**Subject:** propane

My husband and I urge the city to deny permits for a propane dump along the Columbia River. We do not need this explosive, climate damaging facility. No one needs this in a day when climate damage is becoming ever clearer. This product takes enormous energy to extract and ship and maintain. It is produced by fracking which damages water resources that animals, plants, people and invertebrates must have for life. I can not imagine a sane, democratic government allowing this facility.
