

Hello,

I writing to say I do not support this terminal because it is not consistent with Portland's climate change action plan. This fossil fuel terminal will contribute to the problem of global warming. It will create a massive hazard zone and moving the gas presents unacceptable risks. Harvesting this gas also presents unacceptable risks many of which cannot even be quantified due to the secrete processes and liquids used by the fraking industries.

Please take action to terminate the pursuit of this export terminal.

Sincerely,

Jeff Young
