Subject: propane thru Portland

Hello Susan Anderson,

Propane produced by gas products taken from the ground does not help people survive on this planet.

Even though Pembina, who fracted the gas but intends to sell it someplace other than the Pacific Northwest, wants just to transport it by rail through our Gorge to a terminal in Portland for export, moving it by train is extremely dangerous. Too many spills with dire consequences around the U S have clearly shown that this source of energy is opening us to hazardous unknown disasters. Something BAD will happen. Our region doesn't know when, but horrible loss will descend upon us when an inevitable spill occurs.

Additionally, energy from gas products must be curtailed to help people avoid climate change around the globe. No matter where the propane goes that Pembina wants to ship, other forms of energy would help humans, not help send CO2 into the atmosphere where it blankets the earth raising temperatures for everyone. People need energy, but renewable sources have been developed that should be strengthened. Some global warming may be avoided; DO NOT INTENTIONALLY frack and ship propane to secure profits for Pembina.

Please refrain from sending propane (LPG = liquified propane gas) though Portland by train.

Thank you for your attention,
Helen Logan Hays
