Subject: TSP3

I would like to propose the following amendments to the Transportation System Plan Draft 3:

- Re-order Priority lists to consistently place reducing carbon emissions over limiting traffic congestion such as the Introduction on page 1-2 & Performance Measures on page 7-2.
- Add interim Performance Measures for mode share goals that are 5 & 10 years out. Allocate additional measures and/or if goals are not met.
- A congestion measurement standard is described on page 7-6: " 9.49.k. Maintain acceptable levels of performance on state facilities and the regional arterial and throughway network, consistent with the interim standard in Table 9.2". I was not able to locate a Table 9.2 in the document. I found a Figure 9-4 "Interim Deficiency Thresholds and Operating Standards" on 2-16. Is this the intended table?

Thank you,
