

Planning and Sustainability Commission Public Hearing: Terminal 6  
Environmental Overlay Zone Boundary and Code Amendment

Tuesday, January 13, 2015

***We all know that there's nothing more valuable than a piece of information at the right time.***

Smoke detector, tsunami siren, blood test ...

In 1896, the Swedish Physicist, Svante August Arrhenius, described the greenhouse effect of CO<sub>2</sub> gas and the risk of global warming.

In 1985, we could see Scripps Oceanography's, James Keeling's graph of CO<sub>2</sub> plotted with the corresponding Arctic ice core CO<sub>2</sub> to show the persuasive hockey stick.

The effects of global warming are now being seen. Let's not make it worse. Let's not make it worse by adding fossil fuel infrastructure at a time when we should be conserving and moving to other energy sources.

Propane, with whatever it's virtues, is only about 3% in the fractionation of crude oil and natural gas input. It's a by-product. For every three units of propane, the industry has to sell 97 units of the mix of diesel, bunker oil and all the other hydrocarbons that get burned. Let's help them stop.

Please deny this amendment to our zoning code.
