

Dear Port of Portland Planners,

I am against all *new* fossil fuel Export terminals in Oregon. It is one thing to extract fossil fuels for domestic consumption, but using our beautiful Columbia river to transport or facilitate dirty fossil fuel exports to Asia is wrong. I don't need to remind you of climate change and the costs that will be generated from burning more fossil fuels. The costs of air and water pollution, related health problems, clean up costs and climate change disasters outweigh the profits to our communities. It is important for Oregon, and especially Portland, to stay in the forefront for renewable energy. We must be the stewards that ensure a livable planet for future generations. Short term profits for giant foreign fossil fuel corporations should not be our priority! Please reject Pembina's plan for a propane processing plant and export terminal in our region.

Thank you,

Jonnel Covault
