### THE STREET NUMBER SYSTEM

Unlike most cities, our street number system provides only 20 numbers to the block, instead of 100, requiring 5 city blocks to 100 numbers, a fact well to bear in mind if you intend to walk.

By referring to the diagram you will find the Willamette River. All territory to the left of the river is considered the West Side. All streets on the West Side running west from the river start to number at the river west. The number on Ankeny at which Front crosses is 15, at which 1st crosses is 215, etc. All streets on the West Side running west from the river are parallel to Ankeny and numbered same.

By locating Ankeny street, you have the dividing line for numbering streets running north and south on the West Side. The number on Front street at which Ankeny crosses is 1, at which Vine crosses is 15, etc. The number on Front at which Burnside crosses is 15 N. Starting with 1 at Ankeny, numbering each way gives us the same number on each street twice, as 15 Front and 15 Front N. In order to avoid confusion in numbers, N. is added to all numbers on that portion of all streets running north and south, which lies N. of Ankeny street.

All territory to the right of the river is considered the East Side. All streets running east from river start to number at the river east. The number at E. Ankeny at which E. Water crosses is 235, at which E. 1st crosses is 315, E. 2nd is 335, etc. All streets on East Side running east from river are parallel to E. Ankeny and are numbered same.

East Ankeny is the dividing line for all streets running north and south on the East Side. The number on E. Water at which E. Ankeny crosses is 1, at which E. Ash crosses is 15, etc. The number at which E. Burnside crosses E. Water is 15 N. Do not forget to add the N. to the street number of every street running north and south if that portion of the street on which the number is, lies north of Ankeny or East Ankeny.

As the river turns above Ankeny street, a new dividing line must be selected for the adjacent territory on the north of the East Side. Patton av. is the dividing line for numbering streets running east and west through that district. Patton av. crosses Killingsworth at 1, Maryland crosses at 15, while Concord crosses at 45 W.

### HOW TO FIND A STREET NUMBER BY THIS DIAGRAM

You must know the direction of your street and the side of the river it is on. You can find this by referring to the alphabetical arrangement of streets in the book. Following the name of the street will be found the map reference. Locate street on map.

Now follow out the column of figures running in the same direction as your street till you come nearest your number; opposite that number will be your cross street. Example:

Locate 315 Washington. Following out the column of figures on the West Side running in the same direction, we come to 315, opposite which is 6th st.; 315 Washington is at the corner of 6th.

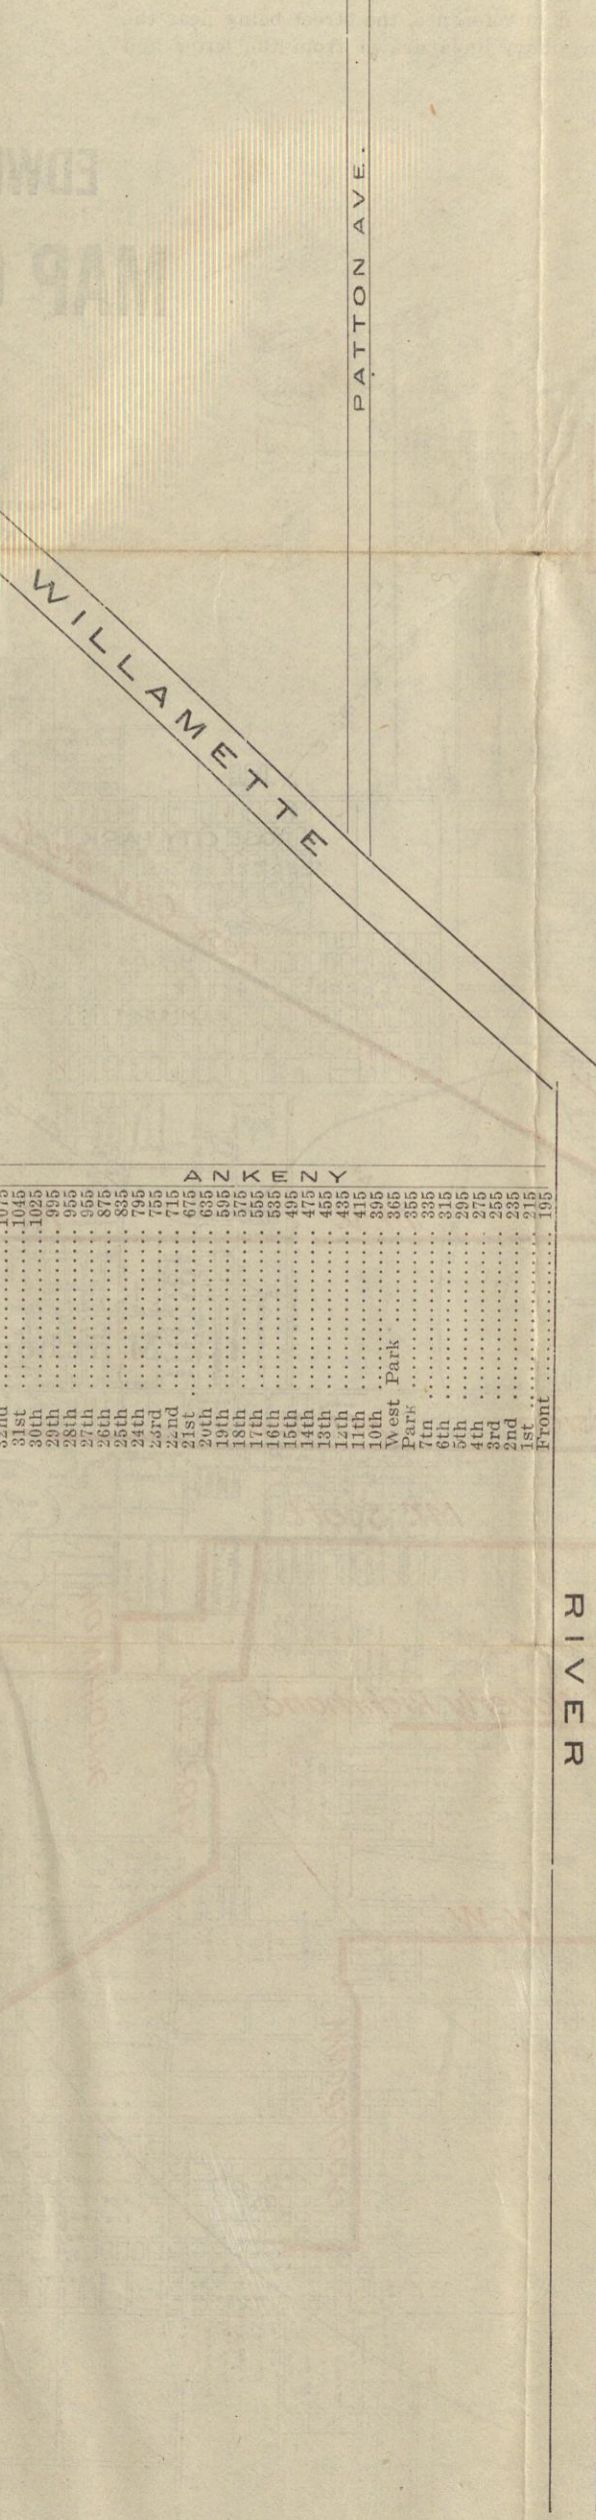

315 10th st. Following out the column of figures on the West Side running in the same direction, we come to 315, opposite which is Clay st.; 315 10th is at the corner of Clay.

315 10th N. Following out column of figures on the West Side running in the same direction, we come to 315, opposite which is Quimby; 315 10th N. is at the corner of Quimby and 10th N.

In like manner 315 E. Washington, 315 E. 10th, 315 E. 10th N. can be found by using columns on East Side.
