Sirs

While interim amounts of fuel are necessary to keep our economy alive preparing infrastructure for moving oil derived by fracking in Canada seems ill advised to me.

not in favor because

1. danger to humans & the environment in the gorge & along the Columbia river, which is a narrow passageway.
2. the process leaves an environmental mess in Canada & all along the way
3. Danger in the use of "flaring" at the drilling site
4. Would be used for plastic making in China & Asia - All ready a problem in the Pacific Ocean as well as in manufacturing
5. not economically viable.

Rotary of Jay
