project being for a 30-foot low water depth for a width of 300 feet of channel. The necessary information supporting the Port's demand for these improved ship channel conditions has been forwarded to the Board of United States Engineers for Rivers and Harbors, Washington, D. C., and it

HARBOR VIEW, MUNICIPAL TERMINAL NO. 1

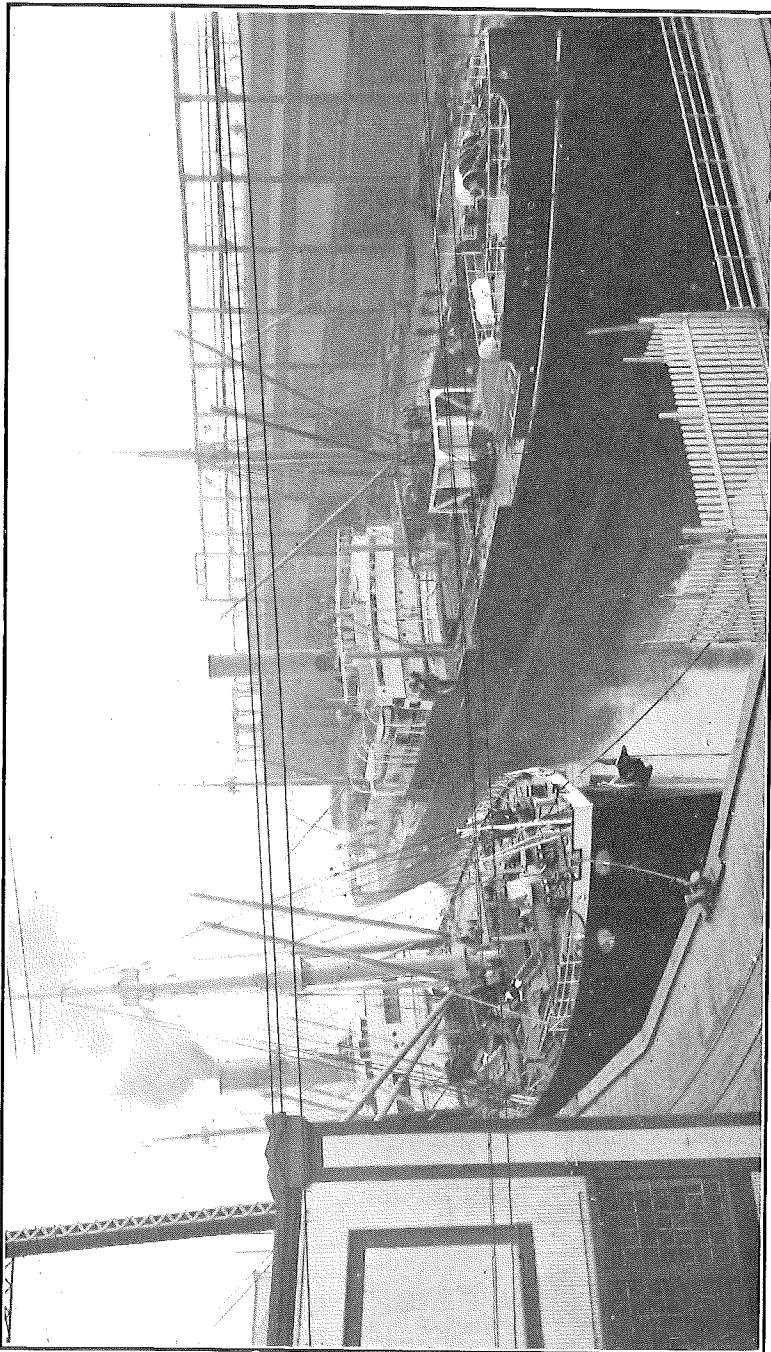

is hoped that favorable action thereon will be submitted to Congress in time to be acted upon during the present session.

Taking advantage of the favorable opportunity of acquiring additional land adjoining Terminal No. 4, which the Commission has had under consideration for several years, at a very reasonable price, the Commission purchased from the Gatton Estate 50 acres of waterfront and upland at the rate of \$1000.00 per acre, and has taken steps to acquire an 11-acre tract lying between Terminal No. 4 and the recently purchased 50 acres, by condemnation, as necessary in the proper development of the Terminal No. 4 site.

HARBOR AND PORT

Portland is the same steaming distance from oriental ports as Puget Sound ports, and, like Philadelphia and New Orleans, approximately 96 nautical miles from the sea. The harbor of Portland is on the Willamette River, which flows into the Columbia River about 10 miles below the shipping center of the harbor, which has a width of 900 to 1600 feet between the established harbor lines. Within the City of Portland there is a harbor frontage of nearly 29 miles, and if extended to the confluence of the Willamette and Columbia Rivers, 37 miles. Of the city's water frontage of 29 miles, 6.87 miles of berthing space has been developed for the accommodation of shipping and industries, of which 1.80 miles is under municipal control; 3.22 miles for private general cargo, grain, lumber and fuel docks, etc., used for ocean commerce; and 1.85 miles for coastwise and river steamers, ship repair plants and industries. A least channel depth of 30 feet at low water exists throughout the harbor and this depth is to be found at nearly all of the terminal docks and piers used for ocean-going commerce. A project for a 35-foot low water depth in the Willamette River has been adopted, and this depth is gradually being established throughout the harbor and along the principal shipping terminals. This work is being done by The Port of Portland Commission.

Channel Conditions: The June, 1924, survey of the entrance to the Columbia River by the United States Engineers showed a channel depth of 45 feet at low water for a width of about 1200 feet, and a 40-foot low water depth for a width of about 7000 feet. During the year there was a further improvement in the channel depth, due to the scouring effect produced by the jetty construction, completed in 1917. The survey of June, 1925, showed this increase to be 46 feet at low water for a width of about 2000 feet, and 40 feet for a width of about 7000 feet, and there is every indication that in a very few years the low water depth at the Columbia's entrance will be 50 feet, a depth much greater than that of the Panama Canal. The mean rise of tide is 7.5 feet at the entrance, which is well supplied with aids to navigation, consisting of lightship, gas, bell and other buoys, and permanently lighted ranges,

SLIP NO. 1 AT MUNICIPAL TERMINAL NO. 1. PIER "A" IS AT RIGHT, PIER "B" AT LEFT

permitting safe and uninterrupted navigation by vessels of the deepest draft at all times.

The Federal project for the improvement of the ship channel in the Columbia River from the mouth of the Willamette to the Pacific Ocean was adopted more than ten years ago, and provided for a low water depth of 30 feet for a width of not less than 300 feet in straight courses, and 500 to 600 feet in bends, and has been fully completed for several years. Channel dredging, which has been carried on since the project completion, was for the purpose of maintaining the project depth, and the gradual widening of the dredged channel, particularly in bends. The Columbia River ship channel is yearly becoming more stabilized by the construction of permanent contraction dikes located at points where annual dredging was required in previous years, with resultant greatly decreased dredging operations to maintain the project channel depth.

The mean tidal range of the mouth of the Columbia River is 7.5 feet, and at low water stages in the Columbia and Willamette rivers there is a tidal effect of about two feet at Portland. Chart of the 1924 U. S. Engineers' survey of Columbia River entrance is included in this report.

The revenues accruing from the operation of the municipal terminals have been very satisfying, as shown by the attached financial statement.

The municipal terminals of the port are directly operated by The Commission of Public Docks and not leased, being thus available to all users on equal terms. Dock loading and unloading and other charges are established by tariff and, as a general proposition, they are maintained at a parity with other Pacific Northwest ports, so that terminal charges at these ports are, for all practical purposes, equal.

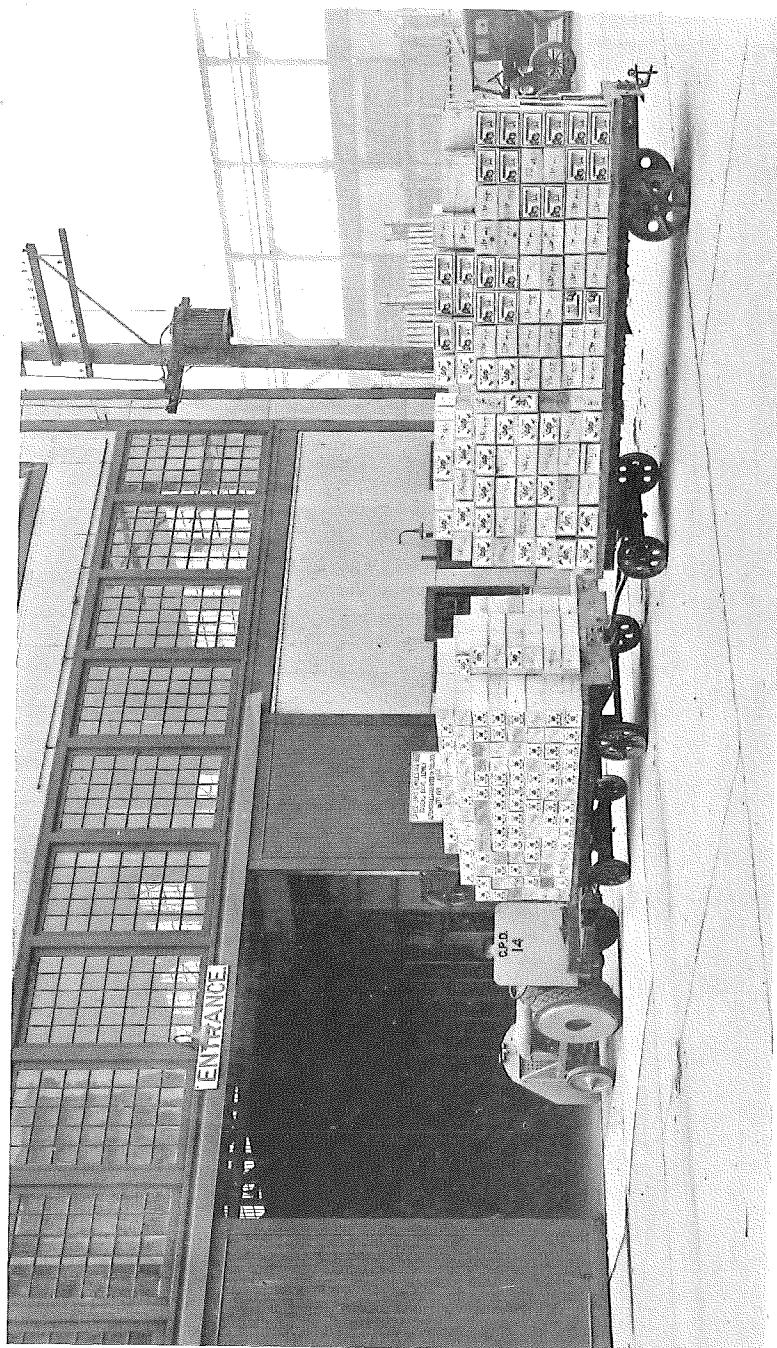

Pursuant to Subdivision "K" of Section 163 of the City Charter, and to the statutes of the State of Oregon, and more particularly Section 8 of Chapter 208 of the General Laws of Oregon for 1921, The Commission of Public Docks notified the County Clerk and the County Assessor that the tax levy of the department for the fiscal year ending November 30, 1925, had been fixed at \$692,246.04.

Pursuant to Section 163 of the Charter of the City of Portland as revised by the Council August 1, 1914, there is submitted herewith an itemized statement of the receipts and disbursements of the current year.

All ordinances passed by The Commission of Public Docks are matters of public record and are on file in the office of the Auditor of the City of Portland, and also in the office of the Commission.

Respectfully submitted,

JOHN H. BURGARD,
Chairman, The Commission of Public Docks.
