- SAC Meeting #16 on 5/10 at ODOT
- Subcommittee Meeting on 5/23

Meeting adjourned at 8:40.

N/NEQ SAC #15 MEETING EVALUATION SUMMARY
APRIL 12, 2012

12 Evaluation Forms

		Poor	Fair	Good	Very Good	Excellent
1)	**OVERALL MTG QUALITY**			1	8	3
2)	**PACING**	Too Slow 1	3	Just right 7	1	Too Fast
3)	**CLARITY PRESENTATIONS**			2	4	5
4)	**DOCUMENTS**		1	1= Fwy options	5 1-height & FAR	5
5)	**DISCUSSION**			1	6	5

6. MOST USEFUL?

- Both were very good.
- Excellent graphics/slides
- Graphics/diagrams
- Great explanation of height and FAR – and offered in a limited time. Way to go. Didn't understand that before.

7. LEAST USEFUL?

- Appreciate ODOT introducing cost conversation into the discussion
- Appreciate the humor, but the pace needs to pick up and focus!
- Cost estimates
- Policy presentation – but OK

8. COMMENTS, SUGGESTIONS, OR QUESTIONS?

- Presentations: some maps needed to include additional streets, particularly west connection to Broadway Br.
- Presentations: Why PPT printed in black? Hard to take notes and the ink!
- Project team is doing an admirable job. We've been a tough crowd.
- Really well done.
- Thanks, staff!
- Where were the maps you said would be here?
- Would be good to keep making some decisions – if little - ___ direction at each meeting.

May 4, 2012

TO: N/NE Quadrant Stakeholder Advisory Committee

FROM: Project Team

SUBJECT: May 10 SAC Meeting #16, Quadrant Plan Discussion (6:00 agenda item)

The following items are included in your packet to accompany the 6:00 agenda item, *N/NE Quadrant Plan Development*:

A) Building Height Recommendations – action item
2 new Lloyd District maps that display existing height limits and proposed potential maximum heights. Please see 4/12/12 meeting packet for detailed height recommendations for five areas:

1. Thunderbird site
2. N Broadway
3. Eliot Edge
4. Irvington Edge
5. Central Lloyd

B) Draft Zoning Proposals – action item
Handouts that provide background information and draft zoning proposals in the following five areas:

1. Lower Albina
2. N of Broadway/Blanchard Area
3. Vancouver/Williams Study Area
4. North Banfield Portal
5. Central Lloyd

C) Revised Draft Goals, Policies and Implementation Items – discussion item
This draft has been revised based on SAC and Technical Advisory Committee member comments submitted in April. The changes to the goals and policies are displayed in track-changes. This is a draft document, and will continue to evolve based on feedback from the SAC, stakeholders and implementing agencies.

5/10/12 SAC Quadrant Plan Development Action Items:

Staff would like the SAC to take preliminary actions on the height and zoning recommendations at the 5/10/12 meeting. Please review the following recommendations and be prepared to vote 1, 2 or 3 on the following draft proposals.

A. Draft Recommendations for Potential Maximum Height Limits (see map in packet)

1. Thunderbird Site - allow height (up to 250') in exchange for public open space.

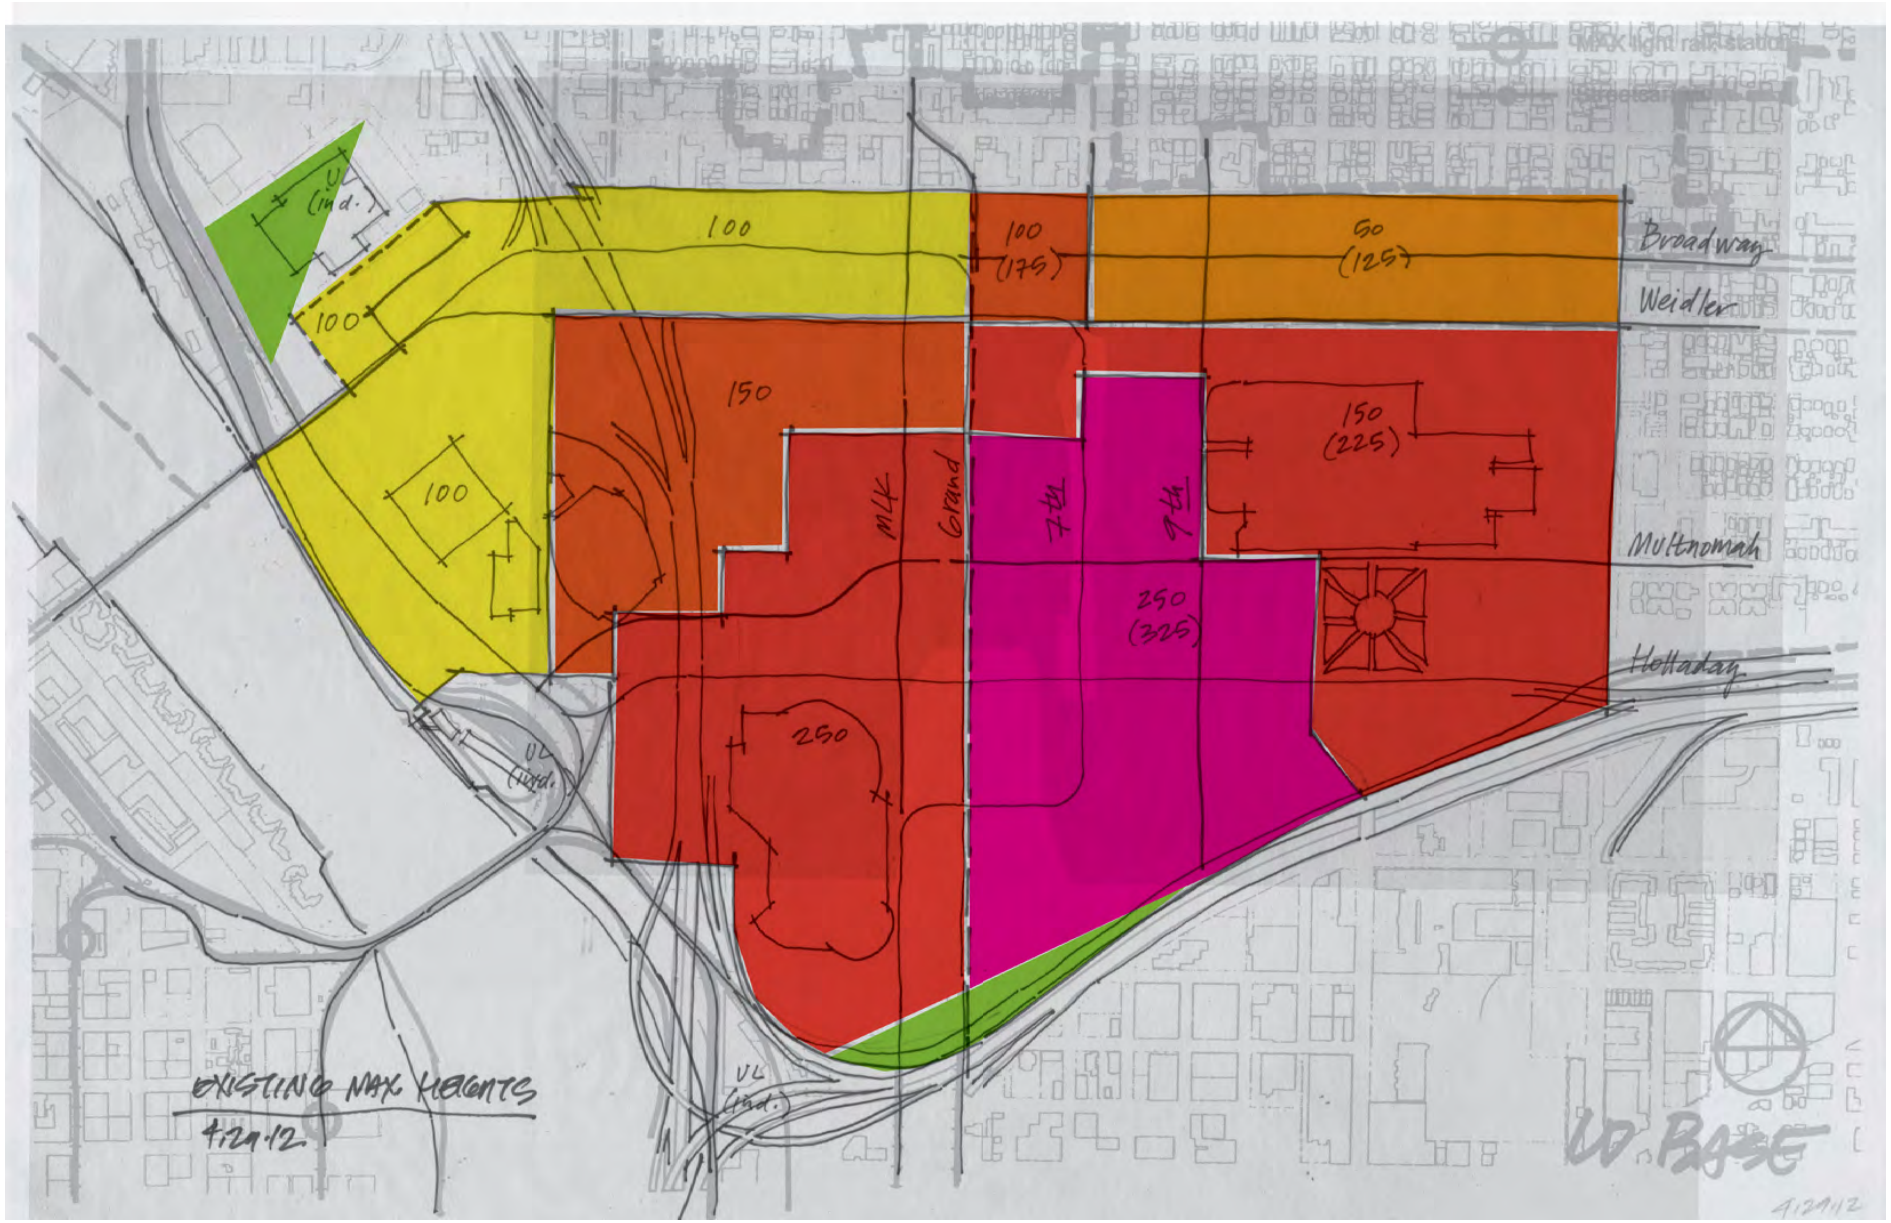
2. N Broadway - allow taller buildings at bridgehead (up to 325', step down to east).

3. Eliot Edge - keep 100' maximum; expand area of 175' max at MLK and Broadway/Weidler.

4. Irvington Edge - reduce maximum height north of Broadway to 75'.

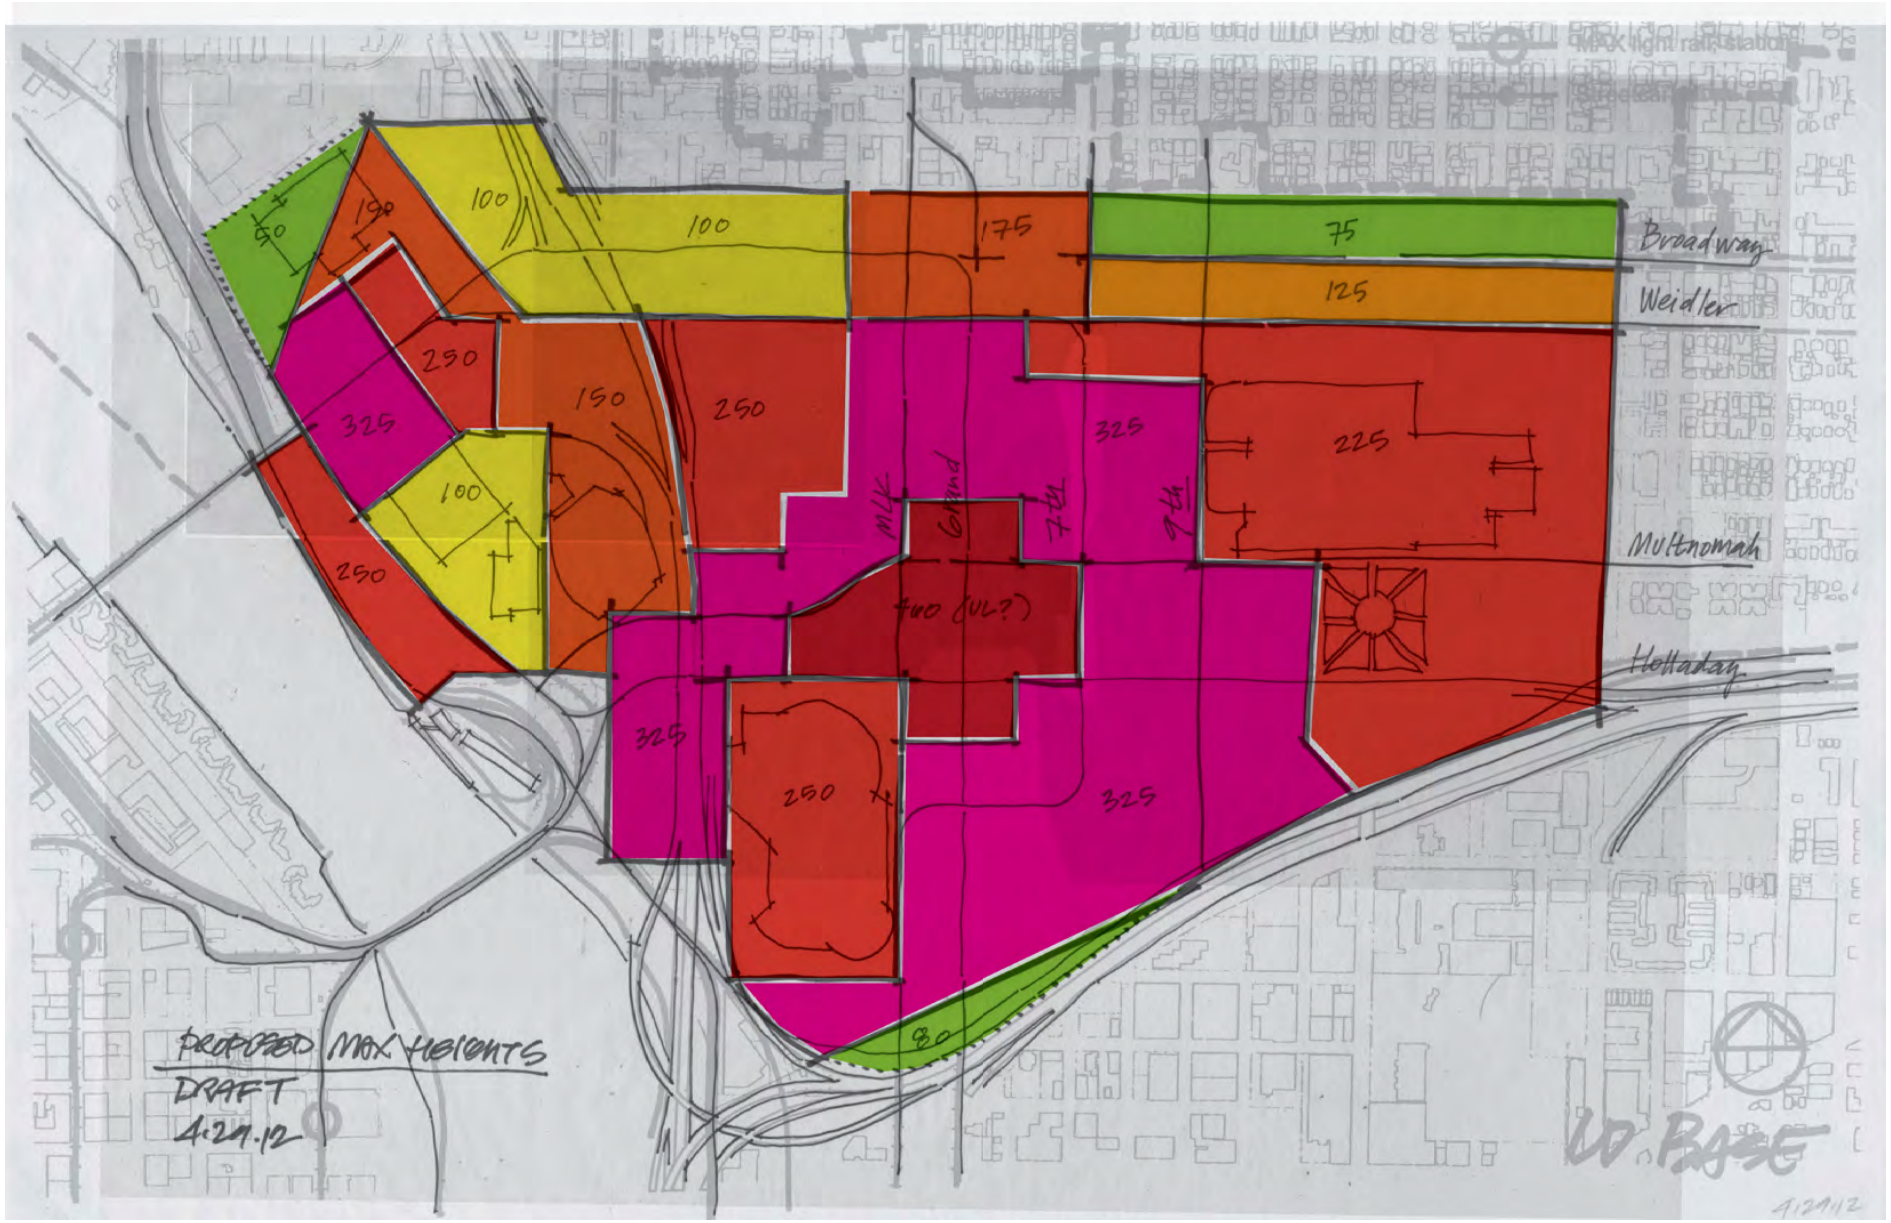
5. Central Lloyd - increase maximum potential heights in the Central Lloyd with the tallest heights (460' or limited only by FAR) around the intersections of MLK/Grand and Multnomah/Holladay.

B. Draft Zoning Proposals (see proposal descriptions in packet)



1. Lower Albina – change IG1d on Russell east of existing conservation district to EXd (no housing), apply Employment Opportunity Subarea provisions east of Union Pacific rail line.

2. North of Broadway/Blanchard Area - change to IG1 to EXd with master plan requirement and EG1 to CXd zoning.



3. Vancouver/Williams Study Area - change RHd to EXd.

4. North Banfield Portal - change RH and CO2 to CXd.

5. Central Lloyd - change RXd pocket to CXd, apply enhanced housing incentives to entire Central Lloyd, apply incentives for hotels, restaurants fronting convention center.

N/NE Quadrant Plan Draft Zoning Proposals — *Lower Albina*

Background

The majority of the Lower Albina district is zoned for industrial uses. It serves as a critical incubator for emerging and innovative businesses and provides an important living-wage job base near inner North and Northeast neighborhoods. The district's mix of industrial businesses, working waterfront and multimodal freight facilities are complemented by a small mixed-use historic area along lower Russell Street, where retail activity is especially active in the evening.

Increasing zoning flexibility to allow a wider range of employment uses that are compatible with industrial activities has the potential to increase job density, capture growing industry sectors, and foster the continued vitality of Lower Albina as an employment center and business incubator.

Stakeholder Feedback

Survey responses and discussions with Lower Albina stakeholders and the Eliot Neighborhood Association indicate general support for increasing zoning flexibility. Most stakeholders support allowing additional employment types, with some concerns about the potential for conflicts with existing and future industrial activities. Most felt strongly that residential uses should continue to be prohibited in the IG1 zone. The Land Use Subcommittee of the N/NE Quadrant Stakeholder Advisory Committee (SAC) generally supported the idea of an Employment Opportunity Subarea (EOS) approach, used in the Central Eastside. The EOS allows additional flexibility in the IG1 zone for certain kinds of "Industrial Office" uses, while prohibiting residential development, which creates conflicts with industrial activities.

The proposed N/NE Quadrant Concept endorsed by the SAC suggests modest expansion of mixed-use zoning near the Russell St. Conservation District by extending EX zoning east along N Russell and south to the MAX station. However, further discussions with property owners and stakeholders have indicated that the area adjacent to the MAX station should retain industrial base zoning with application of the EOS, and that housing should not be allowed in the area along Russell where a change to EX zoning is proposed.

Existing Zoning

The area fronting NE Russell from N Albina to the I-5 overpass, where EXd zoning is proposed, contains 17 tax lots covering approximately two acres (see Map 1). It is currently zoned General Industrial 1 (IG1) with a design (d) overlay zone and has several additional development standards, such as a 50 foot height limit, a maximum 3:1 FAR, and ground floor active use and residential bonus target designations. Many of these requirements are inconsistent with the underlying industrial zoning, make the economic use of these properties difficult, and complicate potential redevelopment. Immediately to the east of this area is the Russell Street Conservation District, which is zoned EXd, allowing a mix of industrial, commercial and residential uses. No zoning changes are proposed in the conservation district.

The area generally east of the Union Pacific railroad and west of I-5, where additional flexibility for employment uses is proposed (hatched area on Map 1), contains 136 tax lots, covering approximately 46 acres. It is currently zoned IG1, with a Scenic Resource (s) overlay on a portion of the area, which limits building heights to 50 feet. The area to the west is zoned IG1, with Heavy Industrial (IH) zoning along the waterfront. No zoning changes are proposed west of the Union Pacific rail line.

Proposed Zoning

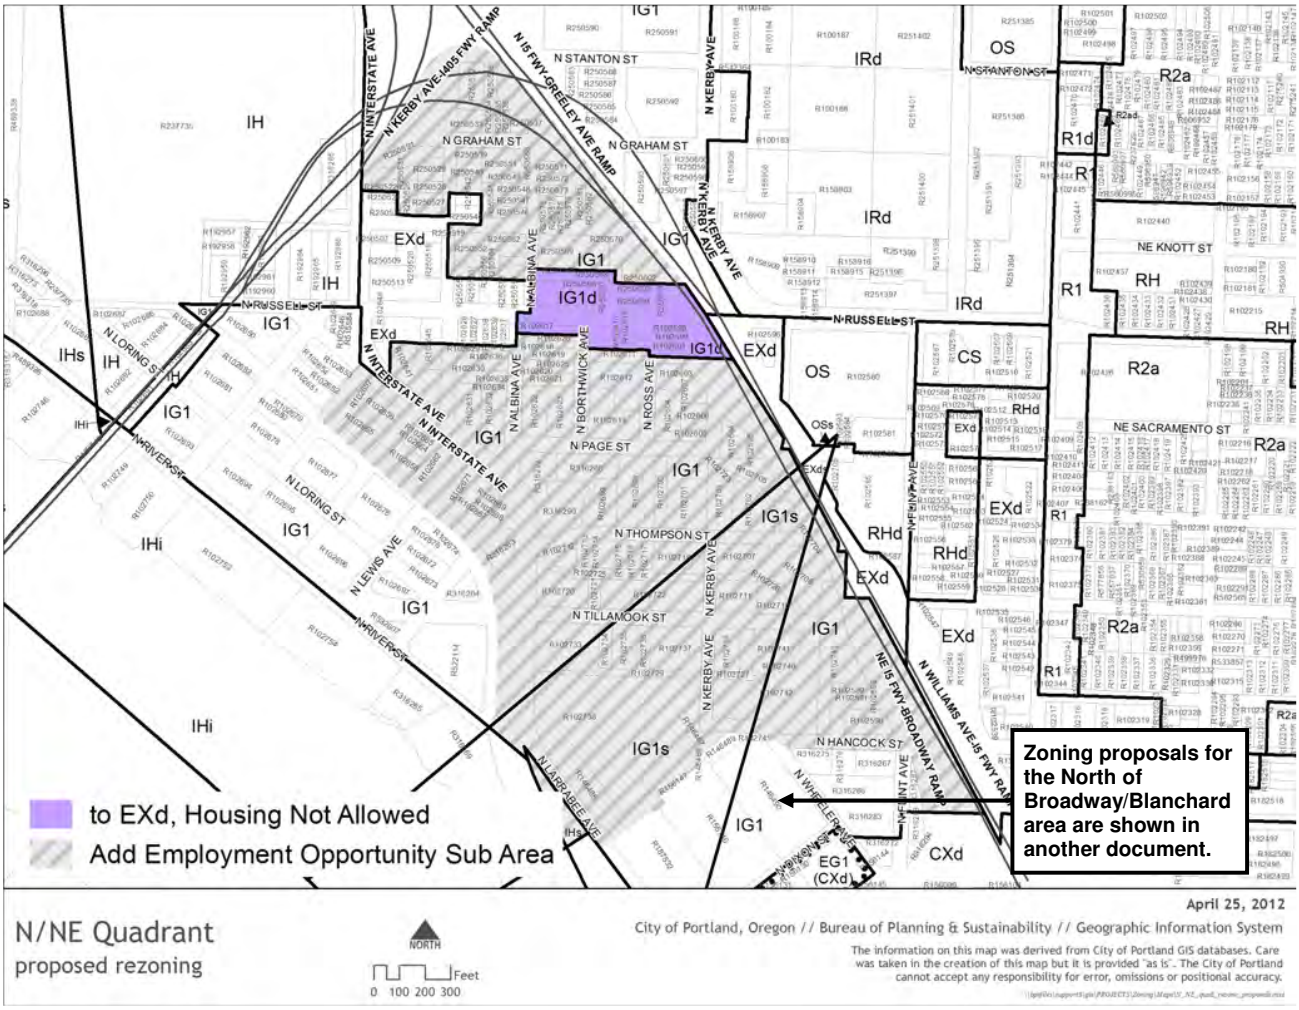
Staff proposes rezoning the properties fronting N Russell between the Russell Street Conservation District and the I-5 overpass from IG1d to EXd, with a new provision that would prohibit residential development (see Map 1). This would continue to allow industrial uses, while also allowing office and retail uses (see Table 1). The existing 50 foot height limit and 3:1 maximum FAR would be retained. No changes are proposed in the existing EXd zoned area, where housing would continue to be allowed.

Staff proposes applying Employment Opportunity Subarea (EOS) provisions to the IG1 area generally east of the Union Pacific rail line and west of the freeway (hatched area on Map 1). This would allow some additional flexibility for commercial and employment uses. Table 1 and the summary of land use classifications below provide an overview of the EOS provisions. Staff believes this targeted approach is less likely to result in land use conflicts with industrial activities than applying an employment base zone, which would have broader allowances for office and retail uses and the potential for residential development. The existing Scenic Resource (s) overlay would remain on a portion of the area.

Table 1: Summary of Existing and Proposed Zoning Provisions

Provision	Existing IG1	Proposed IG1 with Employment Opportunity Subarea (EOS)	Proposed EXd (no residential)
Traditional Office: Allowed	1 Office (or Retail) use per site, up to 3,000 SF	5,000 SF per site	Allowed, limited by FAR (3:1 proposed)
Traditional Office: Conditional Use	More than 3,000 SF, max of 60,000 SF or 1:1 FAR	More than 5,000 SF, max of 60,000 SF	NA
Industrial Office: Allowed	NA	60,000 SF per site	NA
Industrial Office: Conditional Use	NA	More than 60,000 SF	NA
Retail: Allowed	1 Retail (or Office) use per site, up to 3,000 SF	5,000 SF per site	Allowed, limited by FAR (3:1 proposed)
Retail: Conditional Use	More than 3,000 SF, max of 25,000 SF or 1:1 FAR	None	NA
Residential	Generally not allowed	Generally not allowed	Not allowed (proposed)

Land Use Classification Definitions



Traditional Office:

- Focus on business, government, professional, medical, or financial services.
- *Examples:* Professional services, lawyers, accountants, real estate agents; financial, bank HQs, brokerage houses; sales offices; government offices; medical and dental clinics.

Industrial Office:

- Conducted in an office-like setting but more compatible with industrial activities & districts.
- Less service-oriented with focus on development, production, processing of products, including digital products, e.g. internet & media content, designs & specifications, software, advertising materials.
- Primarily provide products to other businesses.
- Do not require customers or clients to visit the site.
- *Examples:* Software and internet content development & publishing; computer design & programming; graphic & industrial design; engineers & architects; telecommunication providers & data processing; TV, video, radio, internet studios & broadcasting; scientific & technical services; medical & dental labs.

Map 1: Existing Zoning with Proposed Changes Shaded

N/NE Quadrant Plan Draft Zoning Proposals — *N of Broadway/Blanchard*

Background

Portland Public Schools' (PPS) headquarters building, the Blanchard Educational Service Center, is currently zoned for industrial use. PPS has expressed interest in eventually moving to another location in the city, which would open up the site for redevelopment. New development at the Blanchard site would complement proposed redevelopment in the Rose Quarter called for by the Rose Quarter District Plan. A zoning change for the Blanchard site and some adjacent parcels would be required to accommodate most redevelopment scenarios.

Stakeholder Feedback

Discussions with representatives from the Eliot Neighborhood Association, area residents and businesses, and other stakeholders indicate strong support for increasing the flexibility of uses on the site, including residential, office and retail. There is some concern that any future residential development be situated in a way that minimizes conflicts with industrial development to the north. PPS supports a change of zoning to increase flexibility on the site.

Existing Zoning

The area contains 25 taxlots with ~12.28 acres. See Map 1 on page 2.

Zoning and Height Limits

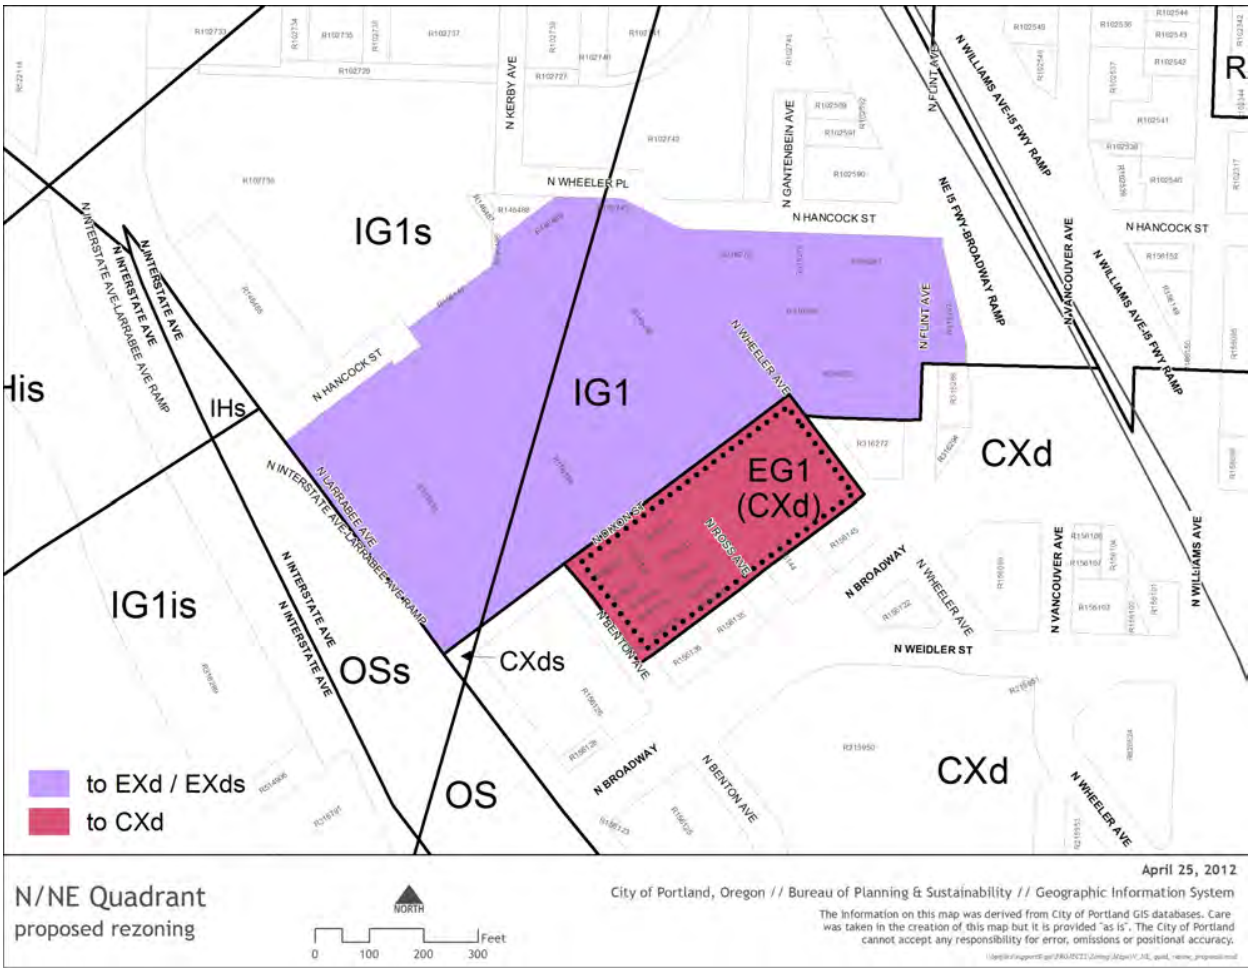
~10.22 acres are zoned General Industrial (IG1). The IG1 zone is intended for industrial development, with sites that generally have smaller lots, a grid block pattern, high building coverages and buildings that are usually close to the street. The northwest portion of the site has a Scenic Resource (s) overlay accompanying a viewpoint from Lillis Albina Park, with a 50 foot height limit.

~2.07 acres are zoned General Employment 1 (EG1) with a comprehensive plan designation of CXd. This area has a 45 ft height limit and an FAR of 4:1. The EG zones allow a range of employment uses, emphasizing industrial uses and limiting office, retail and residential development. EG1 areas generally have smaller lots, a grid block pattern, high building coverages and buildings that are usually close to the street, similar to IG1.

The areas to the south and east of the Blanchard site have flexible commercial zoning (CXd) and are occupied by surface parking lots, a storage building and an apartment building. Areas to the north of the site are part of the Lower Albina subdistrict, and are zoned for industrial use with active industrial businesses in operation. A slope on the North side of the site helps form a natural transition between the Blanchard site and the industrial district to the North.

Proposed Zoning

Map 1 shows the proposed zoning for the site. The area currently zoned General Industrial (IG1/IG1s) is proposed to change to Central Employment (EX), with a design overlay (d) and the continuation of the Scenic Resource overlay (s) on a portion of the area. The EXd zone is a flexible employment zone intended for mixed-use areas of the central city with industrial character. Light industrial, office, retail and residential uses are allowed. The proposed maximum height limit in the EXd area is 100' east of Wheeler and 150' west of Wheeler. The EXds area would continue to have a 50' maximum height.



Because of the large size and unique opportunity presented by redevelopment of the Blanchard site, staff proposes to require a master plan process as part of its redevelopment. The master plan would consider views, street network and capacity, open space, transitions to adjacent land uses, and height and bulk of proposed structures. This process will be developed prior to changing the zoning on the site.

Commercial zoning with a design overlay (CXd) and a height limit of 150' east of Ross and 250' west of Ross is proposed for the area currently zoned General Employment (EG1). The CXd zone is consistent with the city's Comprehensive Plan designation and would allow a more flexible mix of uses than is currently allowed, including a wide variety of residential, commercial and institutional uses. The design overlay would require new development to go through a discretionary review process. A comparison of existing and proposed zoning provisions is shown in Table 1 below.

Table 1: Summary of Existing and Proposed Zoning Provisions

Provision	Existing IG1	Existing EG1	Proposed CXd	Proposed EXd/EXds
Land Uses	Primarily Industrial uses only.	Industrial, institutional and some commercial. Limitations on office, retail and residential.	Wide range of residential, office and retail allowed.	Wide range of residential, office, retail and industrial allowed.
Height limit	No limit	100'	100'-250'	50'-150'
FAR limit	No limit	4:1	4:1	3:1
Design overlay	No	No	Yes. Discretionary design review required.	Yes. Discretionary design review required.

Map 1: Existing Zoning with Proposed Changes Shaded

N/NE Quadrant Plan Draft Zoning Proposals — *Vancouver/Williams*

Background

This area is currently home to a diverse mix of uses, including light manufacturing, warehousing, retail, residential and institutional uses. Some of the area is zoned for high density housing that doesn't allow most other uses and can limit the ability of existing, non-residential uses to expand. The Harriet Tubman School comprises almost half of the developed square footage in the area; of the remaining area, approximately half of the developed square footage is in non-residential use. There are also several structures in the area that are part of the "Cornerstones of Community: Portland's African-American Heritage" inventory completed by the Bosco-Milligan Foundation. Staff is proposing to rezone the area to better meet neighborhood desires, eliminate the regulatory conflicts for existing businesses and reflect the historic mix of uses.

Stakeholder Feedback

Discussions with the Eliot Neighborhood and Portland Public Schools indicate strong support for increasing the flexibility of the zoning to allow a greater mix of uses, including housing. The community is also interested in preserving the "Cornerstones" structures. The proposed concept endorsed by the N/NE Quadrant Stakeholder Advisory Committee suggests a mix of uses for this area in the future.

Existing Zoning

The area contains thirty-eight tax lots totaling ~6.43 acres. See Map 1 on page 2.

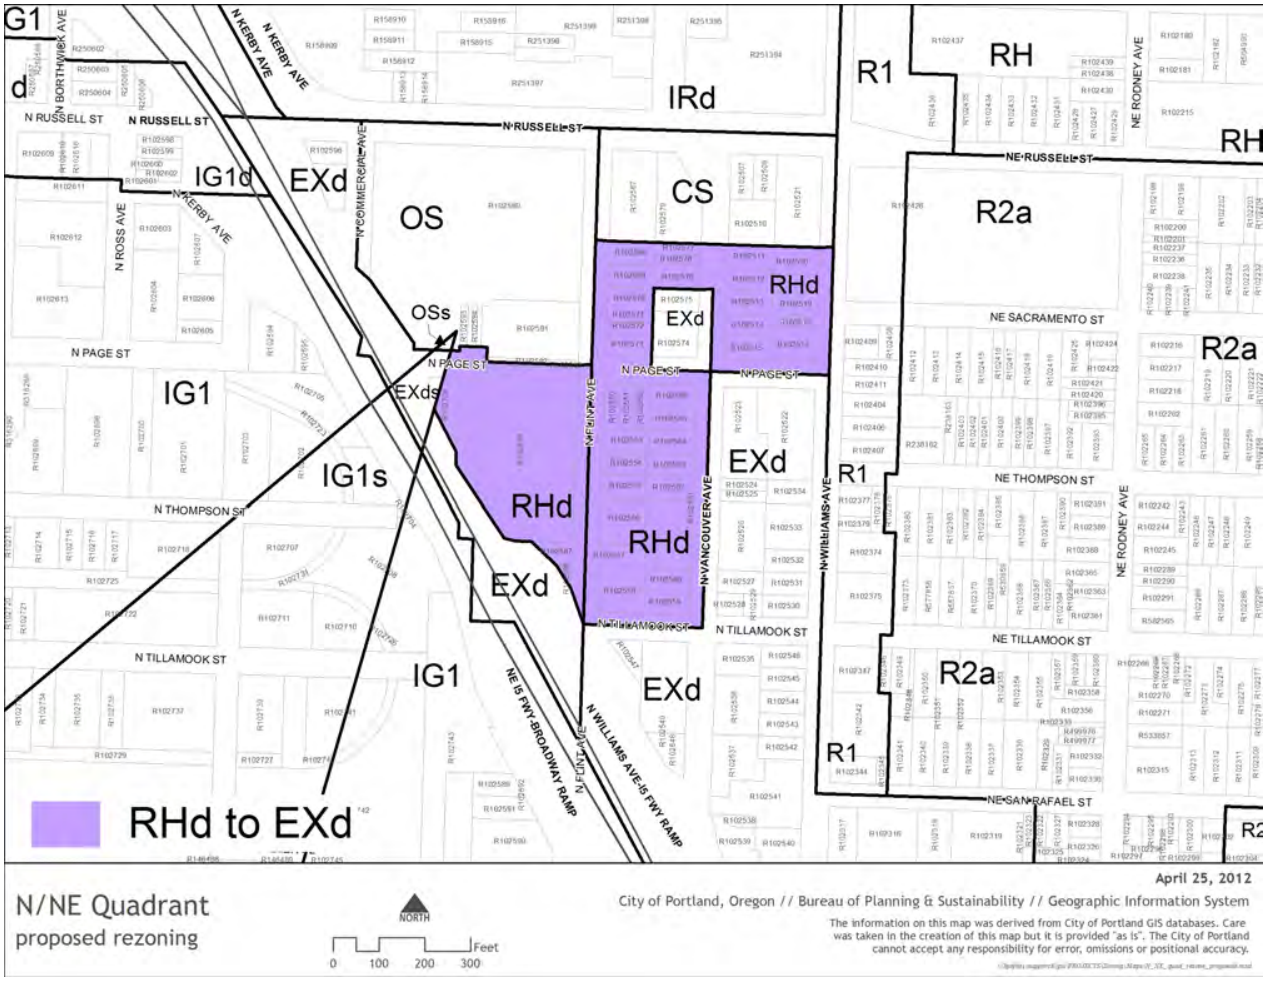
Zoning and Height Limits

~6.43 acres is zoned High Density Residential with a design overlay (RHd), with a 75 ft height limit and an FAR of 4:1. The RH zone is a high density multi-dwelling zone. Allowed housing is characterized by medium to high height and a relatively high percentage of building coverage. The design overlay requires new development to go through a discretionary review process or meet community design standards.

Commercial uses along N Flint

Most of the area between the I-5 freeway and N Williams Avenue has mixed employment zoning with a design overlay (EXd). Lillis Albina Park borders the area to the NW, a small area of storefront commercial (CS) zoning is located to the north along Russell St. and multi-dwelling residential (R1) zoning is across N Williams to the east.

Proposed Zoning



Staff proposes Central Employment zoning with a design overlay (EXd), which includes a height limit of 65 feet and a maximum FAR of 3:1. The EXd zone allows industrial and commercial uses suited for a central location, in addition to residential uses. This change would allow a more flexible mix of uses than is currently allowed and will support the maintenance and expansion of existing businesses. The design overlay would continue to require new development to go through a discretionary review process or meet Community Design Standards. The combination of increased

zoning flexibility, reduced overall development potential (FAR), and no minimum density requirements will encourage reinvestment in culturally significant structures by providing a wider array of potential economic uses and development options. A comparison of existing and proposed zoning provisions is shown in Table 1 below.

Table 1: Summary of Existing and Proposed Zoning Provisions

Provision	Existing RHd	Proposed EXd
Land Uses	Primarily residential only.	Residential, office and industrial allowed. Mixed uses allowed.
Height limit	75’	65’
FAR limit	4:1	3:1
Design overlay	Yes. Discretionary design review or use of Community Design Standards required.	Yes. Discretionary design review or use of Community Design Standards required.
Minimum Density	1 unit per 1,000 SF of site area	None

Map 1: Existing Zoning with Proposed Changes Shaded

N/NE Quadrant Plan Draft Zoning Proposals — *Banfield Portal*

Background

Two sites at the corner of NE Multnomah and NE 21st Avenue are currently occupied by a courtyard apartment building and several older single-family homes. Stakeholders are interested in seeing redevelopment in the area with a mix of uses, but much of the area is zoned for residential and one of the sites is currently split-zoned with a mix of residential and commercial office zoning, complicating redevelopment. The staff proposal is to rezone the site to better meet future redevelopment desires.

Stakeholder Feedback

Discussions with area residents indicate neighborhood support for a mix of residential, commercial and retail uses in this area, with an emphasis on residential uses. There was mixed feedback regarding how tall the height limits should be, with greater support for increased building heights on the south side of the site, near I-84. The proposed concept endorsed by the N/NE Quadrant Stakeholder Advisory Committee suggests future redevelopment of the site with predominantly residential above commercial or retail uses.

Existing Zoning

The sites contain nine taxlots totaling ~2.94 acres. See Map 1 on page 2.

Zoning and Height and FAR Limits

~1.58 acres is zoned High Density Residential (RH), with a 75 ft height limit and an floor area ratio (FAR) of 4:1. The RH zone is a high density, multi-dwelling zone. New housing in this zone will likely be medium-rise apartments and condominiums.

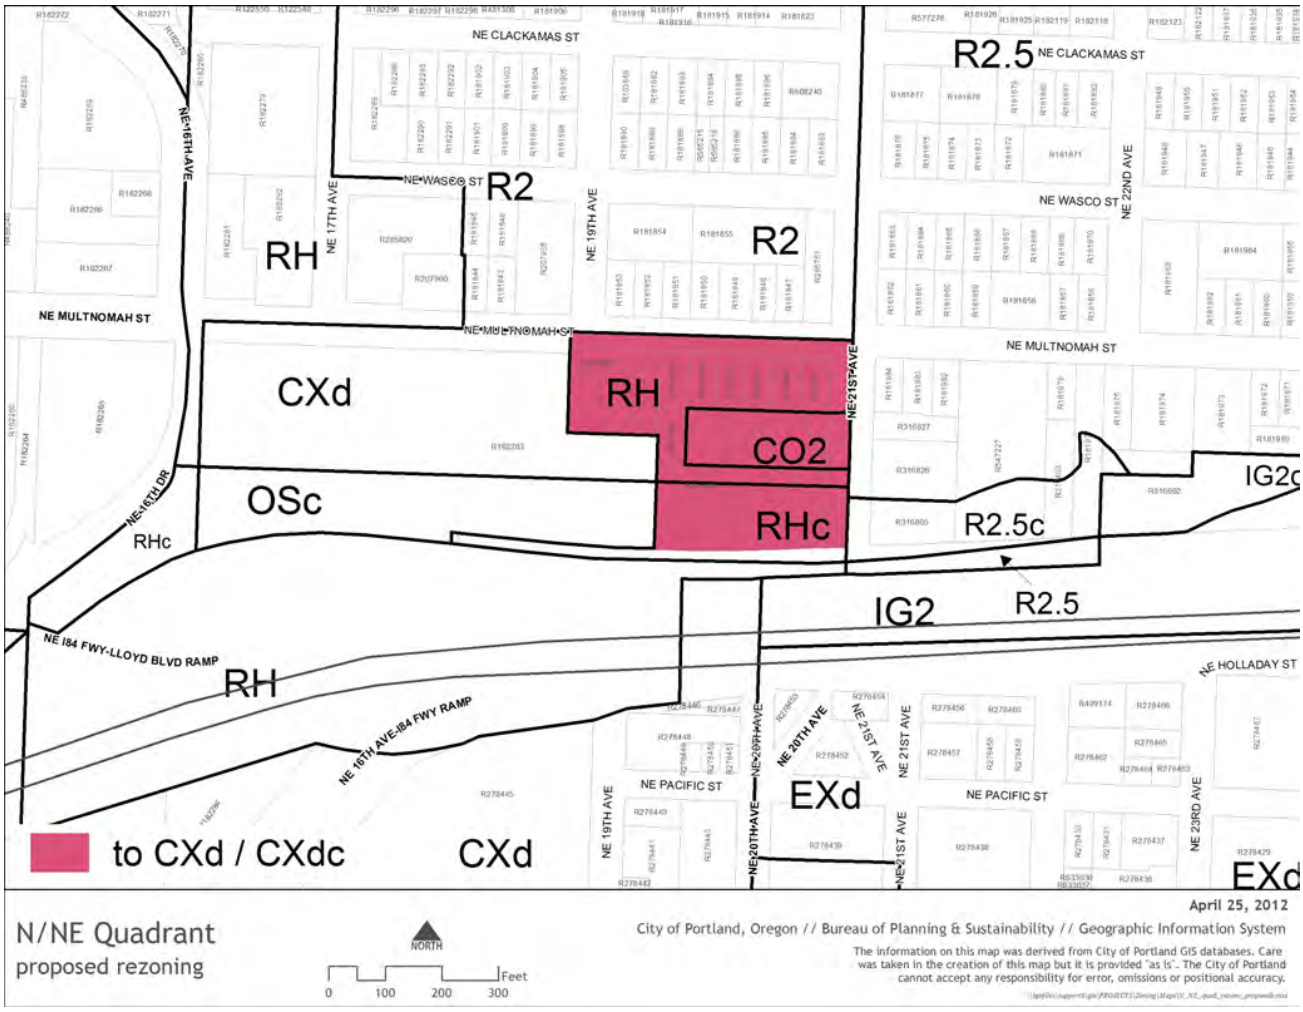
~.78 acres is zoned RH with an Environmental Conservation Overlay (RHc), with a 75 ft height limit and an FAR of 4:1. The 'c' overlay zone is intended to conserve important resources while allowing development that is environmentally sensitive. The 'c' overlay does not prohibit development.

~.57 acres is zoned Commercial Office (CO2) with a 45 ft height limit. The CO2 zone is a low and medium intensity office zone that generally allows uses in the office and institutional categories, but not other commercial uses. Retail uses are limited to 10% of the total floor area.

The area to the west of the site has flexible commercial zoning (CXd) and is occupied by the Marriott Residence Inn Hotel. Areas to the north and east of the site are zoned for medium density residential development with a height limit of 35 (R2.5) or 40 (R2) feet; commercial uses are not allowed.

Looking NW toward NE Multnomah from NE 21st

Looking SW toward I-84 from NE 21st from site



Proposed Zoning

Central Commercial zoning with a design overlay (CXd) with a height limit of 75 feet and an FAR limit of 4:1 is proposed for both sites. The CXd zone would allow a more flexible mix of uses than is currently allowed, including a wide variety of residential, commercial and institutional uses. The design (d) overlay would require new development to go through a discretionary review process or meet Community Design Standards. A comparison of existing and proposed zoning provisions is shown in Table 1 below. The environmental 'c' overlay zone would remain on the southerly portion of the site. The proposed zoning would not affect siting of the proposed Sullivan's Gulch trail.

Table 1: Summary of Existing and Proposed Zoning Provisions

Provision	Existing RH	Existing CO2	Proposed CXd
Land Uses	Primarily residential only.	Office and residential allowed, retail limited.	Residential, office and retail allowed. Mixed uses allowed.
Height limit	75'	45'	75'
FAR limit	4:1	2:1	4:1
Design overlay	No	No	Yes. Discretionary design review or use of Community Design Standards required.

Map 1: Existing Zoning with Proposed Changes Shaded

N/NE Quadrant Plan Draft Zoning Proposals — Central Lloyd

Background and Existing Zoning

Central Lloyd is significantly underdeveloped relative to the area's potential. The N/NE Quadrant Concept endorsed by the Stakeholder Advisory Committee (SAC) calls for high-density, mixed-use development with a substantial residential component organized around new parks and open spaces north of Holladay, office and other employment uses south of Holladay, and a mix of regional event, entertainment and residential uses around the Lloyd Center Mall. Currently, most of the area is zoned Central Commercial with a design overlay (CXd). The CXd zone allows a wide range of commercial and residential uses. A roughly 5-block area between NE 1st and NE MLK and north of Holladay is zoned for predominantly residential uses with a design overlay (RXd). The RXd zone allows housing development, but limits other uses.

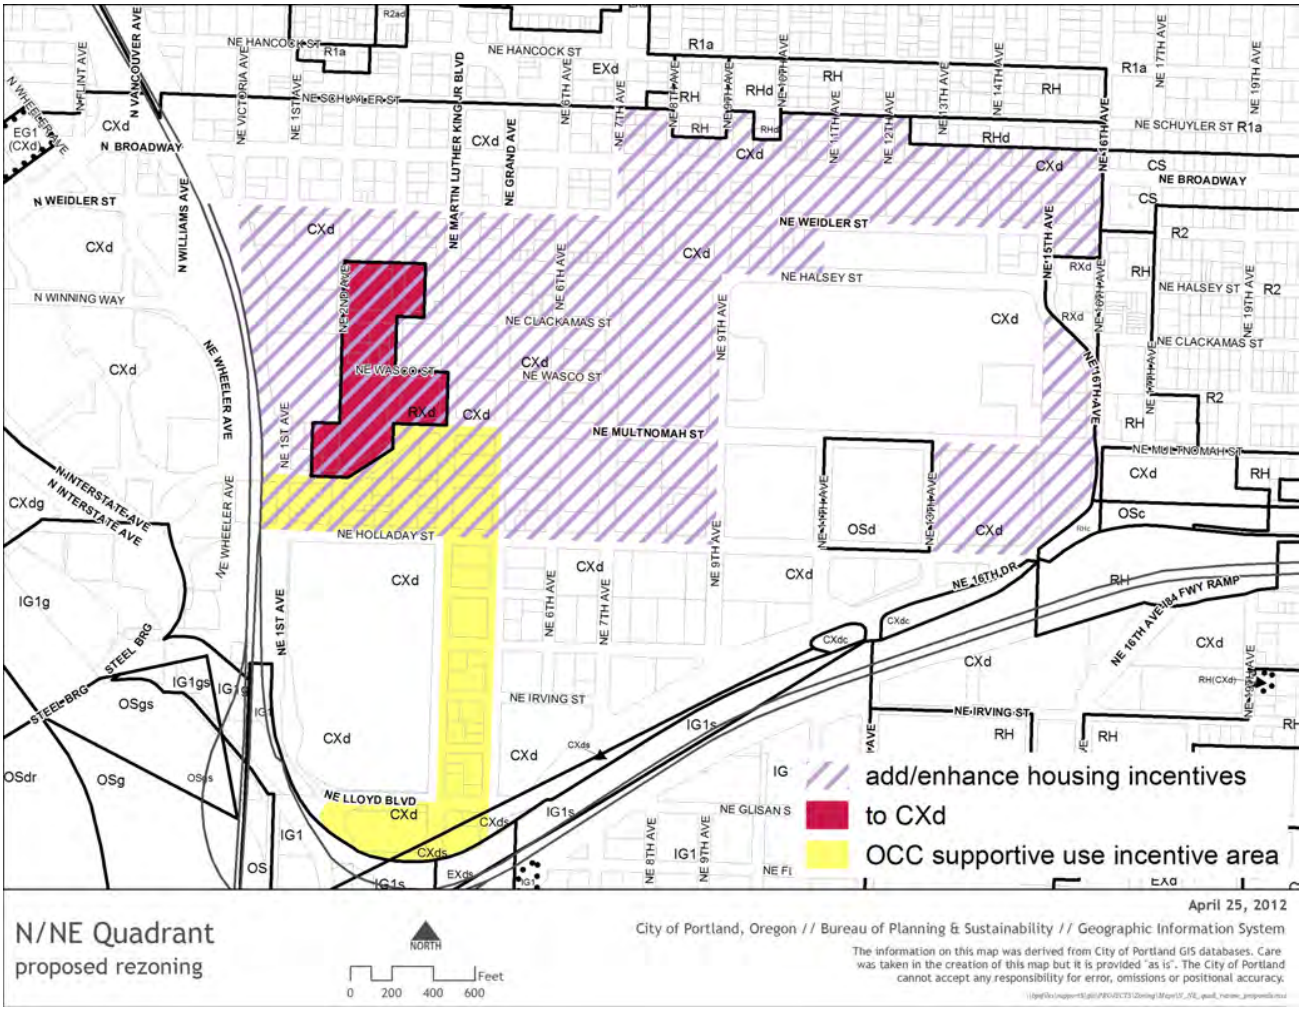
The Oregon Convention Center (OCC) is located in this area, but there are relatively few supporting businesses to serve convention goers and balance the episodic nature of activity at the OCC. There is an established cluster of office and government uses south of Holladay and east of Grand.

Stakeholder Feedback

The SAC-endorsed N/NE Quadrant Concept suggests allowing more flexibility in development regulations in exchange for providing key amenities including residential development and providing needed open space. Sensitive transitions to neighborhoods along the Broadway/Weidler corridor and eastern edge of the district are desired. The Lloyd District Community Association is supportive of the concept, and strongly supports additional residential development in the Central Lloyd Area. There are some neighborhood concerns that we not lose sight of the residential goals of the district and that new ground-floor retail spaces located off major streets will not perform well and should not be required or should be discouraged.

Proposed Zoning

The staff proposal would apply new and enhanced incentives encouraging residential development to a larger area of Central Lloyd as well as the Irvington and Sullivan's Gulch transition areas as shown in Map 1. Housing incentives could potentially include FAR bonuses, height bonuses, property tax abatements, SDC exemptions and limited tax increment financing, among other tools. The proposal shifts the housing emphasis away from the office core eliminating existing residential incentives south of NE Holladay. Incentives encouraging the provision of new parks and open spaces in the Central Lloyd would also be provided.



A new target area around the convention center would encourage supportive businesses and uses (such as hotels, restaurants and entertainment uses) to help support the OCC.

Additionally, staff proposes rezoning the 5-block area of RXd zoning to CXd to allow a more flexible mix of uses including, but not limited to residential. The enhanced residential incentives would apply in this area. Rezoning the RXd area to CXd is not intended to abandon the residential goals for the district, but rather apply a uniform set of zoning regulations to the entire area targeted for mixed-use development including housing. While RXd effectively requires residential development in this area, the CXd zoning with incentives would allow a wide range of uses, including office and hotels, but still encourage residential development. Since 1990, 44% of all new development in the CXd zone in the Central City has been residential, accounting for over 5,500 new units.

Table 1: Summary of Existing and Proposed Zoning Provisions

Provision	Existing RX	Proposed CXd	Other potential proposals
Land Uses	Residential, limitations on office and retail.	Wide range of residential, office and retail allowed.	Residential incentives, incentives that support OCC businesses.
Height limit	varies	varies	
FAR limit	varies	varies	
Design overlay	Yes. Discretionary design review required.	Yes. Discretionary design review required.	

Map 1: Existing Zoning with Proposed Changes Shaded

N/NE QUADRANT & I-5 BROADWAY/WEIDLER PLANS

Height and Zoning Proposals

Stakeholder Advisory Committee Meeting #16: May 10, 2012

CENTRAL CITY 2035

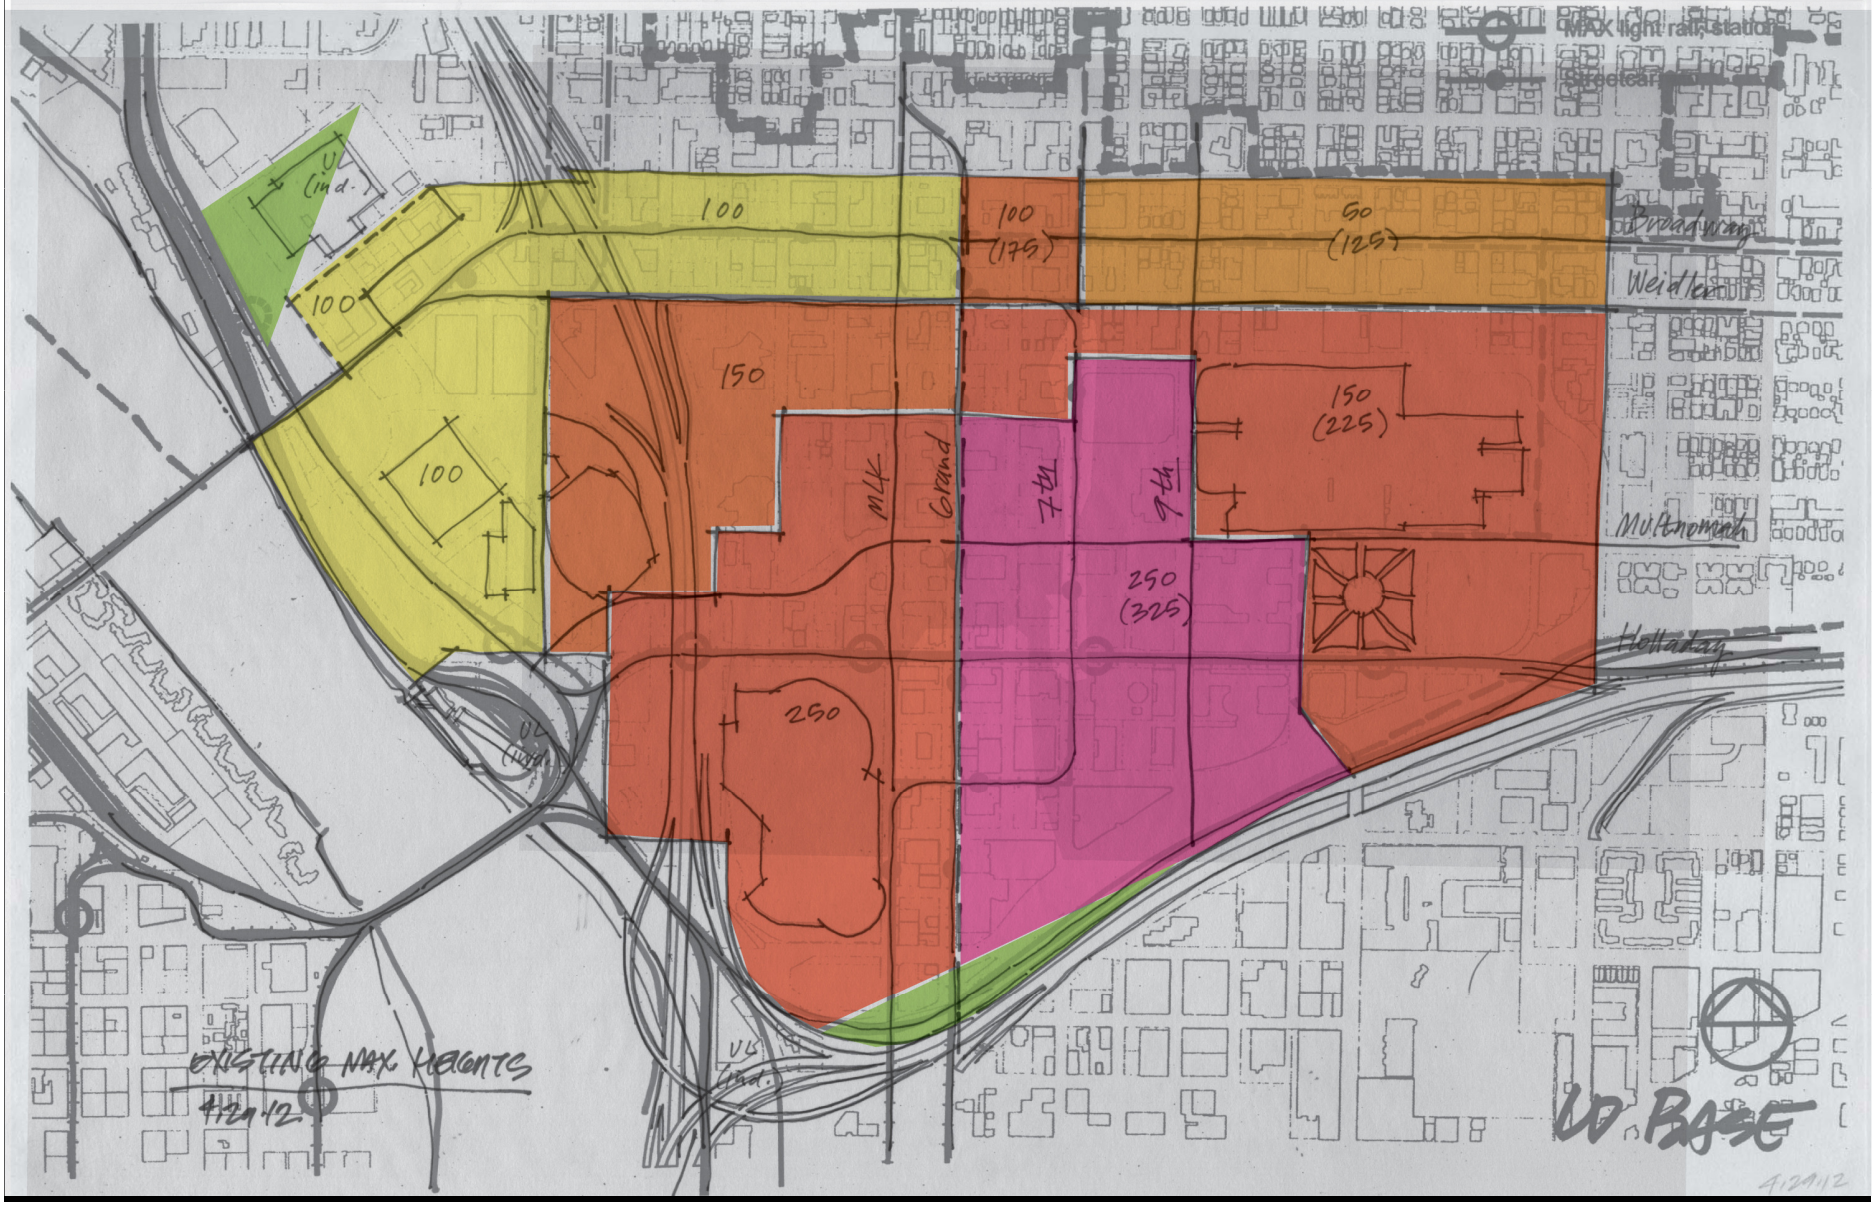
N/NE QUADRANT

CITY OF PORTLAND, OREGON 1851

Oregon Department of Transportation

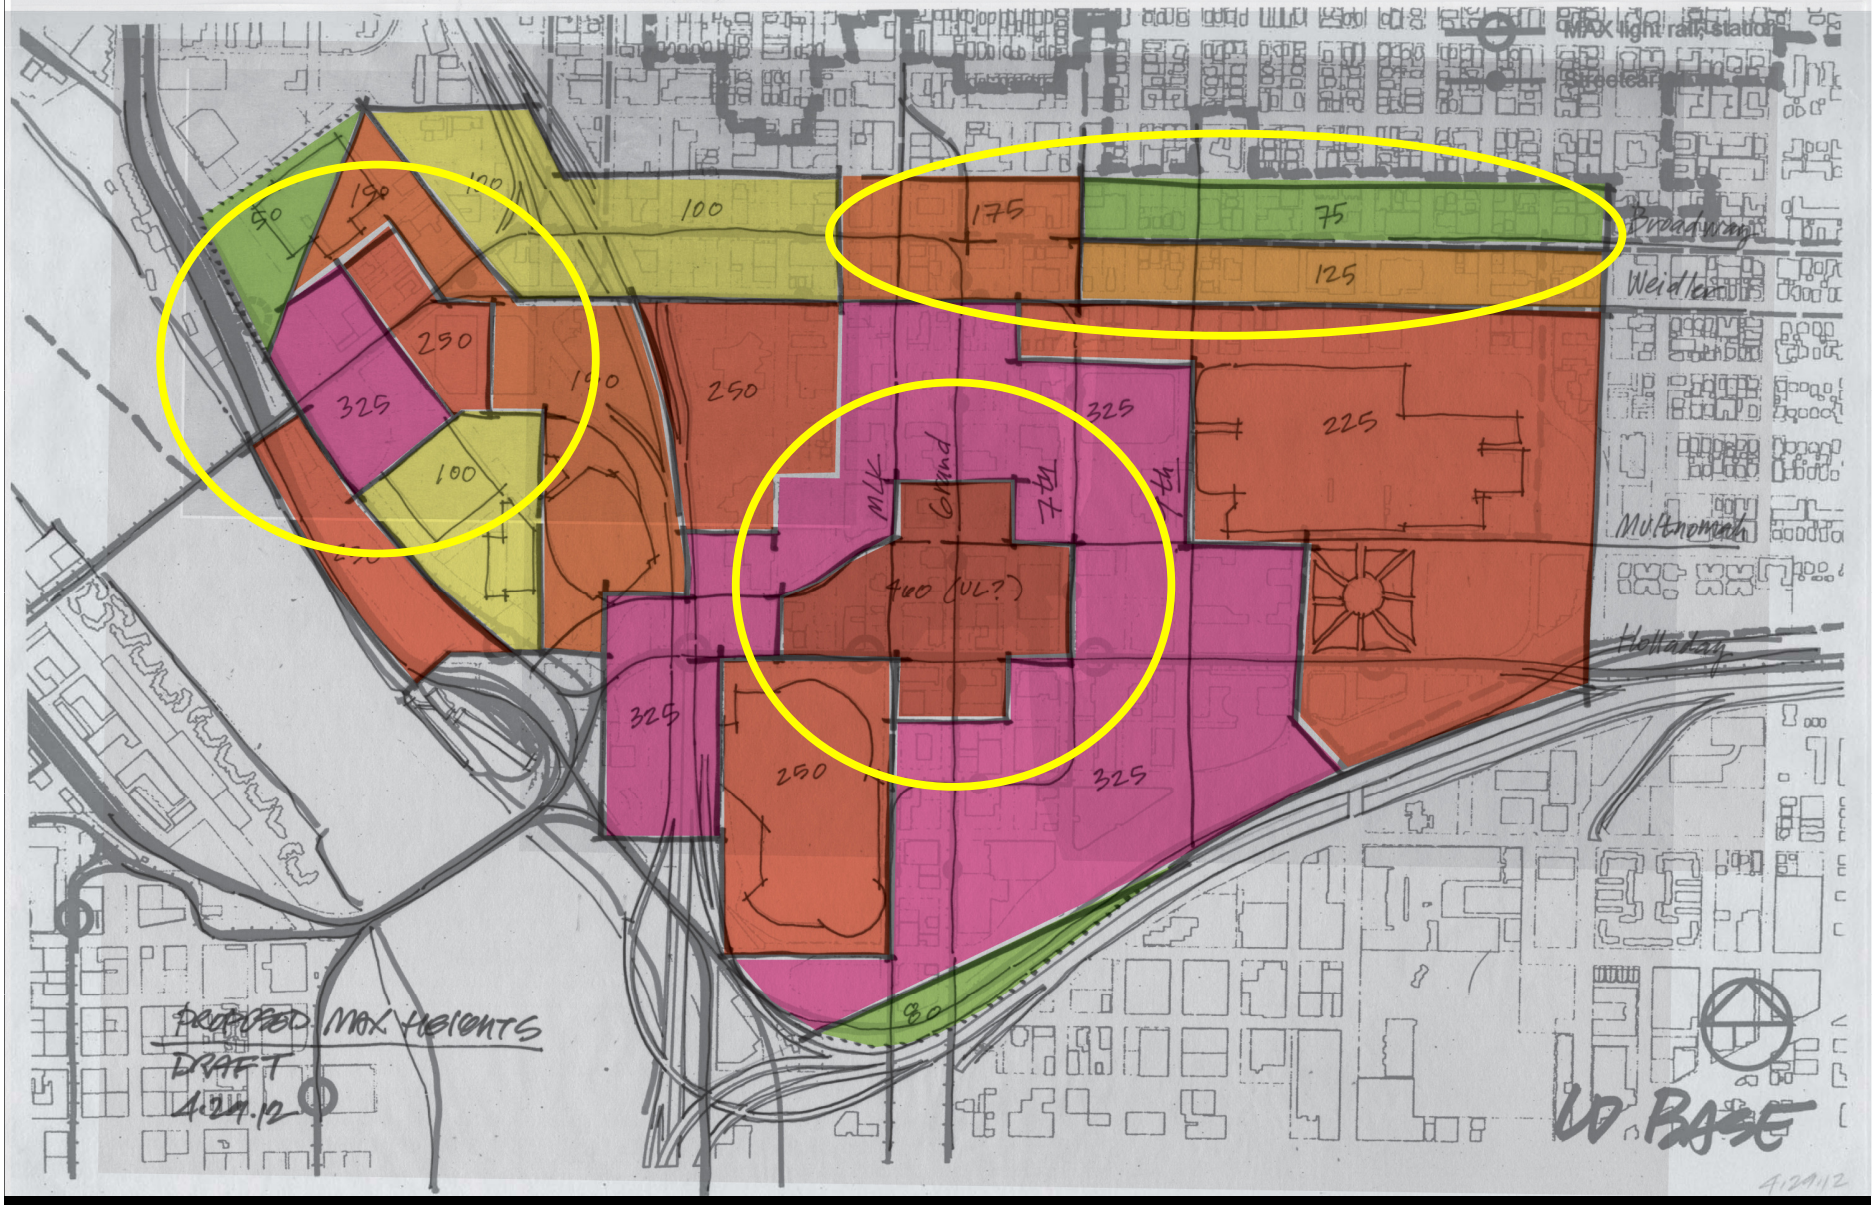
A. Draft Recommendations for Potential Maximum Height Limits (see map in packet)

1. Thunderbird Site - allow height (up to 250') in exchange for public open space.
2. N Broadway - allow taller buildings at bridgehead (up to 325', step down to east).
3. Eliot Edge - keep 100' maximum; expand area of 175' max at MLK and Broadway/Weidler.
4. Irvington Edge - reduce maximum height north of Broadway to 75'.
5. Central Lloyd - increase maximum potential heights in the Central Lloyd with the tallest heights (460' or limited only by FAR) around the intersections of MLK/Grand and Multnomah/Holladay.



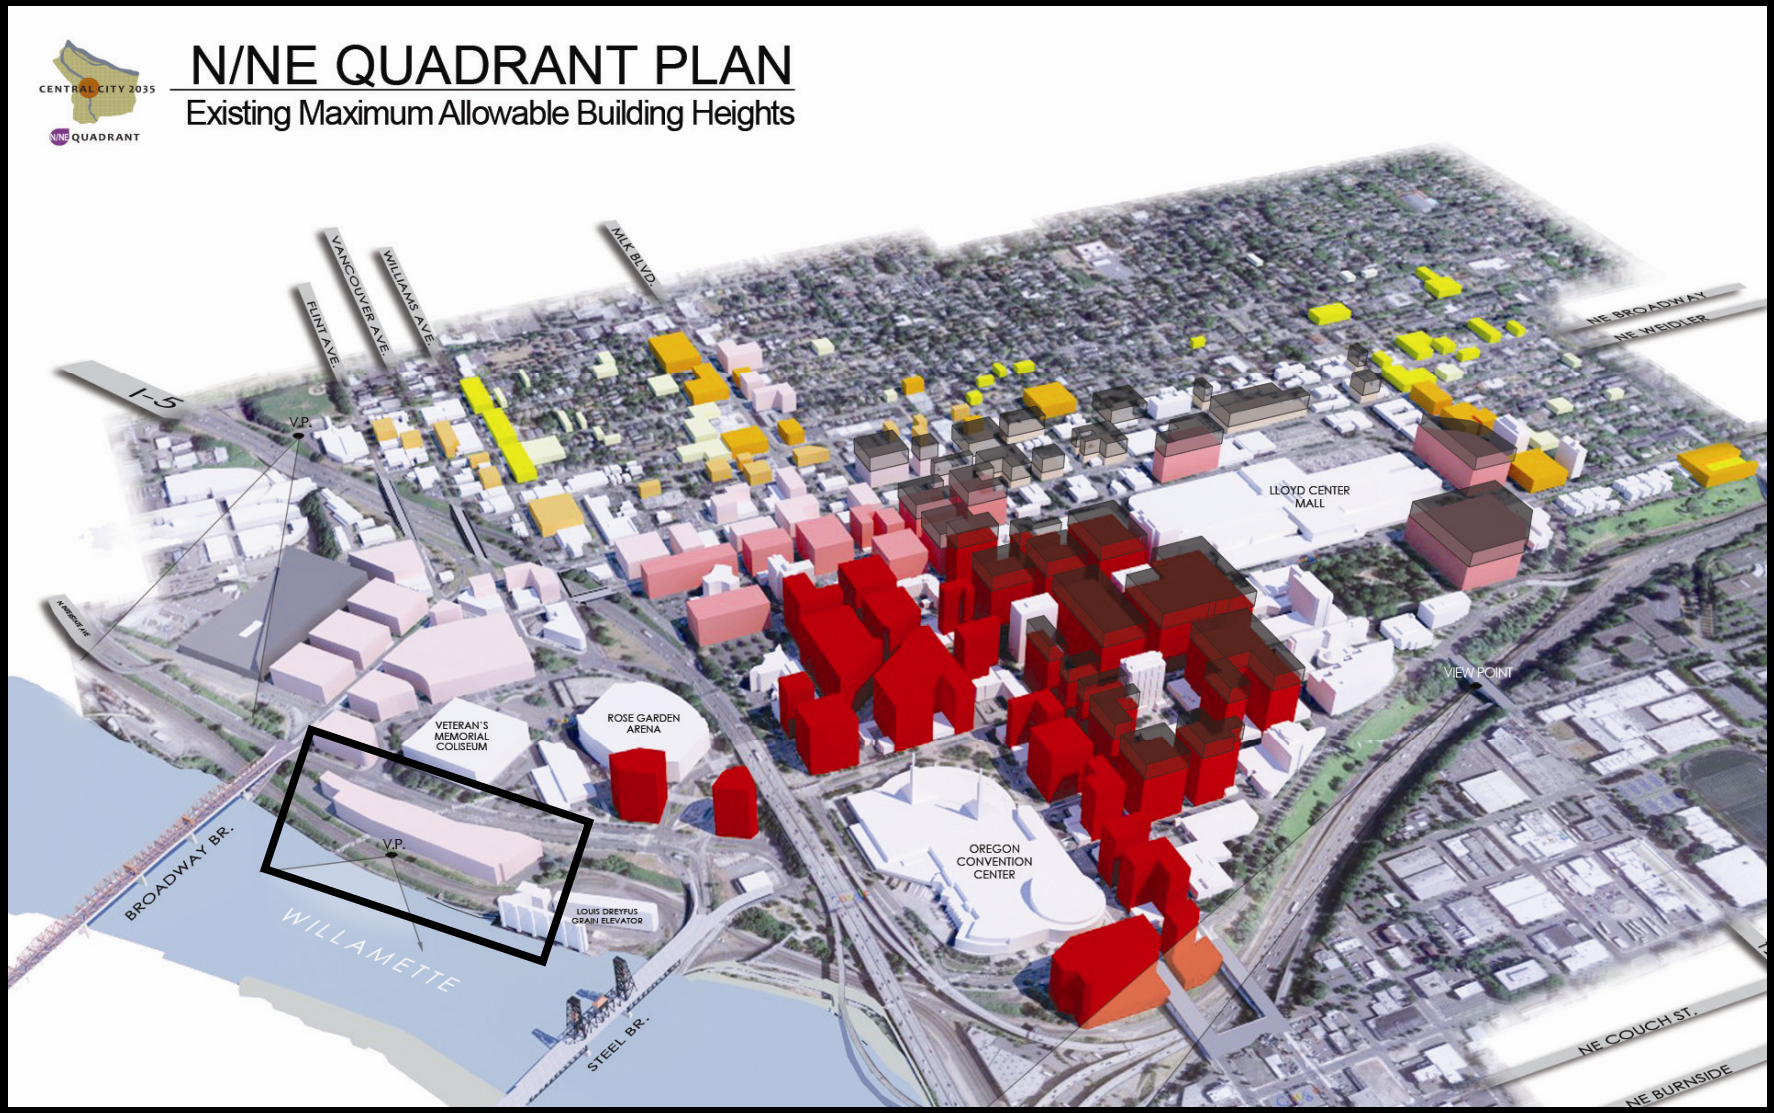
B. Draft Zoning Proposals (see proposal descriptions in packet)

1. Lower Albina – change IG1d on Russell east of existing conservation district to EXd (no housing), apply Employment Opportunity Subarea provisions east of Union Pacific rail line.
2. North of Broadway/Blanchard Area - change to IG1 to EXd with master plan requirement and EG1 to CXd zoning.
3. Vancouver/Williams Study Area - change RHd to EXd.
4. North Banfield Portal - change RH and CO2 to CXd.
5. Central Lloyd - change RXd pocket to CXd, apply enhanced housing incentives to entire Central Lloyd, apply incentives for hotels, restaurants fronting convention center.

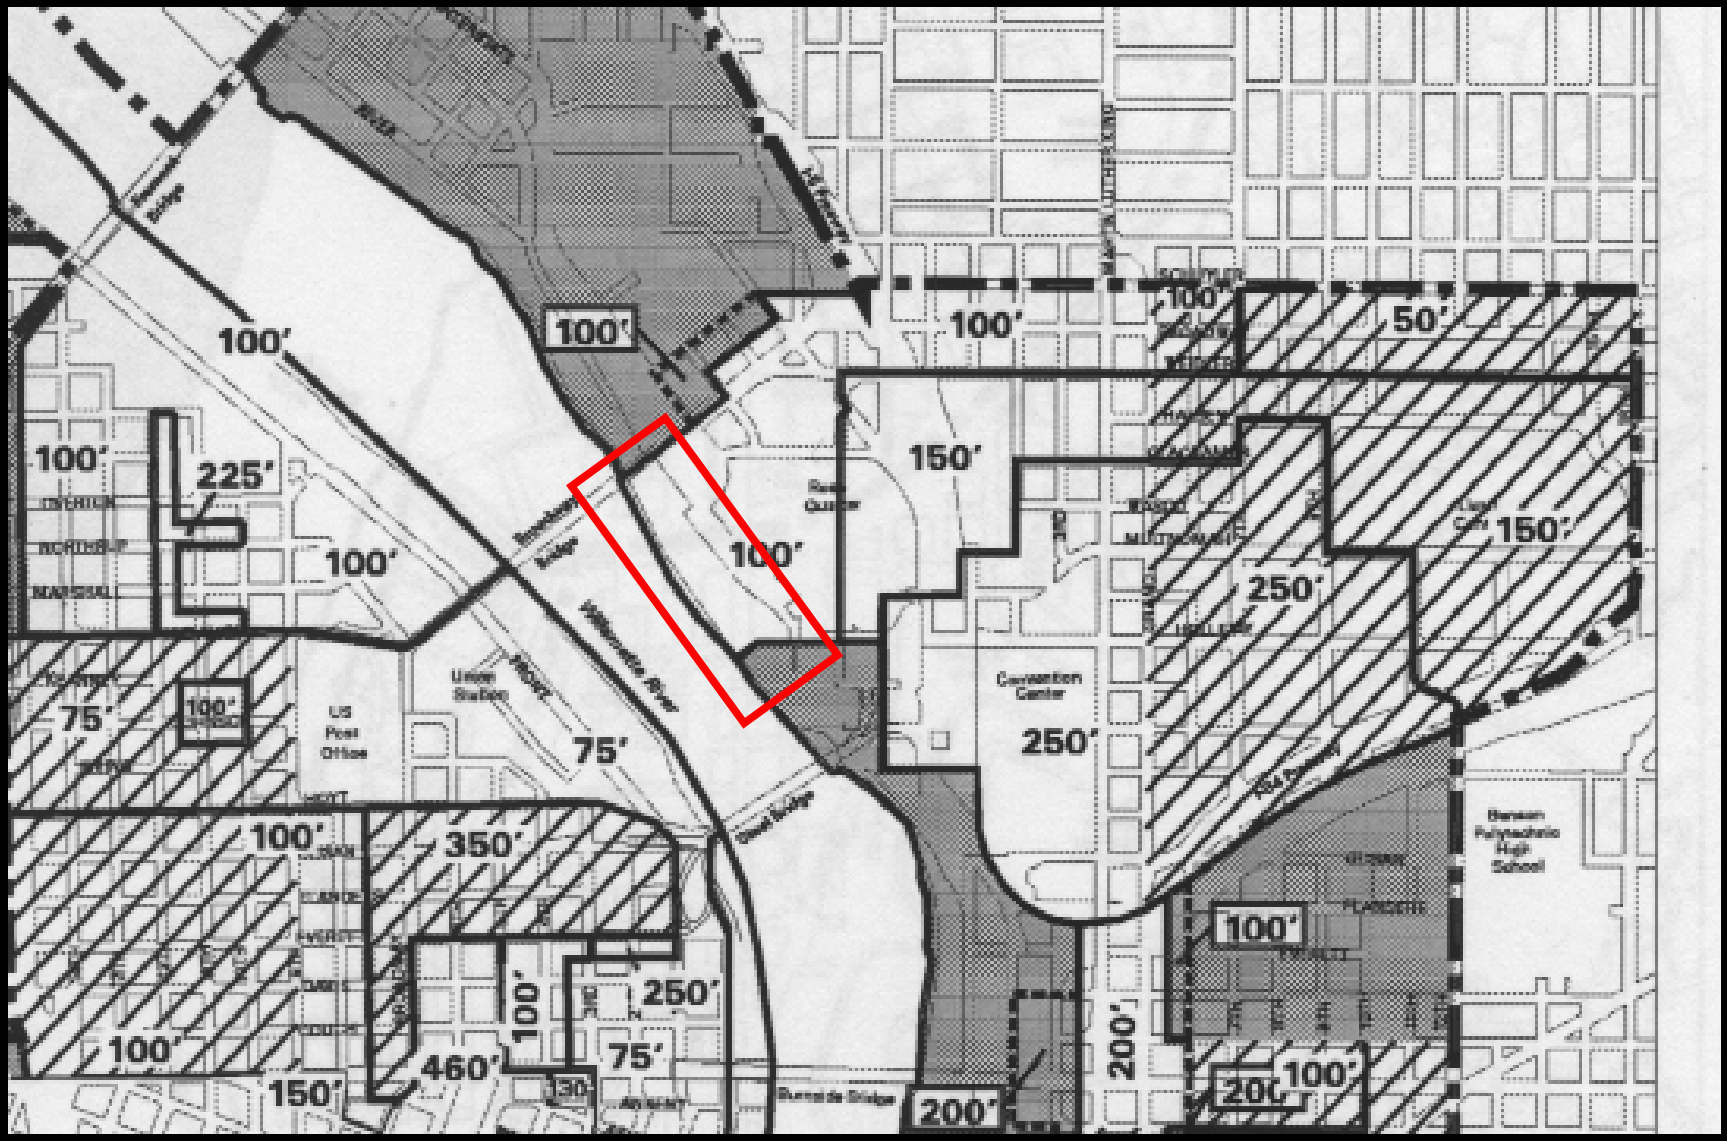


Proposed changes to Maximum Building Height

- Proposals were presented at SAC #15 (April 12, 2012)
- Not necessarily “by right”, but available through bonuses for meeting certain expectations or providing amenities
- Changes would be recommended in the N/NE Quadrant Plan, but not enacted until after the completion of the Comprehensive Plan Update and Central City 2035 (likely 2014)



Existing Height Limits

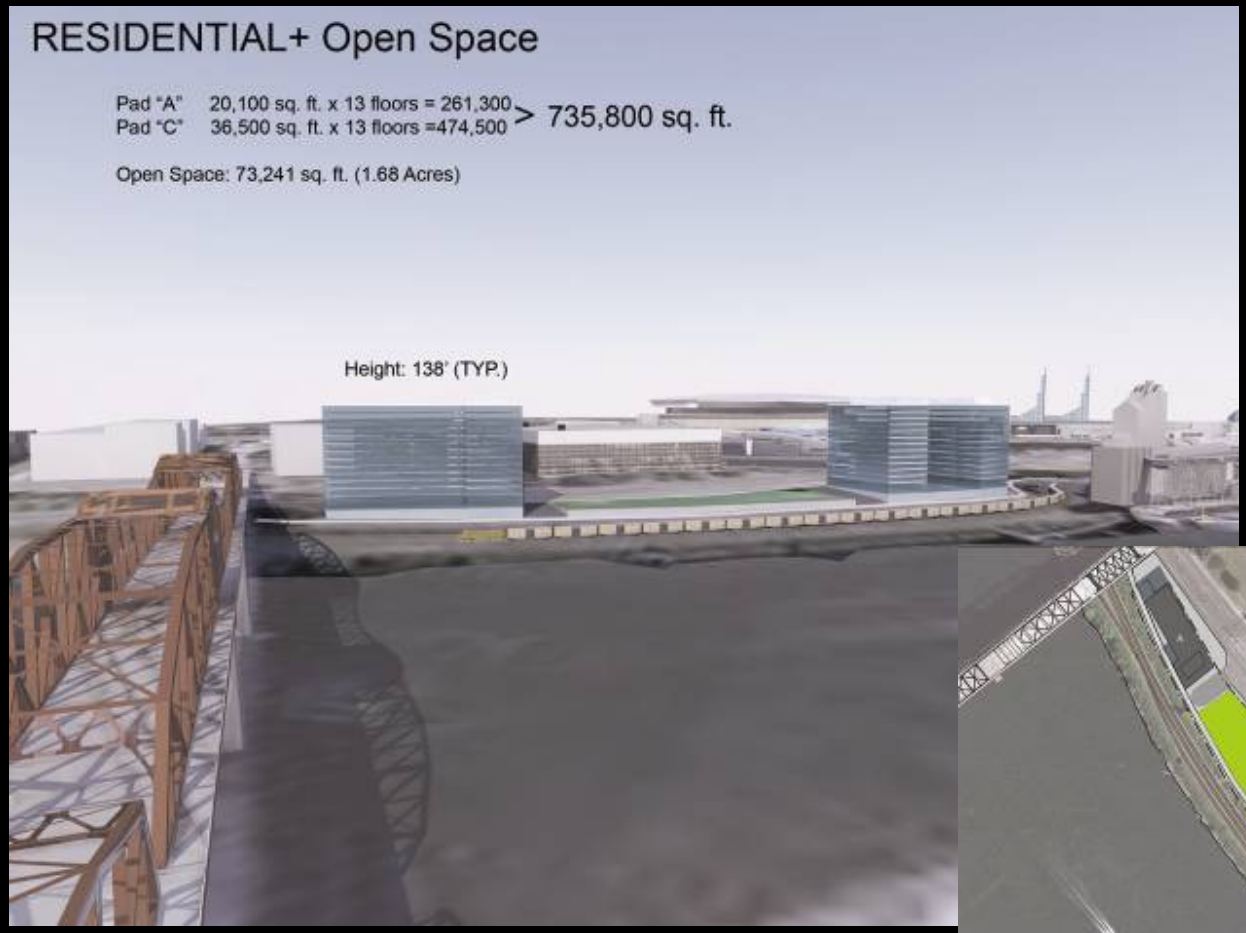


Proposed Height Limits

Thunderbird Site

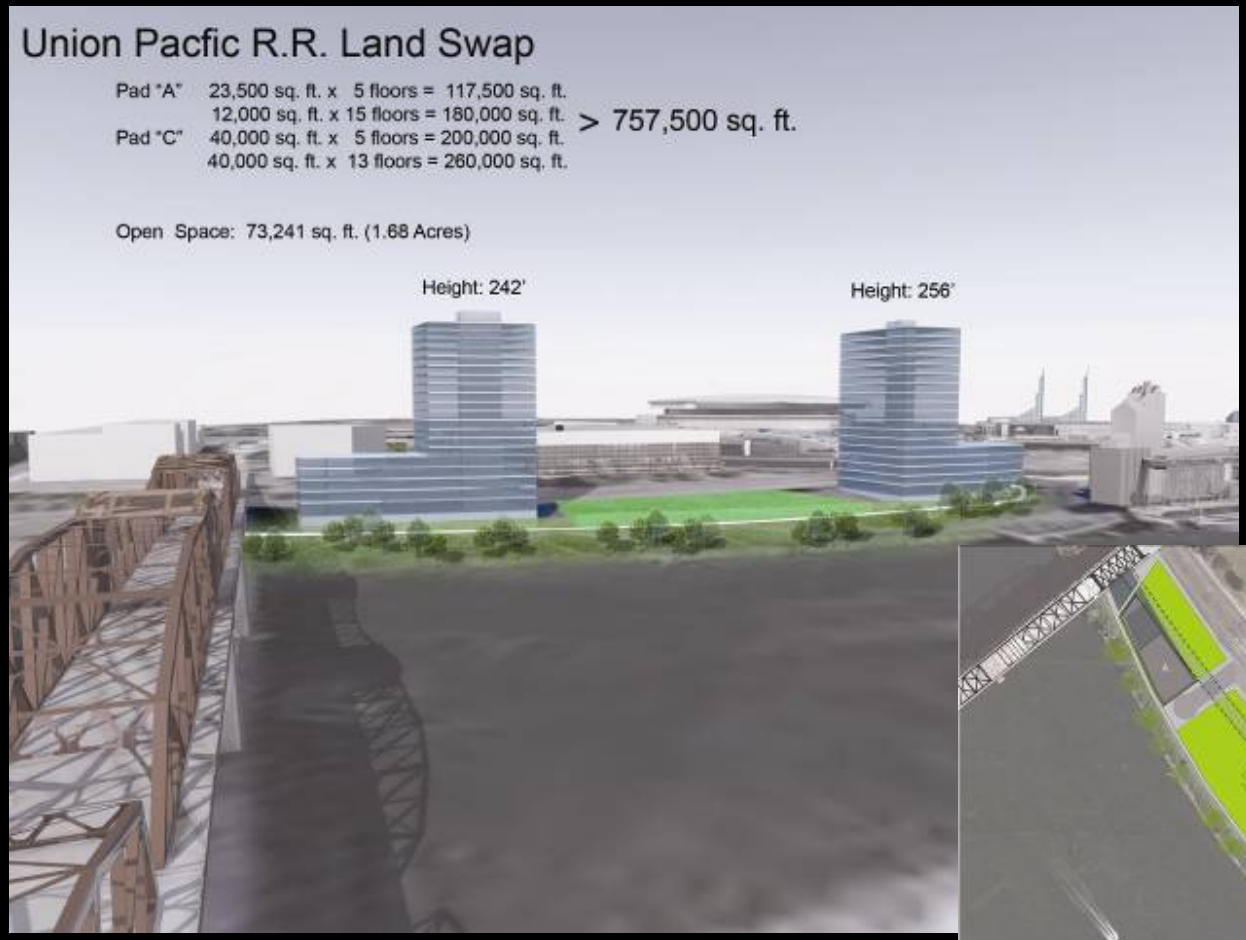
Thunderbird Site

Thunderbird Site



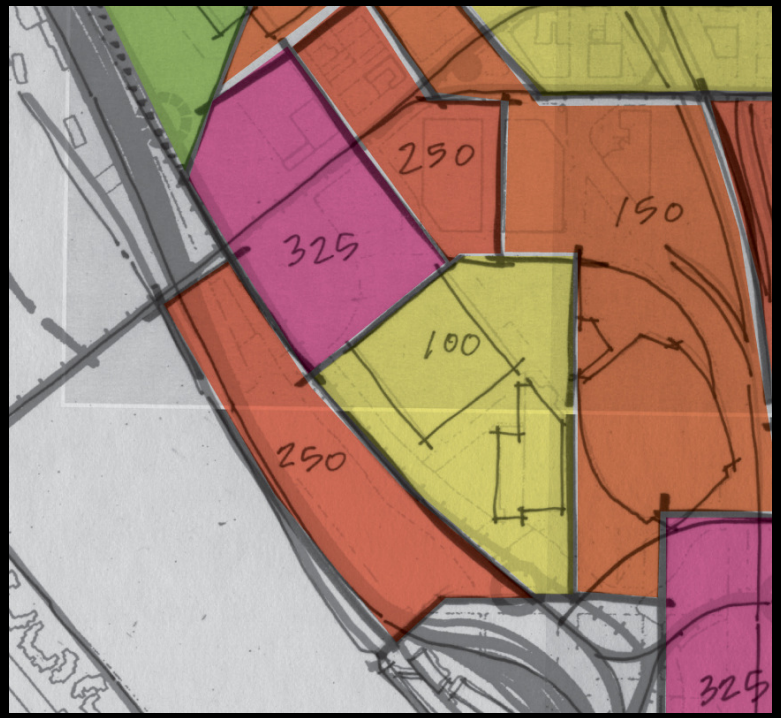
- Broad support for open space
- Interest in increasing amounts of office, commercial, or other less episodic uses
- Relationship of new buildings with the river
- Public view enhancement to both Willamette River and Memorial Coliseum
- Ideas that move around the same amount of development potential

Thunderbird Site – Existing Conditions



Thunderbird Site – Alternative A: up to 150 feet

Thunderbird Site – Alternative E: up to 250 feet



Thunderbird Site – Proposed Change to Maximum Building Heights

A1) Allow building heights up to 250’ in exchange for providing public open space. No change to FAR (development potential.)

Questions

Proposed changes to Zoning

- Refer to proposal descriptions and maps in packet
- Changes would be recommended in the N/NE Quadrant Plan, but not enacted until after the completion of Comprehensive Plan Update and Central City 2035 (likely 2014)

Lower Albina – Proposed Changes to Zoning

B1a) Change IG1d on Russell east of existing conservation district to EXd (with housing prohibited).

B1b) Apply Employment Opportunity Subarea provisions east of Union Pacific rail line.

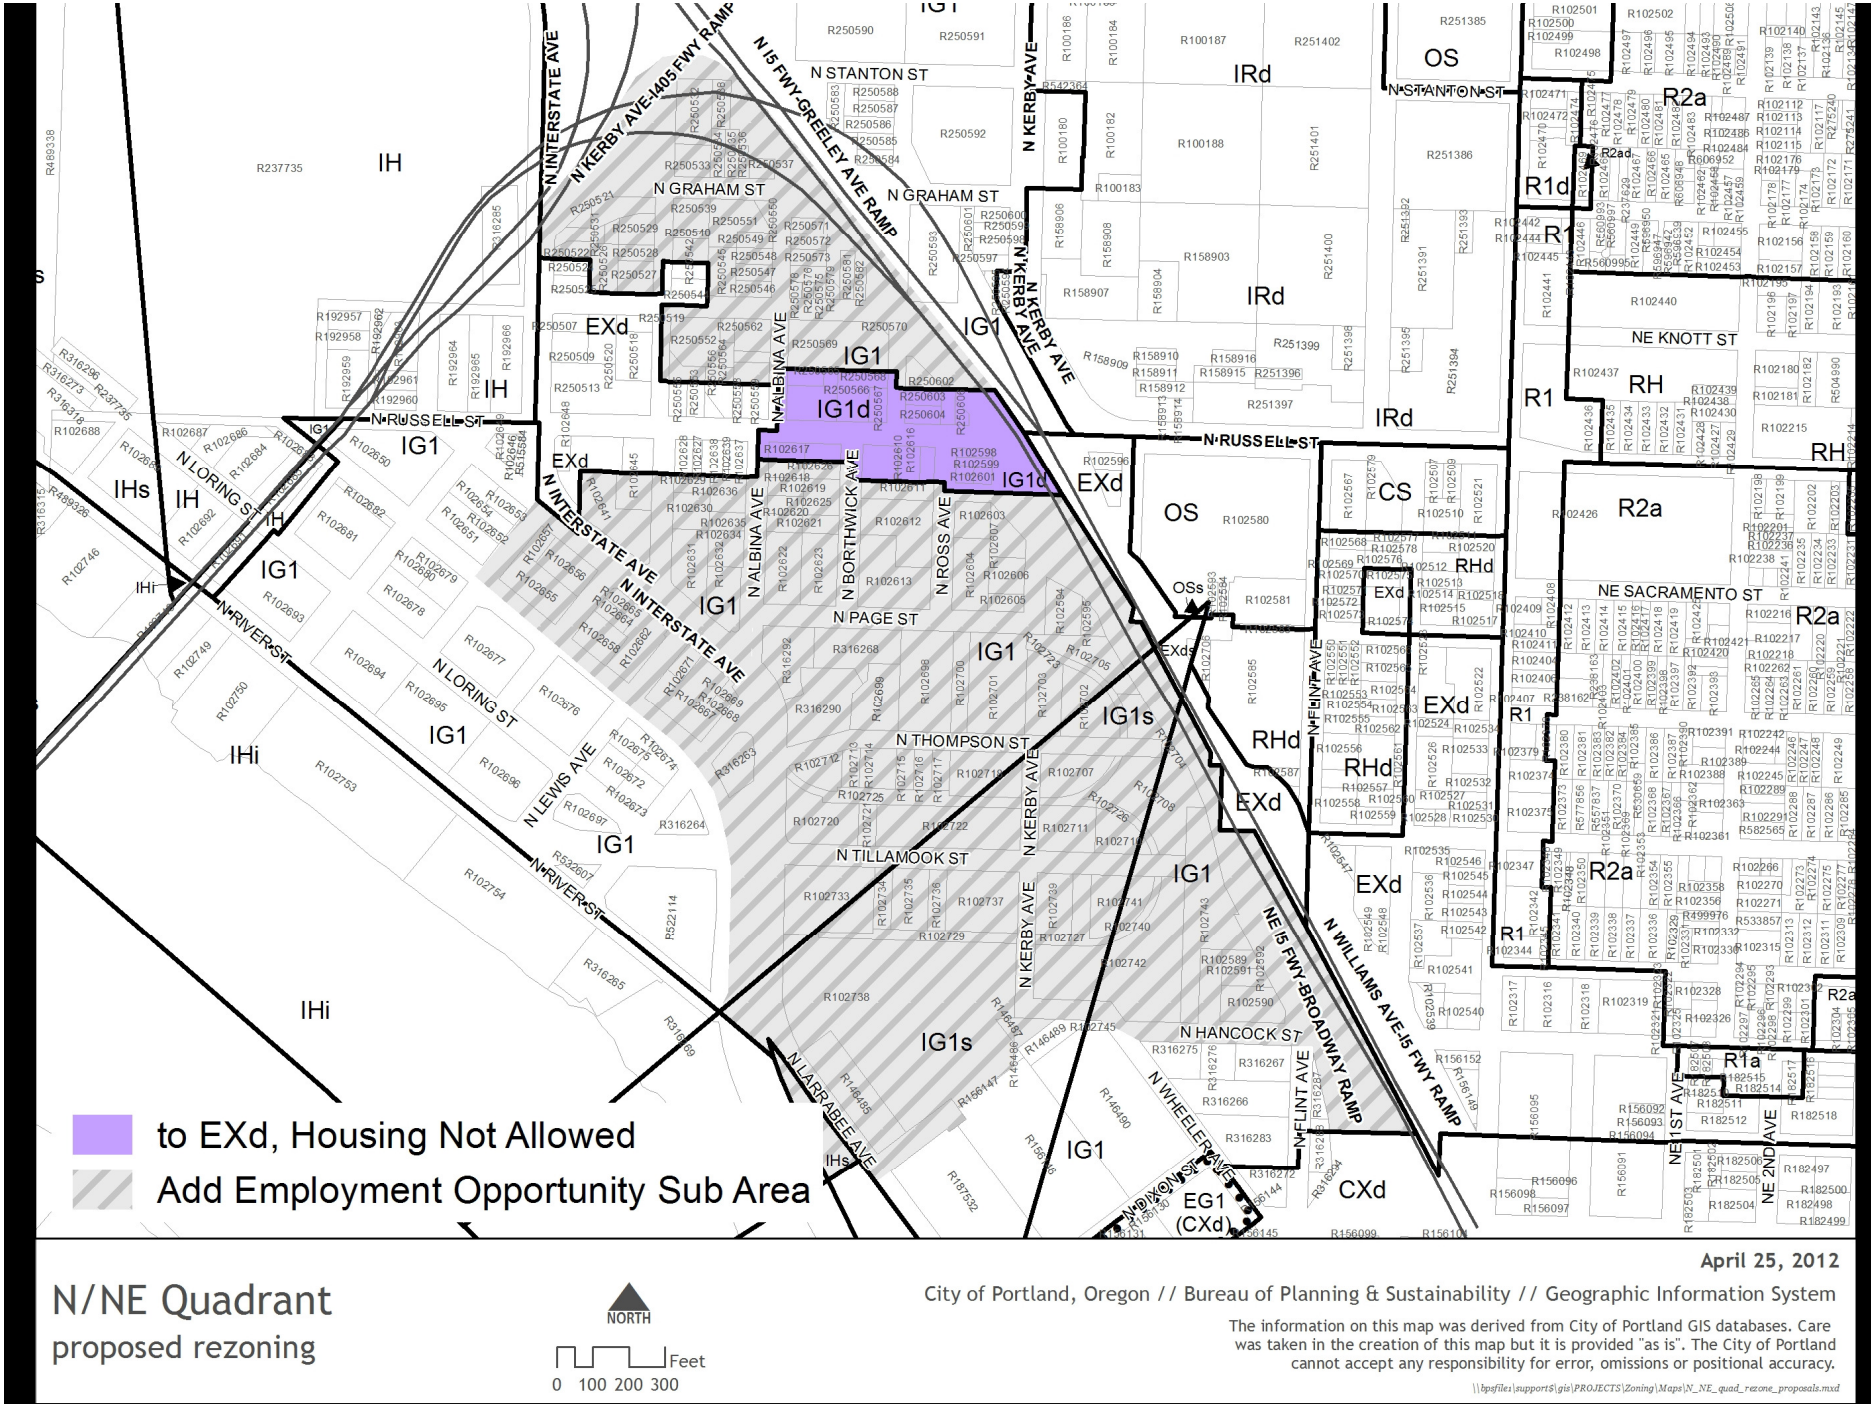
Employment Opportunity Subarea Provisions

	Central City IG1	Employment Opportunity Subarea (EOS)
Traditional Office: Allowed	1 Office (or Retail) use per site, up to 3,000 SF	5,000 SF per site
Traditional Office: Conditional Use	More than 1 Retail or Office use per site More than 3,000 SF, max of 60,000 SF or 1:1 FAR	More than 5,000 SF, max of 60,000 SF
Industrial Office: Allowed	NA	60,000 SF per site
Industrial Office: Conditional Use	NA	More than 60,000 SF
Retail: Allowed	1 Retail (or Office) use per site, up to 3,000 SF	5,000 SF per site
Retail: Conditional Use	More than 3,000 SF, max of 25,000 SF or 1:1 FAR	None

Office Definitions

Traditional Office:

Focus on business, government, professional, medical, or financial services.



Industrial Office:

Conducted in an office-like setting but more compatible with industrial activities, businesses, & districts.

Less service-oriented, focus on development, production, processing of products, including digital products, e.g. internet & media content, designs & specifications, software, advertising materials.

Primarily provide products to other businesses.

Do not require customers or clients to visit the site.

Central Lloyd – Potential Housing Incentives

FAR Bonuses – earn more FAR for housing development, or certain types of housing.

Height Bonuses – earn additional height for housing development.

Required Residential Development Areas – require minimum amount of residential in new development projects.

Limited Tax Exemption Program – property tax abatement for development of housing or certain types of housing.

Tax Increment Financing – OCCURA is expiring, but resources remain for one affordable housing project.

System Development Charge Exemption Program – reducesSDCs for affordable projects.

Not a complete list…

N/NE Quadrant Plan
Draft Goals, Policies and Implementation Actions

This plan chapter, the heart of the N/NE Quadrant Plan, will be organized into sections addressing each Central City district (the Lloyd District and Lower Albina), as well as the two study areas included in the N/NE Quadrant planning boundary. A **district goal** and **concept diagram** will convey the overarching vision for each district, followed by a series of **policies**, which provide more specific direction on issues associated with the larger goal. The district concept diagrams are currently being developed, therefore are not available with this draft. However, they will be based on the N/NE Quadrant Concept diagrams, which the SAC has reviewed several times.

The policies are organized into topic areas generally consistent with the planning framework developed for the Central City 2035 (CC2035) Concept Plan, which will establish the overall vision and direction for the Central City as a whole. Because issues that apply Central City-wide will be addressed in the CC2035 Concept Plan, the N/NE Quadrant Plan will focus on issues that are unique to its planning area within the Lloyd District and Lower Albina. The policy topics are as follows:

1. Regional Center: Economy and Innovation
2. Housing and Neighborhoods
3. Transportation
4. Urban Design
5. Green Central City

All five policy topic areas are covered for the Lloyd District, however Lower Albina, a largely industrial area, does not have a “Housing and Neighborhoods” section.

Implementation actions, such as regulatory changes, future work items, projects, programs or studies, are proposed for each district and for the two study areas: North Banfield Portal and Vancouver/Williams Corridor. Potential implementers are identified, including public agencies, private and non-profit entities and other community partners. It is anticipated that a lead agency will be identified in the next draft of this document, after additional consultation with the implementing agencies. A list of implementers and abbreviations used in the action tables is provided at the end of this document.

A timeline is provided, with some actions intended to be accomplished with the adoption of the full Central City 2035 plan package, anticipated in 2014. Other actions are intended to be completed 2 to 5 or 6 to 10 years beyond that, and some are ongoing. These timelines are preliminary pending review by bureau managers to ensure they align with their anticipated budget and workload constraints.

Relationship to SAC Goals

As noted above, the draft goals and policies are organized consistent with the CC2035 framework. They were also crafted with the original SAC goals and objectives, developed at the beginning of this process, in mind. Below is a summary of how the SAC goals and objectives have been incorporated into the draft plan policies:

SAC Goals	Draft Plan Policy Areas
Goal 1: A diverse mix of commercial, cultural, entertainment, industrial, recreational and residential uses, including affordable housing.	*Lloyd:* Regional Center: Economy & Innovation, Housing and Neighborhoods *Lower Albina:* Regional Center: Economy & Innovation
Goal 2: Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages	*Lloyd:* Regional Center: Economy & Innovation, Housing and Neighborhoods *Lower Albina:* Regional Center: Economy & Innovation
Goal 3: Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment.	*Lloyd:* Housing and Neighborhoods, Urban Design, Green Central City *Lower Albina*: Green Central City
Goal 4: Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods.	*Lloyd:* Housing and Neighborhoods, Urban Design
Goal 5: A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system.	*Lloyd:* Transportation, Urban Design *Lower Albina*: Transportation
Goal 6: Improve the local circulation system for safe access for all transportation modes within the quadrant and at freeway interchanges.	*Lloyd:* Transportation, Urban Design *Lower Albina*: Transportation
Goal 7: Equitable access to community amenities and economic opportunities.	*Lloyd:* Regional Center: Economy & Innovation, Housing and Neighborhoods *Lower Albina:* Regional Center: Economy & Innovation
Goal 8: Protection and enhancement of the cultural heritage of the area and its sub-districts.	*Lloyd:* Housing and Neighborhoods *Lower Albina:* Urban Design

Lloyd District

District Goal

Foster the growth of the Lloyd District into the intensely urban ~~and increasingly residential~~ eastside center of the Central City~~'s eastside, second only to Downtown in vitality, employment and livability.~~ Capitalize on the district's regional attractions, high quality transit and ~~other~~ connections to ~~the city and region~~create one of the most vital and livable districts in the Central City, with a strong employment base, successful residential community and a variety of urban amenities. Develop the district as a complete and green community with well designed ~~parks~~open space, streets, and high-performance green buildings and infrastructure.

Regional Center: Economy and Innovation

As home to vital regionally-significant facilities, the Lloyd District is an integral part of the Central City today, and its tremendous growth potential means it will contribute to the regional center in a variety of new ways in the future.

These policies and actions will help maintain and grow existing assets in the district, including regional event attractions at the Rose Quarter and Oregon Convention Center, the main street character along Broadway, regional retail uses at the Lloyd Center Mall and a well-established office cluster of professional, medical and government services.

New businesses that balance the episodic nature of the regional event centers and new high-density residential and commercial development in Central Lloyd will support job growth and enliven the district.

Policies

1. **Employment**. Support and retain existing businesses while encouraging significant new job growth. Develop the district to support a broad array of employment types that provide living-wage jobs and equitable access to employment opportunities.

2. **Redevelopment.** Encourage high density commercial and residential development and better utilize vacant and underutilized land.

3. **Core Employment Uses.**

    a. **Office Core.** Maintain and grow the Lloyd District as an employment center for headquarters office, institutions, professional services and the government sector.

    b. **Regional Attractions.** Support the continued success of the Rose Quarter and the Oregon Convention Center and encourage new development and businesses that support and balance the episodic nature of event activity.

    c. **Retail.** Support existing and new retail development including regionally focused uses in and around the Lloyd Center Mall and neighborhood-serving uses along the Broadway corridor.

Encourage and support retail development on "Retail and Commercial Streets" identified in the district concept diagram.

d. **Civic and Cultural Amenities.** Expand civic attractions in the Lloyd District to complement the district's tourism, regional attractions and growing residential character. Examples of attractions could include a convention hotel and centers for arts, culture, history or science.

4. **Innovation: High Performance Green District.** Promote the Lloyd District as a center for green innovation and application, foster job creation in sustainable industries and encourage the incorporation of green technology into businesses and development.

Placeholder Performance Target:

By 2035, add 10,000 new jobs within the Lloyd District.

Based on a 2006 estimate, there are approximately 18,977 existing jobs in the Lloyd District. The addition of 10,000 new jobs would result in a total of 28,977 jobs. This would require a 53% growth in jobs over 20 years.

Implementation Actions: Lloyd District – Regional Center: Economy and Innovation

#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 – 20 Years	Ongoing	
RC1	Adjust the Lloyd District and Lower Albina boundaries to include the PPS Blanchard site and adjacent properties to the south and east within the Lloyd District.	X				BPS
RC2	Rezone the PPS Blanchard site and adjacent properties to the east from IG1 to EXd and CXd to encourage future redevelopment. Require a master plan process as part of redevelopment to address street and pedestrian connectivity, open space, views, and the transition to adjacent industrial uses. See zoning map.	X				BPS
RC3	Adjust and increase maximum allowed heights to support high density development, provide public amenities, and encourage desired uses in the following areas (see height map): ▪ N. Broadway near the Broadway Bridgehead ▪ Riverfront ("Thunderbird" site) ▪ Central Lloyd area	X				BPS

Implementation Actions: Lloyd District – Regional Center: Economy and Innovation						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 – 20 Years	Ongoing	
RC4	Adjust regulations and incentives to encourage new development that supports the Convention Center such as new or expanded hotel development, retail and other services on adjacent blocks (see zoning map).	X				BPS, PDC
RC5	Placeholder for Convention Center hotel strategy.		X			Metro, PDC, City, Private
RC6	Pursue development on publically owned sites in and around the Rose Quarter through public-private partnerships.				X	City, Private
RC7	Market the Lloyd District as a leader in sustainable development and business practices.				X	EcoDistrict, PDC, Private
Additional details for selected action items will be developed and included in a plan appendix.						

Housing and Neighborhoods

The N/NE Quadrant Plan envisions the Lloyd District as a high-density, high-amenity, mixed-use area, with a focus on increasing residential development for a more balanced jobs to housing ratio. Greater housing density will increase the vitality of the district and further citywide and regional goals that encourage housing in areas close to employment centers and well connected to alternative transportation networks.

Areas in which housing development should be emphasized are proposed in the Central Lloyd area, upper Broadway and the eastern edge. Policies and actions promoting a diverse housing mix that is attractive and affordable to a broad range of people will help implement equity and diversity goals put forth in the Portland Plan and the Central City 2035 Plan.

Increased residential density will require amenities and services necessary for residents to meet their daily needs. It is essential that the area develop as a complete neighborhood with convenient and safe access to neighborhood businesses, park and recreation facilities and schools in a clean and healthy environment. Development of new open spaces and creating an environment that is supportive of local, neighborhood serving businesses are high priorities. Safe and attractive regionally available alternative transportation options, such as walking, biking and taking transit, are also important for promoting healthy lifestyles and meeting climate action goals for reduced green house gas emissions. See the transportation section for policies and actions that support those elements.

Development of housing affordable to low-income households within the district is a priority given that access to a complete neighborhood reduces household transportation costs and provides access to public and private amenities crucial to economic mobility.

The Lloyd District has a diverse history and is well located to serve as eastside civic center for Portland. The design of public spaces, as well as programming within those spaces, should celebrate the history of the place and help build community among those that visit, work and live in the district.

The goal of increased growth and density brings concerns about the potential for displacement of current residents and businesses, which is a concern that applies citywide in areas of growth and change. This plan identifies a need for citywide programs to address potential displacement, reinforcing the recommendations of the Portland Plan.

Policies

1. **Housing Development.** Encourage the development of new housing especially in “housing emphasis areas”. Through greater concentration of housing the district can foster a sense of community and support efficient provision of residential amenities and services.

2. **Housing Diversity and Preservation.** Encourage the development and preservation of a housing supply of unit types and sizes that meets the needs of people of all incomes, ~~and~~ ages, household sizes and special needs. Include development of affordable housing as a way to ensure income diversity, meet citywide housing needs and help mitigate the potential for displacement due to rising housing prices in the district and in adjacent neighborhoods.

3. **Complete Neighborhood.** Foster development of a complete neighborhood with amenities and services that residents need to meet their daily needs, including access to parks and open space, grocery stores, neighborhood businesses and schools.

4. ~~**Parks and Open Space.** Improve existing parks and develop new trails and open spaces (public and private) that are safe and inviting and meet a range of recreation needs. Prioritize development of new parks within the Central Lloyd area and on the riverfront.~~
(Moved policy to Urban Design Section, parks and open space are also addressed in policy #3 above.)

5. **Successful Neighborhood Business Districts.** Support and expand local main street business areas within the Lloyd District and in adjacent neighborhoods. Cluster a diverse mix of neighborhood scale businesses on the existing Broadway retail corridor and on new district retail commercial streets as a means of concentrating activity and promoting successful retail districts.

6. **Community Building.** Encourage public spaces, pubic art and activities that celebrate the history of the district and that help build a community in the Lloyd District and with surrounding neighborhoods.

7. **Historic and Cultural Resources.** Preserve, rehabilitate and celebrate historic and culturally significant structures and places in the Lloyd District.

8. **Displacement.** Support existing residents and businesses within the Lloyd District and in adjacent neighborhoods that are at risk for involuntary displacement.

Placeholder Performance Target:

By 2035, develop 5000 new housing units within the Lloyd District.

Based on a 2008 estimate, there are approximately 1,165 existing housing units in the Lloyd District. The addition of 5,000 units would result in a total of 6,165 units and a jobs to housing ratio of 5:1.

Implementation Actions: Lloyd District – Housing and Neighborhoods

#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
HN1	Develop regulatory tools to encourage housing development and the inclusion of affordable housing. Focus on housing emphasis areas (see zoning map). Regulatory options to encourage housing include: ▪ Restructuring the FAR/Height base and bonus system ▪ Apply existing tools such as required residential area and residential bonus target area ▪ Changes to superblock regulations ▪ Removing existing housing incentives from the Office Core area	X				BPS, PHB, BDS

Implementation Actions: Lloyd District – Housing and Neighborhoods						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
HN2	Rezone the area of RXd zoning in Central Lloyd to CXd to provide flexibility and encourage investment. Apply housing incentives described in HN1 to this area (see zoning map).	X				BPS
HN3	Develop affordable rental housing through investment of TIF Set Aside funds and other PHB programs. Possible tools include: Limited Tax Exemption program, System Development Charge Exemption Program.		X			PHB, PDC
HN4	Improve the function and safety of Holladay Park through programming that increases its use and CPTED (Crime Prevention Through Environmental Design) improvements.		X			PPR, Private
HN5	Identify sites for community building activities and pursue projects and activities that support community building, such as weekend markets, cultural programming in parks and public art,		X			EcoDistrict, City
HN6	Support connections between district employers and employee housing within the district through employer-assisted housing programs and coordinated mixed-use development, particularly employer-assisted housing for service-level workers employed within the district.		X			Private, PHB, PDC
HN7	Monitor residential population growth and the related school needs of the district. Encourage space for early education programs in new development.				X	PPS, Private

Implementation Actions: Lloyd District – Housing and Neighborhoods						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
HN8	Address potential displacement of residents and businesses in the Lloyd District and in adjacent at risk neighborhoods, such as Eliot, through citywide programs. Potential programs include housing and small business assistance programs targeted for areas at risk for displacement. Possible housing tools include: Limited Tax Exemption program, System Development Charge Exemption program, school family housing, and employer assisted housing.				X	PDC, PHB, Office of Equity, BPS,
Additional details for selected action items will be developed and included in a plan appendix.						

Transportation

The Lloyd District is well served by a multi-modal transportation system that supports its role as a regional center for retail, business, entertainment, and government. The district has unique regional transportation advantages, including direct connections to the interstate freeway system via I-5 and I-84 and the regional light rail and bus network at the Rose Quarter Transit Center. With the addition of streetcar and continued investments in bicycle and pedestrian systems, the transportation network will provide a solid foundation to support goals for high-density development, greater use of active transportation (walking and biking) modes, and reduced greenhouse gas emissions.

The N/NE Quadrant Plan calls for building upon and enhancing the Lloyd District's transportation assets by: improving the efficiency and safety of traffic operations; maintaining regional transit, auto and freight access; enhancing internal circulation and connectivity to adjacent areas, particularly for pedestrians and bicyclists; managing parking to incentivize development and encourage the use of non-auto transportation modes; ~~and~~ leveraging street improvements with future development; and providing strong linkages between the district and the Willamette River. Providing optimum regional access for all modes will be key to realizing the goal of developing the Lloyd District as a high density Central City district and assuring its long-term success.

Policies

1. **Strategic Investments.** Invest in transportation infrastructure to improve safety, convenience and operational efficiency for all modes by strengthening connectivity and access for trips to, through and within the Lloyd District, and by creating special places for workers, residents, neighbors, shoppers and visitors.

2. ~~**Encourage a**~~**Active transportation.** Encourage walking, bicycling and using transit as a way to increase transportation access and choice, enhance livability and reduce the per capita carbon footprint in the district.

3. **Transportation Demand Management.** ~~Support the Transportation Management Association as one of the most effective ways to encourage the use of active transportation.~~
Foster the development of business and property owner-supported programs, incentives and activities that encourage employees and residents to use active transportation and non-single occupant vehicle modes.

4. **Transit**. Strengthen the role of transit in the Lloyd District by working with TriMet to increase the frequency, reliability and safety of the light rail, bus and streetcar services.

5. **Parking.**

   a. **Off-Street.** Strengthen the role of parking management to leverage high-density mixed-use development, enhance livability and reduce reliance on single occupancy automobile trips.

   b. **On-Street.** Preserve and enhance on-street parking assets to support ground floor commercial, retail and service based business.

6. **Streetscape.** Improve the pedestrian experience by integrating high-density mixed uses, urban greenery, and pedestrian amenities into the Lloyd District's streetscape.

7. ~~Increase c~~**Connectivity**. Increase the number of connections across barriers in the district, including major arterials, large blocks, freeways, rail lines, and natural features, and with adjacent neighborhoods.

8. **Transportation System Management.** Manage access and circulation to reduce traffic speeds and provide for safe crossings, while balancing the need for ~~traffic~~ vehicle and freight access to and within the Lloyd District.

9. **Regional Attractions.** Provide access and circulation to and from the Lloyd District that attracts and supports regional development, shopping and tourism. Promote the use of transit to access the area, including light rail, street car, bus, and a potential water taxi service.

Placeholder Performance Target

By 2035, 70 percent of commute trips are by non-single occupancy vehicles (transit, walking, bicycling and carpooling).

The current Lloyd District mode split is approximately 44 percent by non-single occupancy vehicle (SOV) for the district. Members of the Lloyd TMA have an improved mode split of 60% non-SOV.

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR1	Explore ways to adopt the Street and Development Character concept, including three street types: retail/commercial, boulevard and flexible/pathways. This may include updates to the Transportation System Plan Street Design Classifications.	X				PBOT
TR2	Develop and revise parking management strategies to: ▪ Incentivize mixed use development through the provision of shared parking facilities. ▪ Address event parking issues through flexible options such as the use of variable pricing and parking management. ▪ Promote use of transit and active transportation modes by reducing the amount of parking spaces per capita in the district over time.	X				PBOT, TMA, Private

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR3	Update the *Lloyd District Standard Plans and Details within the Right-of-Way* document to implement the Street and Development Character and Green Systems concepts for the district.		X			PBOT, BPS, BES, PPR/UF
TR4	Study and install additional signalized pedestrian crossings, on-street parking, and reduced speed traffic progression on Martin Luther King, Jr. Blvd. and Grand Avenue.		X			PBOT
TR5	Implement streetscape and circulation changes for Multnomah Street to facilitate a "retail/commercial street" environment.		X			TMA, PBOT
TR6	Implement the final phases of the Broadway-Weidler Corridor Plan, emphasizing pedestrian safety projects and installation of traffic signals at intersections identified in the Plan that are not yet signalized.		X			PBOT
TR7	Install electric vehicle charging stations in the Lloyd District.		X			PDC, PBOT
TR8	Implement the I-5 Broadway-Weidler Interchange Plan improvements.			X		ODOT, PBOT
TR9	Implement a 7th Ave pedestrian/bike bridge over I-84 connecting to either 7th or 8th in the Central Eastside.			X		PBOT, ODOT
TR10	Develop a strategy for the Clackamas Flexible Street and private development extending from the Rose Quarter to NE 9th Avenue via a new pedestrian/bicycle bridge over I-5.			X		PBOT, BPS, PDC, ODOT, EcoDistrict, Private
TR11	Complete the North Portland Greenway Feasibility Study and Sullivan's Gulch Trail Concept Plan and implement their recommendations.			X		PPR, PBOT, Private
TR12	Study the feasibility of adding a new light rail station on the Yellow line near Dixon to serve the N Broadway area and PPS Blanchard site.			X		TriMet, PBOT, BPS

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR13	Confirm the benefits and feasibility of straightening the "s-curve" in the Union Pacific rail tracks for freight and passenger rail operations. Options pursued should prioritize maintaining the development potential of the "Thunderbird" site. See related action UD8.			X		ODOT, UPRR, Private, BPS, PDC
TR14	Work with TriMet to improve the Steel Bridgehead and Rose Quarter Transit Center area to improve transit, local and river access, movement and development opportunities			X		TriMet, TMA, PBOT, BPS, PDC, Private
TR15	Explore water transportation options, including a Willamette River water taxi, and investigate the feasibility of a landing in the Lloyd District. Such a landing should include a safe and direct pedestrian connection to the Convention Center and the Rose Quarter.			X		OHWR, PBOT, BPS, PPR, Private
TR16	Expand the Central City wayfinding system in the Lloyd District to include river destinations and other local and regional attractions.			X		OHWR, PBOT, PPR, Private
TR17	Continue City of Portland partnership with the Lloyd Transportation Management Association (TMA) to encourage workers and residents to use transit and active transportation modes.				X	PBOT, TMA
Additional details for selected action items will be developed and included in a plan appendix.						

Urban Design

These policies and actions will enable the Lloyd District to offer a set of unique, human-scaled urban experiences different compared to the ~~from those possible on the~~ west side of the Central City. The area features a series of existing places with established character~~s~~ that will be strengthened around a revitalized and redeveloped Central Lloyd area. The Central Lloyd area will include more high-rise office buildings and a new, high-density residential district, organized around a signature system of linked open spaces and supported by a network of diverse streets ~~and characters~~. The high-quality transit service in the area provides an opportunity to shift the Lloyd District from a focus on auto access and auto-oriented uses, to a more pedestrian-oriented development pattern and streetscape.

The large blocks in the Lloyd District are part of a distinctive urban pattern that allows for larger buildings and unique public spaces including courtyards, plazas and parks. These open spaces ~~would~~ will be linked by a system of pathways, multi-use trails and quiet street ~~segment~~s that are enhanced with vegetation and together create a set of lower stress and quieter routes, and an alternative to the busy arterials through the district. New low stress connections across freeways to the west and south will strengthen connections to the rejuvenated Rose Quarter, the PPS Blanchard site, the Willamette River and the Central Eastside.

The Lloyd District includes a number of ~~portal~~ entry points or "gateway" locations, such as the Broadway and Steel Bridgeheads, the ~~Oregon Convention Center~~Lloyd Center station area and the crossroads intersection of MLK/Grand and Broadway/Weidler. These will be reinforced by buildings taller than the surrounding context that emphasize the civic significance of these places. At its edges, the scale of new development in the Lloyd District will provide as transition ~~"step down"~~ to established lower density neighborhoods and historic districts by providing a "step down" to adjacent neighborhoods and by considering the form and pattern of existing development in the review of new development proposals.

Policies

1. **Diverse and Distinctive Urban Places**. Focus more intense development in the Central Lloyd area and Rose Quarter while enriching the entire district through strengthening the distinct character of the existing Lloyd District subareas.

2. **Better Connected District**

   a. **More Seamless Connections.** Improve the character ~~and increase the number~~ of connections across transportation barriers in the district - freeways, major arterials and ~~transit~~ rail facilities.

   b. **Variety in Street Character.** Expand the diversity of street character in the Lloyd district, distinguishing three major types: retail/commercial, boulevard and flexible/pathways.

3. **Large Blocks.** Take advantage of the unique opportunity for dense, large site development made possible by ~~possible by~~ the large blocks found in the Lloyd District. Integrate this development into the surrounding blocks through well designed internal green spaces and pedestrian connections.

4. **Open Space.** Develop a signature system of linked open spaces that serves the Central Lloyd area, becomes a primary organizing structure for new development, and offers a diversity of character, experiences, and recreational functions for district residents, workers and visitors.

5. **~~Relationship to the Willamette River~~Riverfront Development.** Encourage ~~Develop~~ development ~~vacant non-industrial land~~ along the Willamette River ~~riverfront in ways~~ that activates the riverfront, better connects the riverfront to the rest of the district and surrounding neighborhoods, ~~and~~ improves visual and physical access to the river, and enhances natural resources.

6. **~~Auto~~Pedestrian-Oriented Development.** Discourage new automobile-oriented uses and encourage the eventual redevelopment of ~~sites with~~ surface parking lots and drive-throughs with pedestrian-oriented development.

7. **Transition to Adjacent Neighborhoods.** Provide sensitive transitions in the scale and pattern of development between higher density development encouraged in the Lloyd District and adjacent lower density neighborhoods and historic districts.

Implementation Actions: Lloyd District – Urban Design

#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD1	Update Title 33 Zoning Code development regulations and maps to implement the district concept. Potential regulations to be amended include: heights, active ground floor building uses, required building lines, drive-through limitations, and auto access restrictions related to street car.	X				BPS
UD2	Revise height regulations along Broadway within the Irvington Historic District to allow a maximum height of 75 feet on the north side of Broadway (between Broadway and Schuyler). No height bonuses will be available in this area.	X				BPS
UD3	Develop regulatory tools to encourage the provision of open space, including public open space, publicly-accessible private open space on large blocks, and multifunctional private courtyard spaces with new high density residential development. Possible tools include: height/FAR bonus incentives, superblock regulations, and master plan requirements.	X				BPS, BDS, PPR

Implementation Actions: Lloyd District – Urban Design						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD4	Evaluate existing view designations and potential new view designations in the Lloyd District as part of a Central City-wide analysis of scenic resources. Existing Lloyd District view corridors to be examined for potential changes include the views of downtown from the 12th Ave bridge and from Lillis Albina park.	X				BPS
UD5	Develop a strategy to acquire, masterplan, build and improve public parks, plazas and open spaces consistent with the district concept diagram and policies.		X			PPR, BPS, PDC
UD6	Update the Lloyd District's 1991 design guidelines: *Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan* to reflect the district concept including: • Street character and relationship of development to streets and transit • Connections through development sites • Relationship of development to private and public open spaces • Building orientation • Incorporating green elements, native vegetation, bird-friendly design and green infrastructure in development • Transitions to adjacent neighborhoods		X			BPS, BDS, BES, PBOT
UD7	Create and promote a strategy to activate public open space, rights-of-way and surface parking lots during off hours to bring in new people, interests and energy to the district.		X			EcoDistrict, TMA, Private, PPR, PBOT, BPS, PDC

Implementation Actions: Lloyd District – Urban Design						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD8	Work with the property owner/developer of the "Thunderbird" site to craft a development agreement that incorporates public open space and the greenway trail on the riverfront. Continue to work with ODOT rail and Union Pacific to ensure that any plans to relocate the rail tracks in the area maintain access, the development potential of the site and provide park and riverbank enhancement opportunities. See related action TR13.		X			PPR, PDC, BPS, ODOT, Private
UD9	Enhance the pedestrian and cycling environment under the I-5 Freeway at NE Multnomah and Holladay Streets.			X		PBOT, TriMet, ODOT, TMA
Additional details for selected action items will be developed and included in a plan appendix.						

Green Central City

The combination of significant potential for new development, extensive transit, pedestrian and bicycle networks and the formation of the Lloyd EcoDistrict presents a unique opportunity to dramatically improve environmental conditions within the Lloyd District and help meet Portland's broader sustainability goals. This plan capitalizes on that potential by promoting district-wide sustainability strategies that result in a "high-performance" green district that has significantly improved environmental performance. ~~and by calling~~ The plan calls for green buildings, green infrastructure and sustainable design to be integrated with new development in order to improve air quality, water quality, watershed health, habitat, resource conservation, climate and livability.

A key component to realizing the goals for green development in the district will be to better use of space within public rights-of-way for sustainable stormwater strategies and increased tree canopy that absorb and clean water, provide habitat for birds and pollinators, and provide shade. Boulevards, flexible streets and water quality/tree canopy corridors have been identified to provide this function. Opportunities to enhance existing natural resources and improve habitat have also been identified within Sullivan's Gulch and along the Willamette River bank. Individual projects are also encouraged to incorporate green features, such as ecoroofs and energy efficiency.

This plan embraces the formation of the Lloyd Eco-District and supports its goals for restorative development that improves environmental conditions, a connected district, and to be climate positive. ~~district-wide sustainability.~~ To this end, ~~components of~~ the district concept~~that call for district energy and rainwater harvesting systems~~sustainable development and green infrastructure ~~are~~ is considered a starting place~~s~~ that will be refined and added to as the EcoDistrict priorities are developed in the coming years.

While this policy area primarily focuses on integrating green features into development, it should be noted that the built form envisioned for the district—high density, mixed-use development that is well served by transit, ~~and~~ facilities for biking and walking—will also make a significant contribution to sustainability goals. This will ~~by promoting a compact urban form and~~ encourage~~ing~~ the use of ~~alternative~~ active transportation modes, thereby reducing emissions and energy use and increasing the efficiency of urban services.

Policies

1. **High-Performance Green District.** Promote innovation and leadership in the Lloyd District in the areas of sustainable and restorative development, energy efficiency, water conservation, ~~and~~ waste reduction and climate change resiliency. Support partnerships that facilitate district-wide strategies.

2. **Green Infrastructure and Tree Canopy ~~and Vegetation~~**. Increase tree canopy and the use of vegetated stormwater facilities in Lloyd District rights-of-way particularly on designated "boulevards", "flexible streets" and "tree canopy/water quality corridors". Encourage the use of green elements and habitat-friendly design on development sites, including ecoroofs and other vegetated stormwater approaches, roof gardens, landscaped setbacks and courtyards, living walls, and native vegetation.

3. **Green Buildings and Energy**. Encourage the development of high performance buildings, renewable energy systems, district energy, and ~~deep~~ energy retrofits that reduce greenhouse gas emissions.

4. **Willamette River Resources.** Protect and enhance natural resources along the banks of the Willamette River to prevent erosion and improve habitat functions and connectivity, while ~~furthering~~ also meeting Citywide goals and policies regarding ~~other objectives for~~ recreation, views, access to the river, and riverfront development.

5. **Sullivan's Gulch.** Protect and enhance natural resources within Sullivan's Gulch to improve its function as a habitat corridor, reduce the risk of wildfire and landslide, and maintain and enhance views, while providing flexibility to incorporate a recreation trail.

Placeholder Performance Target

By 2035, trees are planted within the Lloyd District sufficient to achieve 15 percent canopy coverage once the trees mature.

The current tree canopy coverage in the Lloyd District is 10 percent. To achieve 15 percent coverage, approximately 19 additional acres of canopy would need to be added through tree planting and growth of existing trees.

Implementation Actions: Lloyd District – Green Central City						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC1	Evaluate natural resource protection and management options for Sullivan's Gulch and the Willamette River bank as part of the Central City-wide natural resource analysis (Goal 5 ESEE analysis). Possible tools include regulations, incentives, agreements, partnerships and acquisition.	X				BPS, BES, OHWR
GC2	Identify sites for restoration as part of the River Plan/Central Reach process. Potential sites could include the area of shallow water near the I-5/I-84 interchange and the riverbank adjacent to the "Thunderbird" site.	X				BPS, BES, OHWR
GC3	Explore approaches to improve the environmental performance of the district. Possible tools include incentives for green infrastructure, energy retrofits, high performance new construction, renewable energy systems, and connections to district energy.		X			BPS, BDS, BES, EcoDistrict
GC4	Investigate opportunities for serving the PPS Blanchard site with district energy.		X			PDC, BPS, PPS

Implementation Actions: Lloyd District – Green Central City						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC5	Design and implement a water quality/tree canopy corridor project within the Lloyd District.			X		BES, PBOT, BPS, PPR/UF, PDC, OHWR
GC6	Develop and implement a street tree planting strategy for the Lloyd District.			X		PPR/UF, BES, BPS, PBOT, Private
GC7	Identify and improve underutilized space within public rights-of-way (e.g. along I-5, I-84, Interstate Ave) to increase tree canopy, habitat value and stormwater function.			X		BES, PBOT, PPR/UF, ODOT
GC8	Develop a management strategy for Sullivan's Gulch and the Willamette River shallow water habitat area. Incorporate re-vegetation, trail development, environmental education, and maintenance.			X		BES, PBOT, PPR, OHWR, BPS, ODOT, Private
GC9	Continue to support the Lloyd EcoDistrict work program.				X	EcoDistrict, City
GC10	Coordinate capital improvements and "green systems" planning with the work of the Lloyd EcoDistrict.				X	City, EcoDistrict
GC11	Design infrastructure, such as the proposed Clackamas I-5 overcrossing and street improvements to accommodate district energy infrastructure where appropriate.				X	PBOT, ODOT, PDC
GC12	Use green infrastructure measures to improve the water quality of stormwater discharged to the Willamette River and to reduce the risk of sewer backups into basements.				X	BES, PBOT, Private
Additional details for selected action items will be developed and included in a plan appendix						

Lower Albina

District Goal

Strengthen Lower Albina as an industrial and employment area by reinforcing the working harbor and providing for diverse employment and development opportunities.~~while e~~Enliven~~ing~~ the historic Russell Street Conservation District and the adjacent MAX station area with ~~industrially compatible~~ mixed-use and ~~/~~commercial activities that are compatible with industrial and employment uses~~y~~.

Regional Center: Economy and Innovation

Lower Albina plays a key role in the Central City and the region as a center of industrial employment. It serves as a critical incubator for emerging and innovative businesses and provides an important living-wage job base near inner North and Northeast neighborhoods. The district's mix of industrial businesses, working waterfront and multimodal freight facilities are complemented by a small mixed-use commercial area along lower Russell Street, where retail activity is especially active at night.

The policies and action items in this plan are intended to build on the strength of the district's existing industrial fabric and provide additional flexibility for commercial uses that are compatible with industrial businesses and increase employment density. Housing is currently allowed within the Russell Street Conservation District, which is zoned for mixed use. The plan proposes to extend the mixed use zoning east on Russell, however new housing will not be allowed in that area.

Policies

1. **Working Harbor.** ~~Strengthen~~ Protect the Lower Albina working harbor and support river-dependant uses.

2. **Industry and Employment**. Increase economic opportunities, living-wage jobs and employment density by preserving existing industrial land uses and diversifying the range of employment activities allowed in the area east of the Union Pacific railroad and near the MAX station.

3. **Incubator**. Support existing businesses and foster the district as an industrial and employment incubator.

4. **District Vitality.** Support the urban vibrancy of Russell Street and its unique blend of working daytime industrial activity with compatible nighttime restaurant and entertainment activity.

Placeholder Performance Target:

By 2035, add xx new jobs within Lower Albina.

Based on a 2006 estimate, there are approximately 2,712 existing jobs in Lower Albina. The addition of xx new jobs would result in a total of xx jobs. This would require a xx% growth in jobs over 20 years.

Implementation Actions: Lower Albina – Regional Center: Economy and Innovation						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
RC1	Adjust the Lower Albina subdistrict boundary to exclude the PPS Blanchard site and adjacent properties to the south and east, placing them within the Lloyd District.	X				BPS
RC2	Rezone properties east of the Russell St. Conservation District fronting Russell Street from IG1d to EXd. Set max FAR at 3:1 and maximum height at 50'. Prohibit housing in this area.	X				BPS
RC3	Apply zoning provisions to IG1-zoned properties east of the Union Pacific railroad alignment that allow certain compatible office-like uses, similar to the Employment Opportunity Subarea regulations in the Central Eastside.	X				BPS
RC4	Identify potential brownfield sites and identify clean-up and redevelopment strategies to bring them back into economic use.		X			BPS, PDC, BES, Private
RC5	Placeholder for small business assistance, such as storefront grants, Development Opportunity Services grants, and loans for tenant improvements, start-up and equipment.				X	PDC
Additional details for selected action items will be developed and included in a plan appendix.						

Transportation

Lower Albina is located at the southern end of the North Willamette River working harbor area, the northern end of the Central City, and adjacent to historic streetcar neighborhoods. As a predominately industrial area, freight movement associated with ~~provided by~~ the working harbor, freight railroad, and trucks are essential for the economic vitality of this district, City and region. Its location within the Central City also provides for transit, bicycle and walking facilities for workers, shoppers, and visitors to the district. To sustain the vitality ~~and livability~~ of Lower Albina, maintenance and continued improvement of the multi-modal transportation system will be important.

Policies

1. **Freight System**. Prioritize freight movement and access while maintaining and improving the safety, efficiency and convenience of the transportation system for all modes.

2. **Multi-Modal Connectivity**. Improve ~~multi-modal~~ connectivity through the district and strengthen connections to adjacent districts, including the Rose Quarter, the Vancouver/Williams Corridor and Mississippi Avenue. Improve pedestrian connections to Interstate MAX and bus service to enhance access to employment opportunities in the area.

3. **Rail and Marine**. Preserve rail and inter-modal access to the Albina Rail Yards, ~~and~~ marine freight facilities and local industries.

4. **Freeway Access**. Maintain or ~~i~~improve access from industrial areas to the regional freeway system.

5. **Strategic Investments.** Encourage business creation, growth, and innovation through strategic public and private partnership investments in multi-modal transportation and parking infrastructure.

Placeholder Performance Target

By 2035, 40 percent of commute trips in Lower Albina are by non-single occupancy vehicles (transit, walking, bicycling and carpooling).

The current Lower Albina mode split is approximately 18 percent by non-single occupancy vehicle (SOV) for the district.

Implementation Actions: Lower Albina – Transportation

#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR1	Explore ways to adopt the Street and Development Character concept, including three street types: retail/commercial, boulevard and flexible/pathways. This may include updates to the Transportation System Plan Street Design Classifications.	X				PBOT

Implementation Actions: Lower Albina – Transportation						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR2	Complete the North Portland Greenway Feasibility Study and implement its recommendations in Lower Albina, based on the ability to acquire agreements by private property owners.			X		PPR, PBOT, BPS
TR3	Study options for the Larrabee Street ramp that would preserve auto, bicycle and freight access while accommodating the Greenway Trail and pedestrian and bicycle access to the district and river.			X		PBOT, PPR
TR4	Develop a street design plan for the "the Strand" between N. Russell Street and the Rose Quarter, including alternative approaches for the privately owned block in a way that maintains freight access.			X		BPS
TR5	Rebuild N River Street from the Tillamook overpass to Essex Street.			X		PBOT
TR6	Study the need for pedestrian improvements to facilitate employee access to transit on Russell, Interstate and Broadway/Weidler.			X		PBOT, TriMet
TR7	Enhance and maintain streets in working condition to facilitate access and circulation in the district.				X	PBOT
Additional details for selected action items will be developed and included in a plan appendix.						

Urban Design

Lower Albina has a rich and varied fabric of largely industrial and employment buildings, especially within the Russell Street Conservation District. As the character of Lower Albina is not expected to change dramatically, these policies and actions are intended to strengthen its existing urban forms and patterns and offer guidance for the integration of new development that is sensitive to this significant industrial area.

Repurposing and reconfiguring spaces underneath freeways to the north and east will offer an expanded range of recreational opportunities and a more attractive set of connections between employment centers and mixed use neighborhoods, in addition to enhancing the district's function as a "gateway" into the Central City from North Portland. The plan calls for a "Strand", that would provide an additional north/south connection to provide for a lower stress connection between the Russell Street commercial area and the Rose Quarter. The Strand is envisioned as a wayfinding system, coupled with pedestrian and bicycle enhancements that are compatible with industrial operations. It could also celebrate the industrial heritage of the district through public art, murals and historical markers along its path (also see related Transportation policies and actions). ~~Implementing the "Strand" concept will strengthen connectivity, wayfinding and movement options to N. Interstate between the N. Russell commercial area in the conservation district and the Rose Quarter~~.

Policies

1. **Historic and Cultural Resources**. Preserve, rehabilitate and celebrate historic structures in Lower Albina, including those in the Russell Street Conservation District and culturally significant African-American resources identified in the Cornerstones of Community inventory.

2. **Russell Street**. Strengthen the character of Russell Street between Lower Albina and the Vancouver/Williams Corridor with new mixed uses, rehabilitated ~~structures~~ buildings and a nighttime orientation.

Implementation Actions: Lower Albina – Urban Design

#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD1	Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.		X			AHC, BPS
UD2	Improve the design review approval criteria used for development proposals within the Russell Street Conservation District and design overlay zone within Lower Albina.		X			BPS, BDS

Implementation Actions: Lower Albina – Urban Design						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD3	Improve the character and activate the area under the Fremont Bridge ramps. Consider active recreation, public art, sustainable landscaping and stormwater management, and improved parking facilities.			X		City, ODOT
UD4	Improve the character of N Russell under the freeway. Consider lighting improvements, public art, sustainable landscaping and stormwater management, and screening of adjacent City-owned storage yards.			X		City, ODOT
Additional details for selected action items will be developed and included in a plan appendix.						

Green Central City

The Central City 2035 Concept Plan calls for increasing energy efficiency, enhancing natural resources and habitat, improving air and water quality and expanding the use of green infrastructure central-city wide. While the Lower Albina area will continue to be a primarily industrial district, there are opportunities for achieving these goals through incremental improvements to the riverbank, adding green infrastructure to rights-of-way where they don't conflict with industrial operations, and encouraging the use of sustainable design in new development or remodels. Increasing green building and infrastructure within the district will also contribute to business development by making the area more attractive to tenants and employees.

Policies

1. **Willamette River Resources.** Support the natural resource protection and enhancement objectives of the River Plan / North Reach, where they apply to Lower Albina.

2. **Sustainable Design**. Encourage sustainable design in public infrastructure and industrial buildings, including green roofs, stormwater management strategies, tree canopy, habitat-friendly design, energy efficiency improvements, and alternative energy generation.

Placeholder Performance Target

By 2035, trees are planted within Lower Albina sufficient to achieve 10 percent canopy coverage once the trees mature.

The current tree canopy coverage in Lower Albina is 6 percent. To achieve 10 percent coverage, approximately 7 additional acres of canopy would need to be added through tree planting and growth of existing trees.

Implementation Actions: Lower Albina – Green Central City						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC1	Revise, adopt and implement the River Plan / North Reach, to provide more specific river-related policy guidance and regulations within the North Reach, which includes Lower Albina.		X			BPS
GC2	Develop and implement a strategy to install trees and sustainable stormwater facilities to existing streets and underutilized space within rights-of-way (e.g. freeway ROW, Broadway bridgehead, west end of Russell Street). Ensure improvements do not compromise operations for industrial businesses.			X		BES, PPR/UF, PBOT, ODOT, Private

Implementation Actions: Lower Albina – Green Central City						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC3	Explore approaches to improve the environmental performance of the industrial district. Possible tools include incentives for green infrastructure, energy retrofits, high performance new construction, renewable energy systems, and connections to district energy.			X		BPS, BDS, BES
GC4	Target outreach to industrial businesses regarding sustainable business practices.				X	BPS
Additional details for selected action items will be developed and included in a plan appendix.						

Study Areas

Two areas adjacent to the N/NE Quadrant are included in the plan's study area: the North Banfield Portal and the Vancouver/Williams Corridor. They are included because of the potential for land use and transportation proposals in the quadrant to affect them and because community members asked the Bureau of Planning and Sustainability to address long-identified land use and zoning issues in these areas.

Each study area has proposed action items intended to further objectives identified in the planning process, primarily zoning changes to encourage new development or support existing uses. However, these areas will remain outside of the Central City boundary and therefore no new policies are proposed.

North Banfield Portal

The North Banfield Portal is the eastern gateway to the Lloyd District, at the transition from the Central City's higher density commercial and residential development to lower density residential in the Sullivan's Gulch neighborhood.

Sullivan's Gulch provides valuable natural resources in ~~the Central City~~central Portland where habitat areas are less common. Enhancement of the Gulch resources and development of the Sullivan's Gulch Trail will increase connectivity for both wildlife and pedestrians and bikes, connecting the Willamette River with areas to the east. New redevelopment opportunities along Multnomah will bring additional residents and new neighborhood-oriented commercial services to the area. The Sullivan's Gulch Trail offers a unique opportunity to enhance and strengthen transportation options in the Lloyd District and Sullivan's Gulch neighborhood by incorporating bike and pedestrian linkage to existing MAX, auto, bus, and streetcar options in the area.

The N/NE Quadrant Plan ~~seeks to~~will increase flexibility and encourage neighborhood-serving mixed-use development, including housing, in this area by proposing a change in zoning. The current zoning is primarily residential (RH), with a small area of office zoning (CO1). The current zoning presents a potential obstacle to development because it is restrictive in use and it creates site planning challenges due to development standards that vary across the site.

Implementation Actions: North Banfield Portal

#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 – 20 Years	Ongoing	
NB1	Apply CXd zoning to the sites south of Multnomah St. and west of NE 21st Ave. Existing environmental conservation (c) overlay zoning will remain.	X				BPS

Implementation Actions: North Banfield Portal						
#	Action	Timeline				Implementers
		CC2035 (2014)	2 - 5 Years	6 – 20 Years	Ongoing	
NB2	Evaluate natural resource protection and management options for Sullivan's Gulch as part of the Central City-wide natural resource analysis (Goal 5 ESEE analysis). Possible tools include regulations, incentives, agreements, partnerships and acquisition.	X				BPS, BES
NB3	Complete the Sullivan's Gulch Trail Concept Plan and implement the trail connection through the area.			X		PPR, PBOT, Private
Additional details for selected action items will be developed and included in a plan appendix.						

Vancouver/Williams Corridor

The Vancouver/Williams Corridor is in the Eliot neighborhood, a part of the Albina Community Plan area, adjacent to the Central City. This area is included in the N/NE Quadrant Plan study area because of its proximity to potential reconfigurations of nearby freeway over-crossings and long-standing concerns about an area of residential zoning, which contains non-conforming commercial uses and discourages mixed-use redevelopment. It also contains a number of buildings identified in the Bosco-Milligan Foundation's Cornerstones of Community inventory of African-American cultural resources.

This area will remain outside of the Central City and no changes to existing Albina Community Plan policies that govern it are proposed. The primary proposed action is to rezone an area of existing RH zoning to EXd. This additional land use flexibility will support mixed-use development, reinvestment in existing non-conforming employment uses, and the rehabilitation of cultural resources.

Implementation Actions: *Vancouver/Williams Corridor*						
#	Action	Timeline				Implementer
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
VW1	Rezone portions of 4 blocks between I-5 and N Williams from RH to EXd.	X				BPS

Implementation Actions: *Vancouver/Williams Corridor*						
#	Action	Timeline				Implementer
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
VW2	Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.		X			AHC, BPS,
VW3	Ensure that any reconfiguration of surface streets in conjunction with I-5 freeway improvements maintain and enhance connectivity of the surface street system between and within the N/NE Quadrant and the Eliot neighborhood and minimizes traffic impacts on the Eliot neighborhood.			X		ODOT, PBOT, BPS
Additional details for selected action items will be developed and included in a plan appendix.						

Implementers listed in Implementation Action Tables	
AHC	Architectural Heritage Center
BDS	Portland Bureau of Development Services
BES	Portland Bureau of Environmental Services
BPS	Portland Bureau of Planning and Sustainability
City	City of Portland
EcoDistrict	Lloyd EcoDistrict
TMA	Lloyd Transportation Management Association
Metro	Metro
OE	Portland Office of Equity
ODOT	Oregon Department of Transportation
OHWR	Portland Office of Healthy Working Rivers
PBOT	Portland Bureau of Transportation
PCC	Portland Community College
PDC	Portland Development Commission
PHB	Portland Housing Bureau
PPR	Portland Bureau of Parks and Recreation
PPR/UF	Portland Bureau of Parks and Recreation/ Urban Forestry
PPS	Portland Public Schools
Private	Private property owners, businesses or non-profits
TriMet	TriMet
UPRR	Union Pacific Railroad

N/NE Quadrant and I-5 Broadway/Weidler Plans

Freeway/Local Transportation Interface

Joint Staff Report

Recommended North of Broadway Option – I-5 Broadway/Weidler Interchange Plan Improvements

May 10, 2012

The N/NE Quadrant and I-5 Broadway/Weidler Plans Project is a collaborative effort by the City of Portland and the Oregon Department of Transportation to integrate urban design and land use planning with freeway planning and concept-level engineering in the North/Northeast portion of the Central City, which includes Lower Albina and the Lloyd District.

Stakeholder Advisory Committee: Meeting #16

May 10, 2012

Joint Staff Report

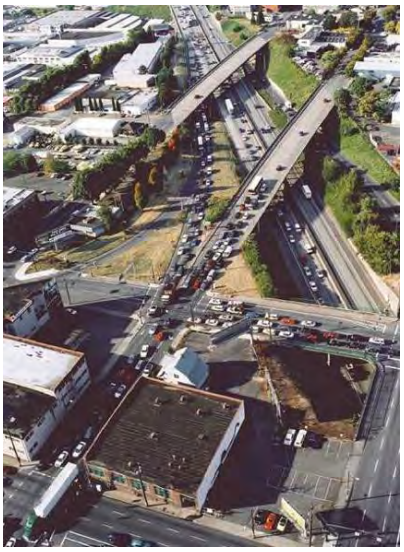
The overall project purpose is to...

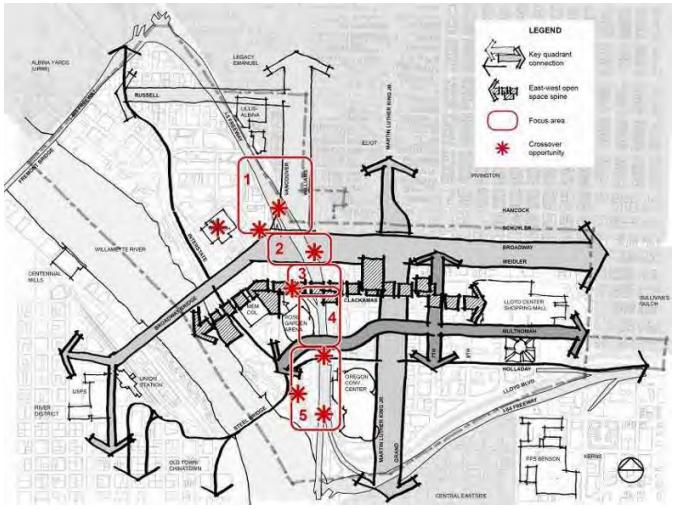
Improve safety and operations on I-5 in the vicinity of the Broadway/Weidler interchange.

OBJECTIVES INCLUDE:

EASE CONGESTION LEVEL S AND IMPROVE SAFETY:

- Congestion can be reduced through a variety of measures. Workable solutions will be explored through the Stakeholder Advisory Committee (SAC) and public outreach.





ENHANCE PEDESTRIAN AND BICYCLE ROUTES:

- Through public input, the SAC process and in partnership with the City, ODOT will look for ways to improve pedestrian and bicycle movements and facilities over and under the freeway system.

IMPROVE FREIGHT MOVEMENT:

- Freight requires highways to have sufficient capacity, good reliability and good geometrics for turning, stopping and other movements.

INTEGRATION OF TRANSPORTATION - LAND USE CONCEPTS IN THE N/NE QUADRANT PLAN

The N/NE Quadrant Plan Concept calls for continued success and development of the existing major regional facilities as well as significant future growth and development in the Rose Quarter, Lloyd District and Lower Albina. The I-5 improvements help support this growth by improving freeway reliability and safety in the area.

I-5 Broadway/Weidler Interchange Improvements

May 10th SAC Action Item: Recommended North of Broadway Option

Do you agree with the joint staff recommendation on the North of Broadway Option described in this report?

The Project Team of ODOT, PBOT, and BPS have completed technical evaluations and reviewed the comments from SAC members and the community, and recommend the North of Broadway Option 3 as described below.

North of Broadway Option 3: Vancouver + Hancock/Dixon (illustrated in Figure 1)

The following are the basic elements of the recommendation:

1. Rebuild the Vancouver overcrossing structure in its current location with a new east-west overcrossing connecting Hancock to Vancouver and Dixon, including a lid over I-5, roughly between Hancock and San Rafael.
2. Implement traffic calming measures at the intersection of Williams/Hancock to mitigate traffic impacts to the Eliot neighborhood east of Williams.
3. Remove Flint between Tillamook and Broadway (including the existing Flint freeway overpass structure).
4. Maintain Wheeler north of Broadway as a two-way street.
5. Maintain the current alignment and northbound traffic direction of Wheeler between Weidler and Broadway in front of the Left Bank.
6. Provide for two-way traffic operation on Flint between Weidler and Winning Way between the two Rose Quarter parking structures.
7. Provide for new traffic signals at the intersections of Wheeler/Broadway and Ross/Broadway.
8. Do not preclude the option of connecting a large lid between Weidler and Hancock.

North of Broadway Option 3: Vancouver + Hancock/Dixon (continued)

The following issues will require further examination as part of Preliminary Engineering and community involvement:

1. Seek a viable, single-lid design solution over I-5 between Weidler and Hancock by exploring mitigation measures for freeway noise and vehicle emissions, and addressing the need for open space and economic development.
2. Develop specific measures to mitigate property and parking impacts to the Paramount Apartments and the Portland Public Schools' Blanchard site due to the proposed Hancock/Dixon connection (via the Hancock/Vancouver Lid).
3. Develop alternative safe and convenient bicycle/pedestrian connections to include:
    a. The proposed removal of the Flint freeway overpass structure and the development of a bicycle/pedestrian connection between the Flint/Tillamook intersection and the proposed Vancouver/Hancock overcrossing, and
    b. The proposed removal of Flint between Hancock and Broadway, the development of bicycle/pedestrian connection from Hancock to Broadway while providing for potential parking mitigation, open space, and redevelopment opportunities.
4. Develop traffic engineering and other design measures to avoid queues on the I-5 southbound off-ramp at Vancouver that would encroach onto the freeway and to provide for southbound movements on Vancouver of autos, trucks, transit, pedestrians and bicycles.
5. Define appropriate Eliot neighborhood traffic mitigation measures for the recommended Hancock connection between Vancouver and Dixon.
6. Develop a street design and circulation plan for the area south of Broadway due to circulation changes resulting from the relocation of the southbound I-5 freeway on-ramp. The plan should address the following issues:
    a. Prepare design refinements to provide for safe and convenient access to the Left Bank and Left Bank Annex.
    b. Prepare a Rose Quarter circulation plan to address proposed changes to the I-5 Broadway/Weidler Interchange and future redevelopment of the Rose Quarter and the area north of Broadway.
    c. Develop and evaluate circulation alternatives for Wheeler, Winning Way, Center Court, Flint and Williams to:
        i. Enhance circulation in the area for all modes,
        ii. Provide flexibility to manage event ingress and egress, and
        iii. Open up opportunities for redevelopment and placemaking.
    d. Update the Rose Quarter Event Transportation Management Plan to address changes in local access and circulation
    e. Develop design elements that address the changes to access and circulation to the Madrona:
        i. Refine street design for Williams between Weidler and Wheeler to address access, circulation and on-street parking needs for the Madrona, while also providing for bus, bike and pedestrian circulation.
        ii. Provide for sufficient pedestrian and vehicle access to the detoxification center entrance on Williams.
        iii. Address visual and noise impacts due to the proposed relocation of the I-5 southbound on-ramp to Weidler/Williams.
        iv. Prepare design treatment for the Weidler/Williams intersection for safe pedestrian and bicycle crossing
7. Develop design plans with TriMet for safe transit operations through the I-5 interchange area.
8. Complete traffic engineering studies and prepare traffic operation and design plans for the area north of Broadway, south of Wheeler Place and west of the freeway.

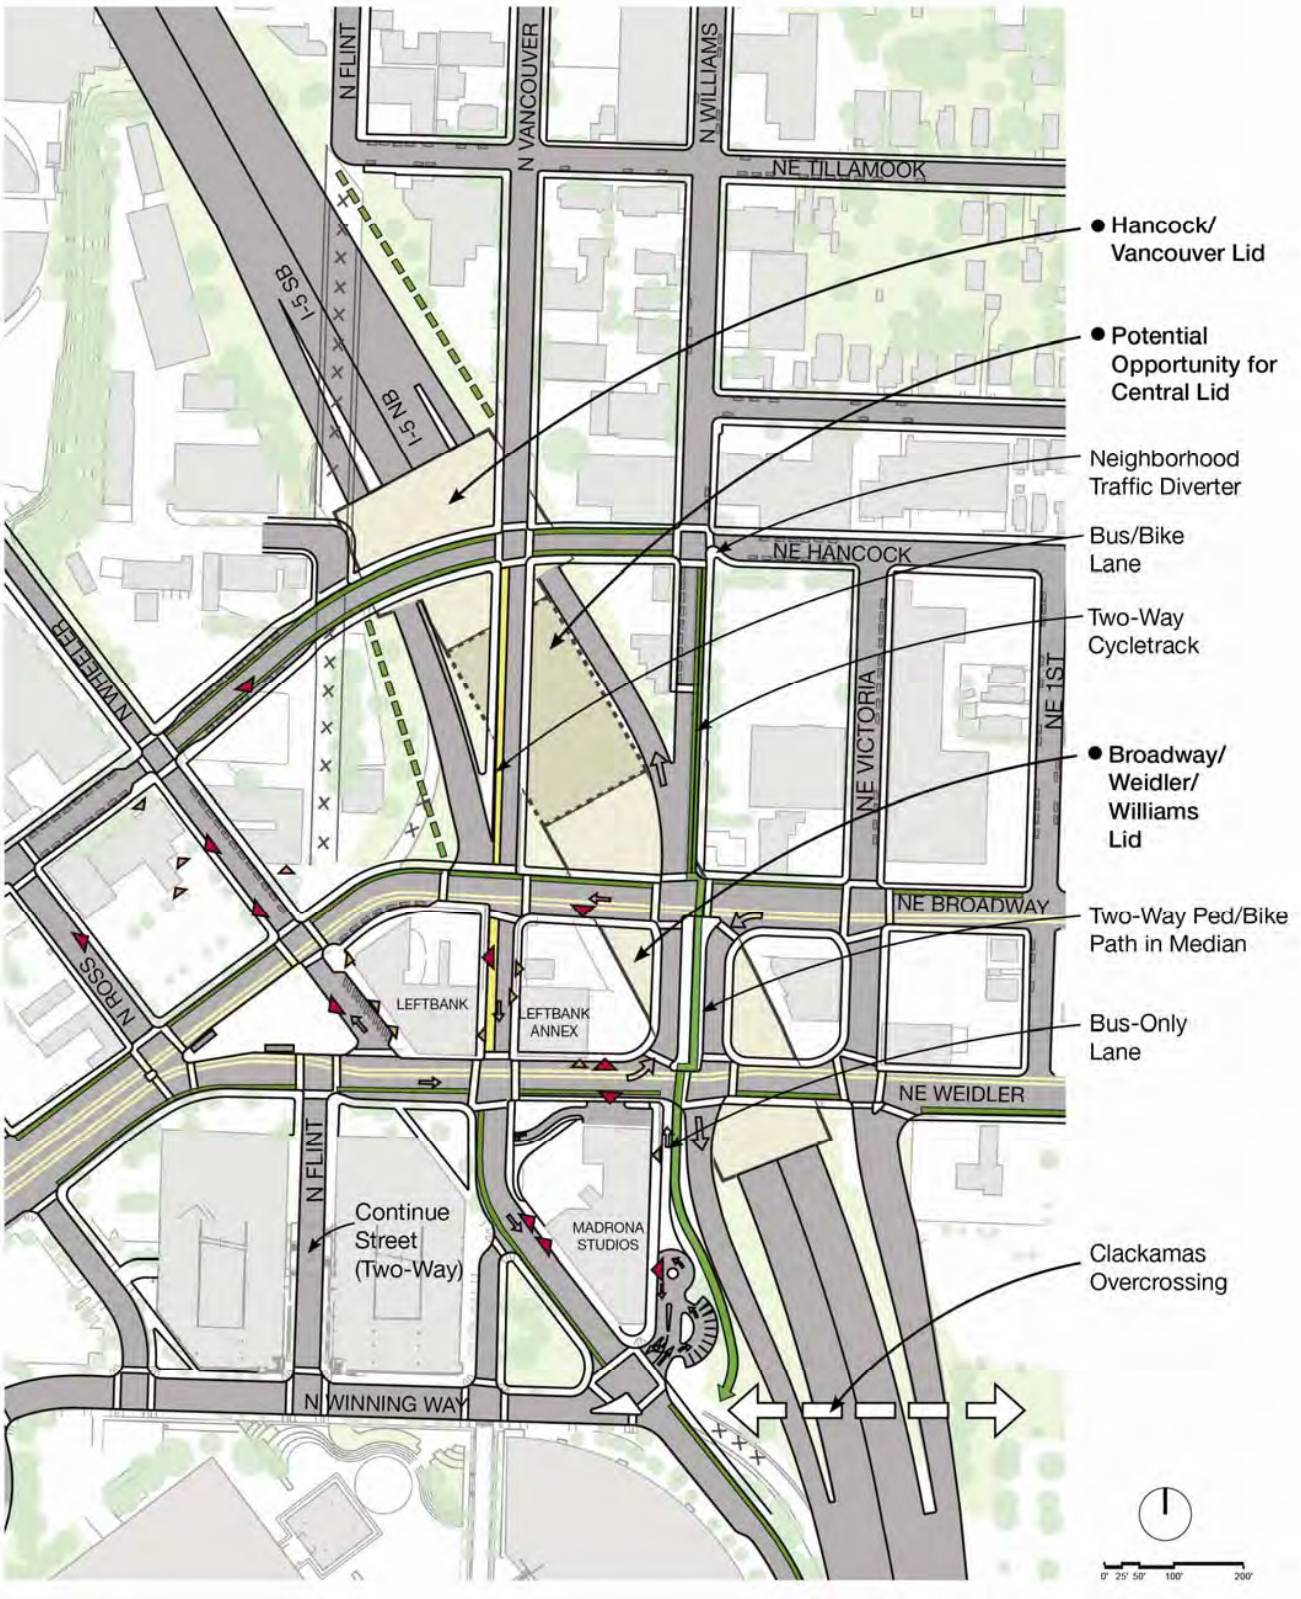


Figure 1: North of Broadway: Recommended Option 3 Modified (illustrative concept drawing)

Recommended North of Broadway Option for the I-5 Broadway/Weidler Interchange Improvements

I. INTRODUCTION

The Oregon Department of Transportation (ODOT), the City of Portland Bureau of Transportation (PBOT), and the City of Portland Bureau of Planning and Sustainability (BPS) are jointly managing a project that includes the preparation of a long-range plan for the overall N/NE Quadrant of the Portland Central City, the identification of specific improvements to I-5 between I-84 and I-405 (Fremont Bridge), and improvements to the Broadway/Weidler Interchange.
This staff report describes the recommended **North of Broadway Option** for the I-5 Broadway-Weidler Interchange Plan.

Summary of I-5: Broadway-Weidler Interchange Process and Actions

The project team has worked closely with the SAC to identify a wide range of freeway and interchange improvement concepts that could improve freeway safety and operations while ensuring compatibility with emerging long-range plans, while supporting economic development within the overall N/NE Quadrant. The range of freeway and interchange improvement concepts has been narrowed to a few of the most promising.. This Joint Staff Report recommends continued study on a few key concepts.

The process for identifying, evaluating, and narrowing the concepts has included several milestone actions by the SAC, including:

<u>Phase I: Background and Existing Conditions/Project Goals and Scope/Issues, Opportunities and Constraints</u>

1.	Adoption of project goals and objectives	SAC Meeting #4	January 4, 2011

<u>Phase II: Develop Concept Alternatives</u>

2.	Conduct freeway/interchange charrette		April 2011
3.	Narrowing from 70+ ideas to 13 concepts	SAC Meeting #6	May 26, 2011
4.	Narrowing from 13 concepts to 6 concepts	SAC Meeting #8	July 28, 2011

<u>Phase III: Analyze Alternatives and Select Recommended Concepts</u>

5.	SAC Meeting #10 review the	October 27, 2011	Review physical model of the six interchange concepts and summary of key findings.
6.	Subcommittee	December 8, 2011	The Subcommittee recommended the following: • Discontinue work on Concept 4a, the Split Diamond, and Concept 4b, the Folded Diamond. • Work to identify the best elements of each remaining concept (the Braided Ramp/CD Road, Rebuild the Structures, and the Three-Point Interchange) and include the identified elements in a hybrid concept.
7.	SAC Meeting #12	January 12, 2012	The SAC unanimously supported the subcommittee recommendation and directed staff to: • Discontinue further study of Concept 4a-the Split Diamond and 4b-the Folded Diamond. • Weigh SAC-identified benefits and concerns regarding proposed hybrid project elements.

8.	SAC Meeting #13	February 16, 2012	The SAC was presented with the Hybrid Base Project that included elements requiring further refinement based on technical assessments of bicycle and pedestrian operations, urban design/land use potential, traffic operations and safety. • The SAC supported the joint staff recommendation to move forward with the Hybrid Base Project (see list of Hybrid Base Project elements on page 6), and • Staff was directed to continue to analyze the four elements that required additional study.
Phase IV: Final Development of Plans			
9.	SAC Meeting #14	March 15, 2012	At the March 15, 2012, SAC meeting, staff presented the following hybrid element recommendations: • The Southbound Braided Ramps are not recommended for further refinement as part of the base hybrid project. • A multi-use path (MUP) immediately east of I-5 between Multnomah and Weidler is not recommended to be included in the project. • Continue work to ensure that a Clackamas Bicycle-Pedestrian Overcrossing could be integrated with a proposed development plan on the east side of the freeway. • Continue to refine and evaluate the North of Broadway options. The SAC supported the joint staff recommendation to move forward with the Hybrid Base Project and directed staff to continue to analyze and refine the North of Broadway options.
10.	SAC Meeting #15	April 10, 2012	Staff presented to the SAC additional refinements to the North of Broadway options based on a March 20th Work Session. • The SAC discussed the pros and cons related to each option for the May SAC recommendation.
11.	**SAC Meeting #16**	**May 10, 2012**	**Staff Recommendation on North of Broadway Option and DRAFT I-5 Broadway/Weidler Interchange Facility Plan**
12.	SAC Meeting #17	June 7, 2012	Extended Public Comments and SAC Action on the I-5 Broadway/Weidler Interchange Facility Plan.
13.	SAC Meeting #18	June 28, 2012	Extended Public Comments on the North/Northeast Quadrant Plan and the SAC's Direction on the Quadrant Plan
14.	SAC Meeting #19	August 2, 2012	SAC Final Action on the North/Northeast Quadrant Plan

Phase V: Adoption and Approval Process

15. ODOT Public Comment period in July-August

16. City of Portland: Planning and Sustainability Commission Public Hearing: September 2012

17. City of Portland: City Council Public Hearing and Action: October 2012

18. Oregon Transportation Commission Action: December 2012

II. Summary of the Hybrid Base Project and Elements for Refinement

The project team developed and refined a Hybrid Base Project (supported by the SAC at its February meeting) and identified additional elements for further study based on technical assessments of bicycle and pedestrian operations, urban design/land use potential, traffic operations, and safety. In March, the SAC agreed that the Southbound Braided Ramps and a multi-use path on the eastside of the freeway should not be included in this project. ODOT and the City of Portland have continued to jointly identify areas of agreement on how to proceed to further develop the Hybrid Base Project. The North of Broadway area, illustrated in Figure 1, is the final element for SAC review and action.

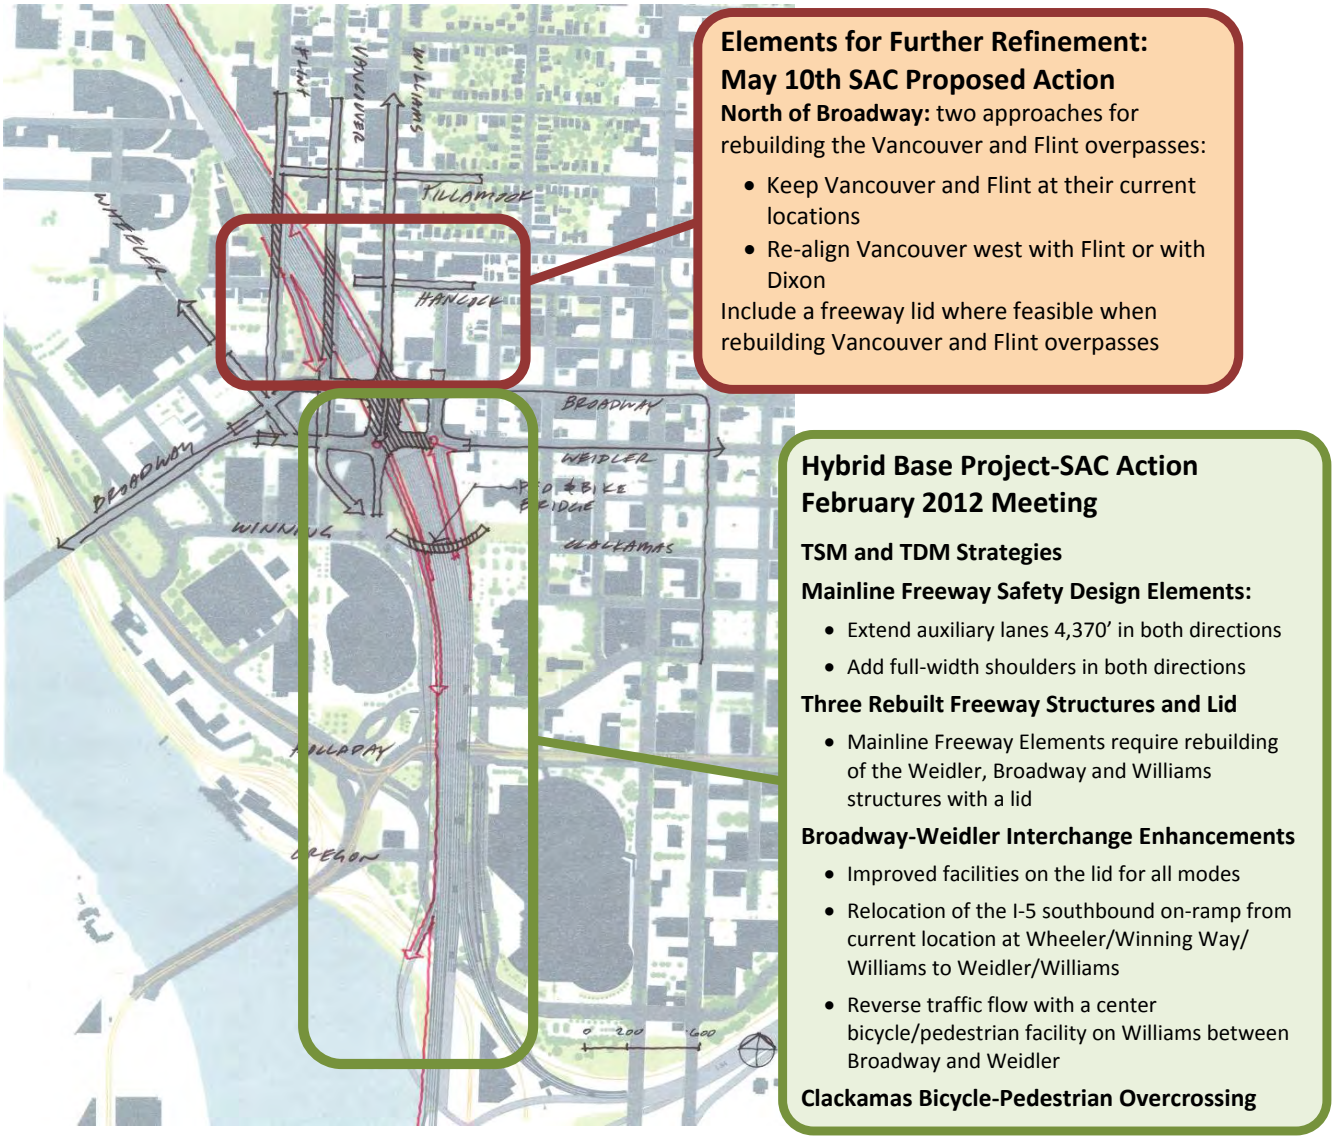

Figure 2: Hybrid Base Project and Elements for Further Refinement

III. North of Broadway Options Overview

North of Broadway: Vancouver/Flint/Hancock Overcrossing/Lid

In addition to overall operational improvements to the interchange, the I-5 Broadway/Weidler Interchange project presents a unique opportunity to improve the local street system just north of Broadway. Because the Flint and Vancouver structures over the freeway must be rebuilt as part of the project, they could be configured in a different manner. All options under consideration would work with the other major elements of the Hybrid Base Project. All new structures would meet current design standards for seismic safety, sidewalks and bike lanes where applicable. All rebuild proposals would improve conditions as compared to the "No-Build" option.

Box around "The Box"

Early in the concept alternative development process, the opportunity was identified to create supplemental safe, pleasant, walkable, and bikeable connections around the intersections of Broadway, Weidler, Williams, and Vancouver (often referred to as "the box"). While the proposed Hybrid Base Project significantly improves pedestrian, bicycle and vehicle conditions in the central part of the box, there will still be heavy traffic and frequent congestion. Rebuilding the structures as part of the interchange improvement project presents the opportunity to establish a circumferential network of local streets and pedestrian/bicycle connections that would offer alternative travel options that would avoid travel through the "Box."

North of Broadway Options:

1. **Rebuild**
   This option would remove and rebuild the existing freeway overcrossings in their current locations.
2. **Optimized Rebuild**
   This option would rebuild the existing freeway overcrossings at Flint and Vancouver in their current locations, with a new two-way connection between Flint and Dixon at Wheeler. Flint would be closed between Dixon and Broadway. Wheeler would be signalized at Broadway as a 4-legged intersection.
3. **Vancouver + Hancock/Dixon**
   This option would remove the existing Flint overcrossing and rebuild the Vancouver overcrossing in its current location, while providing a new east-west overcrossing that connects Hancock to Vancouver and Dixon. Traffic calming measures at Williams and Hancock would be included to mitigate any traffic impacts to the Eliot neighborhood east of Williams. With this option, a new lid could be built over the freeway. Flint would be closed between Tillamook and Broadway. Wheeler would be signalized at Broadway with options to retain the existing alignment to Weidler or connect with Flint in a north-south alignment through Weidler to Winning Way.
4. **Flint**
   This option would replace the existing Flint and Vancouver freeway overcrossings with a single, new overcrossing connecting Vancouver, Hancock, and Flint at a three-point intersection on a lid over the freeway. The new overcrossing would provide a local street connection with Hancock to the east and west. Flint would be closed between Tillamook and Hancock. Flint would be signalized at Broadway and continue in a direct alignment through Weidler to Winning Way. Access to Wheeler from Broadway would likely need to be closed for safety and to allow Flint at Broadway to be signalized as a 4-legged intersection.
5. **Dixon**
   This option would replace the existing Flint and Vancouver freeway overcrossings with a single new overcrossing connecting Vancouver, Hancock and Dixon at a three-point intersection, on a lid, over the freeway. The new overcrossing would provide a local street connection with Hancock to the east and west and Dixon to the west. Vancouver would be closed between Hancock and Broadway. Flint would be closed to motor vehicle traffic between Tillamook and Broadway. A pedestrian/bike connection could be retained along Flint in this segment. Wheeler would be signalized at Broadway with options to retain the existing alignment to Weidler or connect with Flint in a north-south alignment through Weidler to Winning Way.

Summary of Findings

The following section summarizes the evaluation of the North of Broadway options. Table 1 presents the summary of the key findings and Table 2 presents the summary evaluation matrix.

Methodology

The project technical team consisted of staff from ODOT, PBOT, BPS and consultant team members from URS, Alta, DKS and ZGF. The team collaborated to complete the technical evaluation of the options and the matrix.

The each option was evaluated on a (Likert) scale from -5 (minus five) to +5 (plus five). Option 1. Rebuild was used as a baseline for comparison to the alternatives and was represented as "0" to allow for the evaluation of the pros and cons of the alternative options. Each option was then evaluated based on the defined criteria. If a particular option was evaluated as having decreased utility over existing conditions, it received a negative score. If the evaluation indicated an improvement over exiting conditions, it received a positive score.

Table 1: Summary of Key Findings: North of Broadway Options

Option	Pros	Cons
Option 1. Rebuild	• Base case.	• Base case.
Option 2. Optimized Rebuild	• Local street connection between Flint and Dixon, provides access to redevelopment area north of Broadway. • Removes Flint between Hancock and Broadway. Provides open space and redevelopment opportunities, and limits private property impacts.	• No significant difference.
Option 3. Vancouver + Hancock/Dixon	• Strengthens connections between Vancouver/Williams area and the Lloyd District and Rose Quarter. • Highest street connectivity and directness of travel for all modes. • Collector street (Vancouver) connections to redevelopment areas north of Broadway. • Additional freeway lid opportunity with Hancock+Dixon connection. • Street connectivity provides best for potential uses of freeway lid access. • Opportunity for single large freeway lid.	• Maintains 5-legged intersection at Vancouver/Broadway. • Longest traffic queues on I-5 off-ramp. • Longest traffic queues on Vancouver. • Wide crossing of Vancouver at Broadway.
Option 4. Flint	• Eliminates 5-legged intersection at Vancouver/Broadway. • Option 4 and 5: shortest I-5 southbound off-ramp queues. • Option 4 and 5: shortest traffic queues on Vancouver. • Option 4 and 5: shortest intersection width at Vancouver/Broadway. • Options 4 and 5 create opportunities for a larger lid with Hancock+Dixon connection than Option 3. • Opportunity for single large freeway lid.	• Closes Wheeler north of Broadway; significant access impacts to Paramount Apts. and Lower Albina. • Reduces street connectivity and out-of-direction movement for all modes using Vancouver. • Limited access to uses on potential freeway lid, difficult to activate the space. • Higher likelihood of traffic diversion in Eliot neighborhood (eastbound). • Increased travel time and safety conflicts for TriMet buses on Vancouver. • Greater event traffic impacts to Left Bank
Option 5. Dixon	• Eliminates 5-legged intersection at Vancouver/Broadway. • Option 4 and 5: shortest I-5 southbound off-ramp queues. • Option 4 and 5: shortest traffic queues on Vancouver. • Option 4 and 5: shortest intersection width at Vancouver and Broadway. • Options 4 and 5 create opportunities for a larger lid with Hancock+Dixon connection than Option 3. • Opportunity for a single large freeway lid.	• Reduce street connectivity and out-of-direction movement for all modes using Vancouver. • Limited access to uses on potential freeway lid, difficult to activate the space. • Highest traffic diversion in Eliot neighborhood for eastbound traffic. • Increased travel time and safety conflicts for TriMet buses on Vancouver.

Table 2: Summary Evaluation Matrix: North of Broadway Options

Criteria	1. Rebuild	2. Optimized Rebuild	3A. Vancouver + Hancock/Dixon	3B. Vancouver + Hancock/Dixon	4. Flint	5A. Dixon	5B. Dixon
A. Land Use and Urban Design Criteria							
1. Connectivity: Improves the connectivity of the surface street system between and within the N/NE Quadrant and its adjacent districts. a. Reinforces the Broadway Corridor as the major east-west high-density mixed-use corridor. b. Strengthens the commercial spine connections between Williams/Vancouver and the Lloyd District. c. Improves the overall connectivity and provides multiple pathways for safe and convenient access to avoid the high-traffic environment at the freeway interchange.	0	0	3	3	-1	0	0
2. Developability/Opportunities: Enhances development opportunities to support the proposed land use, density and character of the district.	0	2	3	3	2	3	3
3. Open Space: Expands the role and use of open space as a district system amenity.	0	1	1	1	0	1	1

IV. NEXT STEPS

The SAC is near the end of the planning process for completing the North/Northeast Quadrant Plan and the I-5 Broadway/Weidler Interchange Facility Plan. The following summarizes the schedule:

Meeting #17: June 7, 2012 At this meeting, the SAC will have extended public comments on the I-5 Broadway/Weidler Interchange Facility Plan and will be asked to take action.

Meeting #18: June 28, 2012 At this meeting, the SAC will have extended public comments on the North/Northeast Quadrant Plan and will be asked to provide direction on the Quadrant Plan

SAC Meeting #19: August 2, 2012 At this meeting, the SAC will be asked to take final action on the North/Northeast Quadrant Plan.

Section Agenda

- Overview
- Recommended Option
- Pros/Cons
- Discussion

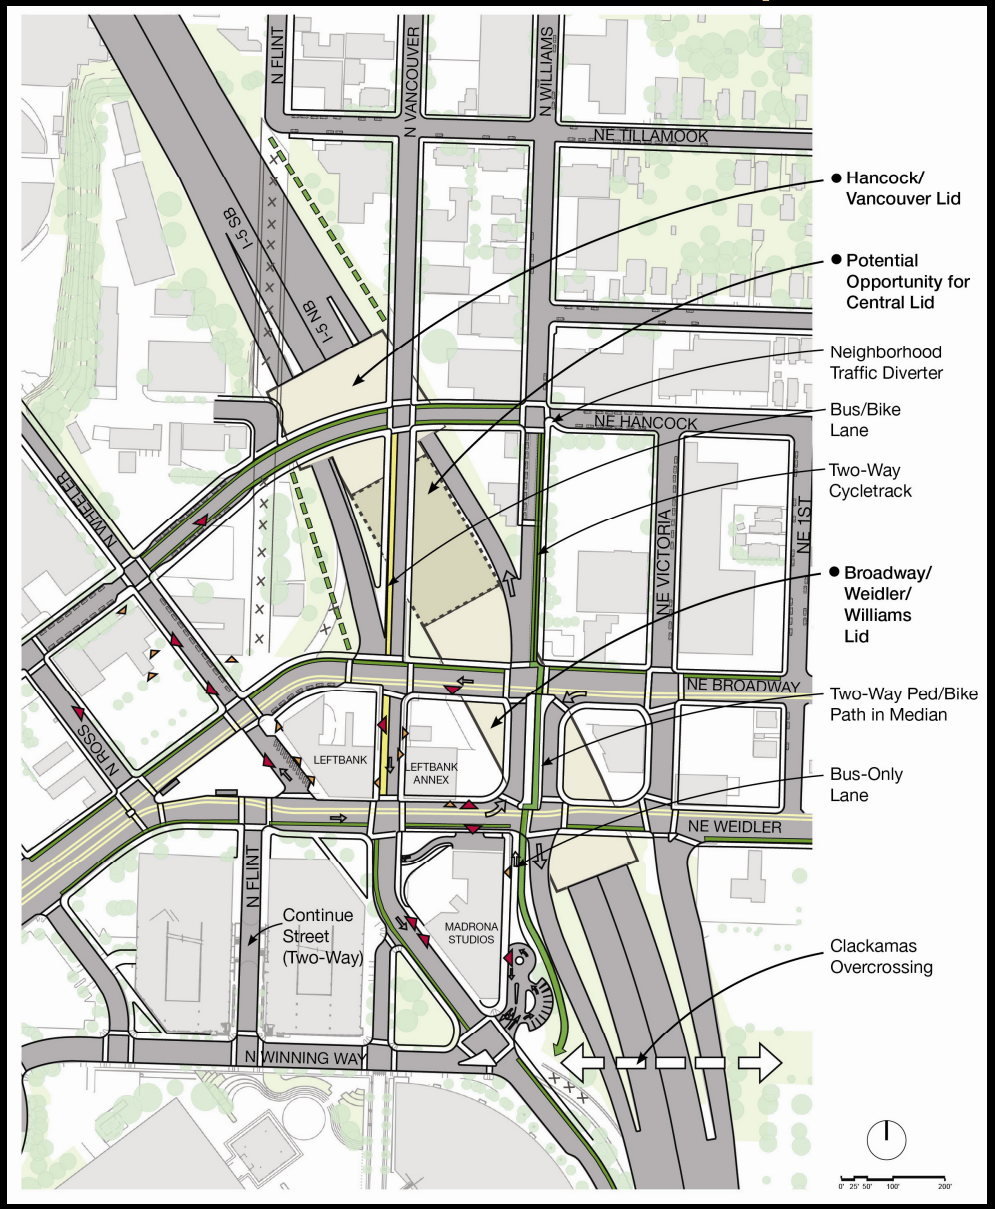
North of Broadway Options

1. **Rebuild**
2. **Optimized Rebuild**
3. **Vancouver + Hancock/Dixon**
   - With Wheeler sub-option
   - With Lid sub-options
4. **Flint**
   - With Lid sub-options
5. **Dixon**
   - With Wheeler sub-option
   - With Lid sub-options

Considerations

- Vancouver Options to keep or move:
  - Unique Opportunity to change local street system safer operations.
  - Box around the "The Box"- opportunity to provide for alternative and less stressful routes.
  - Economic development opportunities
- Options with Freeway Lid to provide opportunities for neighborhood amenities and improved ped/bike facilities.

North of Broadway: Options Evaluation Criteria



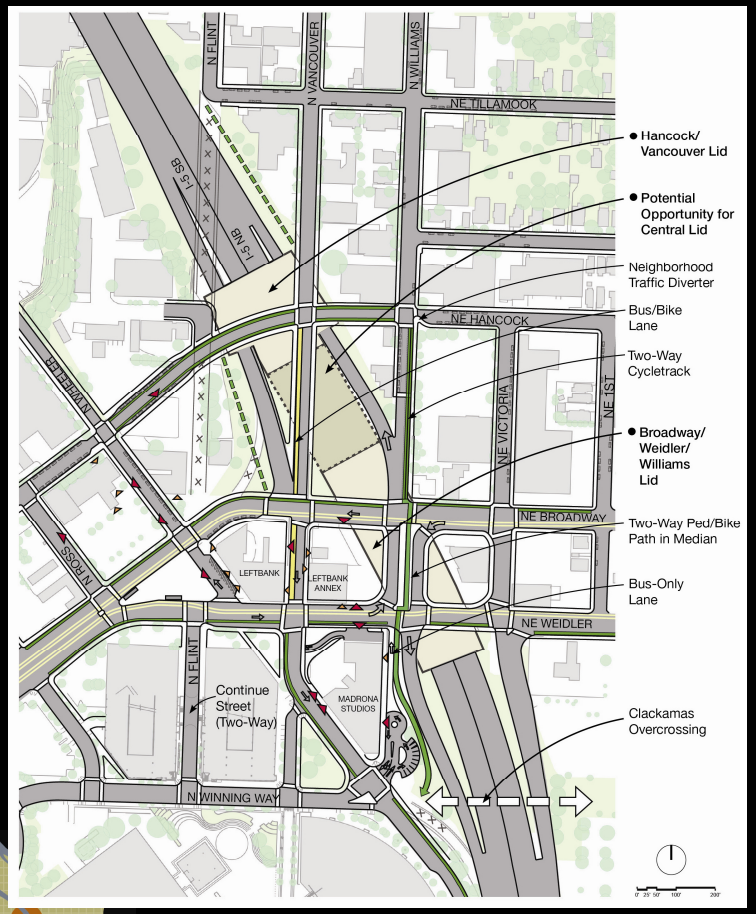
- Connectivity
- Developability/Opportunities
- Open Space
- Safety & Mobility

CENTRAL CITY 2035

Recommended Option

Option 3.

Vancouver + Hancock/Dixon



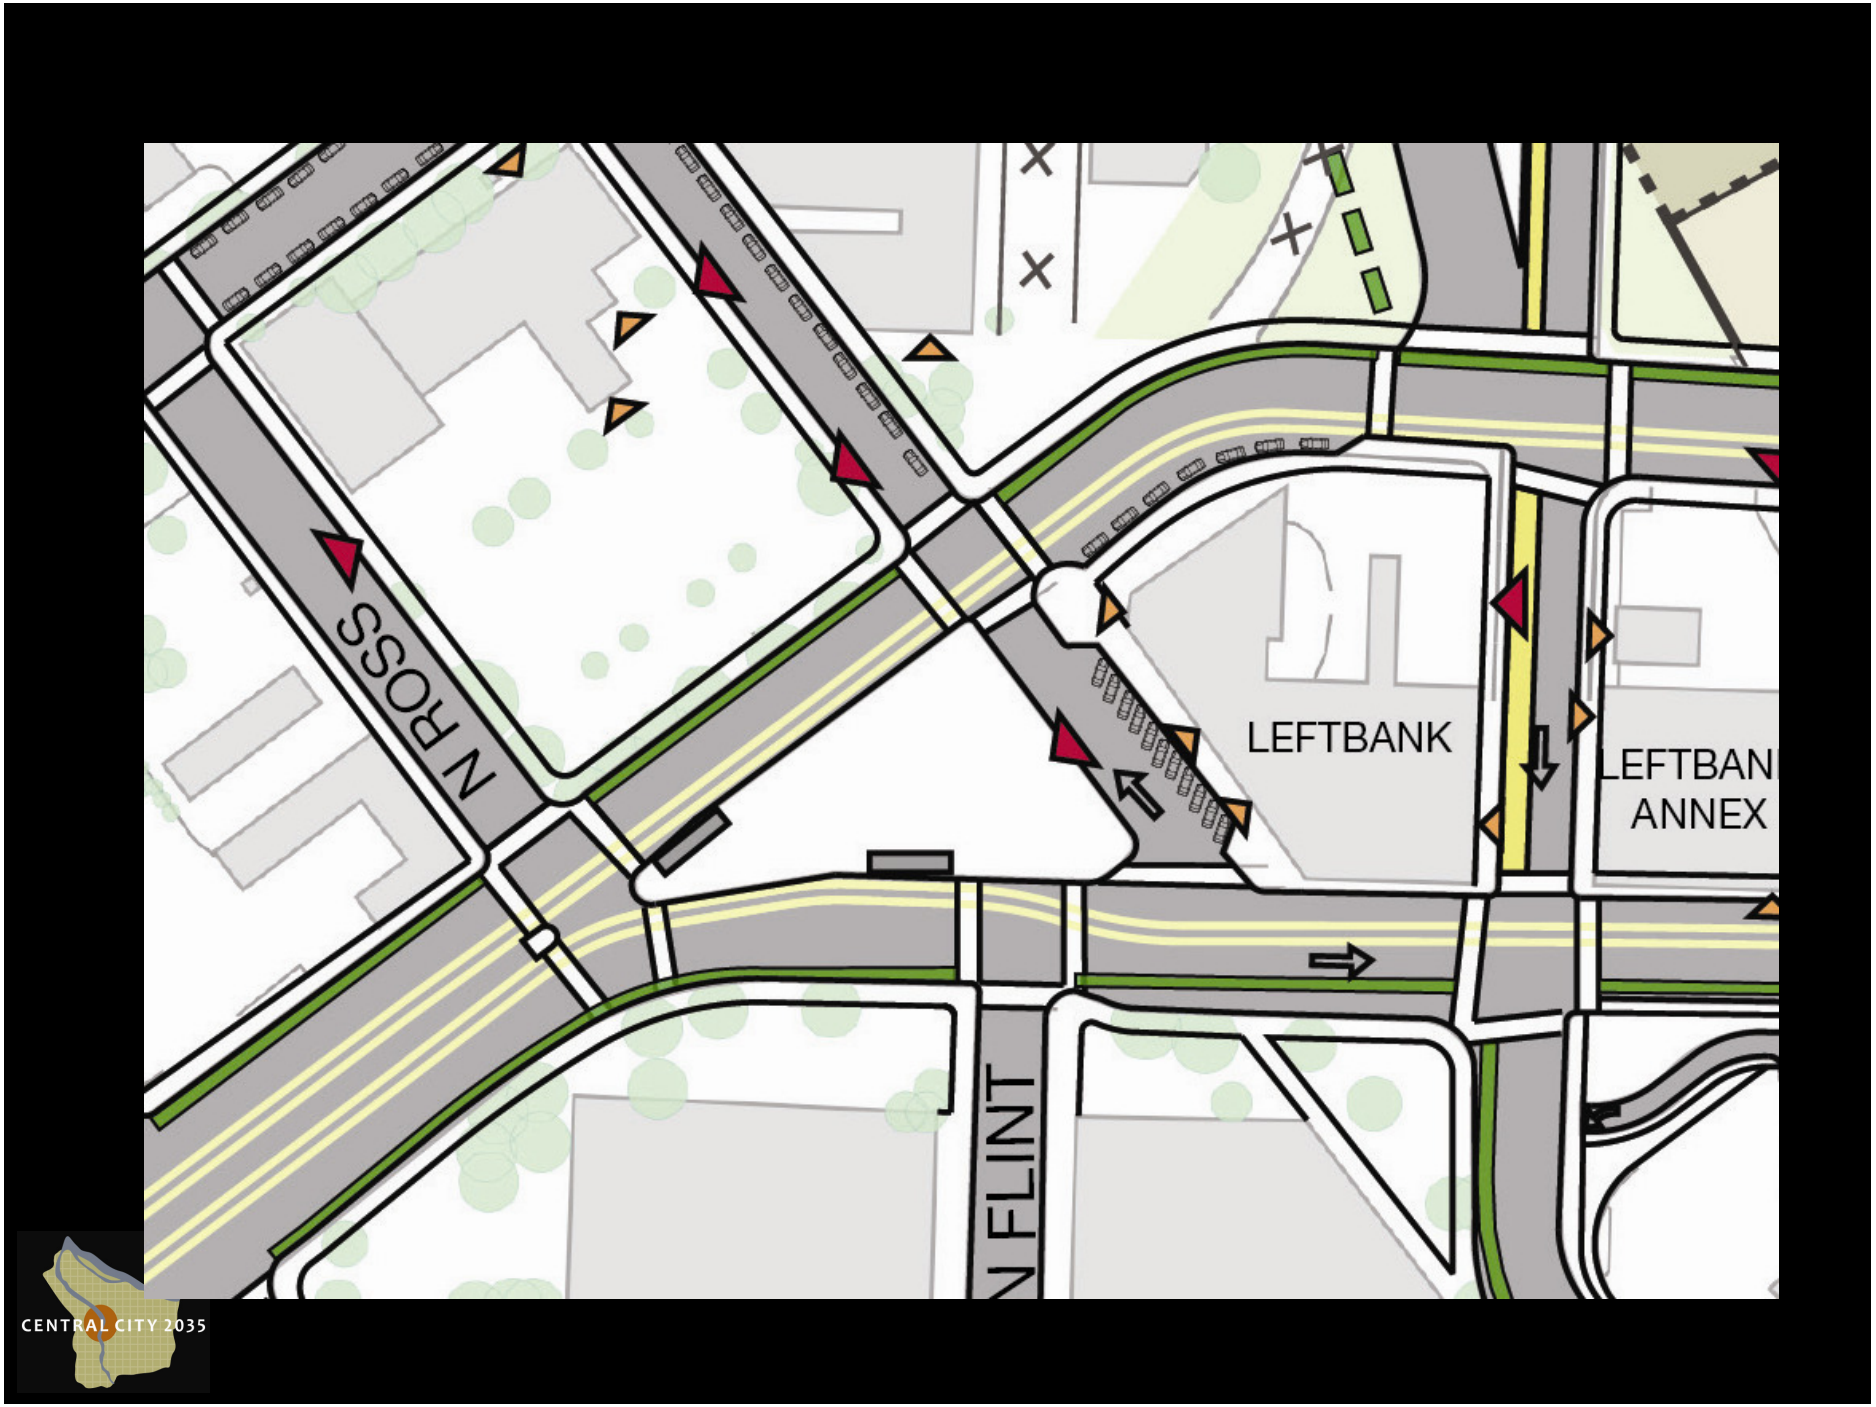
CENTRAL CITY 2035

55791

Recommended Option

Option 3.

Vancouver + Hancock/Dixon

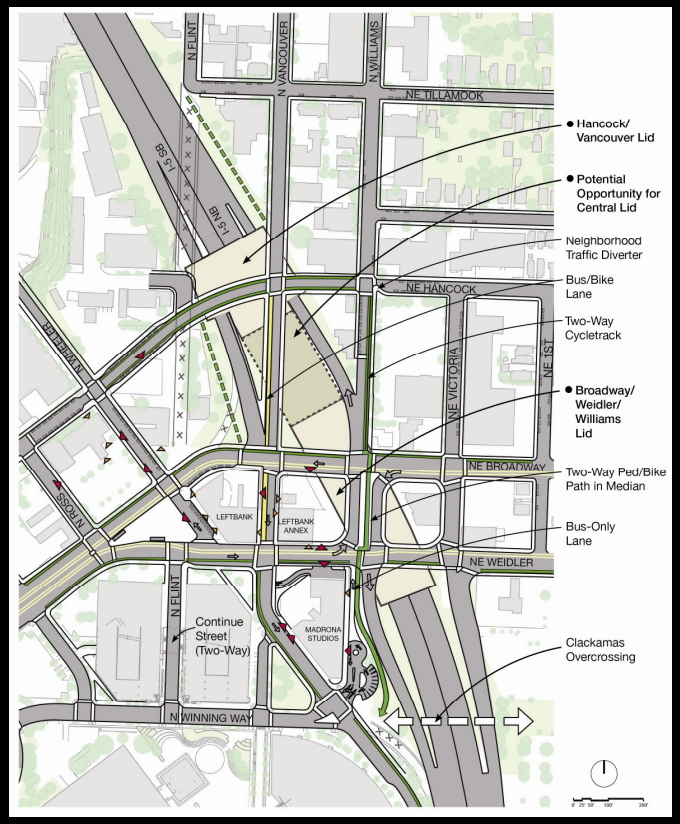


Retains 5-leg intersection @ Vancouver/Broadway

Eliminates Flint at Broadway, potential new signal at Wheeler & Broadway and Ross & Broadway

New east-west local connection at Hancock & Dixon

CENTRAL CITY 2035



55793

Recommended Option

Option 3.

Vancouver + Hancock/Dixon

CENTRAL CITY 2035

PROS

Could accommodate optional freeway lid concepts

Highest street connectivity and directness of travel for all modes

Provides opportunities to travel "around the box"

Maintains current access to Lower Albina via Wheeler

CONS

Risk of some neighborhood traffic diversion (to be mitigated)

Wait time on Vancouver at Broadway remains

Queuing on off ramp (to be mitigated)

N/NE Quadrant and I-5 Broadway/Weidler Plans

Facility Plan Report

I-5 Broadway/Weidler Interchange Improvements

May 10, 2012

Informational/Discussion
DRAFT

The N/NE Quadrant and I-5 Broadway/Weidler Plans Project is a collaborative effort by the City of Portland and the Oregon Department of Transportation to integrate urban design and land use planning with freeway planning and concept-level engineering in the North/Northeast portion of the Central City, which includes Lower Albina and the Lloyd District.

Facility Plan Report:
I-5 Broadway/Weidler Interchange Improvements

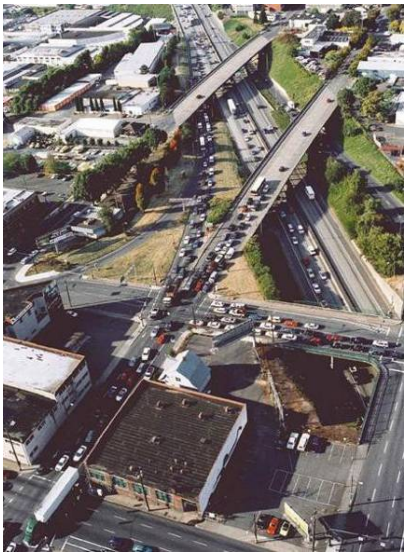
The overall project purpose is to...

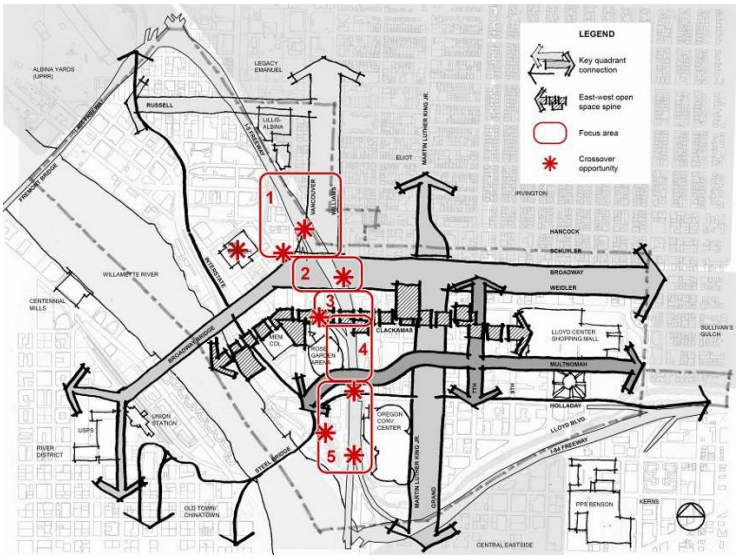
Improve safety and operations on I-5 in the vicinity of the Broadway/Weidler interchange.

OBJECTIVES INCLUDE:

EASE CONGESTION LEVELS AND IMPROVE SAFETY:

- Congestion can be reduced through a variety of measures. Workable solutions will be explored through the Stakeholder Advisory Committee (SAC) and public outreach.





ENHANCE PEDESTRIAN AND BICYCLE ROUTES:

- Through public input, the SAC process and in partnership with the City, ODOT will look for ways to improve pedestrian and bicycle movements and facilities over and under the freeway system.

IMPROVE FREIGHT MOVEMENT:

- Freight requires highways to have sufficient capacity, good reliability and good geometrics for turning, stopping and other movements.

Integration of Transportation and Land Use Concepts in the N/NE Quadrant Plan

The N/NE Quadrant Plan Concept calls for continued success and development of the existing major regional facilities and significant future growth and development in the Rose Quarter, the Lloyd District and Lower Albina. The I-5 improvements help support this growth by improving freeway reliability and safety in the area.

I-5 Broadway/Weidler Interchange Improvements

1. Introduction (The Story)

Purpose of the Facility Plan

State of Oregon agencies prepare facility plans for state-owned infrastructure so that they and decision-makers may effectively manage, maintain and prioritize potential additions to or expansion of this infrastructure. Chapter 6 of this document represents an early discussion draft of a facility plan, detailed in Section 6, that Oregon Department of Transportation (ODOT) staff would present to the Oregon Transportation Commission (OTC) regarding potential improvements to Interstate 5 (I-5) in the area around the I-5 Broadway/Weidler Interchange. This facility plan would represent and confirm, if adopted by the OTC, the state's long-range intent relative to this section of I-5 and the I-5 Broadway/Weidler Interchange.

Combining Land Use and Transportation Planning

Portland is nationally recognized for innovations linking land use and transportation planning. Portland's Downtown Plan, adopted in 1972, and the Central City Plan, adopted in 1987, established a framework for land use and transportation within the central city. In the summer of 2010, ODOT, the City of Portland Bureau of Transportation (PBOT) and the City of Portland Bureau of Planning and Sustainability (BPS) initiated a partnership to begin co-developing land use and transportation concepts for the north/northeast quadrant of the central city (N/NE Quadrant) through an iterative effort involving the public and area stakeholders. The project includes identifying specific improvements to I-5, between Interstate 84 (I-84) and Interstate 405 (I-405) at the Fremont Bridge, and improvements to the I-5 Broadway/Weidler Interchange.

This joint effort represents a new land use-transportation approach in planning improvements to urban freeway interchanges. This approach combined the planning of local strategies for land use, urban design and local transportation improvements with the planning of interstate freeway improvements. The project's approach for freeway improvements was to address existing, not future, issues. Freeway improvements were to focus also on safety and reliability issue and not on adding capacity to meet demand. This plan aims to better manage congestion but not eliminate it.

A comprehensive public process, including a 29-person stakeholder committee with bicycle, neighborhood, business, freight, rail, event and property owner representation, was undertaken with the City. This included several outreach events in the community, community walks and many briefings with potentially affected parties. See Section 2 for additional detail of the plan's public development process.

DRAFT

5. Description of the Recommended Alternative

Description of the Elements of the Recommended Alternative

1. **Implement Transportation System Management (TSM)** and **Transportation Demand Management (TDM)** strategies
2. **Construct Mainline Freeway Safety Elements**
    a. Extend auxiliary lanes 4,370 feet in both directions
    b. Add full-width shoulders in both directions
3. **Reconstruct Three Freeway Structures and Lid**
4. **Relocate Southbound I-5 On-Ramp to Weidler/Williams**
5. **Convert Williams to a Reverse Traffic-Flow Connection between Broadway and Weidler**
6. **Construct Clackamas Bike-Pedestrian Overcrossing**
7. **Reconstruct the Vancouver Structure; Remove the Flint Structure; Reconfigure Streets North of Broadway to Include Hancock/Dixon Structure and Lid**
8. **Possible Future Items**
    a. Central lid flanking Vancouver structure
    b. Southbound braided ramp with description of when to reanalyze

Informational/Discussion DRAFT

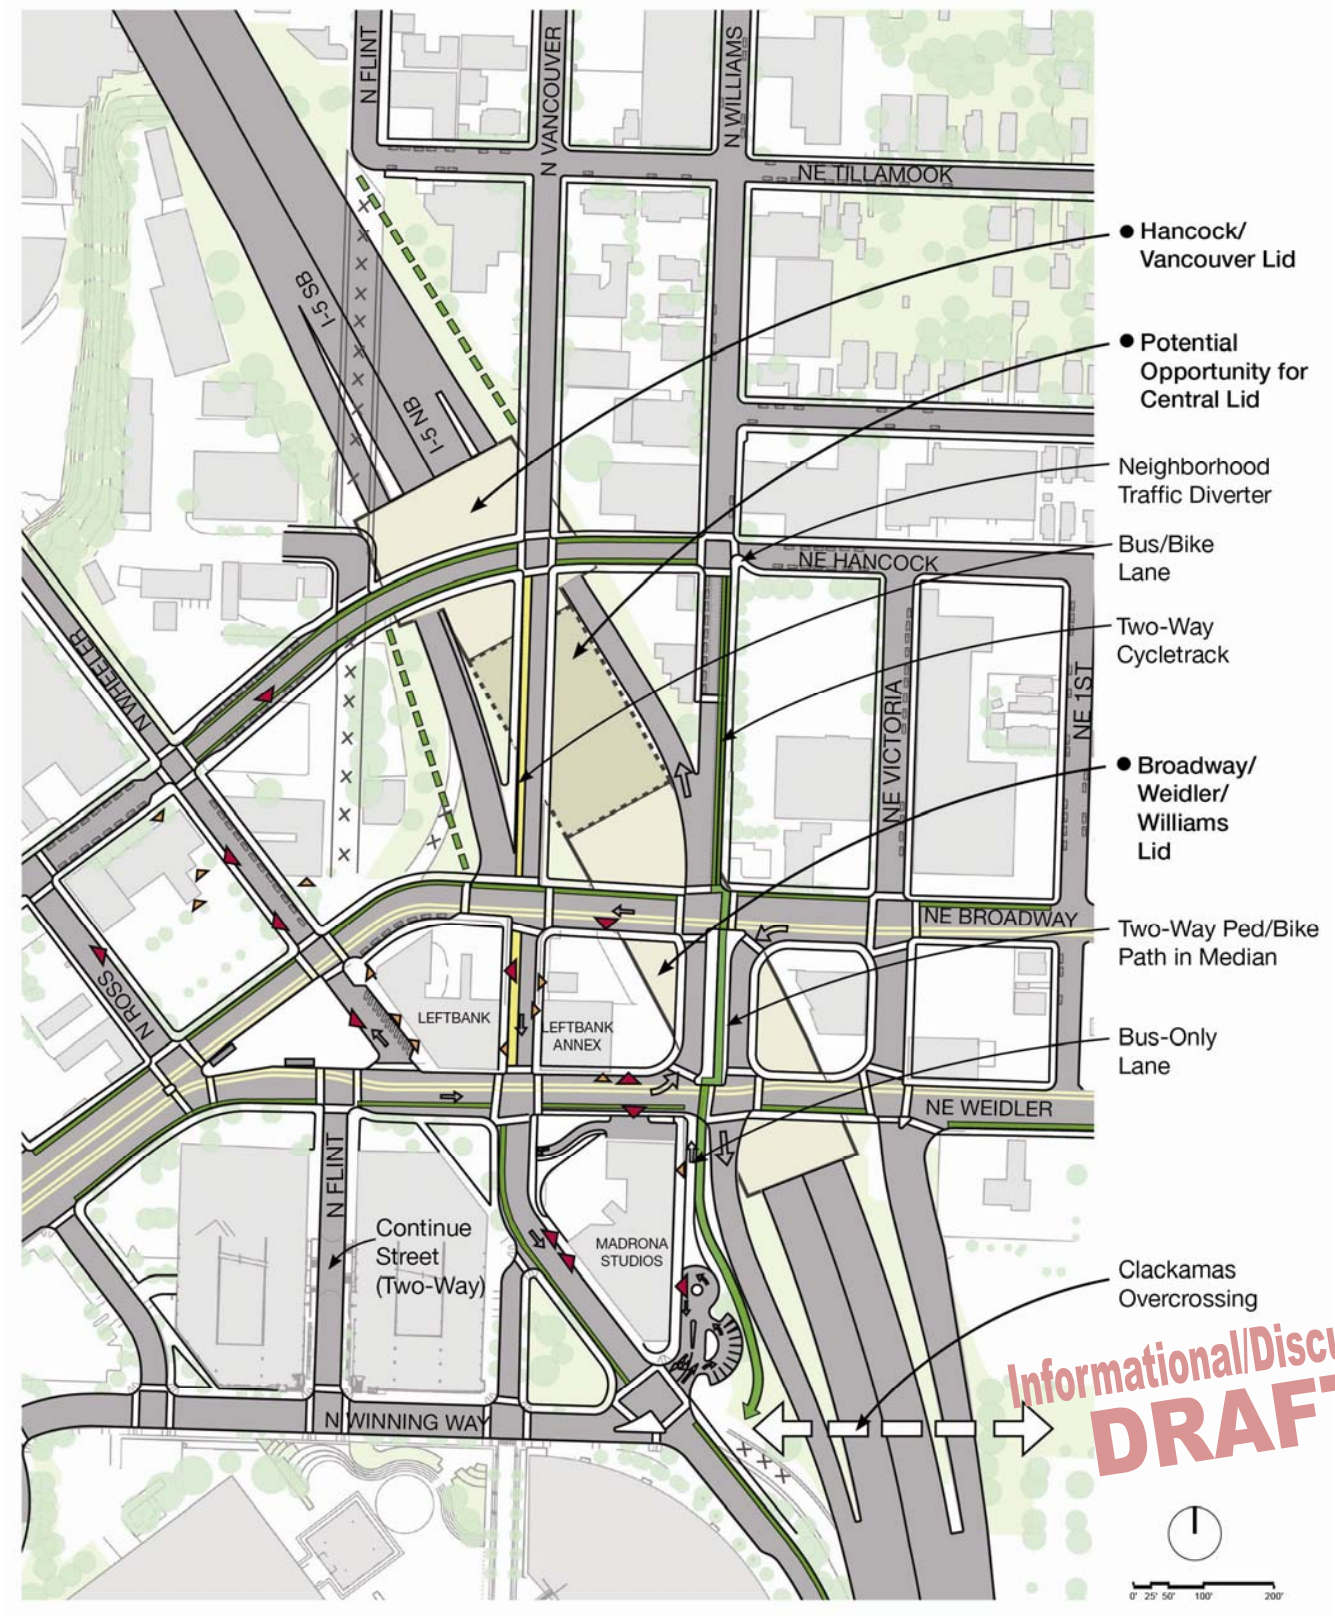

Figure 2: Enlarged "Box" Area of the Recommended Alternative

6. The Facility Plan

Study Area

The project Study Area is at the crossroads of the Portland freeway system, as shown in Figure 3. I-5 is the north-south freeway facility and extends through the metropolitan area; in fact, it runs the full length of the U.S. west coast, from Canada to Mexico. Within the project area, I-84 intersects I-5 and extends east across the U.S. A mile and a quarter north of I-84, I-405 connects to I-5 at the Fremont Interchange. This interchange is the northerly connection of the I-405 loop around the west side of downtown Portland, with the southerly connection at the west end of the Marquam Bridge. Within the overlap section, I-5 serves through traffic as well as connecting traffic between I-84 and I-405.

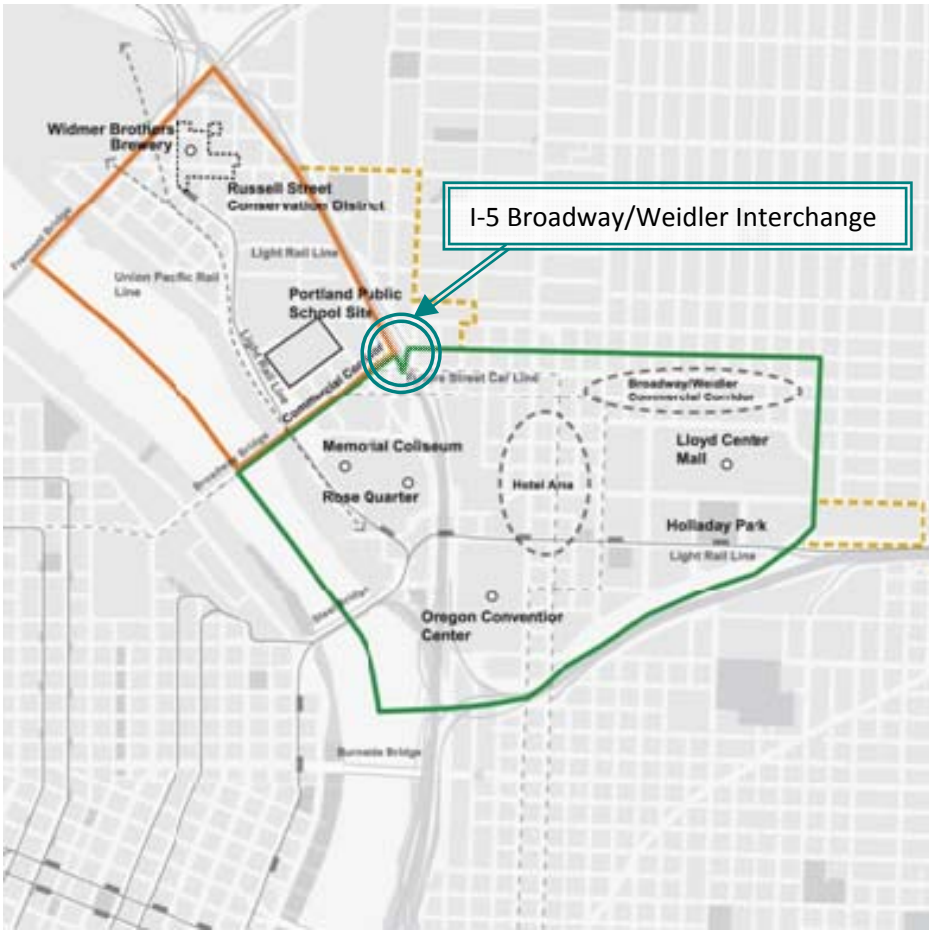

Figure 3: I-5 Broadway/Weidler Interchange Area

Informational/Discussion DRAFT

Facility Function

- I-5 is classified as an Interstate facility and is both a Freight Route and a Truck Route.
- I-84 is classified as an Interstate facility and is both a Freight Route and a Truck Route.
- I-405 is classified as an Interstate facility and is both a Freight Route and a Truck Route.

Interchange Function

The I-5 Broadway/Weidler Interchange is located on I-5, in between I-405 to the north and I-84 to the south. The function of the I-5 Broadway/Weidler Interchange is to serve the Portland central city, which includes the industrial area of Lower Albina and the commercial activity along the Broadway/Weidler corridor, regional attractions, such as the Rose Garden Arena and the Lloyd Center mall, and the surrounding community.

Purpose

The purpose of the I-5 Broadway/Weidler Plan is to improve the safety and operations on I-5 in the vicinity of the I-5 Broadway/Weidler Interchange.

Need

Highest Accident Rate in the State of Oregon

Collision data was collected along I-5 over the past five years and analyzed based on the frequency of collisions (number of collisions that occur) and on collision rate (number of collisions per million annual vehicles).

- High crash rates create frequent safety and traffic problems
    - SB for the five-year period had 292 crashes
    - NB for the five-year period had 180 crashes

Operational Friction and Congestion Caused by Heavy Weaving

Short weave distances contribute to safety and operational problems

- There are currently 30,000 on and off movements in this area
- I-84 to Broadway/Weidler Interchange weaves are very bad today and forecast to worsen in the future
- Broadway/Weidler Interchange to I-405 weaves are marginal today and forecast to worsen
- Poor weaving conditions result in:
    - High crash rates
    - Slow speeds
    - Congestion

Volumes

The segment of I-5 from Broadway to I-405 operates at level-of-service (LOS) C in the AM peak hour and LOS C and D (depending on the direction) in the PM peak hour. The Wheeler to I-84 segment is typically at level-of-service F in both the AM and PM peak hours with the exception of northbound during the PM peak which is level-of-service E. The lower level of service for the Wheeler to I-84 segment can be attributed to the shorter distance to perform weaving maneuvers with approximately 1,300 feet in comparison to the Broadway to I-405 segment that has approximately 1,075 to 2,060 feet (depending on the direction).

Vision of Area

Big picture of how area will look 20-30 years from now

The Study Area will look and feel very different than today.

Changes to land use section.

Changes to transportation section.

Informational/Discussion
DRAFT

The Land Use-Transportation Connection

Land use and transportation are in balance. Proposed changes to land use designations will reduce auto demand and provide a more mixed-use multimodal environment.

The N/NE Quadrant of the central city includes multiple transportation modes and has considerable multimodal infrastructure to support them [rephrase]. In addition to the I-5 freeway and the local street network, four light rail transit (LRT) lines run through the area, converging on the Rose Quarter Transit Center next to the Rose Garden Arena. The City of Portland is constructing streetcar lines on Broadway/Weidler to connect with the Pearl District and the central east side of Portland. Eight TriMet bus lines also connect at the transit center.

The I-5 Broadway/Weidler Plan proposes many new crosswalks that will improve pedestrian safety and connections to and from these major transit amenities. Two major bicycle commute routes run through the area: the major east-west route along Broadway and Weidler, and the major north-south route along Williams and Vancouver. The plan also proposes a new east/west bicycle/pedestrian overcrossing at Clackamas to connect the Lloyd District with the Rose Quarter.

The Lloyd Transportation Management Area (TMA) is one of the most successful TMAs in the Portland metropolitan region. The area is currently predominantly commercial and industrial, however the proposed changes to land use designations in the N/NE Quadrant Plan will encourage a much greater mix of uses, especially in the central Lloyd District where significant density and mix of uses are anticipated.

The changes related to land use and the transportation recommended by this plan have been analyzed, and queues are not anticipated on the I-5 exit ramp deceleration areas (see Table 1). The City of Portland and ODOT have jointly developed this freeway and local transportation plan, and have integrated the transportation and land use components. The transportation components were developed assuming existing zoning, except for changes at the Portland Public Schools (PPS) Blanchard site and some changes to allow more diverse uses in the central Lloyd District. The overall trip vehicle trip generation for the district is expected to be the same or lower than under previous zoning entitlements.

These plans are within ¼-mile of an existing interchange, and ODOT staff concurs that the mixed-use Multi-Modal Area (MMA) designation is appropriate [explain term]. ODOT must be consulted in the future prior to plan amendments within the MMA boundary.

Table 1: Available Storage and Predicted Queues for Exit Ramps at I-5 Broadway/Weidler Interchange

Direction	Storage Available	Predicted Queue
Southbound		
Northbound		

Informational/Discussion
DRAFT

Table 2: I-5 Broadway/Weidler Interchange Recommended Alternative Facility Plan Elements

Facility Plan Elements	Outcome
1. Implement Transportation System Management (TSM) and **Transportation Demand Management (TDM)** strategies	Improve freeway operations and reduce automobile trips.
2. Construct Mainline Freeway Safety Elements	Improve freeway operations and reduce accidents 30-50 percent.
a. Extend auxiliary lanes 4,370 feet in both directions.	
b. Add full-width shoulders in both directions.	
3. Reconstruct Three Freeway Structures and Lid The Mainline Freeway Safety Elements require rebuilding the Weidler, Broadway, and Williams structures over I-5; the new structures will be designed to meet seismic and clearance standards.	The new structures improve facilities for all modes; the lid allows for more effective construction staging, improves the urban design of the interchange area and improves the developability of the area.
4. Relocate Southbound I-5 On-Ramp to Weidler/Williams (from current location at Wheeler/Winning Way/Williams)	Increases weave distance, removes ramp traffic from local streets, Wheeler and Winning Way. Allows bike-ped. overcrossing at Clackamas.
5. Convert Williams to a Reverse Traffic-Flow Connection between Broadway and Weidler Includes a barrier-separated bike-pedestrian path in the middle.	Allows more efficient signal timing, improves bike and pedestrian connections through interchange and simplifies vehicular movements.
6. Construct Clackamas Bike-Pedestrian Overcrossing Establishes connection over I-5 from Winning Way to Clackamas.	Increases multi-modal connectivity across I-5, links central Lloyd District to the Rose Quarter, forms south side of "box-around-the-box."
7. Re-construct the Vancouver Structure; Remove the Flint Structure; Reconfigure Streets North of Broadway to Include Hancock/Dixon Structure and Lid	Vancouver structure must be replaced to accommodate mainline freeway improvements. Hancock and freeway lid allow for effective construction staging, improve viability of Blanchard site and form north side of "box-around-the-box."
North of Broadway elements include:	
1. Rebuild Vancouver	
2. Implement traffic calming at Williams/Hancock	
3. Remove Flint between Tillamook and Broadway	
4. Maintain Wheeler as a two-way street north of Broadway	
5. Maintain Wheeler in front of Left Bank as one-way	
6. Connect Flint as a two-way street south of Weidler	
7. Add signals at Broadway/Wheeler and Broadway/Ross	

Informational/Discussion DRAFT

The I-5 segment between I-84 and I-405 has the highest crash rate in Oregon. The Facility Plan elements of the recommended alternative are expected to significantly improve I-5 mainline operations and safety as well as improve interchange operations at Broadway/Weidler. In the future, once the Facility Plan elements are completed, it is recommended that ODOT and City of Portland continue to monitor the freeway operations in the I-5 Broadway/Weidler Interchange area.

Table 3: Project Monitors and Future Project Development

Project Monitors [revise/explain term]	**Notes**
1. Safety and Operational Performance **- Southbound Braided Ramp or other freeway safety improvement**	Upon completion of the recommended alternative Facility Plan elements described above, ODOT and the City of Portland will monitor the performance of the completed project for addressing safety and operational goals. If safety and operational issues remain on the freeway after construction of the recommended alternative Facility Plan elements, ODOT will work with the City of Portland to initiate a public process to consider additional measures such as a southbound braided ramp from Broadway to I-84 or other options developed through a public process. A southbound braided ramp should not be precluded by the construction of the recommended alternative Facility Plan elements.

Informational/Discussion
DRAFT

Implementation, Timing and Expectations

1. The Broadway/Weidler/Williams lid and related construction will be part of the first phase of the project.
2. If phasing is required, the City and ODOT will work together to match phases to the funding sources available.
3. The City will be responsible for the maintenance of the roads currently under their maintenance; ODOT will be responsible for the maintenance of the roads currently under their maintenance.
4. Signals will continue to be timed to avoid queues backing up into the deceleration area of the I-5 southbound exit ramp at Broadway.
5. ODOT and the City of Portland shall conduct additional public outreach at the time more detail is available and during the design process.
6. Special construction considerations will be identified and discussed with the public during Preliminary Engineering and recommended as part of the Final Design/Engineering. This is due to the neighborhoods and businesses in the vicinity of the interchange. This effort will include potential strategies to increase minority hiring and strategies to support local businesses.
7. Crosswalks will be provided at all signalized locations and should be provided at all safe and feasible locations.
8. Property impacts are of great concern to the neighborhoods, businesses and agencies working in this area. The number of parking spaces should be the same or more than current conditions at the Paramount Apartments, Left Bank, Left Bank Annex and Madrona Studios. In front of the Left Bank, Wheeler should remain a one-way street northbound between Broadway and Weidler.
9. The Traffic Management Plan (TMP) should be updated with the participation of ODOT, City of Portland, and the Rose Garden Arena prior to construction.

CRAFT BREW ALLIANCE

May 9, 2012

Dear Mr. Starin,

I am writing to express my concern over the Lower Albina N/NE Quadrant Zoning Proposal. I feel strongly that the existing mix of industrial businesses, public transportation and historic areas complements the needs of our business and those of our neighbors to continue successful operations. I would be concerned that a change in zoning could make it more difficult for our company to operate effectively, and have a negative impact on our growth and job creation.

Portland has always been sensitive to the preservation of the unique character of our neighborhoods and maintaining the strengths of our community. I urge you to vote against this zoning issue. Zoning in our neighborhood should remain as it is.

If I can help in any way to defeat this proposal, let me know. Thank you.

Sincerely,

Terry Michaelson
Chief Executive Officer

929 N Russell St, Portland, OR 97227

Eliot Neighborhood Representative Comments on SAC 16 Packet

Draft Zoning Materials (Zoning and Height comments)

The addition of Table 1s is very helpful, especially the addition of the EXd (no res) proposed zone. Assuming modifications to the EX and other zones can be adopted, this could go a long way to ensuring the E zone results in employment rather than conversion to multi-family housing and religious uses as has been the case along MLK and Williams. An EXd (limited res) modification would also be welcome to accommodate live/work options with a real "work" requirement. My comments on the zoning proposals will focus on Eliot goals with respect to economic development in the Lower Albina and Vancouver/Williams corridors. In both cases, it is my opinion that staff has not adequately considered the reasons for the ineffectiveness of current zoning in facilitating these goals at these locations and elsewhere in Eliot. This clearly suggests the current and potentially proposed zone will not achieve Eliot's objectives of the broad objectives of the NE Quadrant and Central City Plans.

With respect to Lower Albina, Eliot concurs with the proposed zone change to IG1 south of Russell to provide increased flexibility for firms located in this area. The area between the freeway and Interstate is dominated by large industrial buildings that are best suited to typical industrial use, some of which may benefit from limited retail sale activity above what is currently allowed by right. It is not, however an area that should be at risk of loft-style residential conversions, so I am concerned about the potential for conditional residential use except in association with a live-work activity. I think the restrictions on residences as a conditional use should be extremely specific and restrictive to prevent erosion of the current industrial infrastructure. I also strongly encourage Staff to work with Code Enforcement to enforce the existing restrictions on residential uses within this area, as illegal use for this purpose is already encroaching.

The area north of Russell is fundamentally different than the rest of Lower Albina. It is not flat, but steeply sloping. There is little industrial infrastructure, rather than are scattered residential and shop structures surrounded by unimproved parking lots and vacant land, much of it City owned (although I excepting the Albina Yards in these comments). The existing zoning, as well as decades of industrial zoning previously, have failed to stimulate industrial or employment development in this section of Lower Albina. It is a delusion to think the modest change proposed will have a different outcome. On the other hand, Eliot has been approached to support proposals for development of live/work projects in this area. EX zoning with <u>limited</u> residential would be more compatible with these proposals and near-term redevelopment prospects in this area. As noted previously, this would likely require a modification of the zone in Code, perhaps through a new overlay.

The previous suggestion also applies to the Vancouver/Williams corridor south of Russell. This area hosts a number of thriving light industrial/commercial firms who are unable to expand due to the current R zone. Nearly 15 years of residential zoning has not produced any new housing (except for a commercial developer who did so under duress). While the proposed re-zone to EXd will allow for expansion of existing businesses, it also opens the door to residential development that would stifle that development. Application of the EXd (no res) zone proposed for Lower Albina or the EXd (LIMITED res)

zone/overlay suggested above would be more appropriate for the entire area, including property currently zoned EXd. This should be extended to the east of Williams on the few block faces that are already in commercial use to rationalize their use/re-use.

Heights

There seems to be some inconsistency in the discussion of allowed heights and zones in the North of Broadway (Blanchard and Corridor). The allowed height discussion includes options for taller structures in the Blanchard area than the zoning discussion. These two need to be reconciled, as would any revised zoning. I generally agree with the concept of flexibility in building heights in exchange for building forms (massing) that is better suited to the immediate environment, with the proviso, also shared by Irvington, the historic building heights must "step-down" adjacent to historic districts, including the Eliot Conservation District. To date the discussion of allowed heights along NE Broadway has lacked the necessary subtlety. The Eliot Conservation District, and significant historic buildings are extends to within ½ block of Broadway at Rodney and Victoria, although graphic representations of allowed heights surround these areas with potentially out of scale buildings. There are two ways to address this concern. The first is to change the applicable height limits to the same as proposed to buffer the core of the Eliot and Irvington historic districts. This would provide greater protection for historic structures, but also limit resale value for current owners/heirs. The other would be to provide that restriction as a condition of design review when new structures are located proximate to historic ones. The latter would allow for future changes at the specific sites of concern that would make this issue moot, such as sale, conversion or loss of existing historic structures.

Comments on Goals Packet

In general, changes made by Staff are good ones. Nevertheless, I have comments.

Lloyd District. The "Employment and Housing Target" discussions would benefit from an estimate of the capacity to provide new jobs in Lloyd given existing/proposed zoning, understanding that actual use in a zone is undefined. What I am suggesting is trying to capture some of our discussion about how much potential there is in the district for employment/housing vis a vis planned additions and/or expansion of potential elsewhere in the quadrant. Access to the riverfront is mentioned in multiple places, but nowhere is "access" defined. It needs to be. Are you advocating for waterfront access along the "working" and industrialized areas of the river? I hope not. If not, exactly what and where will this "access" be? If so, how does the plan address the risks to the public associated with increased access to industrial areas? Or, is the plan anticipating/proposed to force the current uses to relocate to provide access? Without meaningful discussion of these issues these statements are meaningless platitudes.

Lower Albina. The Goal statement sets up a conflict with the "river access" discussion in the Lloyd section by setting the river here apart as a "working harbor" where that use extends into Lloyd as well. I would like to see changed in the text on the first page regarding disallowance of housing per previous discussion of zoning north of Russell. One of the dominate uses in Lower Albina is for City services, yet there is no discussion of these. There should be. Do they provide an opportunity for new job creation (additional City employees)? Or should these land holdings be opened for conversion to higher and

better uses? Doing either is wholly within the City's scope and could make an immediate and major impact on employment and development in the area. Personally, I agree with Mayor Adams that there are probably higher and better uses for City owned land and it should consider relocating/disbursing current activities to other locations to stimulate redevelopment and employment.

Comments on North of Broadway Freeway Options

First, I am pleased with the selection of Option 3. However, all of the freeway options will be contingent upon moving forward with freeway widening, which appears to be a more expensive than initial expectations. Inasmuch as federal funding for this and potentially every other transportation project is at best uncertain, I also recommend retaining Option 2 for evaluation, at least of the costs. In my view, Option 2 provides immediate benefits in terms of increased connectivity and potential for redevelopment of PPS properties (both Blanchard and Tubman) once the proposed zone changes are made. Using the current process to advance evaluation of these changes will demonstrate to potential developers and tenants interest by the City in addressing access concerns that they have already raised. I would like to see the Flint overpass retained in Option 3, perhaps as an Option 3b. I understand that it will increase costs however I believe that will be justified by the prospective economic development that rezoning the Vancouver/Williams corridor may bring, as well as the associated with the potential repurposing or sale of Tubman if it does become surplus. Finally, although Hancock has been the focus for an overcrossing, I would like to suggest that Staff at least quickly evaluate crossing at Tillamook. An angled overpass to the west side of I-5 (where the storage buildings are) could connect to an existing City street (dead ended) that could minimize impacts on the Paramount parking lot while providing connection to the area north of the Paramount that will require a new access road under Option 3. This routing appears to be shorter than the proposed Hancock path and potentially less expensive overall, although it would require ROW acquisition from at least two existing private property owners.

Portland, OR 97201-5380
Attention: Karl Lisle, and the Stakeholders Advisory Committee

Re: Area 6A,

Mr. Lisle:

We write in reference to the City of Portland - Bureau of Planning and Sustainability staff's Zoning Proposal for Area 6A, a portion of the Sullivan's Gulch Neighborhood under consideration as part of the N/NE Quadrant and I-5 Broadway Weidler Plans.

The Sullivan's Gulch Neighborhood Association Land Use Planning and Transportation Committee (SGNA LUPTC) in coordination with Carol Gossett, our designated representative for the Stakeholder's Advisory Committee/ N/NE Quadrant I-5 Broadway/Weidler Plan (The Plan) have been working in coordination with Nicholas Starin, Diane Hale and Stephanie Beckman of the City of Portland Bureau of Planning and Sustainability (The City), to coordinate with property owners, Mr. and Mrs. John Rumpakis. This ongoing collaboration concerns an area being considered for development by the Owners and is part of the (The Plan). Therefore, as a contributing party to the organization and planning of this effort, (SGNA) wishes to support the recommendation set forth by (The City) for re-zoning the property pursuant to (The Plan) .

We join with those with whom we have been working at the direction of the Board of the (SGNA) and the citizens of Sullivan's Gulch to request that the Stakeholder's Advisory Committee consider and accept the Bureau of Planning and Sustainability staff's recommendation for the changes in zoning designations for the properties in the (The Plan) known as Area 6A.

This request for the recommended zoning amendment applies exclusively to the properties known as Area 6A of (The Plan) only.

It is our understanding that (The City) has spoken to all property owners within Area 6A and that all are in agreement with the proposed rezoning recommendations.

Subject: RE: Thursday's N/NE BW SAC Meeting #16 ~ 5/10/12 ~ ODOT Rooms A&B, 123 NW Flanders, Portland, OR 97209

Sam,

Both myself and/or Chris Oxley (or other representative) are unable to make this meeting tonight. As to voting and input, here is our direction. Let me know if I missed something in the agenda that you would like our opinion on.

1. **Staff would like the SAC to take preliminary actions on the height and zoning recommendations at the 5/10/12 meeting. Please review the following recommendations and be prepared to vote 1, 2 or 3 on the following draft proposals.**

Portland Arena Management/Trail Blazer/Rose Quarter Response: "1" vote for all the following draft proposals.

A. Draft Recommendations for Potential Maximum Height Limits (see map in packet)

1. Thunderbird Site - allow height (up to 250') in exchange for public open space.
2. N Broadway - allow taller buildings at bridgehead (up to 325', step down to east).
3. Eliot Edge - keep 100' maximum; expand area of 175' max at MLK and Broadway/Weidler.
4. Irvington Edge - reduce maximum height north of Broadway to 75'.
5. Central Lloyd - increase maximum potential heights in the Central Lloyd with the tallest heights (460' or limited only by FAR) around the intersections of MLK/Grand and ultnomah/Holladay.

B. Draft Zoning Proposals (see proposal descriptions in packet)

1. Lower Albina – change IG1d on Russell east of existing conservation district to EXd (no housing), apply Employment Opportunity Subarea provisions east of Union Pacific railline.
2. North of Broadway/Blanchard Area - change to IG1 to EXd with master plan requirement and EG1 to CXd zoning.
3. Vancouver/Williams Study Area - change RHd to EXd.
4. North Banfield Portal - change RH and CO2 to CXd.
5. Central Lloyd - change RXd pocket to CXd, apply enhanced housing incentives to entire Central Lloyd, apply incentives for hotels, restaurants fronting convention center.

2. I-5 Broadway/Weidler Interchange Improvements

May 10th SAC Action Item: Recommended North of Broadway Option
Do you agree with the joint staff recommendation on the North of Broadway Option described in this report?

Portland Arena Management/Trail Blazer/Rose Quarter Response: "2" vote. We are in full-support of the joint staff recommendation, as described. However, the relocation of the I-5 southbound ramp will require additional studies and planning to determine applicable mitigation resolution and required capital investments, related specifically to the Rose Quarter campus. We need assurance that the transportation systems related to Rose Quarter event operations and general business affairs will remain as optimal as current design or enhanced by the I-5 Broadway/Weidler Interchange Improvement projects. Furthermore we believe that this mitigation should be focused on the streets and area encompassed by Vancouver and Center Court Drive, between Weidler and Winning Way.

Subject: N/NE BW SAC Meeting

Melissa:

I own multiple properties in the Lower Albina Industrial Area. I have not been a part of the mailing list for the N/NE BW SAC meetings. Please add my email to this list. Thank you.

Additionally, I appreciate the fact that the proposed EXd zone change along N. Russell will not allow residential use. However, with the current Industrial zone we experience very tight parking and difficult truck maneuvering. Adding more intense uses that would result from an EXd zone, would definitely exacerbate the problem.

As a significant property owner, and long-time stake holder in this neighborhood, I am not in favor of this zone change.

Sincerely,
Will Wright

To: Starin, Nicholas
Subject: RE: Lower Albina

Nicholas,
I agree with the opening paragraph of the *Background* section. I strongly disagree with the second paragraph. By relaxing the zoning, as per the draft proposal, an already very problematic parking issue in Lower Albina will be exacerbated. And the difficulty that heavy trucks already encounter as they try to negotiate through the area will be immediately worsened, due to increase car traffic.
Furthermore, I am concerned that the proposed change n zoning sets off an inexorable erosion of the light industrial sanctuary that currently exists in Lower Albina. I am not sure Portland needs another Pearl. But what happened there seems ominous. I fact, several business/property owners in our neighborhood are 'refugees' from the Pearl, forced out by zoning changes and property tax increases.
One model, closer to Lower Albina, is the Central Eastside. The process of increasing zoning "flexibility" has not been met with universal approval there. Business owners are belatedly realizing that landlords, where possible, have been quick to convert light industrial properties to commercial because they can command higher rent. And the increase in traffic has led to parking issues.
Not every working person in Portland wants a 'white collar' job. A healthy employment scene must include a blend of many different types of employment. In my opinion, Portland has a shortage of industrial sanctuary. This opinion is shared by many business owners in our wonderful city. I think the Bureau of Planning and Sustainability would best serve our city by protecting and strengthening the remaining industrial sanctuary. I recommend that there be no changes in the existing zoning.
Thank you

"The Portland Bicycle Advisory Committee appreciates the opportunity to provide feedback on the North of Broadway Plans for the N/NE Quadrant and
I-5 Broadway/Weidler project. The Committee generally supports Option 3 (Vancouver + Hancock/Dixon) although we feel that certain intersections will require a finer level of detail to ensure safe bicycle and pedestrian circulation. The Committee feels that enhancing the local network is an integral aspect of this project. With this in mind, the Committee wants to ensure that the aspects of the project that improve the local network are maintained in the plans. These include the improvements and build-out of Dixon, as well as the Clackamas pedestrian and bike bridge."

Irvington response to staff recommendations regarding the Irvington property
May 8, 2012

It is important to understand that, as of October, 2010, all of Irvington, including the Central City Plan area and N/NE quadrant area of the Broadway Schuyler strip ("strip"), became a federally, state, and city approved historic district and subject to a new set of federal and state rules and regulations.

A little background: I was co-chair of Irvington's participation in the Albina Planning process. The Irvington plan was part of the first neighborhood planning effort, known as the Albina plan, which took place in the early 1990s. The Irvington plan was a compromise in that the Irvington neighborhood agreed to place more density along the two-block strip from NE 16th to NE 7th, Broadway to Hancock. Such two-block strip was rezoned as RH, the most dense of the housing designated zones. This compromise resulted from significant pressure from City Hall that each neighborhood had to take more density in order to keep the urban growth boundary in place. Most of that density has not been used, for which the neighborhood is thankful, but enough of the 1990s plan has appeared in some projects to show the need for changes in zoning, the FAR, the use of bonuses, and the height restrictions.

The height limit in the original Irvington plan was 65 feet for the RH two-block strip. One of the City's so called housekeeping code amendments changed the height limit for RH zones to 75 feet. This was done without input from Irvington. My understanding is that no one from Irvington was aware of this proposed change. **Therefore, we are asking that the staff recommendation be changed from 75 feet to 65 feet to reflect the original height limit from the Irvington Plan.**

Historic districts, like Irvington, have been so designated because they represent cohesive areas embodying an important Portland narrative. We believe that state regulations require city zoning to support and protect that narrative. Zoning, FAR, bonuses, and height limits in designated Central City historic districts and other significant areas should be adjusted to reflect and support the context of the historic district, which in Irvington's case is an outstanding collection of Victorian, craftsman, etc. housing stock. Further, we believe that these adjustments must cover a wider swath of the southern part of the Irvington District so that the N/NE proposal is consistent with the other Irvington zoning and height limits.

One other significant fact of current City planning, one that has been pointed out at numerous SAC meetings, is that there is more than sufficient land in the Central City where greater heights are permitted outside of the established Historic Districts. The City's own Buildable Lands Inventory specifically states that there is more than enough land available for the highest population projections.

Thus, the Irvington Historic District needs greater protection than is proposed by the staff, which proposal is generally headed in the right direction, but not sufficient to meet the City's requirements to historic districts. The Irvington Historic District needs changes to the current zoning, not only for the strip, but also for other non R-5 zoned areas in the adjoining blocks. The City cannot change the strip without dealing with the adjoining blocks that will

remain RH, R1, and R2. Further, building heights should mirror the historic character of the neighborhood, and the bonuses that allow additional FAR and height should be eliminated in all areas of the Irvington Historic District. The City can achieve its density requirements without affecting historic districts. High-rise zoning has no place in an historic district like Irvington, except in the strip with a 65-foot height limitation **from Broadway to midblock between Broadway and Schuyler.**

We recognize that the N/NE quadrant has limited ability to deal with property outside the boundaries of the Central City plan, thus we propose that:

1. The staff recommendations be modified to read: 65-foot height limit from Broadway to midblock between Broadway and Schuyler, and 45 feet for the remaining half block, with no bonuses. The RH zoning can remain for this strip of blocks, from 16th to 7th. Although many in Irvington do not like the architecture, the size and massing of the condo project at Broadway and 13th shows that the architect tried to put the density on the Broadway half of the project, and scaled back the Schuyler half of the project to better transition to the residential part of the neighborhood. My understanding of the building heights are about 65 feet on Broadway and 35-45 on Schuyler. This is a workable model for the staff recommendations. A 75-foot height on the Schuyler side of the block would simply overwhelm the residential structures on the north side of Schuyler.

2. The staff adds in the N/NE quadrant plan an unconditional recommendation for the Portland plan process that the following additional changes be made to Portland zoning as part of the Portland plan.

3. Except for the strip which would remain RH, the rest of Irvington would be zoned R5 with no bonuses or other incentives to increase density and the height limit would be 35 feet.

Dean Gisvold, Irvington representative to N/NE SAC

Members of the Public: Murray Koodish, NE Broadway Business Association; Jonna Papaefthimiou, Mayor's Office; Lee Perlman, Eliot Neighborhood Association; Betsy Reese, Paramount Apartments; Vanessa Vissar, ODOT, Gwen Baldwin, Baldwin Consulting

INFORMAL DISCUSSION AND MEAL

WELCOME, MEETING PURPOSE, APPROVAL OF MINUTES, AND STANDING BUSINESS

Sam Imperati, ICM, welcomed the group and reviewed the agenda.

Jodi Parker introduced herself as a new member of the SAC, replacing Paul Riggs as the labor representative.

ANNOUNCEMENTS

Sam called attention to letters from Debra Dunn and Lee Perlman included in the meeting packet.

There will be a quadrant tour on Thursday, April 5 from 5:00-7:30 pm. The tour will include highlights of key areas and a walking tour. Staff can make other accommodations for those who prefer to go by vehicle. Details will be emailed soon.

Lloyd Lindley said in this process there has been a lot of work on I-5, and he feels staff has done a good job of looking at alternatives. However, he is concerned about the land use side and the livability, place-making and urban design aspects of the process. He wants to hold a workshop to challenge the size, shape, locations, and what the surface looks like. He is looking for a clearer understanding of what the place looks like and how to address issues the SAC has been bringing up. To this end, there will be a one-day workshop to look at the lid, connections, etc. It will be on Tuesday, March 20, from 1:30 – 7:00 pm. The SAC is invited. The agenda will be finalized and emailed out as soon as possible. The workshop will be at URS, located at SW 1st and Columbia.

PROCESS OVERVIEW/TIMELINE REMINDER

Sam noted there are only four more meetings scheduled for this process. Going forward, he will be taking more formal votes, using the 1-2-3 voting method.

POST MEETING NOTE:

The Collaboration Principles document states:

> …If a consensus is not reasonably forthcoming, the co-chairs or the facilitator may table the issue for additional discussion with constituencies, the gathering of new information, or perhaps just sufficient time to consider options more carefully.

Later it says:

> …If a consensus on an issue is still not reasonably likely, as determined by the co-chair, the votes of those present at the meeting will be taken and recorded as a majority - minority vote.

Finally, it says:

> …The SAC will make draft recommendations on an "issue-by-issue" basis, and then final recommendations as a "package" at each milestone, and again at the conclusion of the process. (Emphasis Added.)

The Collaboration Principles can be found at:
http://www.portlandonline.com/bps/index.cfm?a=340184&c=53257

APPROVAL OF MEETING MINUTES

Wade Lange noted his name was misspelled in the February notes. The notes were approved with that correction.

Subsequently, Justin Zeulner identified an issue with the text in February notes surrounding the question called about the transportation Hybrid Base Project.

POST MEETING NOTE

The current draft Meeting Notes state:

> Action #2: Do you agree with the staff recommendation to approve the Hybrid Base Project? (Emphasis Added.)

While that was how the question was phrased in the Agenda, it was not the question asked at the time of the vote, and the final have been amended to use the **"move forward with"** language per Justin's suggestion.

N/NE QUADRANT PLAN AND CENTRAL CITY 2035 CONCEPT PLAN

Joe Zehnder, BPS, provided a brief presentation on the Central City 2035 Concept Plan, and its relationship to the N/NEQ I-5 B-W process. CC2035 lays out the vision, direction, and overall guidance for Central City as a whole. The finer grain details are to be addressed with quadrant plans. He noted that CC2035 and the N/NEQ processes were launched at same time, which made it more challenging for the CC2035 to provide the intended guidance to this process.

The CC2035 Plan sees universities as being of central important for the economic future of the city. The City is building on the legacy of previous work in its efforts to make complete neighborhoods, providing for all household types, including those with children. Joe reviewed the PPT and explained the framework of the concept plan.

CC2035 Framework

1. Regional Center
   - Economic Competitiveness
   - Business Growth
2. Housing & Neighborhoods
   - Complete Neighborhoods
   - Human and Health Services
3. Transportation
   - System Design and Management
   - System Maintenance/Infrastructure
   - Parking
   - Safety and Accessibility
4. Urban Design
   - Larger Landscape
   - Districts
   - Public Realm
   - Central City Waterfront
   - Historic Resources
5. Environment
   - Green Buildings
   - Green Infrastructure
   - EcoDistrict Strategies

Stephanie Beckman, BPS, referred the "SAC to the N/NE Quadrant Plan – Draft Outline" memo in the packet. She said that at last meeting, the SAC gave approval to move ahead with the draft concept plan. Staff have started working on components of the draft plan, as shown in the memo. The project team wanted to give folks an idea of what to expect during the next meetings. Everything is not in there, but it is a general outline.

- Chapter 1: Introduction
- Chapter 2: Background
- Chapter 3: N/NE Quadrant Concept
- Chapter 4: Goals, Policies and Implementation Actions
- Chapter 5: Implementation and Next Steps

Chapter 4 is the meat of the plan and will be the main subject of the April meeting. Please let staff know if you feel anything might be missing in the draft outline.

Stephanie reviewed the memo, noting it is organized under the same major topic headings of the Central City Plan, because the intention is that all the quadrant plans will be nested within the CC2035 Plan. Also included will be performance measures for jobs, housing, transportation, complete neighborhoods, and other topics, to measure how we are doing over time.

Eric Lovell: thinking back to the Goals we developed at the beginning of this process, he wondered if the CC2035 goals are trumping or replacing them.

Stephanie Beckman: they have been used to evaluate the freeway, and they are being folded into this current plan structure. We envision that the SAC's goals will be included, and we will also develop more specific, corresponding policy statements.

Joe Zehnder: it is all drawn from the original goals, see page 1.

Dean Gisvold: is the Irvington strip is included?

Joe Zehnder: yes.

Dean Gisvold: if we want to comment on the Lloyd District, we would assume it is part of that?

Stephanie Beckman: Yes, the Irvington edge is included in the Lloyd District.

Mike Warwick: Rose Quarter/Blanchard should be separate.

Joe Zehnder: it clearly is, and there are a lot of different ways to break this area down. When we are getting more refined, and if we think there is a better way, we can do that.

Wayne Kingsley: so, you are staying true to the original goals?

Sam Imperati: yes, the goals here are a copy and paste.

Stephanie Beckman: we can provide a clearer crosswalk, if that would be helpful. Staff is interested in SAC feedback, and there is a schedule on the back of the memo. At the April meeting, we will be looking at Chapter 4. At subsequent meetings, we will bring more sections.

I-5 BROADWAY WEIDLER INTERCHANGE ELEMENTS FOR FURTHER REFINEMENT

Sam introduced the presentation, asking folks to hold questions until the end, due to the level of detail involved in the presentation.

Todd Juhasz, ODOT, said, as a reminder, the overall purpose of the project is to improve safety and operations. Todd reviewed the PPT, providing an overview of the alternatives, financial costs, and operational benefits. He reviewed past SAC actions regarding which elements to bring forward for further study.

Slide 15: SB Braid: Safety Analysis

Looked at handful of sites in Portland region

- Based on data from similar locations, adding an aux lane is expected to reduce mainline crashes by 30%-70%
- Braid in combination with aux lane is expected to reduce the number of mainline crashes 45%-85%
- Vissim simulation used: to look at current traffic volumes between 2:00-3:00 (shoulder period)

Slide 16: Vissim Simulations

- Looking at existing vs. addition of aux lane and aux lane/braids
- Based on current traffic counts
- Studied shoulder period (2:00-3:00)
- Look for traffic movement on ramp and right lane as well as congestion on far left lane(s)

Todd showed a video clip simulation of the today's traffic data, including truck-car mix, showing the traffic patterns so the SAC could compare levels of congestion.

Slide 23

These prior slides show:

1) Existing Conditions: High congestion in all lanes. Short weaving distance with Wheeler/Winning Way On-ramp
2) Aux Lane Only: Significant increase in weave length with relocated on ramp to Weidler
3) Aux Lane and Braid: Elimination of I-5/I-84 Weave. Additional reduction in crashes over aux lane alone

Slide 29: SB Braid

- Benefits
  - Added reduction in accidents over the addition of aux lanes
  - Removal I-84/I-5 weave
- Constraints
  - Cost ($140-$150m)
  - Visual/urban design impacts on the Westside of freeway
  - Impacts on transit center

Slide 30: Project Team Recommendation

The SB braided ramp is not recommended for further refinement at this time.

The SB Braid shows promise for further improving safety and operations within the project area. If after base improvements are implemented and safety and operational issues remain, the SB Braid should receive further consideration.

Dean Gisvold: where would cars/trucks access the braided ramp?

Todd showed this on the PPT (Proposed ramp relocation from Wheeler/Winning Way to Weidler)

Dean Gisvold: in addition to moving current access, the braided ramps would also be moved there.

Mike Warwick: accident data indicates that most accidents occur at slow speed. Do you have data regarding what the trade-off would be for accidents at higher speeds?

Andy Johnson: it does not change dramatically. They did not see an increase in severity.

Todd Juhasz: we are basing these numbers on the wide range of conditions at Portland locations that have had an aux lane and braid added. These numbers are based upon the midpoint of that data set.

Andy Johnson: it was more delay than safety, and he does not recall the exact numbers. With accident predication, there were similar problem with accident savings. There isn't really an easy way to do it.

Mike Warwick: you can point us to your methodology?

ODOT: yes.

Owen Ronchelli: question about comparison in weave length?

Todd Juhasz: 200 feet.

Andy Johnson: at the moment, I do not know the difference percentage-wise, but like Todd said, it is about 200 feet.

URS: there is approximately a 15% increase in weave length with the refined aux lane.

Phil Selinger: it is apparent in the simulation video that people are coming to a dead stop before they need to. Is there a way to improve signage? If the potential for a braided ramp can come back, how does that get reconciled with potential development along the freeway?

Andy Johnson: signs do not generally do a good job of changing behavior. He provided an example to illustrate this with an I-205 project near the airport. Regarding development, for example, ODOT and the City met with Daniel Deutsch several times before they developed the Left Bank. We try to be transparent.

Wayne Kingsley: not sure if this is the right time, but regarding Lee Perlman's letter, he gathers we are going to further separate the Eliot neighborhood. Question about how a lid might impact this situation.

Todd Juhasz: the lid and other east-west connections have the potential of weaving the east and west sides together.

Wayne Kingsley: so, we are trying to mitigate his concerns.

Sam Imperati: that will be discussed more at a later time.

Matt Arnold: regarding the slide with the no braid recommendation, he is guessing it is due to the money and the other impacts.

Andy Johnson: the problem is we could not reach consensus. Some think we are doing too much, some think we are doing too little. We want a project we can implement and go forward in a timely manner, so it is those reasons, plus the difficulty in reaching consensus with this group.

Alan Lehto: clarification of slide 15: the aux lane and braid reduces accidents by 15%?

Todd Juhasz: not exactly, the range of sites we looked at is different from each other and none of these sites is an exact match for what would happen in our study area.

Alan Lehto: but it is significantly more than you got with the aux lane.

Todd Juhasz: yes

Justin Zeulner: comment regarding slide 13. The February meeting notes say “approve,” feels we need to correct that. Also, he is very mindful of the commercial impacts, it is a big part of why he is here participating in this process. It is an I-84 not necessarily I-5 only. He is concerned about the benefit of a braided ramp versus an aux lane. And what about trucking? Is Debra Dunn here?

Todd Juhasz: agreed that I-84 is an issue that needs to be looked at in the future as part of another process. Building a braided ramp will not increase speeds on I-84, but will reduce crashes. The braid and auxiliary lane will improve reliability.

Andy Johnson: and we are also striving to make changes that benefit commercial activities in the quadrant.

Justin Zeulner: a statement about that might relive some of the concerns you hear from commercial sector.

Ed Abrahamson: comment regarding cost savings - what part of range were you using?

ODOT: mid-point.

Wayne Kingsley: if the braided ramp were to continue now, how would it be built in reality? Phased? What would come first?

Todd Juhasz: ideally the entire project would be built at once, however identifying funding to pay for the project is the main hurdle

Andy Johnson: we are low on funds for studying the braid; the lid piece would have to come first.

Joe Zehnder: the base hybrid concept and aux lanes are estimated at approximately $250M. That is a lot of money, but not extraordinary for a freeway project. In the past, we have found ways to fund studies. The braided ramps add $140M. So, he just wants to point out that the aux lanes come at a more reasonable price it is a prize we get to build and achieve similar safety benefits.

Dean Gisvold: Staff recommends we not go forward, with the caveat that it could be looked at again. So, even though they drop it, it is not precluded from coming back. It is a take-off of what Wayne said. Either drop it or not. He is ready to drop it, but not if you are going to design the Clackamas Overcrossing in anticipation of it eventually being there.

Sam Imperati: asked Dean to clarify how the two are related in his mind.

Dean Gisvold: explained his thinking.

Todd Juhasz: we do not want to take a potential safety improvement off the table if needed at a later date. However, we are assuming we are going to get a significant improvement with the aux lane alone.

Andy Johnson: the alternative means we do not consider the potential for the braids when designing improvements, and we come back in twenty years and have to tear down a bridge, etc.

Owen Ronchelli: we are talking $300M for this project. Originally it was $200-250M. How hard is it going to be to find the money? And how much more difficult would it be to get $400M?

Andy Johnson: correct, it is difficult. He noted an example of funding for another project. It is not possible to say how difficult it will be.

Paul Smith: referring to the staff report, page 7, it might be worth looking at the language "should not preclude." He is not totally familiar with the southbound braided ramp in its entirety, but notes it is important to understand that the recommendation might say "do X," and that there is private development to consider. It says this project will not put something in the way of the braided ramp.

Tracy Whalen: does not know what private property is in the area, but if we took this off right now, it would be interesting to know what potential development might happen.

Eric Lovell: is struggling a little with the savings listed. You said most of that is delay. He is cognizant of the need to reduce wasted truck time. It seems like a pretty long payback time for the braid. It does not look good.

Mike Warwick: wants to add, regarding Stephanie's presentation, that CC2035 says we are looking at putting the freeway in the tunnel. He agrees with Dean; put a stake in the heart of it.

Wayne Kingsley: the idea of a tunnel has died twice, and it is likely to die again.

Todd Juhasz: burying the tunnel is a multi-billion dollar project and the City and State are not likely to be able to afford anytime soon.

Mike Warwick: agrees, but he mentions it in the context of the CC2035 draft. So even if that is not an option, there are other options.

Todd Juhasz: ODOT does not want to forego implementing safety improvements on the freeway now.

Chris Deffenbach: she cannot think of any examples of this being done in the past, where we put something aside and came back to it and did what we said. It might be a better idea to consider saving right of way. She cannot think of one example of when we returned to something twenty years later and actually did the project.

Alan Lehto: comment regarding the aux lane, braided ramp, and transit center. Existing drawing on slide 25 leaves out some important details. He explained the encroachments on the transit center. Very aggressive design mitigation for an aux lane would be needed, and we may have to move transit center out from under the freeway if the braided ramps went forward.

Wade Lange: comment regarding dollar amounts, vision, and the need for safety improvements. He is not going to worry about money until it comes up as a bond measure we are voting on - that is far down the line. In this process, we need to vote on the best solutions.

Lloyd Lindley: appreciates Chris' comments about right of way. And to what Sean was saying about the central east side planning. There will be significant discussion about I-5. We do not want to get too far ahead of the Central East Side. He likes the idea of calling out that we have space to do something.

Joe Zehnder: back in 2001, the State and City did a joint project under Mayor Katz to look at the east bank freeway. Reconfiguration or relocation is what they looked at. Other things that study put on the table are some of what we are looking at today. When you talk about the east side, you have to look at the whole loop. The 2001 study identified looking at the whole loop as the next step, and that is what is in the CC2035 draft. Seismic security and letting the central east side know what is up with the freeway are important. The question needs to be called and we need to move on. It is an interesting question about "preclude" or "not preclude." Whatever we come up with here will not preclude anything you might want to do on the east side.

Eric Lovell: comment regarding the cost-benefit analysis. Everything is a projection, and that is what we are supposed to base our decisions on. What if we are wrong and the forecasts for population growth are wrong, or some really ecofriendly car is developed? We need to conserve the right of way.

Paul Smith: referring to the CC2035 Concept Plan Draft, March 8, goal 3.2. Most of it is pretty wide open. He thinks the wording in there about burying the freeway is a little too strong and that broader language is more appropriate to pass on to whatever group looks at this next.

Sam noted the text on the recommendation slide is not accurate and referred the SAC to the staff report for the actual language. To tee up the vote, Sam read the following from the report (bottom of page 7, March 8 Joint Staff Report)

> "…the Southbound Braided Ramps are not recommended for further refinement as part of the Hybrid Base Project at this time. If after base improvements are implemented and safety and operational issues remain, the Southbound Braided Ramps should receive additional consideration since they show promise for further improving safety and operations within the project area. It is further recommended that designs developed for the new Weidler southbound
>
> entrance-ramp, the Clackamas Overcrossing and other elements of the Hybrid Base Project
>
> should not preclude the ability to implement the Southbound Braided Ramps, if needed, at some point in the future."

Sam said there are three elements. He is hearing that some are for braids, some would "put a stake in it," others are more in the middle and do not want it to preclude it. Sam proposed calling the vote in three parts.

1) SB Braid not recommended
2) If it is later determined to be needed for safety, a SB Braid shall be considered again
3) What do we do now by way of preclusion

Mike Warwick: could simplify this by eliminating the last sentence of the recommendation paragraph on page 7 of the Staff Report: "If after base improvements are implemented and safety and operational issues remain, the Southbound Braided Ramps should receive additional consideration since they show promise for further improving safety and operations within the project area."

Justin Zeulner: there are so many fundamental questions. This is a staff report. Thus far, we have been voting on SAC statements. This is more approving a report, which seems like a more internal document. He read the following sentence: "Because many of the safety and operational benefits could be achieved with the auxiliary lane extensions, the Southbound Braided Ramps are not recommended for further refinement as part of the Hybrid Base Project at this time." Question: what if we look at another base project? Basically, it is hard to vote on with the way it is written.

Lloyd Lindley: thinks they are parallel, have to vote on both. Suggest striking "the Southbound Braided Ramp" from that sentence.

There was further discussion.

Sam reiterated his understanding of how he will call the questions:

1) SB Braid not recommended
2) If it is later determined to be needed for safety, a SB Braid could be considered again
3) What do not preclude the ability to implement SB Braided Ramps in the future.

PUBLIC COMMENT

Doug Klotz, alternate: He suggested language, proposing leaving out "hybrid base project."

VOTE 1: SB Braid not recommended

1 – Matt Arnold; Pauline Bradford; Joanna Agee (for Daniel Deutsch); Dean Gisvold; Heidi Guenin; Sean Hubert; Wayne Kingsley; Eric Lovell; Bill Ruff

2 – Tracy Whelan; Wade Lange; Lloyd Lindley; Jenny Lyman; Jodi Parker; Owen Ronchelli; Wanda Rosenbarger; Phil Selinger; Gary Warren; Mike Warwick; Justin Zeulner

3 – Debra Dunn (not present, but communicated vote by letter)

Amendments to vote 1

Justin Zeulner: strike: "as part of hybid base project"

Sam asked if there was anyone who voted 1 who would change to 2 because of Justin's amendment? No; all remained 1.

Sam asked if there was anyone who voted 2 who would change to 1 because of Justin's amendment? Gary Warren, Justin Zeulner, Mike Warwick, Phil Selinger, Lloyd Lindley change to a 1.

The 2s who remained 2 with amendment – Jodi Parker, Wanda Rosenbarger, Jenny Lyman, Owen Ronchelli, Tracy Whelan

VOTE 2: If it is later determined to be needed for safety, a SB Braid should be considered again

1 – Pauline Bradford; Tracy Whelan; Wayne Kingsley; Wade Lange; Eric Lovell; Jodi Parker; Owen Ronchelli; Wanda Rosenbarger; Bill Ruff; Gary Warren

2 – Matt Arnold; Joanna Agee (for Daniel Deutsch); Sean Hubert; Lloyd Lindley; Jenny Lyman; Justin Zeulner

3 – Dean Gisvold; Phil Selinger; Mike Warwick

Amendments to vote 2

Lloyd Lindley: thinks we should strike the whole thing. But, that being said, if safey is still a problem, we should re-open design, but acknowledge that braided ramps may not be the answer.

Sam Imperati: so, not to consider only braided ramps but to consider any possible solution.

Suggested text: "Appropriate solutions and concepts should be developed and recieve consideration."

Sam asked if there was anyone who voted 2 who would change to 1 with the amendment? Matt Arnold, Justin Zeulner, Sean Hubert, Joanna Agee, and Lloyd Lindley would change to a 1 with suggested language.

VOTE 3: do not preclude the ability to implement SB Braided Ramps in the future

Sam Imperati: question for clarification to staff: not preclude – what does that mean? Leave space?

Paul Smith: yes. Leave a right of way.

1 – Pauline Bradford; Tracy Whelan; Sean Hubert; Wayne Kingsley; Eric Lovell; Jenny Lyman; Owen Ronchelli; Wanda Rosenbarger; Bill Ruff; Gary Warren

2 – Matt Arnold; Wade Lange

3 – Joanna Agee (for Daniel Deutsch); Dean Gisvold; Lloyd Lindley; Jodi Parker; Phil Selinger; Mike Warwick; Justin Zeulner

Amendments to vote 3

Sam asked the 2s what would move them to a 1?

Matt Arnold: preserving ROW, if that eliminates an element of a design because you are preserving ROW, then he is not ok with that. Adding something like, "not to the exclusion of the hybrid base concept elements" could address his concerns.

Sam asked if there was anyone who voted 2 who would change to 1 because of Matt's amendment? Matt Arnold and Wade Lange

Sam asked for amendments from those who voted 3.

Justin Zeulner: wants to remove the specific references and proposed "further recommended that designs developed for this project should not preclude the ability to implement improvements if needed in the future."

Lloyd Lindley: this could mean also imply not to remove or reduce ROW.

Justin retracted his amendment.

The above votes passed by majority not consensus.

Facilitator's Post Meeting Summary of Above Pending SAC Discussion and Approval at April Meeting

The March meeting explored the "braid" issue and the SAC voted on it by dividing it into three parts, which for simplicity sake can be summarized as follows:

1) Should the braids move forward (No by Majority-Minority vote)

2) Should the braids, along with other solutions, be consider down the road if issues remain, (Yes by Majority-Minority vote) and

3) Should the project design the build elements so as not to preclude the braids from being built in the future, but only if that can be done while accommodating the hybrid base project elements. (E.g. preserving right of way.) (Yes, by Majority-Minority vote.)

BREAK

MULTI-USE PATH

Mauricio Leclerc, PBOT, review a PPT presentation on the Multi-Use Path (MUP) draft concept. One of the goals of this project is to improve accessibility and safety for bikes and pedestrians moving through "the box." During the development of previous concepts, a "big idea" emerged to supplement pedestrian and bicycle access through the box via additional crossings and connections. This led to the Clackamas ped/bike bridge and the connection at Hancock. The MUP was also developed with this in mind, in particular to address some of the early options' lack of connectivity for cyclists and pedestrians travelling north and south. As the concepts have been refined and made into hybrids, staff considered the idea of developing a MUP in addition to maintaining a well-defined north-south connection on the west side of the freeway along Wheeler and Williams. Mauricio reviewed the design of the MUP, demonstrating how bikes and pedestrians can move through the district as a whole.

Slide 34: Multi-Use Path (MUP)

- Benefits
  - Formalized bike and pedestrian path along eastside of the freeway
  - Route for "less confident" riders
- Constraints
  - Cost ($2-$4m)
  - MUP would end at difficult crossing at Weidler
  - MUP would require additional property and would displace off-street parking

Slide 36: Staff Recommendation

- MUP not recommend to be included in the hybrid project.
- Instead, recommend developing a Neighborhood Greenway along 2nd/3rd Avenues.
- Do you agree with the recommendation?

Phil Selinger: will there be funding for the Neighborhood Greenway?

Mauricio Leclerc: we are not there yet to be searching for funding.

Phil Selinger: it does not take a lot of money to do the proposed greenway.

Lloyd Lindley: will cyclists have a greater travel distance?

Matt Arnold: you cannot travel the route as shown [the proposed MUP].

Lloyd Lindley: so, it is added value. Wants to see how we could tie in more environmental benefits.

Sam Imperati: one means of getting funding would be to make it clear that this MUP alternative is included in the freeway package.

Eric Lovell: question about the path shown and a pedestrian route.

Matt Arnold: question for clarification re: traveling north on 3rd.

Alan Lehto: black line would become a bike/ped path?

Mauricio Leclerc: yes, a bike and pedestrian connection on the west side of the freeway.

Gary Warren: struggling with this, why would you go this way?

Matt Arnold: described examples of how bikers of different skill and comfort levels would use it. Main benefit is to skirt around main traffic concentrations in the box.

Gary Warren: still wonders about it, and he is beginning to feel a little pinched with green streets around Calaroga.

Mauricio Leclerc: understood. But it will not need much, possibly some signage.

Justin Zeulner: the recommendation is very specific as to the route. Perhaps you do not need to be so specific about the route. Knows we have great groups working on it, but is concerned about this lines up with the flexible streets, etc.

Ed Abramson: the old MUP was more concerning; this one just makes it a more convenient way to get around. Sounds like you are just talking about signage.

Mauricio Leclerc: yes, but around 3rd and Multnomah there may be a need to do more. Also, 2nd is shown as a flexible street on the street character diagram.

Mike Warwick: concerned about Rodney neighborhood, bikes on street with lots of street parking. Wants to be sure you are thinking about it.

Wayne Kingsley: is this a brand new proposal?

Sam Imperati: it started as a MUP, and then they realized that was not accomplishing its purposes, so they have revised it. Thinks the vote will be something like, “do you agree with dropping the east side MUP and instead develop an alternative east side route as part of the project?”

Wayne Kingsley: seems to him you would have ROW along the freeway.

Mauricio Leclerc: no, the MUP would require additional ROW, which cost $2-4M to purchase.

Joe Zehnder: to summarize the proposal: drop the MUP, focus on bike/pedestrian improvements on west side of the freeway, and then figure out some on-street way on the east side.

Lloyd Lindley: on north-south, west-side alignment, would there be improvements?

Mauricio Leclerc: yes; he described the improvements.

Eric Lovell: thinking of this as the more low-speed route for a more timid biker.

Mauricio Leclerc: yes, a key element is to cross Broadway and Weidler, using the signals that are there on 2nd.

Sean Hubert: assumes MUP alternative not going across Clackamas is an elevation issue?

Mauricio Leclerc: correct.

Gary Warren: this has been presented very last minute and he is requesting more time to study. This is an ambush and he does not appreciate it. Secondly, a low-speed route will often have speed bumps. He cannot have that; he has 200-300 fire truck visits a year at his facility,

Owen Ronchelli: from a TMA perspective, activating a 2nd Avenue crossing is great. It is access for Eliot neighbors. He does not think it will be a very popular route, would likely have fairly low use, but it is a really good, low-cost way to get through the area.

Phil Selinger: regarding Gary's concerns, the word "developing" should give him some relief. Also he would like to add a clause about funding.

Matt Arnold: ditto on funding. To Gary, regarding this being an ambush - the improvements we are talking about are fairly minor, but you are right to be concerned about the details.

Pauline Bradford: there is a committee working on Williams and bike issues, which has been causing lots of issues in the community. She wants to know how it relates. It is a mess sometimes, with fire trucks, cars, buses, bikes, etc.

Sam framed up the vote:

1) keep west side route as part of hybrid base project
2) drop currently proposed east side MUP
3) develop for SAC discussion and consideration a new, alterative east side route as part of this hybrid project

PUBLIC COMMENT

Doug Klotz, alternate: said we should consider a short MUP, provided details, described benefits.

VOTE 4: 1) keep west side route as part of hybrid base project; 2) drop currently proposed east side MUP; and 3) develop for SAC discussion and consideration a new, alterative east side route as part of this hybrid project

1 – Pauline Bradford; Tracy Whelan; Wayne Kingsley; Wade Lange; Eric Lovell; Jodi Parker; Owen Ronchelli; Wanda Rosenbarger; Bill Ruff; Gary Warren; Phil Selinger; Mike Warwick; Matt Arnold; Joanna Agee (for Daniel Deutsch); Sean Hubert; Lloyd Lindley; Justin Zeulner

2 – Jenny Lyman; Dean Gisvold

Dean Gisvold: voted a 2 because he does not understand the connection at Weidler

CLACKAMAS BICYCLE/PEDESTRIAN OVERCROSSING: PRESENTATION, DISCUSSION, Q AND A

Joe Zehnder, BPS, said the Clackamas Overcrossing is a bike/ped bridge only. In their planning and discussion, they have learned that the hospital has a proposal to build a new facility. They believe they are willing to work with the City to explore ways to make it work. It is also a superblock, which means it has requirements to provide pedestrian amenities.

Slide 37: Clackamas Bike-Ped Bridge

- Benefits
  - Improves bike/ped access and safety
  - Supports redevelopment at Rose Quarter and Lloyd District
  - Can work with SB braids
- Constraints
  - Needs to work w/ hospital development plans

- Cost ($15 to $20 million)

.

Slide 38: Staff Recommendation

- Include the Clackamas bike/ped bridge in the hybrid project.
- Continue to work with property owners to design a bridge that works with proposed development.

Charles Kelley, ZGF, described the physical details of the overcrossing.

Ed Abramson: is there an elevator?

Charles Kelley: no. It is all at-grade. This is one preliminary idea of how the bridge could be designed. We need to design this with the community that's going to use it in mind.

Gary Warren: we have a good connection with the lid, so he is questioning why are we considering the Clackamas Overcrossing? He is not sure we should. He is also concerned that at the public meeting boards at the Lloyd Center, there were no bikes on there. This is another example of his problems with this process. You want to turn the area into a parking lot for an event center. The LDCA board agreed to widen the freeway, no decoupling of Broadway-Weidler, and no Clackamas Overcrossing.

Phil Sellinger: from a pedestrian perspective, he thinks it is essential. It needs lighting and other features for safety.

Sam framed up the vote.

VOTE 5: include the Clackamas Overcrossing bike/ped bridge and continue to work with property owners

1 – Pauline Bradford; Tracy Whelan; Wayne Kingsley; Wade Lange; Eric Lovell; Jodi Parker; Owen Ronchelli; Wanda Rosenbarger; Bill Ruff; Phil Selinger; Mike Warwick; Matt Arnold; Joanna Agee (for Daniel Deutsch); Lloyd Lindley; Justin Zeulner

2 – Ed Abrahamson; Sean Hubert

3 – Gary Warren

Ed Abrahamson: voted a 2, has a little buyer's remorse. With the re-designation of Multnomah Boulevard, this would be redundant. There's more need for a bike crossing over I-84.

Sean Hubert: voted a 2 because the design needs to incorporate other design elements re: Williams connection.

Sam Imperati: yes, there will be a more holistic picture to come.

NORTH OF BROADWAY: VANCOUVER/FLINT/HANCOCK OVERCROSSING/LID

Joe Zehnder, BPS, provided a very brief overview of North of Broadway options: Vancouver/Flint/Hancock Overcrossing/Lid. He explained that the base project will consolidate freeway on and off ramps into a "new box," In a smaller area. He showed an "Interested but Concerned bike user path" that is routed around the box. He also explained issues that have been raised by stakeholders that need to be addressed. Even with the heart of the improvements on the freeway, we

still have things to improve upon with the surface street system. With the freeway, we are presented with the opportunity to rebuild Flint, Vancouver and Williams. He showed some options, such as removing Vancouver from the box, etc. Over the next month, staff will continue to develop concepts and work with property owners toward designing a successful solution.

Alan Lehto: would add bus routing to Joe's list of remaining issues. Anything that breaks up Vancouver-Williams really disrupts the bus routes.

Eric Lovell: also, truck traffic coming up to Broadway from Weidler, if you turn Weidler into a one way down hill, you would have other turning radius issues.

MEETING WRAP UP AND NEXT STEPS

Sam thanked everyone for a good meeting. An email will be going out with the agenda and information for next Tuesday's workshop at URS.

Meeting adjourned at 8:40.

N/NEQ SAC MEETING # 14
MARCH 15TH, 2012

EVALUATION SUMMARY

15 Evaluation Forms

		Poor	Fair	Good	Very Good	Excellent
1)	**OVERALL MTG QUALITY**		1	3	6	
2)	**PACING**	1	Little Slow 6	Just right 5	Little Fast	
3)	**CLARITY PRESENTATIONS**		3		10	1
4)	**DOCUMENTS**		2	4	6	3
5)	**DISCUSSION**		1	3	10	1

6. MOST USEFUL?

- Humor – working the problem

7. LEAST USEFUL?

- 1) "Vote" statements on Recommendations should be worded better/more clearly
  2) Very disappointed to learn that there's a design session on 3/20 that SAC didn't know about and for which we don't yet have an agenda on 3/15/12
  3) Why is the project paying consultants to attend meetings (long meetings) at which they have no defined role and rarely participate?
- All good
- Ambushes from PBOT et al with new unstaffed ideas
- Really need maps for entire area at all meetings
- Voting on aux/braid too drawn out
- Would like to see major recommendations to be voted on 30 days in-advance ---present at one meeting for discussion at the next meeting.

8. COMMENTS, SUGGESTIONS, OR QUESTIONS?

- Please don't change plans at votes! They keep changing at public presentation meetings
- Tough forum. Well done.

Joint Staff Report

Recommended Elements of the I-5 Broadway/Weidler Interchange Plan Improvements

April 6, 2012

The N/NE Quadrant and I-5 Broadway/Weidler Plans Project is a collaborative effort by the City of Portland and the Oregon Department of Transportation to integrate urban design and land use planning with freeway planning and concept-level engineering in the North/Northeast portion of the Central City, which includes Lower Albina and the Lloyd District.

Stakeholder Advisory Committee: Meeting #15

April 12, 2012

Joint Staff Report

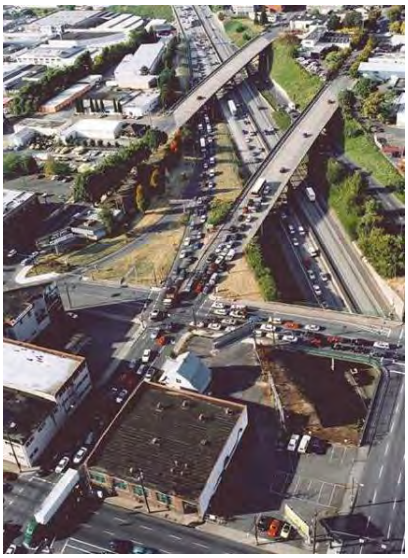
The overall project purpose is to...

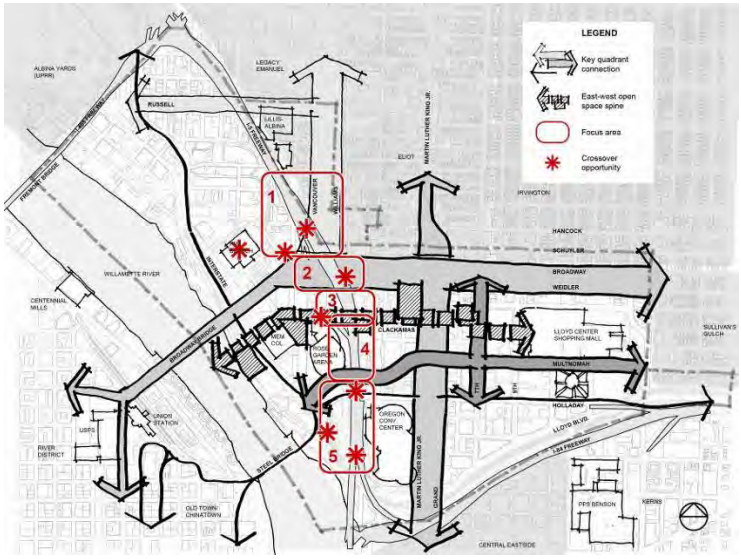
Improve safety and operations on I-5 in the vicinity of the Broadway/Weidler interchange.

OBJECTIVES INCLUDE:

EASE CONGESTION LEVEL S AND IMPROVE SAFETY:

- Congestion can be reduced through a variety of measures. Workable solutions will be explored through the Stakeholder Advisory Committee (SAC) and public outreach.





ENHANCE PEDESTRIAN AND BICYCLE ROUTES:

- Through public input, the SAC process and in partnership with the City, ODOT will look for ways to improve pedestrian and bicycle movements and facilities over and under the freeway system.

IMPROVE FREIGHT MOVEMENT:

- Freight requires highways to have sufficient capacity, good reliability and good geometrics for turning, stopping and other movements.

Integration of Transportation and Land Use Concepts in the N/NE Quadrant Plan

The N/NE Quadrant Plan Concept calls for continued success and development of the existing major regional facilities as well as significant future growth and development in the Rose Quarter, Lloyd District and Lower Albina. The I-5 improvements help support this growth by improving freeway reliability and safety in the area.

Recommended Hybrid Project and Elements for Further Refinement
I-5 Broadway/Weidler Interchange Improvements

I. INTRODUCTION

The Oregon Department of Transportation (ODOT), the City of Portland Bureau of Transportation (PBOT) and the City of Portland Bureau of Planning and Sustainability (BPS) are jointly managing a project that includes preparing a long-range plan for the overall N/NE Quadrant of the Portland Central City and identifying specific improvements to I-5 between I-84 and I-405 (Fremont Bridge) as well as improvements to the Broadway/Weidler Interchange.

This staff report describes the Hybrid Elements recommendations for the I-5 Broadway-Weidler Interchange Plan improvements.

The purpose of this staff report is to support discussion on the following item presented to the SAC:

April SAC Discussion Item:

North of Broadway Options

The project team and the SAC are considering two general approaches and five specific options for the street network north of Broadway. These options are discussed in Section III (page 6).

Background

The project team has worked closely with SAC to identify a wide range of freeway and interchange improvement concepts that could improve freeway safety and operations while being compatible with emerging long-range plans and support economic development within the overall N/NE Quadrant. The range of freeway and interchange improvement concepts has been narrowed to a few of the most promising concepts. This Joint Staff Report recommends continued study on a few key concepts.

The process for identifying, evaluating and narrowing the concepts has included several milestone actions by the SAC, including:

1. Adoption of project goals and objectives	SAC Meeting #4,	January 4, 2011
2. Conduct freeway/interchange charrette		April 2011
3. Narrowing from 70+ ideas to 13 concepts	SAC Meeting #6,	May 26, 2011
4. Narrowing from 13 concepts to 6 concepts	SAC Meeting #8,	July 28, 2011

SAC Meeting #10

At SAC Meeting #10, on October 27, 2011 the committee reviewed a physical model of the six interchange concepts and received a presentation summarizing key findings.

SAC Subcommittee Meeting
At the SAC Subcommittee meeting on December 8, 2011 staff presented information on the performance of each concept and the subcommittee discussed their pros and cons. Based on the technical information, rankings and discussion, the subcommittee recommended the following:

1. That staff conduct no further work on Concept 4a Split Diamond and Concept 4b Folded Diamond.
2. That staff work to identify the best elements of each remaining concept (Braided Ramp/CD Road, Rebuilt Structures, and Three-Point Interchange) and explore including those elements in a hybrid concept or concepts and report findings from those hybrid concepts at the January 19, 2011 SAC meeting.

SAC Meeting #12
At SAC Meeting #12 on January 19, 2012, staff presented an overview of SAC Subcommittee recommendation and asked the SAC to endorse the Subcommittee recommendation. The SAC unanimously supported the Subcommittee recommendation and directed staff to:

- Conduct no further study of the Concept 4a Split Diamond and Concept 4b Folded Diamond.

In addition to this action removing the Split Diamond and Folded Diamond concepts, the SAC discussed the benefits and concerns regarding the proposed hybrid project elements. The issues raised during the SAC discussion were considered in preparing this Joint Staff Report and the hybrid project recommendation.

SAC Meeting #13
At the February 16, 2012, SAC meeting, staff presented the information on the hybrid base concept. The project team developed a hybrid base project and identified elements for further refinement based on technical assessments of bicycle and pedestrian operations, urban design/land use potential, traffic operations and safety.

Based on that assessment, ODOT and the City of Portland have jointly identified areas of agreement on how to proceed to further develop the Hybrid Base Project and to continue to analyze elements that require more study. The SAC supported the joint staff recommendation to move forward with the Hybrid Base Project (see list of Hybrid Base Project elements on page 4) and directed staff to continue to analyze the four elements that require additional study.

SAC Meeting #14
At the March 15, 2012, SAC meeting, staff presented the following hybrid elements recommendations:

- The Southbound Braided Ramps are not recommended for further refinement as part of the base hybrid project.
- A multi-use path (MUP) immediately east of I-5 between Multnomah and Weidler is not recommended to be included in the project.
- The City and ODOT will continue to work to ensure that a bicycle/pedestrian Clackamas Overcrossing could be accommodated with a development proposed on the east side of the freeway.
- The City and ODOT will continue to refine and evaluate the North of Broadway options and bring a recommendation for SAC consideration to the May SAC meeting.

The SAC supported the joint staff recommendation to move forward with the Hybrid Base Project (see list of Hybrid Base Project elements on page 4) and directed staff to continue to analyze the North of Broadway options that require additional study and evaluation.

II. ITEMS FOR CONSIDERATION AFTER THE MARCH SAC MEETING

The project team developed and refined a Hybrid Base Project (supported by the SAC at its February meeting) and identified additional elements for further study based on technical assessments of bicycle and pedestrian operations, urban design/land use potential, traffic operations and safety. In March, the SAC agreed that the Southbound Braided Ramps and a multi-use path on the eastside of the freeway should not be included in this project. ODOT and the City of Portland have continued to jointly identify areas of agreement on how to proceed to further develop the Hybrid Base Project and are continuing to analyze the elements that require further refinement illustrated in Figure 1.

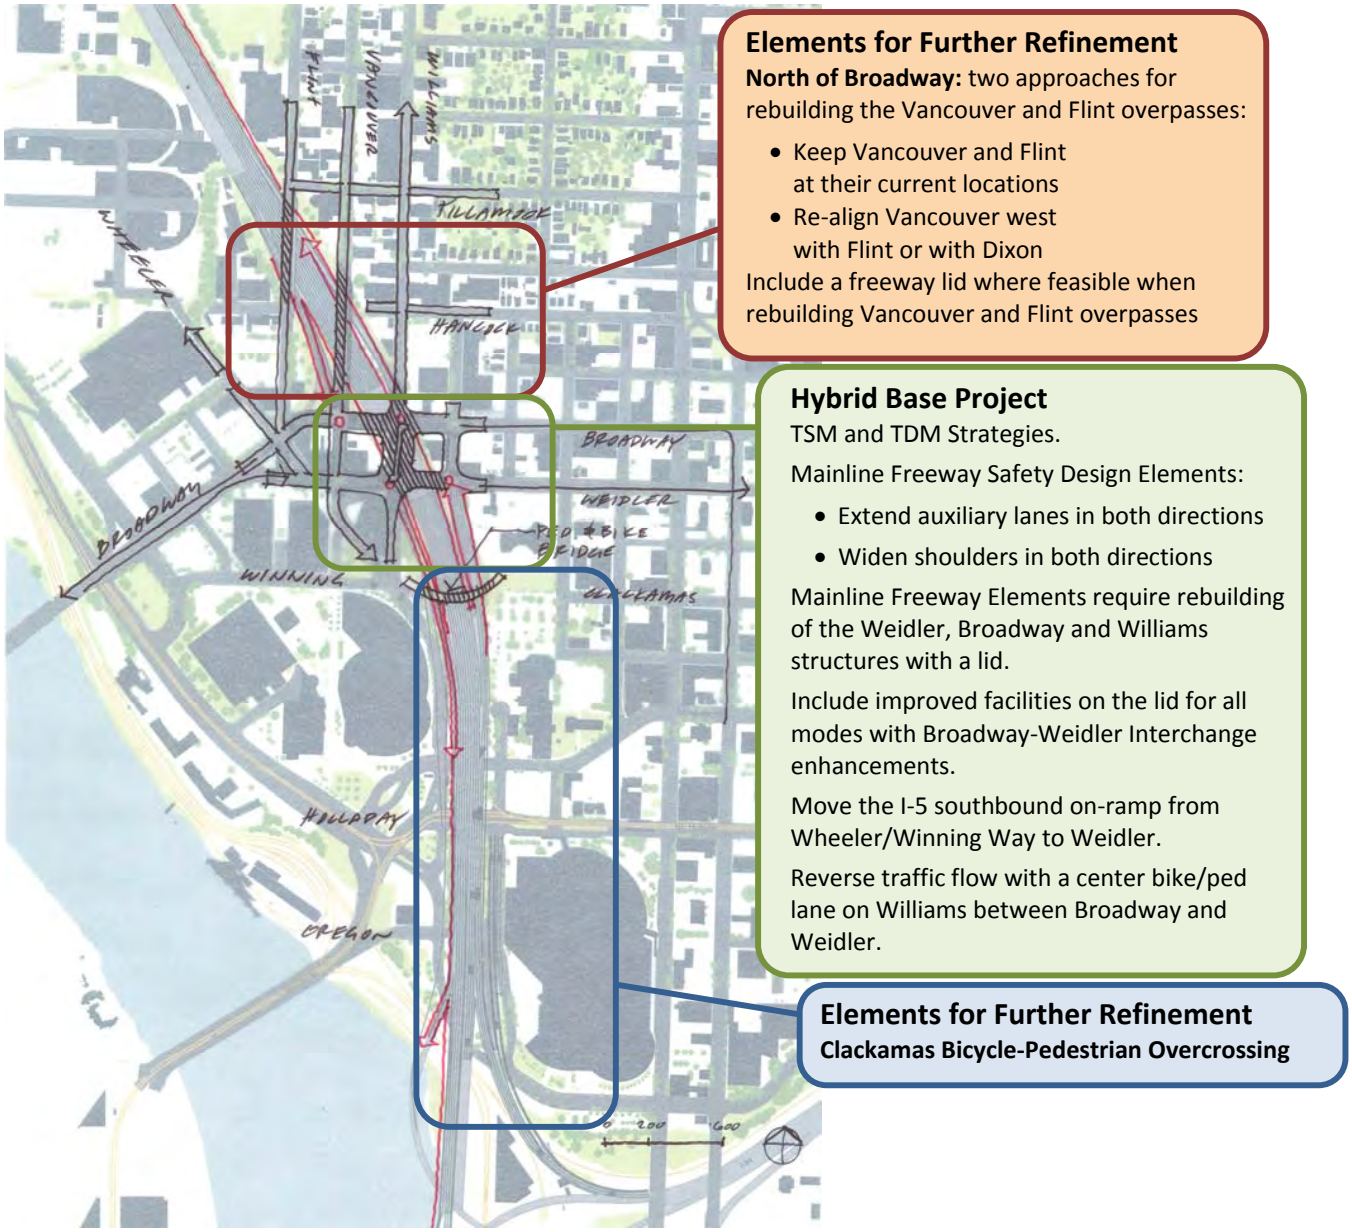


Figure 1: Hybrid Base Project and Elements for Further Study

The Hybrid Base Project

The Hybrid Base Project, with elements supported by the SAC at its February 2012 meeting and illustrated in Figure 2 (cross section) and Figure 3 (plans), includes:

Hybrid Base Project Elements	February 2012 SAC Action
1. Transportation System Management (TSM) and **Transportation Demand Management (TDM)** strategies	Element Supported
2. Mainline Freeway Safety Elements:	Element Supported
a. Extend auxiliary lanes 4,370 feet in both directions	
b. Add full-width shoulders in both directions	
3. Three Rebuilt Freeway Structures and Lid	Element Supported
(Mainline Freeway Safety Elements require rebuilding the Weidler, Broadway, and Williams structures over I-5)	
4. Broadway-Weidler Interchange Improvements	Element Supported
(improved facilities on the lid for all modes)	
5. Relocation of Southbound I-5 On-Ramp to Weidler/Williams	Element Supported
(from current location at Wheeler/Winning Way/Williams)	
6. Reverse Traffic Flow on Williams	Element Supported
(between Broadway and Weidler)	

Figure 2: Hybrid Base Project, Cross Section A (illustrative concept drawing)

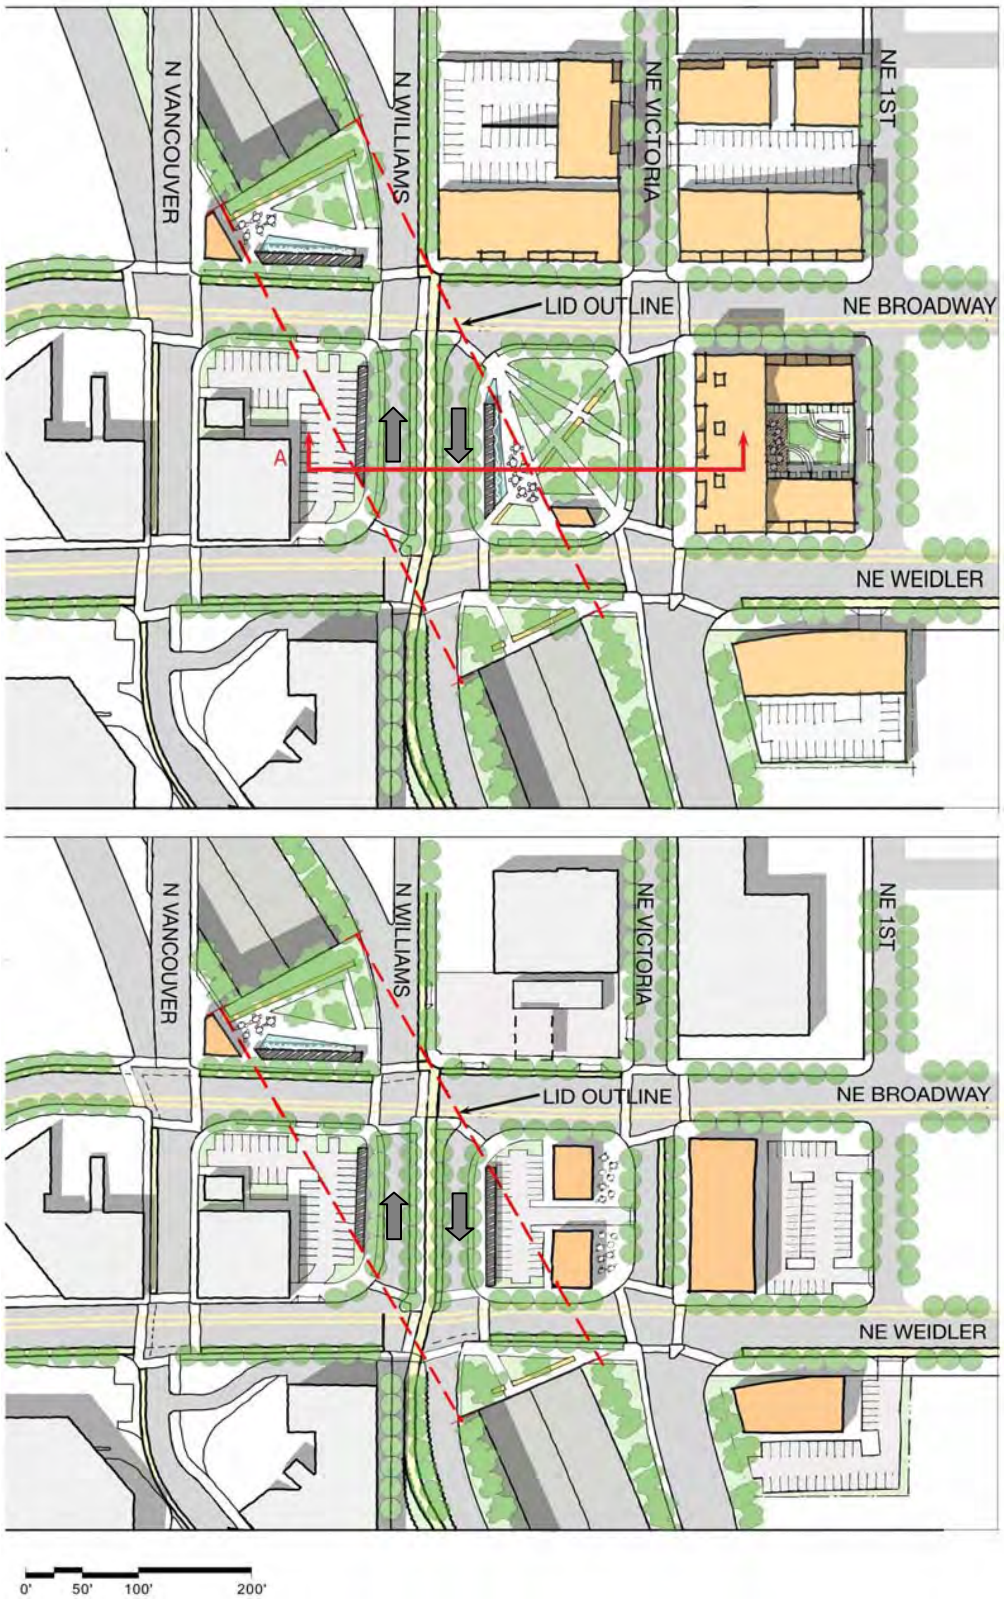

Figure 3: Hybrid Base Project, Plan Views (illustrative concept drawings)

III. JOINT STAFF RECOMMENDATION/DISCUSSION: HYBRID ELEMENTS UPDATE

Based on the above Hybrid Base Project concept and previous SAC direction, the following **Hybrid Elements** were recommended for further refinement:

North of Broadway Options: Vancouver/Flint/Hancock Crossing/Lid (Figures 4a – 4e)
Include a freeway lid where feasible when rebuilding Vancouver and Flint overpasses with two general approaches:

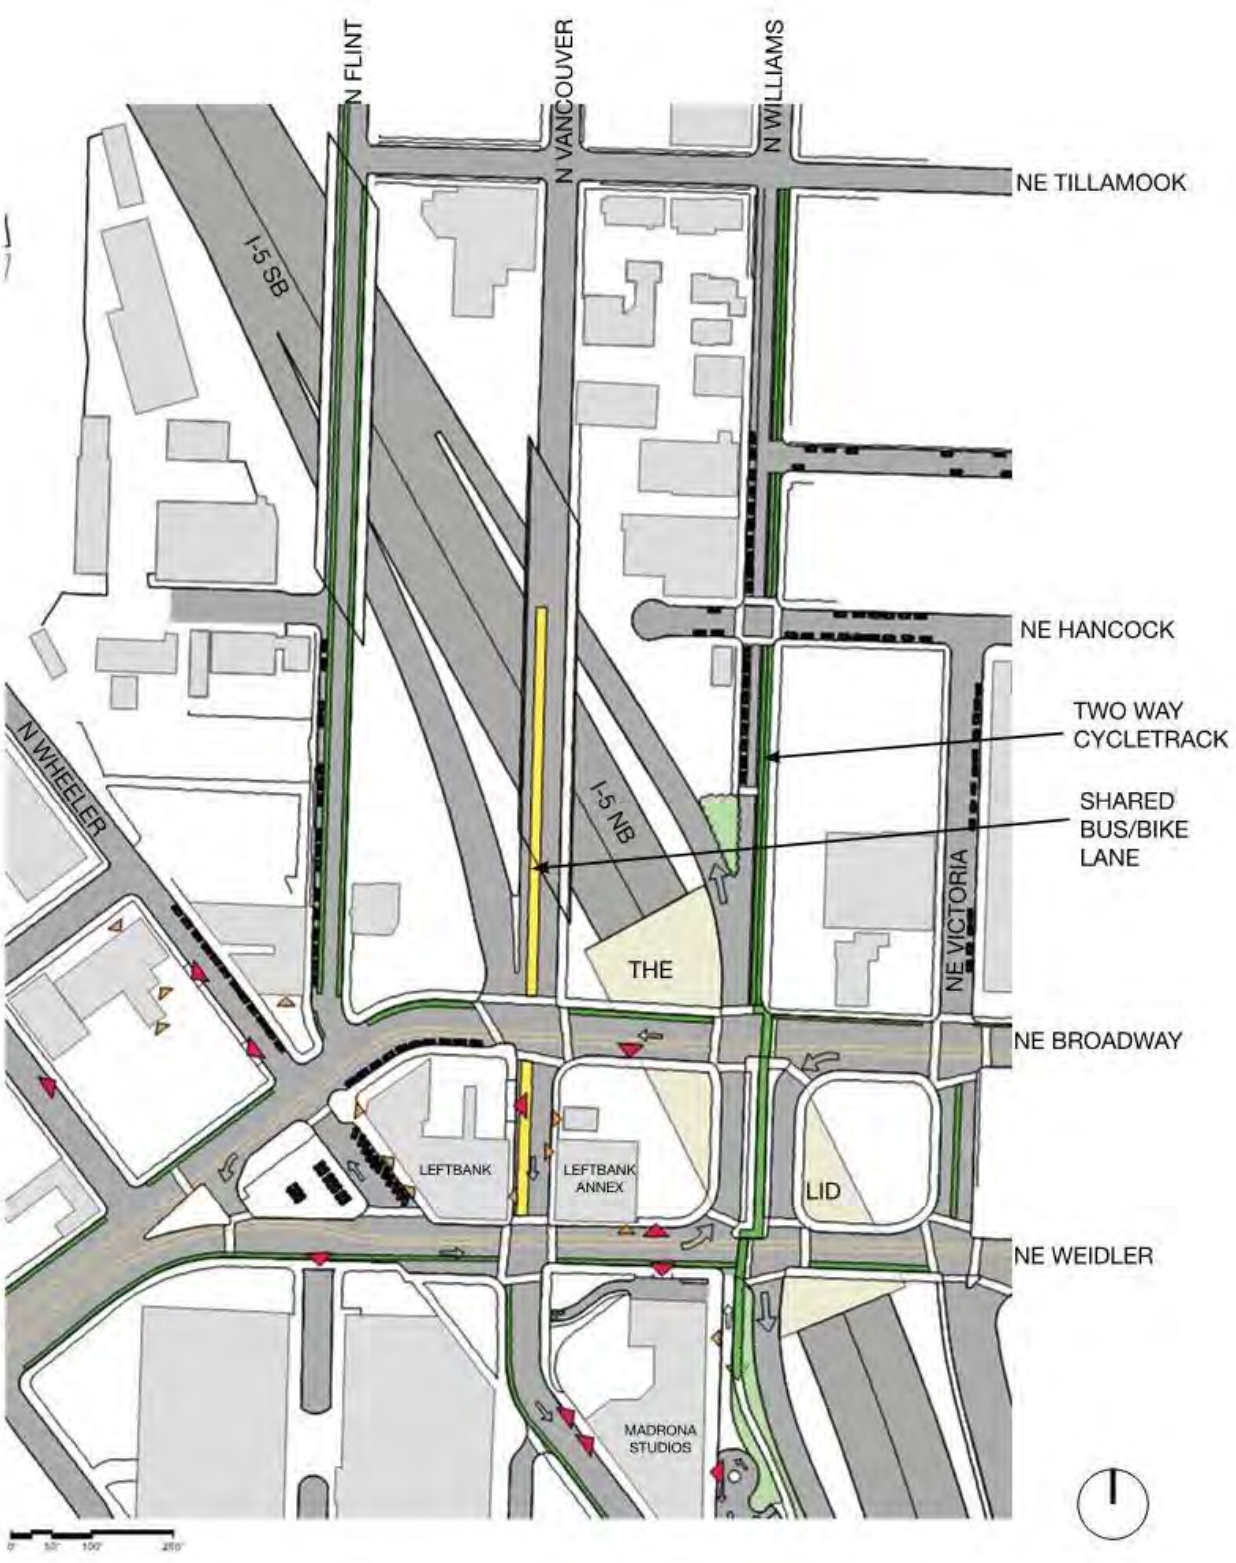
a. Keep Vancouver and Flint at their current locations
b. Re-align Vancouver west with Flint or Dixon

Hybrid Element	March 15 Joint Staff Recommendation
North of Broadway	Refine options further; evaluate options; report in April & May
Two general approaches (Figures 4a – 4e):	
• Rebuild Vancouver and Flint at their current locations	
• Re-align Vancouver west with Flint or with Dixon	

Joint Staff Recommendation/Discussion

Based on additional analysis and assessment, ODOT and the City of Portland have developed the following options for the area North of Broadway and are currently evaluating these options.

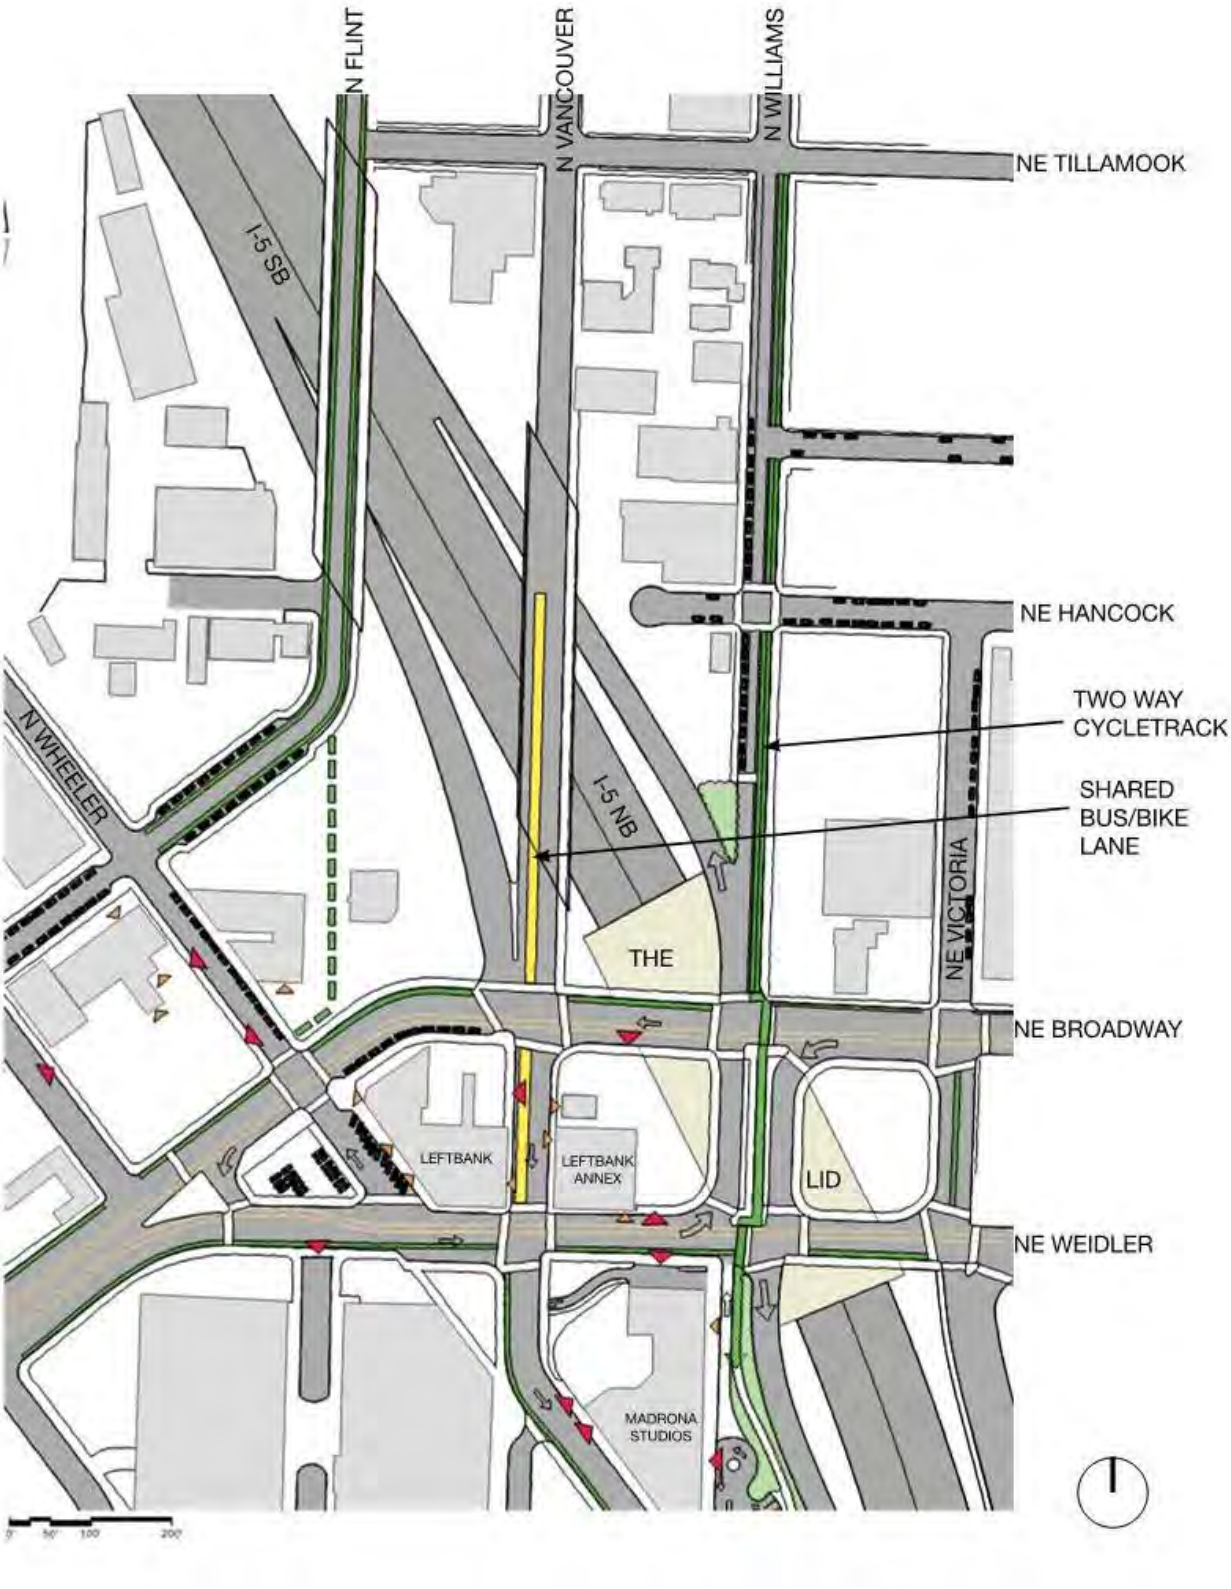
North of Broadway: Vancouver/Flint/Hancock Overcrossing/Lid



The I-5 Broadway/Weidler Interchange project presents a unique opportunity to improve the local street system just north of Broadway in addition to overall operational improvements to the interchange. Because the Flint, Vancouver and Williams structures over the freeway must all be rebuilt as part of the project, they could be built in a configuration different than the current layout which presents a number of challenges. While no option is without impacts, several alternatives have been developed and are worthy of serious consideration, in addition to the option of rebuilding the structures in their current locations. All options under consideration (shown in Figures 4a – 4e) would work with the other major elements of the Hybrid Base Project. All new structures would meet current design standards for seismic safety, sidewalks and bike lanes where applicable and as a result, represent improved conditions over no-build.

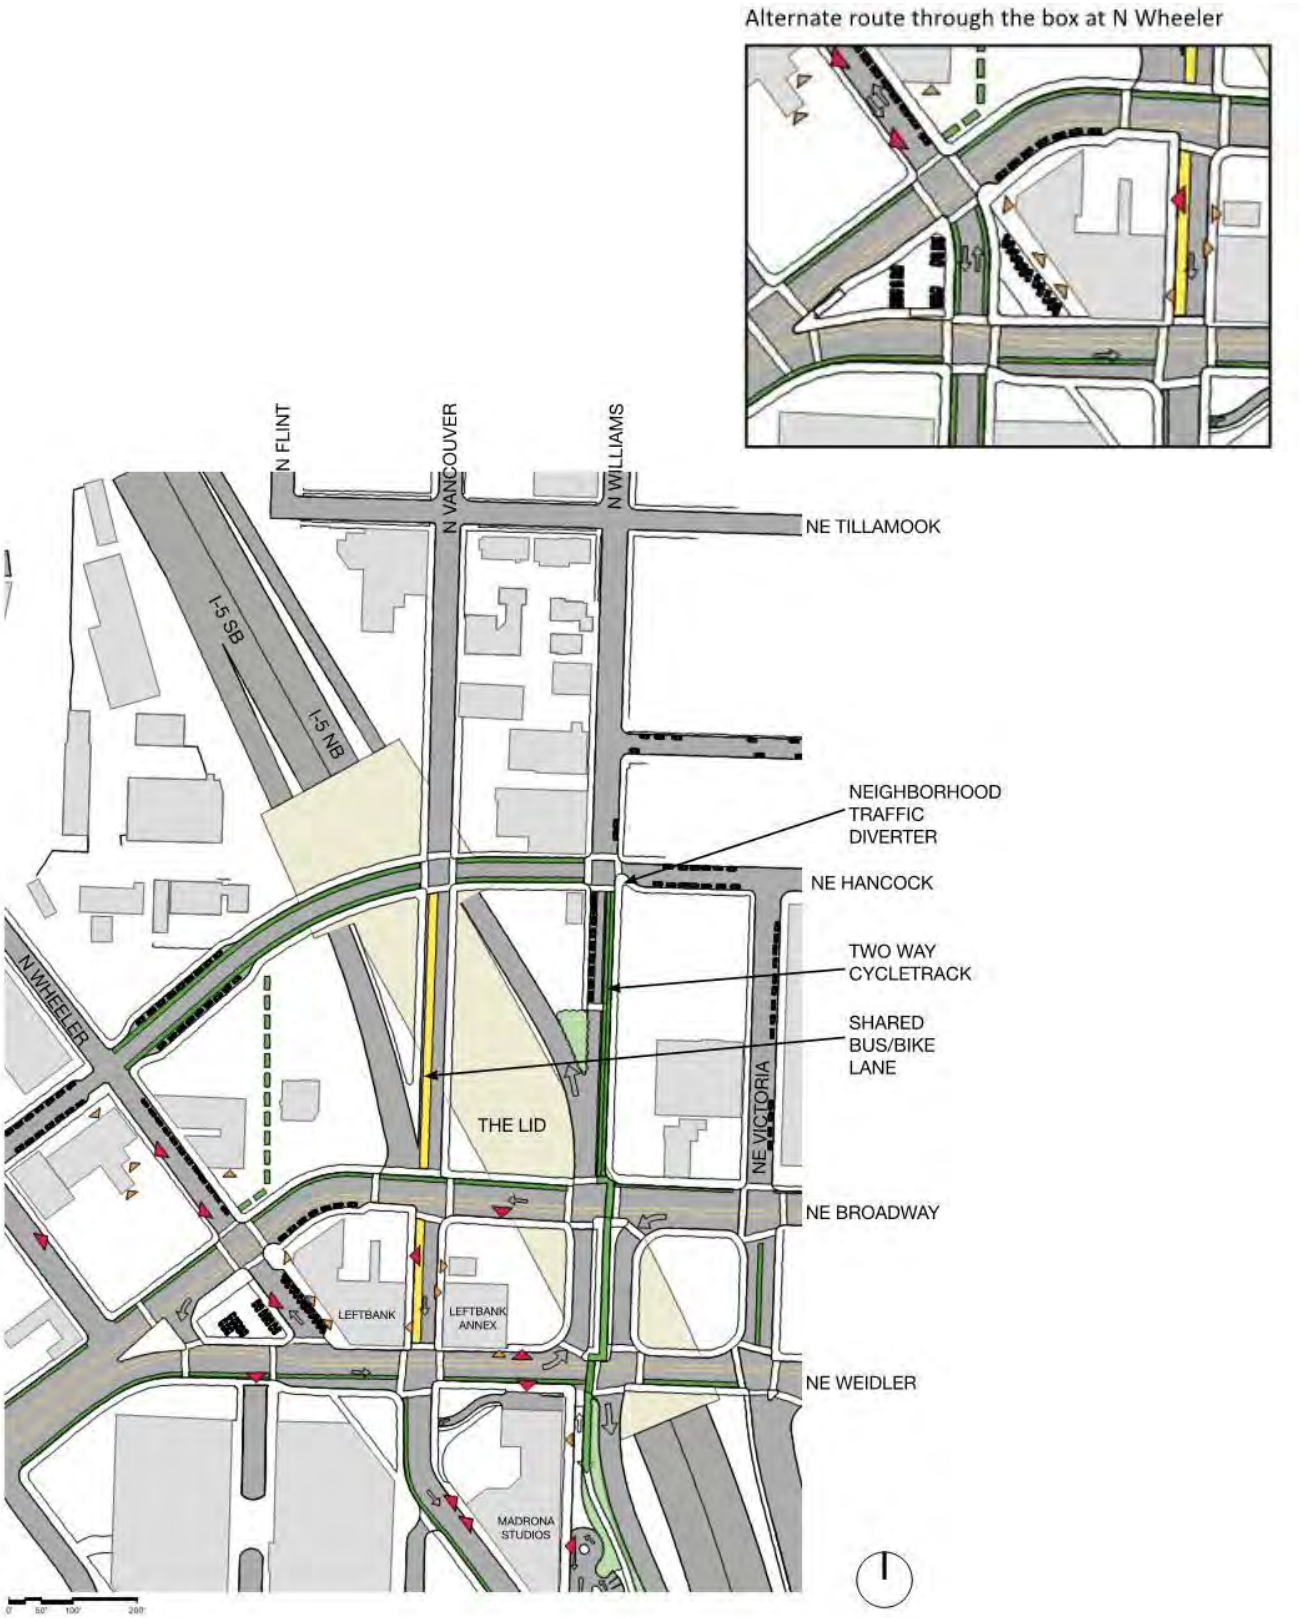
Box around "The Box"

Early in the concept alternative development process, the opportunity was identified to create supplemental safe, pleasant, walkable and bikeable connections around the intersections of Broadway, Weidler, Williams and Vancouver (often referred to as "the box"). While the proposed Hybrid Base Project significantly improves pedestrian, bicycle and vehicle conditions in the central part of the box, there will still be heavy traffic and frequent congestion. Rebuilding the structures as part of the interchange improvement project presents the opportunity to establish a circumferential network of local streets and pedestrian/bicycle connections that would let local movements not associated with Broadway/Weidler and the freeway ramps move through the area without entering the center of "the Box" where they compete with arterial and freeway-related traffic.



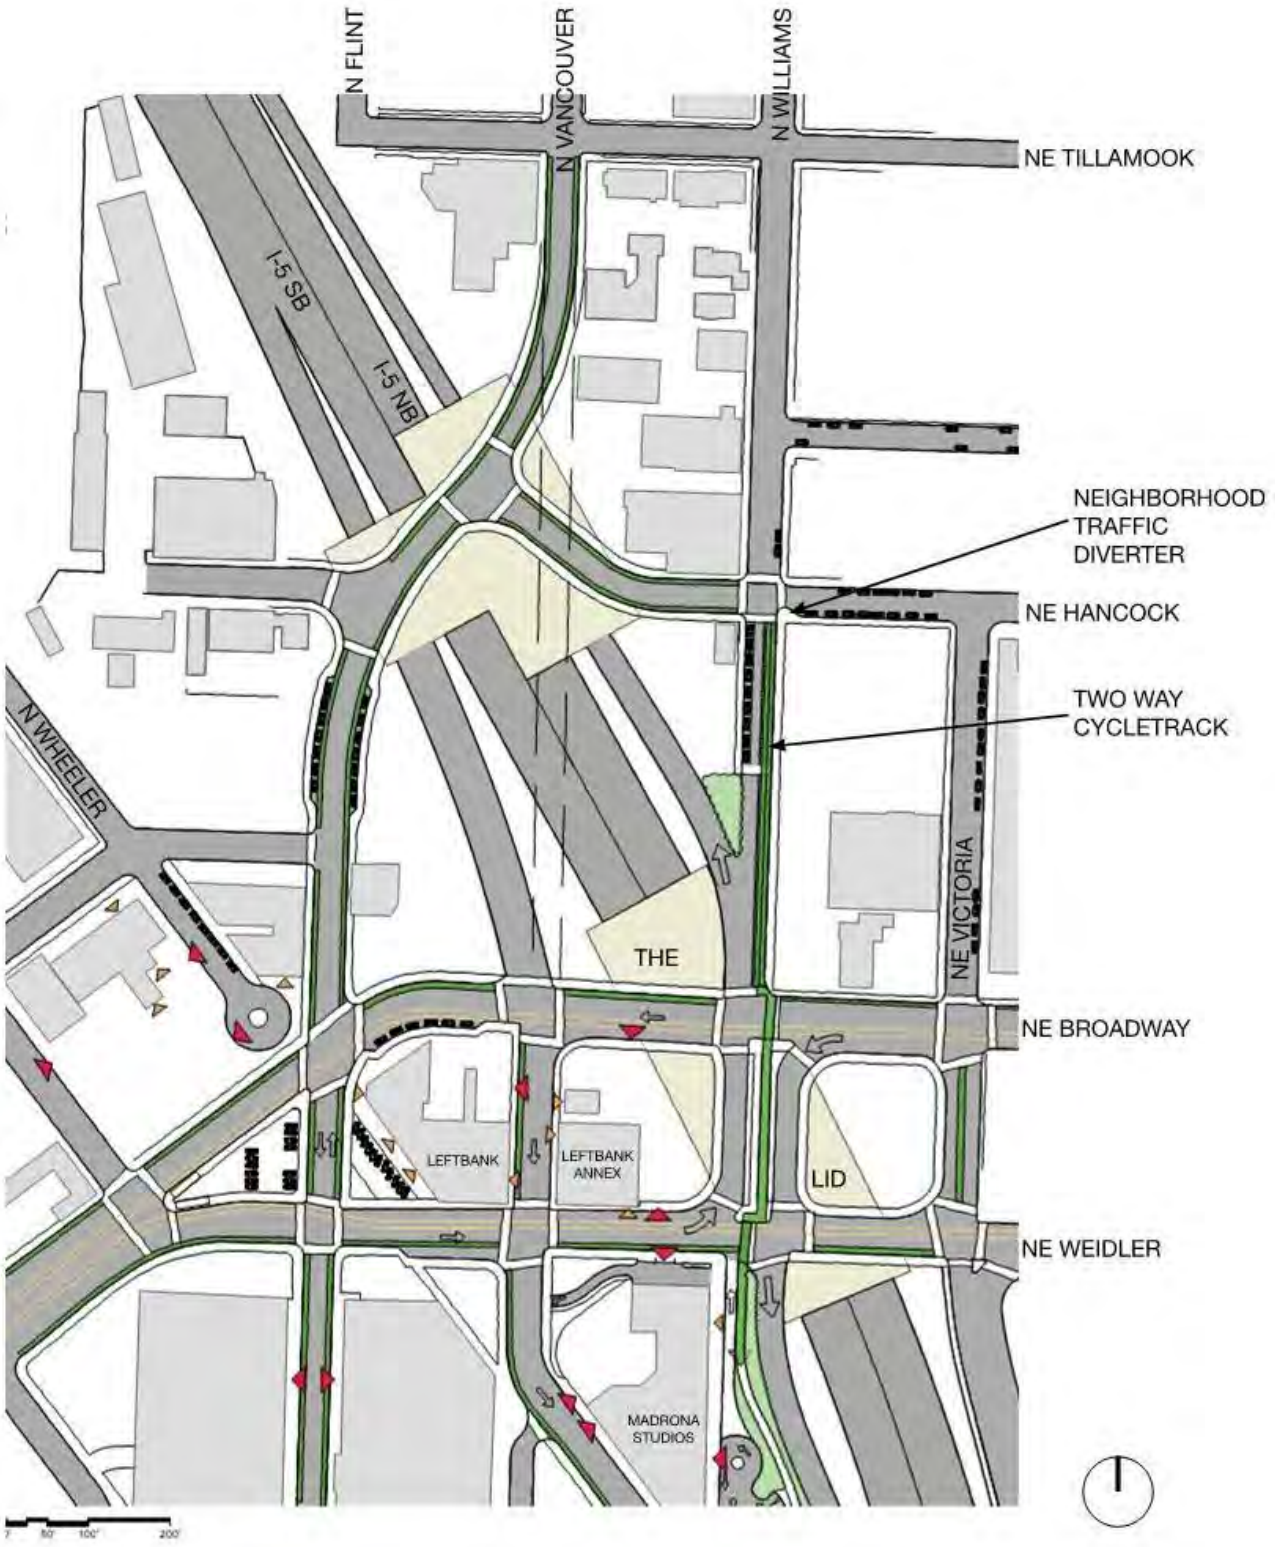
Primary Options under Development/Evaluation:

1. **Rebuild (Figure 4a)**
   This option would remove and rebuild the existing freeway overcrossings in their current locations. Although the replacement structures would meet current design standards, this option would retain the 5-legged intersection at Vancouver and Broadway where the southbound freeway off-ramp intersects Broadway. Flint would be retained in its existing configuration.
2. **Optimized Rebuild (Figure 4b)**
   This option would rebuild the existing freeway overcrossings at Flint and Vancouver in their current locations, with a new two-way connection between Flint and Dixon at Wheeler. Flint would be closed between Dixon and Broadway. The new Flint/Dixon connection would provide a local street connection between the Eliot neighborhood and the Blanchard area/Rose Quarter/Broadway Bridge that avoids the box. Wheeler would be signalized at Broadway as a 4-legged intersection. As Vancouver remains in place, this option would keep the 5-legged intersection at Vancouver and Broadway where the southbound freeway off-ramp lands.
3. **Vancouver + Hancock/Dixon (Figure 4c)**
   This option would remove the existing Flint overcrossing and rebuild the Vancouver overcrossing in its current location with a new east-west overcrossing connecting Hancock to Vancouver and Dixon. The Hancock overcrossing would provide a new east-west local street connection, with traffic calming measures at Williams and Hancock to mitigate any traffic impacts to the Eliot neighborhood east of Williams. This new Hancock/Dixon connection would provide a local street connection between the Eliot neighborhood and the Blanchard area/Rose Quarter/Broadway Bridge that avoids the box. With this option, a new lid could be built over the freeway extending approximately from Dixon to Weidler that could be used for open space, enhanced bike/pedestrian connections, and possibly some development. Flint would be closed between Tillamook and Broadway. Wheeler would be signalized at Broadway with options to retain the existing alignment to Weidler or connect with Flint in a north-south alignment through Weidler to Winning Way. As Vancouver remains in place, this option would not eliminate the 5-legged intersection at Vancouver and Broadway where the southbound freeway off-ramp lands.
4. **Flint (Figure 4d)**
   This option would replace the existing Flint and Vancouver freeway overcrossings with a single, new overcrossing connecting Vancouver, Hancock and Flint at a three-point intersection on a lid over the freeway. The new overcrossing would provide a local street connection with Hancock to the east and west. Flint would be closed between Tillamook and Hancock. Flint would be signalized at Broadway and continue in a direct alignment through Weidler to Winning Way. Access to Wheeler from Broadway would likely need to be closed for safety and to allow Flint at Broadway to be signalized as a 4-legged intersection. As Vancouver is removed between Hancock and Broadway, this option reduces the 5-legged intersection at Vancouver and Broadway where the southbound freeway off-ramp lands to a standard 4 legs.
5. **Dixon (Figure 4e)**
   This option would replace the existing Flint and Vancouver freeway overcrossings with a single, new overcrossing connecting Vancouver, Hancock and Dixon at a three-point intersection on a lid over the freeway. The new overcrossing would provide a local street connection with Hancock to the east and west and Dixon to the west. Vancouver would be closed between Hancock and Broadway. Flint would be closed to motor vehicles between Tillamook and Broadway; a pedestrian/bike connection could be retained along Flint in this segment. Wheeler would be signalized at Broadway with options to retain the existing alignment to Weidler or connect with Flint in a north-south alignment through Weidler to Winning Way. As Vancouver is removed between Hancock and Broadway, this option reduces the 5-legged intersection at Vancouver and Broadway (where the southbound freeway off-ramp intersects Broadway) to a standard 4-leg configuration.



Option 1. Rebuild

Figure 4a: North of Broadway (illustrative concept drawings)



Option 2. Optimized Rebuild

Option 4. Flint

Figure 4d: North of Broadway (illustrative concept drawings)

Option 5. Dixon

Figure 4e: North of Broadway (illustrative concept drawings)

Joint ODOT/City Discussion and Criteria on Options North of Broadway

The project team will continue to refine and evaluate these options and bring a recommendation for SAC consideration to the May SAC meeting. SAC guidance is appreciated on what information and analysis will help the SAC make an eventual recommendation.

Criteria to Be Considered:

- Impacts to existing businesses and residents.
- Connectivity: Increase or maintain the connectivity, quality, and safety of the surface street system for all modes between and within the N/NE Quadrant and its adjacent districts.
- Developability and placemaking: Maintain or create development parcels that accommodate and facilitate the proposed land use, density and character of the district.
- Open Space: Expand the role and use of open space as a district system amenity.
- Opportunities: Leverage improvements to capitalize on district opportunities to improve livability in nearby sub-districts.
- Estimated capital costs of the options.

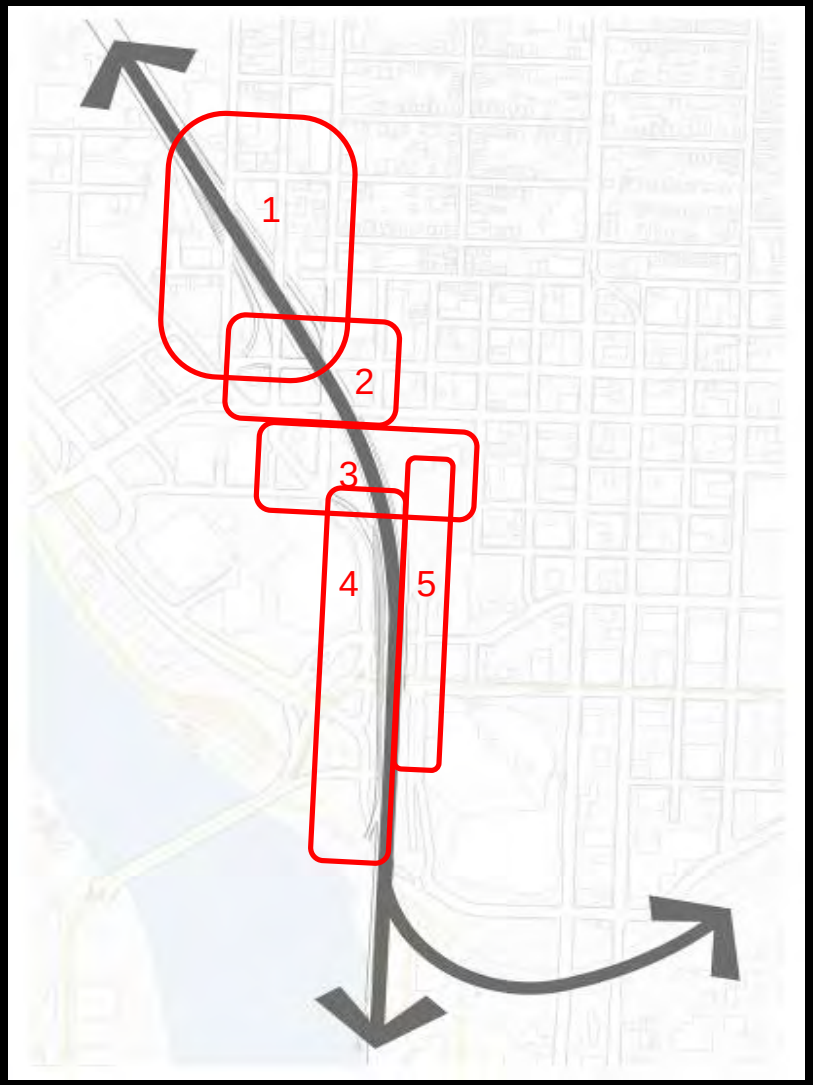
NEXT STEPS

The next SAC meeting is May 10th; at this meeting, project staff will present recommendations on the remaining two elements which are being refined further (the Clackamas Overcrossing and the options for North of Broadway).

N/NE Quadrant & I-5 Broadway/Weidler Plans

SAC Meeting #15
April 12, 2012
North of Broadway Options

CENTRAL CITY 2035



CITY OF PORTLAND, OREGON 1851

Oregon Department of Transportation

Section Agenda

- Overview
- North of Broadway Options
- Pros/Cons & Discussion

Review: Key Hybrid SAC Preliminary Actions

1. Hancock/Vancouver
2. Broadway/Weidler Lid
3. Clackamas Overcrossing
4. The Southbound Braid
5. The Multi-Use Path

CENTRAL CITY 2035

Elements for Further Refinement

North of Broadway: two approaches for rebuilding the Vancouver and Flint overpasses:

- Keep Vancouver and Flint at their current locations
- Re-align Vancouver west with Flint or with Dixon

Include a freeway lid where feasible when rebuilding Vancouver and Flint overpasses

Hybrid Base Project

TSM and TDM Strategies.

Mainline Freeway Safety Design Elements:

- Extend auxiliary lanes in both directions
- Widen shoulders in both directions

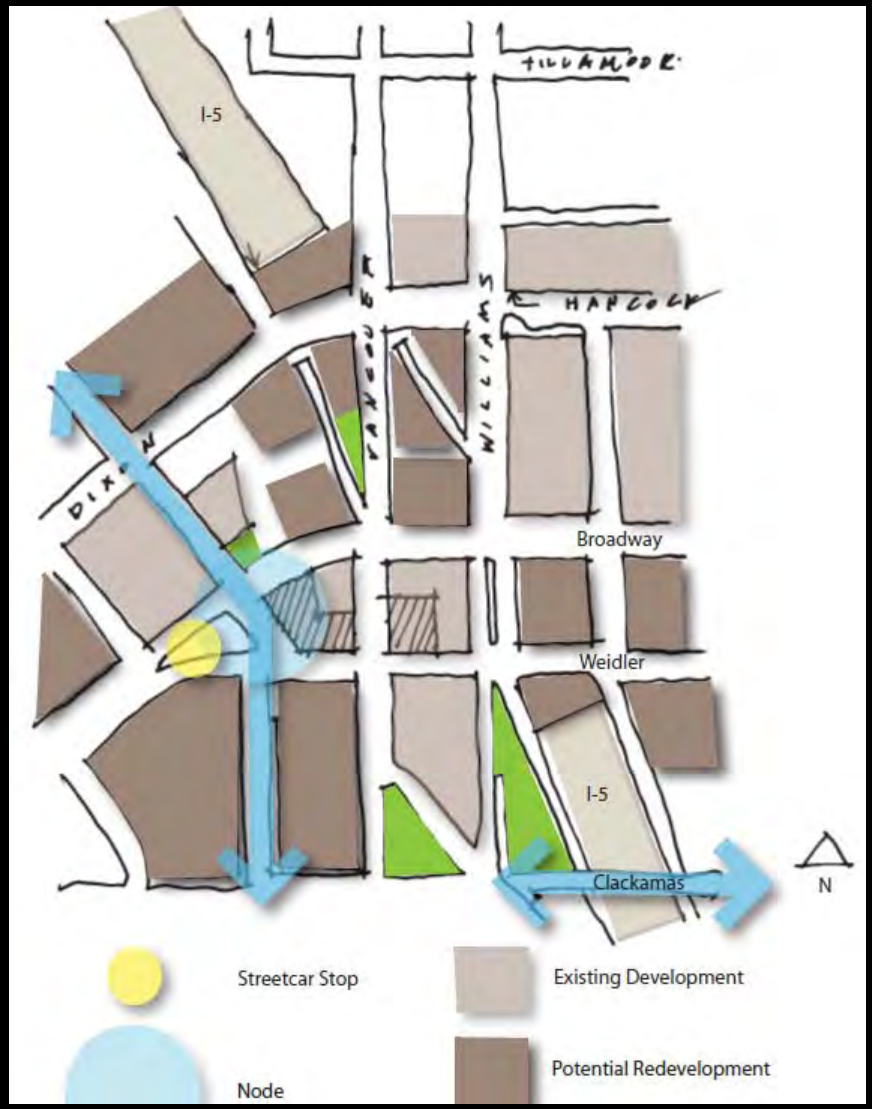
Mainline Freeway Elements require rebuilding of the Weidler, Broadway and Williams structures with a lid.

Include improved facilities on the lid for all modes with Broadway-Weidler Interchange enhancements.

Move the I-5 southbound on-ramp from Wheeler/Winning Way to Weidler.

Reverse traffic flow with a center bike/ped lane on Williams between Broadway and Weidler.

Elements for Further Refinement



Clackamas Bicycle-Pedestrian Overcrossing

North of Broadway: 5 Options

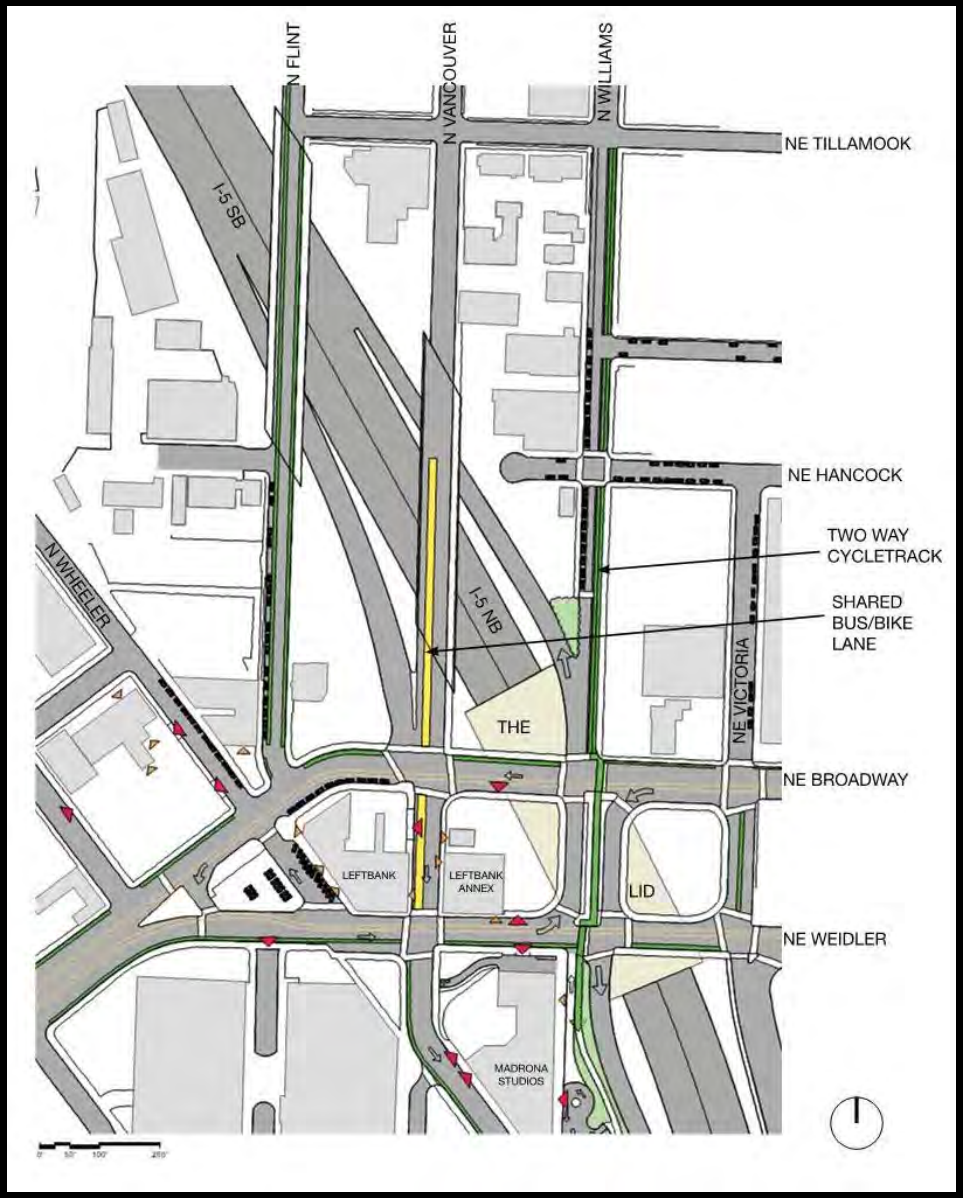
March 20th Work Session

- Co-chair Lloyd Lindley facilitated work session.
- Refinement of North of Broadway Option with N/NE Quadrant Concepts.
- Outcomes:
  - Refinement of Options
  - Alternative lid concepts
    - Two smaller lids with addition of Hancock crossing
    - One large lid with addition of Hancock crossing
  - Alternative uses for the lid

CENTRAL CITY 2035

North of Broadway Options

1. **Rebuild**
2. **Optimized Rebuild**
3. **Vancouver + Hancock/Dixon**
   - With Wheeler sub-option
   - With Lid sub-options
4. **Flint**
   - With Lid sub-options
5. **Dixon**
   - With Wheeler sub-option
   - With Lid sub-options



Discussion Items

- Vancouver Options to keep or move:
  - Unique Opportunity to change local street system safer operations.
  - Box around the "The Box"- opportunity to provide for alternative and less stressful routes.
  - Economic development opportunities
- Options with Freeway Lid to provide opportunities for neighborhood amenities and improved ped/bike facilities.

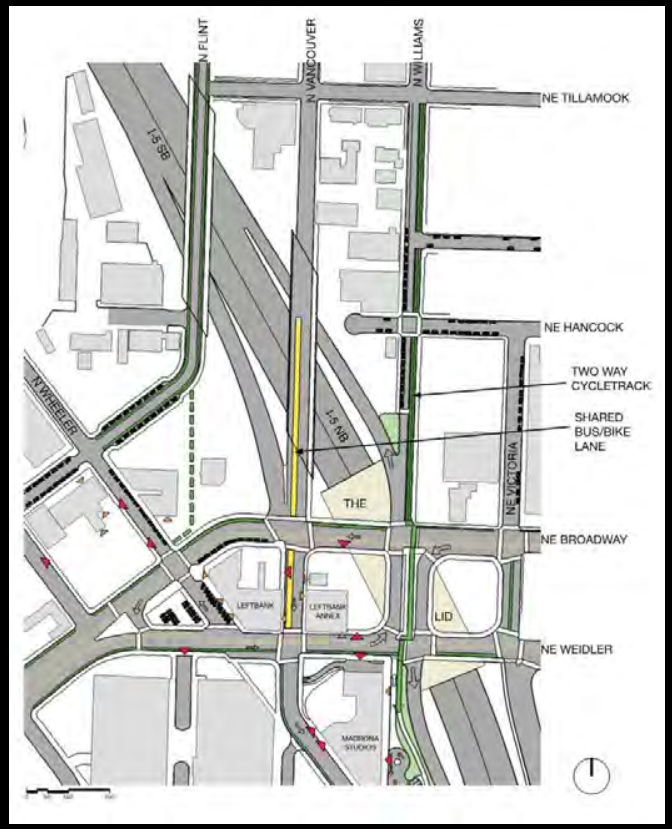
North of Broadway: Pros & Cons

Option 1.

Rebuild



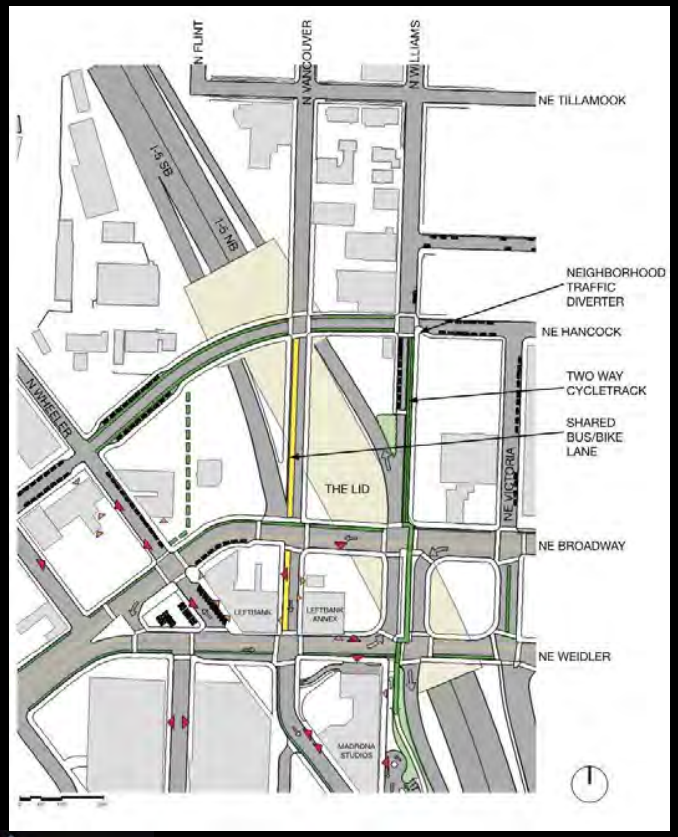
- **No change to traffic patterns north of Broadway**
- **Retains 5-leg intersection @ Vancouver/Broadway (Queuing issues on I-5 off ramp and Vancouver)**
- **One Lid for Broadway-Weidler-Williams**
- **Missed opportunity?**

CENTRAL CITY 2035

North of Broadway: Pros & Cons

Option 2.

Optimized Rebuild



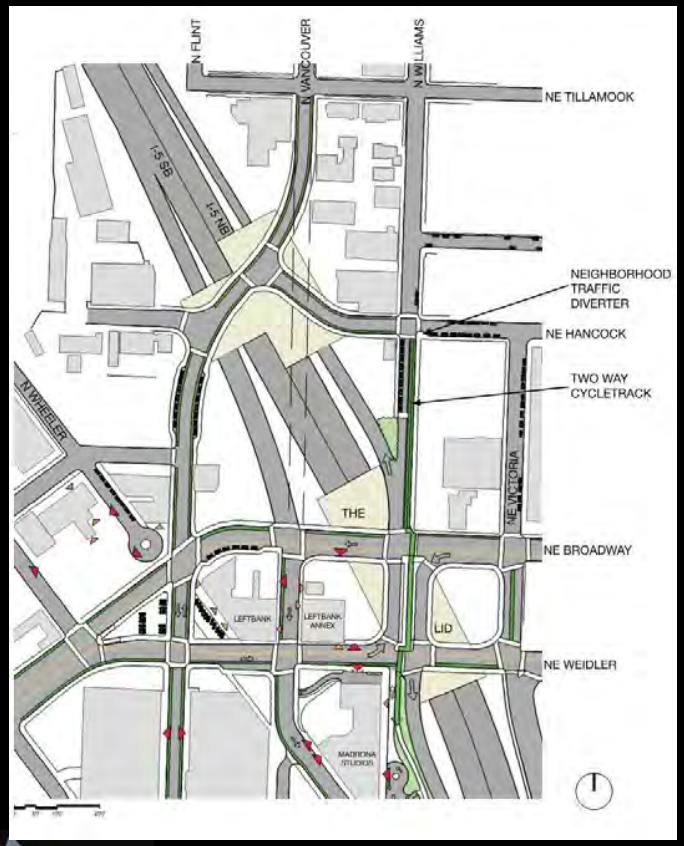
- Retains 5-leg intersection @ Vancouver/Broadway (Queuing issues on I-5 off ramp and Vancouver)
- Connects Flint with Dixon
- Eliminates Flint at Broadway, potential new signal at Wheeler & Broadway
- One Lid for Broadway-Weidler-Williams
- Increased traffic on Flint north of freeway
- Missed opportunity?

CENTRAL CITY 2035

North of Broadway: Pros & Cons

Option 3.

Vancouver + Hancock/Dixon



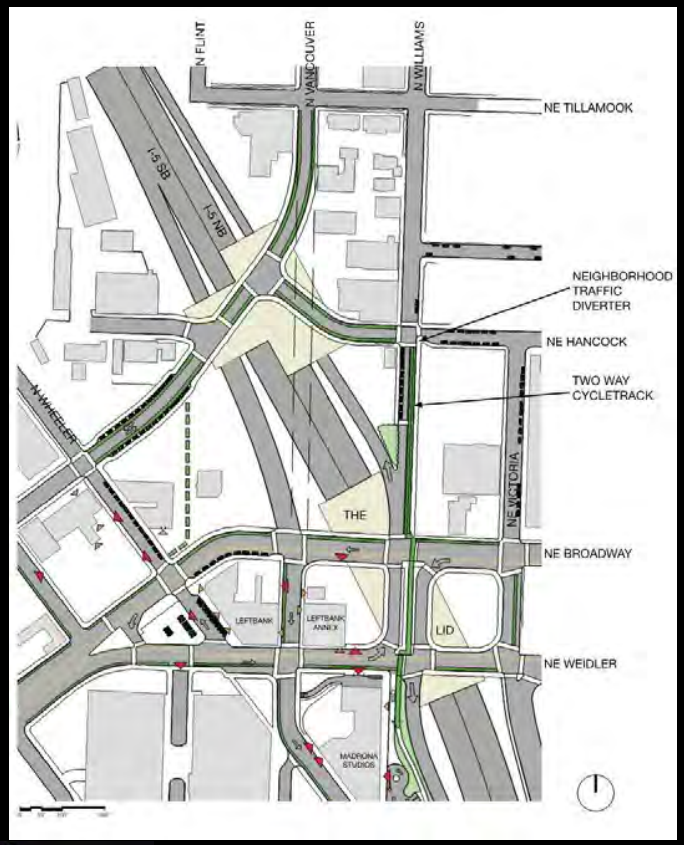
- Retains 5-leg intersection @ Vancouver/Broadway (Queuing issues on I-5 off ramp and Vancouver)
- Eliminates Flint at Broadway, potential new signal at Wheeler & Broadway
- New east-west local connection at Hancock & Dixon
- Could accommodate optional freeway lid concepts
- Risk of some neighborhood traffic diversion if not mitigated

CENTRAL CITY 2035

North of Broadway: Pros & Cons

Option 4.

Flint

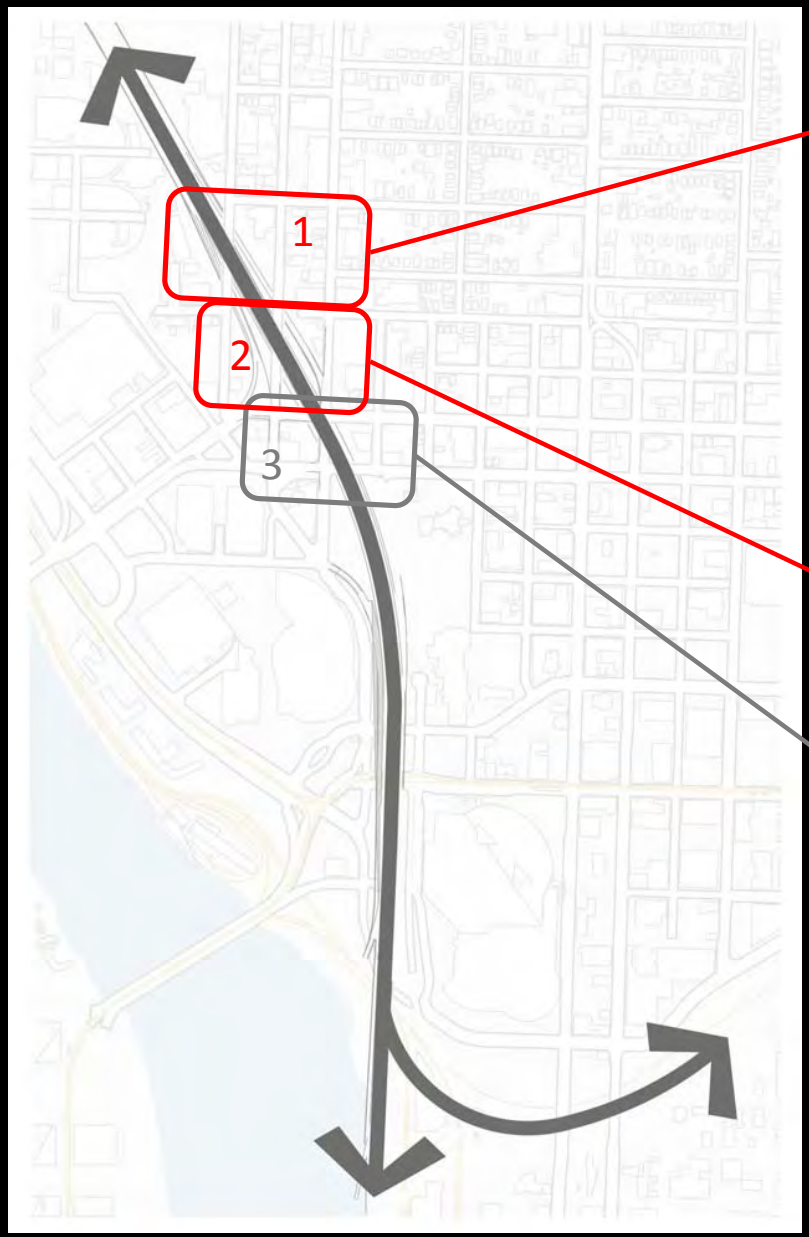


- **Eliminates 5-leg intersection @ Vancouver/Broadway (improves queuing issues on I-5 off ramp and Vancouver)**
- **Closes Wheeler at Broadway, new signal at Flint & Broadway**
- **New east-west local connection at Hancock with Dixon-Flint connector**
- **Could accommodate optional freeway lid concepts**
- **Risk of neighborhood traffic diversion if not mitigated**
- **Significant opposition from area property owners**

North of Broadway: Pros & Cons

Option 5.

Dixon



- **Eliminates 5-leg intersection @ Vancouver/Broadway (improves queuing issues on I-5 off ramp and Vancouver)**
- **Eliminates Flint at Broadway, potential new signal at Wheeler & Broadway**
- **New east-west connection at Hancock & Dixon**
- **Could accommodate optional freeway lid concepts**
- **Risk of some neighborhood traffic diversion if not mitigated**
- **Would introduce more traffic into Dixon area, could require one-way Ross/Wheeler options**

North of Broadway: Options Evaluation Criteria

- Connectivity
- Developability/Opportunities
- Open Space
- Safety & Mobility
- Cost

Lid Cost Estimates

1. North of Broadway:

Rebuild Vancouver/Flint
Structures (No Lid): $45-$50m
Structures (Small Lid): $70 - $80m

Small lid add @25 - $30 m

2. Span to Create "Full" Lid:$50-$60m

3. Previously endorsed:
Broadway/Weidler Lid: $100-$110m

Full Lid: $220m-$250m

CENTRAL CITY 2035

April 12, 2012

TO: N/NE Quadrant Stakeholder Advisory Committee

FROM: Project Team

SUBJECT: SAC #15 Meeting, Quadrant Plan Discussion (7:10 agenda item)

Attached is the first draft of N/NE Quadrant Plan district goals, policies and selected implementation action items for review and comment by the SAC.

This document represents a key chapter of the plan, as it will provide long term policy direction for the area and it provides a roadmap for implementation of the plan. Additional plan chapters will be developed that describe the planning process, issues that plan is intended to address, and the quadrant concept that was developed based on SAC and public input.

Please note that this draft includes only land use and zoning implementation actions, provided as an example of the types of actions that will be proposed. Additional actions are being developed in coordination with implementing bureaus and a more complete list will be provided prior to the May 10 meeting.

An overview of this document will be provided at the April 12 SAC meeting. Following the meeting, we request that SAC members review this draft and provide comments and suggested revisions via email. This will help staff address SAC concerns, while still meeting our tight timeline for production of the draft plan. **Please provide comments via email to Stephanie.Beckman@portlandoregon.gov by April 27, 2012.**

Quadrant Plan Review Schedule

Meeting Date	Plan Component
3/15, SAC #14	Quadrant Plan Outline
3/21, LU Subcommittee	Potential changes in height regulations
4/12, SAC #15	SAC direction on height regulations Draft Goals, Policies and Selected Implementation Actions (comments via email)
5/10, SAC #16	Revised Draft Goals, Policies and Implementation Actions
5/23, LU Subcommittee	Follow-up on Implementation Actions
6/28, SAC #18	Complete Draft Quadrant Plan, public comment
Late July/Early Aug: SAC #19	Revised Draft Quadrant Plan, final review and approval

N/NE Quadrant Plan
Draft Goals, Policies and Implementation Actions

This plan chapter will be organized into sections addressing each Central City district (the Lloyd District and Lower Albina), as well as the two study areas included in the N/NE Quadrant planning boundary. A **district goal** and **concept diagram** will convey the overarching vision for each district, followed by a series of **policies**, which provide more specific direction on issues associated with the larger goal. The district concept diagrams are currently being developed, therefore are not available with this draft. However, they will be based on the N/NE Quadrant Concept diagrams, which the SAC has reviewed several times.

The policies are organized into topic areas generally consistent with the planning framework developed for the Central City 2035 (CC2035) Concept Plan, which will establish the overall vision and direction for the Central City as a whole. Because issues that apply Central City-wide will be addressed in the CC2035 Concept Plan, the N/NE Quadrant Plan will focus on issues that are unique to its planning area within the Lloyd District and Lower Albina. The policy topics are as follows:

1. Regional Center: Economy and Innovation
2. Housing and Neighborhoods
3. Transportation
4. Urban Design
5. Green Central City

All five policy topic areas are covered for the Lloyd District, however Lower Albina, a largely industrial area, does not have a "Housing and Neighborhoods" section.

Implementation actions, such as regulatory changes, future work items, projects, programs or studies, will be proposed for each district and for the two study areas: North Banfield Portal and Vancouver/Williams Corridor. This draft includes only land use and zoning actions, as an example of the types of actions that will be proposed. Additional actions are being developed in coordination with implementing bureaus and a more complete list will be provided prior to the May 10 meeting.

Relationship to SAC Goals
As noted above, the draft goals and policies are organized consistent with the CC2035 framework. They were also crafted with the original SAC goals and objectives, developed at the beginning of this process, in mind. Below is a summary of how the SAC goals and objectives have been incorporated into the draft plan policies:

SAC Goals	Draft Plan Policy Areas
Goal 1: A diverse mix of commercial, cultural, entertainment, industrial, recreational and residential uses, including affordable housing.	*Lloyd:* Regional Center: Economy & Innovation, Housing and Neighborhoods *Lower Albina:* Regional Center: Economy & Innovation
Goal 2: Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages	*Lloyd:* Regional Center: Economy & Innovation, Housing and Neighborhoods *Lower Albina:* Regional Center: Economy & Innovation
Goal 3: Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment.	*Lloyd:* Housing and Neighborhoods, Urban Design, Green Central City *Lower Albina*: Green Central City

SAC Goals	Draft Plan Policy Areas
Goal 4: Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods.	*Lloyd:* Housing and Neighborhoods, Urban Design
Goal 5: A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system.	*Lloyd:* Transportation, Urban Design *Lower Albina*: Transportation
Goal 6: Improve the local circulation system for safe access for all transportation modes within the quadrant and at freeway interchanges.	*Lloyd:* Transportation, Urban Design *Lower Albina*: Transportation
Goal 7: Equitable access to community amenities and economic opportunities.	*Lloyd:* Regional Center: Economy & Innovation, Housing and Neighborhoods *Lower Albina:* Regional Center: Economy & Innovation
Goal 8: Protection and enhancement of the cultural heritage of the area and its sub-districts.	*Lloyd:* Housing and Neighborhoods *Lower Albina:* Urban Design

Lloyd District

District Goal

Foster the growth of the Lloyd District into the intensely urban and increasingly residential center of the Central City's eastside, second only to Downtown in vitality, employment and livability. Capitalize on the district's regional attractions, high quality transit and other connections to the city and region. Develop the district as a complete and green community with well designed parks, streets, and high-performance green buildings and infrastructure.

Regional Center: Economy and Innovation

As home to vital regionally-significant facilities, the Lloyd District is an integral part of the Central City today, and its tremendous growth potential means it will contribute to the regional center in a variety of new ways in the future.

These policies and actions will help maintain and grow existing assets in the district, including regional event attractions at the Rose Quarter and Oregon Convention Center, the main street character along Broadway, regional retail uses at the Lloyd Center Mall and a well-established office cluster of professional, medical and government services.

New businesses that balance the episodic nature of the regional event centers and new high-density residential and commercial development in Central Lloyd will support job growth and enliven the district.

Policies

1. **Employment**. Support and retain existing businesses while encouraging significant new job growth. Develop the district to support a broad array of employment types that provide living-wage jobs and equitable access to employment opportunities.

2. **Redevelopment.** Encourage high density commercial and residential development and better utilize vacant and underutilized land.

3. **Core Employment Uses.**

    a. **Office Core.** Maintain and grow the Lloyd District as an employment center for headquarters office, institutions, professional services and the government sector.

    b. **Regional Attractions.** Support the continued success of the Rose Quarter and the Oregon Convention Center and encourage new development and businesses that support and balance the episodic nature of event activity.

    c. **Retail.** Support existing and new retail development including regionally focused uses in and around the Lloyd Center Mall and neighborhood-serving uses along the Broadway corridor. Encourage and support retail development on "Retail and Commercial Streets" identified in the district concept diagram.

d. **Civic and Cultural Amenities.** Expand civic attractions in the Lloyd District to complement the district's tourism, regional attractions and growing residential character. Examples of attractions could include centers for arts, culture, history or science.

4. **Innovation: High Performance Green District.** Promote the Lloyd District as a center for green innovation, foster job creation in sustainable industries and encourage the incorporation of green technology into businesses and development.

Implementation Actions

Selected land use and zoning actions are presented below. Additional actions will be provided at the May 10 SAC meeting, following review and coordination with implementing bureaus.

1. Adjust the Lloyd District and Lower Albina boundaries to include the Portland Public School (PPS) Blanchard site and adjacent properties to the south and east within the Lloyd District.

2. Rezone the PPS Blanchard site and adjacent properties to the east from IG1 to CXd or EXd to encourage future redevelopment. Set maximum FAR at 3:1 and height at 100'. Require a master plan process as part of redevelopment to address street and pedestrian connectivity, open space, views, and the transition to adjacent industrial uses.

3. Adjust and increase maximum allowed heights to support high density development, provide public amenities, and encourage desired uses in the following areas:
   a. N. Broadway near the Broadway Bridgehead
   b. Riverfront ("Thunderbird" site)
   c. Central Lloyd area

4. Adjust regulatory tools and incentives to encourage new development that supports the Convention Center, including new or expanded hotel development, retail and other services. Potential tools include: bonus incentives, overlay zoning, and site assembly.

5. Pursue development on publically owned sites in and around the Rose Quarter through public-private partnerships.

6. Examine potential changes to parking zoning code regulations for the Lloyd District to provide incentives for mixed use development and the redevelopment of surface parking lots through the provision of shared parking strategies, development agreements and other strategies.

Housing and Neighborhoods

The N/NE Quadrant Plan envisions the Lloyd District as a high-density, high-amenity, mixed-use area, with a focus on increasing residential development for a more balanced jobs to housing ratio. Greater housing density will increase the vitality of the district and further citywide and regional goals that encourage housing in areas close to employment centers and well connected to alternative transportation networks.

Areas in which housing development should be emphasized are proposed in the Central Lloyd area, upper Broadway and the eastern edge. Policies and actions promoting a diverse housing mix that is attractive and affordable to a broad range of people will help implement equity and diversity goals put forth in the Portland Plan and the Central City 2035 Plan.

Increased residential density will require amenities and services necessary for residents to meet their daily needs. It is essential that the area develop as a complete neighborhood with convenient and safe access to neighborhood businesses, parks and recreation facilities and schools. Development of new open spaces and creating an environment that is supportive of local, neighborhood serving businesses are high priorities. Safe and attractive alternative transportation options, such as walking, biking and taking transit, are also important for promoting healthy lifestyles and meeting climate action goals for reduced green house gas emissions. See the transportation section for policies and actions that support those elements.

The Lloyd District has a diverse history and is well located to serve as eastside civic center for Portland. The design of public spaces, as well as programming within those spaces, should celebrate the history of the place and help build community among those that visit, work and live in the district.

The goal of increased growth and density brings concerns about the potential for displacement of current residents and businesses, which is a concern that applies citywide in areas of growth and change. This plan identifies a need for citywide programs to address potential displacement, reinforcing the recommendations of the Portland Plan.

Policies

1. **Housing Development.** Encourage the development of new housing especially in “housing emphasis areas”. Through greater concentration of housing the district can foster a sense of community and support efficient provision of residential amenities and services.

2. **Housing Diversity and Preservation.** Encourage the development and preservation of a housing supply of unit types and sizes that meets the needs of people of all incomes and ages. Include development of affordable housing as a way to ensure income diversity, meet citywide housing needs and help mitigate the potential for displacement due to rising housing prices in the district and in adjacent neighborhoods.

3. **Complete Neighborhood.** Foster development of a complete neighborhood with amenities and services that residents need to meet their daily needs, including access to parks and open space, grocery stores, neighborhood businesses and schools.

4. **Parks and Open Space.** Improve existing parks and develop new trails and open spaces (public and private) that are safe and inviting and meet a range of recreation needs. Prioritize development of new parks within the Central Lloyd area and on the riverfront.

5. **Successful Neighborhood Business Districts.** Support and expand local main street business and areas within the Lloyd District and in adjacent neighborhoods. Cluster neighborhood scale businesses on the existing Broadway retail corridor and on district retail commercial streets.

6. **Community Building.** Encourage public spaces, pubic art and activities that celebrate the history of the district and that help build a community in the Lloyd District and with surrounding neighborhoods.

7. **Historic and Cultural Resources.** Preserve, rehabilitate and celebrate historic and culturally significant structures and places in the Lloyd District.

8. **Displacement.** Support existing residents and businesses within the Lloyd District and in adjacent neighborhoods that are at risk for involuntary displacement.

Implementation Actions

Selected land use and zoning actions are presented below. Additional actions will be provided at the May 10 SAC meeting, following review and coordination with implementing bureaus.

1. Develop regulatory tools to encourage housing development and the inclusion of affordable housing, focusing on housing emphasis areas in the district concept diagram. Regulatory options include:
   a) Restructuring the FAR/Height base and bonus system to encourage housing
   b) Changes to base zoning to increase flexibility for mixed use development
   c) Changes to superblock regulations to encourage housing
   d) Remove housing incentives from the Office Core area

2. Develop regulatory tools and incentives to encourage open space consistent with the district concept diagram and to encourage the provision of private open space and public parks. Possible tools include: height/FAR bonus incentives, superblock regulations, master plan requirements and development agreements.

3. Develop a strategy to acquire and improve public parks consistent with the district concept diagram.

Transportation

The Lloyd District is well served by a multi-modal transportation system that supports its role as a regional center for retail, business, entertainment, and government. The district has unique regional transportation advantages, including direct connections to the interstate freeway system via I-5 and I-84 and the regional light rail and bus network at the Rose Quarter Transit Center. With the addition of streetcar and continued investments in bicycle and pedestrian systems, the transportation network will provide a solid foundation to support goals for high-density development, greater use of active transportation (walking and biking) modes, and reduced greenhouse gas emissions.

The N/NE Quadrant Plan calls for building upon and enhancing the Lloyd District's transportation assets by: improving the efficiency and safety of traffic operations; maintaining regional access; enhancing internal circulation and connectivity to adjacent areas, particularly for pedestrians and bicyclists; managing parking to incentivize development and encourage the use of non-auto transportation modes; and leveraging street improvements with future development.

Policies

1. **Strategic Investments.** Invest in transportation infrastructure to improve safety, convenience and operational efficiency for all modes by strengthening connectivity and access for trips to, through and within the Lloyd District, and by creating special places for workers, residents, neighbors, shoppers and visitors.

2. **Encourage active transportation.** Encourage walking, bicycling and using transit as a way to increase transportation access and choice, enhance livability and reduce the per capita carbon footprint in the district.

3. **Transportation Demand Management.** Support the Transportation Management Association as one of the most effective ways to encourage the use of active transportation.

4. **Transit**. Strengthen the role of transit in the Lloyd District by working with TriMet to increase the frequency, reliability and safety of the light rail, bus and streetcar services.

5. **Parking.** Strengthen the role of parking management to leverage high-density mixed-use development, enhance livability and reduce reliance on single occupancy automobile trips.

6. **Streetscape.** Improve the pedestrian experience by integrating high-density mixed uses, urban greenery, and pedestrian amenities into the Lloyd District's streetscape.

7. **Increase connectivity**. Increase the number of connections across barriers in the district, including major arterials, large blocks, freeways, rail lines and natural features.

8. **Transportation System Management.** Manage access and circulation to reduce traffic speeds, provide for safe crossings, while balancing the need for traffic access in the Lloyd District.

Urban Design

These policies and actions will enable the Lloyd District to offer a set of unique, human-scaled urban experiences different from those possible on the west side of the Central City. The area features a series of existing places with established characters that will be strengthened around a revitalized and redeveloped Central Lloyd area. The Central Lloyd area will include more high-rise office buildings and a new, high density residential district, organized around a signature system of linked open spaces and supported by a network of diverse streets and characters.

The large blocks in the Lloyd District are part of a distinctive urban pattern that allows for larger buildings and unique public spaces including courtyards, plazas and parks. These open spaces would be linked by a system of pathways, multi-use trails and quiet street segments that together create a set of lower stress quieter routes, and an alternative to the busy arterials through the district. New low stress connections across freeways to the west and south will strengthen connections to the rejuvenated Rose Quarter, the PPS Blanchard site, the Willamette River and the Central Eastside.

The Lloyd District includes a number of portal or "gateway" locations, such as the Broadway Bridgehead, the Oregon Convention Center station area and the crossroads intersection of MLK/Grand and Broadway/Weidler. These will be reinforced by buildings taller than the surrounding context that emphasize the civic significance of these places. At its edges, the scale of new development in the Lloyd District will "step down" to established lower density neighborhoods and historic districts.

Policies

1. **Diverse and Distinctive Urban Places**. Focus more intense development in the Central Lloyd area and Rose Quarter while enriching the entire district through strengthening the distinct character of the existing Lloyd District subareas.

2. **Better Connected District**

    a. **More Seamless Connections.** Improve the character and increase the number of connections across transportation barriers in the district - freeways, major arterials and transit facilities.

    b. **Variety in Street Character.** Expand the diversity of street character in the Lloyd district, distinguishing three major types: retail/commercial, boulevard and flexible/pathways.

3. **Large Blocks.** Take advantage of the unique opportunity for dense, large site development made possible by possible by the large blocks found in the Lloyd District. Integrate this development into the surrounding blocks through well designed internal green spaces and pedestrian connections.

4. **Relationship to the Willamette River.** Develop vacant non-industrial land along the Willamette riverfront in ways that activate the riverfront, better connect the riverfront to the rest of the district and improve visual access to the river.

5. **Auto-Oriented Development.** Discourage new automobile-oriented uses and encourage the eventual redevelopment of sites with surface parking lots and drive-throughs.

6. **Transition to Adjacent Neighborhoods.** Provide sensitive transitions in the scale of development between higher density development encouraged in the Lloyd District and adjacent lower density neighborhoods and historic districts.

Implementation Actions

Selected land use and zoning actions are presented below. Additional actions will be provided at the May 10 SAC meeting, following review and coordination with implementing bureaus.

1. Update Title 33 Zoning Code development regulations and maps to implement the district concept. Potential regulations to be amended include: heights, active ground floor building uses, required building lines, drive-through limitations, and regulations related to street car.

2. Revise height regulations along Broadway within the Irvington Historic District to allow a maximum height of 75 feet (no bonuses) on the north side of Broadway.

3. Examine potential changes to parking zoning code regulations for the Lloyd District to provide incentives for mixed use development and the redevelopment of surface parking lots through the provision of shared parking strategies, development agreements and other strategies.

4. Evaluate existing scenic view corridor designations and potential new designations in the Lloyd District as part of a Central City-wide analysis of scenic resources. Existing Lloyd District view corridors to be examined for potential changes include the views of downtown from the 12th Ave bridge and from Lillis Albina park. The evaluation should consider the quality and uniqueness of the view weighed against the economic impact of restricting heights within the view corridor.

5. Work with the property owner/developer of the “Thunderbird” site to craft a development agreement that results in public open space on the riverfront. Consider options for relocating the Union Pacific railroad tracks that that would allow public access to the river.

6. Update the Lloyd District’s 1991 design guidelines: Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan to reflect the district concept including:
   - Street character and relationship of adjacent development to streets and streetcar
   - Connections through development sites
   - Open space strategy and relationship of development to open spaces
   - Incorporating green elements, native vegetation and bird-friendly design

Green Central City

The combination of significant potential for new development and the formation of the Lloyd EcoDistrict presents a unique opportunity to dramatically improve environmental conditions within the Lloyd District and help meet Portland's broader sustainability goals. This plan seeks to capitalize on that potential by promoting district-wide sustainability strategies and by calling for green infrastructure and sustainable design to be integrated with new development in order to improve air quality, water quality, watershed health, habitat, resource conservation and livability.

A key component to realizing the goals for green development in the district will be better use of space within public rights-of-way, including sustainable stormwater strategies and increased tree canopy to absorb and clean water, provide habitat for birds and pollinators, and provide shade. Boulevards, Flexible Streets and Water Quality/Tree Canopy Corridors have been identified to provide this function. Opportunities to enhance existing natural resources and improve habitat have also been identified within Sullivan's Gulch and along the Willamette River bank. Individual projects are also encouraged to incorporate green features, such as eco-roofs and energy efficiency.

This plan embraces the formation of the Lloyd Eco-District and supports its goals for district-wide sustainability. To this end, components of the district concept that call for district energy and rainwater harvesting systems are considered starting places that will be refined and added to as the EcoDistrict priorities are developed in the coming years.

While this policy area primarily focuses on integrating green features into development, it should be noted that the built form envisioned for the district—high density, mixed-use development that is well served by transit and facilities for biking and walking—will also make a significant contribution to sustainability goals by promoting a compact urban form and encouraging the use of alternative transportation modes, thereby reducing emissions and energy use and increasing the efficiency of urban services.

Policies

1. **High-Performance Green District.** Promote innovation and leadership in the Lloyd District in the areas of sustainable development, energy efficiency, water conservation and waste reduction. Support partnerships that facilitate district-wide strategies.

2. **Tree Canopy and Vegetation**. Increase tree canopy and the use of vegetated stormwater facilities in Lloyd District rights-of-way particularly on designate boulevards, flexible streets and water quality corridors. Encourage the use of green elements on development sites, including eco-roofs and other vegetated stormwater approaches, roof gardens, landscaped setbacks and courtyards, living walls and native vegetation.

3. **Green Buildings and Energy**. Encourage the development of high performance buildings; district energy, and deep energy retrofits that reduce greenhouse gas emissions.

4. **Willamette River Resources.** Protect and enhance natural resources along the banks of the Willamette River to prevent erosion and improve habitat functions and connectivity, while furthering other objectives for recreation, views, and riverfront development.

5. **Sullivan's Gulch.** Protect and enhance Sullivan's Gulch to improve its function as a habitat corridor, reduce the risk of wildfire and landslide, maintain and enhance views, while providing flexibility to incorporate a recreation trail.

Implementation Actions

Selected land use and zoning actions are presented below. Additional actions will be provided at the May 10 SAC meeting, following review and coordination with implementing bureaus.

1. Evaluate natural resource protection and management options for Sullivan's Gulch and the Willamette River bank as part of the Central City-wide natural resource analysis (Goal 5 ESEE analysis). Possible tools include regulations, agreements, partnerships and acquisition.

2. Scope a pilot project to develop and evaluate regulatory tools that provide incentives for green infrastructure, deep energy retrofits of existing buildings, high performance new construction, and connections to district heating and cooling systems. Seattle's "Green Factor" is an example of regulations geared toward green infrastructure.

3. Consider Lloyd District sites for enhancement and/or mitigation through a river restoration or similar program developed as part of the River Plan/Central Reach process. Potential sites could include the area of shallow water near the I-5/I-84 interchange and the "Thunderbird" site.

4. Continue to support the Lloyd EcoDistrict in its efforts to study and implement district-wide systems and programs that support sustainability goals.

Lower Albina

District Goal

Strengthen Lower Albina as an industrial employment area by reinforcing the working harbor and providing for diverse employment and development opportunities, while enlivening the historic Russell Street Conservation District and the adjacent MAX station area with industrially compatible mixed-use/commercial activity.

Regional Center: Economy and Innovation

Lower Albina plays a key role in the Central City and the region as a center of industrial employment. It serves as a critical incubator for emerging and innovative businesses and provides an important living-wage job base near inner North and Northeast neighborhoods. The district's mix of industrial businesses, working waterfront and multimodal freight facilities are complemented by a small mixed-use commercial area along lower Russell Street, where retail activity is especially active at night.

The policies and action items in this plan are intended to build on the strength of the district's existing industrial fabric and provide additional flexibility for commercial uses that are compatible with industrial businesses and increase employment density.

Policies

1. **Working Harbor.** Strengthen the Lower Albina working harbor and support river-dependant uses.

2. **Industry and Employment**. Increase economic opportunities, living-wage jobs and employment density by preserving existing industrial land uses and diversifying the range of employment activities allowed in the area east of the Union Pacific railroad and near the MAX station.

3. **Incubator**. Support existing businesses and foster the district as an industrial and employment incubator.

4. **District Vitality.** Support the urban vibrancy of Russell Street and its unique blend of working daytime industrial activity with compatible nighttime restaurant and entertainment activity.

Implementation Actions

Selected land use and zoning actions are presented below. Additional actions will be provided at the May 10 SAC meeting, following review and coordination with implementing bureaus.

1. Adjust the Lower Albina subdistrict boundary to exclude the PPS Blanchard site and adjacent properties to the south and east, placing them within the Lloyd District.

2. Rezone properties directly east of the MAX station at Interstate and Mississippi from IG1 to EXd. Set max FAR at 3:1 and maximum height at 65'. Prohibit housing in this area.

3. Rezone properties east of the Russell St. Conservation District fronting Russell Street from IG1d to EXd. Set max FAR at 3:1 and maximum height at 65'. Prohibit housing in this area.

4. Apply zoning provisions to IG1-zoned properties east of the Union Pacific railroad alignment that allow certain compatible office-like uses, similar to the Economic Opportunity Subarea regulations in the Central Eastside.

Transportation

Lower Albina is located at the southern end of the North Willamette River working harbor area, the northern end of the Central City, and adjacent to historic streetcar neighborhoods. As a predominately industrial area, freight movement provided by the working harbor, freight railroad, and trucks are essential for the economic vitality of this district. Its location within the Central City also provides for transit, bicycle and walking facilities for workers, shoppers, and visitors to the district. To sustain the vitality and livability of Lower Albina, maintenance and continued improvement of the multi-modal transportation system will be important.

Policies

1. **Freight System**. Prioritize freight movement and access while maintaining and improving the safety, efficiency and convenience of the transportation system for all modes.

2. **Multi-Modal Connectivity**. Improve multi-modal connectivity through the district and strengthen connections to adjacent districts, including the Rose Quarter, the Vancouver/Williams Corridor and Mississippi Avenue.

3. **Rail and Marine**. Preserve rail and inter-modal access to the Albina Rail Yards and marine freight facilities.

4. **Freeway Access**. Improve access from industrial areas to the regional freeway system.

5. **Strategic Investments.** Encourage business creation, growth, and innovation through strategic public and private partnership investments in multi-modal transportation and parking infrastructure.

Urban Design

Lower Albina has a rich and varied fabric of largely industrial and employment buildings, especially within the Russell Street Conservation District. As the character of Lower Albina is not expected to change dramatically, these policies and actions are intended to strengthen its existing urban forms and patterns and offer guidance for the integration of new development that is sensitive to this significant industrial area.

Repurposing and reconfiguring spaces underneath freeways to the north and east will offer an expanded range of recreational opportunities and a more attractive set of connections between employment centers and mixed use neighborhoods. Implementing the “Strand” concept will strengthen connectivity, wayfinding and movement options to N. Interstate between the N. Russell commercial area in the conservation district and the Rose Quarter.

Policies

1. **Historic and Cultural Resources**. Preserve, rehabilitate and celebrate historic structures in Lower Albina, including those in the Russell Street Conservation District and culturally significant African-American resources identified in the Cornerstones of Community inventory.

2. **Russell Street**. Strengthen the character of Russell Street between Lower Albina and the Vancouver/Williams Corridor with new mixed uses, rehabilitated structures and a nighttime orientation.

Implementation Actions

Selected land use and zoning actions are presented below. Additional actions will be provided at the May 10 SAC meeting, following review and coordination with implementing bureaus.

1. Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.

2. Review application and direction of Community Design Guidelines for new development in Lower Albina.

Green Central City

The Central City 2035 Concept Plan calls for increasing energy efficiency, enhancing natural resources and habitat, improving air and water quality and expanding the use of green infrastructure central-city wide. While the Lower Albina area will continue to be a primarily industrial district, there are opportunities for achieving these goals through incremental improvements to the riverbank, adding green infrastructure to rights-of-way where they don't conflict with industrial operations, and encouraging the use of sustainable design in new development or remodels.

Policies

1. **Willamette River.** Support the natural resource protection and enhancement objectives of the River Plan / North Reach, where they apply to Lower Albina.

2. **Sustainable Design**. Encourage sustainable design in public infrastructure and industrial buildings, including green roofs, stormwater management strategies, tree canopy, energy efficiency improvements, and alternative energy generation.

Implementation Actions

Selected land use and zoning actions are presented below. Additional actions will be provided at the May 10 SAC meeting, following review and coordination with implementing bureaus.

1. Revise, adopt and implement the River Plan / North Reach, to provide more specific river-related policy guidance and regulations within the North Reach, which includes Lower Albina. The River Plan / North Reach was originally adopted in April 2010 and is currently under appeal.

Study Areas

Two areas adjacent to the N/NE Quadrant are included in the plan's study area: the North Banfield Portal and the Vancouver/Williams Corridor. They are included because of the potential for land use and transportation proposals in the quadrant to affect them and because community members asked the Bureau of Planning and Sustainability to address long-identified land use and zoning issues in these areas.

Each study area has proposed action items intended to further objectives identified in the planning process, primarily zoning changes to encourage new development. However, these areas will remain outside of the Central City boundary and therefore no new policies are proposed.

North Banfield Portal

The North Banfield Portal is the eastern gateway to the Lloyd District, at the transition from the Central City's higher density commercial and residential development to lower density residential in the Sullivan's Gulch neighborhood.

Sullivan's Gulch provides valuable natural resources in the Central City. Enhancement of the Gulch resources and development of the Sullivan's Gulch Trail will increase connectivity for both wildlife and pedestrians and bikes, connecting the Willamette River with areas to the east. New redevelopment opportunities along Multnomah will bring additional residents and new neighborhood-oriented commercial services to the area.

The N/NE Quadrant Plan seeks to increase flexibility and encourage neighborhood-serving mixed-use development, including housing, in this area by proposing a change in zoning. The current zoning is primarily residential (RH), with a small area of office zoning (CO1). The current zoning presents a potential obstacle to development because it is restrictive in use and it creates site planning challenges due to development standards that vary across the site.

Implementation Actions

Selected land use and zoning actions are presented below. Additional actions will be provided at the May 10 SAC meeting, following review and coordination with implementing bureaus.

1. Apply CXd zoning to the sites south of Multnomah St. and west of NE 21st Ave.

2. Evaluate natural resource protection and management options for Sullivan's Gulch as part of the Central City-wide natural resource analysis (Goal 5 ESEE analysis). Possible tools include regulations, agreements, partnerships and acquisition.

3. Complete the Sullivan's Gulch Concept Plan and implement the trail connection through the area.

Vancouver/Williams Corridor

The Vancouver/Williams Corridor is in the Eliot neighborhood, a part of the Albina Community Plan area, adjacent to the Central City. This area is included in the N/NE Quadrant Plan study area because of its proximity to potential reconfigurations of nearby freeway over-crossings and long-standing concerns about an area of residential zoning, which contains non-conforming commercial uses and discourages mixed-use redevelopment. It also contains a number of buildings identified in the Bosco-Milligan Foundation's Cornerstones of Community inventory of African-American cultural resources.

This area will remain outside of the Central City and no changes to existing Albina Community Plan policies that govern it are proposed. The primary proposed action is to rezone an area of existing RH zoning to EXd. This additional land use flexibility will support mixed-use development, reinvestment in existing non-conforming employment uses, and the rehabilitation of cultural resources.

Implementation Actions

Selected land use and zoning actions are presented below. Additional actions will be provided at the May 10 SAC meeting, following review and coordination with implementing bureaus.

1. Rezone portions of 4 blocks between I-5 and N Williams from RH to EXd.

2. Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.

N/NE Quadrant Plan
Draft Goals, Policies, Actions

- General orientation tonight
- Feedback via email by April 27
- Revised draft with complete list of actions for May 10 meeting

N/NE Quadrant Plan Structure

Lloyd District

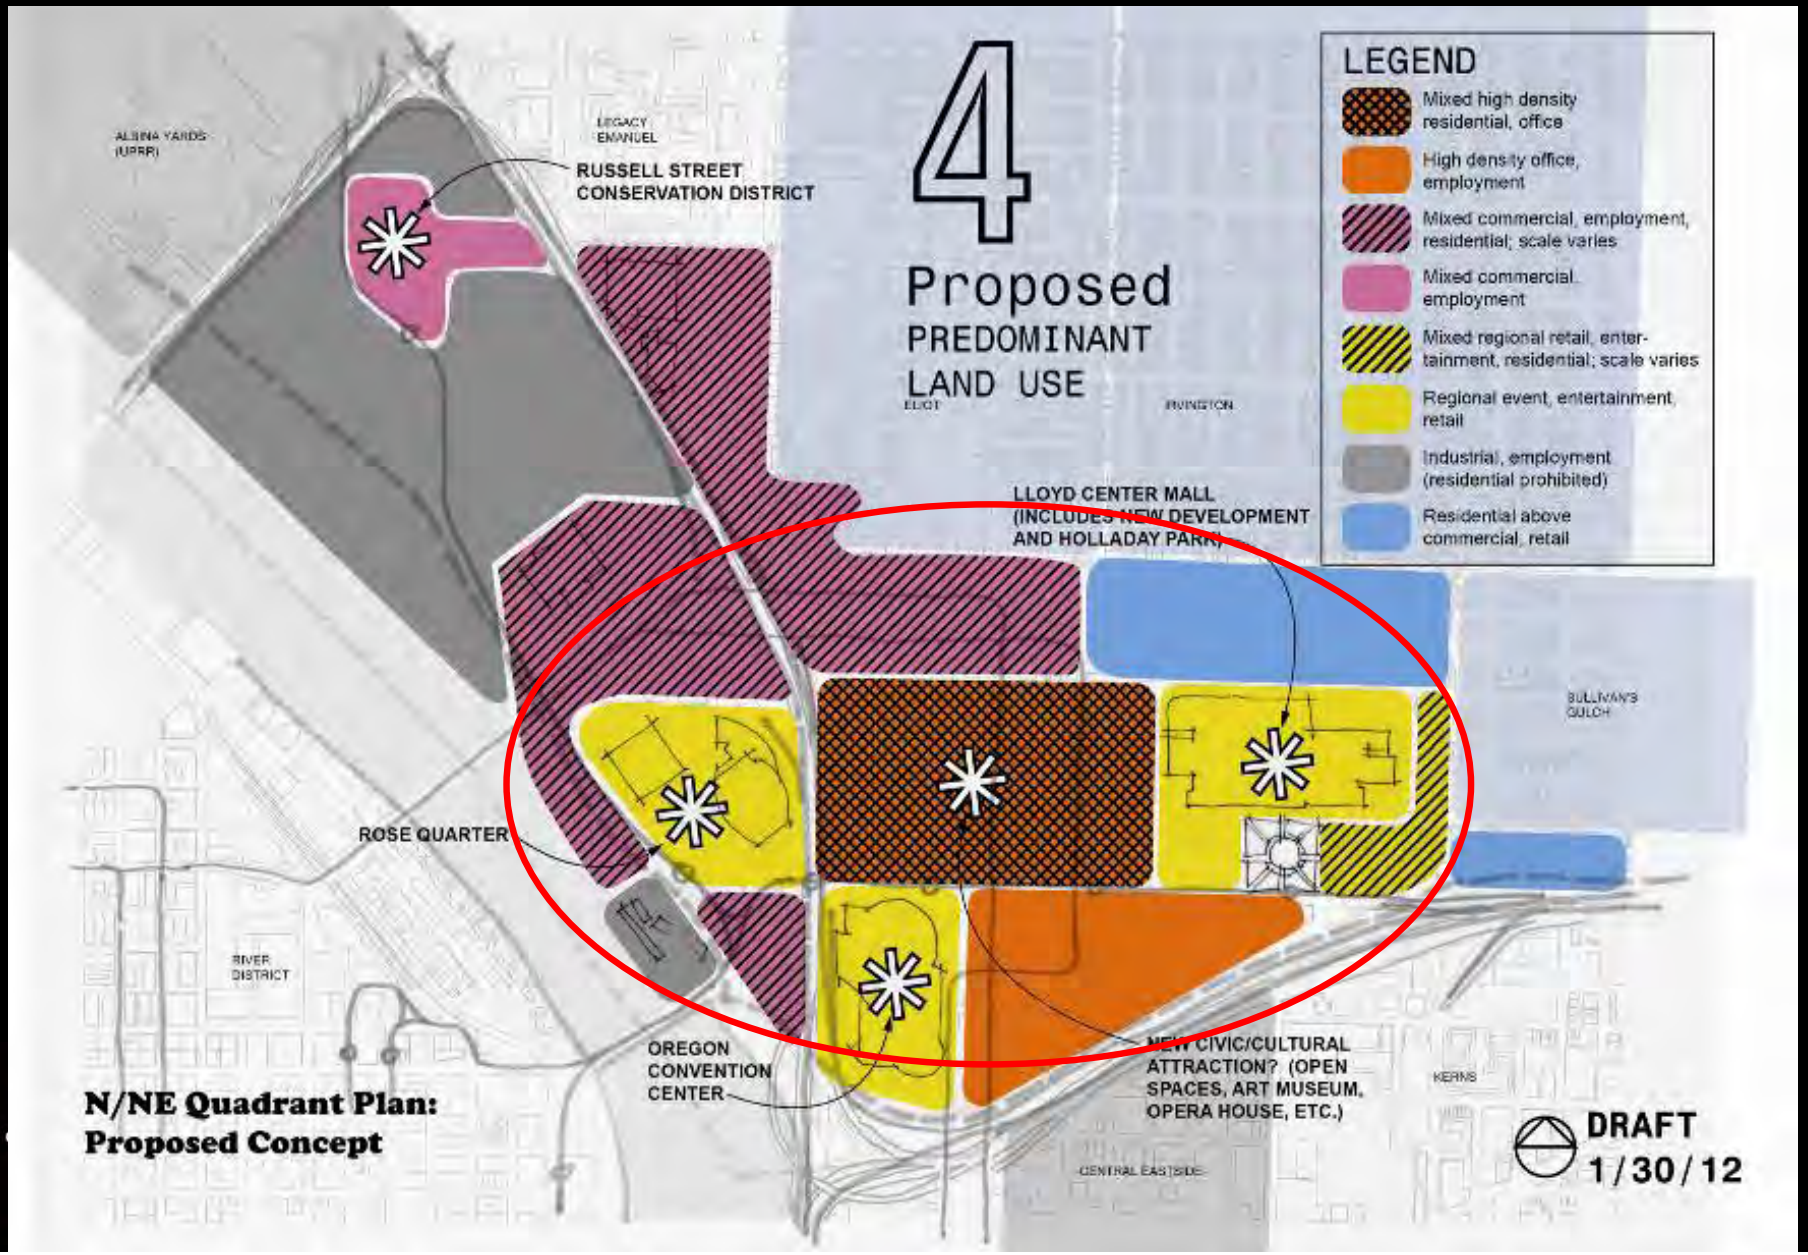
- District Goal
- Policies
  - Regional Center: Economy & Innovation
  - Housing and Neighborhoods
  - Transportation
  - Urban Design
  - Green Central City
- Implementation Actions

Lower Albina

- District Goal
- Policies
  - Regional Center: Economy & Innovation
  - Transportation
  - Urban Design
  - Green Central City
- Implementation Actions

Example land use and zoning actions included with this draft.

How were the district goals, policies and actions developed?



- SAC goals and objectives
- Quadrant Concept diagrams
- SAC and public input
- Other planning efforts
- Organized around CC2035 policy framework

Focus on issues unique to each district.

Central City-wide and citywide issues addressed in CC2035 or Comprehensive Plan update.

Lloyd District

Lloyd District Goal

Foster the growth of the Lloyd District into the intensely urban and increasingly residential center of the Central City's eastside, second only to Downtown in vitality, employment and livability.

Capitalize on the district's regional attractions, high quality transit and other connections to the city and region.

Develop the district as a complete and green community with well designed parks, streets, and high-performance green buildings and infrastructure.

Lloyd District Policies and Example Actions

1. Regional Center: Economy & Innovation

Policy Topics
- Employment
- Redevelopment
- Core Employment Uses (office core, regional attractions, retail, civic & cultural amenities)
- Innovation: Green District

Example Actions
- Rezone PPS Blanchard site
- Increase max allowed heights in key locations
- Regulatory tools and incentives to support Convention center

2. Housing & Neighborhoods

Policy Topics
- Housing Development, Diversity, Preservation
- Complete Neighborhood
- Parks and Open Space
- Neighborhood Business Districts
- Community Building
- Historic and Cultural Resources
- Displacement

Example Actions
- Regulatory tools and incentives to encourage:
  - Housing development
  - Open space
- Strategy to acquire and improve public parks

Lloyd District Policies and Example Actions

3. Transportation

Policy Topics

- Strategic Investments
- Active Transportation
- Transportation Demand Mgmt
- Transit
- Parking
- Streetscape
- Connectivity
- Transportation System Mgmt

Example Actions

Under development

4. Urban Design

Policy Topics

- Urban Places
- Better Connected District
- Large Blocks
- Relationship to River
- Auto-Oriented Development
- Transitions to Adjacent Neigborhoods

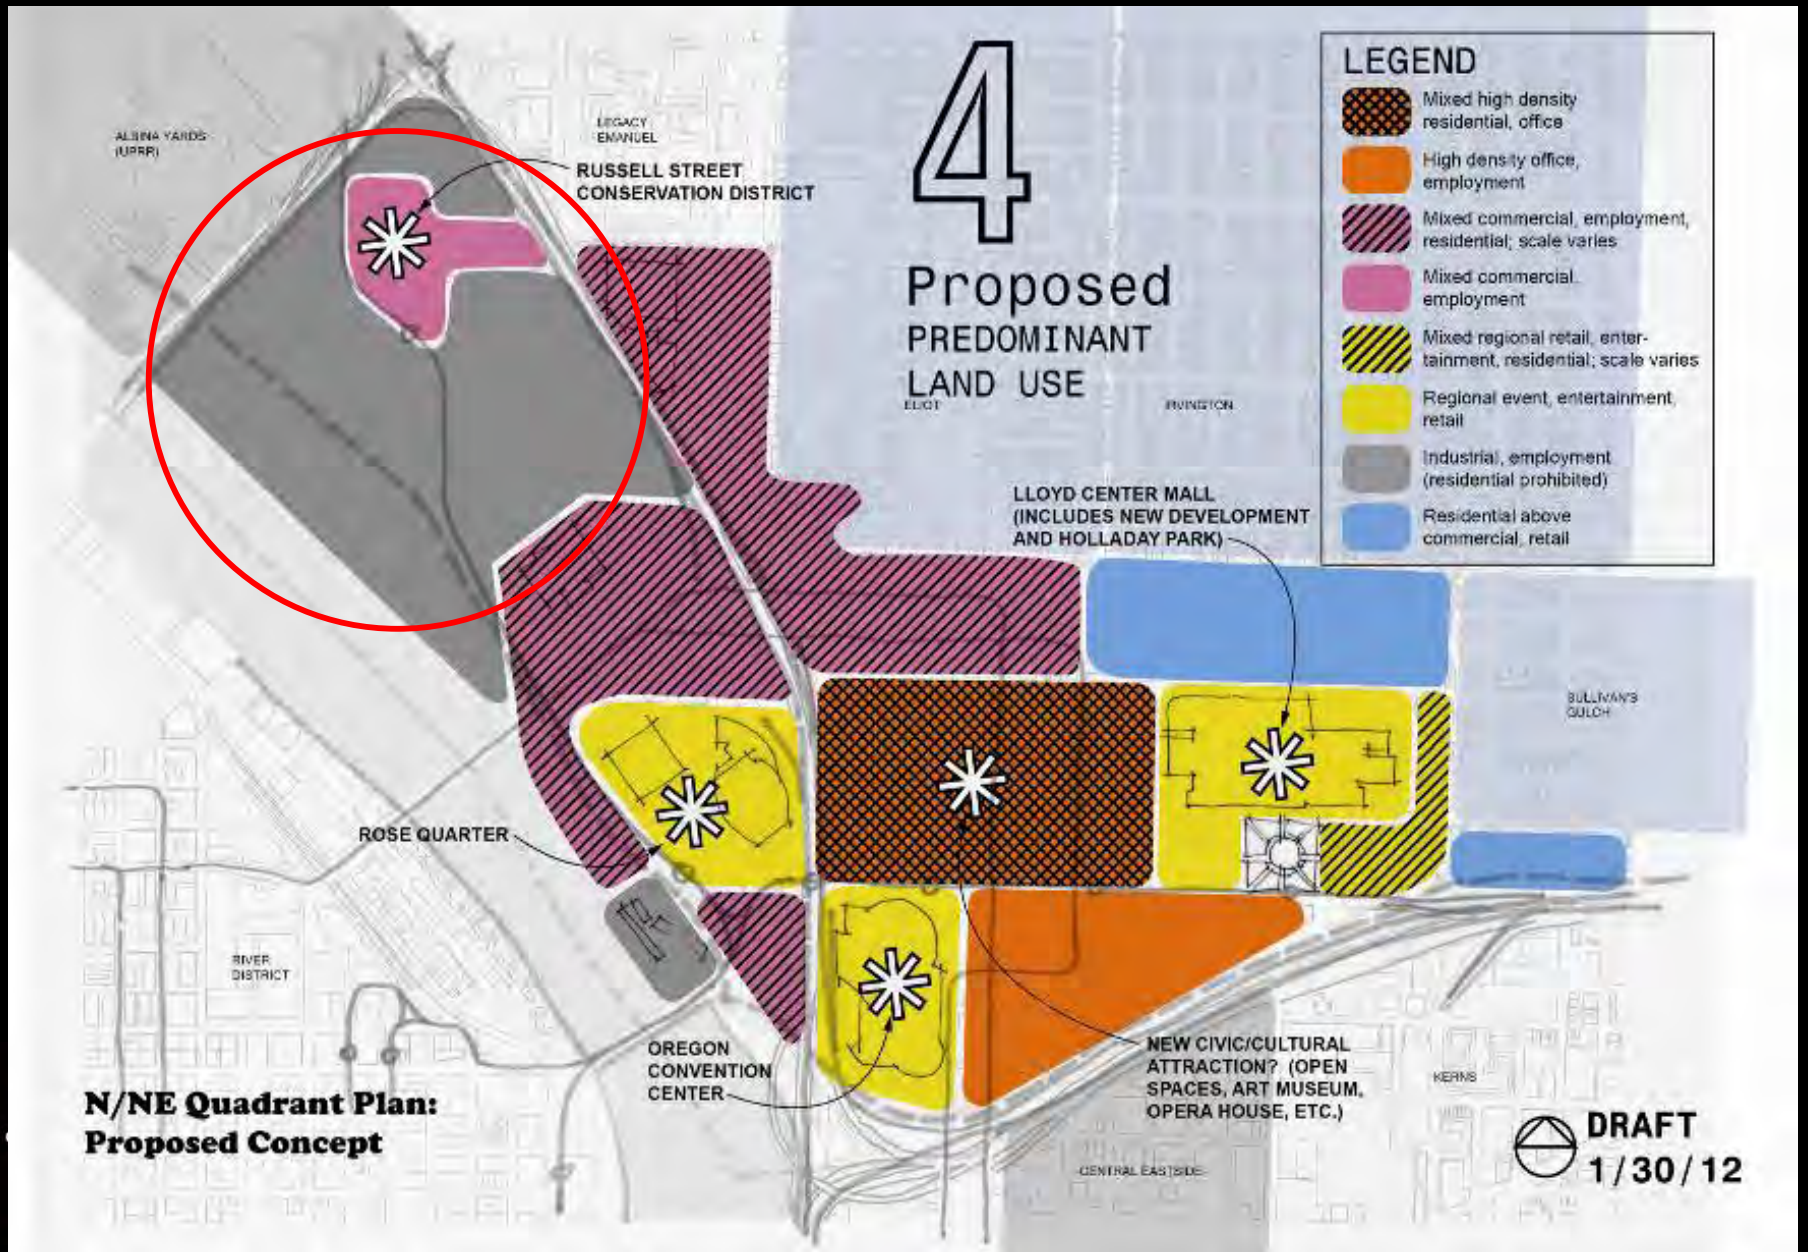
Example Actions

- Update Zoning Code regulations on street orientation; support streetcar
- Revise height regulations on upper Broadway
- Update district design guidelines

Lloyd District Policies and Example Actions

5. Green Central City

Policy Topics



- Green District
- Tree Canopy and Vegetation
- Green Buildings and Energy
- Willamette River Resources
- Sullivan's Gulch

Example Actions

- Consider regulatory incentives to encourage green infrastructure and energy efficiency
- Evaluate natural resource mgmt options through Central City-wide process

Lower Albina

Lower Albina District Goal

Strengthen Lower Albina as an industrial employment area by reinforcing the working harbor and providing for diverse employment and development opportunities, while enlivening the historic Russell Street Conservation District and the adjacent MAX station area with industrially compatible mixed-use/commercial activity.

Lower Albina Policies and Example Actions

1. Regional Center: Economy & Innovation

Policy Topics
- Working Harbor
- Industry and Employment
- Incubator
- District Vitality

Example Actions
- Rezone properties next to MAX station and on Russell
- Apply zoning provisions allowing more employment uses east of UP railroad (e.g. Central Eastside EOS provisions)

2. Transportation

Policy Topics
- Freight System
- Multi-Modal Connectivity
- Rail and Marine
- Freeway Access
- Strategic Investments

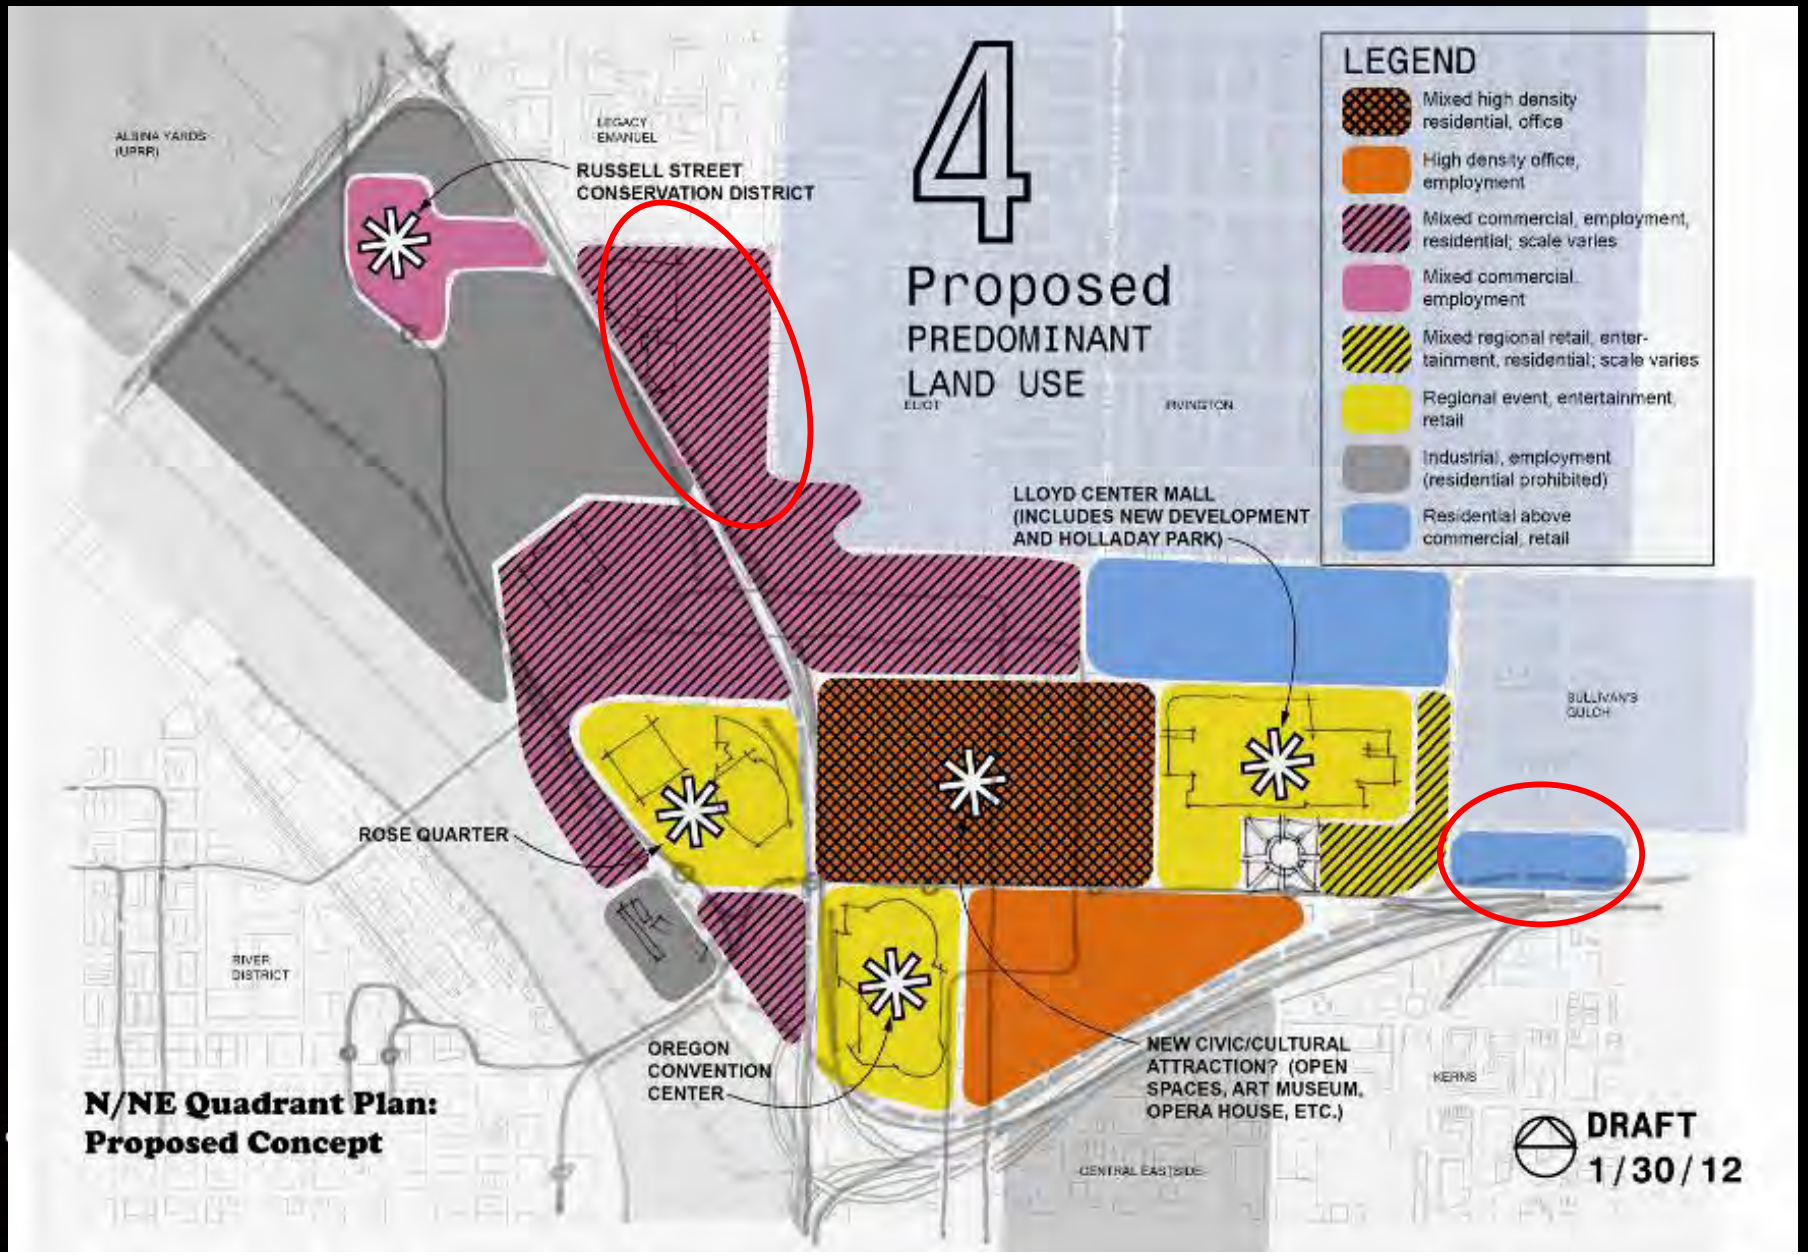
Example Actions
Under development

Lloyd District Policies and Example Actions

3. Urban Design

Policy Topics
- Historic and Cultural Resources
- Russell Street

Example Actions
- Prepare National Register documentation for Cornerstones of Community inventory



4. Green Central City

Policy Topics
- Willamette River Resources
- Sustainable Design

Example Actions
- Revise, adopt and implement River Plan/ North Reach (under appeal)

Study Areas

Study Areas

No formal policies for areas outside of Central City plan boundary

1. North Banfield Portal

Example Actions

- Rezone sites at 21st and Multnomah
- Evaluate natural resource mgmt options for Sullivan's Gulch through Central City-wide process

2. Vancouver/Williams Corridor

Example Actions

- Rezone properties between I-5 and Williams to allow more uses
- Prepare National Register documentation for Cornerstones of Community inventory

Quadrant Plan Review Schedule

Meeting Date	Plan Component
4/12, SAC #15	SAC direction on height regulations Draft Goals, Policies and Selected Implementation Actions **(comments via email)**
5/10, SAC #16	Revised Draft Goals, Policies and Implementation Actions
5/23, LU Subcommittee	Follow-up on Implementation Actions
6/28, SAC #18	Complete Draft Quadrant Plan, public comment
Late July/Early Aug: SAC #19	Revised Draft Quadrant Plan Final review and approval

N/NE QUADRANT & I-5 BROADWAY/WEIDLER PLANS

North/Northeast Quadrant SAC

April 12, 2012

CENTRAL CITY 2035

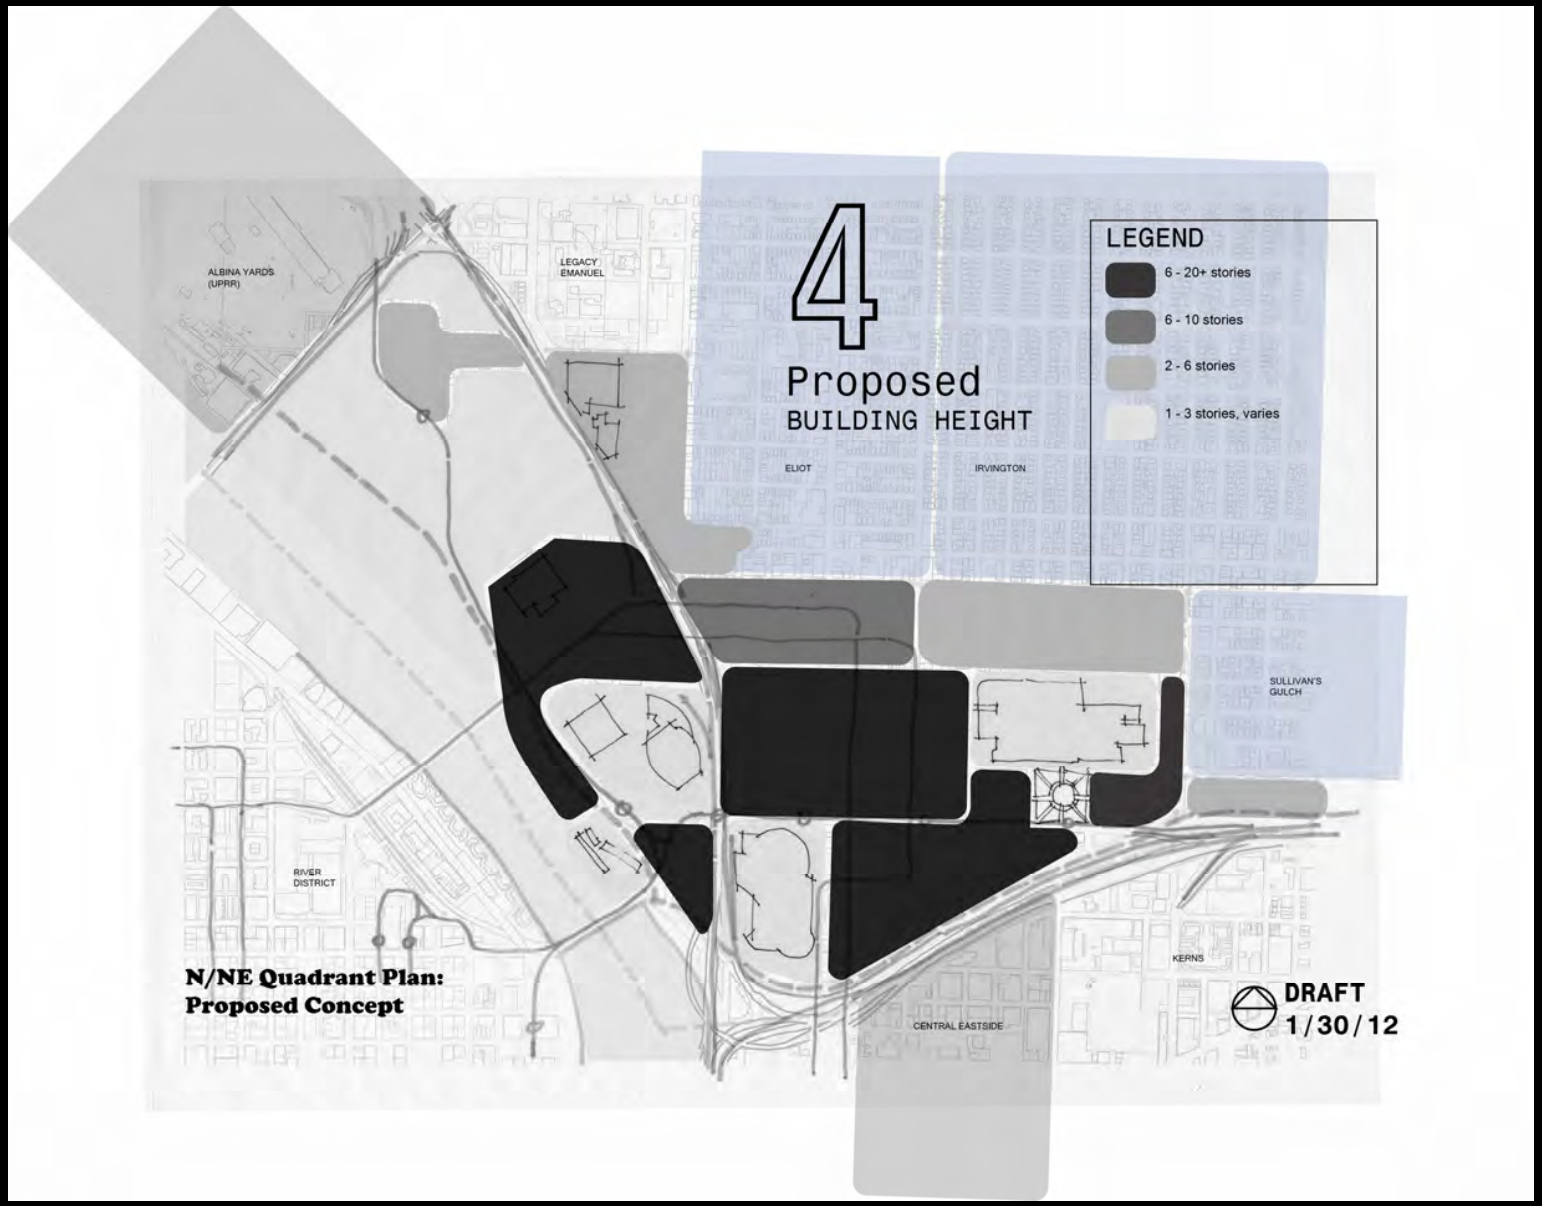
N/NE QUADRANT

CITY OF PORTLAND, OREGON 1851

Oregon Department of Transportation

Outline

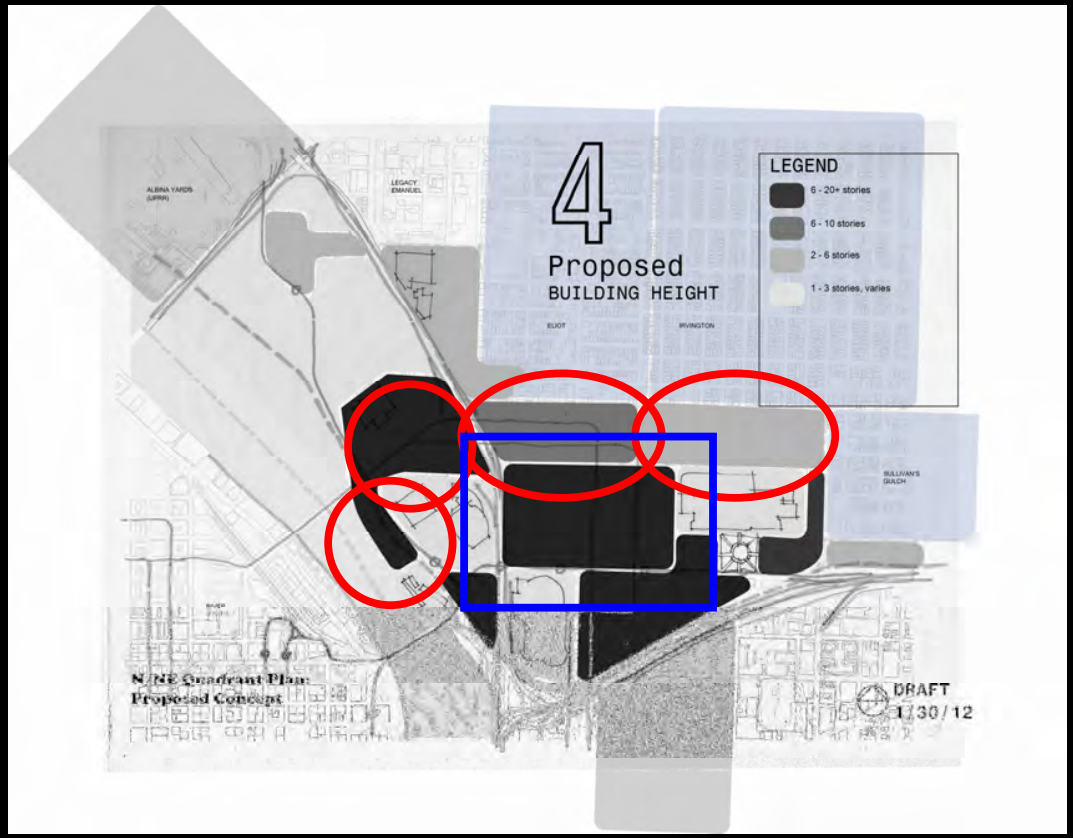
1. Introduction



2. Floor Area Ratio (FAR) and Height

3. Quadrant Height Proposal(s) and subcommittee feedback from 3/21 meeting (options have been narrowed to reflect feedback)

Today: request SAC feedback on preliminary directions.



Next steps: more specific proposal including height map changes, identification of potential tools to achieve amenities and desired uses. Zoning changes discussion in May.

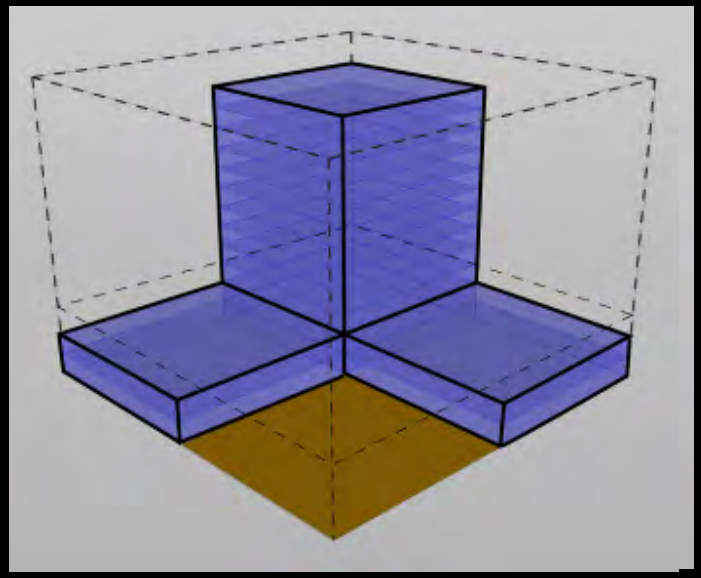
Building Height Concept

Areas of Concern Identified by the SAC

1. Thunderbird Site
2. N. Broadway
3. Eliot edge
4. Irvington edge

FLOOR AREA RATIO (FAR) and HEIGHT

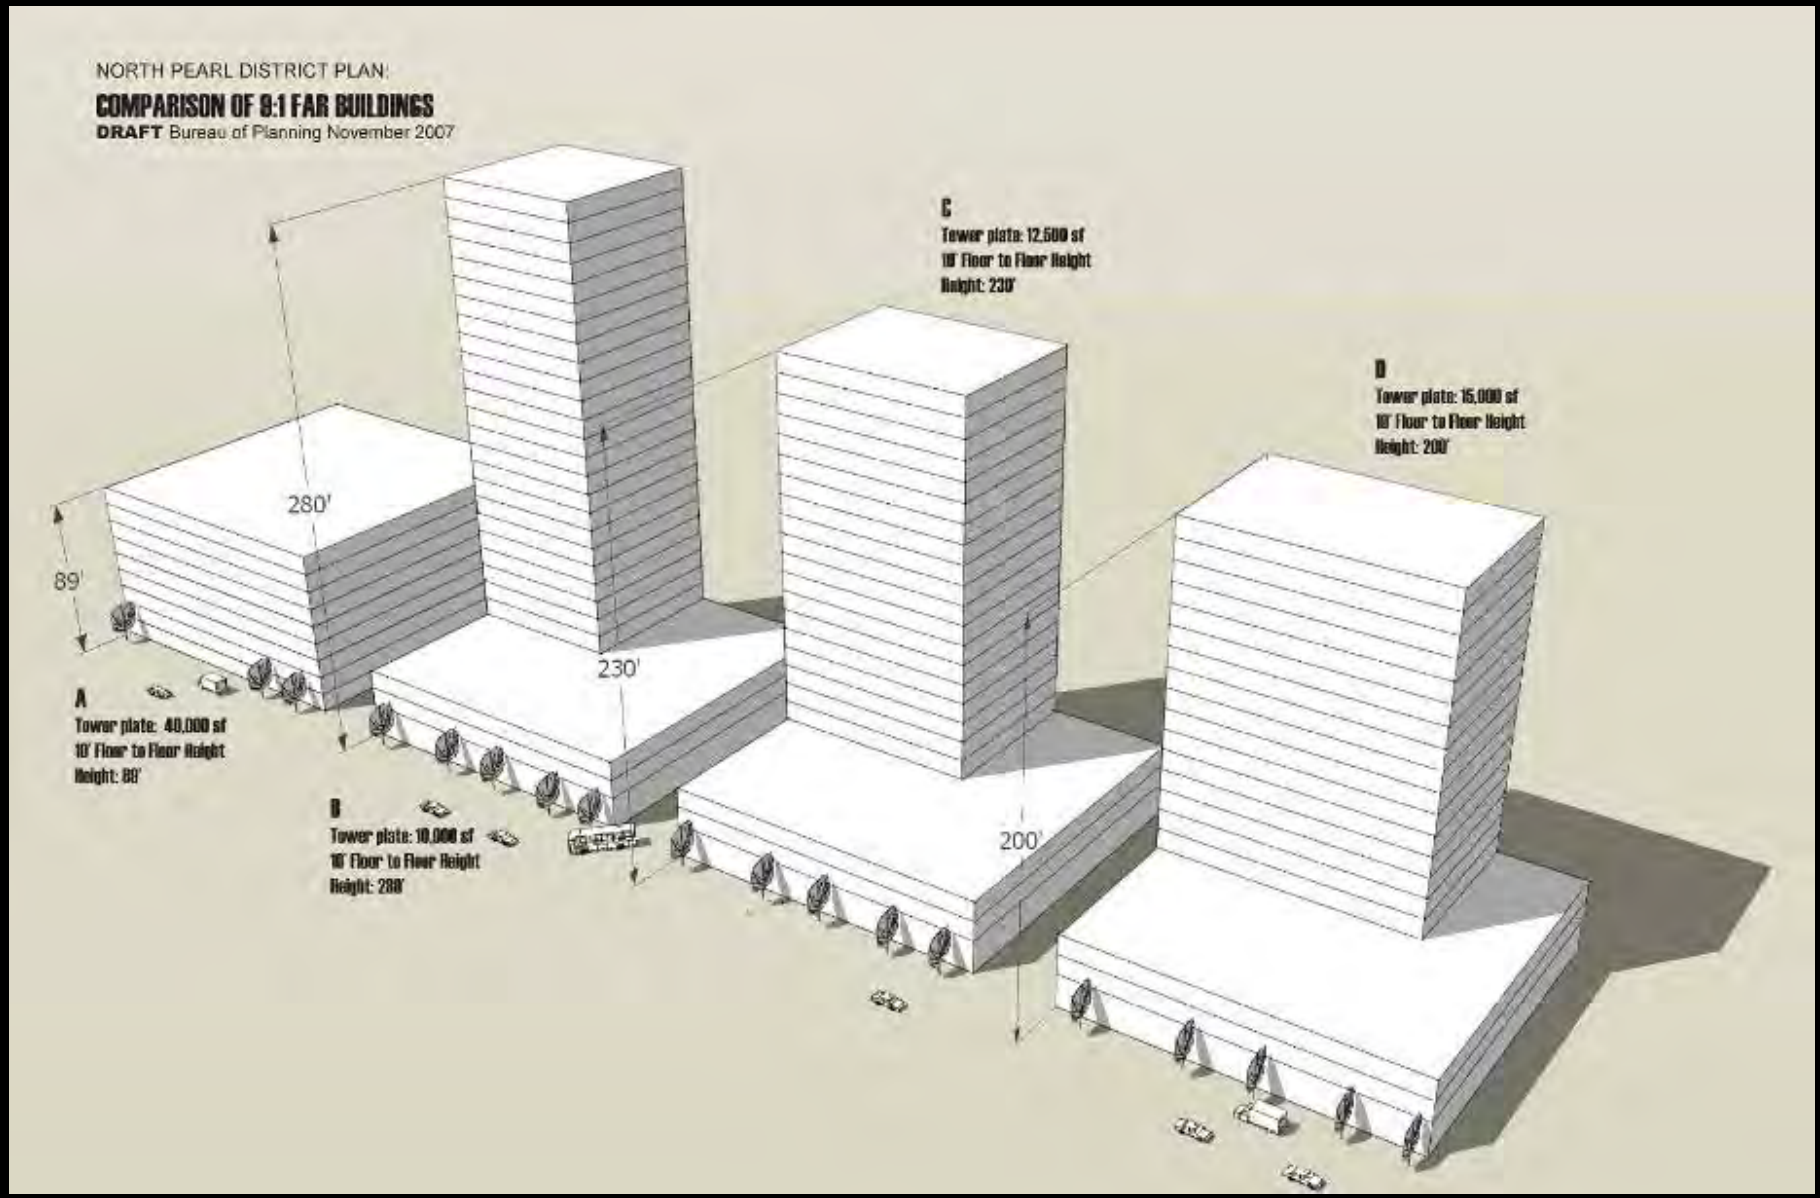
Reasons for allowing building height:



- Encouraging high density, taller buildings in the Central City
- “Sculpting” the city’s skyline
- Emphasize/highlight key locations
- Allowing for more light and air penetration, visual “permeability”

Reasons for regulating building heights:

- Preserving solar access to open spaces
- Enhancing and/or protecting public views
- Transitioning to historic districts or lower density areas



Floor Area Ratio (FAR). The amount of floor area in relation to the amount of site area, expressed in square feet. For example, a floor area ratio of 2 to 1 means two square feet of floor area for every one square foot of site area.

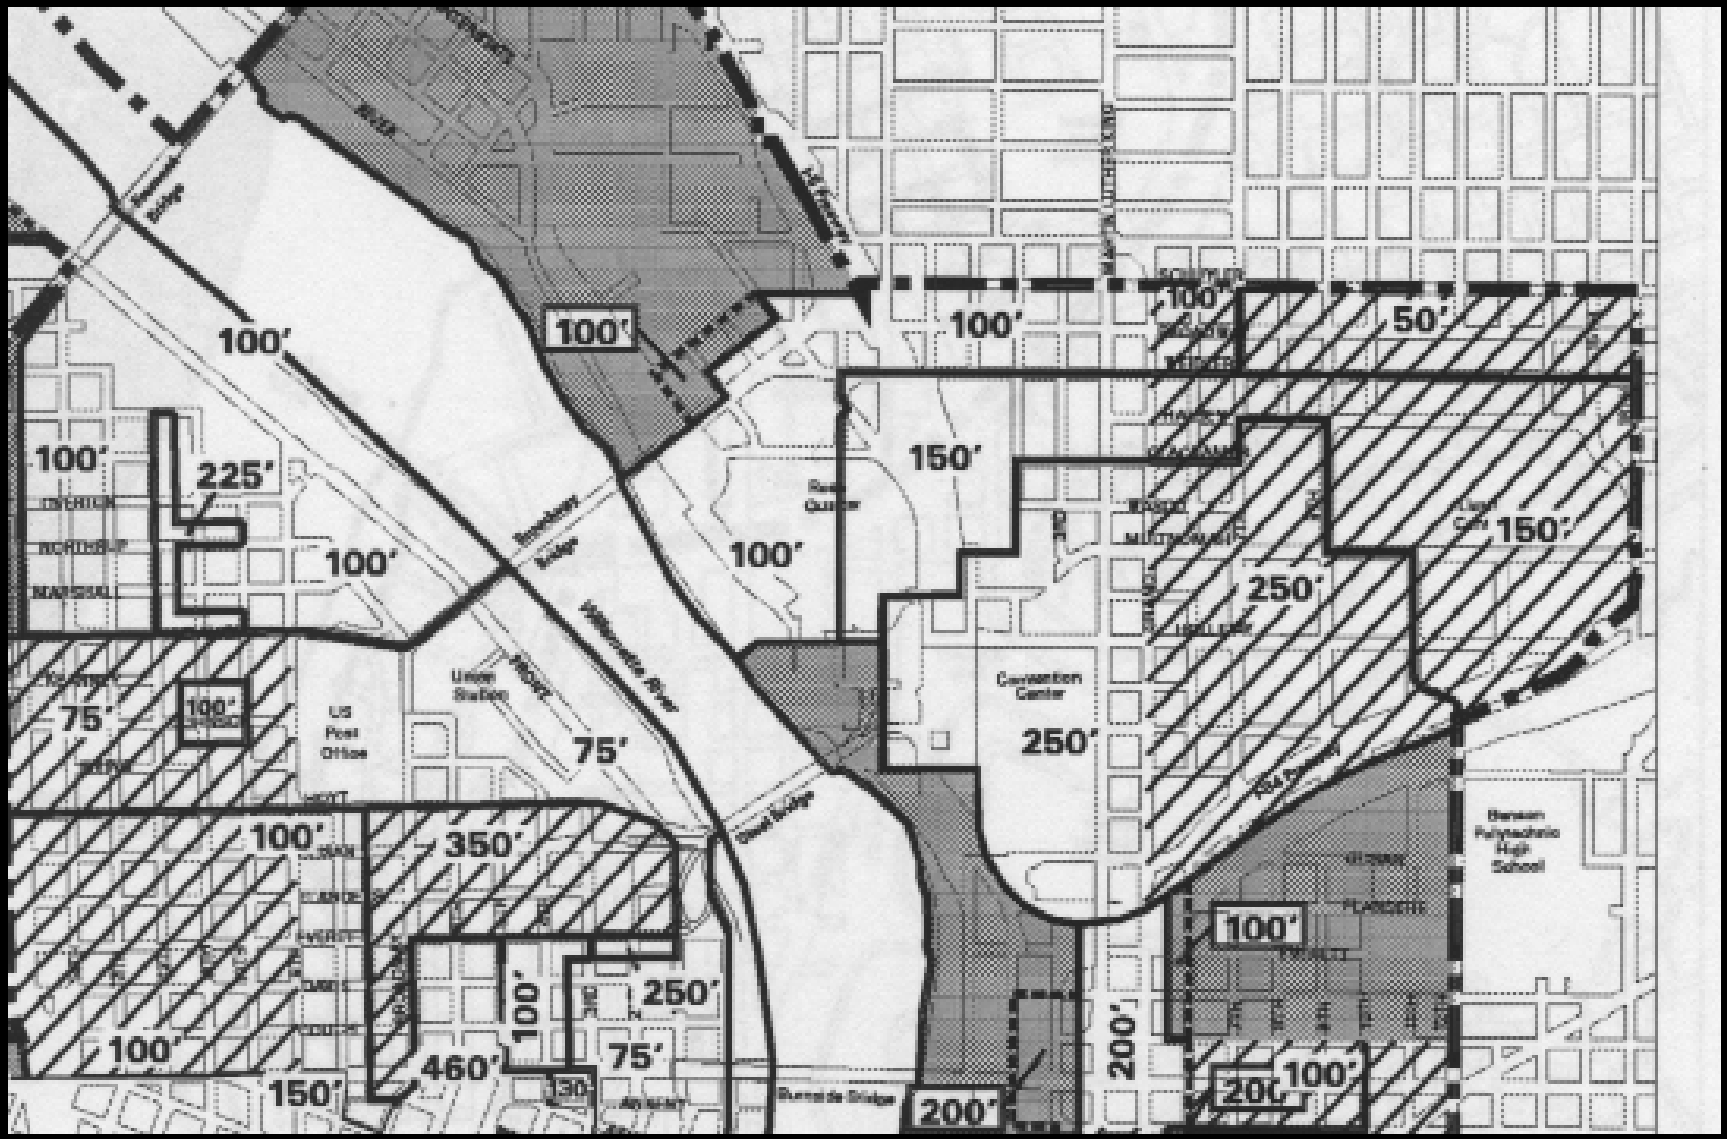
Site = 40,000 square feet; @ 4:1 FAR 40,000 X 4 = 160,000 buildable square feet

FAR 4:1

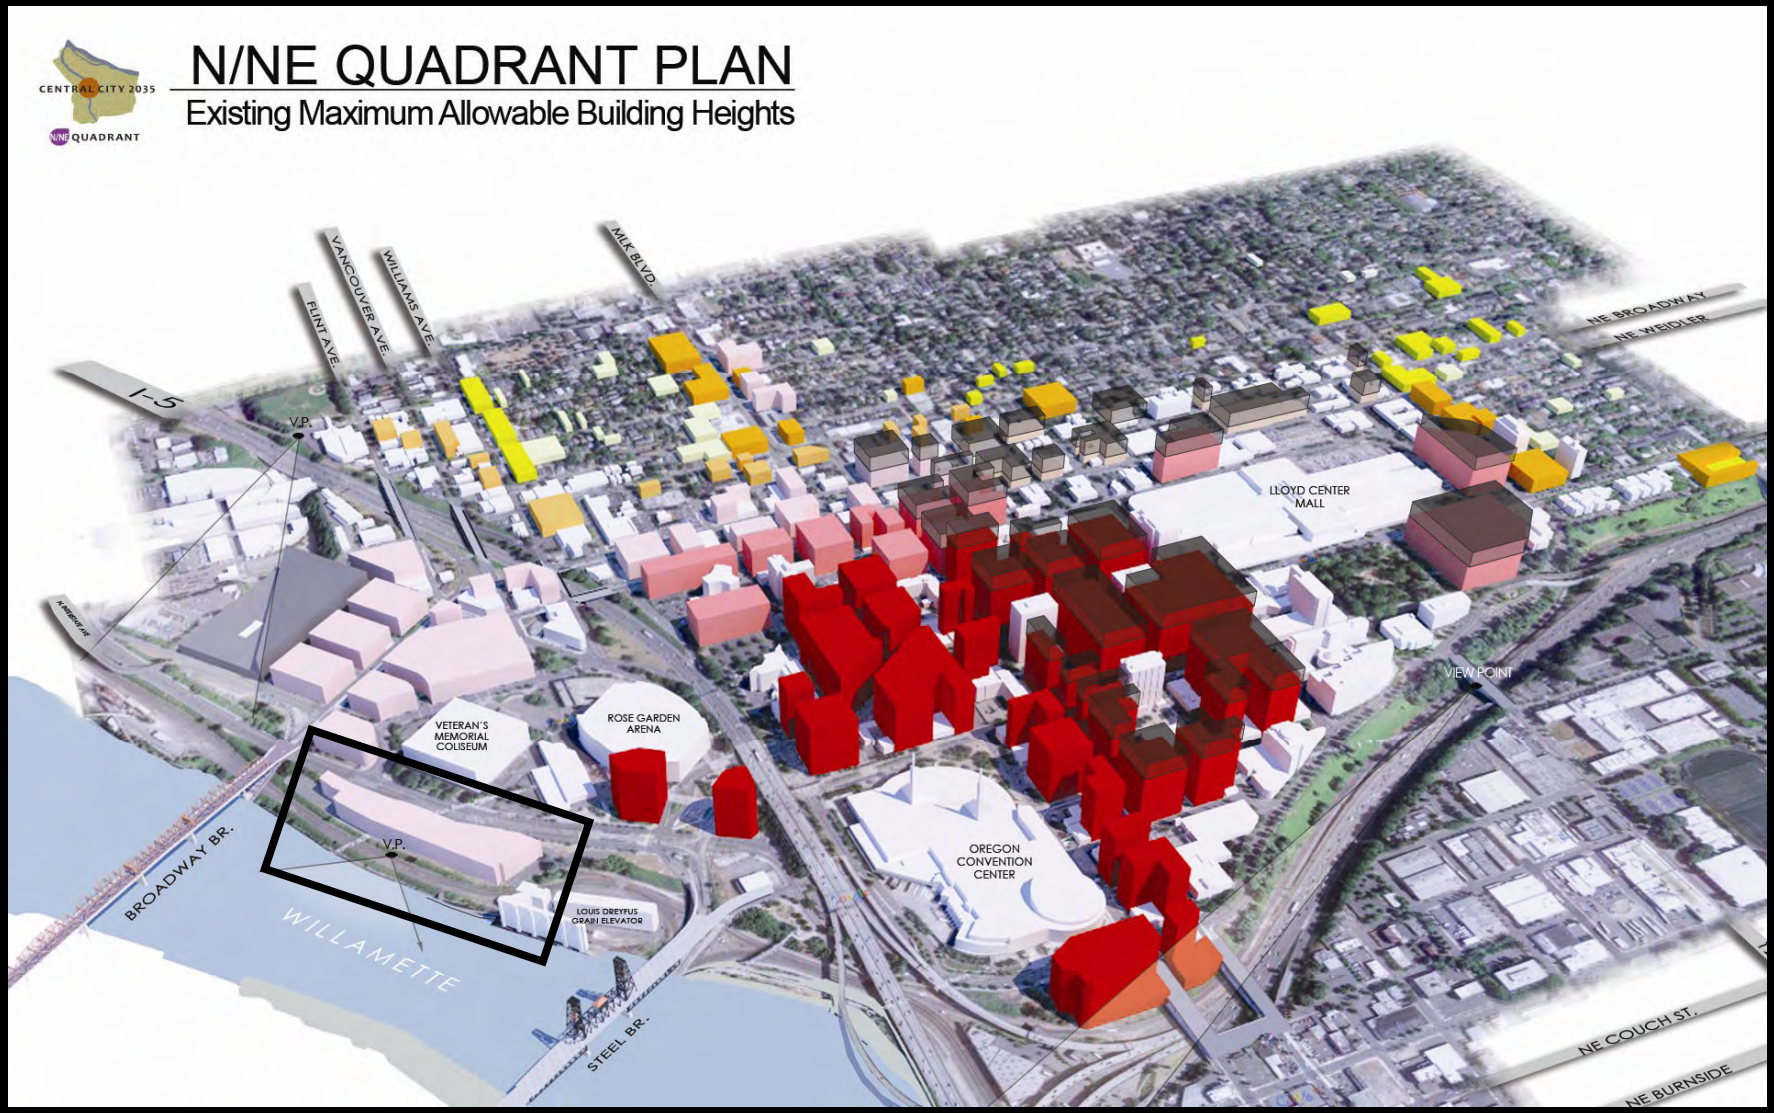
Buildings at 9:1 FAR

Lloyd District Buildings at different heights

around 75 feet



around 150 feet



around 250 feet

Existing Maximum Heights

1. Thunderbird Site

1. Thunderbird Site – current conditions, issues and opportunities

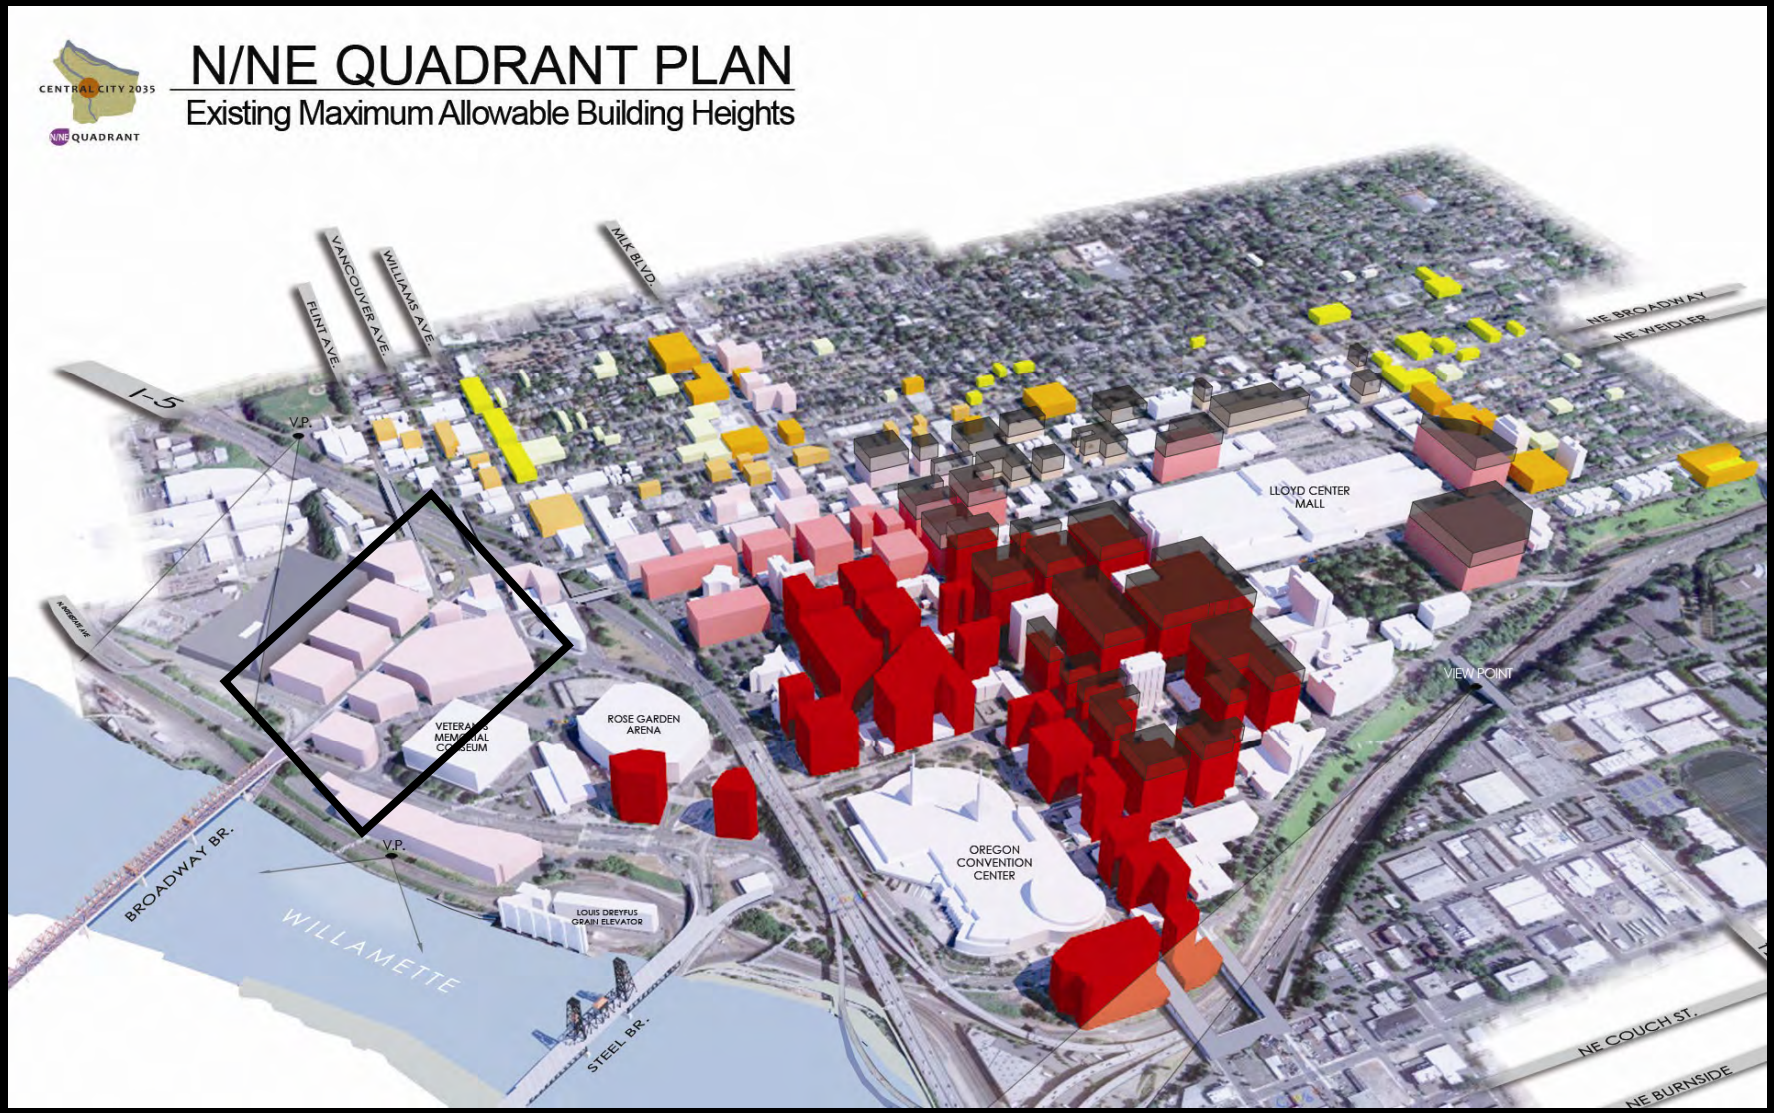
- Broad support for open space
- Interest in increasing amounts of office, commercial, or other less episodic uses
- Relationship of new buildings with the river
- Public view enhancement to both Willamette River and Memorial Coliseum

1. Thunderbird Site – Existing Conditions

1. Thunderbird Site – Alternative A: up to 150 feet

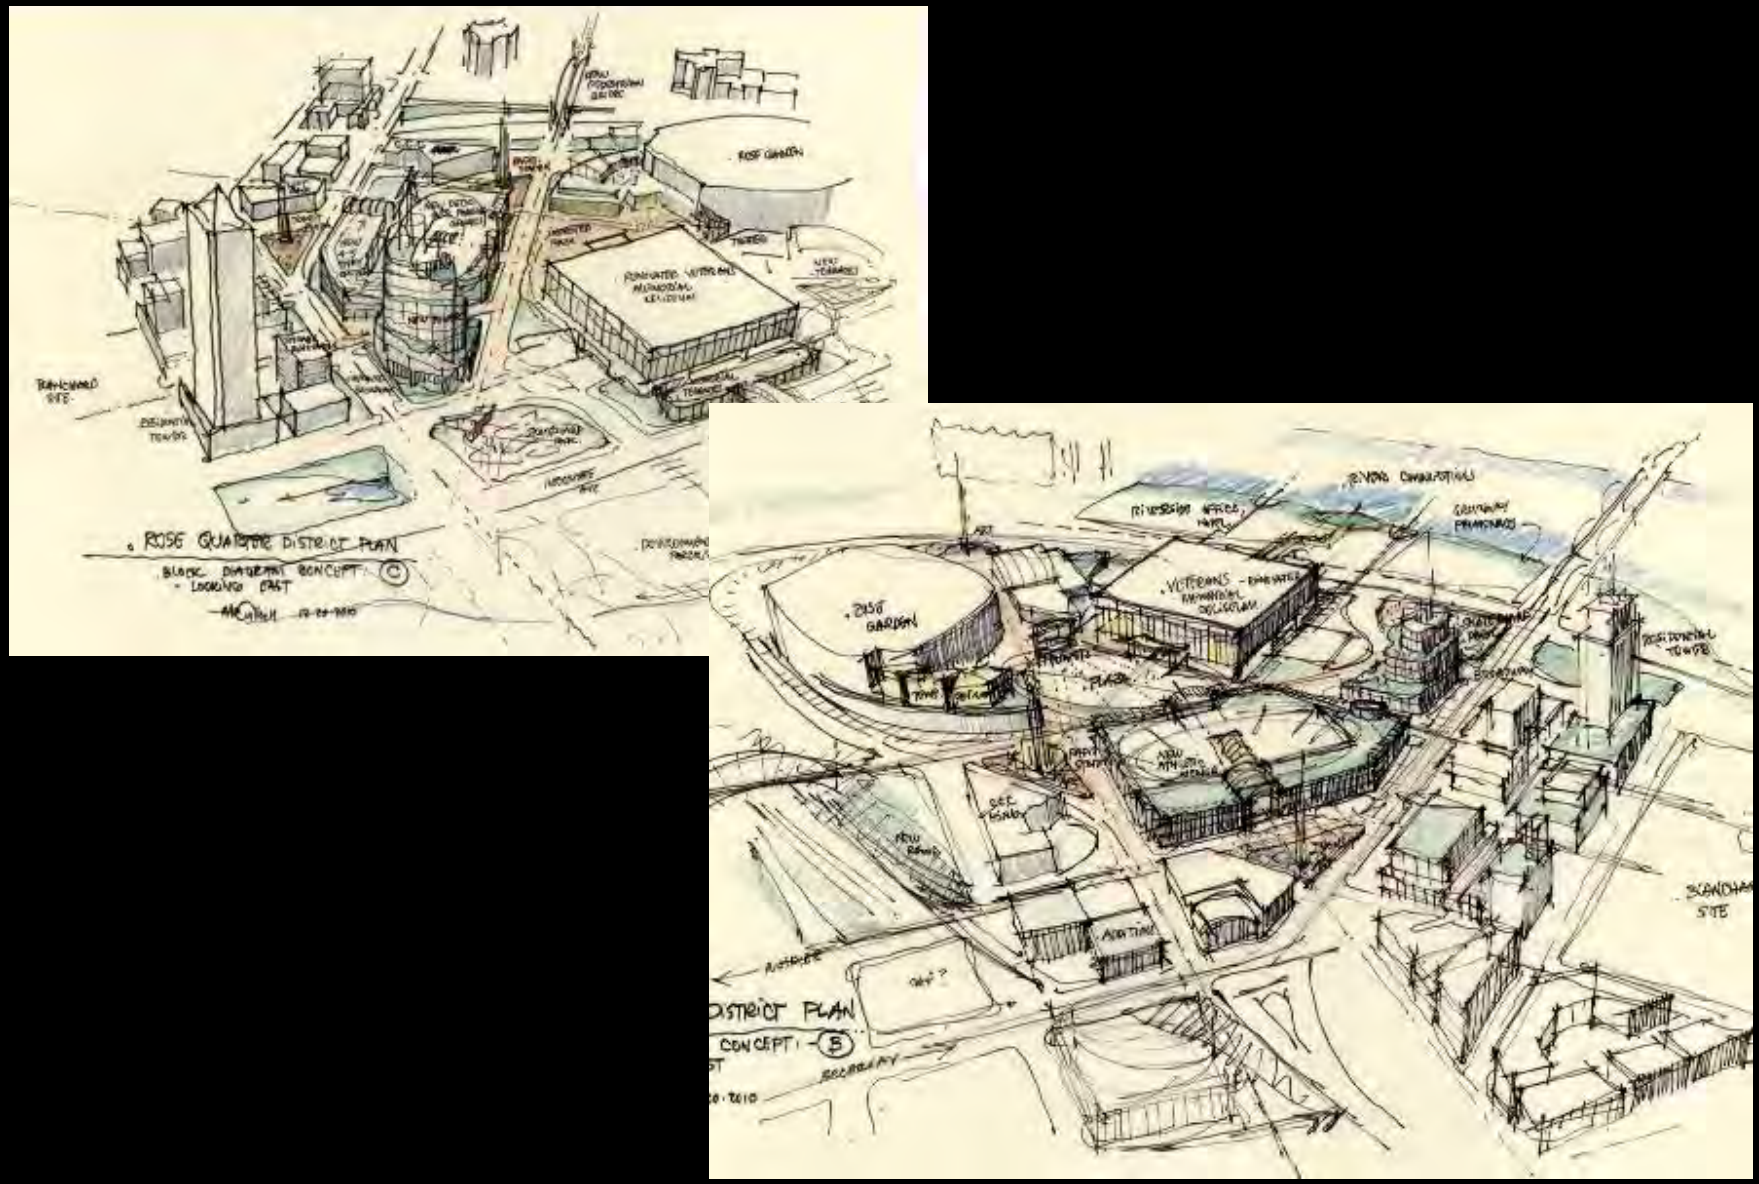
1. Thunderbird Site – Alternative E: up to 250 feet

1. Thunderbird Site – Alternative D: One tower up to 500 feet



1. Thunderbird Site – staff direction based on subcommittee feedback

A. Explore allowing taller buildings in exchange for open space.
B. Consider important views to preserve. (applies to whole quadrant)



2. N. Broadway

CENTRAL CITY 2035
N/NE QUADRANT
N/NE QUADRANT PLAN
Existing Maximum Allowable Building Heights
I-5

OREGON CONVENTION CENTER
LOUIS DREYFUS GRAIN ELEVATOR
BROADWAY BR.
WILLAMETTE
STEEL BR.
NE COUCH ST.
NE BURNSIDE

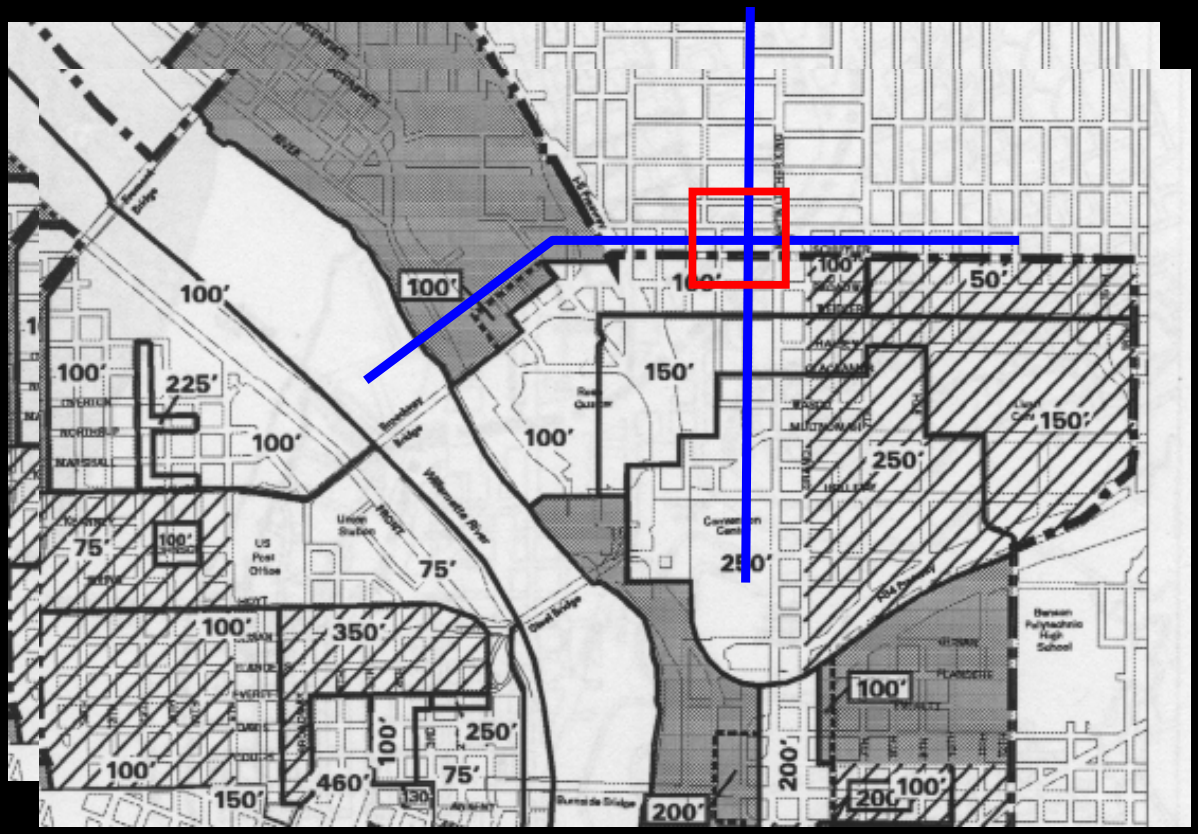
3. Eliot Edge – current conditions, issues and opportunities

- Existing heights generally consistent with concept
- Eliot Conservation District boundary a couple of blocks to north
- More commercial, industrial uses along segment of Broadway/Weidler
- Sensitive transitions to Cornerstone properties
- Not proposing any changes

3. Eliot Edge – No change



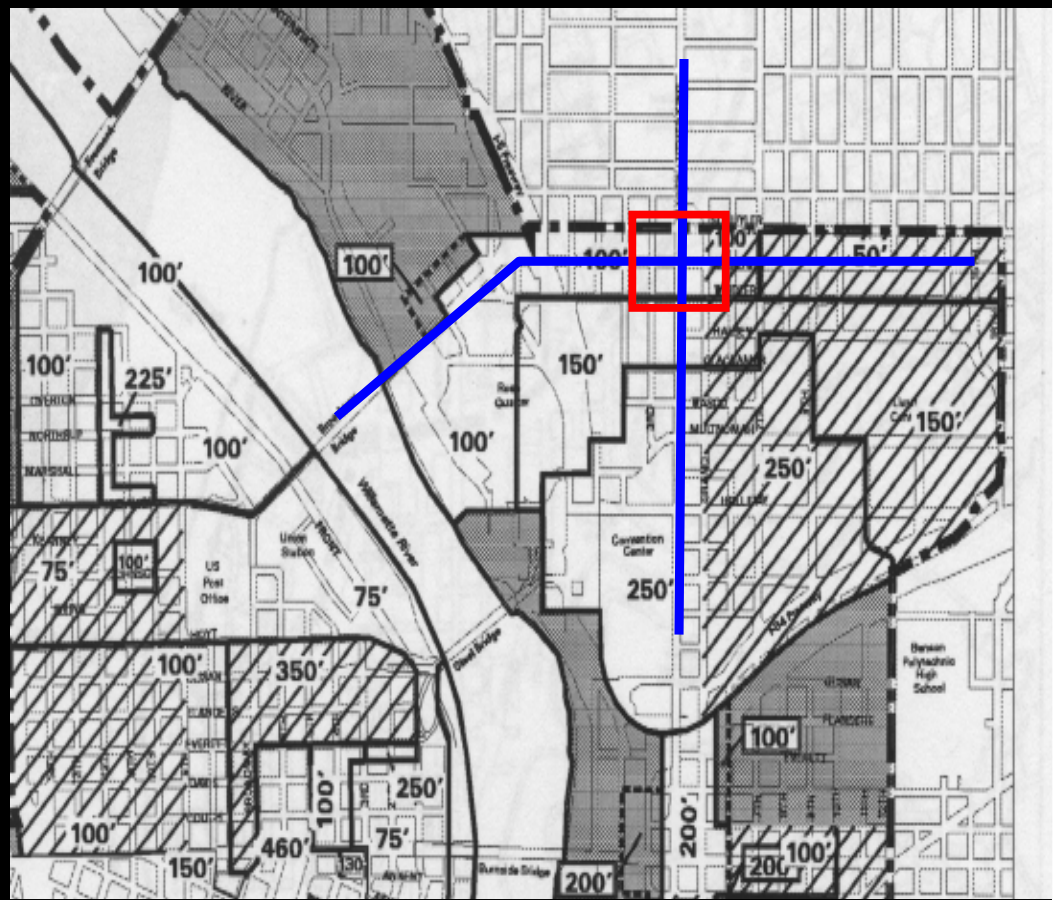
3. Eliot Edge – staff direction based on subcommittee feedback

A. Maintain existing 100’ height limit.

B. Examine transition to neighborhood between Broadway and Schuyler.

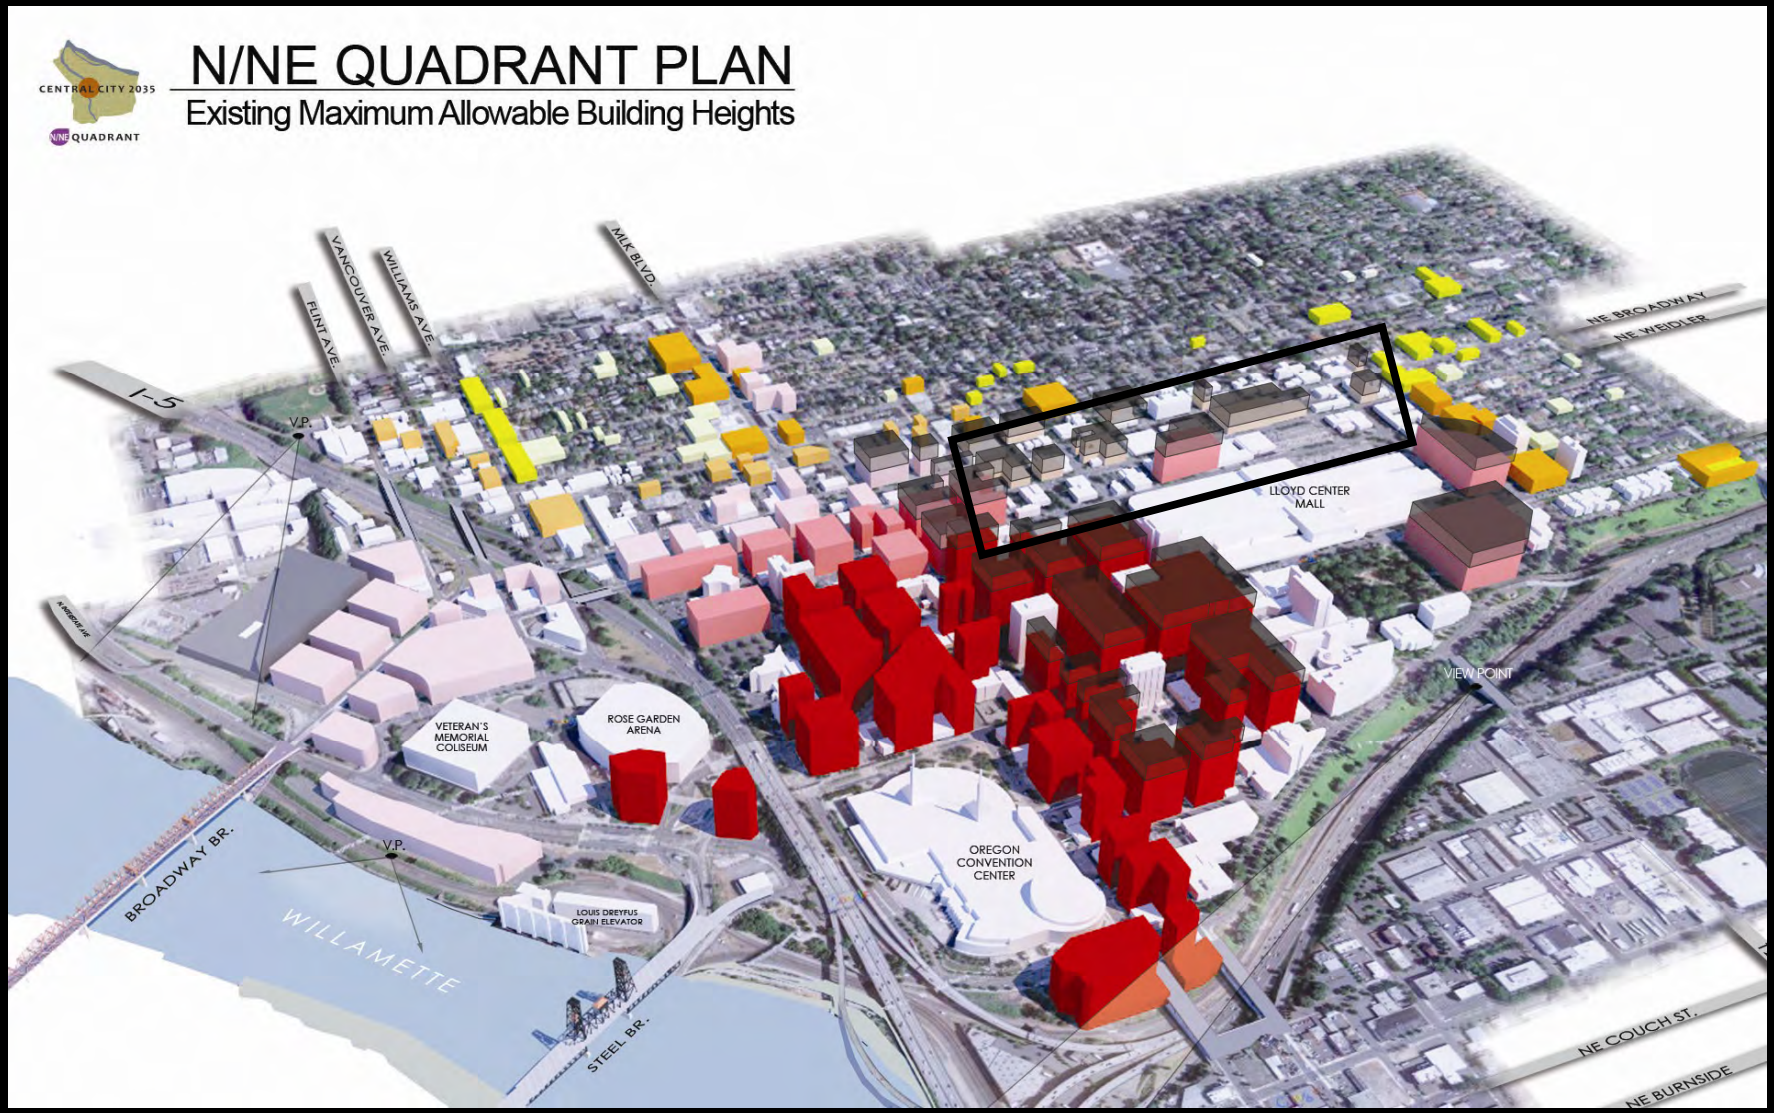
C. Support streetcar with additional height flexibility on large sites near the freeway.

D. Allow taller buildings on the four blocks around the gateway intersections of MLK, Grand, Broadway and Weidler by expanding height bonus area to west.



3. Eliot Edge – staff direction based on subcommittee feedback

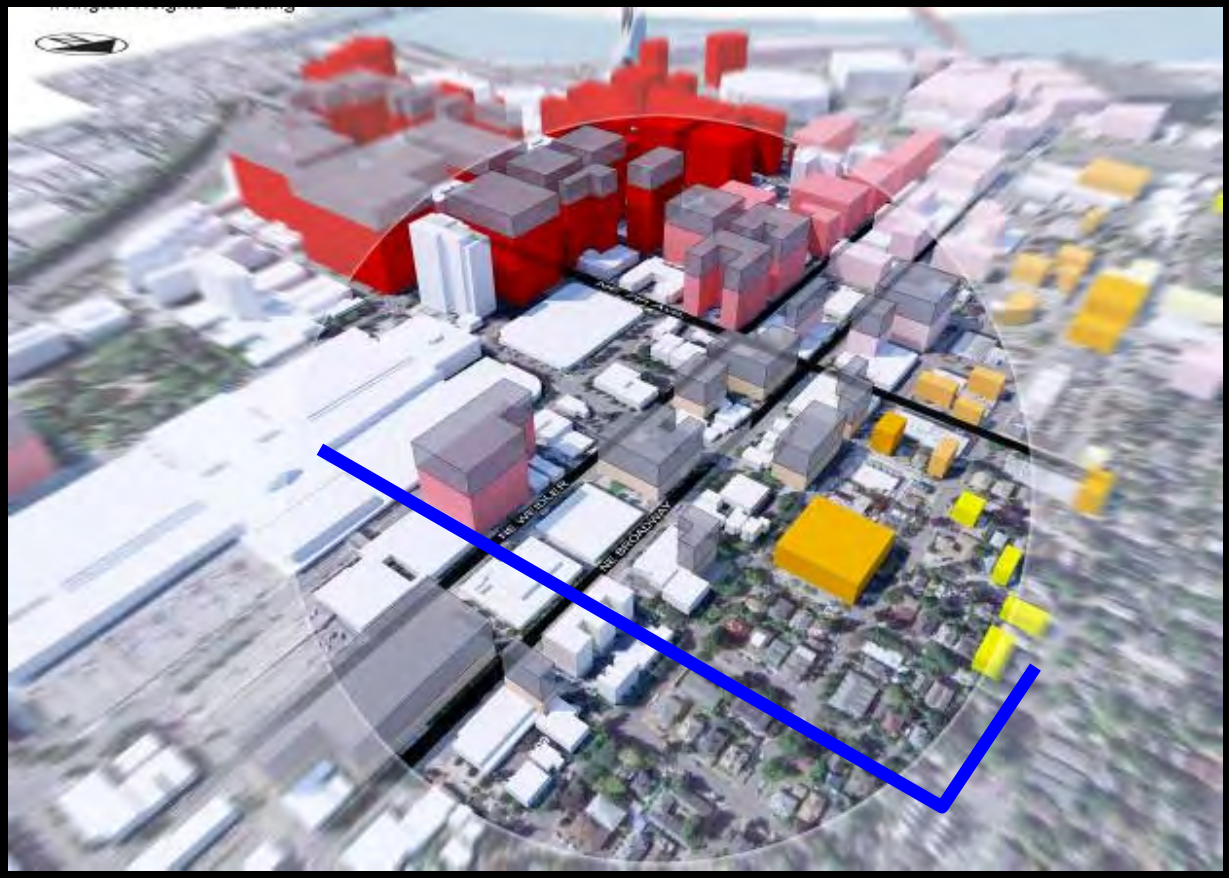
A. Maintain existing 100’ height limit.



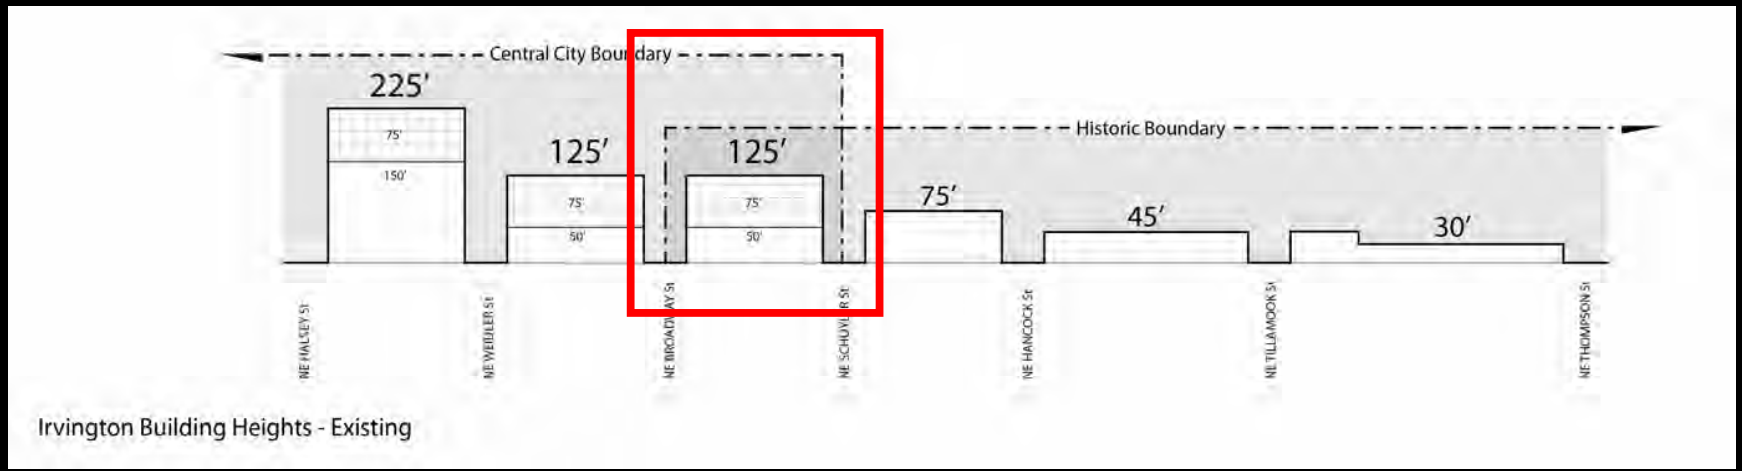
B. Examine transition to neighborhood between Broadway and Schuyler.

C. Support streetcar with additional height flexibility on large sites near the freeway.

D. Allow taller buildings on the four blocks around the gateway intersections of MLK, Grand, Broadway and Weidler by expanding height bonus area to west.

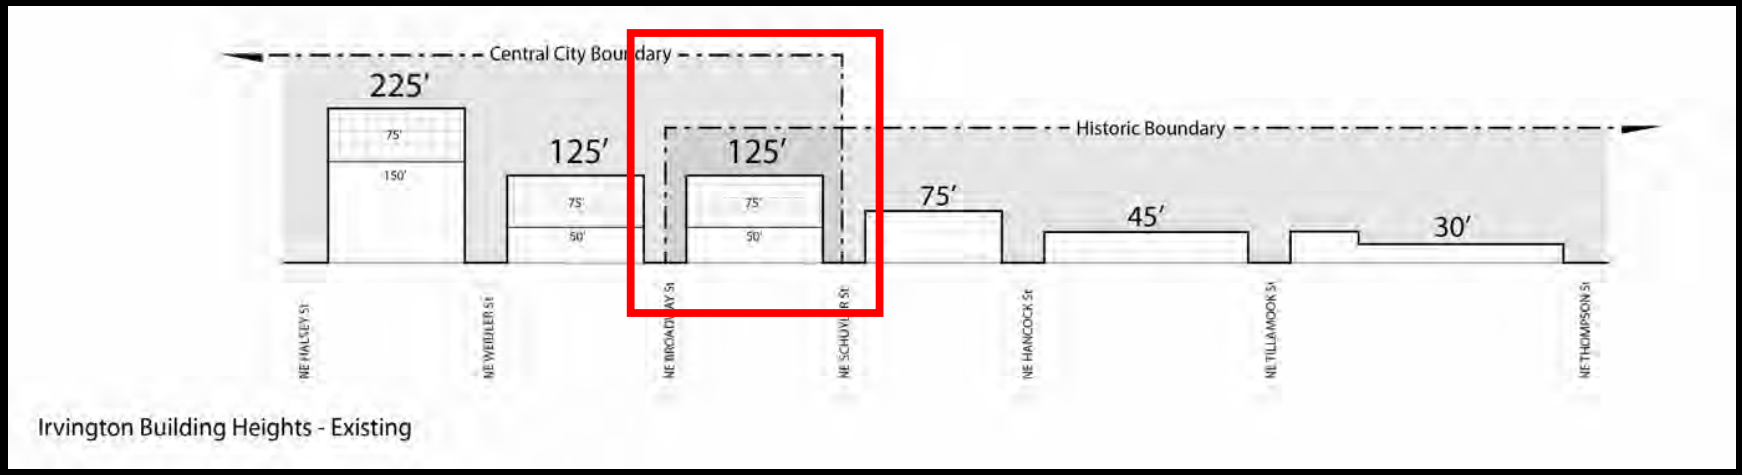


4. Irvington Edge

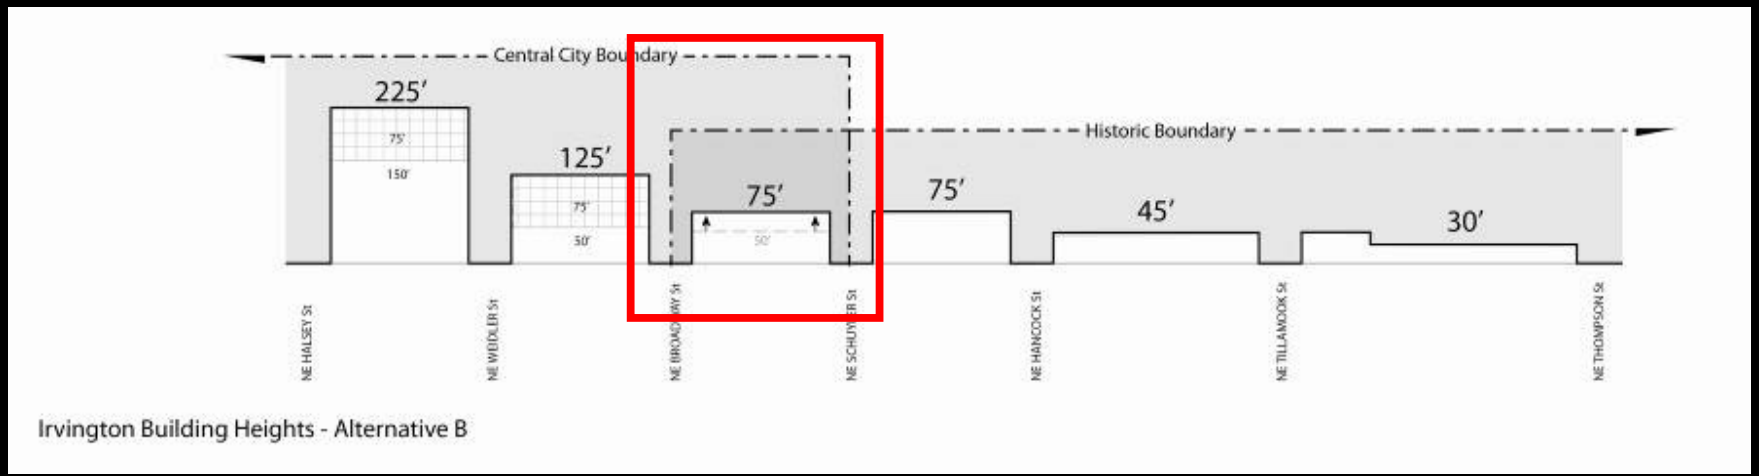


4. Irvington Edge – current conditions, issues and opportunities

- Historic District overlap with Central City boundary
- Sensitive transitions to north
- Supporting retail cluster along NE Broadway
- Further exploration needed on development stepdowns
- Focus on block between NE Broadway and Schuyler



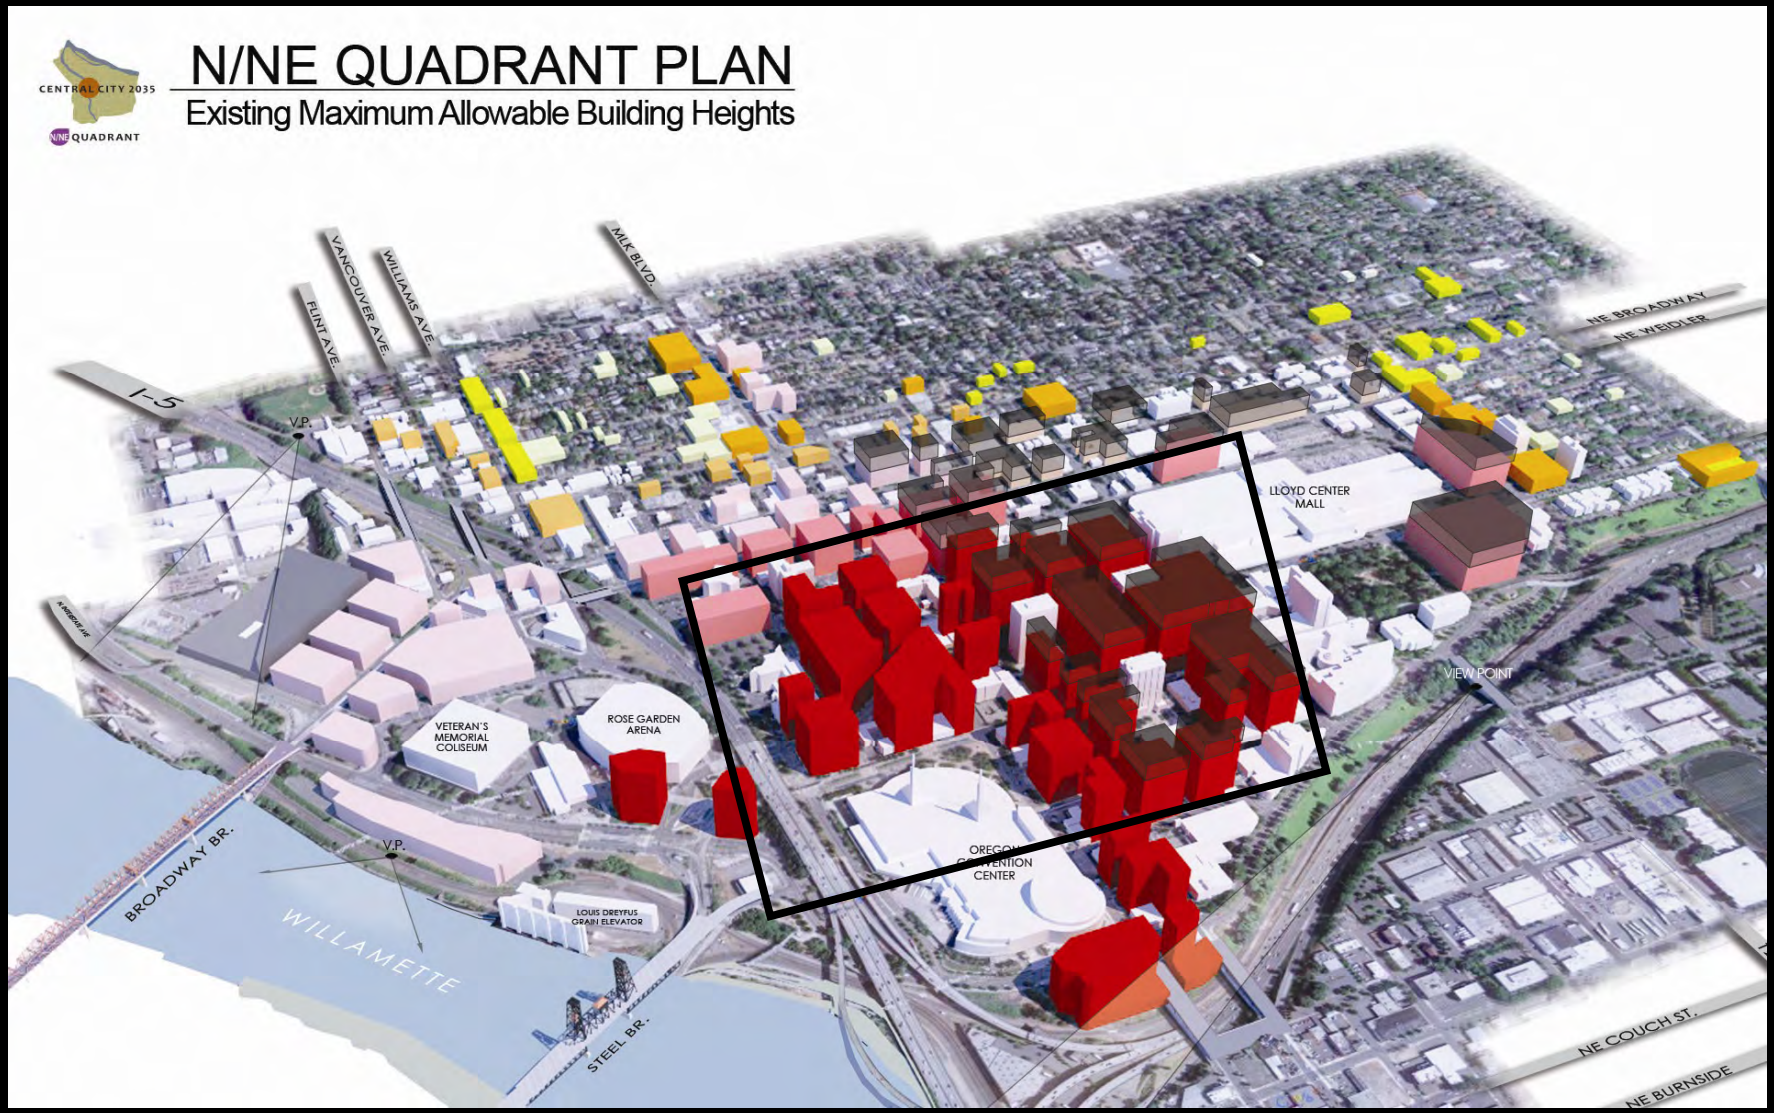
4. Irvington Edge – Existing heights



4. Irvington Edge –

Increase base height to 75 feet, remove allowance for bonus height

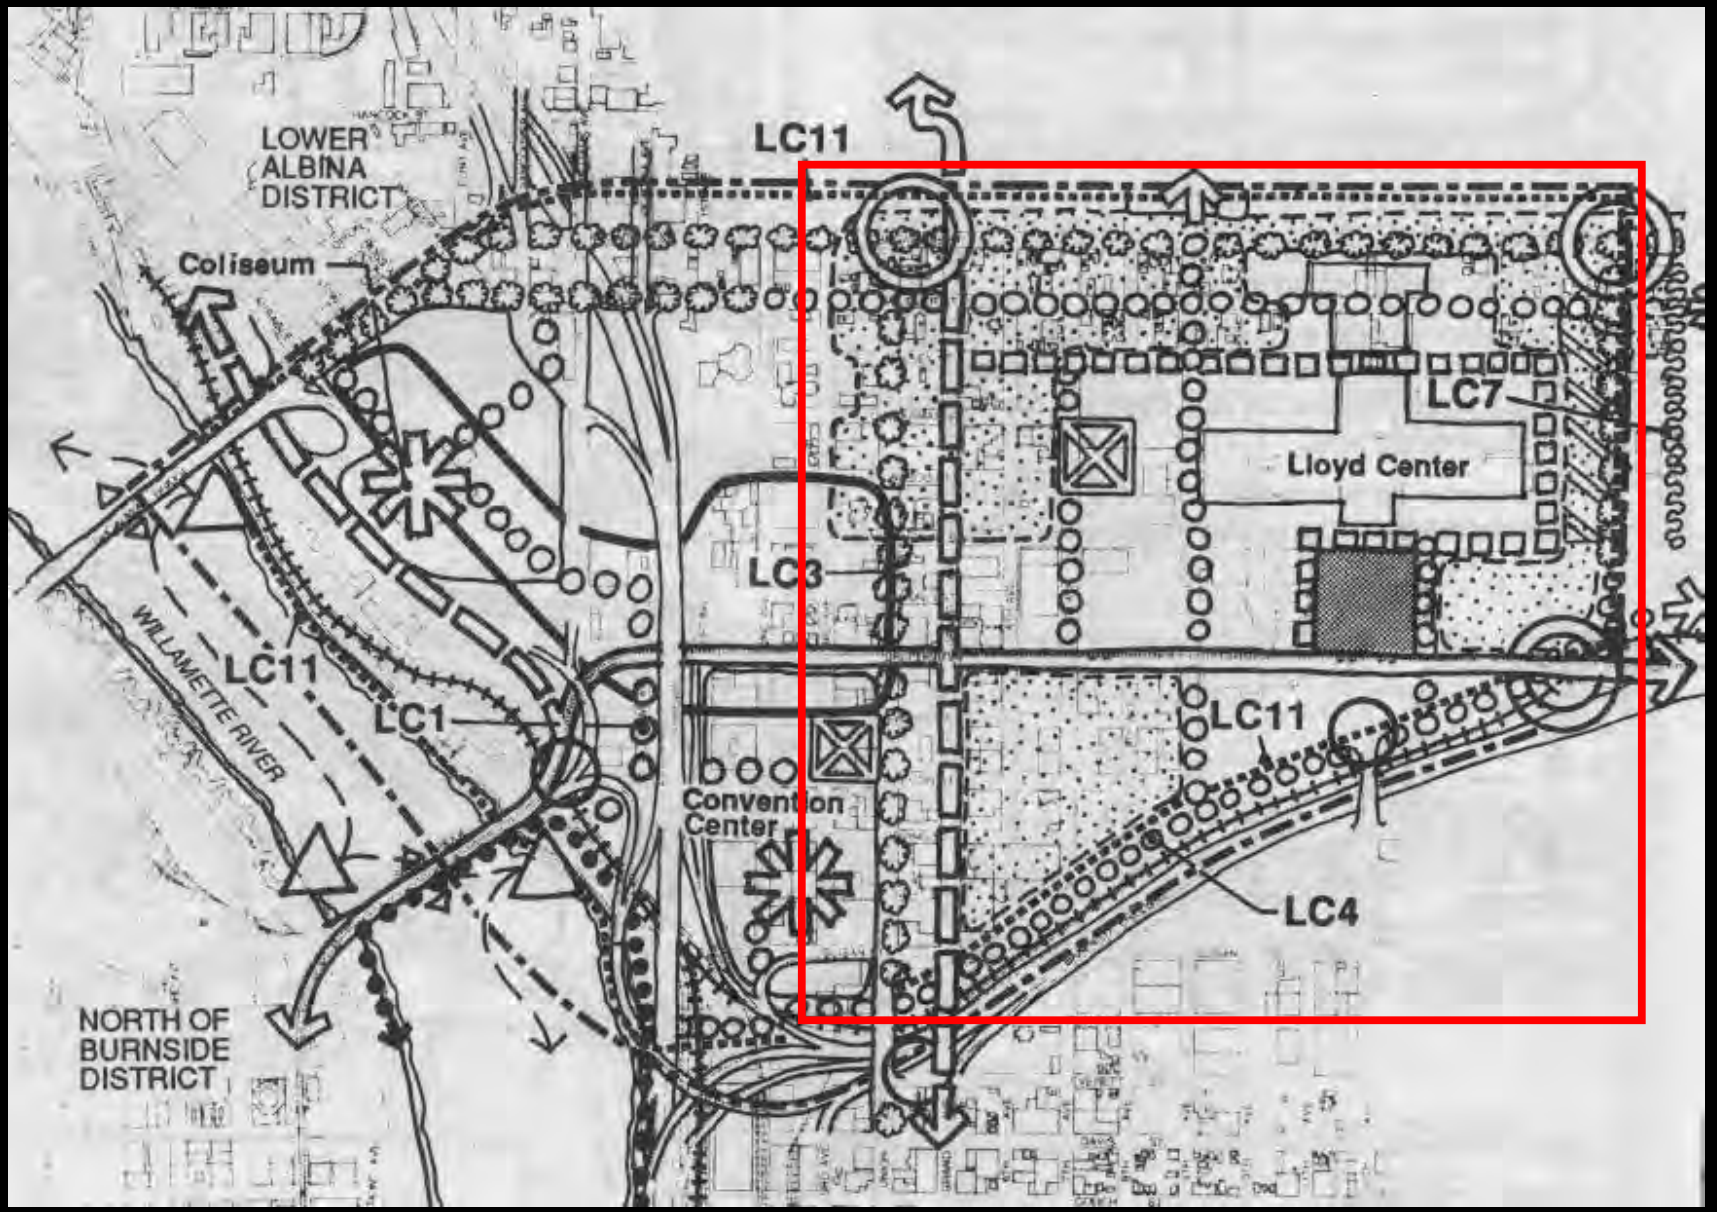
Irvington Building Heights - Existing



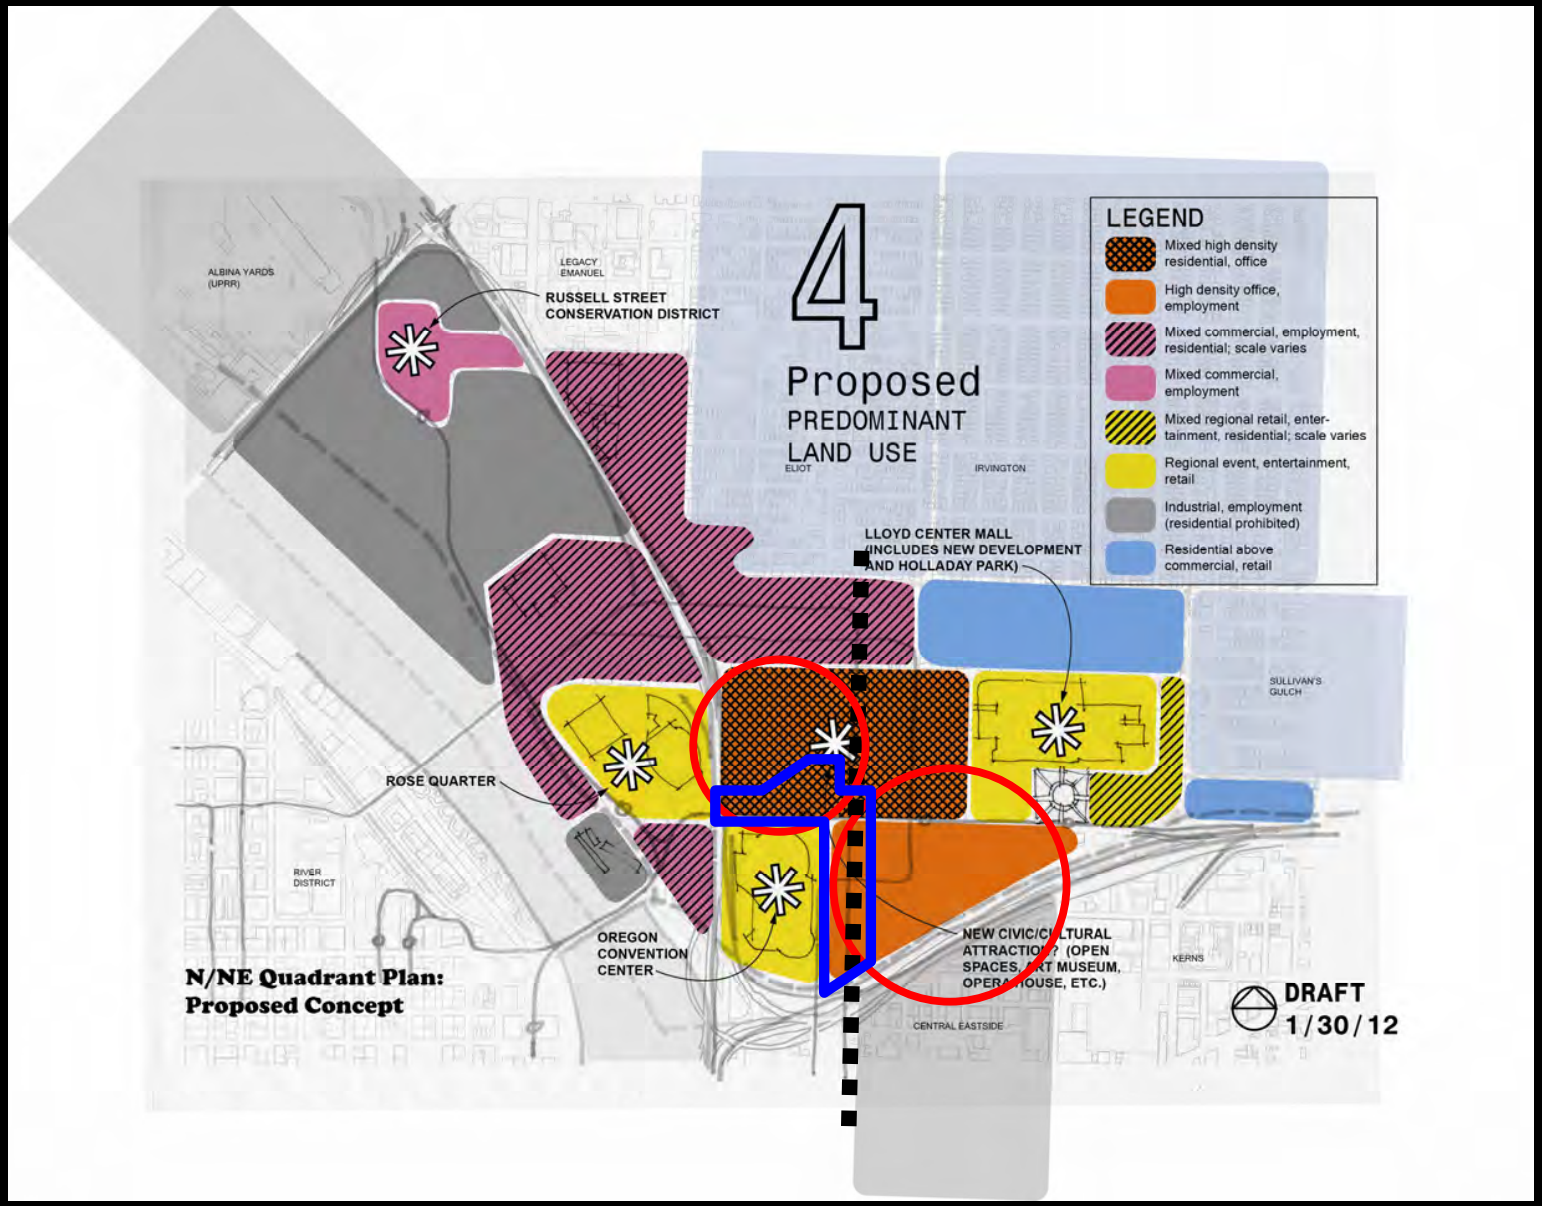
Irvington Building Heights - Alternative B

4. Irvington Edge – staff direction based on subcommittee feedback

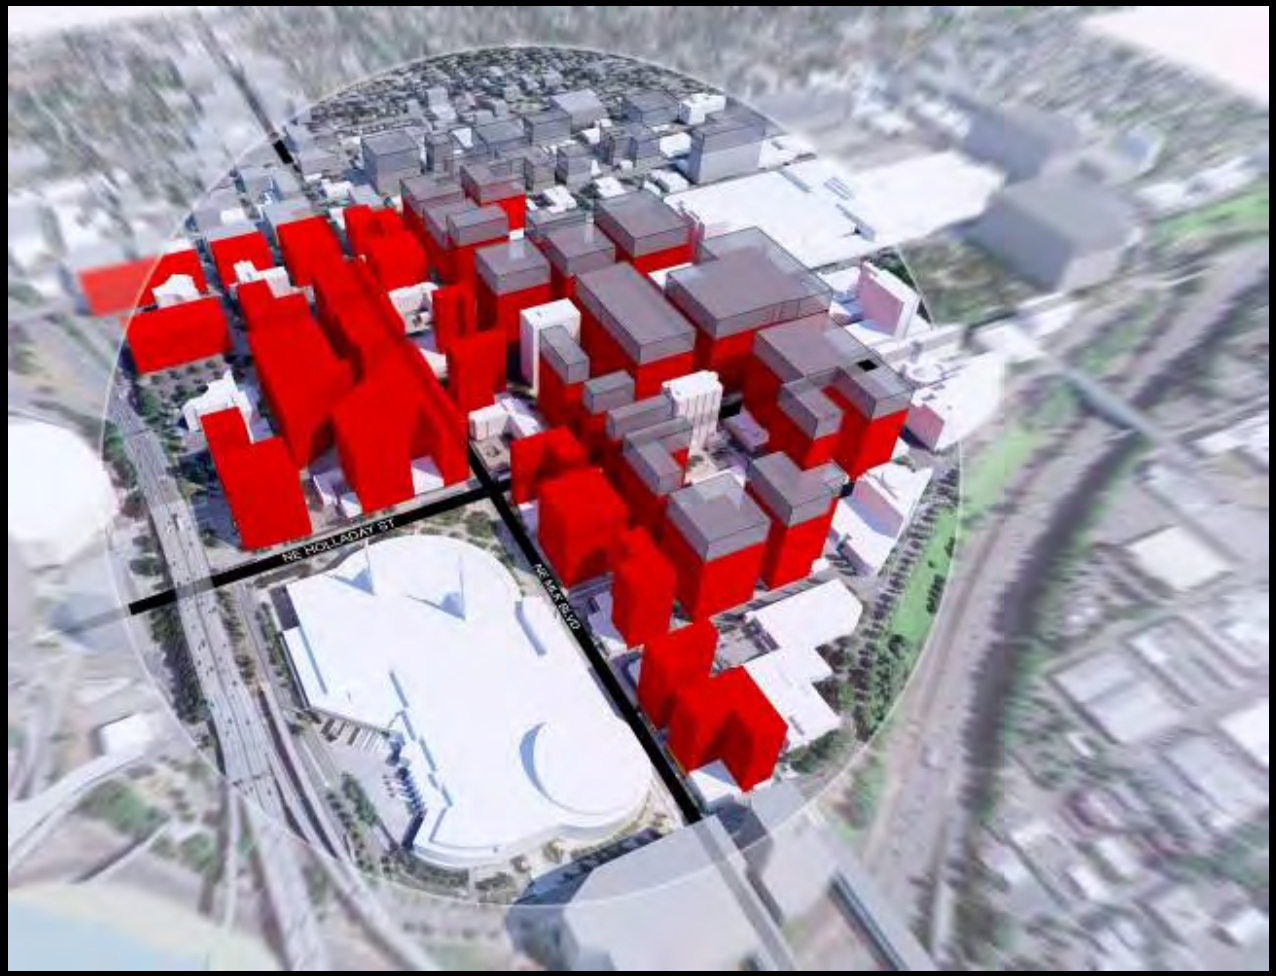
A. Limit maximum building height to 75’ north of Broadway within the Irvington Historic District.



5. Central Lloyd



5. Central Lloyd– current conditions, issues and opportunities



- Height bonus only allowed east of NE Grand
- Reducing incentives for residential south of NE Holladay
- New incentives for residential west of MLK/Grand, in Central Lloyd area
- Possible areas to allow unlimited height (FAR to regulate)
- Strengthen/support future investments in public amenities, such as open space
- Recent development proposal at 325 feet

5. Central Lloyd – Lloyd District Urban Design Plan, 1988

5. Central Lloyd – Alternative B: “100% Corner” at NE MLK/Holladay

5. Central Lloyd – Alternative C: “Just off the Main Streets”

5. Central Lloyd – staff direction based on subcommittee feedback

A. Explore allowing taller buildings in exchange for desired amenities (eg. open space, housing, hotels). Consider unlimited heights in key areas – regulate by building mass and design review.
B. Apply housing incentives more uniformly across Central Lloyd area.

Next Steps

Upcoming Meetings

SAC #16: May 10, 2012, 5 – 8:30 pm

Land Use Subcommittee Meeting: May 23, 2012 (tentative)

AIA Portland
A Chapter of the American Institute of Architects

Mr. Mark Raggett
City of Portland Bureau of Planning and Sustainability
Urban Design Studio

April 3, 2012

Dear Mark:

On behalf of the AIA Urban Design Panel, thank you for presenting the North/Northeast Quadrant Plan to us on March 13, 2012. The panel is supportive of the major recommendations and concepts expressed during your presentation. We feel this planning study strikes the appropriate balance between long-range vision and pragmatic steps that will allow these key areas in our region to evolve. In particular, we felt the following were strong ideas that define a compelling direction for this area:

- The vision for a dense mixed-use urban neighborhood that is pedestrian-oriented realized through the creation of fine-grained places to work, shop, recreate and congregate with friends, family, and others in one's local and regional community
- Infilling around positive existing uses and infrastructure investments;
- Utilization of the relatively unique configuration of super blocks within the Central City to advance an integrated density + openspace relationship;
- Adding high intensity housing to leverage existing high intensity office and retail;
- Implementing a coordinated parks strategy to support added housing, existing uses and general intensification of the area;
- Enhancing physical connections, particularly bicycle and pedestrian connections, between the river, Rose Quarter, and areas East of I-5;
- Developing a hierarchy of streets;

Illustrating in the plan documents incremental short and longer term infill building examples, including well designed but inexpensive, single story retail retrofits and high rise residential towers;

While we are supportive of the plan as presented, we would recommend further consideration and work on the following two main areas:

Connecting South
More effort and focus should be made on physical connections across I-84 to the south. As the draft plan recognizes, the district has been cut off from the rest of the city by historic transportation investments, particularly grade-separated auto-exclusive freeways. Similar to the approach to connections to the river, we suggest increased consideration of the southern connections in the plan's accompanying maps and illustrations.

Planning and Programming Parks and Plazas

The parks concept in the draft is strong, and we agree with the approach of keeping the concept diagrammatic in visualization. As noted above, the Panel agrees with the draft plan's strategy of using investments in parks to help spur, focus in location, and support housing investments and uses in the district. However, more work needs to be done to further develop the concept either in this plan or as a focused follow-on effort. Simply put, good parks do not just happen. The series of parks in the district should function as an integrated system, and should factor in the presence of other "open spaces" in the area. Future work should provide more definition for a programming concept in tandem with the physical concept diagram, establish principles to ensure that parks are developed in the right places and that surrounding uses support them, and give additional thought to the interplay of public and private lands in the parks and open space network for the district.

403 NW Eleventh Avenue Portland, Oregon 97209
Telephone 503.223.8757 Facsimile 503.220.0254
E-Mail: aiapdx@aiaportland.org Internet: www.aiaportland.org

Finally, a practical – which likely means incremental and complex – funding strategy needs to be developed including buy-in from both the public and private sectors.

When crafting a more detailed district parks strategy, considerations should include:

- *Possible consolidation or relocation of existing parks in support of the overall district parks strategy.* There are numerous parks and park-like spaces sprinkled throughout the district today: outdoor plaza spaces at public facilities such as the Convention Center and Rose Garden; Holladay Park; public "greened up" lots with plantings, hardscape and lawns; and even a number of private parks/open spaces/plazas. Many of these places are underutilized, some are arguably poorly located. Portland should be bold enough to at least consider relocating or eliminating some of these spaces in the interest of a stronger district parks strategy.
- *Activating and defining specific roles for the parks throughout the district.* Programming each of the parks will be critical to their future success, and should be further studied before additional park investments are made. That further study should include defining the purpose, role and desired range of experiences at each major site and type of site, including at public facilities. The role of privately provided plaza and park spaces should also be addressed. In addition, questions need to be considered such as how to support year round use, whether on-site program management is needed (as at Pioneer Courthouse Square and Director Park), or whether to provide commercial space or allow mobile vendors; and/or funding/implementation strategies. The process to define, program and design the three Pearl District parks may be a good model. Equity should be considered.
- *Addressing surrounding land uses and building massing/frontages to support planned parks.* Adjacencies must be carefully considered. There are many Portland-specific examples of creating the conditions for successful parks (e.g., Director Park, the three Pearl District parks), and an opportunity to draw lessons learned from the challenges of Holladay Park. Parks should be located where they can be successful assets, and the built environment should support current and future park investments. This should include an assessment of code requirements needed to support the desired direction.

Freeway Configuration and Adjacent Potential Development

The Panel is impressed with the symbiotic results/potential options stemming from the timely collaboration of ODOT and BPS. We are extremely eager to see a replication of that fruitful relationship as the City moves towards the NW, SW and SE Quadrant Plans, and hope the respective project teams will continue to touch base with us in this regard.

With respect to the nascent proposals for I-5 configurations within the extent of the Rose Quarter, the Panel firmly supports the Auxiliary Lane Concept far and away above the potential Braided Ramp Concept and its resultant impacts on the urban environment and long-term vitality of both the Convention Center to the east and Rose Quarter to the west. Our deliberations on this matter squarely focused on the compromised quality and character of the environment (transit and otherwise) of the space BELOW the freeway, but we were also positively swayed towards the Auxiliary Lanes concept based on its ability to provide needed improvements for safety and freight operations.

Finally, the Panel is supportive of options to reconstruct the "surface" or "local" connections above the I-5 Auxiliary Lane widening, in configurations that drive connectivity and foster development in the area of the PPS/Blanchard site and integration with the larger Quadrant Plan visioning. Simply replacing the vehicular framework of local connections available today was not transformative for enough in a quadrant of the city ripe for redevelopment, healing and multi-modal innovation. The Panel would support further study of these alternatives.

Telephone 503.223.8757 Facsimile 503.220.0254
E-Mail: aiapdx@aiaportland.org Internet: www.aiaportland.org

Again, we appreciated the opportunity to hear about the work your team is doing, and to offer our thoughts on how to make what is already a strong framework even better. We reiterate our support for this effort.

Sincerely,

INFORMAL DISCUSSION AND MEAL

WELCOME, MEETING PURPOSE, APPROVAL OF MINUTES, AND STANDING BUSINESS

Sam Imperati, ICM, welcomed the group and reviewed the agenda. He welcomed Kurt Widmer to the table for the first time.

APPROVAL OF MEETING MINUTES

The January 19, 2012 Meeting Minutes were approved with edits shared via email from Debra Dunn. Two other edits were provided: Carol Gossett was the sole representative attending for Sullivan's Gulch Neighborhood Association and Wade Lange was representing Langley Investment Properties.

PROCESS OVERVIEW/TIMELINE REMINDER

Sam projected the updated process chart, which maps out each phase and describes where the SAC is at in the process. He briefly described the goal of each Phase of the SAC Process and reviewed meetings/topics scheduled ahead for March, April and May, 2012. Sam said May 10th is when the complete draft is due. He added that there will be a longer public comment period at the May and June SAC meetings. June 28th will be the meeting for final recommendations and finalizing of the report.

Wade Langley: suggested another tour/field trip, now that the group has whittled down to concrete concepts. Others in the group showed support and Gary Warren offered to arrange a bus.

FOLLOW UP FROM PRIOR MEETING(S)

Sam said the Open House at Lloyd Center on February 2, 2012 was a great success and thanked Wanda Rosenbarger for hosting. Comments received at the open house were provided in the meeting packet. Sam added that there was a letter submitted by Daniel Deutsch, which was also included in packet.

Karl Lisle, BPS, recalled the OSU architecture class' study, and said the results are posted on the project web page.

OUTREACH SUMMARY

Karl Lisle added that in addition to the Open House, members of the project team have also been attending several subgroup meetings on the land use side of the process. There has been also outreach to key property owners through a developers' forum meeting held last week, where concept maps were presented. Feedback was generally positive and the project team gathered some ideas for revisiting regulations to allow more flexibility with shared parking facilities.

N/NE QUADRANT PLAN CONCEPT

Karl Lisle, BPS, clarified that the project team was looking for a more concrete sense from the SAC regarding the plan's conceptual elements. He reviewed the existing condition key points, emphasizing that there are very limited housing areas and noted the new plan does envision more housing in the quadrant. He said most of the infrastructure needed to support a dense urban environment is already present. He showed slides and maps of existing business conditions on the west vs. east side of the Willamette River. He noted that the Lloyd District job growth statistics are an area of some growth, but the housing unit statistics have not grown. The plan looks to capitalize on the next wave of development, as was seen on the west side of the river. Karl presented a slide that showed a three dimensional depiction of growth development potential.

Karl reminded the SAC of the concepts shared at the September 2011 meeting, and the stage of the draft at subsequent SAC meetings. He noted that the subcommittee met in January's meeting to address significant concerns about the street character types. Karl reviewed detailed slides on the revised draft concept, noting that Lower Albina will see limited change during the life of the plan, Russell Street will not have expansion of residential area, but the mixed use area will expand slightly up Russell Street and to embrace the light rail station on Interstate. The Lower Vancouver/Williams area will see increased flexibility to allow more commercial/employment uses in current RH-zoned areas. In the Lloyd District much more significant change is envisioned during the life of the plan. The concept recognizes the importance of the big regional attractions in the district and seeks to balance their episodic activity by encouraging new uses that surround them, but don't necessarily compete. Karl noted that the "Central Lloyd" area will likely see the highest density new development and that the scale of the buildings along the Broadway/Weidler corridor will gradually increase as one moves closer to the river.

Wayne Kingsley: as I reviewed this revised draft, I thought I saw housing next to industrial without much transition (near the Rose Quarter). The lack of transitions in those types of areas hasn't worked well in the past.

Karl Lisle: yes, that is something we are aware of and will be attentive to.

Phil Selinger: is parking being addressed in a separate conversation? Have we looked at shared parking?

Karl Lisle: not sure, think it may be part of future conversation.

Steve Iwata: yes, there will be more to come.

Laurie Simpson: regarding the height limit on Broadway west of 7th, is that the same as the existing?

Karl Lisle: yes, the existing height limitations vary in different areas, and we are suggesting we may need to reduce the height in some places and increase it in others. Along Broadway west of 7th, the current height limit of 100' is generally consistent with the concept.

Pauline Bradford: comment that if the buildings are too high, there is a feeling of being shut out, as was the case with the Rose Quarter and the Eliot neighborhood. Too many tall buildings create a separation. Many of the 2-3 story houses can see the river on the upper floors and that enhances the neighborhood where you are hoping to build.

Karl Lisle: good point. We will discuss these aspects more in Phase 4. This is only a concept level map. The discussion will be more detailed on these aspects at the March 21st subcommittee meeting.

Dean Gisvold: regarding zoning and the effect on non-development areas, he suggests using a comparison map that shows the current height restrictions and current zoning, as it might be useful for the group to see. Question: if you have an approved concept at this point in the process, will that allow for height restriction additions later?

Karl Lisle: an approval of the concept is just that – it sets up a conversation and allows for having the needed resources with us when we get to that next detailed point in the process. The idea here is to have the guidance in place to help frame up and focus those conversations. Yes, stakeholders can offer comments that are more specific (e.g., regarding height restrictions) later in the process.

Tracy Whalen: continuing that point, and comment specifically on the little peninsula between the River and the Coliseum, she sees in the draft that it would create a wall.

Mark Raggett: we have other renderings that will show more detail, and we can talk in more detail about ways to keep an open sense in those spaces.

Gary Warren: comment about the 5 block residential zone; we do want to preserve the existing residential land use along with the zoning.

Karl Lisle: that is a conversation that we need to have. If you want a commitment to residential and other kinds of development in that central Lloyd area, which is suggested by the concept, then you do want to say yes to the concept, (unless you only want 100% residential) as the plan concept has both residential and business.

Bill Ruff: it is important to consider building mass along with height.

Dean Gisvold: suggests that we need some plain English to consider what each zoning restriction actually means, so the public can really understand the plan. Also, show how it factors in scale, this will be helpful for people to consider.

Bill Ruff: do you know what the FAR (Floor-to-Area Ratio) implications of the concept are?

Joe Zehnder: we clearly need to look at that, as it does relate back to infrastructure.

Mark Raggett referred the SAC to the next set of handouts in the meeting packet. He showed maps of three main types of streets (coded as red, blue and green), and reviewed the assumptions used for each type. Mark shared a digital design of how each area could look as compared to a photograph of how they exist today. He noted that for the green or “flexible” streets, stakeholders should focus on the main character of each segment and the connectivity, as there are several possible options for uses of the green streets.

Wayne Kingsley: admitted he had to review the 97 pages of meeting materials quickly, and had a question about the ultimate use of this section - how much will ultimately go into the Comp Plan, in terms of zoning and maps?

Karl Lisle: nothing in the concept will necessarily directly go into anything else. Anything approved today simply lets us move forward into the next phase. At the next SAC meeting, we will turn our focus to zoning, and there will still be time to provide suggestions and feedback.

Wayne Kinsley: comment that the zonings that are part of the 2035 Vision should not be in the Comp Plan.

Karl Lisle: clarified that saying yes to this concept today does not mean final approval.

Tracy Whalen: looking at 9th/Weidler, your vision does not look too bad, but would like to have a car count on daily traffic in both directions. You cannot take a lane away when we already have a streetcar. Also the curb extensions would affect truck access, so you have to be selective about where those are placed. 9th and Weidler is not a good place. Some cars might have trouble making those turns, too.

Joe Zehnder: good feedback, and, as the Pearl District development process has unfolded over time, he expects the same will be true for the east side. Part of what the illustrations were meant to do was to show how things might evolve over time. The Lloyd District is already zoned for large buildings, but that hasn't happened yet. Regarding Tracy's comment, we do want to stress that the digital images were meant to show potential. We are hoping to get smarter on how the area might develop.

Sam clarified that the comments being shared are appropriate for this phase in the process, and staff are putting these concepts forward today as concepts only, in other words, a place to begin to get the SAC out of the generalized issues, so you can move to more detailed discussions in Phase 4. Stakeholders will not be stopped from bringing forth concerns.

Justin Zeulner: specific to Broadway and Weidler, the business community for the most part wants to see parking spaces preserved. We want to see this District become a thriving business community and also good for existing and future residents, as well. From a process standpoint, if we want this, will we start making changes now or just wait until development happens? We want to see some of this implemented sooner, not 20 years from now.

Joe Zehnder: yes, we think it will be a phased, flexible approach, and we want to create a level of confidence regarding the direction the area is going, so the community can it can have sense of direction and momentum. Also, there are specific investments, such as the streetcar, that will greatly influence the direction it will go.

Sean Hubert: regarding the parking plan, a lot of the illustrations showed the removal of current parking areas. We need to be strategic and he wonders if there may be an opportunity for the City to "land bank" or ensure some parking development in this area.

Gary Warren: agrees with Justin, we need to preserve parking, as a portion of Broadway is a ribbon that goes through two residential neighborhoods and parking is critical for businesses. We also need to look at pedestrian safety. Comment to Joe Zehnder: we need to do it now. Also he is concerned about seeing Multnomah become a major commercial road, and has been hearing rumors about that.

Karl Lisle: to clarify, just because Multnomah is red on this map, that does not mean it will be a major arterial. It is more of a commercial character. He did hear quite a bit of pushback regarding earlier versions of the concept which showed Multnomah as a less active boulevard street at previous meetings and in conversations with major property owners along Multnomah. The current concept suggests that Multnomah over time may develop more of a commercial main street character over time, though it wouldn't necessarily have significantly more traffic. The color coding for each street and it really is more about developing character as we move forward.

Dean Gisvold: agree with Justin and Gary, he has also been getting pushback, feedback, and concerns expressed by the public. We plan to present a multi-neighborhood response sometime in early March.

Carol Gossett: when we will be able to prioritize projects/areas within the plan – the next phase?

Karl Lisle: he hopes so, and thinks it will be more effective to have a prioritized list. He is trying to set that up and make this project compelling to large landowners, to get them invested.

Karl reviewed next set of slides on proposed green spaces. He noted the plan has not changed much since the November meeting. The general idea is to seek to organize future public and private open

space amenities in the vicinity of NE Clackamas Street and over time create a balance of active and reflective park spaces. He showed slides with example images of how future green areas might look.

Phil Selinger: in discussions with Conway Properties, we have noted that small parks are expensive to maintain – who would maintain them? Have you discussed with Portland Parks?

Karl Lisle: we have discussed this with parks staff, and they have noted that ideally a central park facility in this area would be more than one block in size, and not all parks and amenities have to be public. Generally, Parks would rather put public funds into larger park spaces and let the private sector supply some of the smaller facilities.

Gary Warren: have seen large amount of construction activity on the Legacy property – can you shed some light on what is happening at Legacy?

Karl Lisle: they have a development project they are trying to get off the ground, and we are talking with them about coordination. Todd has some points he will refer to later and this is a topic that is on the docket for discussion. We need to have more discussion with Legacy about their project and get more information so we can better understand impacts on elements in our concept planning work.

Karl reviewed a few more slides on green systems, including swales, green canopies and other eco-district efforts underway. He noted the attention to areas where there might be synergies, that if we are going to undertake a whole series of infrastructure improvements on, for example, Clackamas Street, why not also include some other objectives, if there is alignment, such as green street improvements.

Justin Zeulner: does not think meeting notes exactly reflected what was meant at the last meeting when he spoke of a "fatal flaw" of Clackamas Street in the green system – and you just highlighted that for me. As a private property owner, he is wondering if there is so much energy being put into that in this plan, and if that does not happen, is there a "Plan B"?

Karl Lisle: this is conceptual and there is always room for a Plan B. While this is a good issue to flag and bring up as a concern, he does not think this is a fatal flaw on a concept level.

Karl continued the presentation and showed a slide on next steps for the next few meetings as the group moves into Phase 4. He also showed a slide on areas where there the potential freeway project presents opportunities to help meet Quadrant Plan Concept priorities such as improving connections, such as the proposed lid over the freeway at Broadway/Weidler.

Gary Warren: regarding the insight shared on the Clackamas over-crossing, can we have a conditional or "dependent upon" component? You said something about Todd talking about that later tonight?

Karl Lisle: if you look at the freeway staff report, it includes items we want to come back to in March. Our original thinking was that a Clackamas crossing was in that base project group. Later tonight, Todd will be asking you to confirm coming back to that idea in March.

Gary Warren: is concerned that some ideas will go away. We are dealing with a lot of things when it comes to that Clackamas overcrossing, such as the eco-system component.

Karl Lisle: yes, and we want to bring that back in March.

Gwen Baldwin: the issue seems to be whether or not the concept is a fit, and whether design development potential is off the table because of properties that would be under private control.

Karl Lisle: the project team wants more time to look at options and to not make a decision just yet. We want to wait until March when there is more information available.

Gary Warren: clarified that he does support the green street on Clackamas.

Justin Zeulner: to be clear, if we think the central Lloyd area is where a lot of residential would be and we want to activate our riverfront, he thinks that we need to be mindful that the residential area must be connected properly. Please keep that in mind when looking at the primary connection green streets.

Alan Lehto: to clarify, Clackamas as a right of way does not extend all the way to the freeway and there is a piece on either side that Legacy could block?

Karl Lisle: yes; and that is exactly why we need more time to have conversations.

Allan Rudwick: one of the examples of what we are trying to do here exists in Virginia where I grew up, and he can foresee that it may be the place where everyone wants to live. If we want to go big, we should create a place where folks want to hang out.

Action #1: Do you agree with the staff recommendation ~~to approve~~ move forward the N/NE Quadrant Concept?

The following members voted 1 (Total = 14):

- Tracy Whalen
- Carol Gossett
- Phil Selinger
- Matt Arnold
- Joanna Agee
- Wade Lange
- Owen Ronchelli
- Gwen Baldwin
- Lloyd Lindley
- Justin Zeulner: feel we need to be deliberate about the word "approve" regarding the concept – prefer the term "move forward"
    - Karl Lisle: we would be fine with changing the term to "move forward"
    - Justin Zeulner: with that change, and the tweaks that discussed today, support with a 1
- Laurie Simpson: with that change, support with a 1
- Gary Warren: with that change, support with a 1
- Jenny Lyman: with that change, support with a 1
- Pauline Bradford: still mindful of height, but with that change support with a 1
- Sean Hubert: still mindful of parking, but with that change support with a 1.

The following members voted 2 (Total = 2):

- Bill Ruff: not clear yet how to deal with the height issue and in the central core area there was no mention of mixed use, and he thinks that would be important
    - Karl Lisle: yes, mixed use would be allowed, with the exception of Gary's RX pocket, and the height issue will be discussed at an upcoming subcommittee meeting.
    - Bill Ruff: with that clarification, support with a 1.5.
- Dean Gisvold: does not like approving the concept with all those numbers in there, staying a 2.

The following members voted 3 (Total = 2):

- Wayne Kingsley: been working with these guys for many years, feels this is way too loose and just cannot give approval without more detail.

- Midge Purcell: while the language change makes me feel a little more confident, she not clear what the consequences of the plan concepts are, things like neighborhood affordability and stability.

I-5 BROADWAY-WEIDLER INTERCHANGE BASE CONCEPT

Todd Juhasz, ODOT, reminded the group of the feedback heard from SAC members at the last meeting. He recalled that crash rates in the area are high and noted the freeway analysis findings. He noted that the auxiliary lanes would significantly reduce congestion and delays in south- and northbound lanes. He showed a key hybrid map slide and noted that question #2 was not called at the last meeting, because more details needed to be worked out. ODOT refined and reframed the presentation for SAC review and the purpose of calling the question to the SAC.

Todd clarified that they were breaking out just the elements that are part of the proposed Base Hybrid project, and noted the improvements gained (e.g., bridge, lid, storm water and seismic upgrades) and the movement of the I-5 southbound on-ramp. He reviewed the rationale for the hybrid base project and showed a close-up slide of the Broadway/Weidler box. He noted a revised event egress from the Rose Quarter with a closed Weidler on-ramp and showed a slide illustration of the existing and the proposed egress (option 1.) He also recalled the Madrona/Central City Concern issues that were raised at the last meeting and showed a slide of existing and a conceptual site plan. He shared a moving digital illustration of a driver's view as they travel up Weidler and approach Williams. He clarified that the Base Hybrid cost estimates are between $240-260 million, which includes auxiliary lanes in both directions. Other costs are listed in the meeting handouts.

Todd reported that the project team recommendation was to approve the revised base elements and to continue refinements for the SAC meeting in March.

Gwen Baldwin: does not recall seeing data that spoke to a dramatic improvement of the weave at the last meeting. What is that improvement in terms of the weave? And what are tradeoffs of having the auxiliary vs. having the auxiliary and the braided lanes, if we didn't extend the highway southbound?

Todd Juhasz said at the January SAC meeting, the team showed peak period slides and pre-peak period slides. In the off-peak hours, there were significant benefits, as drivers have more room to make a decision. It is hard to quantify the amount of accidents we would avoid by eliminating the southbound weave with the addition of the braid, but think the auxiliary lane outweighs the braid in terms of benefit. Traffic will flow more smoothly, and there will be less friction. In ODOT's opinion, the addition of the auxiliary lane will do more good than the addition of the southbound braid on its own. In other areas where we have added an auxiliary lane, we have found it really hard to quantify.

Andy Johnson, ODOT, added that there are data that show there are many drivers coming from I-405 and getting off at I-84. The auxiliary lane would keep them in same lane, and approximately half of the movement would be eliminated, so it is best to have both the auxiliary and the braid. He agrees we need to provide better cost benefit information on that.

Laurie Simpson: it would be good to see more information on that. Have you looked at ways, if you are on the west side of Williams Street, that a pedestrian has options for crossing Broadway by the on-ramp? The proposal makes it look like a pedestrian might get stranded there.

Andy Johnson: yes, we are looking at ways to make that work. Phil Selinger and Doug Klotz offered some ideas that we have not yet had the chance to focus on. Typically ODOT is not a fan of crosswalks at on-ramps, and our goal is to provide crosswalks at all locations unless there is a serious reason not to.

Phil Selinger: these details can make or break the trip for pedestrians. At eastbound Weidler and Williams, there appears to be no option for crossing Weidler. Also, what reason is there for the multi-use path? He is not seeing it as for pedestrians, just for bikes.

Alan Lehto: disagrees with Phil. There might be a good reason for the multi-use path if it connects to something. Also, think about the space behind Madrona building and of getting busses through what looks like a drop off.

Todd Juhasz: essentially this is just a different pattern than the one that exists now. That is another detail we need to work out. We need to look at number of trips per hour.

Alan Lehto: yes. We do not want to design this in a way that cars would linger and busses would have to honk to get through. Also, structures over the transit center and providing more shading in addition to what is already shaded by freeway is of great concern

Carol Gossett: are we still talking about no additional right of way? Is everything within the existing right of way within the bed of the freeway?

Todd Juhasz: to do this we would pull existing retaining wall back to a vertical position. This would allow room to construct the auxiliary lane within existing ODOT right of way.

Carol Gossett: also, it seems like there are a lot of internal circulation issues. Were the other stakeholders all in agreement with this?

Todd Juhasz: not necessarily in agreement, but rather there is an agreement to move forward and work on details until we get this right. We have 2-3 years to make sure we work out the details with the impacted stakeholders, and saying yes to the base concept is not an agreement that the suggested site plan configurations are the final design.

Jenny Lyman: the multi-use path - is there a major divider? It seems dangerous.

Todd showed the moving graphic again, and clarified that there would be a high curb, as well as other barriers that may include bollards, shrubs and/or trees to provide a buffer. The path would also be much wider than a typical multi-use path, 12-15 feet.

Laurie Simpson: the shape of the lid is not providing much land use opportunities. Is that something that is still being tweaked?

Andy Johnson: the reason it is being shown like that is to keep the beam lengths short, so they are perpendicular to the Freeway. There will be opportunities to shape it in more detail later.

Joe Zehnder: The lid has the potential to provide significant access/amenity, development opportunities on the Left Bank Annex block.

Justin Zeulner: when you look at the base project, we are really talking about making the area better. There are issues with getting into the Rose Quarter campus, and relocating the on-ramp could create a good opportunity to get people out of the area. He wonders if the green triangle by the east garage on slide 20 could become a developable area. There are also impacts on bus movement through the area.

Alan Lehto: would be good to look at all opportunities to move through there and move north on Williams. Please consider time needed for buses to get moving north.

Ed Abrahamson: can you speak to the high crash rates and the value of these improvements? Also, looking at Madrona area, and people's tendencies to turn on red lights, he thinks it would be very

dangerous for bicyclists. Similarly, we have a lot of traffic on Weidler that wants to go northbound on Williams.

Andy Johnson: we heard Todd say earlier that the study area has the highest freeway crash rate in the state.

Paul Smith: yes, do crashes occur at highly congested times of the day and usually at low speeds?

Matthew Arnold: regarding the auxiliary lanes, it sounded like the quantifiable justification is light and that you are trying to find numbers to support that. He recalls the discussion at the last meeting about the experience underneath the freeway, especially under the Rose Quarter Transit Center. The new auxiliary lanes may create a dismal environment. We would like to see a trade-off analysis, in terms of light/sound/air quality, as we move closer toward presenting these options to the public. He questions some of the pieces in the Hybrid concept, as the Rose Quarter is an area that has suffered greatly as result of transportation improvements that we have tried to shove into it over the last 20 years.

Todd showed slides of the existing and the new projected options for the area under the freeway near the Rose Quarter Transit Center. For the next meeting, we will do our best to bring something back cross-sections south of the location where the current sections are cut.

Andy Johnson: this is hard to quantify, what would be the best way to bring back to you?

Matthew Arnold: data on light level, the overall width in darkness, and audible noise, as was done with the CRC. That kind of analysis along with traffic and safety benefits would be helpful.

Andy Johnson: we will regroup and for the next meeting we will do our best to bring something back that is consumable. If there are not going to be any improvements to the freeway, it will be unlikely to get the support of federal agencies who could provide hundreds of millions of dollars on this. To me, if there are no improvements to the freeway, we lose the opportunities to make improvements elsewhere.

Owen Ronchelli: thinks there is also another side to this opportunity in terms of safety. With the braided ramp concept, there could be additions to northbound traffic in terms of a separated bikeway on Wheeler. Regarding the lack of light under the freeway, we should keep in mind that when the freeway was built in the late 50's and early 60's, they were not mindful as we are now of urban design and creating nice areas for pedestrians and cyclists. It is already an extremely noisy area, and he would challenge the idea that the proposed structure would create much more sound. With a good urban design treatment, he thinks we have an opportunity to create enhancements for drivers, pedestrians and cyclists.

Gwen Baldwin: this brings her back to the field trip idea, to help look and listen to the area as it exists as we have become more informed and are narrowing down on options.

Alan Lehto: he has serious concerns about an area with the highest TriMet ridership rates in the region. In the area under the freeway, we have tried to make improvements, such as the trolley barn and concessions, and this is a design issue that either needs to be mitigated really aggressively or we need to seriously look at moving the transit center out from under the freeway.

Todd Juhasz: agrees that we could sit together and work on design solutions – whichever way people want to go.

Paul Smith: regarding the benefits of the auxiliary lane vs. the braid, the charts clearly express the benefits. While it is indeed hard to quantify, he agrees we have a major safety problem and thinks the auxiliary lane significantly improves safety.

Dean Gisvold: been trying to listen for benefits that outweigh impacts; we see in the letters from Dan and others that we are underestimating the impact to local business and the construction time. The comments from the public meeting at the Lloyd Center seemed negative on the whole. If it were just the auxiliary lanes, it would not have as much heartache, as the impacts would be less. We are trying to squeeze in too much in too small a space, and it is not going to work.

Lloyd Lindley: he has seen many concepts and there is room for more discussion. We have been shown images that show how the elements you are mentioning have been reconciled. One thing that might help clarify would be the physical form of what the lid might look like, something that might demonstrate the added value for community and transit. Perhaps connections could be made, and the freeway component could be brought up to the level of the quadrant itself.

Gary Warren: to reiterate, we do not have any feel for the impacts this all will have on businesses and the streetcar while all of this is going on. He is concerned not just for the Left Bank and Madrona, but also for those dependent on getting across the freeway.

Joe Zehnder: all this takes much extra attention and money, and there are tactics and efforts that can be made in that regard. He wants us all to remember there is a real safety issue. We need to see the numbers and see that there are real deficiencies around Broadway and Weidler. We do not want to lose perspective on the issue we need to fix. Projected numbers on the proposed designs show significant improvements on the surface level as well as a great deal of promise for the freeway.

PUBLIC COMMENT

Doug Klotz: question regarding slide 17 in the presentation: how does one get down to Broadway? What about bringing the sidewalk over, so the sidewalks connect? Or on left side of Williams, if it were slightly widened? Also, we could probably say no to braided ramps now, but that is not my decision.

Brad Perkins has not heard much mention of bike corridor moving east west – would it continue on Broadway?

Andy Johnson: the green lines are for bikes.

Brad Perkins: suggests diverting the bike lanes as you did on Clackamas. He does not understand why you continue to push bikes through this area. We do not want there to be a lot of car drivers pissed off at bicyclists – why not pull them away from area? Hopefully the lid will add as a place for commercial development.

Todd Juhasz: Broadway-Weidler will continue to be the path of choice for the more adventurous rider, those not afraid of riding alongside traffic.

NOTE: Comments submitted via a hard copy letter from Dean Gisvold are included at the end of these notes.

Sam referred the group to the staff report, noting the four elements that appear on page 5 are coming back to the group for discussion at the next meeting and are not part of the vote.

Action #2: Do you agree with the staff recommendation to approve the Hybrid Base Project?

The following members voted 1 (Total = 8):

- Tracy Whalen
- Wayne Kingsley

- Carol Gossett
- Bill Ruff
- Justin Zeulner
- Wade Lang
- Owen Ronchelli
- Jenny Lyman

The following members voted 2 (Total = 8):

- Phil Selinger: request that where the multi-use path crosses Broadway and Weidler, show a white bar and make a diagram fix
- Matt Arnold: from a bike perspective, separating out the bike enhancements feels arbitrary, and without them is worried the bike community will not be able to support the hybrid option on its own
- Joanna Agee
- Laurie Simpson: would like to see diagram that shows the route further south along the light rail
- Gary Warren
- Gwen Baldwin
- Sean Hubert: appreciate all work staff has done, but feels they are missing a note about minimizing livability and business impacts in the area bus impacts. He suggests that be added as we move forward.
- Lloyd Lindley: in terms of design, would like to see this come up to the same level as land use

The following members voted 3 (Total = 1):

- Dean Gisvold

ADJOURN

There was no meeting evaluation distributed. Sam thanked everyone for a good meeting and adjourned at 8:40 pm.

Notes respectfully submitted by the Institute for Conflict Management, Inc. facilitation team.

Comments -- Dean Gisvold Feb 15th SAC Meeting N/NE Quadrant

The question is: Do you agree with the staff recommendation to approve the Hybrid Base Project, as described?

Two short comments from the recent public meeting on this proposal summarize my thoughts:

"Doesn't serve neighbors well, just cars, don't build it," and "You can't build your way out of congestion."

Forty years ago, the City said no to the Mt. Hood freeway and the Rose City freeway, and instead invested in the first light rail line. Forty years ago, the City said no to more cars and parking downtown and invested in a pedestrian friendly, transit oriented downtown. I was privileged to participate in those decisions, which have, in my opinion, served us well. For years, Portland has and continues to invest in transit, light rail and streetcars, investing in the future. Portland still has an in migration of folks who want to live here, and I am convinced that the quality of life we enjoy will continue to attract businesses with permanent jobs and new residents.

This hybrid proposal turns back the clock, and is inconsistent with forty years of progress toward a transit oriented city with 20 minute neighborhoods. It favors cars and freight over people and small businesses, like the Paramount Apartments, the Left Bank development, the Madrona, and the medical clinic, all located in the study area. These businesses, and the other businesses like them represent significant public and private investments, a real effort to make this part of town, pedestrian friendly, and transit oriented. These are the very businesses this proposal should assist, not isolate, by bringing more traffic to their very doorsteps.

This proposal has the potential to cause problems to the operation of the east side streetcar system.

This proposal will further divide the Rose Quarter area and its development from the Lloyd District and many people who will live and work in this area.

This proposal will further impact the African-American community remaining in the area.

Finally, the time period for planning and construction, a 5 to 10-year period, will cause uncertainty for businesses thinking about relocating and investing in the area, and problems for those who live and work in the area.

As I reviewed the materials, I kept thinking - what would Jane Jacobs say and do? I believe she would agree with the person who said "Doesn't serve neighbors well, just cars, don't build it."

I vote no.

\N NE SAC comments and position etc

March 8, 2012

TO: N/NE Quadrant Stakeholder Advisory Committee

FROM: Project Team

SUBJECT: SAC #14 Meeting, Quadrant Plan Discussion (5:40 agenda item)

At the March 15 SAC meeting, we will begin discussing of the N/NE Quadrant Plan, including its structure and the process that will be used to develop and review the plan. The following materials are included in the meeting packet to help facilitate this discussion:

1) **Central City 2035 Draft Concept Plan**. A copy of the Central City 2035 (CC2035) Draft Concept Plan is provided as background and to help set the context in which the N/NE Quadrant Plan will be developed. This draft plan is currently under review by the Central City Steering Committee.

The CC2035 Concept Plan will establish the overall vision and direction for the Central City as a whole and explain how CC2035 furthers the citywide strategies set forth in the Portland Plan. The Portland Plan has been approved by the Planning and Sustainability Commission and is scheduled for a public hearing at City Council in April. The Portland Plan will establish the citywide framework for the Comprehensive Plan, which will include the CC2035 Concept Plan and the N/NE Quadrant Plan.

Chapter 2 of the CC2035 Concept Plan lays out a planning framework that includes broad goals and objectives that apply Central City-wide. They are intended to provide direction for the quadrant plans and will provide the basis for new comprehensive plan policies related to the Central City. The CC2035 planning framework is organized into five topic areas:

- Regional Center
- Housing and Neighborhoods
- Transportation
- Urban Design
- Environment

Because issues that apply Central City-wide will be addressed in the CC2035 Concept Plan, the N/NE Quadrant Plan will focus on issues that are unique to its planning area within the Lloyd District and Lower Albina.

2) **Draft Outline for the N/NE Quadrant Plan.** A draft outline for the quadrant plan is provided, which lays out the basic structure of the plan. Key components of the plan will be in Chapter 4, which contains district goals, policies, implementation actions and performance measures. The chapter will be organized by district (Lloyd and Lower Albina) and has a framework consistent with that developed by CC2035. Next to each topic area (Regional Center, Housing and Neighborhoods, Transportation, Urban Design and Environment), we have noted which N/NE Quadrant project goals previously developed by the SAC are addressed in that section. The SAC project goals and objectives will be incorporated into the draft plan goals and policies.

Quadrant Plan Review Schedule
The following schedule is proposed for SAC review of the draft quadrant plan:

Meeting Date	Plan Component
3/15, SAC #14	Quadrant Plan Outline
3/21, LU Subcommittee	Potential changes in height regulations
4/12, SAC #15	Draft Plan Chapter 4: Goals, Objectives and Implementation Actions
5/10, SAC #16	Complete Draft Quadrant Plan
6/7, SAC #17	Revised Draft Quadrant Plan and public comment
6/28, SAC #18	Revised Draft Quadrant Plan, final review and approval

Table of Contents

Chapter 1: Envisioning 2035

Preamble

Introduction

- Thriving Educated Youth
- Economic Prosperity
- Healthy Connected City

Framework for Equity

- Central City Context
- Portland Plan's Framework for Equity
- CC2035 Equity Framework

Vision: Region's Center for Equity, Innovation and Exchange

Partnerships

Chapter 2: Planning Framework

Concept Plan Goals & Objectives

How to read this chapter

Central City 2035 & Portland Plan Integration

Regional Center

- Economic Competitiveness
- Business Competitiveness and Growth
- Commercial Development and Districts
- Civic and Cultural Amenities
- Digital Accessibility
- Public Safety

Housing & Neighborhoods

- Neighborhood Development
- Housing Stock
- Essential Services
- Human and Health Services

Transportation

- System Management
- System Maintenance and Infrastructure Investments
- Parking
- Safety and Accessibility

Urban Design

- Recognize the Larger Landscape
- Districts
- The Public Realm
- Central City Waterfront
- Historic Resources and Districts

Environment

- EcoDistricts
- Willamette River
- Air Quality
- Water Resources
- Human Health

Chapter 3: Urban Design Concept

Chapter 4: Quadrant & District Directions

N/NE Quadrant

SE Quadrant

NW Quadrant

SW Quadrant

Chapter 5: Implementation Strategies

Zoning and Code

Financial Tools and Strategies

Plan Review

Appendices:

List of Supporting Background Documents and Reports

City Council Resolution

Preamble

To call Portland's Central City unique is accurate yet inadequate. This place is distinctive not because of what it contains but due to how it became what it is today. This is the result of thousands of choices and decisions made by people who shared a deep respect for the natural and urban environment, a pioneer's independence of thought, civic aspiration and a number of often competing values. The aggregate of all this is a place that reflects aspirations of past and present generations, a place critical to the lives of Portlander's and that serves as the region's center.

Any city center worth mentioning will contain a successful commercial or retail district, perhaps the local seat of government, a mix of institutions, some residential development, and parks and cultural facilities that help define its character. Most often, these uses tend to only be found in the city center. These centers also tend to be connected to their region through a transportation network.

However, the best of these centers set themselves apart when they have a charisma, a sense of place, which is hard to clearly articulate. They communicate a yearning to be inclusive, to attract new people, cultures and experiences that enhance their city and ensure they are members of the larger global community. It's something you know when you experience it. Portland's Central City is one of these special places.

Our Central City is a place more about us as a people than about tall buildings and commerce. Its expresses how we view our place in the Pacific Northwest, a desire to celebrate local talent, industry, and institutions, and to be connected with the stunning landscape that surrounds us.

These ideals manifest themselves in the walkable urban form we have so intently crafted and preserved, the moves we have made to enhance our natural environment, the steps we have made to assist those most in need, and the priorities we have established to maintain industry and manufacturing as a central part of our local and Central City economy. They also emerge persuasively in *how* we've approached the challenge of planning and managing the Central City.

This is an intentional place, crafted through a participatory process engaged in with the belief that planning, done publically and acted on collectively, is a critical ingredient for getting the City we seek. This is also a place of purposeful experimentation, a learning city where new ideas about reshaping the traditional urban landscape and civic involvement have been actively pursued.

The 1972 Downtown Plan began Portland's efforts to restore the city center as a place where the serendipity of urbanity can be experienced by those drawn to the City. A place where the raw materials common to any downtown produce a special alchemy because here they are nurtured to leverage multiple benefits in a manner consistent with our larger civic principles.

Two major efforts from the 1970's provide examples of how Portland charted a different course that influenced other cities around the world. In 1972 Portland closed Harbor Drive and established Tom McCall Waterfront Park. It also rejected the proposed Mount Hood Freeway, which would have required displacing 1,750 households, and embraced development of the transit mall and eastside light rail. These moves reconnected the downtown to its historic waterfront, helped to preserve and save numerous neighborhoods and communities, and established a new recreational amenity and transportation network that continue to serve people throughout the region. These were bold moves that provide continuing dividends today and that have defined the scope of all of our city-building aspirations since.

Perhaps more importantly, these moves demonstrated to Portlanders that they had a voice in how their city operated and evolved, and that conventional wisdom borrowed from other places was not always the best strategy to create a great and livable city.

As Portland begins to think about "the next 25 years", the Portland Plan provides a new set of lenses through which we hope to see ourselves. Further, the Central City is not merely a stage to

present how Portland Plan goals may be achieved, a prosperous city center is critical if these goals are to be achieved city-wide.

Beyond preserving the assets we have, beyond continuing on the path we began in 1972 to create a truly livable city center, we choose to be a place where equity is our greatest aspiration, reflected as a priority in the actions we take and decisions we make. A place where youth thrive and can emerge as the citizens and leaders we'll need in the future. A place that is successful and livable because it is healthy and connected to the region it serves and the opportunities its citizens need.

Through all these experiences and the new lenses provided by the Portland Plan, we see Central City 2035.

Introduction

The Central City is the engine that drives the regional economy. It is here that the ability to accomplish the integrated strategies of the Portland Plan also lies. This is because the Central City provides jobs, professional services, workforce development, and governance critical to the success of every individual business and household in the City of Portland.

Resulting in more than just a symbiotic relationship, a prosperous Central City creates a multiplier effect that increases the prosperity of the region as a whole. It influences the ability every business district, corridor, and industrial area to flourish. It generates the earnings that fuel new physical and business development, influences house income, and creates revenue that funds public infrastructure, programs, and services that all people and businesses within the Portland metropolitan region depend upon.

Central City 2035 proposes new directions to maintain and expand upon the Central City's ability to fulfill its critical role as the economic heart of the region. Some of these directions build upon successful goals and policies originally promoted by the *Downtown Plan* and *Central City Plan*. Other directions address emerging issues and are intended to increase the resiliency of the Central City in the face of challenge and ability to thrive as new opportunities are presented.

These directions also realize the Portland Plan's advancement of establishing a more equitable city through a series of integrated strategies that promote a thriving educated youth, economic prosperity and affordability, and Portland as a healthy connected city. Central City 2035 will directly pursue these strategies as follows:

Thriving Educated Youth

Ensure that youth ages (0-25) of all cultures, ethnicities, abilities and economic backgrounds have the necessary support and opportunities to thrive – both as individuals and as contributors to a healthy community and prosperous, sustainable economy.

The Portland Plan will achieve this goal by focusing on actions and policies that:

- **Build a culture of high expectations and achievement for all Portland Youth**
- **Encourage all Portlanders to share ownership for youth success**
- **Create complete neighborhoods and communities that support youth success**
- **Support facilities, systems and programs that meet 21st century opportunities and challenges**

In the Central City this goal and associated objectives can be achieved by:

- Expanding access to K-12 public schools for the growing number of families with children choosing to live within the Central City.
- Supporting the development of new parks, community centers, libraries and other facilities that become extensions of the home and support urban families and

residents of all ages in active life systems, the ability to engage and learn, and establish community networks that enrich their lives and support the livability of the Central City.

- Encouraging new urban housing to be compatible with the needs of residents of all ages, abilities and incomes, by ensuring it includes a diverse mix of unit types, facilities that encourage community interaction and gathering, and is available in the ownership and rental market.
- Establishing new programs and partnerships between institutions and the public sector located in the city center to engage youth and to utilize the Central City as a stage for life long learning.

Economic Prosperity and Affordability

Expand economic opportunities to support a socially and economically diverse population by prioritizing business growth, a robust and resilient regional economy and broadly accessible household prosperity.

The Portland Plan will achieve this goal by focusing on actions and policies that:

- **Foster regional traded sector business and job growth**
- **Support public and private urban innovation**
- **Support Portland's advantages as a trade and freight hub**
- **Elevate the growth and vitality of the city's employment districts**
- **Support the vitality of Portland's neighborhood based businesses**
- **Meet Portland's needs for quality, affordable homes for current and future residents**
- **Ensure access to education and job skills needed by Portlanders and industry**
- **Provide for the economic security of low-income households**

In the Central City this goal and associated objectives can be achieved by:

- Facilitating job creation through support of office development, start-up businesses and emerging sectors, industrial/employment sanctuary policies, institutions of higher education, and overall retail and economic vitality to bolster competitiveness of the Central City relative to other West Coast markets.
- Investing in the maintenance and expansion of critical infrastructure to create a more stable and attractive climate that supports existing business, new commercial development, and existing employment districts.
- Enhancing the role of the Central City as regional center of arts, culture, and entertainment by supporting existing venues, organizations, and districts, facilitating the ability of a more diverse array of artists and artisans to use the city center as a show case of their industry, and by taking additional steps to maintain a safe urban environment.

- Optimizing the capacity of our transportation system to move people and goods to and through the Central City in a manner that is efficient, safe, and that supports the maintenance of an attractive, livable environment.
- Making strategic investments that maintain existing and help fund new transportation infrastructure critical to sustain the Central City as the regional center of commerce.
- Managing parking supply to ensure that there is enough on and off-street parking to support economic vitality and development of an urban form not dominated by the automobile.
- Increasing the supply of housing affordable to the work force of the Central City and increasing access to essential public services and neighborhood serving commercial services that making urban living for people regardless of their income level.

Healthy Connected City

Improve human and environmental health by creating safe and complete neighborhood centers, linked by a network of city greenways that connect Portlanders with each other, encourage active transportation, integrate nature into neighborhoods, enhance watershed health and provide access to services and destinations, locally and across the city.

The Portland Plan will achieve this goal by focusing on actions and policies that:

- **Prioritize human and environmental health and safety**
- **Promote complete and vibrant neighborhood centers**
- **Develop city connections, greenways and corridors**

In the Central City this goal and associated objectives can be achieved by:

- Fully utilizing and enhance the role of the public realm, establishing stronger ties to the Willamette River, and enhance connections between east and west sides of the Central City with each other and the city beyond.
- Preserving and enhancing the character of unique neighborhoods and historic districts while establishing a greener, healthier urban form that accommodates new growth and expresses the character of future generations while celebrating the past.
- Ensure urban neighborhoods include access to essential public services, such as schools and parks, and housing compatible with the needs of residents of different ages, income levels, and abilities, to ensure Central City living is possible for all Portlanders.
- Enhance the ability of at-risk populations to access human and health services they need.
- Continue to support the growth and revitalization of existing residential neighborhoods in and around the Central City in a manner that respects existing populations and businesses and addresses displacement.
- Ensure that all modes of the transportation network are safe, accessible, and attractive to all potential users.

- Move beyond the development of stand alone green buildings and create EcoDistricts that integrate systems to better manage resources, and improve human and environmental health.
- Continue efforts to clean and improve the health of the Willamette River as a primary source of habitat.
- Establish climate adaptation strategies intended to improve the ability of the Central City's built and natural environment to be resilient to the potential range of effects of climate change.

Framework for Equity

Central City Context

The history of housing and redevelopment in the Central City provides a unique insight to the story of equity and inequity in Portland. In 1950 Downtown contained over 28,000 housing units. At that time much of the housing in the city center was located in some of Portland's most ethnic and racially diverse communities, including African American communities in the northeast and Jewish and Italian American neighborhoods in southwest.

However, in the 1960's urban renewal and the major infrastructure projects, such as Memorial Coliseum, Portland State University, the South Auditorium District and Interstate 5 and 405 freeways, resulted in the removal of significant amounts of this housing, as well as a considerable amount of affordable housing, to make way for redevelopment. By 1970 the total number of housing units Downtown had been reduced to 11,000. Along with the housing and communities displaced, the local businesses supporting these neighborhoods and diverse communities were also lost.

Beginning with the 1972 Downtown Plan, and again reaffirmed by the 1988 Central City Plan, efforts were set in motion to retain and expand the supply of affordable housing and to increase the overall stock of housing to support economic development. These efforts were very successful as today approximately 34,000 people live in the Central City's 23,500 households. Approximately 8,500 of these units are affordable to people earning less than 60% of the median family income for the City of Portland.

The demographics of who is choosing to live in the Central City are also shifting significantly. In 2010 approximately 148 children were born to families living on the westside of the Central City, which continues a trend that started around 2001 when 65 children were born to families living in the same area. Over the last decade alone over 1,000 children have been born to Central City families and families with children are also moving into the Central City. The Pearl's Ramona apartments , an affordable housing project designed to accommodate the needs of families with children, recently reported that over 108 children live in that building alone. The Portland Housing Bureau further noted that at least an additional 100 children live in other affordable projects located in the River District.

These numbers demonstrate that the Central City is again a place attractive to live for people of all ages, income levels, and abilities. Thus, the type of housing developed in the Central City needs to shift to be compatible with the needs of more diverse population. Access to a range of services that support community development and sustained neighborhood growth, such as public schools, parks with play grounds, community centers, and daycare, also need to keep pace with housing development.

Further, growth within and adjacent to the Central City needs to occur in a manner that does not displace access to housing, services, or businesses that more vulnerable communities depend upon. At the same time, new housing, public services, and economic development opportunities and the benefits they present must be accessible to all Portlanders regardless of age, income, ability, ethnicity, or race. For the Central City to serve as the regional center of prosperity the benefits it presents must be shared by all.

Portland Plan's Framework for Equity

The Portland Plan defines equity as a condition when everyone has access to the opportunities necessary to satisfy their essential needs, advance their well-being, and achieve their full potential. The plan seeks to make the promise of equity real by ensuring:

- All Portlanders have access to a high-quality education, living wage jobs, safe neighborhoods, basic services, a healthy natural environment, efficient public transit, parks and green spaces, decent housing, and healthy food.
- The benefits of growth and change are equitably shared across our communities.
- All Portlanders and communities fully participate in and influence public decision-making.
- Portland is a place where your future is not limited by race, gender, sexual orientation, disability, age, income, where you were born, or where you live.
- Underrepresented communities are engaged partners in policy decisions.

Promoting Equity is the most critical element of the Portland Plan and this effort is intended to result in a more prosperous and resilient city. The strategic directions of the plan further promote preventive measures intended to increase access to institutions, programs, and services that benefit all people and the health of the City. Lastly, the plan seeks to establish Portland as a leader in social sustainability by focusing on ways to build equity and accountability and lead to the development of 21st century business practices and tools that have value in a knowledge based economy.

CC2035 Equity Framework

To these ends, CC2035 will establish new policies and create tools that support city-wide initiatives to promote equity, but will also address specific barriers to equity within the geography of the Central City. Among the issues CC2035 will address are:

- **Economic Development.** Expand the City Center's economy in order to improve the city's overall growth, competitiveness, and opportunity and bring those benefits to all Portlanders.
- **Housing.** Facilitate the development of a more diverse housing stock to serve the needs of residents of all ages, incomes, and abilities.
- **Public Services.** Expand access to a range of essential public services that address the needs of all residents and support sustained neighborhood development and urban communities.
- **Education.** Expand access to public schools for Central City families and the role higher educational institutions can play in enhancing the lives of all Portland youth.
- **Workforce.** Create a diverse workforce through programs and initiatives that provide training to meet the needs of existing and targeted sectors and address people at all skill levels.
- **Displacement.** Ensure new development does not result in the displacement of more diverse residents, businesses or services that may have an economic disadvantage in the face of rising land values.

- **Celebrating Diversity.** Promote arts and cultural events, programs that include and facilitate the participation of people of all backgrounds and experiences to increase awareness, acceptance, and access to prosperity.
- **Multimodal Transportation.** Expand and maintain multimodal transportation network to ensure those living and working in Central City have access to affordable transportation to home, work, and services.
- **Human Health.** Ensure all residents live in healthy living conditions, access to active recreation, and healthy foods.
- **Willamette River.** Improve the environmental conditions of the Willamette River to improve recreational access and restore the ability for cultures historically dependant on river resources for subsistence, such as fish, to use the river safely.

Vision: Region's Center for Equity, Innovation & Exchange

We often think of the Central City in terms of the concentration of businesses, facilities and housing located there. At a deeper level, the competitive advantage of the Central City comes from its ability to support efficient, opportunistic and synergistic interaction and exchange among people. This is why cities and downtowns everywhere have been centers of commerce, civic and cultural life, creativity and innovation. The goal for Portland's Central City in 2035 is to be an exceptional and unique center for this interaction. Further, the integrated strategies of the Portland Plan provide mechanism through which the opportunities and benefits derived from such a center are shared by all Portlanders.

The shear density of uses, activities, and people in the Central City establishes an environment of excitment, interest, vibrancy, and synergy. It encourages a level of interaction between people, businesses, and institutions that can not be generated elsewhere in the state. The positive impact this environment has on economic development, creativity, civic engagement, and the livability of the region as a whole is significant.

The Portland version of this is seen in the growing number of creative firms and business that are changing how the world operates, looks, and thinks about itself. These include Wieden + Kennedy and Ziba from the world of adversing and design, Allied Works and ZGF in the fields of architecture, and Vestas and Gerding Edlen in the world of green development. Firms like these and the creative energy of the Central City are fueled by the presence of a diverse collection of universities and colleges, such as Oregon's largerst university, Portland State University, the state's only medical research university, Oregon Health Science University, the Pacific Northwest College of Art, Le Cordon Bleu College of Culinary Arts, and the University of Oregon, Oregon State University, and Oregon College of Oriental Medicine who have or are soon to establish new facilties within the city center.

Beyond its role as the state's largest commercial office district, the Central Eastside and Lower Albina industrial districts provide space for new businesses and economic sectors to start-up and grow and still support more traditional manufacturing and professional services industries that have long called the city center home. Soon these districts will be served by a streetcar loop and expanded lightrail network, both of which conveniently connect buisnesses to each other and their customers, as well as people to job and home whether they live in or outside the Central City. The livability of Central City neighborhoods and districts supports innovation and exchange by adding to the safety, health, and vibrancy of the urban environment.

Forty years of planning, partnerships, and investments have led us to where we are today. The Portland Plan establishes a new framework that builds on past success, while providing us with a new set of lenses for how we view ourselves as a people, and the city we want in the future. CC2035 seeks to leverage all of this to position Portland's Central City a globally recognized center of equity, innovation and exchange.

Partnerships

The Central City of today is the result of many successful partnerships. To accomplish the ambitious goals envisioned by the CC2035 Concept Plan pre-existing partnerships will need to continued and strengthened while new ones will need to be created.

As the CC2035 Plan begins to shape new directions within the individual Central City districts as part of the Quadrant Plans, a number of actions will need to be identified that allow these plans to be successfully implemented. Some actions will be pursued by public sector agencies, others by private development entities or community organizations. Perhaps most importantly, public – private partnerships will be necessary if the most bold of the plan's objectives are to be achieved.

Although the full range of potential partners have yet to identified, as well as the specific roles they will plan and actions they will support, the CC2035 Concept Plan envisions that an implementation and collaborative partnership framework similar to that being pursued by the Portland Plan will be necessary. Such a framework promotes shared responsibility in the risks, outcomes, and opportunities that must be pursued to create the city we collectively envision and the outcomes we individually seek.

To these ends, the CC2035 Concept Plan proposes:

Identify Lead Partners. Lead partners will be either the primary or one of a few key stakeholders in the implementation of actions implementing CC2035. They will:

- Adopt, fund, schedule and coordinate the implementation of CC2035 actions that match their mission.
- Recruit, coordinate and recognize and support additional partners that can help implement action(s), including community organizations and businesses.
- Complete a brief, periodic status reports on the actions they agreed to implement
- Participate in CC2035 Implementation meetings and community forums.
- Coordinate with other partners to request modifications or add new ideas.

Lead partners for each action will be formalized as actions are selected for implementation and it is encouraged that these actions become part of an organization's approved budget and/or strategic plans. Commitment to implementing actions will be critical as CC2035 seeks to identify actions that leverage additional actions necessary for the Central City to evolve and become the place envisioned by this plan.

Supporting Partners. Supporting partners will not lead action implementation, but they are critical just the same as without their cooperation and support many of the outcomes intended by the actions will either not be achieved or successfully sustained.

Supporting partners will:

- Provide direct assistance to lead partners where support matches the mission and resources of an organization or business.
- Undertake activities that support CC2035 actions and objectives.

- Coordinate with lead partners where technical assistance or volunteer support is needed.
- Potentially leverage additional funds, as appropriate.

Supporting partners may include businesses, nonprofits, community organizations and government agency partners. They will include both those identified in the plan and others, as appropriate. Supporting partners will be identified through a collaborative process as actions are indentified for implementation. Identifying supporting partners will be the responsibility of the lead partner.

Critical Partners. As mentioned, all the partners necessary to implement CC2035 have yet to identified, yet, at a minimum the following agencies, institutions, and organizations will play a role either as lead or support partners:

City of Portland
Multnomah County
Metro
TriMet
Portland Development Commission
Oregon Department of Transportation
Portland State University
Oregon Health and Science University
Portland Public Schools
Portland Business Alliance
Central Eastside Industrial Council
Pearl District Neighborhood Association
Downtown Portland Neighborhood Association
South Portland Neighborhood Association
Elliot Neighborhood Association
Northwest District Association
Sullivan's Gulch Neighborhood Association
Old Town China Town Neighborhood Association
Lloyd District Community Association
Irvington Community Association
Goose Hollow Foothills League
Hosford-Abernathy Neighborhood Association
Buckman Community Association
Kearns Neighborhood Association

Take Action. Portland's engaged residents, businesses and community organizations are among the city's greatest strengths. Portlanders continued support is essential to the achieving CC2035. The larger goals of this plan can only be achieved if businesses and community organizations as well as individual Portlanders take complementary supporting actions that align with their missions, interests and capacities. We're all in this together!

Chapter 2: Planning Framework

Concept Plan Goals & Objectives

The CC2035 Concept Plan proposes new planning goals and objectives upon which quadrant plans will be developed and eventually new comprehensive plan policies for the Central City will be established. These objectives were developed through a series of public meetings with the CC2035 Advisory Group and an extensive symposium series that engaged stakeholders and experts on a number of planning issues important to the Central City. Once the goals and objectives were drafted they were further vetted and refined by the CC2035 Steering Committee.

These planning goals and objectives are intended to provide near-term direction to the development of the four quadrant plans with regard to issues of Central City-wide importance. As the quadrant plans are developed these objectives should be viewed as a framework upon which new or refined land use and urban design directions for individual districts will be established.

However, depending upon the conditions and trends within individual districts the objectives should have different levels of importance. For instance, in a district typically associated with being an employment or industrial district the goal and objectives pertaining to housing and neighborhoods may not be as significant as those related to regional center or transportation. Yet, these objectives are intended to be integrated, because they are important to each others success. An example of this is providing affordable housing or child care services near places of employment, as these uses create mutual success when located in proximity.

How to read this chapter

This chapter presents five integrated **planning goals** that address key issues critical in the development of a comprehensive land use plan for the Central City. Following each goal are a series of tables that identify **specific goals** which begin to address issues associated with the larger goal in more detail. Next a series of **planning objectives** associated with each specific goal are outlined. These objectives provide a shaper focus on issues related to the specific goals.

Central City 2035 & Portland Plan Integration

The far left column of each table, entitled “Portland Plan Integrated Strategies”, identifies which of the Portland Plan integrated strategies each CC2035 planning objectives is associated with.

Note: Symbols will be developed for each strategy, but until that time each strategy is identified by the following letters:

E Thriving **E**ducated Youth

P Economic **P**rosperity and Affordability

C Healthy **C**onnected City

Goal: Regional Center

Reinforce the Central City's role as the center for commerce, employment, arts and culture, entertainment, tourism, education, and government for the Portland metropolitan region and Columbia Basin.

Specific Goal 1.1: Economic Competitiveness *Improve the economic competitiveness of the Central City, especially relative to West Coast and regional markets, through support and growth of the Central City's core economic activities.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
P	**1.1.A**	**Economic Development Performance Targets.** Over the next 25 years achieve the following growth target of achieving an average of 15% of 7-county regional job growth in the Central City, approximately 78,000 new jobs by 2035.
P C	**1.1.B**	**Regional Center of Business.** Maintain and grow the Central City's role and competitiveness as: ▪ The region's center for professional, business, financial, institutional, and information services; ▪ Location for industry, especially those generating high employment densities; and ▪ An incubator for business startup activity and innovation.
P	**1.1.C**	**Entrepreneurship and Innovation.** Strengthen the Central City as a location for job creation through business startup activity and innovation. Develop specific approaches to implement this policy as part of the periodic update of the City's Economic Development Strategy. Examples of the types of activities relevant to this guidance include: ▪ Technical assistance and mentorship opportunities such as currently provided by the Oregon Entrepreneurs Network ▪ Facilities such as incubators/accelerators that offer physical space, connections to industry and faculty expertise as well as connections to other resources. ▪ Access to range of capital resources including seed, angel, venture and traditional lending resources. ▪ R&D and tech transfer initiatives provided through higher education institutions in the central city
E P	**1.1.D**	**Center for Government.** Encourage continued location of federal, state and local government offices in the Central City as a means to improve governmental coordination, facilitate continued growth of the service industry, and provide a central location for people to engage and interact with government.
P	**1.1.E**	**Center of Higher Education.** Maintain and grow the presence of colleges, universities and other institutions of higher and continuing education in the Central City to support research & development and tech transfer opportunities to create a robust environment for spin-off and start-up activity to fuel innovation and jobs.
P	**1.1.F**	**Industrial / Employment Sanctuaries.** Continue to protect land for industrial uses through the industrial sanctuary policy in the Central Eastside and Lower Albina sub-districts. ▪ Consider broadening the types of business activities allowed in the industrial zone where this would reflect the changing character of industry, support greater job densities, and not unduly erode the long-term economic viability of these industrial/employment districts. ▪ Maintain access and other conditions necessary for success of industrial uses; and ▪ Provide for conditions beneficial to workers and others including safe pedestrian, bike and transit access and some ground floor commercial uses.

Specific Goal 1.1: Economic Competitiveness (Continued)		
Portland Plan Integrated Strategies	**Planning Objectives**	
P	**1.1.G**	**Retail Vitality.** Support the Central City as a regional center for diverse range of retail activities, including national and local retailers, restaurants and start-up retail entrepreneurs. ▪ Reinforce the success of the Downtown Retail Core as a regional destination. Implementation of this policy typically includes improvements and programs designed to maintain a safe, attractive, and vibrant place for people and a location in which local and national retailers and associated businesses will choose to locate; and ▪ Support retail activities in other parts of the Central City as an important ingredient to the attractiveness and vibrancy of other Central City districts as a way to complement and strengthen the market for the Retail Core.
E P C	**1.1.H**	**Arts and Entertainment.** Support businesses, institutions, and organizations that contribute to the Central City's role as a diverse center for arts and entertainment, including but not limited to museums, performance and sports venues, festivals and other special events.
P	**1.1.I**	**Tourism.** Establish the Central City as Oregon's primary destination for leisure, cultural, and business tourism. Implementation of this policy includes programs and investments that expand the tourism market for existing amenities and businesses, and that expands the use of the convention center and meets its need for hotel facilities.
E P	**1.1.J**	**Housing Supporting Economic Vitality.** Support housing development as part of the overall strategy to support business development and economic vitality in the Central City. In particular, support the development of student, family and workforce housing at locations within and near the city center to support institutions and workforce development in the Central City.
P	**1.1.K**	**Day Laborer Organization and Education.** Continue efforts and initiatives within the Central City that organize and centralize day laborer services that can provide for safe place for worker rights education, outreach, and protect the rights of laborers.
Specific Goal 1.2: Business Competitiveness and Growth *Increase the Central City's competitiveness for job and business growth and new business development especially in traded sector and target industry cluster businesses.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
P	**1.2.A**	**Traded Sectors Growth.** Increase traded sector job growth in the region and in the Central City through focusing business development efforts on target industry clusters that drive regional prosperity, particularly in start-up expanding small businesses and headquarter offices with an emphasis on innovation and increased exports.
P	**1.2.B**	**Marketing Urban Innovation.** Increase the Central City's role as a laboratory and showcase for innovative urban development and the region's growing leadership in businesses related to clean technology, green practices and design and resource conservation.
E P	**1.2.C**	**Education, Research, and Workforce Development.** Expand the economic impact of higher education institutions in the Central City. This policy includes supporting the growth and development needs of the institutions; promoting opportunities for commercialization of research and business development; and, highlighting the contributions the institutions can make to the regional workforce and vitality of the Central City.
E P	**1.2.D**	**Talent.** Ensure a pipeline of competitive talent through the collaboration of industry and higher education with a focus on target industry clusters. Work with workforce training partners to provide skilled worker training and other resources to meet industry workforce needs and provide quality jobs.

Specific Goal 1.3: Commercial Development and Districts

Support private sector development of a supply and mix of commercial space that maintains the economic competitiveness of the Central City as the regional center and location for new business.

Portland Plan Integrated Strategies	Planning Objectives	
P	**1.3.A**	**Core Physical Assets.** Maintain and improve the qualities of the Central City that make it competitive as a location for business and that support the competitiveness of Portland as a whole. These qualities include: ▪ Dense, multi-use development; ▪ Distinctive and active neighborhoods and districts; ▪ A healthy urban environment; ▪ Efficient and safe multi-modal transportation access; and ▪ A safe, attractive and active public realm – streets, sidewalks, plazas, places and parks.
P	**1.3.B**	**Management and Promotion.** Use management, marketing, programming and place-making activities to maintain and improve the attractiveness of the Central City and its districts as locations for distinctively Central City mixes of business, entertainment, culture, shopping and tourism. Undertake this management and promotion through public/private partnerships.
P	**1.3.C**	**Mix and Cost of Commercial Development.** Provide for the development of new commercial space and redevelopment of existing commercial space in the Central City. Target public support for commercial development to the following: ▪ Projects and programs that are relevant to the City's economic development strategy, ▪ Projects and programs that increase the supply of cost-competitive Central City commercial space for small and start-up businesses, and ▪ Projects and programs that increase job densities in new or redeveloped buildings.
P C	**1.3.D**	**Infrastructure Investments.** Give priority to infrastructure investments that create conditions supportive of business productivity and job growth in the Central City. These include investments in infrastructure designed to meet the future of business and urban living such as telecommunications; district energy; and freight, transit, bike and pedestrian access.

Specific Goal 1.4: Civic and Cultural Amenities

Maintain the Central City's role as the region's center for civic and cultural activities, as a place that is easily accessible and rich in attractions, and as a place that stimulates the creative economy and artistic and artisanal activity.

Portland Plan Integrated Strategies	Planning Objectives	
E P C	**1.4.A**	**Public Spaces and Venues.** Ensure public spaces and venues are safe, attractive, and accessible for both organizers and users, and that collectively they meet the programmatic needs of a broad array of activities and functions.
P C	**1.4.B**	**Distinct Districts.** Undertake projects and programs that promote and leverage the distinctiveness of different Central City districts as a way to support economic development and vitality of the district and add to the vitality of the Central City as a whole.
P C	**1.4.C**	**Willamette Riverfront**. Increase the use of the Willamette Riverfront for arts, entertainment, and cultural activities.
P	**1.4.D**	**Artist Infrastructure.** Maintain the Central City as a supportive location for artists, artisans and galleries. Activities that could implement this policy include programs that enhance information sharing and communication among the arts community and the public through technology, more affordable housing, and live/work options, and more affordable exhibit/performance space options.

Specific Goal 1.5: Digital Accessibility *Optimize the capacity to transport electronic information to strengthen the Central City as a place to work, live, visit, and gather.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
P C	**1.5.A**	**Telecommuting Strategies.** Support strategies that enhance the ability for people to work via electronic means from home or other locations such that need to physically travel to and from the city center is reduced for Central City employees and residents.
E P C	**1.5.B**	**Broadband and Digital Transfer Infrastructure.** Plan and create an incentive for very high bandwidth broadband deployment through clustering and collocating very large capacity users.

Specific Goal 1.6: Public Safety *Ensure the Central City remains safe, livable and prosperous by providing law enforcement and emergency services at levels commensurate with housing and employment densities, and by mitigating for the risks associated with natural hazards.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
C	**1.6.A**	**Crime Prevention and Security.** Provide a robust public law enforcement presence throughout the Central City augmented through collaboration with private, as well as public and non-profit security providers. Reduce the sources of conflict and nuisance crime through appropriate zoning and environmental design techniques.
P	**1.6.B**	**Fire & Emergency Rescue.** Maintain fire and emergency response capability as density and congestion increase in the Central City. Emphasize fire/injury prevention through best practices and enforcement of modern fire codes. Optimize safety and cost-effectiveness of code requirements and enforcement. Encourage retrofitting older structures to modern file/life safety and seismic standards.
P C	**1.6.C**	**Emergency Preparedness.** Implement programs to prepare the public regarding natural hazardous and events that could threaten the Central City, and retrofit existing critical infrastructure and unreinforced masonry structures to improve operational resiliency and public safety.

Goal: Housing & Neighborhoods

Realize the full potential of the Central City as a successful dense, prosperous and livable urban center through the development of sustainable and diverse neighborhoods that support the needs of people of all ages, incomes and abilities.

Specific Goal 2.1: Neighborhood Development *Development dense complete neighborhoods within and near the Central City that enhance livability and the prosperity of existing populations while allowing continued growth and diversity.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
E P C	**2.1.A**	**Incorporate Residential Development in Central City Districts**. Where housing is allowed in the Central City, encourage the development of a diverse housing stock, public services, and neighborhood serving commercial and retail uses that support residential success.
E P C	**2.1.B**	**Development without Displacement**: Support maintaining the economic diversity and established communities in the Central City. Where public actions pose the risk of forced displacement of existing low-income residents, engage all residents in planning for changes that will/may affect their communities and neighborhoods, and utilize investments, incentives and other policy tools to minimize or mitigate involuntary displacement resulting from new development in the Central City or close-in neighborhoods.
Specific Goal 2.2: Housing Stock *Enhance the ability of the Central City to maintain diverse communities through the development of a broader housing stock that supports people at all age levels, abilities, and incomes.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
E P C	**2.2.A**	**Range of Unit Types and Sizes**. Encourage a more diverse stock of housing ranging from studios, one bedroom units, and units with two or more bedrooms to address the needs of the Central City's diversifying population.
P C	**2.2.B**	**Low-Income Housing**. Continue development of publicly supported, financially sustainable, low-income housing by prioritizing investments on the most critical unmet needs.
E P C	**2.2.C**	**Housing Affordability and Accessibility**. Encourage development that increases the supply of workforce, student and senior housing at all levels of affordability in the Central City. Among the approaches to Implementing this policy, increase the availability of public financial assistance for these projects, especially for below market-rate housing.
P C	**2.2.D**	**Housing for Economic Vitality:** Support the development of student and workforce housing at locations within and near the city center to support institutions and workforce development in the Central City.
E P C	**2.2.E**	**Housing Compatibility**. Establish design guidelines and incentives that promote the development of housing projects that can meet the needs of a more diverse Central City population, including families with children, people with special needs, students, seniors, and others populations with specific housing needs.
E C	**2.2.F**	**Healthy Living Environments**. Ensure all housing promotes human and environmental health, energy efficiency, and livability.

Specific Goal 2.3: Essential Services

Provide for a full range of public and commercial services inside the Central City to allow households and workers to access basic daily needs.

Portland Plan Integrated Strategies	Planning Objectives	
E P C	**2.3.A**	**Public Schools.** Develop new public school facilities close to new high density housing areas and expand access to existing school facilities to ensure all Central City households with children have access to a public education.
E P	**2.3.B**	**Childcare and Early Childhood Education.** Support efforts to establish high-quality affordable childcare and early childhood education programs, as well as before and aftercare facilities for elementary-age children.
E P C	**2.3.C**	**Parks, Playgrounds, Community Centers, and Libraries.** Develop parks, playgrounds, community centers, libraries, and other public facilities that support residents at all age levels, abilities, and incomes, and that promote active living, and community involvement.
P	**2.3.D**	**Retail and Commercial Services Supporting Urban Living.** Encourage development of a range of neighborhood serving retail and commercial services that support urban living, including grocery and department stores, daycare, medical care, and other services.

Specific Goal 2.4: Human and Health Services

Ensure all populations within the Central City have adequate access to a full range of human and health services.

Portland Plan Integrated Strategies	Planning Objectives	
P C	**2.4.A**	**Shelter and Health Services.** Ensure that at-risk populations have adequate access to emergency shelter and essential mental and health care services.
P C	**2.4.B**	**Transitional Housing and Services.** Provide housing and services that directly assist at-risk populations and allow people to transition to more stable living conditions.
P C	**2.4.C**	**Governmental Coordination.** Support continued alignment of policies and programs that address the needs of at-risk populations as well as the coordinated pursuit of increased financial support for these efforts.
P C	**2.4.D**	**Conflict Reduction Strategies.** Develop ongoing strategies and programs that humanly reduce potential conflicts between special needs populations and other Central City residents, employees, visitors, and businesses.

Goal: Transportation

Meet the mobility needs of people and goods to achieve an economically prosperous, livable and well connected Central City by providing a safe, affordable, equitable, health-promoting and energy efficient transportation system.

Specific Goal 3.1: System Management

Optimize the capacity of the Central City's transportation system to carry people and goods and support existing high density land uses through efficient and balanced use of all transportation modes: pedestrians, bicycles, buses, light rail, streetcar, tram, trucks, freight and passenger rail, motorcycles and automobiles.

Portland Plan Integrated Strategies	Planning Objectives	
E P C	**3.1.A**	**Multi-Modal System.** Continue to support and enhance the multimodal transportation network to support trips within and to the city center in a manner that reduces congestion and greenhouse gas emissions, increases safety, and supports continue economic growth and livability in the Central City.
P C	**3.1.B**	**Street Hierarchy.** Provide a clear street hierarchy that integrates land use with the transportation modes to ensure efficient Central City access and circulation, support land use activities and provide for safe movement of people and goods. ▪ **Multi-modal Access.** Establish a street system and standards that balance auto and freight access and the increasing needs for transit, pedestrian and bicycle facilities; and, ▪ **Pedestrian Realm.** Ensure that the highest priority for the public realm is a safe and pleasant pedestrian experience in all parts of the Central City. ▪ **Central City Transportation Portals.** Ensure adequate capacity of the transportation portals into the Central City in order to provide for efficient and safe movement of people and goods destined to the Central City through design and management of the system.
P	**3.1.C**	**Transportation Demand Management.** Support the continued maintenance and creation of transportation management associations and related strategies that reduce congestion and enhance access to the Central City's multimodal transportation network.

Specific Goal 3.2: System Maintenance and Infrastructure Investments *Make strategic transportation infrastructure investments to maintain the integrity of the existing system and support economic prosperity and successful urban neighborhoods.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
P C	**3.2.A**	**Regional Infrastructure.** Reconcile plans for improvement of the regional transportation system with Central City goals especially related to the desired intensity and urban design qualities of Central City development, transit use and freight access to the Central City and industrial areas. ▪ **I-5/405 Freeway Loop:** By 2035, adopt a plan and implementation strategy for improvements to the I-5/I-405 loop in the Central City. Give priority to addressing safety and congestion issues, freight needs, and land use/urban design needs related to the I-5 at the Broadway-Weidler interchange in the Lloyd District and the connections between I-405 and I-5 in the south Downtown area; - On the east side, improve access to the Willamette River and the Vera Katz Esplanade while reinforcing the Central Eastside Industrial Sanctuary. - With the State and regional partners, develop a plan and implementation strategy for needed improvements to the I-5 Eastbank Freeway. The plan should be consistent with the findings of the 2006 Freeway Loop Study that calls for long term strategies to relocate the freeway into a tunnel. The plan must also address seismic safety, the priority given to transit and freight movement, improved railroad operations, and the development goals for the Central City. • **High Capacity Transit/Light Rail System:** Complete the next phase of the high capacity transit system connecting the Central City to neighborhoods and communities to the southwest along the Barbur Corridor. This work should also address issues identified in the South Portland Circulation Study. • **Intercity Passenger Rail Service:** Support efforts by the States of Oregon and Washington and the Province of British Columbia to improve intercity passenger rail service by increasing the frequency of service, speeds, reliability and safety between Portland and Eugene, Oregon, and Portland to Vancouver, British Columbia. Continue to reinforce Union Station as the multi-modal intercity transportation center. • **Regional and State Planning Coordination:** Use the CC2035 Plan and the Central City Transportation Management Plan (CCTMP) as the basis for agreements with the State of Oregon and regional partners that resolve issues between local plans for the Central City and State highway regulations and policies. Flexibility in the definition of freeway accessibility and mobility is needed to adequately reflect the unique contribution of the Central City to meeting State land use and transportation goals and to recognize the highly complex, urban and multimodal context of the Central City.
P C	**3.2.B**	**Access.** Maintain safe and efficient movement by all modes in the Central City. Increase the people and goods carrying capacity of the transportation system through giving priority to increases in non-single occupancy vehicle (SOV) capacity.
P C	**3.2.C**	**System Maintenance.** Increase maintenance of transportation infrastructure to ensure their longevity, address seismic needs, and where appropriate adapt the facilities to integrate into the urban fabric of the Central City.
E C	**3.2.D**	**Multimodal Transportation Options.** Continue to improve and expand the pedestrian, transit and bicycle infrastructure to encourage additional trips by these modes over SOV trips and support Central City growth and livability.
P	**3.2.E**	**Economic Development.** Prioritize transportation improvements that support economic development and private investment in the Central City.
C	**3.2.F**	**Livability.** Design transportation infrastructure improvements in the Central City to enhance the quality and livability of Central City neighborhoods, the public realm and the retail environment of the Central City.

Specific Goal 3.3: Parking *Manage the supply of off- and on-street parking to support economic development, improve mobility, promote non-SOV modes, reduce greenhouse gas emissions and minimize impacts to adjacent neighborhoods.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
P	**3.3.A**	**Parking Supply and Management.** Simplify the approach to regulation and management of off-street parking. Explore strategies for more flexible parking management for on- and off-street parking to better utilize the parking supply.
P	**3.3.B**	**Parking and System Demand Management.** Integrate parking strategies with demand management strategies as important elements of the transportation system to support economic vitality, reduce the volume of single occupant vehicles.
P	**3.3.C**	**Surface Parking Facilities.** Encourage the redevelopment of existing surface parking lots and limit new surface parking. Where surface parking is warranted and appropriate, design surface parking facilities to minimize the negative impact that they can have on urban form and vitality.
P	**3.3.D**	**Bicycle Parking and Trip End Facilities.** Promote the development of trip-end facilities, secure bike parking and shower rooms, in new office development, as well as expanded access to long-term and short-term bicycle parking throughout the Central City.
P	**3.3.E**	**Parking to Promote Alternative Fuel Vehicles.** Encourage the development of facilities that support alternative fuel vehicles as new on-street and off-street parking is created or reconfigured.
Specific Goal 3.4: Safety and Accessibility *Ensure the transportation network is safe and easily accessible for all travel modes and give priority to the safety of pedestrians in the Central City transportation system.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
E C	**3.4.A**	**Pedestrian Safety.** Develop facilities and strategies that enhance and increase pedestrian safety, including strategies that reduce vehicle speeds and provide more protection for pedestrians at intersections, to further walking as the primary means of directly accessing jobs, businesses, shops, homes, schools, parks, and civic places.
E P C	**3.4.B**	**Bicycle Facilities and Routes.** Continue to expand facilities and routes in the city center that encourage bicycle travel and increase safety.
P C	**3.4.C**	**Multimodal Circulation and System Hierarchy.** Provide clear separation of modes when appropriate and safe, attractive and intuitive design when modes must share the right of way to increase access and encourage safe, attractive and efficient travel.
P C	**3.4.D**	**Education, Stewardship and Enforcement.** Establish and provide long-term support for programs that promote safe travel behavior of bicyclists, pedestrians, and motorist in the Central City, including increased enforcement of all applicable laws to increase safety and reduce conflicts between all modes of travel.

Goal: Urban Design

Ensure that the design and development of the Central City creates a vibrant place of lasting quality and a source of civic identity and pride that supports the success of all the roles of the Central City and allows for the evolution of those roles.

Specific Goal 4.1: Recognize the Larger Landscape *Reinforce and celebrate the Central City's unique setting with visual and physical connections to the larger natural, topographic and citywide landscape.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
C	**4.1.A**	**Orient to the River.** Increase visual and physical access to the Willamette River to strengthen the river's role as the Central City's central and largest public open space, while diversifying riverfront spaces, activities and experiences. Accomplish this through the following streetscape design, reorientation or creation of new open spaces, and the design and orientation of buildings.
C	**4.1.B**	**Significant Public Views.** Protect and enhance significant public views and view corridors that celebrate the stature and setting of the Central City in the landscape of the city and region as a whole.
E P C	**4.1.C**	**Regional Corridors and Connections.** Elevate the presence, character and role of the multimodal regional routes and corridors and city greenways into and through the Central City, including freeways, bridges, arterial streets, trails, and transit lines.
C	**4.1.D**	**Edges and Nodes.** Identify and highlight points of transition into and out of the Central City, including transit hubs and important intersections through appropriate urban form, art, streetscape design, landscape materials and/or gathering spaces.
Specific Goal 4.2: Districts *Strengthen the character, diversity and experience of the Central City's highly urban districts while creating and enhancing places for people to live, work, learn and gather.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
P C	**4.2.A**	**Distinct and Evolving Districts.** Enhance the character of the Central City's distinct places with development that complements the existing buildings, streets and spaces while encouraging new and innovative forms and patterns of development to emerge in under-developed areas as the Central City continues to evolve.
C	**4.2.B**	**Block Patterns.** Consider the creation of new, larger block patterns when large vacant parcels or redevelopment projects are implemented as a means to accommodate different land uses, circulation patterns, and distinct urban character than can be accommodated on the Central City's traditional small block grid pattern.
C	**4.2.C**	**Building Forms.** Establish clear direction and guidance to ensure that the forms of new buildings enhance and contribute to the character of the adjacent public realm and local district.
E P C	**4.2.D**	**Density and Livability**. Promote utilization of the full development potential of the Central City to establish a dense, livable, prosperous environment, and to promote the maintenance of the regional urban growth boundary and prior investments made to support growth in the Central City.
C	**4.2.E**	**Experimentation and Innovation.** Identify underutilized and/or "remnant" sites throughout the Central City that can serve as high-visibility locations for temporary and dynamic testing and display of architecture, landscape architecture, art, performance piece/art or other place-making contributions.

Specific Goal 4.2: Districts (Continued)		
Portland Plan Integrated Strategies	**Planning Objectives**	
C	**4.2.F**	**Design Tools.** Improve existing and create new clear and succinct urban design tools (such as guidelines, zoning and concept plans) to ensure the Central City and its unique districts and places continue to evolve in a manner that enhance cherished and successful elements of their past and express the times and values of future generations.
Specific Goal 4.3: The Public Realm *Expand the quality and variety of experiences offered by the Central City's system of public parks, streets and open spaces and the buildings that frame them.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
E C	**4.3.A**	**Blend Open Space and Mobility Functions.** Explore the integration of design, character, and, in some cases, functions allowed in parks and open spaces with those of the public streets and trails. Seek to design these facilities to enhance the quality of experiences, environmental function, safety, recreational opportunities, accessibility, connectedness and the overall liveliness of the public realm.
E C	**4.3.B**	**Functional and Responsive Open Spaces.** Ensure that the Central City continues to feature an iconic system of public open spaces. Design this system with the range of sizes and scales of spaces needed to meet the user's needs for recreation and respite in a highly urbanized area. Design these spaces to be responsive to the cultural, demographic, place-specific needs and shifts of an evolving city center.
C	**4.3.C**	**Intuitive Open Space Connections.** Increase the clarity of connections among existing spaces, new open spaces and the Willamette River. Accomplish this through public realm enhancements such as a coordinated street tree strategy, more pedestrian spaces and bicycle amenities, targeted stormwater management strategies and other green street infrastructure.
P	**4.3.D**	**Street Hierarchy.** Establish a clear and varied hierarchy of streets and related streetscape and ground floor use characteristics. Design these to increase district identity and way finding, accommodate an array of travel modes, enrich the natural environment, and improve the pedestrian experience.
C	**4.3.E**	**Green Infrastructure**. Integrate green infrastructure into the public realm, and develop new types and models of green infrastructure that increase long-term system resiliency, improve environmental health, provide habitat opportunities, enhance the pedestrian experience, and are coordinated with a Central City street hierarchy system.
P C	**4.3.F**	**Green Buildings.** Integrate green or high-performance features on new and existing buildings that reduce the building's total energy use, lower its carbon footprint, enhance the site, add character and diversity to adjacent public spaces, and contribute to a distinctive and function-based urban form/cityscape.

Specific Goal 4.4: Central City Waterfront *Ensure that the Willamette waterfront supports varied types of activities, experiences, spaces and business opportunities. Maintain and enhance the distinctive urban edge where the developed parts of the Central City.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
C	**4.4.A**	**Portland's Commons.** Elevate the role and importance of the Willamette River in the daily lives and activities of Portlanders. ▪ Design and develop the waterfront to take advantage of the river. - Strengthen the physical and visual connections between the river and the rest of the Central City. - Increase opportunities for recreational use of the river by ensuring that a variety of active and passive recreational needs are served such as fishing, - Develop a network of distinctive destinations along the waterfront that reflect the character or unique features of each area. - Complete a system of trails along, across and to the river establishing continuous interconnected loops. - Enhance riparian areas and incorporate habitat along the river and an urban design feature. ▪ Undertake programming activities that take advantage of the river. - Celebrate Portland's bridges through activities that highlight the unique qualities of each bridge. - Promote and establish arts, education and entertainment activities along the river especially a key publically owned waterfront sites. - Increase public awareness of the Willamette River's significant cultural heritage and natural history in Portland through art, educational programs, and facilities that celebrate the diverse and important roles the river has and will continue to play. - Allow for a seasonal ferry system that circulates between important destinations along the river in the Central City.
P	**4.4.B**	**Prosperous Waterfront.** Support industrial and commercial business uses that take advantage of a waterfront location. ▪ Support the existing industrial and commercial uses; ▪ Encourage employment and tourist-related uses that capitalize on waterfront locations. ▪ Encourage new development especially on underutilized land at bridgeheads and brownfield sites; ▪ Treat access to the river as an asset supportive of employment uses in the Central City.
C	**4.4.C**	**Vibrant Waterfront Districts.** Reinforce the distinctive character of the Central City's different waterfront districts by strengthening each districts unique relationship to the river building on the residential, commercial, employment, recreational and habitat opportunities that each district presents.

Specific Goal 4.5: Historic Resources and Districts

Enhance the Central City's identity, design and sustainability by preserving and rehabilitating historically, culturally and architecturally significant buildings and places, while encouraging contextually-sensitive infill development and the creation of a new architectural legacy for future generations.

Portland Plan Integrated Strategies	Planning Objectives	
C	4.5.A	**Preservation Strategy.** Identify, protect, improve and promote the Central City's historically and architecturally important buildings, structures, districts, landscapes and sites.
P C	4.5.B	**Growth, Infill and Compatibility.** Strengthen the vitality of historic districts by incorporating infill development that responds to the surrounding historic context and preserves the integrity of the district, while reflecting contemporary design values and practices.
C	4.5.C	**Transitions between Districts and Neighborhoods.** Create legible transitions between historic districts and surrounding neighborhoods as well as higher density development in the Central City.
C	4.5.D	**Social and Cultural History.** Foster inclusive historic preservation and public history activities that embrace Portland's diverse communities, cultures and history.
C	4.5.E	**Seismic Hazards and Upgrades.** Increase the long-term viability of historic structures and improve public safety through seismic retrofits and structural upgrades.
C	4.5.F	**Stewardship of Public Resources.** Preserve and celebrate publicly-owned historic structures as our common civic heritage.
C	4.5.G	**Sustainable Development and Adaptive Re-use.** Promote historic preservation as a sustainable development strategy through adaptive reuse of historic buildings, energy upgrades and the reuse of historic materials.
C	4.5.H	**Implementation and Regulation.** Use a broad set of historic preservation tools and incentives, including regulatory, financial, educational and promotional elements.

Goal: Environment

Weave together the natural and built environment at the building and district scale to create a sustainable central city by using natural systems and processes that increase energy efficiency, minimize resource consumption, pollution and waste, and provide wildlife habitat, clean and cool the air and water, and improve stormwater management.

Specific Goal 5.1: EcoDistricts

Transform the built environment at the building and district scale to manage resources efficiently and use natural functions to improve the environment and provide multiple benefits.

Portland Plan Integrated Strategies		Planning Objectives	
P	**C**	**5.1.A**	**Buildings and Energy.** Establish programs and strategies to reduce total energy use of new buildings to achieve net zero greenhouse gas emissions, and increase on-site renewable and clean district energy systems in the Central City.
	C	**5.1.B**	**Green Infrastructure.** Identify how infrastructure can be integrated to mimic or utilize natural systems, such as expanded tree canopy, ecoroofs, living walls, green streets, as part of new public and private development.
	C	**5.1.C**	**Healthy and Diverse Urban Forest.** Identify opportunities and techniques to: expand the urban forest and natural ecosystem function; decrease impervious areas; restore riparian and upland vegetation; increasing tree canopy; and, integrate green infrastructure, such as bird and wildlife-friendly designs, ecoroofs, and living walls, into development projects.
	C	**5.1.D**	**Preservation.** Identify techniques and constraints associated with rehabilitating existing buildings for new uses, while also improving the environmental performance of these structures.
	C	**5.1.E**	**District-Wide Strategies.** Develop strategies to implement incentives to create eco-districts and district energy programs where feasible in the Central City.
	C	**5.1.F**	**Waste Stream Management.** Identify strategies to reduce total solid waste generation and maximize recycling and composting in the Central City.
P	**C**	**5.1.G**	**Stewardship, Education, and Inspiration.** Create programs and projects which through education and demonstration show how development can be designed, constructed, and maintained to be more efficient and improve environmental health.
	C	**5.1.H**	**Climate Adaptation Strategies.** Identify strategies to ensure the infrastructure, built environment, and natural systems of the Central City are resilient and/or adaptable to impacts associated with climate change.

Specific Goal 5.2: Willamette River

Enhance the Willamette River and the land along the riverfront to support a healthy, functioning environment in the heart of the Central City.

Portland Plan Integrated Strategies		Planning Objectives	
P	**C**	**5.2.A**	**River Health and Water Quality.** Improve the environmental conditions of the Willamette River to achieve: ▪ Healthy and riparian and upland habitat areas; ▪ A swimmable and fishable river; and, ▪ Compliance with regional, state and federal laws.
P	**C**	**5.2.B**	**Environmental Restoration and Enhancement.** Implement environmental improvements by: ▪ Incorporating habitat enhancements into development projects; ▪ Restoring key riverfront sites to improve overall system functions; ▪ Encouraging riverbank improvements that increased natural hydrology while maintaining flood protection. ▪ Coordinating river restoration and stewardship efforts with upstream communities.

Specific Goal 5.3: Air Quality

Improve air quality throughout the Central City District and inside buildings to improve human and environmental health within and exterior to the built environment and reduce the amount of greenhouse gases (GHG) released, and increase the amount of GHG sequestered in the urban environment.

Portland Plan Integrated Strategies		Planning Objectives	
	C	**5.3.A**	**Indoor Air Quality.** Ensure new development, including housing at all affordability levels, utilizes ventilation systems and construction materials that protect indoor environmental air quality.
P	**C**	**5.3.B**	**Greenhouse Gas Sequestration and Air Quality Strategies.** Continue the implementation of the City of Portland and Multnomah County Climate Action Plan and additional strategies intended to reduce carbon emissions and reduce other air pollutant, such as carbon monoxide, sulfur dioxide, benzene, and particulates.
	C	**5.3.C**	**Land Use and Development.** Increase the balance between jobs and households in the Central City to increase use of alternative transportation modes and reduce per capita vehicle miles traveled and greenhouse emissions.
	C	**5.3.D**	**Green Infrastructure.** Increase urban tree canopy, green streets, ecoroofs, and living walls to capture particulates and improve air quality.
	C	**5.3.E**	**Air Toxics.** Develop means to consider the concentration of airborne toxins in making land use and development decisions.

Specific Goal 5.4: Water Resources *Reduce per capita use of potable water, improve the water quality of the Willamette River, and return water from the urban environment to the natural hydrologic system.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
C	**5.4.A**	**Water Conservation.** Reduce the use of potable water, capture and reuse rain-water and waste-water, and manage stormwater by applying methods to reduce per capita water use and improve the quality of water entering local rivers and streams.
C	**5.4.B**	**Integrated Stormwater Management.** Incorporate stormwater as a design element in buildings, streets, and urban open spaces, to create opportunities for the public to experience, enjoy and learn about water resources in the urban landscape.
Specific Goal 5.5: Human Health *Expand opportunities for people who live and work in the Central City to walk, bike, recreate, and live more active lifestyles.*		
Portland Plan Integrated Strategies	**Planning Objectives**	
C	**5.5.A**	**Complete Communities and Districts.** Improve and expand infrastructure that supports pedestrian and bicycle mobility and provide a range of essential services in the Central City that residents and employees do not need an automobile to easily access.
C	**5.5.B**	**Access to Healthy Food.** Increase access to healthy food choices in the Central City by supporting the development of community and roof-top gardens, supporting the expansion of farmers markets, and other efforts that make healthy food options easily accessible to residents, employees and visitors.
C	**5.5.C**	**Parks and Recreational Facilities Promoting Healthy, Active Living.** Develop new and where appropriate repurpose existing public parks and recreational facilities to provide a wide variety of active recreation opportunities through facilities such as playgrounds, sports courts and fields, trails, and other infrastructure that encourages active recreation throughout the city center.

N/NE Quadrant Plan – Draft Outline

Chapter 1: Introduction

1. Purpose
2. Planning Process
    a. SAC
    b. Partnership
3. Relationship to Portland Plan and Central City 2035 Concept Plan
    a. Equity
    b. Thriving Educated Youth
    c. Healthy Connected City
    d. Creating the Region's Center for Equity, Innovation and Exchange

Chapter 2: Background

1. History
2. Previous Planning and Existing Policies
3. Existing and Future Conditions
4. Identified Issues

Chapter 3: N/NE Quadrant Concept

1. Concept Overview and SAC Goals
    a. Goal 1: A diverse mix of commercial, cultural, entertainment, industrial, recreational and residential uses, including affordable housing.
    b. Goal 2: Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages
    c. Goal 3: Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment.
    d. Goal 4: Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods.
    e. Goal 5: A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system.
    f. Goal 6: Improve the local circulation system for safe access for all transportation modes within the quadrant and at freeway interchanges.
    g. Goal 7: Equitable access to community amenities and economic opportunities.
    h. Goal 8: Protection and enhancement of the cultural heritage of the area and its sub-districts.
2. Urban Design Principles
3. Concept Layer Diagrams and Descriptions
    a. Land Use
    b. Street and Development Character
    c. Open Space
    d. Green Systems
4. Integration with the I-5 Freeway Improvements
    a. Crosswalk diagram and explanation
    b. Freeway plan elements and how they benefit Lloyd and Lower Albina

Chapter 4: Goals, Objectives and Implementation Actions

This chapter will be organized into sections addressing each Central City district (the Lloyd District and Lower Albina), as well as the two study areas. A **district goal** and **concept diagram** will convey the overarching vision for each district, followed by a series of **policies**, which provide more specific direction on issues associated with the larger goal.

The policies are organized into five topic areas consistent with the planning framework developed by Central City 2035 (CC2035):

1. Regional Center
2. Housing and Neighborhoods
3. Transportation
4. Urban Design
5. Environment

Each set of policies will be followed by **implementation actions**, such as regulatory changes, future work items, projects, programs or studies, that are intended to implement the district goals and policies. Planning objectives and implementation actions will also be developed for the two study areas (Vancouver/Williams Corridor and Banfield Portal).

Key **performance measures** will also be set as a means of tracking progress toward meeting goals and policies. Examples of the type of measures being considered include:

1. Jobs: # of jobs, diversity
2. Housing: # of units, diversity
3. Transportation: mode split, per capita vehicle miles traveled (VMT), crashes
4. Urban Design/Complete Neighborhood: active street level, access to parks, access to healthy food, connectivity
5. Environment: tree canopy, energy

CHAPTER 4 OUTLINE

1. **Lloyd District**
   a. District Goal
   b. District Concept Diagram
   c. Policies and Implementation Actions

      1. Regional Center
      Addresses N/NE Quadrant project goals 1: Diverse mix of uses; 2: Economic development; and 3: Environment
         a. Support regional attractions/entertainment
         b. Expand employment center with range of opportunities
         c. Promote successful retail districts
         d. Support business retention and development
         e. Encourage high density development
         f. Promote EcoDistrict as economic development tool

      2. Housing and Neighborhoods
      Addresses N/NE Quadrant project goals 1: Diverse mix of uses; 2: Economic development; 3: Environment; 4: Amenities and Services; and 7: Equity
         a. Improve jobs/housing balance
         b. Encourage housing development with a mix of affordability and types
         c. Provide services and amenities that support housing and residents (open space, active transportation, schools, food)
         d. Support and expand local business and main street areas that support housing and residents

e. Provide transitions between new and existing development (heights and form)
f. Encourage development of a livable and safe community that supports healthy living

3. Transportation
Addresses N/NE Quadrant project goals 5 and 6: Transportation
a. Provide an adequate and safe network for all modes
   - Street classifications and improvements
   - Connectivity
   - I-5 freeway improvements
b. Provide freight access to industrial areas and the freeway
c. Support rail and inter-modal access
d. Improve parking management
e. Promote transportation demand management

4. Urban Design
Addresses N/NE Quadrant project goals 1: Diverse mix of uses; 5: Transportation; and 8: Cultural heritage
a. Strengthen links to the larger landscape including regional attractions and connections, and the relationship to the natural landscape
b. Encourage distinct subareas with unique subarea characters, qualities and sense of place
c. Preserve cultural and historic resources and areas of stability
d. Provide transitions to and integrate new development with adjacent neighborhoods and historic districts
e. Enhance the public realm through diverse and engaging streets, open spaces and connections

5. Environment
Addresses N/NE Quadrant project goal 3: Environment
a. Support Lloyd EcoDistrict
b. Encourage sustainable development and resource conservation
c. Increase tree canopy and green infrastructure
d. Enhance natural resources and integrate habitat

2. Lower Albina
a. District Goal
b. District Concept Diagram
c. Policies and Implementation Actions
1. Regional Center
Addresses N/NE Quadrant project goals 1: Diverse mix of uses; 2: Economic development; and 7: Equity
a. Support existing businesses and role as business incubator
b. Preserve existing industrial land and increase flexibility for employment uses
c. Support the working harbor

2. Housing and Neighborhoods
Addresses N/NE Quadrant project goals 1: Diverse mix of uses; 2: Economic development; and 4: Amenities and Services
a. Increase the vitality of Russell Street and MAX station area
b. Limit housing opportunities
c. Improve connections between the Russell Street area and adjacent neighborhoods

3. Transportation
Addresses N/NE Quadrant project goals 5 and 6: Transportation

a. Provide an adequate and safe network for all modes
   - Street classifications and improvements
   - Connectivity
   - I-5 freeway improvements
b. Provide freight access to industrial areas and the freeway
c. Support rail and inter-modal access
d. Improve parking management
e. Promote transportation demand management

4. Urban Design

Addresses N/NE Quadrant project goals 1: Diverse mix of uses; 5: Transportation; and 8: Cultural heritage

a. Strengthen the unique character of Russell Street and adjoining areas
b. Preserve cultural and historic resources and integrate new development

5. Environment

Addresses N/NE Quadrant project goal 3: Environment

a. Encourage sustainable development and resource conservation
b. Integrate tree canopy, green infrastructure and enhanced natural resources, while meeting the needs of industrial businesses

3. Study Areas

a. Vancouver/Williams
   1. Planning Objectives and Implementation Actions
      a. Protect and promote cultural heritage
      b. Increase business retention and development
      c. Improve street character and connections to other neighborhoods

b. Banfield Portal
   1. Planning Objectives and Implementation Actions
      a. Improve developability
      b. Promote neighborhood compatibility

Chapter 5: Implementation and Next Steps

Appendices

1. Details of Selected Implementation Action Items
   - Recommended zoning map changes
   - Recommended zoning code changes
   - Transportation System Plan changes
   - Description of future work items or projects
2. Summary of Public Outreach
3. Bibliography (list of major documents produced during project)
4. Resolution

N/NE Quadrant and I-5 Broadway/Weidler Plans

Freeway/Local Transportation Interface

Joint Staff Report

Recommended Elements of the I-5 Broadway/Weidler Interchange Plan Improvements

March 8, 2012

The N/NE Quadrant and I-5 Broadway/Weidler Plans Project is a collaborative effort by the City of Portland and the Oregon Department of Transportation to integrate urban design and land use planning with freeway planning and concept-level engineering in the North/Northeast portion of the Central City, which includes Lower Albina and the Lloyd District.

Stakeholder Advisory Committee: Meeting #14

March 15, 2012

Joint Staff Report

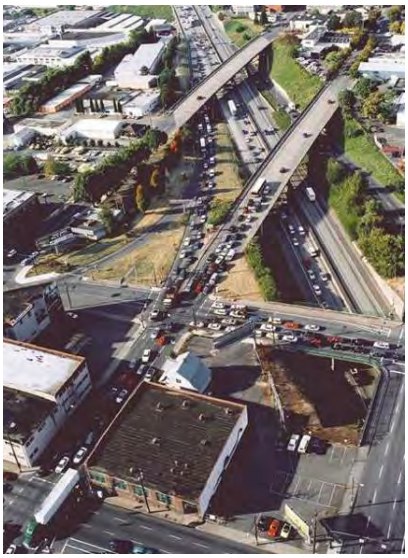
The overall project purpose is to...

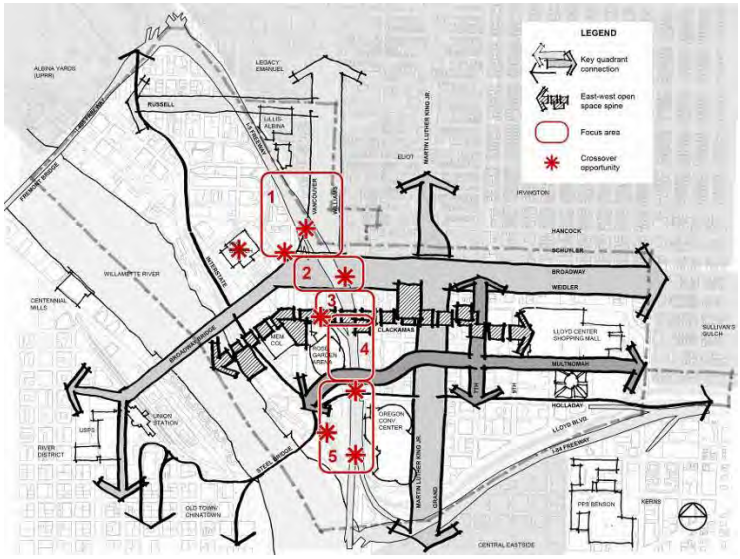
Improve safety and operations on I-5 in the vicinity of the Broadway/Weidler interchange.

OBJECTIVES INCLUDE:

EASE CONGESTION LEVEL S AND IMPROVE SAFETY:

- Congestion can be reduced through a variety of measures. Workable solutions will be explored through the Stakeholder Advisory Committee (SAC) and public outreach.





ENHANCE PEDESTRIAN AND BICYCLE ROUTES:

- Through public input, the SAC process and in partnership with the City, ODOT will look for ways to improve pedestrian and bicycle movements and facilities over and under the freeway system.

IMPROVE FREIGHT MOVEMENT:

- Freight requires highways to have sufficient capacity, good reliability and good geometrics for turning, stopping and other movements.

Integration of Transportation and Land Use Concepts in the N/NE Quadrant Plan

The N/NE Quadrant Plan Concept calls for continued success and development of the existing major regional facilities as well as significant future growth and development in the Rose Quarter, Lloyd District and Lower Albina. The I-5 improvements help support this growth by improving freeway reliability and safety in the area.

Recommended Hybrid Project and Elements for Further Refinement
I-5 Broadway/Weidler Interchange Improvements

I. INTRODUCTION

The Oregon Department of Transportation (ODOT), the City of Portland Bureau of Transportation (PBOT) and the City of Portland Bureau of Planning and Sustainability (BPS) are jointly managing a project that includes preparing a long-range plan for the overall N/NE Quadrant of the Portland Central City and identifying specific improvements to I-5 between I-84 and I-405 (Fremont Bridge) as well as improvements to the Broadway/Weidler Interchange.

This staff report describes the Hybrid Elements recommendations for the I-5 Broadway-Weidler Interchange Plan improvements.

The purpose of this staff report is to support decisions on the following four items presented to the SAC:

March SAC Action Items:

Do you agree with the joint staff recommendations on the following hybrid elements as described in this report?

- The Southbound Braided Ramps are not recommended for further refinement as part of the base hybrid project.
- A multi-use path (MUP) immediately east of I-5 between Multnomah and Weidler is not recommended to be included in the project.
- The City and ODOT will continue to work to ensure that a bicycle/pedestrian Clackamas Overcrossing could be accommodated with a development proposed on the east side of the freeway.
- The City and ODOT will continue to refine and evaluate the North of Broadway options and bring a recommendation for SAC consideration to the April 12 SAC meeting.

Background

The project team has worked closely with SAC to identify a wide range of freeway and interchange improvement concepts that could improve freeway safety and operations while being compatible with emerging long-range plans and support economic development within the overall N/NE Quadrant. The range of freeway and interchange improvement concepts has been narrowed to a few of the most promising concepts. This Joint Staff Report recommends continued study on a few key concepts.

The process for identifying, evaluating and narrowing the concepts has included several milestone actions by the SAC, including:

1.	Adoption of project goals and objectives	SAC Meeting #4,	January 4, 2011
2.	Conduct freeway/interchange charrette		April 2011
3.	Narrowing from 70+ ideas to 13 concepts	SAC Meeting #6,	May 26, 2011
4.	Narrowing from 13 concepts to 6 concepts	SAC Meeting #8,	July 28, 2011

SAC Meeting #10

At SAC Meeting #10, on October 27, 2011 the committee reviewed a physical model of the six interchange concepts and received a presentation summarizing key findings.

SAC Subcommittee Meeting
At the SAC Subcommittee meeting on December 8, 2011 staff presented information on the performance of each concept and the subcommittee discussed their pros and cons. Based on the technical information, rankings and discussion, the subcommittee recommended the following:

1. That staff conduct no further work on Concept 4a Split Diamond and Concept 4b Folded Diamond.
2. That staff work to identify the best elements of each remaining concept (Braided Ramp/CD Road, Rebuilt Structures, and Three-Point Interchange) and explore including those elements in a hybrid concept or concepts and report findings from those hybrid concepts at the January 19, 2011 SAC meeting.

SAC Meeting #12
At SAC Meeting #12 on January 19, 2012, staff presented an overview of SAC Subcommittee recommendation and asked the SAC to endorse the Subcommittee recommendation. The SAC unanimously supported the Subcommittee recommendation and directed staff to:

- Conduct no further study of the Concept 4a Split Diamond and Concept 4b Folded Diamond.

In addition to this action removing the Split Diamond and Folded Diamond concepts, the SAC discussed the benefits and concerns regarding the proposed hybrid project elements. The issues raised during the SAC discussion were considered in preparing this Joint Staff Report and the hybrid project recommendation.

SAC Meeting #13
At the February 16, 2012, SAC meeting, staff presented the information on the hybrid base concept. The project team developed a hybrid base project and identified elements for further refinement based on technical assessments of bicycle and pedestrian operations, urban design/land use potential, traffic operations and safety.

Based on that assessment, ODOT and the City of Portland have jointly identified areas of agreement on how to proceed to further develop the Hybrid Base Project and to continue to analyze elements that require more study. The SAC supported the joint staff recommendation to move forward with the Hybrid Base Project (see list of Hybrid Base Project elements on page 4) and directed staff to continue to analyze the four elements that require additional study.

II. FEBRUARY SAC MEETING DECISIONS

The project team developed and refined a Hybrid Base Project, endorsed by the SAC at its February meeting, and identified four elements for further study based on technical assessments of bicycle and pedestrian operations, urban design/land use potential, traffic operations and safety. Based on that assessment, ODOT and the City of Portland have jointly identified areas of agreement on how to proceed to further develop the Hybrid Base Project and to continue to analyze elements that require further refinement illustrated in Figure 1.

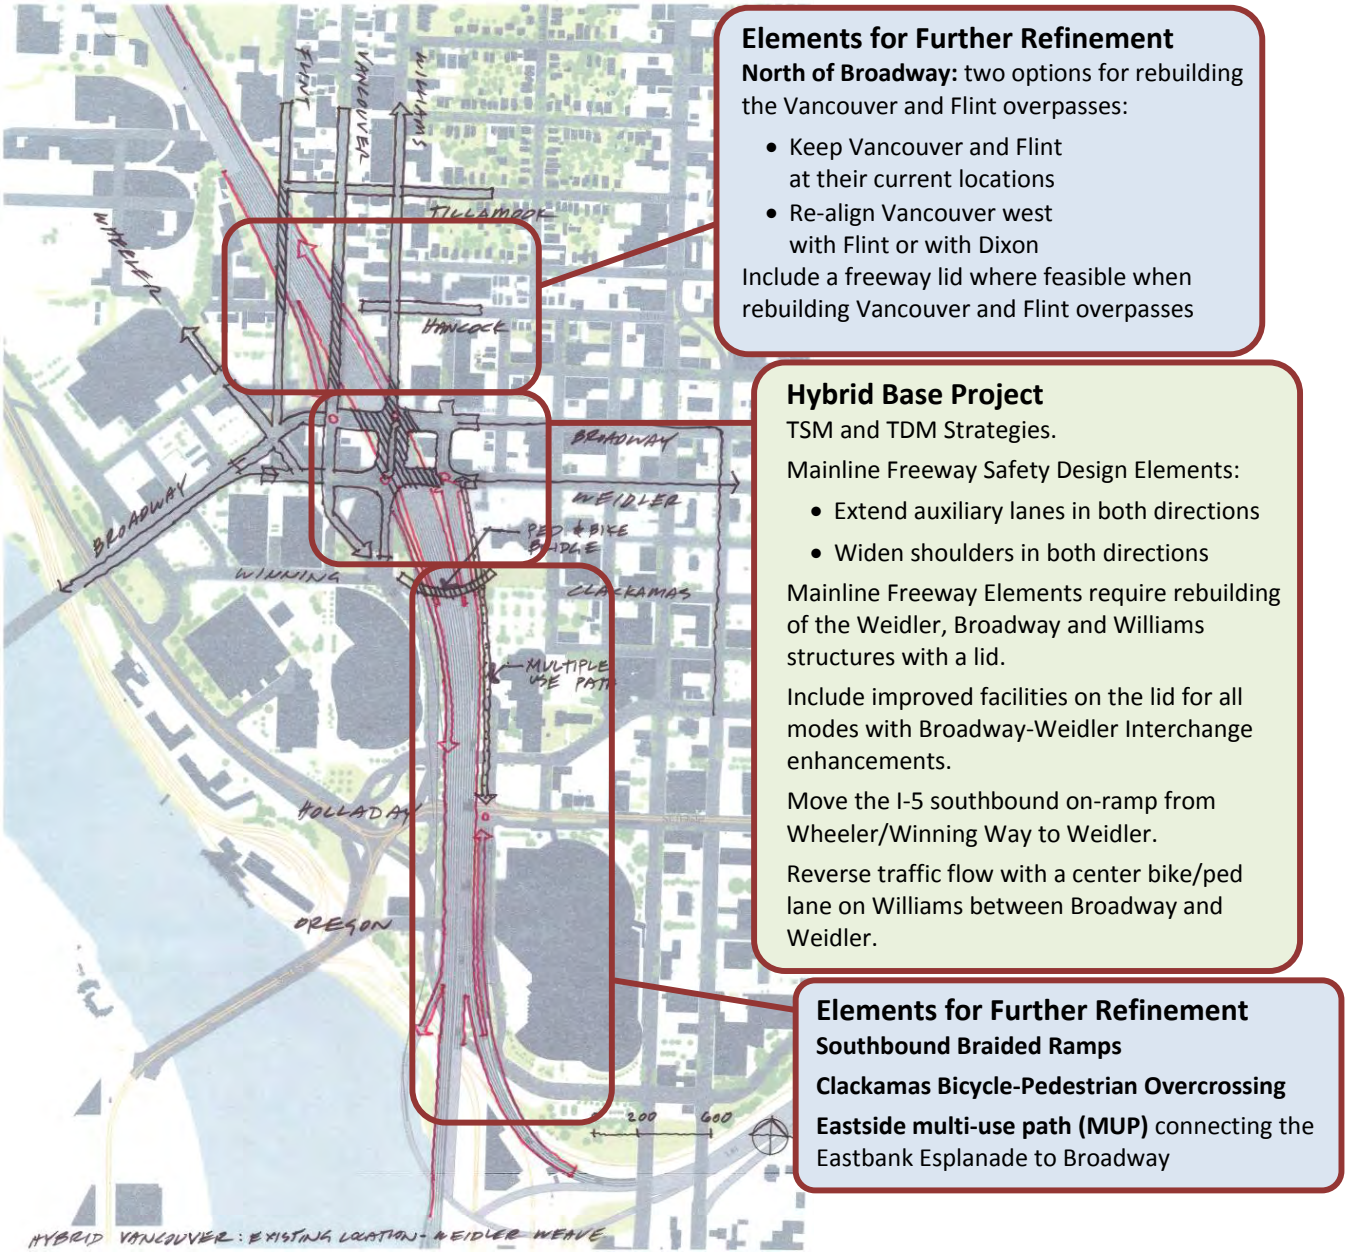


Figure 1: Hybrid Base Project and Elements for Further Study

The Hybrid Base Project

The Hybrid Base Project, as endorsed by the SAC at its February 2012 meeting and illustrated in Figure 2 (cross section) and Figure 3 (plans), includes:

Hybrid Base Project Elements	February 2012 SAC Action
1. Transportation System Management (TSM) and **Transportation Demand Management (TDM)** strategies	Endorsed
2. Mainline Freeway Safety Elements:	Endorsed
a. Extend auxiliary lanes 4,370 feet in both directions	
b. Add full-width shoulders in both directions	
3. Three Rebuilt Freeway Structures and Lid	Endorsed
(Mainline Freeway Safety Elements require rebuilding the Weidler, Broadway, and Williams structures over I-5)	
4. Broadway-Weidler Interchange Improvements	Endorsed
(improved facilities on the lid for all modes)	
5. Relocation of Southbound I-5 On-Ramp to Weidler/Williams	Endorsed
(from current location at Wheeler/Winning Way/Williams)	
6. Reverse Traffic Flow on Williams	Endorsed
(between Broadway and Weidler)	

Figure 2: Hybrid Base Project, Cross Section A (illustrative concept drawing)

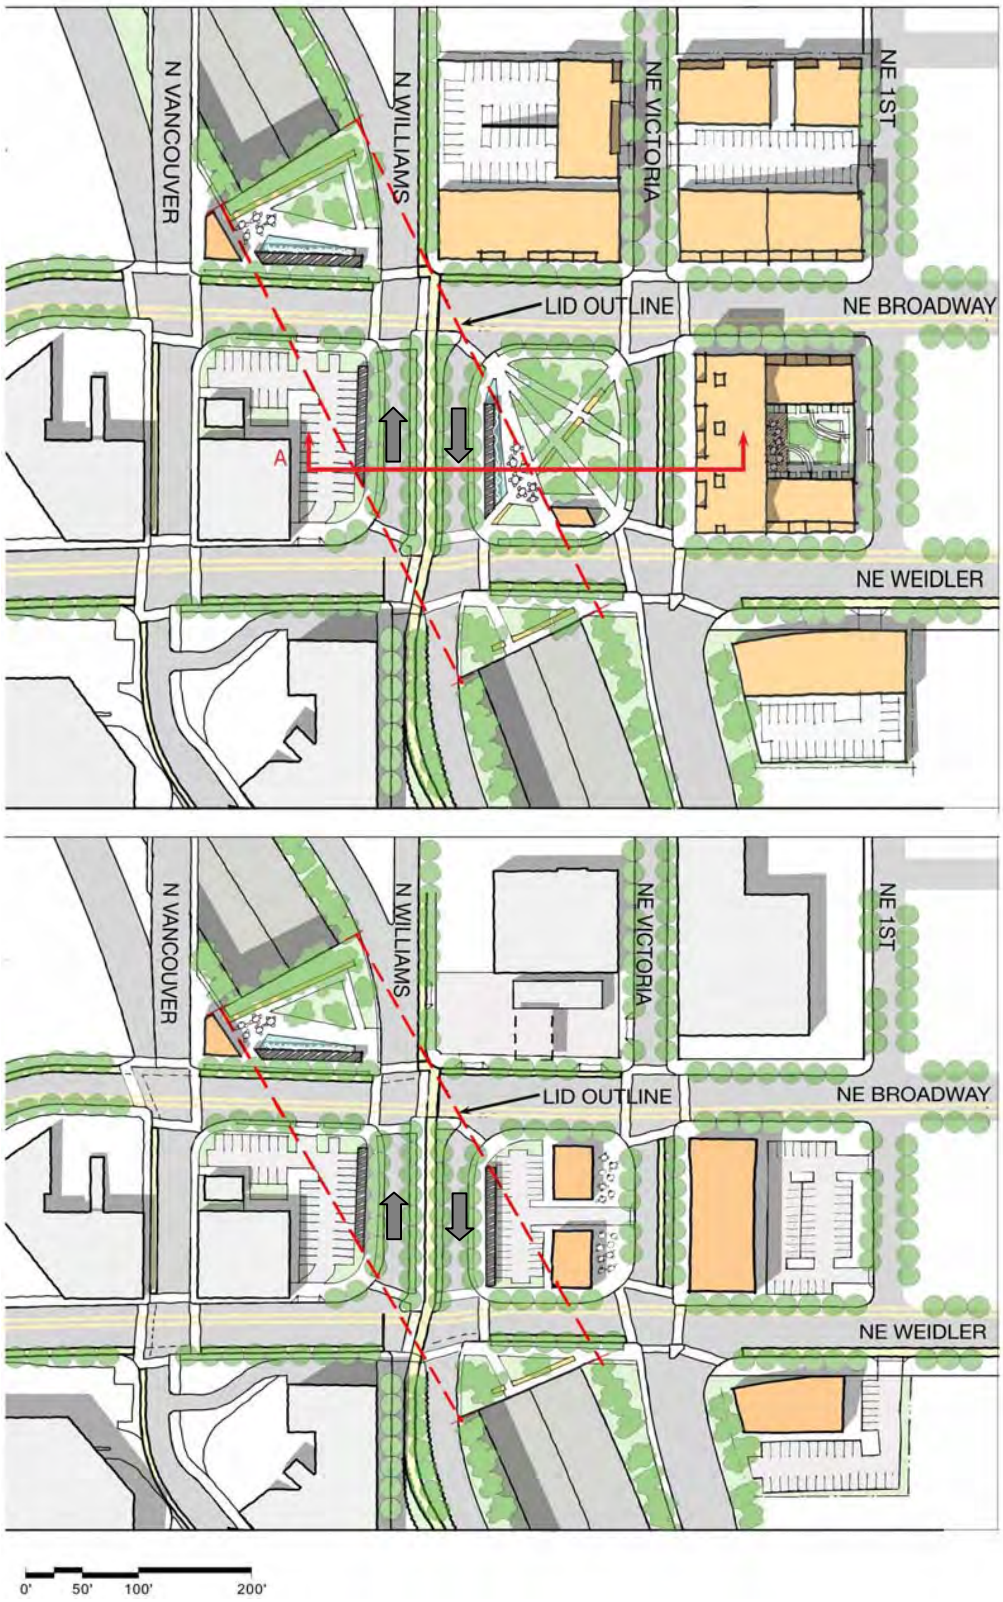

Figure 3: Hybrid Base Project, Plan Views (illustrative concept drawings)

III. JOINT STAFF RECOMMENDATION: HYBRID ELEMENTS

Based on the above Hybrid Base Project concept and previous SAC direction, the following four **Hybrid Elements** were recommended for further refinement:

1. **Southbound Braided Ramps** (shown in Figures 4a and 4b)
2. **Eastside Multi-Use Path (MUP)**: connecting Eastbank Esplanade to Broadway (Figure 5)
3. **Clackamas Overcrossing** (bicycle/pedestrian overcrossing, shown in section in Figure 6)
4. **North of Broadway**: Vancouver/Flint/Hancock Crossing/Lid (Figure 7)
   Include a freeway lid where feasible when rebuilding Vancouver and Flint overpasses with two options:
   a. Keep Vancouver and Flint at their current locations
   b. Re-align Vancouver west with Flint or Dixon

Hybrid Elements	March 15 Joint Staff Recommendation
1. Southbound Braided Ramp	Not recommended for further refinement at this time
(Figures 4a and 4b)	
2. Eastside Multi-Use Path (MUP)	Not recommended; support alternative north-south routes
(connecting Eastside Esplanade to Broadway, Figure 5)	
3. Clackamas Overcrossing	Refine further; include in the Hybrid Base Project
(bicycle/pedestrian overcrossing, Figure 6)	
4. North of Broadway	Refine options further; report in April
Two options (Figure 7):	
• Rebuild Vancouver and Flint at their current locations	
• Re-align Vancouver west with Flint or Dixon	

Joint Staff Recommendation

Based on additional analysis and assessment, ODOT and the City of Portland have developed the following recommendations on which of the following four hybrid elements should be included in the Hybrid Base Project for improvements to the I-5 Broadway/Weidler Interchange.

1. Southbound Braided Ramps

The Southbound Braided Ramps would separate traffic destined to I-5 South from traffic destined for I-84 East. The ramps would be added on new structures to the western edge of I-5 which would be widened to include a new auxiliary lane. Conceptual layouts for the braided ramps were developed and the potential benefits and impacts associated with the ramps were analyzed. Based on this analysis, the following benefits and impacts were identified:

Benefits

- Safety – Crash data for similar braided ramp improvements show a significant reduction in the number of total crashes comparing before and after implementation of braided ramp improvements.
- Freeway Operations – Braided ramps (beyond the auxiliary lanes improvements) would allow weaving and merging activity to occur outside of the freeway mainline and further reduce negative operational impact on freeway through-lanes.

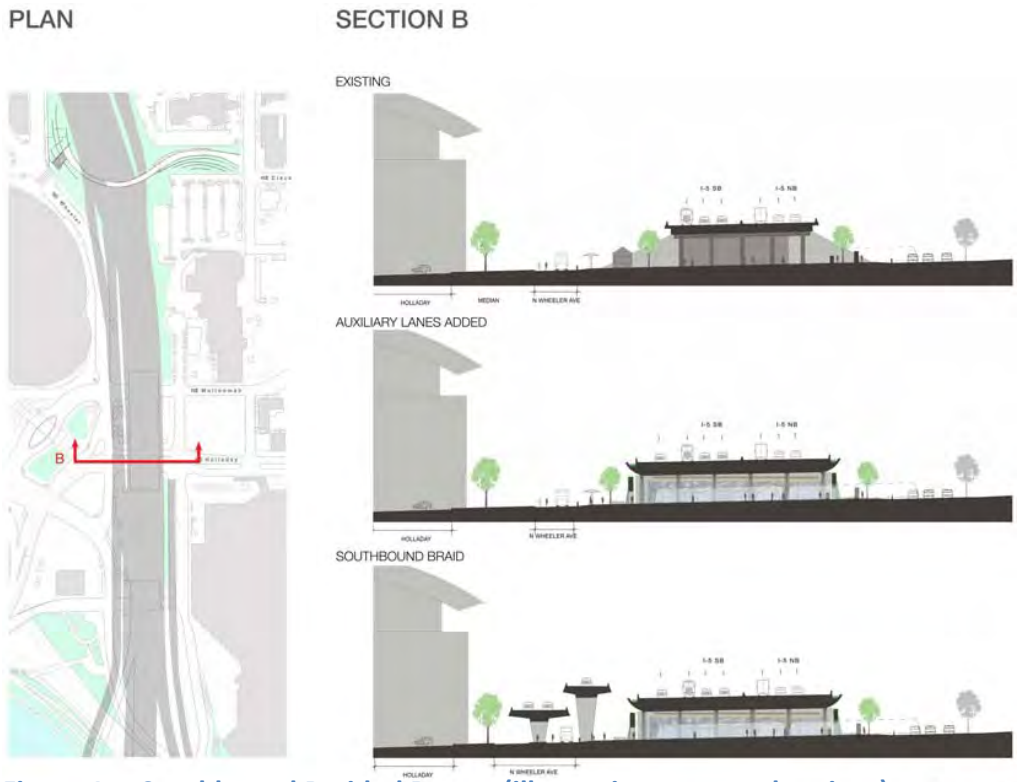
Issues

- Visual and Aesthetic – The braided ramp would be located outside the existing footprint of I-5 and would require new support columns along Wheeler Avenue in the vicinity of the Rose Garden Arena and the Rose Quarter Transit Center. Figures 4a and 4b show views of how the braided ramp structures could look from perspectives below the new structures. Opportunities have been identified to utilize landscaping, walls, water, lighting and other techniques to enhance the look and feel of areas below the freeway.
- Capital Cost – Braided ramps would add an additional $150 million to the cost of the Hybrid Base Project.

Joint ODOT/City Recommendation on Southbound Braided Ramps

Braided ramps and auxiliary lanes have been shown to be effective strategies to improve the safety and operations of an urban freeway. Because many of the safety and operational benefits could be achieved with the auxiliary lane extensions, the Southbound Braided Ramps are not recommended for further refinement as part of the Hybrid Base Project at this time. If after base improvements are implemented and safety and operational issues remain, the Southbound Braided Ramps should receive additional consideration since they show promise for further improving safety and operations within the project area.

It is further recommended that designs developed for the new Weidler southbound entrance-ramp, the Clackamas Overcrossing and other elements of the Hybrid Base Project should not preclude the ability to implement the Southbound Braided Ramps, if needed, at some point in the future.



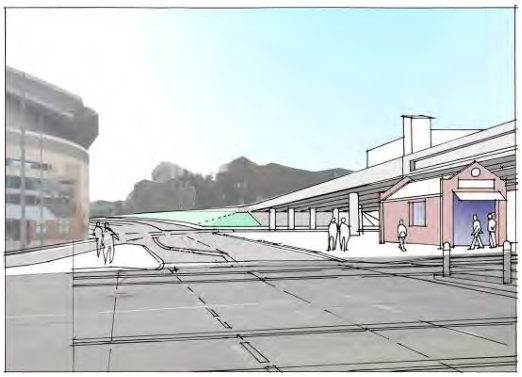


Figure 4a: Southbound Braided Ramps (illustrative concept drawings)

Existing

With Auxiliary Lanes Only

With Southbound Braided Ramps

At MAX platform with Auxiliary Lanes Only

Figure 4b: Southbound Braided Ramps (illustrative concept drawings)

2. Eastside Multi-Use Path (MUP)

The analysis to date has identified a range of potential benefits and impacts associated with creating a multi-use path (MUP) along the east side of I-5 to connect the Eastbank Esplanade to Broadway. This multi-use path would serve as an alternative route to encourage "interested-but-concerned" bike riders (see Figure 5).

The east side MUP was originally prepared during the development of a range of possible interchange concepts. Certain concepts would have severely limited the ability for bicycles and pedestrians to safely travel north-south through this area. The concept of the eastside MUP was developed to address these concerns. The recommended Hybrid Base Project interchange concept provides for reasonable north-south connections west of I-5 using Wheeler, Williams and Vancouver avenues and would not have the same need for a separated multi-use pathway.

Benefits

- Provides a secondary north-south bicycle connection attractive to "interested-but-concerned" cyclists.

Issues

- Capital cost estimated at $2 - $4 million.
- The east side multi-use path would create a difficult crossing at the eastern edge of the I-5 northbound exit-ramp to Weidler.
- The east side MUP would require additional property acquisition and would displace approximately 25 off-street parking spaces.

Joint ODOT/City Recommendation on Eastside MUP

Improved north-south bicycle and pedestrian connections through the interchange area are a critically important outcome for the N/NE Quadrant and I-5 Broadway/Weidler Plans project. Due to its cost, property impacts and parking impacts, a multi-use path immediately east of I-5 between Multnomah and Weidler is not recommended to be included in the project.

In lieu of a separated MUP, it is recommended that the City develop a Neighborhood Greenway connecting the Eastbank Esplanade to neighborhoods north of Broadway via Lloyd Boulevard, Multnomah Street, 3rd Avenue, Wasco Street and 2nd Avenue.

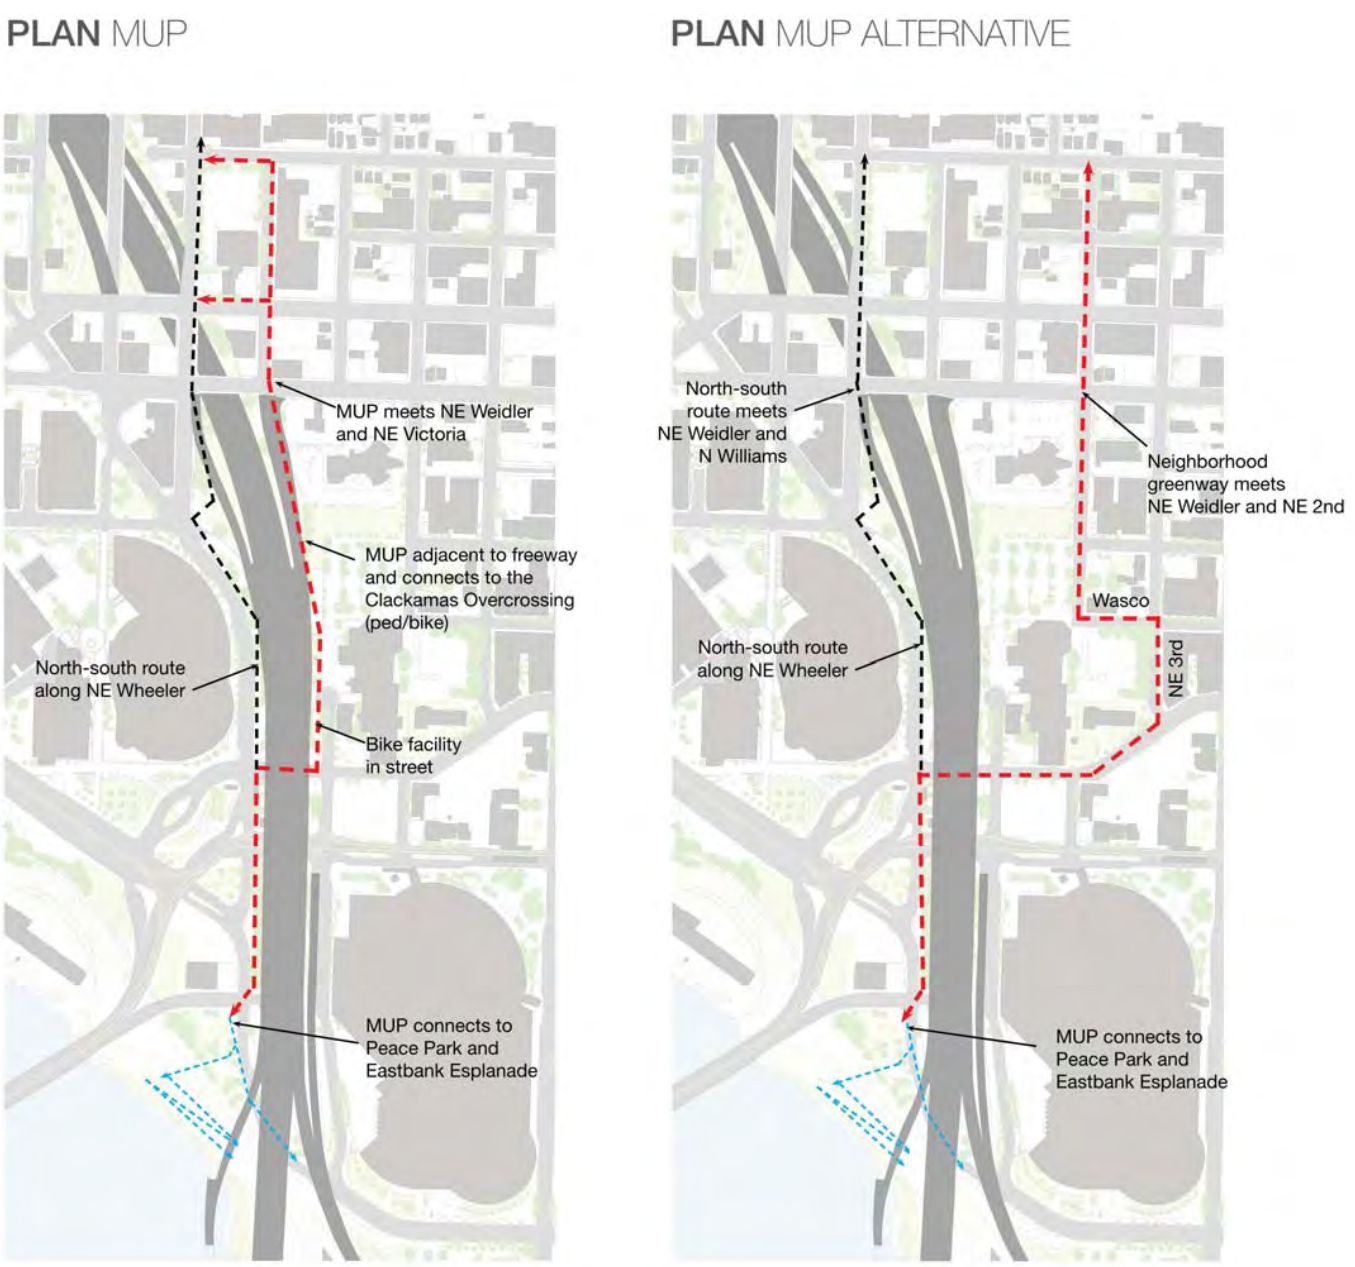

Figure 5: Eastside Multi-Use Path (MUP; illustrative concept drawing)

3. Clackamas Overcrossing (Bicycle/Pedestrian)

Provide a bicycle and pedestrian crossing of I-5 connecting from the vicinity of 1st Avenue at Clackamas Street to the vicinity of Williams, Wheeler and Winning Way. This overcrossing would improve pedestrian and bicycle access to the Rose Garden Arena and other Rose Quarter activities.

Concepts have been prepared that depict a potential overcrossing and describe some of the challenges of providing good physical connections on both sides of the freeway. Additional design challenges involve providing for a potential, future braided ramp (see Figure 6).

Benefits

- Improves bicycle and pedestrian access to the Rose Quarter.
- Supports redevelopment opportunities at the Rose Quarter and on the east side of I-5.
- Would improve pedestrian safety by moving some event-based pedestrian activity from Weidler and "the Box" area to the overcrossing.
- Can be designed to allow for Southbound Braided Ramps if those are desired in the future.

Issues

- Potential development on the east side of I-5
- Capital cost estimated at $15 - $20 million.

Joint ODOT/City Recommendation on the Clackamas Overcrossing (Bicycle/Pedestrian)

The Clackamas Bicycle/Pedestrian Overcrossing should be included as part of the Hybrid Base Project. The City and ODOT shall continue to work with the proposed development on the east side of the freeway to ensure that the overcrossing could be accommodated with the proposed development.

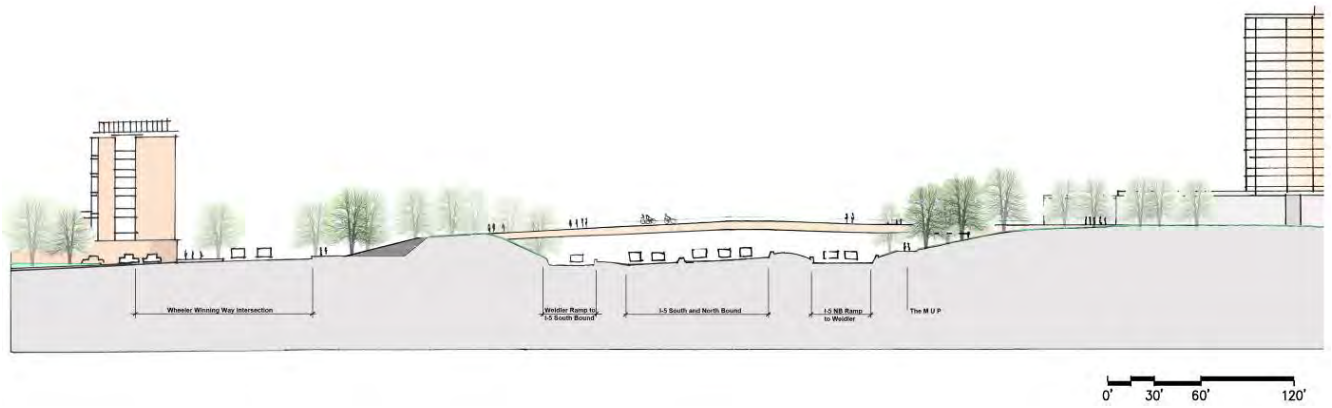

Figure 6: Clackamas Overcrossing, Cross Section (illustrative concept drawing)

4. North of Broadway: Vancouver/Flint/Hancock Overcrossing/Lid

The I-5 Broadway/Weidler Interchange project presents a unique opportunity to improve the local street system just north of Broadway in addition to overall operational improvements to the transportation network. Because the Flint, Vancouver and Williams structures over the freeway must all be rebuilt as part of the project, they could be built in a configuration different than the current layout which presents a number of challenges. While no option is without impacts, several alternatives are under development and worthy of serious consideration, in addition to the option of rebuilding the structures in their current locations. All options under consideration (shown in Figure 7) would work with the other major elements of the Hybrid Base Project. All new structures would meet current design standards for seismic safety, sidewalks and bike lanes where applicable.

Box around "The Box"

Early in the concept alternative development process, the opportunity was identified to create supplemental safe, pleasant, walkable and bikeable connections around "the Box." While the proposed Hybrid Base Project significantly improves pedestrian, bicycle and vehicle conditions in the central part of the box, there will still be considerable traffic impacts and frequent congestion. Rebuilding the structures as part of the interchange improvement project presents the opportunity to establish a circumferential network of local streets and pedestrian/bicycle paths that would let local movements not associated with Broadway/Weidler and the freeway move through the area without entering the center of "the Box" where they conflict with arterial and freeway-related traffic.

Primary Options under Development (Figure 7):

1. **Rebuild**
   This option would remove and rebuild the existing freeway overcrossings in their current locations. Although the replacement structures would meet current design standards, this option would not eliminate the 5-legged intersection at Vancouver & Broadway. Removing the Vancouver leg from the intersection would reduce accident potential and improve driver expectations within the interchange area.
2. **Align Vancouver with Flint (Flint)**
   This option would replace the existing Flint and Vancouver freeway overcrossings with a single, new overcrossing connecting Vancouver to Flint. The new Vancouver/Flint overcrossing would provide for a local street connection with Hancock to the east and a local street connection to the west. The intersection of Flint and Broadway would be signalized, the existing access to Wheeler from Broadway would be closed and access to Wheeler would be provided via Dixon. Flint would connect south of Broadway, across Weidler, and continue as a through-street connection to Winning Way between the two city parking structures.
3. **Align Vancouver with Dixon (Dixon)**
   This option would replace the existing and Vancouver freeway overcrossings with a single, new overcrossing connecting Vancouver to Dixon at Wheeler. The new Vancouver/Dixon overcrossing would provide for a local street connection with Hancock to the east and a local street connection to the west. Wheeler would connect as a two-way street to a signalized intersection at Broadway and Flint would be closed at Broadway. The south leg of the Wheeler /Broadway intersection would be a new, north/south through-street connection across Weidler to Winning Way between the two city parking structures.
4. **Align Vancouver with Dixon and form couplet (Dixon Couplet)**
   This option would replace the existing and Vancouver freeway overcrossings with a single, new overcrossing connecting Vancouver to Dixon at Wheeler. The new Vancouver/Dixon overcrossing would provide for a local street connection with Hancock to the east and a local street connection to the west. Wheeler would be paired with Ross as a one-way couplet with northbound traffic on Wheeler and southbound traffic on Ross.

Joint ODOT/City Recommendation on Options North of Broadway

The project team will continue to refine and evaluate these options and bring a recommendation for SAC consideration to the April 12 SAC meeting. SAC guidance is appreciated on what information and analysis will help the SAC make an eventual recommendation.

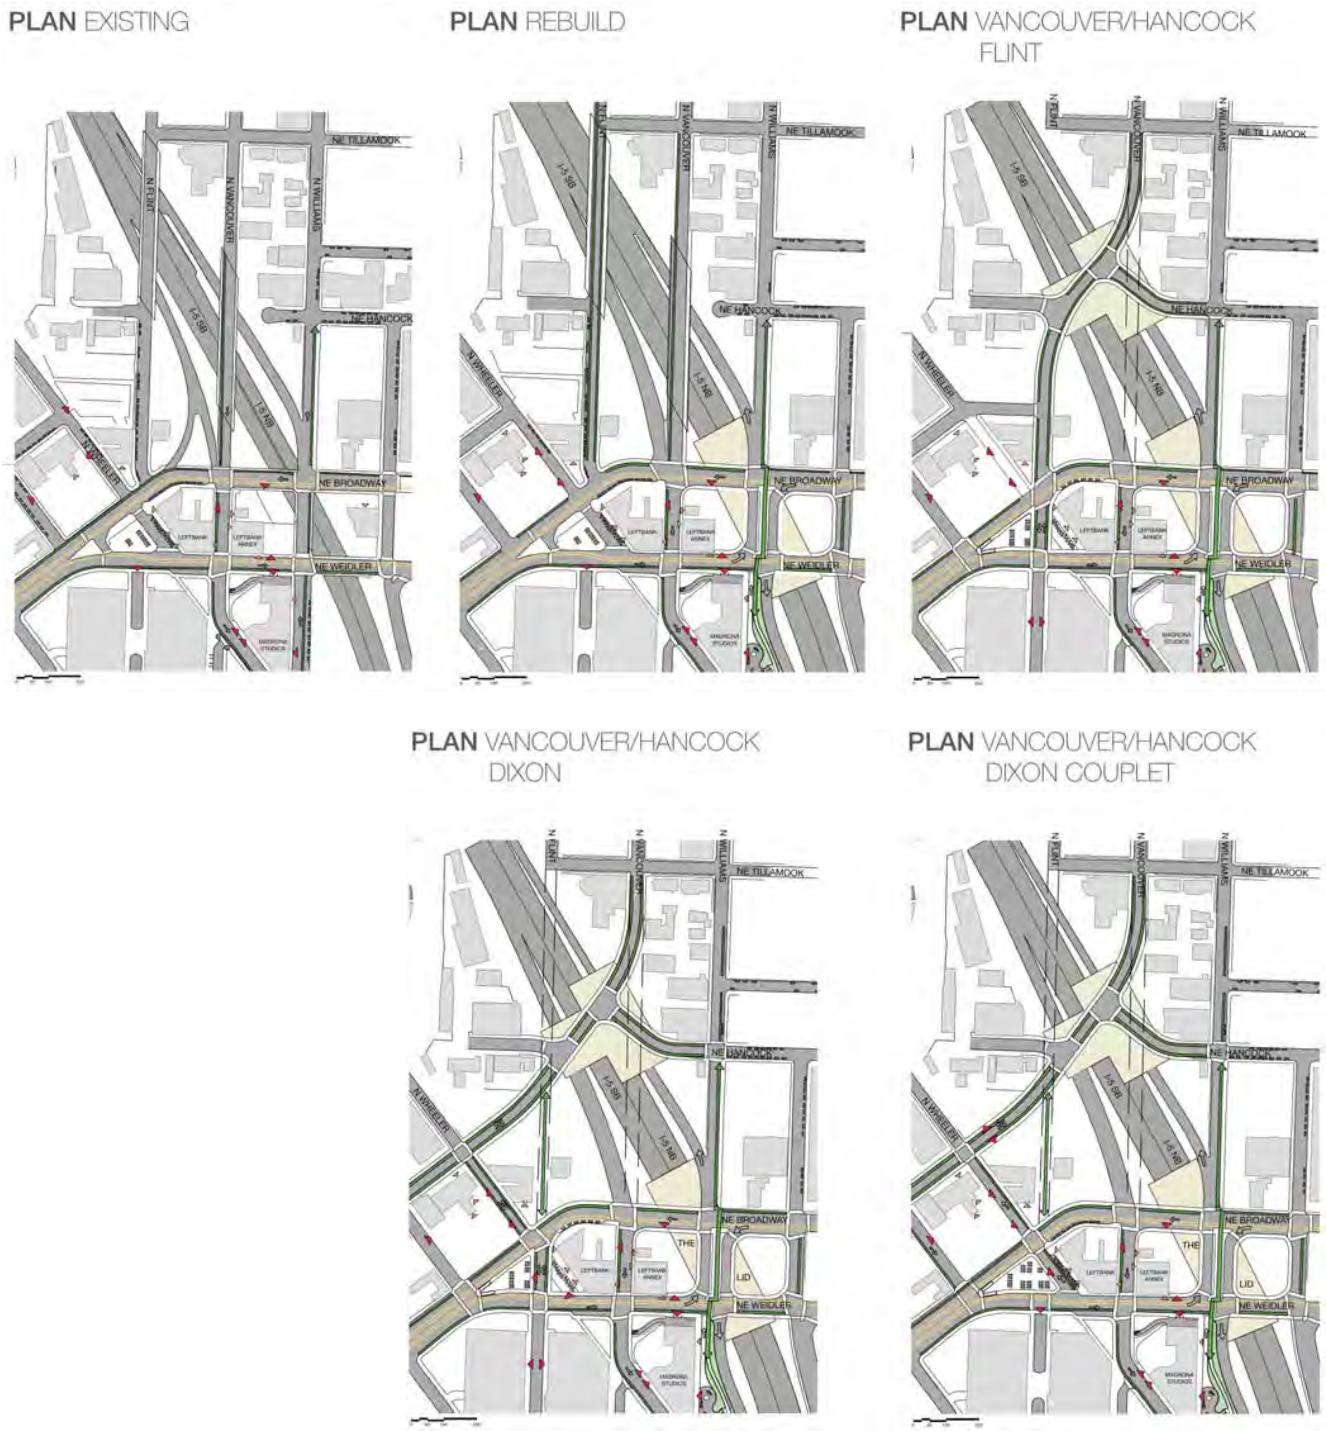

Figure 7: Options North of Broadway (illustrative concept drawings)

Criteria to Be Considered:

- Impacts to existing businesses and residents.
- Connectivity: Increase or maintain the connectivity, quality, and safety of the surface street system for all modes between and within the N/NE Quadrant and its adjacent districts.
- Developability and placemaking: Maintain or create development parcels that accommodate and facilitate the proposed land use, density and character of the district.
- Open Space: Expand the role and use of open space as a district system amenity.
- Opportunities: Leverage improvements to capitalize on district opportunities to improve livability in nearby sub-districts.
- Estimated capital costs of the options.

NEXT STEPS

The next SAC meeting is April 12th; at this meeting, project staff will present recommendations on the remaining two of four elements which are being refined further (the Clackamas Overcrossing and the options for North of Broadway).

To members of the North-Northeast Quadrant Project Stakeholders Committee:

During the last 60 years the Eliot neighborhood has been viewed as expendable by private and public agencies, and as an area transitioning from a residential community into something else. As recently as 1978, a member of the Portland Planning Commission suggested that the entire area be rezoned for employment uses, saying, "Let's face it, no one will ever build housing there again." In the 1980s a representative of the Urban League described Eliot as "two thin strips of residential uses," and said that as far as she was concerned any development was legitimate.

I and other Eliot volunteers did not agree with these thoughts and fought vigorously against them. However, compared to some of the proposals associated with the North-Northeast Quadrant Study, there are things to be said for them.

At least the authors of these statements were looking at the neighborhood holistically, rather than picking it apart piece by piece. At least they had the guts to confront the ultimate effects of their actions and attach their names to them. Finally, such a broad stroke approach would at least have allowed property owners to cash out as they left the neighborhood.

In this light, it would be better to re-route North Vancouver Avenue directly through the Paramount Apartments, the Left Bank Project and perhaps the Madrona. This would at least compel the government entities involved to pay the owners for their property, and the commercial and residential tenants for their relocation. In contrast, at least one of the options would be the equivalent of cutting halfway through the truck of a tree, leaving the object of such attentions technically alive but unviable.

Likewise, proposals to make North Hancock Street a through route, with a freeway overpass carrying motor vehicles, would inevitably lead to a major increase in cut-through traffic in a neighborhood that already has too much of it. Proposals to place a traffic barrier on Hancock would merely move the new through traffic to some other street. You can see the potential future if you drive west on Northeast Broadway from 33rd Avenue and attempt to make your way north; you encounter a series of cul-de-sacs, diverters and other controls that protect the quiet and safety of some streets at the expense of others, and turn the total area into a mess. (Or perhaps not. This is Eliot, after all, and how many decades have we waited for traffic signals on Williams and Vancouver at Cook, after telling the City how dangerous the status quo is?) The message to the residents of Hancock is, "You have the choice of henceforth living on a regional collector, or gain some protection by messing with your own access. Don't ask why; someone somewhere has an agenda and you live in Eliot; get used to it."

Indeed, proponents of this solution have had the gall to suggest that it is a benefit to this neighborhood, that it would "re-knit" the area cut in half by the I-5 Freeway so long ago. This is more than false, it is an insult. They know as well as I do that if benefiting Eliot were the motivation, this proposal wouldn't even be on the table. Like I-5, this is for people passing through.

Planner Joe Zehnder has said that congestion at the Williams-Vancouver-Broadway-Weidler Box is a major deterrent to redevelopment of both lower Broadway and the Lloyd District. Perhaps so, but this neighborhood has been asked to sacrifice itself for the greater good too many times. I do not have an alternative solution, but I have no qualms about saying, "We gave already. Do something else."

You Stakeholders, I believe, agreed to a stipulation that traffic solutions should "do no harm." The question is, how narrowly or broadly do you construe this directive? Obviously a pile of rubble represents "harm"; I submit that a building, or a block, is harmed if traffic "improvements" leave it standing but rob it of its value. I urge you to adhere to a higher standard.

I am not the first to raise such concerns, and I am distressed that despite this these proposals are continuously approved for "further study." I am reminded of the quote, "A wise victor will, whenever possible, deliver his terms of surrender in installments." I would hope more of you would find the sense to emulate Dean Gisvold of Irvington and say, "Enough is enough. It's spinach and to hell with it. No."

Lee Perlman

March 14, 2012

Dear SAC Members,

It's my understanding that on March 15, the I-5 N/NE Broadway Wielder Interchange SAC is scheduled to vote on the project team's recommendations. One of the recommendations is to remove the SB Ramp from any further refinement, thus, removing the SB Ramp as a base element of the project. While I am not able to attend in person, I feel it is important to offer OTA's position on this issue. OTA cannot support this recommendation for the reasons outlined below.

The Oregon Trucking Associations, Inc. represents trucking companies in Oregon where we are a key partner in the intermodal freight network. In 2010 trucks transported 88% of the total manufactured tonnage in the state, or 638,135 tons per day. Over 77% of Oregon communities depend exclusively on trucks to get their goods with many of the loads first traveling through the Portland region via I-5. Trucks deliver your life's essentials!

OTA supports a balanced transportation system throughout Oregon and has been actively involved in discussions in the Portland region where significant investments have been made in alternative transportation. While we applaud these efforts, we believe it's time to balance the investments in our transportation system by keeping the SB Braided Ramp as a priority base element in the I-5 Broadway Weidler/N/NE Quadrant project.

The research conducted by the project team and presented to the Transportation Sub-committee on December 8, 2011 outlines the value of investing in such a balanced transportation system. In the report, the SB Braid outperformed the other designs by:

- Improving safety in the project area
- Reducing traffic delays dues to crashes.
- Improving how efficiently vehicles are able to travel through the study area.
- Reducing Weaving: Between I-405 and the Broadway/Weidler interchange and between the Broadway/Weidler interchange and I-84

OTA members put safety first, investing in improved driver training programs and advanced safety technologies. They actively participate in industry safety initiatives at the local, state and national levels. In the project area, the crash rate is three times what it is in the Terwilliger curves. From 2005 - 2009, there were 472 crashes reported in the study area. Research by the project team shows the crashes are due to short weaving sections, conflicting movements and friction from through movements, problems which the proposed SB Braid would reduce.

Oregon Trucking Associations, Inc.
4005 SE Naef Rd., Portland, OR 97267
Phone: 503. 513.0005 Fax: 503.513.9541
www.ortrucking.org

Removing the SB Braid would be detrimental to our transportation system as a whole. If the goal of SAC members is to improve the safety and functionality of this area, the SB Braid must remain a priority base element. Ignoring safety concerns in favor of avoiding *potential visual impacts* (outlined in the Project Team's Dec. 2011 report) is not a viable argument. Nor is it a rationale that will convince the families who have had their lives impacted by the serious crashes in the project area. *Therefore, it must be restated that for OTA to support the project design, the SB Braid must remain a priority base element*. Anything less would set the wrong standard in our community.

The trucking industry in Oregon plays a significant role in the economy. There are over 6,190 trucking companies based in Oregon, most of which are small and locally owned. These companies provide one out of 16 jobs (85,050) in Oregon, paying wages totaling over $3.8 billion. The trucking industry also 'invests' over $486 million in federal and state roadway taxes and fees each year. For OTA and its members, the facts are clear: We need to invest in the asset. It's time to relieve the pressure this quadrant is under by improving safety and reliability in the project area. This will ultimately enhance the economic strength of the region.

OTA recommends the SB Braid remain a priority base element in the project design and encourages the committee to support a balanced transportation system.

Sincerely,

Debra Dunn

Debra Dunn
President
Oregon Trucking Associations, Inc.

N/NE Quadrant & I-5 Broadway/Weidler Plans

SAC Meeting #14 **March 15, 2012**

CENTRAL CITY 2035

CITY OF PORTLAND, OREGON 1851

Oregon Department of Transportation

CC2035 Framework

1. Regional Center:

- Economic Competitiveness
- Business Growth

center for commerce, employment, arts and culture, entertainment, tourism, education, and government

2. Housing & Neighborhoods:

- Complete Neighborhoods
- Human and Health Services

successful, dense, prosperous and livable diverse neighborhoods - support the needs of people of all ages, incomes and abilities.

3. Transportation:

- System Design and Management
- System Maintenance/Infrastructure
- Parking
- Safety and Accessibility

mobility needs of people and goods - safe, affordable, equitable, and efficient transportation system

CC2035 Framework

4. Urban Design:

- Larger Landscape
- Districts
- Public Realm
- Central City Waterfront
- Historic Resources

design and development - a vibrant place of lasting quality - the success and evolution of Central city.

5. Environment:

- Green Buildings
- Green Infrastructure
- EcoDistrict Strategies

building and district scale - energy efficiency, reduce pollution, stormwater and waste, and provide wildlife habitat.

N/NE Quadrant Plan Structure

Lloyd District

- District Goal
- Policies
- Implementation Actions

Lower Albina

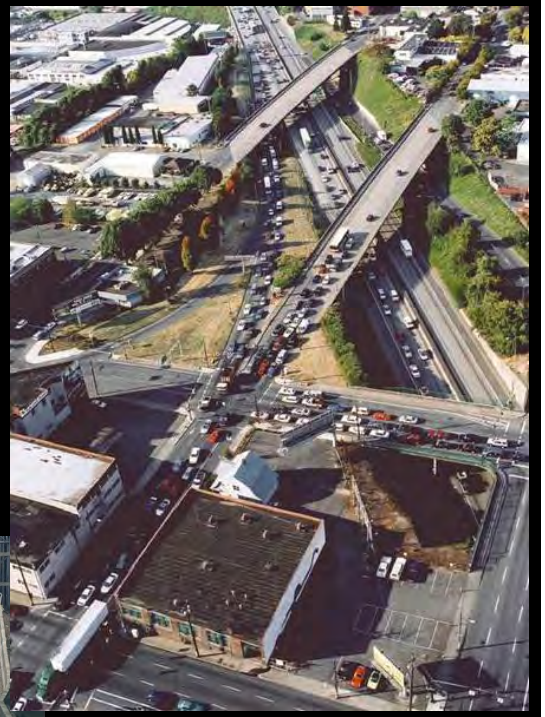
- District Goal
- Policies
- Implementation Actions

Organized into 5 policy areas:

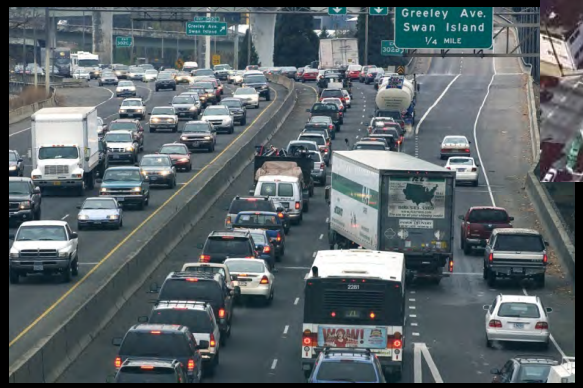
Regional Center
Transportation
Environment
Housing and Neighborhoods
Urban Design

Goal: Overarching vision for the district
Policy: More specific direction on topics or issues
Implementation actions: Regulatory changes, projects, programs, future work items or studies

Presentation



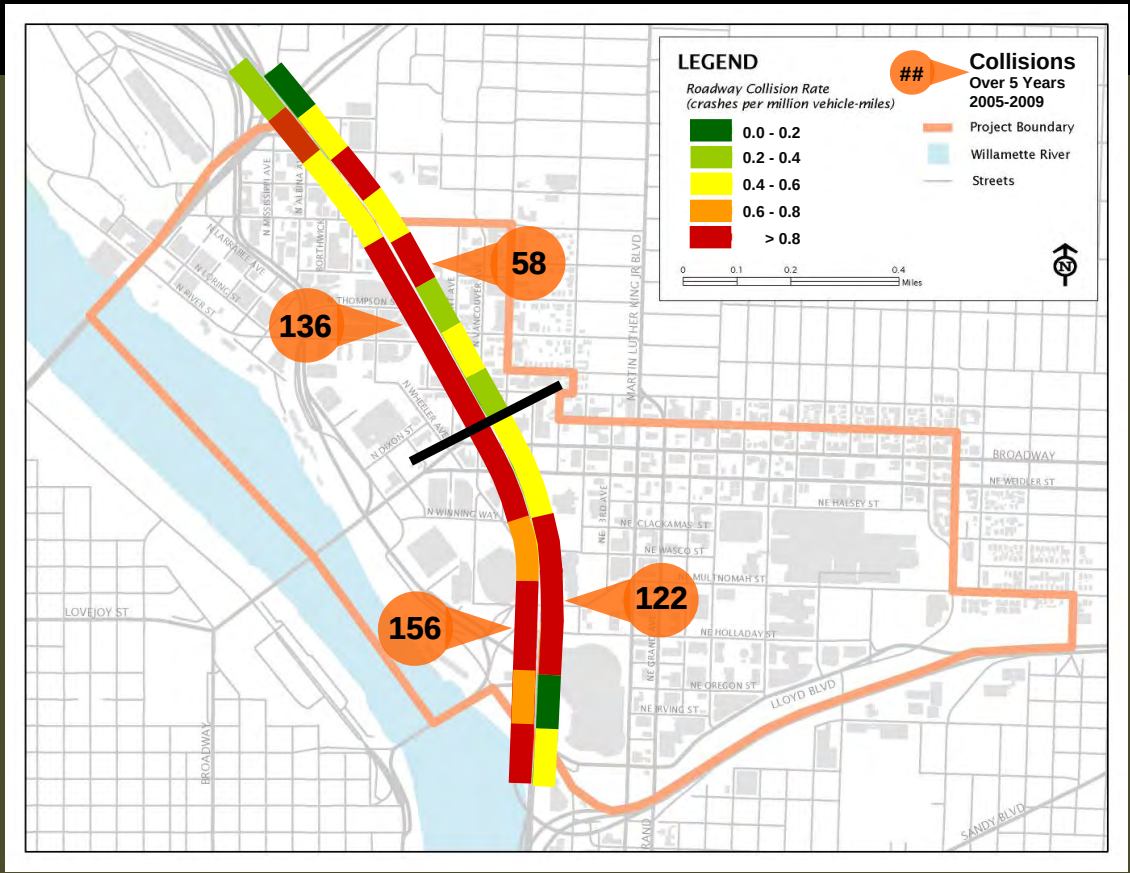
- Purpose of I-5 Project
- Review of SAC 13 Outcomes
- Hybrid Elements for Further Discussion



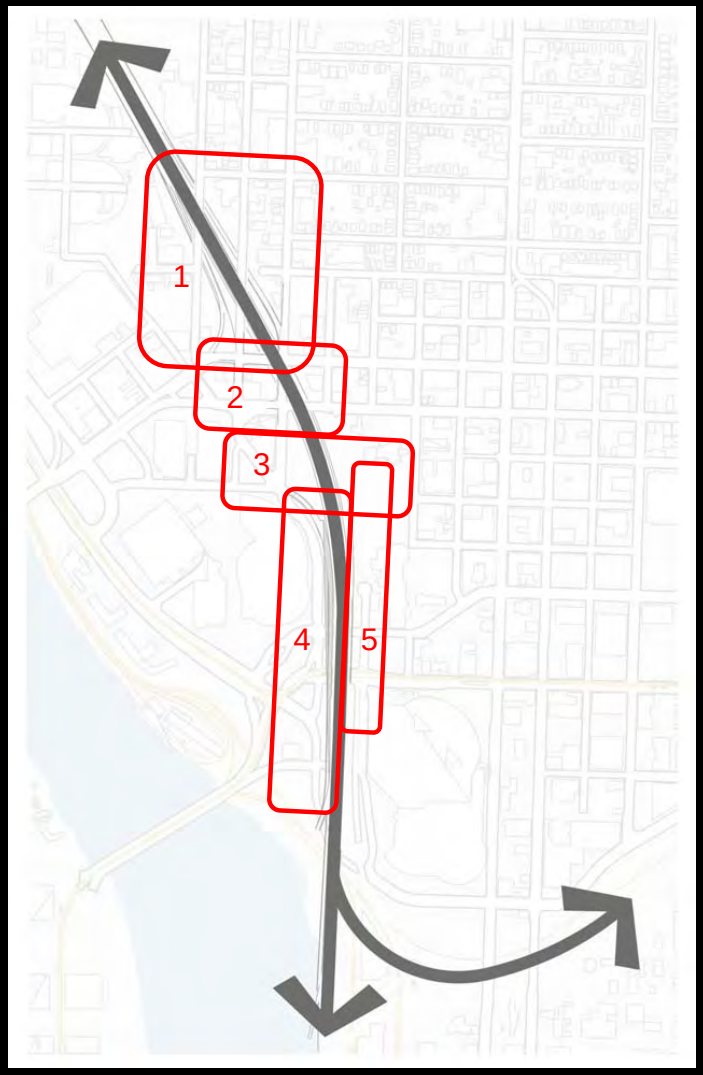
Review: ODOT Purpose

Improve safety and operations on I-5

in the vicinity of the Broadway/Weidler interchange

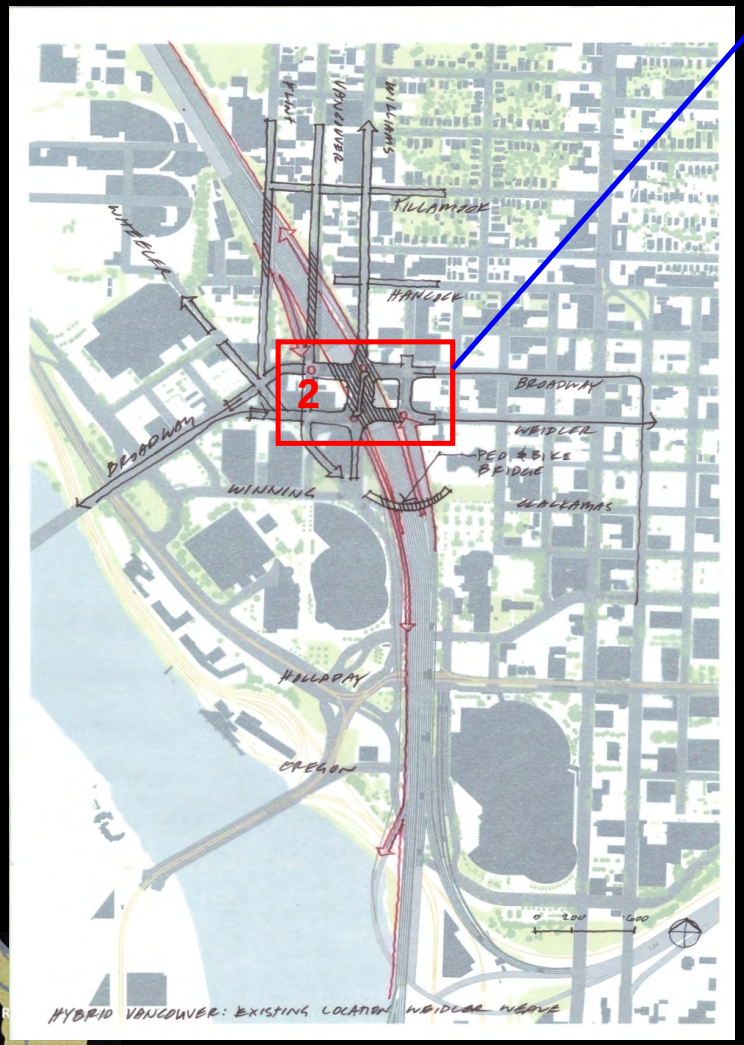


Review: I-5 Crashes



CENTRAL CITY 2035

Review of SAC 13
(February 16, 2012)



Review: Key Hybrid Map

1. Hancock/Vancouver
2. Broadway/Weidler Lid
3. Clackamas Overcrossing
4. The Southbound Braid
5. The Multi-Use Path

CENTRAL CITY 2035

2. Broadway/Weidler Lid: Base Hybrid Project

2. Broadway/Weidler and Auxiliary Lanes

To Include:

TSM and TDM

Mainline Freeway Safety Improvements:

- **Extend auxiliary lanes**
- **Widen shoulders**

Rebuild Broadway/Weidler Bridge with a lid.

- **Improved bike/ped facilities**
- **Lid over I-5**
- **Storm water management**
- **Seismic upgrades**

Move I-5 southbound on-ramp from Wheeler to Weidler

Reverse traffic flow lanes with a center MUP on Williams

Base Hybrid Project

Cost:

- Add auxiliary lane to I-5 in both directions ($140 - $150 million *)
- Rebuild Broadway/Weidler/Williams with lid ($100 - $110 million)

** Additional costs will be required, at minimum, for rebuilding Flint and Vancouver, north of Broadway ($45-$50m)*

- *Today's Dollars*

SAC Meeting 13 Review

(February 15, 2012)

Observations/What We Heard:

- Freeway Performance

  - What are the differences between the Aux Lane and Braid?

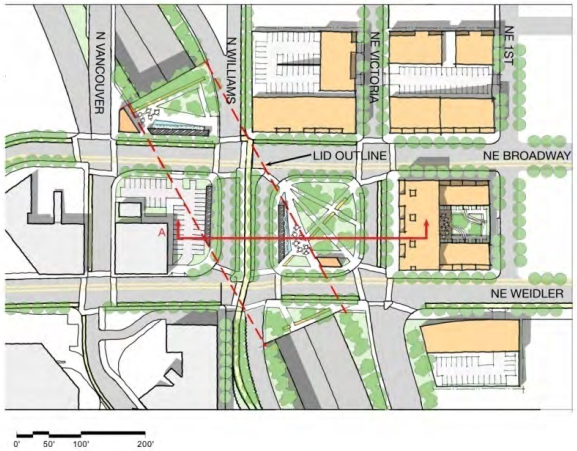
- Reverse Traffic Flow Williams:

  - Would the center multi-use path be protected from drivers on Williams?

SAC Meeting 13 Review

(February 16, 2012)

Observations/What We Heard:



- Lid

  - What could Lid look Like? How could the land be used?

SAC Meeting 13 Review
(February 16, 2012)

- Called Question 1:

  Do you agree with the Staff recommendation to move forward with Base Hybrid Concept?

✓ *SAC Approved*

Elements for Further Study

- Rebuild Vancouver and Flint in their current location
- Realign Vancouver west with a lid

Elements for Further Study

- Southbound Braided Ramp
- Clackamas Overcrossing
- Eastside multi-use path (MUP)

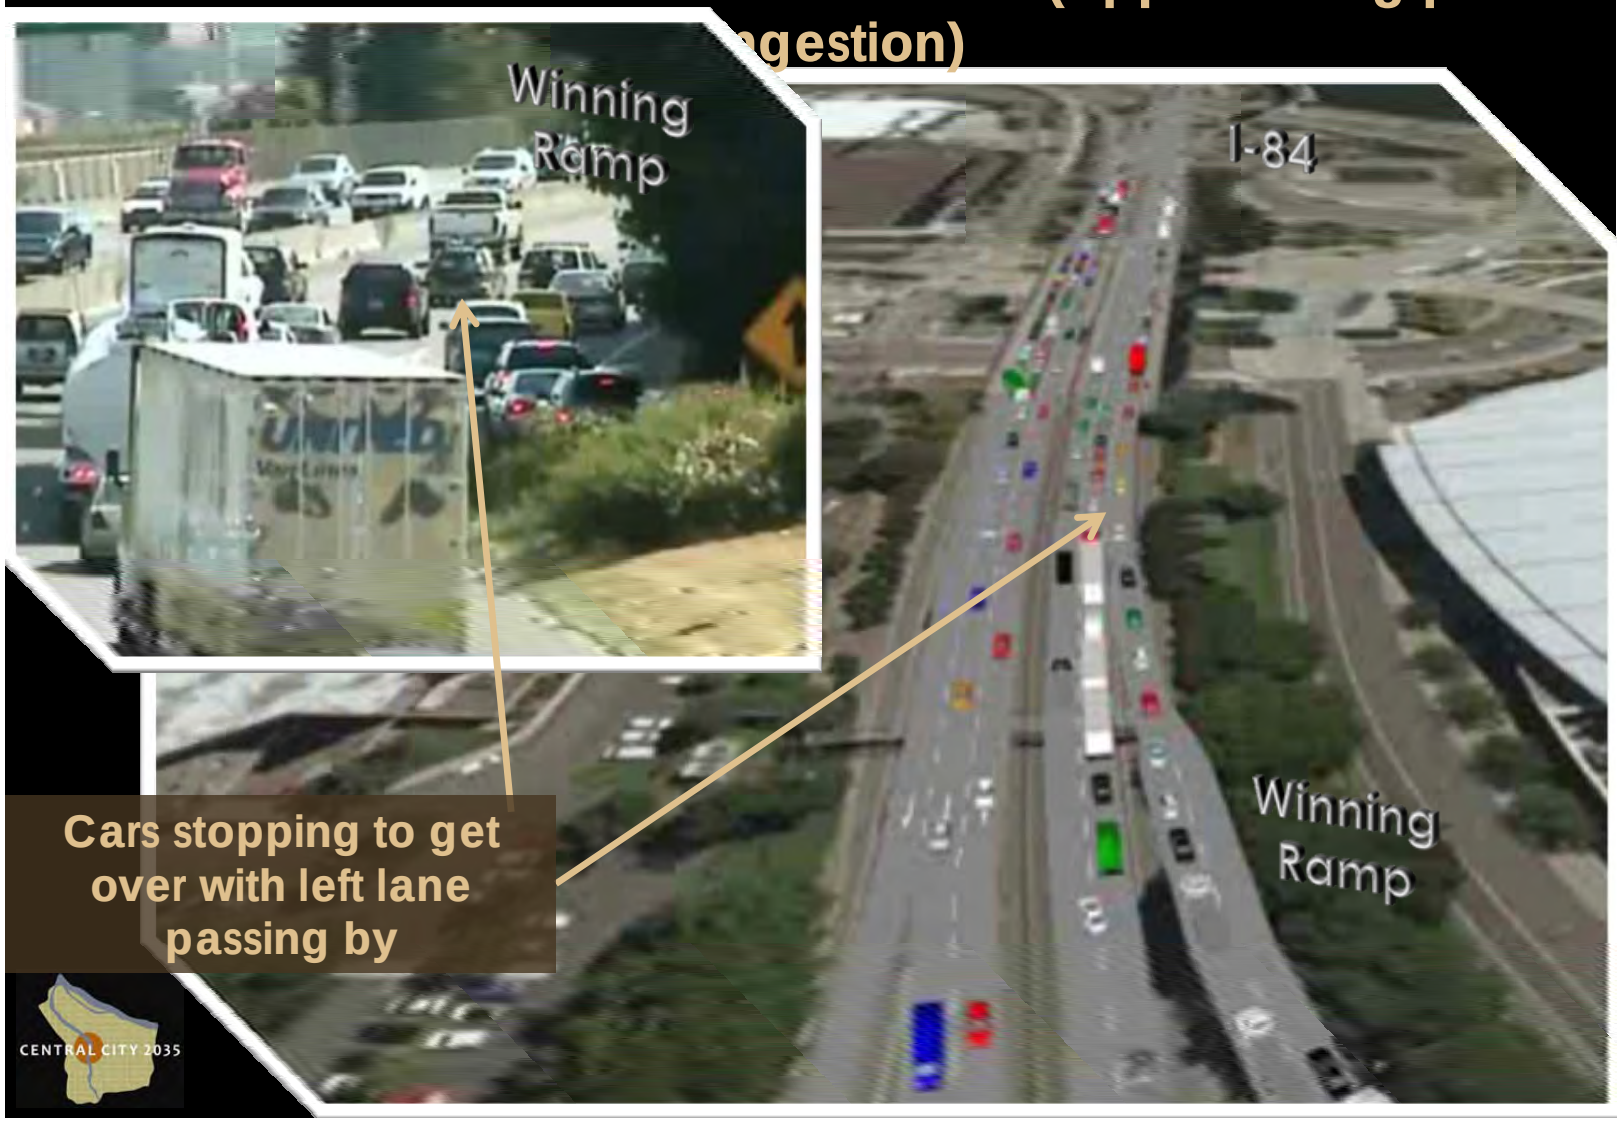
CENTRAL CITY 2035

Hybrid Projects for Further Study

SB Braid: Safety Analysis

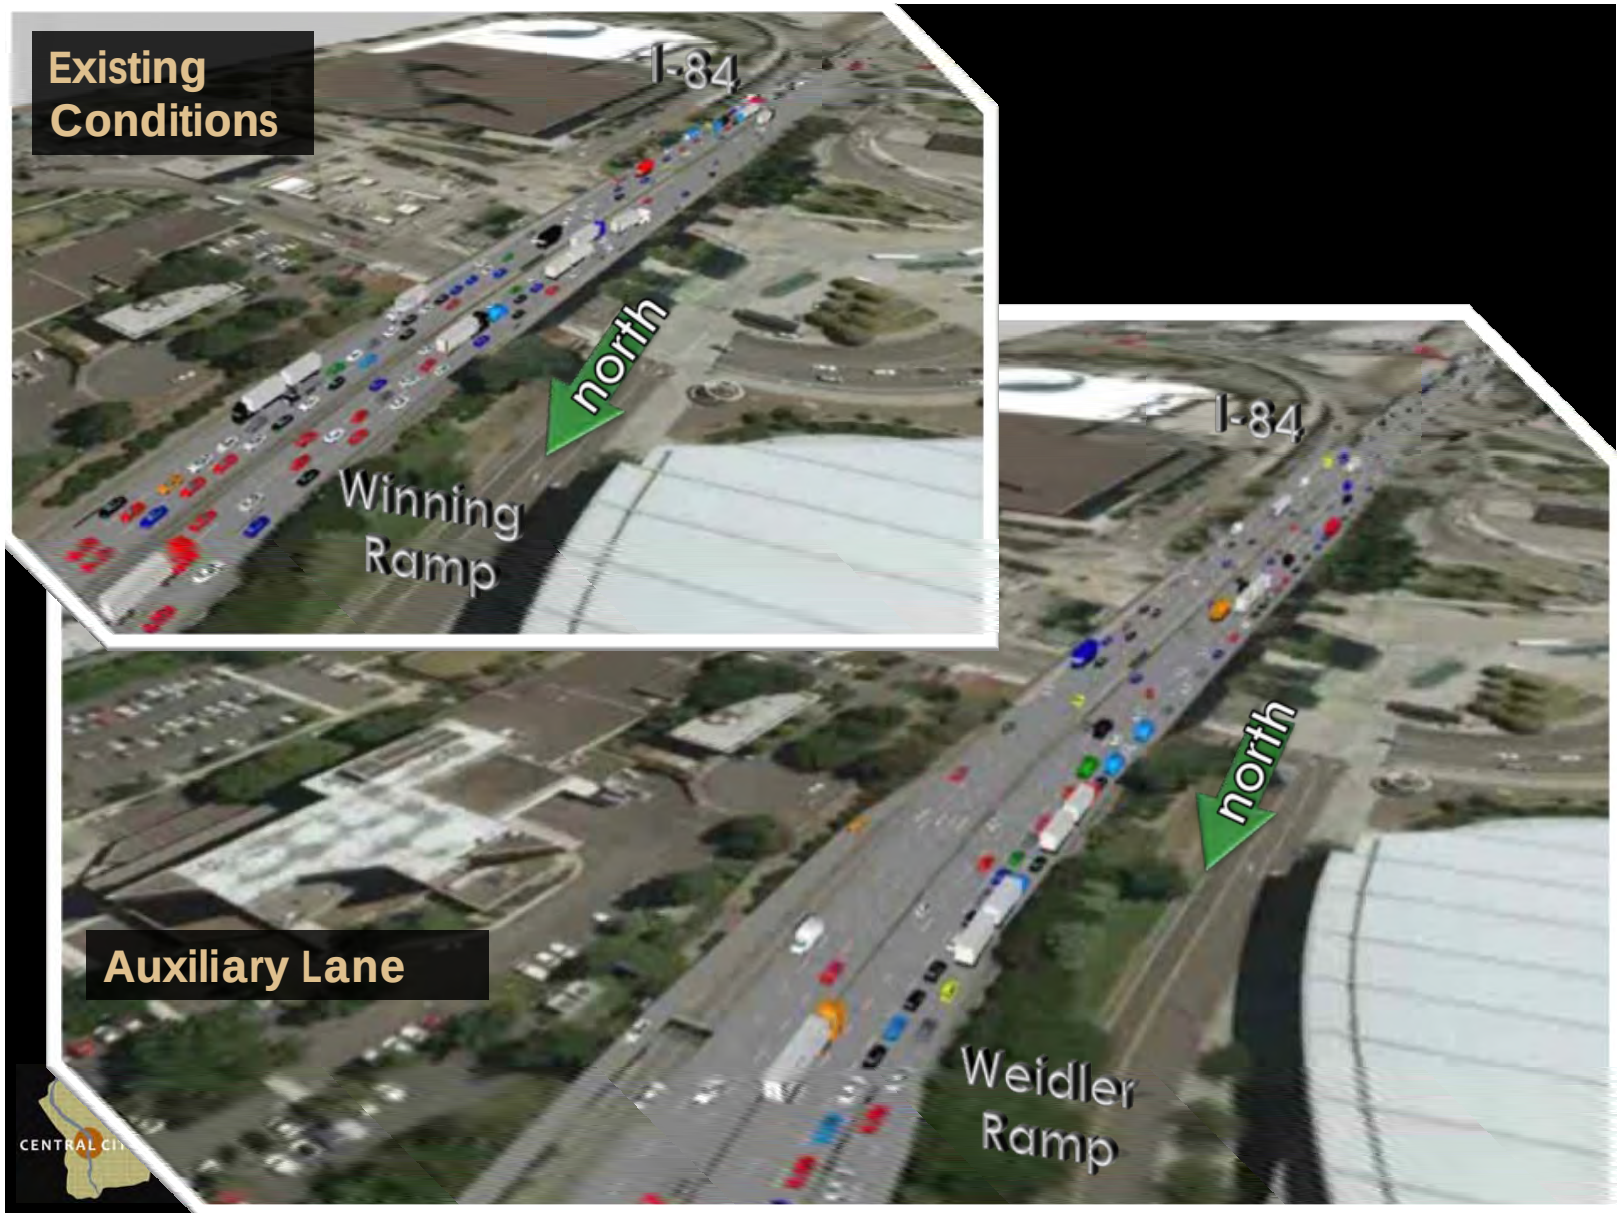
Looked at handful of sites in Portland region

- Based on data from similar locations, adding an aux lane is expected to reduce mainline crashes by 30%-70%
- Braid in combination with Aux lane is expected to reduce the number of mainline crashes 45%-85%
- Vissim simulation used to look at current traffic volumes between 2:00-3:00 (shoulder period)

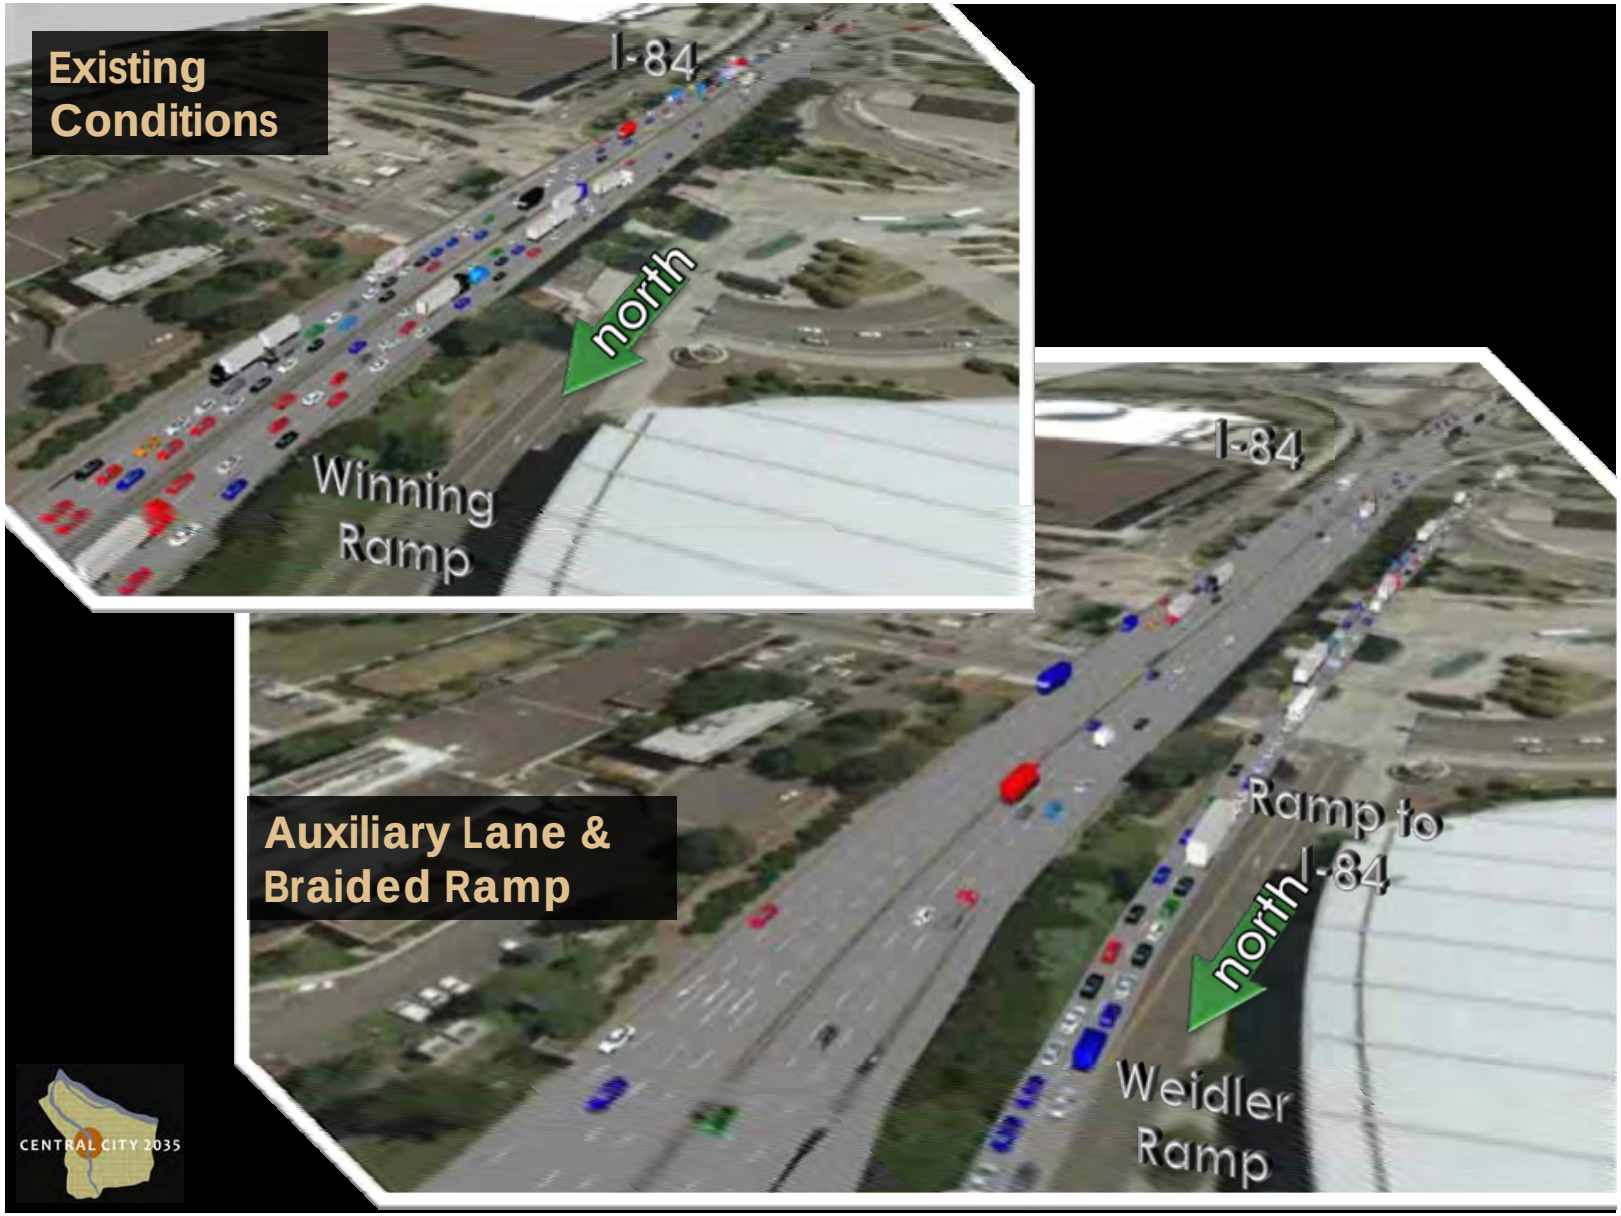


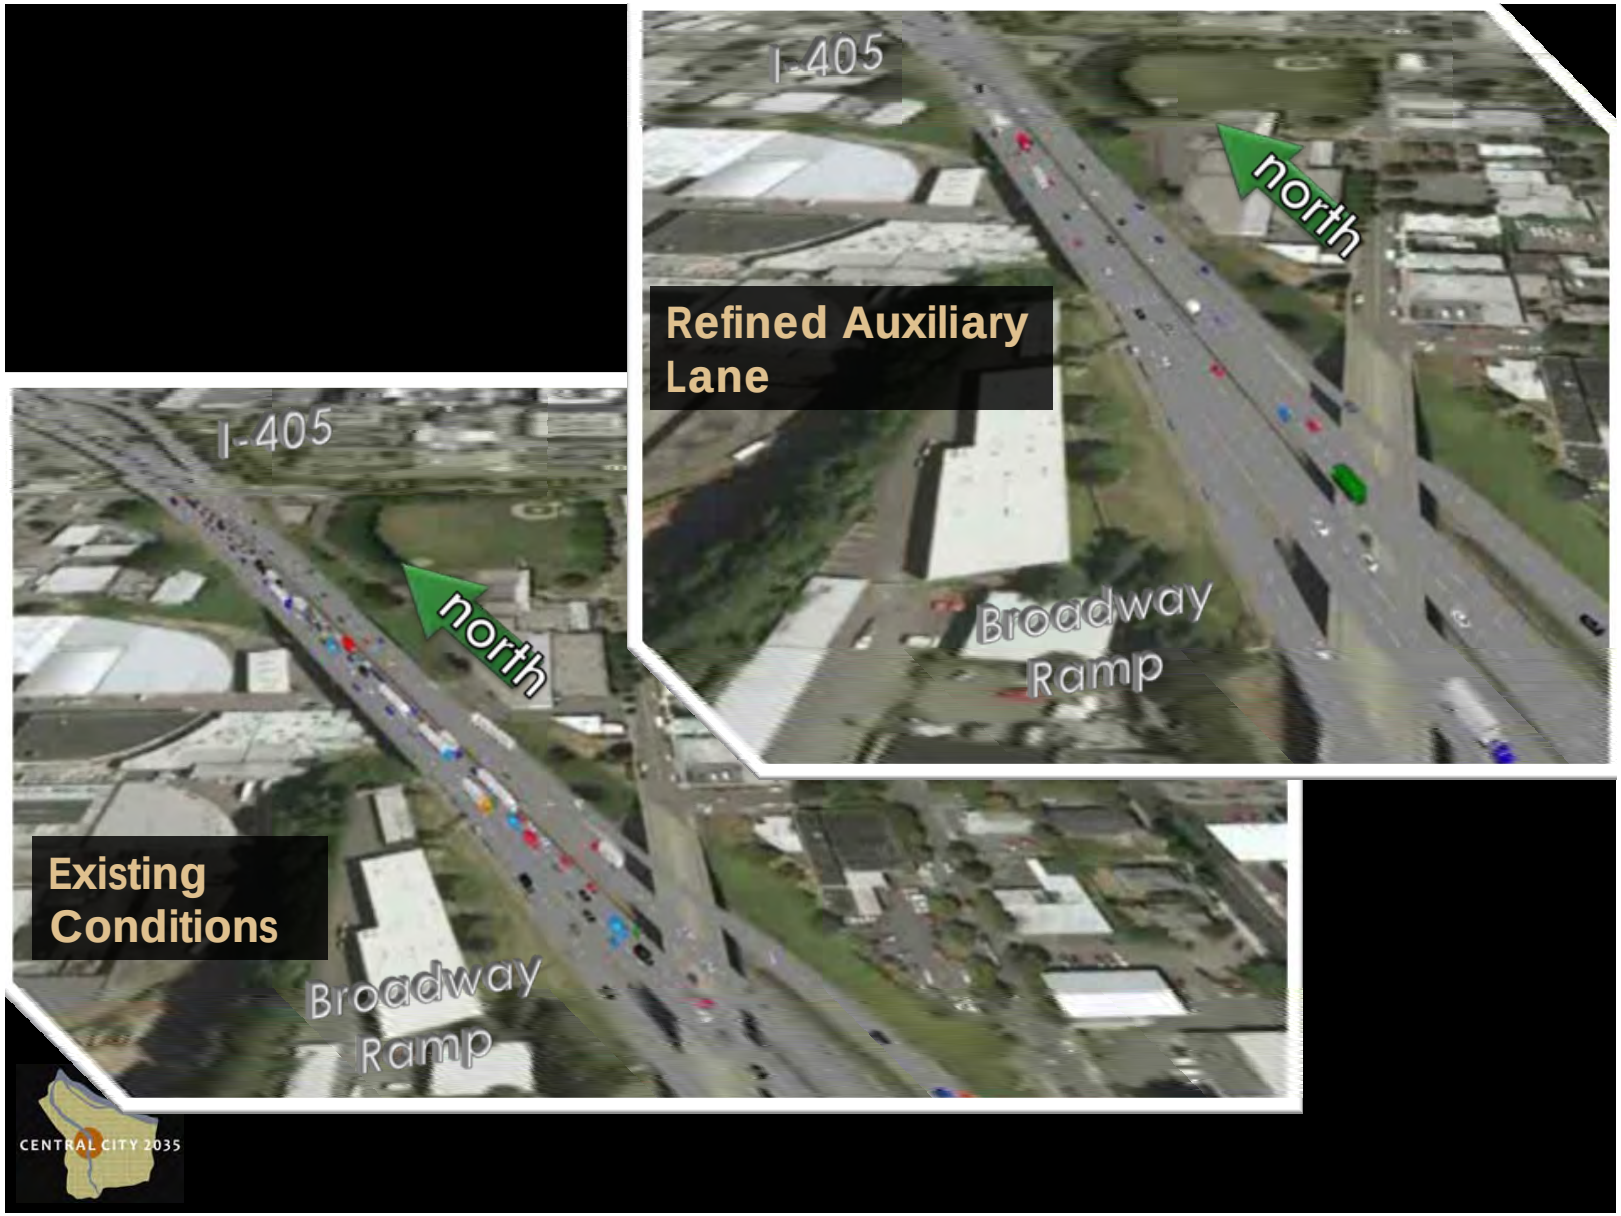
Vissim Simulations

- Looking at existing vs. addition of aux lane and aux lane/braids
- Based on current traffic counts
- Studied shoulder period (2:00-3:00)
- Look for traffic movement on ramp and right lane as well as congestion on far left lane(s)

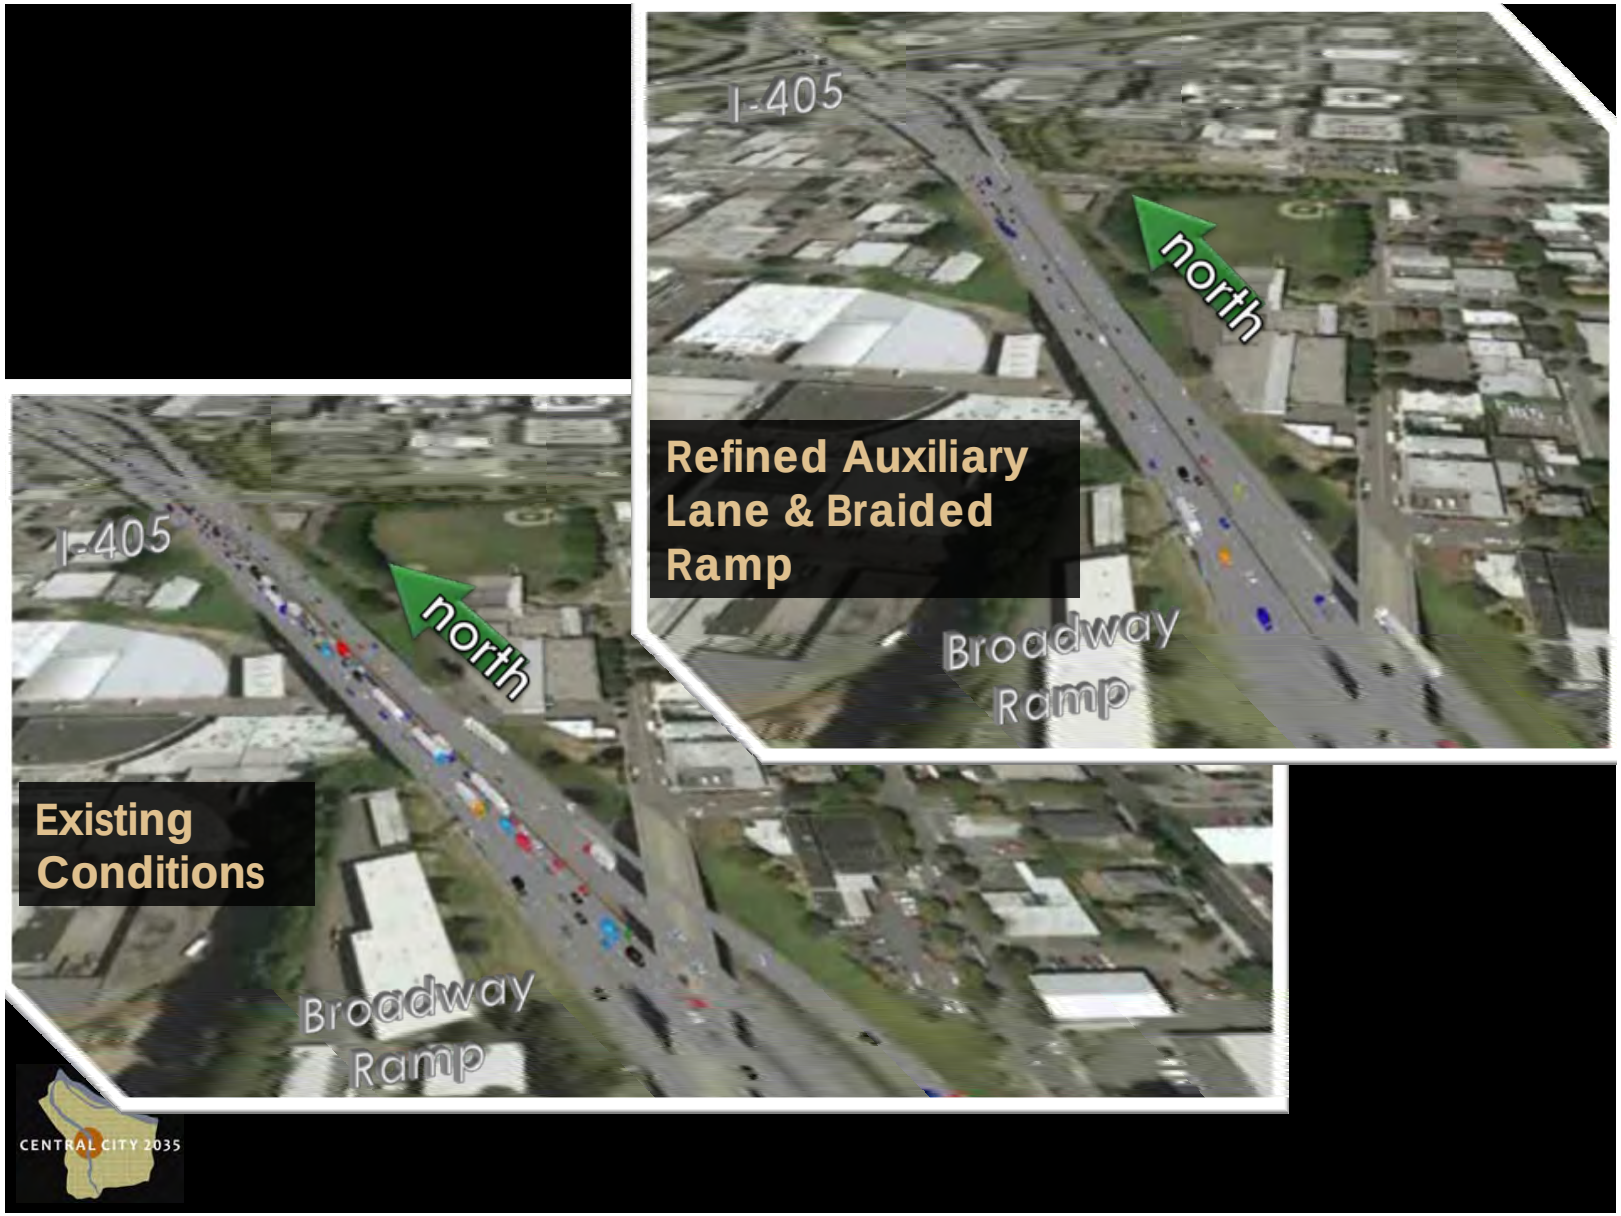


Actual Field Conditions vs. Simulation (approaching peak ngestion)





Here is what to look for in the following video clips: in all four slides



- The relocated on-ramp from Wheeler/Winning Way to Weidler
- Compare right lane congestion
- Potential crash locations
- Freeway speeds in left lanes

Existing Conditions

CENTRAL CITY 2035

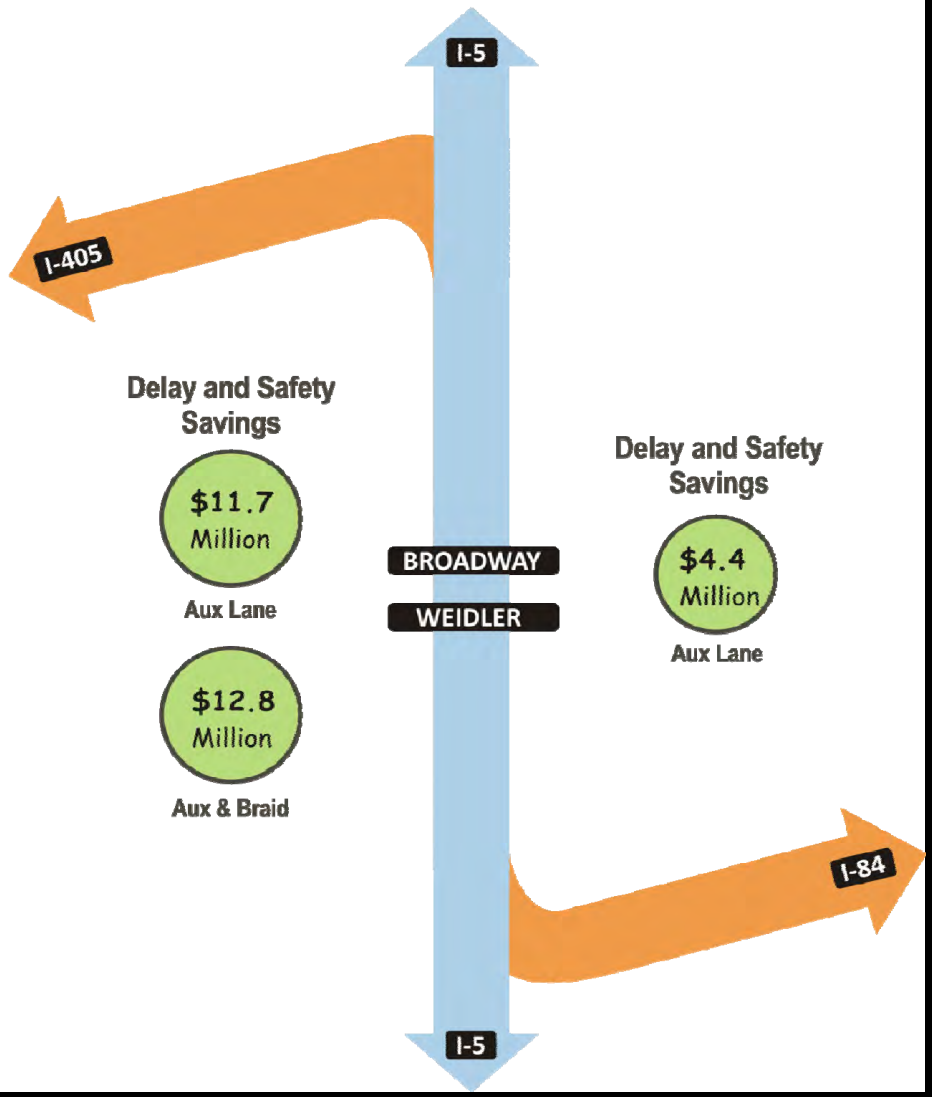
These prior slides show:



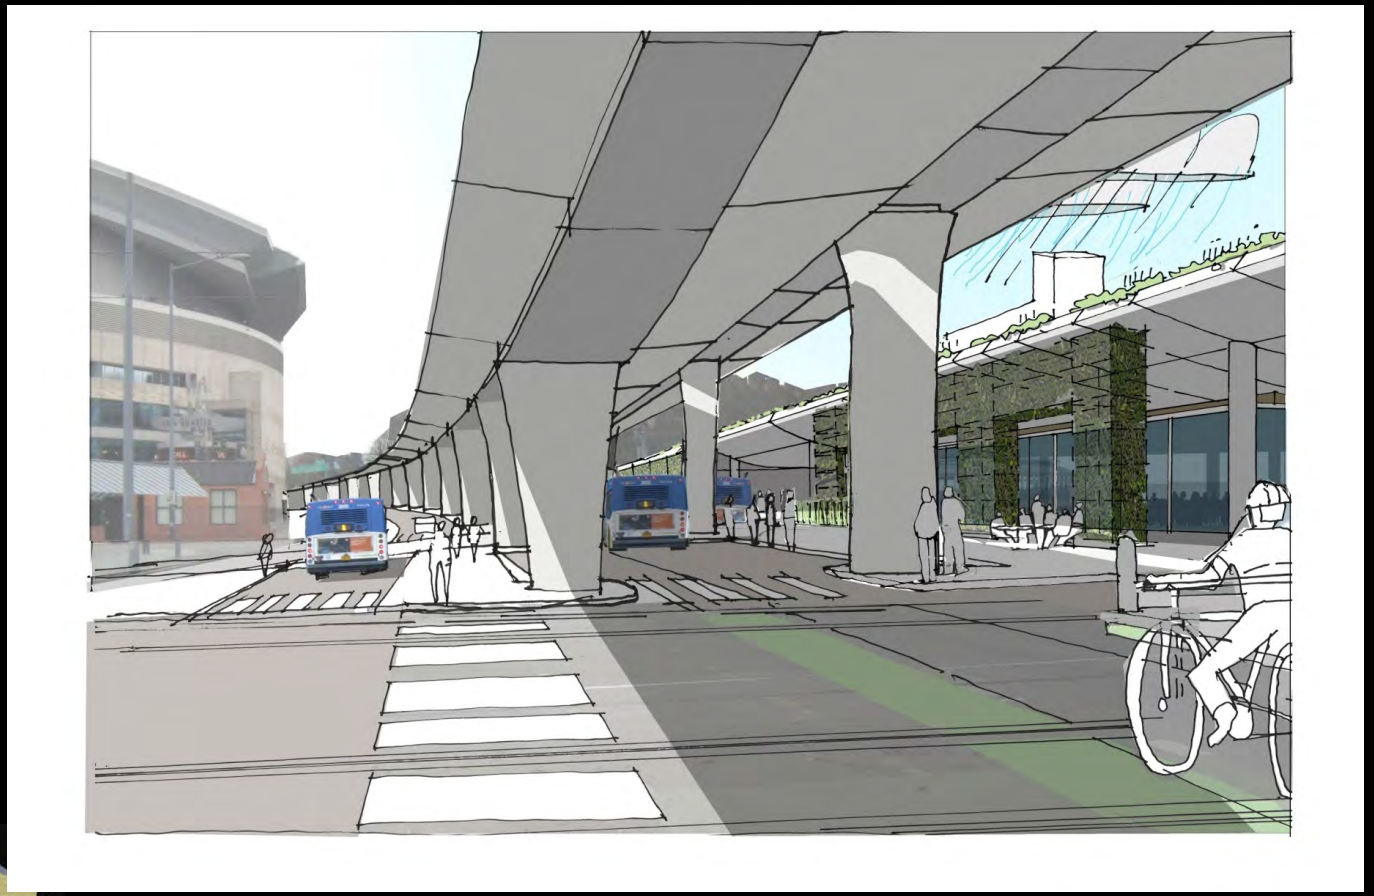
1)Existing Conditions: High congestion in all lanes. Short weaving distance with Wheeler/Winning Way On-ramp

2) Aux Lane Only: Increase in weave length with relocated on-ramp to Weidler

3) Aux Lane and Braid: Elimination of I-5/I-84 Weave. Additional reduction in crashes over aux lane alone

Current Annual Cost Savings

CENTRAL CITY 2035



Existing Conditions at Transit Center

Aux Lane at Transit Center

Aux Lane, Braid at Transit Center

CENTRAL CITY 2035

Transit Center

CENTRAL CITY 2035

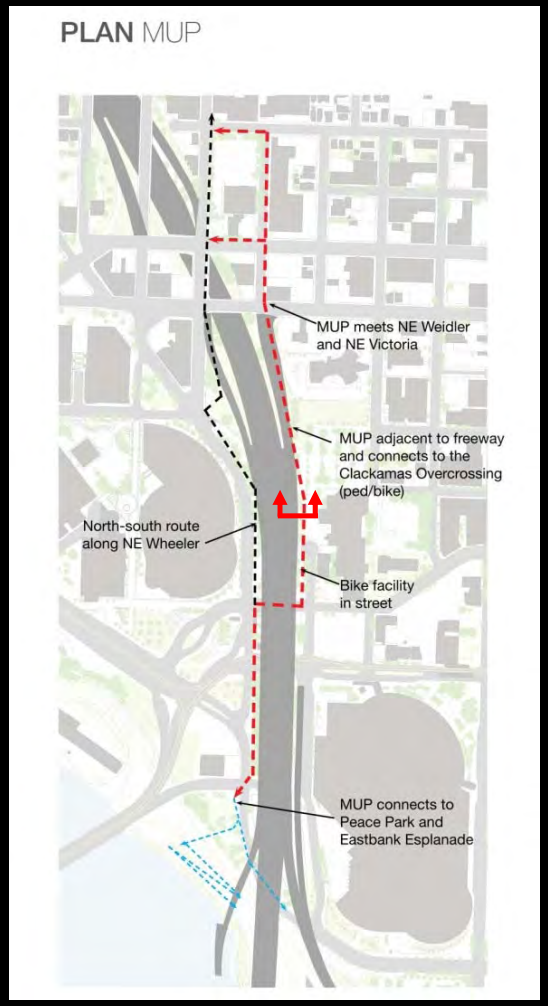
SB Braid

- Benefits
  - Added reduction in accidents over the addition of aux lanes
  - Removal I-84/I-5 weave
- Constraints
  - Cost ($140-$150m)
  - Visual/urban design impacts on the Westside of freeway
  - Impacts on transit center

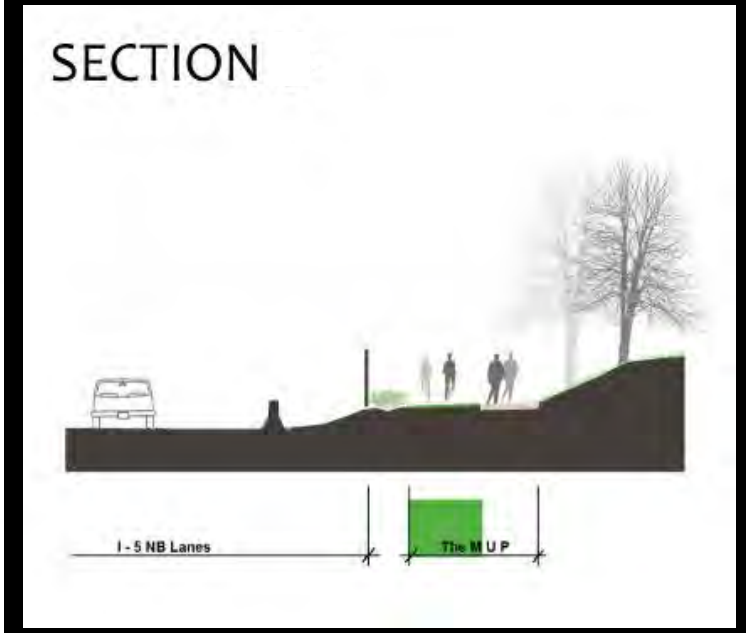
Project Team Recommendation

The SB braided ramp is not recommended for further refinement at this time.

- The SB Braid shows promise for further improving safety and operations within the project area. If after base improvements are implemented and safety and operational issues remain, the SB Braid should receive further consideration.



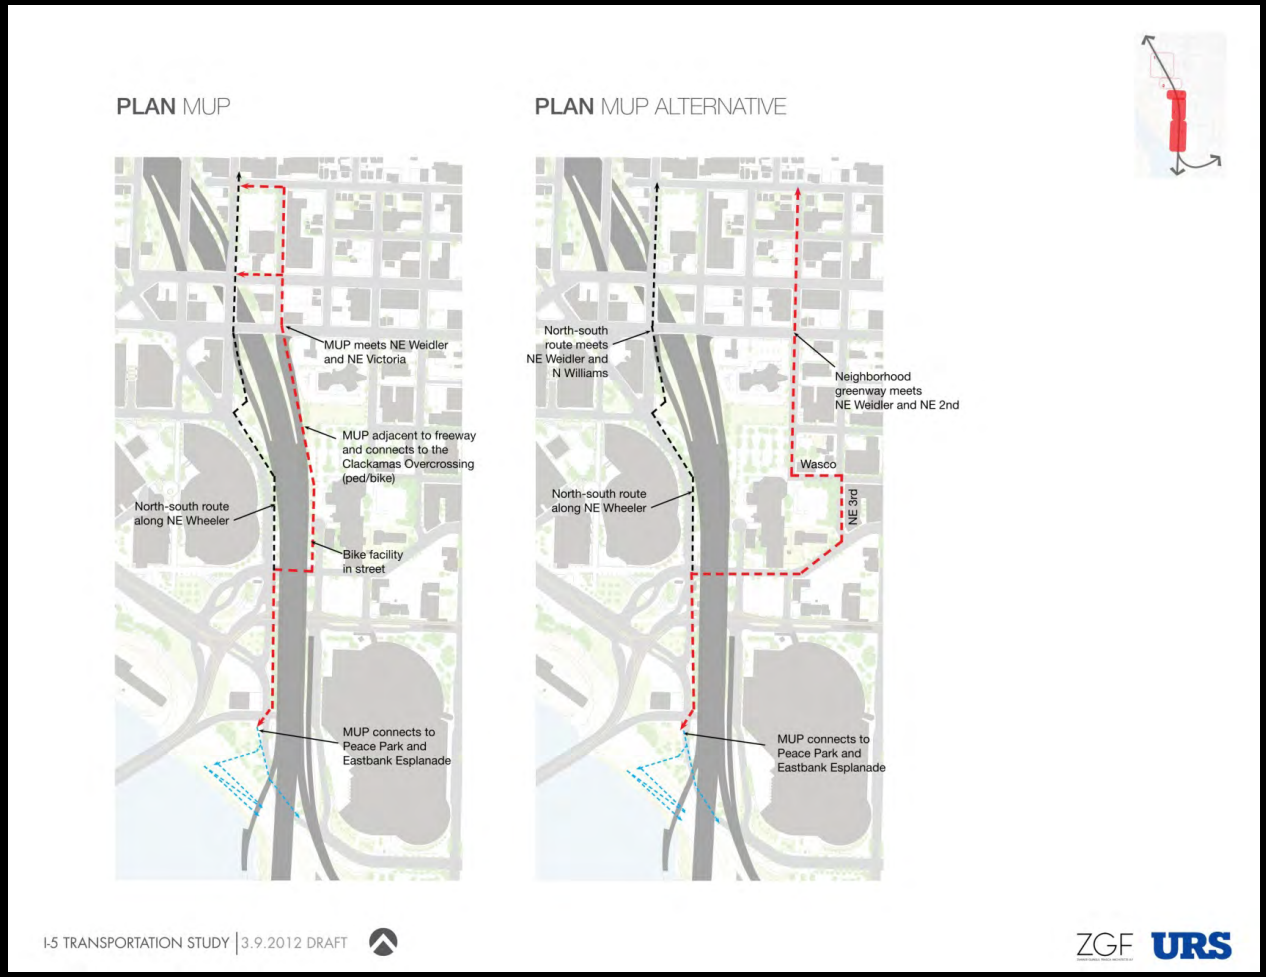
Southbound Braided Ramp:



Do you agree with the staff recommendation to discontinue refining the Southbound Braided Ramp?

Break

Multi Use Path (MUP)



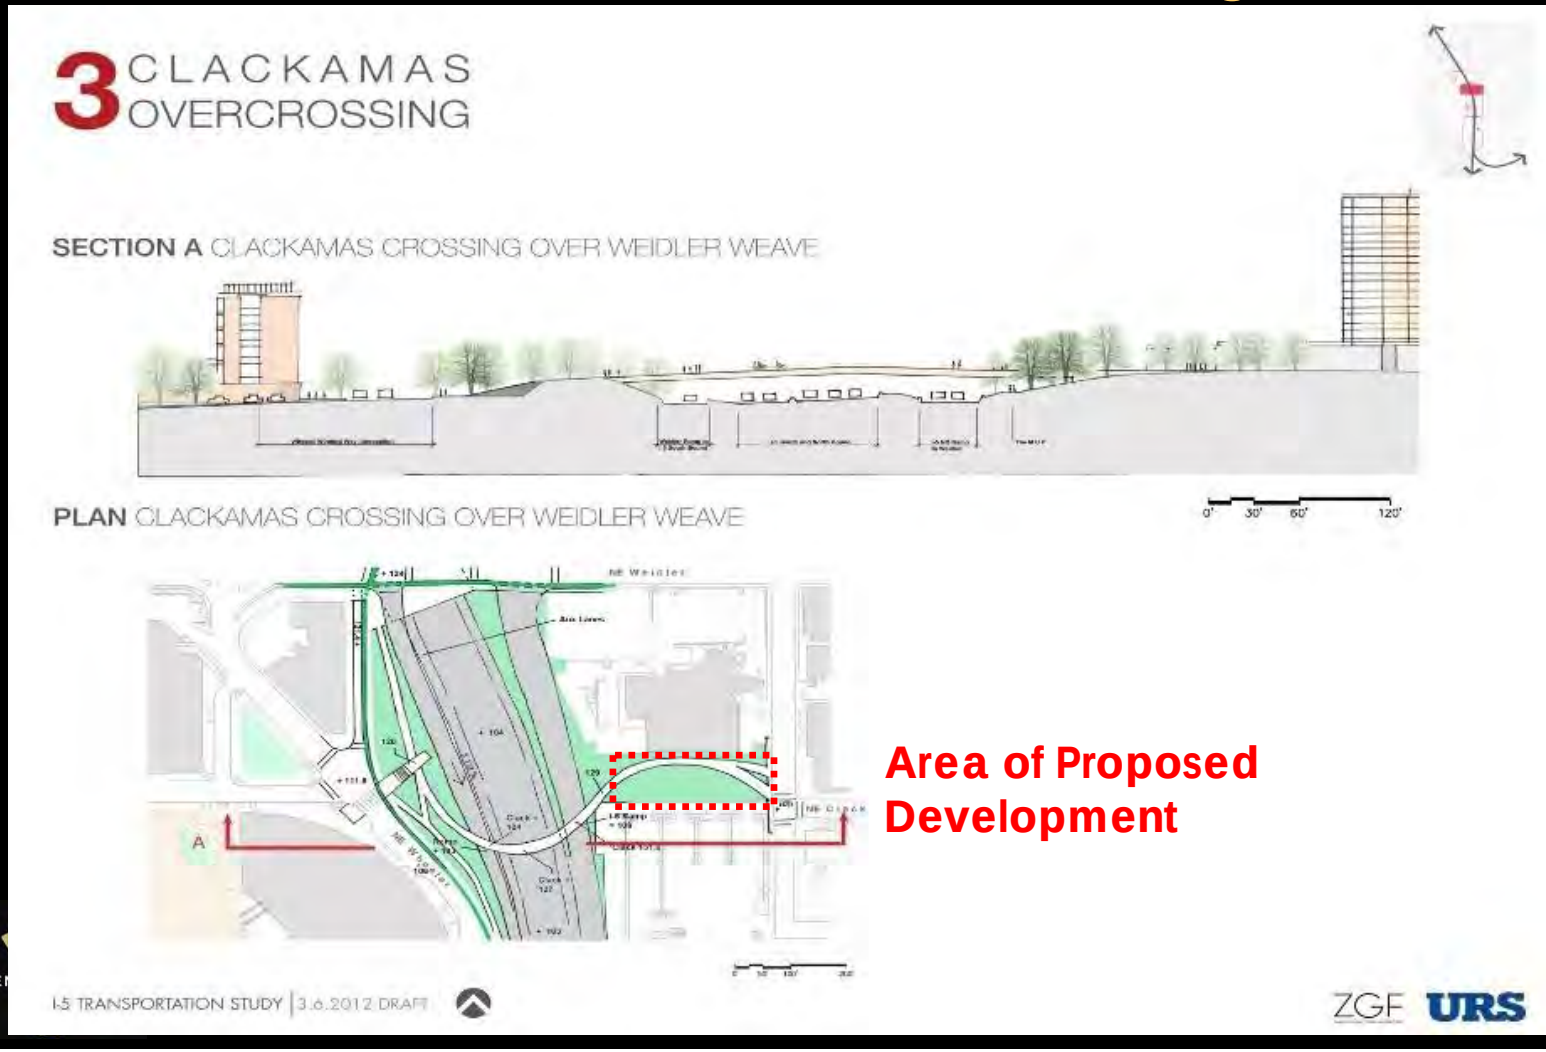
CENTRAL CITY 2035

Multi-Use Path (MUP)

- Benefits
  - Formalized bike and pedestrian path along eastside of the freeway
  - Route for “less confident” riders
- Constraints
  - Cost ($2-$4m)
  - MUP would end at difficult crossing at Weidler
  - MUP would require additional property and would displace off-street parking

Multi Use Path (MUP)

CENTRAL CITY 2035



Project Team Recommendation

- MUP not recommend to be included in the hybrid project.
- Instead, recommend developing a Neighborhood Greenway along 2nd/3rd Avenues.

- Do you agree with the recommendation?

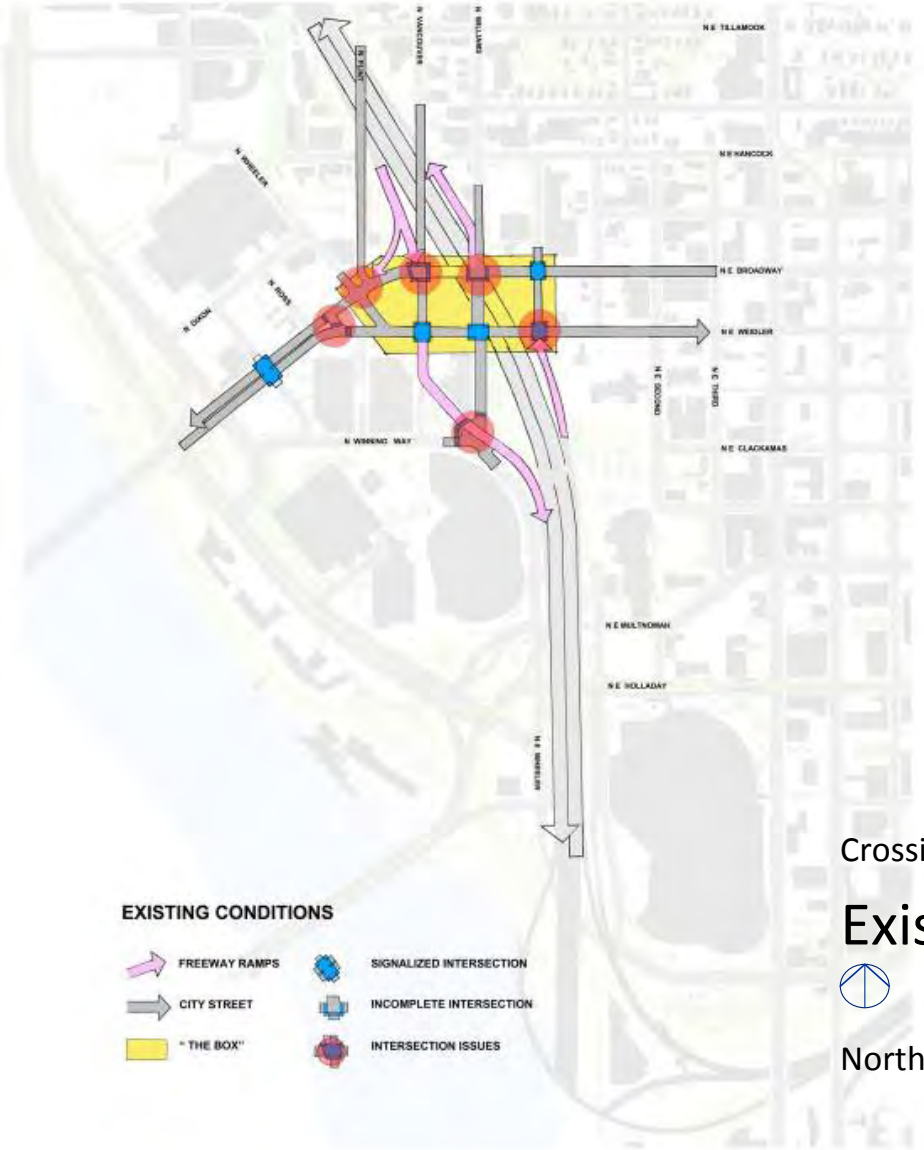
Clackamas Bike-Ped Bridge

Clackamas Bike-Ped Bridge

- Benefits
  - Improves bike/ped access and safety
  - Supports redevelopment at Rose Quarter and Lloyd District
  - Can work with SB braids
- Constraints
  - Needs to work w/ hospital development plans
  - Cost ($15 to $20 million)

Project Team Recommendation

- Include the Clackamas bike/ped. bridge in the hybrid project.
- Continue to work with property owners to design a bridge that works with proposed development.



Do you agree with the recommendation?

North of Broadway: Vancouver/Flint/Hancock Overcrossing/Lid

- Discussion item only
- Would like to continue to work on options
- Recommendation in April

What would help the SAC better understand and evaluate these options?

INFORMAL DISCUSSION AND MEAL

WELCOME, MEETING PURPOSE, APPROVAL OF MINUTES, AND STANDING BUSINESS

Sam Imperati welcomed the group and reviewed the agenda. New members of the group were introduced. Michael Jones announced he was sitting in for William (Bill) Ruff; Phil Selinger said he was at the table representing the Willamette Pedestrian Coalition. Sam clarified that the night's meeting would be focused on the freeway, with time allotted for in depth conversation and discussion, preceded by an update on land use to set the stage.

APPROVAL OF MEETING MINUTES

The November 17, 2011 Meeting Minutes were approved as written.

ANNOUNCEMENTS

Sam announced that a flyer for the N/NE Quadrant Project Open House was included in the meeting packet and thanked Wanda Rosenbarger for hosting the event; the Open House will be held at the Lloyd Center Mall on February 2, 2012, 4:30 to 6:30 p.m.

PROCESS OVERVIEW/TIMELINE REMINDER

Sam projected the updated process chart, which showed each phase and where the group was at in the process. He briefly described the goal of each Phase of the SAC Process. Sam noted the group was in Phase 3. He noted that on Feb 2nd there would be an opportunity for public feedback on the two major pieces of the project coming together. On February 16th, the SAC will analyze how the land use and the freeway pieces are coming together. In Phase 4, there will be refinement of the final development of the plan over March, April, and May. He said there would be a process for the SAC to look at drafts as they emerge.

FOLLOW UP FROM PRIOR MEETING(S)

Andrew Johnson, ODOT, provided information as follow up from the prior meeting:

- Regarding construction impacts, at a minimum they are looking at a two or two and a half year timeframe, but if there is a more phased approach, it could be as many as five years. If the project is able to maintain movement in all directions, it will be the former.

- Regarding the risk of parking space loss at the Left Bank, they did go through and measure the parking spaces, looking at the number of spaces displaced, and it is hard to say how many will ultimately be affected at this stage in the process. They feel like what has been done thus far is a holistic approach. He welcomes further comments from the SAC.

- Regarding lowering the construction impact, Eric and Lloyd have helped make refinements to the draft plan that would lower impacts.

- Regarding bike transportation, the revised draft plan shows dotted lines where there might be loss of lanes. Andy acknowledged that the draft plan shows there are 1 to 2 lanes likely to be lost (low-end estimate), and thanked folks for bringing this piece to the group's attention.

LAND USE UPDATE

Karl Lisle, BPS, recalled that the SAC had worked through three plan alternatives, and they had shared a "95%" draft Proposed Concept with the SAC at the November 17th meeting. After gathering feedback from the SAC, they held a Subcommittee meeting on January 11th. One product from that meeting is included in the meeting packet tonight: a staff report responding to SAC questions and concerns raised at the November 17 meeting. Karl noted that the majority of the Subcommittee meeting was spent on a revised street typologies concept, which the project team felt was the most significant issue raised about the Proposed Concept at the November meeting. The revised "Street and Development Character Concept" clearly explains what was being proposed in terms of the character of streets and adjacent development within the quadrant. He thanked all who were part of the subcommittee, noting that staff feels this new draft provides a better level of comfort, better labeling and easier reading of maps. This draft, with some revisions to incorporate Subcommittee comments, will be presented to the SAC in February.

Karl added that the project team is open to feedback - SAC members can contact Karl directly if they have questions or concerns, so they can be addressed before the February SAC meeting. He also said the Open House in February, which hopefully will reach members of the public who may not know anything about the project. February 16th should be the last meeting of Phase 3. At that point, the SAC will be moving on to plan development and how the pieces will work together. The project team will also bring a new workplan to that meeting.

Finally, Karl recalled the University of Oregon class that provided some great ideas and graphics from students. The project team will share the files with the SAC via the project website, and hopefully it will be posted by next week. They have a Development Forum meeting scheduled for early February that will help provide a "reality check" from the viewpoint of the large business/investments in the Lloyd area. Wade Lange complimented Karl on doing a good job leading the group during Sam's absence last week.

FREEWAY - TRANSPORTATION SUBCOMMITTEE REPORT

Andrew Johnson, ODOT, provided the SAC with the latest report from the Transportation Subcommittee and on the staff recommendation. He reviewed the outline of the revised plans that were the focus of the power point presentation and noted that the project is of particular ODOT concern due to the bottleneck issues and the need to improve safety. There are a high number of accidents due to the high volume of cars getting on and off the freeway in such a short distance. They see this project as one that provides opportunities for improving safety for street operations, pedestrians and bicyclists, as well as enhancing redevelopment, improving livability, reducing delays and improving regional access to the quadrant.

Andy said the hybrid concepts were based on the five concepts with the most promise and the point of the meeting was to allow for group discussion now that the project team has provided more detailed information and evaluation.

Andy reviewed some of the overall findings, said that the joint recommendation of joint agency staff and the subcommittee was to drop the split diamond, and folded diamond options. He noted that the project team developed the Hybrid Recommendation, which was to be described in more detail in the second part of the presentation. The subcommittee had serious concerns regarding the "3 Point" specifically, moving Vancouver to the west or to Weidler. Johnson commended all who were part of the team, as they gave up time over holidays to make sure the best analysis and information was provided for the SAC meeting.

Wayne Kingsley: recalled that at the end of the last SAC meeting there were votes for/against dropping the diamond options – were those supported to be dropped by those with yellow cards?

Andy Johnson: to clarify, dropping the diamond options is the recommendation from the subcommittee and, yes, after review, we did decide to drop the diamond options.

Dean Gisvold: comment about keeping the braids: have not heard anybody against this proposal.

Sam asked the SAC to provide official input:

Action #1: Do you agree with the Subcommittee recommendation to remove the folded Diamond and Split Diamond Options from consideration?

- All showed unanimous support for removing the two diamond options.

PRESENTATION OF HYBRID ELEMENTS AND EVALUATION

Andy Johnson continued with the presentation, again stating that the subcommittee looked at combining the best elements of the five best options. These included: moving the southbound on-ramp to Weidler from where it is today; English-style operations on Williams; adding an auxiliary lane to I-5 in both directions; braiding the southbound ramps only; moving Vancouver to the west (or keeping it at its current location); and the Freeway lid.

Andy shared slides that provided a "VSim" model that compares the current lane configuration to both I-5 with auxiliary lanes and auxiliary lanes and a SB braid. Andy said the refined auxiliary option would essentially be very similar to the existing configuration; however, the option with auxiliary lanes and the braid provides the best safety performance. He showed another set of slides that noted that the option with auxiliary lanes showed marked safety improvements over the existing lane configuration.

Paul Smith: comment that there could be different problems during the morning commutes and for the northbound, have always said that for those trying to leave central eastside there are limited options, but otherwise the northbound direction works pretty well.

Debra Dunn: are these current traffic volume projections?

Andy Johnson: yes. Our purpose was to fix the existing, not future problems.

Gary Warren: have you looked at accident rates in terms of morning vs. afternoon?

Andy Johnson: would say the same types of problems we see in the p.m. will happen in the a.m., likely to end up with the same types of accidents. The question is about what volumes and how those change.

Gary Warren: could we expect to see the same black/congested lanes for a.m. as we do for p.m.?

Andy Johnson: not really. Depending on whether traveling northbound or southbound, it could be worse in the p.m. The peak lasts longer in the p.m.

Andy continued with slides on freeway analysis, noting the braided ramps do offer added safety benefits. He said the CD (collector-distributor) road offers only slight improvements and is not recommended.

Justin Zeulner: comment specific to I-5 by Weidler: as traffic is moving off and on I-5, is there even more congestion in the right lane in the refined auxiliary option than in the existing configuration?

Andy Johnson: yes, that option backs up further for that lane, but the other lanes move better – so the "clog" is isolated in the auxiliary lane.

Andy continued by saying the Hybrid concept brings together 5 primary elements, and in all options TSM/TDM are included. He introduced Element Number 1 - improving the "Broadway Box" area to bring it up to standards that are more modern and showed detailed slides of the Broadway/Weidler Lid, including pathways for bikes and pedestrians. He noted this element provides a new option for public space.

Joe Zehnder: comment that the English style would reduce conflict with pedestrians, but it also calls in the need for clear cues to pedestrians that the "English style" is in effect.

Tracy Whalen: likes this, and added that westbound corner might need better radius for larger trucks.

Andy Johnson: agreed. We will need to balance the needs of pedestrians/trucks as we move forward.

Joe Zehnder: so is there a more open usability for the southbound?

Andy Johnson: yes, we have looked to learn from examples from Virginia and have heard a lot of support for the idea of a Lid, as it offers a wonderful construction opportunity. It results in no "throw away" and allows traffic to navigate easily when rebuilding.

Alan Lehto: how do busses navigate from the Rose Quarter?

Andy Johnson: they still have the option of using Vancouver.

Phil Selinger: if one was walking down Williams on the west side of the street, would they be stranded at Williams? Can the on-ramp be split and thereby resolve the walkway?

Andy Johnson: we will look at that moving forward.

Wayne Kingsley: comment regarding being concerned for the safety of pedestrians around the English style, it looks like this might be an awkward intersection.

Andy Johnson: to clarify, the English style would be like two one-way streets with a wide separation in between, not a side-by-side feel.

Wayne Kingsley: how would this affect businesses on Williams?

Andy Johnson: there will be impacts, not so much from the Lid – we will show more detail regarding that aspect later on. There may be a change to the I-5 and I-84 on-ramps as they are drawn. There is an issue that needs to be resolved regarding circulation around the Madrona Studios.

Dean Gisvold: there will be significant impacts for Weidler and Williams businesses. Is it possible to extend the Lid further south?

Andy Johnson: not sure, it may be possible to extend the lid further to the south.

Matt Arnold: for the bike issues, the City's Bike Advisory Committee has been working closely with ODOT and PBOT and we do see some conflict points, one of which is Broadway. Dealing with Broadway is a big point for us. All on/off ramp locations are significant areas of concern as well. Also, the Weidler off-ramp, which will need much more work to make sure bikes and cars are not competing

for the same space. Wish could see the full interchange picture then dive into more detailed views. Engineering details will continue to be a concern.

Andy Johnson: agreed. It is very difficult to make your way across the on-ramp, and yes, had some retro fit projects in that area.

Eric Lovell: how would northbound traffic move up to Williams?

Andy Johnson: volumes would get reduced? in the box, and there would be a reduction in volumes between Weidler/Broadway/Vancouver as cars make their way around. The bus conflict would be pulled out and there would be opportunities for lower traffic during events.

Joe Zehnder: criteria for bikes?

Matt Arnold: there are those who will bike anywhere anytime, and those who are more cautious. The options presented do consider the multitude of directions bikes may need to go from that area.

Andy Johnson: to clarify, there is a free right in these options that would go away.

Justin Zeulner: from an event related standpoint, the current configuration may not be ideal but it works pretty well. We have met with the project team and have made efforts to make sure the proposed design changes work well for events, as volumes increase.

Andy Johnson: yes, want to move in the direction of improving, not making things worse during events.

After a break, Sam clarified that the SAC will not be asked for a formal vote following the presentation – and suggested that Andy move through the rest of the presentation and hold detailed questions until it is complete.

Andy reviewed Element 2 – Vancouver/Hancock options, noting changes to traffic patterns from the no-build to hybrid options, (i.e., Vancouver moving to the west.) He reviewed issues regarding circulation, operations, parking, and traffic impacts, the benefits of east-west connection and redevelopment opportunities, and freight access.

For Element 3 – Clackamas crossing, Andy noted the focus was to determine if the pedestrian and bike crossing could work with the potential braided ramps (Element 4). An example of what it might look like was shown to the SAC for consideration.

For Element 4 – Southbound braided ramps; Andy showed renderings of the existing/no-build vs. braided options – noting the project team wanted to find the best way to maximize space behind the Rose Garden.

For Element 5 – A multi-use path east of I-5, Andy noted that the “interested but concerned” bicycle riders would feel more comfortable with this proposed option than with the existing configuration, as it would connect to bike paths.

Regarding cost estimates, Andy said that there were very conservative numbers in the handouts. If the plan were to be implemented ten years from now, costs would obviously change. He also reviewed the estimates for potential additional costs.

Andy presented a few “bigger picture” slides of the Hybrid framework with Vancouver in its current location vs. Vancouver moved to the west. He clarified again that the purpose for the time remaining was to solicit advice on how to best focus efforts as the subgroup moves forward. He also noted the

next meeting date is not that far from today's date. The project team will be asking the SAC over next couple of months: move Vancouver or not?

FEEDBACK ON THE STAFF RECOMMENDATION DOCUMENT

Sam referred the SAC to ***Action #2: Do you agree with the staff recommendation to carry forward the Hybrid Framework for further refinement?*** He directed the SAC to page two of the staff recommendation document, noting there are Base Elements that are part of the hybrid framework, Additional Elements, and Discarded Elements.

Andy said that by "moving forward," we want to clarify that a "yes" to move forward will not prohibit pieces from being amended later.

Overall Comments on the BASE Elements:

Lloyd Lindley: comment that it would be great to bring in VSim to see movements for each alternative. It will be important to work with federal agencies early on to confirm potential uses for the space on the lid, what options are available for development. I think some examples of contra / English style flow are out there (California) and are good options. For the Clackamas overcrossing, instead of just a pedestrian bridge, we might still want to consider a park bridge.

Dean Gisvold: would like to hear public comment on base elements and wondered if the proposed elements are all within current ODOT standards?

Andy Johnson: yes.

Mike Warwick: some good elements have been presented. Wants to reiterate that given the comments shared regarding the timeline, this will be a project that affects the streetcar development and puts things on hold for a very long time, up to ten years. This seems like a very high price to pay for what seems like minimal freeway improvements.

Debra Dunn: comment on the 350 million price tag on base elements: how were priorities considered? We do need the project, but question if the base elements are the priority. The more we keep traffic moving, the better all the added elements will be appreciated.

Andy Johnson: regarding financing, we are working on funding solutions and freeway improvements that we can demonstrate will get support. Agree that the more improvements we can show will help secure continued funding. Admit that it is early on in funding strategy process.

Joe Zehnder: yes, there are certain bundles of this plan that have to take place together, and they will have to be funded as bundles. Seeing this taking shape as three big packages, and acknowledge that this project has been in the works for a long time.

Justin Zeulner: appreciates how far we have come along in the process, but am not yet convinced that we know why there are so many on/offs in the area. Still wonder if there are some lower cost alternatives that might still be important to consider and might better mitigate the volume of traffic.

Lloyd Lindley: thinks the park bridge at the Corbett/Terwilliger/Lair Hill area might be an example to learn from, as you might bump up estimates for costs based on that project. (That project ended up being 12 million.)

Wayne Kingsley: suggested throwing tolls into the mix for consideration as a source of funding.

Gary Warren: commended the project team on the work put into the presentation today. Asked Andy to speak to the negative feedback they got in response to the higher version of the Clackamas pedestrian bridge.

Andy Johnson: that feedback was with regard to the elevator needed for one end of a bridge of that height, which makes it much less desirable from a user standpoint.

Carol Gossett: question about whether your construction values take acquisition into account?

Andy Johnson: yes.

Overall Comments on the ADDITIONAL elements:

Element #1: Braided Ramps

Eric Lovell: see the overall plan as a bit of a relief, as some issues have been resolved. Wonders if the southbound braided ramp should be a base element as tied to off-ramp and overall goals for freeway.

Alan Lehto: see significant impact to the transit center on slides 33/34. Would like to see advantage taken of the covered areas under the freeway. Wants to see minimized impact to the transit station, perhaps by moving it more toward river.

Wayne Kingsley: agrees with Eric.

Debra Dunn: also agrees with Eric. Notice that the transit station is very close to the Rose Garden Arena – has it been there long?

Alan Lehto: yes, the station has been there since the original line in the 1980's.

Debra Dunn: Was the potential need to widen the freeway considered when the Rose Garden was built?

Andy Johnson: yes, that was part of consideration as the Rose Garden was built.

Tracy Whalen: needs to see safety benefits and consider elimination of crashes.

Lloyd Lindley: in considering building braided ramps, want to avoid another "Embarcadero" like in San Francisco. He wants to see the new building efforts fit into the fabric of the existing urban environment and strategize in a way that will leave space open to future urban development in the surrounding area. There might be some good alternative ideas for the covered areas under the freeway and he challenges the team to take advantage of those.

Matt Arnold: think you might be optimistic about using the freeway-covered areas, as they have been studied as potential area for bike paths – and nowhere in the country have those kinds of adaptations been done well. Need to consider everyday livability (i.e. transit users, Rose Quarter patrons) – this is a really big issue, and a real challenge to find good uses of freeway underpath.

Lloyd Lindley: acknowledges the attempts of TriMet to make the underpath inhabitable.

Justin Zeulner: the freeway does disconnect the Rose Quarter from the Lloyd District; need to be mindful of potential thriving area for development.

Joe Zehnder: want to keep moving forward, see the potential impacts of design and safety improvements. At this point, there are marginal safety improvements in the plan and we need to weigh them against the costs.

Dean Gisvold: thinks the overpass is divisive, and Williams/Weidler cannot be done without impacts to property.

Paul Smith: believes ODOT will have information in couple of weeks that will be helpful. Regarding the impact of the full length of the braided ramp, he is concerned that we are only at the beginning of understanding the full impact.

Debra Dunn: thinks fundamentally we might need more study/information. The economy is stalled and we need tax dollars coming into this project.

Lloyd Lindley: regarding the auxiliary lane, could it be considered an exclusive lane? And thereby take the entire weave out of the lane?

Alan Lehto: is it really the auxiliary lane that drives design?

Andy Johnson: in terms of the throughway, there are more safety benefits to the braided ramps (as it eliminates weave), and we will continue to bring back to group more robust information and provide better context for what the braided ramp design does/doesn't do.

Element #4: Vancouver/Hancock Options

Phil Selinger: requested that those intersections will be urbanized, so that traffic will not be encouraged to move at higher speeds.

Alan Lehto: suggests paying attention to bus routes, turns, stops, etc. when looking at options.

Mike Warwick: there is no connection existing or needed between Hancock and Vancouver. It should be deleted. Comment that Hancock could be accessed and aligned better. Objects to slide 27.

Daniel Deutsch: most of the proposals affect the Left Bank more than anyone. While a lot of good ideas are being generated, they are concerned about how the project will impact their building. They have many bike riders and small businesses and they did much with one small façade. A lot comes up with regard to the proposed parking removal. He was struck by something Andy said earlier, regarding parking spots - the evaluation cannot be done quantitatively, it needs to be by geographic consideration, as people and businesses on the ground need space. You are killing our community by doing this; we are starving. Please come see the space in person and visit on the ground as you consider proposals. Option B (moving Vancouver to the west) is exactly what we were trying to prevent in this area. We are trying to build community. I am really concerned. The parking lot needs to be there. Do not evaluate this on quantitative metrics, as it does not capture what we are trying to do there. He thinks good things are happening in the area and we are the people who are there every day.

Joanna Agee: noted this brings into sharp focus the need for an urban planning and transportation connection.

Carol Gossett: on slide 41, looks like there are two lids.

Andy Johnson: yes, it shows a potential way to build is to add another lid where Vancouver crosses the freeway. This is a different iteration, one that facilitates better access back off Weidler.

Eric Lovell: slides 25-27 – question how much flexibility is there? Is it a starting point for consideration?

Andy Johnson: yes, displaying these as options for getting at issues and yes there is flexibility.

Eric Lovell: would consider options to be studied further, as with slide 27. If that piece was in place, it would solve some urban design/livability. Regarding slide 26, he believes there are some areas toward the Dixon side that could include car crossing. The urban fabric does need to be woven carefully, allowing for pedestrian travel to the river, etc. These are really important aspects to the plan and encourages the group to continue studying.

Matt Arnold: regarding slides 39/40 – BAC generally rejects keeping Flint, as it continues two big conflict points. Currently bicyclists have to jog around to continue through the area, and we support realigning Vancouver. We also support making a better bicycling connection to Hancock. Thanks to Andy for showing us a Lid not just a bridge, as it has better potential for meeting multiple needs.

Lloyd Lindley: wishes to remind the group of Madrona history and the effects of changes in the economy and impacts on activity in the Lloyd area. Think we can get into the urban design element with development. Also, regarding Hancock, challenge group to look at innovative way to connect, look to Dixon to see what points of entry are going to do to that street. Dixon could end up being more of a shortcut than Hancock. He feels we need more contextual analysis.

Justin Zeulner: originally supported alternatives to Vancouver, because of the box. However, I have not seen an alternative treatment that provides a "no harm" impact to traffic - think need to redirect, as I cannot support anything that would add to traffic from a Rose Quarter perspective.

Michael Warwick: the near river areas behind the Rose Quarter are endangered, and the proposals connecting Hancock would worsen.

Sean Hubert: from the Madrona's perspective, there are nearly 300 people who live/work at the site, which raises concerns for directions on slides 26.

Phil Selinger: is very sensitive to land use impacts at the Left Bank and Madrona and thinks it is important to use options that are good in multiple aspects.

Paul Smith: concerned about 5-legged intersections as well and hopes that we can continue to work on alleviating impacts to the streetcar.

Alan Lehto: Not sure he sees the benefit of bus only lanes in slide 27.

Joe Zehnder: regarding slide 40, this is where I see promise for multiple direction options. They want to build on the success of the Left Bank and help that inner neighborhood stay "on the map."

Mike Warwick: wonders if/how communities will mix, but do want to see more connectivity of people.

Element #2: Move the southbound on-ramp from Wheeler/Winning Way to Weidler

Tracy Whalen: leave on the list.

Justin Zeulner: assess traffic impacts.

Element #3: Use the "English" style (left side driving) concept on Williams between Broadway and Weidler

Phil Selinger: seems like the English style street is the price to pay for the diamonds options moving off the table. He foresees pressure on bikes/pedestrians, as well as potential hazards in crosswalks as the "free right" notion is diminished.

Element #5: Include a freeway lid where feasible when rebuilding structures

Justin Zeulner: reminder to vet the cost.

Michael Warwick: yes, keep in mind could facilitate faster construction – that could be big benefit

Element # 6: Eastside multi-use path (MUP) connecting Eastbank Esplanade to Broadway

Wade Lange: is it a bicycle lane for both directions or one-way north?

Andy Johnson: it could accommodate both directions.

Tracy Whalen: leave on the list.

Alan Lehto: design will be important.

Gary Warren: concerned for the Legacy property.

Justin Zeulner: thinks dollars/staff time best used on Broadway/Weidler.

PUBLIC COMMENT

Betsy Reese: made public comment via a letter included in the meeting packet.

Alan Ruddick – what about a more aggressive schedule, like a month and a half? Also, lower traffic streets around the Rose Quarter would be better for pedestrians. Are there examples of pedestrian crossings with a ramp flying over them we could learn from? Wonders how much noise will this generate? Seems like a multi-use path meeting up with First Avenue is a good idea. Regarding slide 40 – sweeping Vancouver to the west, thinks it is a good idea.

Peter Finley Fry: regarding the streetcar, he has worked with Joe Weston. Knows that there are goals of building high rises based on the streetcar project and the loop is important, as serves as core upon which can build a system. Also, see the station on Flint just off Broadway as important and should consider not just private property impacts, but also the connections between districts.

Doug Klotz: issues of the English-style street – see those two movements as difficult for pedestrians. Also, Slide 27 seems like a better option than Flint, as it will lessen the impact at Broadway/Weidler. Having the connection to Hancock seems like a good idea and will take the pressure off Tillamook.

NEXT STEPS AND MEETING EVALUATION

Sam distributed the evaluation form.

ADJOURN

Sam thanked everyone for a good meeting and adjourned at 8:50 pm.

Notes respectfully submitted by the Institute for Conflict Management, Inc. facilitation team.

SAC #12 Meeting Evaluation Summary
JANUARY 19, 2012

13 Evaluation Forms

		Poor	Fair	Good	Very Good	Excellent
1)	**OVERALL MTG QUALITY**			3	6	2
2)	**PACING**		Little Slow	Just right	Little Fast	
		1	3	6	3	
3)	**CLARITY PRESENTATIONS**			4	4	4
4)	**DOCUMENTS**			3	4	4
5)	**DISCUSSION**			2	4	5

6. MOST USEFUL?

- Andy's presentation was clear – logical
- Discussion (x 2)
- Graphics
- Thinking on feet/openness
- Time for discussion

7. LEAST USEFUL?

- Delaying Public Comment until the end (maybe necessary)
- Interchange presentation should have included overall image/map up front for orientation
- Missed having a clear diagram of all changes to understand how they interact
- Reiterating comments already stated for the sake of talking
- Some comments were long-winded
- This meeting was long

8. COMMENTS, SUGGESTIONS, OR QUESTIONS?

- Extra time was needed and worth it – do not listen to any guff on that
- Limit comment time per person

Oregon Department of Transportation

N/NE Quadrant and I-5 Broadway/Weidler Plans

February 2012 Open House Summary

On February 2, 2012, the N/NE Quadrant Project team hosted a public open house at the Lloyd Center Mall to present draft concepts developed to direct future development of the area and options for potential I-5 freeway improvements. It is estimated that approximately 100 people attended the event, with 75 participants signing in.

At the open house, City of Portland and Oregon Department of Transportation staff were on hand to discuss the proposals, which were displayed on poster boards. Specifically participants were asked to provide feedback on:

- The Proposed Quadrant Concept, covering the future direction for land use, street and development character, open space and green systems; and
- Potential safety and operational improvements to the I-5 freeway and local street system in the vicinity of the Broadway/Weidler interchange.

The input received will help inform upcoming decisions by the project's Stakeholder Advisory Committee as they finalize the quadrant and freeway concept diagrams and begin to draft more detailed plan documents.

Summary of Comments

A total of 38 comment cards were received. Themes that emerged in the comments are summarized below. A compilation of all comments received is also attached.

Proposed Quadrant Concept

- General support for the concept, although some felt it needed more detail and/or more explanation.
- Support for proposals that enhance pedestrian and bicycle travel. Specific items listed included:
    - The flexible street system
    - Freeway overcrossings
    - Sullivan's Gulch trail
- Housing is important. Comments noted the need to preserve existing housing, develop more housing in the Lloyd District and to emphasize affordable housing.
- Concerns about the intensity of development on Broadway, with some calling for lower heights and others asking for a step down to adjacent neighborhoods.
- Interest in preserving the "main street" feel of Broadway and extending it west. A need for traffic calming was noted.
- Concerns about impacts to Eliot neighborhood and historic structures due to increased property values resulting from more intense development in the Lloyd District.
- Need to address air quality issues.

I-5 Freeway and Broadway/Weidler Interchange Improvements

- Support for the Broadway/Weidler lid, including suggestions to develop buildings on the structure.
- Concerns about the visual impact of the braided ramps and the atmosphere that would be created under them.
- Concerns about negative impacts to the surrounding neighborhood resulting from construction, dislocation and traffic.
- Facilities for pedestrians and bikes need to be emphasized. Specific comments asked for:
    - Increasing the width of the pedestrian/bike path on the reverse flow section of Williams and the multi-use path
    - More thought about connecting to the Eastbank Esplande from Vancouver.
- Support for the pedestrian and bike overcrossing at Clackamas.
- Support for a pedestrian and bike connection at Hancock; concern that a vehicle connection would negatively impact the Eliot neighborhood.
- Concerns about negative impacts on the streetcar due to freeway construction and the cost to rebuild.
- Need to fully assess impacts on all properties. Specific concerns were raised about negative impacts to the Madrona Studios and Paramount apartments.
- Several comments questioned the need for the freeway project, noting that we shouldn't try to "build our way out of congestion". Some suggested that funds be directed at improving facilities for alternative modes of travel instead.

N/NE Quadrant and I-5 Broadway/Weidler Plans
Compilation of All Comments Received at February 2, 2012 Open House

Comment cards were provided that asked for comments on the Proposed Quadrant Concept, potential improvements to the I-5 Freeway and Broadway/Weidler Interchange and other comments. A total of 38 comment cards were received. The full text of comments received are provided below.

Proposed Quadrant Concept
General guiding principle: in all consideration, prioritize facilities and capacity for non-motorized transportation, in keeping with the city/regions goals for shifting mode-split.
Where are the air quality issues discussed and mitigated?
Want more spacious, comfortable bicycle and pedestrian accommodations in the area.
Like the flexible street idea and intensification of Lower Broadway/Weidler, but stepped down to Eliot Neighborhood.
Land use concepts too general/amorphous--too large of areas. Broadway=very different than Schuyler and Hancock-the entire length of the plan area. Projected heights=too high. Nothing will happen. Get real-recognize quality development that is on each major street- plan to protect it; cluster the densities when it makes sense- don't blanket large areas- be surgical.
I would like to see a linkage between Russell Street key hole and Russell Vancouver to create a connection up to the MLK and towards Brand Best warrant area. It would also be good to make Broadway/Weidler feel properly sealed all the way down to Broadway Bridge--provide river access for pedestrians.
I'd like to see the Sullivan's Gulch walk/bike path happen! If/when the movie theatre gets rebuilt, can they please put a rooftop seasonal drive-in theatre on top?? That's been a dream of mine.
Concepts are good but objective is unclear. Need to tie Lloyd Center to Broadway better and develop main street retail (2 story) along street car route on Broadway. More housing towers past (south?) of Broadway where 3 are now.
Like much of it, but really want to see new development now, not by and by.
What specific congestion mitigation strategies are being employed here? Where are the proposals for air quality improvements?
Looks good. Decouple it from the freeway boondoggle.
As a broad proposed concept for the entire district, the plan fulfills, or seems capable of fulfilling all the needs of the community and bringing to life a static environment. Bringing more residential areas will be challenging if they are to be at all diverse, and I believe it is critical to carefully plan open spaces within the superblock structure that are inviting, safe and truly feel public. As a principle-based plan, it looks good, but I am curious to see the specific plans and challenges within each smaller node.
Need to continue to preserve residential uses and promote development of additional residential look at preserving the main street feel of Broadway.

Proposed Quadrant Concept (continued)
We walk through the area all the time.
Access to Willamette River shore would be great. Good ideas about pedestrian access between Lloyd Center and Rose Quarter.
Pedestrian Bridge is a great idea!
Looks great!
Make N Broadway a pedestrian oriented main street again. Place for pre and post game restaurants that can also have business outside of RQ events by capturing pass thru traffic on N Broadway- traffic calm and narrow N Broadway-too wide now
Keep low heights on Broadway and Weidler-No wind tunnels (2-10 stories). If we want 20-minute neighborhoods, then we need a variety of options. Need more ideas and work/ Consider and preserve existing uses.
There needs to be more attention to the volumes of bicyclists in the Vancouver/Williams Corridor- now approaching 4000/day! Each way- and to the connections to the Eastbank Esplanade. In particular; the shared use path on the Williams overcrossing isn't nearly wide enough for bicycles and pedestrians with 4000 bikes/day. And no real thought seems to have been given to the connection of Vancouver cyclists to the esplanade.
I am concerned with the potential impacts to the historically marginalized African-American community in the Eliot Neighborhood with respect to intensified land use at the southern end of the neighborhood and destruction of historic resources, single family houses, etc., that would no longer be financially viable for existing property owners when surrounded by skyrocketing property values and dwarfed by buildings up to six stories tall. It seems that this community is given lip service when the real impact of massively increased density would likely change the income demographics of the neighborhood.
Appreciate emphasis on affordable housing. Very important not to force residents out because of increased rent and real estate prices. Thank you
I-5 Freeway Interchange at Broadway/Weidler
Don't build! Re-look at the whole design. Stress less concrete.
Really excited about the "lid" over the freeway at Broadway/Weidler. Please follow through with this.
Your plans will do irreparable harm to the economic and civic life in N/NE Portland and snarl transportation throughout the metro area, do nothing.
Strongly oppose turning Williams into a bus-only lane. That will restrict public and medical access to the Hooper Detoxification Center. That proposal also will impact the 60 or so employees there. In addition that same proposal will impact the 180 residents of the Madrona studios. Furthermore, a freeway on-ramp coming off Weidler will dramatically decrease livability of the Madrona Studio residents.
Can this be done without ripping up the recently built streetcar lines? The thought of doing that is ridiculous and needs to be reconsidered!
Please do not proceed with the "Braided Ramp" (60's technology)

I-5 Freeway Interchange at Broadway/Weidler (continued)
Glaring point-should start with issue of safety first; all of the ideas provided will separate Portland east and west sides. We've spent too much time and money trying to make one city. Rethink plans.
No automobile or freight connection at Hancock (A pedestrian-bike connection is ok). Need to study economic impact of streetcar and traffic disruption from rebuilding Broadway/Weidler overcrossings.
Pedestrian and bike facility in middle of Williams- "English Street" block. 12 feet clear is inadequate for pedestrians and bikes- should be 20 feet clear, not 20 feet overall. Tall planters are a bad idea-create hidden areas that would be unsafe to walk in. Max 2 feet high planters for safety. Left turn slip ramps onto English Street section must be stopped with signal for pedestrians. Add sidewalk on east side of Wheeler from Multnomah to Winning Way and on East side of Williams from Winning Way to Weidler, with or without the Clackamas overpass.
Until and if there is a realistic presentation of impacts on other streets, on properties (like Paramount) and on property owners--No Build. Too many years of a construction morass are ahead. Too many years of uncertainty. No realignment of Vancouver or Flint overpasses. Hancock overpass- do not bring more cars into Eliot, in the hope that the school property will one day/decade be available for re-development.
Like the LID; don't really understand anything else. Label text with cross reference to plan view or drawing (e.g. Braided Ramp (B).) Don't see much of a need; slow speeds is a good thing. Don't know why we are spending money on 2 hours and 1 mile of congestion. You won't make rush hour go away, just move it to neighborhood streets instead. How about dropping the on ramp if it is a problem and push things into Rose Garden/Convention Center area.
I think I-5 should have a double deck from Fremont Bridge to I-84 like the one in Oakland or I-110 in Los Angeles.
I'm very concerned about the expansion of I-5 in my neighborhood. You've stated that I-5 expansions are about improving safety but for whom? Moreover, there are numerous references to relieved congestion that seem to factor in induced demand. Wouldn't other investments be better spent on alternate modes? As a member of this neighborhood, I would support leaving I-5 as is but continue forward with the land-use plans, street development character, open space and green systems. Bicycle infrastructure is critical for my community and for those in N, NE, and East Portland.
Doesn't serve neighbors well, just cars, don't build it. Use money to protect bikes and pedestrians.
Unsure of effectiveness of congestion mitigation by adding lanes. In favor of Broadway/Weidler safety improvements. Like the Clackamas overcrossing, although I struggle to envision the bridgeheads. I like the English Street Style on Williams.

I-5 Freeway Interchange at Broadway/Weidler (continued)
I'd like to comment primarily on the transportation elements, specifically the Freeway-Local Transportation interface. I don't see a single option that really improves anything other than the freeway, with the single exception of an overcrossing for bicycle/pedestrian at Clackamas. The proposed concepts include trying to stuff heavy NB bike traffic plus pedestrians into a skinny 12 feet MUP that will not be adequate, impairing bike and pedestrian circulation by cutting off the direct path from Vancouver to the Rose Quarter, and covering even more space with the freeway ramps.
I would prefer that the planning process for the freeway put priority on the smooth connectivity and safety of the local system, rather than attempting to further accommodate freeway travelers. It's important not to degrade the safety and livability of the area overall while improving safety for the privileged group of freeway drivers.
Let's get an option that improves the situation for everyone, or let's not bother wasting money and time building something.
Not really needed-seems like an expensive solution to a small 1 to 2 mile problem and is very disruptive. Why not more on/off ramps outside this area altogether- like to Greeley and Multnomah?
The operational improvements anticipated from any of the "build" options do not justify the expense or the decade of dislocation that would result. You can't build your way out of congestion. Give communities better options and you'll ease freight movement. Consider congestion pricing.
Couple of points: -Is this solely a freeway project as the title above indicates? No but it is the gorilla in the room. -If there is a Vancouver/Hancock connection, make it bike-pedestrian only east of Vancouver.-On westbound/southbound Vancouver/Hancock take traffic to Benton or Dixon to access Broadway/Weidler, not Wheeler.-Reduce Broadway to 2 travel lanes east of 7th and with angled parking, cycle track and street furniture. Give more of a boulevard atmosphere.
Circulation diagrams-for bikes and pedestrians- you don't even show the connection to the Eastbank Esplanade/Steel Bridge.
I frequent the study area daily, sometimes 4-5 times a day. The neighborhood streets do not have a problem during rush hour. There is no congestion beyond what would be expected in a City. A city should not be designed for quick, easy car traffic. If the problem is I-5 freeway is cross-weaving, then the I-5 freeway can be widened if not impacting the neighborhood. There is no reason to improve local streets. They work fine. If the lure is CRC and designing for "future" traffic from Vancouver, then please acknowledge this/ Admit what this project is really about. Our neighborhood has been impacted enough and so has the City. If braided ramps are too costly, and they are the only solution for the cars weaving, which is reported to be the problem, then why do anything?
Why the concern over the Clackamas overcrossing if the Broadway/Weidler Lid is put in? Is it worth the cost?
These are not "potential improvements!" They are massive freeway expansion plans with little or no regard to the neighborhoods and the disruption and destruction of the areas near the freeways. Simpler, less invasive proposals must be created.

I-5 Freeway Interchange at Broadway/Weidler (continued)
Does the pedestrian overcrossing need to be curved? Better to cross quickly and directly. -Can the freeway lid be developed to help fund other projects? What if the Rose Quarter paid for their own freeway on-ramp-off ramp to their garage?
Braided Ramps seem like a bad idea- if it creates more dead spaces underneath---people on top, cars below.
The Broadway/Weidler lid looks great. The braided ramps would be horrible. It would make the TriMET station dark and discourage people from using it. I greatly favor option 1. How many cars get off I-5 in the AM and move onto Alberta, then onto Vancouver?
Stop prioritizing thru traffic at the expense of city-Lid over I-5 is great but should not be a park or square (miserable place to hang out, no one will use it, develop it!)- Don't waste land with leftover parcels for ramps, use the land efficiently. This is a terrible place now, this is also your opportunity to fix this place and do it right- don't waste this opportunity.
Why not make real estate on top of the lid available for development, which could be a significant source of funding and serve to fill in a great deal of dead space and the visual barrier of the freeway?
Other Project Comments
I am the Chair of the Humboldt Neighborhood Association, on the ICURAC Transportation and Parks Committees, the NECN's Land Use, Economic Development and Education Committees, and the Williams Avenue Stakeholder Advisory Committee--your process has been exclusive, and your plans are terrible.
More focus on the economic development of Broadway/Weidler area is needed. These plans would destroy what little is left of the Albina/Eliot Neighborhoods.
Due to limited street capacity, there is already too much congestion around the Rose Quarter- especially during Blazers games and near the Convention Center during large events. The opening of the streetcar will only give up streets more and make congestion worse. More room on surface streets is needed for cars. Additional freeway lanes are needed for cars. For all the expense, including nearly 50% of the Federal transportation funds received, transit in Portland/Metro carries less than 3% GA time per capita passenger miles traveled which is subsidized at approximately 60 cents per passenger mile. Transit fares cover only 25% of this operating expenses while automobile use is only subsidized. At less than a penny per passenger mile, bicycle infrastructure is 100% subsidized. Given the direction of the Auto Industry, in 20-years the average turnover for fleets- driving will use less energy and emit less pollutants per passenger mile than riding transit. In 2035 cars will be more efficient than transit. Planning needs to start now. Additionally, history clearly demonstrates a more mobile society produces more and creates higher wage jobs. The anti-mobility model in Europe is not working. Europe's GDP is 30 years behind the US and miles traveled per capita is 50 years behind. Wages in Europe are lower than in the US. Bicyclists need to pay for any bicycle infrastructure such as the proposed Clackamas Crossing of I-5, and transit fares need to better reflect the costs of providing the service to be sustainable.

Comments Received via Email

The PAC (Pedestrian Advisory Committee) recognizes that the current freeway was not constructed to handle high volumes of vehicles arriving at Rose Quarter events that frequently constrains existing freeway road capacity.

2. Pedestrians are also concerned about the capacity of large numbers of pedestrians to safely and comfortably access and leave the Rose Quarter area before and after games and for other activities as the quarter and adjacent neighborhoods redevelop.

3. The PAC questions the very costly continued expansion of I-5 through the heart of the City. The concern applies both to cost to construct as well as environmental and safety impacts. The PAC is concerned about the lack of serious alternatives analysis, congestion analysis, and environmental impact studies well **beyond the immediate project area** needed to assess:

Crash Hazards for all modes from increased speeds and volumes
High noise levels from engine and tire noise
Degraded air quality from exhaust and other vehicular debris, dirt, and pollution.
Congested local streets
Freeway congestion north, south, and east of the Rose Quarter interchange
The diversion of precious transportation funding from other citywide multimodal priorities to this high cost overpass rebuilding and widening project.
Other ideas.....

4. The PAC is concerned about further committing the City to the long term alignment of I-5 through the central city that constrains redevelopment opportunities for the Central Eastside and Rose Quarter districts and the eventual reconstruction of the earthquake vulnerable Marquam bridge. At a time when other US cities are constraining, diverting or eliminating central city freeways, we may be taking a short sighted approach.

Though I do not live or work in the N/NE quadrant, I do spend time there now and then, so I am very familiar with the area. And I have often thought about what it could be. So I breezed through the draft January 2012 document to see what is being proposed. I am glad that it has been recognized that the couplet configuration of NE Broadway and Weidler poses many challenges. In my opinion, the couplet configuration is THE problem that would hinder even the most advanced proposals in this draft document. Along the more active retail zone of Broadway, the freeway width of the street and the high speed / high volume traffic make Broadway NOT a pleasant street to stroll along or to linger about. This retail zone cannot compare to the more pleasant scales of NW 23rd Avenue, N. Mississippi, NE/SE 28th Avenue, or SE Belmont. I urge those involved in this plan to consider conversion of Broadway and Weidler back to two-way streets. They may need to stay one-way streets where the new streetcar line is being constructed, but east of that alignment, I believe those streets should be two-way with amenities that have been proposed in this plan. For instance, Broadway could be configured with middle left-hand turn lanes with integral planting strips down the middle with trees. Single travel lanes would go in each direction. How about throwing that concept out on the table?

N/NE Quadrant Plan

Proposed Concept for Land Use, Urban Design and Local Transportation **Draft 2/1/12**

Background

In Spring 2011, staff developed three quadrant-wide concept alternatives, intended to describe different future development scenarios and highlight key choices. Following extensive outreach to stakeholders and community groups, a draft proposed concept was developed and presented to the Stakeholder Advisory Committee (SAC) in the fall. The draft concept was then revised based on feedback from the SAC and other stakeholders.

This packet contains the revised concept, including the following layers: land use, building height, street and development character, open space and green systems. Next steps will be to develop more detailed proposals in a draft plan. For more information please visit the project website: www.portlandonline.com/bps/cc2035/nneq.

Developing the Concept

CENTRAL CITY 2035
N/NE QUADRANT

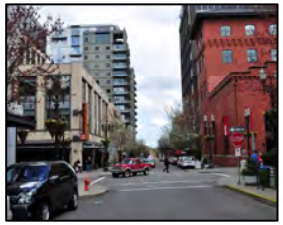
CITY OF PORTLAND OREGON 1851

Oregon Department of Transportation

Predominant Land Use

Each "bubble" on the land use map reflects the predominant land uses that would be encouraged under that development type. With the exception of industrial areas, other uses would generally continue to be allowed, and some mixing of uses would be expected. The following predominant uses are shown on the maps:

High density office, employment: A highly developed office district, with buildings ranging from 6 – 20 plus stories.



Mixed high density residential, office: High density office, employment uses interspersed with high density residential uses. Buildings ranging from 6 – 20 plus stories.

Industrial, employment: Low-rise buildings with light industrial uses, such as manufacturing and warehousing. Industrial areas are typically set aside exclusively for industrial uses, with the exception of very small scale service uses.

Mixed commercial, employment: An eclectic mix of uses that could include, retail, office and light industrial.

Mixed commercial, employment, residential: Mixed commercial and employment uses that also could include residential uses. Scale could vary greatly depending on location.

Residential above commercial, retail: Mid-rise buildings (2 – 6 stories) located on busier streets. Ground floor retail or service uses with residential uses above.

Regional event, entertainment, retail: Predominant uses have a regional draw and are characterized by large footprint buildings. Hotels and restaurants could also be expected to locate in the area.

Mixed regional retail, entertainment, residential: Regional event, entertainment and retail uses mixed with residential uses.

Building Height

The proposed building height map provides a sense of the development scale that could be achieved in the quadrant under the proposed concept scenario.

Street and Development Character Concept

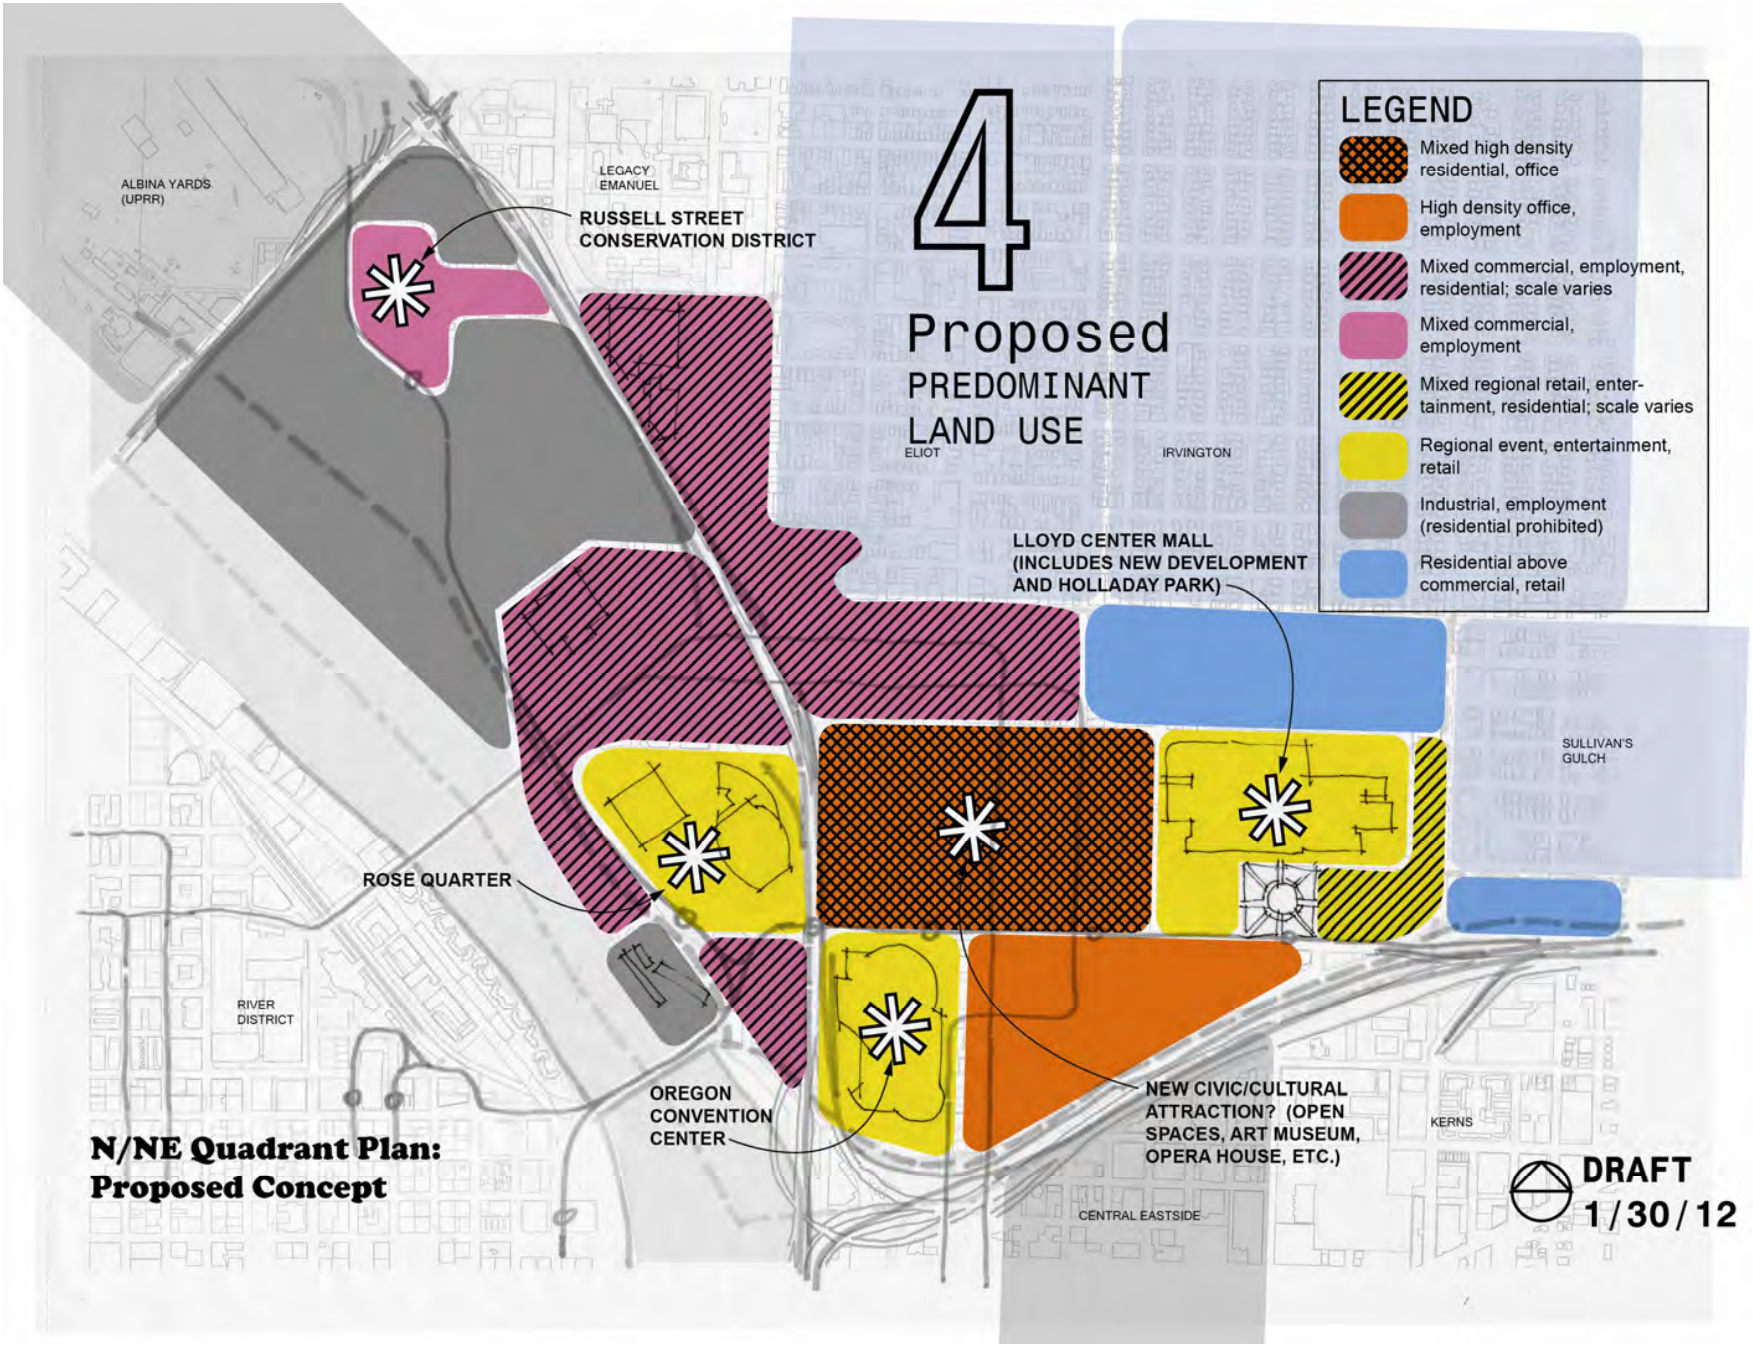
The street and development character concept outlines a more intentional approach for the quadrant's street network, uniting streetscape design with adjacent land uses and building forms. While the concept proposes a new way of envisioning the design character of these public streets and connections, it does not imply changes to the City's existing system of modal classifications that define the functional roles streets play in moving people and goods throughout the quadrant.

The proposed concept includes the following street types:

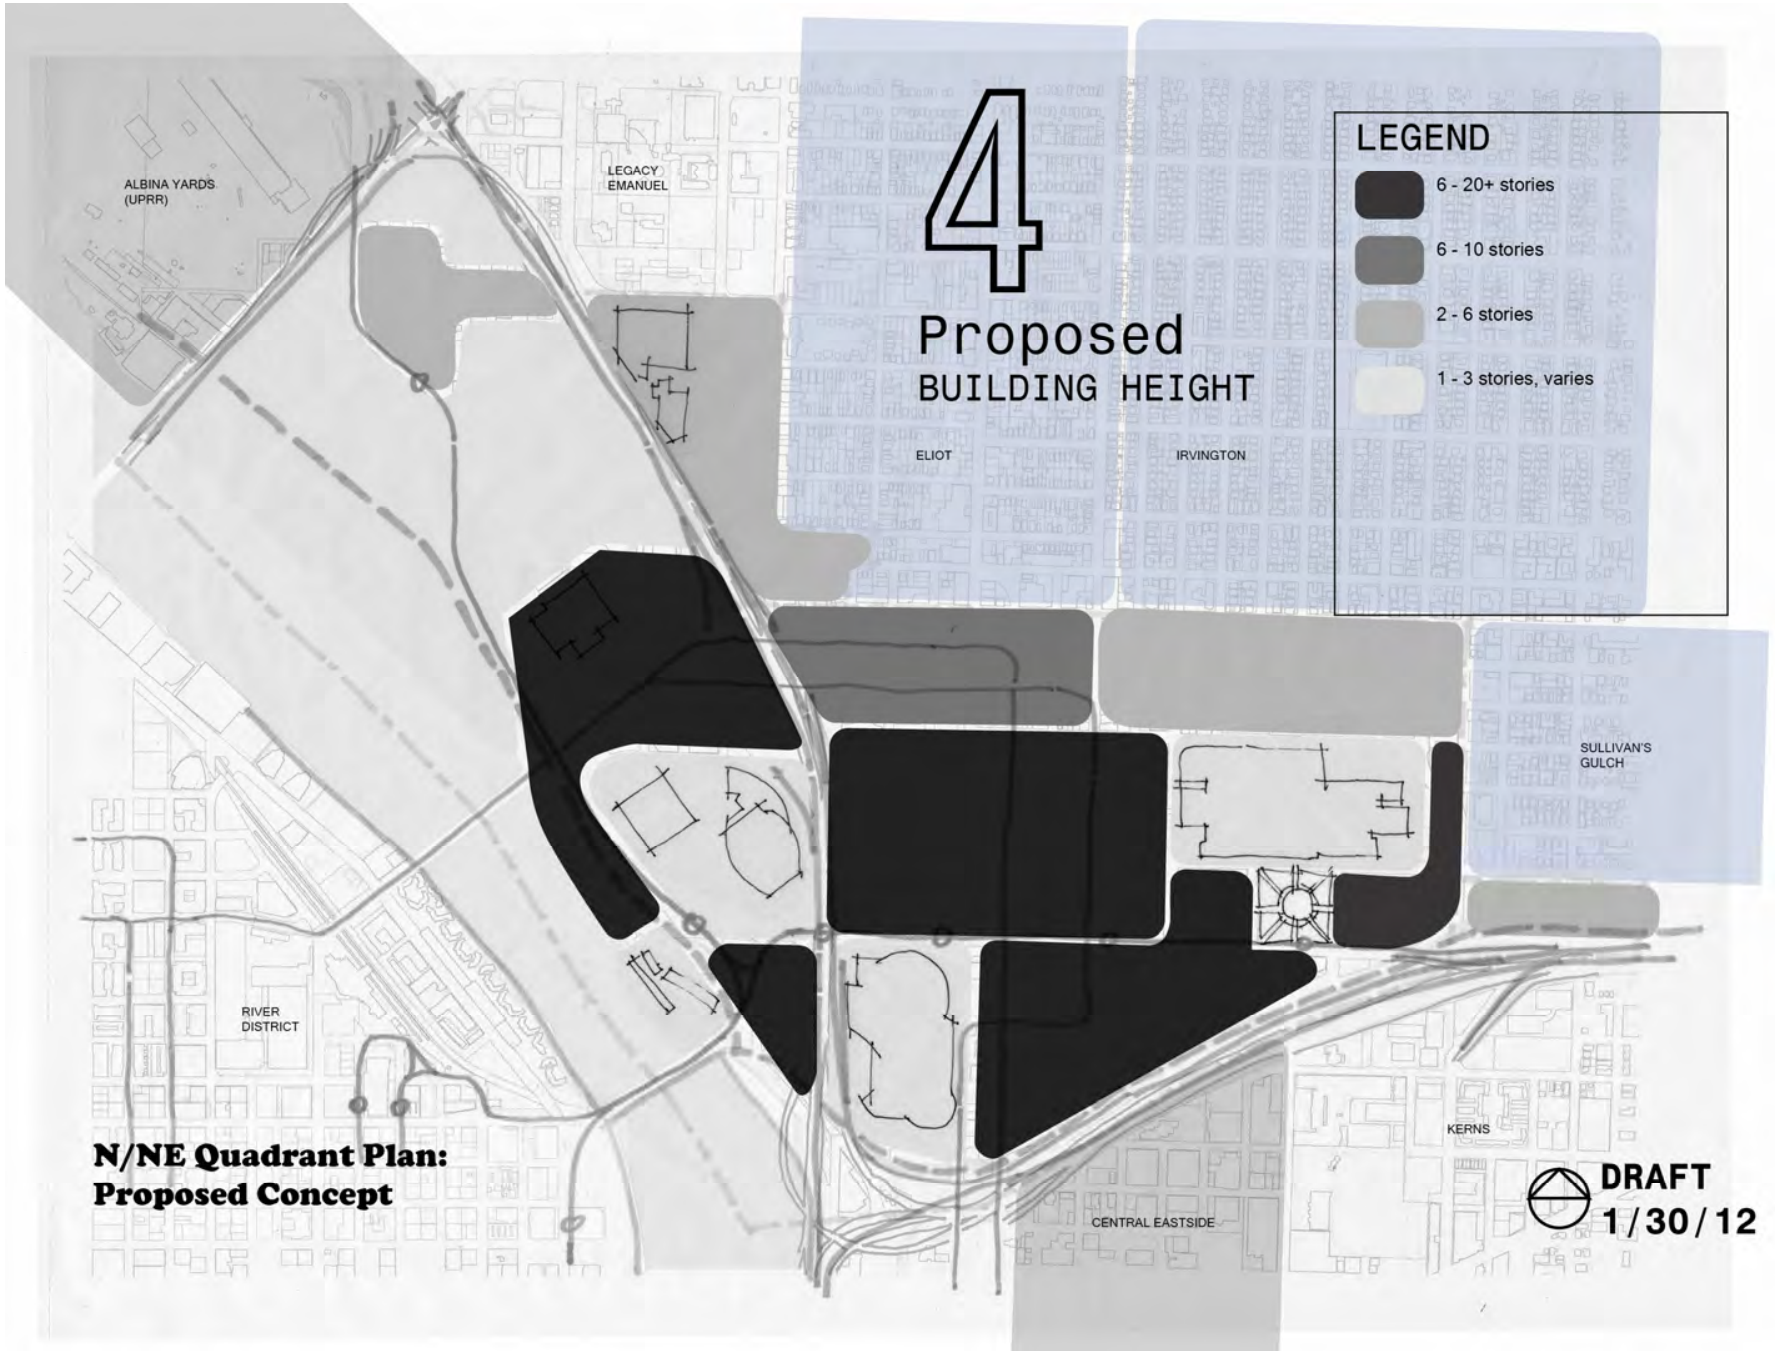
- **Retail Commercial Streets:** Busy, continuous, active streets with nighttime character, high volumes of vehicles, transit, bicycles and pedestrians and limited or less-visible "green" features. Ground-floor retail uses required or strongly encouraged. Multi-level or specialized retail encouraged.
- **Boulevard Streets:** Busy, continuous streets with emphasis on access and flow. High volumes of vehicles, transit, bicycles and pedestrians. Visible "green" features encouraged. Ground floor retail uses allowed, and encouraged at key locations.
- **Flexible Streets:** Quieter low-volume streets that are part of a connected, primarily pedestrian network. Can be highly specialized or localized street designs responsive to community needs and adjacent land uses and development. Visible "green" features encouraged. Ground-floor retail uses generally limited or restricted, but allowed at some locations.

Open Space

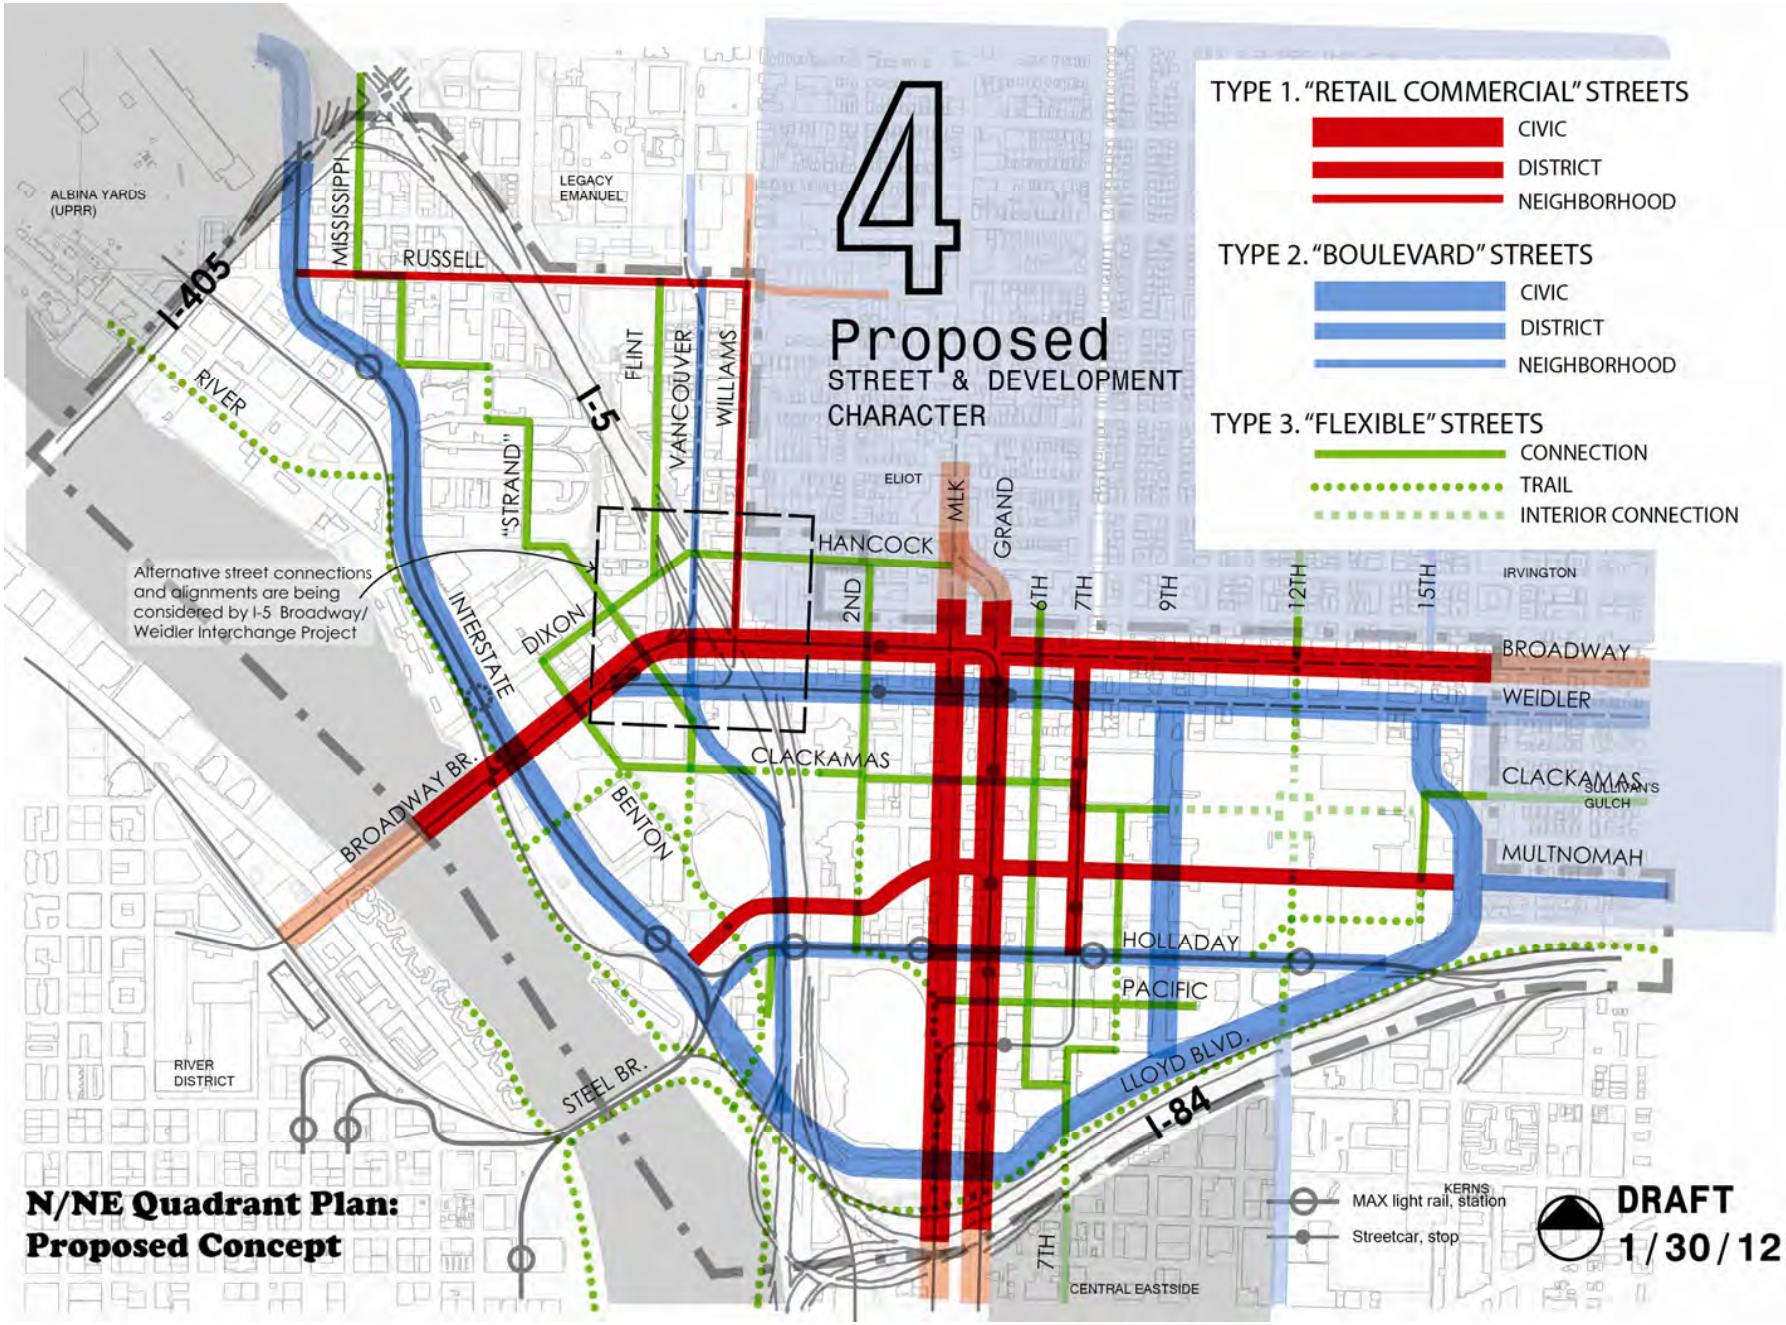
The proposed open space concept illustrates a potential framework for parks and open space within the quadrant, an area that is currently park deficient. The concept envisions a series of new parks organized along an improved NE Clackamas Street linking to a new open space adjacent to the Willamette River. When developed, the new parks would alleviate the deficiency by making open space accessible to most parts of the district within a ¼ mile radius.



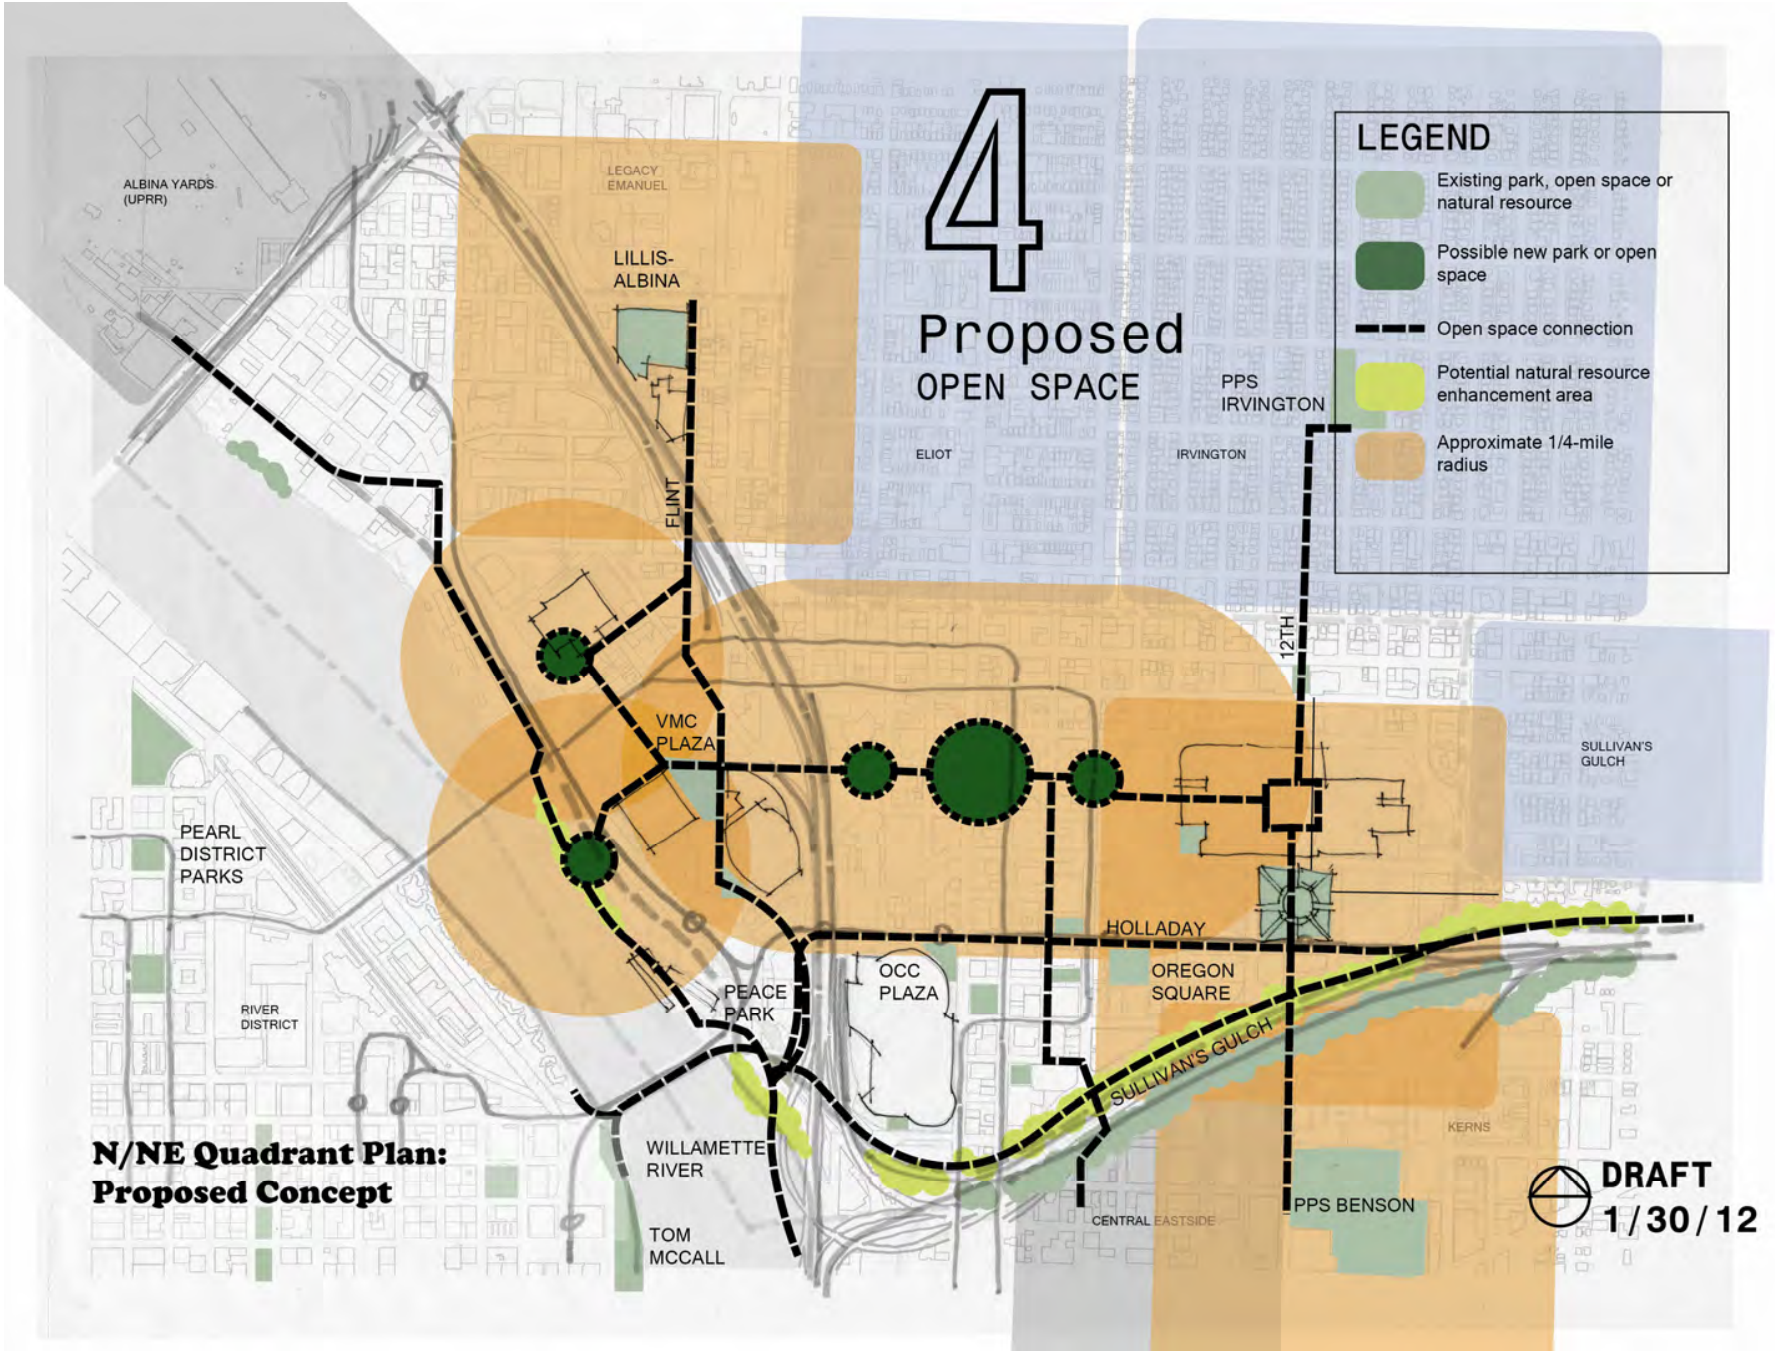
The proposed parks would likely range in size and function, and could be augmented by privately owned pocket parks. The open space concept also proposes enhancement to natural resources along the riverbank and within Sullivan's Gulch.



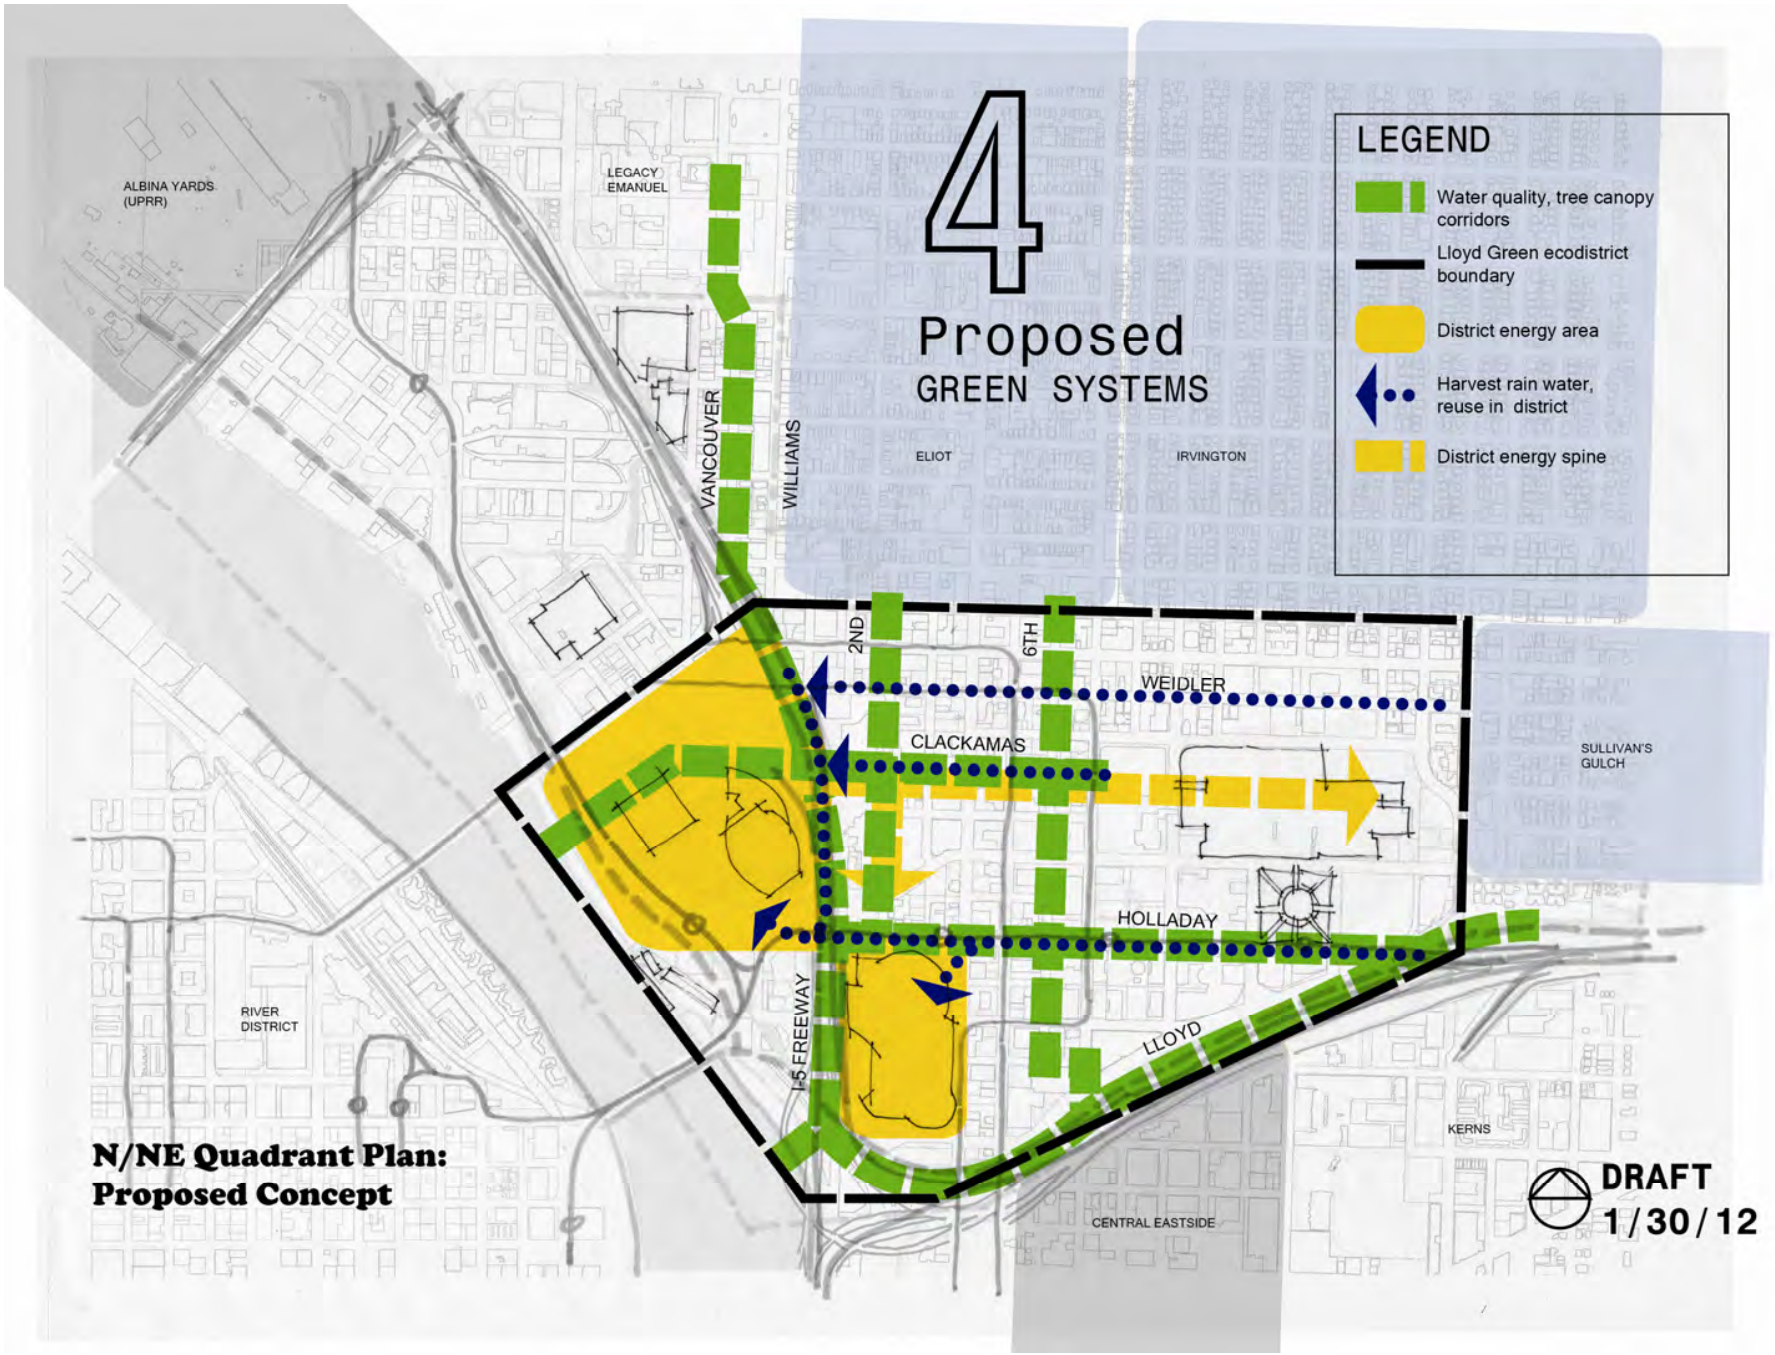
Green Systems



The green systems map illustrates how green infrastructure could be integrated into the quadrant to improve long-term resiliency. The concept includes the following green systems components:



- **Tree Canopy/Water Quality Corridors:** Corridors that provide enhanced tree canopy and stormwater management through large trees and vegetated stormwater facilities such bioswales and planters.
- **District Energy:** A system that could facilitate shared energy production and distribution between different businesses, residential uses and facilities.
- **Rainwater Harvesting:** A system that would facilitate capture and reuse of rainwater



Other opportunities to support goals for sustainable development and improvements to the natural environment include the use of native vegetation, eco-roofs, vegetated walls, bird-friendly buildings and other green building techniques.

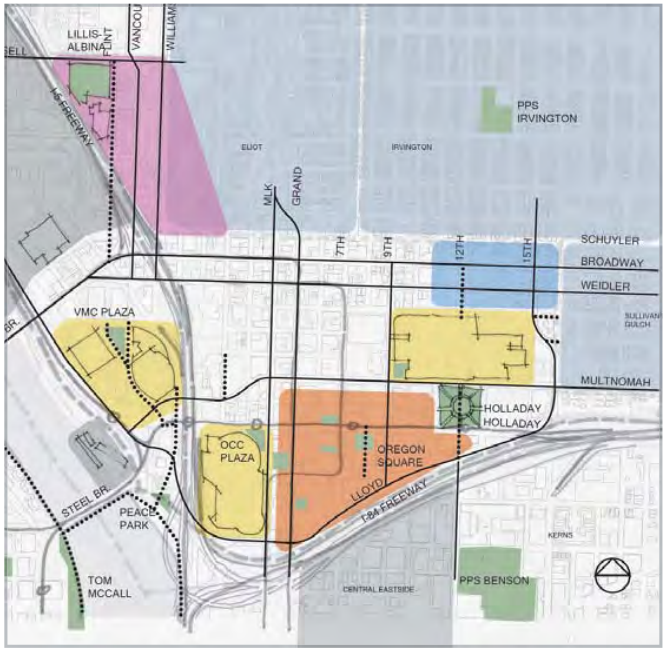
URBAN DESIGN STUDIO

1. PREFACE



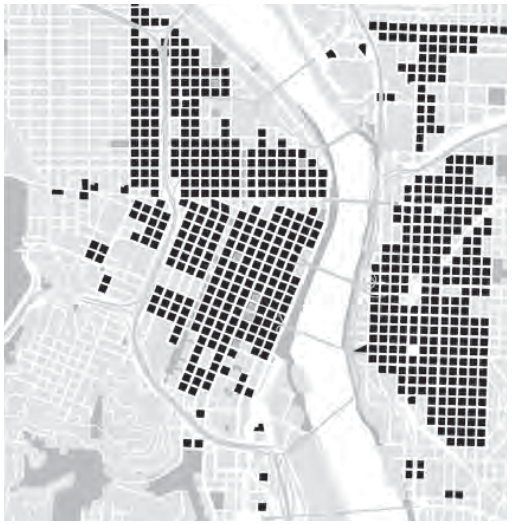
PURPOSE OF THIS DOCUMENT

The purpose of this document is to describe a conceptual approach that would create a series of different street and development characters in the North/Northeast Quadrant Plan study area. This document has been developed to assist the project's Stakeholder Advisory Committee (SAC) in its deliberations on this topic -- and others -- that will eventually be prepared in a long-range plan to guide the quadrant's future redevelopment and evolution.

This document is a tool that is intended to help visualize different public street spaces and imagine the experiences in them. It outlines the issues and opportunities presented by the existing street and connectivity network, presents a comprehensive conceptual street system for the entire quadrant, and then elaborates on each street character type using a series of graphic drawings and renderings.

Efforts in N/NE quadrant will influence other Central City quadrant planning processes

The N/NE quadrant today features pathway segments, scattered attractions and large undefined areas



56131

1. PREFACE, continued

BACKGROUND

The street and development character concepts described in this document are derived from broader design themes explored in the *Design Central City, Volume 1* document. This document is a discussion draft that identified urban design issues and proposed place-making concepts for the entire Central City. It was prepared by the Bureau of Planning and Sustainability's Urban Design Studio as a part of the Central City 2035 planning process in July of 2010.

One of the three themes in *Design Central City* was "Transform the Public Realm" which proposed being more intentional in developing more street diversity throughout the Central City. Offering more diversity in streetscape and public space experiences increases the attractiveness of the place to a broader range of people and makes it a more compelling place to live, work, visit, and socialize. The intent behind developing a system of different street and development characters for the quadrant is to take better advantage of this considerable Central City-wide public resource, testing and refining the concept at the district level.

40,000 SF blocks and lots in Central City

60 foot Right-Of-Way (ROW) in Central City

The Central City features a large amount of land area in small blocks and narrow streets, without a lot of variety in the urban experience

56132

2. INTRODUCTION

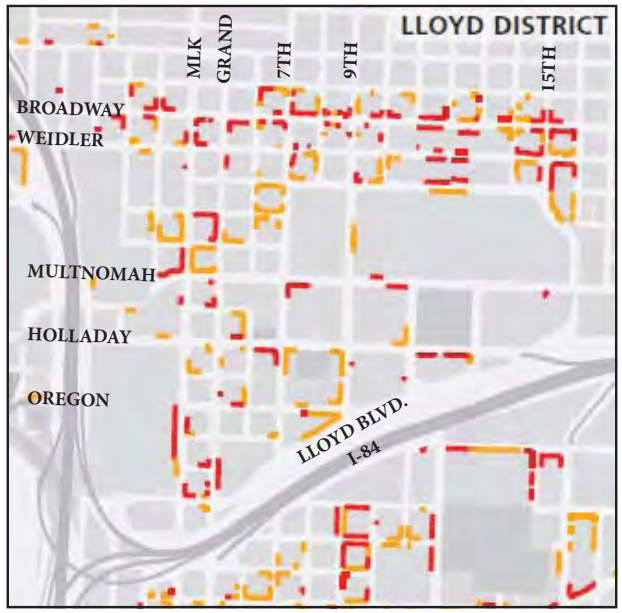
Historically, Portland evolved as a city that was strongly influenced by transportation systems; in the first half of the 20th Century, it was the streetcar. As the primary mode of mass transit, the streetcar got everyone where they needed to go. Streets that included streetcars became the active central hubs of commercial and retail activity. Today, the flexibility of the automobile has blurred this previous clarity, and the challenge is enlivening current (and proposed) retail concentrations, while expanding the range of other distinctive characters, experiences and places on streets not likely to be retail-emphasised.

A key objective is to broaden the design character of the street from primarily facilitating the movement of goods and vehicles to more multifunctional public spaces for people. This approach organizes the N/NE Quadrant street system to better link public parks and open spaces, tree canopy corridors, natural resources or features, city activity centers and civic places. The intention is to describe the different connections, identify where they would be located, and offer one idea – but not the only – of how they might feel.

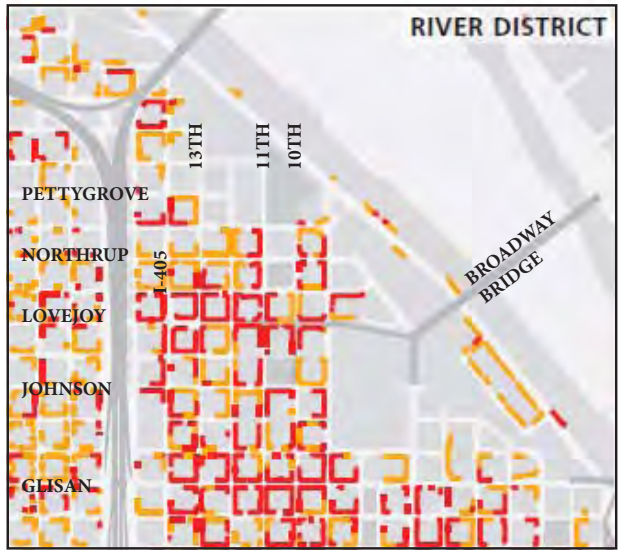
For some time, retail store frontages have been seen as the only answer to a long-standing Central City-wide "active ground floor use" objective. While this objective for active ground floors remains, it has become clear that even with thousands of more residents, workers and visitors, every street in the quadrant can not support a vibrant retail or shopping district. The considerable amount of public realm in the quadrant offers great potential for a diversity of compelling urban experiences for people beyond just shopping and commercial activities. In addition, clarifying the design intent for different streets in the quadrant increases certainty and creates more choices – reducing some risk – for interested developers, property owners and/or new investors.

The experience of "place" is a combination of character of the street -- function, streetscape design, etc. -- framed by the buildings along it -- scale, setbacks, ground floor use, etc. For example, NW 13th in the Pearl District is a slow-moving, two-way street that has a uniform, curb-less concrete surface recalling the historic rail-spur-street that existed before. The street is framed by many of the original 3 - 4 story industrial buildings – now repurposed – and their associated loading docks. The resulting experience of the street is a combination of the modern interpretation of an industrial streetscape with a preserved set of historic industrial structures. A cohesive set of street and development characters, or street types that more directly links the design of both the public and private realms, offers the greatest potential to create a set of new, distinct, and lasting public places in the quadrant.

SW 5th and Washington, 1949



NW Irving, Pearl District



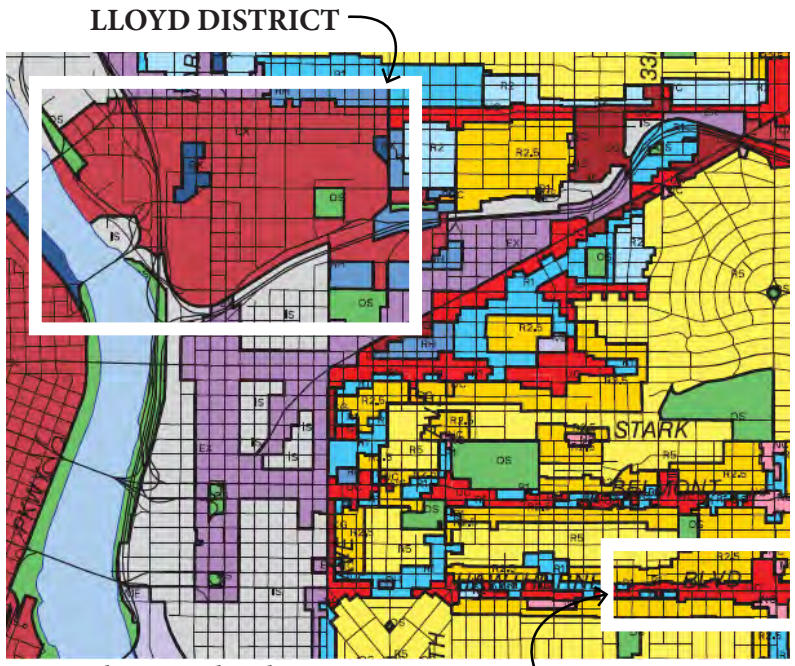
3. ISSUES & OPPORTUNITIES

Issues and opportunities that prompted the street development character concept were derived from urban design, land use and transportation analysis. They include:

A. Quadrant lacks a sense of place
B. Market for new retail is limited
C. Current land uses and characters are dispersed
D. Street network is homogenous
E. Street design guidance is outdated
F. The unique system presents opportunities
G. Couplets pose design challenges

A. There are a lot of streets, but not a lot of "there there." Most of the public streets in the quadrant – primarily in the Lloyd District – do not convey a strong sense of place for the current and future residential, employment and visiting populations. The experience of most of the public realm in the in the Lloyd District is dominated by transportation functions: freeway interchanges, major north-south and east-west couplets, large internal circulators and major high-capacity transit corridors. While these access and movement facilities are critical to the quadrant's ongoing growth, they have not yet catalyzed a distinct place or places that attract a lot of new people to gather, interact and live; A notable exception being the eastern end of NE Broadway. The potential exists to expand Broadway's character, but there are opportunities for equally compelling experiences (suggested by these street and development character concepts) along other streets that can be just as attractive to new residents, workers and visitors.

Existing ground floor edge condition diagram



B. There is limited market support for more retail. Market studies show that in 2035 there will be a potential retail demand of roughly 410,000 new square feet, with more than half of it being absorbed by the Lloyd Center Mall. The Lloyd Center Mall is unique to the quadrant and currently features some 1.5 M square feet of largely national retail stores and businesses, with the potential to expand significantly on its own properties. As many of the mall's stores, shops and restaurants currently serve the quadrant's population today, expanding those services may make it challenging to generate new interest and energy outside the mall itself. To better ensure some level of retail activity outside the mall, requirements for retail uses could be targeted at high visibility streets with significant recent investments, such as the new streetcar alignment. Additionally, a district-wide retail development strategy should be considered.

Lloyd District Potential Future Retail Demand

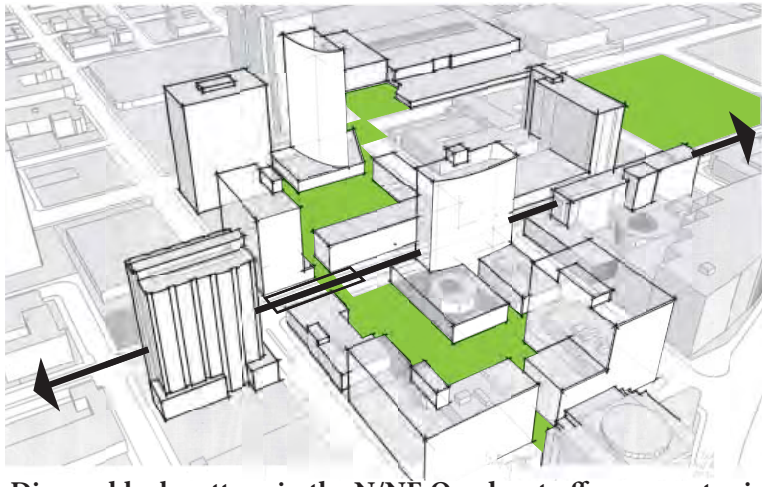
	Retail Category	Potential Future Demand SF 2035
Comparison Goods	Apparel	31,918
	Auto Parts and Accessories	15,059
	Home Furnishings	21,775
	Home Improvement	19,376
	Specialty Retail	53,748
	General Merchandise	79,556
Neighborhood Serving Retail	Grocery	92,826
	Health/Personal Care	12,294
	Restaurants/Entertainment	84,200
	Total Neighborhood Serving Retail	189,319
	Total Retail	410,750

Source: City of Portland Bureau of Planning and Sustainability, 2012; MetroScope, 2011; ESRI Business Analyst, 2011.

C. Street storefront retail is more successful when clustered. Expectations, current zoning and regulations for retail in the quadrant are too broad, and do not facilitate or clearly direct the cultivation of concentrated, active retail districts. While different from the Central City, some of the City's most distinctive retail streets, such as NW 23rd, SE Hawthorne, or N Mississippi, feature a compressed zoning pattern that allows retail in a limited area. Other cities, such as Vancouver BC, employ an intentional and much more limited approach toward allowances for retail in their city centers. Recent studies looking at Central City retail districts by Economics Research Associates (ERA) and the Leland Consulting Group, both in 2009, recommended closer examination of retail feasibility by geography, and the subsequent application of tools to encourage its growth in target areas while discouraging it in others. Both reports include findings that recommend reconsideration of policies that allow retail uses broadly throughout the Central City.

Comprehensive Plan designations

3. ISSUES & OPPORTUNITIES, continued



D. Streets with different characters add to the diversity and texture of cities. The livability of cities requires the provision of public spaces that offer residents, workers and visitors a wide range of experiences: resting, socializing, celebrating, being entertained, or taking a quiet stroll. The Central City features a vibrant street network, but would benefit from the development of streets that support specialized districts or neighborhoods. One type worth considering is the urban residential street, where the predominant ground floor building characteristics include landscaped setbacks, building lobbies, stoops, and/or patios. These types of streets exist outside the Central City, in a wide range of neighborhoods, as well as in other highly urbanized city centers, such as New York or San Francisco.

Experience of the public realm is a combination of the streetscape and adjacent building edges

E. Current Transportation System Plan (TSP) Design Classifications do not address unique conditions and street design opportunities of the Central City adequately. They are adapted from Metro's *Regional Transportation Plan* (RTP) and do not speak with enough specificity to the unique streetscape and high-density adjacent land use issues that currently exist (or are envisioned) in the N/NE Quadrant. The proposed street and development character concepts for the quadrant are intended to inform a larger investigation of the entire Central City's design classifications. The proposal is intended to better support existing and future land use clusters and stimulate new economic development.

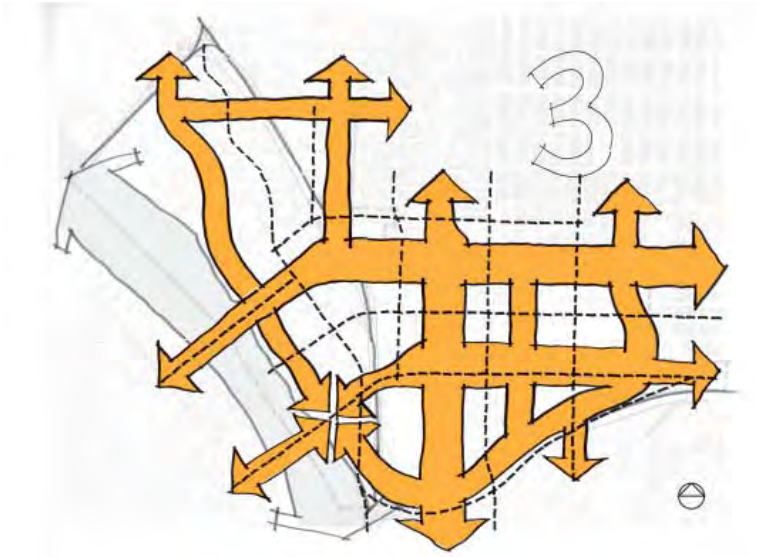
F. The public realm system of the quadrant – and by extension the Central City – is unique, and could make it a more attractive place to be. The N/NE Quadrant -- the Lloyd District in particular -- is a part of the Central City and has some of the highest land use densities possible in the region. Creating attractive, livable and active high density communities in the Central City has been shown to directly address greenhouse gas reduction targets set in the *Climate Action Plan*. A new, more coordinated approach to the quadrant's public realm system: its transportation network, the character of adjacent land uses, and new open spaces serving high density residential and employment districts, could maximize the catalytic effect of targeted public investments. This more responsive and resilient system in the quadrant would still be linked to the City and region's larger transportation network and modal classification systems, but could offer more tailored, distinct urban experiences, making the quadrant, and Central City by extension, more attractive to people, more of the time.

Diverse block pattern in the N/NE Quadrant offers opportunities for new systems of connected public spaces

G. Couplets present design challenges. Couplets, or paired one-way streets such as MLK/Grand, Broadway/Weidler or Vancouver/Williams, provide high-volume multi-modal transportation corridors that serve the quadrant but spread retail uses, design, and urban activity expectations across a broad area. Couplets are typically half a historic commercial main street – e.g. Broadway – and half a formerly quieter residential (or other) street that was reconfigured later to increase capacity in the automobile era – e.g. Weidler. One couplet street, usually the historic main street, typically outperforms the other in terms of urban vitality, development character, and pedestrian activity. However, design and land use expectations for both streets are frequently the same. A new design strategy that recognizes the different roles of both streets in couplet pairs and provides more clarity of intent would better manage development and community expectations.

Couplets in the Central Eastside: E Burnside and Grand are the centers of commercial activity areas, supported by Couch and MLK, respectively

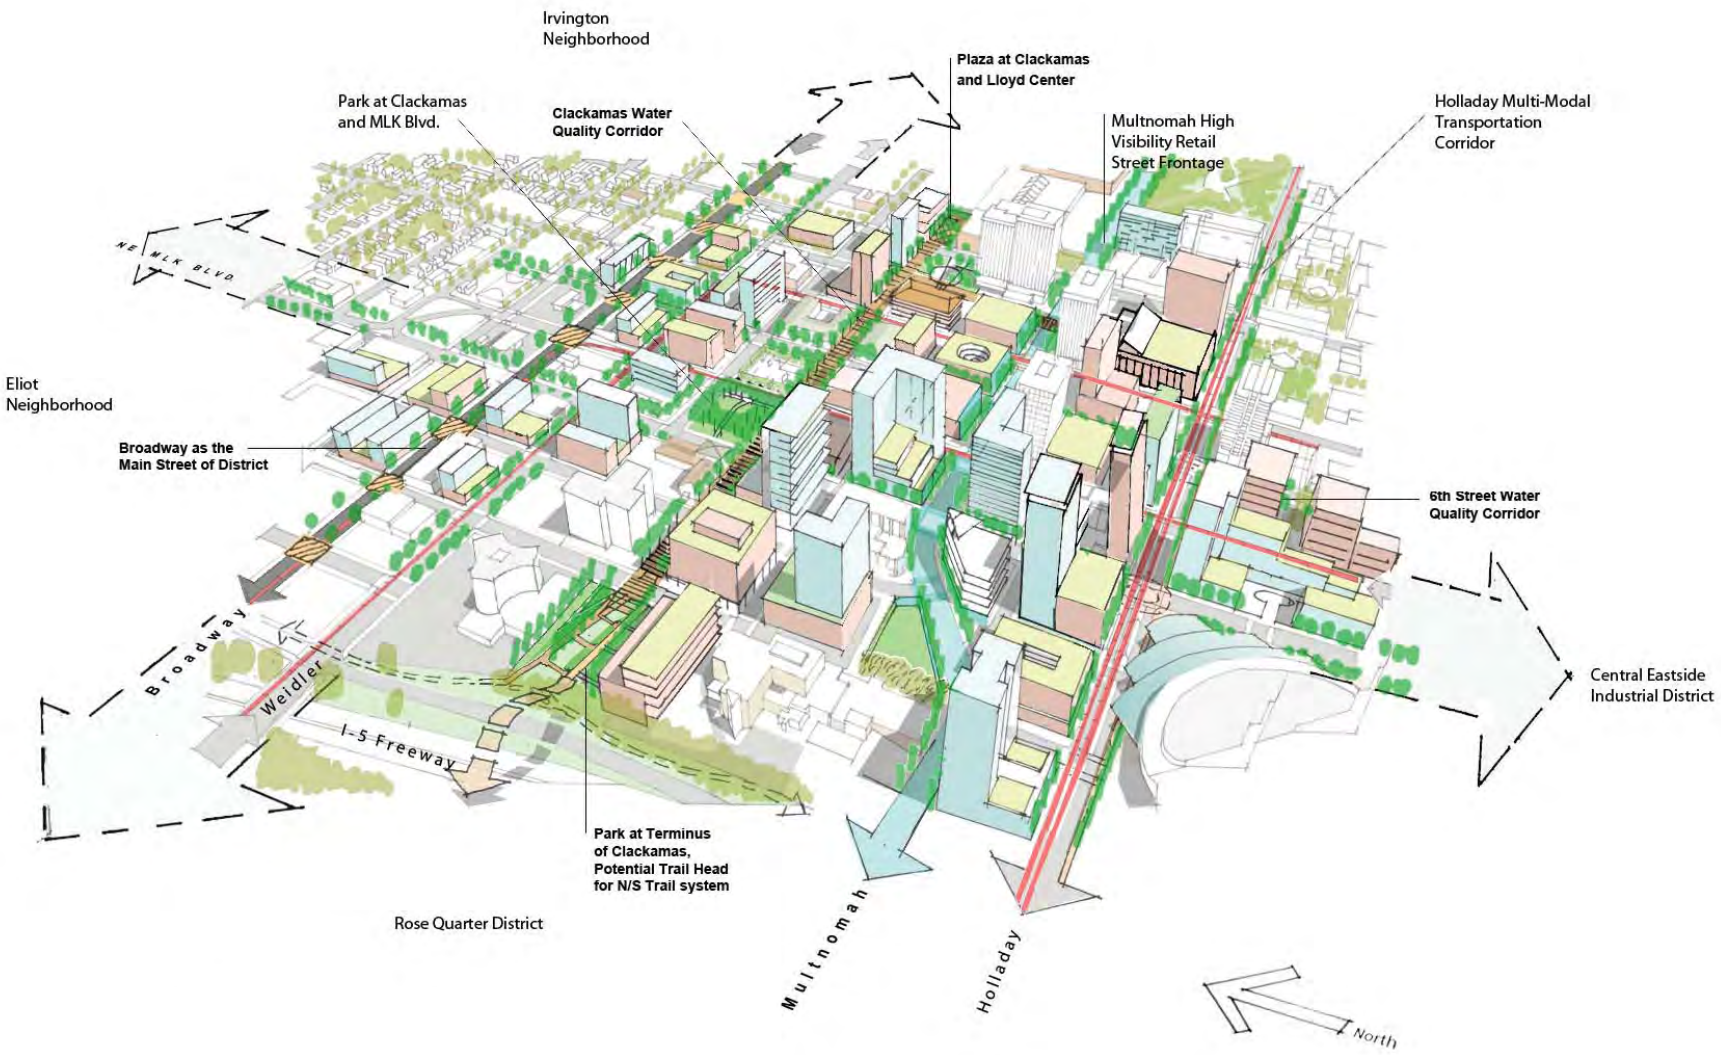
4. CONCEPT



The street and development character concept for the N/NE Quadrant area is intended to create a high quality system of connections and public spaces that supports the existing and envisioned range of uses, districts and businesses in the quadrant area. The concept is based on the quadrant's existing network of streets, corridors and pathways, and expands opportunities for new, high density development in under performing parts of the area currently defined by a sense of "placeless-ness" and dominated by an automobile-oriented built pattern.

The concept unites expectations for streetscape designs with those of adjacent land uses and building forms, developing a more coherent and varied set of public "places" throughout the quadrant. It should be noted that while the street itself stays the same, the character along its length can vary through the quadrant.

Specifically, this concept:



- Builds on the existing pattern of streets in the quadrant
- Develops and strengthens a series of different street and development characters
- Supports existing and future lands use concentrations
- Offers alternative active ground floor use responses to the retail storefront
- Identifies only the key/major connections – every street in the quadrant does not get a designation

Implementation of this concept would potentially make changes to the *Transportation System Plan* (TSP) Design Classifications, development regulations in Title 33 Planning and Zoning of the *Portland Zoning Code*, and the Lloyd District design guidelines. Some development regulations in Title 33 that could be affected include ground floor active use areas, required building lines, parking access restrictions, and bonus option target areas, among others. The extent of amendments to the TSP, the *Portland Zoning Code* or the design guidelines will require more analysis in the next phases of the project.

"Strengthen Connectivity" design principle from beginning of concept development phase

56138

Aerial View Looking East over Central Lloyd Area

5. PROPOSED CHARACTER TYPES

Type 1. "RETAIL / COMMERCIAL" STREETS

CIVIC
DISTRICT
NEIGHBORHOOD

- Busy, continuous, active streets with high visibility, high volumes of vehicles, transit, bicycles and pedestrians, nighttime character

- Limited or less-visible "green" features (high canopy or columnar trees, less visible or hardscaped swales, smaller building setbacks, etc.)

- Required/strongly encouraged ground-floor retail uses, multi-level or specialized retail encouraged

Type 2. "BOULEVARD" STREETS

CIVIC
DISTRICT
NEIGHBORHOOD

- Busy, continuous streets with nodal activity and emphasis on access, movement and flow, high volumes of vehicles, transit, bicycles and pedestrians

- Visible "green" features encouraged (larger canopy/spreading trees, more prominent swales and planting strips, landscaped building setbacks, etc.)

- Allowed ground-floor retail uses, encouraged at key locations

Type 3. "FLEXIBLE" STREETS

CONNECTION
TRAIL
INTERIOR CONNECTION

- Quieter low volume streets, alternative routes for pedestrians and potentially bicyclists

- Parts of a connected, primarily pedestrian network that reaches the river

- Highly specialized or localized designs responsive to community needs, adjacent land uses/development

- Visible "green" features encouraged (larger canopy/spreading trees, more prominent swales, landscaped building setbacks, etc.)

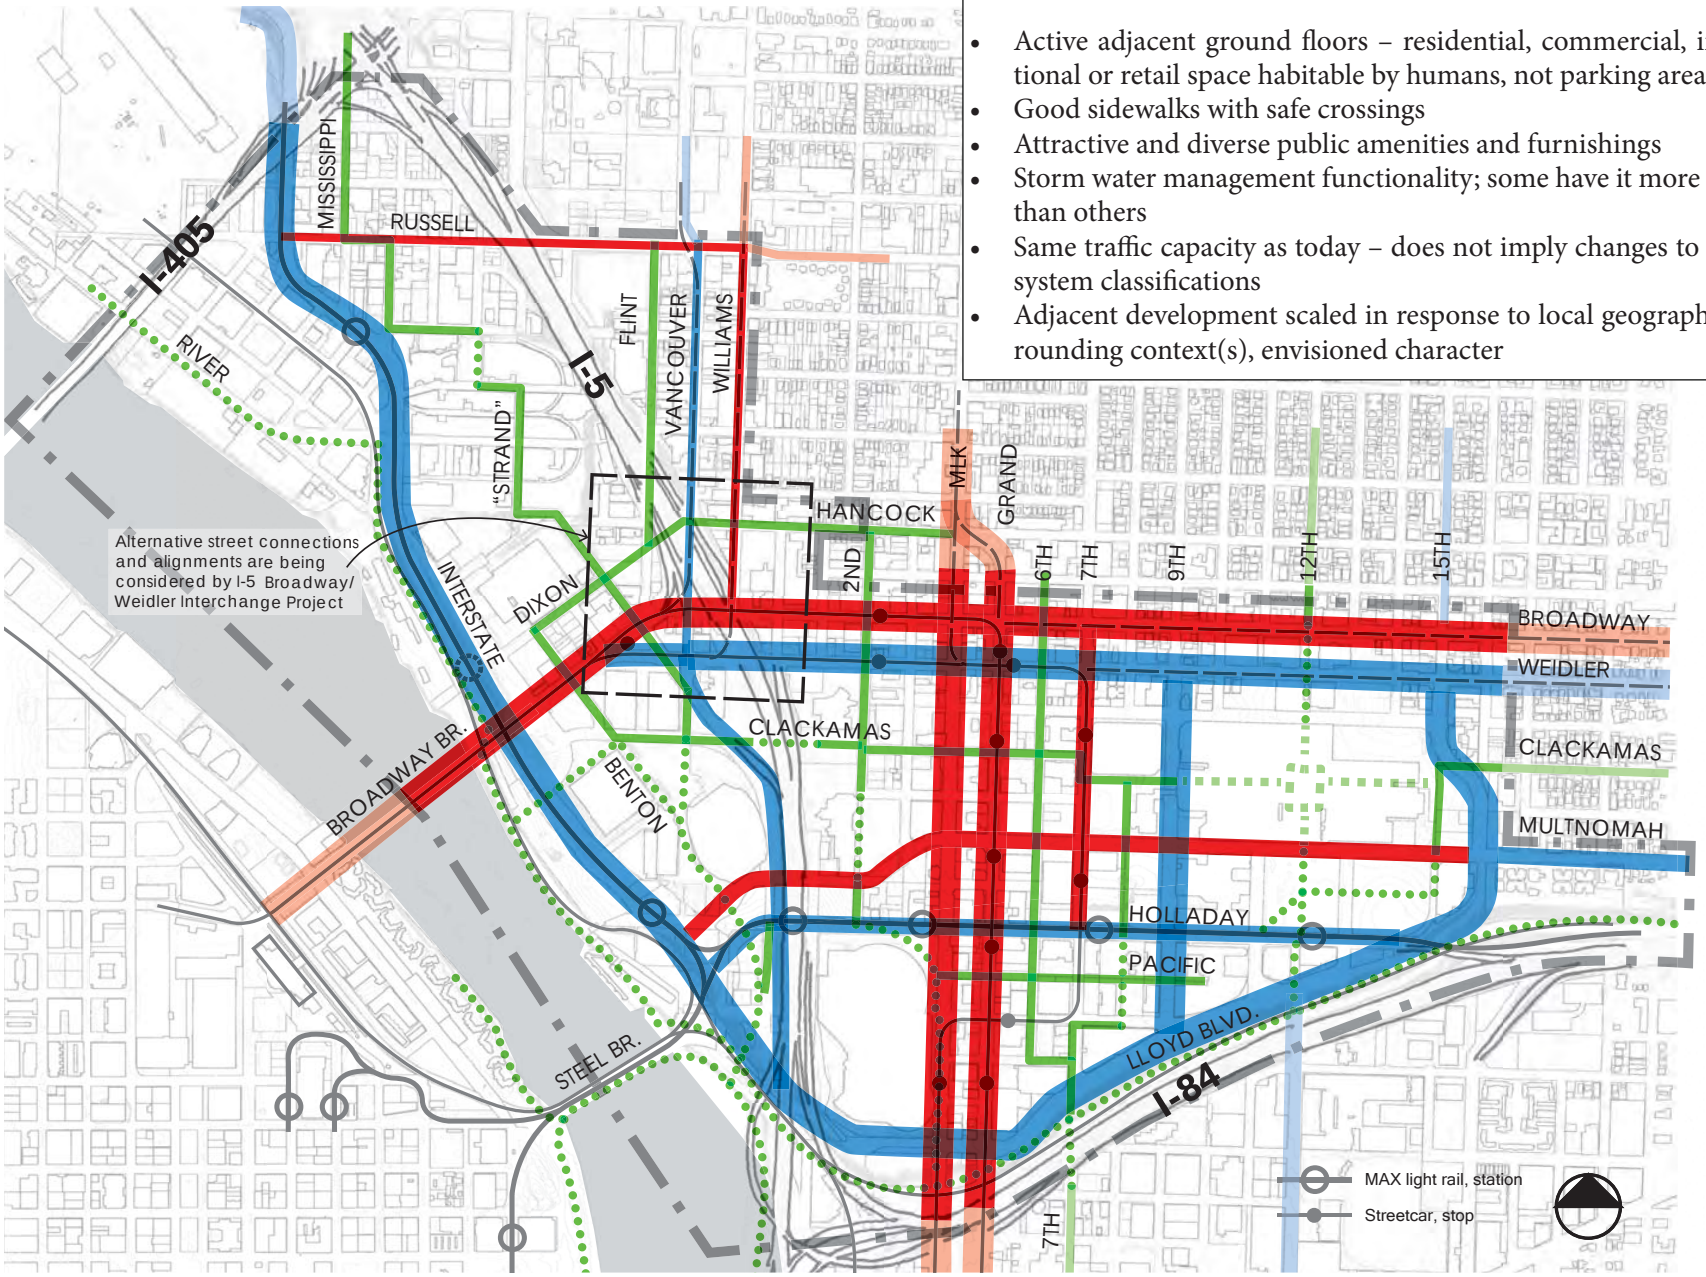
- Limited or restricted ground-floor retail uses, allowed at some locations

- Public or private ownership

Type 4. "TYPICAL" STREETS (not mapped)

- Quieter, low volume local streets, featuring more standard sidewalk, planting strip and roadway treatments

- Visible "green" features encouraged (larger canopy trees, more prominent swales, landscaped building setbacks, etc.)



- Limited or restricted ground-floor retail uses, allowed at key locations

56140

5. Proposed Character Types, Plan

ASSUMPTIONS FOR ALL TYPES:

- Active adjacent ground floors – residential, commercial, institutional or retail space habitable by humans, not parking areas
- Good sidewalks with safe crossings
- Attractive and diverse public amenities and furnishings
- Storm water management functionality; some have it more visibly than others
- Same traffic capacity as today – does not imply changes to modal system classifications
- Adjacent development scaled in response to local geography, surrounding context(s), envisioned character

TYPE 1. "RETAIL COMMERCIAL"

QUALITY OF EXPERIENCE

These are the busiest streets in the quadrant, with high volumes of motor vehicles, transit, bikes and pedestrians, consistent ground level retail storefronts, and "center" like character(s) for the community. They are where most of the quadrant's residents, workers and visitors come together and experience the urban character of the quadrant. These streets feature a strong sense of urban enclosure as they are framed by buildings scaled to each unique geographic setting. They are high visibility streets that are active by day and animated at night, accentuated with civic-scaled places, works of public art and unique signage and lighting systems.

MOBILITY AND ACCESS

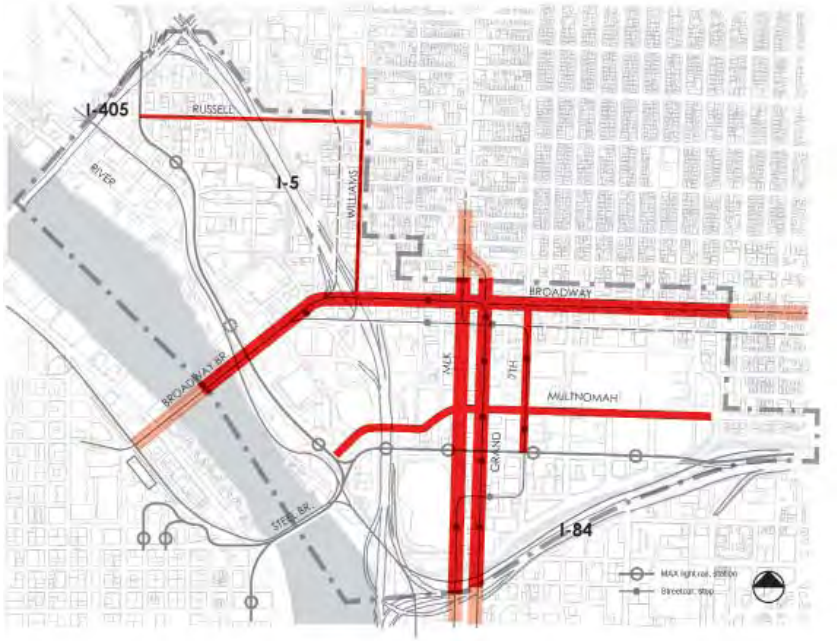
They offer high-volume multi-modal access, sometimes including the highest levels of transit and motor vehicle service, safe bicycle facilities, and generous sidewalk space to accommodate high levels of pedestrian and transit rider activity. The streetscape includes special paving patterns and/or materials, unique street lights and generally a less-dominant street tree character, perhaps more columnar in form. Surface storm water management is accomplished through a series of more hard-scaped and perhaps less visible solutions along the corridor, or alternatively could be addressed more visibly at intersections with cross streets.

ADJACENT LAND USE AND FORM

Adjacent ground floor uses and building forms typically reflect the high visibility and citywide significance of these transportation arteries. Common building uses and characteristics include main entrances or building lobbies, ground floor windows and doors, smaller hard-scaped building setbacks suitable for outdoor gathering or dining, and specialized or distinctive building lighting and/or signage. Retail sales and service uses at the ground level on these streets are required, and multi-level or specialized retail businesses are encouraged.

POSSIBLE STREETSCAPE AND DEVELOPMENT CHARACTERISTICS

Streetscape:



- Special sidewalk and intersection paving materials
- Unique street lighting
- Trees with less canopy (more columnar)
- Less visible/more hardscaped storm water management
- Wide sidewalks/pedestrian facilities
- On-street parking
- Civic-scaled public art at key locations/intersections
- Curb extensions for additional seating, gathering
- Signature transit service and facilities

Development:

- Limit building setbacks, hardscaped
- Main entrances, lobbies
- Required ground floor retail space, multi-level retail space encouraged
- Larger building volumes oriented to street
- More elaborate, distinctive building signage and night lighting
- Building service, parking access limited, discouraged

TYPE 2. "BOULEVARD"

QUALITY OF EXPERIENCE

These streets should be considered at the same level as the Retail Commercial streets, and can offer a few different experiences in the quadrant. They can be the "second" street of a couplet; they can create and define a district "edge"; or they can strengthen – and perhaps celebrate – a local transportation and/or transit route within through the quadrant. They provide a more landscaped, green (at least in color) character that is a distinct alternative to the more hardscaped and consistent retail storefront experience on the Retail Commercial streets.

MOBILITY

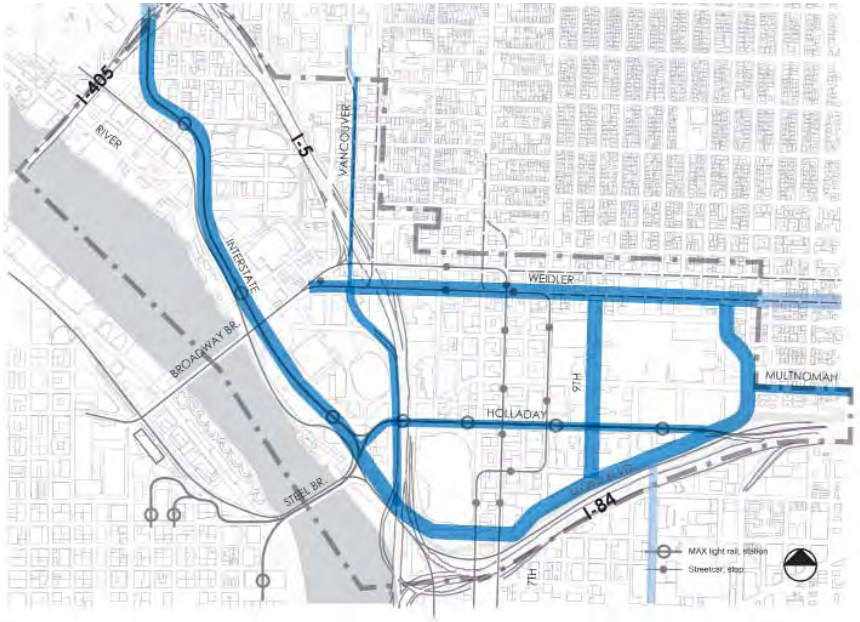
They frequently offer high-volume multi-modal access, sometimes with the highest levels of transit and motor vehicle service, safe or perhaps signature bicycle facilities, and generous sidewalk space, to accommodate the high levels of pedestrian activity. The streetscape includes special paving patterns and/or materials, perhaps unique street lights and a more-dominant street tree character, with more canopy coverage. Surface storm water management, using swales for example, is more prevalent along these streets. Opportunities to extend the curb into on-street parking areas could include additional trees, storm water management facilities and seating for pedestrians.

ADJACENT LAND USE AND FORM

Adjacent ground floor uses and building forms along these streets strengthen the retail concentrations along other streets by incorporating alternative responses. These could include commercial, neighborhood service, or institutional uses, main entrances and/or building lobbies, ground floor windows and landscaped planters. Adjacent buildings could also feature setbacks with additional landscape materials for building storm water management and/or seating areas. Because there may not be as many direct physical connections between the sidewalk and the ground level of adjacent buildings, matching grades is not always necessary. Retail sales and service uses on these streets would be allowed, but not encouraged.

POSSIBLE STREETSCAPE AND DEVELOPMENT CHARACTERISTICS

Streetscape:



- Special sidewalk and intersection paving materials
- Trees with more spreading canopy
- Visible storm water management
- Wide sidewalks/pedestrian facilities
- On-street parking
- Curb extensions with additional landscaping, trees
- Signature transit service and facilities

Development:

- Landscaped building setbacks allowed/encouraged
- Main entrances, lobbies
- Required ground floor retail space allowed, not encouraged
- Larger building volumes oriented to street, full block buildings could see step down from nearby "first" couplet street
- Building service, parking access limited, discouraged

56160

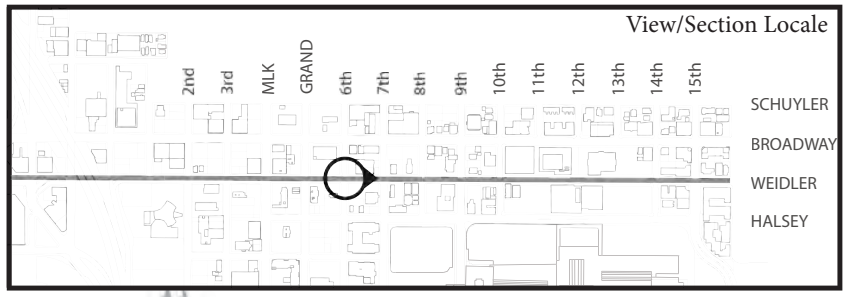
PROPOSED BOULEVARD STREETS

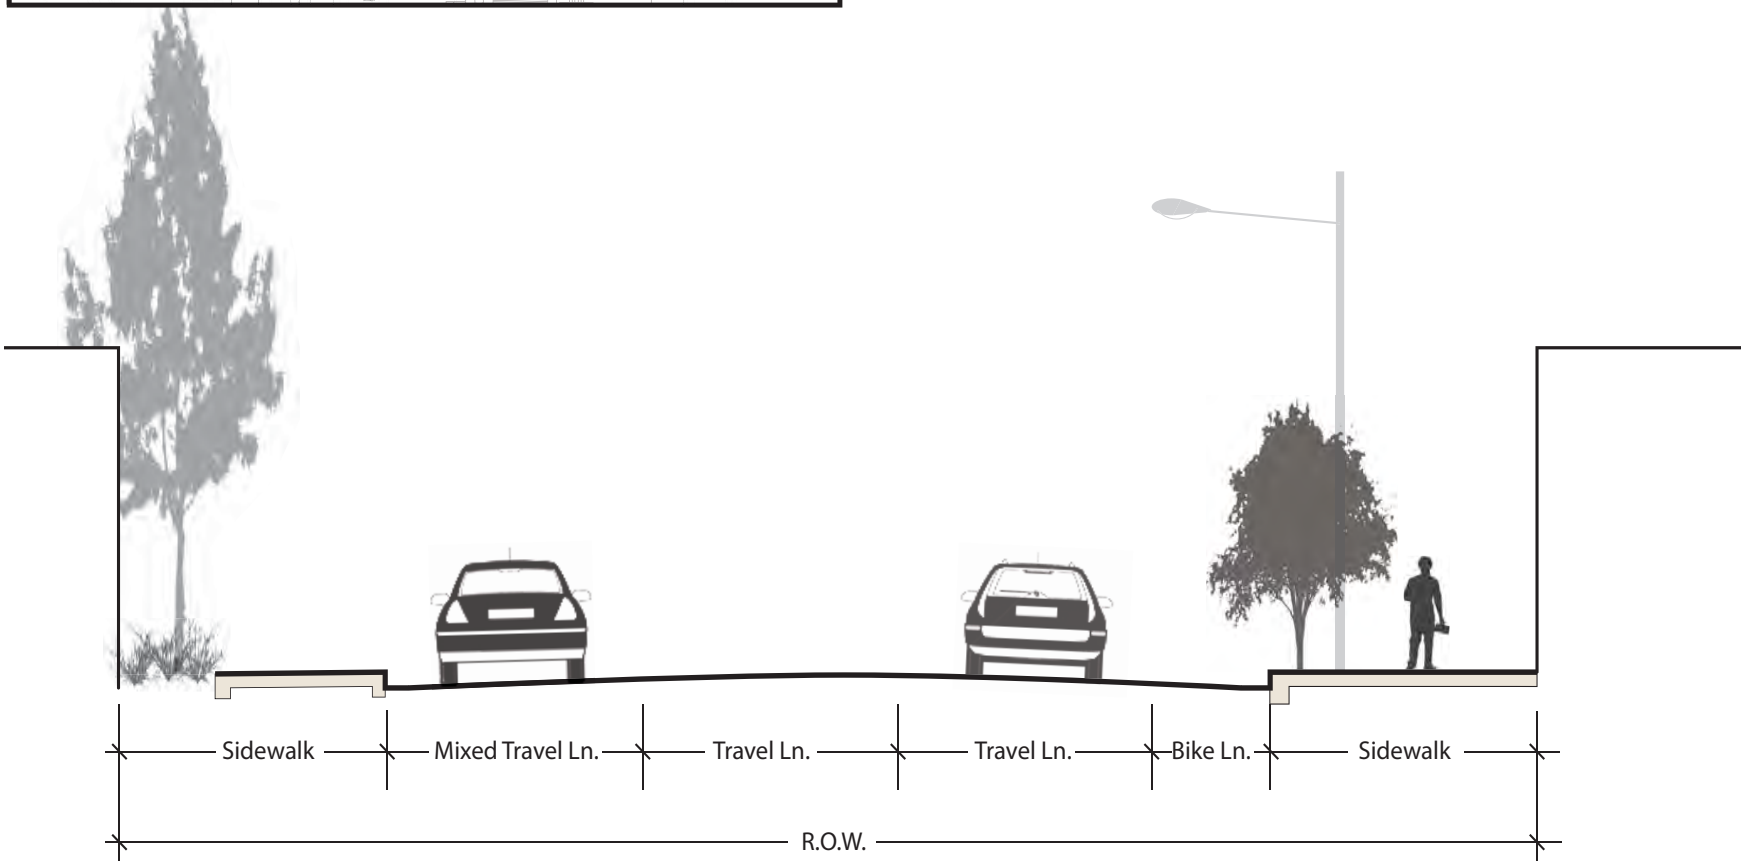
Different scales:

Civic – Regional, could be part of couplet corridor, extend beyond quadrant *Weidler, 15th/16th, 9th, Lloyd Blvd., Interstate*

District - Central to the quadrant, opportunities for distinctive corridors, some offering specialized transit or other mobility facilities *Wheeler, E Multnomah, Holladay**

Neighborhood – Local, continuation of existing character and patterns, transitional *Vancouver*





BOULEVARD - CIVIC

BOULEVARD - CIVIC

NE Weidler + 9th Ave. (2035)

2035 Street Section (looking East)

NE Weidler + 9th Ave. (2035)

TYPE 3. "FLEXIBLE"

QUALITY OF EXPERIENCE

These streets and spaces make up a system of local connections through the entire quadrant area, linking its different districts to each other and to the surrounding communities. An alternative set of routes to the busier street network, they generally provide more of a quieter, park-like character, offering relief from the rest of the quadrant's busier public realm system. Due to their more local orientation, they are more internally-focused and offer local workers and residents additional opportunities for passive and active recreation.

While the connectivity would be consistent in its orientation, the design of each segment of the system could vary according to unique or specialized conditions of adjacent land uses and/or block faces. In Lower Albina, for example, new flexible connections would offer an alternative route for pedestrians, and potentially bicycles, through the district while maintaining freight and truck mobility and access. More than the other types in the quadrant, this flexible type moves across public and privately-owned properties and utilizes connections through large blocks in concert with parts of the street system less burdened with traffic movement functions.

MOBILITY AND ACCESS

This is primarily a pedestrian network, though portions or segments of the system could offer additional low stress bicycle connections, local vehicular access, building loading and/or parking. Some of these streets or segments could offer expanded surface stormwater management facilities and/or larger-canopy trees

ADJACENT LAND USE AND FORM

Adjacent ground floor uses along these streets include ground level residential units (townhouses, porches, patios, stoops, etc.) live/work spaces, residential building common areas, and potentially other types of neighborhood services such as day-care facilities. Retail sales and service uses would be discouraged and/or limited on these streets except at key locations.

POSSIBLE STREETSCAPE AND DEVELOPMENT CHARACTERISTICS

Streetscape:

- Special paving materials, at intersections with other types(?)
- Trees with more canopy (more spreading)
- Visible, expanded storm water management
- Generous pedestrian areas, trail-like facilities in some cases
- On-street parking
- Curb extensions with additional landscaping, trees
- Reclaimed portions of the right-of-way for additional public uses, non-transportation
- Low stress bike facilities
- Curbless roadway, "festival street"-like quality
- Bollards
- "Gateway" or traffic-calming features
- Public art
- Unique lighting, wayfinding signage
- Safe crossings at intersections with other streets

Development:

- Building setbacks (up to 20 feet?) allowed/encouraged
- Ground floor residential entries
- Stoops, patios, semi-private dwelling unit access
- Ground floor retail space discouraged, prohibited?
- Large buildings podium edges
- Building service, parking access

56172

PROPOSED FLEXIBLE CONNECTIONS

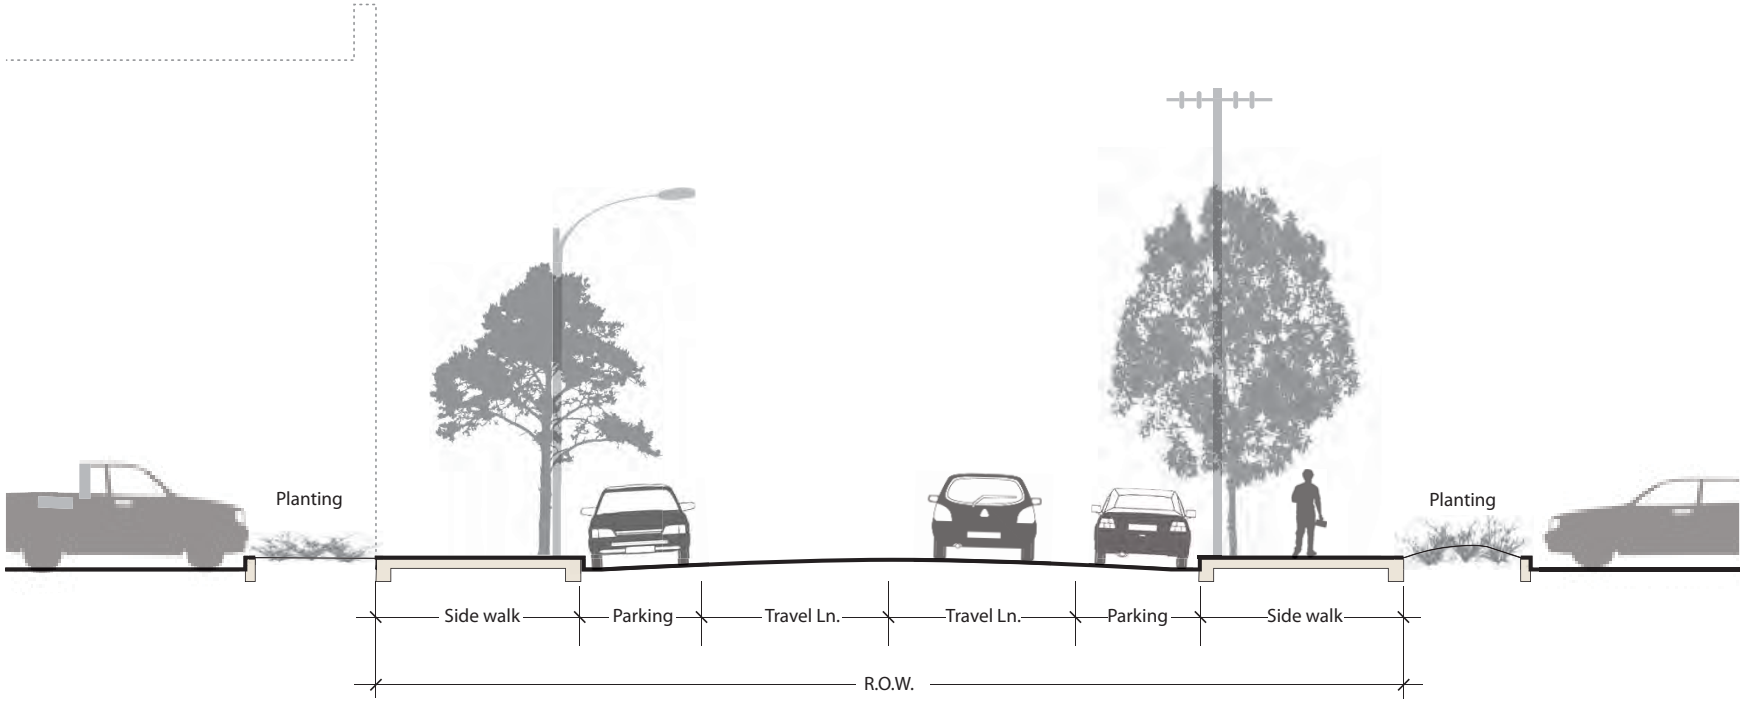
Some potential variations *(specific variations, locations TBD):*

"Woonerf" – Allows through motor vehicle access, parking

"Festival Street" – Allows some motor vehicle access, parking, can be closed off for events

"Strand" – Allows truck access, loading, movement and parking, features some wayfinding clues, potentially through Lower Albina, industrial areas

"Pathway" – Limited or prohibited motor vehicle access and parking, coordinated pedestrian links, some could accommodate signature bicycle, transit facilities, also alternative routes through superblocks



"Open Space" – Limited or prohibited motor vehicle access and parking, street provides open space and recreational functions

"Bridge" – Primarily pedestrian/bicycle movement-oriented, provide connections across major barriers, link Central City districts, places and activity centers

FLEXIBLE

56187

TYPE 4. "TYPICAL" (not mapped)

QUALITY OF EXPERIENCE

These are the typical, or "local access" streets in the quadrant. While typically limited to two travel lanes, the character of these streets wouldn't necessarily emphasize one theme or another. They would provide local access to buildings and businesses, offering a street with less motor vehicle traffic and a pleasant experience for pedestrians.

MOBILITY

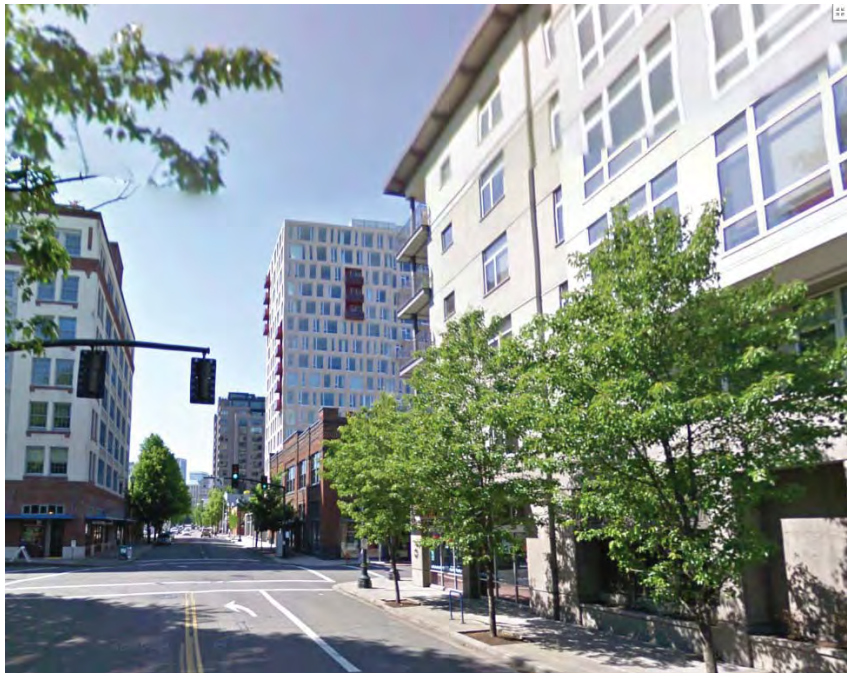
These streets are fairly evenly split between roadway and sidewalk space. The usually have two travel lanes, on-street parking, and adequate sidewalk space. Due to the much lower traffic volumes on these streets, some may provide lower stress bike options that may include bike lanes or "sharrows." They provide an opportunity for street trees with broader canopy, and enhanced storm water management facilities.

ADJACENT LAND USE AND FORM

Adjacent ground floor uses and building forms reflect the non-signature nature of these streets, with the predominant character being individual residential unit entries, some neighborhood service or commercial uses, in addition to building loading and service access facilities. Except for some key locations, retail sales and service uses on these streets would be limited or prohibited.

POSSIBLE STREETSCAPE AND DEVELOPMENT CHARACTERISTICS

Streetscape:



- Trees with more spreading canopy
- Visible storm water management
- On-street parking

Development:

- Landscaped building setbacks allowed
- Required ground floor retail space limited or prohibited
- Larger building volumes oriented to other, more prominent streets
- Building service, parking access allowed

56188

5. Next Steps...

This street and development character concept will be explored in more depth, with more discussion, deliberation and direction from the SAC, in the plan development phases of work for the project. As planning for the Centra City continues, this framework will be expanded to the other Central City quadrants as they undergo similar planning efforts. Ultimately, implementation of this concept will help guide future decision making and more strategic investments in the quadrant (and Central City's) public realm system.

How Potential I-5 Freeway Improvements Support the Quadrant Concept

Overall Project Benefits

The Quadrant Plan Concept calls for continued success and development of the existing major regional facilities as well as significant future growth and development in the Rose Quarter, Lloyd District and Lower Albina. The I-5 improvements help support this growth by improving freeway reliability and safety in the area. Potential impacts of the freeway improvements will need to be carefully considered and weighed against the benefits they bring to the area. Ways to mitigate impacts will continue to be explored as the project moves forward.

The freeway project also has the potential to support the N/NE Quadrant Concept in several specific areas:

Focus Area #1. North of Broadway (Vancouver/Hancock) —
Rebuilding bridges over the freeway presents opportunities to:

- Improve pedestrian and bicycle conditions.
- Create new connections between Vancouver/ Williams and the Portland Public School's Blanchard site, a key redevelopment opportunity.

Focus Area #2. Broadway/Weidler Lid —
Rebuilding bridges provides opportunities to:

- Simplify traffic movements to and from the freeway.
- Improve local access and safety for all modes.
- Improve pedestrian and bicycle facilities.
- Create a large freeway lid over the freeway (a first in Portland) that could be used in a variety of ways.

Focus Area #3. Clackamas Overcrossing —
The proposed new pedestrian/bike connection over I-5 supports:

- The creation of a flexible connection and open space system along Clackamas Street that would stretch from Lloyd Center to the Willamette River.
- Infrastructure for a proposed district energy system linking facilities in the Rose Quarter with the remainder of the Lloyd District.

Focus Area #4. Rose Garden Arena —
Freeway improvements in this area could include:

- Improvements to bicycle routes between the Rose Quarter Transit Center and Broadway/ Weidler.
- Innovative stormwater management.
- Improvements to the undercrossing at Multnomah.

Focus Area #5. Rose Quarter TC & Oregon Conv. Center —
Improvements could include innovative design under bridges to:

- Improve pedestrian connections between the Rose Quarter and the Convention Center.
- Upgrade conditions and mitigate impacts to the MAX station and Peace Park.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Freeway/Local Transportation Interface

Staff Report:
Recommended Hybrid Project
and Elements for Further Refinement

I-5: Broadway/Weidler Interchange Improvements

February 16, 2012

The N/NE Quadrant and I-5 Broadway/Weidler Plans Project is a collaborative effort by the City of Portland and the Oregon Department of Transportation to integrate urban design and land use planning with freeway planning and concept-level engineering in the North/Northeast portion of the Central City, which includes Lower Albina and the Lloyd District.

Stakeholder Advisory Committee: Meeting #13

February 16, 2012

Staff Report

The overall project purpose is to...

Improve safety and operations on I-5 in the vicinity of the Broadway/Weidler interchange

OBJECTIVES INCLUDE:

EASE CONGESTION LEVELS AND IMPROVE SAFETY:

- Congestion can be reduced through a variety of measures. Workable solutions will be explored through the Stakeholder Advisory Committee (SAC) and public outreach.

ENHANCE PEDESTRIAN AND BICYCLE ROUTES:

- Through public input, the SAC process and in partnership with the City, ODOT will look for ways to improve pedestrian and bicycle movements and facilities over and under the freeway system.

IMPROVE FREIGHT MOVEMENT:

- Freight requires highways to have sufficient capacity, good reliability and good geometrics for turning, stopping and other movements.

Recommended Hybrid Project and Elements for Further Refinement
I-5: Broadway/Weidler Interchange Improvements

I. INTRODUCTION

The Oregon Department of Transportation (ODOT), the City of Portland Bureau of Transportation (PBOT) and the City of Portland Bureau of Planning and Sustainability (BPS) are jointly managing a project that includes preparing a long-range plan for the overall N/NE Quadrant of the Portland Central City and identifying specific improvements to I-5 between I-84 and I-405 (Fremont Bridge) as well as improvements to the Broadway/Weidler Interchange.

This staff report describes the Hybrid Base Project and Elements recommendation for the I-5: Broadway-Weidler Interchange Plan improvements.

The purpose of this staff report is to support the N/NE Quadrant Stakeholder Advisory Committee (SAC) in answering the following question (SAC Question #1 is addressed by separate materials):

SAC Question #2:
Do you agree with the staff recommendation to approve the hybrid base concept as described?

Overview

The project team has worked closely with SAC to identify a wide range of freeway and interchange improvement concepts that could improve freeway safety and operations while being compatible with emerging long-range plans and support economic development within the overall N/NE Quadrant. The range of freeway and interchange improvement concepts has been narrowed to a few of the most promising concepts. This Staff Report recommends continued study on a hybrid project with a few key elements.

The process for identifying, evaluating and narrowing the concepts has included several milestone actions by the SAC, including:

1.	Adoption of project goals and objectives	SAC Meeting #4,	January 4, 2011
2.	Conduct freeway/interchange charrette		April 2011
3.	Narrowing from 70+ ideas to 13 concepts	SAC Meeting #6,	May 26, 2011
4.	Narrowing from 13 concepts to 6 concepts	SAC Meeting #8,	July 28, 2011

At SAC Meeting #10, on October 27, 2011 the committee reviewed a physical model of the six interchange concepts and received a presentation summarizing key findings.

At the SAC Subcommittee meeting on December 8, 2011 staff presented information on the performance of each concept and the subcommittee discussed their pros and cons. Based on the technical information, rankings and discussion the subcommittee recommended the following:

1. That staff do no further work on Concept 4a Split Diamond and Concept 4b Folded Diamond.
2. The Subcommittee recommended that staff work to identify the best elements of each remaining concept (Braided Ramp/CD Road, Rebuilt Structures, and Three-Point Interchange) and explore including those elements in a hybrid concept or concepts and report findings from those hybrid concepts at the January 19, 2011 SAC meeting.

At SAC Meeting #12 staff presented an overview of SAC Subcommittee recommendation and asked the SAC to endorse the Subcommittee recommendation. The SAC unanimously supported the Subcommittee recommendation and directed staff to:

- **Do no further study of the Concept 4a Split Diamond and Concept 4b Folded Diamond.**

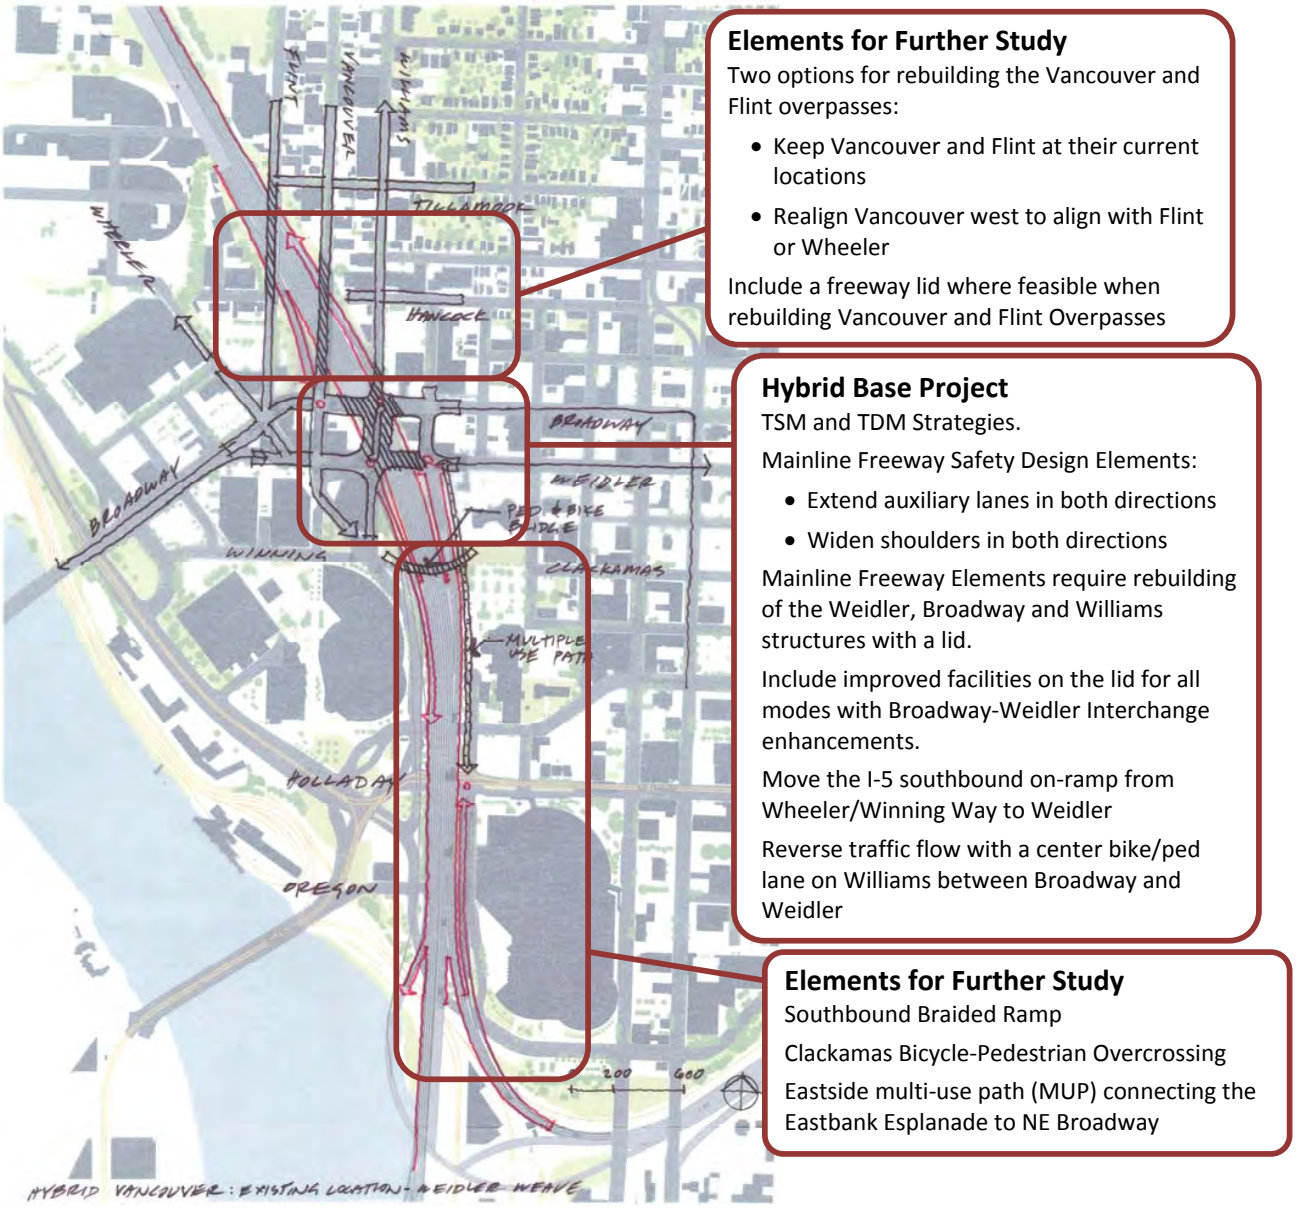
In addition to this action removing the Split Diamond and Folded Diamond concepts, the SAC discussed the benefits and concerns regarding the proposed hybrid project elements. The issues raised during the SAC discussion were considered in preparing this Staff Report and the hybrid project recommendation.

A project Open House was held at Lloyd Center Mall on February 2, 2012. The Open House provided information on the land use planning process and on the freeway and interchange improvements that have been discussed with the SAC. The Open House also provided an opportunity for the public to provide input on the proposed project elements.

II. RECOMMENDATION: HYBRID BASE PROJECT AND ELEMENTS FOR FURTHER REFINEMENT

The project team developed a hybrid base project and identified elements for further refinement based on technical assessments of bicycle and pedestrian operations, urban design/ land use potential, traffic operations and safety.

Based on that assessment, ODOT and the City of Portland have jointly identified areas of agreement on how to proceed to further develop the hybrid base project and to continue to analyze elements that require more study illustrated in Figure 1.



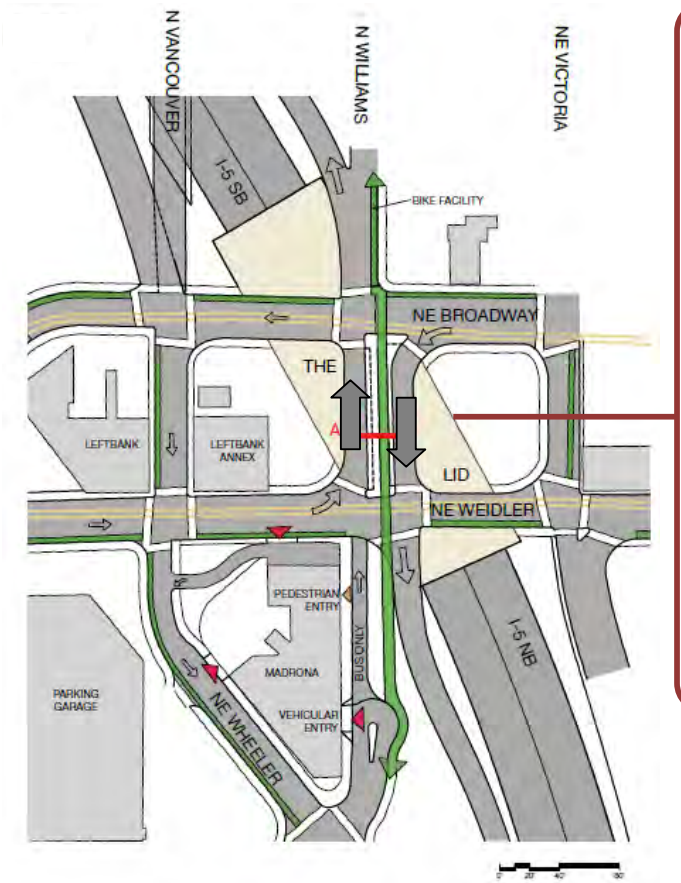


Figure 1: Hybrid Base Project and Elements for Further Study

Hybrid Base Project

In preparing the Hybrid base project, the project team identified the most promising I-5 Broadway-Weidler Interchange elements of each concept. The Hybrid Base Project (illustrated in Figure 2) includes:

1. Transportation System Management (TSM) and Transportation Demand Management (TDM) Strategies
2. Mainline Freeway Safety Elements:
    a. Extend Auxiliary Lanes in both directions
    b. Add full-width shoulders in both directions
3. Mainline Freeway Safety Elements require re-building the Weidler, Broadway, and Williams, structures over I-5. The structures would be rebuilt to include a lid over portions of the freeway.
4. Broadway-Weidler Interchange enhancements including improved facilities (sidewalks, bicycle lanes, etc.) on the lid for all modes
5. Move the southbound on-ramp from Wheeler/Winning Way to Weidler (at Williams)
6. Reverse traffic flow on Williams between Broadway and Weidler with center bicycle/pedestrian lane

Broadway/Weidler/Williams Lid

An auxiliary lane with widened shoulders in both directions would improve traffic operations and safety.

Rebuilding structures would be required to add the auxiliary lane and would provide improved bicycle and pedestrian facilities and an opportunity to build a lid over the freeway that could include usable public space.

Moving the I-5 southbound on-ramp from Wheeler/Winning Way to Weidler would reduce traffic on Wheeler south of Weidler.

Operating Williams as a reverse traffic flow street for one block would allow westbound traffic destined for I-5 south to turn one block to the east of where they currently turn and would reduce traffic on Vancouver. This arrangement, with the center bike/pedestrian facility, would allow bicyclists, pedestrians and transit to continue northbound from the Eastbank Esplanade and Rose Quarter to Williams Avenue.

Figure 2: Hybrid Base Project (illustrative concept drawing)

Rationale for the Hybrid Base Project

1. TSM and TDM measures represent low cost strategies for managing traffic operations and minimizing demand. While local, regional and state policies call for extensive use of these strategies, this recommendation will help to ensure that ODOT and the City of Portland fully commit to maximizing TSM and TDM strategies in the N/NE Quadrant and on I-5.
2. An auxiliary lane with widened shoulders will improve traffic operations and safety.
3. Rebuilding structures would be required to add the auxiliary lane and would provide improved bicycle and pedestrian facilities and an opportunity to build a lid over the freeway that could include usable public space.
4. Moving the Wheeler/Winning Way on-ramp to Weidler (at Williams) would reduce traffic on Wheeler south of Weidler.
5. Operating Williams with reverse traffic flow and a center bicycle/pedestrian lane for the block between Broadway and Weidler would allow westbound traffic destined for I-5 south to turn south one block to the east of where they currently turn and would reduce traffic on Vancouver. In addition the center bicycle/pedestrian lane would allow for bicycles and pedestrians to continue north from the Eastbank Esplanade and Rose Quarter to Williams Avenue.

Estimated Costs

Planning level cost estimates for the Hybrid Base Project:

1.	Add auxiliary lane to I-5 in both directions	$140 - $150 million
2.	Rebuild Broadway/Weidler/Williams with lid	$100 - $110 million

Elements for Further Refinement

The Hybrid Base Project described above includes the elements that are fundamental components of the project as all additional proposed elements are components that are designed to operate with the contingent upon approval of the base elements. In addition to the base elements (Rebuilt Broadway/Weidler and auxiliary lanes), there are additional elements that are recommended for further design refinement and analysis (illustrated in Figures 3, 4, 5 and 6):

1. I-5/I-84 Southbound Braided Ramp
2. Two options for rebuilding the Vancouver and Flint overpasses:
    - Keep Vancouver and Flint at their current locations
    - Realign Vancouver west to align with Flint or Wheeler

   Include a freeway lid where feasible when rebuilding Vancouver and Flint overpasses
3. Clackamas Bicycle/Pedestrian Overcrossing
4. A multi-use path (MUP) connecting the Eastbank Esplanade to NE Broadway along the east side of I-5

Rationale for the Elements of Further Refinement

1. The analysis to date has identified a range of potential benefits and impacts associated with adding southbound braided ramps (see Figure 3). Staff recommends additional analysis of the braided ramps in order to fully understand and document the following:
    - Traffic operations on the freeway and braided ramps
    - Incremental benefits of the braided ramps in addition to the auxiliary lane.
    - Design treatments for the braided ramps
    - Visual and aesthetic impacts associated with braided ramps

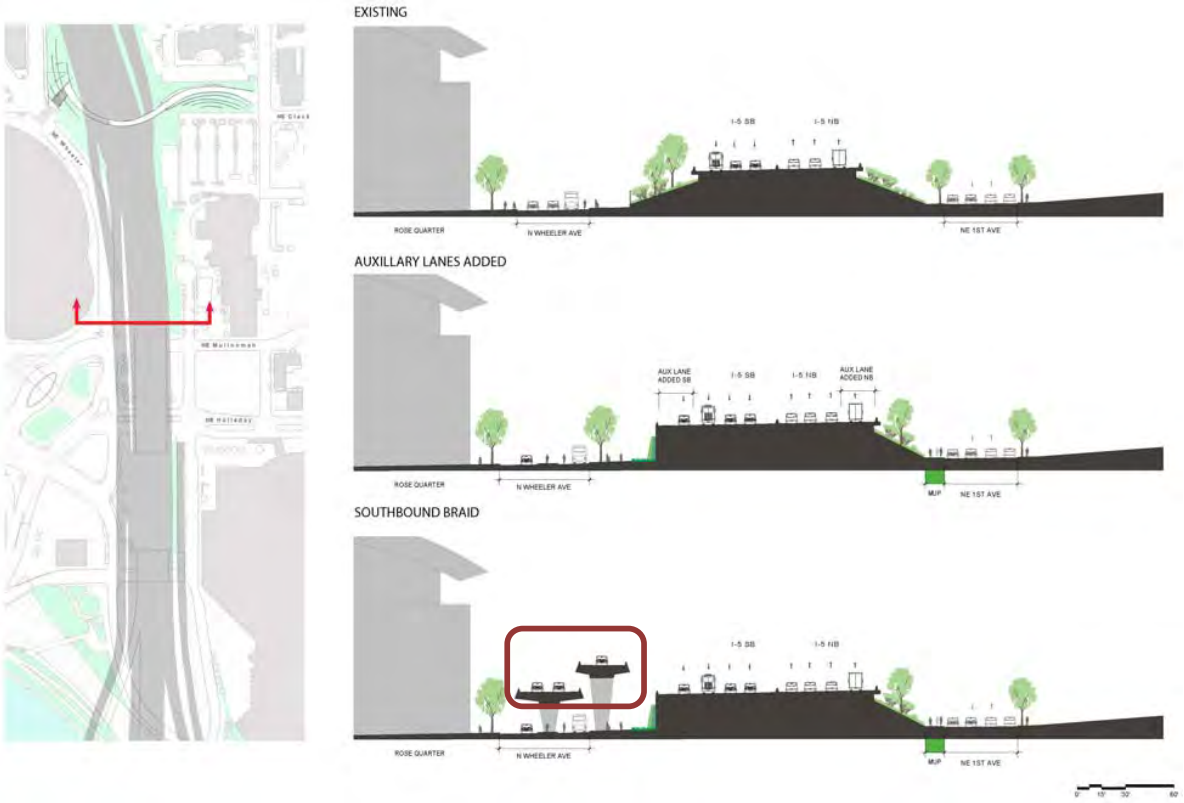

Figure 3: Southbound Braided Ramps (illustrative concept drawings)

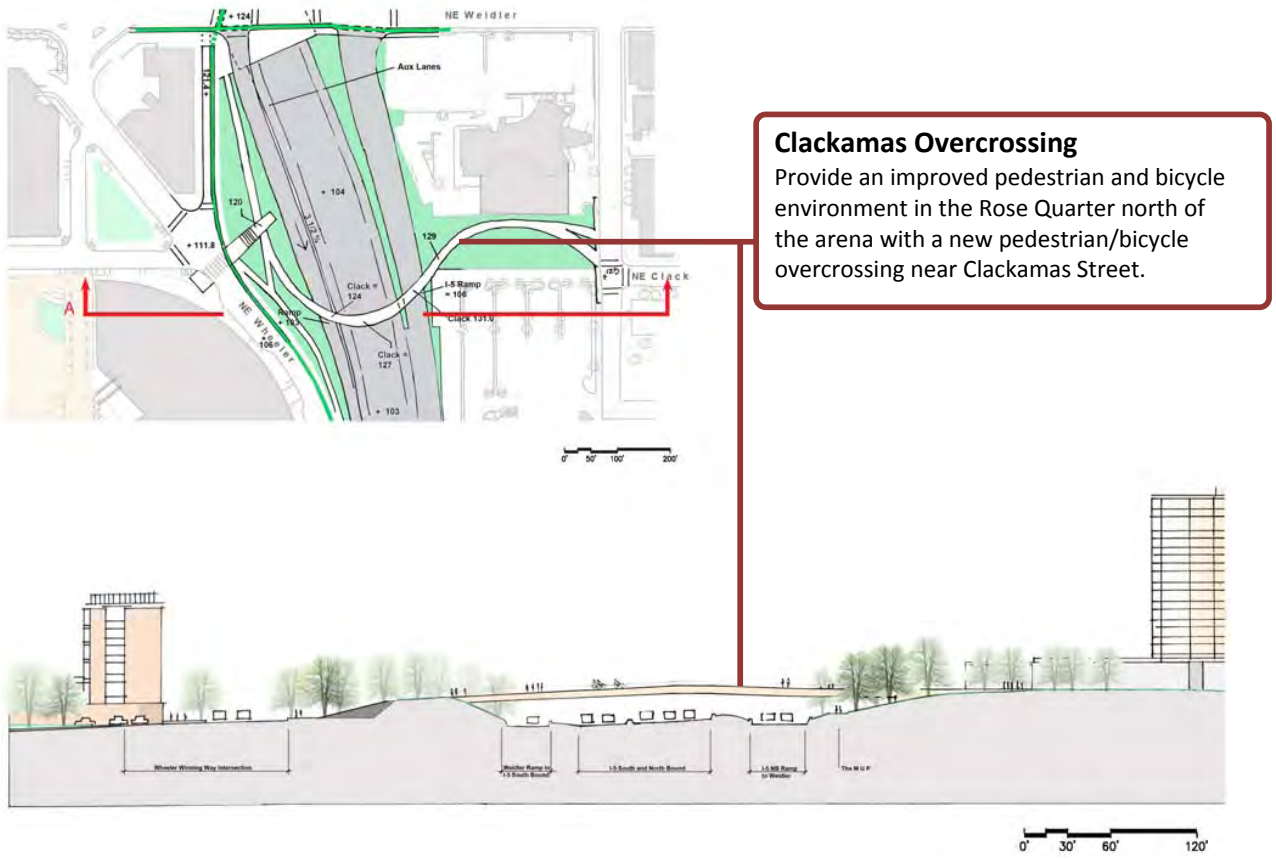
2. The analysis to date has identified a range of potential benefits and impacts associated with moving Vancouver to the west or keeping Vancouver at its current location as a five-legged intersection with Broadway and the I-5 southbound exit ramp (see Figure 4). Staff recommends additional analysis of both concepts in order to fully understand and document the following:
    - Traffic operations
    - Bicycle and pedestrian safety and circulation
    - Urban design and redevelopment opportunities
    - Impacts to existing residents and businesses



Option 1
Keep Vancouver and Flint at their current locations

Option 2A
Move Vancouver west to align with Flint

Option 2B
Move Vancouver west to align with Wheeler

Figure 4: Vancouver/Flint Options (illustrative concept drawings)

3. The analysis has identified to opportunities to provide an improved pedestrian and bicycle environment in the Rose Quarter north of the arena near NE Clackamas Street (Figure 5).

Clackamas Overcrossing
Provide an improved pedestrian and bicycle environment in the Rose Quarter north of the arena with a new pedestrian/bicycle overcrossing near Clackamas Street.

Figure 5: Clackamas Overcrossing (illustrative concept drawings)

4. The analysis to date has identified a range of potential benefits and impacts associated with creating an Eastside multi-use path (MUP) to connect the Eastbank Esplanade to NE Broadway. This multi-use path would serve as an alternative route to encourage "interested-but-concerned" bike riders (see Figure 6).

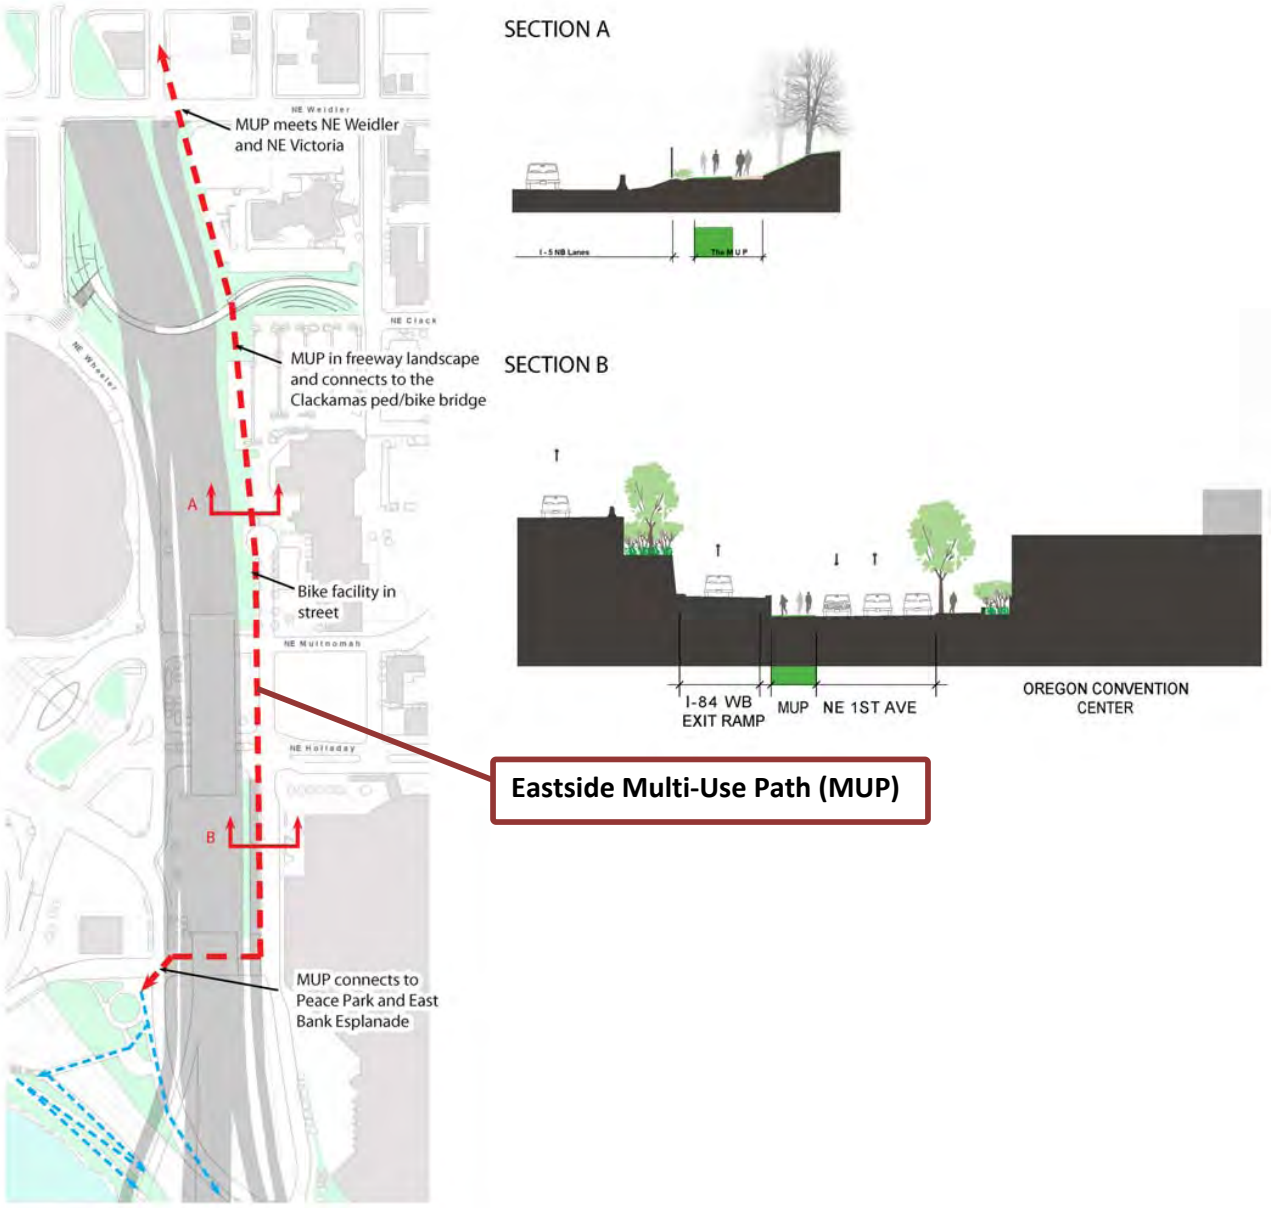


Figure 6: Eastside Multi-Use Path (illustrative concept drawings)

Estimated Costs
Planning level cost estimates for the Additional Elements to be Refined Further:

- Southbound Braided Ramps (additional cost above Base Project $140 - $150 million) *or Forgo SB Braid as Part of Current Construction Plans*
- Realign Vancouver west to align with Flint or Wheeler $65 - $80 million

  Or Rebuild Vancouver and Flint in Place *$45 - $50 million*
- Clackamas Overcrossing $15 - $20 million
- Multi-Use Path east of I-5 $2 - $4 million

2035 No-Build

The 2035 No-Build Concept will be analyzed for the 2035 forecast year and will provide a basis for comparison with the build concepts.

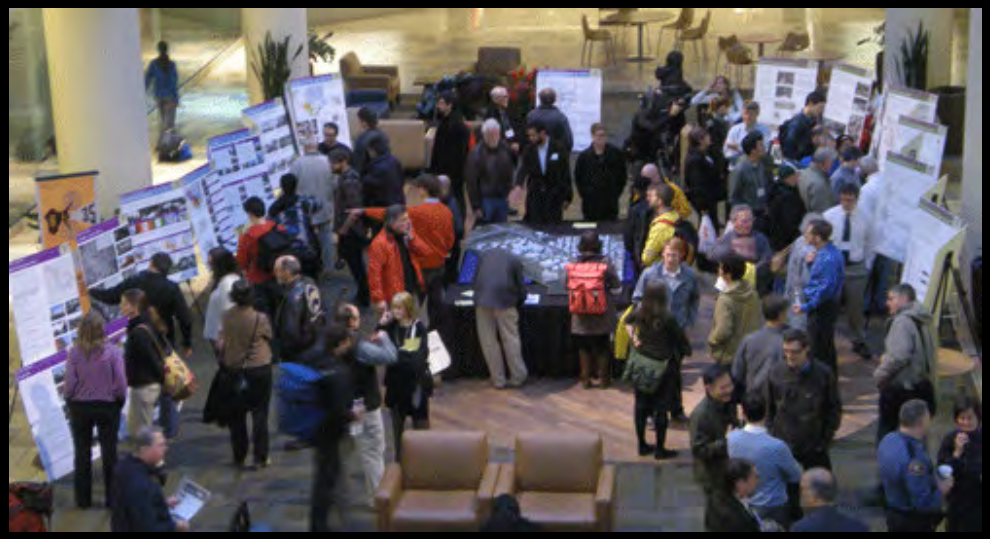
1. No change – limited new development opportunities. The 2035 No-Build Concept will be analyzed for future conditions and will provide a basis for comparison with the build concepts.
2. No construction impacts
3. No capital expenditures

III. NEXT STEPS

The next SAC meeting is March 15th; at this meeting, project staff will present recommendations on the remaining four elements which are being refined further.

N/NE Quadrant & I-5 Broadway/Weidler Plans

SAC Meeting #13 February 16, 2012



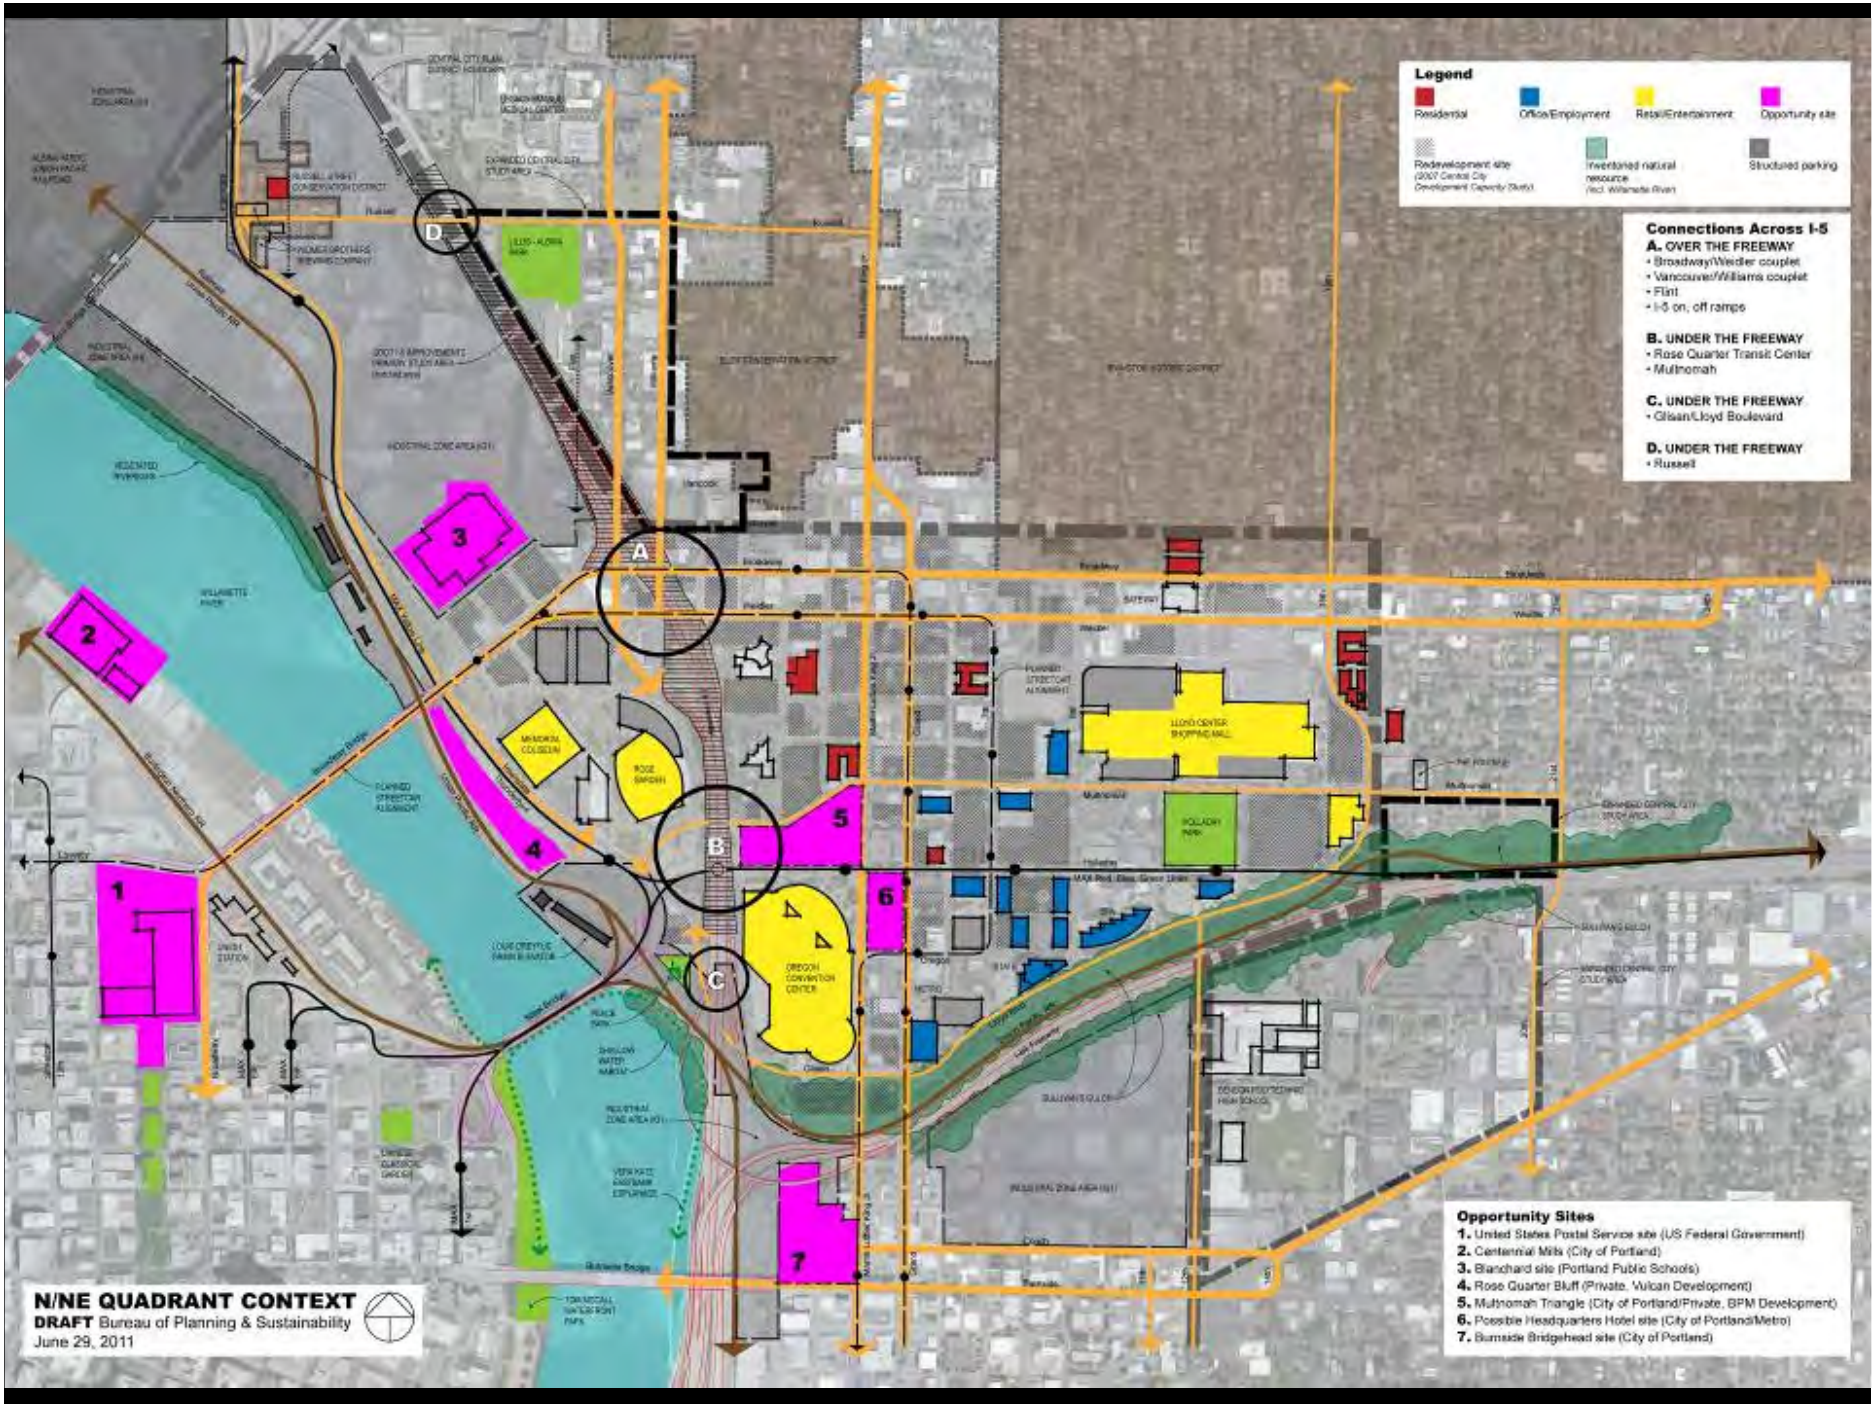
Oregon Department of Transportation

Agenda

1. Standing Items
2. N/NE Quadrant Plan Concept
   - Public comment
   - Requested SAC action: approve concept
3. Break
4. I-5 Broadway/Weidler Interchange
   - Public comment
   - Requested SAC action: approve hybrid base concept

Standing Items

- Approve SAC #12 Minutes
- Announcements
- Process Overview
- Outreach Summary



N/NE Quadrant Plan Concept

- Recap Key Existing Conditions
- Review Concept Diagrams
  - Land Use & Scale
  - Street & Development Characters
  - Open Space
  - Green Systems
- Next Steps
- I-5 Project Integration Diagram
- Discussion, Public Comment and Recommendation

Existing Conditions – Key Points

- Regionally important
- Significant jobs and potential for growth
- Limited housing
- Limited street-level activity / gobs of development potential
- Significant infrastructure in place

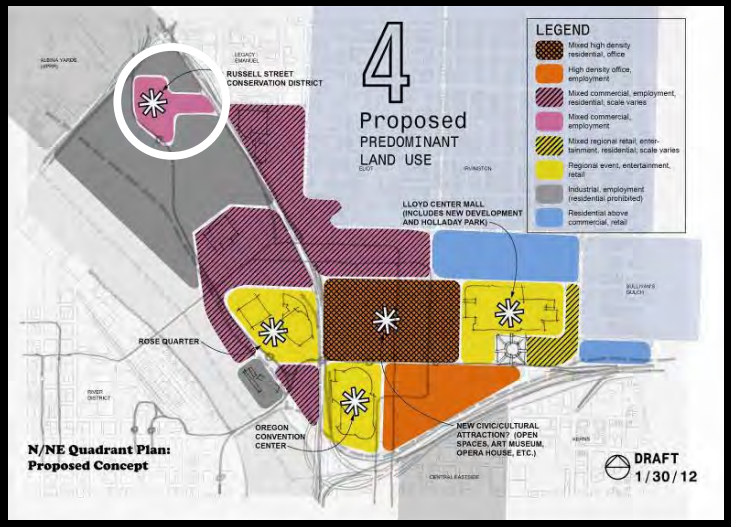
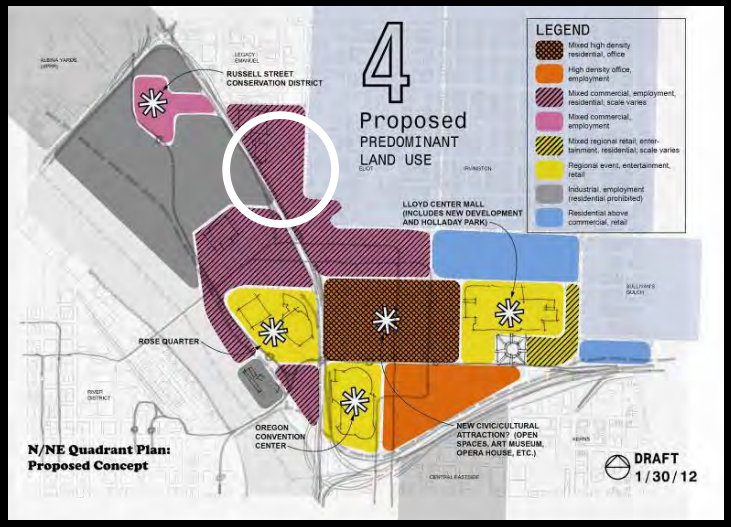
CENTRAL EASTSIDE
N/NE Quadrant Plan:
Proposed Concept
DRAFT
1/30/12



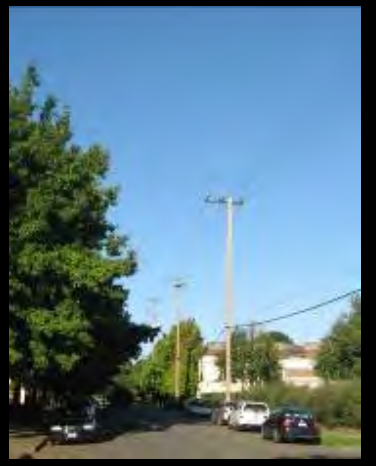
LOWER ALBINA

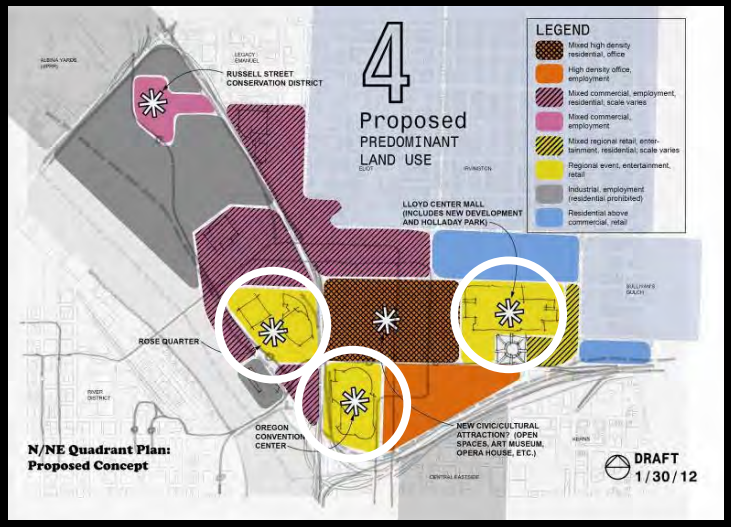
- Support continued success of industrial district
- Additional flexibility for compatible employment uses east of Union Pacific rail line



RUSSELL STREET

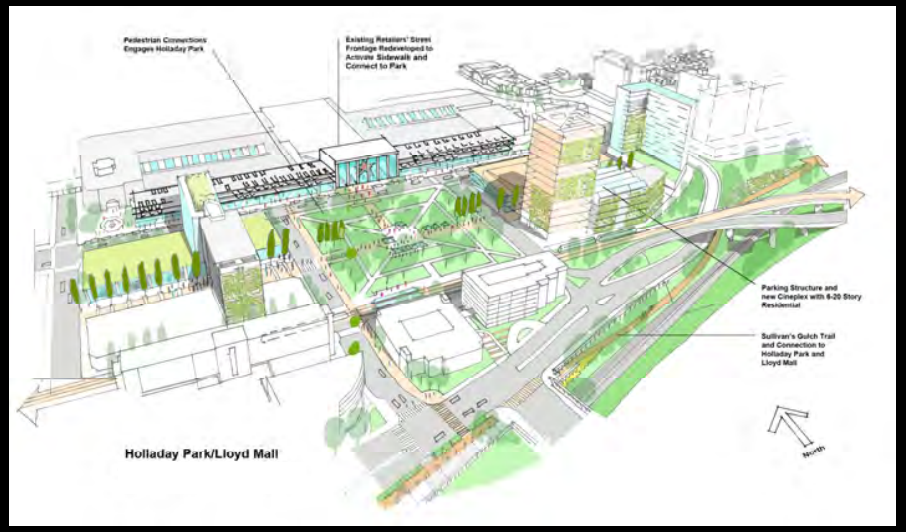
- Continue to preserve and celebrate the conservation district
- Expand mixed use area east along Russell and south to light rail station
- No expansion of residential area

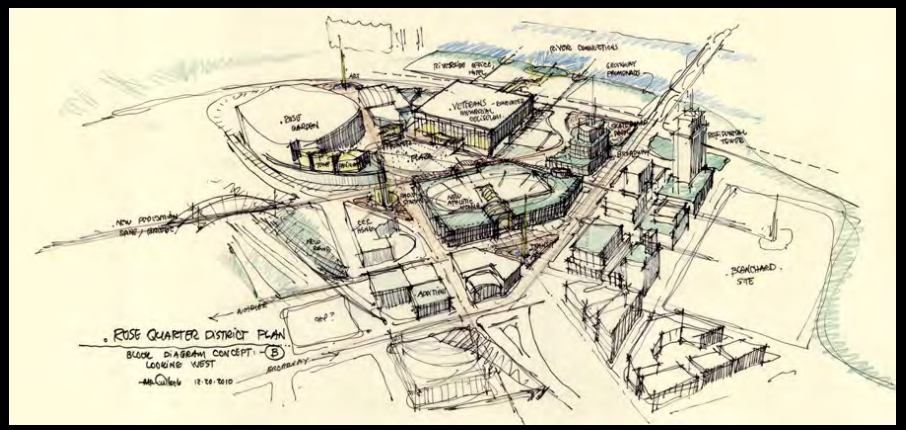


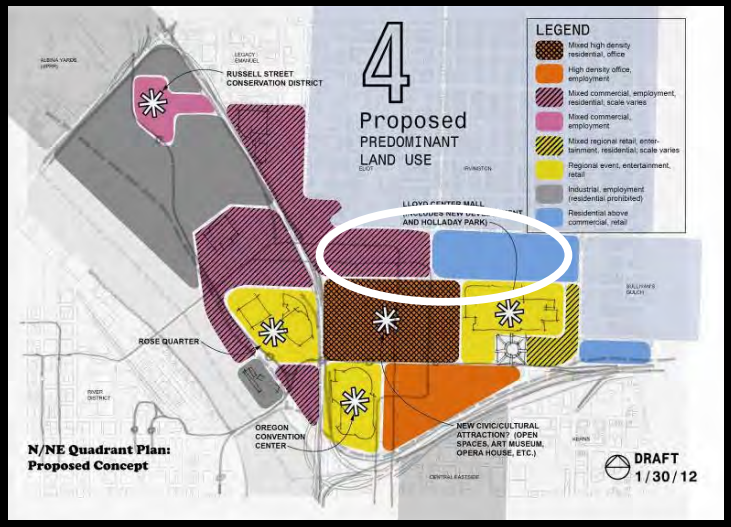


LOWER VANCOUVER / WILLIAMS

- Increase flexibility to allow more commercial, employment uses in current RH-zoned areas
- Celebrate Russell and Williams as neighborhood main streets
- Integrate and enhance cultural and historic resources in the area

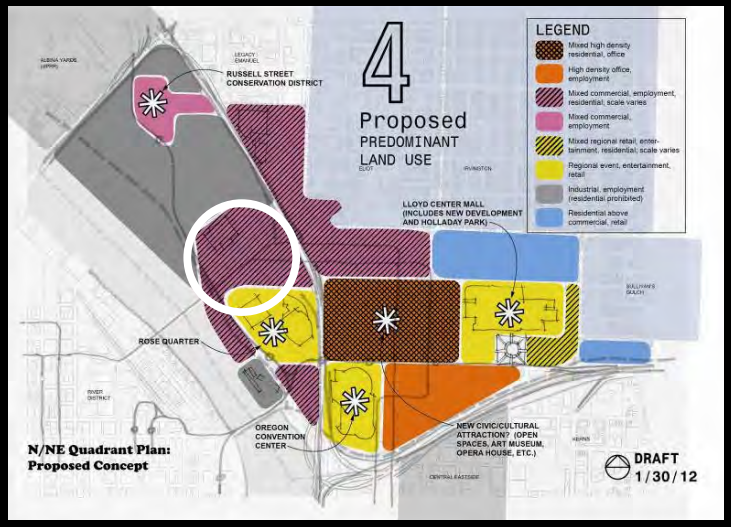






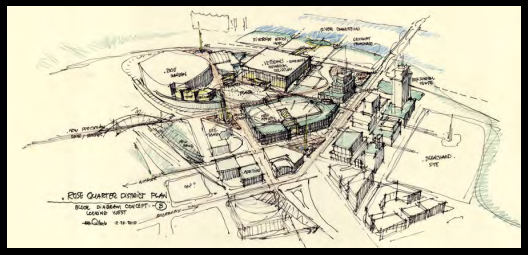
REGIONAL ATTRACTIONS

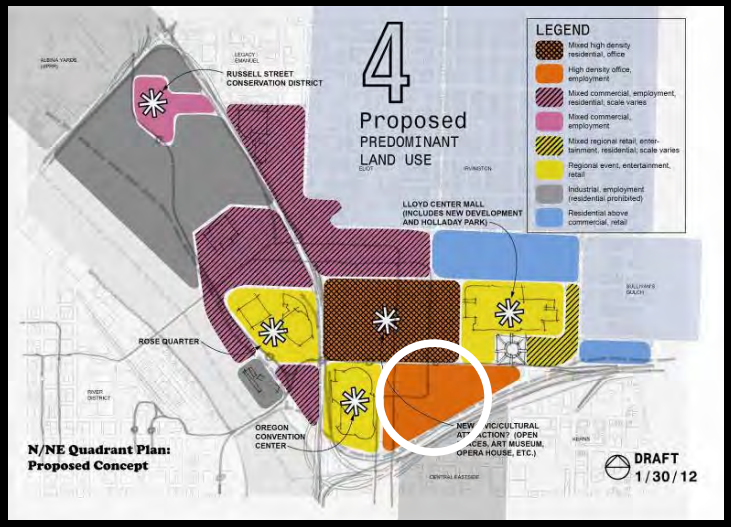
- Unique in the Central City
- Potential for new attraction in Central Lloyd area
- Encourage new uses, places at edges to improve balance of activity

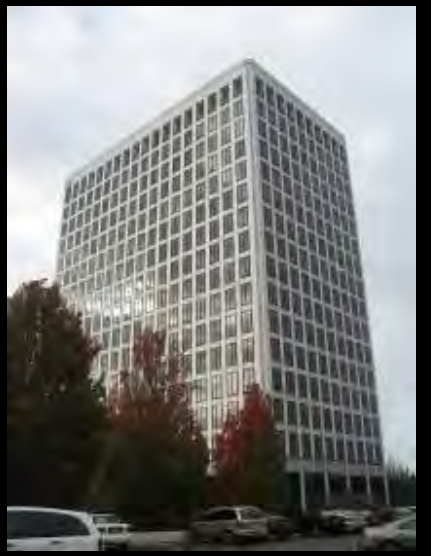


BROADWAY / WEIDLER CORRIDOR

- Extend and expand existing main street development to the west
- 2 to 6 story development east of 7th,
- 6 to 10 story development west of 7th, transitioning height down to north
- Housing over ground floor commercial, retail uses

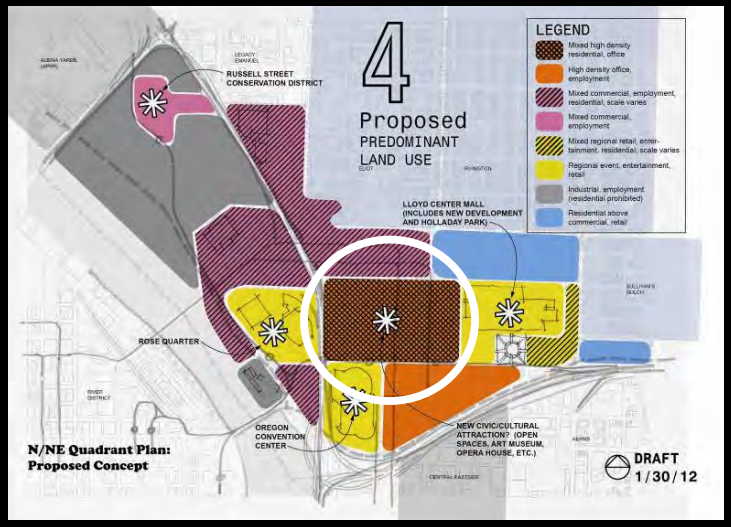






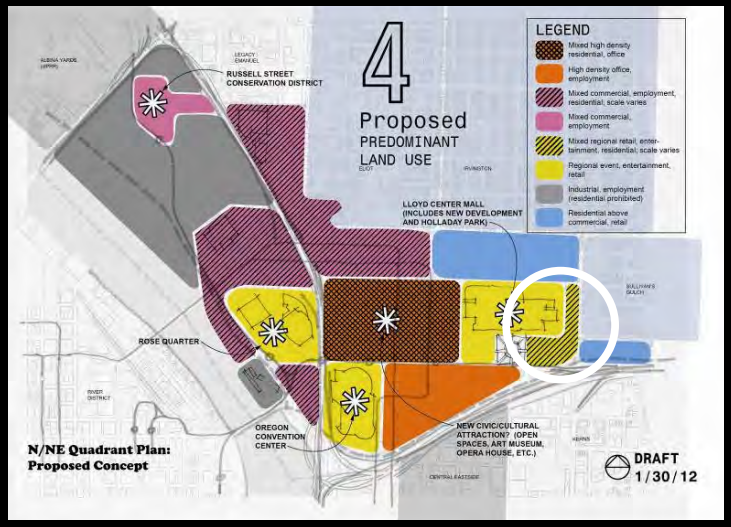
NORTHWEST ROSE QUARTER

- Increased land use flexibility at the PPS Blanchard site, residential possible – sensitive transition to industrial area needed
- Larger scale, active development along N. Broadway
- New riverfront open space



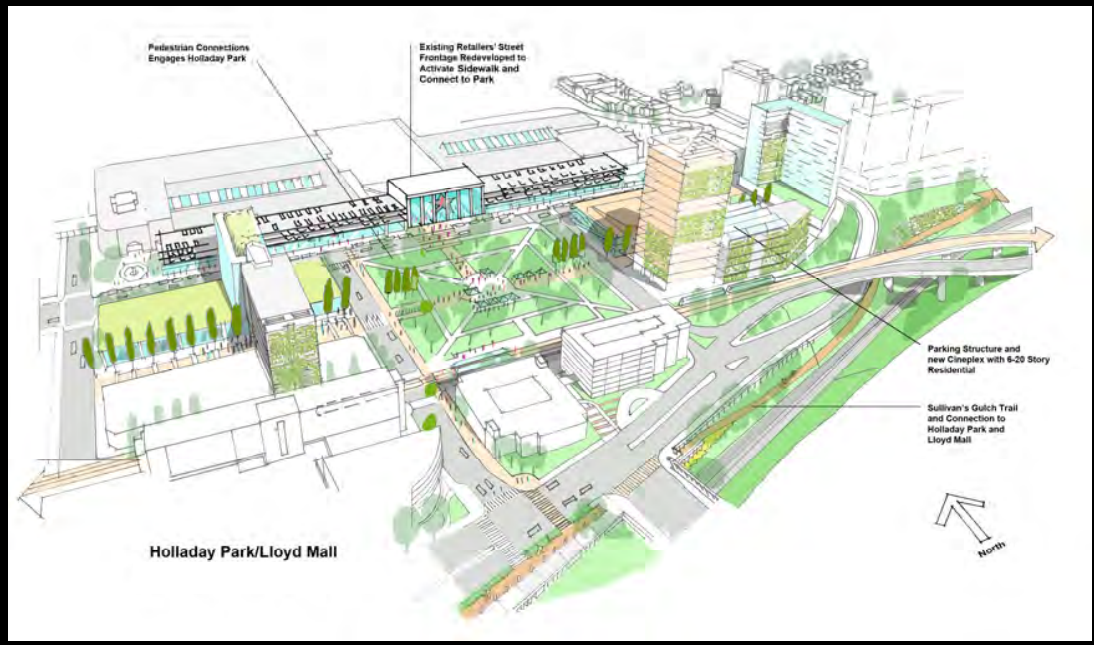
OFFICE CORE

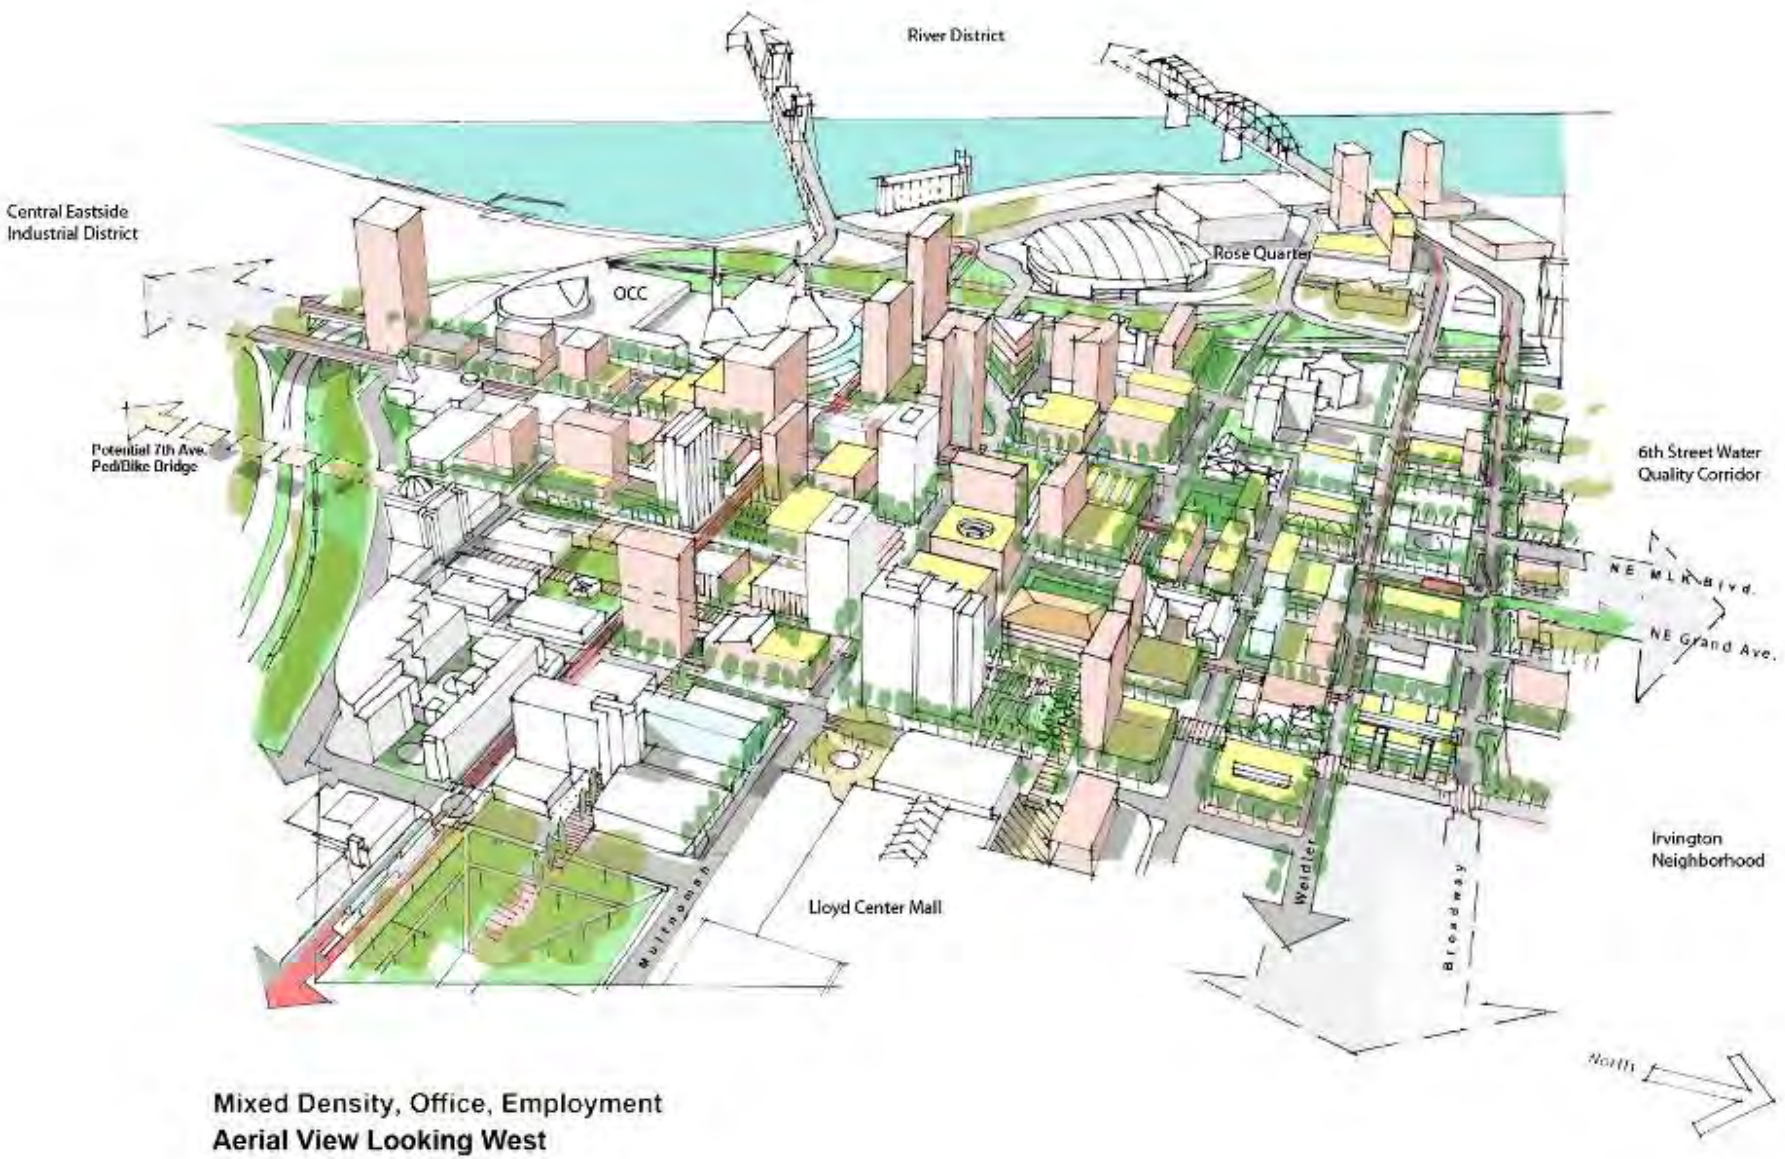
- Continue as active, expanding office district
- Residential possible, but not emphasized



CENTRAL CORE

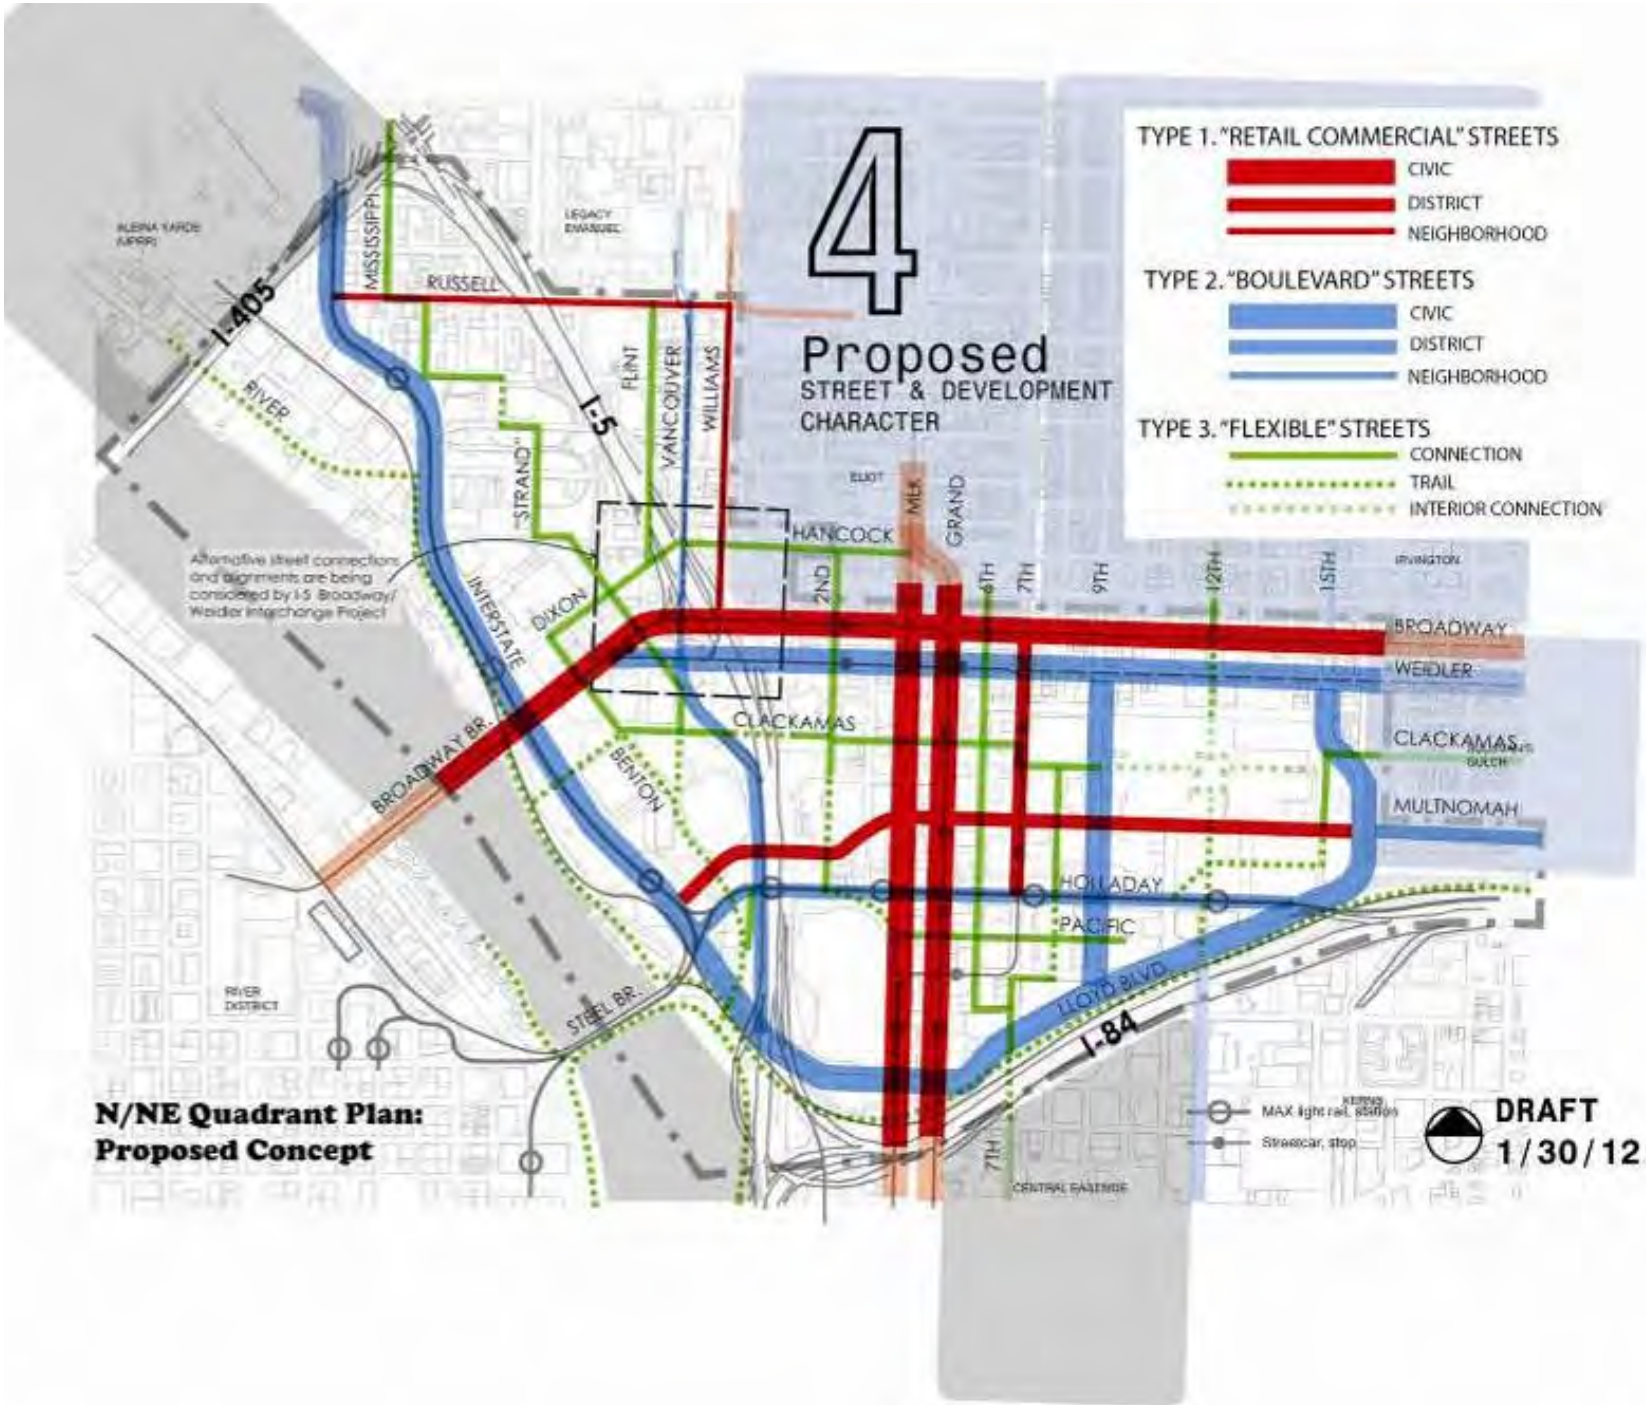
- Mix of high density residential and office development organized around new, signature open space system
- NE 7th as potential new neighborhood-serving retail street.
- Cluster residential buildings





EASTERN EDGE / MULTNOMAH

- Focus on residential development, commercial allowed
- Potential expansion of mall-related regional retail
- 2 to 6 story development east of 16th, taller allowed around Holladay Park



Mixed Density, Office, Employment

N/NE Quadrant Plan:
Proposed Concept
DRAFT
1/30/12

Assumptions for all types

1. Active adjacent ground floors
2. Good sidewalks with safe crossings
3. Attractive and diverse public amenities
4. Stormwater management functionality
5. Same transportation role
6. Adjacent development scaled to context

"Retail Commercial" Streets

1. Busy, continuous, active streets by day and night with high volumes of vehicles, transit, bicycles and pedestrians
2. Stormwater management less visible or at intersections with side streets
3. Retail uses required/strongly encouraged, specialized retail encouraged

Scales:
Civic: *Broadway, MLK and Grand*
District: *Multnomah and 7th*
Neighborhood: *Russell and Williams*

NE Broadway at 3rd

NE 7th near Clackamas

“Boulevard” Streets

1. Busy, continuous streets with nodal activity and emphasis on access, movement and flow. High volumes of vehicles, transit, bicycles and pedestrians
2. Visible “green” and stormwater management features allowed/encouraged, including landscaped building setbacks
3. Retail uses allowed, encouraged at key locations

Scales:

Civic: *Weidler, 15th/16th, 9th, Lloyd Blvd. and Interstate*

Neighborhood: *Vancouver and Wheeler*

NE Weidler at 6th

NE Weidler at 9th

“Flexible” Streets

1. Quieter low volume streets, alternative routes for pedestrians and bicyclists
2. Visible “green” and stormwater management features allowed/encouraged, including landscaped building setbacks
3. Retail uses limited or discouraged, except at key locations
4. Highly specialized/localized designs responsive to adjacent land uses/development
5. Linked together as part of a system that reaches the river
6. Ownership varies, can be public and private, exterior and interior

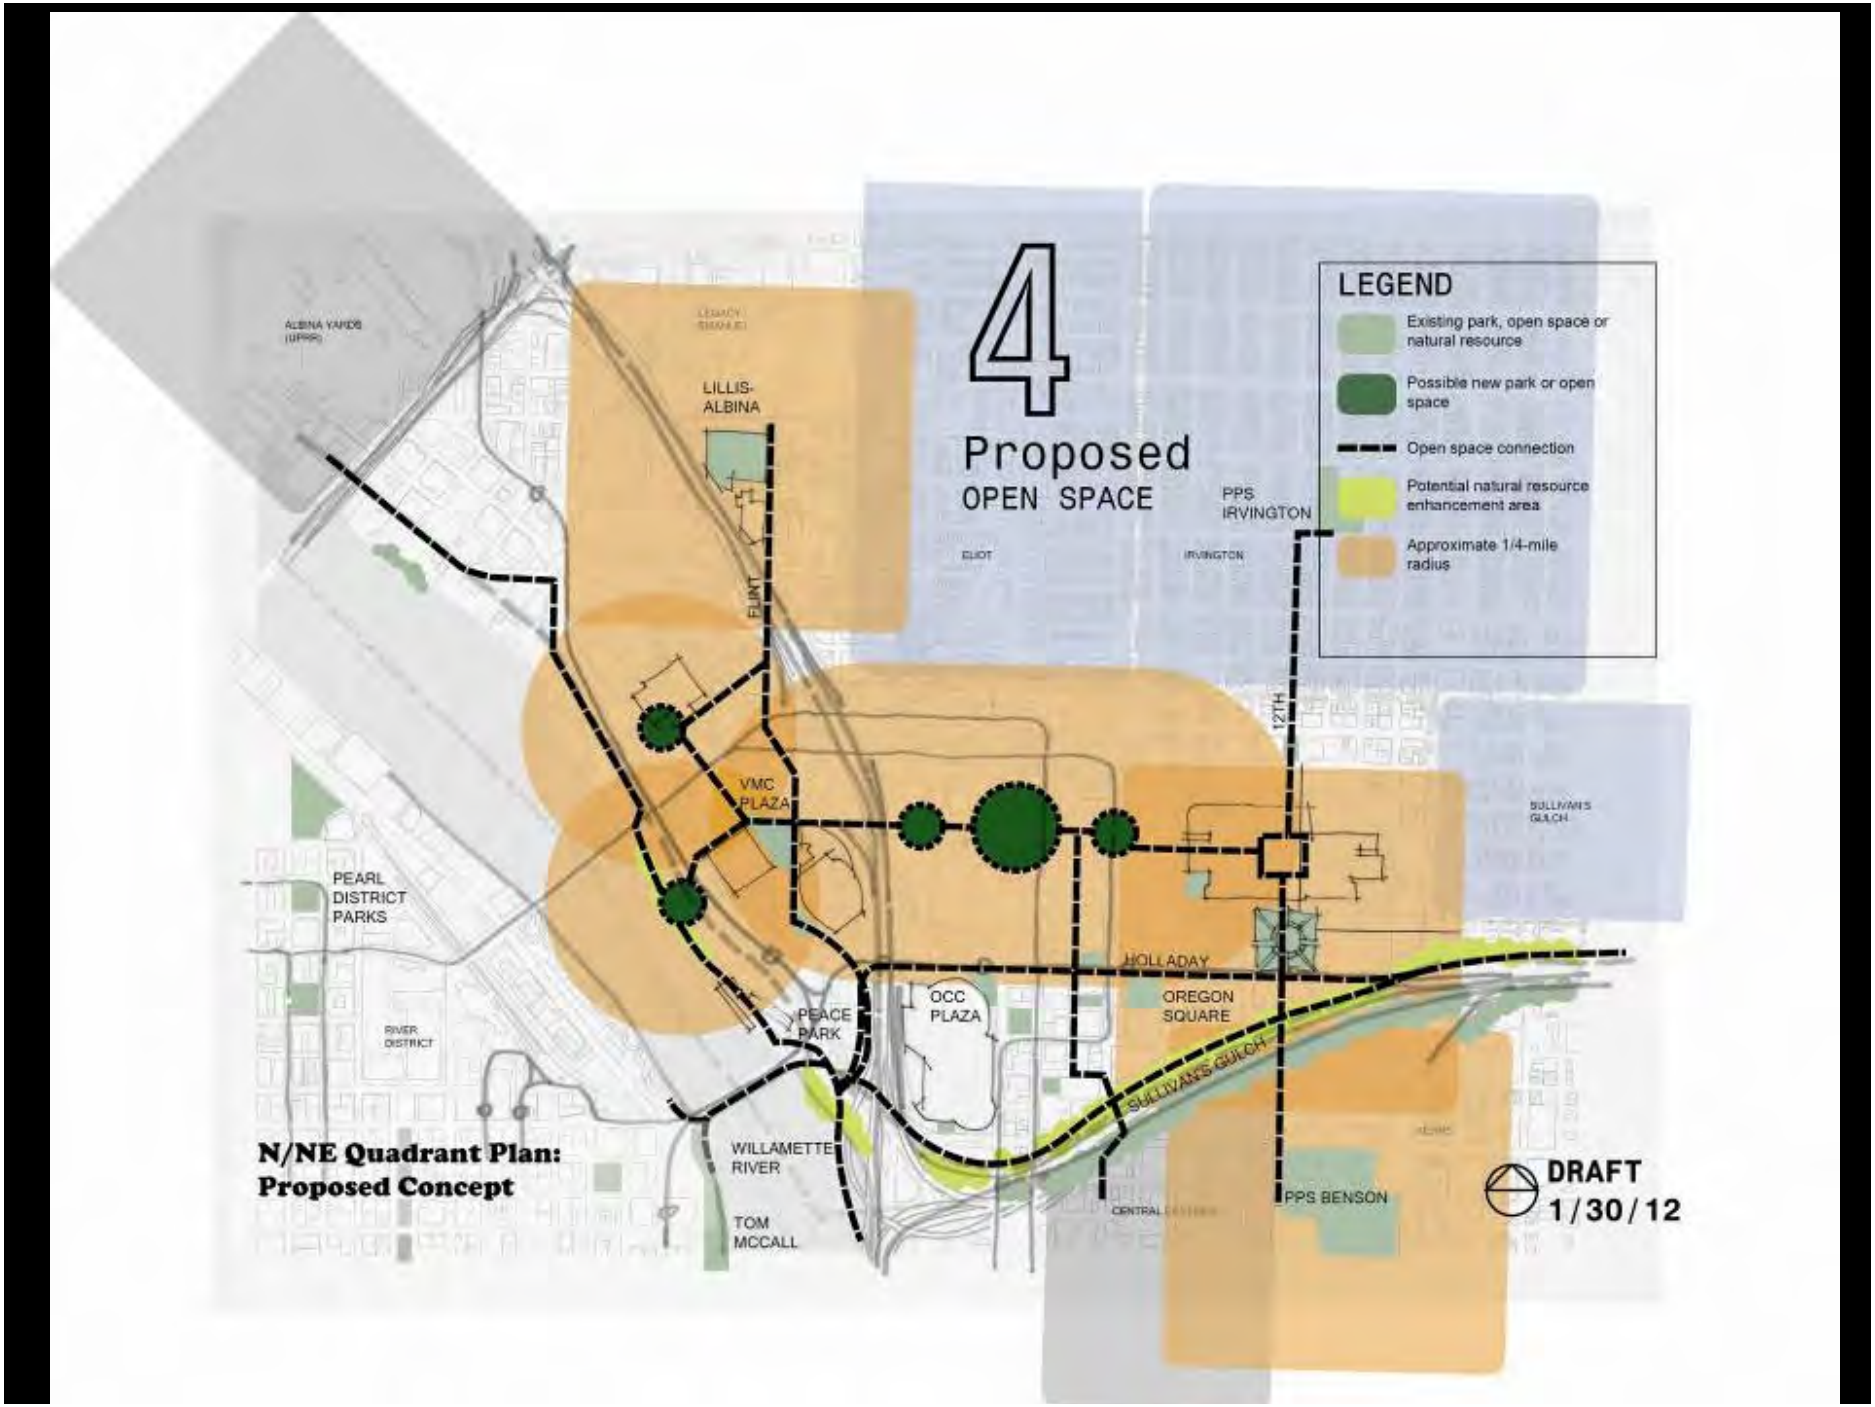
Some potential variations:

Woonerf, Festival Street, Pathway, Alley

NE 6th at Wasco

“Strand” concept for N Kerby in Lower Albina

“Bridge” concept for NE 7th



“Bridge” concept for NE 7th

SAC Meeting 12 Review
(January 19, 2012)

Observations/What We Heard:

- North of Broadway:
  - Hancock, Vancouver swing to Westside: Transfer of traffic volumes from East to Westside
  - Changes to circulation pattern and uses for affected businesses

  - SB Braid:
    - Eliminates I-5/I-84 weave in SB direction
    - Visual impacts
    - Impacts to transit center

SAC Meeting 12 Review
(January 19, 2012)

Observations/What We Heard:

- Multi-Use Path (MUP):
  - Comment: should this element be included in hybrid?
  - Worth Cost ($2-$4m)?

- Clackamas Overcrossing
  - Location to be defined

SAC Meeting 12 Review
(January 19, 2012)

- Called Question 1:

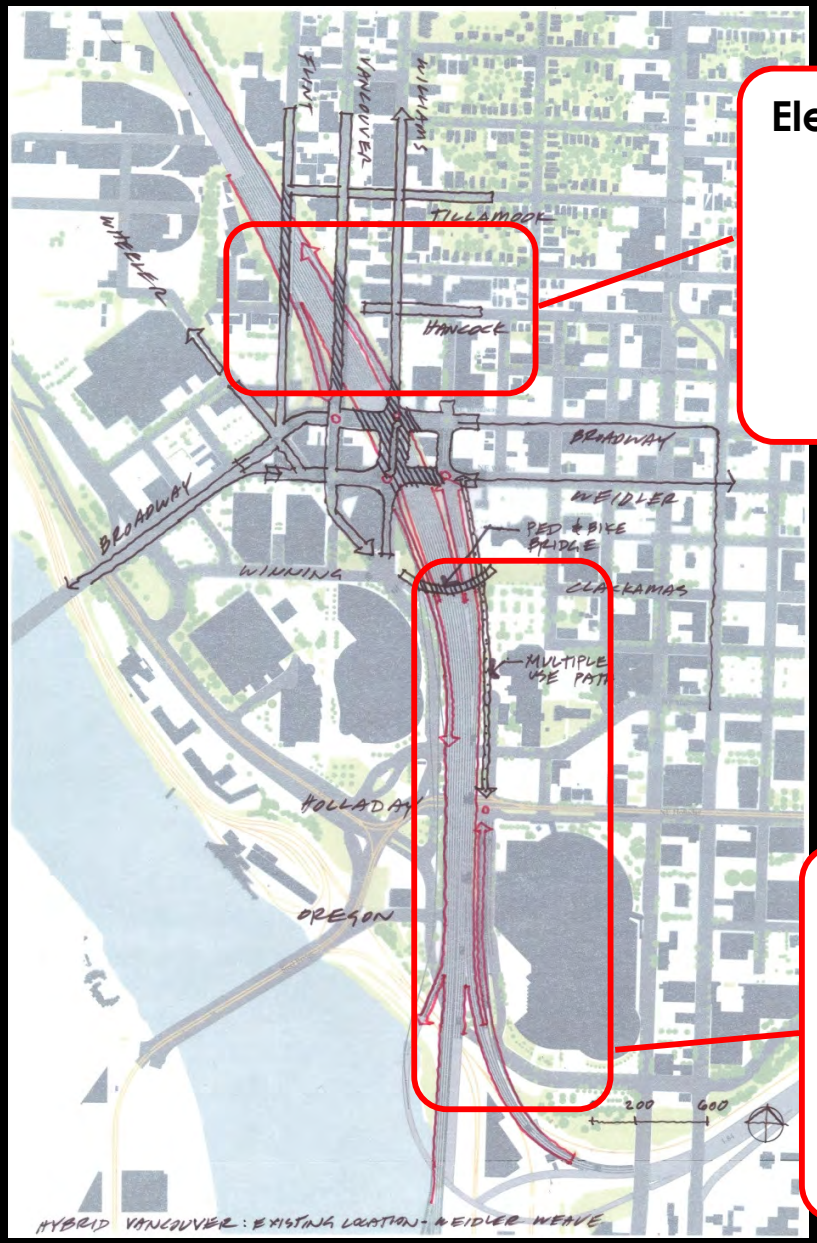
  Do you agree with the Subcommittee recommendation to remove the Folded Diamond and Split Diamond options from consideration?

✓ *SAC Approved*

- SAC Question 2 *not* called:

  Do you agree with the staff recommendation to carry forward the Hybrid Concept for further refinement?

- *Since January, the team has worked to refine and reframe the presentation*



Elements for Further Study

Hybrid Base Project

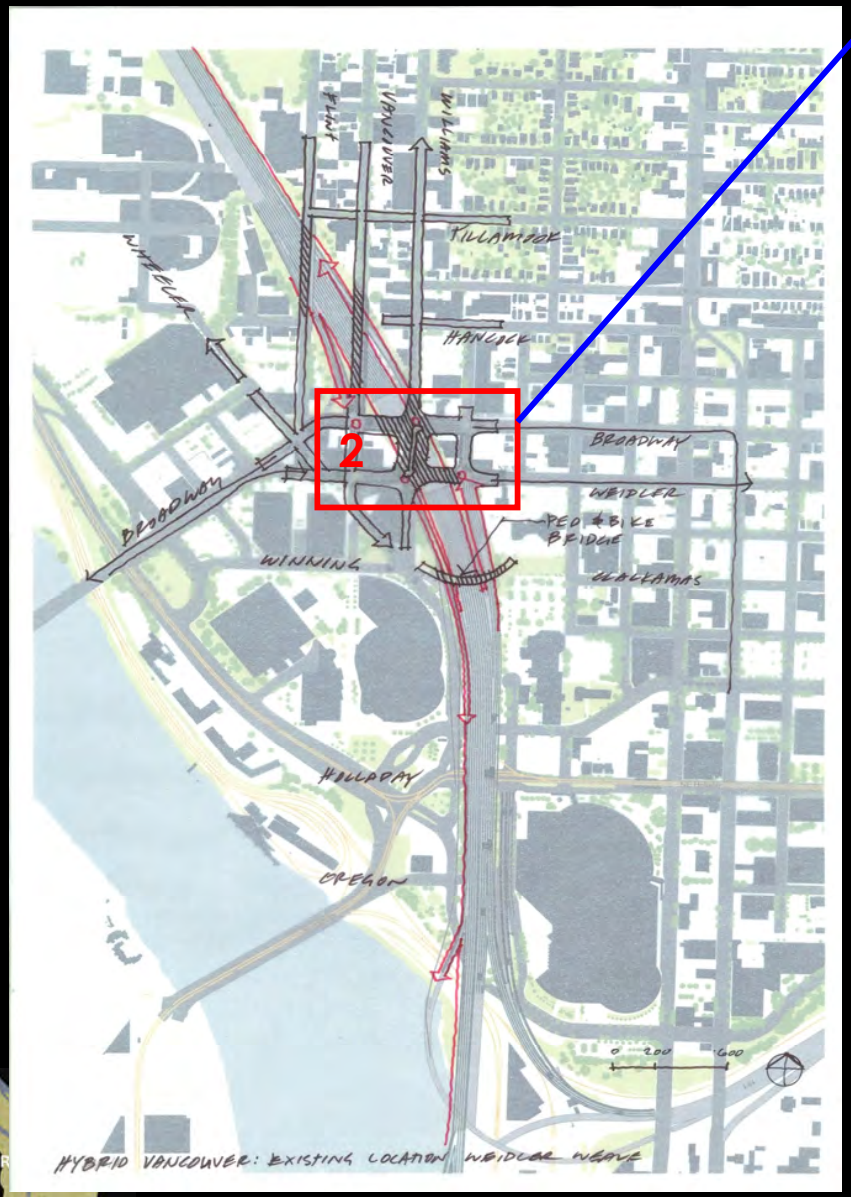
Elements for Further Study

CENTRAL CITY 2035

Figure 1: Hybrid Base Project and Elements for Further Study

Elements for Further Study

- Rebuild Vancouver and Flint in their current location
- Realign Vancouver west with a lid



Elements for Further Study

- Southbound Braided Ramp
- Clackamas Overcrossing
- Eastside multi-use path (MUP)

CENTRAL CITY 2035

Hybrid Projects for Further Study

2. Broadway/Weidler Lid: Base Hybrid Project

2. Broadway/Weidler and Auxiliary Lanes

To Include:

1) <u>TSM and TDM</u>

2) Mainline Freeway Safety Improvements:

- **<u>Extend auxiliary lanes</u>**
- **<u>Widen shoulders</u>**

3) Rebuild Broadway/Weidler Bridge with a lid.

- **Improved bike/ped facilities**
- **Lid over I-5**
- **Storm water management**
- **Seismic upgrades**

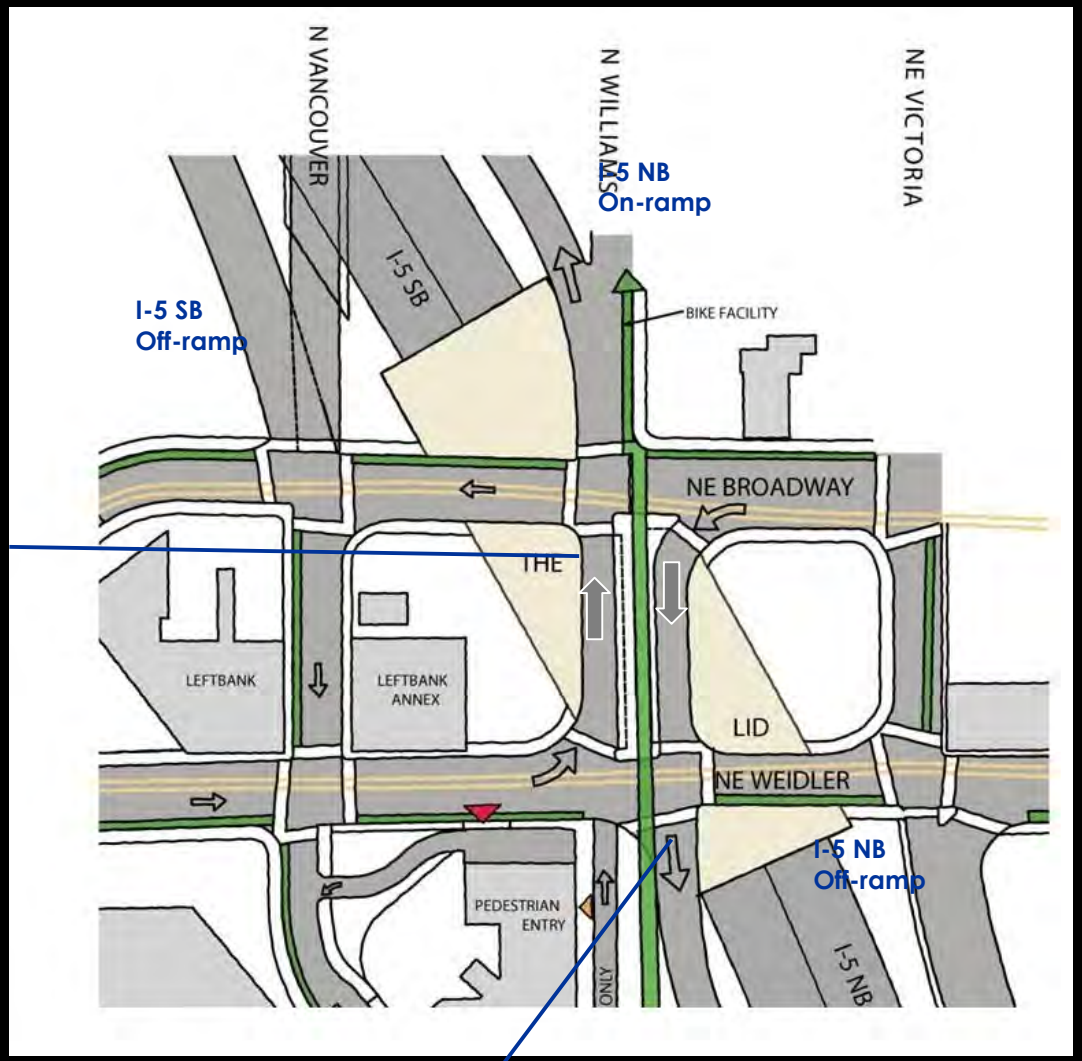
5) Move I-5 southbound on-ramp from Wheeler to Weidler

6) Reverse traffic flow lanes with a center MUP on Williams

Rationale for Hybrid Base Project

1. TSM/TDM manages traffic operations and minimize demand

2. Auxiliary lane/widened shoulders improve traffic operations and safety



3. Rebuilt Broadway/Weidler structure required to add aux lane
   - Benefits accrue from rebuilding Broadway/Weidler

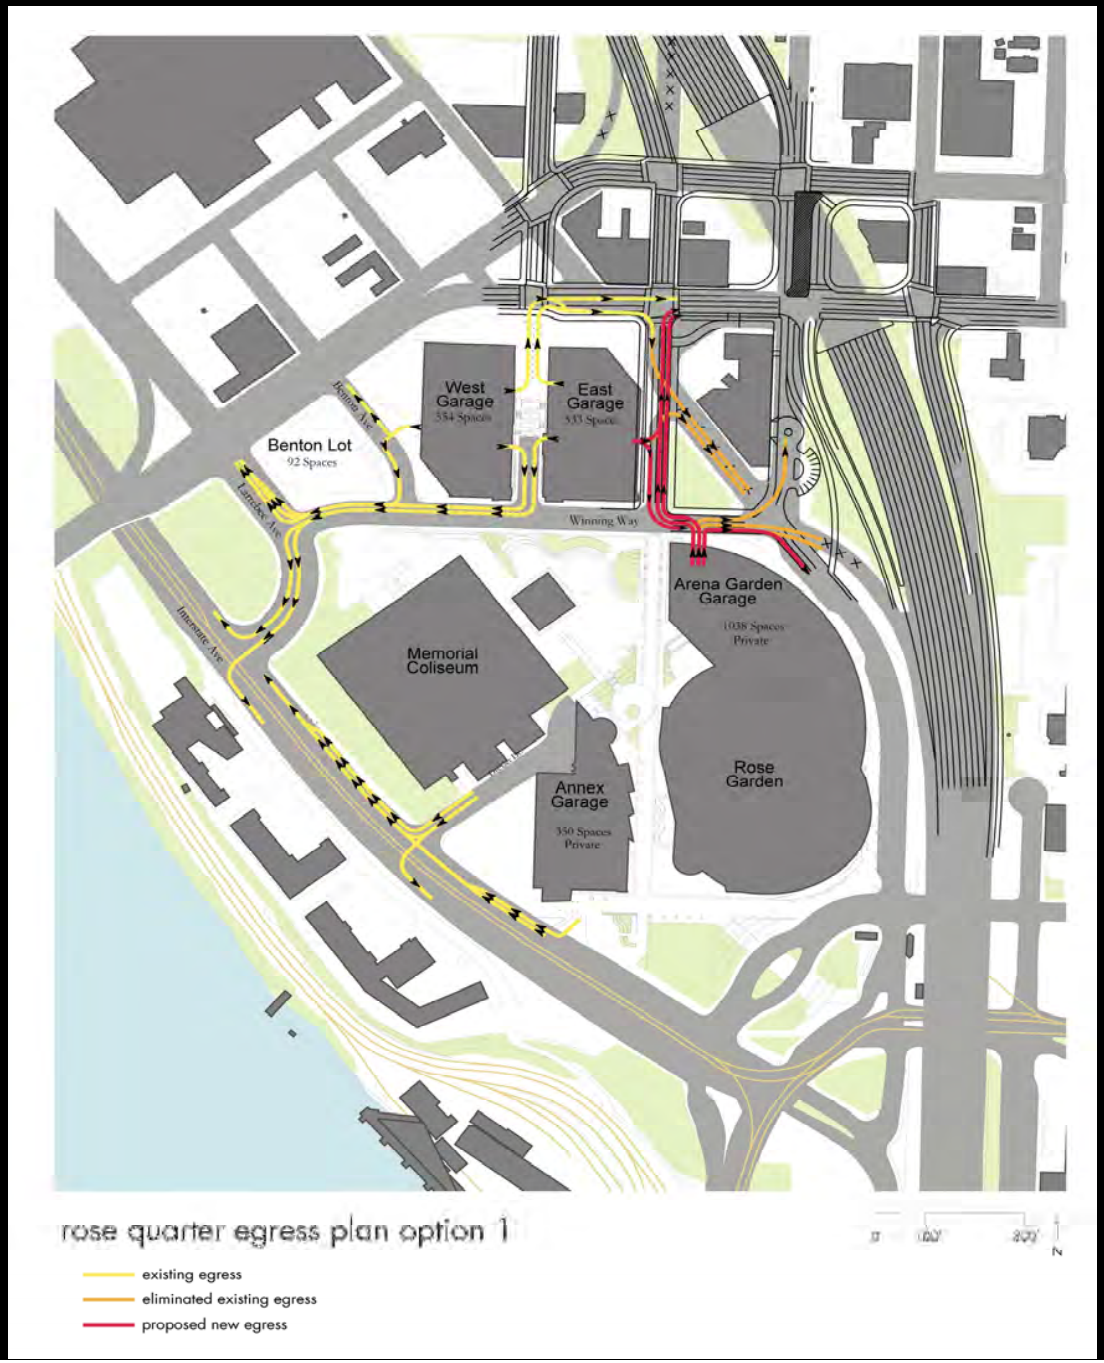
4. Moving the Wheeler on-ramp to Weidler/Williams would reduce traffic on Wheeler south of Weidler and would clarify traffic patterns

<u>The Hybrid Base Project is required for the addition of any additional hybrid elements to the north and south</u>

CENTRAL CITY 2035

2. Broadway/Weidler Lid: Base Hybrid Project

Williams Avenue Reverse Traffic Flow with Center Bike/Pedestrian Facility



I-5/I-84 SB On-ramp

CENTRAL CITY 2035

- The following slides *conceptually* address issues raised at the last SAC
- These include:
  - An event egress plan for the Rose Quarter
  - A proposed Madrona Studios/CCC site plan
  - Reverse traffic flow operations with a center MUP on Williams btwn Broadway/Weidler

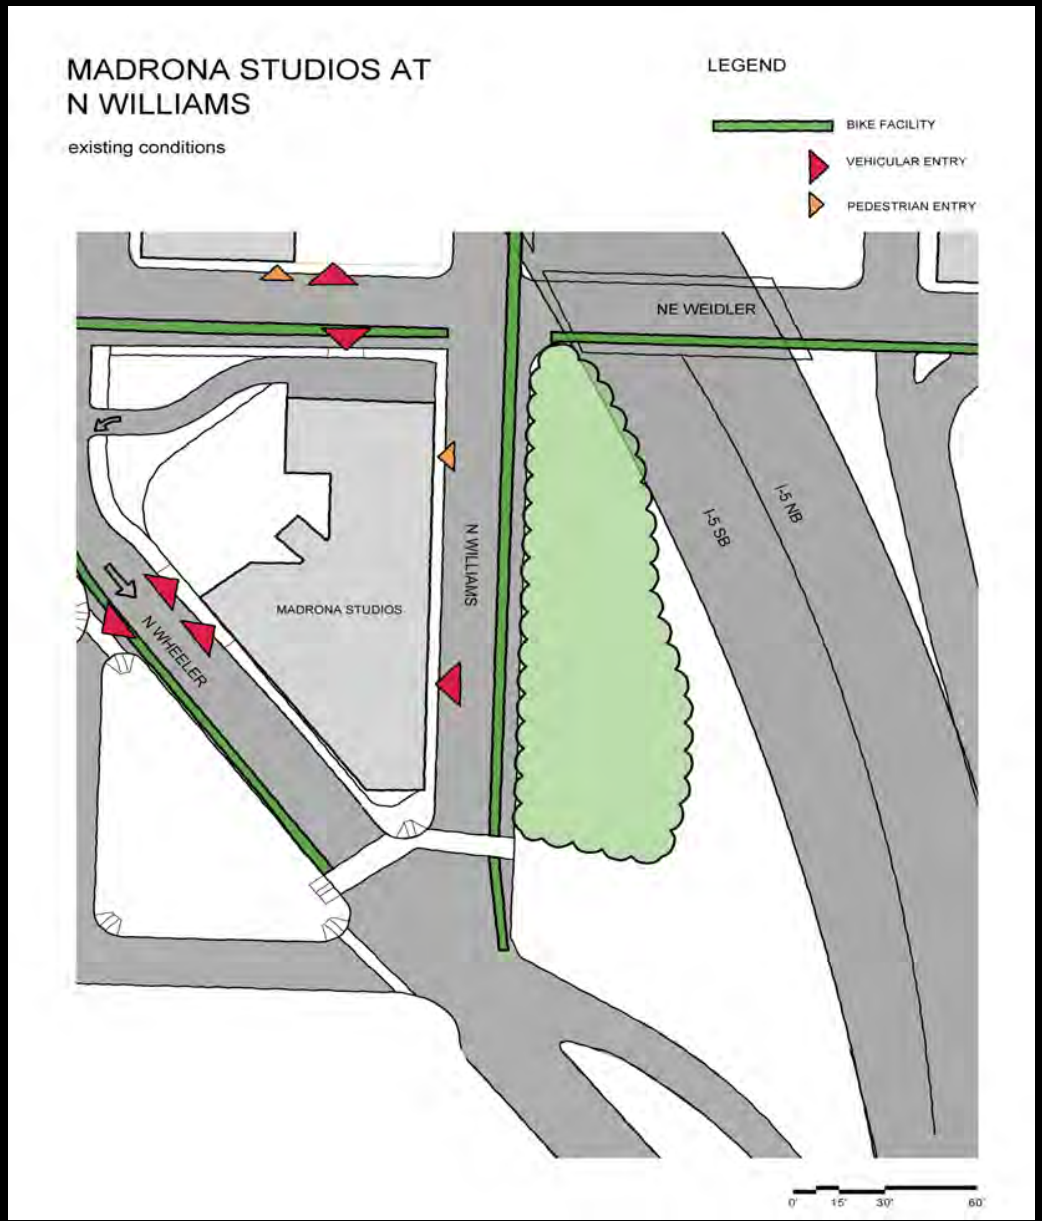
Proposed Event Egress from the Rose Garden w/ Closed Wheeler On-Ramp

- Most parking structures will use the same egress plan
- Arena parking structure traffic could use N. Center Court Rd.
- Staff will continue to work with Rose Garden.

CENTRAL CITY 2035

Madrona/CCC

Issues:



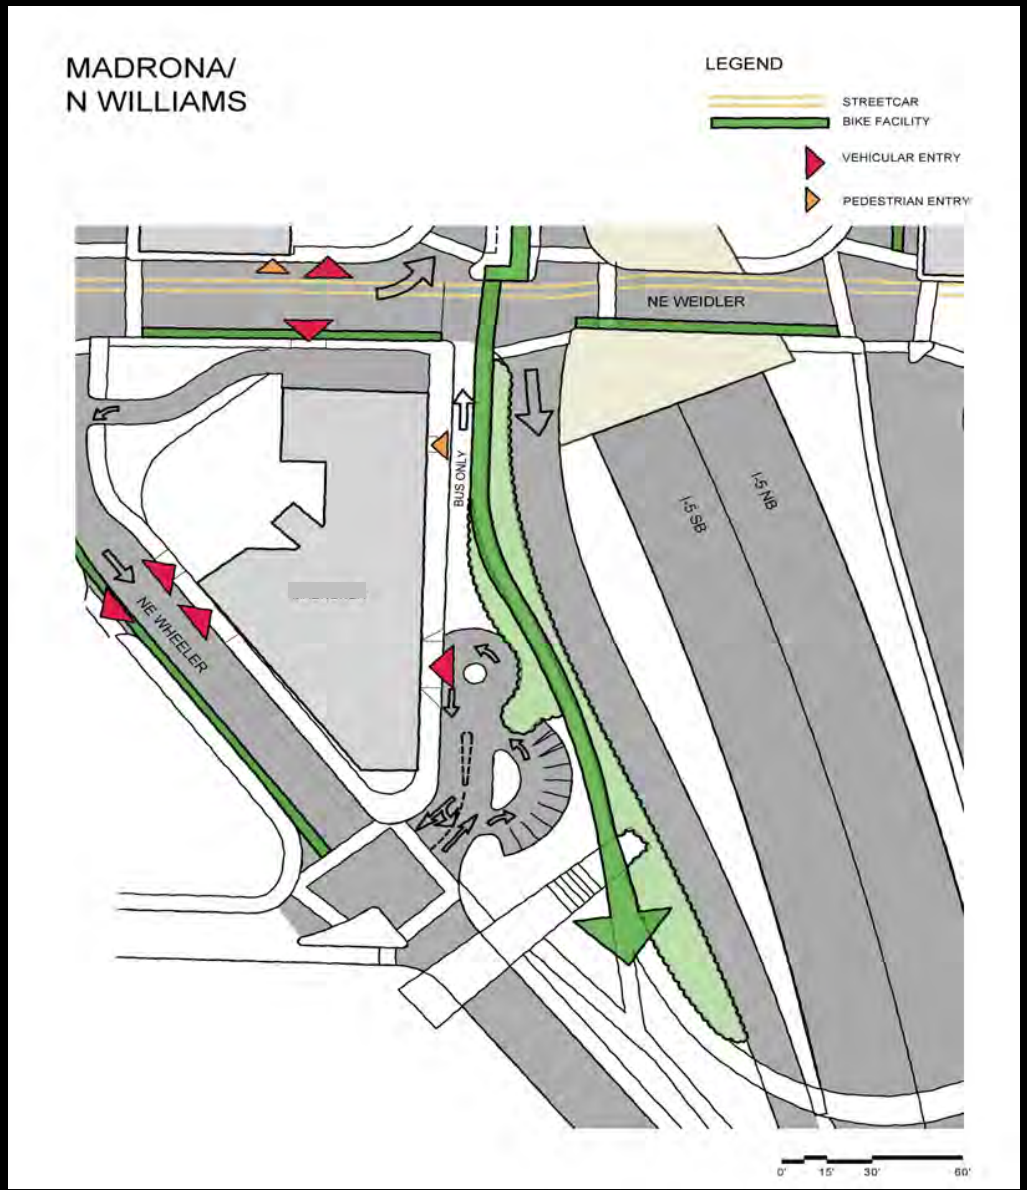
- Ingress and egress for deliveries and patients

- Safety of patients

- Parking

Madrona/CCC

Current Site Plan



CENTRAL CITY 2035

56276

Madrona/CCC

Conceptual Site Plan

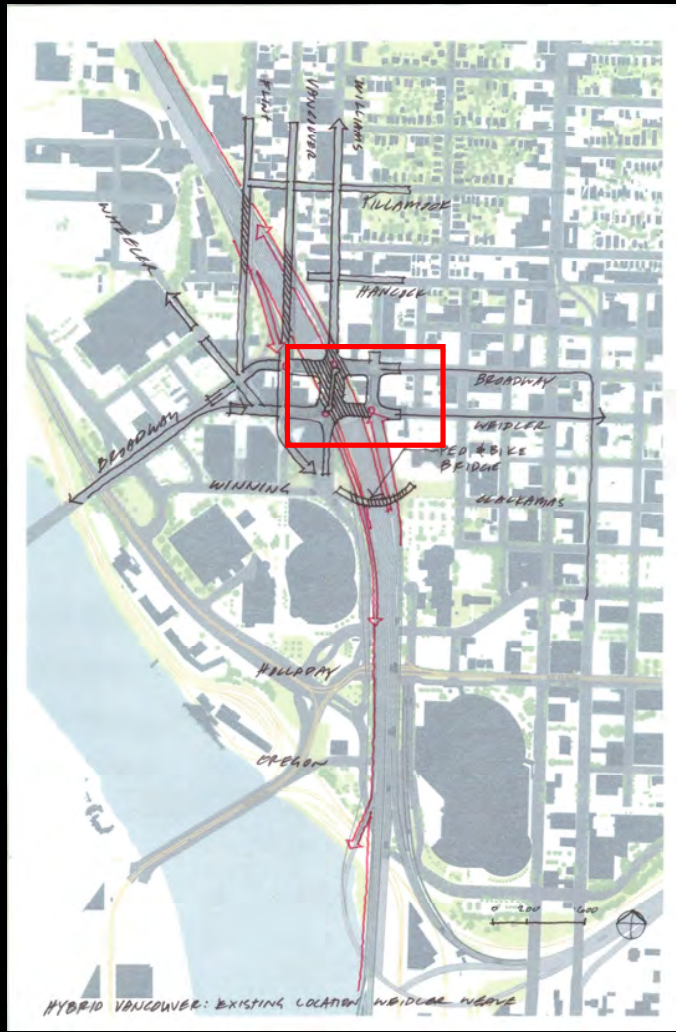
CENTRAL CITY 2035

Reverse Traffic Flow on Williams with Center MUP

Base Hybrid Project

Cost:

- Add auxiliary lane to I-5 in both directions ($140 - $150 million)

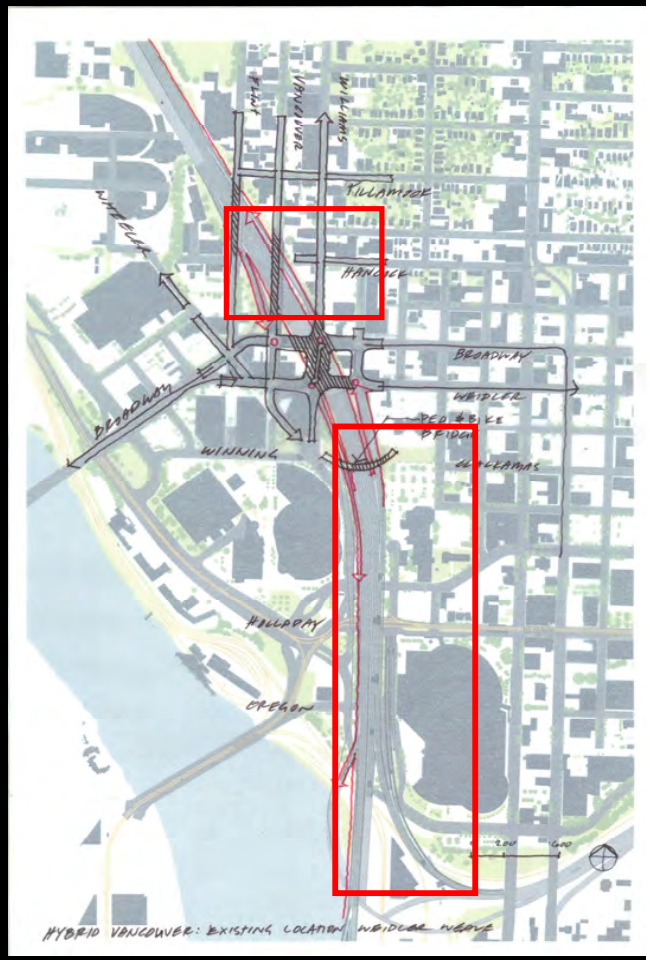


- Rebuild Broadway/Weidler/Williams with lid ($100 - $110 million)

* *Additional costs will be required, at minimum, for rebuilding Flint and Vancouver, north of Broadway ($45-$50m)*

Project Team Recommendation

- Approve the recommended Base Hybrid Project



CENTRAL CITY 2035

Decision Points for March SAC

Continue Refinement of Proposed Hybrid Concepts to Include:

- Hancock/Vancouver Overcrossing
- Southbound Braided Ramps
- Multi-Use Path East of I-5
- Clackamas Overcrossing

Questions on Base Hybrid?

SAC Questions 2

Do you agree with the staff recommendation to move forward with the hybrid base concept?

Stakeholders Advisory Committee
N/NE Quadrant Project

RE: Interchange Redesign Option 4c

Dear SAC members and project team,

Many of the challenges faced in N/NE Quadrant planning are challenges I have faced through the development of Leftbank and Leftbank Annex over the last five years. Most of the SAC identified criteria for success parallel measures for success in my own adaptive reuse project.

In adaptive reuse, the challenges extend beyond envisioning desired outcomes and working in a clear path toward them. The heart of the work is identifying the aspects of what already exists that can be built upon. Then, seeing the value and potential in a blighted building, carefully dismantling and remaking everything that doesn't work without compromising what does. It is artful, demanding work that calls for countless creative solutions.

The story of Leftbank is a very Portland story. A desert island in a river of fast moving traffic, Leftbank Project faced terrible odds five years ago. Extremely limited parking and a stark lack of commercial community defined a bleak context in which to redevelop a building, activate a neighborhood, and spark and sustain new community. Two elements were crucial in overcoming the neighborhood challenges: dedicating the limited front parking lot to visitors, and creating a calm oasis at Leftbank's front door.

These measures set the community up to welcome clients, and to fully inhabit the building and the neighborhood. Sharing just 20 visitor parking spots, 30+ businesses in the Leftbank community make it work. The parking in this front door lot is irreplaceable. Leftbank is completely cut off from neighborhood streets, and there is no parking on Broadway, Weidler and Vancouver. The calm welcome at the front door is possible because Wheeler is a low volume, one-way street. Despite Leftbank's placement in the middle of the box with high speed and/or high volume traffic on three sides, the building has a "front walk" where the community can step outside and feel refreshed. These things are critical to Leftbank's success.

Rerouting Vancouver as outlined in Option 4c would eliminate that quiet at Leftbank's front door, and decimate the visitor parking that every business requires. These two aspects of Option 4c specifically negate creative solutions to critical challenges that Leftbank put resources into overcoming.

I ask you to understand what the district and the City have at stake if Leftbank fails. In two short years, Leftbank has become known as a hub of creativity,

240 n broadway, portland, oregon 503 286 6442 www.leftbankproject.com

the
leftbank
project

entrepreneurship, sustainability, and collaboration between businesses and non-profits. More than 30 businesses have moved in, some of them Portland powerhouses (like Sockeye Creative and Portland Farmers Market), some of them politically and culturally invaluable (Latino Network, Upstream Public Health), and many of them vital start-ups (Upright Brewing, FMYI).

These groups have invested themselves in Leftbank and in the neighborhood. They have pulled together with other Leftbankers to create a place where there was no place before. They have already brought so much to the district and they stand ready to offer much more. But despite their vision, their businesses are subject to the same forces that affect businesses everywhere. They must be able to welcome customers and accommodate visitor parking.

We must see the artful and demanding work of redesigning this piece of Portland as an adaptive reuse project. Leftbank already manifests the highest aspirations of urban planners and stakeholders as a thriving, mission-focused business community at this challenged intersection of east and west Portland. We must not reroute Vancouver and destroy the community that can help shape the district. We must build on it, instead.

Sincerely,

Daniel C. Deutsch

INFORMAL DISCUSSION AND MEAL

WELCOME, MEETING PURPOSE, APPROVAL OF MINUTES, AND STANDING BUSINESS

Sam Imperati welcomed the group and reviewed the agenda. Tonight's meeting will be focused on land use, with an update on transportation, along with a briefing on the Portland Plan and the Central City 2035 process and their relationship to this process.

PROCESS UPDATE

Sam provided a brief review of the updated process chart, noting that if the schedule goes according to plan, staff will be seeking a SAC recommendation at the February 16, 2012 meeting. The project team will send out dates of upcoming meetings.

APPROVAL OF MEETING MINUTES

The October 27, 2011 Meeting Minutes were approved as written, with Gary Warren's correction below. Between pages 4 and 6, he wants to be sure the notes reflect that he asked Charles a question about the weight limits of a pedestrian bridge.

ANNOUNCEMENTS

1) Developer's Forum
   BPS is organizing a meeting with key developers and real estate professionals to get their input on the evolving land use concepts and discuss their priorities and vision for developing in the quadrant. Diane Hale is leading the organizational effort. She is still looking for space on February 9 or 10; please let her know if you have space or suggestions.

2) UO Landscape Architecture Studio
   A University of Oregon landscape architecture class has been looking at the Strand concept in the Lower Albina area this term. The class final is in Eugene in December. Lloyd Lindley is going to review what the class has done. Mark Raggett and Karl Lisle are going next week and will bring back materials to SAC.

3) Rose Quarter Development Project Update
   When Peter Englander arrives, we will see if he has any updates for the SAC.

Alan Lehto: hearty thumbs up for the idea of the Developer's Forum.

Sam Imperati announced that Carol Gossett has been appointed to Metro's Transportation Policy Alternatives Committee for a two-year term. Congratulations!

PROCESS OVERVIEW/TIMELINE REMINDER

Sam projected the updated process chart on the screen, which showed new dates and where we are at in the process. He briefly described the goal of each SAC meeting. Sam said the heavy lifting on this project for the staff and the SAC happens between now and March 15.

- Transportation Subcommittee: 12/8
- SAC #12: 1/19
- Public Event: 2/2 (tentative)
- SAC #13: 2/16 (to be confirmed by email poll)
- SAC #14: 3/15
- SAC #15: 4/12
- SAC #16: 5/10
- SAC #17: 5/31
- SAC #18: 6/28

I-5 INTERCHANGE UPDATE

Todd Juhasz, ODOT, said at the last SAC meeting in October that ZGF provided a review of opportunities and constraints of each concept. The SAC voted to remove TDM/TSM as a standalone concept because it did not achieve the necessary improvements. TDM/TSM measures can and likely will be incorporated into all of the remaining concepts.

The traffic analysis will not be ready by December 8, so we decided it would be more effective to have a Transportation Subcommittee instead of a full SAC meeting. This will provide an opportunity for a more in-depth look at the data, and your input will help the consultants finalize their analysis. We will have the evaluation criteria plus data, and it will not be fully digested, but it will be ready enough to have a first cut at it. It will be a forum for everyone to discuss and give input before it is brought to the SAC in January.

INTEGRATION WITH THE PORTLAND PLAN AND CENTRAL CITY 2035

Joe Zehnder, BPS, gave a brief update on the Portland Plan (PP) and the Central City 2035 plan, how they are integrated, and how they are relevant to the N/NE Quadrant plan. A draft of the Portland Plan was recently released and it is now going through public hearings. The PP is a 20-year strategic plan for the City and partner agencies working in Portland, and it is also includes a 5-year action plan for each of the goals. The notion of a strategic plan for a city may be obvious, but cities do not typically operate that way.

The PP framework is based on equity and it includes three strategies:
- Thriving educated youth
- Health connected city
- Economic prosperity and affordability

They are aiming to work on the problems of disparity due to where one lives, race, disability, income and other factors. It is a way for the city to hold itself accountable to all citizens. We want to encourage business success along with household economic success. As you look at neighborhoods, we are projected to grow by 135,000 households over the next twenty years. We want to pay attention to how we design and develop neighborhoods.

Joe said there is a great deal of alignment with PP, CC2035, and what we are talking about here in the N/NEQ process. The city is also doing a comprehensive plan update, which includes the CC2035 Framework and the Quadrant Plans. It includes a project list of what we are going to do for the next twenty-five years to achieve goals, a great example of which is the freeway project. If we do not do it, then it will impact the ability to meet goals.

Bill Ruff: thought he has heard the projections are about a million more people in Portland.

Joe Zehnder: that number is for the Metro tri-county region. The figure he noted is for Portland only. Working number is 100,000 to 135,000 more households in Portland.

Gary Marschke: measures of success – some are easier than others; how are you planning on measuring?

Joe Zehnder: it is in the draft. They have gone through and done a first cut. Metro has also done a lot of measurements. As you said, some are harder to measure than others. They are open to refinement as we go along. This strategic plan is a 5-year action plan, which can be revised.

Mike Warwick: comment regarding housing; it looks like you are trying to view this in context of Metro. Wonders how this is coordinated with housing plans. The strategy seems to be to put low-income population in Portland instead of in Washington County or Gresham near the jobs.

Joe Zehnder: the market drives what product is developed, but the city has to make sure all neighborhoods are successful. Urban renewal money is not the biggest driver in terms of the total amount of housing built.

Pauline Bradford: timeline for comments?

Joe Zehnder: December 28th is new deadline.

Pauline Bradford: would like copy of the plan sent to her.

PROPOSED 95% LU/UD/LT QUADRANT-WIDE CONCEPT (DOES NOT INCLUDE PHASE IV POLICIES AND STRATEGIES)

Karl Lisle and Mark Raggett, BPS, will review revisions to the concept diagrams made since the 9/29 SAC meeting and then discuss the evaluation of the proposed concept vis á vis the project goals. After discussion, the SAC will be asked the following question:

> ***Action****: do you approve the concept layers for the purposes of moving forward with public comment and Phase IV Plan Development?*

Karl referred the SAC to "Staff Responses to 9/29/11 SAC and 10/13/11 TAC comments" document in the meeting packet. He explained the changes that have been made since the last presentation.

Alan Lehto: comment regarding height shift. Dean sent an email today, making the point about owners sitting on property even longer. Suggestions of ways to avoid this? We need to take care not to create situations where people sit on properties even longer.

Karl Lisle: great point; there are different ways to do that; we need to set up the framework in the code to do that.

Eric Lovell: requested clarification of map and area boundaries for this height zoning.

Karl Lisle: that is a level of detail we can come back to – there is room for greater detail in height limits than that illustrated by the concept bubbles.

Eric Lovell: there is a height step-down downtown as you get closer to the river; are we missing an opportunity to do that here?

Karl Lisle: great point. We can look at mechanisms for doing that along the riverfront; the diagram suggests some flexibility – perhaps the ability to trade additional height in some areas for open space and public access in other areas.

Mark Raggett: open space has been talked about right in front of the Coliseum, hopefully ensuring views to and from the Coliseum to the River.

Pauline Bradford: regarding Schuyler – does the proposal go across the street?

Karl Lisle: the Central City plan boundary is Schuyler, so we will not address properties on the north side of the street. The detail of this will be addressed at a later point.

Pauline Bradford: question for clarification; where's MLK on the map?

Karl Lisle: (indicated MLK on the map) the surrounding development around the area are larger lots, car dealerships, etc. Different from Irvington, which has closer single-family homes and the historic district boundary is on Broadway. The streetcar line and historic district are driving this shift. The 6-10 stories on the lower portion is pretty consistent with the height limits in the area today.

Pauline Bradford: there are residential houses of one or two stories all over this area. It needs to be looked at.

Karl Lisle: agreed.

Mike Warwick: wants to reinforce Alan's point of creating false expectations around height. 6-10 stories seems to be too much. He is not opposed to some height. The two super blocks have the greatest potential to support that type of development.

Lloyd Lindley: agrees. Develop the mechanism so it is not granted outright but with provisions to have the ability to go through the community to get there. Mark and I talked about Irvington Place as a model. Regarding views from the Coliseum to the Columbia River, views should be both ways, the whole design of height and bulk on river will take some work. Also, Brock Nelson told us UPRR is willing to work with us to make a connection to the river possible. It will come into the economic exercise to figure this out.

Bill Ruff: mixed use designations – do they address the convention center hotels?

Karl Lisle: not as directly as they could or should. The concept does allow for that type of development, but it is not displayed as the focus. We could look at that.

Lloyd Lindley: can that be a star in that area?

Karl Lisle: yes.

Wayne Kingsley: Riverfront area, what is there?

Karl Lisle: Union Pacific has been there for 100 years, not much else, other than a parking lot.

Peter Englander: heights there now are 100 feet.

Wayne Kingsley: you realize that is all in the working harbor from the grain elevators, north. Cannot see where industrial development is. That overlay might work east of Interstate, not sure about west of Interstate.

Karl Lisle: (showed Interstate on map) agree. There is one block that you can only access by Interstate because the railroad runs along its western edge. That block could be included in the overlay as well.

Wayne Kingsley: should circle back with Brock on the very generous comments Lloyd noted earlier.

Gary Warren: heard comments about view concern along riverbank. Reminds everyone there are great views that will be obstructed going west from most of Calaroga apartments if you allow 20-story buildings.

Peter Englander: are there currently height restrictions at the Rose Quarter itself?

Karl Lisle: yes. It is CX zone, with allowed heights of 100 and 150 feet.

Mark Raggett: there is no bonus height allowed.

Owen Ronchelli: height restriction along Broadway, west of 7th. What are they currently?

Karl and Mark showed on map, explaining heights and height bonuses in the area.

Owen Ronchelli: his point is, with the proposed 6-10 stories, how much of a difference are you proposing from today?

Karl showed it on the map and noted that existing allowed heights are 100 feet with no bonuses.

Owen Ronchelli: from 7th to freeway, it is important to maximize heights along the streetcar, stepping down as you get into neighborhoods. Also, the waterfront issue, since this is aspirational, thinks we should shoot for some pretty cool open space. It is a great opportunity to be right on the water, assuming we can cap the freight there.

Ed Abrahamson: We just want to be sure in the Irvington Historic district; the height of six stories is limited to Broadway and steps down to Schuyler.

Mike Warwick: we are not suggesting height limits to limit development, rather to encourage development. There is plenty of development capacity. If something is going to be tall, it is more likely to be in the Lloyd District. We have got twenty years of the Albina Plan and no construction. Thinks folks are waiting until the market bares taller buildings, and so the land is sitting fallow.

Chris Deffebach: appreciates comparison with LU before this presentation; agrees there is plenty of zoned capacity. Appreciates information on today's conditions.

Pauline Bradford: why not allow for a range of two to ten stories? Variety makes for a more interesting city. They would have to get a variance to do anything different.

Mobility

Mark continued the presentation on mobility and proposed street design typologies.

Tracy Whalen: regarding slides that show Weidler as a scenic street; it is a main street and she wonders how you propose making it into a scenic street with trees?

Mark Raggett: we are not proposing dramatic changes right away, but the plan would encourage more retail and pedestrian activity on Broadway than on Weidler.

Tracy Whalen: traffic is not going to go away.

Mark Raggett: agrees; we are not necessarily taking away traffic or parking.

Mauricio Leclerc: each of these is flexible and will be adjusted to local conditions. So, it may not necessarily have big trees, more of a scenic street flavor.

Tracy Whalen: not fully convinced of the new street typology.

Gary Warren: he is also trying to figure out all these street definitions, not entirely clear.

Mark re-explained the street typology categories.

Gary Warren: what is scenic vs. green? Seems the same. Take Clackamas for example – you have got it flexible, but green.

Mark Raggett: a "scenic" street can still have traffic and have green elements; it's more about the character of the streetscape and adjacent development.

Karl Lisle: with the terms scenic and civic, both have busy traffic and serious transportation functions. They are trying to differentiate the busy retail focused streets, which will be more successful if there are fewer of them. So, they are trying to concentrate the maximum level of activity. The scenic idea is an alternative way to approach busy streets that cannot support as much retail as a civic or "main street," but can be improved with sensitive design and greenery.

Carol Gossett: it seems to her if you look at Lloyd or Broadway; they are huge mixed-use areas. People in cars, other modes of transportation, how are we treating those streets? Will we need more housing to sustain Broadway? Are you comfortable that you are addressing all those issues?

Karl Lisle: we believe it is a pretty good balance, but it is still in development. At the end of the process, the SAC has to agree.

Joe Zehnder: great question. Also thinks the names for the street typology are throwing people off. But really, we need to get at what does it take to support the market? Working with streetcar development? Weidler – one of the opportunities with Broadway and Weidler is that Broadway will be the main street and Weidler could be more residential.

Bob Sallinger: how much work have you done overlaying your work with BES's stormwater plan?

Mark Raggett: we have met with them, and have begun coordinating.

Bob Sallinger: that always gets left to end; you have to be sure infrastructure works with this.

Eric Lovell: went to visit 3rd Avenue in southeast, which was given as an example of a flexible street in an industrial area. It is a disaster. Is there a better model? They have lost access.

Mark Raggett: Yes, it could be better; looking at ideas for the Strand.

Mike Warwick: similar concern to Eric's point on Hancock. In all the designs, it appears you have eliminated Flint. Also, regarding your Broadway-Weidler concepts, he is having a hard time getting his head around them considering all the traffic. Greener, softer streets seem appropriate next to residential. Broadway is successful now, with nice storefronts being supported by residents a block

away. Weidler is clearly not as successful, he agrees with that. Not sure, the main street concepts you have are the right way to do it.

Tracy Whalen: another comment about scenic on Weidler; allowing tree canopy on there, there is retail on Weidler, they have to rely on their buildings for advertising. If you start putting up trees, it blocks views and advertising.

Ed Abrahamson: east of 7th, would like to see more architecture, continuation of bike lane. Also, want to serve neighborhoods with street trees and lights, and encourage development of local businesses.

Justin Zeulner: comment regarding Broadway-Weidler. It was mentioned that Broadway-Weidler have same traffic volumes. Wonders if anyone has looked at flow - is it all day long the same? He was in Vancouver B.C. recently, and noted some streets have a reversible center lane to increase capacity in one direction. Have you looked onto the potential of that?

Mark Raggett: we can look at that in future phases.

Justin Zeulner: could help to activate Broadway as main street.

Gary Warren: they have that in Tucson.

Matt Arnold: thinks the scenic Weidler is a very logical idea; green up Weidler as the "step-child" street, (e.g., MLK-Grand).

BREAK

Open Space

Mark re-capped the open space layer as first shown on 9/29. They have met with Parks staff to discuss acquisition target areas, and possible uses of System Development Charges (SDCs). Parks is looking to develop 3 acres in the Lloyd District by 2020.

Justin Zeulner: is aware there is commonly understand distance from a park to residential areas to be considered usable space - how far away can one be?

Karl Lisle: Parks uses ½ mile; the goal is to be ¼ to ½ mile away.

Justin Zeulner: when we isolate areas for residential, and going back to what Owen said, we have to keep this in mind, the location, and access to parks and open space.

Paul Smith: could you describe vision for the line over the Banfield Corridor?

Matt Arnold: a potential connection at 7th or 9th.

Peter Englander: clarification: the Metro plaza is temporary.

Gary Warren: has heard 15th is going to be a green street. Wonders if everything is in sync or is it preliminary?

Mark Raggett: these match up with the flexible network. (Showed examples on map).

Paul Smith: what do you mean by the connection through the mall?

Karl gave example of what it could be, providing for easier pedestrian flow through the area parks and the mall.

Chris Deffebach: do you think you have really leveraged the full potential of Holliday Park? It is in the middle of a regional center. Wonders how it is being capitalized.

Mark Raggett: hopes the mall can improve its southern edge and that the Doubletree improves its face to the park.

Eric Lovell: mixed regional retail. Is it the right zone on the edge of Holliday Park?

Karl Lisle: Wanda is with Glimcher, which controls future development of the site east of the park. Karl explained map and intentions of proposed land use category and that the crosshatching indicates the desire to see housing mixed in with future retail development. We have been talking with Glimsher.

Wanda Rosenbarger: we are a retail developer; but if the economy had not gone so south, we had a plan for significant residential. Currently it does not pencil out. We are back looking at retail. Glimsher wants residential and were aiming for housing on top of retail. We have a dilemma. Retail is interested in going there, but they are interested in more of an internal focus.

Karl showed vision of improvements, with more grand entrances on the park, improving use and safety of park.

Carol Gossett: Holliday Park is in Sullivan's Gulch. It is our only park. They are interested in access to and safety in that park.

Green Systems

Mark continued with presentation, noting changes since 9/29. Bob mentioned BES, and they have had a meeting with them to coordinate on stormwater, tree canopy and other related issues. He showed the BES map on stormwater management. They want to build in features to help harvest and process rainwater.

Eric Lovell: question about stormwater collection; how is city planning to deal with the bioswales? There are many being built and the older ones are not being maintained. They are filled with garbage and have become wild areas. How to deal with this?

Mark Raggett: need to continue those conversations.

Lloyd Lindley: wide green line on Russell. There is a large triangle cut off at railroad, there is a truck turn around, it is quite a large area. Could pick up some of the stormwater and treat it there.

Bob Sallinger: comment regarding street trees; the district is not going to meet the City's target for 33% canopy cover. In every process he is in, we are not meeting that target. Stormwater treatment and ecoroofs should be higher priority. He is also concerned about the river – how are we going to restore the river and connectivity of salmon habitat?

Gary Warren: he is embracing the concept of green street around here, but has concerns about liability. If one of his seniors falls off into one, he has asked BES about liability and apparently, it is on him. Also, clarification re: harvesting rainwater on the bridge.

Mark Raggett: the water is shown being brought down to Multnomah or Holladay. It goes under the freeway instead of over it.

Gary Warren: to Charles, what are we talking about here, pedestrian bridge changing to six lanes?

Charles Kelly, from audience: this bridge is an opportunity for improvement, ped, bike, perhaps part of district energy system, green system. This group will set up a framework for what it should be for putting the brackets around it.

Gary Warren: you designed it to be six lanes wide. He is going on record to oppose it. No problem with energy, or other things across it. Just not cars and trucks.

Sam Imperati: these are conceptual plans. We are striving for balance, and no decisions have been made yet about the detailed design of the bridge

Lloyd Lindley: the goal was to create a park bridge, and you need some area to do that. That was the intention for this design. There are successful examples in Seattle and other places that have never been converted. Thinks that is the right way to frame it. There is no intention to turn it into a road.

Gary Warren: feels it is beyond what he thinks of as a pedestrian bridge.

Paul Smith: the minimum from the Ped/Bike Advisory Committee is a twenty-four foot wide path. We have preliminary designs across Hayden Island, and the Gibbs Street bridge, which is under construction. Those are more along the lines of what we are talking about here.

Lloyd Lindley: thinks it is a misnomer to use the term "lanes," no disrespect to Gary.

Paul Smith: a good width to move people is twenty-four feet. Anything extra is for a park.

Todd Juhasz: the proposed pedestrian bridge is aspirational. If it is determined that the SAC members are opposed to a pedestrian bridge, then the proposal will be dropped.

Eric Lovell: not interested in a utilitarian crossing with chain link on each side like Springwater trail bridge; thinks a park bridge is a better amenity.

Wade Lange: district energy; as we look at ecodistrict, it may be more efficient to have two zones with energy production occurring on the eastern end of the district as well.

PUBLIC COMMENT

Lee Pearlman, FYI, on Dec 1, PBOT holding open house at Architectural Heritage Center, 701 SE Grand, on the street car. It is a given it is going to have a fare on this side of the river, and they are looking at should there be a fare, if so, what, and also the issue of transfers to the TriMet system. Next, a personal comment, he has been active in Eliot, regarding Hancock Street - don't make it a road. No traffic other then pedestrians or bikes. They want a guarantee, if that is possible, that there will be no cut-through traffic. It would just be moving the problem or creating a new one. This neighborhood has sacrificed enough.

Brad Perkins; Broadway is not a regional street. We should get off this notion of a regional street. Still interested in de-coupling east of 24th. City Council has voted to approve $3M funding for Coliseum improvements. What are we going to do to improve the Rose Quarter? Likes idea of mixed commercial and residential that wraps around RQ down to water. Why is Dreyfus Storage a sacred cow? The money is available for high-speed rail. Let's aspire for something really great for development between Interstate and river. Tomorrow morning, we will be talking about this at West Hayden Island Advisory Committee – let's move them out there, they are a bulk product. In order to make this stuff happen, we need to think about what's possible. Sees a ribbon going through with a bike trail as a really good idea.

Sam thanked the members of the public for their comments and referred group to the evaluation summary. It will be emailed out to the SAC; we want you to give staff direction. At the next SAC, what you saw today will be further refined. The purpose of tonight's meeting is to take your pulse on how close is the LU/LT/UD proposed concept getting. We went through it in 4 layers. My sense based on your comments, is if we used the 1-2-3 voting, there are people who would vote 2 and some would vote 3 on certain elements. He is proposing we identify those issues that, had a vote been called, would get a 2 or 3, to identify those issues that need further work. The assumption then is that the remaining issues would get a 1 and staff can proceed.

The "2 ½" and "3s"

Tracy Whalen:

- Scenic street designation of Weidler; how would you envision putting in trees; wants to know what it would take to really do it. Would you lose parking? Lanes?
- Stormwater treatment – needs more definition, pencil it out. Concerns about how this would work with pedestrians, parking, bicycles.

Carol Gossett:

- Broadway-Weidler is very complex. There are parking issues, design issues, and height issues. There needs to be more definition of what is intended.

Wade Lange:

- Need more definition of the street types, what do they mean? Maybe re-name them?

Justin Zeulner:

- Agree about the need to better define Broadway-Weidler.
- Concerns about open space; must be coordinated with residential development; have to check in with other stakeholders;
- Concerns about the land use proposed on the riverfront in the Rose Quarter;
- Is the Clackamas overcrossing a possible fatal flaw for the proposed green systems? Have we devised an alternative to make these systems work even if we don't get those crossings?

Pauline Bradford:

- Issue of height - 6-10 story land use designation along Broadway; prefers 2-10 for more flexibility

Gary Warren:

- Agree with issues about building height transition from Irvington/Eliot;
- Concerns about the green street concept;
- Possible Clackamas/Wasco couplet – has not been fully explained;
- No comment from staff tonight about residential zoning – are you proposing to preserve what exists in Lloyd today?
- Clackamas overcrossing – very emotional issue. Something that wide can be turned into a street; whatever is discussed by this committee can be forgotten in 10 years;
- View corridor issues – uncomfortable with tall buildings on the riverfront;

Bob Sallinger:

- Tree canopy targets
- River restoration

The "2s" – issues that need more refinement

Mike Warwick:

- Hancock overpass is a concern, but we will keep an open mind to see if there is a way to design so it works. Has had conversations with City, thinks they understand his issues.
- Heights on Broadway - would rather see heights that do not allow property owners to squat on land, rather see 2—3 story buildings rather than waiting for 10 story building. Zoning proposals need to address that.
- Lower Williams/Vancouver – the notion of "encouraging residential" – it has been encouraged for 20 years and it is not working because of the RH zoning. Allow residential but don't encourage it.

Lloyd Lindley: Generally pleased with work so far. Feels much of this can be worked out in Phase IV. Show details that could help address concerns include:

- Show a hotel district around convention center
- Waterfront tools that could be used to control development and to help with riparian edge;
- Broadway-Weidler tools; would like to see some examples of Broadway-Weidler as parallel street, show as pair and how they work together;
- Russell Street – could be a green street going to the river;
- Better explain how stormwater management would be integrated;
- Sympathetic to Gary's concerns around Clackamas, and thinks the SAC needs more information to understand a park-bridge as a permanent construct;
- Also, need to further define the Hancock bridge.

Ed Abrahamson:

- Height issues on Broadway - would like to see lower maximum heights the whole way;

Need to consider the connection to Lloyd Center in the designation of Broadway-Weidler.

Bob Sallinger:

- Wants to see more coordination between Planning and BES on green streets

Sam said staff will go forward with refining the issues that have not been mentioned above. We will consider options for next steps – perhaps a subcommittee to deal with issues that SAC members ranked 2s and 3s. We will update the SAC as soon as we have figured out next steps.

NEXT STEPS AND MEETING EVALUATION

Sam distributed the evaluation form.

ADJOURN

Sam thanked everyone for a good meeting and adjourned at 8:30 pm.

Notes respectfully submitted by the Institute for Conflict Management, Inc. facilitation team.

SAC #11 Meeting Evaluation Summary
NOVEMBER 17, 2011

12 Evaluation Forms

		Poor	Fair	Good	Very Good	Excellent
1)	**OVERALL MTG QUALITY**			2	7	3
2)	**PACING**		Little Slow	Just right	Little Fast	
			2	9	1	
3)	**CLARITY PRESENTATIONS**			4	3	5
4)	**DOCUMENTS**			5	4	3
5)	**DISCUSSION**			2	6	4

6. MOST USEFUL?

- Discussion
- Discussion and briefings
- Discussions leading to future plan
- Humor
- Maps (x 2)
- More presentations
- When the proposal description includes the "why"

7. LEAST USEFUL?

- Good work, All!
- Public Input
- Text
- Transportation proposals – hard to follow

8. COMMENTS, SUGGESTIONS, OR QUESTIONS?

- Documents: would benefit from having ALL slides used
- Keep going

Oregon Department of Transportation

Staff Responses to SAC Questions and Concerns

From November 17, 2011 SAC Meeting

Below are staff responses to issues raised by SAC members at the November 17 meeting which focused on the proposed concept for the N/NE Quadrant district plan. The topics below were identified by SAC members as issues that may have resulted in a "2" or "3" vote if the question had been formally called at that meeting (1 = full support; 2 = support but would prefer modifications; 3 = do not support). A Land Use Subcommittee meeting is scheduled for January 11, 2012 to discuss these issues in more detail, particularly regarding the proposed system of street and development characters (typologies). In some cases, requests for more detail will be addressed in the next phase of work when more specific proposals are developed as part of the Draft Quadrant Plan.

Land Use/Height

1. **Concerns about tall buildings on the Rose Quarter riverfront and the potential loss of views.**

The vacant riverfront site (between the UP Rail Line on the bank and Interstate Avenue) in the Rose Quarter is privately owned and has existing development entitlements of 4 to 1 FAR and a 100 foot height limit. The proposed concept envisions a mix of development and open space on the site, consistent with the vision set forth in the Rose Quarter District Plan. It is anticipated that development of the site as envisioned would require a joint public-private partnership to secure public open space and potentially relocate the railroad tracks. In this situation, it would be desirable to maintain the flexibility to allow taller buildings to be built on the site, if it were to result in dedicated open space. Under this scenario, the open space would allow for views to downtown and to the Memorial Coliseum from the river.

2. **Concerns about heights proposed on Broadway, including:**
   - **More detail needs to be shown for the transition between Broadway and Schuyler within the Irvington Historic District. Request for a 2 story height limit on Schuyler.**
   - **Request for a height range of 2 to 10 stories (instead of 6 to 10 stories) between the freeway and 7th for more flexibility.**
   - **Prefer lower heights along the entire length of Broadway. Request for no more than 10 stories.**
   - **Prefer heights that encourage development (2-3 story) rather than encouraging property owners to wait (10 stories).**

The heights shown in the proposed concept are intended to provide general guidance about the maximum heights that would be allowed in different areas. A more detailed height proposal will be developed in the next phase of work as part of the draft plan. Responses to specific concerns raised are provided below:

- Staff is aware of the desire to have a transition in allowed height between Broadway and Schuyler within the Irvington Historic District and will incorporate this in the detailed height proposal to be developed in the next phase of work.

- The 6 to 10 story height range between 7th and the freeway suggests the desired future urban form in which the scale of development ramps up as you move west toward the Rose Quarter and Broadway Bridge. It would not preclude smaller buildings. This is consistent with previous direction from the SAC to allow for a larger scale of development in this area to optimize the investment in streetcar.
- The proposed concept calls for increased height in lower Broadway adjacent to the Rose Quarter and at the Broadway Bridgehead. This is consistent with the concepts developed as part of the Rose Quarter District Plan and public input has been predominantly supportive of more intense development in that area.
- Staff agrees that there is an issue with too much entitlement in FAR and height in the Lloyd District and will work to develop tools to address this concern. At this time, the concept is intended to illustrate the maximum height that the community would find acceptable, provided it came with an appropriate level of amenities and public benefit. Certain conditions may be required in order for a development to achieve these heights.

3. Opposition to any plan that calls for up zoning unless such up zoning is matched by an equivalent amount of down zoning in the plan area. There is more than enough density under current zoning, and additional up zoning will deter development while owners wait for a market for big buildings.

The proposed concept anticipates "up zoning" in a handful of sites including the PPS Blanchard site, the area around Historic Russell Street, the Vancouver/Williams corridor and possibly at Multnomah and 21st. These changes are proposed to respond to development opportunities and to address issues identified with the current zoning. Not all zoning changes would necessarily allow for higher density of development, but would allow for greater flexibility of uses. For example, within the Vancouver/Williams corridor, a change from high density residential to central employment zoning would result in a slight decrease in FAR and maximum height.

Additional height allowances, achieved through an updated bonus system, would be necessary in certain areas to achieve the desired character of the proposed concept. These areas include the high density central core of the Lloyd District and the Broadway Bridgehead.

As described in #2 above, staff agrees that there is an issue with too much existing entitlement in the Lloyd District and will work to develop tools to address this concern.

4. We need to discuss what will happen with the existing residential zoning in the Lloyd District.

Staff agrees that this will be an important discussion to have with the SAC. The proposed concept calls for a strong residential presence in the central core of the Lloyd District where there is an existing pocket of Central Residential (RXd) zoning. Details of how that proposal will be implemented, including tools to encourage development and retention of existing housing will be included in the next phase of work during which the draft quadrant plan will be

developed. The appropriate zoning for the area will be one of the issues considered at that time.

5. **Residential uses have been encouraged along lower Williams/Vancouver for 20 years; it is not working. We need to allow residential uses, but not encourage them.**

This comment is helpful for the next phase of work where more specific zoning and tools will be proposed. The concept proposes a mix of commercial, employment and residential uses along the lower Williams/Vancouver corridor. No changes are needed at the concept level.

6. **We don't want to lose the concept of a hotel district around the convention center. Add something to the concept to acknowledge it.**

The proposed concept calls for high density mixed use development around the convention center that would complement and ideally enhance the convention center events by encouraging greater activity. More specific recommendations about developing a hotel district can be included in the quadrant plan, which will be developed in the next phase of work.

Mobility

7. **Concerns about the proposed street typologies, including:**
   - **Generally need more definition of what is proposed.**
   - **Would like to see some examples of Broadway-Weidler as parallel streets - show how they work together.**
   - **How would the street section of Weidler change under the scenic street typology - would it affect on-street parking or the number of lanes?**
   - **Need to consider other issues in planning for Broadway and Weidler - parking, design, height, how they interact with the Lloyd Center mall.**

Staff agrees that there needs to be more discussion about the proposed street typologies and it will be a main topic of discussion at the land use subcommittee meeting scheduled for January 11, 2012. To assist with this discussion, staff is working on descriptions and examples to better illustrate what is intended. Since the November SAC meeting, the proposed street typologies have been revised based on SAC and agency input and is now being called "Street and Development Character" to be more descriptive of the proposal. A revised proposal that describes the four different street types, including their proposed function, design characteristics, and visual examples is included under separate cover.

8. **The current proposal for the Clackamas overcrossing is wide enough to be turned into a traffic street in the future. This should not happen. We need more definition about what a "park bridge" would look like.**

The width of the pedestrian/bike crossing that has been displayed in some concept maps and in the physical model is intended to represent a pedestrian/bike bridge that is wide enough to have amenities such as enhanced landscaping and seating. The SAC voted to eliminate local traffic from the proposed overcrossing on 9/29/11 with 15 members voting "1" and 2 members voting "2" in favor of moving the Clackamas overcrossing forward into phase III as a

pedestrian/bike only bridge. City and ODOT staff support this direction and do not intend to propose the crossing be used for local traffic now or in the future. In addition, the grades (likely necessitating ADA ramps, stairs/elevators) would make it very difficult to construct a crossing suitable for vehicular traffic in this location. Staff will continue to work to clarify the potential design and features of the overcrossing.

9. The Eliot Neighborhood is concerned but open minded about the Hancock overcrossing and is waiting to see if there is a way to design it so it doesn't bring additional traffic into the neighborhood.

Project staff is aware of this concern and will continue to work with the neighborhood on designs that would prevent traffic impacts, should a new overcrossing within the Eliot neighborhood be recommended as part of a preferred I-5 freeway improvement concept.

10. We need more information about a possible Clackamas/Wasco couplet.

The proposed concept does not include a couplet on Clackamas and Wasco. The urban design diagrams that prompted this comment were intended to identify possible alternative alignments for the proposed open space and green street that would provide a central amenity for the high density neighborhood envisioned in the central core of the Lloyd District. The concepts have typically placed this spine along NE Clackamas Street, but as an alternative, it could end up being on Wasco. The concept will continue to show the flexible connection along the Clackamas alignment.

<u>Open Space and Green Systems</u>

11. Concerns about coordinating open space with residential development; need to check in with other stakeholders on these issues.

The existing open space at Holladay Park is currently bordered on three sides by non-residential uses that are not anticipated to change significantly over the life of the plan. Residential is desired east of the park and the proposed concept calls for mixed regional retail, entertainment and residential on that site. The proposed concept also includes a series of new parks along Clackamas Street, extending from roughly the Lloyd Center to the Rose Quarter that would serve as a central amenity for the high density residential focus area envisioned for the central core of the Lloyd District. Staff will continue to check in with stakeholders to make sure this proposal fits with the desired future for the area. In addition, methods to tie residential development and open space together can be explored in the next phase of plan development.

12. The proposal needs to address tree canopy and citywide targets.

As shown in the table below, the existing tree canopy within the quadrant falls short of the targets established in the City's 2004 Urban Forestry Management Plan. It is important to note that these targets were established to measure citywide progress toward meeting tree canopy goals and were not intended to be strictly applied to every property or in all areas of the City.

Existing N/NE Quadrant Tree Canopy and Citywide Targets

Land Use Category	Current N/NE Quadrant Canopy**	Current Citywide Canopy*	Citywide Target *Urban Forest Management Plan, 2004*
Residential	n/a	30%	35%-40%
Commercial/Industrial	6%	7%	15%
Parks & Open Space***	45%	28%	30%
Rights-of-way	10%	17%	35%
Total	9%	26%	33%

* from 2002 as cited in Portland's Urban Forest Canopy, Parks and Recreation 2007.
** estimate using GIS analysis of Metro's 2007 high structure vegetation mapping. Excludes area within the Willamette River.
*** not including undeveloped natural areas.

The Central City, where City policies and zoning encourage full site build-out, offers limited opportunities to achieve significant tree canopy on private property. So we anticipate lower tree canopy coverage within the Central City than we would expect to see in lower density/intensity commercial and industrial areas.

In the N/NE Quadrant more significant opportunities to increase tree canopy exist along rights-of-way, including freeway corridors, and to some degree within parks. The water quality/tree canopy corridors emphasize the surface treatment of stormwater, vegetation and large-canopy trees. Enhanced tree canopy is also suggested on boulevards (previously "scenic" streets), where a lush, highly vegetated environment is would be encouraged. Additional tree planting could also be done in Sullivan's gulch and other open spaces within rights-of-way. Additional parks are also called for within the quadrant, which would provide tree planting opportunities.

More specific tree-related goals and objectives and strategies for meeting them will be developed as part of the next phase of Central City plan development. These goals and objectives should focus on the role and functions of trees, priority locations, maintenance, and implementation opportunities. Through this process we can determine how the Central City can contribute to Portland's overall tree canopy, which will inform future programs and investments both inside and outside the Central City 2035 plan area.

13. How are we going to restore the river and connectivity for salmon habitat?

Restoring the Willamette River is a challenge that requires action on the part of many entities including the City and other local, county, state and federal agencies, property owners, businesses and the community at large.

The River Plan/Central Reach is focusing on four main tools for improving natural resource conditions along the Willamette River in the Central City:
A. BPS is developing a Natural Resource Inventory (NRI) that identifies existing habitat areas and the functions they provide. The information in the NRI will be used to inform discussions and decisions about natural resource conservation and restoration during the Central City planning process.

B. The existing greenway zoning code regulations (development standards, greenway review approval criteria and design guidelines) will be revised to more flexibly and effectively address natural resource conservation, mitigation and enhancement in and along the river. The regulations will be revised to support the natural resource and green system goals and policies drafted for the Central City Concept Plan and quadrant plans.

C. BPS is working with the Bureau of Environmental Services to identify potential restoration sites in the Central Reach. As part of the River Plan / North Reach, NOAA Fisheries recommended restoration sites every 1/4 mile. This type of goal may be hard to meet in the Central Reach. The NRI shows that there is very little existing shallow water habitat in the Central City, and our work with BES shows that there are few areas that are good candidates for traditional restoration such as laying back the river bank and daylighting/restoring stream mouths. That said, there are two potential enhancement sites shown on the proposed N/NE concept map.

As part of the Central City planning process we will consult with scientists about the best approach to take in the Central Reach, and we will look for sites that have the potential for creative approaches to restoration that can work in a highly urban environment. We will look south to Ross Island, Oaks Bottom and other less developed area for additional restoration sites. We will also explore opportunities to benefit wildlife through development design (e.g., bird friendly buildings, habitat oriented ecoroofs).

D. As part of the quadrant plans, the River Plan/Central Reach team will help to identify opportunities to connect upland green systems (green streets and corridors, eco-roofs, parks and open space, etc.) with the river to support and enhance overall natural resource functions for this area.

14. Concerns about the green street concept, including:

- **Need more definition about the potential stormwater treatments in water quality corridors (e.g. potential conflicts with pedestrians, bicyclists, parking).**
- **How they relate to the flexible and scenic street concepts.**
- **Need for coordination between BPS and BES.**

Green streets are shown on the concept as “water quality/tree canopy corridors”, which are intended to provide a system of green infrastructure that could capture stormwater, shade streets and generally add vegetation to the built environment. These streets would provide a greater emphasis on green infrastructure than might be placed on other streets, for example those with a retail focus. The water quality/tree canopy corridors generally correspond with the flexible street system, but in a couple of examples correspond with boulevards (previously “scenic” streets). The flexible street system is geared more toward pedestrian travel, although cars would likely be allowed on most streets. Likewise, the water quality/tree canopy corridors would be expected to focus on pedestrian travel and green infrastructure, such as stormwater swales and large canopy street trees. It should be noted that green street facilities may also be included in other streets as redevelopment occurs according to existing City stormwater

regulations. Staff is working on examples to better illustrate how water quality and tree canopy can be incorporated into streets and will continue to coordinate with the Bureau of Environmental Services to ensure that the proposal is consistent with their goals for the area.

15. Opportunity for Russell to be a green street leading to the river.

Comments from Lower Albina stakeholders have emphasized the importance of retaining the industrial character of streets within the district, including adequate movement for trucks. Designating Russell as a green street may not be consistent with that direction. In addition, Russell had recent streetscape improvements (Fall 2009) that were the result of a public process to determine the appropriate character for the street. That said, there may be opportunity to add green infrastructure, such as trees and stormwater facilities, to the Lower Albina area within unutilized space in rights-of-way. Open areas at the base of Russell have been noted, however the majority of that area is privately owned at this time.

16. Are the Hancock and Clackamas overcrossings potential fatal flaws for the green systems concept? Have we devised alternative proposals for district energy if we don't get these crossings?

The proposed concept envisions redevelopment of Clackamas Street as a green street with enhanced pedestrian amenities and a pedestrian/bike bridge over the freeway. Given its anticipated redevelopment, it would also make a good route for a district energy spine connecting the Rose Quarter and the rest of the Lloyd District. However, it would be possible to install this infrastructure in other streets as they are redeveloped. Holladay and Multnomah could both serve as alternate routes. The quadrant plan can clarify that the proposed district energy system shown in the diagram is conceptual and that exact routes may differ based on implementation opportunities that arise. The Hancock overcrossing has not been shown as a route for district energy or other green systems in the proposed concept.

January 18, 2012

N/NE Quadrant and I-5 Broadway/Weidler Plans Project

Stakeholder Advisory Committee: Meeting # 12 – January 19, 2012

Staff Report: Recommended Hybrid Framework for the I-5 Broadway/Weidler Interchange

I. INTRODUCTION

The Oregon Department of Transportation (ODOT), the City of Portland Bureau of Transportation (PBOT), and the City of Portland Bureau of Planning and Sustainability (BPS) are jointly managing a project that includes preparing a long-range plan for the overall N/NE Quadrant of the Portland Central City and identifying specific improvements to I-5 between I-84 and I-405 (Fremont Bridge), as well as improvements to the Broadway/Weidler Interchange.

This staff report describes our Hybrid Framework recommendation for the I-5: Broadway-Weidler Interchange Plan. It outlines the freeway and local street elements and defines the key issues for further analysis. The purpose of this staff report is to support staff recommendations on the following key SAC questions:

Question #1: Do you agree with the Subcommittee recommendation to remove the Folded Diamond and Split Diamond options from consideration?

Question #2: Do you agree with this Staff Recommendation to carry forward the Hybrid Framework for further refinement?

II. Background

The project team has worked closely with the N/NE Quadrant Stakeholder Advisory Committee (SAC) to identify a wide range of freeway and interchange improvement concepts that can improve freeway safety and operations, while being compatible with emerging long-range land use/urban design plans and supportive of economic development within the overall N/NE Quadrant. The range of freeway and interchange improvement options has been narrowed to a few of the most promising concepts.

The process for identifying, evaluating, and narrowing the concepts has included several SAC actions by the, including:

A) Adoption of project goals and objectives	SAC Meeting #4, January 4, 2011
B) Freeway/Interchange Charrette	April 2011
C) Narrowing from 70+ ideas to 13 concepts	SAC Meeting #6, May 26, 2011
D) Narrowing from 13 concepts to 6 concepts	SAC Meeting #8, July 28, 2011

At SAC Meeting #10 in October, the committee reviewed a physical model of the six interchange concepts and received a presentation summarizing key findings. At the SAC Subcommittee meeting on December 8, 2011, staff presented information on the performance

of each concept and the subcommittee discussed their pros and cons. Based on the technical information, rankings, and discussion, the subcommittee recommended the following:

A) No further work on Concept 4a, Split Diamond and Concept 4b, Folded Diamond.

B) Identify the best elements of each remaining concept (Braided Ramp/CD Road, Rebuilt Structures, and Three-Point Interchange), explore including those elements in a hybrid concept(s), and report findings at the January 19, 2011 SAC meeting.

III. Staff Recommendations

Question #1: Do you agree with the Subcommittee recommendation to remove the Folded Diamond and Split Diamond options from consideration? **YES**

Question #2: Do you agree with this Staff Recommendation to carry forward the following Hybrid Framework for further refinement? **YES**

Hybrid Framework: Based on technical assessments of bicycle and pedestrian operations, urban design/land use potential, traffic analysis, and freeway safety.

A) Base Elements:

1) TSM and TDM strategies will be included,
2) Mainline Freeway Elements require re-building the Weidler, Broadway, Williams, Vancouver, and Flint Overpasses,
3) Mainline Freeway Design Elements: Auxiliary Lanes and widen shoulders would be included in both directions,
4) Broadway-Weidler Interchange enhancements including improved facilities on the new bridges/lid for all modes, and
5) Clackamas Bicycle-Pedestrian over-crossing.

B) Additional Elements:

1) SB Braided Ramp
2) Move the southbound on-ramp from Wheeler/Winning Way to Weidler (4c)
3) Use the “English” style (left side driving) concept on Williams between Broadway and Weidler (2 and 4c)
4) Two options for rebuilding the Vancouver and Flint Overpasses:
    a) Keep Vancouver and Flint at its current alignment (2 and 3)
    b) Realign Vancouver west to align with Flint or Wheeler (4c)
5) Include a freeway lid where feasible when rebuilding structures (4c)
6) Eastside multi-use path (MUP) connecting Eastbank Esplanade to Broadway

C) Discarded Elements:

1) NB CD road on Eastside of I-5
2) Folded Diamond and Split Diamond

IV. Next Steps

- **January 19 SAC Meeting:** Review the I-5 Framework Recommendations

- **February 2 Open House:** N/NE Quadrant Concept Recommendations and I-5: Broadway-Weidler Framework Recommendations

- **February 16 SAC Meeting**: Final Review and Endorsement of N/NE Quadrant Concept Recommendations and I-5 Broadway-Weidler Recommendations.

- **February to April:** Phase IV DRAFT N/NEQ Plan and I-5: Broadway-Weidler Plan

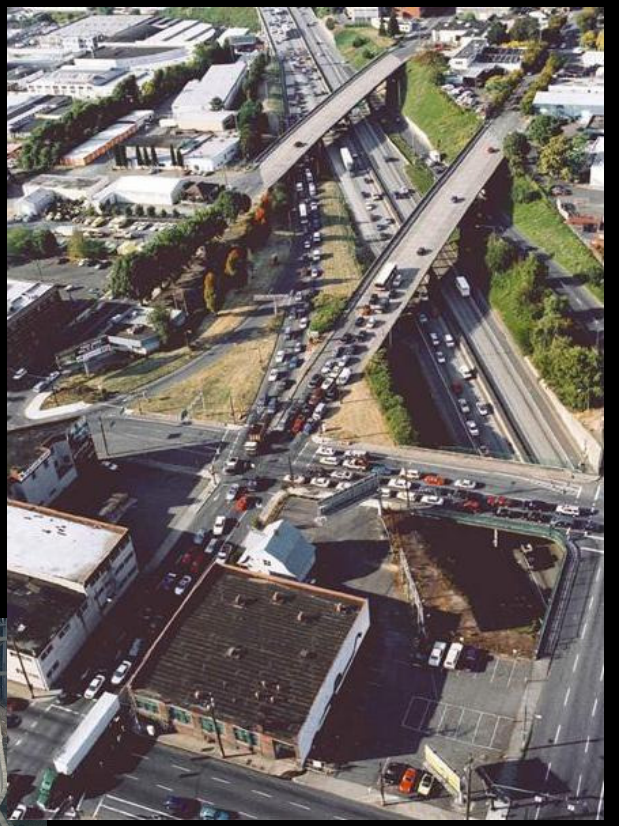
N/NE Quadrant & I-5 Broadway/Weidler Plans

SAC Meeting **January 19, 2012**

CENTRAL CITY 2035

Oregon Department of Transportation

Presentation



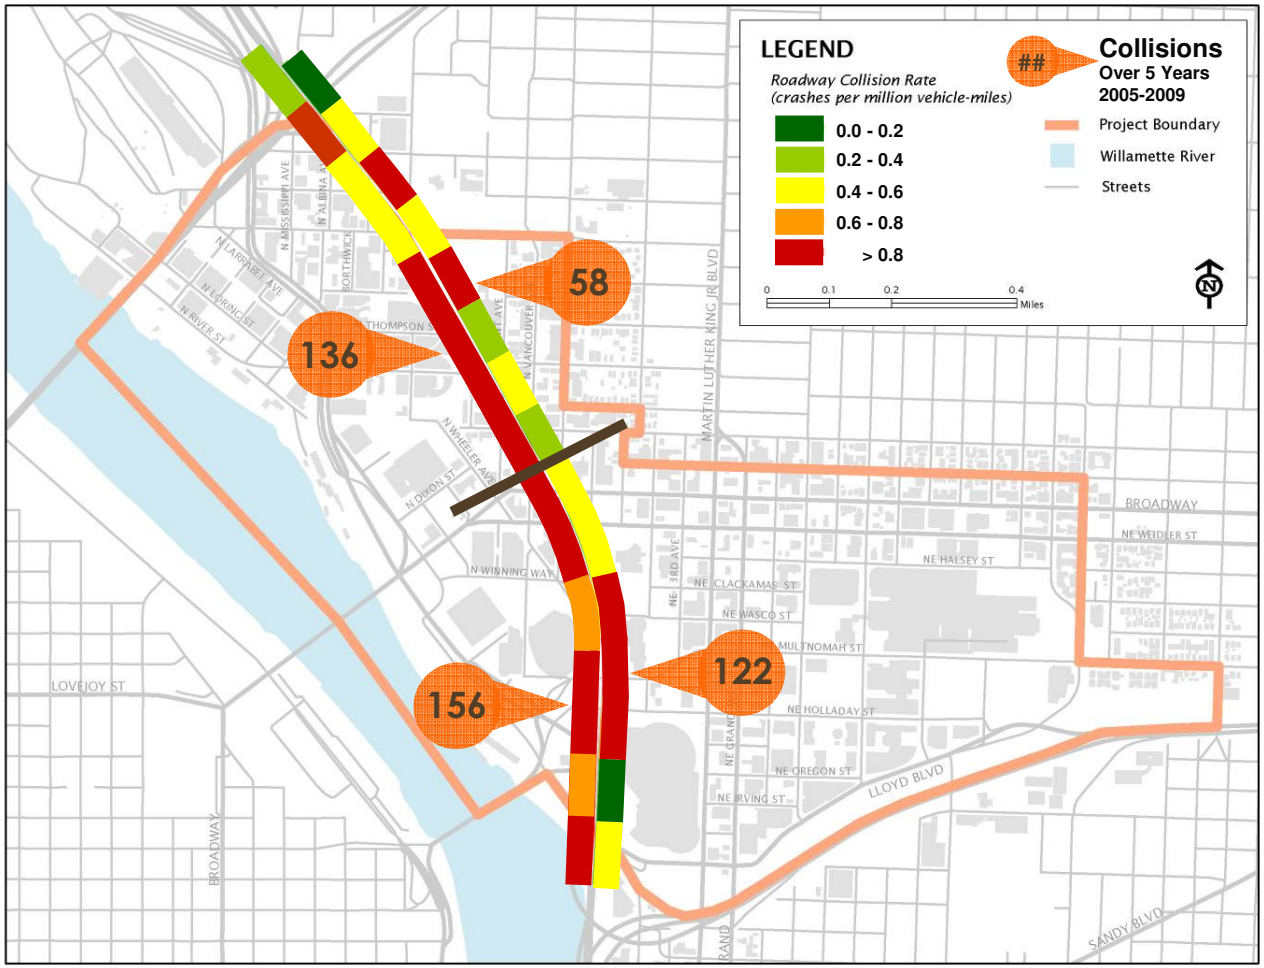
- Project Purpose
- Technical Evaluation Summary
- Question #1
- Transportation Subcommittee Report
- Hybrid Framework
- Question #2

CENTRAL CITY 2035

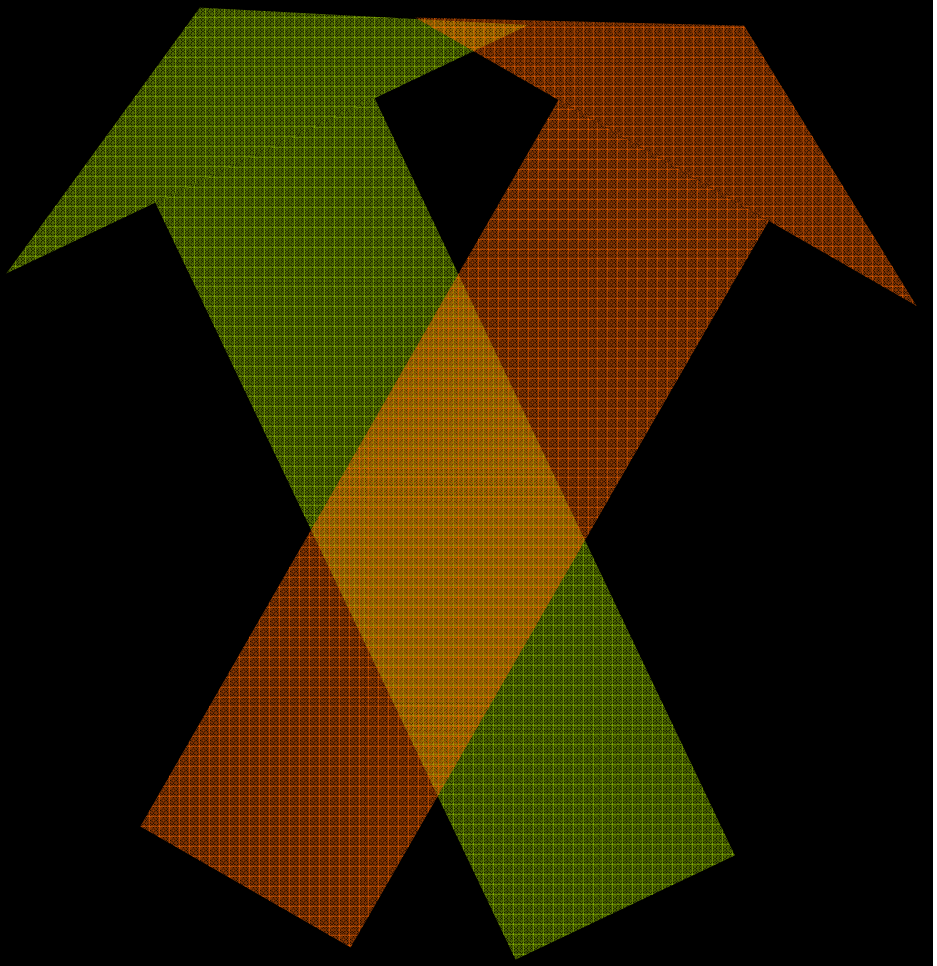
ODOT Purpose

Improve safety and operations on I-5

in the vicinity of the Broadway/Weidler interchange



CENTRAL CITY 2035



I-5 Crashes within the Study Area

CENTRAL CITY 2035

Why are Crash Rates High?

- Short weaving sections
- Conflicting movements
- Friction for through movements
- 30,000 NB ons and 30,000 NB offs between I-84 & I-405

CENTRAL CITY 2035

Broadway/Weidler Interchange Improvements

Opportunities Presented by the Project

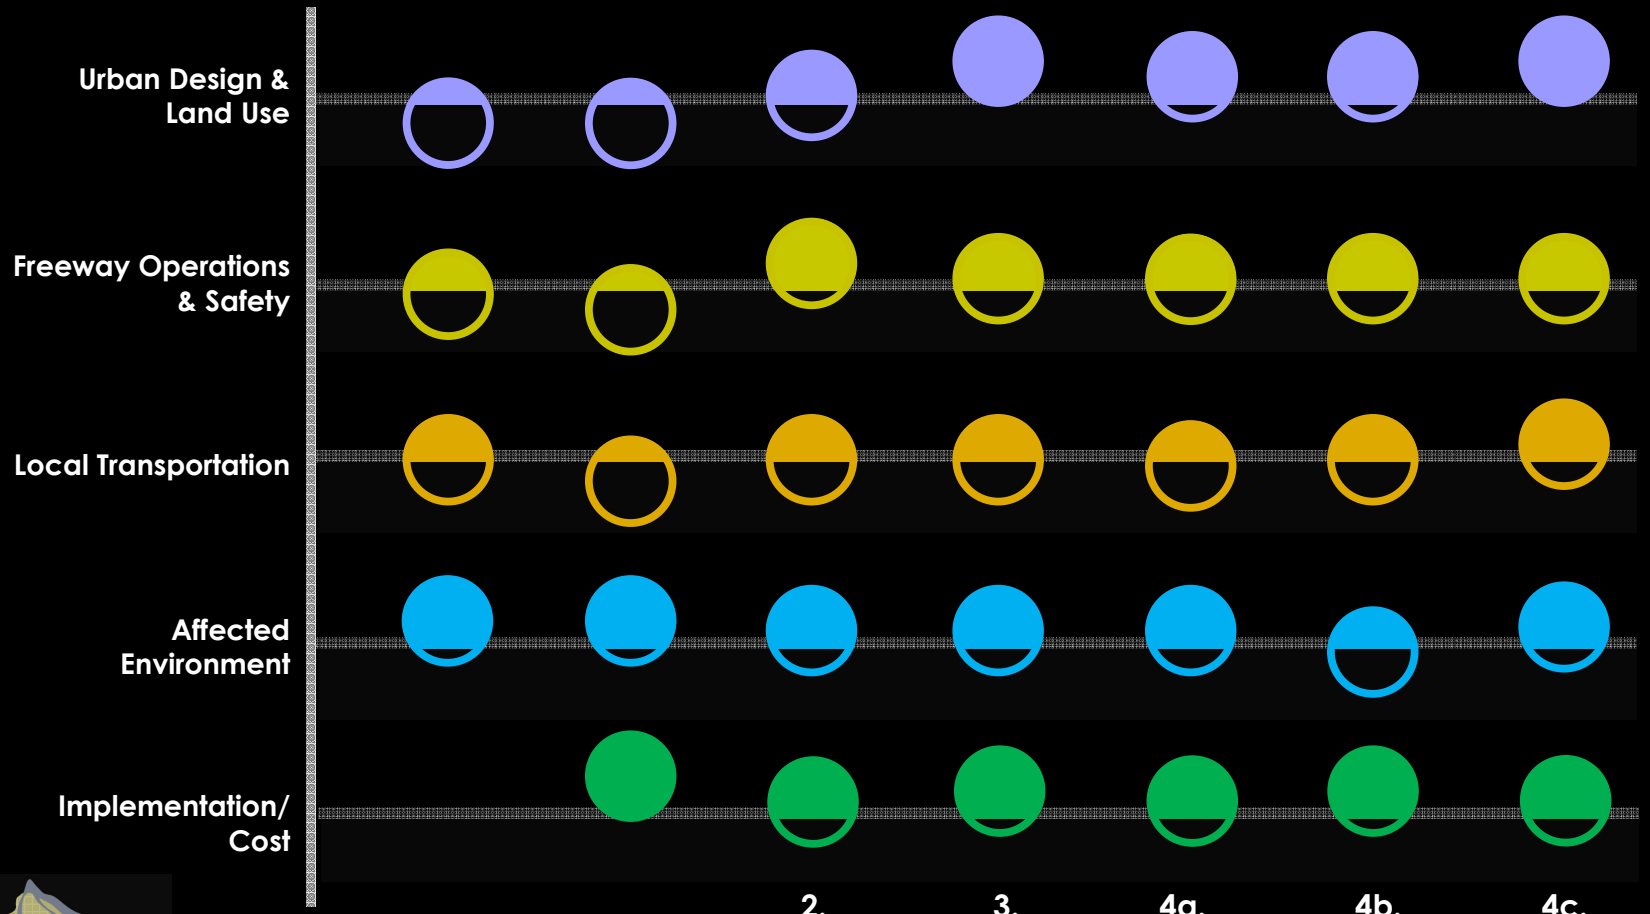
- Improve safety and street operations in the box
- Improve bicycle and pedestrian facilities
- Enhance redevelopment opportunities
- Improve livability in the vicinity of the "Box"
- Reduce delay due to crashes
- Improve regional access to quadrant

CENTRAL CITY 2035

Where We Are

	SAC Actions
Goals & Objectives	(Jan. 2011)
Charrette: 70+ Concepts	(April 2011)
13 Concepts, plus options	(May 2011)
6 Concepts, plus options	(July 2011)
5 Concepts, plus options	(Oct. 2011)
Subcommittee recommends developing hybrids	(Dec. 2011)
Presentation and discussion of Hybrid Concepts	(Jan. 2012)

CENTRAL CITY 2035



Subcommittee Meeting
(December 8, 2011)

- Report on technical findings by category:
  - Urban Design and Land Use
  - Freeway Operations and Safety
  - Local Transportation
  - Affected Environment
  - Implementation/Cost

CENTRAL CITY 2035

Overall Findings

As Presented to Subcommittee

CENTRAL CITY 2035

Subcommittee Meeting
(December 8, 2011)

- Subcommittee Discussion:
  - Concur with eliminating 4a. Split Diamond and 4b. Folded Diamond due to impacts and similar benefits of other alternatives
  - Discussion regarding remaining concepts
    - 2. Braided Ramps/CD Road
    - 3. Rebuild Structures
    - 4c. Three Point Interchange

CENTRAL CITY 2035

Subcommittee Meeting
(December 8, 2011)

- Subcommittee Discussion (Cont'd):
  - Concerns regarding impacts of 4c
  - Agreement to mix and match best elements (including 4c) to develop promising hybrids

CENTRAL CITY 2035

SAC Question #1

1. ***Do you agree with the Subcommittee recommendation to remove the folded Diamond and Split Diamond Options from consideration?***

CENTRAL CITY 2035

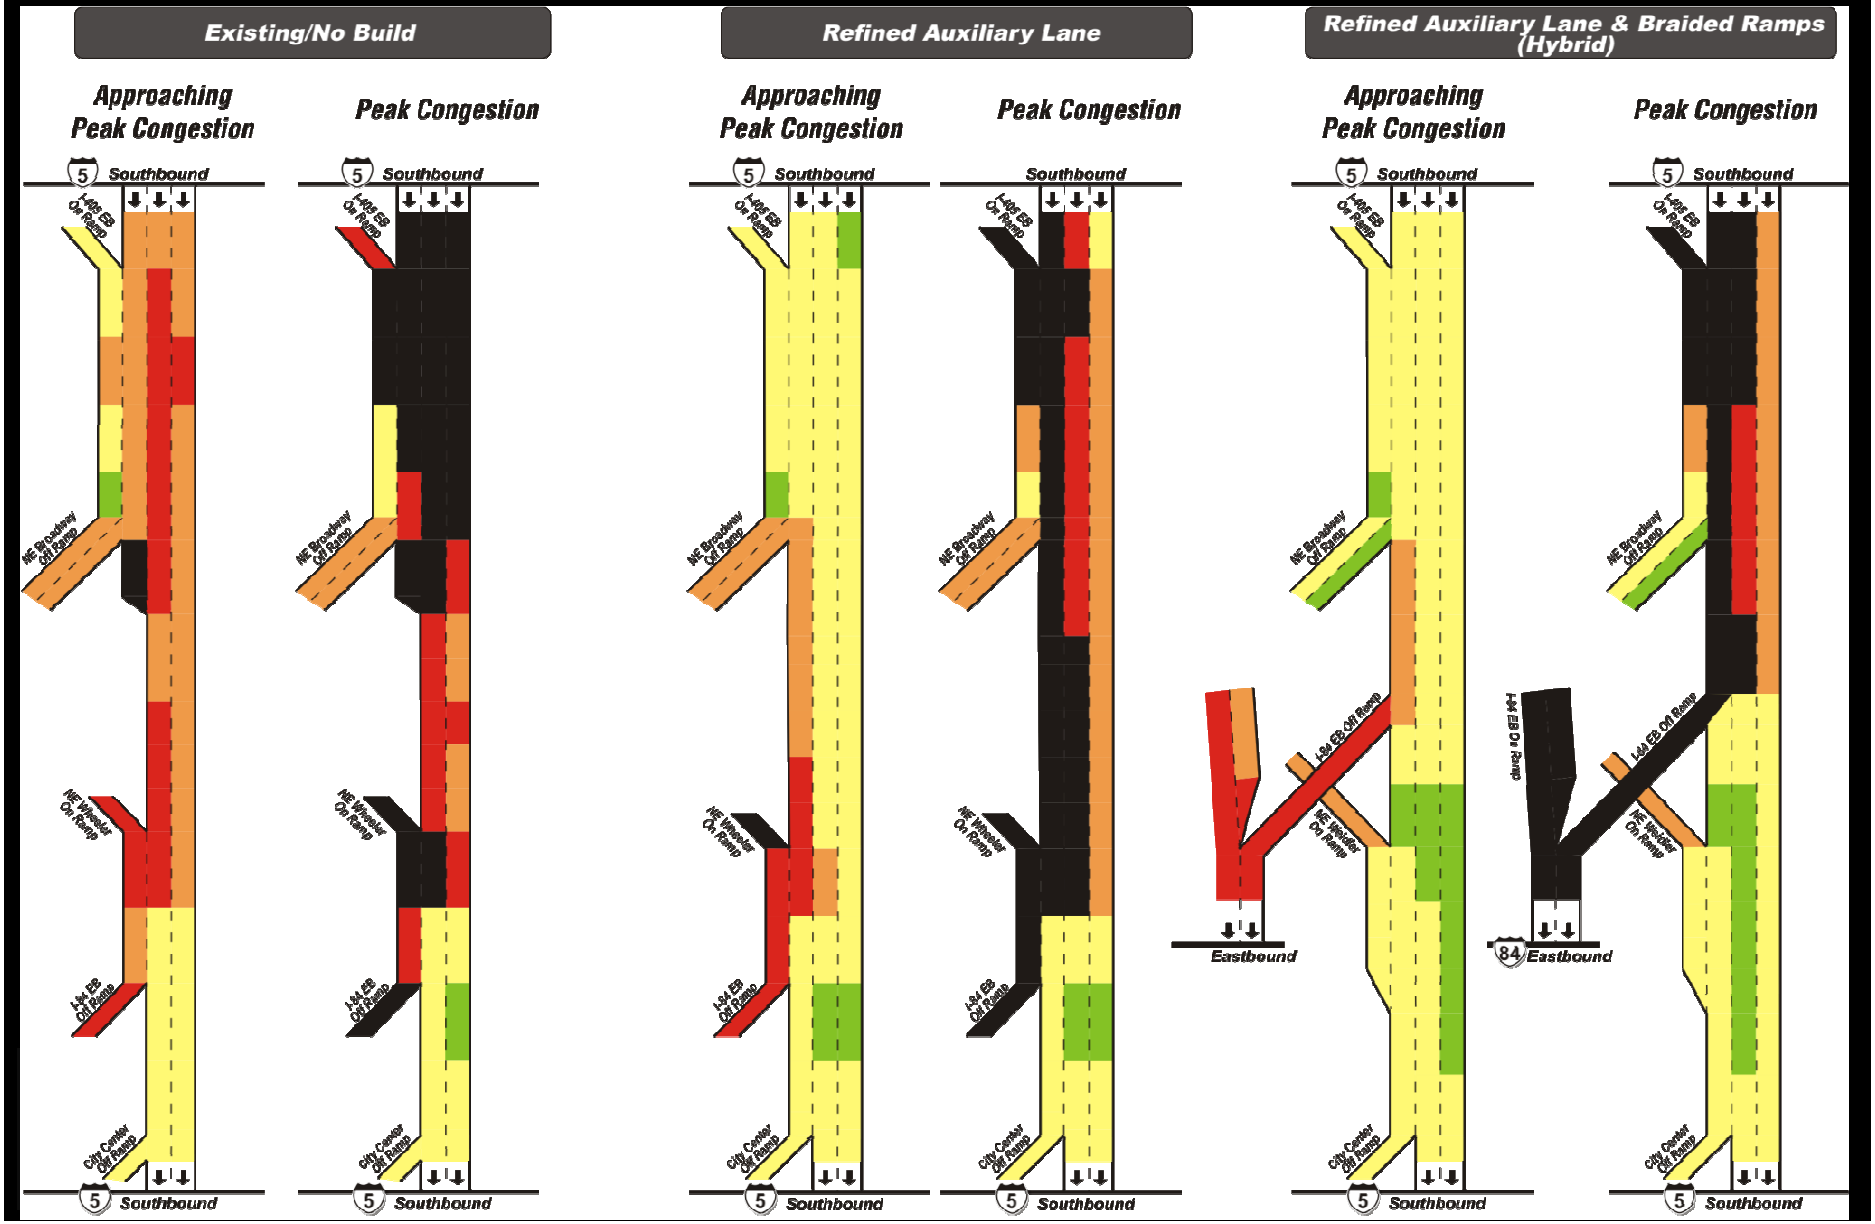
Developing Hybrids

- Refine freeway lane configurations
- Identify best elements of:
  - 2. Braided Ramps/CD Road
  - 3. Rebuild Structures
  - 4c. Three Point Interchange

CENTRAL CITY 2035

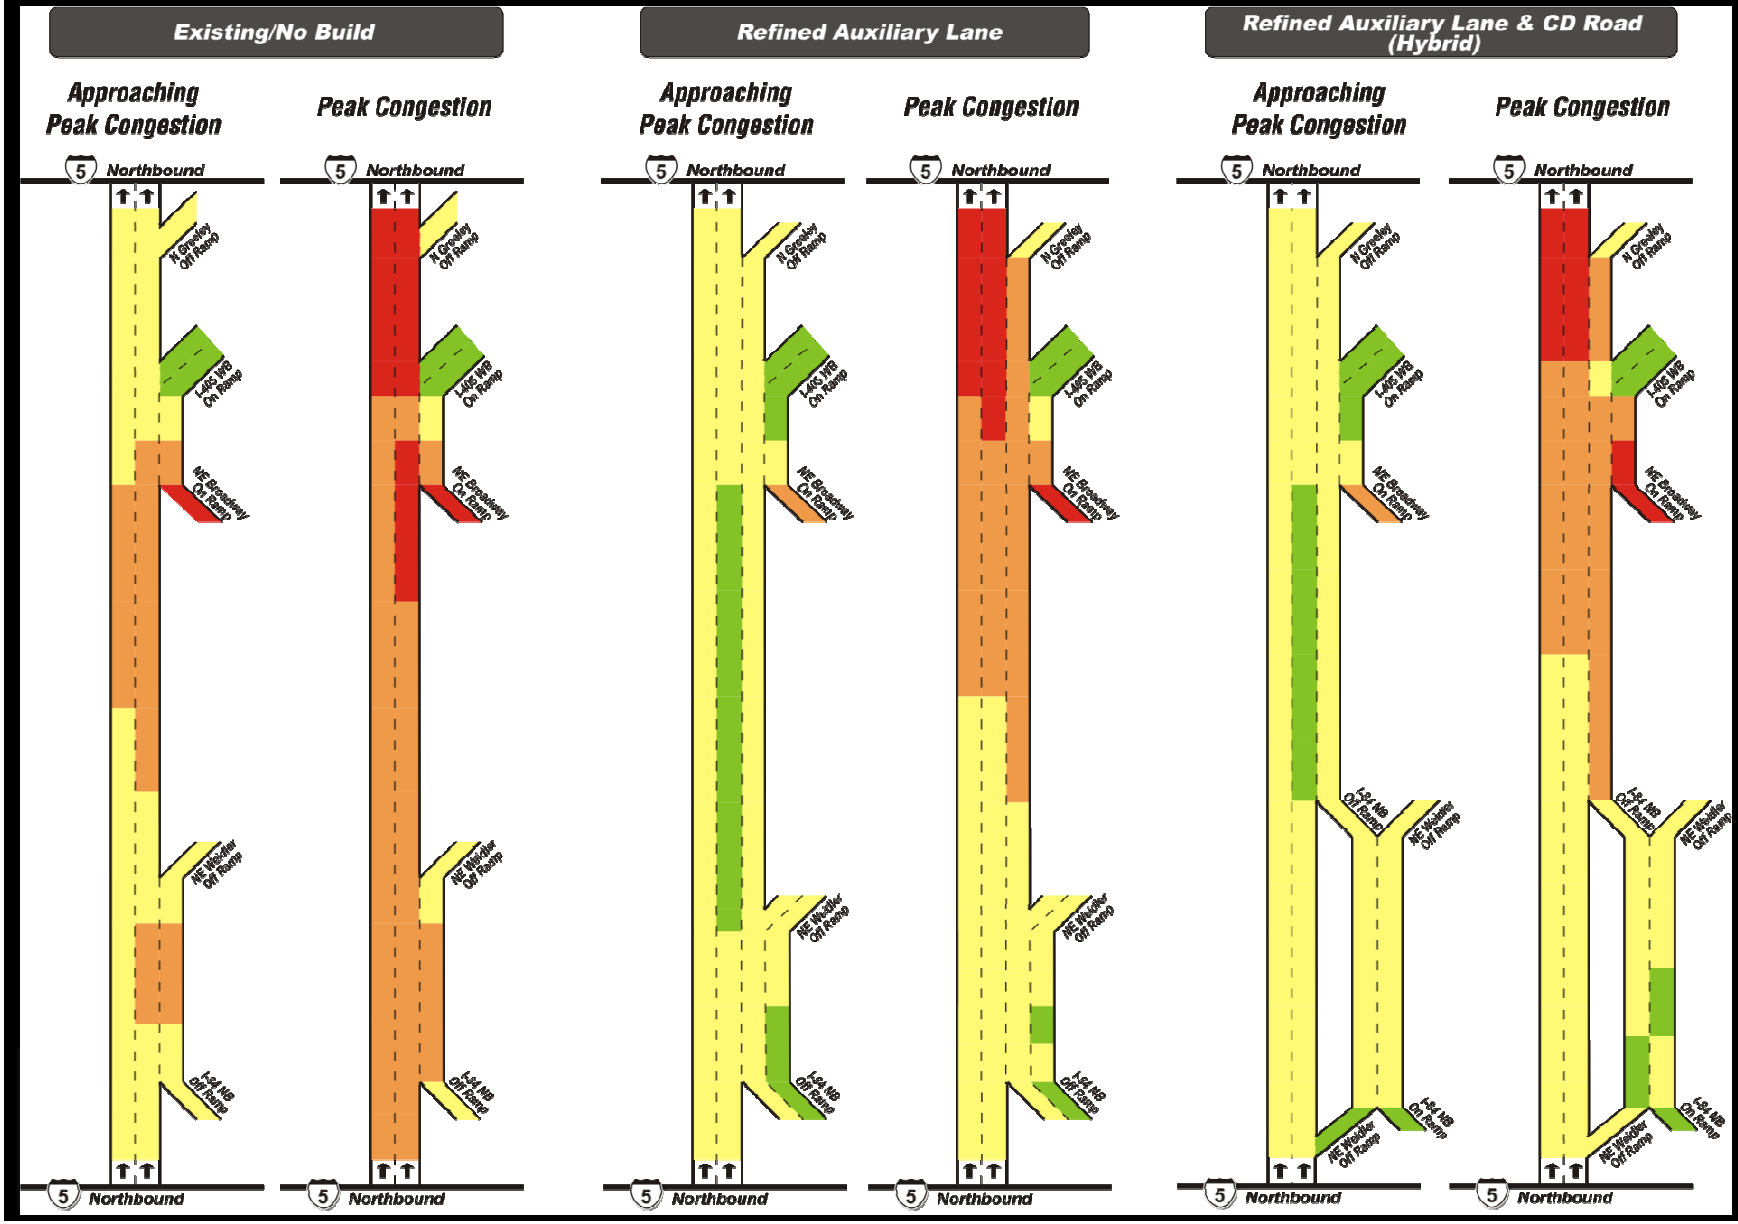
Developing Hybrids

- Best elements include:
  - Move SB on-ramp to Weidler
  - English-style operation on Williams
  - Add auxiliary lane to I-5
  - Braid southbound ramps only
  - Move Vancouver to the west, or keep Vancouver at current location
  - Include freeway lid
  - TSM/TDM from City and State



Freeway Operations

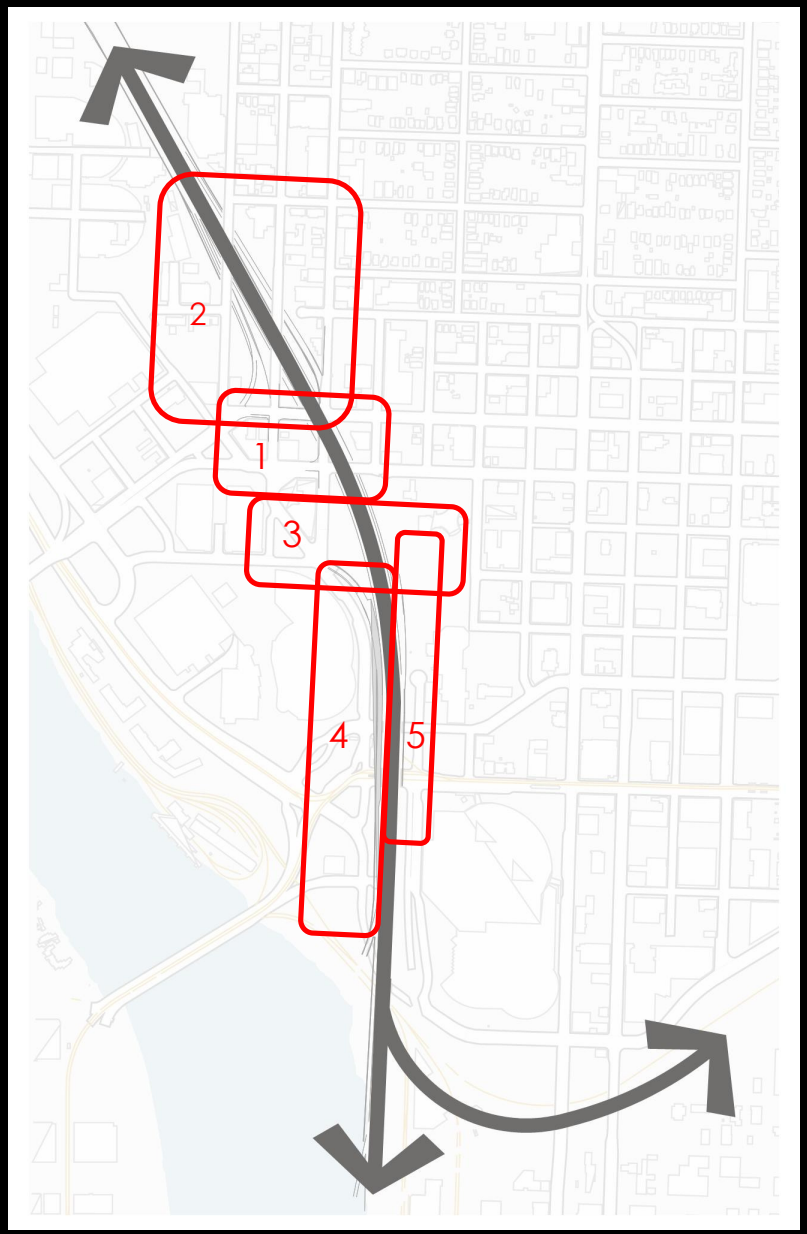
Optimizing the Auxiliary Lanes and Ramps



- Add auxiliary lane both northbound and southbound
- Braid southbound ramps

CENTRAL CITY 2035

Freeway Operations - Southbound



Freeway Operations - Northbound

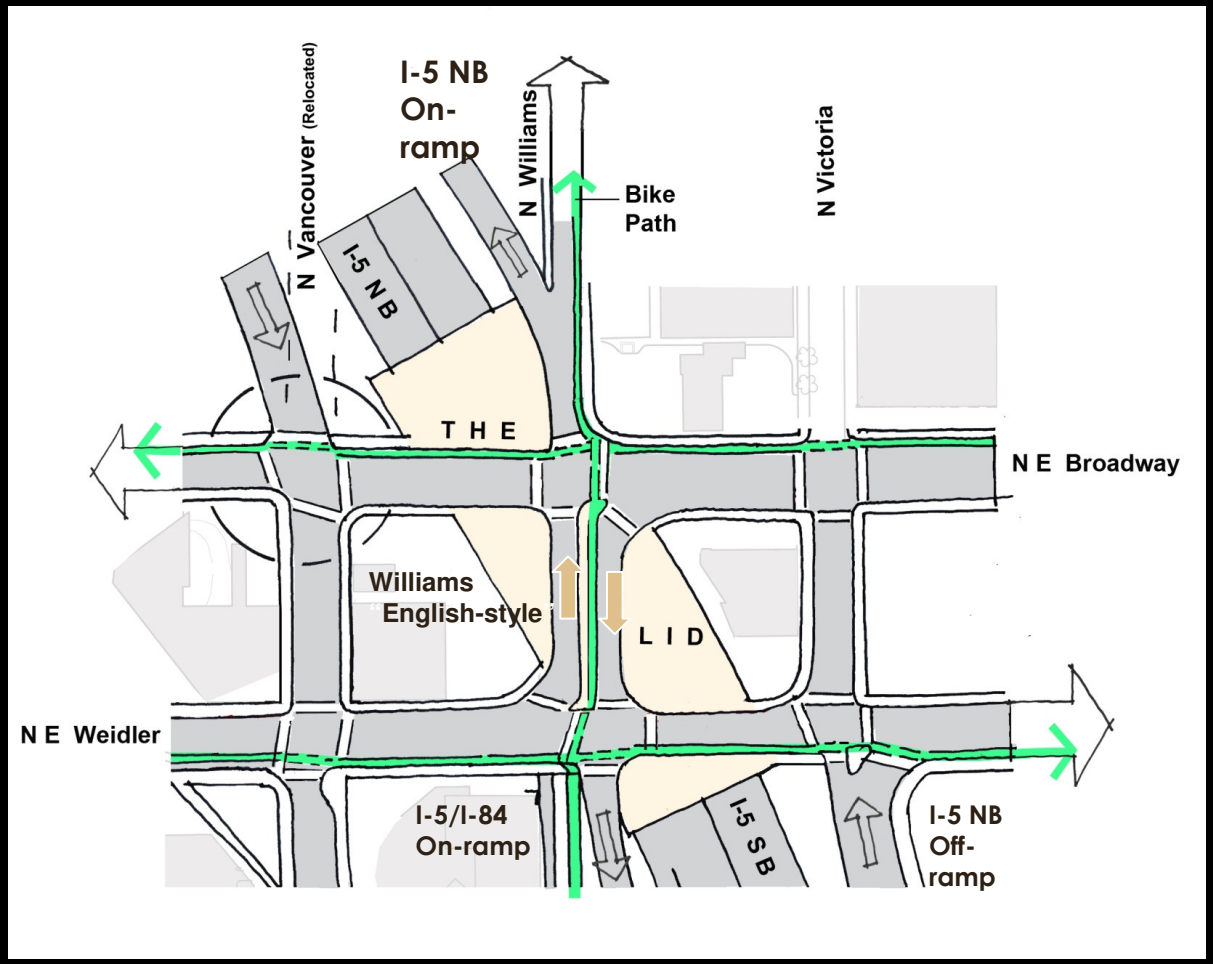
Freeway Analysis Findings

- Southbound:
  - Auxiliary lane reduces congestion and delay
  - Braided ramps offer added safety benefits
- Northbound:
  - Auxiliary lane reduces congestion and delay
  - CD Road offers a only slight improvement – **not recommended to be studied further in this process**

Key Map - Hybrid Concept by 5 Elements

1. Broadway/Weidler Lid
2. Hancock/Vancouver
3. Clackamas Crossing
4. The Braid
5. The Multi-use Path

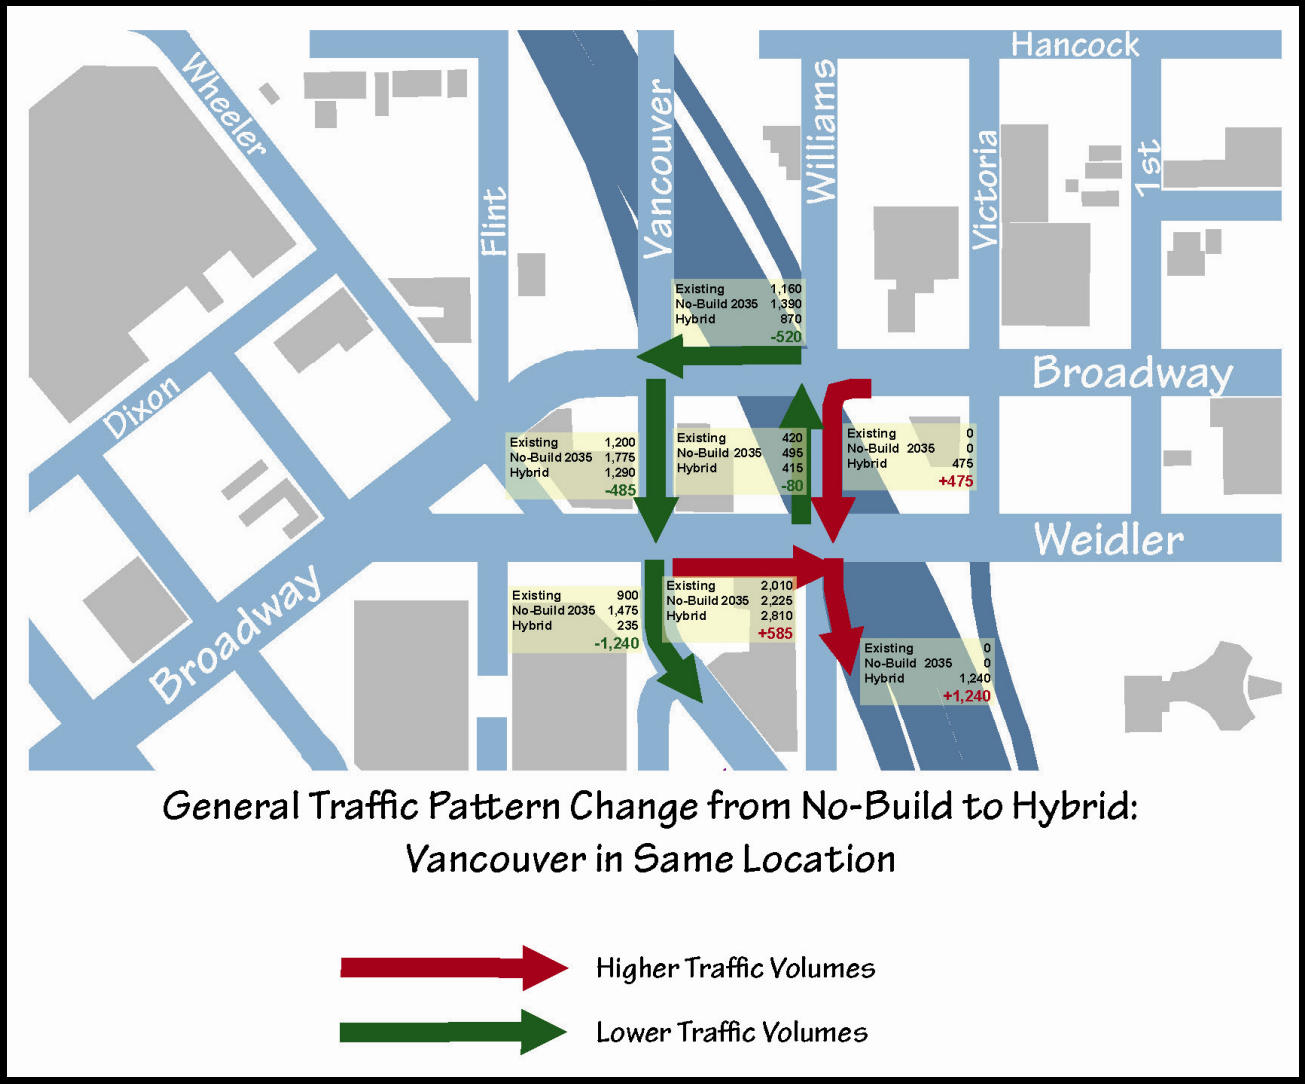
CENTRAL CITY 2035



1. Broadway/Weidler Lid

- Improve the Box Area to include the following:
  - Structures rebuilt to accommodate auxiliary lane extension
  - Widened sidewalks, bike lane and opportunity for public space
  - English-style (drive on left) treatment on Williams between Broadway & Weidler
  - On-ramp to I-5 & I-84 located at Weidler

TSM/TDM



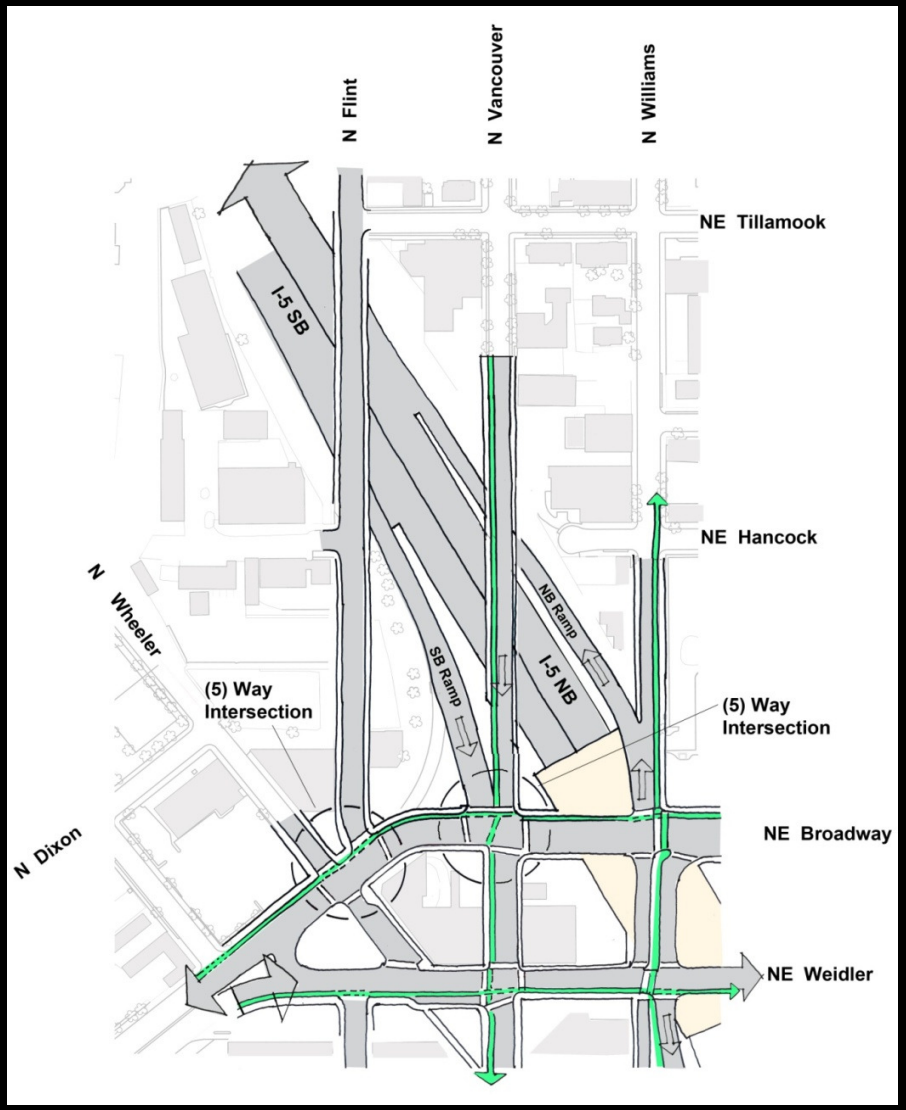
- VMS
- Event Management / TMP
- Ramp Metering
- CCTVs
- Incident Management
- Potential Study for Variable Speeds on I-84 near I-5

1. Broadway/Weidler Lid

CENTRAL CITY 2035

2. Hancock/Vancouver

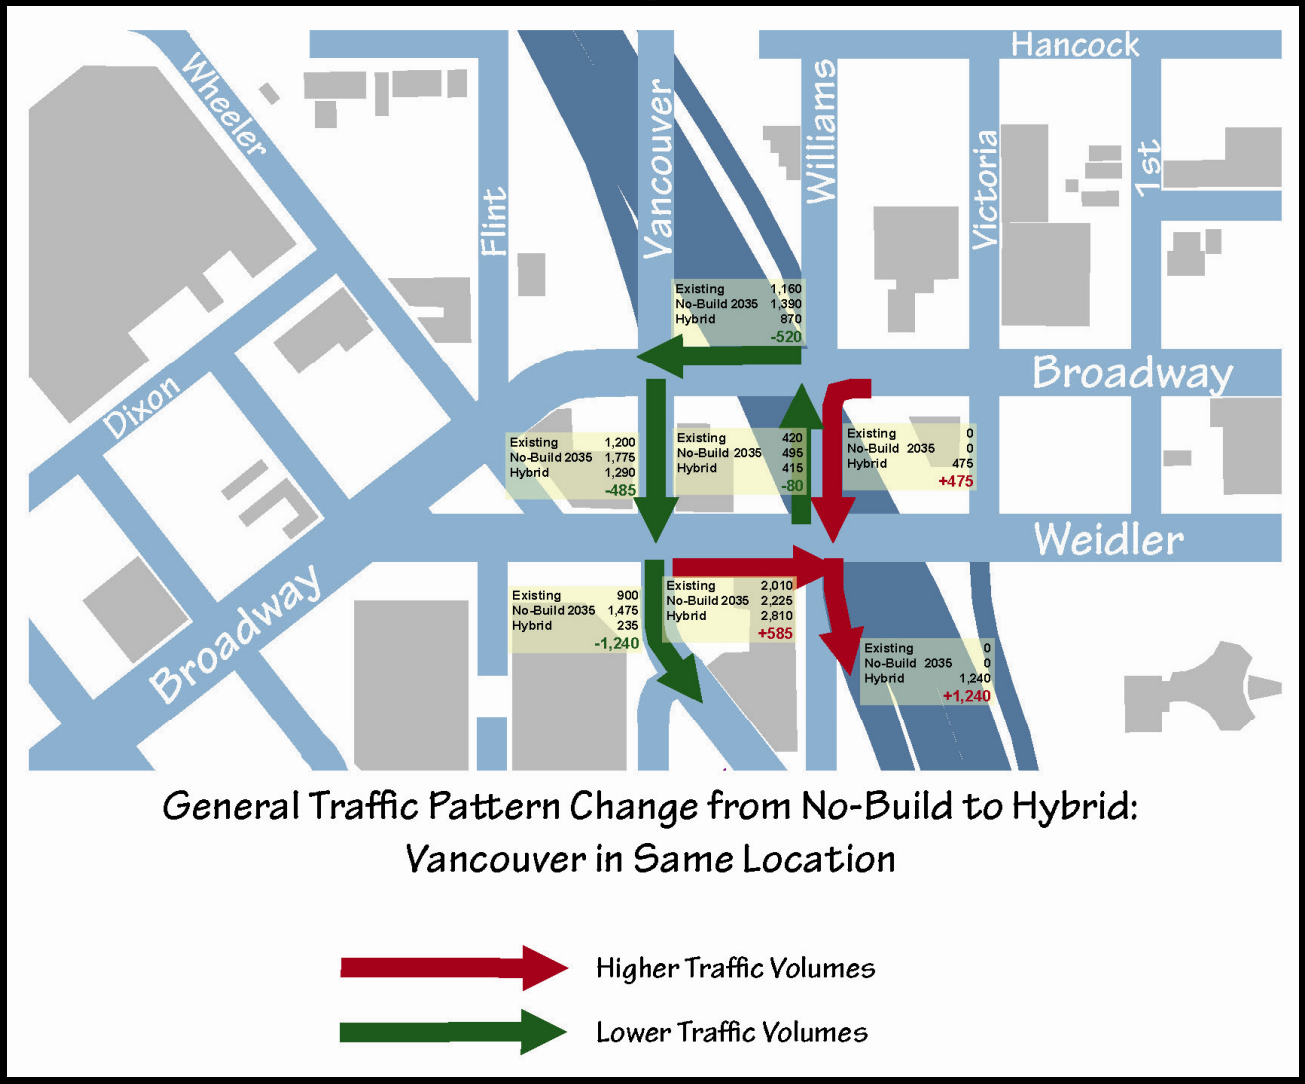
CENTRAL CITY 2035



2. Hancock/Vancouver

- Continue study of two options north of Broadway:
  - Keep Vancouver at current location
  - Move Vancouver to west

2. Hancock/Vancouver

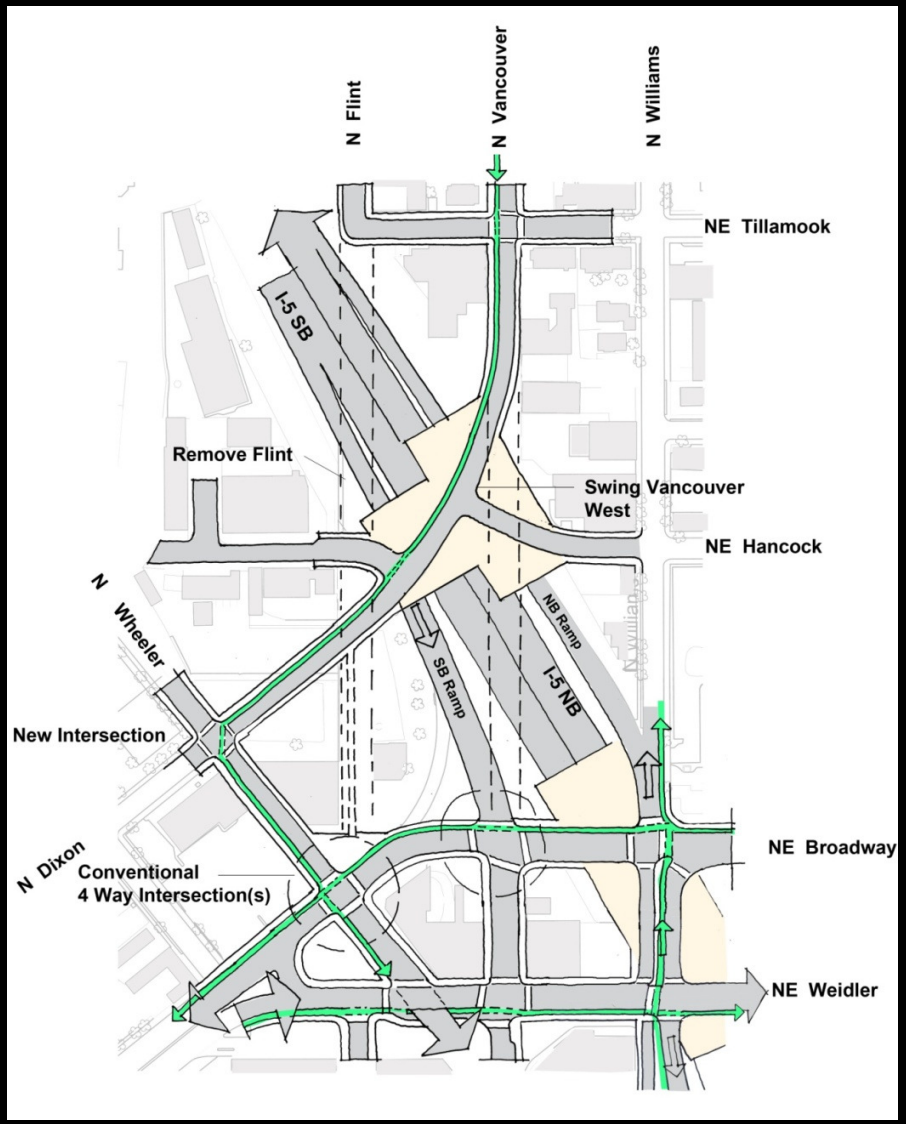


Option 1

- Keep Vancouver at current location

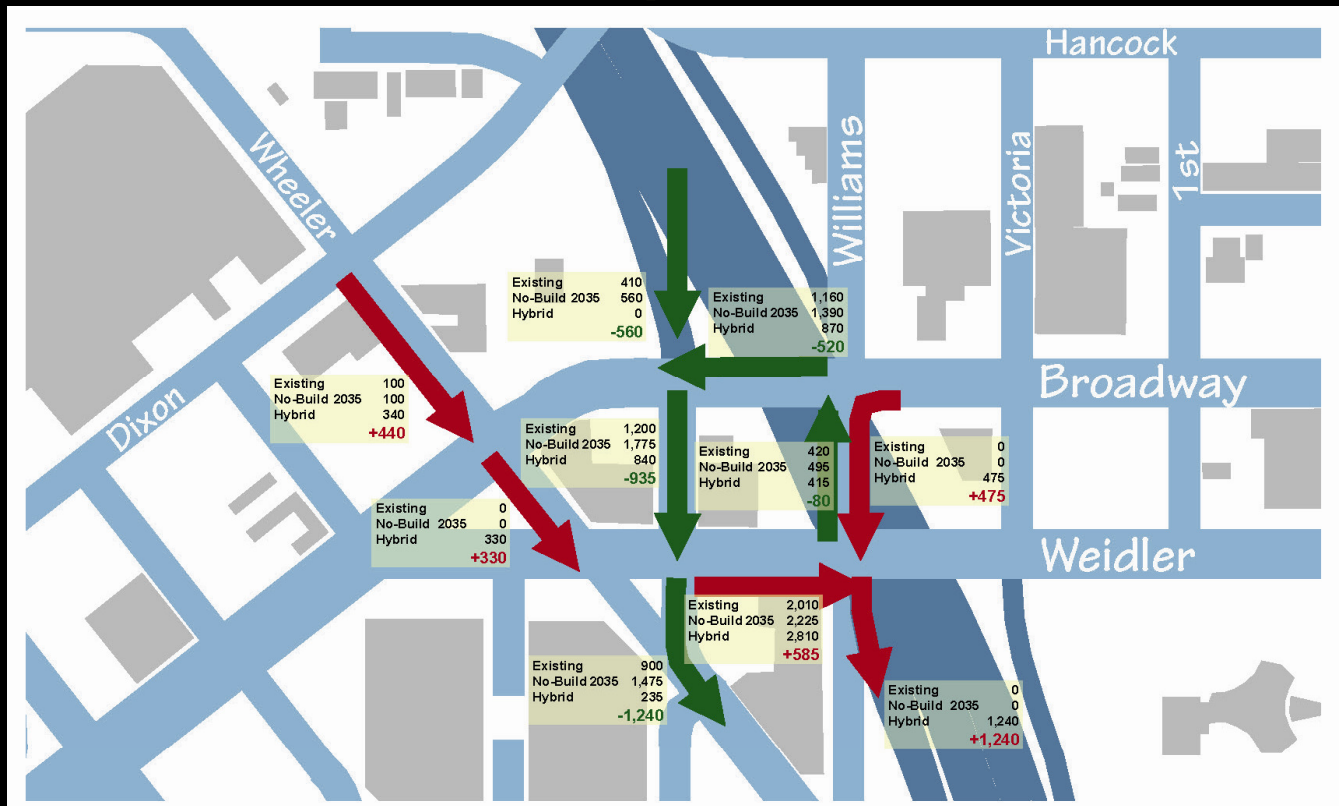
CENTRAL CITY 2035

2. Hancock/Vancouver



CENTRAL CITY 2035

2. Hancock/Vancouver

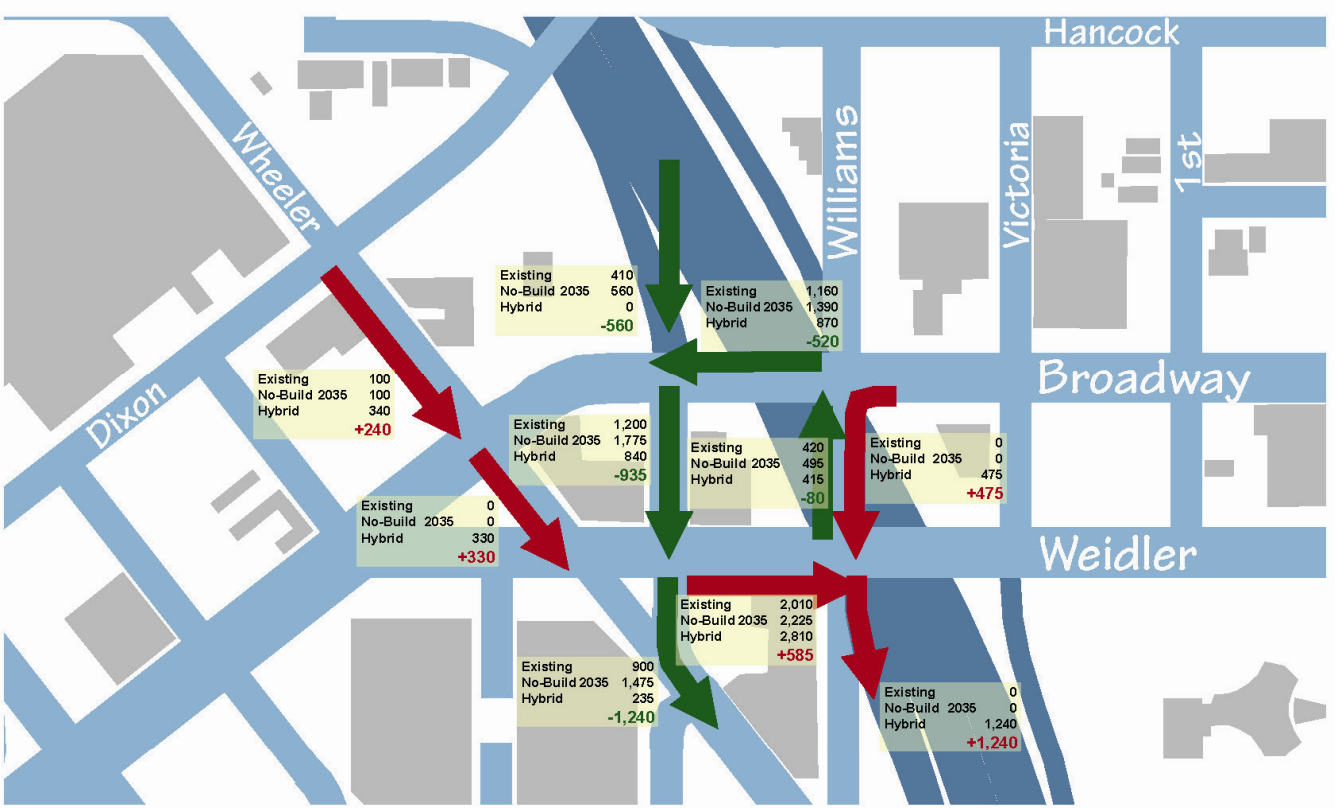


Option 2

- Move Vancouver to the West

CENTRAL CITY 2035

2. Hancock/Vancouver



General Traffic Pattern Change from No-Build to Hybrid:
Vancouver to the West

Higher Traffic Volumes

Lower Traffic Volumes

CENTRAL CITY 2035

2. Hancock/Vancouver

General Traffic Pattern Change from No-Build to Hybrid:
Vancouver to the West

Higher Traffic Volumes

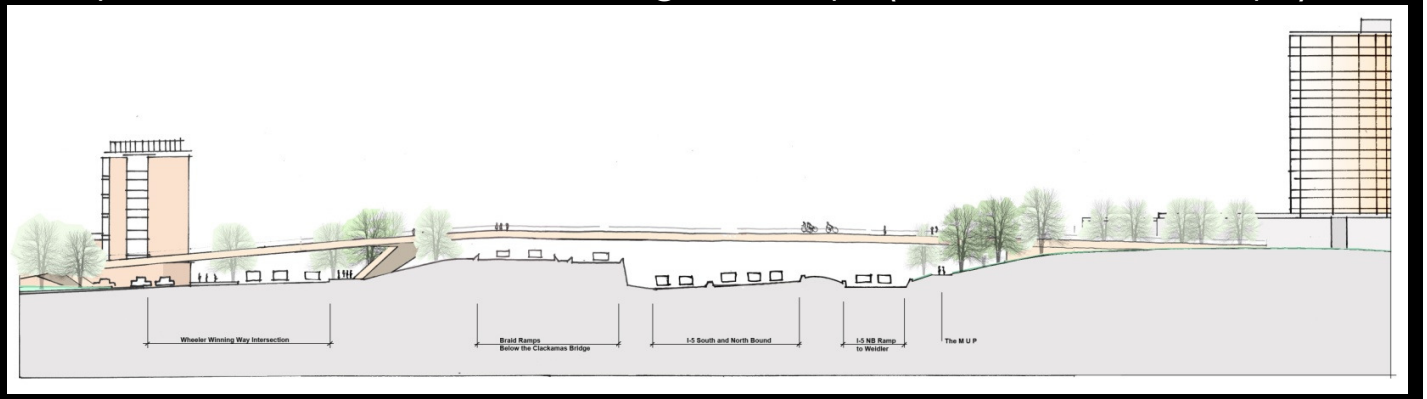
Lower Traffic Volumes

CENTRAL CITY 2035

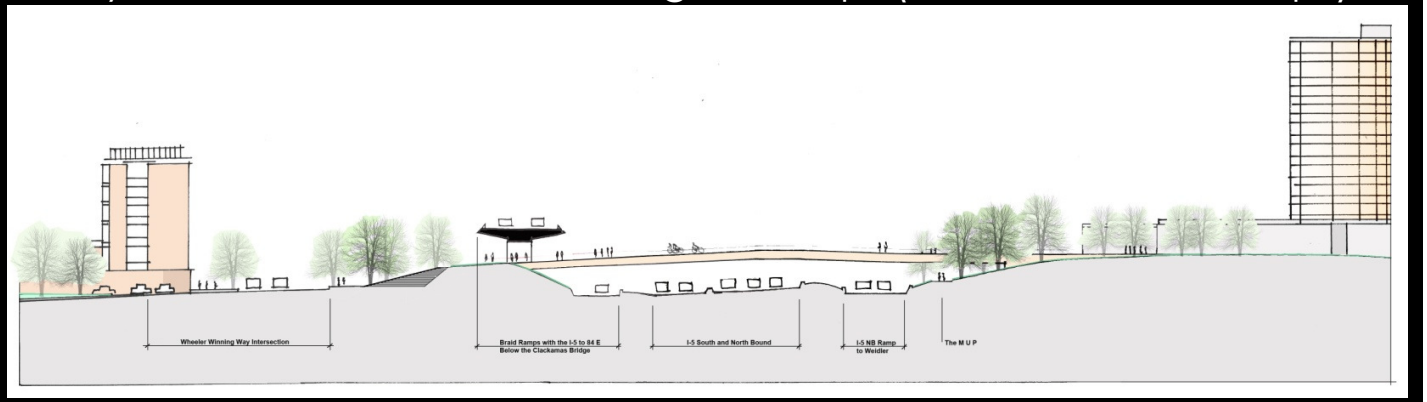
2. Hancock/Vancouver Issues

- Bicycle & pedestrian circulation
- Traffic operations
- Parking and traffic impacts
- Benefits of east-west connection
- Redevelopment opportunities
- Freight access

3. Clackamas Crossing



- Continue design refinement of a bicycle & pedestrian overcrossing at Clackamas
  - Connections on the east side and west side
  - Integration into Rose Quarter
  - Connection with multi-use path east of I-5
  - With or without southbound braided ramps



3. Clackamas Crossing

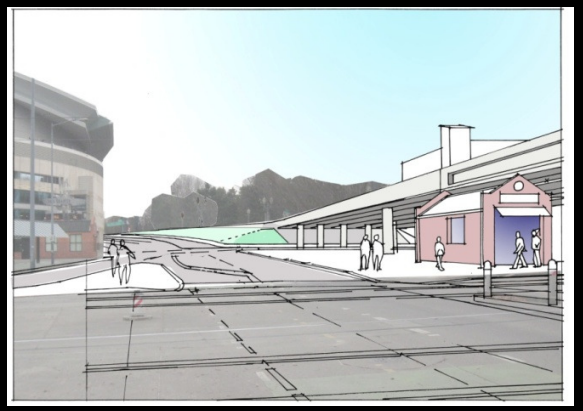
Bicycle/Pedestrian Overcrossing Concept (over braided ramps)

Bicycle/Pedestrian Overcrossing Concept (under braided ramps)

CENTRAL CITY 2035

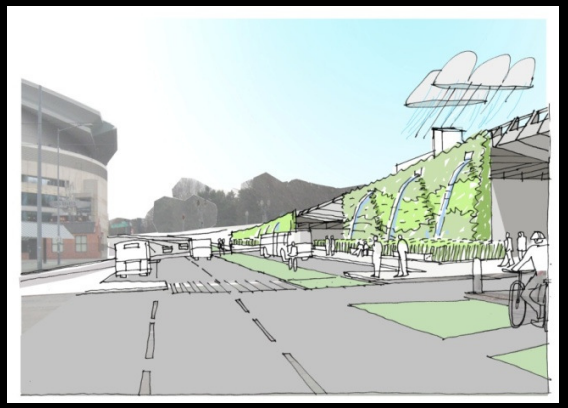
4. Southbound Braided Ramps

- Continue study and design refinement of southbound braided ramps
  - Refine design to optimize operations and minimize physical and visual impact
  - Coordinate with design of Clackamas Crossing
  - Further develop and refine urban design treatments:
    - Along Wheeler east of Rose Garden Arena
    - At Rose Quarter Transit Center
    - In vicinity of Peace Park



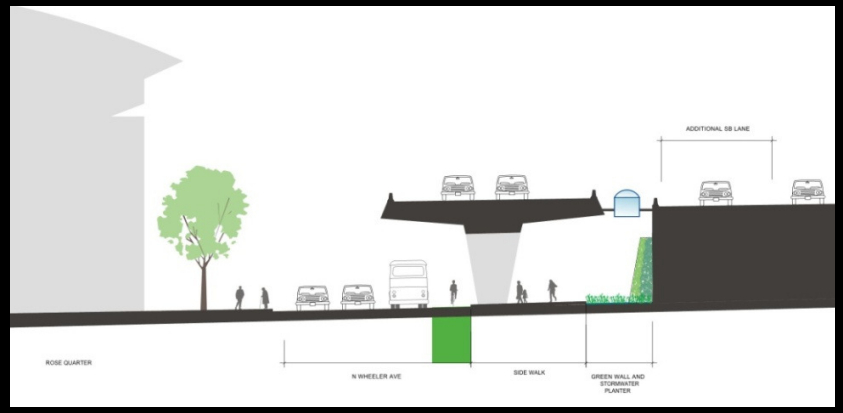
4. Southbound Braided Ramps

SECTION: Existing conditions

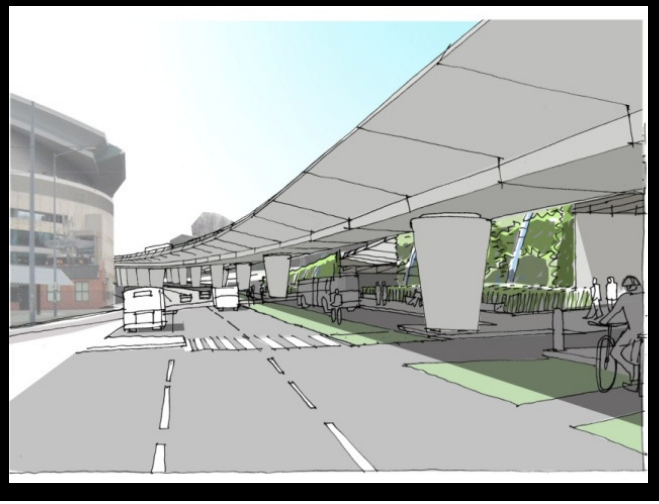


(Looking north from MAX tracks)

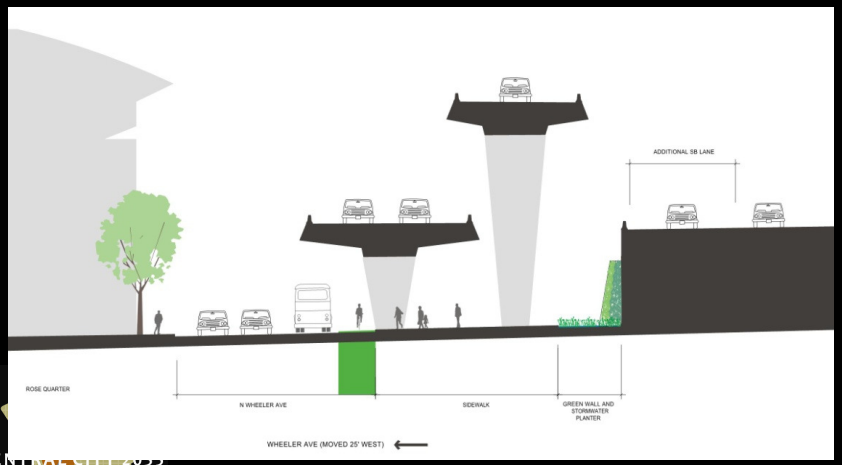
SECTION: Condition with auxiliary lane



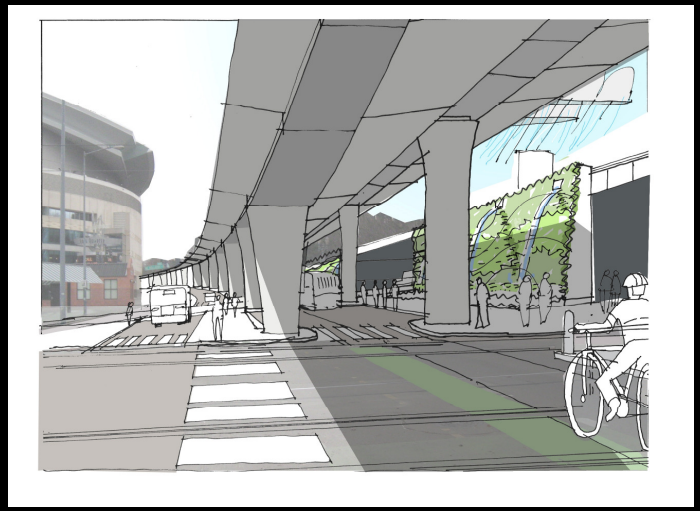
(Looking north from MAX tracks)



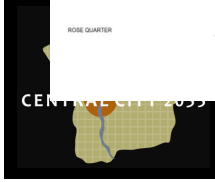
CENTRAL CITY 2035



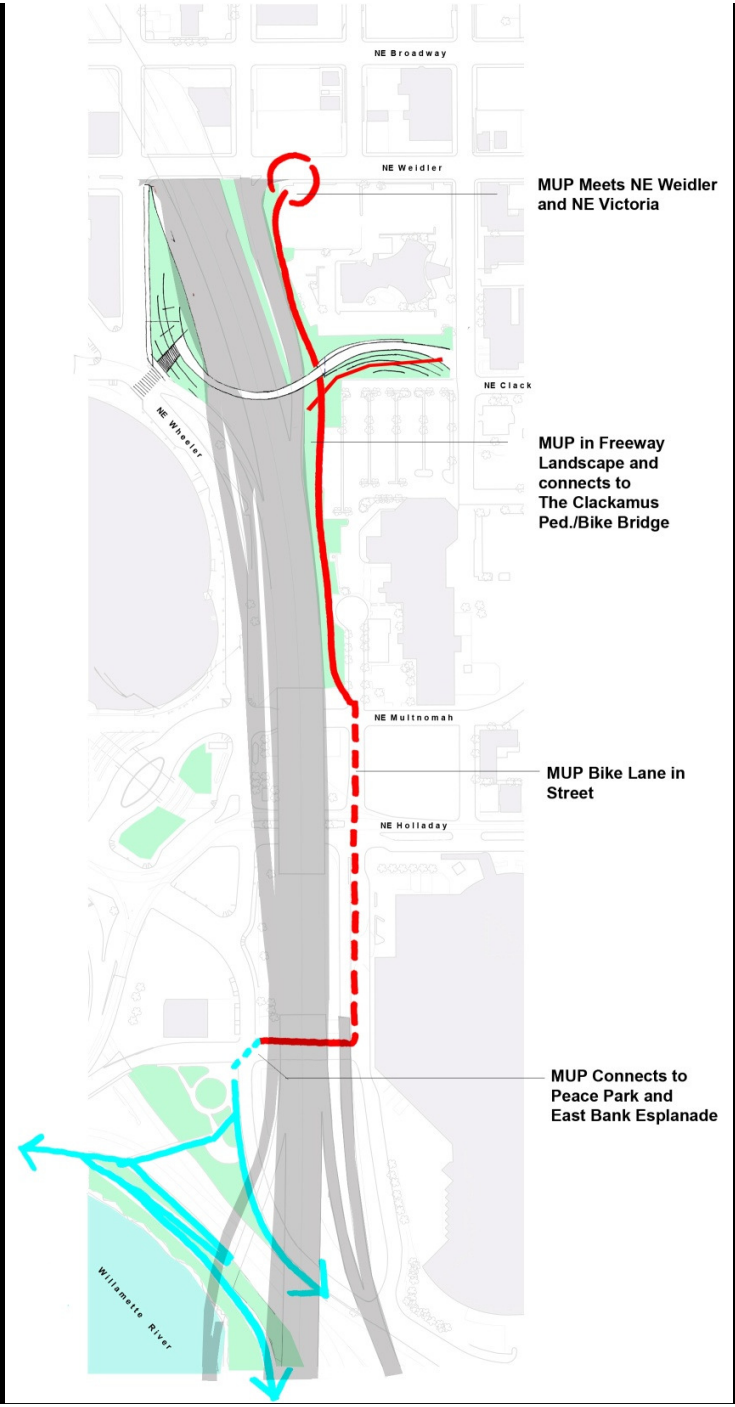
4. Southbound Braided Ramps



SECTION: One braid/two lanes (south of Multnomah)



SECTION: Two braids (south of Multnomah)



56347

5. Multi-Use Path East of I-5

- Continue design refinement of a multi-use path east of I-5 connecting from Multnomah to Weidler
- Serves the Interested but Concerned riders.

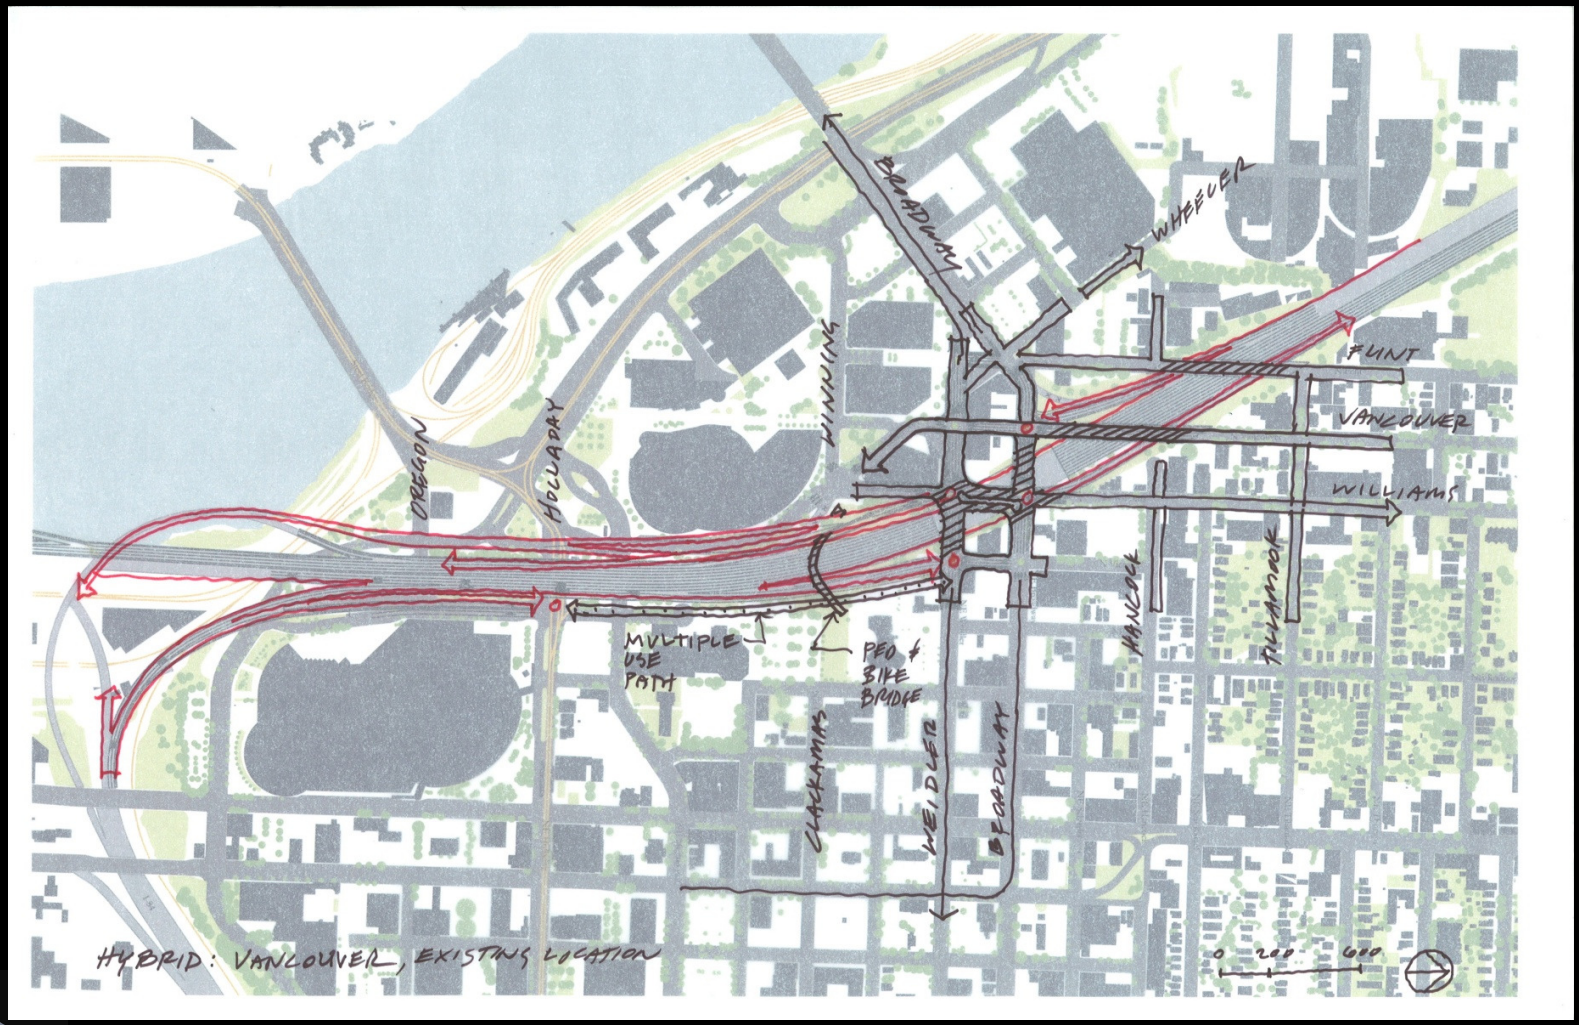
5. Multi-Use Path East of I-5

Multnomah to Weidler

CENTRAL CITY 2035

Recommended Base Project (Hybrid)

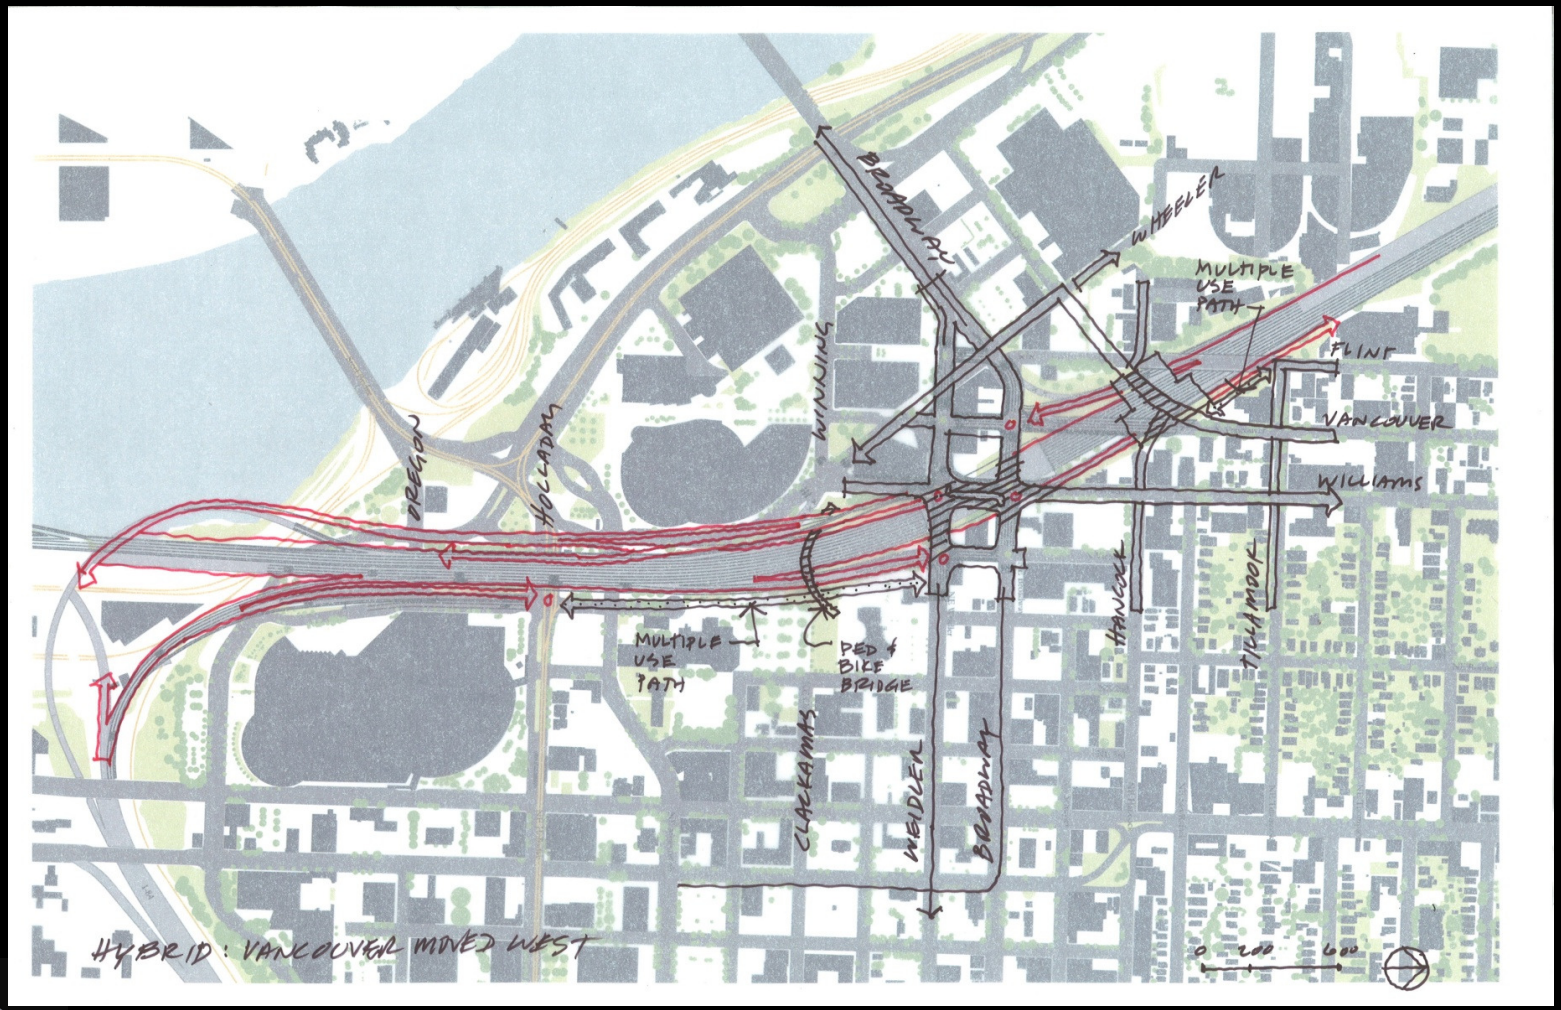
- Add auxiliary lane to I-5 in both directions ($140 - $150 million)
- Rebuild Broadway/Weidler/Williams with lid ($100 - $110 million)
- Rebuild Flint and Vancouver structures on current alignments ($45 - $50 million)



CENTRAL CITY 2035

Potential Elements of Hybrid

- Hancock/Vancouver crossing with connection to Wheeler or Flint (additional cost above Base Project $25 - $30 million)
- Southbound Braided Ramps (additional cost above Base Project $140 - $150 million)
- Clackamas Overcrossing (additional cost above Base Project $15 - $20 million)
- Multi-Use Path east of I-5 (additional cost above Base Project $2 - $4 million)



Hybrid Framework with Vancouver in Current Location

CENTRAL CITY 2035

56352

Hybrid Framework with Vancouver Moved West

CENTRAL CITY 2035

56353

Project Team Recommendation

- Approve the recommended Base Project (Hybrid)
  - understanding that the Hancock/Vancouver crossing could be substituted for rebuilding Flint and Vancouver structures at their current locations

Project Team Recommendation

- Continue refinement of potential elements of the Base Project (Hybrid):
  - Broadway Weidler Lid/Box
  - Hancock/Vancouver Overcrossing
  - Southbound Braided Ramps
  - Clackamas Overcrossing
  - Multi-Use Path East of I-5

SAC Questions 2

Do you agree with the staff recommendation to carry forward the Hybrid Framework for further refinement?

To the SAC committee, January 19, 2012

While we question the basic premise of the inevitability of freeway expansion, and in principle are more interested in traffic engineering changes that would enhance our neighborhood through better bike, pedestrian and public transportation connections, we understand the importance of participating in this public process at the point of the current discussion.

Our specific concerns about the impact of I-5 expansion plans to the Paramount Apartments, Paramount Parking, and our neighbors remain the same:

1. Bring no more busy streets, freeways, or traffic queuing nearer to our building (e.g., avoid rerouting N. Vancouver to run alongside us on the Flint side, or behind us through our parking lot and up alongside us on the Wheeler side, or running any street through our parking lot).
2. Do not cut off our main entrance access from Broadway (e.g., avoid closing Wheeler between Dixon and Broadway.)
3. Make bicycling and walking both safe and pleasant in our neighborhood.

Additionally, we have some concerns regarding your evaluation methods. "Displacement of quadrant residents" appears to be viewed in terms of transportation-related impacts only (e.g., "circulation, access, parking or 'other' impact"). Is displacement only measured as housing units eliminated? We would like to see a mentality of respect for the tenants of non-owner-occupied residential buildings. The livability of someone's home should be valued, no matter that it be their home for a relatively short or long period of time, or whether the financial investment in the property is theirs or their landlord's. This goes equally for Madrona Studios.

An inconsistency of wording may be a significant detail: The evaluation reads "avoid/minimize/mitigate *demolition* of *historic and cultural resources*", but nothing about avoiding or minimizing *adverse impacts* on historic resources (including Leftbank and Paramount). It does read "avoid or minimize adverse impacts on *cultural* (1609 NE 2nd Ave.?) or *high priority community sites* (meaning parks and schools?)". It appears to show they are doing a good job if they don't tear down historic structures, but does not address negatively impacting them. You've promised you will "not touch the Paramount Apartments". Is increased air and noise pollution, and reduction in access, on- and off-street parking, tree canopy, and neighborhood walkability and bikeability "not touching"? How many inches away can you come with higher traffic streets and still consider it "not touching" us?

With all the city's stated promises for the Rose Quarter area and goals for the N/NE Quadrant/Blanchard Site over the last 20 or more years, we hope the freeway expansion project will support, not prevent or undermine, those finally becoming a reality. In the meantime, several properties have gone ahead and made substantial investments in this area anyway, including, The Madrona Studios, the Leftbank Project, Compass Oncology, and Paramount Apartments. Those financial and personal investments, as well as the people benefiting from the jobs, housing and services they provide, should be further supported, not undermined, by traffic engineering changes.

PORTLAND PLAN AT A GLANCE

Framework for Equity

- Close the gaps
- Deliver equitable public services
- Engage the community
- Build partnerships
- Launch a racial and ethnic justice initiative
- Increase internal accountability

3 Integrated Strategies

12 Measures of Success

1. Equity and inclusion
2. Resident satisfaction
3. Educated youth
4. Prosperous households
5. Growing businesses
6. Creating jobs
7. Transit and active transportation
8. Reduced carbon emissions
9. Complete neighborhoods
10. Healthier people
11. Safer city
12. Healthier watersheds

ACTION AREAS

- PROSPERITY AND BUSINESS SUCCESS
- EDUCATION AND SKILL DEVELOPMENT
- SUSTAINABILITY AND THE NATURAL ENVIRONMENT
- HUMAN HEALTH, FOOD AND PUBLIC SAFETY
- TRANSPORTATION, TECHNOLOGY AND ACCESS
- EQUITY, CIVIC ENGAGEMENT AND QUALITY OF LIFE
- DESIGN, PLANNING AND PUBLIC SPACES
- NEIGHBORHOODS AND HOUSING
- ARTS, CULTURE AND INNOVATION

The Portland Plan is organized around an equity framework, measures of success and integrated strategies based on nine action areas. The action areas were the starting point for completing background research and for setting goals and objectives for 2035.

Together, they provide a five-year action plan and 25-year guiding policies for the City and Portland Plan partners.

INTEGRATED STRATEGIES

Thriving Educated Youth

STRATEGY ELEMENTS

- A culture of high expectations and achievement for all Portland youth
- Shared ownership of student success
- Neighborhoods and communities that support youth
- Facilities and programs that meet 21st century challenges and opportunities

Economic Prosperity and Affordability

STRATEGY ELEMENTS

- Business cluster growth
- Urban innovation
- Trade gateway and freight mobility
- Growing employment districts
- Neighborhood business vitality
- Access to housing
- Education and job training
- Household economic security

Healthy Connected City

STRATEGY ELEMENTS

- Public decisions that benefit human and environmental health
- Vibrant neighborhood hubs
- Connections for people, places, water and wildlife
- Coordinated inter-agency approach

What's in a strategy?

2035 Goals and Objectives

The plan's goals and objectives provide big picture statements about what the strategies are designed to achieve.

Guiding Policies

The purpose of the guiding policies is to help the City of Portland and its partners make critical, long-term investment and budget decisions. The policies also provide direction for the city's Comprehensive Plan, the state-mandated land use, transportation and capital projects plan; as well as direction for other transportation, housing, economic development, environmental and education plans, among others.

5-Year Action Plan

The actions are the specific steps the City of Portland and partners will take in the next five years (2012–17). Some actions are first steps to achieving significant change. Other actions are quick starts that will provide efficient near-term results.

Action Areas

The nine Portland Plan action areas were the starting point for completing background research and for setting our goals and objectives for 2035. Guiding policies and actions to achieve the most strategic goals and objectives were developed for the Portland Plan strategies. Next to each action in the Portland Plan are icons that represent the action areas.

	Long-range Policy Statements from Draft Portland Plan (by strategy and strategy element)	CC2035 GOALS: Regional Center	Sustainable Neighborhoods	Design & Civic Vitality	Mobility	Urban Ecosystems
1	THRIVING EDUCATED YOUTH					
1.C	**Neighborhood and Communities That Support Youth:**					
	Stabilize housing for homeless and low-income families with public school students to reduce student mobility rates and provide educational continuity for students throughout the school year.		X			
1.D	**Facilities and Programs That Meet 21st Century Opportunities:**					
	Enable educational and community facilities to serve multiple functions and build a broader sense of community ownership. Find ways to share and leverage funding for school-related capital improvements and facility operations across partner public agencies.		X			
	Utilize school grounds and facilities as space to meet community open space and recreation needs in neighborhoods with little or no other access.		X			
2	ECONOMIC PROSPERITY AND AFFORDABILITY STRATEGY					
2.A1	**Business Cluster Growth:**					
	Focus Portland's limited strategic business development resources on enhancing the competitiveness of businesses in its target cluster industries.	X				
	Integrate traded sector competitiveness into the city's planning and overall policy directions.	X				
	Focus business assistance efforts first on retention, then expansion, and then recruitment of businesses.	X				
	Create initiatives targeting industry sectors that concentrate in the inner tier of the metropolitan region, such as professional and business services, distribution, and diverse niche industries.	X				
	Connect MWESB firms with target cluster opportunities.	X				
2.A2	**Urban Innovation:**					
	Enhance the vitality of the Central City to support job growth and high/medium-density development, highlight sustainability innovations and attract educated talent.	X	X	X		
	Foster entrepreneurial support systems that make Portland the home for regional business startup activity, including commercialization of urban innovations.	X				
	Pursue universal, affordable access to high-speed information technology. Accelerate deployment of very high bandwidth broadband through clustering and collocating very large capacity users.	X	X		X	

	Long-range Policy Statements from Draft Portland Plan (by strategy and strategy element)	CC2035 GOALS: Regional Center	Sustainable Neighborhoods	Design & Civic Vitality	Mobility	Urban Ecosystems
	Support and invest in Portland's creative talent and arts and culture community as part of driving innovation and economic growth.	X		X		
	Connect MWESB firms with urban innovation opportunities.	X				
2.B1	**Growing Employment Districts:**					
	Provide land supply and development capacity to meet job growth targets, and improve the cost competitiveness of redevelopment and brownfields.	X				
	Provide competitive growth capacity for Portland's campus institutions.	X				
	Better link freight transportation and other quality, reliable infrastructure investments with employment districts.	X			X	
	Review regulatory and fee approaches and revise them to keep Portland regionally competitive for business and job growth.	X				
2.C1	**Access to Housing:**					
	Provide for a supply, types and price ranges of housing units located to reduce household transportation costs supportive of expected growth.		X			
	Remove barriers to fair housing, including discriminatory practices, and maintain the safety nets that keep households from falling into homelessness.		X			
	Establish as a new standard for affordability consideration of both housing and transportation costs to the household when making housing investment decisions.		X			
	Continue to expand Portland's transit and bicycle networks, and develop corridor-specific housing strategies as a component of major transit investments.		X		X	
	Emphasize universal design and accessibility, especially in neighborhood hubs and other areas with frequent accessible transit service.		X			
2.C2	**Education and Job Training:**					
	Develop training programs to build career pathways that allow individuals to secure a job or advance in a high-demand industry or occupation. Improve community college and university degree and workforce training certificate completion rates to prepare individuals for high-growth, high-demand occupations.	X				
	Align and integrate city workforce development training to ensure maximum leverage of funds and reduce duplication.	X				
3	HEALTHY CONNECTED NEIGHBORHOODS					
3.B	**Vibrant Neighborhood Hubs:**					

	Long-range Policy Statements from Draft Portland Plan (by strategy and strategy element)	CC2035 GOALS: Regional Center	Sustainable Neighborhoods	Design & Civic Vitality	Mobility	Urban Ecosystems
	Support strong, vibrant neighborhood hubs through land use, infrastructure and technology investment and community economic development with a focus on underserved areas with disadvantaged populations.		X			
	Encourage development of high quality, well designed housing that protects the health and safety of residents and encourages active living.		X			
	Support development of housing options accessible to seniors and mobility-limited individuals in places where close proximity to services and transit makes it easier to live independently.		X			
	Foster a multi-modal transportation system that links neighborhood hubs to each other, employment areas, the Central City and the broader region through safe and attractive frequent transit service, bikeways, and pedestrian connections.	X	X		X	
	Prioritize street improvements that make it safe, convenient and attractive to walk, bike or roll to neighborhood hubs and key community destinations.		X		X	
	Include parks, plazas or other public gathering places in neighborhood hubs to provide places for community activity and social connections. Build partnerships to ensure their future management and programming.			X		
	Use the design of civic spaces as a venue for public art and to highlight the culture of Portland's neighborhoods and diverse communities.	X	X	X		
	Promote energy and resource conservation at a district scale in the Central City and in neighborhood hubs through compact development and ecodistrict approaches.		X			X
	Connections for People, Places, Water and Wildlife:					
3.C	Develop the network of Habitat Connections, Neighborhood Greenways and Civic Corridors as the spine of Portland's civic, transportation and green infrastructure systems.	X	X	X	X	X
	Design Neighborhood Greenways and Civic Corridors to integrate safe and accessible facilities for pedestrians and cyclists, sustainable stormwater facilities, tree planting and community amenities.		X			X
	Build on Portland's green street and bikeway efforts to create a citywide greenway network of trails and pedestrian and bike-friendly green streets.		X		X	X
	Reestablish functioning habitat corridors within Portland by preserving existing habitat and restoring degraded natural resources and reconnecting habitat corridors wherever possible.		X			X

N/NE Quadrant Plan: 95% Proposed Concept for Land Use, Urban Design and Local Transportation DRAFT 11/10/11

Background

In Spring 2011, staff developed three quadrant-wide concept alternatives, intended to describe different future development scenarios and highlight key choices. Each concept alternative had a different land use emphasis (residential, employment and blend) with supporting infrastructure system diagrams (mobility, open space and green systems).

On September 29, 2011, staff presented a 70% draft proposed concept based on feedback received at outreach activities between May and September 2011. This packet contains concept map layers that have been revised based on N/NE Quadrant Stakeholder Advisory Committee (SAC) and the N/NE Quadrant Technical Advisory Committee (TAC) feedback. The following revised concept map layers are included in the packet:

- Predominant Land Use
- Building Height
- Transportation Typologies
- Transportation Typologies: Civic and Local Main
- Transportation Typologies: Scenic
- Transportation Typologies: Flexible
- Transportation Typologies: Civic and Local Main + Form
- Open Space
- Green Systems

For event dates and relevant project materials, please visit the project website: www.portlandonline.com/bps/cc2035/nneq.

Predominant Land Use

Each "bubble" on the land use map reflects the predominant land uses that would be encouraged under that development type. With the exception of industrial areas, other uses would generally continue to be allowed, and some mixing of uses would be expected. The following predominant uses are shown on the maps:

High density office, employment: A highly developed office district, with buildings ranging from 6 – 20 plus stories. Ground floor retail and service uses would be expected.

Mixed high density residential, office: High density office, employment uses interspersed with high density residential uses. Buildings ranging from 6 – 20 plus stories.

Industrial, employment: Low-level buildings housing light industrial uses, such as manufacturing and warehousing. Industrial areas are typically set aside exclusively for industrial uses, with the exception of very small scale service uses.

CENTRAL CITY 2035 N/NE QUADRANT

CITY OF PORTLAND, OREGON 1851

Oregon Department of Transportation

Mixed commercial, employment: An eclectic mix of uses that could include residential, retail, office and light industrial.

Mixed commercial, employment, residential: Mixed commercial and employment uses that also could include residential uses. Scale could vary greatly depending on location.

Residential above commercial, retail: Mid-rise buildings (2 – 6 stories) located on busier streets. Ground floor retail or service uses with residential uses above.

Regional event, entertainment, retail: Predominant uses have a regional draw and are characterized by large footprint buildings. Hotels and restaurants could also be expected to locate in the area.

Mixed regional retail, entertainment, residential: Regional event, entertainment and retail uses mixed with residential uses. See above for more information.

The following **change** has been included in the revised land use map:

a. The predominant land use type for the Doubletree Hotel site has changed from office (orange) to regional event/entertainment (yellow).

Building Height

The proposed building height map provides a sense of the development scale that could be achieved in the quadrant under the proposed concept scenario.

The following **change** is reflected in the revised map:

a. The proposed height along NE Broadway from the freeway to NE 7th has been increased from 2 to 6 stories to 6 to 10 stories (in line with current maximum heights).

Transportation Typologies (formerly mobility)

The transportation typologies map illustrates options for the creation of a clearer street hierarchy for the quadrant that emphasizes the development of different streets with distinctly different characters and development responses. The proposed hierarchy includes the following street typologies:

- **Civic**: Active focal points for new high-density development, offering good transit service, pedestrian-oriented amenities and unique signage and lighting.
- **Local main**: Active streets with local serving retail, commercial and residential development. Less busy than civic streets.
- **Scenic (working title)**: Less active than civic or local main streets, but have more street trees and landscaping.
- **Flexible**: Streets or pathways that offer an alternative, quieter system of mobility, oriented toward pedestrian and bicycle movement.

The following **changes** have been included in the revised transportation typologies map:

a. The mobility + place map has been replaced by the transportation typologies civic and local + form map. The new

map suggests how urban form and scale would vary within proposed street typologies.

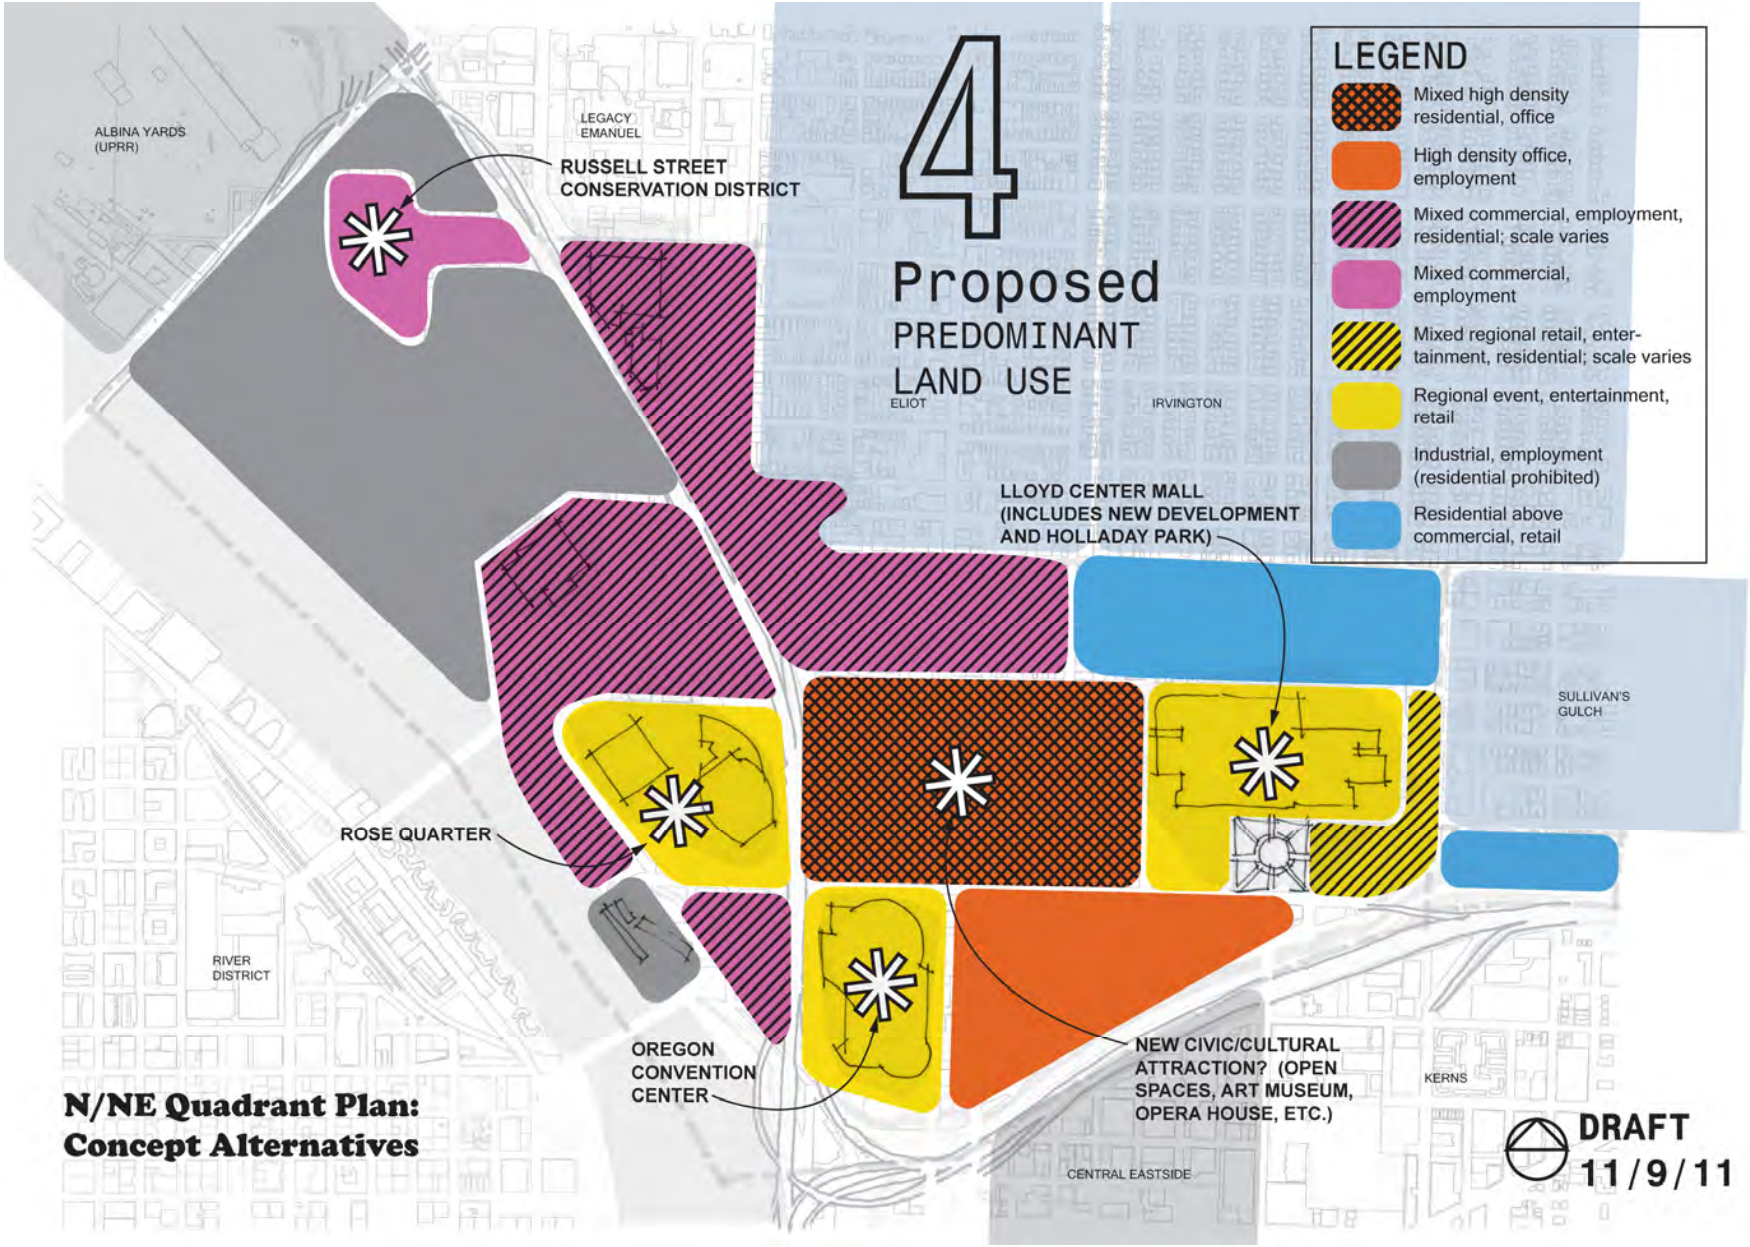
b. The typology for Multnomah Street has been changed from scenic to local main street to reflect the desire for more active pedestrian and retail activity in the future.
c. The entire length of Grand Avenue has been changed to the civic typology (previously it was civic north of Holladay and scenic south of Holladay).
d. Pacific Street has been added as a flexible street.

Open Space

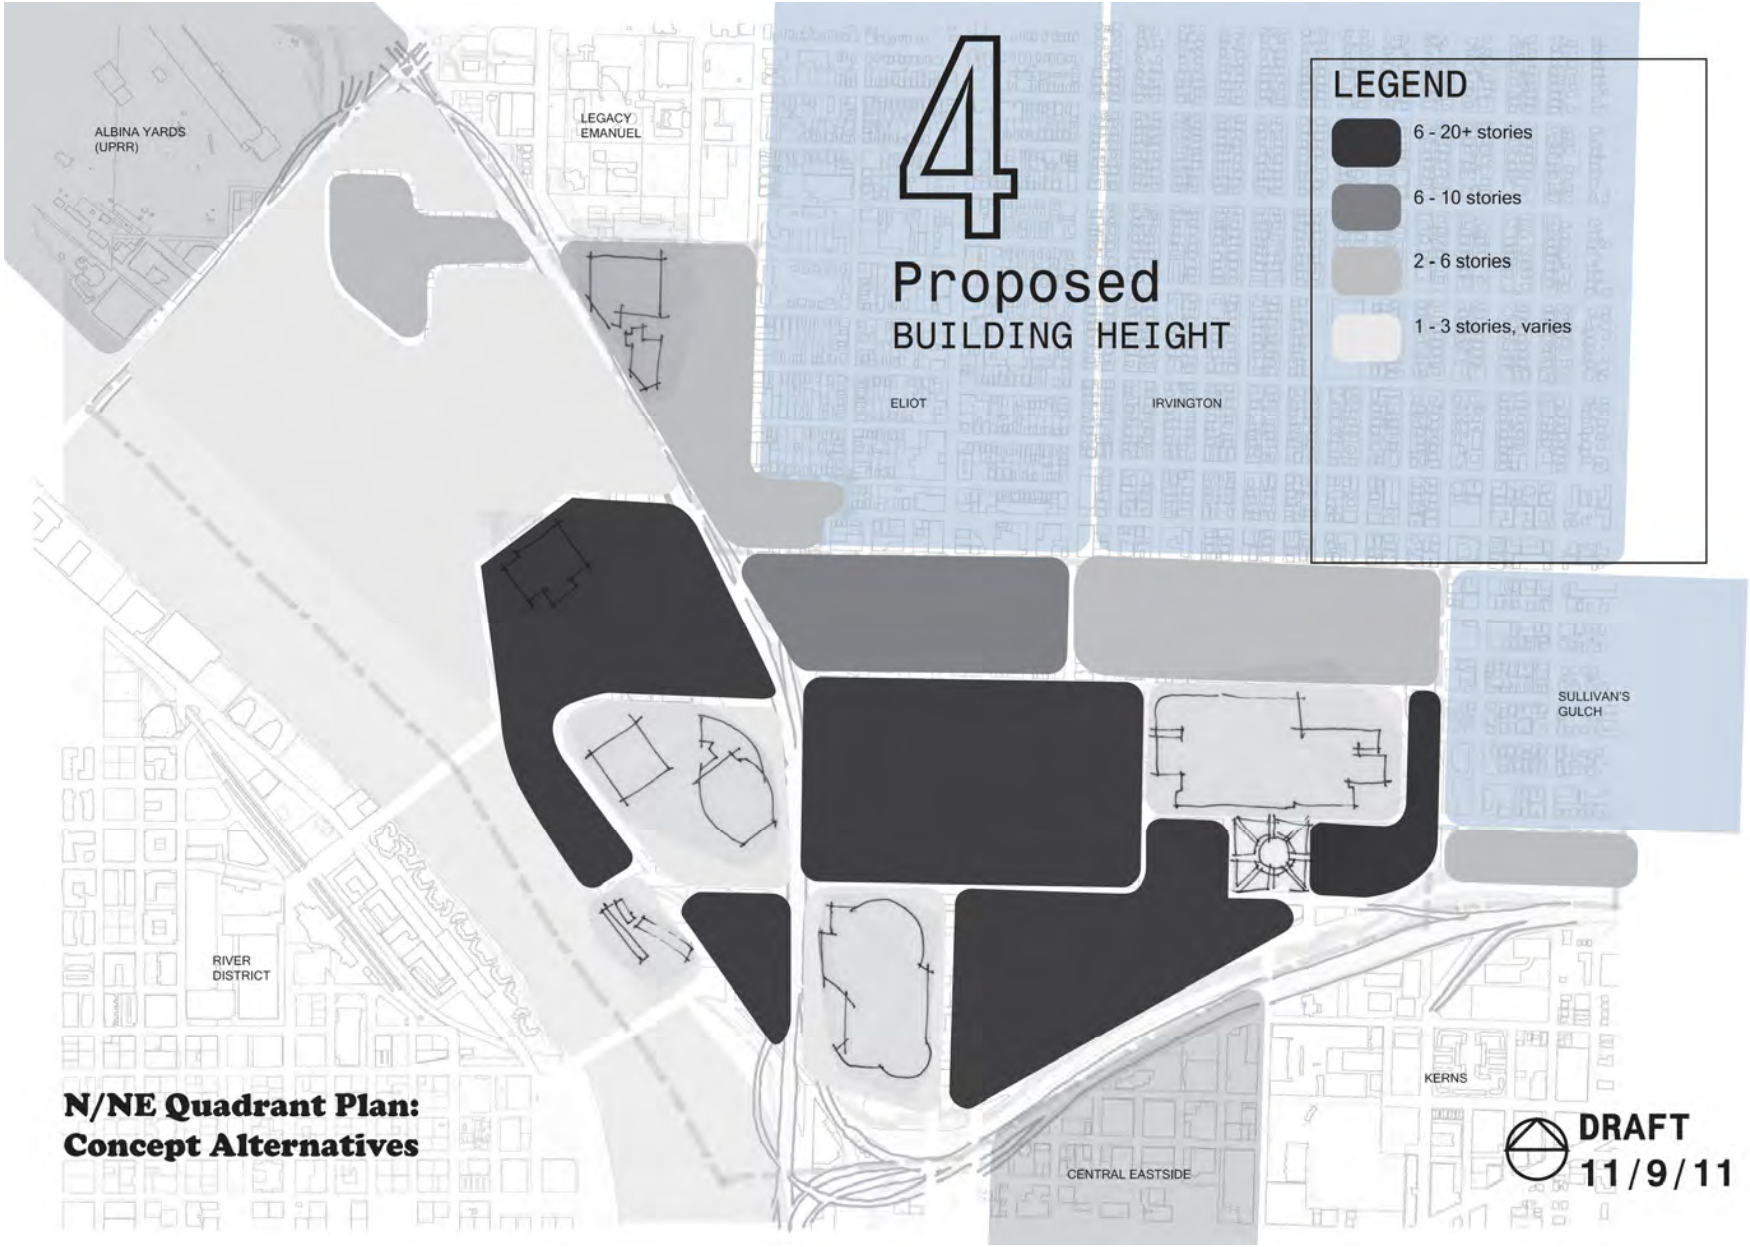
The proposed open space concept illustrates a revised open space framework for the quadrant that would serve anticipated residential and employment populations. The proposed concept includes a series of new parks organized along an improved NE Clackamas Street from the Lloyd Center to the Willamette River.

The following **changes** have been included in the revised open space map:

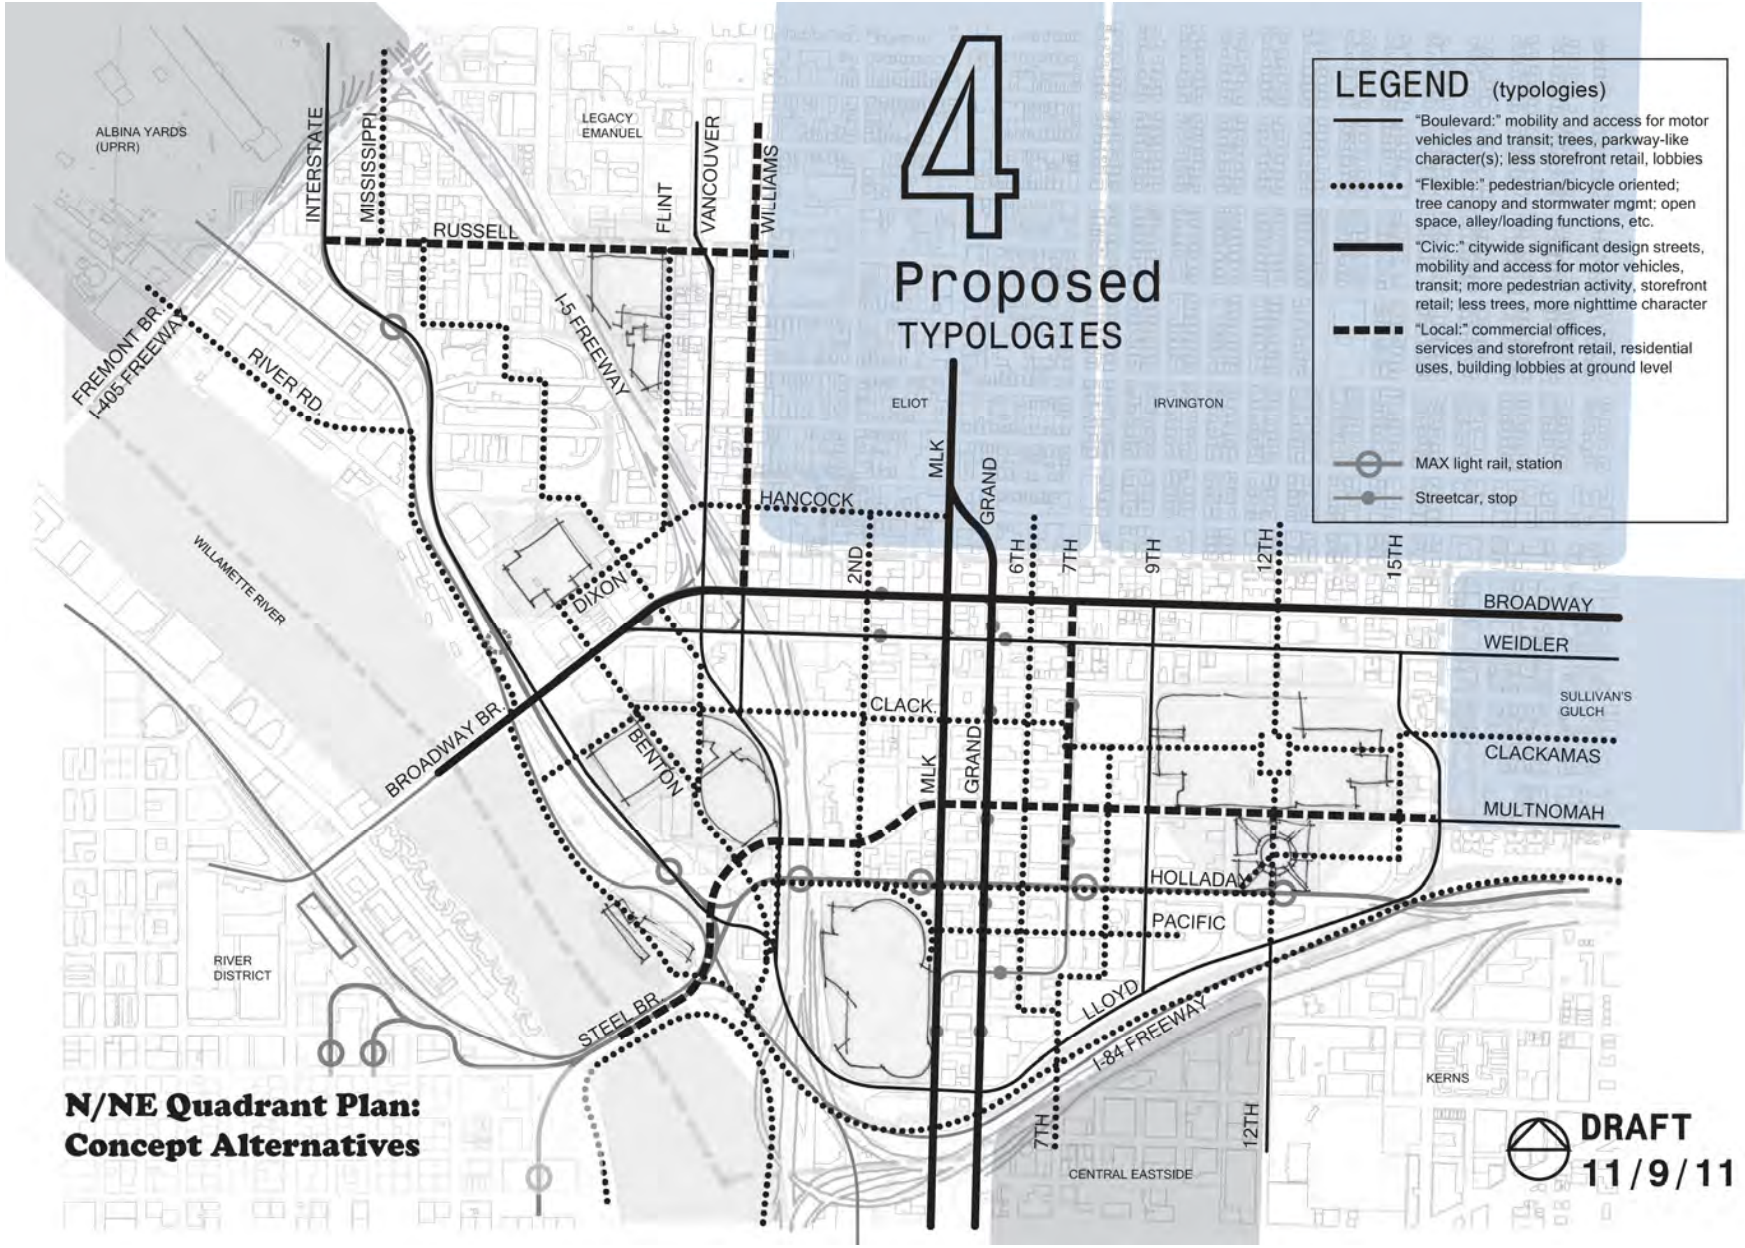
a. The map showing detailed future park locations has been replaced with a conceptual diagram that uses a series of circles to suggest general areas where parks could potentially be located in the future. The size of the central circle along Clackamas is larger to reflect the desire that one of the future parks spaces be larger than the others and able to accommodate some active recreation.
b. The proximity of existing and proposed open spaces to surrounding areas is displayed.
c. Connections between existing and proposed open spaces have been highlighted, including a new connection between Lillis Albina Park and the proposed parks along Clackamas Street.
d. Areas where new or enhanced natural resources could be developed are identified (primarily along Sullivan's Gulch).



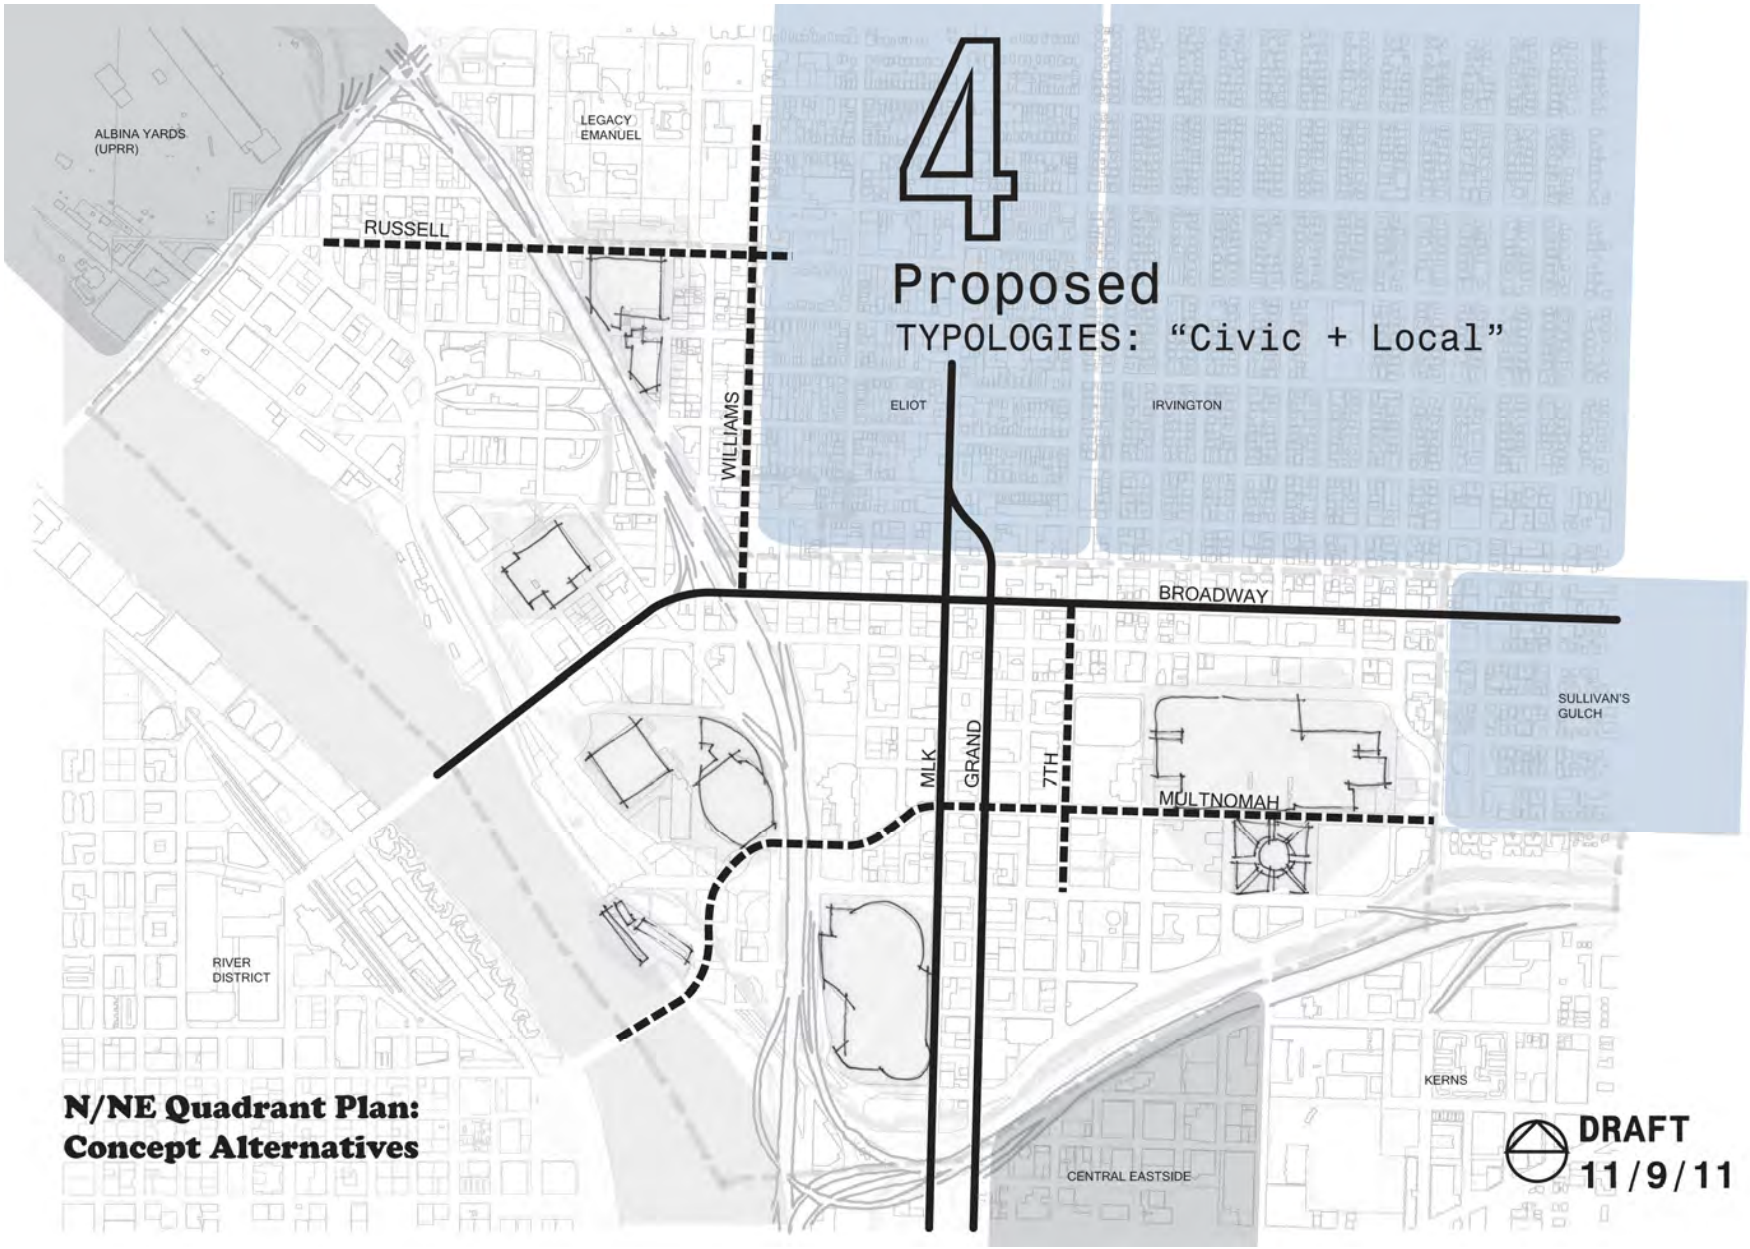
Green Systems



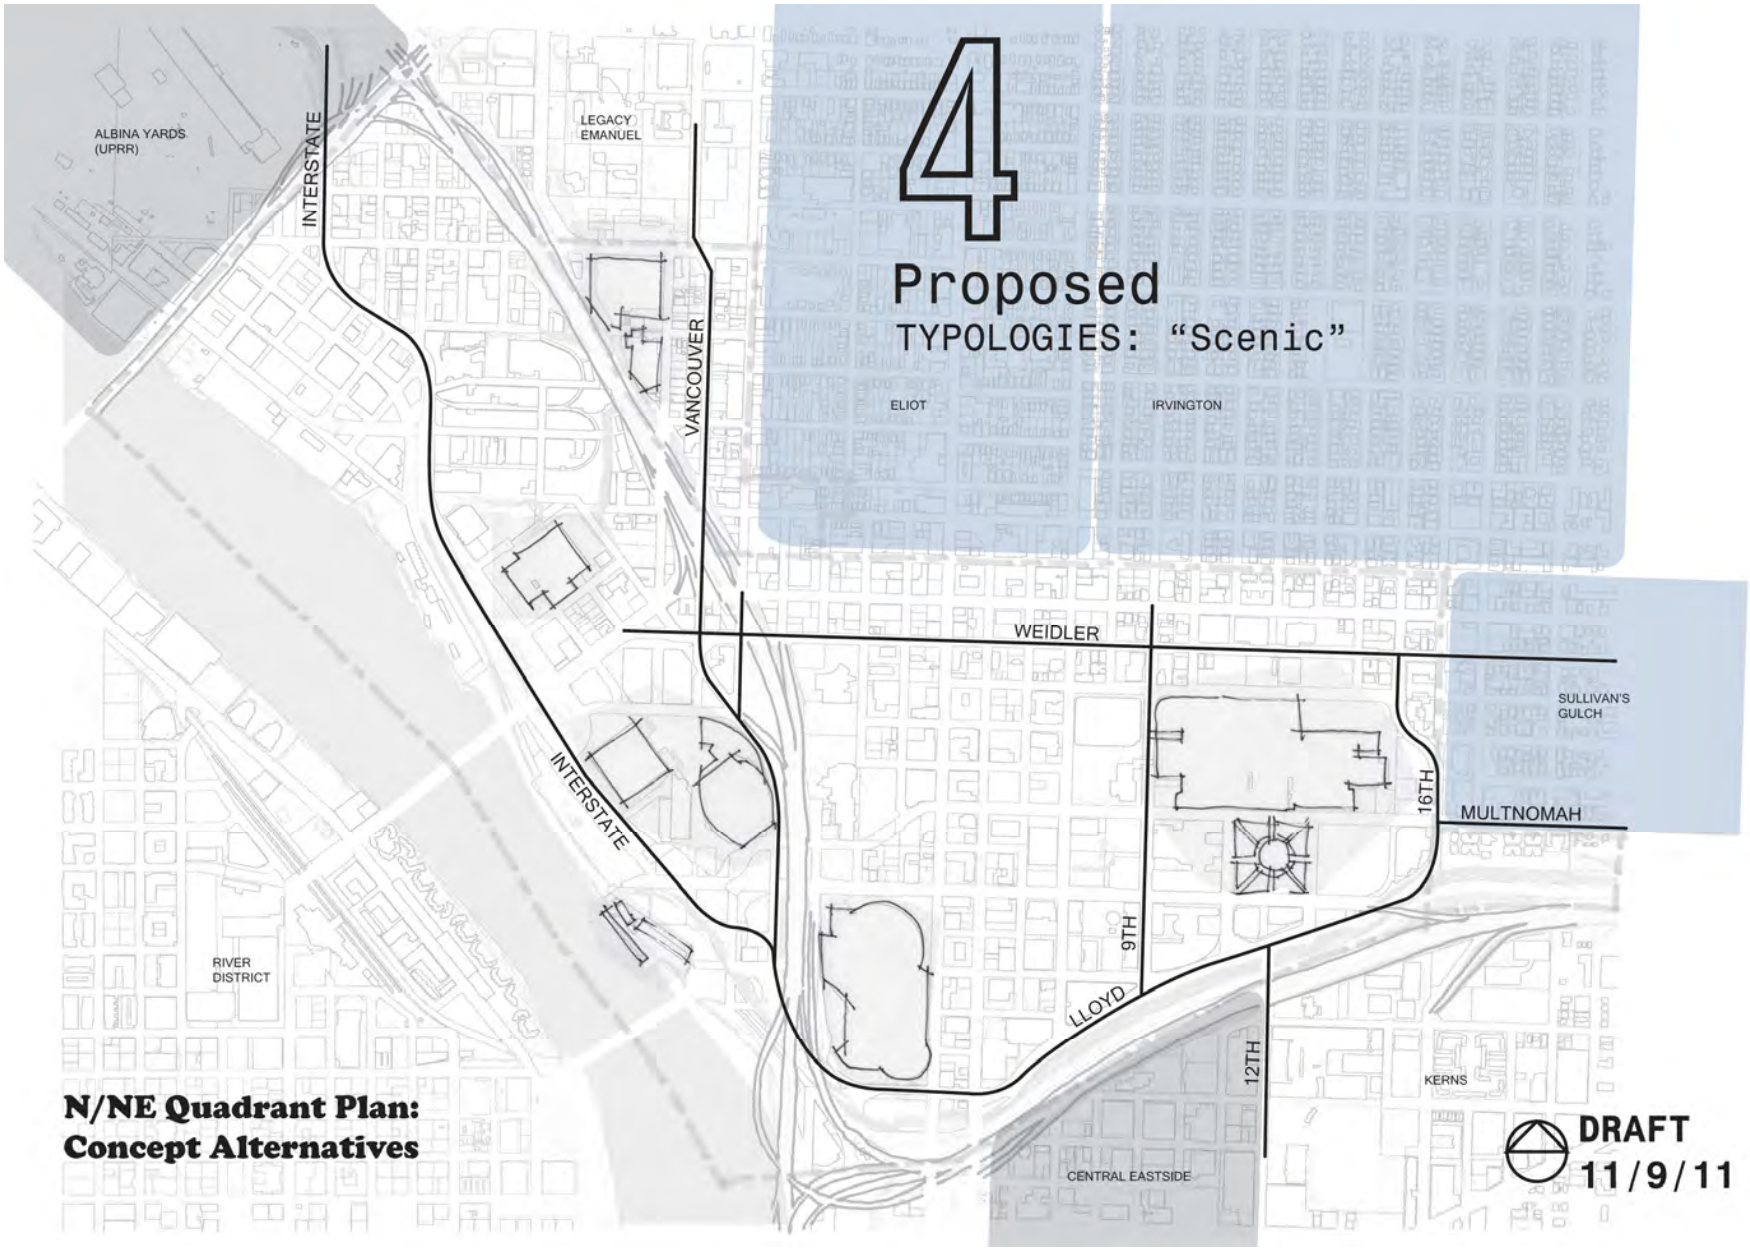
The green systems map illustrates how the Lloyd Ecodistrict effort could integrate green systems and facilities in the quadrant to improve its long term resiliency. The green systems components include the following:



- **Water Quality Corridors**: Corridors that improve and celebrate surface treatment of stormwater runoff.
- **District Energy**: A system that could facilitate shared energy production and distribution between different businesses, residential uses and facilities.
- **Rainwater Harvesting**: Different strategies for rainwater retention reuse and/or treatment throughout the quadrant.



The following **changes** have been included in the revised transportation typologies map:



a. The rainwater harvesting corridors are aligned to use a gravity-fed system rather than a system that requires pumping (purple to blue).
b. The water quality, tree canopy corridor designation has been removed from NE 15th to reflect concerns about the retail environment at NE Broadway and Weidler and moved to NE 2nd to assist stormwater management in an area of identified capacity issues.

Staff Responses to 9/29/11 SAC and 10/13/11 TAC comments

Staff presented the 70% draft proposed concept to the Stakeholder Advisory Committee (SAC) at their meeting on September 29, 2011 and to the Technical Advisory Committee (TAC), comprised of local and regional agency partners, on October 13, 2011. Issues raised are summarized below followed by staff responses.

Land Use and Scale

1. How much land area in the Lloyd District is vacant?

In the NNE Quadrant study area, the development capacity model identifies roughly 54 acres as vacant (41 in Lloyd District) and an additional 40 acres as redevelopable (27 in Lloyd District). With the exception of the school district's 7-acre Blanchard site, vacant and redevelopable industrial properties in Lower Albina are not included in these numbers.

2. Relationship of industrial land flexibility or zone changes to the larger industrial land supply, and therefore pressures on natural resources in other industrial areas.

Applying an Employment Opportunity Subarea "overlay" to portions of Lower Albina east of the UP Railroad line does not remove the properties from the industrial land supply. The limited flexibility provided by the overlay is intended to encourage additional compatible employment in the area, which could take pressure off of other industrial areas throughout the city.

The revised concept proposes changing the zoning for the PPS Blanchard Site from IG1 to another zone that allows significantly more land use flexibility. It is not clear if removing this site from the industrial land supply will affect needs citywide, because the site is not currently in industrial use and is unlikely to become available for industrial use in the future. The City is in the process of completing an Economic Opportunity Analysis to predict future supply and demand of industrial lands. Key results of the new analysis are expected to be completed in December, and will inform the discussion of the Blanchard site's current industrial zoning.

3. Will additional residential uses be allowed in Lower Albina and on the Blanchard Site?

The concept does not propose expanding the area where residential uses are allowed in Lower Albina, however existing allowances for housing in the Russell Street Conservation District would be maintained. The concept proposes that commercial and employment uses could expand along Russell Street and south to the light rail station. If housing were developed on the Blanchard site, a sensitive transition would be needed between it and the Water Bureau's properties to the north. Because the site is a single property, zoning may not be the best way to implement a transition. Options for SAC consideration will be prepared by staff in the next phase of plan development.

4. Would EG zones be a suitable zoning option in Lower Albina?

As part of the next stage of plan development, staff will explore a variety of zoning options in the parts of Lower Albina where additional land use flexibility is proposed, including the EG1 and EG2 zones. However, the EG zones have provisions that may not be appropriate in Lower Albina, including large retail use allowances, required setbacks and landscaping, and 85 percent maximum lot coverage. The Central City plan district does allow such provisions to be modified for specific

situations. Staff will strive to develop the simplest and most easily implemented zoning tools that achieve desired objectives.

5. Should residential development be prioritized more heavily on the transit lines?

The proposed concept suggests residential uses as part of mixed use development in most areas of the quadrant and places particular emphasis on residential development in Central Lloyd and along the NE Broadway/Weidler Corridor. This area encompasses much of the streetcar alignment and the north side of the MAX line. Residential development is also suggested as part of mixed use development east of Holladay Park.

6. How is the proposed concept addressing market demands?

The proposed concept accommodates Metro's 2035 forecast for development and suggests mixed land uses in much of the quadrant area, providing significant development flexibility that allows development to respond to market demands. Staff has been working with major property owners during this process to make sure that the proposed concept and private development are complementary. In addition, the project team will host a developer's forum this winter to get feedback from real estate development experts on the proposed concept and inform implementation strategies.

7. This project needs to consider impacts along Broadway up to 33rd Avenue.

The eastern boundary for the N/NE Quadrant Plan is NE 16th Avenue, but the broader context of the Broadway corridor has been taken into account during development of the proposed concept. The Portland Plan is addressing neighborhood needs citywide and will further address community desires for the extended corridor.

8. The height bonuses along Broadway east of 7th need to be reduced, and these measures should be extended north of Schuyler.

The revised concept continues to propose development along Broadway east of 7th in the 2 to 6 story range. The exact height limits will be discussed during development of the detailed plan, but staff recognizes that there is strong community and SAC support for reducing or removing the existing height bonuses. The area north of Schuyler is outside the Central City Plan District boundary and outside the N/NE Quadrant study area. This process will not make changes to zoning in that area. Zoning issues outside the study area would have to be examined through some future process.

9. Height restrictions on Broadway between the river and 7th avenue.

- **The height restrictions that would be implemented between 7th and 15th along Broadway should be extended west to the freeway, and perhaps to the river, to respect the historic Eliot neighborhood and address overly generous entitlements.**
- **There should be higher density along Broadway west of 7th.**

The majority of comments at the SAC meeting on September 29, 2011 supported larger-scale development along Broadway west of 7th Avenue to help achieve Central City density targets and support the new streetcar. The proposed concept has been revised to propose 6 to 10 story development from 7th Avenue to the freeway (current limit is 100' and would not have to change) and 6 to 20 story development (an increase from current limits) from the freeway to the river.

Design Review takes into account height and scale of adjacent development, and can help address neighborhood concerns about increased building scale along the corridor. Exact height limits and development standards will be discussed during development of the detailed plan. Strategies to address inflated expectations due to overly generous development entitlements would likely apply to the entire Central City and will be explored through the Central City 2035 process.

10. Impacts to established views of downtown and the river.

BPS is working on a viewpoint study involving inventory work for 12 priority scenic viewpoints in the Central City. A priority viewpoint is one that has a corresponding view corridor with a height limit that affects parcels in the Central City. The inventory work involves reviewing the 1991 documentation that established the viewpoint, and field work to document the status of the view today. While in the field, we are also mapping the viewpoint with a GPS unit. The inventory work will also involve 3D modeling to see how buildings built to the height limit in the view corridor do or could affect the view. The final product of this work will be a report with the 2011 inventory information, maps, other graphics, and photos. The information in the report will give the Central City team an understanding of what the view looked like in 1991, what it looks like now (e.g. blocked by vegetation), how accessible the viewpoint is (in some cases there is no way for the public to reach the viewpoint), and an idea of what the area surrounding the viewpoint is like. We will return to this issue in the development of the detailed plan.

Mobility

11. Are there conflicts between proposed flexible streets and freight routes?

- **Conflicts with the Strand and industrial traffic?**

One section of River Street is classified as a minor truck route and is also displayed in the proposed concept as a flexible street. This section represents the adopted alignment for the Greenway Trail.

Industrial access remains a priority on streets throughout Lower Albina. Pedestrian improvements associated with the Strand in this area would have to preserve functional freight access. There are some examples of bike and pedestrian improvements in industrial areas that could serve as precedents, such as NW 13th street in the Pearl District and SE 3rd Avenue in the Central Eastside.

12. Define sections of Broadway that have individual characteristics. Suggested sections are 15th to 7th, 7th to the freeway and the freeway to the river.

Broadway continues to be classified as a civic corridor on the revised transportation typology map, but the building scale and character of the urban form along the corridor has been differentiated as suggested. The proposed building scale from 15th to 7th is 2 to 6 stories, from 7th to the freeway is 6 to 10 stories and from the freeway to the river is 6 to 20 stories.

13. Concerns about proposing a scenic designation for Multnomah because SAC members envisioned more activity along the street.

The revised transportation typology map designates Multnomah as a local main street with a high level of multimodal transportation and retail activity.

14. Conflicts on 7th between bikes and on-street parking needed for retail.
The proposed concept suggests that NE 7th be highlighted as a local main street where retail and pedestrian activity would be encouraged. The combination of streetcar construction and bike facilities has resulted in the loss of on-street parking on one side of 7th. It is recognized that this may present a challenge for retail, however staff continues to hear support from stakeholders for encouraging 7th as a retail street in order to take advantage of the streetcar investment.

15. Extend the civic designation further south along Grand.
In the revised concept map, the full length of both MLK and Grand are shown as civic streets.

16. Display Pacific St as a flexible street.
In the revised concept map, Pacific Street has been added as a flexible street.

17. Will all streets eventually be assigned a transportation typology (scenic, flexible, civic, local main)?
No. The typologies are intended to elevate certain streets with special significance in the district. Many streets will not have a designation within the typologies.

Parks and Open Space

18. How does the plan meet Parks Bureau targets?
The Portland Plan calls for access to a park within ¼ to ½ mile of 90% of Portland's residents. There is a deficiency in the western part of the Lloyd District. The proposed concept calls for additional parks to address the deficiency and support residential development.

19. What is the mix of parks services that are proposed?
Specific locations and functions for parks have not yet been determined, but the proposed concept anticipates a system that could provide a mix of active and passive recreation. Specific needs will be determined as the area develops.

20. It would be good to see a more practical, results oriented, real estate approach to the parks strategy.
The open space concept proposes new parks along Clackamas Street to serve the needs of new residents in the Lloyd District. Some of these spaces might be publicly developed, others could be built through private development. The City can offer incentives and take advantage of other opportunities to work with private partners to develop additional public and privately owned open space as the area redevelops. Specific strategies will likely be worked out as part of individual development deals.

21. Add a connection between Lillis Albina Park and the new proposed parks.
The revised open space map includes a connection.

22. Are you looking at/ what is the feasibility of incorporating small scale open space, recreation and habitat opportunities? E.g. private pocket parks, ecoroofs, capping the freeway.
As noted in Question 21, the City can offer incentives and take advantage of other opportunities to work with private partners to develop additional public and privately owned open space as the area

redevelops. The urban design analysis of the remaining freeway improvement options suggests that a cap would be feasible in many scenarios.

23. The area along the Willamette River is shown with open space and 6 to 20 story development in the concept. Riverfront land is scarce and should be preserved for open space.

Planning for the waterfront site west of the Rose Quarter is included in the Rose Quarter District Plan (PDC). Recent concepts for the riverfront parcel display a blend of development, open space and public access on the site.

Green Systems

24. Instead of mining stormwater and pumping it back into the district, use runoff at the site where it originates. The concept should address managing stormwater at the source and reflect the Portland Watershed Management Plan, Green Street Policy and the Stormwater Management Manual guidance.

The green systems concept has been revised to propose a gravity-fed system of rainwater collection that could provide water to users along the corridor and terminate in the western parts of the district where there are large potential users, such as the Rose Quarter. In addition, on-site management of stormwater will continue to be encouraged through other existing City policies.

25. How does the plan meet citywide tree canopy targets?

The existing tree canopy within the quadrant falls short of the targets established in the 2004 Urban Forest Management Plan. However, it is important to note that these targets were established to measure citywide progress toward meeting tree canopy goals and were not intended to be strictly applied to all areas of the City. The Central City, where full-build out of sites is encouraged, has limited opportunities to achieve significant tree canopy on private property. More significant opportunities exist within rights-of-way, including freeway corridors, and to some degree within parks.

Appropriate tree canopy targets for Central City areas, including the N/NE Quadrant, and strategies for meeting the targets will be developed as part of the next phase of plan development. It is estimated that most streets within the quadrant could meet the target for canopy within rights-of-way if they met current standards for street trees (1 tree per 25 linear feet of street frontage), assuming they were planted with medium canopy trees. In addition to typical street tree planting, water quality and tree canopy corridors are proposed that would emphasize the surface treatment of stormwater and large canopy trees. Enhanced tree canopy is also proposed on scenic streets.

26. Will green infrastructure only be incorporated into the streets designed as water quality and tree canopy corridors?

The water quality and tree canopy corridors are intended to provide a special emphasis on surface treatment of stormwater and enhanced tree canopy. However, it is anticipated that all streets within the quadrant would meet City requirements for green infrastructure, such as street trees and stormwater facilities, as they are redeveloped.

N/NE Quadrant Proposed Concept Evaluation Summary

In early 2011, the N/NE Quadrant Stakeholder Advisory Committee (SAC) developed project goals and objectives to guide the planning process. To ensure consistency with the SAC's vision for the quadrant, the project team has evaluated the proposed concept against the project goals and objectives. This exercise is intended to provide an interim check-in on how well the proposal responds to the goals and objectives before getting into the more specific work of developing plan policies and implementing actions. In some cases, objectives are not fully represented in the concept diagrams and hose topics have been identified for further attention in the next phase of the process. A summary of findings is provided below and a more detailed discussion is attached.

Summary of Findings

The evaluation found that the proposed concept diagrams generally support the project goals and objectives. No conflicts were identified. The evaluation highlights the fact that the concept diagrams provide good direction about the overall vision for the N/NE Quadrant, but do not provide the necessary depth to fully address all of the detailed objectives set forth by the SAC. The next phase of the process will involve development of a draft plan that will flesh out proposals reflected in the proposed concept, as well as address issues that were not explored during the concept planning phase. Below is brief summary of how the proposed concept supports the project goals, followed by a more detailed discussion in the remainder of the report.

Goals 1 and 2: Diverse Mix of Uses and Economic Development
The proposed concept provides opportunities for a wide variety of land uses and seeks to reinforce the success of existing employment centers and neighborhood business districts. A more balanced mix of uses is sought than exists today, with a renewed focus on encouraging residential development that will help create more active vibrant districts. An important element of this concept is to increase the number of residents to attract new businesses. The conceptual open space plan addresses the park deficiency in the area and suggests an amenity to support and encourage the desired high-density development within the Lloyd District. Additional work is needed to address affordable housing objectives.

Goal 3: Enhanced Natural Environment and Sustainable Development
The proposed concept supports natural resource enhancement in Sullivan's Gulch and on the riverbank. Increased tree canopy is proposed focusing on enhanced canopy in certain rights-of-way. Additional work is needed to identify appropriate canopy targets for this area. The concept supports the Lloyd Eco-District designation and suggests district systems for energy and rainwater harvesting.

Goal 4: Access to Amenities and Neighborhood Transitions
Additional work is needed in development of the quadrant plan to ensure appropriate services, such as parks, schools and grocery stores, are provided as the residential population increases. The proposed concept seeks to provide sensitive transitions to adjacent neighborhoods by proposing more moderate densities along central city edges that will help buffer lower density neighborhoods from the higher intensity development proposed in the central portions of the Lloyd District and Rose Quarter.

Goals 5 and 6: Multi-Modal Transportation
The concept provides an integrated land use-transportation framework that will be used to identify multimodal transportation system improvements that focus on connectivity and access improvements to meet the specific modal and land use needs for safe and efficient accessibility within the quadrant. The concept suggests a street hierarchy and street typology that relates street design to adjacent land uses and street functions, as a means of supporting objective for creating distinctive districts and more walkable streets. The concept encourages the use of alternative transportation modes by proposing an improved job to housing balance and an enhanced

pedestrian and bicycle environment. The concept will also provide for freight access to serve businesses and regional markets.

Goal 7: Equitable Access to Opportunities
The proposed concept seeks to provide a broad range of employment and housing opportunities that provide a place for both existing and new residents and employees within the quadrant. Additional work is needed in development of the quadrant plan to identify strategies to encourage a mix of housing types accessible to all income levels and to address the potential for involuntary displacement of existing residents and businesses.

Goal 8: Cultural Heritage
The proposed concept includes a number of features intended to celebrate, preserve and enhance historic and cultural resources within the quadrant, including highlighting the Russell Conservation District, zoning changes that encourage investment in historic structures and height changes that respect the scale of historic structures. Additional policies and actions supporting the protection and enhancement of the areas cultural heritage will be developed in the next phase.

Additional Criteria: Implementable proposals; Consistency with Other Plans and Policies
The proposals in the proposed concept are intended to be reasonable and implementable over the 25 year planning horizon. Next steps will include more detail about policies and strategies to implement to the plan. No conflicts have been identified between the proposed concept and adopted land use and transportation policies or the draft goals and objectives of the Portland Plan and Central City 2035 processes. Consistency with other plans and policies will continue to be monitored in the next phase of plan development.

N/NE Quadrant Proposed Concept Evaluation

Background

In early 2011, the N/NE Quadrant and I-5 Broadway/Weidler Plans Stakeholder Advisory Committee (SAC) developed project goals and objectives to guide the planning process. Together, the goals and objectives represent what the SAC hopes to achieve with the N/NE Quadrant and I-5 Broadway/Weidler Plans as a whole. Along with an extensive public outreach effort, the goals and objectives were used to guide development of a draft proposed concept for the quadrant. They will also provide a means for determining whether the final plan, that will be developed during the next phase of the N/NE Quadrant Plan process (Phase 4), is balanced and complete and meets the aspirations of project stakeholders.

The draft proposed concept consists of a series of diagrams that illustrate what is envisioned for the quadrant at a conceptual level, covering the following topic areas: land use, building height/scale, transportation typologies, open space and green systems. A 70% draft of the proposed concept was discussed at the SAC's September meeting and is being refined to reflect stakeholder comments. A revised version of the proposed concept will be presented at the November 17 SAC meeting.

To ensure consistency with the SAC's vision for the N/NE Quadrant, the project team has evaluated the concept against the project goals and objectives. This exercise is intended to provide an interim check-in on how well the proposal responds to the goals and objectives before getting into the more specific work of developing plan policies and implementing actions. The evaluation is largely qualitative in nature, however some quantitative measures have been provided where they are available. In some cases, objectives are not fully represented in the concept diagrams. Those topics have been identified for further attention within the next phase of the process. A summary of findings is provided below and a more detailed discussion is attached.

Proposed Concept Evaluation

Goal 1: A diverse mix of commercial, cultural, entertainment, industrial, recreational and residential uses, including affordable housing.

Objectives:

a. Provide opportunities for a variety of desired land uses in the quadrant and its Subdistricts.
b. Foster distinct and complementary subarea identities within the quadrant.
c. Encourage uses that complement regional facilities including the Rose Garden, Memorial Coliseum, Convention Center and Lloyd Center, while seeking to balance the episodic nature of these attractions with additional activities.
d. Increase residential density and improve jobs to housing ratio in the quadrant.
e. Increase affordable housing close to multimodal transportation systems and other appropriate locations.
f. Preserve existing housing in the quadrant.
    - Consider the impacts of proposed Freeway Interchange improvements on nearby residential dwelling-including land use and zoning impacts.
g. Provide open space, parks and recreation opportunities.
h. Provide access and highlight the quadrant's relationship to the Willamette River.

Evaluation:

Mix of Uses and Districts

The proposed concept provides opportunities for a wide variety of land uses and seeks a more balanced mix of uses than currently exists in the quadrant today. The concept calls for increased

office, residential, retail and entertainment uses, which will all complement and provide more balance to the episodic nature of the large regional facilities that are currently located in the study area. In particular, a focus on increased residential development in the Lloyd District will provide for a more constant level of activity, which, in turn, will help support smaller scale businesses. The concept embraces the idea that multiple distinct areas within the study area will result in an economically stronger, more vibrant place. It supports further developing existing distinct places like Russell Street and the NE Broadway main street and encourages the creation of several distinctive new places, including a mixed-use high-density core centered around NE 7th and NE Clackamas and an exciting new district along N Broadway between the Broadway Bridge and I-5.

Housing

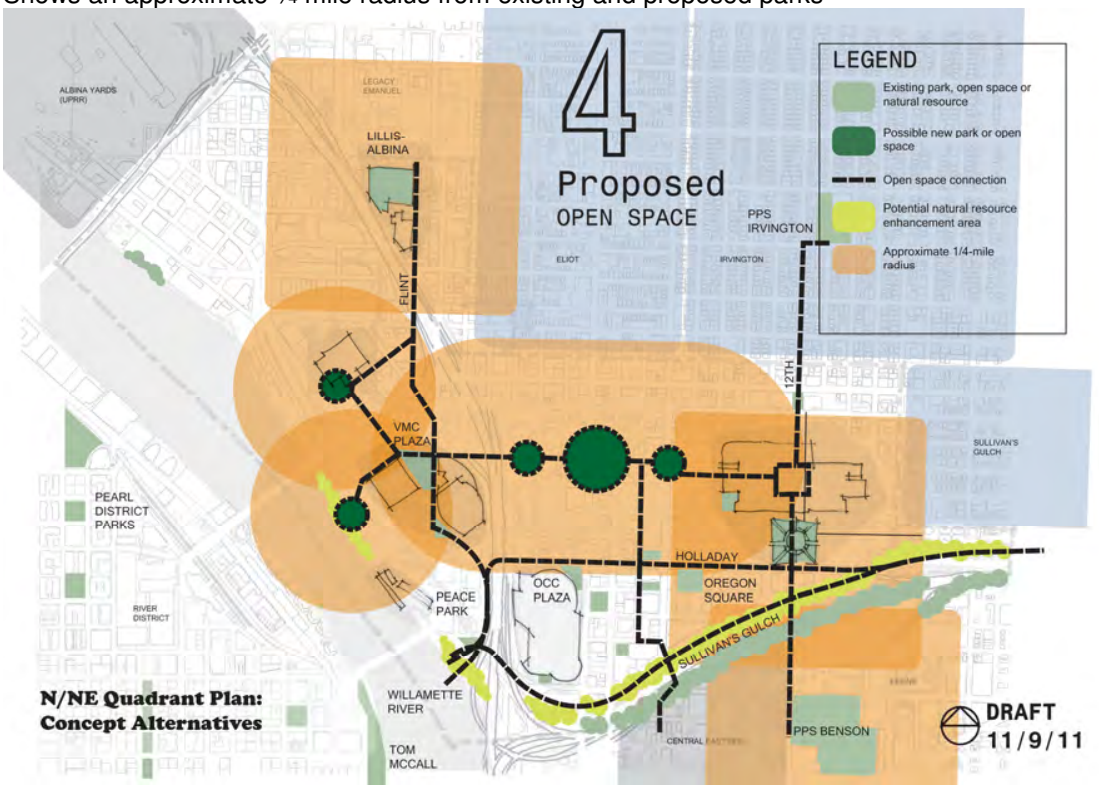
A key objective of the proposed concept is to increase the amount of residential development in the Lloyd District. This will also support economic development strategies to stimulate jobs in the N/NE Quadrant. Housing emphasis areas have been identified, including a high density residential area in the central core of the Lloyd District and medium density housing above commercial along the Broadway/Weidler corridor, east of MLK Blvd. In addition, housing would be allowed in all other areas, with the exception of Lower Albina's industrial areas. It is estimated that the concept when fully built-out, could produce over 5,700 housing units, resulting in a total of approximately 7,000 units at build out. With these new housing units, the jobs/housing ratio in the quadrant would become much more balanced at 4.5 jobs to every housing unit, as compared to the existing 17 to 1 jobs/housing ratio. It should be noted that the estimated number housing units far exceeds the Metro forecast for the Lloyd District, which projects that the district will have approximately 3,800 total units by 2035.

Table 1: N/NE Quadrant Estimate of Housing and Jobs

	Existing*	Proposed Concept** (Buildout)	Estimated Increase
Total Jobs	21,689	31,316	9,622
Total Housing Units	1,252	7,007	5,755
Jobs/Housing Balance	17:1	4.5:1	
*2006 jobs estimate; 2008 housing estimate **Based on projected buildout of identified vacant and redevelopable land, assuming a mix of building types. Does not represent maximizing full zoned-capacity.			

While the proposed concept diagram calls for an increased housing supply, it does not speak specifically to housing diversity or affordability. The draft plan, to be developed in the next phase of the process, will reinforce the importance of preserving the housing that currently exists, particularly housing in culturally and historically significant structures, and will address housing affordability and diversity through policies and potentially housing unit and affordability targets. This effort will be coordinated with the Portland Plan and the Central City 2035 Concept Plan.

Parks and Open Space



The Lloyd District was identified as being park deficient in the 1988 Central City Plan and those deficiencies continue today. In 2008, Portland Parks and Recreation (PPR) identified the need to acquire and develop at least 3 acres of open space in the Lloyd District by 2020 to meet projected growth. And, PPR generally seeks to provide parks or open space within ¼ to ½ mile walking distance, with the exception of industrial areas. The only significant public open space within the Lloyd District today is Holladay Park, a 4.3 acre park located in the eastern portion of the district. The proposed concept seeks to address the need for additional open space and recreation opportunities by suggesting a conceptual framework for an ultimate open space system. The focus is on creating new open space within the central core, where a new high-density residential neighborhood is envisioned, linking to a new open space on the riverfront. New open space is also shown on the Portland Public Schools Blanchard site, which has been identified as a future redevelopment site. With the proposed addition of new parks, most of the Lloyd District would be

served by a public park within a distance of a ¼ mile (see Map 1) and all areas would be served within ½ mile. It should be noted that the area around the Oregon Convention Center that would not be served within a ¼ mile a public open space, is not envisioned as a location for significant residential development and is currently served by a series of private and semi-private open spaces.

Because the Lower Albina area is largely industrial, new park space is not proposed within the area. It should also be noted that Lillis Albina Park, a 4 acre park, is located just outside of the Lower Albina district.

An extensive trail network is also planned, including the Sullivan's Gulch and Willamette Greenway trails, which will provide recreation opportunities and improved connections to the riverfront and other parts of the Central City. In addition to a new riverfront park, the concept calls for improved riverbank conditions through habitat restoration.

Map 1: N/NE Quadrant Park Service Area
Shows an approximate ¼ mile radius from existing and proposed parks

Goal 2: Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages.

Objectives:

a. Create opportunities for new employment and a variety of employment types and levels.
b. Maintain or increase development potential where appropriate, e.g. through zoning, infrastructure and creation of new parcels.
c. Foster increase in future high density commercial development in appropriate locations while supporting and encouraging industrial activities in current industrial areas.
d. Retain and support existing and local businesses in the quadrant.
e. Support and strengthen the retail environment.

Evaluation:

Employment Opportunities
The proposed concept promotes economic development within the quadrant by seeking to support and strengthen the district's role as a major employment center and regional attractor, while encouraging the growth and vitality of smaller neighborhood business areas. A significant element of the proposal is the emphasis on improving the jobs to housing balance as a means of creating a more vibrant and less episodic district. The concept demonstrates significant development capacity for many types of new employment uses, including industrial, commercial office and retail space. It is estimated that through development of land that is currently vacant and redevelopable, the concept could accommodate over 9,600 new jobs in a range of employment sectors.

Development Potential
The concept maintains the existing development potential in the majority of the study area and suggests investments in parks, trails and more connected walkable streets that would both support and encourage new development. Increases in development potential are proposed in several areas, including:

- The Portland Public Schools Blanchard site and adjacent area where rezoning from industrial to another more flexible zone is proposed;
- Limited areas along N Russell Street and adjacent to the light rail station where rezoning is proposed from industrial to another zone that would allow for a broader mix of commercial uses but continue to prohibit housing.
- Increased maximum heights are suggested at two gateway locations: NE MLK and NE Lloyd Blvd, and along N/ Broadway between the Broadway Bridge and I-5. Taller buildings in these locations would mark the entry into the Lloyd District and help support Convention Center and Rose Quarter activities.

There is one area, along NE Broadway in the Irvington Historic District, where maximum allowable heights are proposed to be reduced. The proposal suggests reducing the applicability of bonus height north of Broadway, where currently buildings up to 125 feet could theoretically be built, to encourage development that is more compatible with the Historic District. Allowed floor area ratio (FAR), which governs the overall square footage of a building would not change.

Business Retention
The proposed concept is designed to build on the district's existing strengths and seeks to support existing successful business areas, such as the Lower Albina which will be retained as a largely industrial area. In contrast, a zoning change is suggested along the Vancouver/Williams corridor in order to support the retention and growth of existing businesses that are currently non-conforming uses in that area. Areas expected to see major transformation over the life of the plan, the central core of the Lloyd District and N Broadway adjacent to the Rose Quarter, are those that are either largely vacant or dramatically underdeveloped.

Retail
The concept identifies and embraces the continued development of several existing distinct retail areas in the study area: NE Broadway (local character, local-serving), Lloyd Mall (major regional), Russell Street (small-scale, local creative character/ food & drink destination). In addition, the concept suggests that with future growth and development, there may be opportunities to expand these districts and create new retail concentrations along MLK/Grand, NE 7th and NE Multnomah. The proposal attempts to support retail by focusing the areas intended for retail, thereby concentrating the retail into more active successful districts. Additional strategies to support retail districts will be explored during plan development. The housing elements of this plan would also support existing and new retail businesses, especially in the central Lloyd and Broadway/Weidler Corridor.

Goal 3: Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment.

Objectives:

a. Create opportunities for new strategically located parks and open space.
b. Maintain and create new access points to the river.
c. Enhance and create new fish and wildlife habitat, tree canopy, and green infrastructure in appropriate locations.
d. Support sustainable development goals and practices, including understanding and impacts of the Lloyd Eco-District.

Evaluation:

The Proposed Concept seeks to balance the overall role of the Central City and the N/NE Quadrant to support high density development, while supporting improvements to habitat, increased access to nature and a sustainable built environment. As described under Goal 1, a new system of parks is proposed in the Lloyd District's central core, an area that is currently park deficient and where substantial new residential development is proposed. The park(s) in the central core would connect to a new riverfront park and Willamette Greenway Trail via a green spine on NE Clackamas Street. Specific locations and functions for parks have not yet been determined, but the conceptual plan anticipates a system that could provide a mix of active and passive recreation, as well as respites of green space within an intensely developed urban area.

Natural Resource Enhancement

The N/NE Quadrant is currently highly developed and has few existing natural resources. Identified resources include:

- The Willamette River, which is a migration corridor for fish and is part of the Pacific Flyway. Specific resources within the quadrant related to the river include shallow water habitat near the interchange of I-84/I-5 and vegetated riverbanks.

- Sullivan's Gulch, a steep, vegetated ravine along I-84. While the area does provide wildlife habitat, there is not enough tree cover to receive a rank in the City Natural Resources Inventory.

The proposal seeks to enhance natural resources along the riverbank where opportunities are presented, and within Sullivan's Gulch. It is estimated that the natural resource enhancement shown in the concept could result in the following:

- 9 acres of ranking wildlife habitat could be created within Sullivan's Gulch if it were planted with native vegetation, including 60% tree canopy. There is currently no ranking wildlife habitat in the quadrant, outside of the Willamette River itself.
- Approximately 2200 linear feet (.42 miles) of river bank could have improved riparian functions resulting in an increase its relative ranking if the banks were planted with more trees and shrubs.

Tree Canopy

As shown in Table 2 below, the existing tree canopy within the quadrant falls short of the targets established in the 2004 Urban Forest Management Plan. It is important to note that these targets were established to measure citywide progress toward meeting tree canopy goals and were not intended to be strictly applied to all areas of the City. The Central City, where full-build out of sites is encouraged, has limited opportunities to achieve significant tree canopy on private property. More significant opportunities do exist to increase tree canopy within rights-of-way, including freeway corridors, and to some degree within parks.

Table 2: Existing Tree Canopy and Citywide Targets

Land Use Category	Current N/NE Quadrant Canopy**	Current Citywide Canopy*	Citywide Target *Urban Forest Management Plan, 2004*
Residential	n/a	30%	35%-40%
Commercial/Industrial	5%	7%	15%
Parks and Open Space***	45%	28%	30%
Rights-of-way	11%	17%	35%
Total	8%	26%	33%

* from 2002 as cited in Portland's Urban Forest Canopy, Parks and Recreation 2007.
** estimate using GIS analysis of Metro's 2007 high structure vegetation mapping.
*** not including City-managed natural areas.

Appropriate tree canopy targets for Central City areas, including the N/NE Quadrant, and strategies for meeting the targets will be developed as part of the next phase of plan development. The proposed concept recognizes the need to add tree canopy to the area and seeks to do so on a number of fronts, primarily focusing on right-of-way areas. It is estimated that most streets within the quadrant could meet the 35% target for canopy cover within rights-of-way if they met current standards for street trees (1 tree per 25 linear feet of street frontage), assuming they were planted with medium canopy trees. In addition to typical street tree planting, water quality and tree canopy corridors are proposed throughout the quadrant that would emphasize the surface treatment of stormwater, vegetation and large canopy trees. Enhanced tree canopy is also suggested on scenic streets, where a lush, highly vegetated environment is proposed. The water quality/tree canopy corridors and scenic streets would also provide additional bird and insect habitat within the quadrant and provide a connection between its interior areas and the natural resource areas at the riverfront and in Sullivan's Gulch.

Sustainable Development

The Proposed Concept supports sustainable development goals and practices and embraces the Lloyd Eco-District designation. The concept envisions built form that encourages the use of alternative travel modes, including high density development that is well served by transit, has enhanced facilities for biking and walking, and includes a mix of housing and employment opportunities. The concept also suggests district systems for energy production and distribution and rain water harvesting for reuse within the district. Improving the balance of jobs and housing within the district will result in a more balanced use of energy throughout the day, making the proposed district energy system more efficient (see Table 3 below). Additional strategies to further sustainability goals, within the district are a potential topic to be explored further in the next phase of plan development.

Table 3: N/NE Quadrant Heating and Cooling Load Comparison

	Jobs/Housing Ratio	Heating Load Commercial/Residential Ratio*	Cooling Load Commercial/Residential Ratio*
Existing	17:1	5:1	26:1
Proposed Concept	4.5:1	1.3:1	7:1

*Based on estimated annual energy use per employee and per household.

Goal 4: Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods.

Objectives:

a. Create sensitive transitions between the more highly urban Central City and adjacent residential neighborhoods.
b. Foster concepts that support high-density development in the Lloyd District in appropriate locations and minimize their impacts on adjacent neighborhoods-Eliot, Irvington, and Sullivan's Gulch.
c. Provide for amenities and services, such as parks, schools and connections, at a level appropriate to support the type and intensity of development proposed.

Evaluation:

Neighborhood Transitions

The proposed concept envisions a high density mixed-use central core and office area within the Lloyd District and retaining the majority of Lower Albina as an industrial employment center. The need for sensitive transitions to adjacent neighborhoods is addressed as follows:

- *Irvington* – A reconsideration of existing height bonuses along NE Broadway within the Irvington Historic District is suggested, which would generally limit development to 2 to 6 stories along NE Broadway within the historic district.
- *Eliot* - Russell and Williams are designated as local main streets within the Eliot neighborhood. These streets are intended to be developed with neighborhood scale businesses that would serve the needs of the adjacent residential neighborhood. The concept suggests 6 to 10 story development on Broadway between MLK/Grand and the I-5 Freeway. The Eliot Conservation District is 1 ½ to 2 ½ blocks north of Broadway, providing adequate transition from the taller buildings on Broadway to historic structures.
- *Sullivan's Gulch* – The proposed concept suggests adding medium density residential above commercial along the Sullivan's Gulch edge on Broadway/Weidler and on Multnomah to 21st, adding residential and neighborhood supportive retail to area. Around the Lloyd Center mall, higher intensity development is anticipated, building on the attraction of the mall, Holladay Park and the light rail station. This edge abuts properties that are currently developed with high-rise buildings which provide a buffer for the lower density neighborhood further to the east. In addition, 15th/16th is designated as a scenic street, which would provide a green buffer for the neighborhood.

Amenities and Services

The proposed concept would dramatically increase the amount of housing in the Lloyd District, which will require an increased level of amenities. As discussed under Goal 1, the area has been identified as being park deficient and the concept seeks to address that deficiency through a conceptual open space plan. The need for a full-range of services, such as schools, grocery stores, community centers, libraries, day care and medical services, and strategies to assess and provide them, will be a topic for further work in development of the quadrant plan.

Goal 5: A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system.

Objectives:

a. Improve multi-modal transportation accessibility and connectivity within and through the quadrant (e.g. via new or improved connections across freeway and in the district)
b. Encourage the use of transportation modes other than single occupancy vehicles to reduce auto emissions and vehicle miles traveled.

c. Improve circulation for all modes in the Rose Quarter Transit Center.
d. Accommodate present and future multimodal access needs of the quadrant.
e. Improve freight access from freeway and railroads to industrial areas and major destinations.
f. Increase safety within the quadrant for all modes.
g. Provide a street hierarchy system that supports the quadrant's desired urban form, land use and livability goals.
h. Provide parking and transportation demand management strategies that better support the needs of the quadrant.
i. Support the ODOT High Speed Rail study, including analysis of alternative routes and station locations from existing rail facilities.

Goal 6: Improve the local circulation system for safe access for all transportation modes within the quadrant and at freeway interchanges.

Objectives:

a. Provide affordable, reliable, time saving and effective range of multimodal transportation solutions.
b. Connect regional trail system via local pedestrian and bicycle network.
c. Improve freeway operations for transit (C-TRAN), freight and auto.
d. Improve local access across freeways and rail crossings via improved, safer crossings and additional separated facilities for cars, pedestrians and cyclists.
e. Improve access to transit for residents, employees and visitors.
f. Seek to significantly reduce accident potential.
g. Minimize local land use impacts of transportation infrastructure.
h. Improve rail operations for freight and passengers (e.g. “S” curve in UPRR Mainline).

Evaluation:

Goals 5 and 6 call for an improved regional and local multimodal transportation system that provides for better access, safety, convenience, and efficiencies. The following evaluation examines both goals as a holistic transportation system integrated with the land use concepts.

The overall approach for the N/NE Quadrant recommendation is to support the high density development potential in the Lloyd District, create a more vibrant district that compliments area businesses and events at the Oregon Convention Center and Rose Quarter and retain the eclectic industrial job base of Lower Albina. In order to encourage economic development within an existing congested transportation system, the proposed concept builds upon previous efforts from the 1988 Central City Plan to increase land use densities and the use of alternative modes of travel to, from and within the Central City. Fundamental to the proposal is an improved job-to-housing balance in the Lloyd District, which will encourage the use of alternative transportation modes by locating housing near existing employment centers and in an area well served by transit, bike and pedestrian facilities. The concept provides a framework that will be used to identify multimodal transportation system improvements, which focus on connectivity and access improvements to meet the specific modal and land use needs of the quadrant.

The following summarizes the proposed concept as it relates to additional topics addressed in the goals and objectives:

- *Street Typology:* The concept suggests a street hierarchy and street typology that relates street design to adjacent land uses and street functions as a means of supporting objectives for creating more distinctive districts with walkable streets. The typology also provides for flexibility to adapt to adjacent land uses, which vary from the industrial activities in Lower Albina to the high density commercial uses in the Lloyd District.

- *Encouraging the Use of Alternative Transportation Modes:* The Lloyd District currently has a successful Transportation Demand Management (TDM) program as part of a public-private partnership between the City of Portland and Lloyd District businesses through the Lloyd Transportation Management Association (TMA). Through this partnership, the Lloyd TMA has been successful in increasing the use of alternative transportation modes. In 1997, 40% of Lloyd area employees used modes other than driving alone to get to work. Today, approximately 60% of employees of Lloyd TMA members use modes other than driving alone, whereas in the Lloyd District as a whole this figure is 45%. The success of the TMA speaks to the continued need to expand TDM strategies in order to meet citywide goals for reduced reliance on driving alone. Recommendations for updating transportation and parking management strategies for Lower Albina and the Lloyd District, as well as targets for reducing vehicle use will be developed as part of the next phase of the quadrant plan. It is anticipated that the partnership with the Lloyd TMA will continue to play a key role in developing and implementing future strategies.

- *Transit:* N/NE Quadrant is currently very well served by transit and future service improvements are planned, including light rail expansion to Milwaukie and streetcar service within the N/NE Quadrant. The proposed concept reinforces the use of transit by promoting increased density of residents and employees and by promoting a system of connectivity and more walkable streets throughout the quadrant. With this system of pedestrian and transit connectivity, most workers and residents in Lower Albina and Lloyd District would have transit service within one-quarter mile. However, as growth occurs within the quadrant, it is anticipated that there will be a need is to restore recent service cuts and to increase frequency of bus service to the area. A desire to improve circulation within the Rose Quarter Transit Center has been identified and the City and TriMet have begun discussions about possible solutions. This is a potential topic to be addressed in the quadrant plan.

- *Freight and Auto Access*: the proposed concept recognizes the important role of the area as a major employment and entertainment area and the need to maintain good freight and automobile access and circulation. Improved freight and auto access to the area is somewhat dependent on the outcome of the process evaluating options for I-5: Broadway-Weidler Interchange improvements. The main goal of that process is to improve safety and operations on the freeway and at the interchange, which would contribute to improved freight and auto access to the district. The City of Portland is working closely with ODOT to analyze and evaluate impacts of the improvement options, including land use impacts associated with expansion and/or reconfiguration of the freeway right-of-way.

  The “s” curve in the Union Pacific rail line that runs through the area has long been identified as an issue for rail operations in the area. It also acts as an obstacle to other objectives in the area, such as development of a greenway trail and waterfront park. Addressing the “s” curve is a potential topic to be addressed in the quadrant plan.

- *Bicycle and Pedestrian Access:* In addition to supporting active transportation by encouraging increased levels of high density residential in close proximity to employment and services, the proposed concept calls for an enhanced system of bicycle and pedestrian connectivity and safety. The concept also supports walking and biking by promoting more vital retail districts and green elements that will improve the pedestrian and bike experience. It should be noted that the “flexible” street system shown builds upon the system in the Bicycle Master Plan and is intended to provide additional choices to travel through the district. The proposed flexible system represents an increase of approximately 8 miles of pedestrian and bike focused streets and trails within the quadrant over what exists today.

  The concept includes additional crossings of I-5 at NE Clackamas St and N. Hancock St. that could provide safer bicycle and pedestrian access. These crossings will depend on the final recommendations for the I-5 Broadway/Weidler Interchange process. Additionally, the concept

proposes a crossing of I-84 in the vicinity of NE 7th Avenue. The concept also acknowledges the desire for future regional trail connections within the N/NE Quadrant, including the Sullivan's Gulch Trail, which is currently being studied, and the North Portland greenway trail along the Willamette River.

- *High Speed Rail*: Outcomes of the high speed rail planning effort being conducted by ODOT will continue to be monitored for any action items appropriate to the N/NE Quadrant Plan.

- *Safety*: The N/NE Quadrant serves as a transportation hub with many high volume arterials, freeway access and highly traveled bike commute routes. A number of safety issues have been indentified as a result of mixing these facilities and modes. The proposed concept seeks to improve safety by providing more separated alternatives for bikes and pedestrians. Additional strategies to improve safety will be developed as part of the next phase of the plan development.

Goal 7: Equitable access to community amenities and economic opportunities.

Objectives:

a. Avoid/minimize/mitigate involuntary displacement of quadrant residents, businesses and jobs.
b. Provide for a broad array of employment types and encourage living-wage jobs.
c. Provide for diversity of housing types that meets the needs of all income-levels and a variety of household types and lifestyles.
d. Provide for amenities and services, such as parks, natural areas, schools and connections, at a level appropriate to support the type and intensity of development proposed.
e. Increase the capacity of existing residents and business owners to share in the benefits from growth in the quadrant.
f. Ensure that the plan compliments economic development and housing strategies to build capacity for existing area residents and businesses.
g. Ensure that infrastructure improvement do not have disproportionate public health impacts.
h. Ensure that plan proposals address the needs of local residents and businesses while recognizing the importance of the quadrant's region-serving facilities and infrastructure.
i. Ensure the plan broadly supports the equity objectives established through the Portland Plan process.

Evaluation:

Equitable Access to Opportunities and Services

The overall goal of the proposed concept is to provide a broad range of employment and housing opportunities that provide a place for both existing and new residents and employees within the quadrant. The concept provides for variety of employment sectors, including expansion of existing office areas and retention of the industrial job base. As discussed under Goals 1 and 4, development of the quadrant plan will also include work to identify strategies to encourage a mix of housing types and to ensure appropriate services, such as parks, schools and grocery stores, are provided as the residential population increases.

The overall approach of the Portland Plan and the 5-Year Economic Development Strategy is to support and nurture existing businesses so they can prosper and expand. The proposed concept builds on this approach to support economic development, especially for small businesses, by supporting the retention and enhancement of existing local business areas, such as the Broadway main street, Lower Albina and the Vancouver/Williams corridor. This, along with the housing focus of the quadrant plan, can provide a basis for increasing the capacity of local residents and businesses to share in the growth of the Lower Albina and Lloyd Districts. The plan will also support the retention of existing residential buildings, particularly those that are historic or culturally

significant. The issue of displacement is a significant challenge that is being addressed citywide by the Portland Plan and will be explored further in the next phase of the N/NE Quadrant Plan.

Health Impacts of Transportation Infrastructure
The City of Portland is working with the Oregon Department of Transportation to analyze options for improvement to the I-5 freeway within the quadrant and to evaluate the options based on a number of factors, including public health impacts such as air quality and safety. That evaluation will inform the decision made by the N/NE Quadrant Stakeholder Advisory Committee about which freeway improvement option to recommend.

Portland Plan Equity Objectives
The Draft Portland Plan calls for a number of actions to analyze City-wide procedures and decision-making processes and modify them as necessary to promote more equitable outcomes, as well objectives throughout the strategies that are identified as promoting equity. Many of the actions identified within the Portland Plan will be implemented citywide. The Portland Plan effort will be monitored as it progresses and any relevant district-specific strategies that emerge will be incorporated during the plan development phase.

Goal 8: Protection and enhancement of the cultural heritage of the area and its sub-districts.

Objectives:
a. Preserve, enhance and celebrate historic and cultural resources.
b. Avoid/minimize/mitigate demolition of historic and cultural resources.
c. Avoid or minimize adverse impacts on cultural or high priority community sites.

Evaluation:

The proposed concept includes a number of features intended to celebrate, preserve and enhance historic and cultural resources within the quadrant. The Russell Conservation District is highlighted as an attraction and Russell and Williams, which once were the heart of a lively business district, are designated as local main streets, suggesting that these areas be revitalized and returned to their former importance within the community.

Increased zoning flexibility proposed for portions of Lower Albina would allow a greater variety of employment uses that are compatible with industrial activities. These uses generally pay higher rents than traditional industrial uses, encouraging new investment and rehabilitation of older and historic buildings. Similarly, proposed zone changes on residentially zoned land in the Vancouver/Williams corridor would allow mixed-use and commercial activities and could spur reinvestment in historic and culturally significant buildings in this area. The nature and scale of the increase in development entitlements here will need to be carefully determined so as not to encourage demolition of resources.

The concept also suggests reducing existing height bonuses along NE Broadway within the Irvington Historic District, scaling down development from the Broadway main street area to the predominantly single-family residential character of the historic district.

Additional policies and action items that support the protection and enhancement of the quadrant's cultural heritage will be developed as part of the complete N/NE Quadrant Plan.

Additional Criteria:

a. Ensure plan proposals are reasonable and implementable.
b. Ensure capital costs are within project limits.
c. Ensure plan proposals are consistent with relevant adopted local, regional and state land use and transportation goals and policies.
d. Ensure plan concepts and proposals are consistent with relevant goals and objectives of the Portland Plan and Central City 2035 processes.

Evaluation:

The proposals in the proposed concept are intended to be reasonable and implementable over the 25 year planning horizon. Next steps will include more detail about policies and strategies to implement to the plan.

Capital costs are in reference to the I-5 Freeway improvement evaluation process and are not relevant to the proposed concept for the overall N/NE Quadrant.

No conflicts have been identified between the proposed concept and adopted land use and transportation policies or the draft goals and objectives of the Portland Plan and Central City 2035 processes. The concept supports goals for a strong central city that acts as the region's hub for employment, culture and entertainment, as well as a complete residential neighborhood. Proposals for improved transportation connections, more walkable streets, green infrastructure and natural resource enhancement also support sustainability and watershed health goals.

The following is a preliminary draft outline for the N/NE Quadrant Plan and will change with potential changes to the Portland Plan and CC2035 Concept Plan. The existing Central City Plan Policies for Lower Albina and the Lloyd District are attached.

For reference, the draft CC2035 Concept Plan goals/major policy areas are:

- Economic Prosperity of the Region's Center
- Healthy Connected Urban Neighborhoods
- Mobility
- Design and Civic Vitality
- Urban Ecosystems

Introduction

The primary land use, urban design and transportation policies that currently govern the North/Northeast Quadrant were established by the 1988 *Central City Plan*. They include a number of Central City-wide functional policies, as well as subdistrict-level policies specific to Lower Albina and the Lloyd District (referred to as “Lloyd Center-Coliseum” in the plan). In addition, the *Eliot Neighborhood Plan*, adopted as part of the Albina Community Plan project in 1993, contains policies that also apply to Lower Albina.

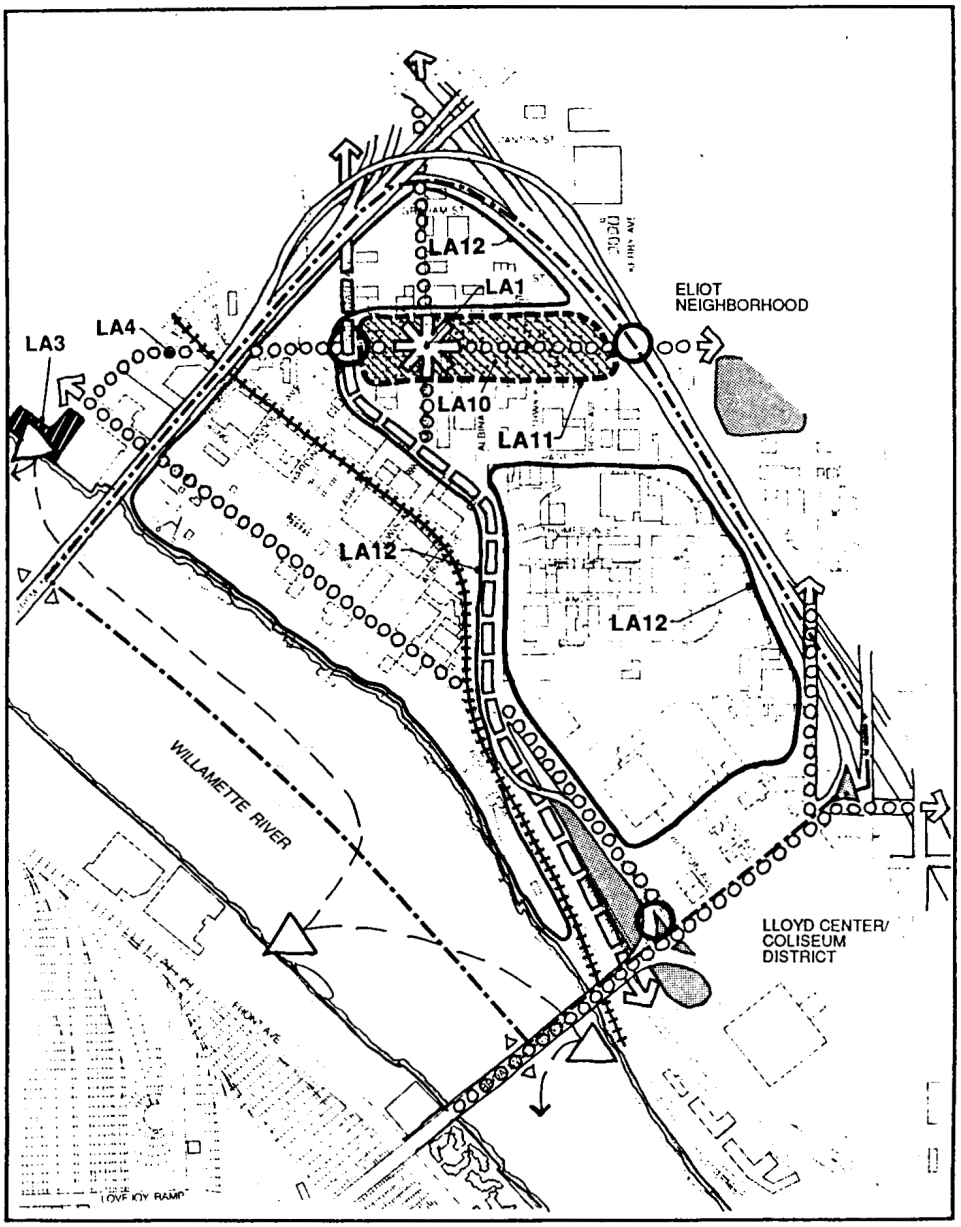
This document contains the subdistrict-specific policies, action charts and urban design diagrams for Lower Albina and the Lloyd District from the *Central City Plan* and the *Eliot Neighborhood Plan*. The N/NE Quadrant Plan will replace these policy elements as part of the overall Central City 2035 process.

1988 *Central City Plan* Policy 18: Lower Albina

Strengthen the economic development of the district as an industrial employment area while preserving its historic buildings and providing a connection for pedestrians to the Willamette River.

FURTHER:

A. Preserve the riverbank for water-dependent industrial uses.



B. While preserving the cluster of historical buildings along Russell Street, allow a mix of uses which promote the economic health of the district.

C. Provide improvements which attract industry to the district and remove barriers to the movement of industrial goods and equipment.

D. Provide a connection for the adjacent neighborhoods to the district and river.

Action Chart

POLICY 18: Lower Albina				
Proposals for Action		Possible Implementing Agency		Timeframe
		City	Other	
Projects				
LA1	Establish a music center or other public attractions on Russell Street near Interstate Avenue.		MAC PVT	Next 5 years
LA2	Build Lower Albina District gateways in locations as shown on the map.	Parks	MAC PVT	Next 5 years & 6 to 20
LA3	Establish riverbank access on publicly-owned property north of the Fremont Bridge, include a fishing pier and a river taxi stop.	Parks	PVT	Next 5 years
LA4	Establish a pedestrian connection along Russell Street from the Eliot, Humboldt and Boise Neighborhoods to the district and riverfront park.			Next 5 years
LA5	Develop and implement a traffic circulation plan that permits the use of local industrial streets for employee parking and industrial loading, including piggyback vehicle loading.	PDC PDOT	PVT	Next 5 years
LA6	Update the Lower Albina Traffic Study and implement its recommendations.	PDOT		Next 5 years
Programs				
LA7	Encourage water-dependent uses to locate on the riverfront.	PDC		Next 5 years
LA8	Establish an annual event on Russell Street, such as a music festival.		MAC PVT	Next 5 years
Regulations				
LA9	Continue industrial sanctuary status over most of the district.	BOP		Adopt with Plan
LA10	Study designating Russell Street as an historic district.	PDC BOP		Next 5 years
LA11	Target bonus FAR for development of housing along Russell Street.	BOP		Adopt with plan
LA12	Permit superblocks for industrial uses in areas indicated on the district map.	BOP		Adopt with plan

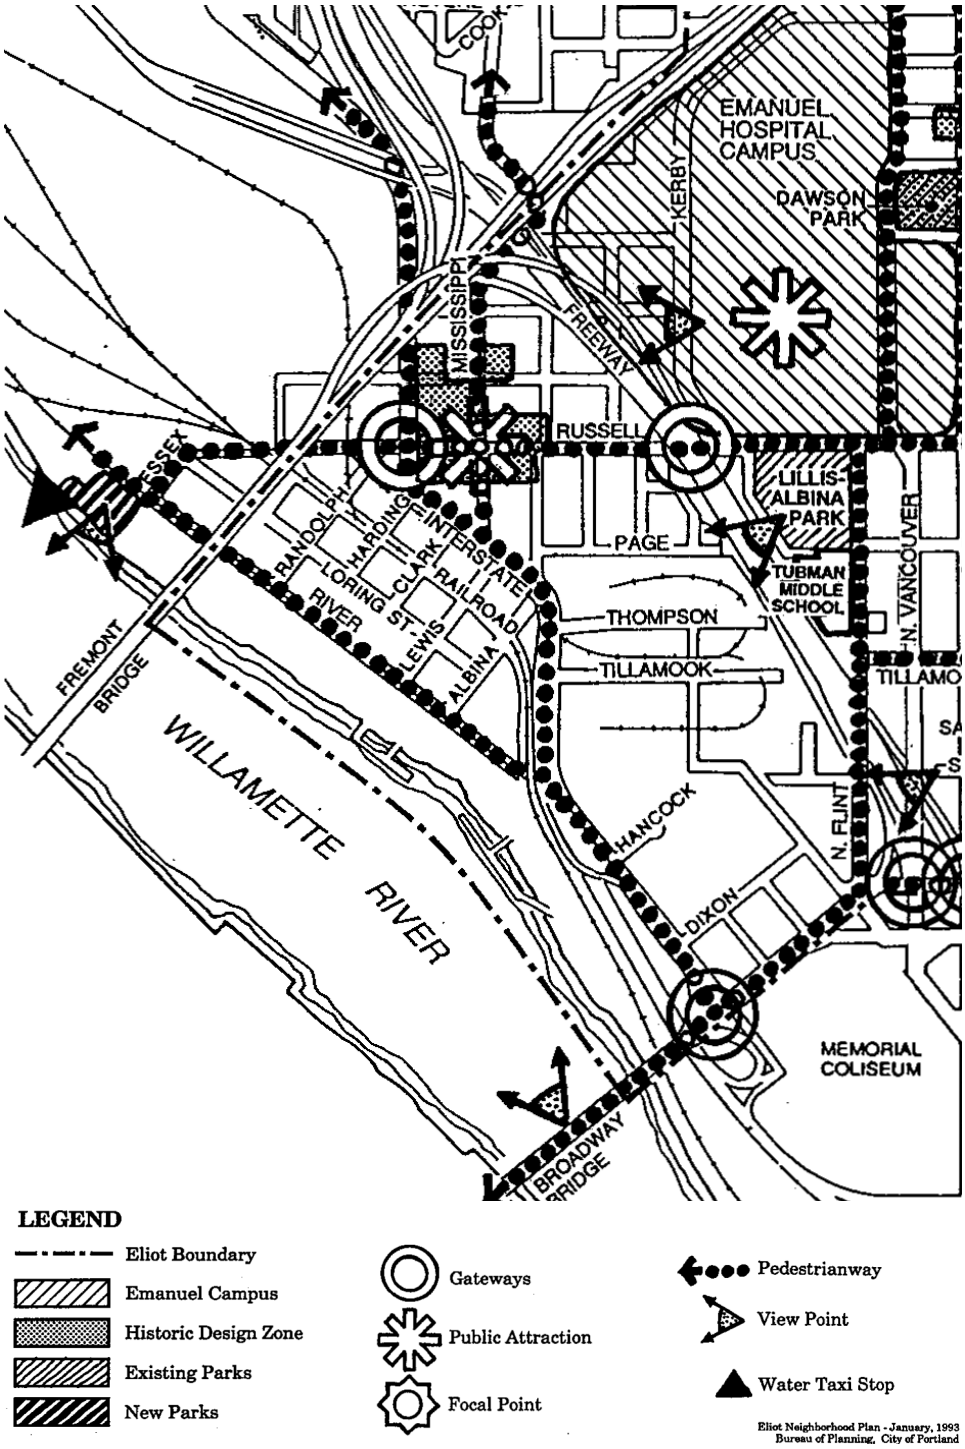
Central City Plan

5 URBAN DESIGN PLAN
LOWER ALBINA

0 200' 400' 600' FEET NORTH



1993 *Eliot Neighborhood Plan* Policy 15: Lower Albina

Preserve the Lower Albina area as an industrial sanctuary protected from commercial encroachment while recognizing that some new commercial features are compatible with the industrial sanctuary designation. Examples include public access to the Willamette River at a small new riverfront park, a pedestrian/bicycle path, and commercial/mixed use development in the Russell Street Historic Design Zone.

Implement the Central City Plan's Policy for Lower Albina.

Policy 15 Action Chart: Lower Albina

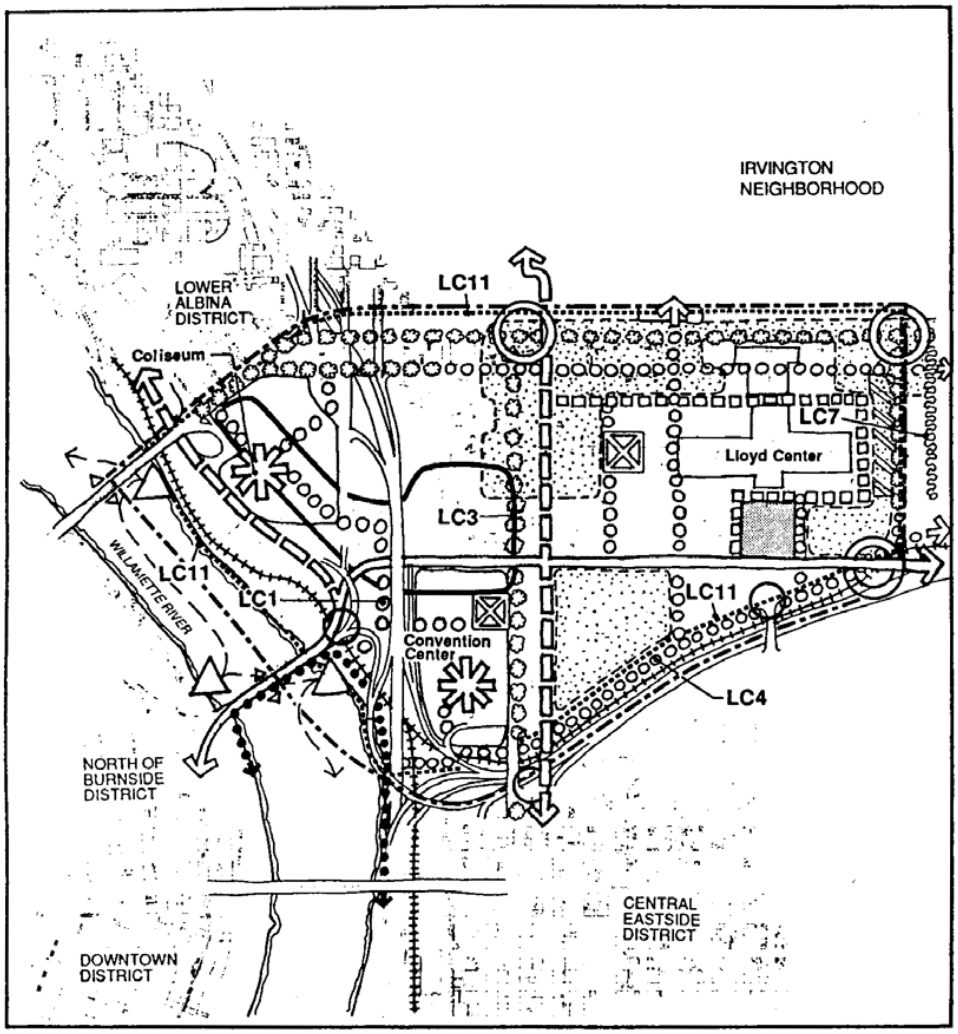
#	Actions	Time				Implementors /Advocates
		Adopted With Plan	On-Going	Next 5 Yrs	6 to 20 Yrs	
	PROJECTS					
EA 1	Plant street trees on Russell Street, Interstate Avenue and Greeley Street (adjacent to Albina Yard).		X			Eliot/Parks/ Overlook
EA 2	Install Portland "two-lantern" ornamental cast iron lighting standards along Russell Street between King and Interstate.			X		PDOT ODOT
EA 3	Create a public walkway connecting the residential areas north and east of Lower Albina to the waterfront.			X		PDOT
EA 4	Create a new waterfront park including fishing pier, water taxi stop and viewpoint north of the Fremont Bridge.			X		PDOT Parks
EA 5	Create a new overpass and rail crossing to eliminate truck-rail conflicts for Lower Albina waterfront industrial sites.				X	ODOT/ PDOT
EA 6	Create a Museum of Portland Music on Russell Street, featuring live performances in a setting similar to Preservation Hall in New Orleans.				X	MAC/Eliot/ Musicians Union/Private
EA 7	Create a new facility on Russell Street to house an Albina Yard Interpretive Center and the Columbia Gorge Model Railway.				X	CGMRR Eliot
EA 8	Landscape the slope between Interstate Avenue and Larrabee Street with flowering plants.			X		Parks/ PDOT
EA 9	Create a gateway at the intersection of Russell and Interstate celebrating arrival at the Russell Street entertainment district.				X	Eliot Private PDOT/ODOT
	PROGRAMS					
EA 10	Use street vacations to promote the creation of super-blocks to foster the development of larger, more marketable industrial sites.		X			Bureau of Planning/ PDOT
EA 11	Foster the revitalization of Russell Street by encouraging additional live music clubs to locate there.			X		Bureau of Planning
	REGULATIONS					
EA 12	Create a Russell Street Historic Design Zone.	X				Bureau of Planning
EA 13	Allow development of light industrial activities that reinforce the entertainment theme of Russell Street.	X				Bureau of Planning
EA 14	Allow loft housing by right along part of Russell Street.	X				Bureau of Planning

Eliot Neighborhood Plan Urban Design Concept (detail showing Lower Albina)

1988 *Central City Plan* Policy 19: Lloyd Center-Coliseum

Reinforce the Lloyd Center as the eastern anchor of Central City retailing and locate the highest density new development in areas served by light rail.

FURTHER:



A. Recognize the Lloyd Center-Coliseum District's role as a major entrance to the Central City.

B. Improve the environment for pedestrians throughout the district and create a regional civic facilities campus which brings together the Convention Center and Coliseum.

C. Promote and encourage the development of uses supporting the Convention Center and Coliseum.

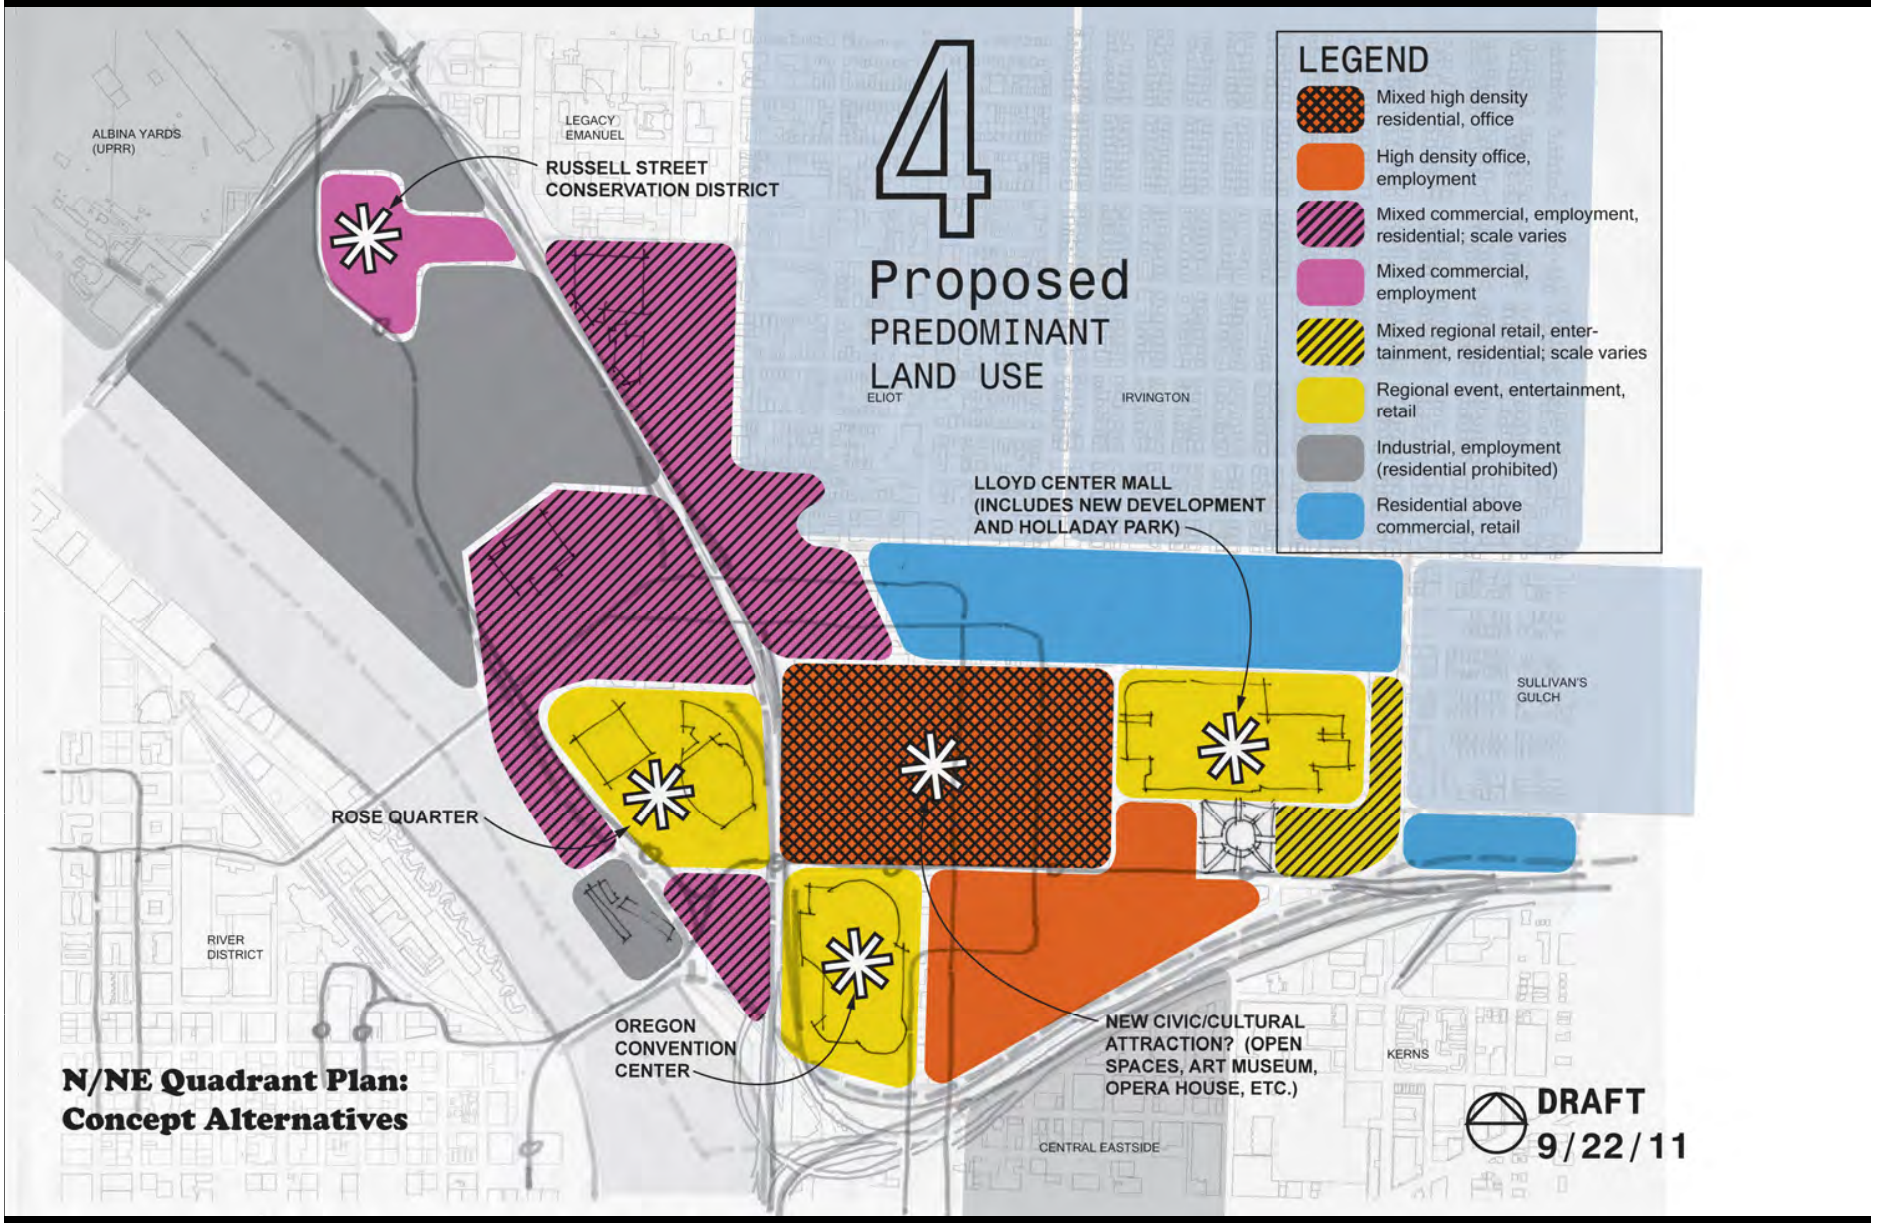
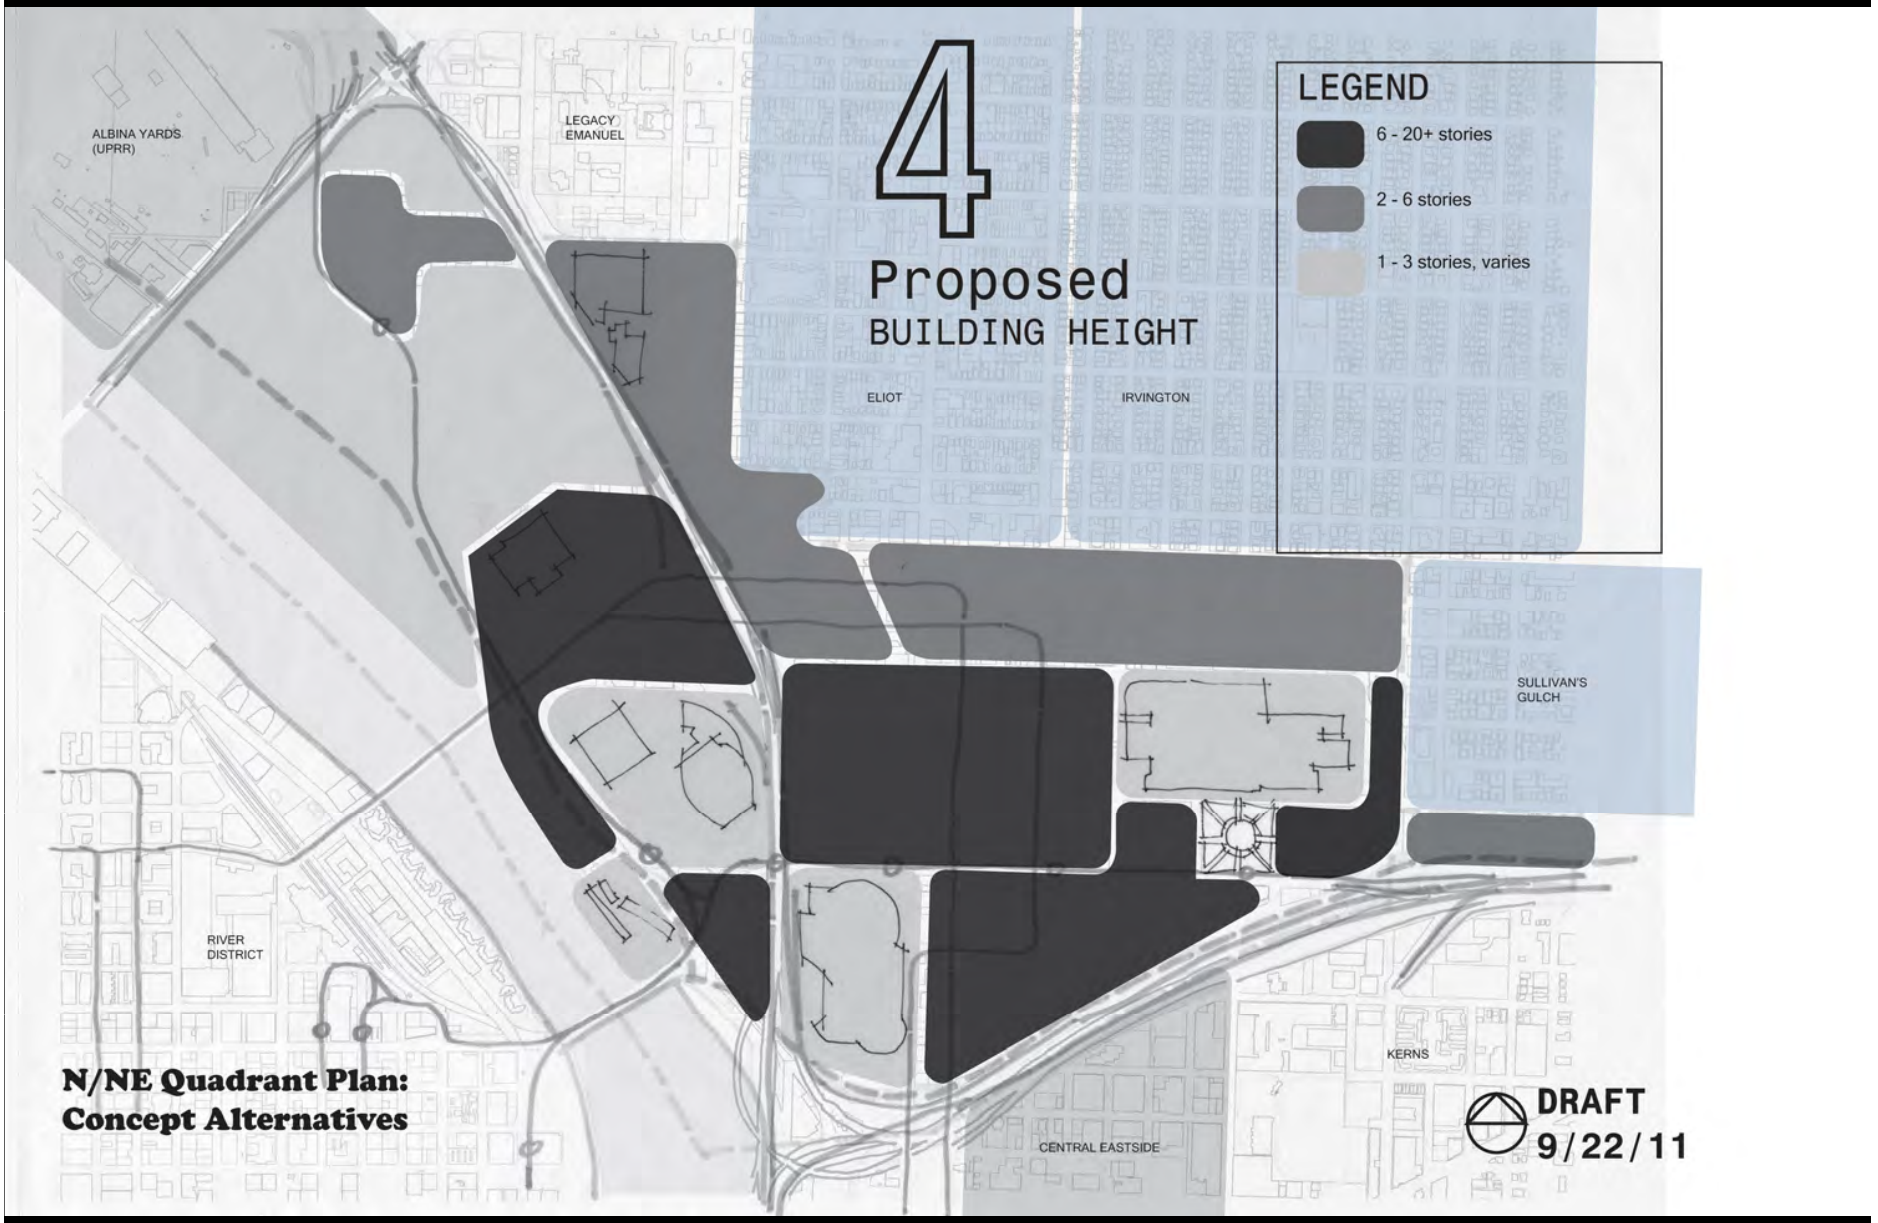
Proposed Quadrant Concept

Presentation Overview



1. Revisions to Proposed Concept Diagrams
2. Evaluation of Proposed Concept
3. SAC Discussion
4. Action: Do you approve the concept layers for the purposes of moving forward with public comment and Phase IV Plan Development?
5. Next Steps – Phase IV, Plan Development

Revisions to the Proposed Concept



Changes to Proposed “70%” Concept

1. Predominant Land Use, Height
2. Mobility (Transportation and Design Typologies)
3. Open Space
4. Green Systems

From September 29 SAC Meeting: **PREDOMINANT LAND USE**

From September 29 SAC Meeting: **BUILDING HEIGHT**

LOWER ALBINA

- Continue as a functioning and growing industrial and employment district
- Limited change
- Greater flexibility east of UP rail line

RUSSELL STREET

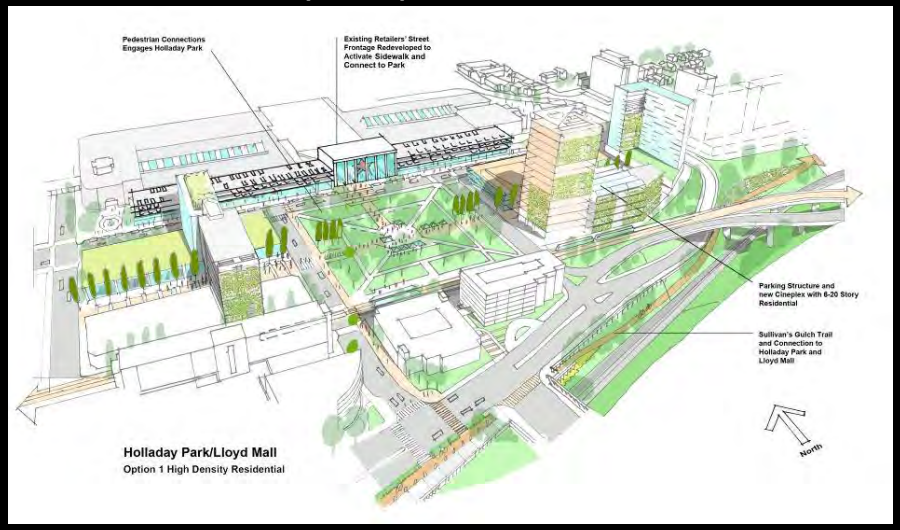
- Continue to preserve and celebrate the conservation district
- Expand mixed use area east along Russell and south to light rail station
- No expansion of residential area

OFFICE CORE

- Continue as active, expanding office district
- Residential possible, but not emphasized

BROADWAY / WEIDLER CORRIDOR

- Extend and expand existing main street development to the west
- Predominantly 2 to 6 story development along Broadway, taller south of Weidler
- Typically housing over ground floor commercial, retail uses



LOWER VANCOUVER / WILLIAMS

- Increase flexibility to allow more commercial, employment uses in current RH-zoned areas
- Continue to encourage residential uses
- Integrate and enhance cultural and historic resources in the area

NORTHWEST ROSE QUARTER

- Increased land use flexibility at Blanchard site, residential possible – sensitive transition to industrial area needed
- Larger scale, more frequently-active development along N. Broadway
- New riverfront open space on Thunderbird site

EASTERN EDGE / MULTNOMAH

- Focus on residential development, commercial allowed
- Potential expansion of mall-related regional retail
- 2 to 6 story development east of 16th, taller allowed around Holladay Park

CENTRAL CORE

- Mix of high density residential and office development
- Organized around new open space system
- NE 7th as potential new urban main street for the area
- Cluster residential buildings along Clackamas

PREDOMINANT LAND USE and BUILDING SCALE

CLARIFICATIONS

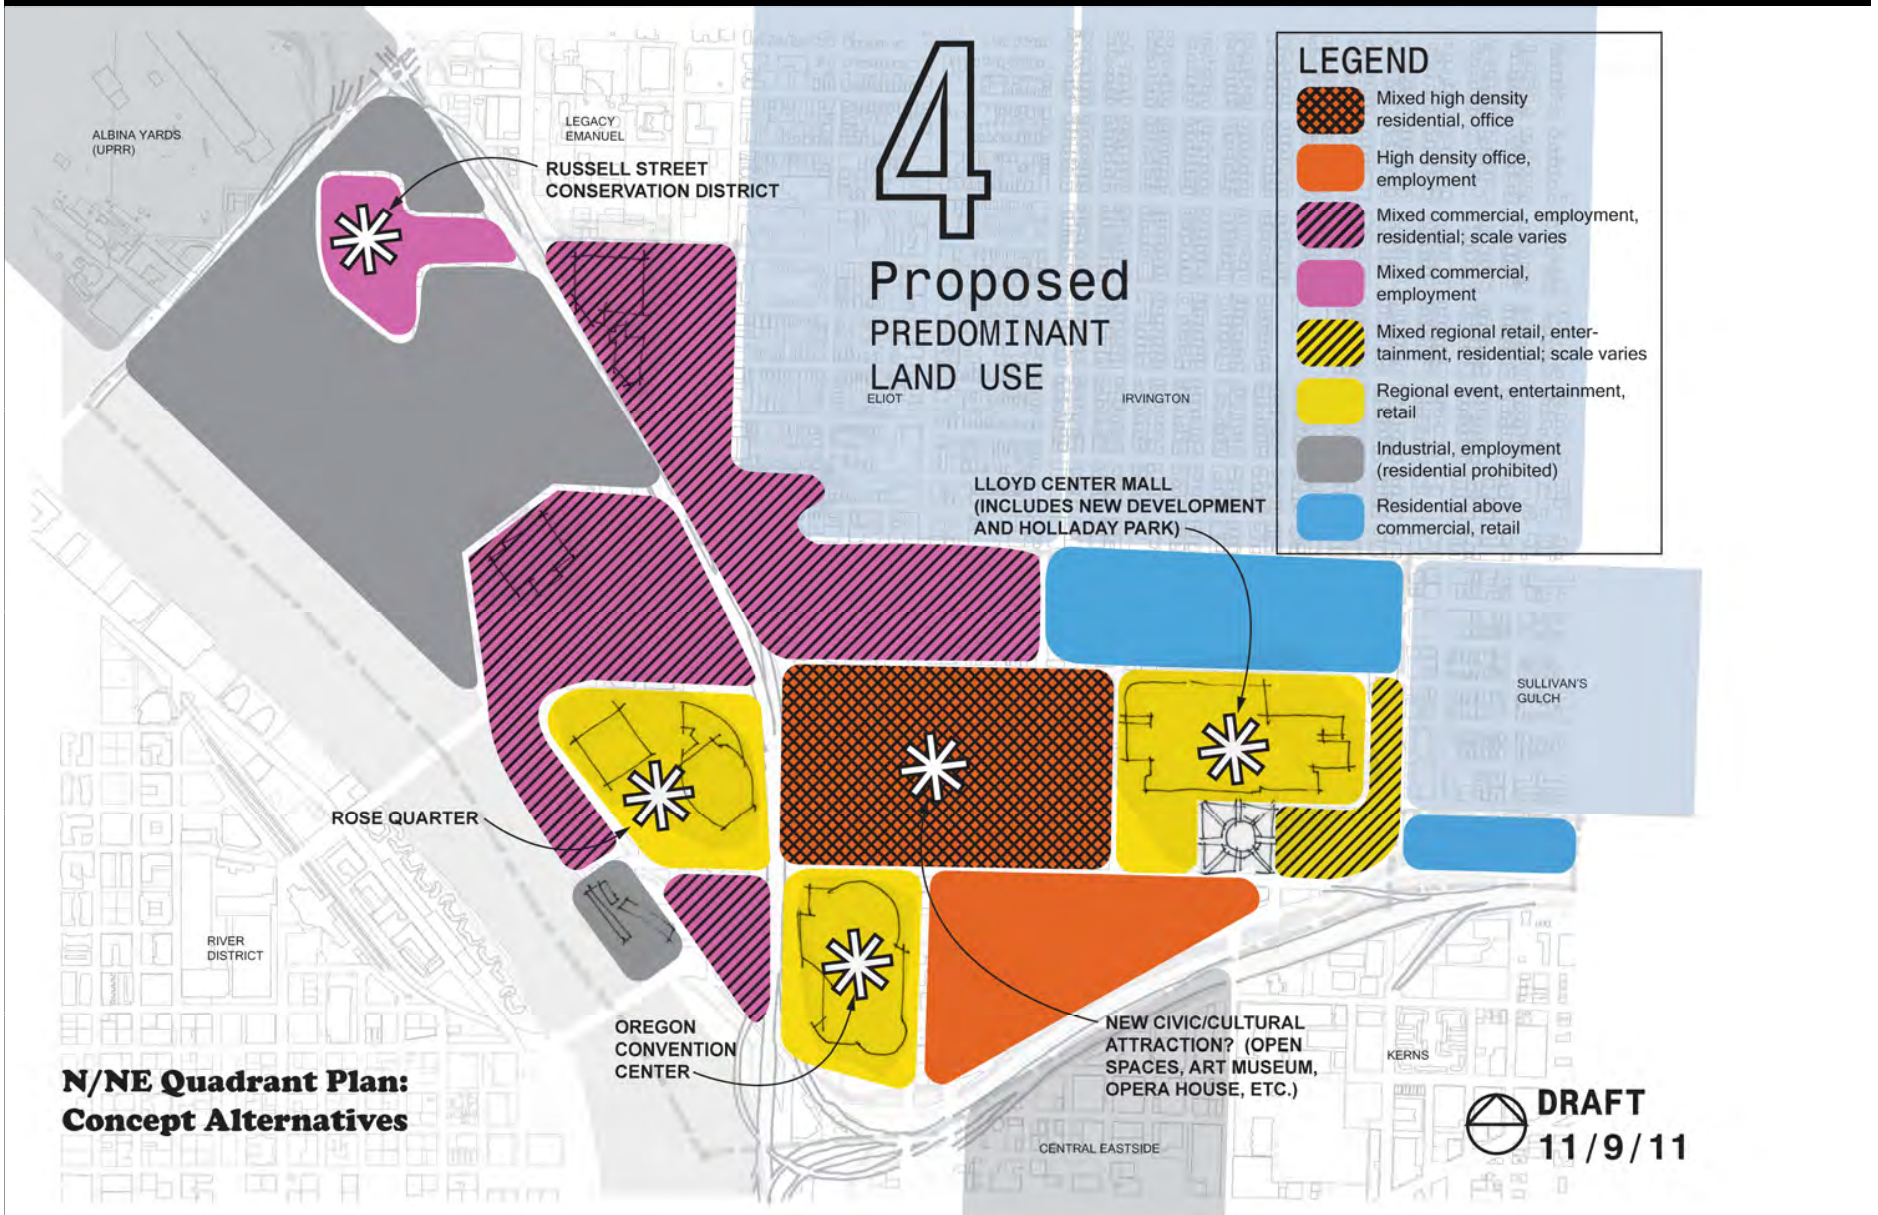
•Minimal change and no expansion to areas where housing is allowed in Lower Albina (no cross-hatching)

•Employment Opportunity "overlay" does not rezone industrial lands

•Increased land use flexibility for the PPS Blanchard Site (zoning change proposed)

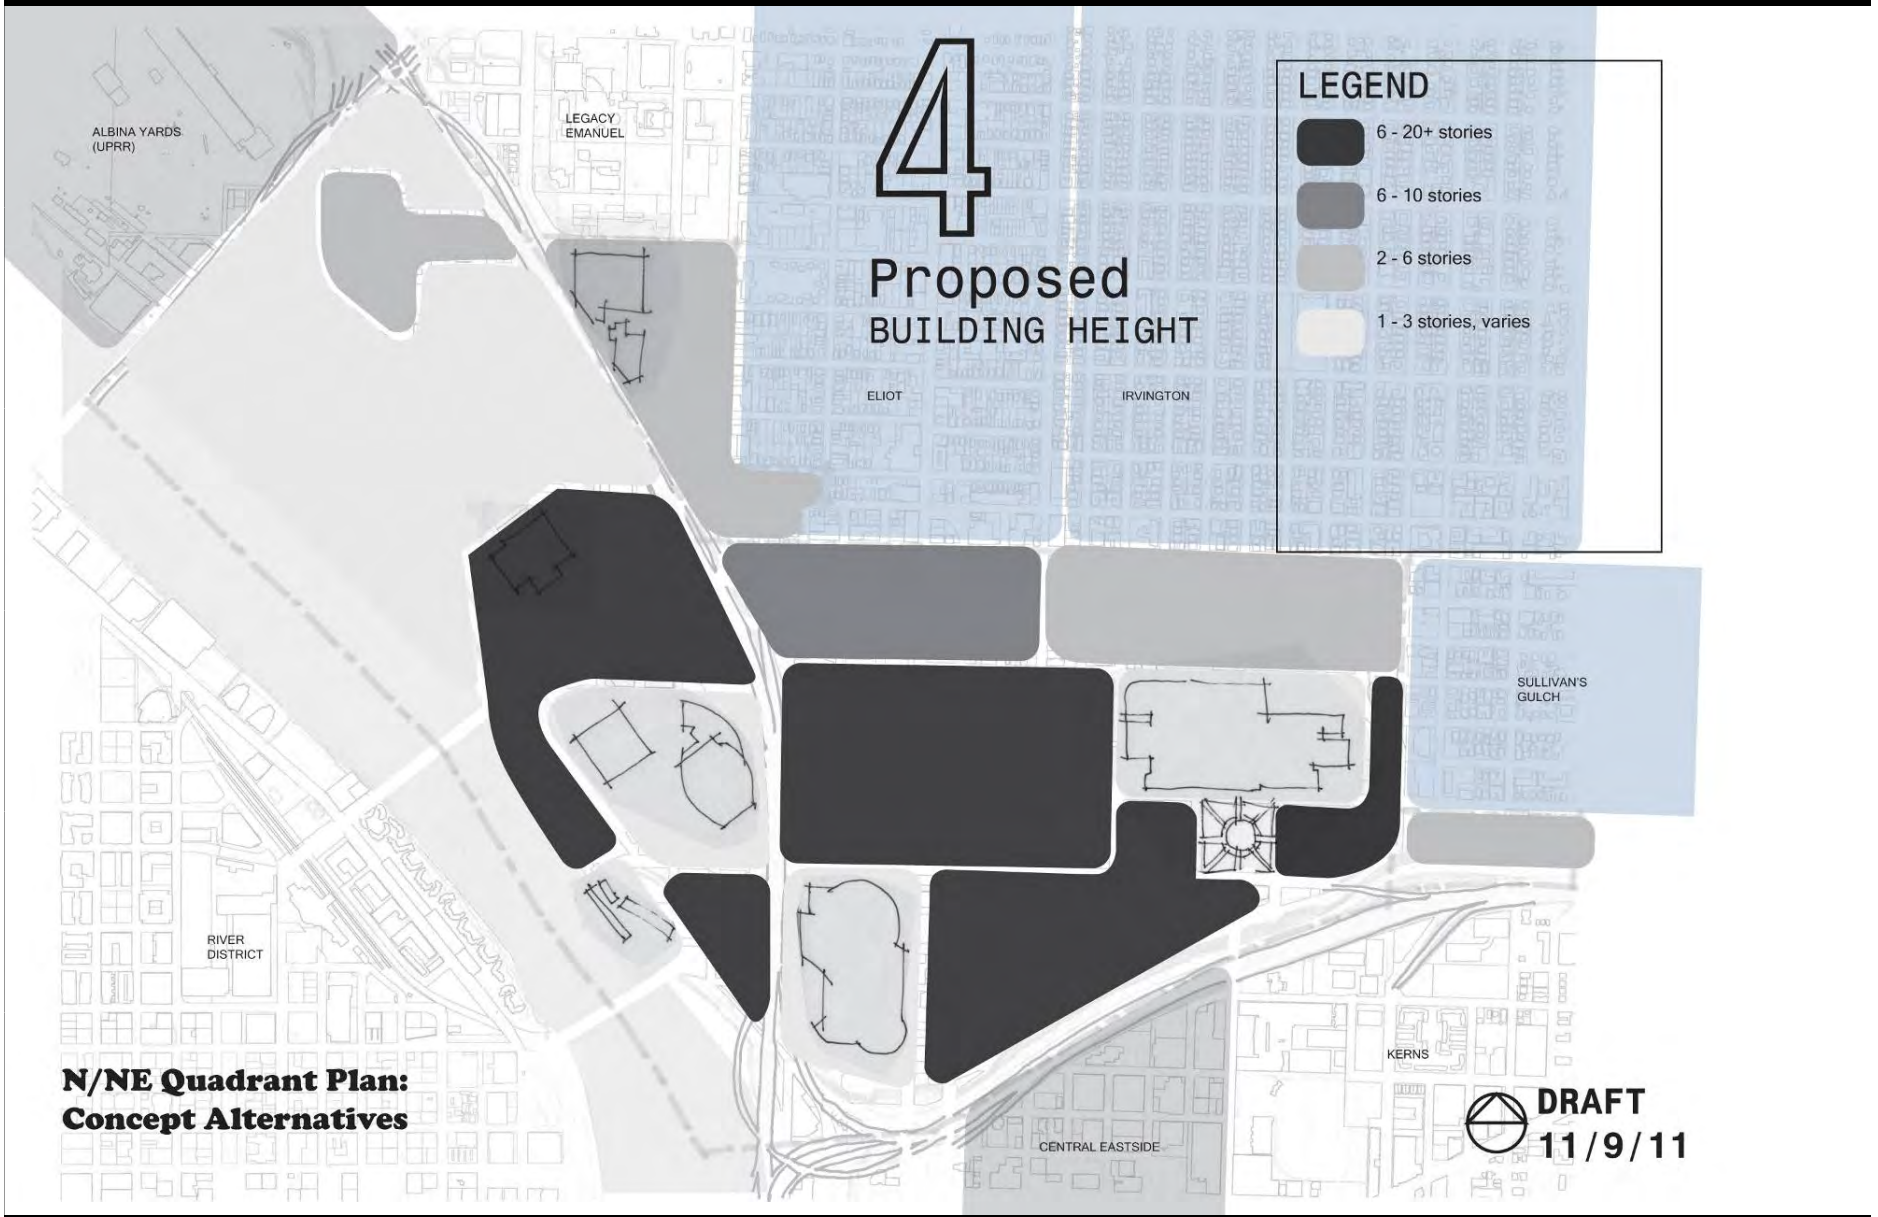
CHANGES SINCE 9/29 SAC MEETING

Predominant Land Use



•Extend "Mixed employment, commercial, residential" (pink, hatched) designation east along Broadway/Weidler corridor to NE 7th

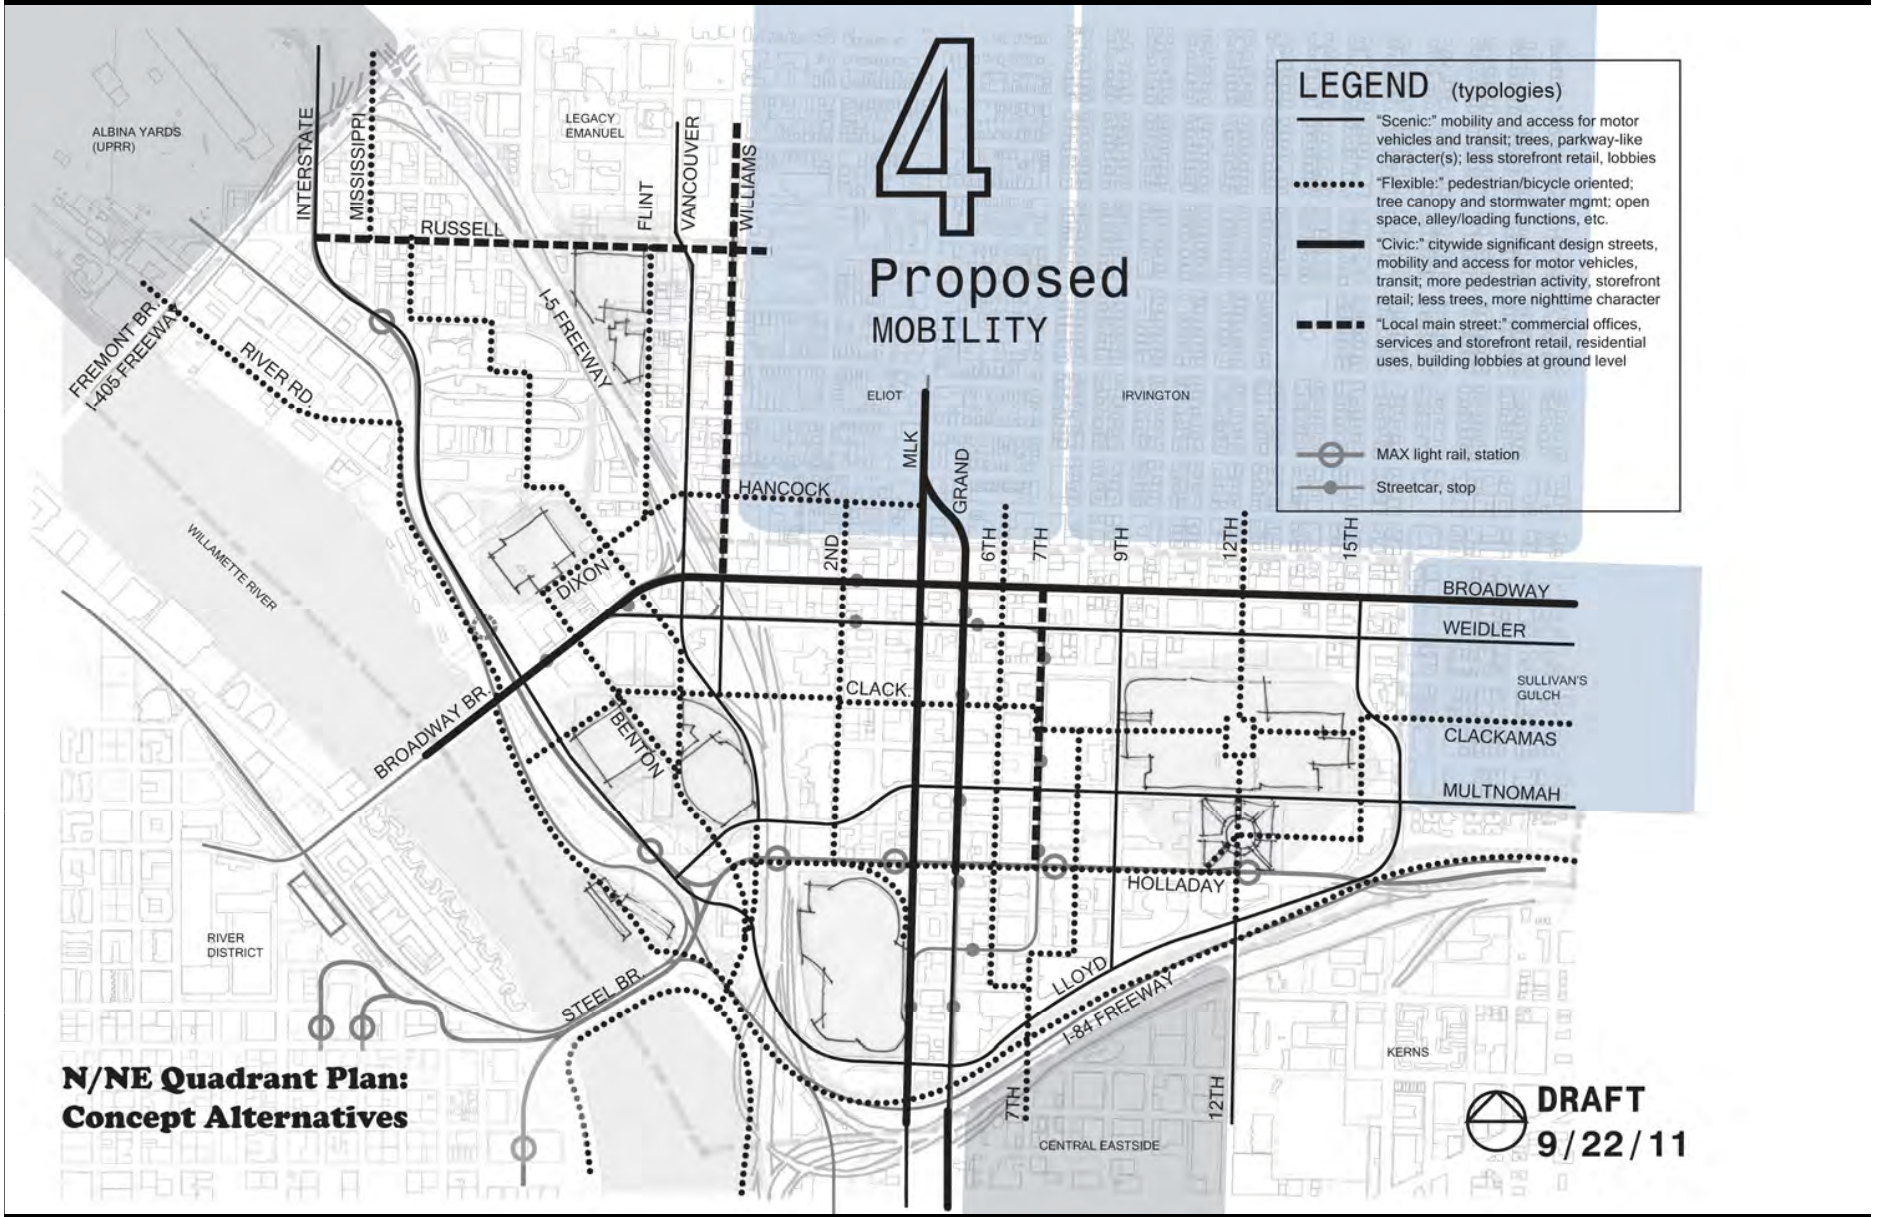
•Include Doubletree Hotel site in "Regional event, entertainment, retail" (yellow) designation



Building Height

• Increased the building height along Broadway/Weidler corridor between I-5 Freeway and NE 7th to 6 to 10 stories (similar to current regulations)

Predominant Land Use: **REVISED CONCEPT**



Building Height: **REVISED CONCEPT**

SAC Questions

Predominant Land Use, Height

From September 29 SAC Meeting: **MOBILITY**

PROPOSED STREET DESIGN TYPOLOGIES

(names subject to change)

"Civic" – Active, big, public, regional

"Local Main" – Busy, active, locally-oriented

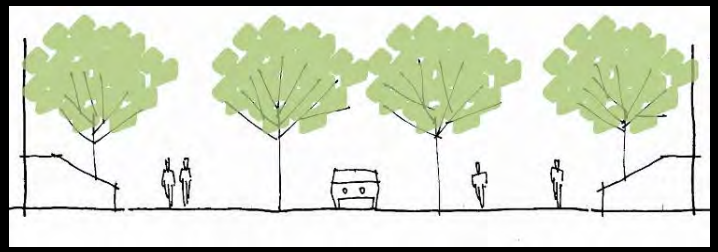
"Scenic" – Movement, access, green

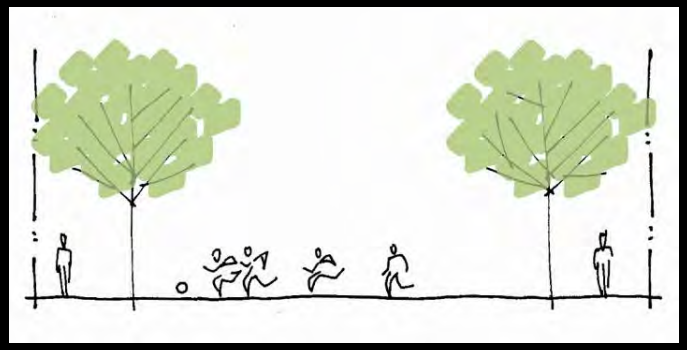
"Flexible" – Small, intimate, open space, variety

- Clarify expectations along different corridors in the quadrant
- Encourage, target retail uses where they will be most successful
- Propose alternatives to the retail street that can be great places too
- Increase public space options for quadrant residents, workers and visitors

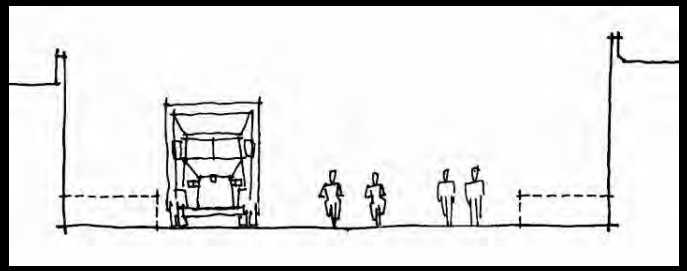
Design Typologies: **“CIVIC” and “LOCAL MAIN”**

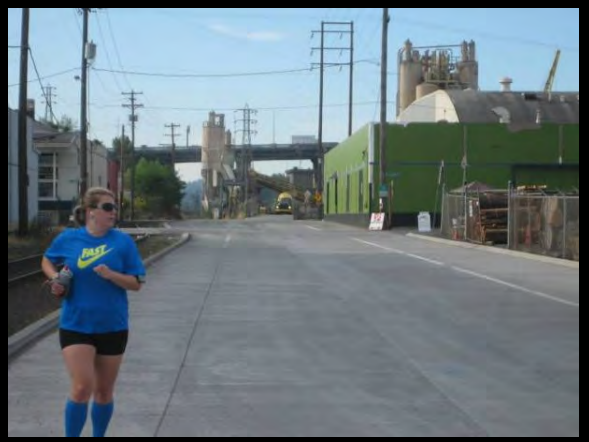
Design Typologies: **“SCENIC”**





Design Typologies: **“FLEXIBLE”**





MOBILITY

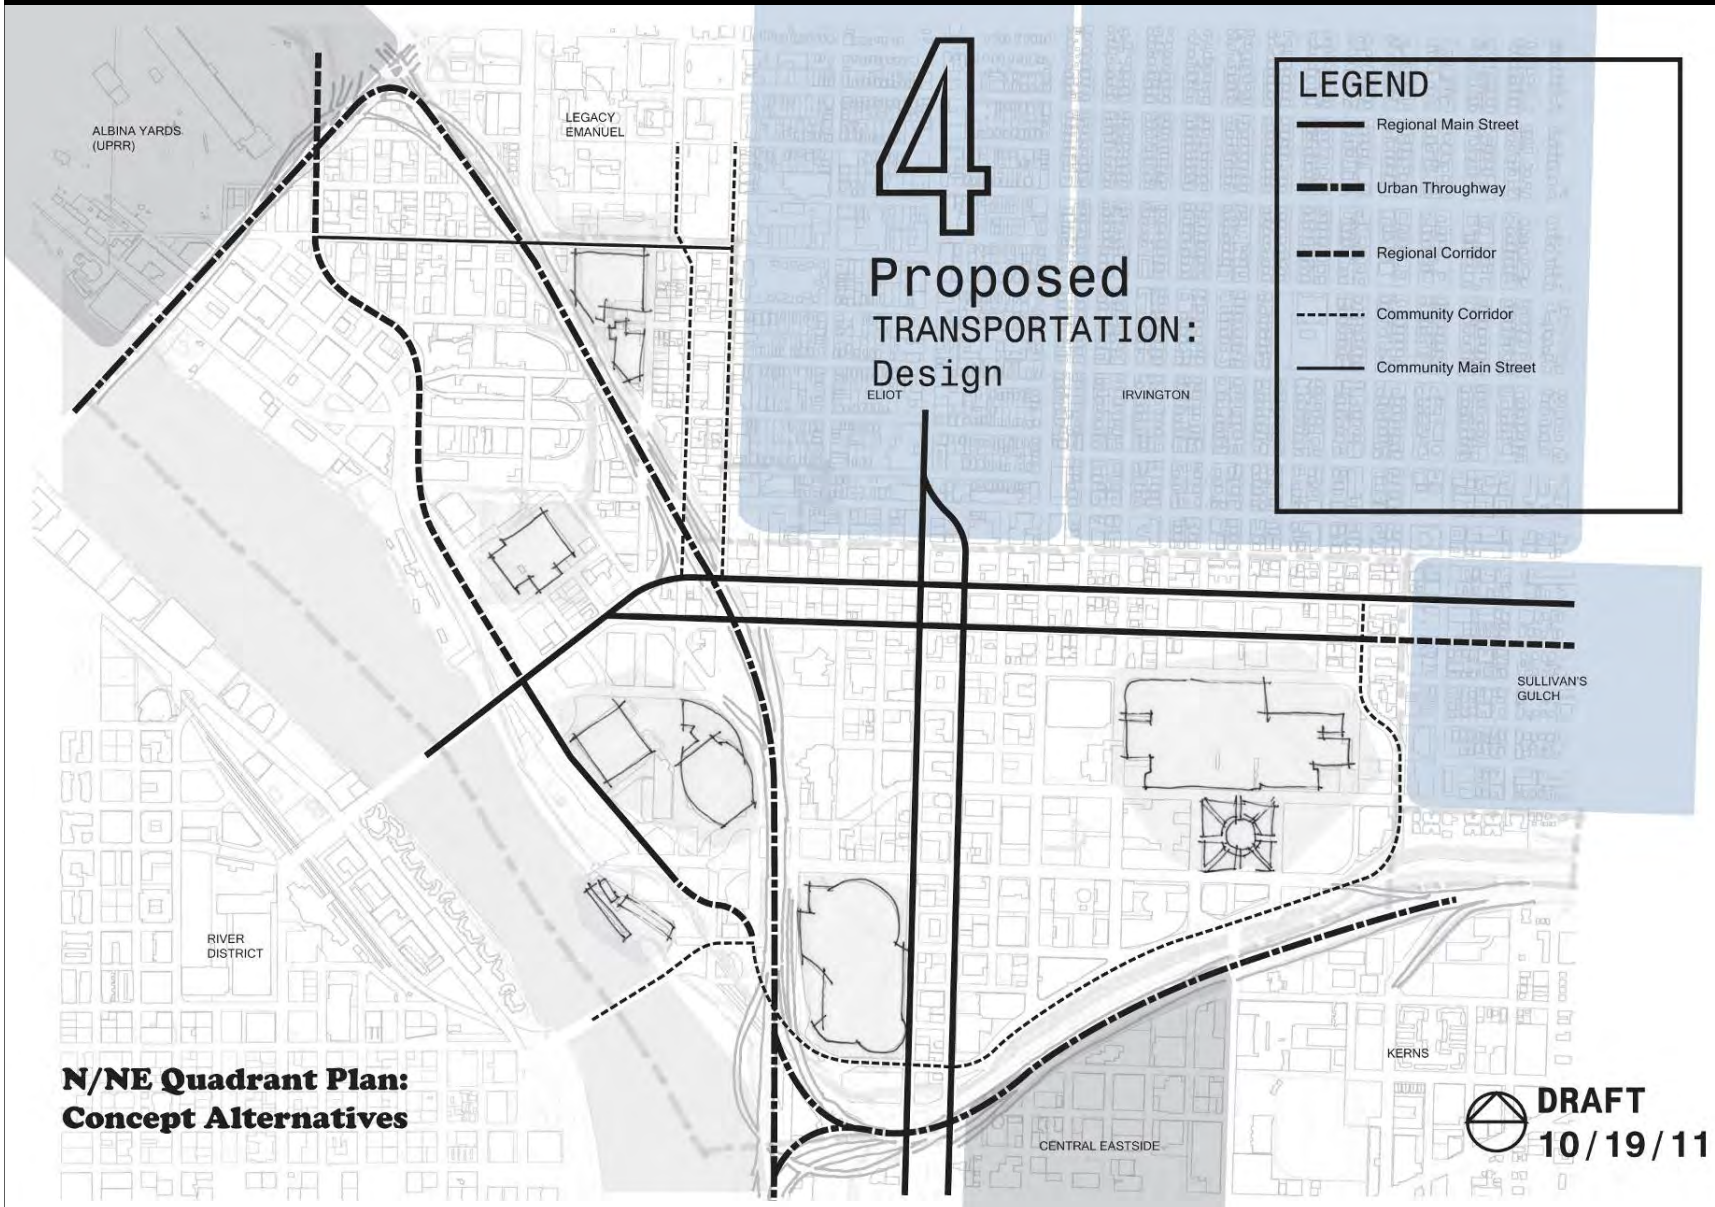
CLARIFICATIONS

• Clarified proposal's relationship to Transportation System Plan (TSP) classifications, modal and design

• Began exploring arrangement of different "Flexible" design types

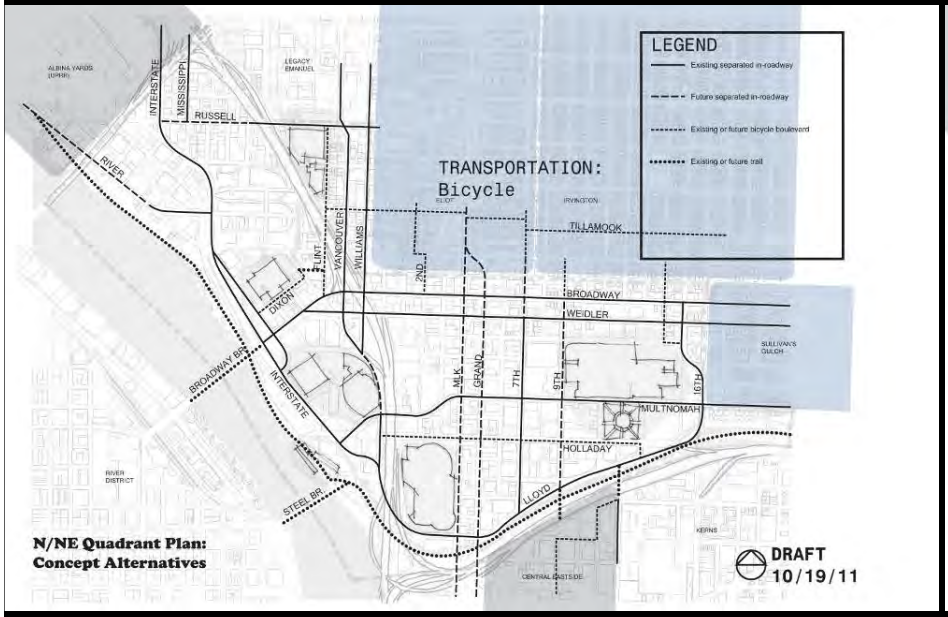
CHANGES SINCE 9/29 SAC MEETING

Street Typologies

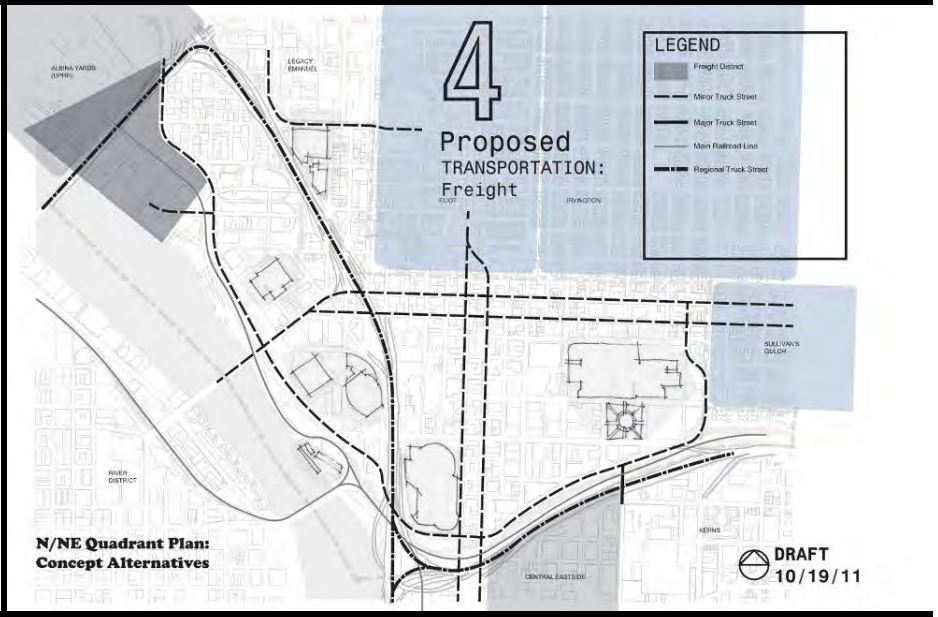


• Changed Multnomah from "Scenic" to "Local Main"

• Added Pacific as "Flexible"

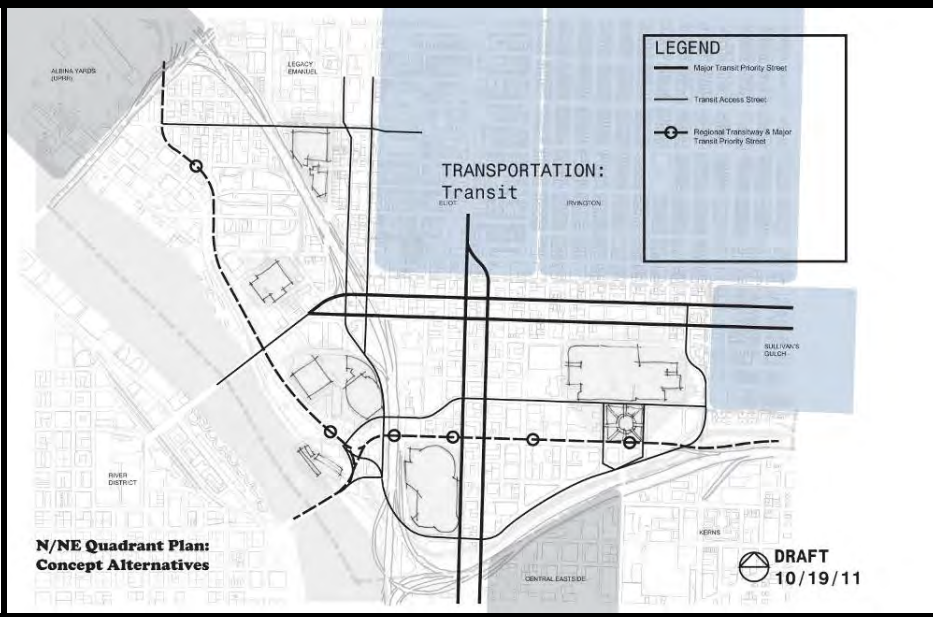


Mobility + Place

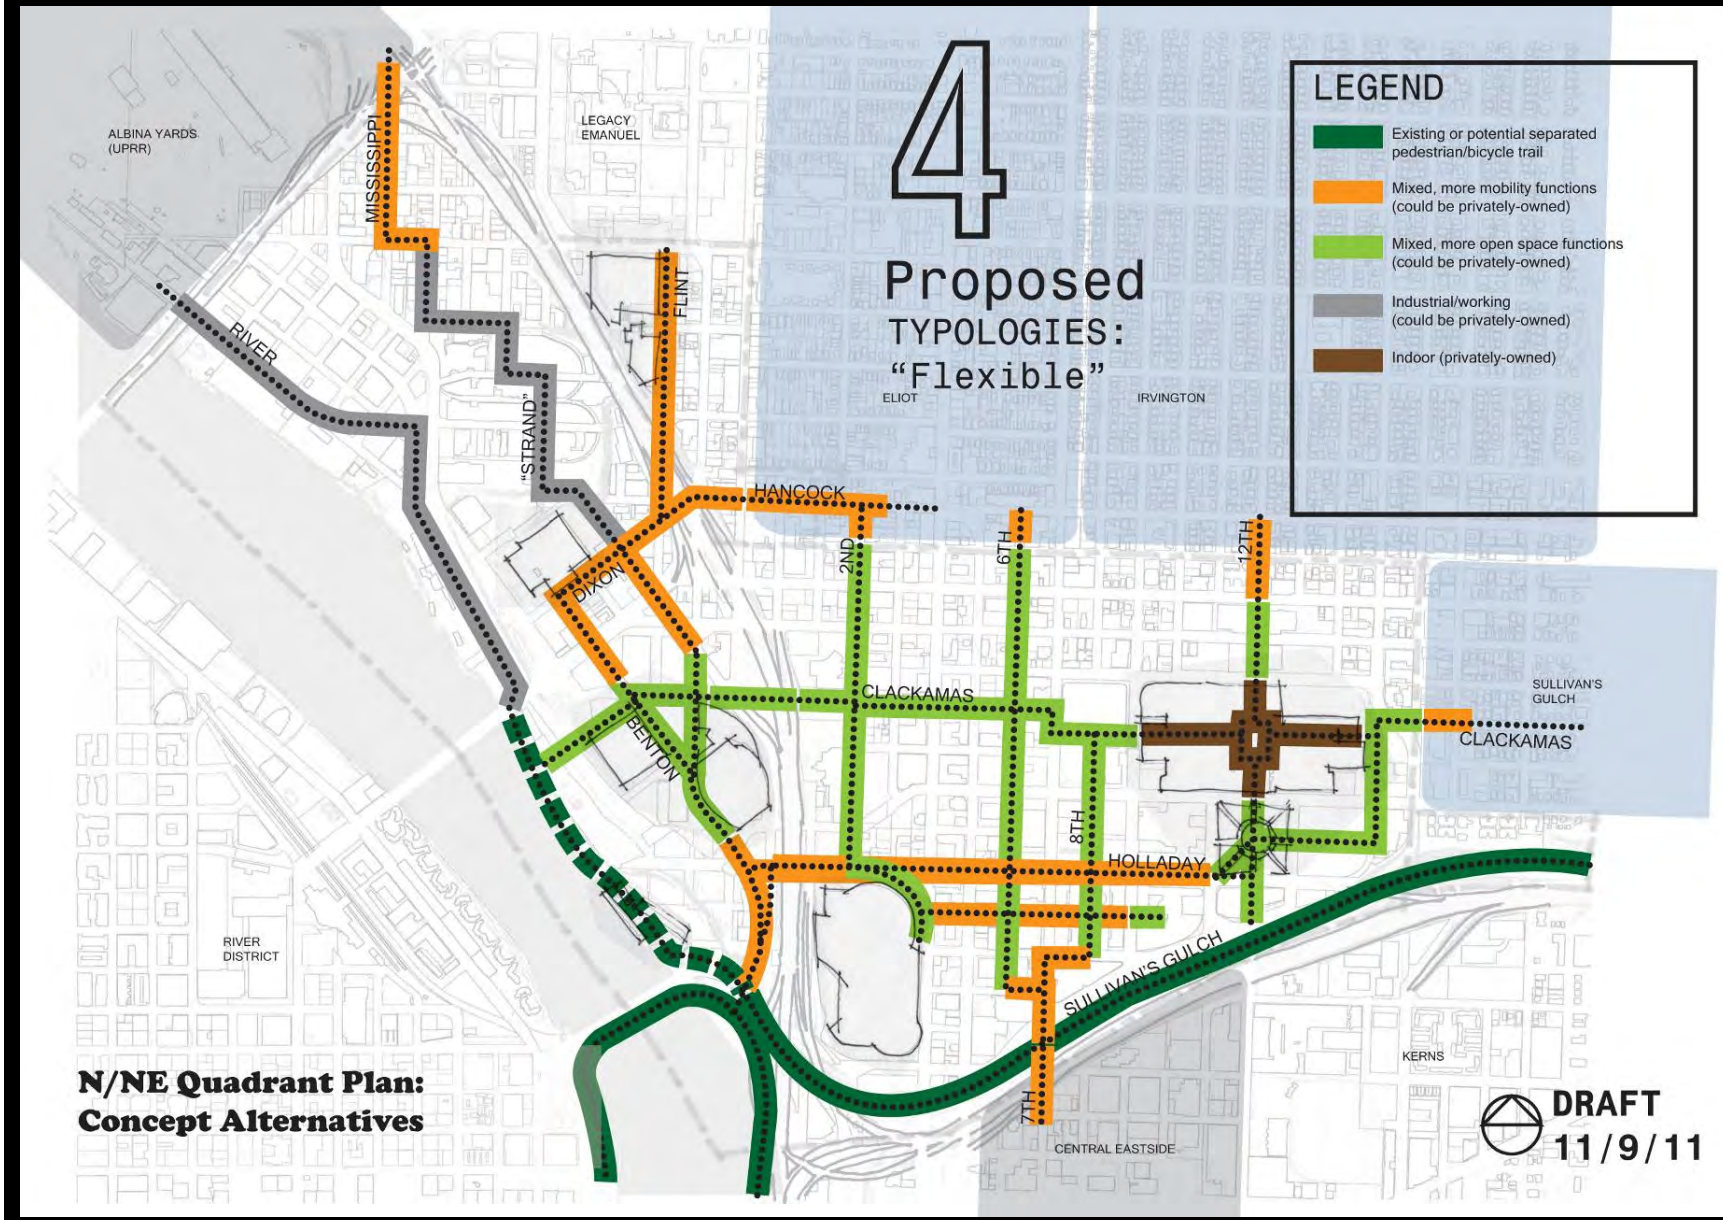


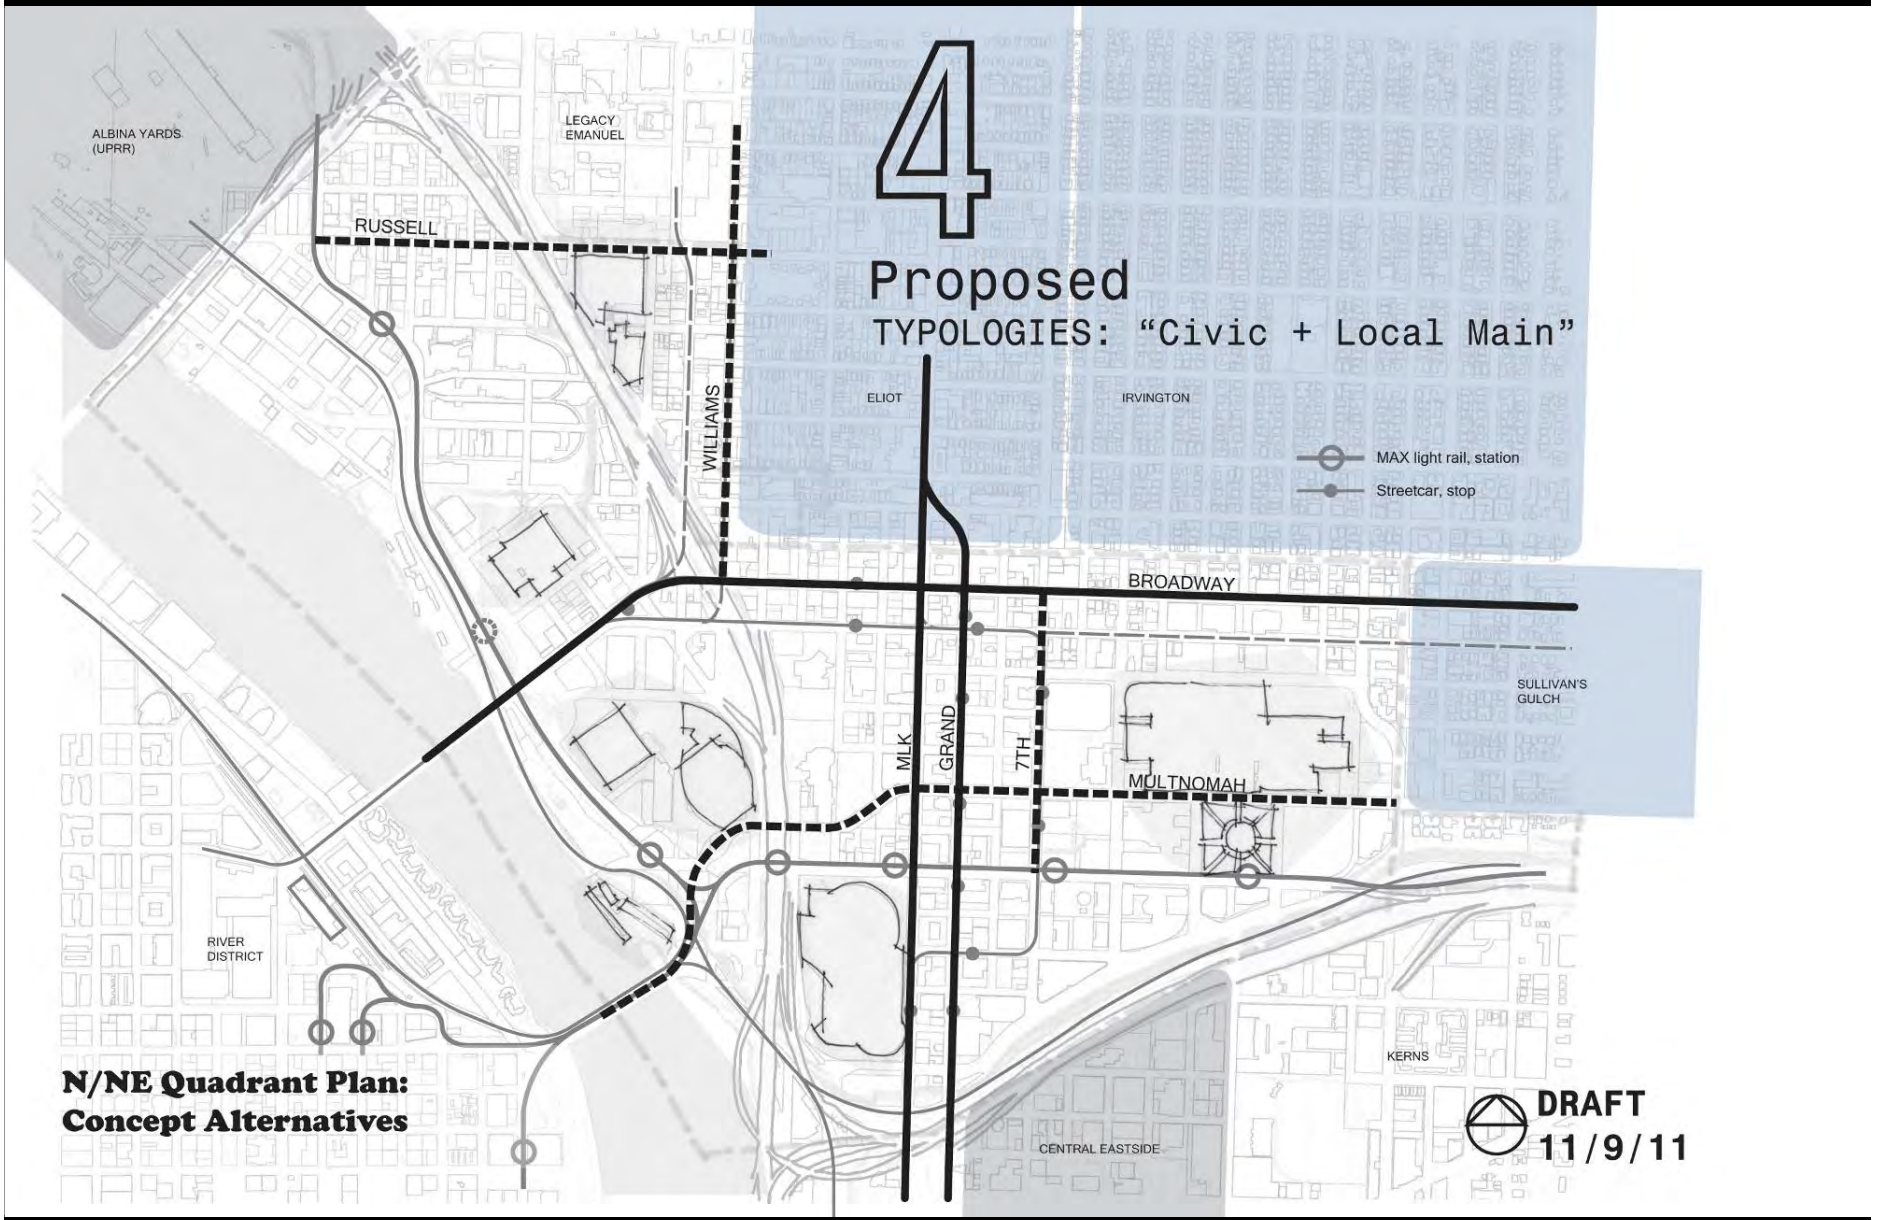
• Revised/refined the former "Mobility + Place" diagram to show more sensitivity to adjacent districts

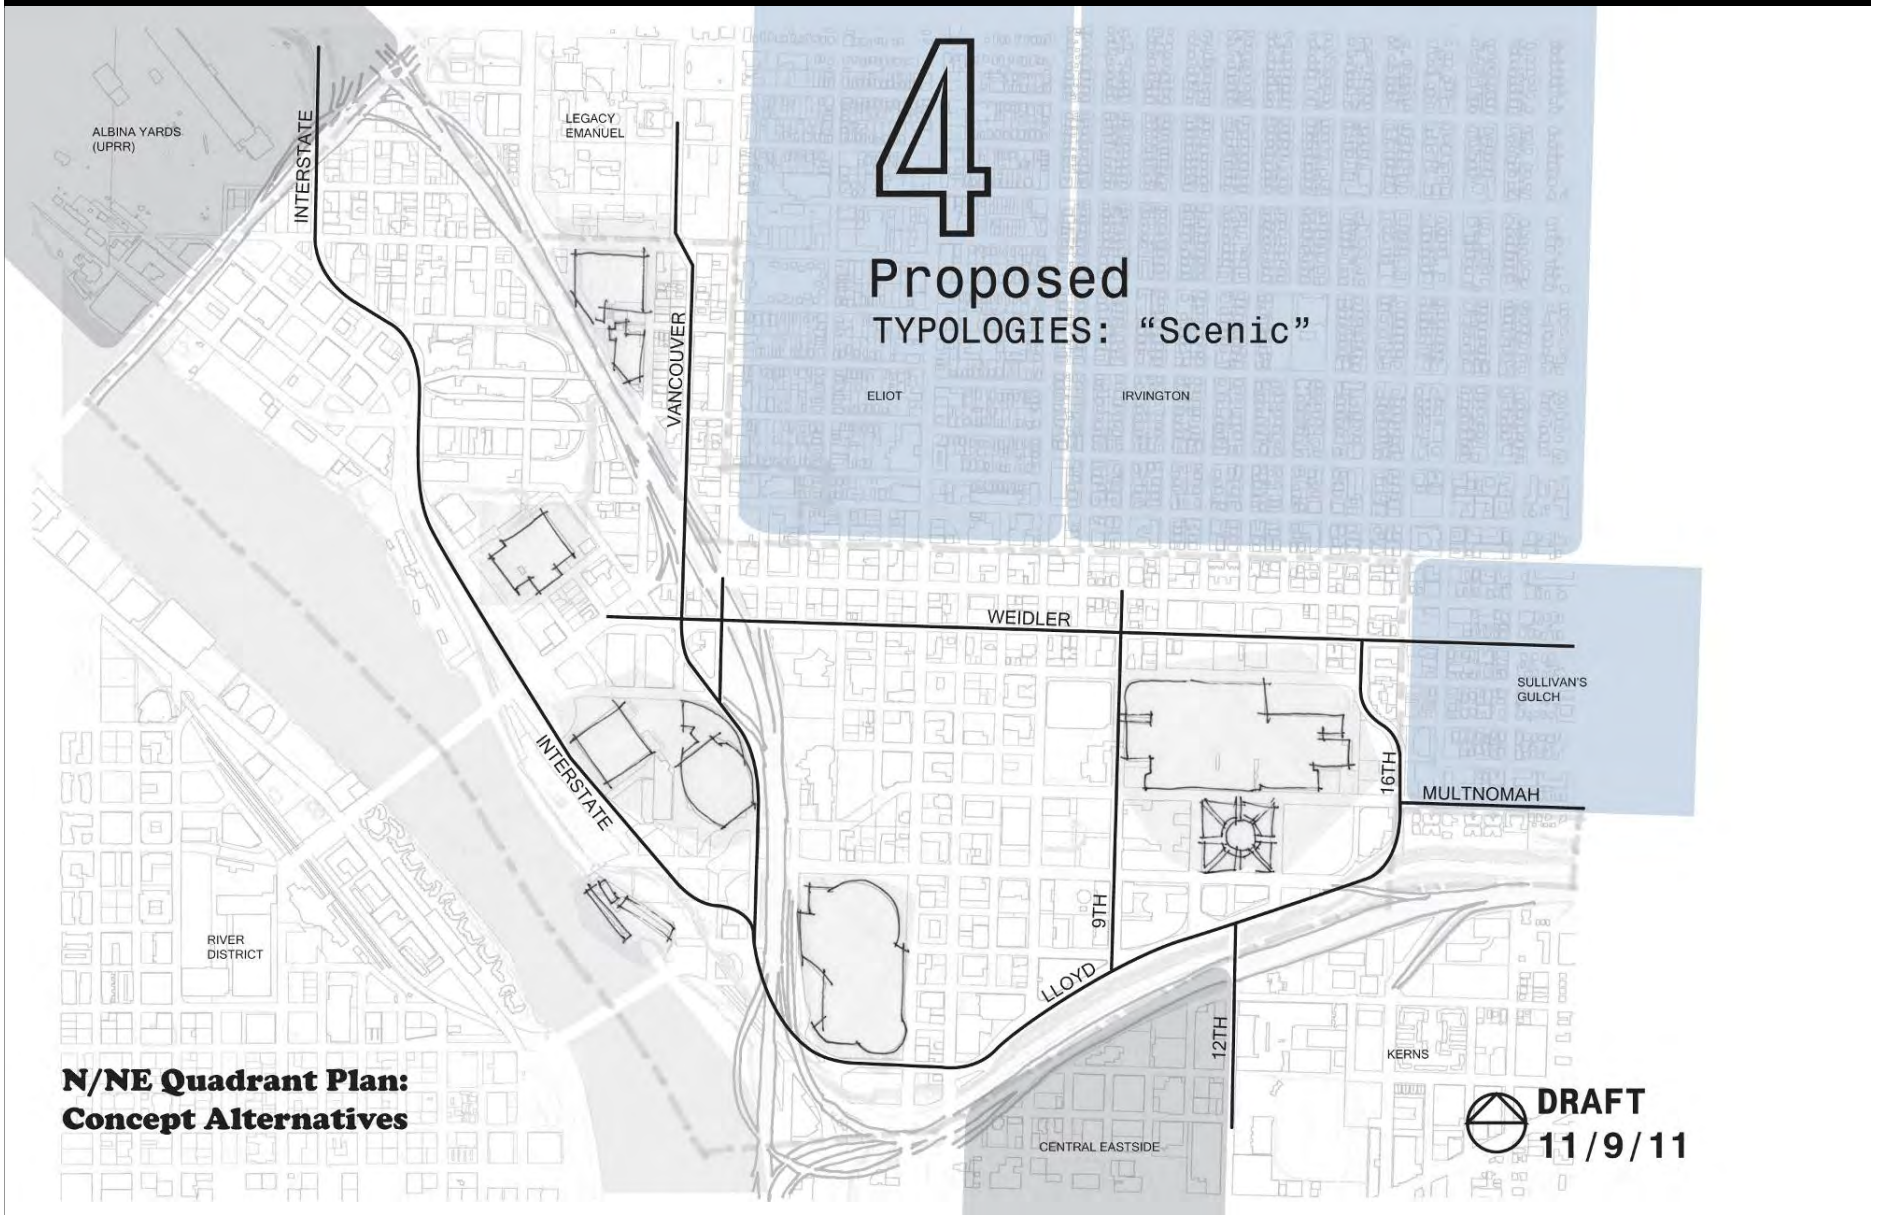
Transportation System Plan (TSP) **Design Classifications**



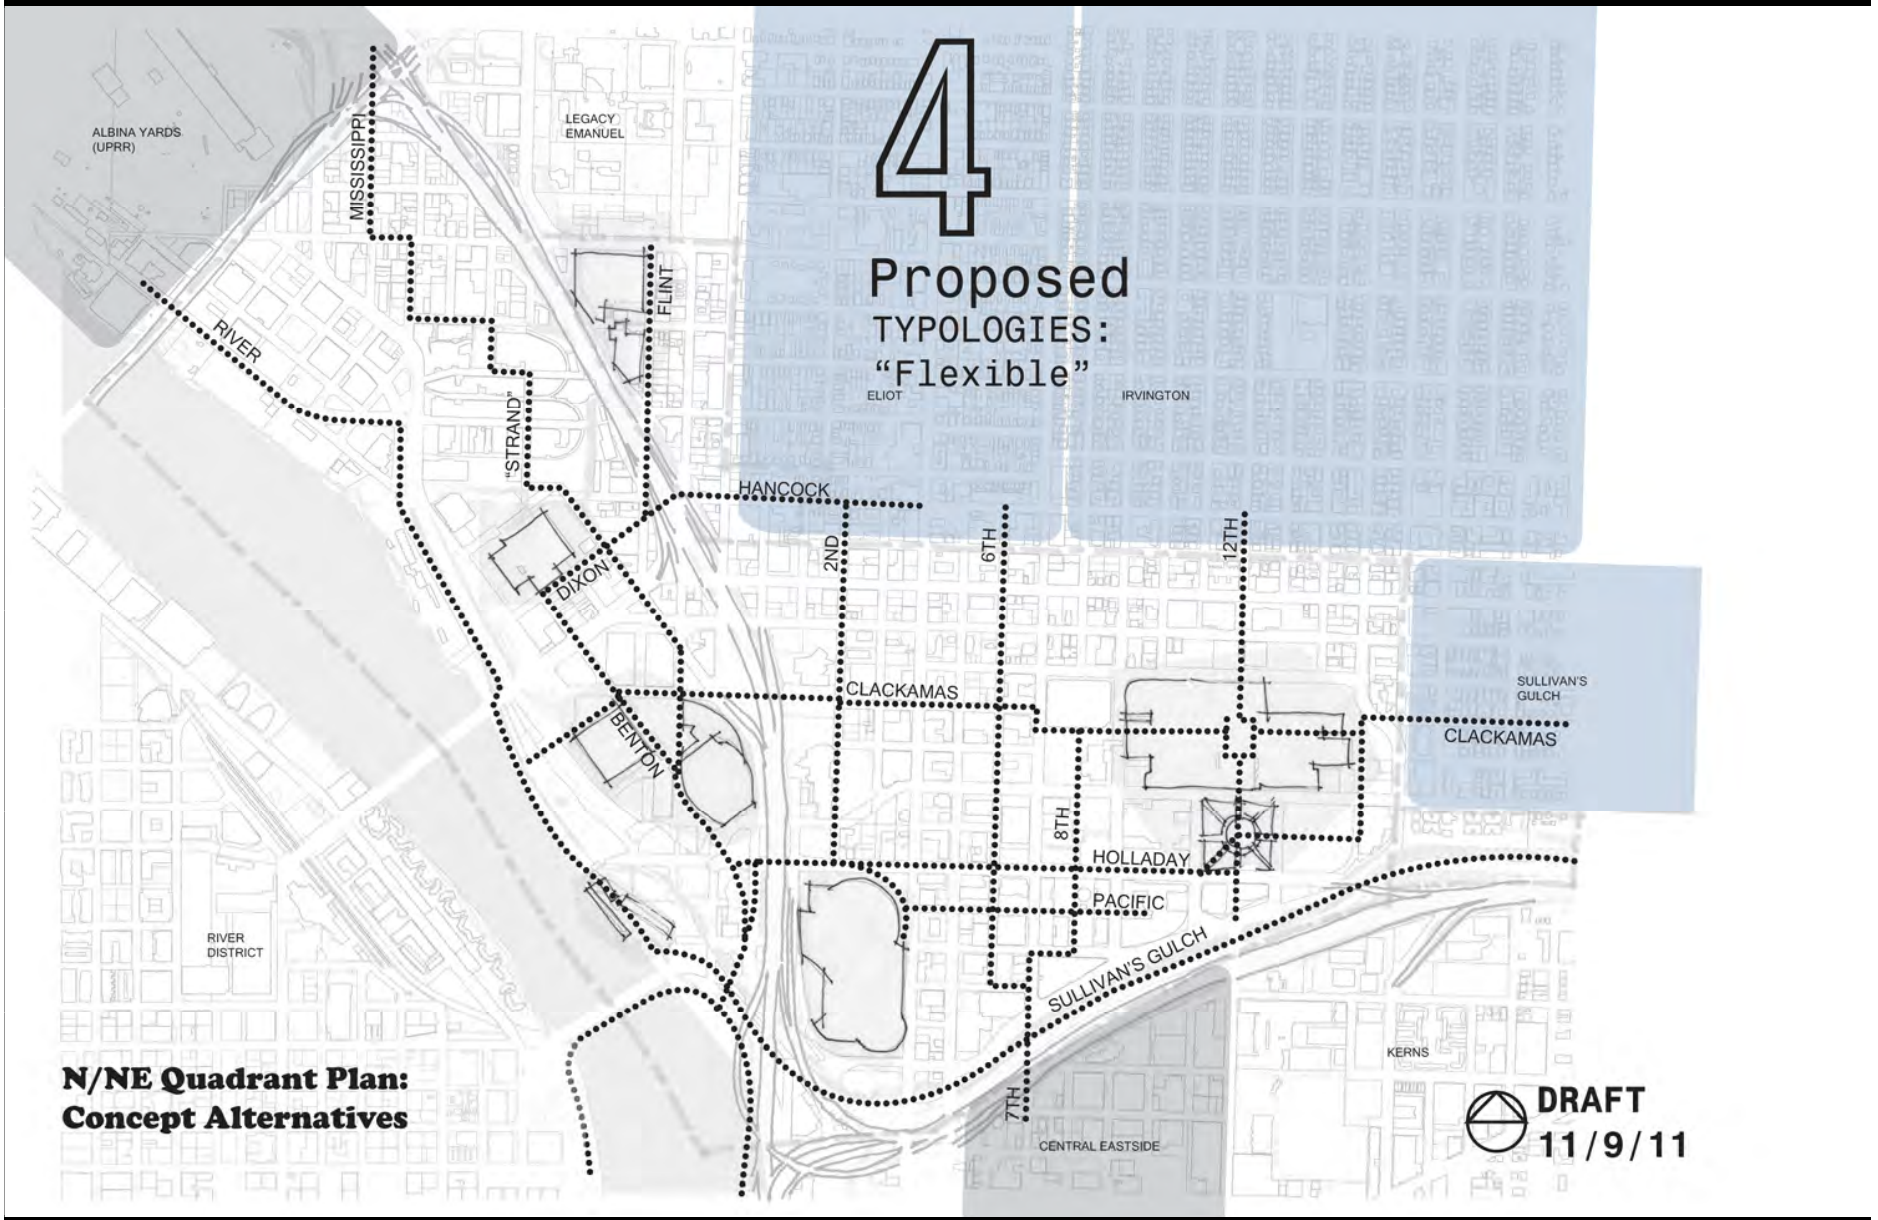
TSP **Modal Classifications**



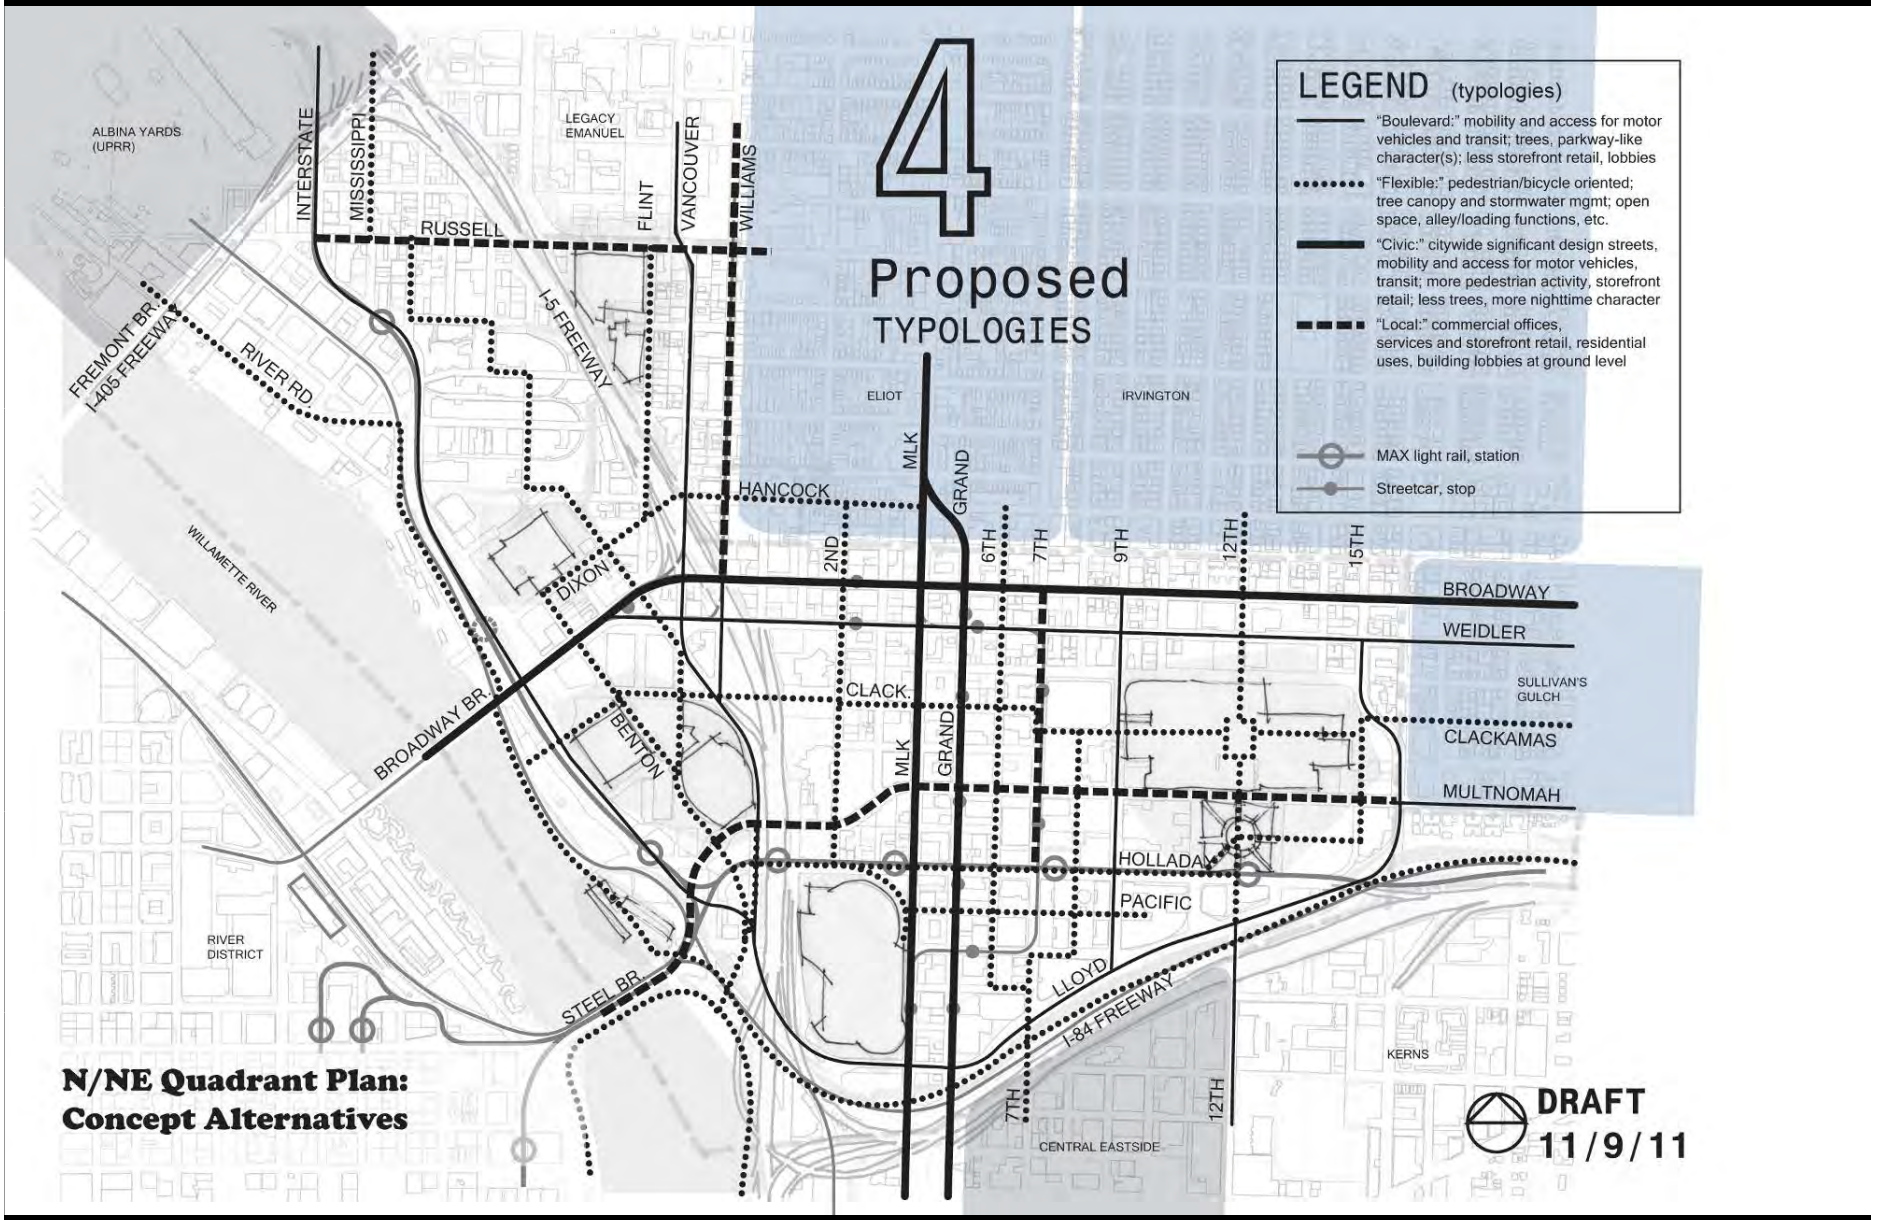




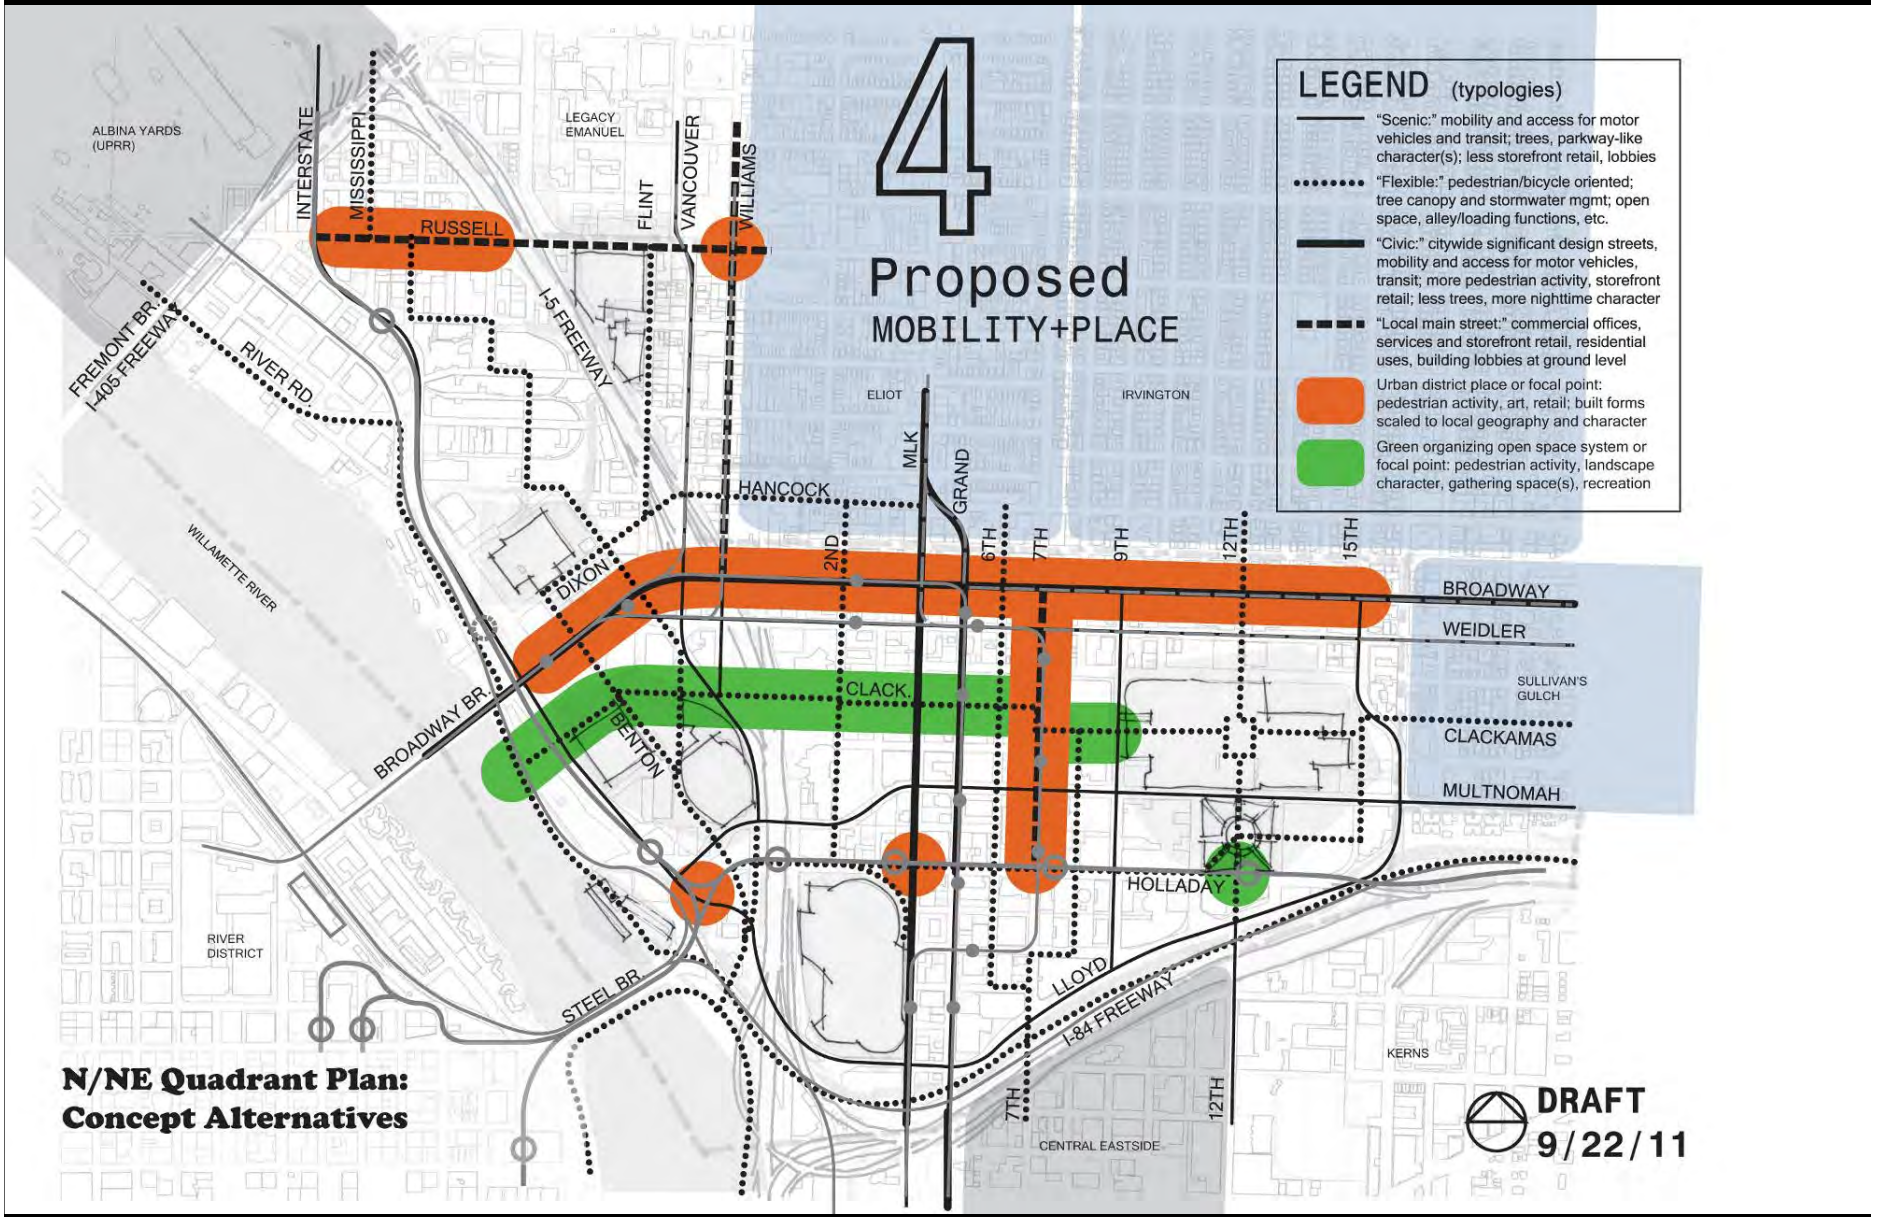
“Flexible” Typology: **Next Steps**



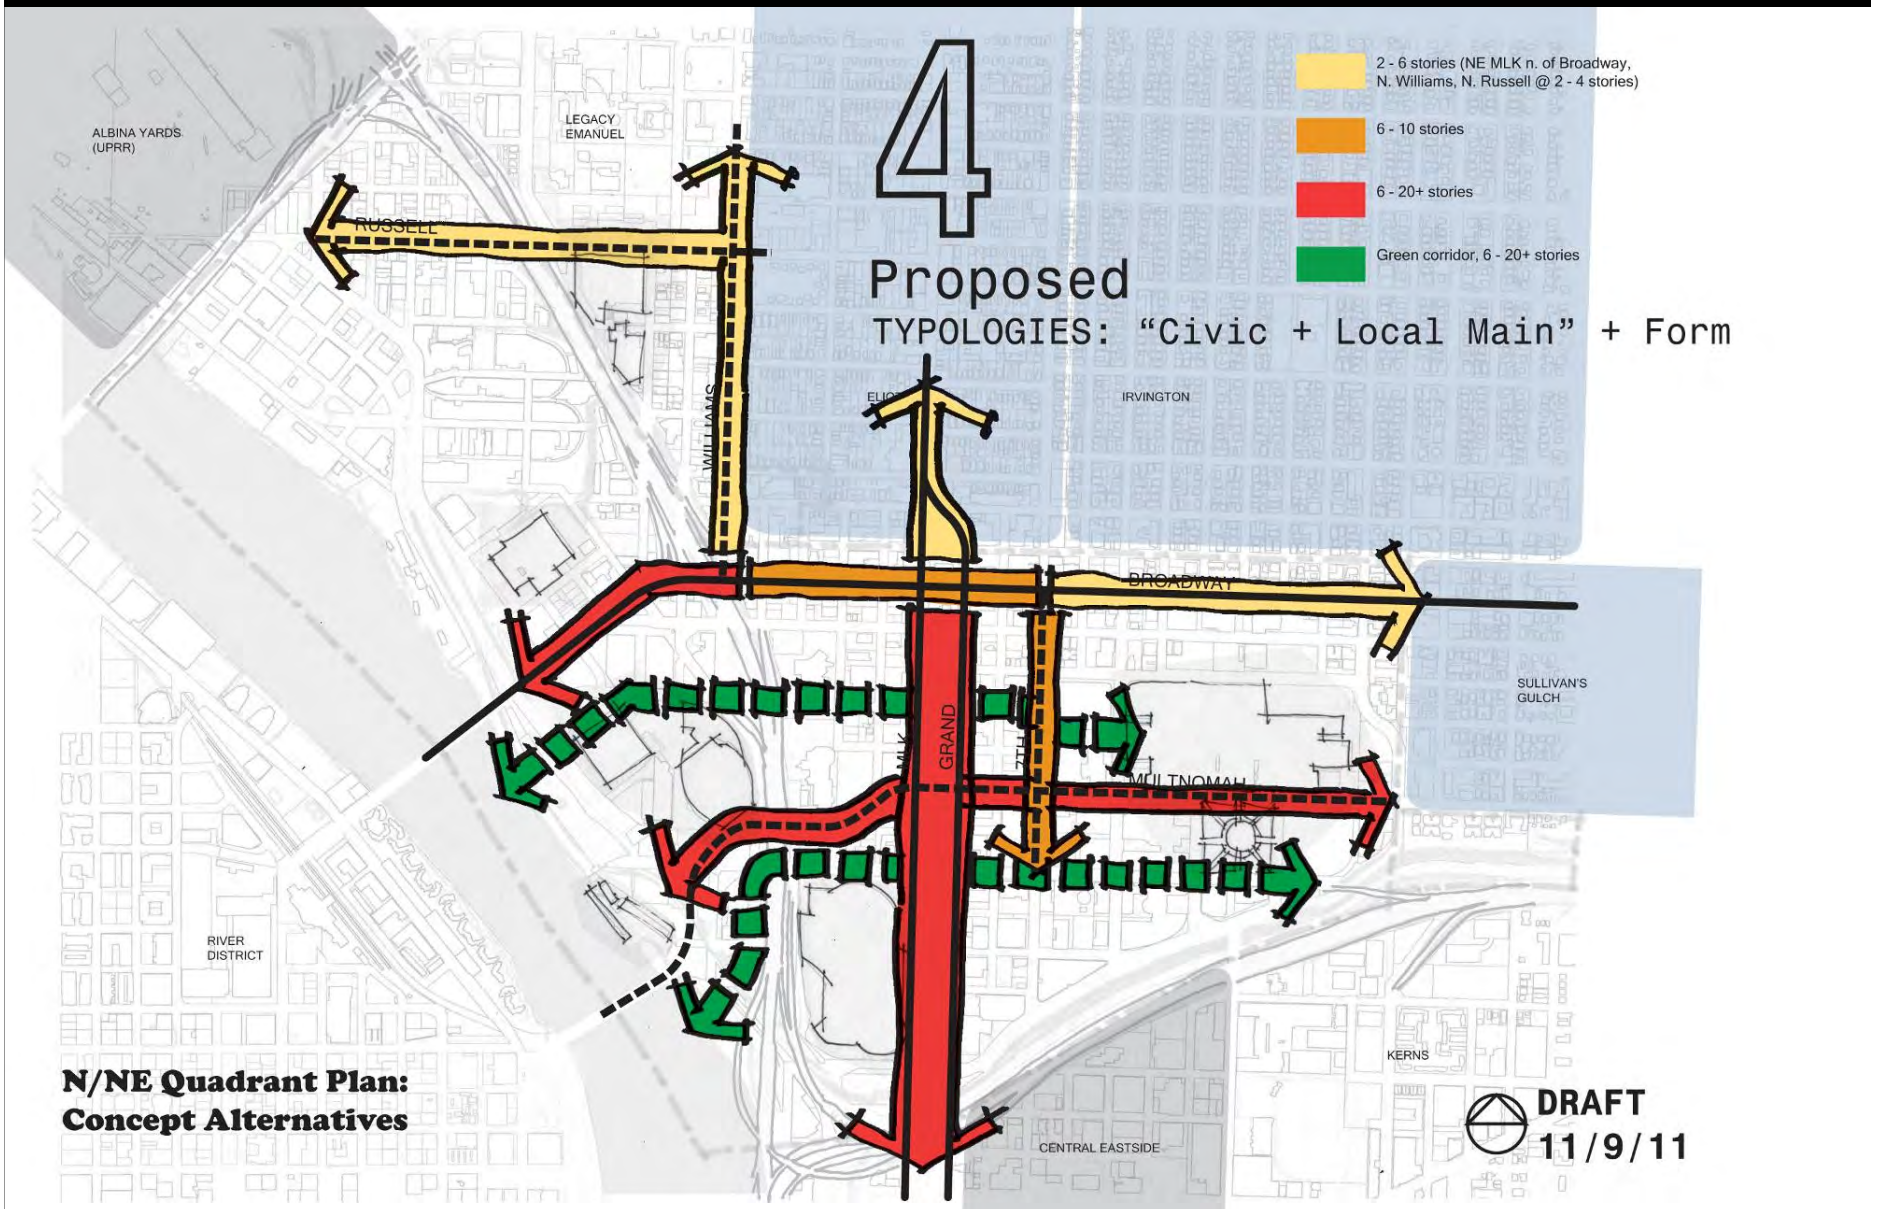
From September 29 SAC Meeting: **"Civic and Local Main" Typologies**



From September 29 SAC Meeting: **“Scenic” Typology**

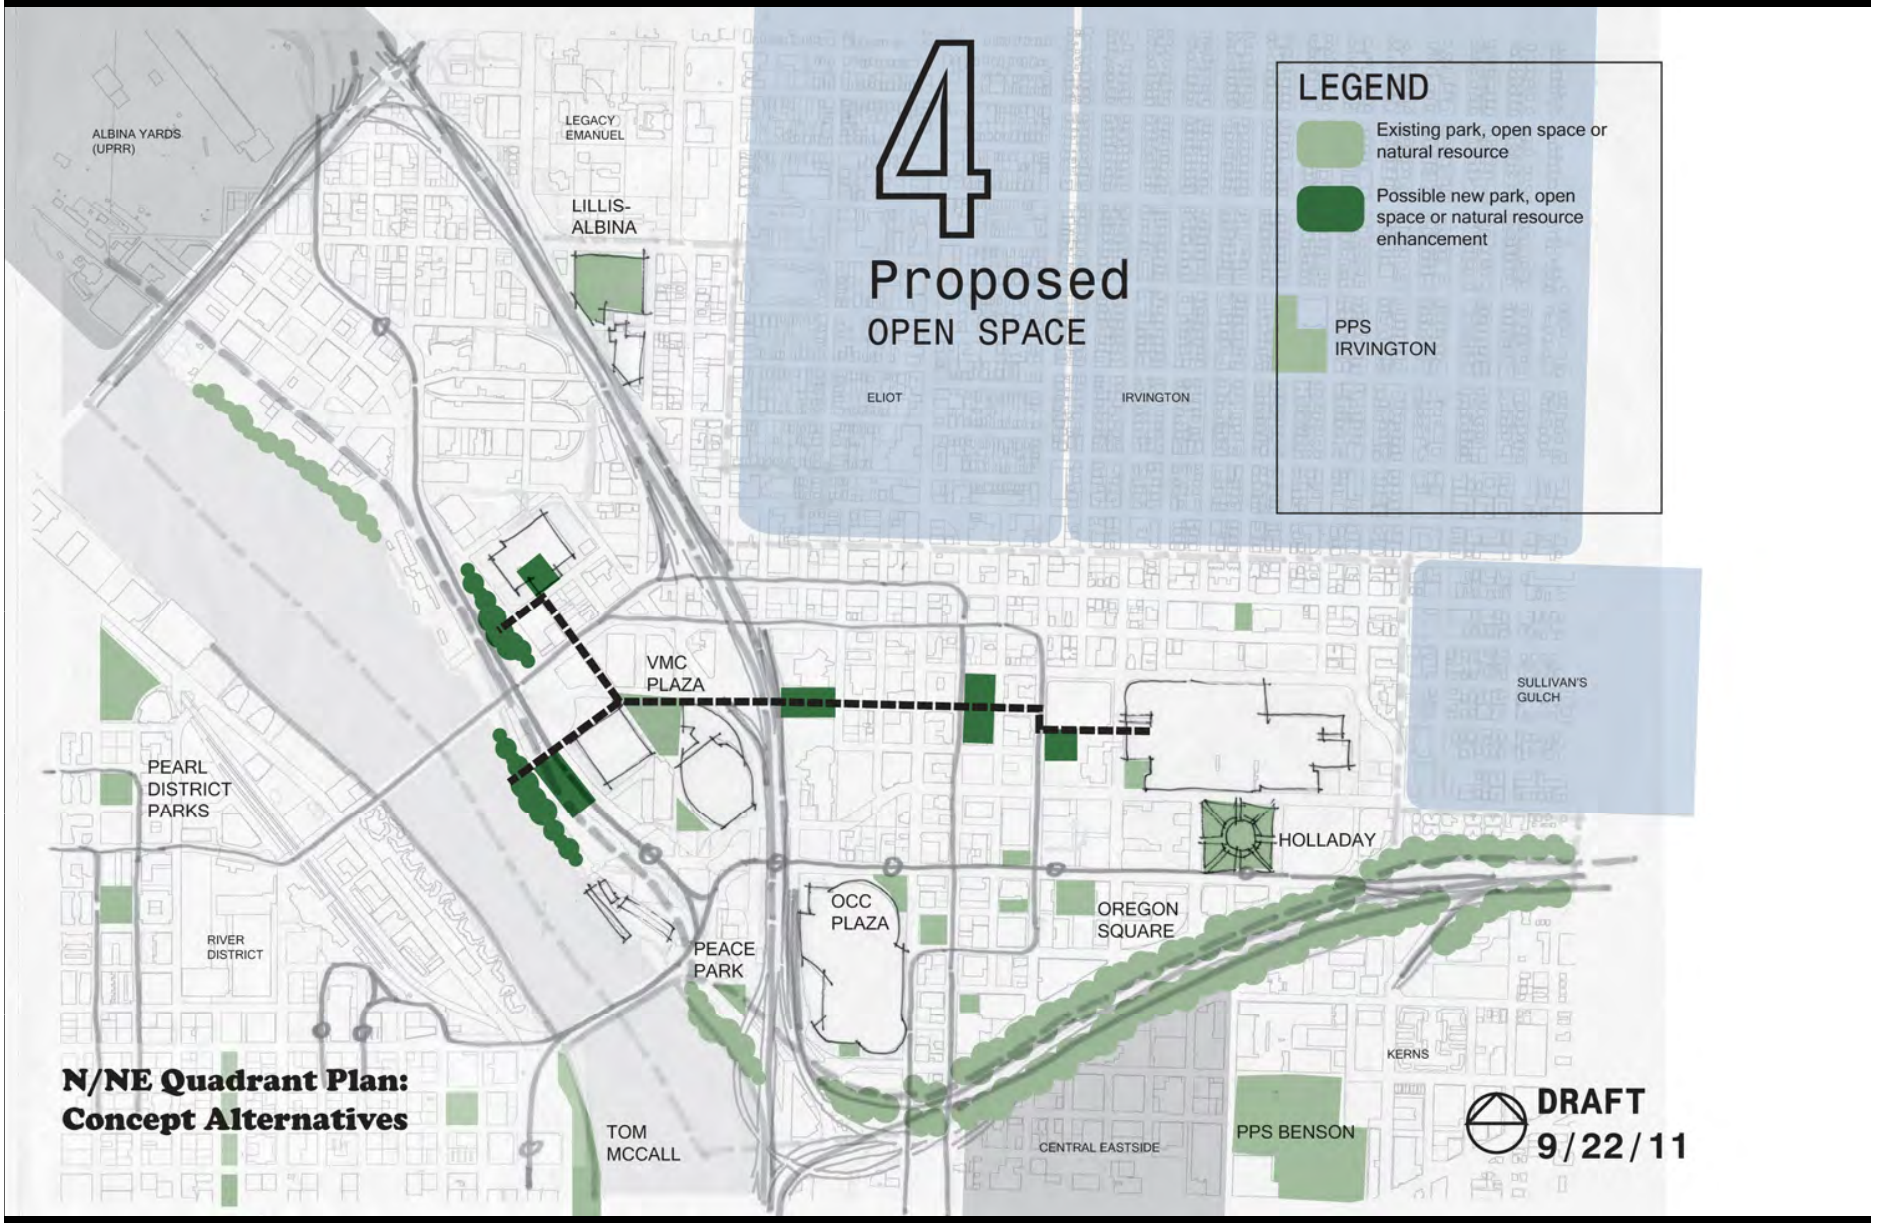


From September 29 SAC Meeting: **"Flexible" Typology**



Transportation Typologies: **REVISED CONCEPT**

From September 29 SAC Meeting: **MOBILITY + PLACE**



Mobility + Place: **REVISED CONCEPT**

SAC Questions

Mobility

From September 29 SAC Meeting: **OPEN SPACE**

OPEN SPACE

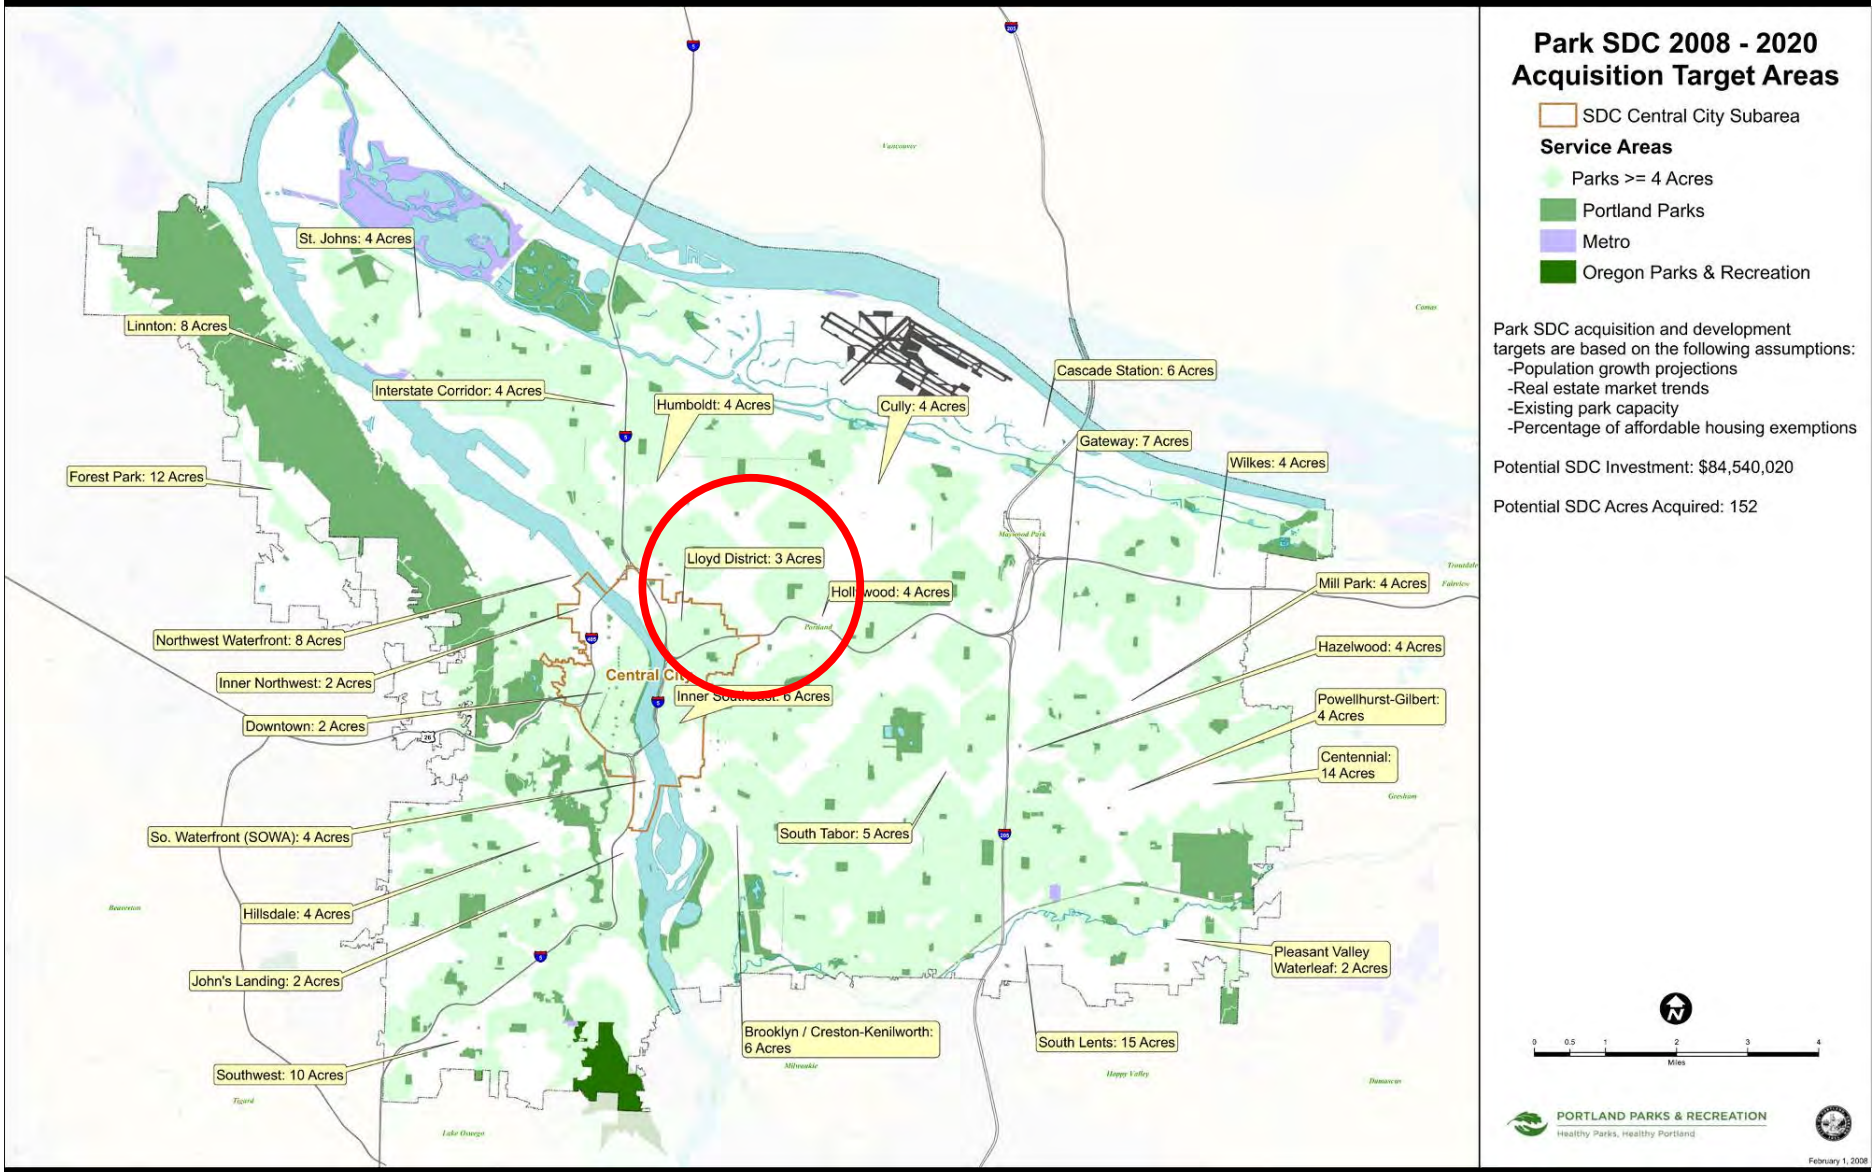
Site Alternate 1
300 unit high rise building
over retail
Site Alternate 2
240 unit high rise building
over retail
Cafe/Living Machine

OPEN SPACE

CLARIFICATIONS

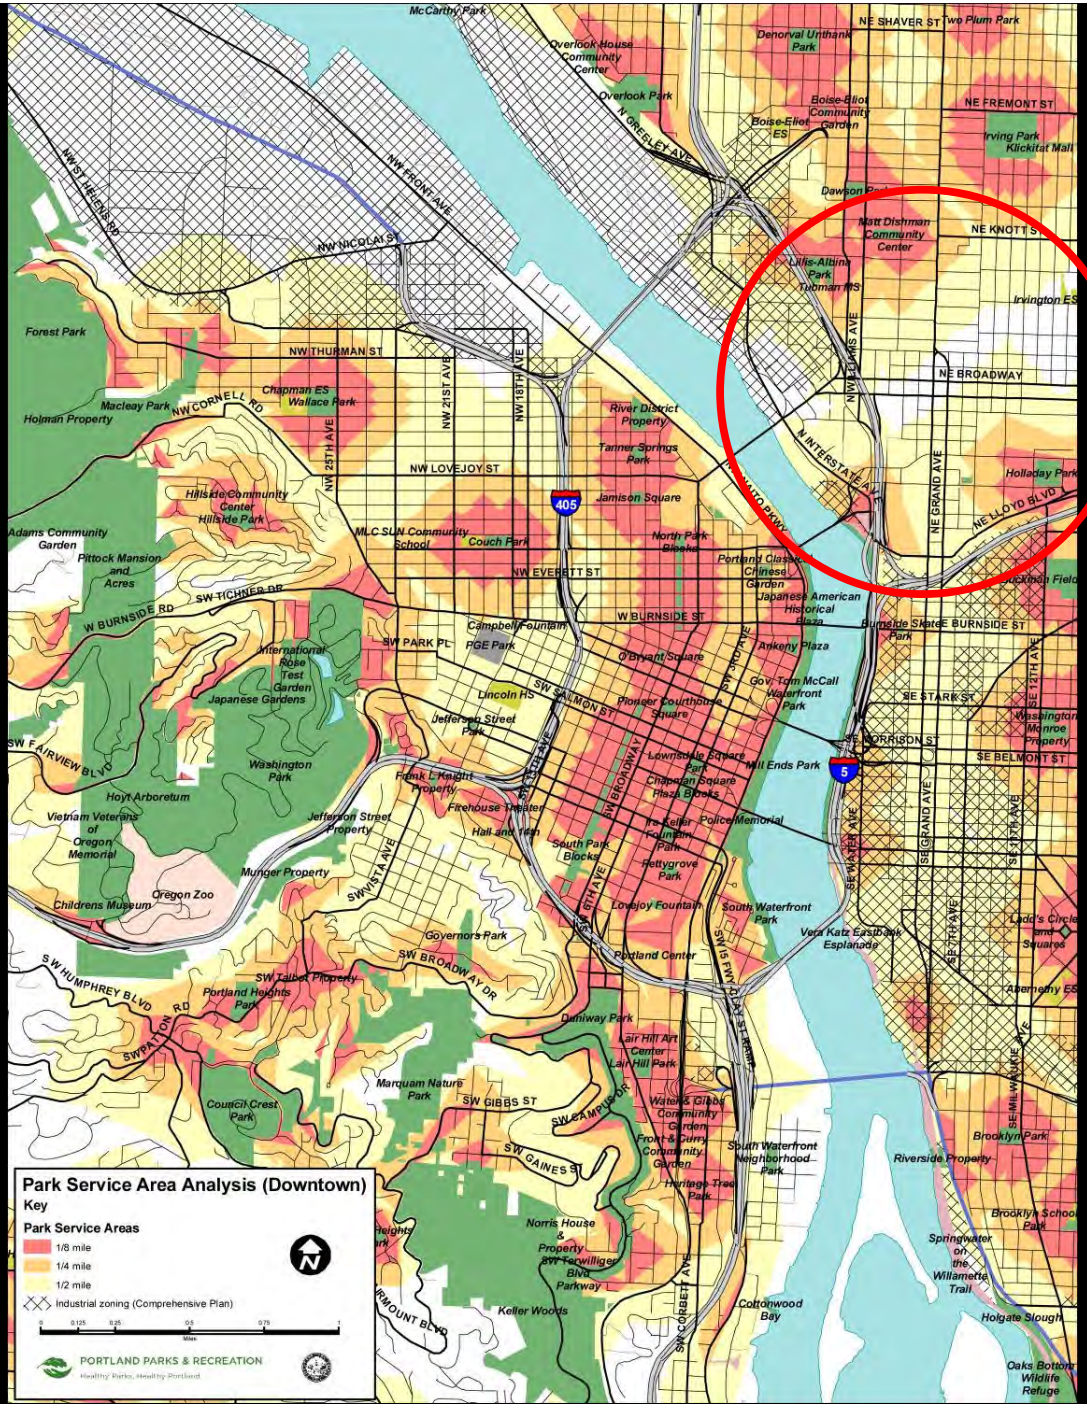
•Assessed proposed open space concept for amount (SDC Acquisitions) and access (Service areas) with Parks bureau

CHANGES SINCE 9/29 SAC MEETING



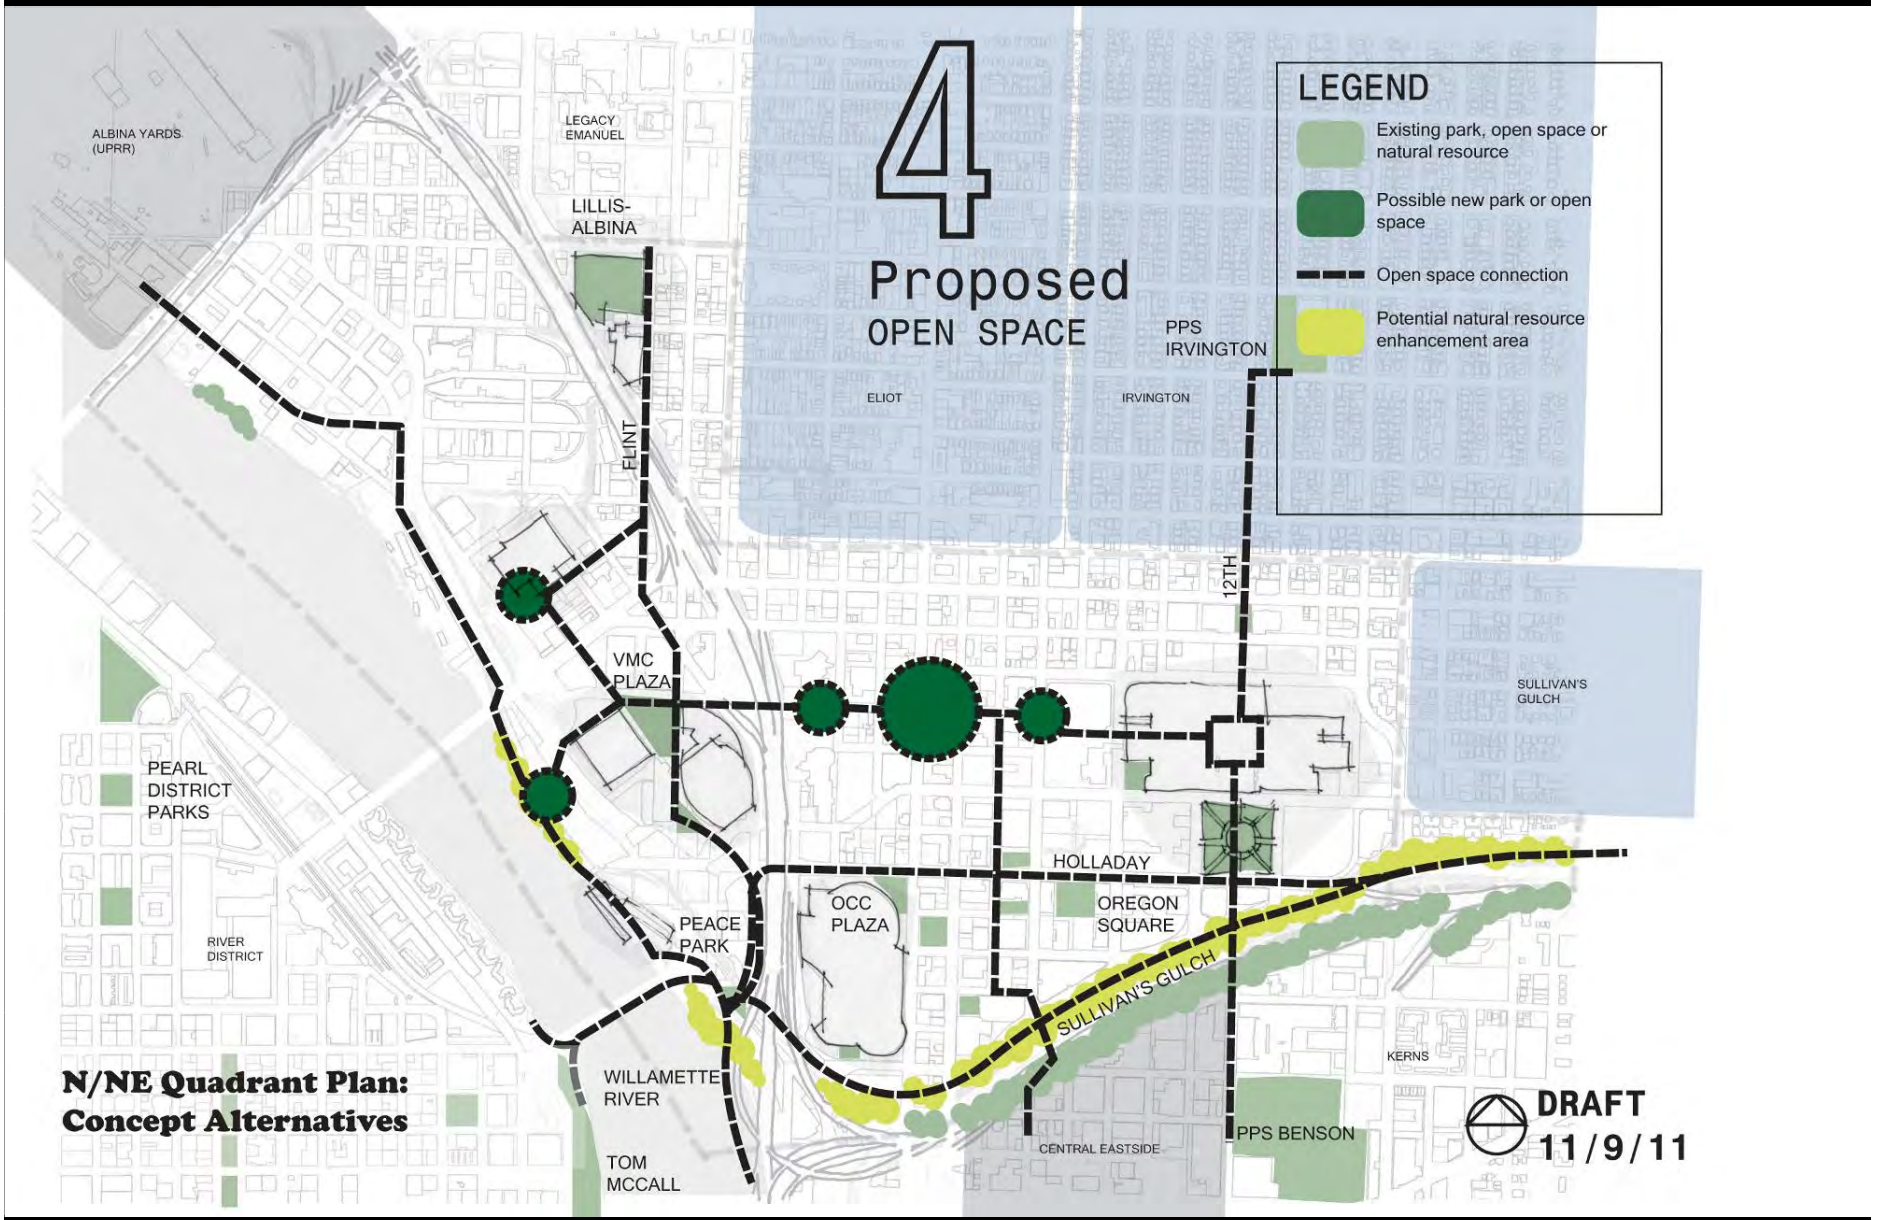
• Revised proposed open space designation to be more conceptual, less property-specific

•Displayed proximity of open spaces to surrounding area

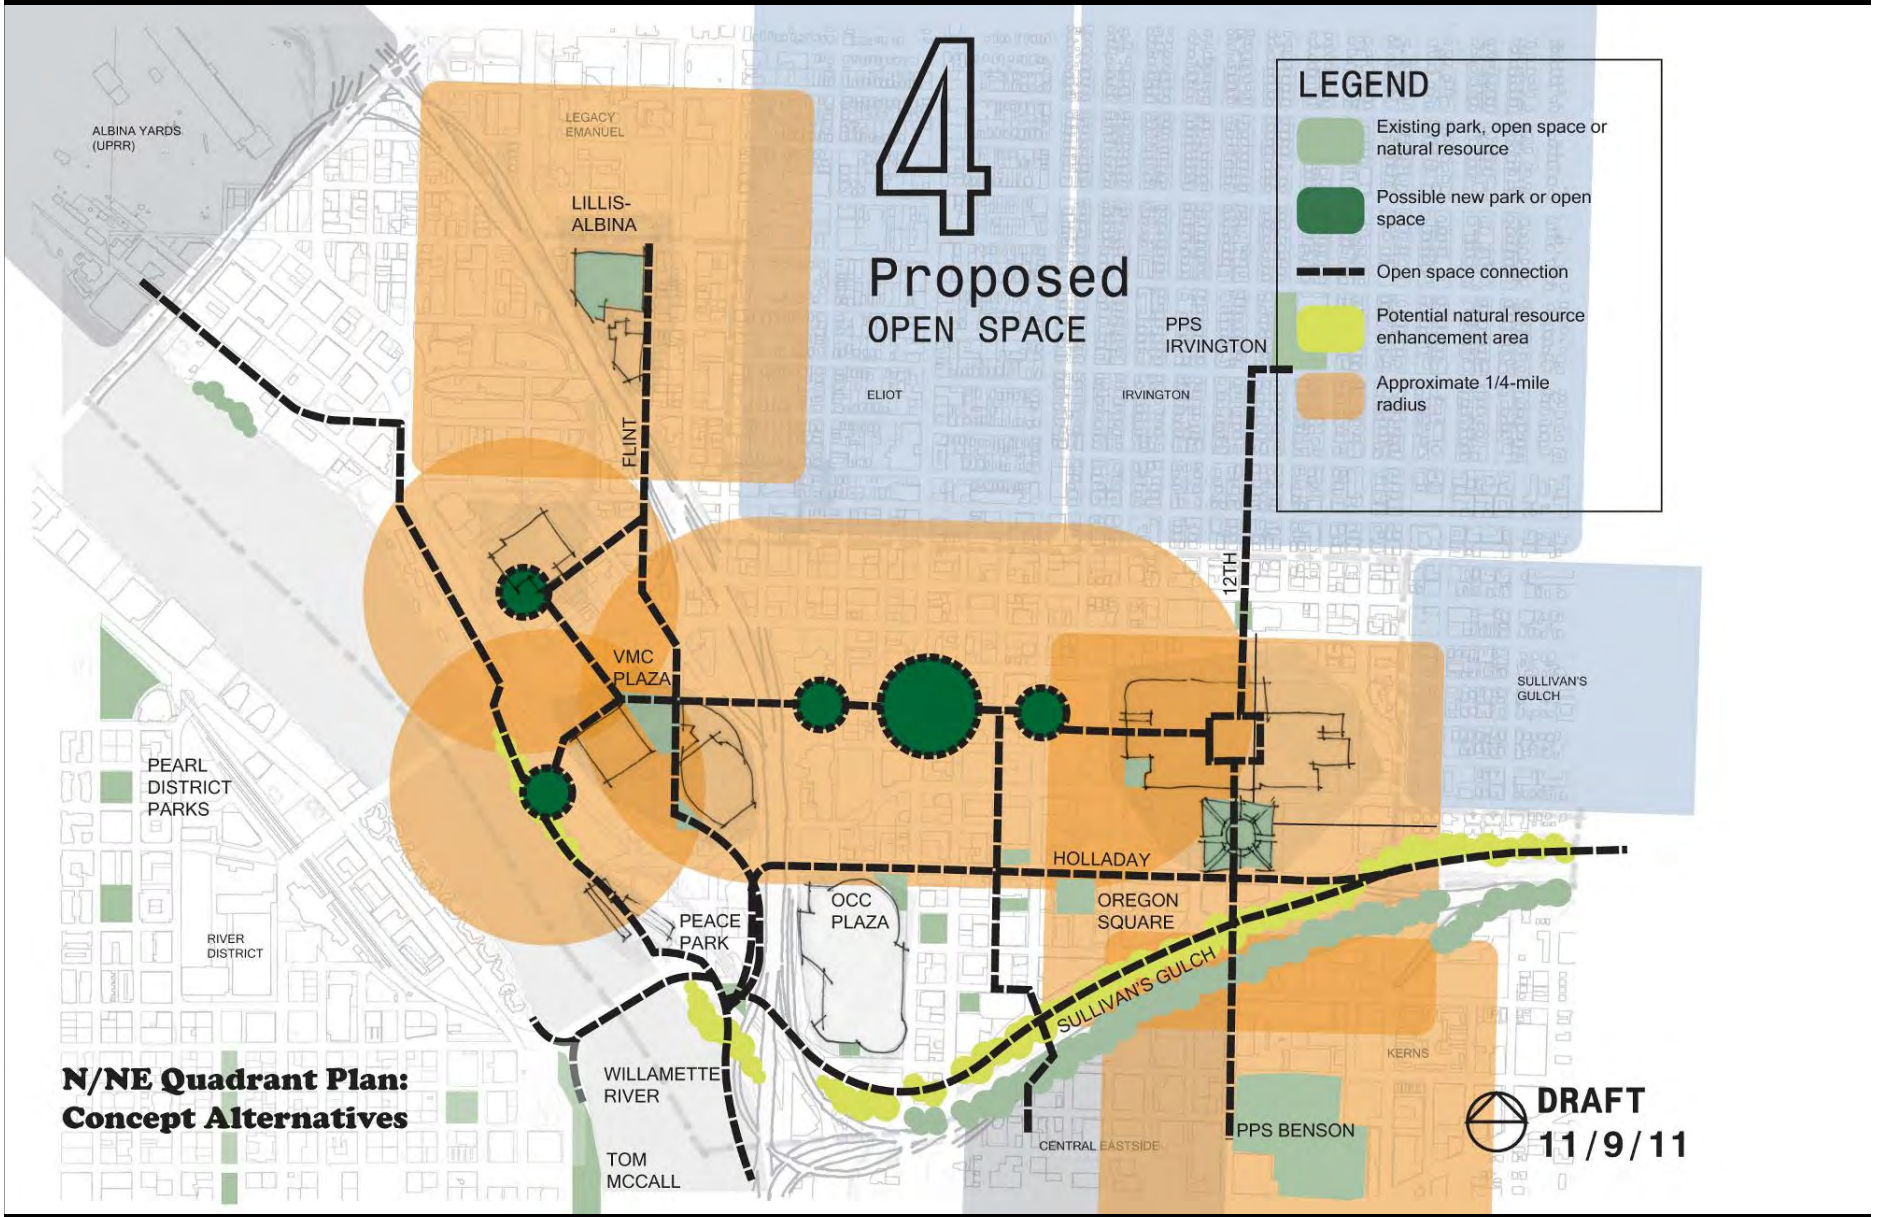


•Included more connections between proposed new open space system and existing parks/open spaces

•Specifically identified “natural resource enhancement areas”



Open Space: **Systems Development Charges (SDC)**
ACQUISITION TARGET AREAS



Open Space:
SERVICE AREA ANALYSIS

Open Space: **REVISED CONCEPT**

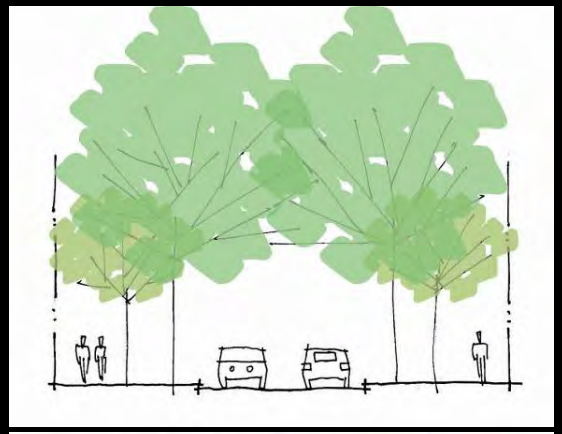
Open Space: ¼ **Mile Access**

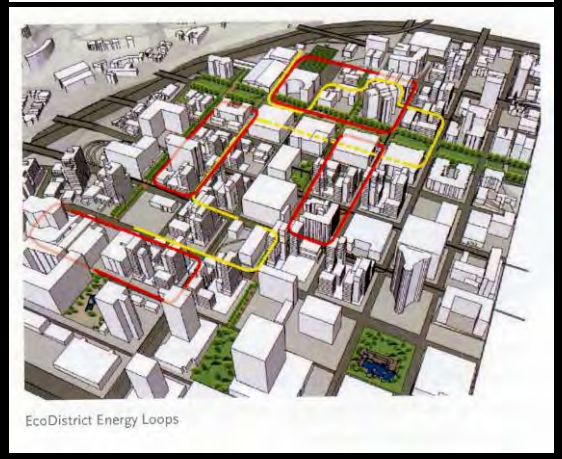
SAC Questions

Open Space

GREEN SYSTEMS

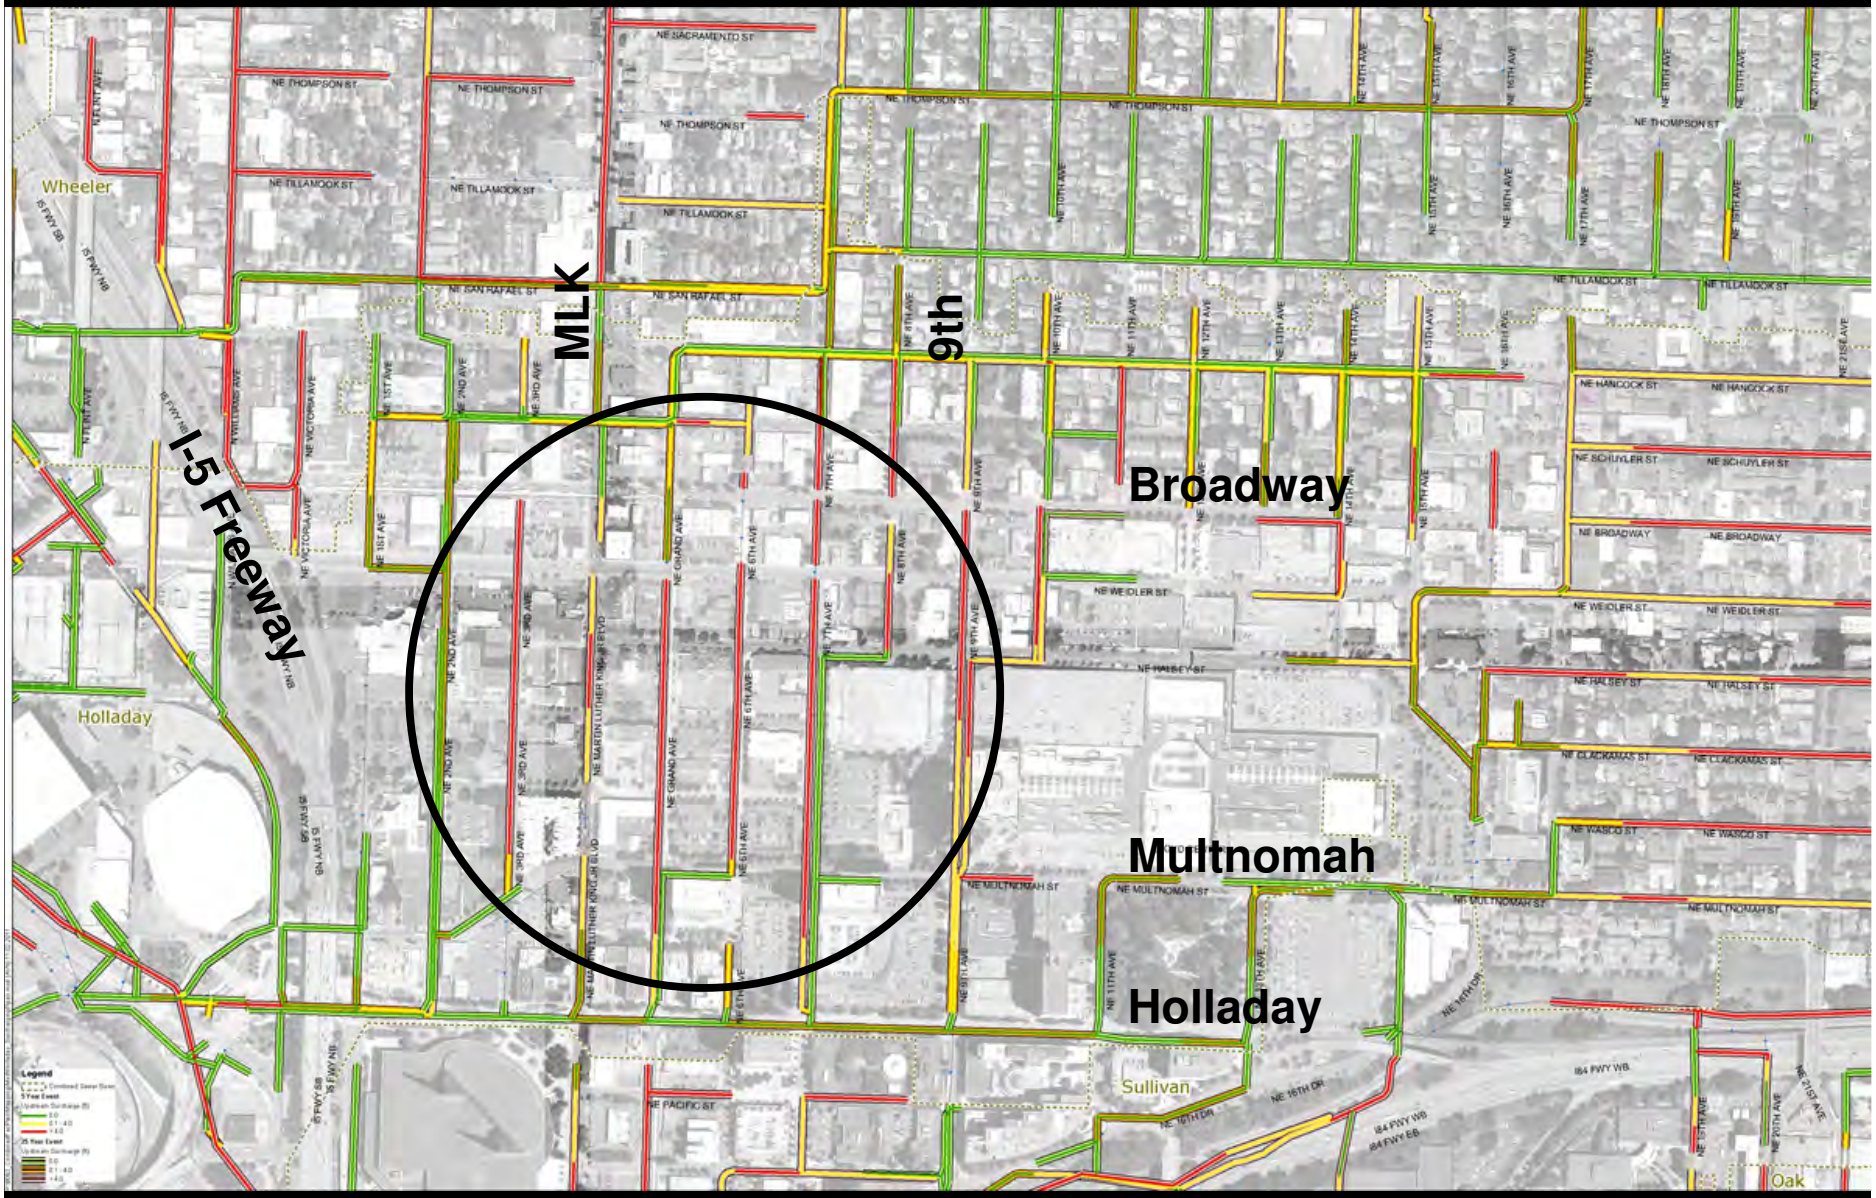
- District energy
- Water quality, tree canopy corridors
- Harvest and reuse rain water
- Integrate systems with ecodistrict efforts



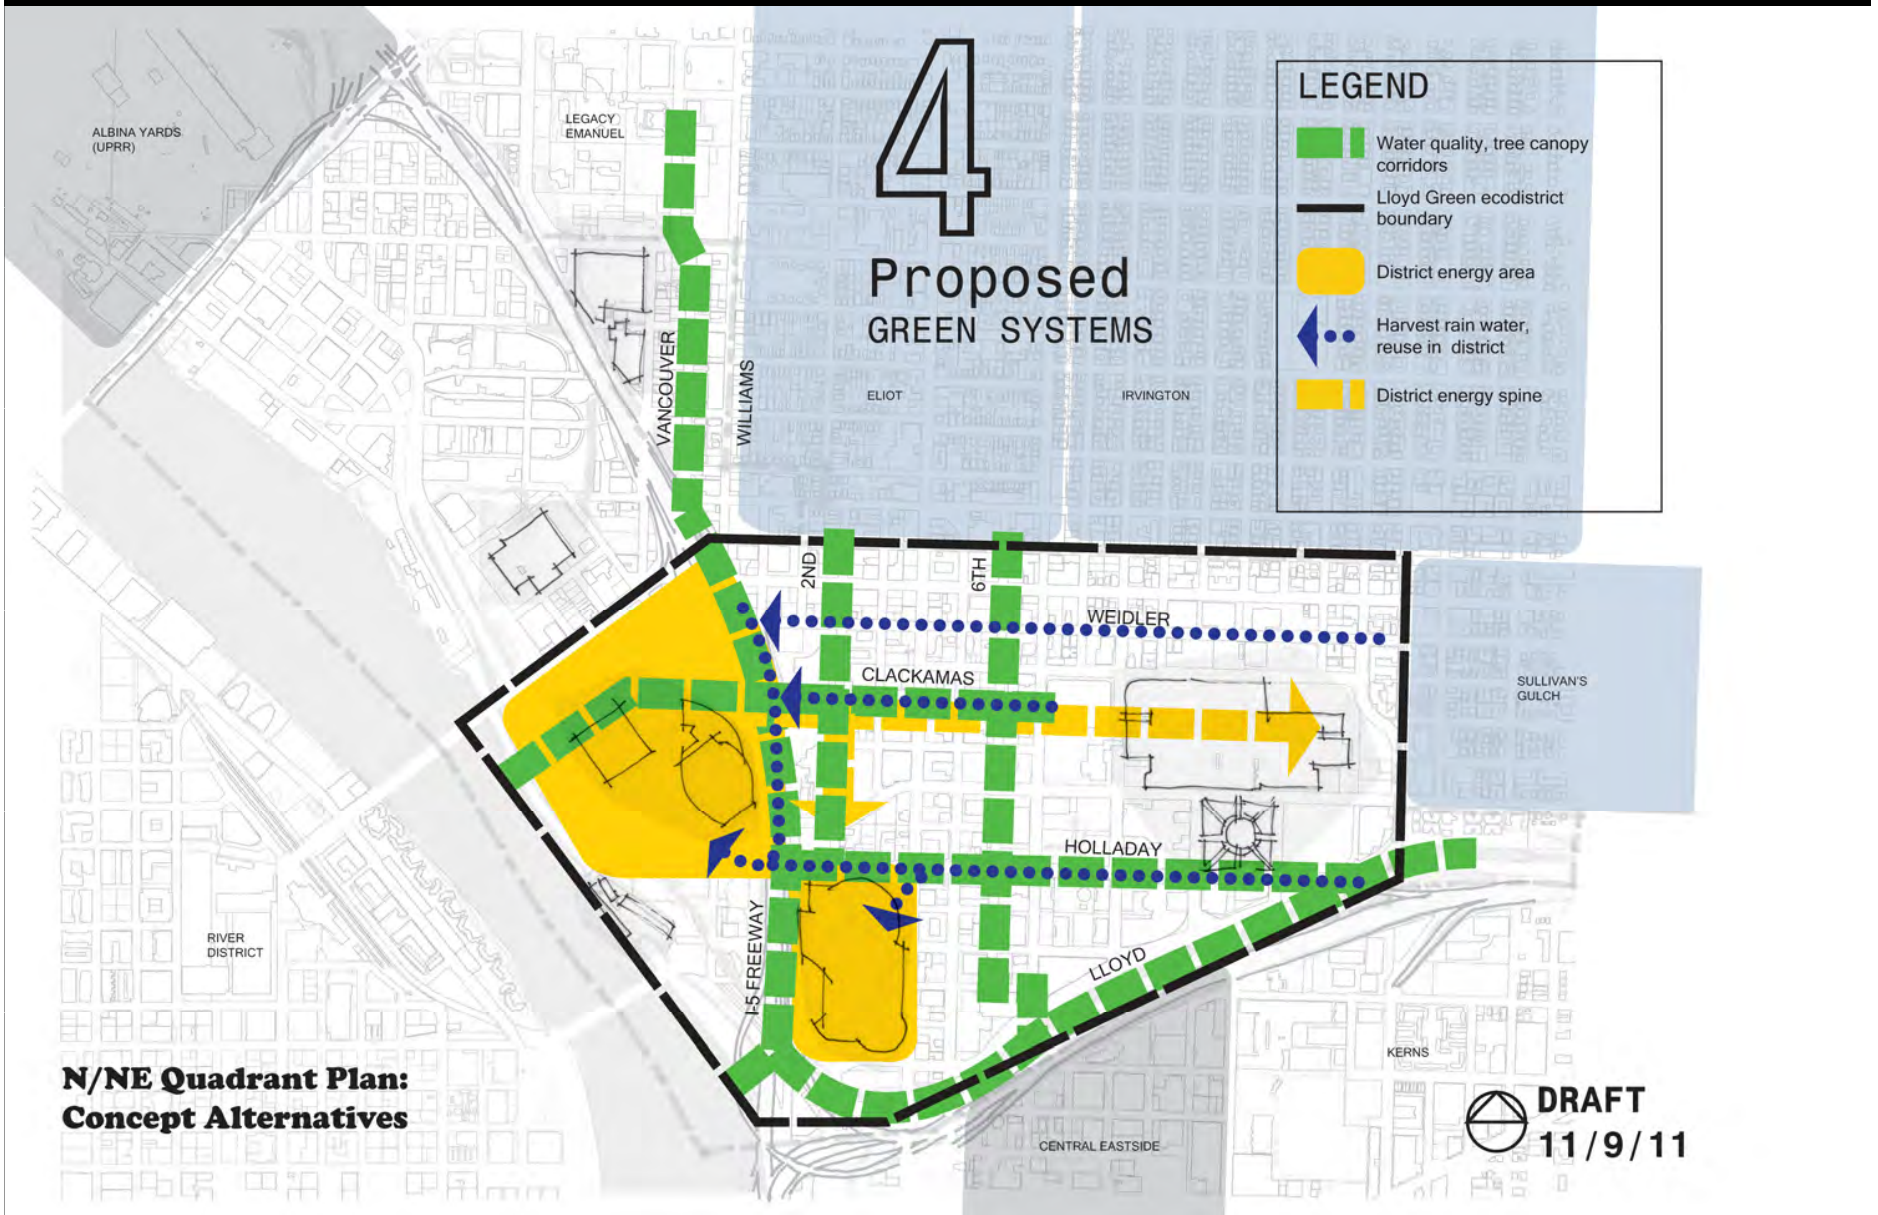


CHANGES SINCE 9/29 SAC MEETING

- Changed proposal from “harvest rain water, pump to district” to “harvest rain water, reuse in district”
- Assessed proposed concept and stormwater management needs with Bureau of Environmental Services
- Replaced NE 15th with NE 2nd as a “water quality, tree canopy corridor”



EcoDistrict Energy Loops



From September 29 SAC Meeting: **GREEN SYSTEMS**

Green Systems: **STORMWATER MANAGEMENT CAPACITY ISSUES**

Green Systems: **REVISED CONCEPT**

MEMORANDUM

From:
Sullivan's Gulch Neighborhood Association
Land Use Planning Committee
Co-chairs - Carol Gossett, Brittain Brewer
To:
City of Portland
Bureau of Planning and Sustainability
N / NE Quadrant Project
RE:
Neighborhood consensus / comments
September 15, 2011

The following comments are compiled from -
Neighborhood charettes, held on Sept. 2, 2011
Comments solicited and received at the annual "Gulch-o-rama", held on Sept. 10, 2011
And, SGNA Board Meeting, Sept. 13, 2011

Subarea 4 Broadway/Weidler Commercial Corridor

A Current heights are irrelevant and should be re-examined base on further study to develop design paradigms and standards allowing for transitions from corridor to adjacent residential areas and in a manner that encourages financeable development.

B Yes. The block between provides a natural transition strip from adjacent areas. The corridor should extend from I-5 to NE 33rd. Detailed studies should be conducted to develop design and development guidelines for future development.

C The circulation must be developed to simultaneously encourage regional connection to the Lloyd District shopping area and circulation to and from adjacent residential areas and neighborhoods to the east. The corridor is the future gateway to the Portland east of the Willamette, aso Portland's future downtown develops to incorporate both sides of the river from I-205 to, at least the MLK/Grand N-S corridor.

D The current heights are irrelevant and should be revisited in context. Yes, particularly, as historically considered and developed, east of I-5, west of MLK, south of Clackamas, and north of Multnomah. It is conceivable that might extend south to Holladay. Development of east of I-5/Williams, west of MLK, south of San Rafael, and north of Multnomah could also be considered mixed use/ residential.

Subarea 6a

A Residential over office/medical office/ over retail - parking an issue,

B Height limitation - step down to limit shadows across the street in residential sections

C As long as shadows across the street are limited, yes, preserve room for Sullivan's Gulch Trail and to preserve conservation overlay

MEMORANDUM

Framework Review

CENTRAL CITY 2035

Review of What Has Been Accomplished

Concept Development and Analysis

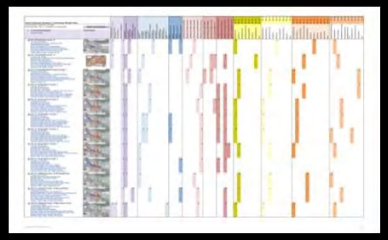
- 70+ ideas generated (Apr 2011)

Narrowed via Project Scope Screening Criteria to…

- 40+ ideas/concepts (May 2011)

Grouped and developed into…

- 13 concepts (plus options)



Within groupings of…

- 6 concept categories (June 2011)

Narrowed groups to…

- 6 concepts to design, analyze and evaluate (July 2011)
- Concepts refined and fixed for analysis (September 2011)

CENTRAL CITY 2035

June 11, 2011 Recommended Concept

Design and Analysis of Concept Phase
Table 1 – Concepts for Further Study

1. 2035 No-Build
2. Mainline Operational Improvements

   Braided Ramps/Collector/Distributor (C/D) Road
3. Rebuild the Structures

   (Auxiliary lane extension; ramps remain as they are)
4. Enhance the Broadway/Weidler Interchange

   (Auxiliary lane extension and new ramp configurations)

   -Split Diamond Interchange
   -Folded Diamond Interchange
   -Three-Point Interchange
6. TSM/TDM

CENTRAL CITY 2035

Interchange Area Model

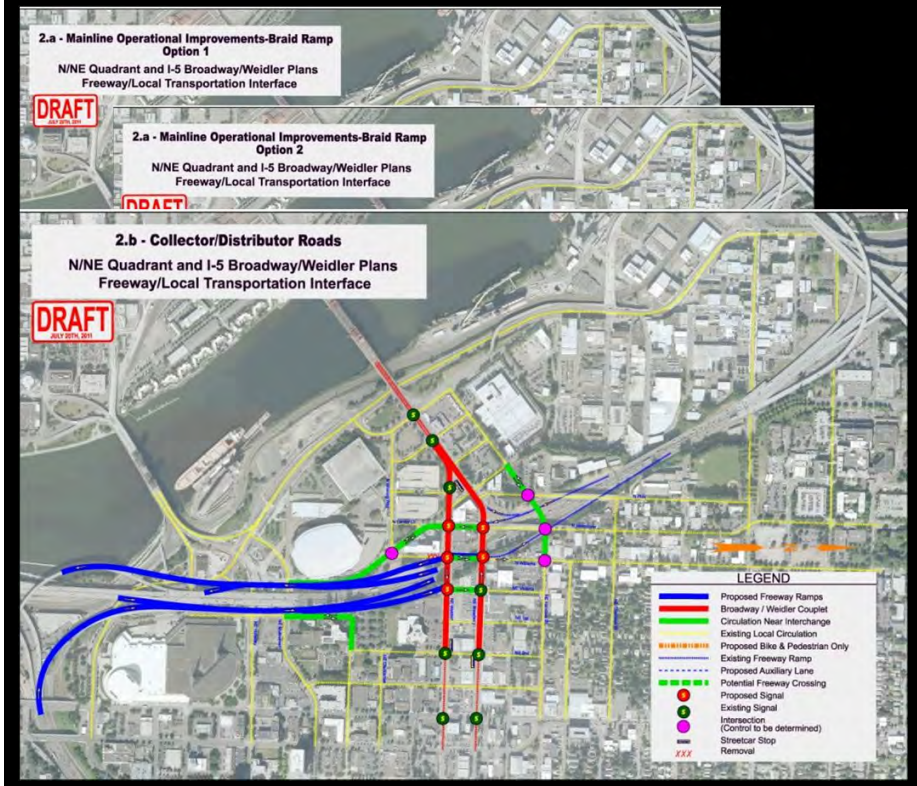
Interchange Concepts

1. 2035 No-Build

General Description:

Baseline for comparing with build concepts for safety and operation on I-5

Maintains existing number of lanes on the freeway



The existing weaving sections and interchange configuration remains

Avoids ROW impacts

CENTRAL CITY 2035

July 28, 2011 Recommended Concept

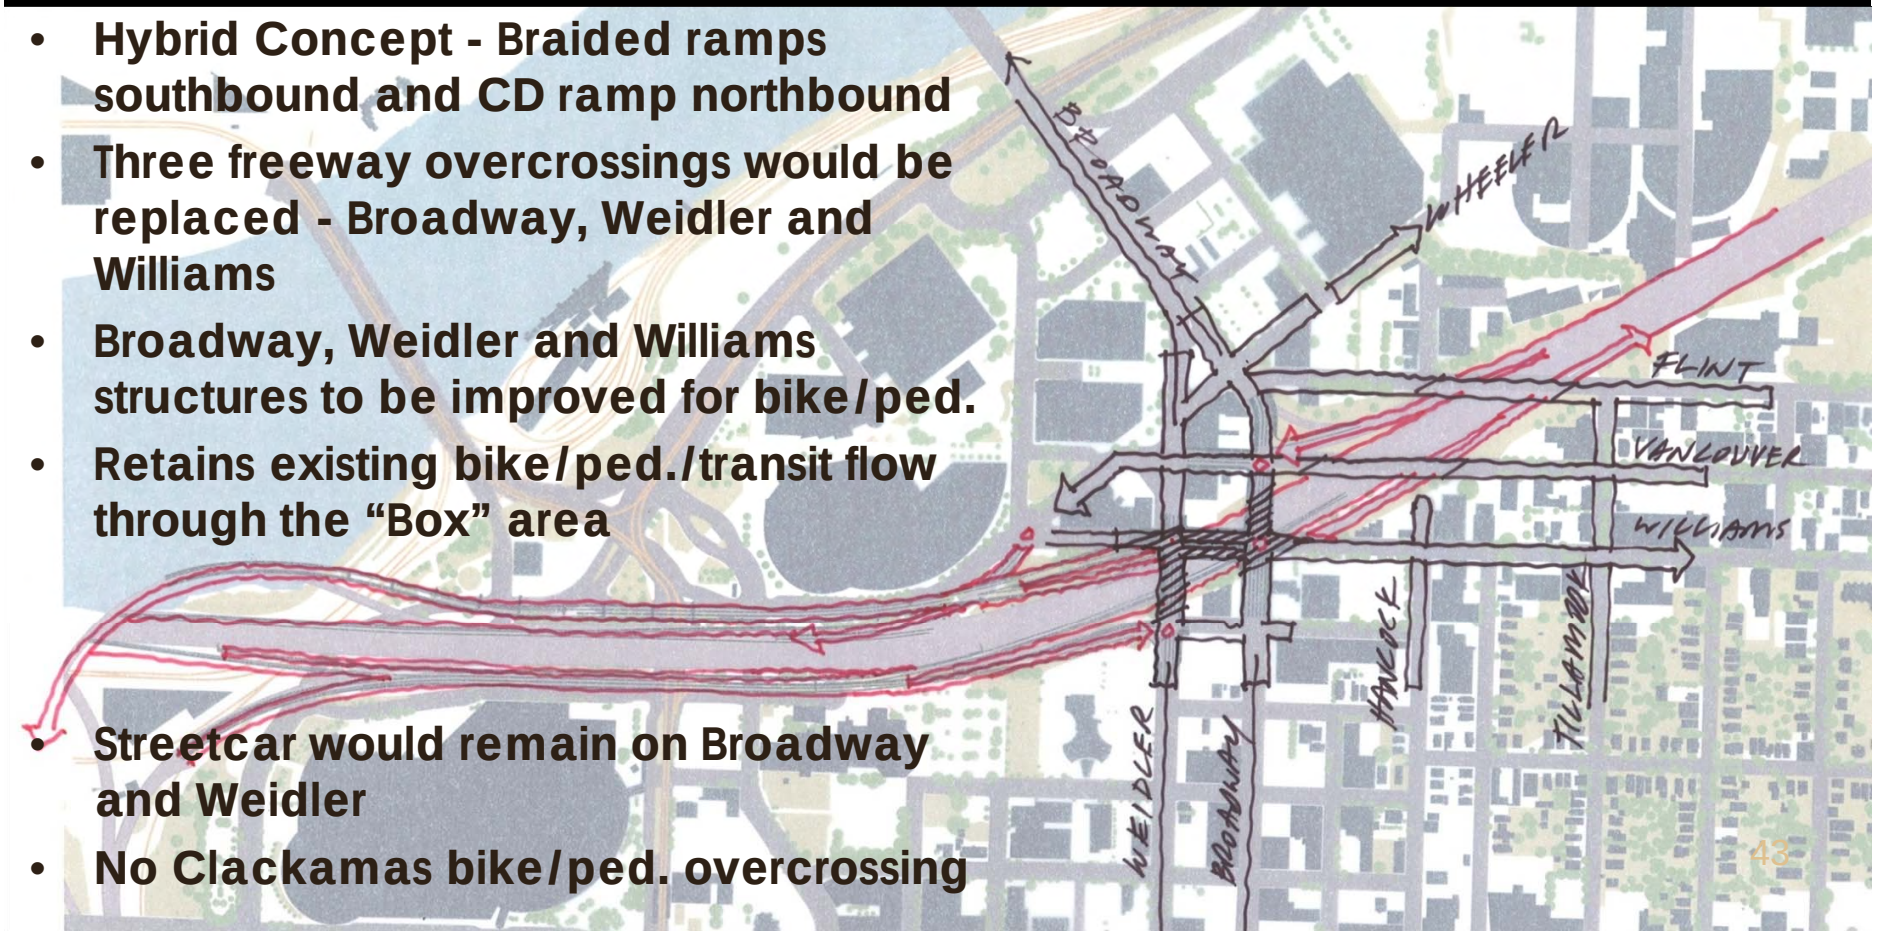
2. Mainline Operational Improvements
Braided Ramps & CD Road

Key Findings:

- Improves freeway safety and operations
- No I-5 auxiliary lane extension
- Avoids ROW impacts

Recommendation:

- Refine and evaluate in Phase III

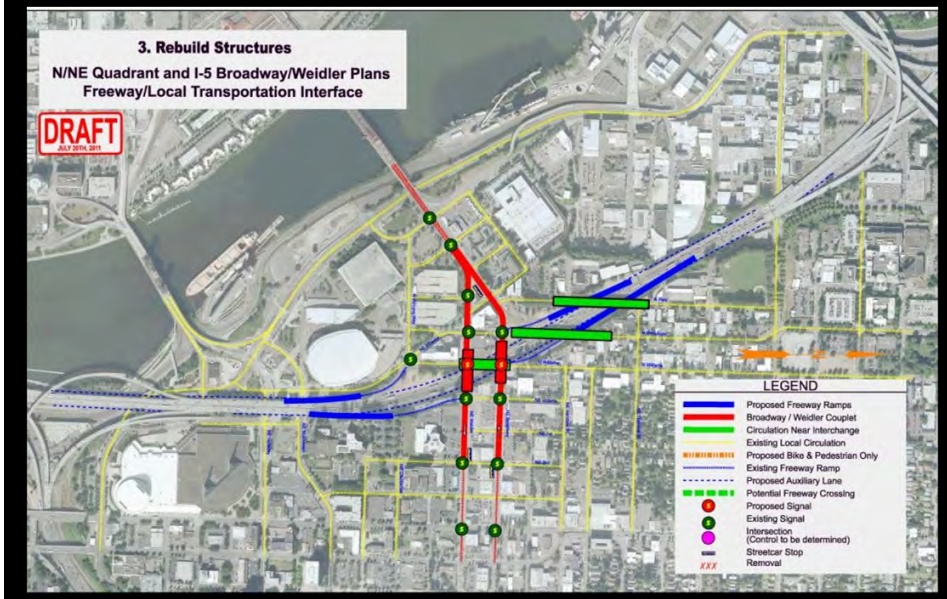


CENTRAL CITY 2035

Refined Concept for Evaluation

2. Mainline Operational Improvements
Braided Ramps & CD Road

General Description:



- **Hybrid Concept - Braided ramps southbound and CD ramp northbound**
- **Three freeway overcrossings would be replaced - Broadway, Weidler and Williams**
- **Broadway, Weidler and Williams structures to be improved for bike/ped.**
- **Retains existing bike/ped./transit flow through the "Box" area**
- **Streetcar would remain on Broadway and Weidler**
- **No Clackamas bike/ped. overcrossing**

July 28, 2011 Recommended Concept

3. Rebuild the Structures

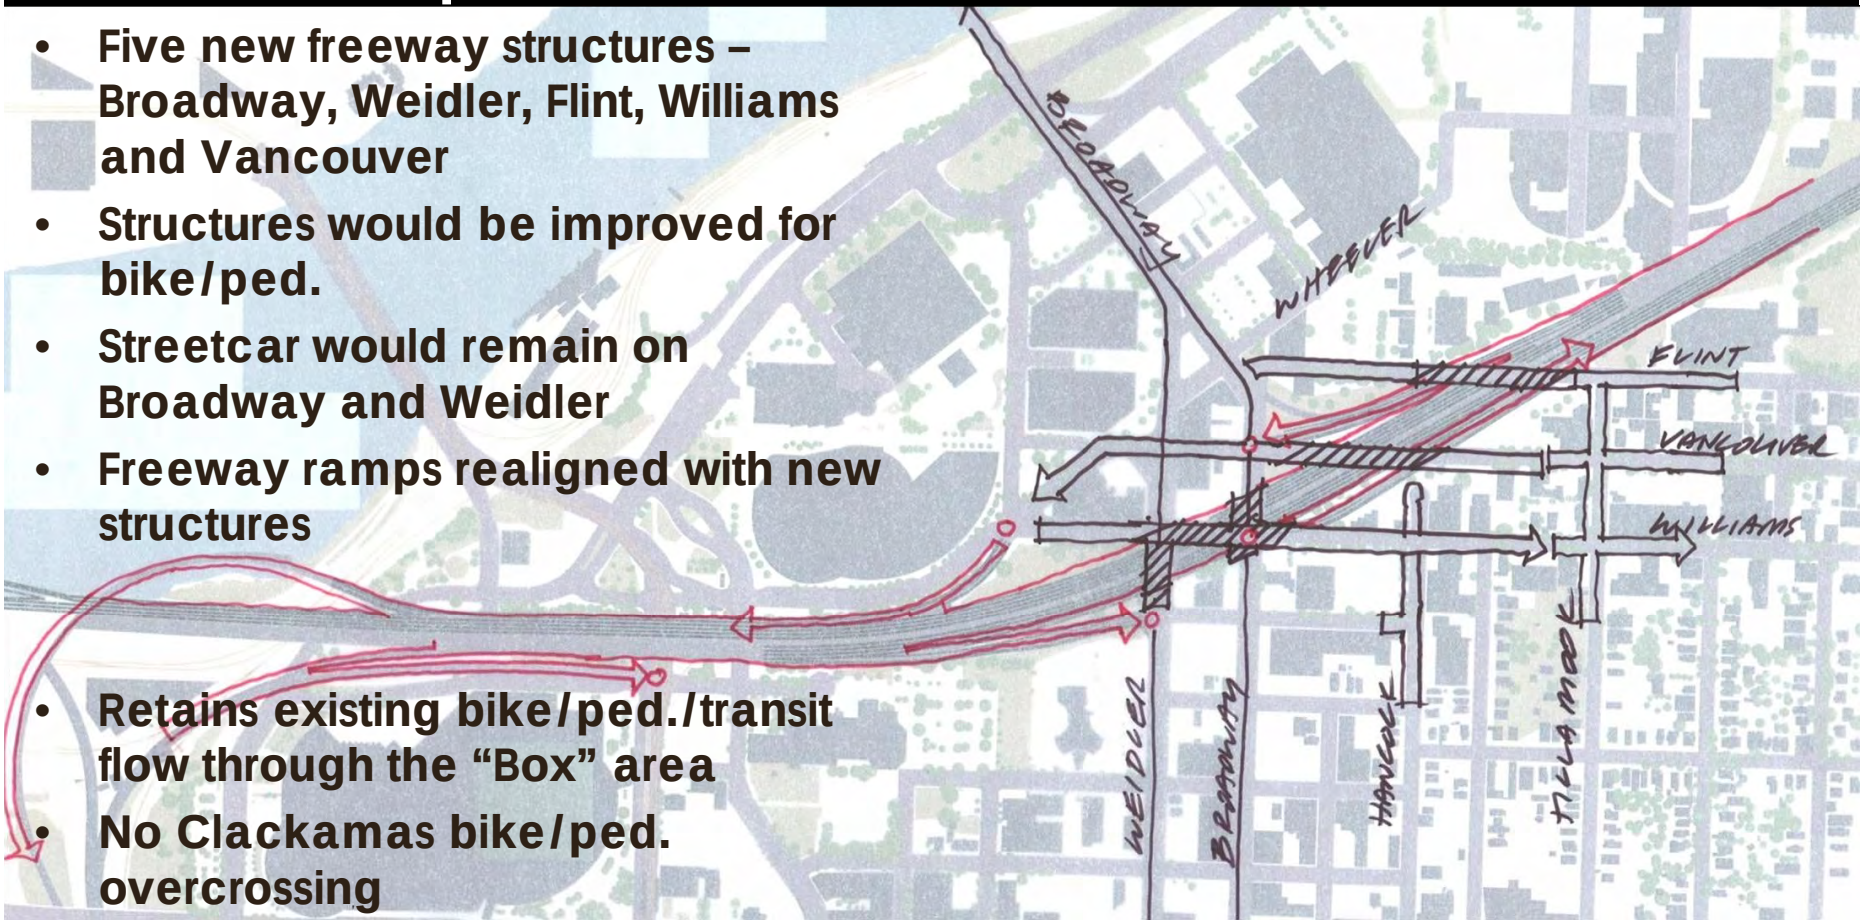
Extend Auxiliary Lane

Key Findings:

- Improves freeway safety and operations
- Avoids need for additional ROW
- Minimal impacts

Recommendation:

- Refine and evaluate in Phase III

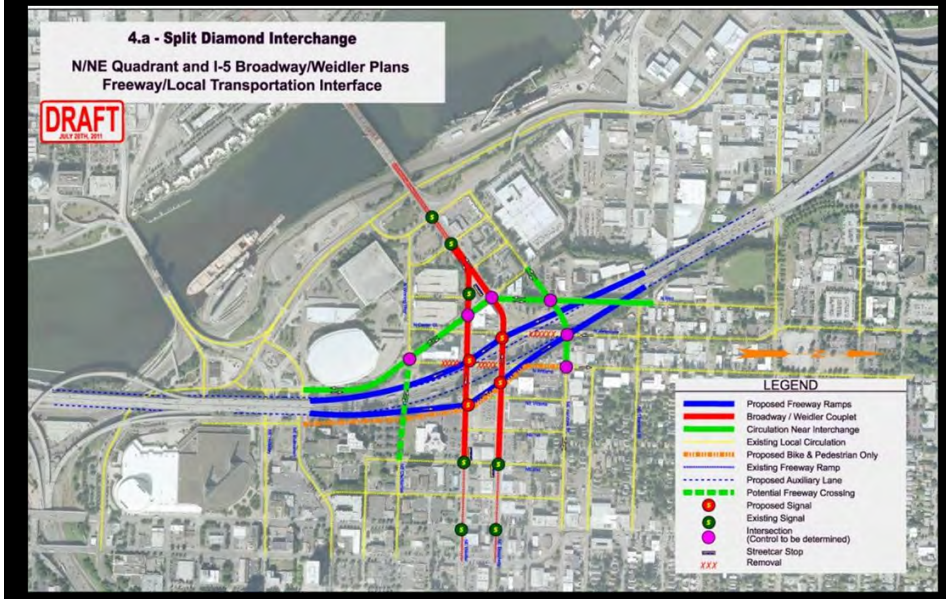


CENTRAL CITY 2035

Refined Concept for Evaluation

3. Rebuild the Structures
Extend Auxiliary Lane

General Description:



- **Five new freeway structures – Broadway, Weidler, Flint, Williams and Vancouver**
- **Structures would be improved for bike/ped.**
- **Streetcar would remain on Broadway and Weidler**
- **Freeway ramps realigned with new structures**

- **Retains existing bike/ped./transit flow through the "Box" area**
- **No Clackamas bike/ped. overcrossing**

July 28, 2011 Recommended Concept

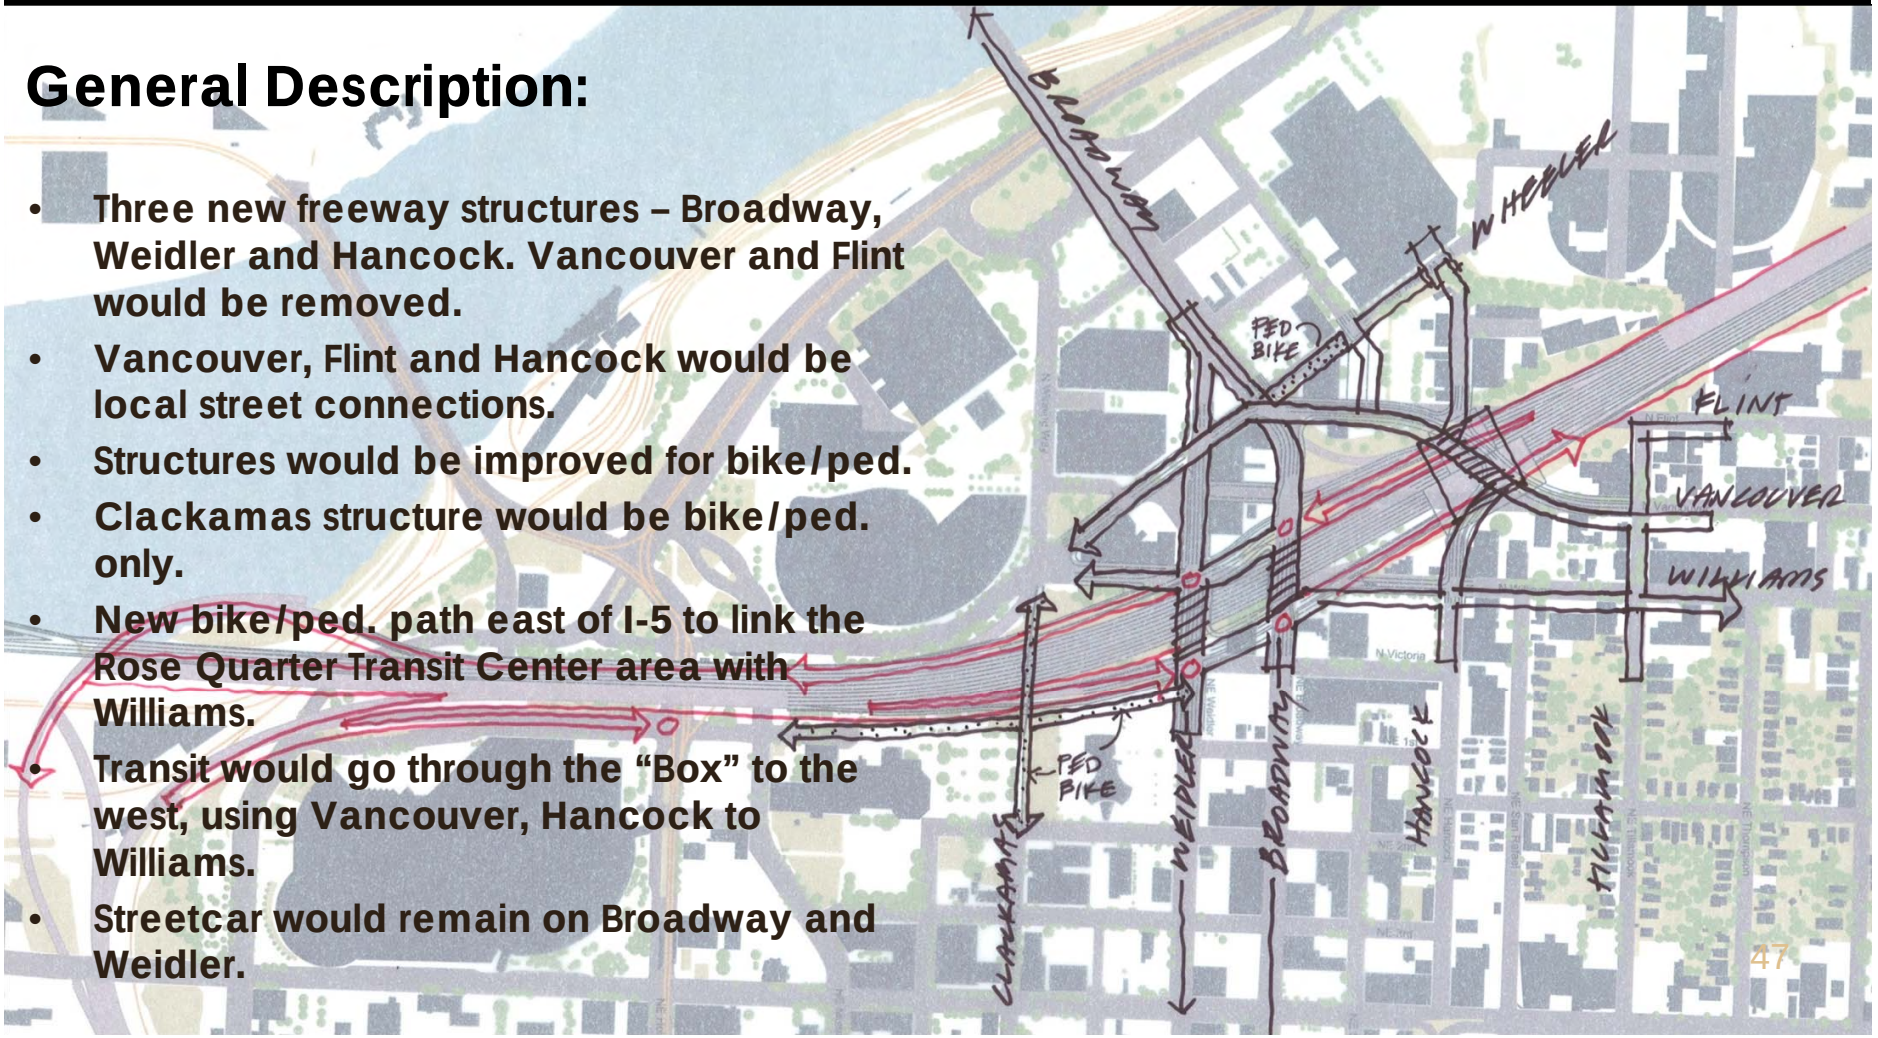
4a. Split Diamond
Extend Auxiliary Lane

Key Findings:

- Improves freeway safety and operations
- Limited ROW impacts

Recommendation:

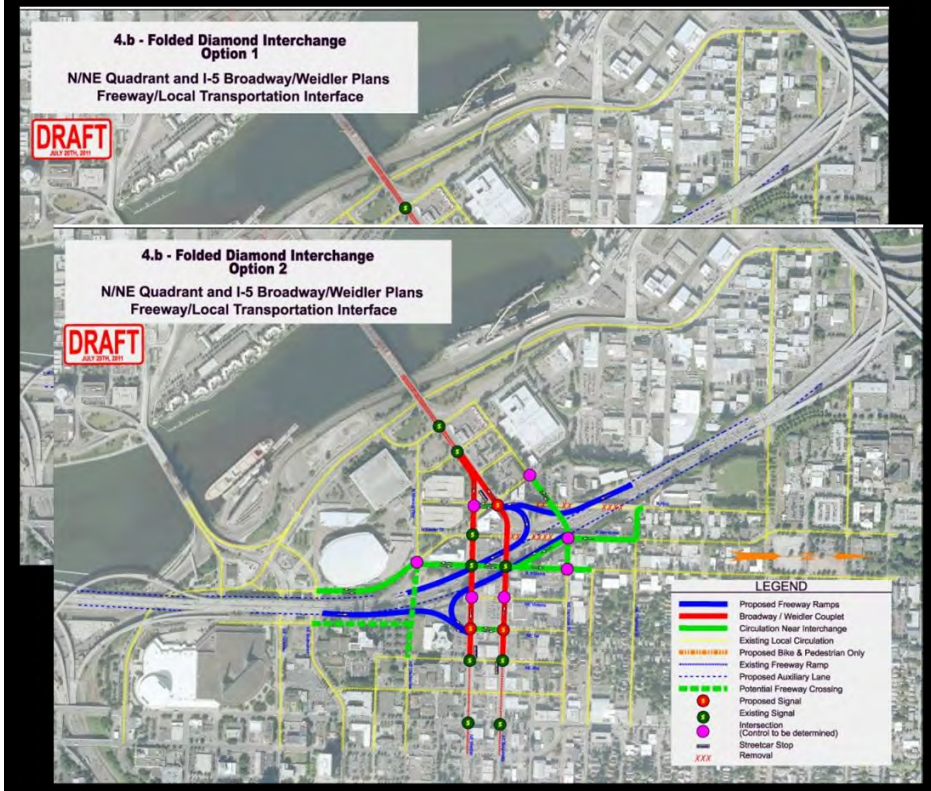
- Refine and evaluate in Phase III



CENTRAL CITY 2035

Refined Concept for Evaluation

4a. Split Diamond
Extend Auxiliary Lane



General Description:

- Three new freeway structures – Broadway, Weidler and Hancock. Vancouver and Flint would be removed.
- Vancouver, Flint and Hancock would be local street connections.
- Structures would be improved for bike/ped.
- Clackamas structure would be bike/ped. only.
- New bike/ped. path east of I-5 to link the Rose Quarter Transit Center area with Williams.
- Transit would go through the "Box" to the west, using Vancouver, Hancock to Williams.
- Streetcar would remain on Broadway and Weidler.

July 28, 2011 Recommended Concept

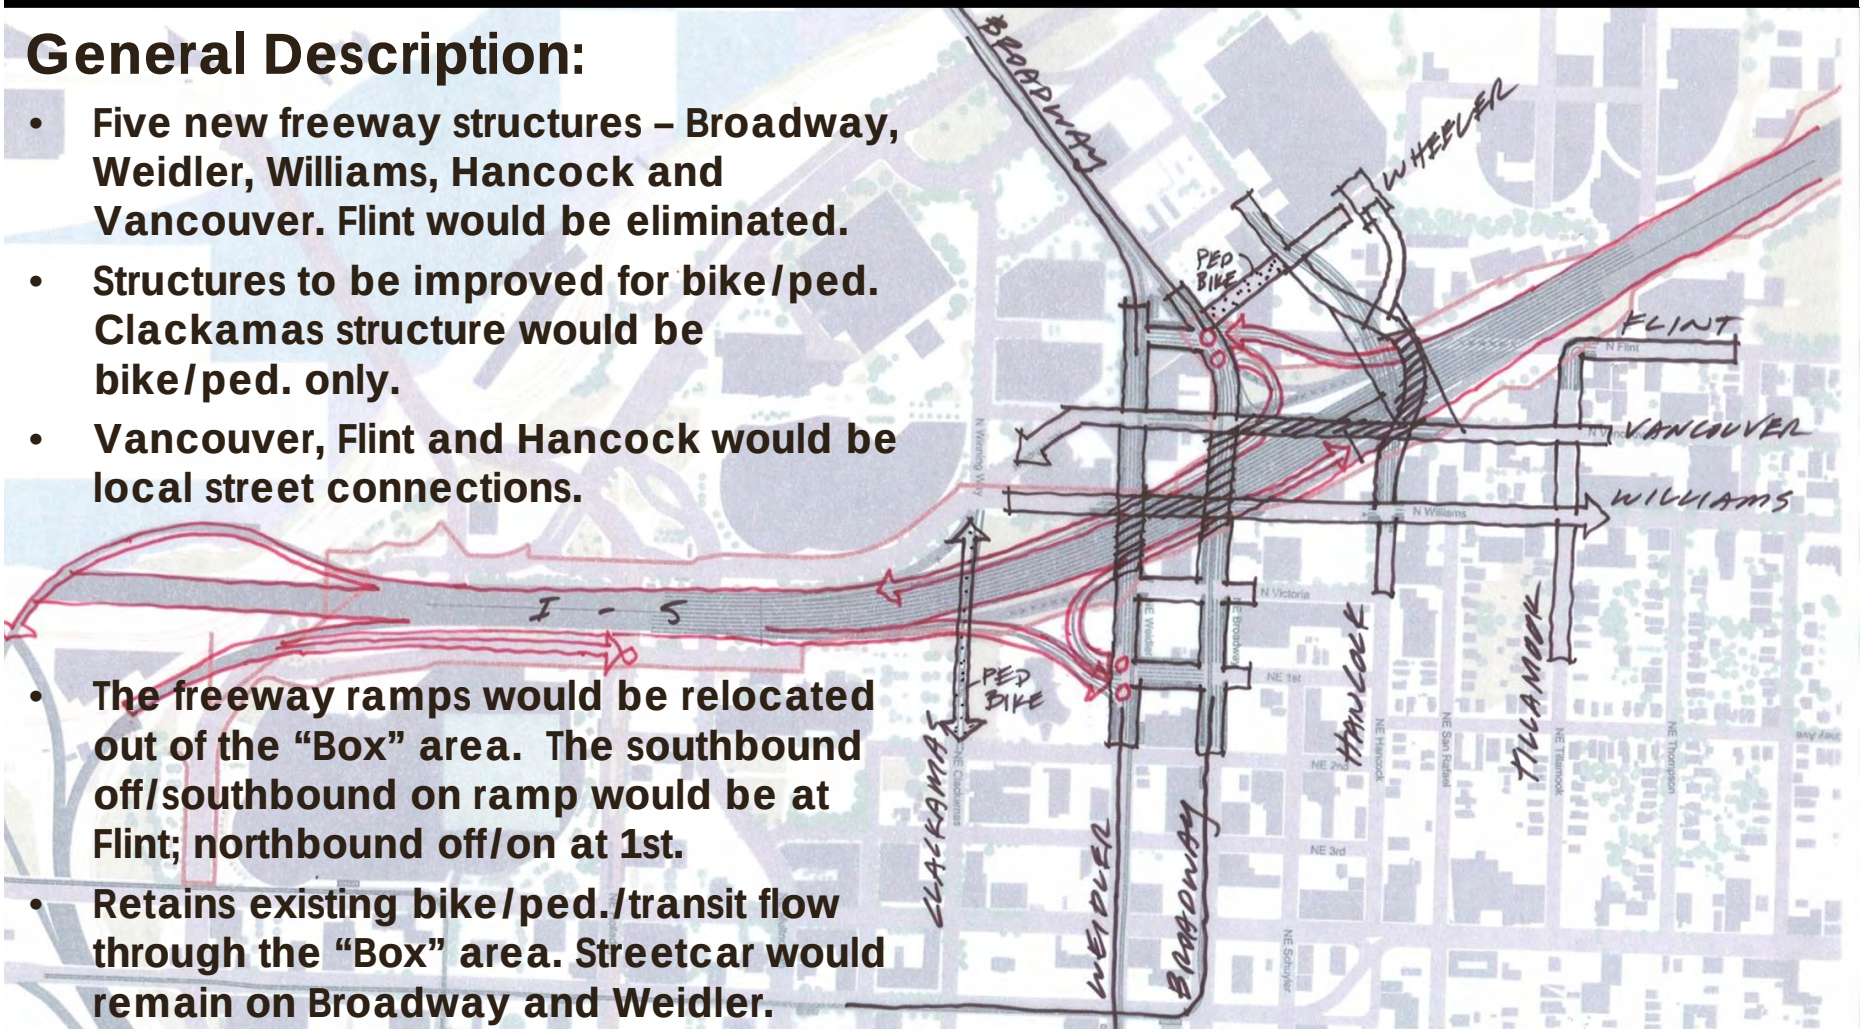
4b. Folded Diamond
Extend Auxiliary Lane

Key Findings:

- Improves freeway safety and operations
- Lengthens weave distances

Recommendation:

- Refine and evaluate in Phase III

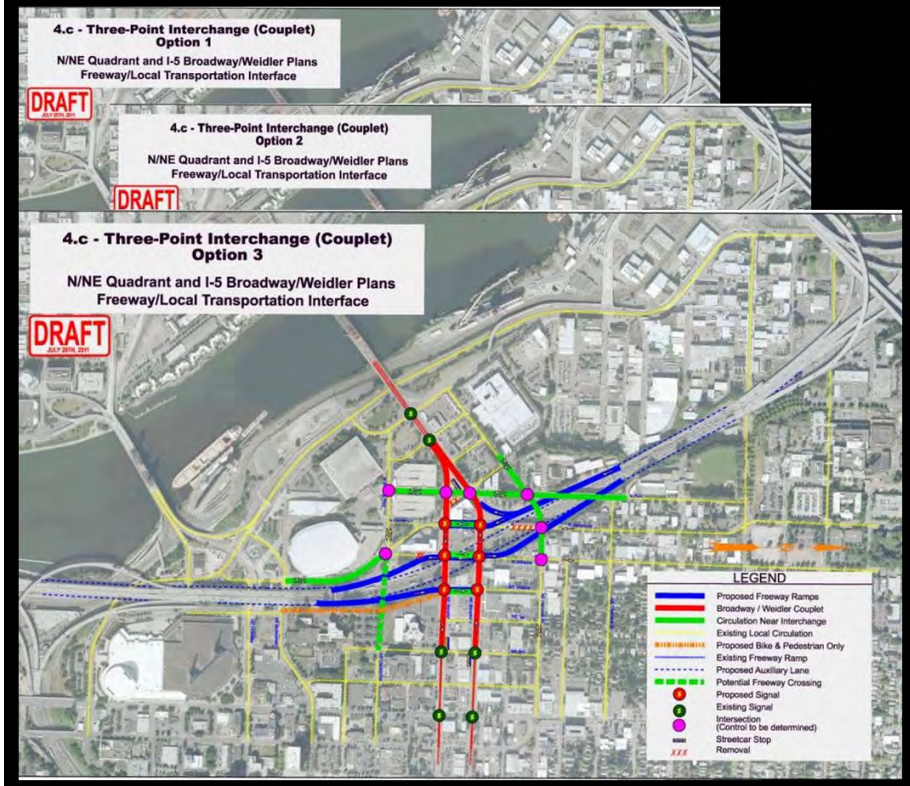


CENTRAL CITY 2035

Refined Concept for Evaluation

4b. Folded Diamond
Extend Auxiliary Lane

General Description:



- Five new freeway structures – Broadway, Weidler, Williams, Hancock and Vancouver. Flint would be eliminated.
- Structures to be improved for bike/ped. Clackamas structure would be bike/ped. only.
- Vancouver, Flint and Hancock would be local street connections.

- The freeway ramps would be relocated out of the "Box" area. The southbound off/southbound on ramp would be at Flint; northbound off/on at 1st.
- Retains existing bike/ped./transit flow through the "Box" area. Streetcar would remain on Broadway and Weidler.

July 28, 2011 Recommended Concept

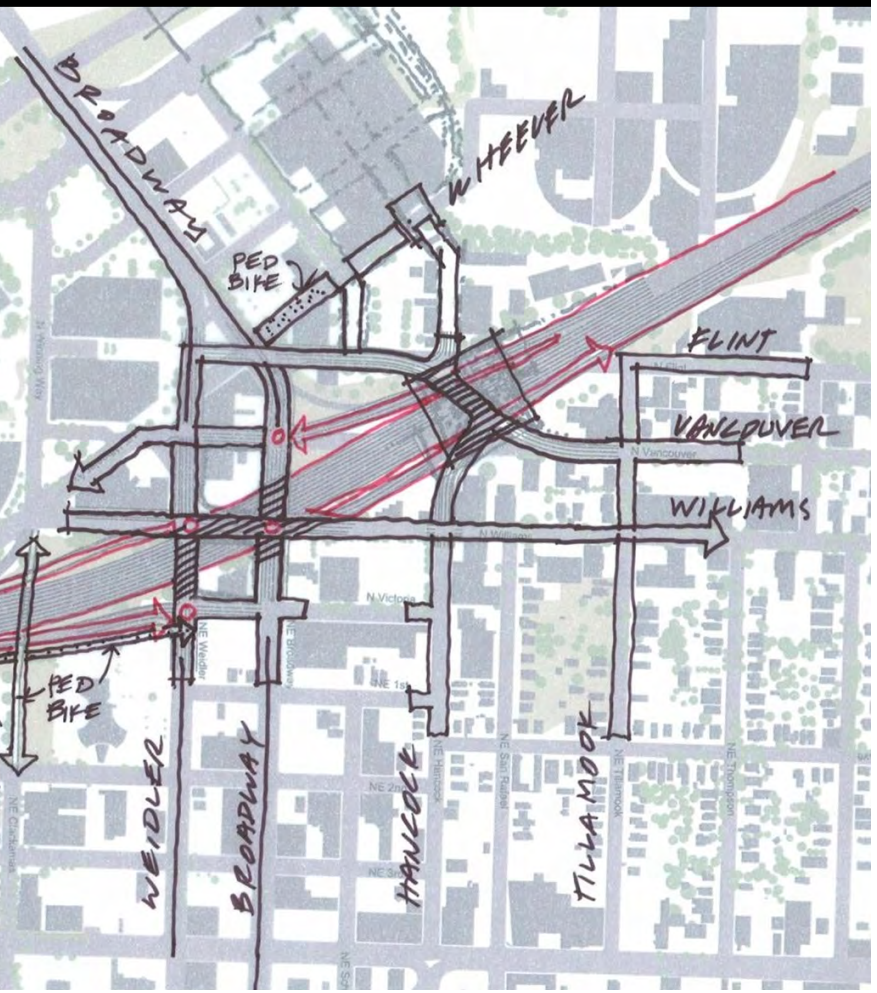
4c. Three-Point Interchange
Extend Auxiliary Lane

Key Findings:

- Improves freeway operations; good safety for all modes
- Limited ROW impacts

Recommendation:

- Refine and evaluate in Phase III



CENTRAL CITY 2035

Refined Concept for Evaluation

4c. Three-Point Interchange
Extend Auxiliary Lane

General Description:

- Four new freeway structures – Broadway, Weidler, Williams and Hancock
- Flint and Vancouver would be eliminated
- Structures to be improved for bike/ped. Clackamas structure would be bike/ped. only
- Streetcar would remain on Broadway and Weidler
- Transit, bike/ped. northbound would go through the "Box" using Williams
- Transit, bike/ped. southbound would go to the west of the "Box" area using the Vancouver, Hancock, Flint local streets to the Rose Quarter

Break

Analysis of the Concepts

- Based on Adopted Goals, Objectives and Criteria
- Concept Designs Have Been Refined and Held Constant for Technical and Urban Design
- Higher Level of Detailed Analysis than Phase II

Analysis of the Concepts

- Completed Analyses Include:
  1. A diverse mix of uses
     - Property impacts (acres)
     - Buildings displaced
     - Parking spaces displaced
  2. Economic development supporting businesses and job growth
     - Businesses displaced
     - Commercial/industrial land needed
     - Commercial parking spaces displaced

CENTRAL CITY 2035

Analysis of the Concepts

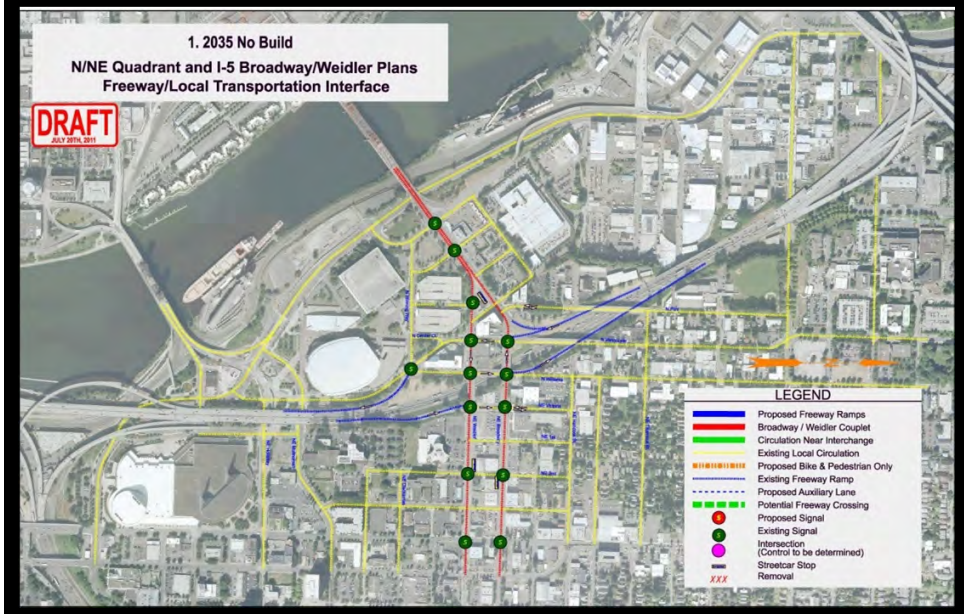
- Completed Analyses Include:
  3. Enhanced habitat, access to nature, built environment
     - ***Data and analysis at December SAC***
  4. Infrastructure for healthy, safe, vibrant communities
     - ***Includes only land use/quadrant plan measures***
  5. Multi-modal transportation system
     - Number of bicycle and pedestrian freeway crossings
     - Bicycle and pedestrian safety at freeway ramps
     - Bicycle and pedestrian route directness (increase or decrease)
     - Transit route directness

Analysis of the Concepts

- Completed Analyses Include:
  6. Improve local circulation for all modes
     - ***Data and analysis at December SAC***
  7. Equitable access to community facilities
     - ***Data and analysis at December SAC***
  8. Protect and enhance cultural heritage
     - Impacts to historic and cultural structures
     - Impacts to high-priority community facilities (Rose Garden, Convention Ctr, Left Bank, Madrona Studios, Blanchard Bldg, etc)
     - Increased traffic on local streets
     - ***Data and analysis at December SAC***
  9. Capital Cost
     - ***Data and analysis at December SAC***

Analysis Team

ODOT, Portland Bureau of Transportation, Portland Bureau of Planning and Sustainability and consultants in the following specialty fields:



- Bicycle/Pedestrian Connectivity and Quality of Experience
- Freeway & Local Street Operations
- Transit Operations & ROW, Business, Residential Impacts
- Design Details and Cost Estimates

- Mike Tresidder, Alta Planning & Design
- Alan Snook, DKS Associates
- David Zagel, URS Corporation
- Mark Johnson, ODOT

Technical Analysis

1. 2035 No-Build

Preliminary Data:

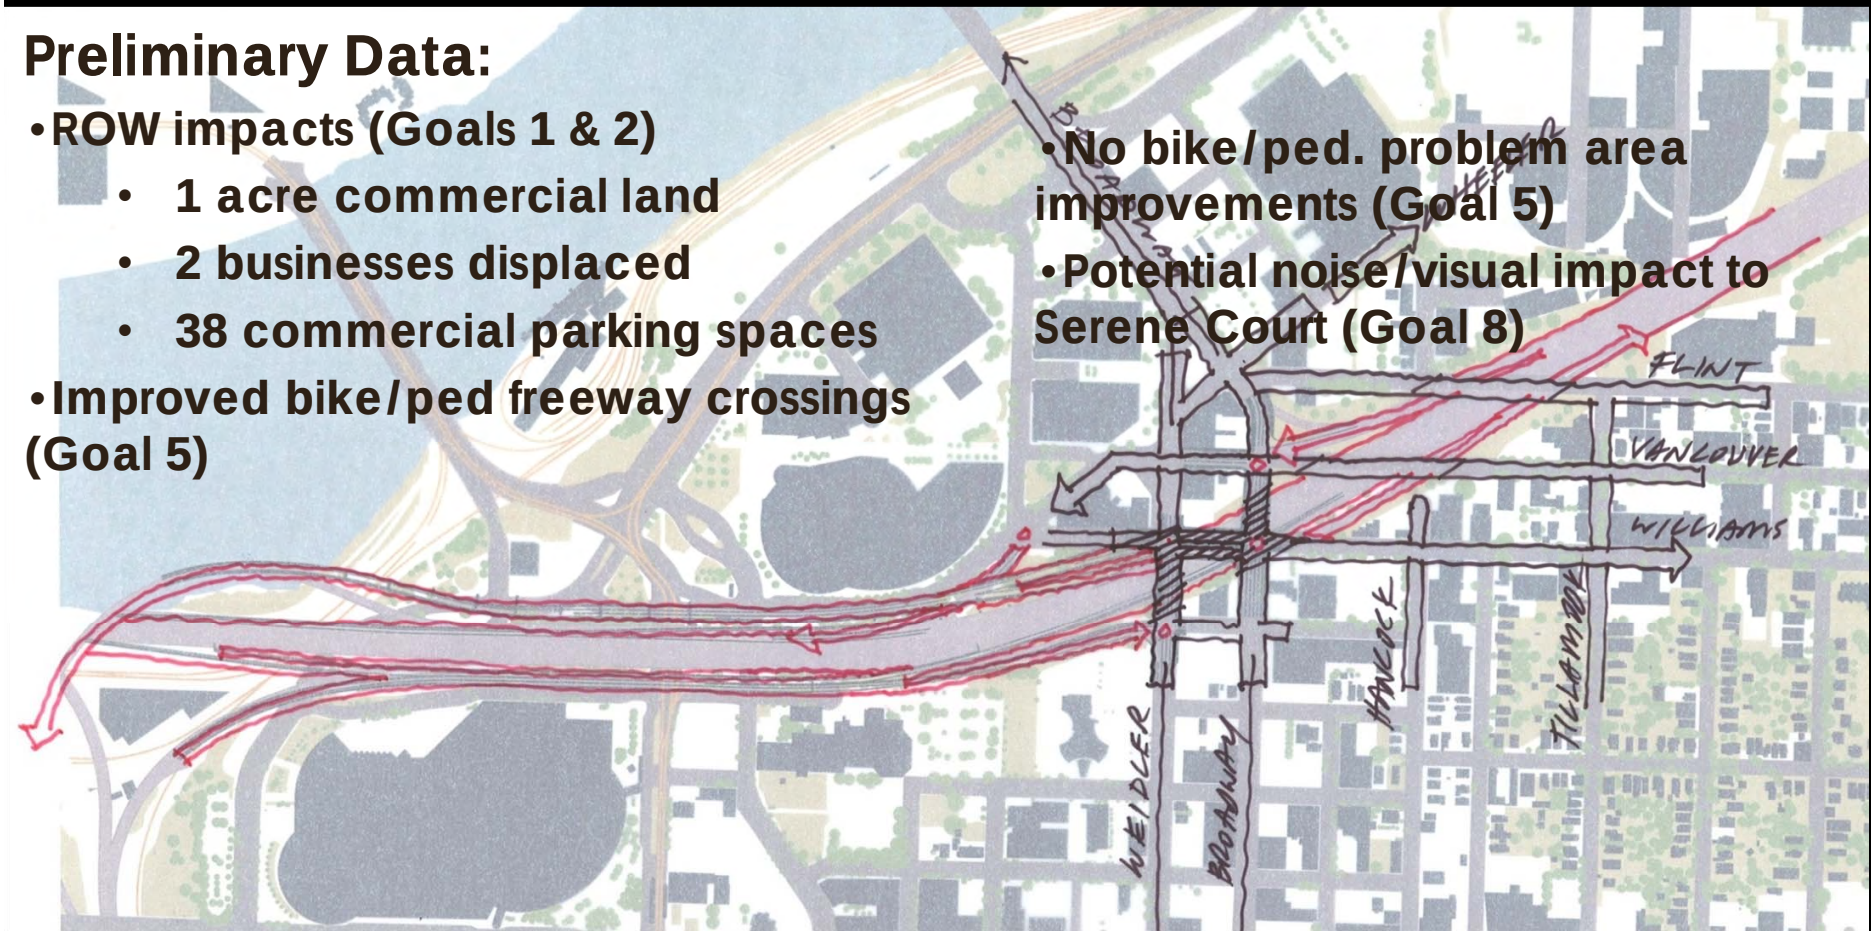
- No additional ROW (Goals 1 & 2)
- 5 freeway bike/ped crossings (Goal 5)
- No bike/ped problem area improvements (Goal 5)
- No changes to historic and cultural (Goal 8)

CENTRAL CITY 2035

Challenges and Opportunities – 2035 No-Build

Opportunity:
- **No change**

Challenge:
- **Status quo**
  - **Multimodal safety and quality**
  - **Limited new development opportunities**



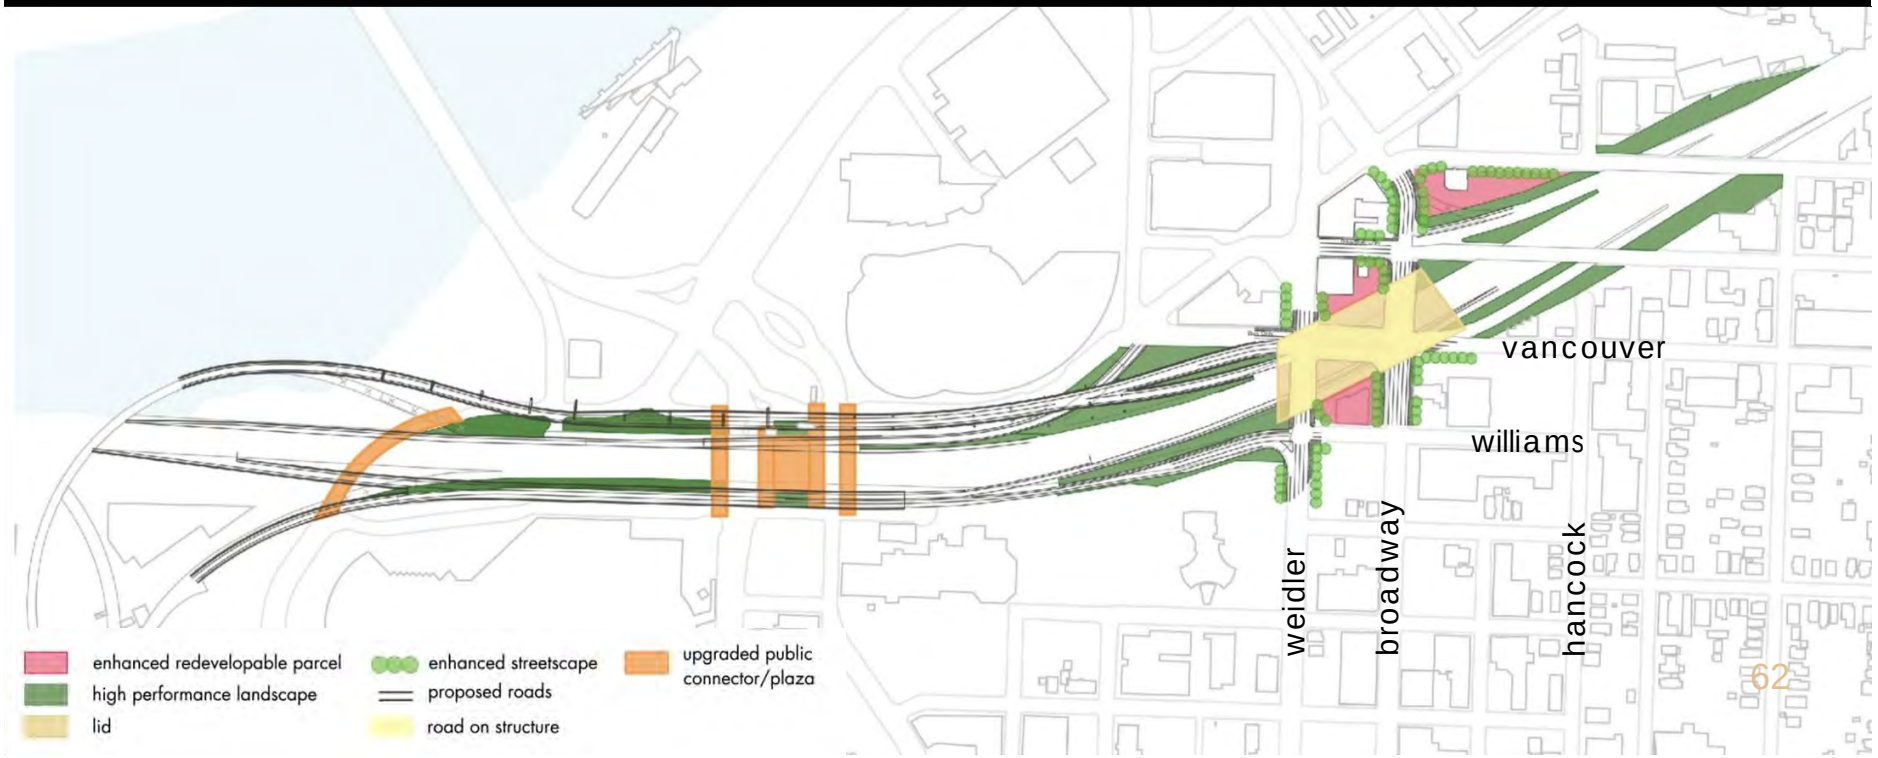
Refined Concept for Evaluation

2. Mainline Operational Improvements

Braided Ramps & CD Road

Preliminary Data:

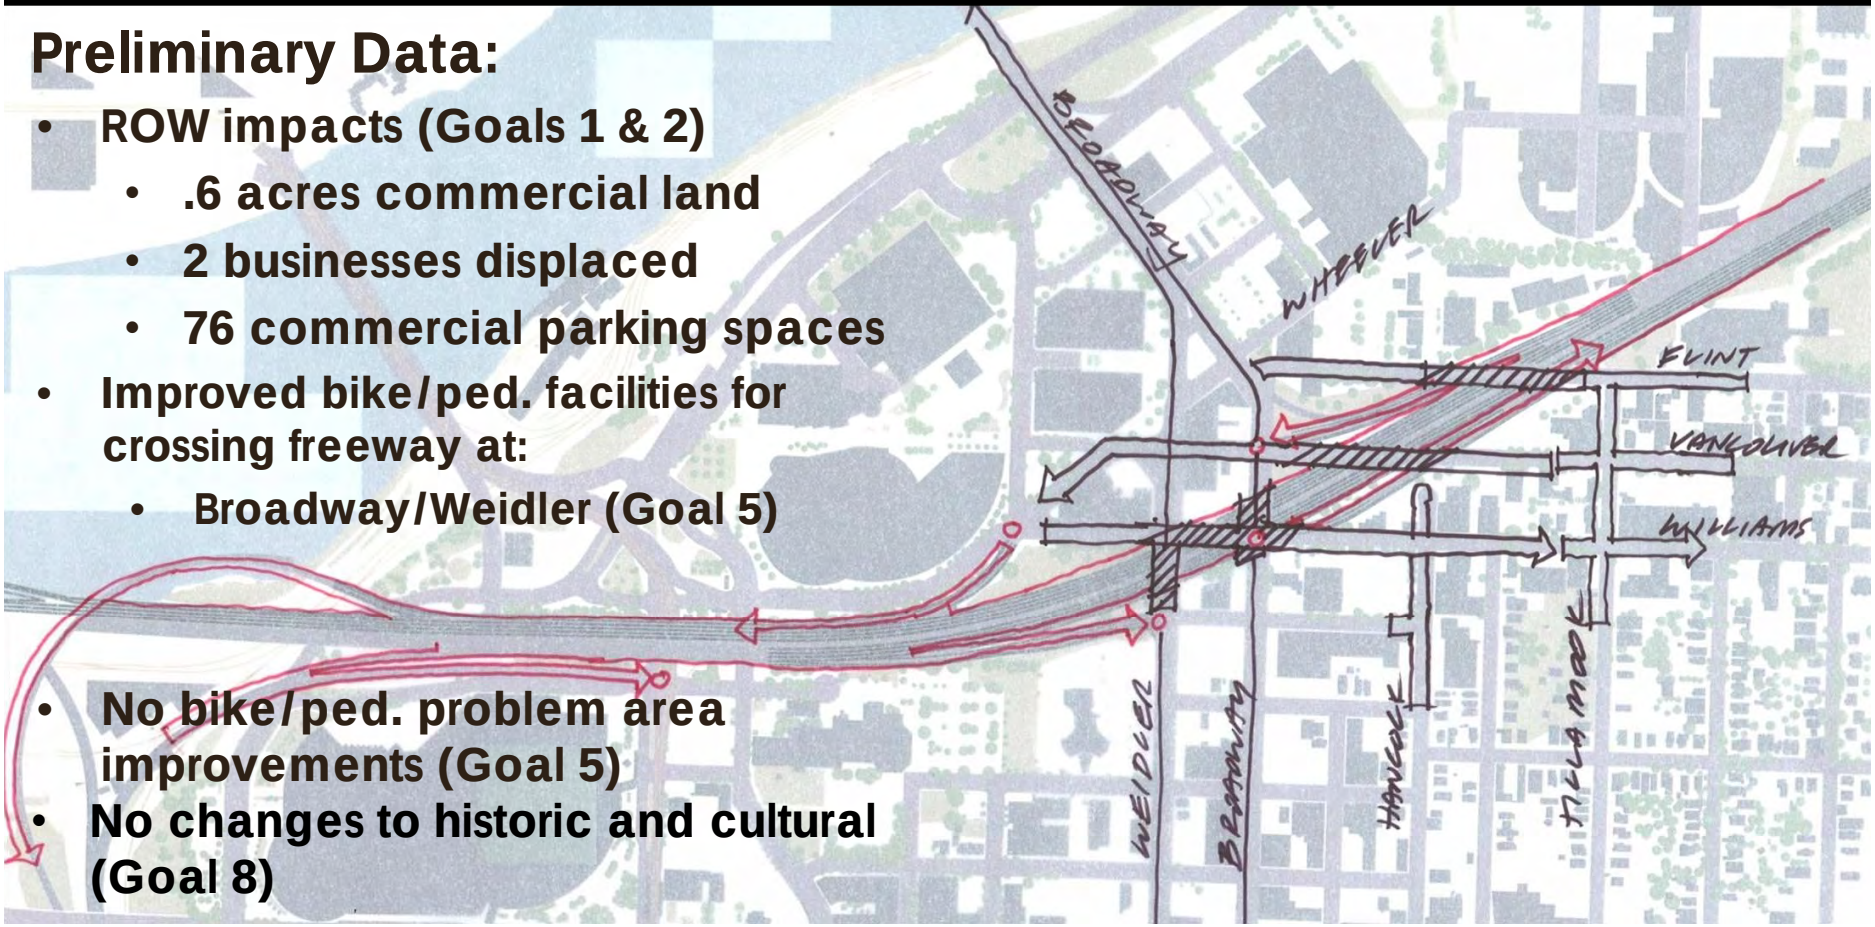
- **ROW impacts (Goals 1 & 2)**
  - **1 acre commercial land**
  - **2 businesses displaced**
  - **38 commercial parking spaces**
- **Improved bike/ped freeway crossings (Goal 5)**
- **No bike/ped. problem area improvements (Goal 5)**
- **Potential noise/visual impact to Serene Court (Goal 8)**



Challenges and Opportunities – 2. Braided Ramps/CD Road

Opportunity:

- Lid over freeway provides additional open space.
- Freeway improvements focused in the "Box" and between Weidler and I-84.
- Improvements to transit center and underpass environments.



Challenge:

- Expanded freeway section with visual impacts to underpasses near Rose Quarter TC and Peace Park.
- Additional fly over ramps in view shed.
- Limited improvement to local street system, East-West connectivity
  - Hancock
  - Clackamas

Refined Concept for Evaluation

3. Rebuild the Structures
Extend Auxiliary Lane

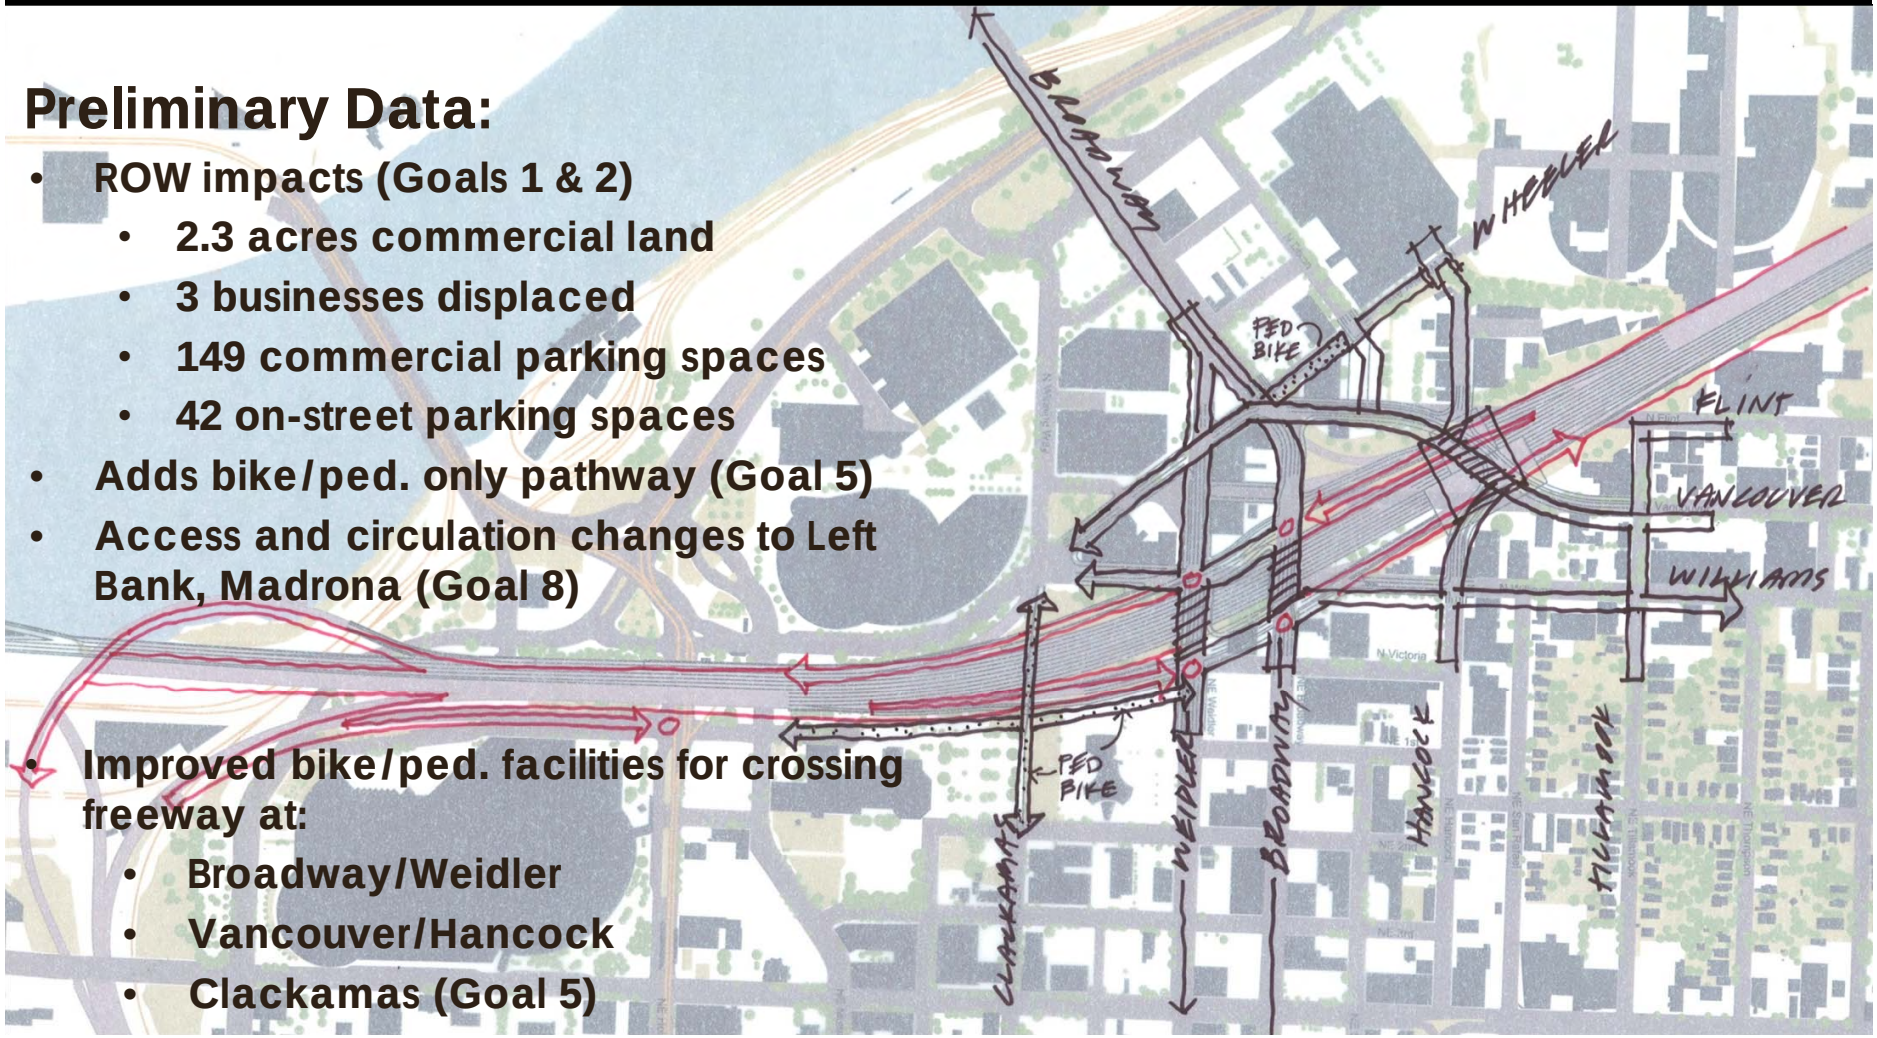
Preliminary Data:

- **ROW impacts (Goals 1 & 2)**
  - **.6 acres commercial land**
  - **2 businesses displaced**
  - **76 commercial parking spaces**
- **Improved bike/ped. facilities for crossing freeway at:**
  - **Broadway/Weidler (Goal 5)**
- **No bike/ped. problem area improvements (Goal 5)**
- **No changes to historic and cultural (Goal 8)**

Challenges and Opportunities – 3. Rebuild the Structures

Opportunity:

- **Lid over freeway provides additional open space**
- **Improve bike and ped. facilities**
- **Improve underpasses south of Broadway**



Challenge:

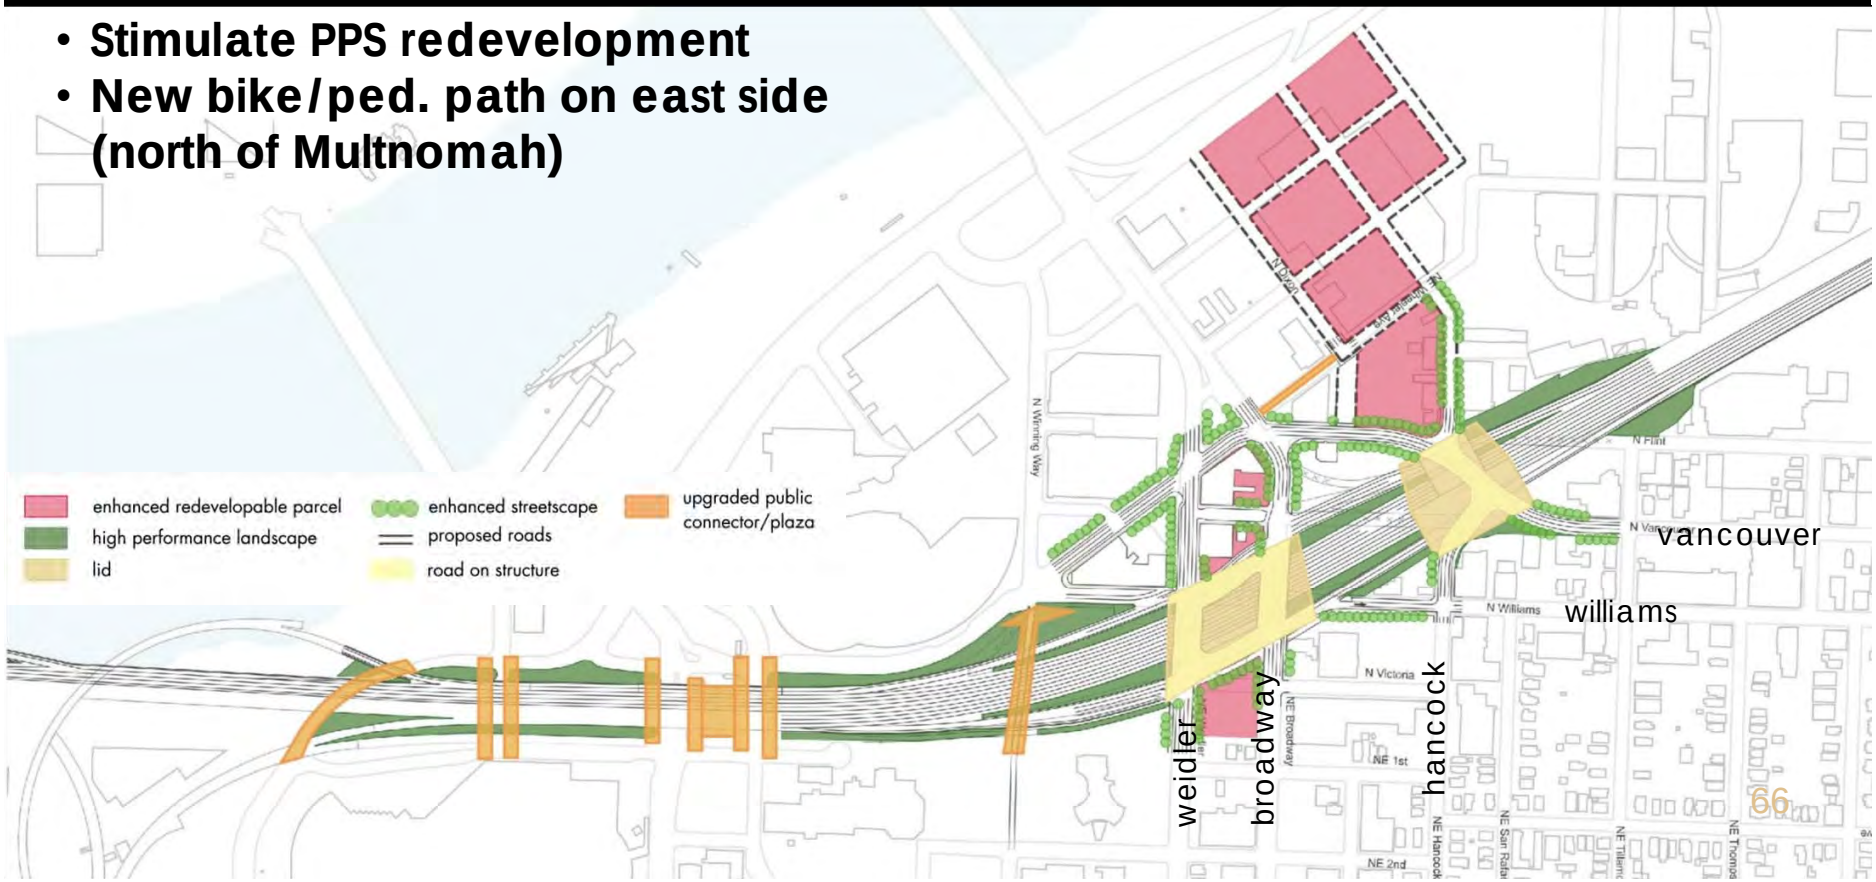
- **Limited improvement to local street system, East-West connectivity. No new crossings at:**
  - **Hancock**
  - **Clackamas**

Refined Concept for Evaluation

4a. Split Diamond
Extend Auxiliary Lane

Preliminary Data:

- ROW impacts (Goals 1 & 2)
  - 2.3 acres commercial land
  - 3 businesses displaced
  - 149 commercial parking spaces
  - 42 on-street parking spaces
- Adds bike/ped. only pathway (Goal 5)
- Access and circulation changes to Left Bank, Madrona (Goal 8)
- Improved bike/ped. facilities for crossing freeway at:
  - Broadway/Weidler
  - Vancouver/Hancock
  - Clackamas (Goal 5)



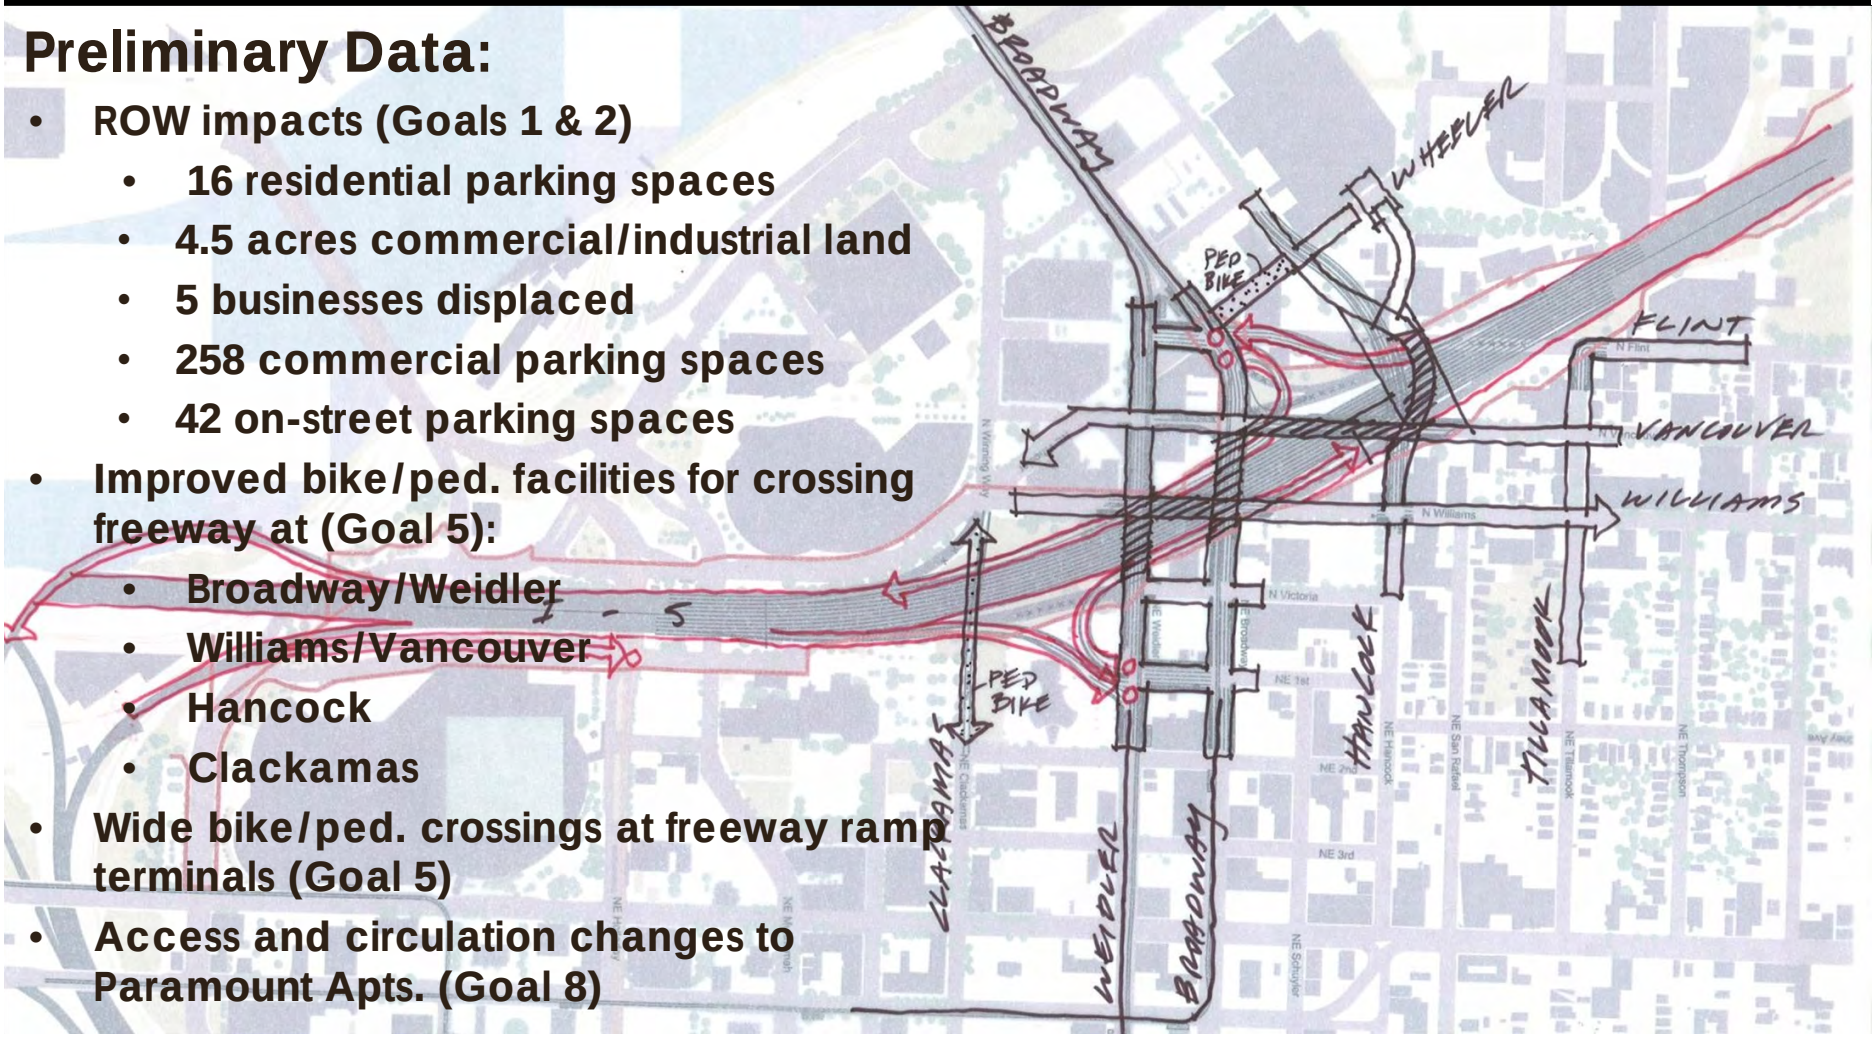
Challenges and Opportunities – 4a. Split Diamond

Opportunity:

- **New East-West connections enhance development potential, directing traffic away from the box**
- **New bike/ped. connection at Clackamas**
- **Stimulate PPS redevelopment**
- **New bike/ped. path on east side (north of Multnomah)**

Challenge:

- **North-South connections less direct (eliminates Williams and Vancouver)**



Refined Concept for Evaluation

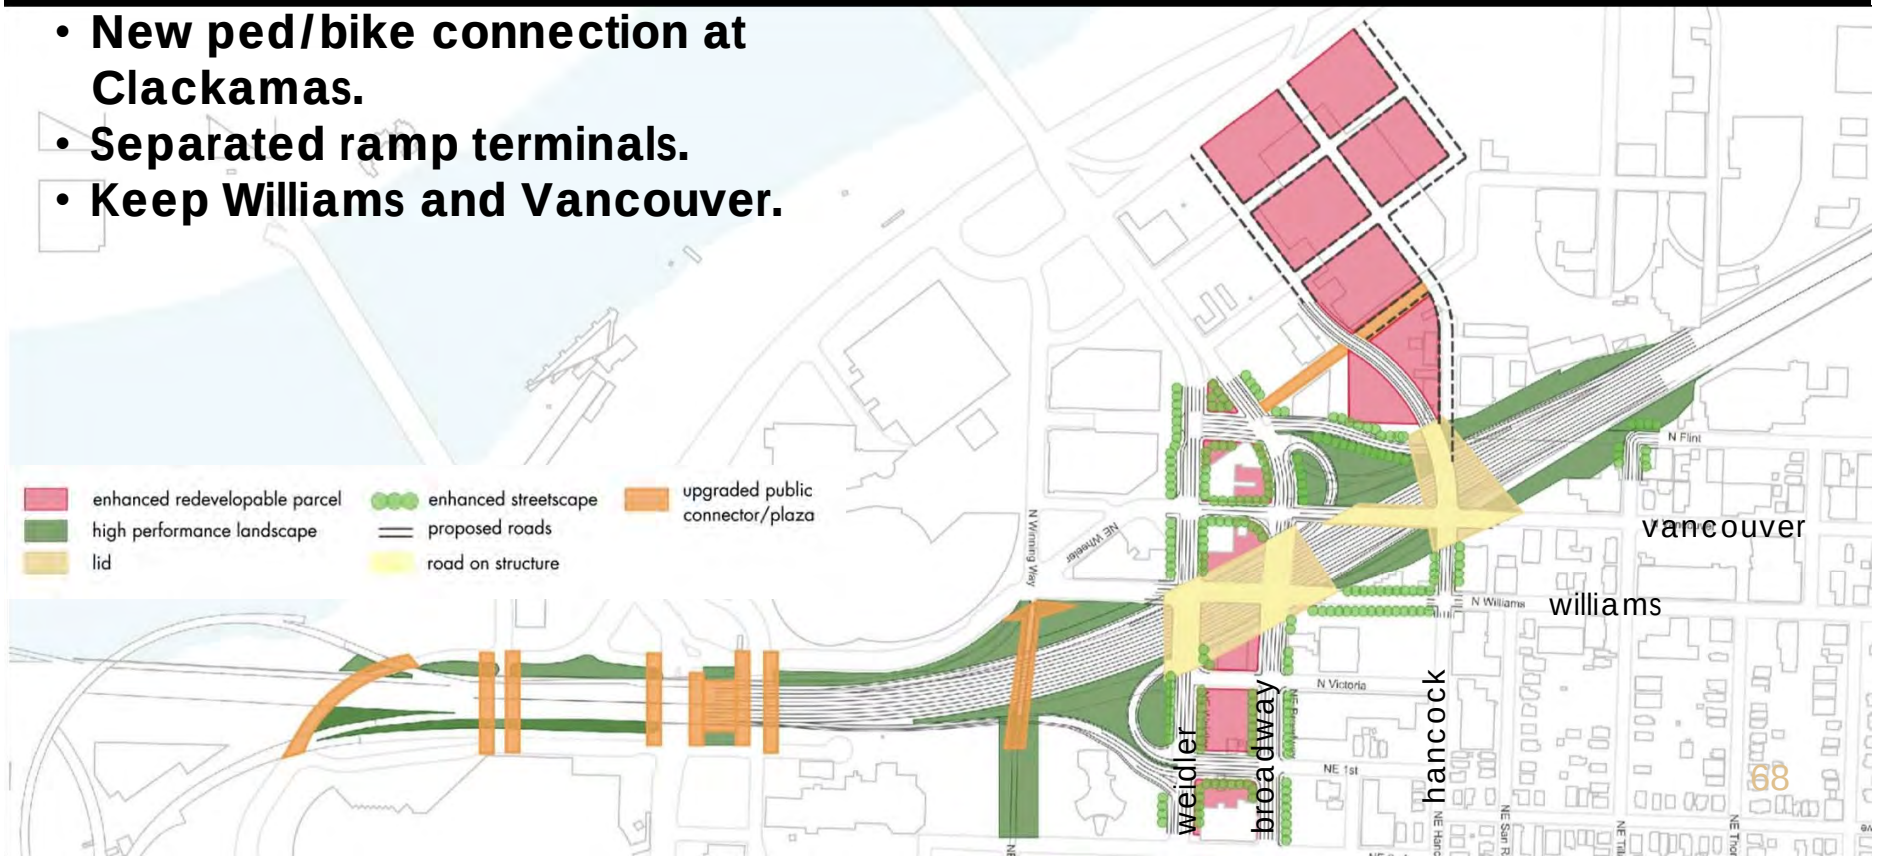
4b. Folded Diamond

Extend Auxiliary Lane

Preliminary Data:

- ROW impacts (Goals 1 & 2)
  - 16 residential parking spaces
  - 4.5 acres commercial/industrial land
  - 5 businesses displaced
  - 258 commercial parking spaces
  - 42 on-street parking spaces
- Improved bike/ped. facilities for crossing freeway at (Goal 5):
  - Broadway/Weidler
  - Williams/Vancouver
  - Hancock
  - Clackamas
- Wide bike/ped. crossings at freeway ramp terminals (Goal 5)
- Access and circulation changes to Paramount Apts. (Goal 8)

Challenges and Opportunities – 4b. Folded Diamond



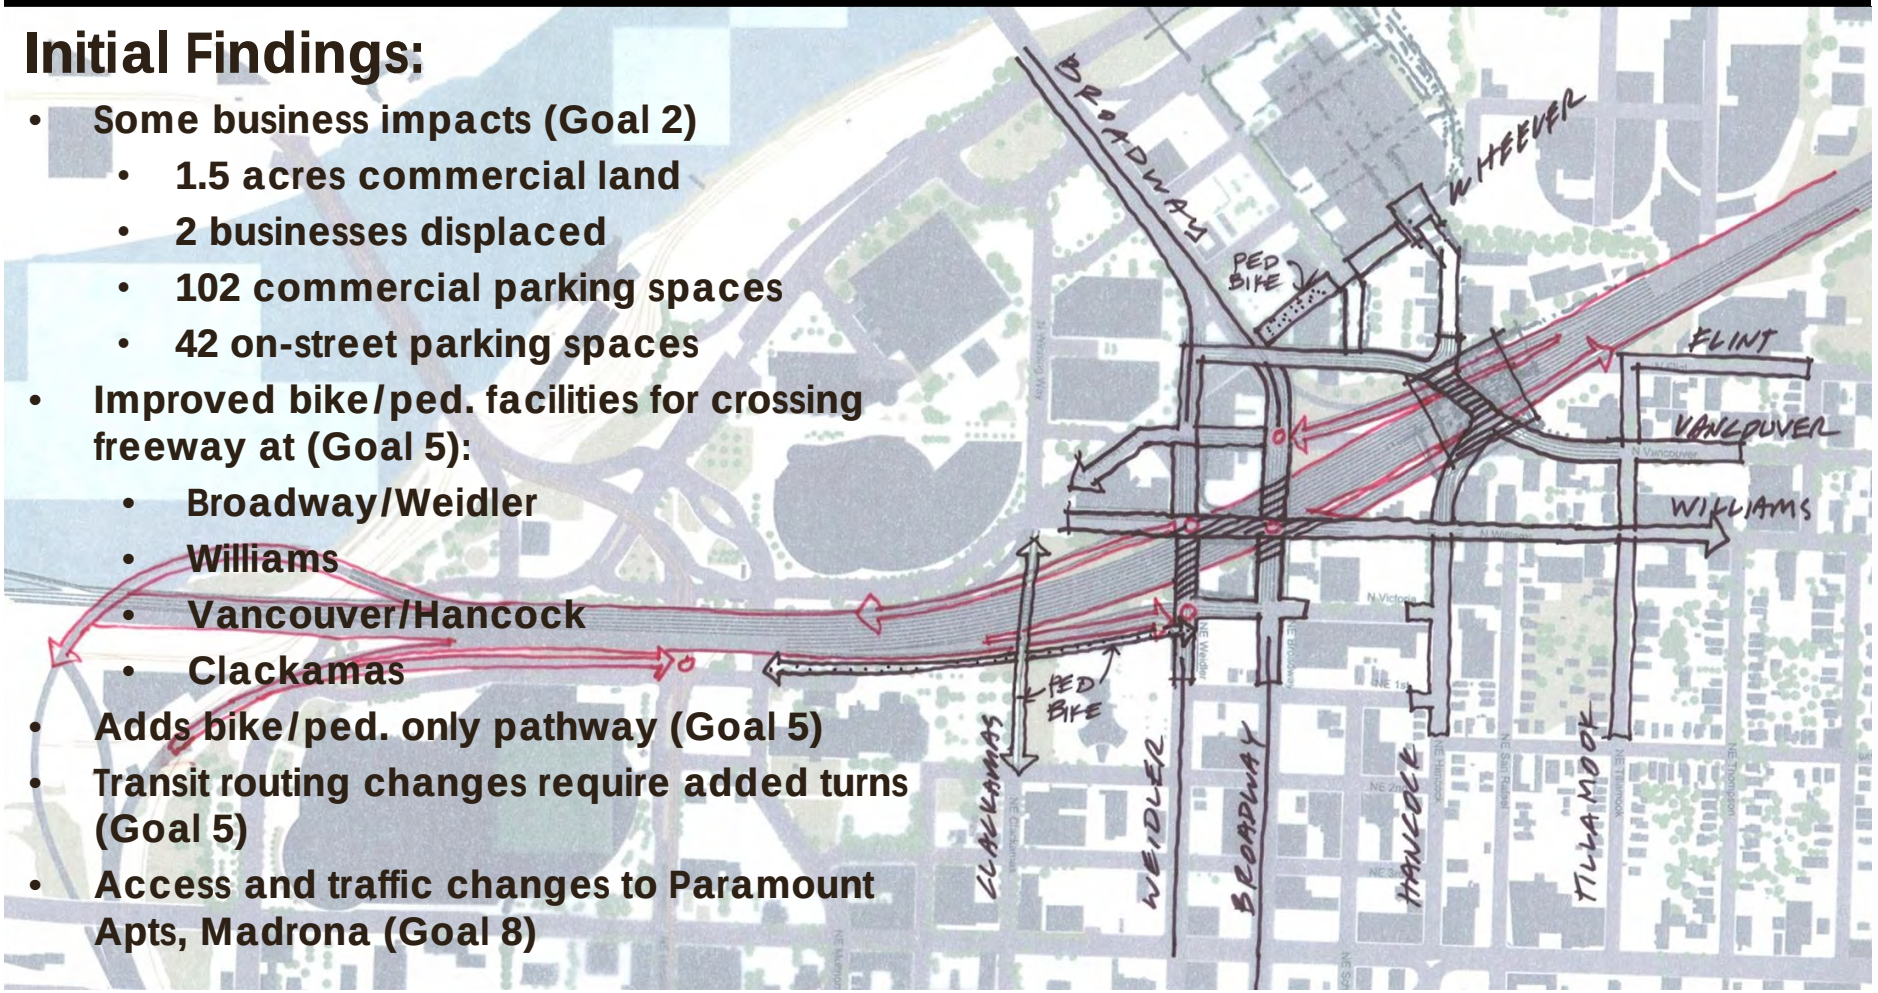
Opportunity:

- **New East-West connections enhance development potential and sub-district connectivity;**
- **Lids at Hancock and Broadway provides new open space.**

Challenge:

- **Interchange focused on two points with high traffic intensity**
- **Affecting more parcels.**

- **New ped/bike connection at Clackamas.**
- **Separated ramp terminals.**
- **Keep Williams and Vancouver.**

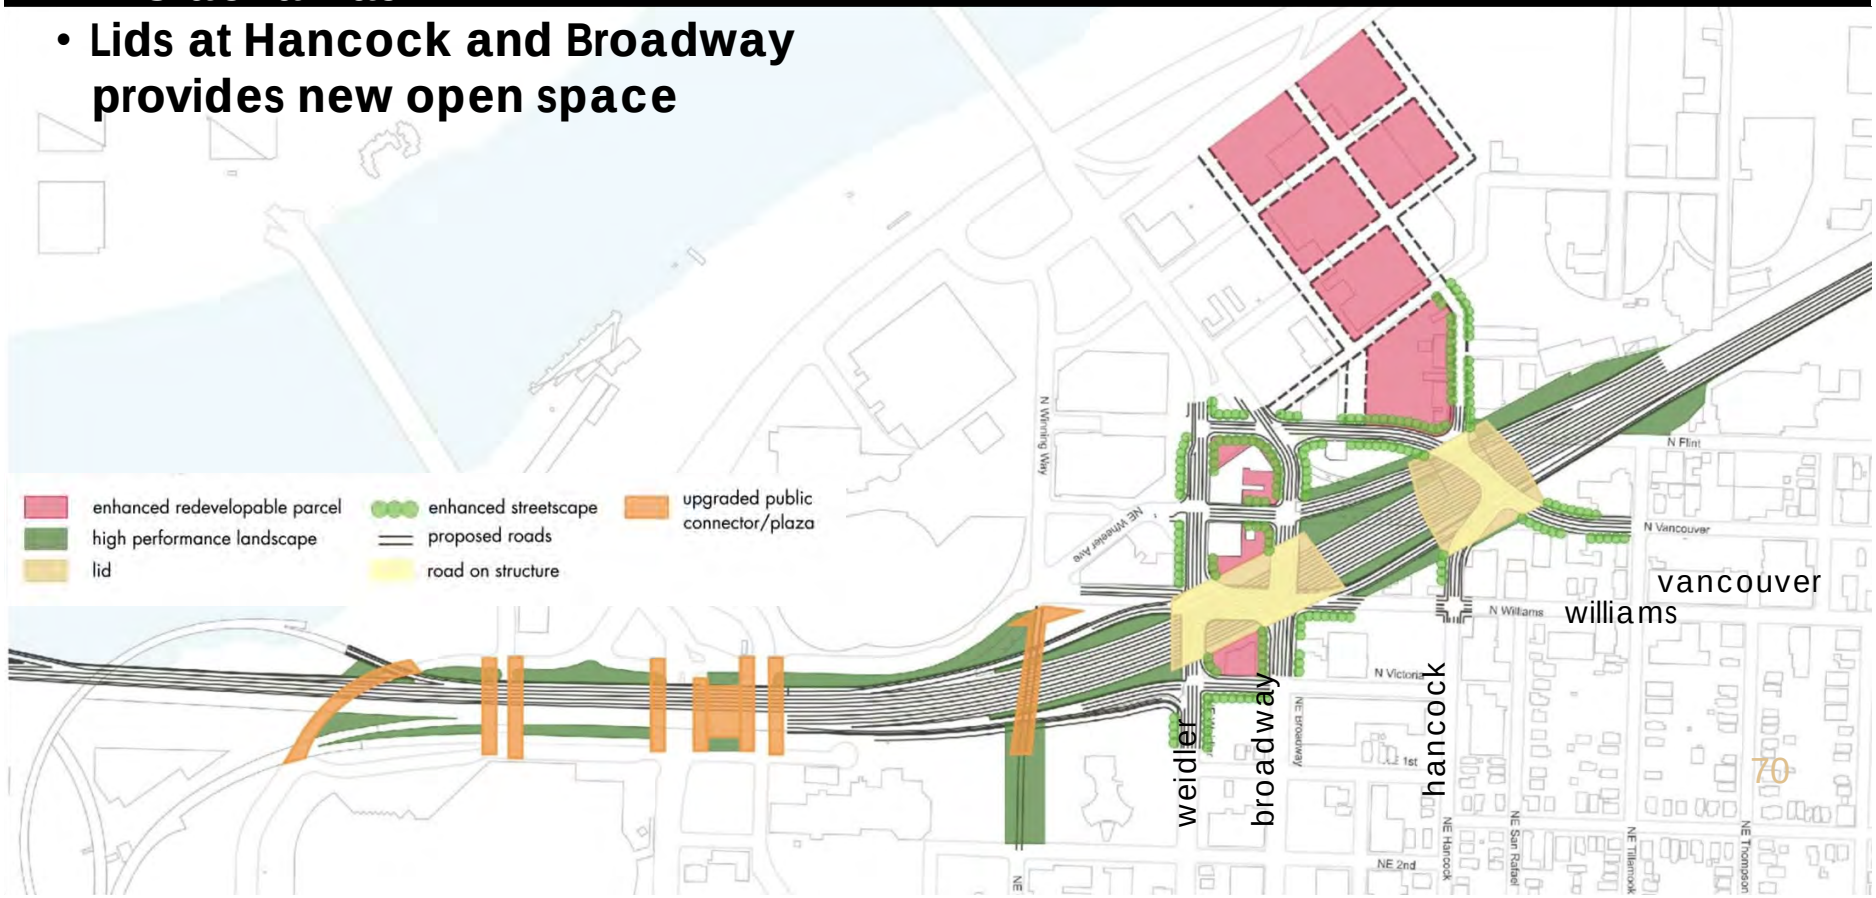


Refined Concept for Evaluation

4c. Three-Point Interchange
Extend Auxiliary Lane

Initial Findings:

- Some business impacts (Goal 2)
  - 1.5 acres commercial land
  - 2 businesses displaced
  - 102 commercial parking spaces
  - 42 on-street parking spaces
- Improved bike/ped. facilities for crossing freeway at (Goal 5):
  - Broadway/Weidler
  - Williams
  - Vancouver/Hancock
  - Clackamas
- Adds bike/ped. only pathway (Goal 5)
- Transit routing changes require added turns (Goal 5)
- Access and traffic changes to Paramount Apts, Madrona (Goal 8)



Challenges and Opportunities – 4c. Three Point

Opportunity:

- **New East-West connections enhance development potential**
- **New bike/ped. connections**
  - **Hancock**
  - **Clackamas**
- **Lids at Hancock and Broadway provides new open space**

Challenge:

- **Main bikeway shares Williams with both freeway on-ramps**
- **Interchange focused on four points.**

Advisory Committee Discussion

SAC Discussion & Questions about the Urban Design Analysis

- What Additional UD Analyses Would You Like to See?

SAC Discussion & Questions about the Interchange Analysis

- What Additional Interchange Analyses Would You Like to See?

CENTRAL CITY 2035

6. TSM/TDM/Operations Management

TSM – Transportation System Management

TDM – Transportation Demand Management

Key Findings:

- Maximizes system utility and safety

without significant capital investment

- Elements could be added to other concepts

Recommendation:

- More precisely define and evaluate in Phase III

CENTRAL CITY 2035

6. TSM/TDM/Operations Management

- TSM in the Regional Transportation Plan
  - Transit signal priority
  - Real-time traveler info
  - Weigh in-motion
  - ITS Laboratory
  - Ramp meters
  - Traffic signal coordination
  - Incident response

6. TSM/TDM/Operations Management

- TDM in the Regional Transportation Plan
  - Marketing programs
  - Rideshare services/carpool matching
  - Vanpool programs
  - Employee commute options (ECO)
  - Transit outreach and pass subsidies
  - Alternative mode information and support
  - Transportation management associations (e.g. Lloyd TMA)

6. TSM/TDM/Operations Management

TDM in the N/NE Quadrant

- City and Regional Programs
- Lloyd TMA Programs
  - Employer support (transit fare subsidy program)
  - Maps and information
  - Transportation store
  - Lloyd Links – personalized commuter plans
  - Carpool/vanpool information and support

6. TSM/TDM/Operations Management

- Mode Split Goals (Aspirational) for Non-Single Occupant Vehicles:
  - Central City TMP (1995) — 60% (2010 – Lloyd District)
  - Regional Transportation Plan (2005) — 60 – 70% (2040 - Central City)
  - Climate Action Plan (2008) — 70% (2030 – City-wide)
  - Portland Plan (2011 – DRAFT) — 70% (2030 – City-wide)

6. TSM/TDM/Operations Management

- Transportation model Lloyd District non-motor-vehicle commute mode split (PM peak 2-hours):

- 2005 Model: 18%
- 2035 Model: 33%

6. TSM/TDM/Operations Management

- TDM Sensitivity Test (2035)
  - Test: What if we had 55% of PM peak trips to/from quadrant not in motor vehicles (instead of the model-based 33%)
    - ***No specific strategies identified to achieve this improvement***
  - Key Findings:
    - 26% reduction in motor vehicle traffic to/from the quadrant
    - Less than 5% reduction on freeway mainline and Broadway/Weidler Ramps

6. TSM/TDM/Operations Management

Conclusion:

- TSM/TDM can be an important quadrant strategy
- TSM/TDM would not, by itself, fix the safety and operational problems on the freeway
- Aggressive TSM/TDM measures should be included as an element of all freeway interchange concepts that advance

Advisory Committee Discussion

Do you agree with removing TDM/TSM as a stand-alone alternative and adding it to the remaining alternatives?

N/NE Quadrant and I-5 Broadway/Weidler Plans
Comments from Mike Warwick for Eliot Neighborhood

1a. Housing
It needs to be clear that "Broadway/Weidler Corridor" encompasses the larger Broadway Bridgehead area (the Blanchard site and the Rose Quarter). Absent "targeting" this area will not redevelop as is widely expected it should. If "targeted" implies investment of public funds, significant prior investment in the Lloyd District has failed to met expectations. If new investment is envisioned (and I am concerned on that point), it should be tied to achievement of specific goals. For example, , a publicly financed parking structure could be offered to induce new residential development in the Clackamas residential area, with the amount to be repaid reduced if area landowners exceed specific housing unit goals by 5, 10, 15 and 20 year deadlines. Similar goals could be offered for employment and housing units in Central Lloyd in exchange for public development of a "green" district utility system. In either case, area landowners would bear responsibility for repayment of public investment if they fail to meet goals.

1b. Employment
The effect of rezoning in this area is twofold. First, it is to adjust zoning to economic realities the second is to enable uses operating in grey areas to do so legally so they can thrive. Both are needed to stimulate growth and investment, although the needs vary sort or by the "bubbles" the City has identified. The I zone is envisioned for industrial uses requiring separation for other uses due to noise, rail and semi-truck access, and emissions. Areas A1 and A2 should be rezoned Ex. A1 is a sloping site unsuitable for heavy industrial uses. It encompasses many vacant lots and much of the land is City owned or used for parking or open-air storage. Other parcels contain residential structures. In other words, it is mostly in an Ex, rather than an I use today. Those uses should be brought into conformity through rezoning. We (Eliot and PDC at least) learned from the Albina Plan that splitting zones along block faces on MLK frustrated redevelopment, especially if the zoning wasn't consistent with ownership. Area 2 is an example of that, as northern blocks are under single ownership and if they are redeveloped, will only be redeveloped as whole blocks consistent with one or the other zone. That zone should be Ex.
The area between Russell and Hancock east of Interstate should be rezoned to allow more flexible uses within an industrial/employment zone. Residential conversion should be disallowed, but retail sales and office/commercial uses that support area industries and employment should be allowed by right. Such uses currently exist in the area in a grey area.
Area B2 (the enclave by the light rail station) should remain as currently zoned. Rezoning it won't redress the poor location of that station.
Area C should be used to create closer coupling between Lower Albina and the Mississippi corridor to stimulate mixed use (live/work ideally) south of Fremont and into area A1. It can do so through zoning and public investment (most of the land is public ROW) in facilities that allow for uses such as farmer's markets, festival sales, and perhaps skateparks.

Fears that rezoning this area will result in loss of wild or other lands for industrial use are misdirected. The need for new property for heavy industry is for large parcels of land (scores of acres, not city blocks). That DOES pose a real threat to habitat lands, but isn't relevant in Lower Albina. Not "doing good" out of fear of maybe, something bad happening sometime is nor good planning or policy, although I agree not anticipating secondary and tertiary impacts IS a real shortcoming of much planning (see my comment about splitting zones on the same block above).
Finally, I want to repeat that Eliot wants the area along and west of N Williams between Russell and Broadway included as Industrial/Employment in Quadrant plans. Rezoning lands currently zoned R to Ex will allow the light manufacturing that has been grandfathered in this area to expand. Because these firms are thriving, the area will continue to be unattractive for residential development. Although rezoning will affect approximately 7 residences, 2 are multi-family structures with years of deferred maintenance and 2 or 3 of the remainder are used for "allowed" commercial purposes already. The expansion of industrial land above Lower Albina should be viewed as a fair trade-off for relaxation of zoning in the A1/A2 area.

2a. Hierarchy
We agree with the "overall" approach of stepping down allowed heights adjacent to residential areas. That needs to be considered in the context of adjacent development/land uses as Lloyd Lindley proposed, rather than adopting a uniform height/step down the length of the corridor. For example, block faces abutting historic areas should step down to be comparable to adjacent residential structures; to be clear, that is 30 NOT 40 feet. More important than the height allowance is a stronger voice of the neighborhood in new development. No more "consistent with community design standards" when the "community" isn't the immediate neighborhood.
In terms of "flexibility/consistency" with existing development/use on adjacent blocks; Hancock is mostly residential on the north side, but the blocks to the south are not uniformly residential. Therefore development north of Broadway in those areas could be more dense/higher depending on the context and neighborhood approval. Zoning block-by-block to allow that is problematic. Perhaps height allowance "swaps" should be used to retain an overall cap on height but allow flexibility along the corridor, subject to neighborhood approval. There are a few locations were tall buildings appear to be especially likely. The Broadway Bridgehead and the area just east of I-5 will provide excellent views from tall buildings. The associated parcels are also larger than normal and could accommodate "point towers" and other urban forms on those sites that could be more compatible with nearby residential areas. Height swaps to allow increased height would allow for that as well as provide financial incentives to other landowners to develop their properties.
To strengthen the connection between the existing neighborhoods (Eliot and Irvington), the streetcar corridor, and the urban neighborhoods to the south, development that "faces" (rather than backing on) the north/south streets should be encouraged more so than just along Broadway/Weidler. In other words, the north/south streets should have an active face, not driveways and dumpster corrals.

2b. Hierarchy

Multnomah along with 9th and 15th are major circulators for the Lloyd District and need to function as such. The addition of streetcar and new bike facilities on 7th change the character of it in ways that should be capitalized on, but the lack of on-street parking presents a challenge to retail/commercial uses in a new mixed-use zone. Public or LID investment in "free" limited time parking spaces in nearby lots or structures could be a solution because this area is already a "destination" location with many users coming by car and parking away from where they shop. It is unfortunate that the bike improvements along 7th are not tied to similar improvements north of Broadway. We strongly recommend that they be extended up 7th at least to Fremont, to not only divert downtown commuters to the Steel Bridge to relieve congestion in the "box" and on the Broadway Bridge, but to reinforce 7th as a "route to school" for students at Irvington and the Tubman Academy. That also better accommodates the disabled living in special needs housing by the hospital that use Thompson to access shops and services at the Lloyd Center.

3a. Parks Network
Per comments in 1a, new public investment in parks in the Lloyd area should be tied to specific expectations for property owners with cost consequences if they do not follow through. The Eliot/Lower Albina area is under-parked already and will be more so if there is significant new development in the Broadway Bridgehead area. Since development in that area and Central Lloyd is going to be "urban," it should be accompanied by urban "parks" rather than conventional tree/lawn style parks; Portland's newer fountain parks are an example. These don't need to use ground level lots, but can be located on elevated walkways, rooftops, etc. Accordingly, they should be part of private property developments rather than wholly publically funded.
In terms of priority of public investment, parks are way down on the list after direct investment in redevelopment of the Blanchard site.

4a. Broadway/Irvington
Generally agree with the approach of lower rise construction along Broadway. However, the commercial/employment amenity that is the Lloyd District will attract redevelopment in this area long before it will further west along the streetcar route. It is, therefore, difficult to justify restricting heights in this area without comparable reductions further west, where development of higher structures in unlikely and increased height allowances may encourage site-banking instead of development. That said, there are areas where taller buildings are more attractive. This argues for a more flexibility within the zone along this corridor to allow for swaps of height allowances subject to increased design control by the affected neighborhoods.

4b. Broadway Bridgehead
Given PPS won't sell the Blanchard building until they either have a very high offer or it becomes too expensive to maintain (which it will within the next 20 years), that parcel needs to be rezoned to allow for profitable redevelopment based on a high assumed purchase price. Maximum flexibility in use and design should be allowed to accommodate this unusual set of circumstances, subject to a community review and approval process (meaning nearby neighborhoods, not Beavertonians!). This needs to be

extended to surrounding properties (between N. Hancock and Broadway) as well so the area can develop in a consistent way. That said, the zone adopted should NOT allow for redevelopment north of Broadway of the same entertainment/sports-type event use as the Rose Quarter. This area needs to be a catalyst for more "full-time" uses at this important site.

5a. Tree Canopy

My personal opinion is that Portland's new tree policy skirts perilously close to a "taking" with the restrictions it imposes on landowners without a compelling public benefit. While I agree with the philosophy behind it, and the idea that some areas are better suited for trees than others, fundamentally the best place for trees is a forest, not a city. Despite the desire to see trees on heavily trafficked corridors, the use of these corridors by semi-trucks and as routes for wide-loads argues that the number and size of trees along them be restricted, not increased and therefore the placement of trees should be along slower speed/lower volume routes or in elevated containers that get the limbs above tractor/trailer heights.

SEPTEMBER 29, 2011 SAC MEETING # 9 AGENDA

CALAROGA TERRACE, 1400 NE SECOND AVENUE, PORTLAND, OR 97232

TIME	MIN	ITEM	LEAD(S)
5:00	30	**Informal Discussion and Meal**	All
5:30	20	**Standing Items** A) Welcome B) Meeting Purpose/Agenda Review C) Approval of Minutes D) Public Involvement, Outreach, and Land Use Subcommittee Reports E) Announcements	Imperati Beckman Iwata
6:00	10	**I-5 Interchange Concepts – Progress Update** A) Status of Work in Progress B) Q and A/Discussion	Cullerton Juhasz
6:15	15	**Phase III Evaluation Criteria** A) Final Review B) Public Comment C) Vote ***Action #1***: *Do you approve the revised Phase III Evaluation Criteria?*	Imperati Beckman Juhasz
6:45	130	**Presentation of ~70% Proposed Plan LU/UD/LT Quadrant-wide Concept** A) Introduction of evolving Quadrant-wide Concept and Staff Recommendations on specific choices B) Break (10 min) C) Q and A and Discussion D) Public Comment ***Discussion:*** *Give staff direction on proposed concept. What needs to change to get your support for a concept on November 17?* *Specific Discussion Questions by concept layer:* 1. *Land Use:* a. *Housing – Do you agree with the proposed housing emphasis areas (Broadway/Weidler Corridor and the Central Lloyd) and targeted jobs/housing ratio?* b. *Employment – Do you agree with the approach to slightly increase flexibility on Russell Street and Lower Albina?* 2. *Mobility:* a. *Hierarchy – Do you agree with the overall approach to street hierarchy and typology?* b. *Hierarchy – What are the most appropriate designations for NE 7th and NE Multnomah?* 3. *Open Space:* a. *Parks Network – Do you agree with the proposed string of new well-connected parks along NE Clackamas to support new high-density residential development?*	Iwata Lisle Raggett

		4. *Scale:* a. *NE Broadway/Irvington –The proposed concept suggests the predominant building form along NE Broadway between Grand and NE 16th should be in the 2-6 story range. Do you agree with this approach?* b. *Rose Quarter – The proposed concept recommends rezoning the PPS Blanchard site to allow future mixed-use redevelopment as well as increasing height limits along N. Broadway. Do you agree with this proposal?* 5. *Green Systems:* a. *Tree Canopy – The green systems map and street hierarchy layers imply that heavy tree canopy should be focused on certain streets and corridors while other streets could have fewer trees. Do you agree with this approach?* *Are there other specific issues you want to discuss?*

INFORMAL DISCUSSION AND MEAL

WELCOME, MEETING PURPOSE, APPROVAL OF MINUTES, AND STANDING BUSINESS – SAM IMPERATI

Sam Imperati welcomed the group and reviewed the agenda.

APPROVAL OF MEETING MINUTES

The June 16, 2011 Meeting Minutes were approved as written.

NEW MEMBER INTRODUCTIONS

Joanna Agee is with the Left Bank and is Daniel Deutsch's new alternate. She has been involved with the Left Bank for four years. Her focus has been in developing the tenant community. This is her first SAC meeting and she thanks Todd and Stephanie for meeting with her and getting her up to speed on the process.

PUBLIC INVOLVEMENT, OPEN HOUSE, AND SUBCOMMITTEE UPDATE

Stephanie Beckman of BPS provided an update on the June 29 Open House. Over 100 people attended. The focus was to share the work the project team has done thus far with the community and get feedback on the land use, transportation, and sub-area choices. There were surveys and comment cards available and there is a compilation of survey responses received on the freeway concepts in the meeting packet. Since the SAC is being asked to make decisions to narrow down the number of freeway options studied, the project team wanted you to have that feedback to consider in your deliberations.

The project team is continuing to collect feedback and will be launching an on-line survey. It will be live next week, and available through the beginning of September. It will be announced via email to the project mailing list.

Staff has also been having informational meetings with interested groups such as the Irvington and Elliot Land Use Committees, the Oregon Convention Center Urban Renewal Advisory Committee, and several individual stakeholders. Coming up, we will meet with Sullivan's Gulch Neighborhood Association, the Lloyd TMA, Calaroga Terrace residents, and we will have a table as part of the National Night Out event at Holladay Park. The results of our outreach efforts will be compiled and distributed this September. Stephanie asked the SAC to please send ideas for other groups to meet with, as staff is trying to do as much outreach as possible this summer.

Finally, Stephanie provided an update on the Joint Land Use and Transportation Subcommittee, held at ODOT on July 13. Eighteen people attended. Much of the same content will be covered tonight. The Subcommittee meeting discussion generated numerous comments on the proposed evaluation criteria, which is in the packet and will be discussed more in depth later this evening.

MEMBER COMMENTS SUMMARY AND STAFF RESPONSE

Sam noted the email he sent out, asking for SAC member feedback on the process. Responses have been compiled and are in the packet. Staff is happy to hear additional feedback and suggestions at the break or anytime.

Gary Warren: sees a comment about parking on the summary, and announced that if you ask the folks at the front desk at Calaroga, they will let you park on the first floor for free.

OTHER ANNOUNCEMENTS

In the meeting reminder and materials distribution email that goes out a week before the meetings, we sent out a link instead of numerous attachments this time. Sam wondered if folks liked that or do you want individual documents?

Eric Lovell: thought it was difficult to find documents. A table of contents would be a nice thing to add.

Heidi Guenin: liked being able to save it as one PDF.

Lloyd Lindley: good; easy to scroll through.

Sam said that we will keep this format going forward and will add a table of contents.

PROCESS UPDATE

Steve Iwata of BPS reviewed the updated Process Overview Chart. As Steve has explained before, this is a unique planning process with two different city agencies and ODOT, working to bring land use and transportation planning together. We have held a series of charrettes on land use and transportation. The intent tonight is to finish Phase 2 and proceed to Phase 3.

For land use, staff has developed three types of quadrant concepts – residential, employment, and blend. We hope to have a recommended draft for discussion in September. That quadrant concept will be evaluated with the remaining freeway concepts that will be acted upon tonight. Then, we will be looking at freeway concepts in October.

At the end of Phase 3, we will have the preferred diagram on the land use side and same on the freeway side. Then, we will go into Phase 4. We will have defined, more specific goals and objectives on the land use side, which will help inform the quadrant plan, including potential changes to zoning code and maps.

On the freeway side, we will have a more detailed plan for freeway, recommended concept plans, which will include cost estimates, mitigation measures, and will identify next steps for ODOT.

After all of this, the plans go to the Planning Commission, City Council, and the Oregon Transportation Commission.

Sam noted the new meeting dates in left column of the process chart:

- SAC Meetings: #9 - 9/29, #10 - 10/29, and #11 - 12/8
- Subcommittee Meetings: LU: 9/14, T: 10/12, and Joint LU/T: 11/16

Mike Warwick: the request was for firm dates, not tentative dates.

Sam Imperati: these are the most promising, next step is a quick poll of the SAC.

LU/UD/LT QUADRANT-WIDE CONCEPTS RECAP

Karl Lisle of BPS provided an update of the current status of the Land Use/Urban Design/Local Transportation concepts, referring the SAC to the Concept Alternatives Workbook. The Workbook is one of the primary tools being used for communication during public involvement activities and meetings this summer. We have developed goals, done technical analysis, issue identification work, developed a survey tool, and created this workbook. It contains all the concepts and the staff is seeking feedback. It will be helpful for the project team to bring the best concept back to the SAC for consideration and discussion. When we come back in September, we will not have everything figured out, but we hope to have recommendations on as many areas as possible. Then, we will work with SAC to identify the conflicts and places where there may not be an obvious choice.

The document is in two parts. First part is the concepts, organized after many months of work. Soon, we will start building "column 4," meaning the preferred concept. In this, we will decide where we want to go, select elements, and consider new ideas. We will not go into a thorough review of the entire Workbook today, but if anyone would like to spend more time or have questions, staff is always willing to meet. You will see examples in there, showing what different responses could be to different types of development initiatives. Staff made an effort to use plain English rather than planner-eze in the framing and phrasing of questions. These will be the questions on the web survey. We are aiming for a direction to come together in September and the bulk of the September SAC meeting will be devoted to local land use issues.

Karl asked if there were any questions for clarification or comments.

Sam noted the question from the agenda:

Action #1 *Do you approve the Phase II LU/UD/LT process and staff recommendations on the Quadrant-wide concepts to go forward into Phase III?*

He said we will have another presentation and discussion, and then, ask the SAC to answer the above question.

LAND USE, URBAN DESIGN, TRANSPORTATION, AND FREEWAY CROSSWALK

Steve reviewed the Crosswalk, which is the term used for how the land use and freeway concepts will work together as we move through the phases of this project. He noted the three key principles of place, connectivity, and scale, defined below:

- **Place**: The vitality of Central City districts can be seen in the presence of, and potential for, an interconnected system of distinct and attractive high-density areas that support vibrant, livable and diverse communities, and that allows for the place to evolve and grow.
- **Connectivity:** Desired street connectivity should support a diverse system of land uses, open spaces, amenities and green systems and provide a clear street hierarchy. It should afford multiple safe means of access and circulation that supports the vitality of the district.
- **Scale:** The scale of infrastructure in terms of its size, design, and volume of use should support land uses and activity at all scales: regional attractions and employment areas as well as City and local land use and mobility needs.

In thinking about these guiding principles, we looked at current conditions. Looking at the interchange, it is not good for "place," and the freeway interrupts the flow on Broadway-Weidler and east-west through the district. In terms of scale, the freeway is appropriate for many current uses – the Rose Quarter,

Lloyd Center, industry, and Lower Albina, but it is not a pedestrian friendly place. These are some of the current conditions we identified.
The overall quadrant-wide conclusions on page 2 of the Crosswalk memo, from a quadrant-wide perspective, the freeway concepts can be accommodated by the LU concepts - employment, residential, blend.

- The **Residential Concept** would increase housing in the quadrant and result in a better jobs-to-housing balance, similar to the River District, and high internal trips by walking, biking, or riding transit.
- The **Employment Concept** would de-emphasize new residential development, resulting in a development pattern similar to the current Lloyd District and downtown Portland, featuring transportation and parking management strategies that would support high-density commercial buildings.
- The **Blend Concept** would be a combination of these two concepts.

For all of these concepts, we have ways of making each of them work together. We will look at what kind of placemaking opportunities are possible at the interchange, as some freeway concepts work better than others. For example, some freeway concepts interrupt Vancouver-Williams, while several of the concepts improve connectivity, creating better east-west connectivity. This is a quick summary of the analysis. Steve is happy to take questions.

Sam said that the SAC asked for a look at how these two aspects come together. What Steve just reviewed is part of the evaluation that the project team and consultants have done. We now want the SAC to have the opportunity to look at this and add to it.

Q & A AND DISCUSSION

Lloyd Lindley: comment regarding public/private partnerships; one component has been the return on investment; he knows there is no scope to look at economics, but would be nice to have some criteria and information on this aspect. He appreciates "place, connectivity, and scale," but it is also good to look at what we can leverage from the $250M investment. He wants the best return possible on the investment. He wonders how the different concepts impact economic development?

Steve Iwata: that is more the focus of next steps as we narrow the options down; we would look at public private partnerships with property owners. That is for the next level down when we hone in on options.

Sam Imperati: will have opportunity to deal with Phase 3 evaluation criteria at 7:55; for your reference, one of the ways we did capture that is on page 2:

> **Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages:**
>
> a. Create opportunities for new employment and a variety of employment types and levels.
> b. Maintain or increase development potential, e.g. through zoning, infrastructure, and creation of new parcels.
> c. Foster increase in future high-density commercial development while supporting and encouraging industrial activities in current industrial areas.
> d. Retain and support existing and local businesses in the quadrant.

Sam noted that that section will be used to conduct analysis on these issues.

Todd Juhasz: wants to assure the SAC that we have and will continue to look at these issues, striving to find the options that either enhance or do not negatively impact economic development.

Tracy Whalen: has been disappointed about the employment emphasis; it is really a blend; it is not really an employment emphasis. She knows it is not changing, just wanted to remark on it.

Lloyd Lindley: comment regarding the blend concept and "strand." The strand feature seems to have been dropped out of the employment and blend concepts. He would like to at least see it on a base map, down by Russell connecting to Mississippi.

Sam Imperati: the concepts and strand feature are not mutually exclusive.

Karl Lisle: correct.

Lloyd Lindley: some nod to Mississippi is important; he just wants it noted.

Mike Warwick: the novel idea of combining land use and transportation planning is frustrating but very useful. He believes this is a meritorious example of how these things ought to be done – it could have been useful for the CRC.

PUBLIC COMMENT

Emma Colburn was born and raised in SE Portland. She became interested in the development of this neighborhood. She has worked in Chicago on issues related to African American heritage sites. She works in collaboration with individuals and nonprofits and is taking steps to develop a center for Oregonians of African descent.

Emma read a prepared statement. *(Note: the project team was unable to obtain a copy of Ms. Colburn's statement. It will be added to the public record if and when we receive it.)*

Emma thanked the SAC and said she wanted to be here today to give voice to architectural structure and preservation.

Sam Imperati: referred to her Nicholas Starin with BPS, who specializes in preservation of historical landmarks.

Steve Iwata: noted that some of the issues Emma mentioned are addressed in goals 7 and 8.

Sam asked if there was any further public comment. There was none, so he called the question:

Action #1 *Do you approve the Phase II LU/UD/LT process and staff recommendations on the Quadrant-wide concepts to go forward into Phase III?*

Vote: All voting members were in favor.

I-5 INTERCHANGE CONCEPTS SCREENING – PART 1: PRESENTATION OF ANALYSIS

John Cullerton with URS presented a PowerPoint called "Freeway/Local Traffic Interface Concept Evaluation," which provides an overview of the I-5 Interchange concepts screening analysis process, screening factors, options, and staff recommendations. John referred the SAC to the packet materials: the presentation, the latest version of Freeway/Local Transportation Interface Draft Concepts Recommendation, Draft Concepts Recommendation for Phase 3 Design and Analysis; and the Phase 2

Screening Evaluation Methodology, which includes the draft evaluation matrix with the green square (very good) to red diamond (poor) evaluation scale occasionally referred to in comments below. John briefly reviewed the process of gathering over 70 ideas, organizing and narrowing them down to 40 ideas and concepts, now grouped into 6 categories with sub-options, as shown in Table 1.

Table 1: Concepts for Further Study

1. 2035 No-Build
2. Mainline Operational Improvements
2a. Braided ramps 2b. Collector/distributor (C/D) roads
3. Rebuild the Structures with Mainline Operational Improvements (Auxiliary lane extension; ramps remain as they are today)
4. Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements
4a. Split diamond Interchange 4b. Folded diamond Interchange 4c. Three-Point Interchange (couplet) (Auxiliary lane extension with all interchange options)
5. New Concepts for the Broadway/Weidler Interchange with Mainline Operational Improvements
5a. Standard-Diamond Interchange (de-couple Broadway/Weidler) 5b. Single-Point Urban Interchange (SPUI; de-couple) 5c. Diverging Diamond Interchange (DDI) 5d. Roundabout-Controlled Diamond Interchange 5e. Three-Point Interchange (de-couple) (Auxiliary lane extension with all interchange options)
6. TSM/TDM/Operations Management

Staff proposes that we study further concepts 1, 2, 3, 4, 5a and 6.

Staff proposes that we do no further study on concepts 5b, 5c, 5d, and 5e.

John introduced the team of consultants who assisted staff and provided technical expertise.

Slides 5 and 6: Analysis Team

ODOT, Portland Bureau of Transportation, Portland Bureau of Planning and Sustainability, and consultants in the following specialty fields:

• Bicycle/Pedestrian Connectivity and Quality of Experience	• Mike Tresidder, Alta Planning & Design
• Traffic Operations and Freight Roadway Design	• Alan Snook, DKS Associates Mark Johnson, ODOT Preliminary Design
• Right-of-Way Impacts	• John Cullerton and Seth Gallant, URS Corporation
• Urban Design	• Charles Kelley and Nolan Lienhart, ZGF Architects

John reviewed the concept evaluation, providing an overview of the methods used. Staff and consultants considered how safety and connectivity are impacted for bikes and pedestrians, as well as impacts to traffic safety and operations, considering level of service, queuing, and weaving distance.

John provided a methods overview for right of way impacts and urban design, reviewed how the evaluation matrix was developed, and briefly went through the concepts.

Paul Smith: do the structures over the freeway have to be demolished and rebuilt?

John Cullerton: no

Joe Zehnder: (referring to Slide 13, Mainline Operational Improvements: Braided Ramps & CD Roads, asked) do folks need a review of what this option really means?

Joanna Agee: yes

John provided information about what mainline operational improvements could include, such as adding a collector-distributor road to the existing freeway mainline structure, and what impacts are considered, such as visual impacts and safety improvements.

Joanna Agee: when you refer to visual impacts, do you mean from the freeway or off the freeway?

John Cullerton: off the freeway.

John continued the presentation, explaining the major features and key findings of Concept 3.

Eric Lovell: first one that has the auxiliary lane. It does not result in as much benefit as he would have thought, not as much as option 2.

John Cullerton: correct.

Alan Lehto: is it possible to do 2 and 3 blended?

John Cullerton: probably should have re-emphasized that we are looking for all the best elements and will try to maximize all the best ideas.

Owen Ronchelli: seconds Alan's idea.

John continued the presentation, explaining the major features and key findings of Concept 4. The engineers now need to dive a little deeper in their analysis to inform us if these options will really work. They felt it was important to study further the concept of de-coupling Broadway-Weidler, as shown in 5a, to get a better idea about what those impacts would be.

John discussed option 6: TSM/TDM, which means "Transportation Safety Management/Transportation Demand Management. TSM/TDM are improvements such as signage, messaging to drivers about current conditions, and variable speed limit signs. The early reports are quite favorable from locations

where this approach has been implemented. We will explore these further. Many of these can and will be done in conjunction with all other concepts. We are doing everything we can to manage demand. There are also things like carpool matching and other program to incentivize the use of other non-single-occupant vehicle modes.

The concepts for no further study are:

- 5b. Single-Point Interchange (SPUI, de-couple)
- 5c. Diverging Diamond Interchange (DDI)
- 5d. Roundabout-Controlled Diamond Interchange.
- 5e. Three-Point Interchange (de-couple)

All of these may have some benefits, but on balance, the impacts are negative enough to cut.

Q & A AND DISCUSSION

Sam opened the floor for questions for clarification, not positions disguised as questions. We will have that conversation next. We first want to provide all of you with the same fund of knowledge.

Paul Smith: noting that one of the concepts has an extended northbound on-ramp, wonders if it is possible for that ramp to be built independently and also would it have some benefit? For example, if you go with TSM/TDM, could you add in building a ramp improvement in an early phase?

Andy Johnson: it depends; but it is certainly not prohibited.

Eric Lovell: wondering which row in the red-green matrix gives weight and/or consideration to right-of-way impacts.

John Cullerton: (referring to the evaluation matrix) left side, section 3; options that ranked lower had more negative impacts.

Eric Lovell: question regarding buildings, impacts, and how this was factored into the evaluation matrix and process.

Todd Juhasz:

1) Avoids displacement of historically significant buildings
2) Minimizes impacts to historically significant structures (changes to circulation, loss of parking etc.)
3) Avoids the destruction of historically significant structures

John Cullerton: referred the SAC to the evaluation matrix, and explained how those rankings were developed and that they will continue to be refined.

Mike Warwick: where would the money come from for improvements that do not improve the mainline access? Would that still be state money or city money?

Todd Juhasz: the funding is for the interface between the freeway and surface improvements – dollars can be spent for the project as long as the improvements can be loosely attributed to the improvement of safety and operations on the freeway and at the interchanges.

Andy Johnson: if it is for a benefit for the freeway, it will be state or federal money.
Alan Lehto: to summarize his understanding, the team is analyzing concepts, but also treating them as puzzle pieces, to see how they fit with other things?

Sam Imperati: yes.

Wayne Kingsley: are you also looking at I-84 and impacts?

Todd Juhasz: yes. We are assuming improvements in the area will benefit I-84.

Andy Johnson: we are looking at all related safety and operations issues, but the scope of this project is not specifically for I-84.

Wayne Kingsley: that interchange is one of the worst problems in the sate.

Andy Johnson: to be clear, yes, we are considering all possible benefits to I-84.

Tracy Whalen: at the last meeting, she suggested eliminating all of the 5 series; she notices 5a is there.

Todd Juhasz: correct; we are looking at it for possible benefits and potential opportunities significant enough to keep on table.

Matt Arnold: comment regarding evaluation criteria as related to bike issues. He wants to see how some of the evaluation criteria break down. He has serious concerns about bikes. On the matrix, he sees the big green squares and it looks rosey – but he wonders what is behind the green squares.

Todd Juhasz: we are aiming to increase the quality of experience and safety for bikes.

Sam Imperati: we have the Alta Planning representative here for your questions and discussion on how this was done.

John Cullerton: to Matt and the SAC, pointed out the summary document attached to the evaluation matrix, which explains how the green square-red diamond rankings were developed.

BREAK

John brought up the 4c map on the screen, in response to the Paul Smith question about the northbound ramp.

Sam Imperati: it sounds like what Paul proposed is possible, but not fully analyzed yet.

Andy Johnson: there are many unknowns and it will be looked at, but we cannot know for sure at this point.

John introduced Mike Tresidder with Alta Planning and Design. Alta does bike, pedestrian and trail planning and design. He referred to the evaluation matrix, noting that we are still at 10,000-foot level. The team will be looking at the expanded matrices as the options in the next phase. At this level, they are conducting a medium-grain assessment. The next phase is the fine level analysis.
Matt Arnold: it would be great if you could send an email to let the SAC know when more information is available; he wants to see continued single-issue evaluation.

Sam Imperati: what is a rough ETA on this information request?

David Zagel: By next week, we will put notification out on email.

Sam Imperati framed up the next discussion, noting the question from the agenda:

Action #2*: Do you approve the Phase II Interchange screening factors/process, and staff recommendations on the Interchange concepts to go forward into Phase III?*

Also, he wants the SAC to have clarity on what is the purpose of the discussion – why did we go from 70 to where we are now, and how will we get to the preferred option.

Todd Juhasz: we have identified options that clearly do not work. The ones that are left have a lot of possibility, even if they may not satisfy everyone. Next, we want to refine and improve the options, create specificity through modeling, and integrate with what is going on with the City concerning LU/LT/UD.

Paul Smith: agrees with Todd.

Sam Imperati: we will put forth to the SAC a range of options to be measured against the evaluation/screening factors, listing the pros and cons. There are a number of ways to have this conversation. Sam asked the SAC to consider if there is anything that you wanted to have studied that has a red checkmark? For land use, nothing has been taken off the table; for the freeway, we heard the staff recommendations today for concepts to be taken off the table.

Tracy Whalen: pushing for removal of 5a, which includes de-coupling of Broadway-Weidler. It does not improve safety, has a very poor rating for local circulation. She sees lots of red. The only benefit she has heard for keeping it may be more land that is developable.

Steve Iwata: from a LU/UD perspective, a two-way street works better. He agrees that de-coupling causes some traffic issues; but there are opportunities with right-of-way on Weidler. The de-couple options can better connect around the Left Bank building. There are opportunity costs for how Weidler might be better connected. He believes there are some interesting possibilities we have not fully maximized.

Dean Gisvold: agrees with Tracy. He has not heard any argument making it worthwhile. Also, he was assuming we would be at five or six options - disappointed we are at 14.

Heidi Guenin: she has been working with a coalition of groups, and is pleased with current status of the concepts, except for 5a.

Mike Warwick: sees could be fun to look at, even if he agrees with Tracy and Dean, he believes 5a likely will not make final cut. It could be useful to just look at functionality. Is it possible to study it with the assurance that it will not be the recommended option?

Wayne Kingsley: 5a does not have a chance. Dump it to make it simpler.

Malina Downey: agrees.

Britt Brewer: notices that one goal was to simplify choices to integrate better with land use, and the first person to defend 5a was a land use person. He thinks there will be ample time to consider this fully later.

Debra Dunn: is there any chance that you can prove that 5a might work? If not, she agrees with Tracy and Dean.

Gary Warren: he is really opposed to 5a. So is the Lloyd District Community Association.

Tracy Whalen: with de-coupling, to get on the freeway, you will have to add a left turn. It will add time and congestion. Does not see it working from a safety standpoint. Does not understand why it is worth studying.

Lloyd Lindley: the principle of having a two-way retail street is different kind of “place” than a six-lane centered around the freeway. A two-way system is not going to create a quaint, commercial environment. Agrees with taking 5a off the table.

Paul Smith: there are differences among the City bureaus; PBOT supports the removal of option 5a, as well.

Gary Warren: 5a would cause Clackamas to be the bypass, as vehicles will look for ways to avoid the congestion. He is very strongly against 5a.

Eric Lovell: from a cost control point of view, it seems a good idea to drop off the weakest contender. If there is a good idea in 5a, he is confident it will survive.

Britt Brewer: trusts the teams and their recommendation; willing to support it.

Tracy Whalen: wants to make a motion to remove 5a.

Sam Imperati: noted. Are there any others folks would like to discuss?

Dean Gisvold: proposes the removal of 4a and 4b, too.

Gary Warren: he has questions regarding the Clackamas overcrossing, would it be an ODOT project or City of Portland project? And he wants to know how this came about. From what he learned at the charrettes, it was bike/ped only, and now options with vehicles are shown on maps.

Todd Juhasz: it would be both an ODOT and City of Portland project. However, nothing is decided yet.

PUBLIC COMMENT

Alan Rudwick: regarding 5a, is it an 8-lane overcrossing or a 4-lane crossing?

Alan Snook: When we were taking a look at it, you are in the 6 to 8 lane range. So, it is a larger structure. A lot of issues came into all the red dots that are showing on the chart. And, you would need a left turn for each direction.

Sam took a 1, 2, 3 vote on the proposal to remove 5a.

Votes:

- 1 - Jenny; Bob; Wayne, Owen; Malina; Debra; Wanda; Gary; Joanna; Mike; Heidi, Eric; Matt; ~~Dean~~ (*later changed it to 2; seen notes page 17*); Lloyd; Tracy
- 2 – Pauline, Dean
- 3 - Britt

5a will be removed from the options to be considered.

Sam opened the discussion on the category 4 options.

Dean Gisvold: in the effort to mesh freeway with land use and urban design, 4a and 4b flunk on urban design elements, so they flunk the basic standards of this planning process. However, now that 5a is gone, he feels in a more compromising spirit.

Matt Arnold: question about the SAC vote to remove 5a - does it actually remove it or is it just a recommendation?

Todd Juhasz: yes, your vote removes it.

Gary Warren: question on the Clackamas overcrossing and how it is displayed on map.

Todd Juhasz: changed to dashed after we spoke, which indicates the potential use is for bicycles and pedestrians only

Eric Lovell: thinks we need to look at all of the 4 options for more study.

Lloyd Lindley: 4 options may have some value in the area; thinks we should look at them, too.

Tracy Whalen: 4a, no problem; 4b, further study is ok if even just for comparison's sake.

Lloyd Lindley: is there a way for the team to re-focus efforts on more promising alternatives between now and next SAC?

Sam Imperati: the staff and consultants will do a triage analysis and suggest removing the less promising alternatives between now and the end of September.

Todd Juhasz: yes; we will try to optimize our processes, be efficient, and present the best options. We will keep the SAC informed, perhaps by email and through project web-site updates.

Britt Brewer: holding strong on his 3 vote to give designers and engineers freedom to do their work; these are not fixed entities, wants to be sure there is room for creativity.

Alan Lehto: request to make a slight update to process diagram to make reference to the "mix and match"

Owen Ronchelli: these are not sensitive urban lands, there will be compromises. If you can get better safety for a little more footprint, it may be worth it.

Mike Warwick: getting freeway traffic out of box is a top priority for him. Regarding 4b, he recognizes the urban design problems, but is also very interested in how it gets traffic out of the box.

Britt Brewer: this is the entry for downtown, it is on par with the larger cities; wants to be sure we acknowledge we are growing, and wants to make this an appropriate center for the metropolitan area.

Alan Lehto: 4b should stay.

Sam Imperati: motion to eliminate? Hearing none, 4a and 4b go forward.

Gary Warren: wants to know why Clackamas came up in this process in the first place. With everything going on in the box, Clackamas is the perfect bypass. An overcrossing will turn it into a major street and he is very opposed to it, especially for vehicles.

John Cullerton: the purpose was for bikes and pedestrian, but in the category 5 series, it was critical to the functioning of those options. In category 4, it is not essential for those.

Sam Imperati: so, to be clear, is it currently for bikes, pedestrian or vehicles?

John Cullerton: bike/pedestrian focus.

Eric Lovell: always thought it was bike/pedestrian. And such a connection would be beneficial for Gary's area. A bike pedestrian focus will be a very pleasant way to get across. It would increase quality of life and transportation.

Lloyd Lindley: to provide a little history, in 1999 and 2000, the Lloyd District Development Strategy was done, with an emphasis on creating connection to the river. The idea was to make a pedestrian/bike connection. One idea was a park bridge, a bike and pedestrian only facility. Later, with Rose Quarter plan, it popped up as a vehicular connection. The intention was to create a great crossing to connect residents to the water.

Tracy Whalen: if you look at this micro-area, this area is a nice quaint area. She agrees you do not want to introduce traffic. It is a good connection, a good way to get people off main thoroughfares.

Gary Warren: can we change the green dashed line to a brown dashed line, which means a proposed bike/pedestrian crossing.

John Cullerton: we are preparing information on Clackamas and Hancock overcrossings - how it would physically look and how it would perform as bike/pedestrian facility.

Gary Warren: he attended charrettes, at the end, talked about bike/pedestrian – no discussion about vehicles. Only at transportation subcommittee did the notion of vehicles come up.

Dean Gisvold: would it be useful to the staff to have a strong vote, but not a binding resolution?

Paul Smith: PBOT supports Clackamas as bike/pedestrian only.

Tracy Whalen: proposes any study for Clackamas only be bike/pedestrian.

Mike Warwick: can we add Hancock?

Eric Lovell: Hancock is a separate issue, recommends handling it separately.

Tracy Whalen: fine with friendly amendment to add Hancock.

Joe Zehnder: would like to study what kind of vehicular connection could be provided with Hancock? Thinks that is something worth considering, as the City is searching for a solution that provides connectivity but does not provoke this type of negative feedback. Something that works for more folks. He would hate to take it off prematurely.

Andy Johnson: the point of a Hancock overcrossing is how, at least, not to make connectivity worse.

Lloyd Lindley: one thing we have heard form Eliot is reconnecting with the quadrant. Hancock is a baby step toward re-knitting the neighborhood and possibly developing the Blanchard site. The team could look at how to keep it a local street that serves the neighborhood.

Fred Eberle: as Andy started to note, it was a replacement for many other options; to say “no cars on Hancock” would negate many other options because it would remove essential functions.

Mauricio Leclerc: agrees with what has been said; the analysis you have seen assumes Hancock as a reliever. The analysis is what Fred mentioned - otherwise it would be a very different set of 4s.

Britt Brewer: 100% in support of Gary for Clackamas and is 100% against Hancock.

Mike Warwick: will withdraw amendment; but is with Gary on that notion that it could be a runaway train. He is ok if Hancock is studied. Also, the neighborhood wants to keep the traffic calm, they are not in favor of creating a car thoroughfare.

PUBLIC COMMENT

Lee Perlman lives in Eliot and is a member of Eliot LU Committee. For the same reasons Gary Warren has sited, he has concerns about adding more traffic to the neighborhood. He still has trouble seeing how you could do that and not have that experience. If you cut off Hancock, people will find another street. This neighborhood would not support it.

Brad Perkins said we need to try to get bicyclists off Broadway-Weidler. There is a committee looking at de-coupling 15-24th Avenues, and to do that, you need to get the bikes off Broadway-Weidler. He is in support of bikes/pedestrian on Hancock. Roger Geller and the bike committee feel comfortable getting bikes off Broadway as a main thoroughfare. Whatever improvement should emphasize car traffic on Broadway-Weidler.

Sam Imperati: motion on table, for purposes of moving forward, is that Clackamas is for bike-pedestrian only.

Votes:

- 1 - Bob, Wayne, Owen, Britt, Debra, Wanda, Gary, Mike, Heidi, Eric, Matt, Pauline, Dean, Tracy, Lloyd,
- 2- Malina, Joanna

Sam summarized that, including the votes we have taken, the SAC is comfortable with the amended package of options going forward for further study.

Dean Gisvold: changes his vote on 5a to a 2.

PUBLIC COMMENT

Alan Rudwick comment on 4c, wants to make a formal request that this option be studied without mainline improvements. Thinks this has some land use and mainline benefits.

SCREENING FACTORS FINALIZED & EVALUATION CRITERIA DRAFT PRESENTED

Sam said that our next agenda item is about evaluation criteria. It is late, there is not enough time for discussion, and wonders what people prefer we do given time constraints. The options are to end meeting now and do email with descriptive text and a process for voting, have the discussion now and stay for an additional 30 minutes, or something else, such as staff proceeds conditionally, and comes back to you in Sept.

Lloyd Lindley: how much have we seen this?

Fred Eberle: it was introduced at the last SAC, discussed thoroughly at the Subcommittee in July, but never fully discussed with the full SAC.

Sam Imperati: briefly reviewed document structure and contents.

Dean Gisvold: fading fast, has not had time to review, and would like to do it over email.

All but Wayne, Wanda, and Mike voted in favor of that approach, so we will proceed and send it out next week.

Heidi Guenin: recommends a collaborative on-line approach, there lots of benefit to that. And, tell us what Pauline says since she does not have email.

NEXT STEPS AND MEETING EVALUATION

Sam distributed the evaluation form.

ADJOURN

Sam thanked everyone for a good meeting and adjourned at 8:40 pm, with apologies for keeping folks late.

SAC #8 Meeting Evaluation Summary
JULY 28, 2011

15 Evaluation Forms

		Poor	Fair	Good	Very Good	Excellent
1)	**OVERALL MTG QUALITY**			4	7	2
2)	**PACING**		Little Slow	Just right	Little Fast	
			2	11		
3)	**CLARITY PRESENTATIONS**		1	8	4	2
4)	**DOCUMENTS**		1	5	5	4
5)	**DISCUSSION**			2	9	4

6. MOST USEFUL?

- Accommodation of civil tone even in face of great differences in opinion
- Clarification of reasons why options were removed for further study
- Concept alternatives workbook
- Diagrams with explanations
- Humor
- Open debate
- Professionalism and skills of both LU and Transp Teams
- Sam I.
- Specifics

7. LEAST USEFUL?

- Attempts to narrow down options seems to early in this process
- General BS which is incomprehensible
- Schedule slippage – looks like I will miss Project Runway!

8. COMMENTS, SUGGESTIONS, OR QUESTIONS?

- Documents are generally very good. Interchange diagrams, however, are very poor and confusing
- Keep up the good work
- More details that state practical use of roadways
- Need to find a way to make public comment easier/more comfortable for folks who haven't been part of the process yet
- Would like to receive red-lined/yellow-lined documents a week before meeting

Notes respectfully submitted by the Institute for Conflict Management facilitation team.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Revised Phase 3 Evaluation Matrix

The following is a revised Phase 3 Evaluation Matrix that incorporates comments received from SAC and Subcommittee members on previous drafts dated June 15 and July 28, 2011.

This matrix will be used during Phase 3 to evaluate concepts under consideration, leading to SAC endorsement of a recommended Quadrant Concept and a recommended I-5 Freeway/Interchange Concept. Once this direction on recommended concepts is established, the project will move into Phase 4, which will involve development of the final plan products and additional detail to support the recommended concepts including policies, targets and implementation strategies.

Goals and Objectives

The column on the left contains the N/NE Quadrant and I-5 Broadway-Weidler Plans project goals as adopted by the SAC, numbered from 1 to 8. Under each goal are related objectives derived from a number of sources including SAC and subcommittee meetings, the Issues, Opportunities and Constraints report, public events and other public and agency input.

Together, the goals and objectives represent what we hope to achieve with the N/NE Quadrant and I-5 Broadway-Weidler Plans as a whole. They will guide development of recommended concepts during Phase 3 and provide a means for determining whether the final proposed plan, developed during Phase 4, is balanced and complete and meets the aspirations and intent of project stakeholders.

Evaluation of the Quadrant Concept

During Phase 3, beginning at the September SAC meeting, the project team will present a 70% draft of a proposed Quadrant Concept to serve as a starting place for SAC deliberation that will result in a recommended Quadrant Concept. The concept proposed by the project team will largely be comprised of ideas contained within the three concept alternatives prepared in Phase 2, and will be informed by the goals and objectives, analysis of options, and extensive outreach to the public, community groups and stakeholders.

Following SAC discussion and preliminary direction, the project team will evaluate the emerging Quadrant Concept against the project goals and objectives to ensure that it fulfills the intent of stakeholders. That work will be presented to the SAC in November. The evaluation will largely be qualitative in nature, but quantitative measures will be provided where they are available. In some cases, the objectives will not clearly be represented in the Quadrant Concept. Those objectives will be identified for further work within the next phase of the project when more specific plan proposals, including policy language, will be developed.

Evaluation of Freeway Concepts

The column on the right contains evaluation criteria specific to the freeway interchange and related local transportation interface element of the project. Each evaluation criterion is tied to one or more goal or objective. They are generally more specific or quantitative than the objectives and are tailored to the infrastructure project characteristics of the freeway planning element. Specific measures have been developed for each criterion like those used in the Phase 2 screening process. These evaluation criteria will be used to evaluate the pros and cons of the freeway concepts approved by the SAC for Phase 3 analysis and evaluation at their July 28, 2011 meeting.

N/NE Quadrant and I-5 Broadway/Weidler Plans Goals and Objectives	Freeway Interchange & Local Transportation Interface Concepts Evaluation ~~Measures~~Criteria
1. A diverse mix of commercial, cultural, entertainment, industrial, recreational and residential uses, including affordable housing: a. Provide opportunities for a variety of desired land uses in the quadrant and its Subdistricts b. Foster distinct and complementary subarea identities within the quadrant. c. Encourage uses that complement regional facilities including the Rose Garden, Memorial Coliseum, Convention Center and Lloyd Center, while seeking to balance the episodic nature of these attractions with additional activities. d. ~~Foster~~ I~~i~~ncrease~~d~~ residential density and improve jobs to housing ratio in the quadrant ~~by 2035~~. e. ~~Create opportunities for~~Increase affordable housing close to multimodal transportation systems and other appropriate locations. f. Preserve existing housing in the quadrant. • Consider the impacts of proposed Freeway Interchange improvements on nearby residential dwelling-including land use and zoning impacts. g. Provide open space, parks and recreation opportunities. h. Provide access and highlight the quadrant's relationship to the Willamette River	Note: Only the evaluation criteria to be measured for the transportation concepts in Phase 3 are listed here. (1.f. and 2.d.) Minimize the need to purchase property for right-of-way. (measure acres needed by land use) (1.f.) Minimize residential units displaced and impacts to existing residential development
2. Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages: a. Create opportunities for new employment and a variety of employment types and levels. b. Maintain or increase development potential where appropriate, e.g. through zoning, infrastructure and creation of new parcels. c. Foster increase in future high density commercial development in appropriate locations while supporting and encouraging industrial activities in current industrial areas. d. Retain and support existing and local businesses in the quadrant. e. Support and strengthen the retail environment.	(2.) See 5.a. for active transportation access (2.d.) Minimize businesses displaced and impacts to existing businesses.
3. Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment: a. Create opportunities for new strategically located parks and open space. b. Maintain and create new access points to the river. c. Enhance and create new fish and wildlife habitat, tree canopy, and green infrastructure in appropriate locations~~.~~ d. Support sustainable development goals and practices, including ~~creation~~ understanding and impacts of the Lloyd Eco-District.	(3.b.) Location and level of local connectivity improvements (See 5.a.) (3.c.) Amount of enhanced street tree canopy (3.c.) Reduction of storm water run-off (meet or exceed City and State requirements) and energy use

N/NE Quadrant and I-5 Broadway/Weidler Plans Goals and Objectives	Freeway Interchange & Local Transportation Interface Concepts Evaluation ~~Measures~~Criteria
4. Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods: a. Create sensitive transitions between the more highly urban Central City and adjacent residential neighborhoods. b. Foster concepts that support high-density development in the Lloyd District in appropriate locations and minimize their impacts on adjacent neighborhoods-Eliot, Irvington, and Sullivan's Gulch. c. Provide for amenities and services, such as parks, schools and connections, at a level appropriate to support the type and intensity of development proposed.	(4.) Health and safety impacts of proposed new infrastructure (See air quality under 5.b.) (See transportation safety under 5 and 6)
5. A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system: a. Improve multi-modal transportation accessibility and connectivity within and through the quadrant (e.g. via new or improved connections across freeway and in the district) b. Encourage the use of transportation modes other than single occupancy vehicles to ~~and~~ reduce~~s~~ auto ~~gas~~ emissions and vehicle miles traveled.~~(e.g. via reduced median work and non work trip distance and auto mode split)~~ c. Improve circulation for all modes in the Rose Quarter Transit Center. d. Accommodate present and future multimodal access needs of the quadrant e. Improve freight access from freeway and railroads to industrial areas and major destinations. f. Increase safety within the quadrant for all modes. g. Provide a street hierarchy system that supports the quadrant's desired urban form, land use and livability goals. h. Provide parking and transportation demand management strategies that better support the needs of the quadrant. ~~i.Provide for Quadrant portal capacity to accommodate future multi-modal access needs for all trips destined to, from, and through the quadrant, with a distribution of trips appropriate to the desired street hierarchy.~~ ~~j~~i. Support the ODOT High Speed Rail study, including analysis of alternative routes and station locations from existing rail facilities.	(5.a., 5.f. and 6.f.) Provide pedestrian and bicycle infrastructure and minimize pedestrian and bicycle conflicts with motor vehicles: • Increase quality (comfort/safety) of bicycle freeway crossing opportunities • Improve transit access and operations via fast, direct connections, better reliability and access • Increase quality (comfort/safety) of pedestrian freeway crossing opportunities • Provide direct pedestrian and bicycle connections to and from the following key locations: o Broadway Bridge o Steel Bridge o Rose Quarter/Transit Center o Oregon Convention Center o Lloyd Center o Vancouver/Williams Corridor north of Hancock o Broadway/Weidler Corridor east of I-5 (5.a. and 6.d.) Identify and address system-wide transportation impacts of proposed interchange improvements, including traffic diversion, local access and circulation, transit operations, freight movement and on land uses. (5.b.) Reduce auto emissions o Reduction of emissions (improve air quality) o Reduction of greenhouse gas emissions

N/NE Quadrant and I-5 Broadway/Weidler Plans Goals and Objectives	Freeway Interchange & Local Transportation Interface Concepts Evaluation ~~Measures~~Criteria
	(5.b.) Reduce single occupancy vehicles (SOVs) with Transportation Demand Management (TDM) measures in Land Use Plan ○ Vehicle Miles Travelled per Capita ○ Increase Mode Split on non-SOVs (5.e., 6.c. and 6.f.) Minimize conflicts between freight traffic and other modes (5.f.) Improve freeway safety (5.f.) Reduced opportunities for traffic speeding on local street network (peak and off peak)
6. Improve the local circulation system for safe access for all transportation modes within the quadrant and at freeway interchanges. a. Provide affordable, reliable, time saving and effective range of multimodal transportation solutions. b. Connect regional trail system via local pedestrian and bicycle network. c. Improve freeway operations for transit (C-TRAN), freight and auto. d. Improve local access across freeways and rail crossings via improved, safer crossings and additional separated facilities for cars, pedestrians and cyclists. e. Improve access to transit for residents, employees and visitors. f. Seek to significantly reduce accident potential. g. Minimize local land use impacts of transportation infrastructure. h. Improve rail operations for freight and passengers (e.g. "S" curve in UPRR Mainline).	(6.a.) Refer to 9.b. below. (6.c.) Improve weaving Level of Service (LOS) on I-5 at Broadway/Weidler. (6.c.) Mainline through traffic performance. (6.d.) Improve local circulation and freeway crossing opportunities. (6.f.) Lower likelihood of collisions on I-5 between Broadway and I-84. (6.g.) Potential construction impacts on land uses and transportation network and transit operations. (6.g.) Refer also to 1. above and 8. below.
7. Equitable access to community amenities and economic opportunities: a. Avoid/minimize/mitigate involuntary displacement of quadrant residents, businesses and jobs. b. Provide for a broad array of employment types and encourage living-wage jobs. c. Provide for diversity of housing types that meets the needs of all income-levels and a variety of household types and lifestyles. d. Provide for amenities and services, such as parks, natural areas, schools and connections, at a level appropriate to support the type and intensity of development proposed. e. Increase the capacity of existing residents and business owners to share in the benefits from growth in the quadrant. f. Ensure that the plan compliments economic development and housing strategies to build capacity for existing area residents and businesses.	(7.a.) Minimize negative impacts to access, circulation, parking for major destinations / facilities and events

N/NE Quadrant and I-5 Broadway/Weidler Plans Goals and Objectives	Freeway Interchange & Local Transportation Interface Concepts Evaluation ~~Measures~~Criteria
g. Ensure that infrastructure improvement do not have disproportionate public health impacts. h. Ensure that plan proposals address the needs of local residents and businesses while recognizing the importance of the quadrant's region-serving facilities and infrastructure. i. Ensure the plan broadly supports the equity objectives established through the Portland Plan process.	(7.g.) Health and safety impacts of proposed new infrastructure (See 5.b.[air quality], 5. and 6. [safety] above). (See 1.f., 2.d. and 8.b.)
8. Protection and enhancement of the cultural heritage of the area and its sub-districts: a. Preserve, enhance and celebrate historic and cultural resources. b. Avoid/minimize/mitigate demolition of historic and cultural resources. c. Avoid or minimize adverse impacts on cultural or high priority community sites.	(8.b., c.) Minimize~~Measure~~ impacts to existing historic and culturally significant structures and high priority community sites. (8.c.) Minimize negative traffic pattern changes in residential neighborhoods (forecast traffic volumes) • NE 2nd.Ave • NE 3rd.Ave • NE Hancock St • NE Rodney St • NE Tillamook St • NE Schuyler St • NE Clackamas • NE Flint
9. Additional Criteria: a. Ensure plan proposals are ~~practical,~~reasonable and implementable~~ and cost-efficient~~. b. Ensure capital costs are within project limits. c. Ensure plan proposals are consistent with relevant adopted local, regional and state land use and transportation goals and policies. d. Ensure plan concepts and proposals are consistent with relevant goals and objectives of the Portland Plan and Central City 2035 processes.	(9.b.) ~~Develop~~ Broadway/Weidler Interchange and Local Transportation Interface cost estimates

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
SAC Meeting (6/16)	1	The items related to the freeway interchange and local transportation need to be weighted.	The proposed evaluation measures include measures to analyze impacts on all transportation modes for local, city and regional travel needs. Measures will depend on the type of street and type of trips. Each SAC member will determine their own priorities or weighting as they recommend alternatives to forward.
SAC Meeting (6/16)	2	There are many measures related to bike/ped, but no mention of safety.	See 5.f. and 6.f.: Increase quality (comfort/safety) of bicycle freeway crossing opportunities and Increase quality (comfort/safety) of pedestrian freeway crossing opportunities
SAC Meeting (6/16)	3	When will we see a merging of the two categories of concepts, land use and transportation?	During Phase 3, a recommended Quadrant concept will be proposed prior to finalizing a freeway concept. This recommended Quadrant Concept will be evaluated against the Transportation Concepts.
Subcommittee Meeting (7/13)	4	We need more quantifiable measures on the land use side.	Phase 3 will develop a recommended Quadrant Concept based on land use and urban design principles. Measures, where appropriate, for the Goals and Objectives for the Quadrant Plan will be part of the final plan, Phase 4.
Subcommittee Meeting (7/13)	5	Don't just measure things; aim to reduce or increase	Both land use and transportation concepts are designed to improve conditions (reduce or increase). However, there are tradeoffs, so improving one element may negatively effect another. We will measure the results, and report them so the SAC can see which elements are improved or impacted to help in the decision process of which options to recommend. The NNE Quadrant plan would propose potential targets for Phase 4.
Subcommittee Meeting (7/13)	6	Is there a phase 4 where we test the freeway concepts against the land use concepts?	See response to #3. In Phase 4, a recommended freeway concept will be evaluated with the recommended land use concepts for assess the overall transportation impacts.
Subcommittee Meeting (7/13)	7	Has the City done an analysis of the development capacity based on these scenarios?	The Subdistrict Profiles as part of the existing conditions identify the development capacity for the NNEQ, and has capacity to accommodate these land use scenarios.
Subcommittee Meeting (7/13)	8	Are you going to ask the SAC to approve these criteria?	Yes, on July 28
Subcommittee Meeting (7/13)	9	Can we look at vacating streets as a jobs supporter, because it creates developable land?	Street vacation is a separate city process. This plan could identify potential opportunities for street vacation if needed for economic development or other reason.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Subcommittee Meeting (7/13)	10	Focus on creating affordable housing close to multimodal transportation-systems and social services.	Access to transit for housing and jobs will be examined. Overall, the N/NE Quadrant plan has high transit coverage and will be documented. Objective 1.e. has been reworded to encourage affordable housing close to multimodal transportation systems. Within the Central City, access to social services is not anticipated to be an issue.
Subcommittee Meeting (7/13)	11	High density at bridgehead/Blanchard at odds with goal of maximizing Lloyd	The Land Use, Urban Design, and Local Transportation Workbook contains subarea questions that ask the community where to focus commercial development. The NNEQ Quadrant Plan is a 25 -year guide for development and will support strategies for economic development throughout the study area. Infrastructure investments have been in place to stimulate development in the Lloyd, such as the LRT and the current streetcar project.
Subcommittee Meeting (7/13)	12	Separate 2c – fostering commercial development and supporting industrial activities are two separate thoughts.	Commercial development can complement industrial activities. Widmer for example is both manufacturing and commercial. Each subarea may also have a different emphasis, similar to the Central Eastside Industrial area.
Subcommittee Meeting (7/13)	13	Which areas are you trading off with the commercial development? Where do you encourage tradeoffs?	The Land Use, Urban Design, and Local Transportation Concept Alternative Workbook contains subarea questions that ask the community questions to determine where to focus future commercial development.
Subcommittee Meeting (7/13)	14	Make sure we are keeping the existing businesses in mind with freeway impacts.	See 2.d. and 7.a. for example. Impacts on existing businesses will be measured - including access and circulation changes, parking impacts and building impacts.
Subcommittee Meeting (7/13)	15	In 4b, make sure we are supporting/encouraging small neighborhood businesses.	Goals and Objectives contained in 2.d., 7.e., 7.f., and 7.h. addresses this comment.
Subcommittee Meeting (7/13)	16	There is confusion about air quality measurements. Will you do a hot spot analysis?	Hot Spot analysis is done at the most congested intersections where traffic is queuing significantly. ODOT has requested more information from URS (the project consultant) on the level of effort and cost of this analysis. This analysis may need to be conducted in the NEPA phase.
Subcommittee Meeting (7/13)	17	Add access to transit to measures under goals 5 and 6	See response to #10. Access to transit for housing and jobs will be examined within a 1/4 mile of bus stops, streetcar stops, and LRT Stations.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Subcommittee Meeting (7/13)	18	Need more about pedestrians in this section	Staff believes these measures are appropriate. Pedestrians are included under "multimodal." See 5a-d, 5f, 5i, 6a, 6b, 6d for original and edited language.
Subcommittee Meeting (7/13)	19	Minimize impacts to streetcar operations during freeway construction and ongoing.	Added measures 5.a, 6.d. and 6.g.
Subcommittee Meeting (7/13)	20	Should we be prioritizing what type of access is maintained in 5D? Should we de-emphasize single occupancy vehicle (sov) access?	Added "multimodal" to objective 5.d. Balancing the access needs for all travel modes will be important for the economic vitality of businesses in the study area. See comment 15.
Subcommittee Meeting (7/13)	21	Preserve single occupancy vehicle access as it relates to local merchants.	Added "multimodal" to objective. See response to #20.
Subcommittee Meeting (7/13)	22	Increase housing/employment that has good access to transit	See response to #17. Also, note the N/NEQ currently has very good transit coverage.
Subcommittee Meeting (7/13)	23	Add “more” to bullet 6a, after “provide”. Also reference reliable, time-saving transportation solutions	Added "reliable, time -saving and effective" to objective 6.a., instead of "more".
Subcommittee Meeting (7/13)	24	Add “improve rail operations for freight and passenger rail”	Added as 6.h.
Subcommittee Meeting (7/13)	25	Explore options to add a high-speed rail station	High speed rail options are part of a state-wide planning effort. This plan will coordinate with this effort. The SAC could recommend that ODOT Rail include EIS scoping to include alternatives that may include: the I-5 corridor for HSR, including tunneling portions of the route entering Portland, alternative station locations on the east side of the Willamette River and a route to Vancouver on the UPRR alignment through North Portland instead of the BNSF alignment in NW Portland. See new objective 5.j regarding supporting the ODOT high speed rail study.
Subcommittee Meeting (7/13)	26	Develop 3 Equitable Access criteria to evaluate alternatives?	See change to 1.e. Also, Objective 7.d. includes connections to services, including access to multimodal transportation options.
Subcommittee Meeting (7/13)	27	Need to make the objectives more clear	Agree. As part of planning process, staff will continue to refine the goals and objectives based on community inputs with the intention of developing clearer objective statements.
Subcommittee Meeting (7/13)	28	Focus on local jobs and contracting opportunities	Not applicable for alternatives evaluation. There is a broad procurement policy on contracting and subcontracting goals in place.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Subcommittee Meeting (7/13)	29	Clarify hierarchy in policy context for avoid/minimize/mitigate approach to preserving cultural heritage.	Avoid means try not to impact a resource at all. Minimize means if you cannot avoid it; impact the resource as little as possible. Mitigate means if impacted, there may be mitigation required: payments for property, relocation costs, replace equivalent area of resource impacted, etc.
Subcommittee Meeting (7/13)	30	We should separate the gentrification impacts from the transportation impacts.	Objective 7.a. is focused on the issue of gentrification.
Subcommittee Meeting (7/13)	31	Add something about traffic impacts to neighborhood fabric and character.	Added 5.a. and 6.d.
Upstream Public Health et al.	32	The current evaluation measures do not go far enough in considering the need to reduce SOV trips and increase active transportation mode share.	Added Vehicle Miles Traveled (VMT) and Mode Split to 5.b. As part of the CC2035 and NNEQ Planning Process, BPS and PBOT will be updating the CCTMP to address mode split targets.
Upstream Public Health et al.	33	How can we improve transit with this project?	Added 6.e.; also transit service improvements are assumed in the transportation model and the RTP; funding and implementation are functions of the TriMet budget.
Upstream Public Health et al.	34	There are not enough measures examining safety and employment impacts.	Staff believes the proposed measures are appropriate.
Upstream Public Health et al.	35	Concepts 6 and 3 look like the best places to start with respect to meeting the objectives and providing alternative ideas to improve the concepts.	The SAC will discuss and recommend the alternatives they, as a group, believe best meet all of the Goals and Objectives.
Upstream Public Health et al.	36	Measure impacts of configuration changes on major attractions. (1c)	1.f., 2.d., 6.d. and 7.a. measure impacts on all land uses, including major attractions.
Upstream Public Health et al.	37	Would configuration remove residential or RX zoning areas? (1f)	Overall zoning issues will be addressed as part of the CC2035 and NNEQ to identify best strategies to support existing residential dwellings and to support future residential developments. 1.f. will measure both acreage of RX zoning required for ROW and any residential dwellings displaced by the freeway project.
Upstream Public Health et al.	38	Does the configuration block access or development for parks and recreation areas? (1g)	The alternatives are intended to improve access to existing open space; additional open space opportunities have been incorporated into the Quadrant concepts and will be refined with the freeway options.
Upstream Public Health et al.	39	Check whether the configuration removes jobs or commercial space. (2d)	2.d. will measure both acreage of employment zoning required for ROW and any businesses displaced

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Upstream Public Health et al.	40	Does the configuration prevent or degrade access to current and future employment locations through the active and local transportation systems? (2)	5.a. measures bicycle and pedestrian access to employment and other locations
Upstream Public Health et al.	41	Measure parks/open space per user (including workers and residents). (3a)	Park deficient areas were identified in the Design Central City Report (http://www.portlandonline.com/bps/index.cfm?c=51133&), and incorporated into the Quadrant Concepts. Objective 7.d. address the need for appropriate parks and open space.
Upstream Public Health et al.	42	Specifically improve east-west connections across the freeway. (3b)	Incorporated into the Quadrant Concepts and Freeway Concepts. 3.b. and 5.a. measure bicycle and pedestrian access and freeway connections.
Upstream Public Health et al.	43	Change measures to *Improve* air quality and *reduce* greenhouse gas emissions.	See reworded 5.b.
Upstream Public Health et al.	44	Connectivity measures – block length, node connectivity (alpha & gamma measures). (5a)	5.a. measures bicycle and pedestrian connection quality
Upstream Public Health et al.	45	Evaluation of bike/ped/transit facility type (width, buffers, amenities, etc.). (5a & 5f)	5.a. measures bicycle and pedestrian connection quality
Upstream Public Health et al.	46	Overall street width. (5a & 5f)	A Complete inventory of street width is contained in Atlas, linked: http://www.portlandonline.com/bps/index.cfm?c=53634&a=327972
Upstream Public Health et al.	47	Traffic volume and speed. (5a & 5f)	8.c. and 5.f. measure traffic volumes and speeds
Upstream Public Health et al.	48	A measure related to parking & TDM – not sure what this would look like, but there's nothing here so far. (5h)	As part of the overall planning for NNEQ, mode split targets to increase the use of alternative transportation modes, reduce VMT, and greenhouse gas emission will be developed.
Upstream Public Health et al.	49	Not just quality of freeway crossing opportunities but of local connections and crossings. (5a & 5f)	5.a. measures connections and circulation across and around the freeway
Upstream Public Health et al.	50	Current crash rate of relevant locations. (5f)	See Existing Conditions Report
Upstream Public Health et al.	51	Nearly everything we'd suggest for #5. (6f)	Each measure will be used once; will not repeat the measures under 5. See section 6.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Upstream Public Health et al.	52	Travel time through the corridor by mode (and add “efficient, fast, safe, and comfortable” to “affordable range of multimodal transportation solutions” objective. (6a and 6e)	Deleted 6.e.; added "reliable, time-saving and effective" to 6.a.
Upstream Public Health et al.	53	HCM 2010 bicycle and pedestrian LOS. (6a)	HCM bicycle and pedestrian LOS is essentially what we're measuring in 5.a.
Upstream Public Health et al.	54	Share of network with speeds less than 20mph, 25mph, 30mph, etc. (6f)	The Quadrant Concept proposes alternatives for street functions and could lead to a street hierarchy system that illustrates a network travel speeds. Refer to the Workbook.
Upstream Public Health et al.	55	Rather than “seek to reduce accident potential” as an objective, shoot for a better outcome! Vision Zero? Exemplary safety record for this type of freeway interchange? (6f)	Human behavior is very unpredictable and as a result nearly impossible to achieve a situation of Zero incidents of accidents.
Upstream Public Health et al.	56	Improve freeway access & mobility for transit & not just freight and auto. (6c)	Added transit to 6.c.
Upstream Public Health et al.	57	TDM measures seem to belong in 5 and 6c, too – parking pricing & availability, carpooling, transit improvements, enhanced SmartTrips program?	See response to #48. The city anticipates continuing a partnership with the Lloyd TMA and other organization to define specific strategies.
Upstream Public Health et al.	58	Change 7g to "do not have negative public health impacts.”	The team will measure air quality and estimate safety improvements to see what impacts are reduced
Upstream Public Health et al.	59	Many of the suggestions made for goals #4, 5, & 6 would fit here, too.	Each measure will be used once; will not repeat the measures under 5 in 6.
Upstream Public Health et al.	60	One objective is to “ensure capital costs within project limits,” but what are those limits? What about budget for programs and operations (especially for TDM)?	ODOT is anticipating a project cost range of $100-200 million
Upstream Public Health et al.	61	Ensure plan proposals are consistent with adopted policy. See comment summary for complete list of highlighted policies. Or we could list each policy…	Both the Quadrant Plan and the Freeway Plan will make findings for consistency with State, Regional, and City policies and statutes. Also, include in objectives 9.c and 9.d.
Chris Deffebach (Metro)	62	Make sure there are transportation criteria that measure impacts on transit operations.	Added 6.g. and measure under 5.a.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Chris Deffebach (Metro)	63	Include transportation criteria that capture effect of street connectivity on redevelopment opportunities as related to urban design and multimodal transportation.	Current City policies in the Central City Plan and the Transportation System identifies a system of street connectivity for the Central City. The Quadrant Concepts suggests an alternative system of connectivity to link development, open space, and multi-modal network for public discussion.
Chris Deffebach (Metro)	64	Add a transportation criterion under the displacement measure to reflect the impacts of non-physical displacement on potential redevelopment, such as noise.	Noise impacts will be modeled during the NEPA process
Chris Deffebach (Metro)	65	Add a transportation measure to capture the impact on special event traffic operations.	The Staff will review Rose Quarter traffic plans and develop circulation systems in each alternative to accommodate Rose Quarter traffic if existing, planned traffic patterns are impacted.
Chris Deffebach (Metro)	66	Measure which options increase the number of jobs or households near transit.	Access to transit for housing and jobs will be examined within a 1/4 mile of bus stops, streetcar stops, and LRT Stations.
Chris Deffebach (Metro)	67	Measure which options align with or support the market to facilitate job and housing development.	Access to transit for housing and jobs will be examined within a 1/4 mile of bus stops, streetcar stops, and LRT Stations.
Jenny Lyman (transit riders)	68	Include access to transit as a measure under goals 5 and 6.	Added 6.e.; also transit service improvements are assumed in the transportation model and the RTP; funding and implementation are functions of TriMet budget.
Mike Warwick	69	The goals and objectives should be reworked to make the document shorter and focused with more measurable metrics.	See response to # 27.
Mike Warwick	70	Each subarea should have individualized and appropriate goals and objectives.	Agree. The Workbook with the subarea questions and survey will help inform the goals and objectives for each subarea.
Mike Warwick	71	The major land use goals should be simplified. Suggested new goals: 1)Vibrant urban neighborhoods, 2)Economic development; 3)Environmental health; 4)Social health; 5)Transportation systems for the future; 6)Local transportation options that serve the neighbors; 7)Social equity; 8) Honor the area's heritage; 9)Cost effectiveness.	See response to #27.
Mike Warwick	72	See the comment summary for a detailed re-write of objectives.	See response to #27.
Mike Warwick	73	The highest 2 priorities for each goal based on the current matrix are as follows: 1b, 1f, 2a, 2c, 3a, 3d, 4a, 4b, 5g, 6e, 6g, 7b, 7c, 8a, 8b, 8c, 9a, 9d.	Each SAC member will determine their own priorities as they recommend alternatives to move forward.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
NE Coalition of Neighborhoods	74	Freeway improvement projects should "do not harm" to existing neighborhoods.	The goals and objectives are to avoid/minimize impacts. See 8.c. There are tradeoffs and mitigations to consider with each alternative
NE Coalition of Neighborhoods	75	Freeway improvements should be accommodating to the land use and urban design project goals.	Freeway improvements will be evaluated for land use and urban design goals
NE Coalition of Neighborhoods	76	Streetcar improvements and associated development priorities should be carefully considered in any freeway changes.	See 6.g.
NE Coalition of Neighborhoods	77	Livability for all inner N/NE Portland residents should be increased, and equitable access to jobs, service and other neighborhood improvements is most important.	These comments are reflected in the Goals and Objectives in 1, 2, 4 and 7.
The above comments were received prior to SAC #8 on 7/28/11; the below comments are in response to the email vote on the 7/28/11 draft.			
Malina Downey	78	My vote is #2 – I have similar concerns on the detail of the criteria on specifically the #5 grouping and the measures of safety impact and freight accessibility.	Safety and access for freight is inherent in the design process as engineering is required to address safety and access concerns as relates to specific criteria such as turning radii, queue length etc. As part of the evaluation of the concepts, one of the criteria to be measured will include weave and merge level of service to determine how well adding an auxilliary lane addresses the the number of side swipe and rear end collisions.
Dean Gisvold	79	I am attaching my redlined version of the goals and objectives, the Phase 3 Matrix. I especially want to see specific language in the objectives which protect the 3 properties in the I-5 Weidler/Broadway discussion, Paramount Apartments, Madrona Studios, and the Leftbank Project. It has been stated on numerous occasions that this is the case, but nothing specific is in the objectives.	None of the concepts being considered would demolish the Paramount Apartments, Left Bank buildings or Madrona Studios. However, there may be impacts to circulation patterns. Freeway measures 8.b and c. will measure demolition and impacts to historic and culturally significant buildings. Revisions to 1f, 2d and 8c have been included to ensure that impacts to other existing residential and business uses are measured, in addition to displacement. Weighing impacts vs. benefits of the different alternatives will be part of the evaluation and decision-making process by the SAC.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Dean Gisvold	80	Redline comments: Objective 8b. Avoid/minimize/mitigate demolition of historic and cultural resources. **Revise to:** Prohibit demolition of historic and cultural resources. Objective 8c. Avoid or minimize adverse impacts on cultural or high priority community sites. **Revise to:** Avoid adverse impacts on cultural or high priority community sites. Add Objective 8d. Prohibit adverse impacts/demolition of Paramount Apartments, Madrona Studios, and Leftbank Project.	The Quadrant Plan cannot prohibit the demolition of structures, including historic or culturally significant properties, as suggested. It should be noted that while the Paramount Apartments and Left Bank Project are identified as historic resources, they are not on the National Register of Historic Places and therefore are not subject to protections or incentives that might otherwise apply to them. Also see response to #79.
Dean Gisvold	81	I share Mike Warwick's concerns about construction impacts and issues with Box.	We agree that construction impact mitigation will be an important element to be considered. There are many ways to phase construction (building one half of a bridge at a time and diverting traffic on the segment of roadway that is not under construction etc.) With that said, it's hard to be specific about phasing elements without the emergence of a preferred alternative. Construction phasing will be discussed once a preferred alternative is selected. Standard ODOT construction mitigation procedures will be used and will vary based on the specific elements of the preffered alternative.
Dean Gisvold	82	Although I share Mike's concern about the broadness and fuzziness of the current draft of goals and objectives, I am willing to live with the current draft, hopefully with some additional editing to increase clarity and focus. I say this in part based on (a) my experience with other major planning efforts and (b) my positive reaction to the SAC leadership and membership, and the quality of the staff. I was very impressed with the quality of the discussion at the last SAC meeting. In short, my confidence level is high.	Thank you. Most of your redline suggestions have been incorporated.
Dean Gisvold	83	A major concern is that at the end of this process that we have real freeway options, one or more that we can support, not back into, or as Mike puts it, choose "the least evil option among limited choices".	Agree. We will continue to refine the concepts and look at land use/local transportation and the freeway as a holistic package of improvements.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Dean Gisvold	84	Another major concern is the 800 pound gorilla in the room-the CRC and its impact on what we are doing. My worst nightmare is that the CRC will dictate Rose Quarter options and decisions, not this SAC, and staff.	The N/NE Quadrant process is a separate and distinct project fom the CRC. The I-5 Freeway corridor in the Rose Quarter is a problem that exists today and will continue to exist with or without the CRC Project. The operational and safety issues this project is addressing are due to the unique circumtances of two major interchanges (I-5/I-84 and I-5/I-405) being close together with the Broadway-Weidler Interchange in between and are not intended to increase through capacity.
Dean Gisvold	85	My interests (or the “stakes” that make me a stakeholder) include protecting and enhancing the Irvington historic district, and providing more affordable housing. As you know, I am a 45 year resident of Irvington, now the largest historic district in Oregon. We are dealing daily with the issues surrounding proposals for greater density in historic neighborhoods. Fortunately, the City’s analysis shows clearly there is no need to disrupt existing historic designated districts, such as Irvington, to accommodate the projected growth, even assuming those projections are accurate. The FAR analysis shows plenty of under-utilized land that can support increased density. Does Goal 8 deal effectively with my goals? Well, for now, it is close enough, hopefully again with some editing.	Comments noted. They will be helpful for determining the appropriate direction for the perferred concept. The Land Use, Urban Design and Local Transportation Concept Alternative Workbook contained subarea questions to assist staff in developing concepts and policy recommendations to address these issues regarding development scale, location, and transitions to surrounding neighborhoods.

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Dean Gisvold	86	Densities along Broadway and Weidler can be increased, but not with 10 or 20 story buildings. Some in the neighborhood argue for guidelines rooted in the historic "Streetcar suburb" style of development rather than the over-high structures currently allowed by the zoning. Streetcar suburbs typically had 2-3 story buildings on major streetcar-served routes with retail on the ground floor and residential apartments above. Were the Broadway corridor west of 16th re-built with this style of structure, it would represent a major increase in housing and retail capacity compared to the current pattern, while staying within the historic patterns appropriate to the NR District. Others in the neighbor would look favorably on 4 to six story structures fronting Broadway, but scaling back to 2 to 2.5 story structures on Schuyler, such as the condo project at NE 12th and Broadway. Again, Goal 4 is okay for now.	Comments noted. See response to #85.
Dean Gisvold	87	The need for affordable housing has never been higher. As Board Chair for Central City Concern, I can advise that CCC's average portfolio occupancy is 96% with one year waiting lists	The objectives call for increased affordable housing and a diversity of housing to meet a variety of income levels and lifestyles (1e and 7c). The objectives will be reflected in the quadrant plan through policies and implementation strategies. Specific strategies for affordable housing will be discussed at the next phase, as the financial challenges will be a key part of this discussion.
Dean Gisvold	88	Redline comments: Objective 1d. Foster increased residential density and improve jobs to housing ratio in the quadrant by 2035. **Revise to:** Increase residential density and improve the jobs to housing ratio in the quadrant. Objective 1e. Create opportunities forIncrease affordable housing close to multimodal transportation systems. **Revise to:** Increase affordable housing close to multimodal transportation systems and other appropriate locations.	Revised as suggested.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Dean Gisvold	89	Redline comment: Objective 2b. Maintain or increase development potential, e.g. through zoning, infrastructure and creation of new parcels. **Revise to:** "Review development potential, e.g. through zoning, infrastructure and creation of new parcels, and the location thereof."	We understand the concern that is objective could be read to mean that development potential must be maintained or increased in all locations in the quadrant. The project team feels this is an important concept to ensure that there is adequate capacity to meet the housing and economic development objectives, however it may not be appropriate in all locations. This objective was revised to more clearly reflect this intent: "Maintain or increase development potential where appropriate..."
Dean Gisvold	90	Redline comment: Objective 2c. Foster increase in future high density commercial development in appropriate locations while supporting and encouraging industrial activities in current industrial areas.	Revised as suggested.
Dean Gisvold	91	Redline comment: Objective 4b. Foster concepts that support high-density development in the Lloyd District in appropriate locations and minimize their impacts on adjacent neighborhoods-Eliot, Irvington, and Sullivan's Gulch.	Revised as suggested.
Dean Gisvold	92	Avoid/minimize/mitigate involuntary displacement of quadrant residents, businesses and jobs.	Revised as suggested.
Dean Gisvold	93	Redline comment: Objective 9a. Ensure plan proposals are practical, implementable and cost efficient. **Revise to:** Ensure plan proposals are reasonable and implementable.	Revised as suggested.
Cynthia Carmina Gomez	94	Things I need to think more about: STEP 3 EVALUATION CRITERIA: 1) Employment impacts; 2) Residential displacement; 3) Safety issues I am curious as to how the above will be measured - in specific terms - and interplay. I am concerned about staff response # 34 and #55 - they seem short and not well thought out. I am interested in revisiting this with my colleagues and staff to collaboratively develop measures.	Employment impacts will be evaluated when a preferred land use is selected and compared to the transportation alternatives. SAC discussions regarding employment impacts (Broadway etc.), have led to the decision to reject concepts with employment impacts. None of the remaining concepts will lead to any residential displacement. Previous comments (see #55) suggested that the project shoot for a better outcome in terms of accidents. Objective 6f has been revised to read: "Seek to significantly reduce accident potential".

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Cynthia Carmina Gomez	95	PHASE 3 EVALUATION MATRIX: On page 2, under #1.e. & 1.f., the evaluation measure is not reflected.	The specific measures proposed on the left side of the matrix will be used to evaluate the freeway interchange alternatives. Objective 1e calls for increased affordable housing. Since the freeway project will not have a role in creating affordable housing, no measure has been proposed. However, more specific housing strategies and targets will be included in the plan, which will be developed as part of the next phase of the project (Phase 4). The financial challenges with affordable housing will be a key part of that discussion. A freeway measure is proposed for objective 1f, related to preserving existing housing - "Minimize residential units displaced".
Cynthia Carmina Gomez	96	Also, the goals and objectives might need to be more detailed. Will this be something that is done later? The way they are written, I have a hard time figuring out what is being stated. Can they be written more clearly?	The goals and objectives listed in the evaluation matrix will be used to guide development of preferred alternatives and to ensure the quadrant plan is balanced and complete. Many of the objectives will not be reflected in the preferred quadrant concept diagram. However, more specific targets, actions, and implementation strategies will be developed to address those objectives in the plan, which will be developed in the next phase of the project (Phase 4).
Heidi Guenin	97	I'm also voting a 2. I appreciate the work that staff put in to respond to the comments that were submitted, and I would like to see us move onto the next phase where we can really start to think about how the freeway concepts and the land use will interact. However, I do have a couple of reservations, some of which have already been mentioned here. While I may not agree with every single issue that has been raised in this e-mail thread, I do agree that most of them do require more discussion. I share the concern of Mike and others that there is a danger of having an outcome that the SAC can tolerate but cannot truly embrace.	The outcome will be a balancing act. An element that one member dislikes may be liked equally by another. We will continue to take feedback and will continue to refine our Concepts as the process moves towards examining the finer grain details. During the current phase of evaluation we are beginning to look at how the freeway, local transportation and land uses work as a system.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Heidi Guenin	98	Specifically, though, I want to echo Cynthia's concern that Objectives 1e & 1f are not reflected in the measures at all. Also, I'm a little concerned that some of the measures remain high-level/unrefined compared to others. For example, the 5a measures are not clearly spelled out. Will there be opportunities as the process moves forward to work with staff to understand the specific measures that will be used and to provide feedback on those?	See response to # 94 and 95. The project team would be happy to meet with you to discuss the evaluation process in more detail.
Wayne Kingsley	99	I vote one with a few questions. First, as you know the only dogs I have in this parade are: the best I-5 solution possible with only a secondary interest in the land consumed within reason, conservation of the valuable river frontage for industrial use and keeping the 12th Avenue bridge available for freight access to the CES. I also note this quadrant also provides a gateway to downtown and has a number of significant regional attractions for which vehicular and freight access should be protected.	Comments noted. We agree that the Broadway Weidler area is a gateway to downtown and that freeway access and continued freeway movement through the area is of high importance.
Wayne Kingsley	100	Para 5 talks about minimizing SOV traffic. Is there a definition of SOV? Is it the Washington commuter going to work, is it the Maytag repairman going to a home or a computer repair tech on her way to fix a computer and etc? There is also mention of reducing VMT. Is this VMT within the quadrant, the city or the region. If within the quadrant, is this the last mile traveled? There is discussion of air quality vis a vis vehicle emissions presumable from gas and diesel engines. This presents a whole host of issues from near term adoption of electric vehicles, significantly increased mileage of new gas engines (with reduced emissions) and so-to-be mandated efficiency of diesel engines. What about TriMet and buses. It would seem the planning should comprehend these emission improvements.	A SOV refers to any light truck/passenger vehicle with one occupant. An evaluation of emissions is estimated by Metro as part of the regional model output. The impact of one particular concept over another will have a measurable, but minimal change. The 2035 emissions will better than existing due to better fuel economy, fleet changes and cleaner fuels. The goal of reducing VMT per capita will involve encouraging drivers to use transit, bikes etc.
Wayne Kingsley	101	I don't know what 5i means.	5i has been deleted. Other comments noted that it was duplicative of 5a and 5g.

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Wade Lange	102	Redline comment: Freeway measure 3.c.) Amount of enhanced street tree canopy; with respect to future street level retail growth.	The idea reflected in this comment about the potential conflict between street trees and retail is more appropriate under the general goals and objectives, as opposed to measure for the freeway project. Changes were made to Objective 3c to reflect that habitat, tree canopy and green infrastructure should be enhanced in "appropriate locations" and Objective 2e was added "Support and strengthen the retail environment."
Wade Lange	103	Redline comment: Objective 3d. Support sustainable development goals and practices, including creation of the Lloyd Eco-District. **Revise to:** Support sustainable development goals and practices, including understanding and impacts of the Lloyd Eco-District.	Revised as suggested.
Eric Lovell	104	This document's goals are going to be a pretty tall order for us mere mortals to achieve. Nonetheless, I think it does a great job of documenting our groups goals and accommodating the various points of view. So I vote yes on it as is, though I would like to see other's comments in case they bring up something I hadn't thought of and think is pertinent.	Thank you.
Eric Lovell	105	If there are going to be further edits, I'd suggest someone take a look at Objective 5b: I think the e.g.: is written awkwardly and may be able to be improved with a little dose of plain English, and in Evaluation Measures 7a I suggest adding 'negative' to read 'minimize negative impacts to access…'	5b: The technical terms listed in the "e.g." have been deleted. 7a: The suggested edit has been incorporated.

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Gary Marschke	106	I vote a 2 - mostly, I want to see the language throughout ensure that all the job, contracting, and other economic opportunities are offered **LOCALLY FIRST** - and by LOCALLY, I mean the neighborhood starting with a half mile radius around the project site and as long as gaps remain increasing in half mile-one mile increments concentrically as necessary. That also means providing the direct assistance necessary to aggregate skills and capacity to allow small firms to collectively and collaboratively compete for jobs and projects with larger firms.	There are objectives included related to supporting existing businesses (2d) and increasing the capacity of existing residents and businesses (7c). Contracting procedures of City and State agencies is a broader topic than can be addressed by this planning effort. The City does have procedures in place that are intended to help minority, women and emerging businesses compete for contracts.
Brock A. Nelson	107	Sam, I vote 2. Whereas we state that we want to "improve freight access from freeway and railroads.... "(5(e), and " improve rail operations for freight and passenger..."6(h), I think we should also mention somewhere that we need to preserve the existing freight infrastructure and do no harm. I think it's inferred in the previously mentioned goals and objectives, and also in 6(g), but feel it should be more clearly stated in both the N/NE Quadrant Objectives and Freeway Interchange Concept Evaluation Measures categories.	Agree that preservation of existing infrastructure is implied in the objectives. We prefer to keep the term "improve" because it gets at some of the issues with the current system that have been identified (such as the "s" curve). "Preserve" denotes that no changes to the system should be made.
Owen Ronchelli	108	Redline comment on page 1: PLACE: Create opportunities for a diverse series of “places” that can be seen in the presence of or potential for an interconnected system of distinct and attractive high-density areas that support vibrant, livable and diverse communities, and that allows for the place to evolve and grow. **Revise to:** Create opportunities for a diverse series of “places” that are part of an interconnected system of distinct and attractive high-density areas that support vibrant, livable and diverse communities.	Revised as suggested.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Owen Ronchelli	109	Comment re: “Provide opportunities” - There is a lot of terminology that talks about opportunities – creating them, providing them, etc. (14 in total). My question is how are these “opportunities” manifested, incentives, zoning bonuses, tax abatements, TIF money? What is on the table, what is off the table?	Specific strategies will be developed during the next phase of the proejct. See response to #96.
Owen Ronchelli	110	Redline comment: Add: 2e. Retain and enhance existing on-street parking in commercial areas to support local businesses	Providing parking that supports the needs of the quadrant is covered in Objective 5h. Instead of specifically addressing the parking needs of commercial areas, a new objective was added to encompass the broader retail environment. See Objective 2e: "Support and strengthen the retail environment."
Owen Ronchelli	111	Redline comment: Objective 3a. Create opportunities for new strategically located parks and open space.	Revised as suggested.
Owen Ronchelli	112	Comment re: 5h: Provide parking and transportation demand management strategies that better support the needs of the quadrant. This is redundant with 5b. – they should be combined and simplified.	The project team feels that these objectives represent different ideas. 5b is about mode choice, which 5h is specifically about parking and TDM strategies.
Owen Ronchelli	113	Comment re: 6e, Improve access to transit for residents, employees and visitors. I like this sentiment (and support it), but how would this be accomplished – free bus passes for everyone in the district? Or are we talking about sidewalks and crosswalks? Is it vague by design?	Specific strategies will be developed during the next phase of the project in coordination with implementing partners like the TMA. See response to #96.
Bob Sallinger	114	I vote 2. I am a somewhat concerned that the matrix lacks specificity in the goals and objectives. Almost none of these goals have any measurable metrics that will allow us to really guide staff and consultants or allow us to determine whether we have really been successful. For example the document calls for "creating opportunities for affordable housing..." What are the targets for this area? What work has the city already done in the affordable housing arena that would inform what "creating opportunities" really means?	See response to #96. Affordable housing is an example of an objective that will be addressed in more detail in Phase 4 when the quadrant plan is developed.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Bob Sallinger	115	In the natural resource arena, the city has developed very specific, detailed documents addressing tree canopy, park access, climate change, stormwater management, ecodistict development, watershed health etc. It would be good to reference these types of documents and incorporate specific targets to inform the goals and objectives. Perhaps that comes in the next stage...but I am concerned at this point that the current document is vague and general enough that it pretty much could mean whatever anybody wants it to mean.	See response to comment #96. Your comments will be helpful as we develop specific targets and actions during the next phase of the process. Also, the additional criteria listed in the matrix (Criterion 9), acknowledges that the quadrant plan will need to be consistent with and implement other adopted plans and policies that were noted in your comments.
Bob Sallinger	116	Redline comments: Add Objective 1h. Provide access and highlight the quadrant's relationship to the Willamette River.	Revised as suggested.
Bob Sallinger	117	Redline comments on freeway measures: 3.c.) Amount of enhanced street tree canopy (meet or exceed targets for both overall canopy and canopy by land use type as delineated in the city's tree) (3.c.) Reduction of storm water run-off and energy use (meet or exceed the requirements of the stormwater manual) Directly address targets for CO emissions as well as other climate change objectives as defined in the city's climate change action plan	The specific measures proposed on the left side of the matrix will be used to evaluate the freeway interchange alternatives. The proposed measures for tree canopy targets and climate change targets would be difficult to address for this single project. Measures are proposed that look at the amount tree canopy produced by the project, reduction in stormwater runoff and energy use (3c) and the effect on auto and greenhouse gas emissions (5b). 3c has been revised to note that the project will meet or exceed City and State stormwater requirements. Targets for the overall quadrant can be incorporated into the quadrant plan where appropriate during the next phase of plan development. Also see response to #96.
Bob Sallinger	118	Comments on 3: Increased access to nature is a very different concept than ecological protection and restoration. Both are important but I am not sure they belong in the same box.	Agree that these could be separated, however the project goals were approved by the SAC earlier in the process. There are separate objectives for these different concepts.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Bob Sallinger	119	Redline comments on objectives: 3a. Create opportunities for new parks and open spaces (such that all residents are within 1/4 mile of a park and natural area) 3c. Enhance and create new fish and wildlife habitat (where and for what species?), tree canopy (reference city's tree plan and specific targets), and green infrastructure (reference city's stormwater manual, grey to green program, watershed plan goals etc).	See response to #114. Your comments will be helpful as we develop specific targets and actions during the next phase of the process.
Bob Sallinger	120	Comment regarding 3d. Support sustainable development goals and practices, including creation of the Lloyd Eco-District. What does it mean to be an ecodistrict--how is this different than the rest of the landscape. Do we want the whole landscape to be sustainable or just the ecodistrict?	This objective is intended to express support for the Lloyd Eco-District concept. The details of what that effort will entail is being developed in a separate process from the quadrant plan. The project team is coordinating with the Lloyd Eco-District project and It is anticipated that the quadrant plan will incorporate ideas developed as part of that process, and vic versa.
Bob Sallinger	121	Redline comment: Objective 7d. Provide for amenities and services, such as parks, natural areas, schools and connections, at a level appropriate to support the type and intensity of development proposed.	Revised as suggested.
Gary Warren	122	I also would vote a conditional 2. Everyone has given much thought and emphasis in their responses which I can only concur with. I am very concerned like Mike that we could have a choice of lesser of evils. Like Dean, I am concerned we are not getting all of the cards on the table, be it the CRC or the Bicycle SAC. We occasionally seem to work at cross purposes on these projects.	See responses to #84 and #97
Gary Warren	123	I would like to see the preservations of existing residential zoning to be one of the considerations in the first objective/goal beyond the preservation of uses.	A number of objectives deal with opportunities for new housing and preservation of existing housing. The specific tools that will be used to achieve those goals/objectives will be part of the next phase of the plan. Your comments about preserving the existing residential zoning will be helpful in that work.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Gary Warren	124	In summary, I see some areas of concern looming in the near future. There are going to be some interesting discussions as we proceed as interest groups could be pitted against each other.	The goals and objectives are intended to help identify tradeoffs, so a balanced outcome can be reached.
Mike Warwick	125	I vote a qualified 2. I am skeptical of the process, but understand the need to move forward and that this matrix is more about getting agreement on the kind of data that will be used to evaluate options than how they will be evaluated (the "how" is the basis for my concern, more so that the "what is the metric").	Comment noted. The project team would be happy to meet with you to discuss the evaluation process in more detail.
Mike Warwick	126	As you all know, I have one major reservation. Specifically, that the reconstruction of the overpasses will disrupt both current businesses in the area and plans for redevelopment of the area. There is a high rate of business failure associated with such construction projects. Given the potential risks to businesses in the Lloyd District as well as to the event schedule and attendence at activities at the Rose Quarter and Convention Center, as well as major hotels like the Doubletree (old Red Lion) SHOULD NOT be underestimated. And, I fear the current matrix does so. I firmly believe a job or business lost during construction is "worth" far more than some estimate of some prospective future job that the freeway ramps may create. Moreover, ramp improvements may actually decrease future business activity in the area if traffic that now diverts down neighborhood streets stays on the freeway instead of stopping to shop on the way home. (Obviously, that is a mixed blessing since the area benefits from the shopping but not the cut through traffic.)	We agree that construction impact mitigation will be important. However, specifics of phasing and mitigation are difficult to address until a preferred alternative has been identified. See response to #81.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Mike Warwick	127	My second greatest reservation is that elminating the Box is paramount. That means there needs to be a metric based on relocation of ramps away from the existing Box or metrics that measure how movement through the Box is changed in each option. Of course, the greatest improvement would be to eliminate these ramps at this location. An option I thought we were going to see, although I don't expect it to win acceptance. I think that would still be a useful educational effort.	The evaluation measures will help determine how the level of circulation improvements in the box can be achieved with the different concepts. The SAC has already rejected/eliminated concepts that eliminated the box, or concepts that removed freeway ramps.
Mike Warwick	128	My third major concern is that the goals as written allow too much leeway for perverse interpretation. This is a result of the combination of multiple objectives into both single sentences and subheads under a common goal. For example 1b. Does this get a "check mark" if some "identies" are "fostered" at the expense of others? Should it have a "do no harm" minimum threshold? I have see too many of these measures that allow the City to take credit for meeting them, when in fact they barely met the letter, let along the expectations. I would much prefer clearer statements of the goals and objectives in terms of expectations. For example, "identities" should be defined. "A distinct identity means ...." The goal is to preserve the following existing identities .... and foster the creation of x number of new ones."	See response to #96. More specific targets and actions will be developed in the next phase of plan development. Your comments will be helpful for that work.
Mike Warwick	129	My bottom line is that there has not been a groundswell of support for any "build" option. I do not want to hear at the end of this process that the CAC "favors" an option which we all found the least bad. Choosing the least evil option among limited choices is not the same as favoring anything and it is a perversion of the process to make that claim.	See response to #97.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Phase 3 Evaluation Matrix - Stakeholder Comments and Staff Responses, September 22, 2011

Comments #1 - 77 were received prior to SAC #8 on 7/28/11. The responses to those comments were previously provided to the SAC in the 7/28/11 meeting packet. Comments #78 - 132 were received in response to the email vote on the 7/28/11 draft. The new comments and response start on page 8.

Comment Source	#	Comment	Staff Response
Justin Zeulner	130	I want to state a few additional comments about where we are in the process (might not be directly related to the Concept Evaluation Matrix document): 1. Freeway concepts need to be further condensed, prior to spending additional resources and time. Gather the sub-committee (and sub-committee only) to discuss.	The response from the SAC has been to take a go slow approach before reaching consensus on freeway design. We will continue to move concepts forward in line with proposed land use concepts.
Justin Zeulner	131	2. After freeway concepts are condensed, place "hold" on any concept element that requires any substantial change to "land/property". SAC needs to agree on land-use/vision, before they can adequately comments on a recommended freeway concept. That said, some of the freeway improvements will exist in the majority of the condensed options, thus planning efforts can continue on those specific elements.	Agree. The next step in the process will focus on developing a preferred land use concept. The goal is that the SAC provide preliminary direction on a preferred land use concept before making more decisions about the freeway options.
Justin Zeulner	132	3. Specific to Rose Quarter business operations, we need to be very mindful of impacts to our City, State and region's largest episodic campus that comes along with any freeway changes.	Comment noted. Impacts to circulation within the Rose Quarter will be included in the analysis of the freeway options. Specifically, see 7a in the freeway measures.

Concept Alternatives Outreach Summary
Summer 2011

The N/NE Quadrant team made a significant outreach effort over the summer to obtain feedback on the quadrant concept alternatives and specific subarea planning choices that were developed for discussion in the spring. The Concept Alternatives Workbook, which illustrates the three quadrant-wide concept alternatives and subarea choices for eight smaller geographic areas, was used extensively to facilitate discussion during this period.

Outreach efforts included:

- An open house held at the end of June, where the public was invited to review the concepts, talk to the project team and respond to surveys asking for feedback on the options and issues presented. Over 100 people attended that event.
- Members of the project team attended 20 community and stakeholder meetings to discuss the project, answer questions, and get feedback. Please see the list of outreach meetings and events attended below. Notes from the meetings were compiled and are available in the project file.
- An on-line survey that was open from August 5 to September 5, 2011. The on-line survey asked the same questions as the paper survey used at the open house. All responses were combined into a survey report. A total of140 people responded to the quadrant-wide survey and between 50 and 75 responded to each of the eight subarea surveys.

The feedback received from this outreach effort is being used to inform development of a proposed land use, urban design and local transportation concept for the quadrant, as well as recommendations on area-specific planning questions. The Stakeholder Advisory Committee will begin discussing these proposals at their September 29 meeting.

Summary of What We Heard
A brief summary of main themes heard during all summer outreach activities is presented below. This summary is intended to provide an “at a glance” description; more detailed information on specific issues can be found in the Concept Alternatives Survey Report (attached) and the Proposed Concept Alternative Staff Recommendations report (Sept 29 SAC meeting packet).

Feedback on Quadrant-wide Concepts

- The Residential/Employment Blend alternative best matches the appropriate mix of uses for the quadrant.
- There is continued support for increasing the level of residential development in the Lloyd District as a means to create more vibrant districts with 24 hour activity.
- Lower Albina should remain an industrial area, however there is interest in allowing a broader range of employment uses and in a small expansion of commercial activity on Russell Street.

- New and improved connections within the district are important, particularly for pedestrians and bicycles. Support was expressed for new connections across I-5 and I-84, although there is concern about the traffic impacts to neighborhoods if these connections are to be used by vehicles. Other important connections identified are better access to the Willamette River and a means of traversing barriers including large buildings or complexes, such as the Rose Quarter and the Lloyd Center Mall, and busy streets, such as MLK/Grand and Broadway.
- There is a need to recognize the regional significance of the quadrant and for good vehicle and freight access to support the existing employment centers and attractions. Parking supply is also important to support retail, events and desired new residential development.
- A desire has been expressed for a significant new amenity within the Lloyd District to provide a focal point that will help spur development and create a more vibrant active place. Some concern has been expressed that a focus on Central Lloyd will spread development too thin and take away from other areas, such as the Rose Quarter and the Broadway bridgehead.
- Support was expressed for a string of mid-sized public parks and interconnected private plazas that could serve different functions. Desired open space functions include picnic/lunch space, urban plazas, habitat/natural systems, children's play area and a community garden. Ideas to activate the spaces included surrounding open space with residential development, including active fountains (i.e. Director's Park or Jamison Square), holding regular events such as farmer's markets and providing space for cafes or food carts.
- Support was expressed for green infrastructure systems, particularly district energy and stormwater capture and reuse. Some believe that public investment in "green" utilities could help spur development within the area and create a "brand" for the area.
- Comments regarding natural systems focused on integrating tree canopy and native vegetation into the built environment, particularly on streets and within parks. Sullivan's Gulch and the riverfront were both seen as good places for new or enhanced habitat.

Feedback on Subareas

- **Subareas 1 and 1a: Lower Albina and Historic Russell Street**

Lower Albina should be retained as a largely industrial area. In general, there has been support expressed for proposals to increase the size of the current mixed use area on Russell Street and to allow for a broader range of employment uses within the remainder of the industrial area. However, the business community in the area has expressed concerns about eroding the industrial sanctuary, increasing costs for industrial businesses, and introducing uses that could be incompatible with the existing industrial uses. Residential uses are a particular concern.

- **Subarea 2: Eliot: Vancouver/Williams Corridor**

General support was expressed for changing residential zoning in this subarea to another zone that would allow more flexibility for existing commercial and light industrial uses to expand. The importance of African-American heritage in the area was emphasized and a desire to encourage preservation of historic buildings and to revitalize Williams and Russell, the historic main streets within the area. It was noted that any new development at the intersection of

the Williams and Russell should include a gesture that recognizes the historical significance of that location. There was support for increased connectivity through possible new freeway overcrossings, particularly for bikes and pedestrians. However, concerns remain about allowing vehicular traffic at the proposed Hancock to Dixon crossing, due to potential negative impacts on the residential neighborhood east of the freeway.

- **Subarea 3: Rose Quarter**

General support was expressed for rezoning the Portland Public Schools Blanchard site to allow a broader range of uses. Larger buildings are seen as a good fit along N Broadway to provide more diversity of uses that will support activities in the Rose Quarter and make it livelier on a daily basis. A strong desire for public access to the riverfront via a trail and park was expressed. It was also suggested that the Rose Quarter should have riverfront amenity similar to those that exist on the Westside of the river. Improved connections through the area are seen as important, including improvements to conditions of freeway underpasses, across busy streets like Broadway and through the Rose Quarter complex.

- **Subarea 4: Broadway/Weidler Corridor**

In general, there is support for taller buildings (6 to 20 stories) on the western portion of the corridor, west of 7th or MLK/Grand. In the eastern portion of the corridor where a main street feel should be emphasized, it has been suggested that heights be limited to 5 or 6 stories. There are concerns about the transition from the higher density development allowed on Broadway to the Irvington neighborhood and historic district to the north. Of particular concern are the allowed height bonuses that could result in buildings up to 125 feet. Suggestions have been made for development to step down between Broadway and Schuyler to be more compatible with the adjacent residential area. The pedestrian environment on Broadway is a key concern. Additional pedestrian crossings and traffic signals were recommended to improve safety and the ease of pedestrian movements.

- **Subarea 5: Central Lloyd**

Significant residential development continues to be desired within the Central Lloyd area, particularly as redevelopment of under-utilized areas, such as surface parking lots. To support and attract residential development, there is generally agreement that public investments in new amenities are needed. The ideas of a Clackamas green street, string of public open spaces and an I-5 freeway overcrossing have all generally been met with support. However, strong opposition has been voiced about the idea of a vehicular I-5 overcrossing due to potential traffic impacts. There have also been concerns voiced about potential parking impacts because an overcrossing could facilitate parking in the Central Lloyd area for Rose Quarter events.

- **Subarea 6: Eastern Lloyd**

There is a desire for more mixed use development with a significant residential component to support the Lloyd Center mall and provide more positive 24 hour activity in the area. Comments emphasized redevelopment of surface parking lots and the need for more active storefront uses, including restaurants and nightlife. Existing and new development adjacent to Holladay Park should be encouraged to open onto the park to help with safety concerns. More active programming, outdoor markets, and improved safety were noted as the most needed improvements to the park. Better connectivity to and through the area is important.

A connection across I-84 to the Central Eastside in the vicinity of NE 7th is desired, as are connections through "superblocks".

- **Subarea 6a: Sullivan's Gulch**

Residential uses garnered the most support for new development in this area. Office and neighborhood scale retail were also noted as uses that could be appropriate. There was agreement that the current allowed heights should be revisited to address inconsistencies in current regulations that could hinder development of the site at 21st and Multnomah. It was suggested that relatively lower heights would be desirable on Multnomah, across the street from existing lower density residential development, with increased heights allowed toward I-84. Providing space and access to the proposed Sullivan's Gulch trail was also noted as an important consideration.

About the N/NE Quadrant and I-5 Broadway/Weidler Plans

The N/NE Quadrant and I-5 Broadway/Weidler Plans (N/NE Quadrant Project) is a collaborative effort by the City of Portland and Oregon Department of Transportation. It is part of Phase II of Central City 2035, the City of Portland's effort to update the 1988 Central City Plan, providing detailed planning for the Lower Albina and Lloyd District areas. Working jointly with the Oregon Department of Transportation, this pr0ject will also explore options for I-5 freeway and local transportation improvements in the vicinity of the Broadway/Weidler Interchange. For more information visit the project website: www.portlandonline.com/bps/cc2035/nneq or email the project team at nnequadrant@portlandoregon.gov.

56604

INTRODUCTION

Based on ideas captured at previous events and meetings, the N/NE Quadrant Project team prepared draft concept alternatives that represent how the N/NE Quadrant area could develop over time. Ideas for the concepts were drawn from a number of sources, including examining existing conditions; identifying issues, opportunities and constraints; Stakeholder Advisory Committee and Subcommittee meetings; and the Local Issues Charrette, held in February 2011.

The **quadrant-wide concept alternatives** display existing conditions and three concepts that are based broadly on potential future land use patterns that each has a different emphasis: residential, employment, and a residential/employment blend. The concept alternatives are further illustrated by three related infrastructure systems: mobility, open space and green systems.

The **subarea choices** highlight key land use, urban design and local transportation choices for the N/NE quadrant subareas. These choices were illustrated with maps and background information about these smaller geographic areas, with questions posed that is specific to each subarea. Consideration of the subarea choices and issues will inform the refinement of the quadrant-wide concepts alternatives and vice versa, assist in developing a recommended concept and provide guidance for more focused plan proposals at the subarea level.

The quadrant-wide concepts and subarea choices were displayed in the Land Use, Urban Design and Local Transportation Concept Alternatives Workbook, which was distributed in hard copy and was also available on-line.

THE CONCEPT ALTERNATIVES SURVEY

Beginning with a public open house held in June 2011, a series of surveys were developed to solicit feedback on the concept alternatives and subarea choices. Separate surveys were developed for the quadrant-wide concept alternatives and for each subarea in order to provide flexibility for participants to address the areas they were most interested in. This resulted in a series of nine different surveys.

The paper surveys used at the June open house were converted to an on-line survey that was open from August 5 to September 5, 2011. The results of the on-line survey and the paper survey were combined. The on-line survey was advertised via email to the project mailing list, a media advisory, fliers distributed in the quadrant, and by word of mouth.

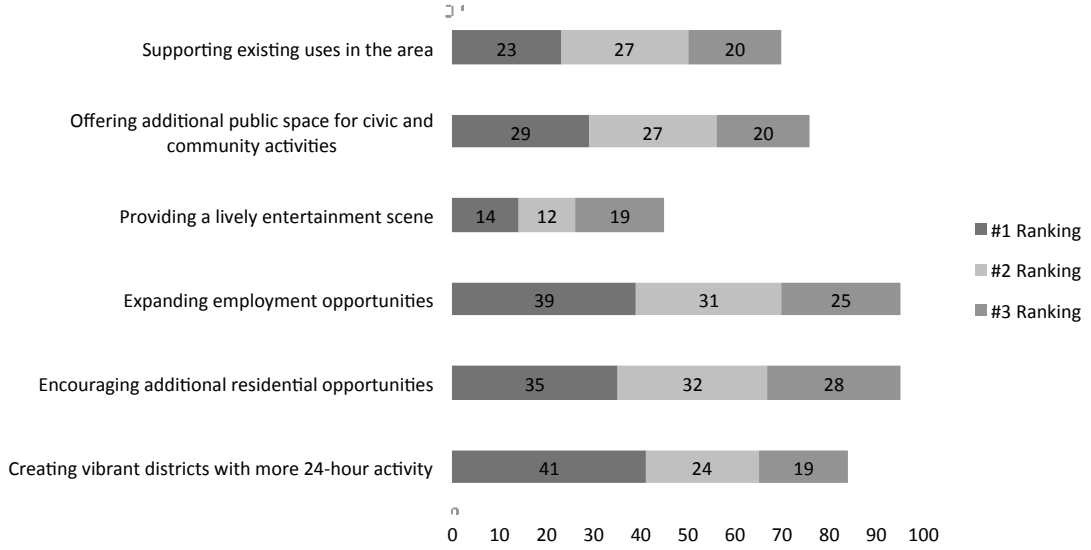
The feedback received from the surveys is being used to inform development of a proposed land use, urban design and local transportation concept for the quadrant, as well as recommendations on area-specific planning questions that will be considered by the N/NE Quadrant Stakeholder Advisory Committee in the fall of 2011.

Number of Surveys Received

Survey by Geographic Area	*# of surveys collected*
Quadrant-wide Concepts	140
Subarea 1: Lower Albina	67
Subarea 1a: Historic Russell Street	56
Subarea 2: Vancouver/Williams Corridor	55
Subarea 3: Rose Quarter	71
Subarea 4: NE Broadway/Weidler Corridor	75
Subarea 5: Central Lloyd	58
Subarea 6: Eastern Lloyd	56
Subarea 6a: Sullivan's Gulch Transition	56
Total collected surveys	634

How Survey Respondents are Connected to the N/NE Quadrant

The on-line surveys each had a question asking how the respondent is connected to the N/NE Quadrant. Respondents were asked to check all that apply. The results are shown below:



Survey	Live in Quadrant	Work in Quadrant	Own property/business in Quadrant	SAC member	Live/Work in Adjacent Neighborhood
Quadrant-wide Concepts	35%	38%	19%	8%	54%
Subarea 1: Lower Albina	19%	23%	16%	12%	61%
Subarea 1a: Historic Russell Street	17%	25%	17%	22%	61%
Subarea 2: Vancouver/Williams Corridor	22%	25%	16%	13%	59%
Subarea 3: Rose Quarter	13%	42%	13%	21%	50%
Subarea 4: NE Broadway/Weidler Corridor	33%	32%	19%	13%	48%
Subarea 5: Central Lloyd	12%	46%	9%	15%	52%
Subarea 6: Eastern Lloyd	6%	36%	18%	21%	61%
Subarea 6a: Sullivan's Gulch Transition	30%	20%	13%	27%	47%

The remainder of this report shows the detailed survey results, including those collected on-line and at the June open house. Many of the questions provided space to provide additional comments. Those responses are provided verbatim, with the exception of instances where respondents made the same comment multiple times. Where comments were grouped, the number of people making that comment is noted.

Quadrant-Wide Alternatives Survey

DISTRICTS/PLACES

Q1 Which objectives are most important in determining the types of uses that should be encouraged in the quadrant? Rank top three choices from 1 to 3, with 1 representing the most important objective.

Other Responses
Can't we do all these things? Maybe just a matter of how much where?
Creating flows in the areas that encourage productive interactions (e.g. retail, business, community areas), and that discourage "hang out" and/or loiter opportunities.
Safety and accessibility of than area via car, transit, walking and biking.
Encouraging more employment and residential must be supported by public space, though!
Support a community that lives and works in the same area. Esp. the service sector. Offer more affordable housing.
Whatever the market demands - without public funds - EXCEPT for public infrastructure needed to support PRIVATE Development
Support schools in the area to attract families people employed and not impeding existing or new businesses.
Additional advanced manufacturing and freight transport infrastructure friendly development and support, such as childcare on bus-lines, walkable family resources.
Maximizing the benefit to residents of the quadrant, versus business owners, and those coming in from outside the quadrant.
open space including urban farms
Safety of neighborhood
Addressing the residential, employment, commercial, and service needs of the longstanding minority residents in the area. (#1)
Greenspace!

People in Portland still mostly sleep between 10pm and 6am. Keep density-we don't want to be like the Pearl. We are NE Portland and proud of it.
Involve a diverse group (and particularly African Americans) in determining the future of this historically black neighborhood.
A mix of uses which allow people to live, work, and recreate in the same area is key. Attractors should be sized and located in a way that encourages primarily neighborhood bike/foot traffic, and only draws traffic from outside the area if it can be wholly accommodated by the bicycle, pedestrian, and transit network.
Utmost importance to decreasing reliance on I-5, as that needs to be removed or turned into a boulevard eventually.
Supporting industrial activity and freight mobility
By adding jobs to an area, growth of businesses that serve businesses fuels further growth.
Increasing safe and functional parks and greenspaces
Multimodal transportation investments-transform trips from car to transit!
Equity
Protecting cultural resources of community= people rather than freeway.
Redefining the Lloyd District from a parking and pass through neighborhood, to afoot-friendly destination.
As in mixed use development a fundamental mixed objective might be to prepare a multidimensional strategy that: encourages a vibrant 24 hour district with residential and employment opportunities, supported by public and civic community spaces and activities, where locals and visitors can enjoy a diverse range of entertainment and cultural events and programs that respect and support existing residents and businesses.
One of the complaints we hear often from meeting planners who bring, or are thinking about bringing, meetings and conventions to the Oregon Convention Center is that there is nothing to do around the convention center. We need more food/beverage/entertainment in this area.
Replacing the use of the automobile, streets, parking lots, and other auto related stuff with alternative transportation. Make as pedestrian friendly as possible.
Creating a more pedestrian and bike friendly environment that increases connectivity. This area used to be almost a perfect grid, and expanding I-5 access even further will most likely hurt and not help this.
More human scale and family-friendly activities

Q2 The current mix of uses in the quadrant has a high level of employment and regional attraction uses and a low level of residential uses. Should the plan encourage this mix to change?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	74%	104
No, preserve the current mix of uses	26%	37
answered question		141
skipped question		3

Q3 If you answered yes to question 2, in what ways should the mix of uses be encouraged to change? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Encourage additional employment and regional attraction uses	19%	20
Encourage slightly more residential use	42%	44
Encourage significantly jigher levels of residential use	55%	58
Other	15%	16
answered question		105
skipped question		39

Other Responses

Read your Jane Jacobs. Her observations still apply. Portland can be a great city.
In particular, it would help congestion if this residential increase targeted those who work in the quarter.
Support the service sector. More residential because of good transportation and neighborhood services.
Bonneville Power presents a real problem to the neighborhood because people park in our neighborhood and leave no place for residents. If businesses are here they need to provide bus passes as a minimum.
more residential and more employment
More mixed use buildings encouraging short commute times via Max and to employers in the immediate area
Vibrancy will increase only with housing and residents who can walk, bike or transit to mix of uses.
Reduce dependence on single-occupant-vehicles for residential and commercial uses.
Protect existing long-standing housing, including brick apartments. Increase mixed-use development
Make them work together. Encourage more street-level businesses that create reasons for people to be on the street.
You should implement the suggestions in the 2001 Lloyd District Housing Strategy-3000 units, I wrote it.
The Quadrant could be thought of as a city within a city where there is ample room and development capacity to create healthy and vibrant sub areas that provide a balance of employment, housing and amenities.
Residential use is needed to create more 24/7 activity and to support the dining and entertainment that is also needed for the Convention Center.
Creating a place people will want to visit and stay awhile will then encourage more residential development.

Q4 Which concept alternative do you feel best illustrates the appropriate mix of uses for the quadrant? Check one.

	RESPONSE PERCENT	RESPONSE COUNT
Concept 1: Residential Emphasis	12%	17
Concept 2: Employment Emphasis	14%	20
Concept 3: Residential/ Employment Blend	74%	102
answered question		139
skipped question		5

Q5 What would you change about the concept you selected in question 4? Please explain.

Concept 1: Residential Emphasis

Add an emphasis on MLK (even though it isn't a street that runs East/West). Pedestrian-friendly development along MLK would draw residents along that corridor (North of Broadway) toward the commercial/entertainment areas and to the river.
Specifically plan for increased demand for ground-floor retail and services, and 24x7 on-the-street activity, stemming from the boost in residential density.
6-20 stories doesn't seem like a form the market will support. Has a market study been done? Make sure the residential zone has flexibility unlike some of the current residential zones that require too much density.
The super blocks need to be broken up to smaller blocks. I really would like to see more mixed use similar to the Pearl.
Greatly enhance small retail storefront component.
I do not think that we should exclude any of the emphases; they should be used in concert with Employment the emphasis.

Concept 2: Employment Emphasis

Nothing. We don't need another overpriced area that pushes out businesses and lower to middle class people.
I'd place even greater emphasis on employment.
Expand green spaces, make sure good public transit/parking - make it a pleasant place to go to work.
I know that safety is a large concern in this part of town. Business will not expand and people will not want to work in an area that has an unsafe reputation. The Convention Center has lost business because of the perceived safety issue. The hotels and restaurants are often dealing with this.
Increase opportunities for independent retailers, restaurants, and entertainment venues. Focus on making this an attractive destination for discretionary spending AND ALSO a transfer point from car or light rail to alternative transportation such as bike with bike rentals, storage, etc; bus; taxi. Encourage supporting pick-up / delivery services, etc.
Jobs comes first followed by housing second.

Add parks and open spaces
Slightly more residential but mostly employment.
Concept 3: Residential/Employment Blend
Design it well. Configure the "system" so that it is not rigid. That beyond the planning of infrastructure, a mechanism is created to allow creativity to adapt to changing circumstances. Be no more particular than necessary, be open to the possibilities.
Foster employment that is not primarily entertainment/service-based.
Blending commercial and residential development maximizes the vibrancy of a community, provides more efficient development and long-term sustainability. I don't think the city should go out of its way to build new apartment buildings in the Lloyd district, but if an opportunity presents itself for development then the preference should be towards a balance of residential and commercial development rather than a polarization of the two.
Ensure that there is affordable housing and all modes of transportation are supported, such as ped, bike, transit, etc... Increased green and open space. Preserve parks and open space in area. Better green systems.
Preserve more of the small park spaces in the employment area to the SE. Density of allowed residential should reflect what is needed to provide affordable housing for folks who work in the district.
Create a vibrant, mixed-use neighborhood with easy access to mass transit and employment opportunities as well as easy connections to adjacent neighborhoods.
Focus on supporting families with family oriented restaurants and entertainment as well as supporting quality school programs in the area.
It's a bit of a dead zone when there are either too many residences or too many business - they need to be mixed.
Emphasis on what families need to be comfortable in their neighborhood where they live and work.
Change it to say "employment/residential" blend rather than "residential/employment" - fear becoming a residential district at the expense of jobs
local micro production in the extant buildings (renovated) and urban farms in the under-used open spaces
With more residences there should be significantly more park spaces if possible. I would like to see a supportive environment for local small businesses to be added to the area.
We need to protect green space for public use. Dense infill communities are great when folks can walk to get their needs met (Groceries, work, libraries, parks, medical, etc.) As we develop, we need to make streets easier for cyclists to get in and get around safely.
Allow higher density residential in the Rose Quarter
Public/green space.
I want the emphasis to be around small businesses, as it would fit more into the context of a more residential quadrant.
More small businesses. More local small restaurants. Day care. Food Co-op. We have 2 high end grocery stores.
Promote high density housing with affordable options for low income people.
More emphasis on parks, bike/ped connections, and bringing residential energy to riverfront (those elements from Concept 1, residential emphasis would be good to add here).
Greater attention to small manufacturing business
more small business, more walkability
Mix of good density residential with employment and retail. Residential will support retail, employment, and vibrancy goals.
I don't know exactly what the current employment/residential use mix is, but I would like the concept to be something like this: people who live in this quadrant should be able to find employment in this

quadrant, if they desire; and people who work in this quadrant should be able to find residences they can afford in this quadrant, if they desire.

More open space should be zoned and community gardens should be implemented, particularly around affordable housing areas, possibly creating court yards with gardens and residential units with less stories and/or patios with garden areas. More emphasis on commercial/restaurant zoning than light industrial.

Live/work/entertainment all in your own neighborhood!

A close blend of residential and employment at the lowest level, meaning, on the same block or within a few blocks; a close blend than the current pattern of many blocks of offices (that go dead at night) and many blocks of residential (that could use a bit more liveliness.)

Allow tallest possible development in all areas except those immediately adjacent to existing residential neighborhoods.

But with residential preferred over employment if a conflict exists. For example 60% housing, 40 % employment.

Lower residential density (purple/dark blue area) to lower density, to working with light blue.

More sense of place emphasis is Concept 3.

I like the larger open spaces of concept 2 with the blend of uses in concept 3.

Create plaza over Interstate Avenue and MAX that links Rose Quarter and Memorial Coliseum to future development along the river. North/South Bike-Pedestrian Plan with new East/West connections.

1. While retaining development flexibility, focus employment uses where a buffer of scaled down commercial and retail uses creates a focused transition such that neighborhoods evolve adjacent to commercial, employment and retail uses. San Diego, San Francisco and Vancouver B.C. provide workable examples of transition between uses in highly urban areas.

2. A sequence of compelling amenities that will create demand for general residential life within the quadrant and the formation of new neighborhoods and reinforcement of existing neighborhoods. This is a priority because the district lacks direct access to the river, exciting and dynamic open space, or the character of older building stock (read D.T., Pearl, South Waterfront, CEID).

3. Create a cohesive public mobility open space system of paths and places that are interconnected and support Lloyd Green Ecodistrict policies and include The Strand, Harriet Tubman Pathway, Clackamas pedestrian/bike way between the river and Lloyd Shopping Center, a Park Bridge over I-5 at Clackamas, and a connection south to the CEID, etc.

4. Strengthen Halsey building on the pedestrian scale development that has enhanced the north/south connection between Irvington/Eliot and the shopping mall on NE 12th Ave.

Expand residential in lower Albina

Add dining/entertainment

Starter homes and lower income housing, less condos

Transportation is very important. Reduce auto use as much as possible and create a highly pedestrian friendly environment with added amenities.

More infill and density. Take a look across the river at the Pearl District and notice substantially less surface parking and street hierarchy. There is such a lack of place in the Rose Quarter/Lloyd District, and mixed use buildings built on surface parking will help negate the feeling of walking through a cratered landscape.

Make the mixed-use area near Russell St bigger, like in the residential scheme

Blend, but favoring more employment given the current focus. Focus on employment here but add enough residential to make it more active at night and weekends.

"2-6 story development" being more like "4-12 story development"

Whatever the market demands - without public funds - EXCEPT for public infrastructure needed to

support PRIVATE Development

Too hard to decide.

Q6 Additional DISTRICTS/PLACES Comments or Suggestions:

What's the difference between the gravity-fed water treatment and the water quality corridors? Why isn't gravity-fed an option for the blend?

Green systems need to be built up. e.g.: Gravity fed water

No More Urban Renewal.

Tear out Interstate 5 through North and Southeast Portland, cap Interstate 405 through downtown.

The residential areas around MLK are growing significantly, and yet there still aren't amenities to serve those residents (e.g. restaurants, shops, a medium sized, affordable grocery store, etc.). If the focus along MLK was promoting pedestrian-friendly, connected, "main street" character, I believe more private businesses would locate there.

I'm unfamiliar with details of the area, except to say that I think the Rose Garden decreases the residential appeal of the area somewhat; that I'd love to live in a small home in the area someday if I could afford it; and that I'm uncomfortable assuming that the area should be cut out for either jobs or for housing. Job density and residential density both seem like good ideas in an area so close to the city's center. In the long run, we'll almost certainly have both. In the medium run, I think the city should strive to make as few assumptions as possible about which of those is best for the area.

concentrate residential on the east and west ends of district

Loan-fund, and encourage thru zoning, local owned micro businesses that integrate education, production and service.

Upgrade the Lloyd center

When does the planning and improvements spread East? Neighborhoods East of Hollywood up to 82nd continue to need improvement.

Promote diverse forms of transportation esp. walking/biking/public transport.

Any alternative selected needs to include better crossings of I-84, I-5 and bike/ped connections to the riverfront. Disappointed to see no discussion of turning freeway(s) into boulevards. Illustration on p. 8 shows "Parking Structure and new Cineplex with 620 Story Residential "; this seems like 1980's thinking - the new cool is to go old-school, European style, with smaller theaters (sans parking) distributed across neighborhoods (compare the unique character of the Bagdad, Laurelhurst, and the Clinton theaters with the bland corporate feel of big screen Cineplex's like the Fox Tower that feel more like an airport than a community destination).

Would love to see a more vibrant post work into the evening strip of cafes similar to Istanbul's Istiklal Caddesi or parts of Manhattan.

If I could wave my magic wand, I would focus on converting all the surface or 1-2 story parking lots into underground parking with mixed use above. Not sure this is excluded in the concept, but it's such dead space for the neighborhood. I also kind of like having Lloyd Center right there (I live just down the street) but it is also a big dead zone if you're not inside the mall. Could it be more inside-out (i.e., instead of being surrounded by parking and walls, could it have shops facing the street)? Finally, the whole area needs to be made much more walkable -- it is so clearly structured for car use, and it leads to odd jaywalking and walking against the light b/c you have to hit a button to get a cross walk.

Find out what developers think about potential near and long-term for development in this area and adjust plans accordingly and identify what public infrastructure will best incentivize the kind of development envisioned.

Got to keep industrial land available, but encourage innovation.

This is a land-use and community process-not just transportation/freeway. Protect Eliot Neighborhood

from through traffic, Protect Hancock Street and its residential uses.

Improve facilities for non auto-movement in and through the District, dis-incent auto movement in and through the district. Calm the streets; put residences and storefronts everywhere; reduce auto parking and traffic capacity; dramatically increase transit, bike, and pedestrian facilities for moving in and through the district.

There has been little residential development but could be by moving huge land owners to act. One well done mixed-use Cinema family lot could do it.

Identify a connection between the quadrant and N Mississippi Street. This is as important as creating connections between Central City Districts.

More specialty services, no big box retailers

Decide on what to do with the Memorial Coliseum and the Rose Quarter.

If I-5 is expanded throughout the area, all work done here to create a special place will be that much harder.

Given the lack of decent urbanism or historic character in the Lloyd, seems the place to do projects that wouldn't be done elsewhere. I wouldn't mind a casino in the Lloyd, seems like the perfect destination attraction with high foot traffic.

MOBILITY

Q7 Civic corridors are active urban streets that are focal points for new high-density development, offering good transit service, pedestrian-oriented amenities and unique signage and lighting. In the final plan, which of the following streets should have this emphasis? Choose four.

	RESPONSE PERCENT	RESPONSE COUNT
Broadway	77%	96
MLK Boulevard	72%	89
Vancouver Avenue	22%	27
Grand Avenue	48%	60
Multnomah Avenue	21%	26
Weidler Street	48%	60
Lloyd Boulevard	11%	14
Russell Street	23%	28
Williams Avenue	47%	58
Other	17%	21

skipped question		20

Other Responses

Whatever the market demands - without public funds - EXCEPT for public infrastructure needed to support PRIVATE Development

None of the above

Fremont (x2); Interstate Ave (4x); Alberta St. (x2); Holladay Street (x2)

Broadway & Weidler east to Grand

Sandy

Killingworth

But all have immediate contact with existing neighborhoods so high density development must be carefully thought out. For example, development on NE Broadway, north side, from River to edge of NNE Quadrant should be limited to 5-6 floors.

The non marked thick lines need to remain vehicle and freight oriented.
Areas closer to Lloyd Center
(Broadway Weidler and MLK Grand act as a single two way street enabling narrower roadways, less ped crossing distance, wider sidewalks, on-street parking while performing heavy lifting for traffic.
42nd Ave
20th

Q8 Scenic parkways offer good access into and through the quadrant, are defined more by street trees and landscaping, and would have less focus on street-level activity as compared to civic corridors. In the final plan, which of the following streets should have this emphasis? Choose four.

	RESPONSE PERCENT	RESPONSE COUNT
1st Avenue	17%	19
Broadway	12%	13
Interstate Avenue	34%	38
Multnomah Avenue	25%	28
Weidler Street	19%	21
2nd Avenue	17%	19
Clackamas Street	21%	23
Lloyd Boulevard	38%	42
Russell Street	32%	35
Williams Avenue	23%	25
15th Avenue	41%	45
Grand Avenue	23%	25
MLK Boulevard	17%	19
Vancouver Avenue	37%	41
Other	13%	14

	skipped question	33

Other Responses

The choices on 1, 2, & 3 are being given simplistically, despite the attempts to characterize with the descriptions. You are going to get as many opinions as you get answers. This will get you no where. This is a process of discussion and a discovery and ultimately of compromise and the effort to gain some will be lost. Now, discuss amongst yourselves. Planning is not merely a public opinion pole.
none (X3); No more money on bike improvements - tax is too heavy on homeowners
Whatever the market demands - without public funds - EXCEPT for public infrastructure needed to support PRIVATE Development
NE 6th Ave
Alternative vehicle thru ways! Yeah!
I don't know the names of the streets but all the streets around the rose garden including to the connection with the ramp across the train tracks
I LOVE THIS IDEA! MAKE MANY OF THESE!
Sandy
Rodney (X2)
I support this idea, but can't make an informed recommendation
Multnomah
Williams
N. Michigan Ave.
Wheeler
Priorities and hierarchy needs to be based and given to the mode of transport that pays for any improvements, not social engineering.
NP Greenway and Sullivan's Gulch Trails (X2)

Pacific
Lara bee-Locate Pedestrian-bike trail from Lara bee/Interstate light on west side of Lara bee across Broadway, across overpass (push vehicles to east side of overpass, use westerly side for 2 way bike-ped trail to Tillamook Street overpass).
7th Ave

Q10 Please rank the importance of improving pedestrian and bicycle connections in each of the following areas. Use the numbers 1 through 4 with 1 representing the most needed improvement.

Other Responses
More, more, more, of course.
Access "through" Lloyd Mall when closed
around Coliseum
North / South routes (X3)
Whatever the market demands - without public funds - EXCEPT for public infrastructure needed to support PRIVATE Development
None of the above (X2) ; no more bike improvements
East-West through the district
NE, east of the Lloyd, into other Lloyd
across I-84 at 7th Avenue
We REALLY need to make sure that with any changes on all streets; cyclists and pedestrians have more access and can move around safer. I-5 and I-84 separate neighborhoods and divide neighbors. We should work to alleviate these problems.
The Rose Quarter/Transit Center
By Lloyd Center
The area between the east end of the Burnside bridge up to Williams.
access to/from se/sw
Along Interstate Ave.
Through Rose Quarter in all directions
Bike access around Columbia Blvd
to marine drive

All are needed
Freight traffic and modes that pay for improvements
across MLK and Grand (X3); a nightmare to walk and bike near/across
Focus pedestrians/cyclists on designated "River Routes"
Car and Truck access needs improvement too!
To the north on the Strand or Tubman path
Terminating within the Lloyd District.
To neighborhoods across Broadway/Weidler to Esplanade.
Along riverfront/Larabee to Tillamook with distinct connections.
Connect the Strand with Sullivan's Gulch
To adjacent neighborhoods
across the river

Q11 Additional MOBILITY Comments or Suggestions:

I-5 and I-84 are rivers with a powerful flow. People shop, cars do not. But, cars bring people and money on a regional basis. So do trains and buses. Gas is getting expensive. The final should enhance the existing, while making us more accessible and attractive to our neighbors. The clues are here now. Make a place we want to be. Make a place we want to go to. Allow us to flow through, but invite us to stop.
Consider addition of public bathrooms (loos) in Lloyd District.
Separation of modes when possible. For example, keeping bikes and pedestrians out of interchange areas and having residential access only on streets designated as bikeways,
don't want this area to become an automatic extension and same feel as central downtown
Increased mobility and transportation alternatives for children and families.
Preserve as many connections as possible to reduce traffic on neighborhood streets and to maintain connectivity for all modes.
Whatever the market demands - without public funds - EXCEPT for public infrastructure needed to support PRIVATE Development
Consistent implementation of curb cutouts to allow chair and scooter users to travel through area easily.
Crossing both I-5 and I-84 is hideous and unwelcoming for bikes and peds.
A major barrier to biking from North or NE to the waterfront or downtown is the limited connections to the waterfront. The ramp to the Steel Bridge is often congested during rush hour and it requires complicated bike routes and traffic signals to get to the ramp. MLK & Grand are also fairly significant barriers to biking from NE to the waterfront or downtown.
A city isn't based on bicycles. I would like to seem more done to encourage pedestrian traffic, if there is excellent mass transportation then pedestrian traffic follows.
Any mobility improvements should support employment emphasis
(1) Enhanced use of lower speed limits, to make all transportation safer and active modes more appealing. (2) Decouple Broadway and Weidler and return them to bidirectional streets, to calm traffic, enhance access (bidirectional during both AM and PM commutes) to storefronts. (3) Integrate plans for the Sullivan's Gulch Tail in planning for connections to and through the Quadrant. (4) On this survey page Multnomah should be "Street", not "Avenue". Assure commercial/retail corridors preserve and enhance vital active on-street customer parking.
Alternative vehicle thoroughfares! (Williams and / or Albina?) For skaters, boarders, bikers, wheelchairs, and mini electrics.
Do NOT widen I-84 or I-5. Do not build the CRC. Do expand street car and MAX. Do fund and build out the bicycle master plan. Tax gas harder and increase fees on auto registrations. Subsidize Public transportation further. Build 20 minute neighborhoods- start in working class/ working poor

neighborhoods.
The Broadway and Vancouver Intersection is better but still a mess. The way Vancouver and the Freeway off ramp work together need to be examined and improved
Turn I-5 into a boulevard.
Where is the consideration for existing industrial employment areas in this study???
With the congestion that currently occurs daily in this quadrant and noticing that more pedestrian and bicycle access often means less automotive access, the real solution seems to be improving the automotive connections.
Because of contours and the existing roads and light rail, the Lloyd Center area is a natural hub and transition point for persons driving into Portland who would then use bicycle, public transport, or walking to access the central city or the inner southeast. Dedicated bike/walk bridge(s) across I-84 and improvements to existing access to the Broadway, Steel, and Hawthorn bridges are called for.
Auto is used to get to the place where we walk and bike. Auto parking needs to be included.
The intersection of NE Holladay & 13th is very frustrating as a pedestrian The ramp down to the eastbank esplanade from the east end of the Steel Bridge is getting congested on the tight turns. NE 16th between Halsey and Multnomah is a royal pain as a pedestrian When biking west on Multnomah, moving across traffic to make the left turn into the Rose Quarter transit center is scary. Super blocks should always have a pedestrian way through them.
Make pedestrian the highest priority in all decisions. However, for cars, save all current street connections - even if very low volume and look for more where redevelopment allows. This allows more mobility and greater flexibility to keep cars from clogging up freight access.
Need more bike-pedestrian connections. 7th and Holladay are great N/S and E/W crosshairs through Lloyd. Build i-84 bridge and take cars off Holladay and you have the spine of an excellent network.
Two way main streets on the historic main street corridors.
Improve pedestrian connections from bus/MAX stops/stations to the river and bridges.
Get the I-5/Broadway/Wiedler problem fixed first. That should be your priority.
Coming to this area is a drag due to the traffic, especially around I-5/Broadway.
1. The continuity, hierarchy and frequency of east/west streets provides a framework to fill in missing links. However, north/south continuity, hierarchy and frequency suffers from several large impediments (I-84, Lloyd Shopping Center, I-5/I-405 in Lower Albina). Few connections reach north to Mississippi, Eliot, and south to the CEID, Kerns and Buckman neighborhoods. The Strand, Tubman Path, NE 9th or NE 7th over-crossings, NE 12th Ave through Lloyd Shopping Center may all hold the promise of creating these needed connections. As these concepts are pursued they should seek to strengthen and enhance the eventual system and sequence of amenities to support the existing and future residential and commercial development. 2. Mobility to the river (truly adding the river as an accessible asset) should be an emphasis of this plan especially for bikes and peds.
7th Avenue Bike-Pedestrian Bridge!
Car-free crossings of I-84 are very important, as are continuing n/s bike routes.
Need additional I-84 crossing for bike/ped. 12th is a valuable freight corridor so a separate crossing for bike/ped would be best.
Use congestion pricing to control auto traffic. Reduce transit fares and find a better way to fund TriMet. Increase the cost of long term parking and reduce the number of parking lots.
We should work to undo couplets through this area. They act like freeways. Turning them back into two-way streets would calm traffic and make the area more pleasant for all users. If people want to drive on a freeway, I-5 and I-84 already cut through the district.
Once again, if this area is to encourage high density, quality development and activity, extreme emphasis should be focused on placemaking and connectivity. Walk around the area and see if you get the same feeling as being downtown or in the Pearl District. Simply, you don't. There are too many surface parking lots, high speed corridors, and an emphasis on automobiles. These need to be fixed.
Simple easy-to-remember straight route bike boulevards, HAWK signals to cross arterials especially Grand

and MLK. Traffic calm and reduce lanes and speed on Grand, MLK, Broadway, Weidler big time. -Reinforce traditional historic main streets (Broadway, Grand, Williams, Russell) as two-way transit-oriented urban streets (preferably revert back to two-way): Civic Corridors. Minor streets should be residential in character with more tree cover and planting, focus bike blvds/scenic parkways

OPEN SPACE

Q12 What type of open space and civic amenities would best suit the needs of the quadrant area? Choose one.

	RESPONSE PERCENT	RESPONSE COUNT
New large, centralized park	7%	8
Series of connected, private parks	8%	10
String of mid-sized public parks	59%	70
Civic or cultural feature	14%	16
Other	12%	14
answered question		118
skipped question		26

Other Responses

Probably 2 & 3, but the river, and large tracts of undeveloped areas exist for number 1. The Convention Center and the Rose Garden are civic and cultural features. How about a large plaza connecting Metro to the convention Center and celebrating the unity of local democracy. I am only partly joking.
Baseball stadium
Whatever the market demands - without public funds - EXCEPT for public infrastructure needed to support PRIVATE Development
Would love to have carousel. We have Ivory and Grant so OK there. No! We have trails/ayers and they cause enough problems.
let the Rose Quarter move forward with Jump Town
Why parks in this area when the eastside is DYING?!?
Large park would be nice but would require mix use housing all around it so that it can be safe at all hours. Holladay has the problems that it does because it is surrounded by day use and parking development only. But a series of mid-sized parks does sound nice.
None. The region already has a long history of large or civic projects that have damaged some of the character, including Lloyd Center, Memorial Coliseum, and Legacy Emanuel Hospital.
String of mid-sized public parks and a series of connected, private plazas
Only where there would be no demolition of existing buildings to create open space.
A variety of parks ranging from new large to small local neighborhood including mid-sized that are interconnected to create a recognizable sequence and a strong amenity that will attract residential and commercial development.
Connect inland parks to river/greenway with green streets/trails (include string of mid-sized public parks, and a series of connected, private plazas).
New plaza over Interstate- from Multnomah to Larabee connecting Memorial Coliseum and Rose Garden District with waterfront.

Q13 What type of functions should open spaces in this area support? Choose three.

	RESPONSE PERCENT	RESPONSE COUNT
Athletic Field	14%	16
Community Garden	39%	45
Hard Courts (basketball, tennis)	21%	25
Skate park	10%	12
Children's play area	39%	25
Habitat/natural system	44%	52
Picnic/lunch space	62%	72
Urban plaza	56%	65
Other	9%	10
	answered question	117
	skipped question	27

Other Responses

This is a silly question asking a particular question that gives no context. WE want all these things well done in the proper context.
Whatever the market demands - without public funds - EXCEPT for public infrastructure needed to support PRIVATE Development
private urban farms with edu and sales
cross cultural community center
Covered for protection from rain
Any place where people won't get shot.
None
through pedestrian access
Fountains or art/sculpture
large event space

Q14 Additional OPEN SPACE Comments or Suggestions

Our teachers and cities, our behavioral scientists, our actions and dollars, give us great examples and information for designers, as do the existing conditions. Don't' try and dictate things too early that should be determined in detail as time goes by. Do not get in the way, make a way. Respect the order of events sand the hierarchy of spaces and needs. Allow for good design.
Design open spaces to promote multi-use, weekend and after-hours activities, deter crime, etc.
Functions are dependent on residential and access to affordable housing improvements.
The changes to open space should reflect the needs of the users - increased residential might call for more play areas, etc. Teens patronizing the mall could also access the skate park.
No more Urban Renewal
Have group picnic or eating places. The park adjacent to Alameda school is a good example.
Connections are most needed between the waterfront and Convention Center and Rose Quarter.
Activate open spaces by include food-carts and other flexible uses of those spaces alongside their primary

planned use
non-smoking, public open spaces should be programmed; also, food carts/pods
ban use of toxic chemicals and GMO'd plants
I answered mid-sized parks in #1, but there is no size specification so I don't really know if my answer is what I mean. I would consider mid-sized to be say at least 4 acres if not more.
The more green space the better. I'd rather see many little parks/ plazas (I love director park and Jamison square and the park blocks) instead of a lager park (Like Holliday park or the plaza where the nurse log is near the convention center.)
The area is slated to be urban so the parks should be reflective of this a la the string of parks in the Pearl or Directors Park
Mix between private plazas and public parks. Concerned about transients taking over public areas
Different areas should support different functions.
Children's play areas and hard courts might also make sense. The skate park(s) recognize the area's key role in the history of skateboarding, and this will become increasingly significant now that 35d and 4th generation 'boarders are beginning to roll. Also the area is ideal for developing in line skating facilities.
I don’t think this is really a need
Food is important. Make room for outdoor eating. Encourage outdoor eating establishments.
More open space would be WONDERFUL. I would love to have more places to just be outside. I actually have great fondness for Holladay park, although I don't generally hang out there.
Don't do too much. This area lacks round-the-clock activity. Do only as much open space as needed to generate the activity. Don't over-supply or else it doesn't stay active and becomes a drain rather than a positive.
Green spaces along river?
Grand urban people-oriented plaza-restaurant in square.
The open space sequence should create a "Fen Way" of spaces, places and uses that will provide amenity and respite for a diverse and higher density population of residents and employees while supporting active play and habitat and natural systems.
Larger open spaces make it easier to get away from traffic noise-that's problem at many existing open spaces in the area.
Modify OCC glass spires; add neon outlines; add large rooftop restaurant between the spires; include public or semi-public plaza and eco-roof areas atop OCC
Include the river as much as possible: access and views.
With all the employment in the area, it would be great to have areas to get outdoor exercise and eat lunch. These spaces would also be a great amenity for new residential users.
This area needs to connect to the river much, much more so than it does. I-5 needs to be 'hidden' through even more tree plantings.
Already have a typical large park with Holladay Park, need something different like a people oriented plaza with amenities like restaurants/cafes, water feature, chairs & tables, umbrellas.
Improved safety needs to go along with this.

GREEN SYSTEMS

Q15 What green infrastructure systems should be encouraged in the N/NE Quadrant? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Stormwater capture and reuse (e.g., underground collection and treatment tanks piped to buildings	74%	86
Water quality corridors to clean and infiltrate stormwater	69%	80
Locally-produced, renewable energy (e.g., solar, wind, geoexchange wells, waster digesters, etc.)	66%	76
District energy (e.g., high performance heting and cooling systems shared between buildings	75%	87
Other	13%	15
	answered question	116
	skipped question	28

Other Responses

It is the mandate now. Just do it. It should just be the way we build.
no
Whatever the market demands - without public funds - EXCEPT for public infrastructure needed to support PRIVATE Development
conversion of non-permeable surfaces
greater City financial support of Lloyd EcoDistrict
Solar on rooftops and water fountains from drinking.
Didn’t understand.
District energy is especially promising for Lloyd redevelopment.
Encourage the development of Green Streetcar Corridors (Broadway/ Weidler, Martin Luther King Jr Boulevard north, see "Portland Streetcar System Concept Plan
They must be market based.
Simple curb extension swales. Don't go overboard; this is a city not the wilderness.
Replace asphalt/parking with ecoroof buildings and planted areas.
Screening/natural filtering of air pollution from Interstate.
modify OCC spires

Q16 How should natural systems be improved in the quadrant? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Increased tree canopy	74%	84
Use of native vegetation	71%	80
New/enhanced habitat	59%	67
Other	11%	12
answered question		113
skipped question		31

Other Responses

That all works for me.
would like to see a return to more fir
Use the vegetation that works! Usually native but not always.
Whatever the market demands - without public funds - EXCEPT for public infrastructure needed to support PRIVATE Development
None of the above (x2)
conversion of non-permeable surfaces
I am big on habitat, but not in this location
only possible if trucks are united or prevented because they wreck trees
Restore or create new clean waterways to the river.
Modest use of trees and vegetation- this is a city! Not the Wilderness!
Retain existing trees. How did the 100+ year old oaks get cut down on Flint at Tillamook?

Q17 If you would like to see new/enhanced habitat, where should we encourage it? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Sullivan's Gulch	77%	73
Riverfront	78%	74
Other	20%	19
answered question		95
skipped question		49

Other Responses

Where ever you can get it in. The Gulch Trail is fantastic. It should be coupled with a "re-greening" of the watershed we have used for roads and railway. But, as we know the roads and railways, must remain.
Whatever the market demands - without public funds - EXCEPT for public infrastructure needed to support PRIVATE Development
Multifamily residential area
Interstate and Lloyd Blvd
Eco-roofs
All vacant property
Parklets like in San Francisco
Albina Strand
Throughout the street network

Near Lloyd Center (x3)
One of the parks
Any otherwise vacant space
Smith and Bybee park
Enclosing I-5
throughout the Lloyd District
Rose Quarter
Outside the most urban neighborhoods in Portland, not in the Lloyd or Broadway Corridor

Q18 Additional GREEN SYSTEMS Comments or Suggestions:

Green should just be the way we are now. However, let's minimize the flash and tricks and concentrate on the science. Again, good design. Examples abound.
Lloyd Mall should strive to go LEED, add some green roofs, and convert some existing surface parking lots to natural spaces. IMO, it was a tragedy when it was enclosed and just became another suburban mall.
Sullivan's Gulch will need improvement if the trail goes in. None of this should affect blue collar jobs.
For new habitat: Sullivan's gulch would be good as we look to put a trail in that area. Riverfront is good but not at the cost of industrial jobs.
No More Urban Renewal
Some of our small green-space/medians are really trashy looking. It would be great to have a no-maintenance native solution in those places.
let some areas be pedestrian only
Portland loves bicycle corrals. It is time for some Parklets in Portland like on Valencia in San Francisco.
This is a poorly done section and doesn't force and choices or tradeoffs
I seem to want all of the above of course....
I think the possibilities for habitat enhancement in this area are extremely limited. It is too isolated from wildlife corridors and too strongly urbanized.
Solar roofs that feed to power grid makes sense.
I would totally adopt a bioswale or other green system that needed some tending if it was near me in Sullivan's Gulch.
Community Gardens!
More people living and working near each other ultimately has greater environmental benefits than any given intentionally green system.
I'm all for nature in cities, but this is a dense urban neighborhood, not sure there's much "nature" to gain.
Use evergreen trees on streets, open space and parks to sequester greater amounts of carbon.
Please consult studies and literature that detail the overall multi-system effect of promoting/accommodating/subsidizing/perpetuating auto movement and storage in urban environments. The more that people walk, bike, and use transit to move into and through the district, the greater the benefit and relief to all components/concerns in the N/NE Quadrant.
Integrating greenspaces into the urban form in a way that enhances habitat but also creates space for people to enjoy it would be ideal.
Treat the urban, cultural, economic, social, political, systems like an interconnected natural system; the web of life.
I'm not against any habitat here, just people and the quality of urban space need to be the driving force in this area, not nature. Keep the city dense and urban so that land outside the UGB can remain truly natural, untouched habitat. Its not like overlaying natural areas here is going to even be good natural areas given the urbanity. Please let the quality of the urbanism be the driving force here instead of having poor natural areas in a place not suited for nature.

Subarea 1 – Lower Albina Industrial

Q1 In area A (see diagram), should the plan increase flexibility by allowing more creative office uses (e.g., software development, design, media production, etc.) in Lower Albina?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	79.1	53
No, it should remain primarily industrial	20.9	14
answered question		67
skipped question		1

Q2 Should the plan call for "the strand" to create greater bicycle and pedestrian connectivity through Lower Albina to link the Russell Street area to the Rose Quarter (see diagram, Area B)?

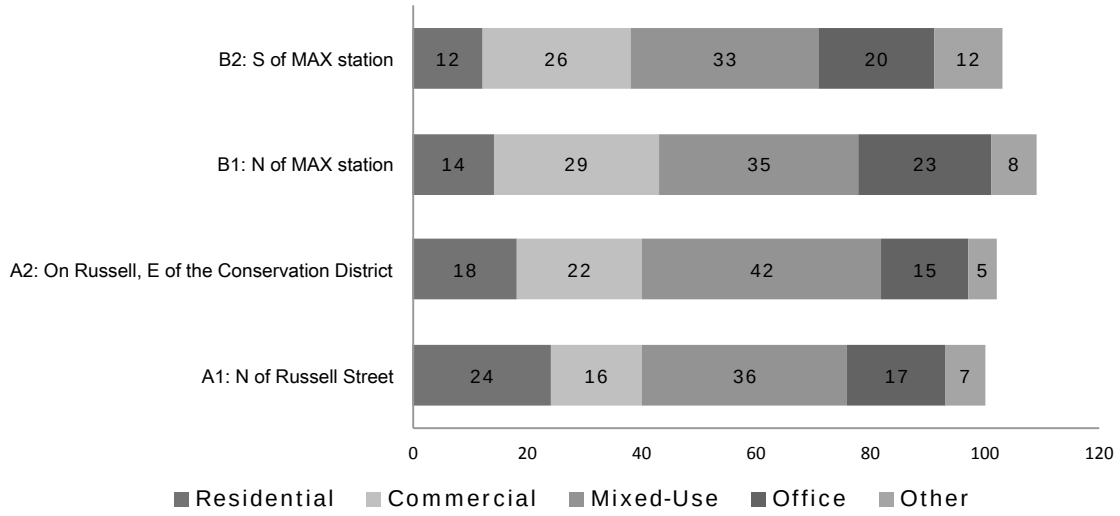
	RESPONSE PERCENT	RESPONSE COUNT
Yes	79.1	53
No	20.9	14
answered question		67
skipped question		1

Q3 Should the zoning for the Portland Public Schools (PPS) Blanchard Site and adjacent properties to the east be changed to allow more land use flexibility to encourage future redevelopment of the sites (see diagram, Area C)? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Yes, to allow mixed-use residential	71%	47
Yes, to allow retail	47%	31
Yes, to allow research and development	53%	35
Yes, to allow office	42%	28
No, keep it primarily industrial	12%	8
Yes to allow other	-	13
answered question		66
skipped question		2

Q3 Yes to allow other, responses:

The PPS site seems like a natural choice for high-rise buildings, providing a contrast with the adjacent low-rise historic district
Public fitness facility with rinks and courts and gymnasiums and performance space
Yes, to allow some big box in Central Portland, but not acres of parking lot devoted to single big box, instead using parking ramps that can serve two boxes (Costco/Home Depot) AND the Rose Quarter overflow parking (encouraging walking!)
Whatever uses create the most jobs and activity levels to support transit and neighborhood retail
Keep as is
Any high-density use
Any of these uses, but with a significant residential component
Grocery store-big box
Only on the east side of the area
Residential
Small-scale neighborhood service retail only. Limit or prohibit large-scale regional destination retail development.
Services that will benefit adjacent neighborhoods



Q4 Additional SUBAREA 1 Comments

No More Urban Renewal
No retail stores that require more than 25 parking spots.
Parking would be an issue in this area if there were a lot of visitors. People who work there regularly of course would likely take transit, but offices usually need considerable parking.
I can see lower Albina being a natural green space with diverse plant life given the sun and shade mix provided by the bridges
TriMet should provide a direct bus link across the Fremont Bridge between Fremont Street and Emanuel Hospital on the east side and the NW industrial area and Montgomery Park on the west side.
What about transportation access? Is this to be a stand-alone district or part of the larger whole?
The vitality of this area will never increase much if the freeway remains as such. To develop subarea 1 economically, turn I-5 into a boulevard, which allows traffic to support the local land uses and provides greater connectivity.
The City needs industrial land so I can't see removing the option for industrial use. At the same time if no industrial development occurs the land remains useless. I think we need to allow development of something that would not remove possibility of using it for industrial in the future.
I separate the Russell street area and North, of sub 1, from the remainder. Some of these blocks would be improved with more retail and office. The others (Page St South to the hill below Blanchard site (Hancock?) should remain primarily industrial, except for the properties facing interstate ave, which should also allow retail and office mixes. Greenway Trail development should be a high priority. Bicycle access to Swan Island and from there to Willamette Boulevard would not only provide obvious direct benefits, but would significantly reduce the bicycle traffic on Williams and Vancouver, which is rapidly growing and has already
I think this area would be awesome to redevelop more intensively, and probably ought to move away from primarily industrial, particularly because it doesn't seem to be used that intensively.
If the strand is implemented, make sure it includes cars - at a civilized speed. The desire line for bike/ped only will not be enough to keep sufficient "eyes on the street" to keep it feeling comfortable throughout

the day and evening.
The city and region need the industrial base, but there is a definite opportunity to develop this subarea into a quirky neighborhood. Build some housing!
Blanchard site should be kept as a large parcel for a future tenant in search of a large central city land parcel i.e. a future ballpark if one was ever needed. Would be a lost opportunity to subdivide this parcel, one of last large parcels left in the Central City.
Stay out of Eliot. Lower Albina is not primarily industrial. There are warehouses and other low intensity uses and they should be encouraged.
1. Its an industrial sanctuary remember? 2. If bicycles on the strand will keep bicycles off River street and out of the UPS yard and off the concrete road, then good. If not, bad. 3. I don't really care what you do in NNE outside of Lower Albina provided that you preserve if not improve freight mobility (truck, rail, water) within the industrial sanctuary and the connectivity to the main transportation grid. The capacity of Interstate Avenue has already been halved by MAX (should have gone on Williams/Vancouver). Don't make it any worse. The industrial sanctuary is there because it's the interface between road, rail, and water. It's unique. You can't replace it elsewhere in the region. 4. Don't compromise Lower Albina by using it as a through commuter route to Swan Island or elsewhere or by pretending it has recreational value.
No large big boxish retail please!
The Strand idea is great, but Interstate should also have a cycle track as well.
The uses should encourage developments that attract families.
Keep the integrity of the industrial area

Subarea 1a – Historic Russell Street

Q1 1. Which uses should the plan encourage in each of the following areas (see diagram for corresponding areas)? Check all that apply.

A1: Other Responses
Affordable Housing (x2)
Protect existing buildings and land uses
land uses don't matter as long as the use supports a wide range of activity.
allow general industrial uses that support creative users while allowing greater diversity of office and commercial uses.
industrial (x2)
A2: Other Responses
Affordable Housing (x2)
This seems like a great place for creative office space.
B1: Other Responses
Transit-Oriented Development
Affordable Housing
B2: Other Responses
Residential uses should be limited.
Industrial (x4); Light industrial/craft plus any supporting retail; industrial along RR tracks and over to river.
Affordable Housing
commercial along Interstate

Q2 How should the area under the I-5/I-405 Freeway Interchange be utilized (see diagram, Area C)? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Dog Park	40%	21
Skate Park	48%	25
Leave it as is	17%	9
Mountain biking	39%	20
Tennis Courts	21%	11
Other	35%	18
answered question		52
skipped question		4

Other Responses

Don't waste taxpayer money on this area under the freeway.
A park would be nice, but one that allowed people to enjoy the view of the central city from that point. The green that is there now, if maintained could be very nice "as-is". An amphitheater that looked towards the city would also be cool.
Seattle has successfully used their under I 5 for a super popular and tourist attraction bike park
Place for outdoor circus, dances, loud parties (noise covered up by the freeway overhead!).
If possible, locate as many compatible uses to make area feel safe with more eyes on it.
Rock climbing feature
Some sort of use that would deter homeless camping --> which leads to lots of litter under the bridge
No dogs
These are all 'the same' as in parks.
Off Ramp to Interstate (Mountain biking)
Locally Unwanted Land Uses (LULUs)
Not for recreation.
Clean it up and get rid of barbed wire and vehicles as it is used now.
Massive sculpture.
Parking
Given the distance from much residential and lack of easy parking, I doubt this would be much used.
Public park for all uses
Could become an extreme sports park.

Q3 Additional Subarea 1a comments:

Avoid putting high density or affordable housing in the path of high car emission areas (the freeway spaghetti), especially without the benefit of more stringent building/HVAC codes to offset noise & pollution.
Preserve historic buildings. Affordable housing where there are lower emission areas.
No More Urban Renewal
This is a pretty gritty area. I don't see residential uses fitting in very well there, unless they are restricted to current buildings or back along the I5 right of way.
A commercial/light industrial mix may be better than commercial/office.
The entire subarea needs rezoning the encourages both residential and small business in order for the Russell Street Improvement Plan to ever succeed.
What about transportation connections. Russell needs work as a bike, ped facility to encourage the connection between upper developing area and lower area.
Many people have expressed in interest in live/work type use in this neighborhood. Light industrial, wood shops, metal fabricators, music studios, etc.

Area under freeway needs activation throughout the day and evening. Of options I've heard, dog park has greatest promise. Lots of use throughout day and people more likely to use it everyday not just weekends and be more comfortable due to presence of dog. Other active uses by adults encouraged.
Let's value children and education instead of animals!
This is a Historic District and it needs stronger design guidelines and review and better incentives.
The only dedicated mountain biking facility in the city is the planned Gateway Green park out by I-205. The inner city could use a facility like this in the urban area.
New users and activating the area during off hours.
Encourage this area to continue to be successful
Identify conceptual links to Mississippi and the river as an attraction for inviting

Subarea 2 - Eliot: Vancouver/Williams Corridor

Q1 **In area A there are currently a number of non-residential uses (see diagram). Should the plan rezone residentially-zoned properties to allow a wider range of uses?**

	RESPONSE PERCENT	RESPONSE COUNT
Yes	**82%**	**45**
No	**18%**	**10**
answered question		55
skipped question		0

Q2 If so, for which uses? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Commercial	37%	18
Office	35%	17
Mixed-use	92%	45
Other	33%	16
answered question		49
skipped question		6

Other Responses
No More Urban Renewal
Residential
Maintaining historic residences and other buildings, but increasing residential or live/work density. Increasing cafes, restaurants, and small shops. Variety and flavor.
The type of use is less important than the form of the building and the activity level that it generates - more activity is better.
Light Industrial (x3)
Uses that enhance / support the school
Grocery mom and pop's
Retail, commercial, office but predominant use should be housing
That overrides buffering transition to the surrounding lower density areas.
Farmer's Market/exterior public space
Housing OK
Creative, live work
None
Small-lot form. Avoid too much consolidation of properties

Q3 Are additional incentives for housing development desired in Area A?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	66%	31
No	34%	16
answered question		47
skipped question		8

Q4 Should the plan recommend changes to the designated view corridor from Lillis Albina Park as a means of facilitating potential redevelopment of properties to the west, including the PPS Blanchard site(see diagram, Area B)?

	RESPONSE PERCENT	RESPONSE COUNT
No	64%	28
Yes	36%	16
answered question		44
skipped question		11

Yes, changes should include:
Raising the height limit to 75’
Allow only residential buildings with low income options to have exception to height
Allowing high-rise development at the PPS Blanchard site.
The area west of I-5 between letters “C” and “E” has so much potential- and is under utilized.
Most things would be better than what is there now.
Eliminate them.
Only if a person standing in the park can see over/through the current I5 corridor, by all means, limit the height of buildings downhill/between the park and the river.
Mixed use
Allow more density and delight for that area so feel too low
Ability to build a lookout tower to get extra height in lower Albina
Don’t know the area well enough but I’d like to see the Blanchard site redevelop with higher density.
As long as mature trees aren’t compromised
The historic view should be checked to see if it still exists. A better location might integrate the viewpoint into the open space system and better serve the public.
Re-map it to focus on a particular feature (the river?) and relax other height restrictions.
Remove designation, with regulations that require that views to City be considered if buildings in the PPS Blanchard area are built

Q5 Should an additional pedestrian connection be developed at Page Street under I-5 to connect this area to Lower Albina (see diagram, Area C)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	81%	42
No	19%	10
answered question		52

Q6 Should a main street district be encouraged around the intersection of Williams Avenue and Russell Street, reviving a historic commercial node (see diagram, Area D)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	82%	42
No	18%	9
answered question		51
skipped question		4

Q7 Should an additional east-west multimodal connection be developed north of the Broadway/Weidler couplet, such as Hancock Street to Dixon Street (see diagram, Area E)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	89%	47
No	11%	6
answered question		53
skipped question		2

Q8 If you answered yes to question 7, please specify for which modes a connection should be developed. Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Cars	27%	13
Buses	22%	11
Trucks	10%	5
Bicycles	86%	42
Pedestrians	86%	42
Other	18%	9
answered question		49
skipped question		6

Other Responses

No More Urban Renewal
Nothing new for vehicular traffic of any sort. It will become a cut-through and ruin a residential street. Only something for bikes/peds, get them off Broadway/Weidler if possible to reduce conflicts with interstate connections/on/off ramps.
Only if it connects Eliot neighborhood to uses that are relevant for the neighborhood like a grocery store.
Get bikes off Broadway

Bikes! Do not add more traffic to this residential neighborhood

Small buses

Some local car traffic might be integrated into a ped/bike street.

But take measures to ensure that traffic can not travel further east than Williams Ave.

Include measures to ensure it doesn't become a cut-through and negatively impact the neighborhood

Q9 Should both Vancouver and Williams Avenues be encouraged as neighborhood commercial streets, or should one be emphasized as the prominent commercial corridor? Check one.

	RESPONSE PERCENT	RESPONSE COUNT
Both Avenues	58%	29
Williams Ave.	28%	14
Vancouver Ave.	4%	2
Other	10%	5
	answered question	50
	skipped question	5

Other Responses

No More Urban Renewal

More room for traffic and parking - reroute bikes

I guess I would pick one, but I don't know which

Whichever is most likely to support the most robust development (or both if that is possible)

Q9 Additional Subarea 2 Comments:

No More Urban Renewal

Promote locally owned and operated business that requires less than 10 parking spots.

Lillis Albina park has a completely awesome view of the entire city, but someone chose to plant giant trees on the West side of the park. They also failed to put any windows on that side of the school, so the kids don't get a view of their fair city. The freeway could be obscured by shrubs under 10' and the view revealed. Apartments along that part of Flint could be built – they would have the best view in the city. Please don't change the view corridor - instead let's make use of it!

This should be the most friendly to cyclists and pedestrians as possible. Albina Park should stay green space and should not have buildings built on it.

Allow higher residential densities because of excellent transit service access.

Eliot's residential zoning must be protected. Protect existing buildings and uses.

Encourage both Williams and Vancouver as neighborhood corridors

This area is difficult to navigate due to I-5. Improved street connectivity and a variety of land uses will help activate this part of the city make it a more meaningful place.

NO thru auto traffic on Hancock! However, better ped and bike connections to the river and Broadway Bridge are a must!

Legacy Immanuel Hospital dominates the area N of Russell, W of Williams. The new Children's Hospital will further increase traffic by added staff, patients, visitors, and suppliers. The great majority are non-residents of the quadrant. Many drivers are confused about where to go, or - understandably - are in a hurry to access the hospital. Include ambulances in that number. All of which makes the hospital zone somewhat hazardous going for cars, cyclists and pedestrians. Think hard about compounding the traffic density by commercializing Area D. Encouraging commercial development in Area D should provide for plenty of OFF-STREET PARKING. The area does need more business fulfilling the daily needs of local residents - many of whom could walk or bike. As a resident - Williams/Stanton - my overall concern is that the City over-emphasizes making it convenient for traffic to pass through the area. Not enough attention

is given to the quality of life of people WHO LIVE HERE. This quadrant has been messed with, chopped up and torn down long enough. The weedy vacant lots girded by chain link fences north of Ivy look like a war zone, and downgrades the area. No more tearing down, please, unless the developers prove they have the funds, the plans and the knowledge to build ASAP - approved by the City or no go! Also consider putting a stoplight at Stanton and N. Williams. Active in heavy traffic hours. Cars dashing across Williams on Stanton are a danger to all traffic - 4 wheel, 2 wheel and 2 footed. Cars accelerating hard across Williams are turning Stanton into a drag strip. At least, install a speed bump. Weekday mornings and afternoons are filled with children going to and from public and private schools. With the building on SE corner of N Williams/Morris re-opening as a Montessori, moms dropping off and picking up their kids will further add to the hazards. To say nothing of the traffic in drug dealing around Dawson Park - especially alongside the Catholic Church at Stanton/Williams. But that's another topic, isn't it.
Vancouver and Williams are major bikeways for all of North and much of NE. Because of the hill, commercial dev should be focused on Williams (up hill, slower, safer wrt traffic entering and leaving road). These streets are near capacity for bike traffic now, but if the lower Greenway Trail is developed between Willamette Blvd and Rose Quarter that will siphon off much of the traffic.
This area seems like it has a lot of potential, but also a bunch of dead zones. Dealing with the pedestrian and bicycle access around the freeway would be excellent.
Russell street has so much character - it would be a great continuation - support street for commercial / restaurant expansion of Mississippi and introduce more area-wide Portlander's to the Albina neighborhood and all of it's positive opportunities.
Vancouver /Williams south of Russell could be considered a district instead of a corridor-Vancouver, Williams, Flint and cross streets. Encourage Legacy to redevelop NW corner of Williams/Russell intersection. 37 years of vacancy is blight- more than what was there before.
Enhance all connections with more tree and greenery for enhanced experience. Vancouver and Williams create a linear accessible seam through the neighborhood with rich and community scale uses that support the local context. Given the current economic downturn, Vancouver and Williams are continuing to thrive (remembering that there is never a good day in retail).
Undo the Vancouver-Williams couplet and make them both two-way streets. This will calm traffic and make the area more pleasant for all users.
Encourage active neighborhood friendly development where Emmanuel faces NE Russell

Subarea 3 – Rose Quarter and Vicinity

Q1 Should larger buildings (height, mass) be allowed along N Broadway between the river and N Wheeler Avenue to increase density and support a higher level of activity in the Rose Quarter (see diagram, Area A)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	76%	53
No, leave height at 6-10 stories	24%	17
answered question		70
skipped question		1

Q2 How tall should these buildings be? Check one.

	RESPONSE PERCENT	RESPONSE COUNT
11-15 stories	36%	19
20+ stories	40%	21
16-20 stories	24%	13
answered question		53
skipped question		18

Q3 Should the zoning for the Portland Public Schools (PPS) Blanchard Site and adjacent properties to the east be changed to allow more land use flexibility to encourage future redevelopment of the sites (see diagram, Area B)? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Yes, to allow mixed-ise residential	81%	56
Yes, to allow retail	46%	32
Yes, to allow office	52%	36
Yes, to allow research and dev-leopmnent	55%	38
No, keep it primarily industrial	10%	7
Yes, to allow other	13%	9
answered question		69
skipped question		2

Other Responses

Baseball stadium (x2)
Costco or other big box that will tuck parking underneath and NOT have a huge, vast, single use parking lot for their purposes only (perhaps a paid lot shared with the Rose Garden or another big box like Home Depot).
Major event entertainment; educational institution
Keep as is
Big Box

Any high density use
With specific limitations and necessary prohibitions to control large-scale retail development.
Focus on uses that will be active and will be supportive of adjacent neighborhoods

Q4 What should the nature of the Willamette riverfront be in this area, in terms of land use, public access, and other features (see diagram, Area C)? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Commercial	27%	19
Events/ Entertainment	44%	31
Industrial	11%	8
Office	21%	15
Residential	33%	23
Enhanced Habitat	47%	33
Hotel	21%	15

Recreation/active use park	63%	44
Other	23%	16
answered question		70
skipped question		1

Other Responses

No More Urban Renewal
Low income housing
Public River Access for small non motor boats
Public Property, complete access for all the public. Another entertainment bowl, like the one just south of the Hawthorne Bridge on the west side of the river (where the Blues festival is now). Grassy. As flexible as possible. Open. With paths. Trees near the street. NOT WITH private buildings blocking the view of the river.
Amphitheater, water taxi dock
An active boardwalk with shops, dining, and entertainment with mid-to-high rise uses above. Area seems too narrow for industrial uses.
Eastside Waterfront non-active Park with Grass & Trees - picnic tables etc. available for special events
We need some natural areas like the other side of the river
For people-not commercial, not hotel, and not trucks
NP Greenway, essential connection.
Public Park with picnic, grass, trees, open space, etc.
Provide elevated viewpoints for peds/cyclists to view the working river
A connection to the river is an important connection to make leaving it in a natural state will help people relate to the river and natural habitat. It provides a respite from the surrounding dense development.
A mix of uses is best, but don't force out industrial unless market dictates
This should become one of the districts great amenities and assets for attracting new families and businesses to the district.
Limited commercial to support events

Q5 Are there ways to improve access between this subarea and other parts of the Lloyd District over and under I-5 with new connections (e.g., Hancock Street, Clackamas Street) or improvements to existing connections (e.g., Multnomah Street/ Holladay Street)? (see diagram, areas D1, D2 and D3)

	RESPONSE PERCENT	RESPONSE COUNT
Yes	100%	59
No		0
answered question		59
skipped question		12

Q6 If so, what type of improvements would you recommend? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
New connection across I-5 for all modes (car, truck, bus, bicycle, pedestrians)	40%	25
New connection across I-5 for pedestrians and bicyclists only	65%	40
Improve connection on Multnomah Street and/or Holladay Street, as follows:	37%	23
answered question		62
skipped question		9

Improve connection on Multnomah Street and/or Holladay as follows:

Substantial changes to both streets under I-5--art, lighting, gateway features
Limit new auto connections to local traffic as much as possible and still prioritize bicycles and pedestrians on those new connections.
Limit auto. Encourage bikes and peds.
No More Urban Renewal
Make Holliday St a two-way cycle track! It is so hard/scary to get through the Lloyd by bike. Reduce Multnomah to 3 auto travel lanes with wide buffered bike lanes on both sides.
Make better signage and intuitive routes for bikes
On-street parking on Multnomah, enhanced bike access on Holladay
Improved bike facilities, including cycle track on Holladay
Motor vehicles only - traffic circulation around the Rose Quarter is a complete mess. Poor planning for streetcars along with the transit transfer create a ton of artificial congestion puff.
Active business and storefronts, as well as increased walking/biking infrastructure.
I want to comment here I am not checking this box as an agreement to that idea. We need to keep bikes off of the faster moving traffic areas. I won't ride next to fast traffic
Take the cars or at least the parking off of Holladay. That would be so WONDERFUL for both access through the neighborhood, and potentially promoting that area as a neighborhood that people spend time in. I mean J Cafe is a nice start, but we need a bit more.
Don't spend money on this right now. Yes it is possible. Do I think it is a good idea to do NO
Multnomah: Consider moving some i-5 on/off traffic to Multnomah to improve Broadway experience Holladay: 2-way bike/ped only and MAX (existing)

Holladay: This is an important corridor for out of town guests-their first impression on the MAX from the airport. Liven and green it up.
Holladay: Turn it into a bike/ped only street.
Cover Interstate Avenue and MAX with Plaza from Multnomah to Larabee signals,
Substantially increase lighting levels and find some way to make the underpass feel safer - e.g., use architectural fabric to turn current grubby underpass into bright white, well-lit archway with no hiding places
Ideas have been suggested for the under bridge area of I-5 that would reinforce the Historic Trolley Barn and create a dynamic and exciting transition under I-5. "Just Do It"
Activate the space under I-5. Bike commuter parking? Retail? Basketball courts sponsored by the Blazers? Turn the trolley barn into an active party place. Make the trolleys a tourist attraction. Find a way to add a green element, public art and other elements so they are a friendlier environment

Q7 Should the local and regional transportation infrastructure around the Steel Bridgehead and the Rose Quarter Transit Center be reconfigured to improve access, circulation and encourage new development (see diagram, Area E)?

	RESPONSE PERCENT	RESPONSE COUNT
No	35%	20
Yes, as follows:	65%	37
answered question		57
skipped question		14

Q7 Yes, as follows:

Re-align LRT tracks to create more development opportunities See 2001 Rose Quarter study
Depends on what the nature of the development barrier is if new development is for local business and low-income housing I would love to see I5 removed.
Make bicycling easier by having a decent separated path instead of zigzagging through the major bus stops, and allow high density residential and mixed use buildings that have the potential to catalyze a sense of place in the area, rather than just an area that people pass through as quickly as possible.
Dedicated bike lanes that are more segregated from bus, max, and car traffic
What if you closed off all motorized traffic other than public transit?
Allow easier bicycle crossings
More auto access and safer bike/ped connections
Better options for Vehicles.
Fix I-5 at Rose Quarter
Mixed high-density development around this major public transportation hub. See below.
During rush hour, it is painful to try and cross over to the West side across the Steel Bridge. The bus-only light should be removed, and traffic should just merge like it did before.
More direct alignment with bridge.
Almost anything would be an improvement.
Improvement for public transportation.
Street crossings should be grade separated from rail and all new building entries should be prioritized on the rail level, with parking accessible from below.
Very expensive - see old Rose Quarter study (2001) for good ideas.

Bike underpass beneath Interstate and Oregon intersection to improve access to/from river walk.
Improvements are needed for motor vehicle traffic only - get rid of the bike signal because bicyclists push the button and then cross before it is their turn. The signal only adds to engine idle time.
Primarily to encourage new development and reduce auto usage in the area.
Keep bikes separate from fast traffic
Better roads for cars. Better signs
Local businesses with residential options
Consider options suggested by others. Try to increase MAX speed across the river (tunnel under downtown?)
To create more land for development to create an urban neighborhood.
How much more transportation infrastructure can the RQ transit center take?
Better circulation for all transportation modes perhaps limiting cars somehow.
Dedicated bike/ped lane; dedicated car/truck lane(s)
Better connection to Eastbank Esplanade, Sullivan's Gulch, and the Strand. More bus/bike only lanes
High Speed Rail Station north of Steel Bridge between Interstate and River.
Enhance access and provide better separation between MAX and other traffic/ped movements
We should take advantage of future structural upgrades to consolidate the LRT Station and create a system of ped/bike and car streets that would help bridge the I-5 gap and knit the Lloyd District together with the river. We should have this project on the books in case funding opportunities arise in the future.
Rationalize the streets
Elevate all/parts of max system.
Sounds like a good idea, you tell me

Q8 Additional Subarea 3 Comments:

For area E - is the transportation infrastructure the reason that there's so much vacant land in that area? Is it a zoning issue? Is the market lacking? If the transportation infrastructure's the problem, then that's important to know.
No More Urban Renewal
Promote low income housing
Why does our neighborhood have to suffer so much just to allow fast vehicular traffic? Our community doesn't need both I5 and I405. Removing I5 on the east side would cause massive redevelopment and investment for the city of Portland. San Francisco has done it, why can't we?
Area C should not block the view of the historic Memorial Coliseum from Downtown. It should be a park or plaza/event space with a north-south trail.
Are you serious with question #7? How else is supposed to answer that one? I think it should be poorly planned, very dangerous to cyclists and pedestrians and allow no development whatsoever.
Do something. I live near by and bike through the area daily and it's an embarrassment to the city. They have invested so much and it is a dead zone.
This area will, over time, become the primary transportation hub of the Portland metropolitan region. It will become the major transfer point of the north-south and east-west MAX system when the Yellow and future Milwaukie Lines are connected together on the east side between OMSI and the Rose Quarter. The east-west MAX lines will eventually be routed in a tunnel between Lloyd Center and Goose Hollow to expedite rapid inter-regional transit trips. A deep station at this locational will be required. The area will be served by streetcar, as the existing surface light rail tracks will be incorporated into the streetcar network. A railroad station will also be needed here to accommodate both Cascade Corridor inter-regional high-speed trains and regional commuter trains because routing them over the Willamette River twice to reach Union Station will become infeasible. Union Station will still be needed for Amtrak long distance trains and can be conveniently connected to this new station with a streetcar shuttle over the Steel Bridge. Buses, both TriMet and intercity will also have to be accommodated at this location.

The bus-only restricted streets in and around the Rose Quarter are very inconvenient for traffic - I think this makes people stay away from the area.
The future land use designation for the PPS Blanchard site (multiple properties) needs to allow maximum flexibility of future uses to accommodate future redevelopment of the site. Proximity to a major event center, light industrial area, and adjacency to Interstate-5 requires the redevelopment of the Blanchard properties be able to respond to a variety of redevelopment potentials that may be led by the redevelopment of adjacent properties. Redevelopment of the Blanchard site also needs to provide for a revenue neutral move of PPS' current operations on the site to other location(s).
The Rose Garden, Coliseum, I-5, and Convention center are all mega projects that have fractured the access through this area and make it difficult to navigate for ALL modes, although transit is relatively easy to figure out through here. There needs to be more "there" there, and better access through these giant surrounding land uses.
Ped connections on Broadway need a lot of work. Also, much of lower Broadway is very suburban in nature and needs to retrofit back to an urban (central city) cross section. So often this area gets treated as a suburban enclave in the central city - change that as part of this plan!!
Why is there no discussion of turning I-5 into a boulevard? Or completely removing it? Consider the increased land available for development, parks, residential, etc. and the opportunities for increased connectivity.
Re open the street along side the convention center for auto traffic.
We need to have areas for biking and traffic. I don't want to ride with traffic and I don't want to ride in an environment that encourages racer bikes.
WRT #7: What is currently there sucks. But without a very expensive do-over of the entire existing infrastructure, no significant improvements are possible. We need to just live with this problem area so we can use tax dollars in other places where we will see worthwhile improvements.
This area could be so cool for the surrounding residential neighbors and the various tourists, but it is pretty darn dead. Too much surface parking, too many chains. Are retail rent expectations too high? Why are we stuck with gross chain food all round the convention center? I feel bad for the tourists and convention goers as I walk from Sullivan's Gulch to Old Town and back every day. Sort of embarrassing.
High-speed rail at Memorial Coliseum? High Speed Rail depot with N/S/W/W connections to make this truly the center of the regional transit system.
Spent so much $$ on streetcar, need to invest in peds, density to leverage transit investment.
Need an active waterfront near downtown where commerce and activity, restaurants are right on the water. This is one place where minimal setbacks from the river are a must! Create a ped friendly commercial corridor along N Broadway with pre and post game restaurants for the Rose Quarter crowd (also can serve people outside of game/event time since on a major pass-thru-street). Improve street-connectivity in this area. Wait to redevelop Rose Quarter and focus on edges now (Waterfront and Broadway).
Create a new river SDC to develop habitat/parks/public access
Making Rose Quarter TC an active place throughout the day and evening would greatly enhance connections from Lloyd through to Rose Quarter events and Broadway.
This area is critical to the economic health and vitality of the quadrant and holds the promise of an exciting riverfront amenity that is on par with South Waterfront, River Place, D.T. and the Pearl.
Undo the Broadway-Weidler couplet. This will calm traffic and make the area more comfortable for all users.
Need more lively activity on an everyday basis.

Subarea 4 – NE Broadway/Weidler Commercial Corridor

Q1 Looking at section AA, is the current transition in allowed heights from the Lloyd District to the neighborhoods to the north appropriate?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	58%	42
No	42%	31
answered question		73
skipped question		3

Q2 If not, what changes could be made to improve it?

Question is confusing to me. The current transition (step down) looks ok but do NOT increase the maximum height allowed in the Irvington and Central City areas to 125'.
The area is too residential closer to Hancock. Broadway/Weidler is already a higher density/higher traffic corridor, and it is currently underutilized. A better way to maximize the corridor's density is to encourage/further encourage redevelopment along Broadway, rather than to encroach into an established residential zone. It might make Broadway more residential (and pedestrian commercial) if pedestrian enhancements were installed up and down Broadway. It is often nerve-wracking to cross Broadway and Weidler. It's not a highway, and it's an obviously underutilized but demographically sound resource.
Broadway's such a divider that larger heights might be appropriate & may not really affect neighborhood character.
Whatever is needed to serve market demand
Do not change height system in place in this area
Height restrictions seem silly and NIMBYish. Their benefits accrue to a few landowners and their costs are borne by the entire metro area in higher transportation and land prices.
A higher allowance along the Broadway/Weidler corridor In general, the allowable heights are too high, especially between Schuler and Hancock and Hancock and Tillamook. Reduce the first to 45 feet, the second to 35.
But VERY concerned about height "bonuses" This has created some overlarge structures not in keeping w/ the neighborhood surrounds and character. These would be very inappropriate.
We could allow the Maximum Height Allowed to be expanded- but we add density, we should protect green space and park space and make improvements for cyclists and pedestrians. As we add infill, we need to add libraries.
Increase height (x4)
Allowable heights along Broadway ought to be opened up. Allow for more high-density housing.
Since the Irvington is a historic district any height increase past Broadway should be discouraged. If we do increase the height it should be minimal- not more than 75' on Schuyler and 100' on Broadway. Even Weidler is too high-175' would be overwhelming for the existing neighborhood. We need to look at the neighborhood set up if all these properties built to the height limit we would be doubling or tripling the density. Are we going to demand parking for these buildings like we didn't for the 50units on 15th that went in with no parking? It's fine to want people to take public transport but my experience as a landlord of 1 bedroom 600 square foot apts. On bus lines is that 83% have cars.
Could be higher south of Weidler.
It could be more gradual, or, allow for only maximum height development on portions of each block, not on the entire block or every block. Reserving some blocks for lower development allows for variety, and not a canyon-like symmetry in an entire area. Maintaining pedestrian and bicycle paths through larger developments so that Portland's small blocks are intact is also desirable.
Too drastic-look at the apt. Complex if Broadway-Minavhe dev.

Keep the Irvington and Central City Boundaries the same as current levels.
50' height limit between Broadway & Weidler should be 75', bonus should 150'
Great reduction in allowed height in general to encourage greater building coverage. Decrease height north of NE Schuyler
Got to get more people into the area. This is central Portland, and it needs to be dense.
Increase heights between Broadway & Weidler. Lets put lots of density there ... close to shopping, buses, the new streetcar & MaX. That is where density should be.
Reduce it
Limit higher buildings it half block between Broadway and Schuyler, stair step
Down quickly to neighborhood historic district.
Hancock and Schuyler as low scale with many residences and a historic Church Downzone
Is not acceptable to community, needs to be refined.
Allow higher buildings further to the north along major north-south streets. It would bring high-density housing that is more affordable than the extraordinarily expensive houses in that neighborhood.
Allow further step up south of Weidler
It might be appropriate to explore no height limit with FAR being the control as found in the north properties of the Pearl District. This might encourage a better development pattern in the corridor.
Heights south of Broadway should be increased to same as south of Halsey. 150' max height between Schuyler and Broadway. North of Schuyler is appropriate.
Bonus height should not be allowed north of Broadway. Max height on the north side of Broadway should be 75-100 ft. maximum. Otherwise it seems fine.
Make the allowed height north of Broadway lower. Like 50'. It would be helpful to see the cross-sections here!

Q3 Should both Broadway and Weidler be encouraged as neighborhood commercial streets, or should one be emphasized as the prominent commercial corridor? Check one.

	RESPONSE PERCENT	RESPONSE COUNT
Encourage both streets	66%	48
Encourage Weidler	4%	3
Encourage Broadway	23%	16
Other	7%	5
answered question		70
skipped question		6

Other Responses

Encourage Broadway and eliminate one-way pattern.
Encourage Broadway-decouple Make Broadway main river (bike lanes)- Make Weidler a neighborhood street- housing stock still good
Way too much traffic and too fast on Broadway
Determine what market is most likely to develop in most active way in the long-term and encourage that
Assure that the signalization; on-street parking and wider sidewalks are completed.

Q4 Should the main street character present on the east end of NE Broadway extend toward the Rose Quarter? If so, how far?

	RESPONSE PERCENT	RESPONSE COUNT
No	19%	13
Yes, as far as:	81%	54
answered question		67
skipped question		9

Yes, as far as:

The river /Broadway Bridge (x20); As far west as is possible. (x4)
MLK/Grand (x5)
Vancouver/Williams (x4);
The I-5 freeway (x3);
Ne 12th (x3)
All the way to Larabee ped focus
We can safely and pleasantly accommodate pedestrian traffic that really makes a "main street"
Commercial demand expects
16th
Practicable
I feel like "east end" is vague, but I assume you mean the Irvington area? It should extend past MLK, and more than just chain restaurants should be encouraged there.
More signalized street crossings
1st Ave; NE 2nd Ave
Just prior to the I-5 ramps, possibly consider activity/development/public space adjacent to the bridge
We have other Main Streets ... lets keep Broadway easy to drive
The Rose Quarter and even the river. The lack of main street character to the west has left that area dead or dangerous feeling at night.

Q5 What methods should be used to address circulation and safety issues along the Broadway/ Weidler corridor? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Additional crosswalks	59%	41
Curb extensions	52%	36
Additional signals	41%	28
More frequent, controlled intersections	45%	31
Other	59%	41
answered question		69
skipped question		7

Other Responses

Reduce and enforce speed limits/Lower speed limit. (x7)
Traffic must flow freely/calmly (x2)
Most of the issues are being addressed with the new Streetcar construction (additional crosswalks, curb extensions and signals) (x3)
More sidewalk trees (x2),

Buffered Bicycle Lanes (x5) ; Bike paths (x6) ; Cycle-track. Reduced speeds through signal timing and narrower travel lanes.
Prioritize pedestrian signals at crossings (x5)
Fewer lanes (x3)
Remove the train and bike lanes. Keep vehicle lanes open.
4-way stop signs.
Center islands, narrower vehicle lanes, clearly marked bicycle lanes with green boxes at the signals, pedestrian activated signals, zebra crossings (like from one block to another at Lloyd Mall)
Decouple Broadway/Weidler (x7); reduce access to areas of each block, and actually make navigation more difficult.
Figure out a way to improve the bike lanes at the entrance to I-5
Parking-slow people down-non residents should be on freeway ;Additional parking options
No curb extension - they create artificial congestion - get the bikes off Broadway
Another driving lane and let the Blazer fans take light rail
Stoplight on 19th
NONE
work to move streetcar to both directions on Broadway
More main street, small town feel on Broadway
Elimination of on street parking; streetcar extension east
Reduced curb cuts for driveways/access management
Complete, wide sidewalks
See the Broadway Weidler Plan that called for signals at most intersections to protect pedestrians and make crossing convenient. Even though traffic warrants it, do not consider slowing traffic with signals it can be a calming result.
Improved lighting, other parking [hard to see around street parking]
Time the lights better and traffic will flow in a unit; easier then for pedestrians.
No more signals! These roads need to be efficient for traffic flow.

Q6 Are the current allowed building heights along Broadway/Weidler appropriate (see section BB)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	46%	34
No	54%	39
answered question		73
skipped question		3

Q7 If not, what changes could be made to improve them?

Do NOT increase the maximum height allowed from NE 14th east to 125'.
The potential height seems appropriate.
Could be higher(x11), especially near the Rose Quarter (x2)
Reduce them (x3) ;restrict RX zoning, reduce height, reduce FAR; This is a disincentive for upgrading/maintaining existing buildings.
Whatever is needed to serve market demand

Height restrictions seem silly and NIMBYish. Their benefits accrue to a few landowners and their costs are borne by the entire metro area in higher transportation and land prices.
Increase the height allowances from Grand west as this has the potential for a dense urban environment.
The Height bonuses are backwards. Allow them to rise from Vancouver/Williams to Grand, and then drop them from Grand to 16th. The current plan encourages ugly, light-blocking structures adjacent to an established residential neighborhood.
A similar problem w/ height "bonuses" and degrading the character of the area. Tripling the allowed height in the transitional blocks of Broadway/Weidler would be very detrimental.
Higher from west end to Grand (x9), 6th & 7th equal to the rest going east.
We could allow the Maximum Height Allowed to be expanded- but we add density, we should protect green space and park space and make improvements for cyclists and pedestrians. As we add infill, we need to add libraries.
From 7th to 16th, building should be limited to 75' or 100'. IT is a historic district! We also need to be demanding underground parking for all new structures. A minimum of one space per bedroom. If not used by the building they can be rented.
They are fine. I would like to see neighborhood shops (shoe repair/clothing) the army recruitment center should go army with fast food grease chains. No more grease (KFC, Mac, BK) on Broadway was our slogan a few years ago, still good
Extend 175' height bonus west to 3rd to allow greater heights along bus & streetcar on MLK-Grand.
Require minimum bldg. coverage of 75% and then allow heights up to five stories.
Taller towards the river
Increase heights west of 15th slightly, throughout
A more refined section needs community approval
Slightly higher height could be allowed to encourage more high density and relatively affordable housing, especially if its in mixed-use structures that also bring eating, drinking, entertainment, retail, and public accommodations (libraries).
Height bonuses could encourage development between Grand and the Rose Quarter. A little more height could provide a greater buffering effect for Elliot and the area around Callaroga Terrace.
Heights should gradually increase near the freeway and river.
Commercial areas could be taller closer to Williams, but the problem is that traffic flow problems are already very bad on Broadway. Lights need to be timed better if Portland wants to be called a "green" city!
Need that section. Could be higher to support bridgehead development and higher intensity uses around the rose quarter.

Q8 Should residential uses be encouraged at the west end of the corridor (see section BB)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	84%	52
No	16%	10
answered question		62
skipped question		14

Q9 If so, what level of density is appropriate?

	RESPONSE PERCENT	RESPONSE COUNT
Medium density, 2-6 story development	39%	20
High density, 6-20 story development	61%	32
answered question		52
skipped question		24

Q10 Additional Subarea 4 comments:

The changes to the Broadway corridor should really go to 24th Avenue. 15th is not the natural dividing line for the District; the start of the one-way streets is.
Residential (x2)
No more Urban Renewal
High-density housing, diverse, rich and poor residents, low to medium height buildings with local businesses on street level. No big box or international vendors.
In what way should residential uses be "encouraged"? Neighborhoods should be made walkable and residential and commercial uses should be allowed.
Question 9 doesn't tell me much about how dense it really could be. An average of 6 stories per building could be more densely populated than an average of 12 stories depending on the percentage of land covered with buildings, what percentage of each building is residential, and the average size of each residence and family. Taller buildings done right could leave more room for trees and open space, shorter buildings more light unless they are packed too close together.
Do what ever you can to encourage development. There is so much surface parking and fast food. The area does not feel like part of the city of reflect the Portland ideal at all.
The "super block" between 10th and 14th with two blocks of surface parking lot is a development problem -- it prevents the development of smaller scale offices, retail. This is a major arterial and adding the streetcar to the traffic mix has the potential to make pedestrian and bike travel extremely hazardous. Figuring out how to change expectations over travel time in the corridor is crucial.
Level of density is not as important as quality of development, design blends should not be cheap looking.
Has a market study been done for the potential residential? Need to look at what other amenities are needed to spur new development and how the proposed freeway improvements will or will not encourage this type of development.
Prohibit residential development west of NE 3rd, or within 600' feet of freeway, due to well-documented public health hazard of long-term exposure to vehicle emissions. Short-stay hotels exempted.
The Broadway/Weidler area is a long corridor. When the Broadway business had their street fair there was no good concentration of businesses, plazas, parks to gather people. Please take into consideration nodal development and plazas/parks to create areas that are energized with both the built environment and activity areas for people.
Until you tackle to car dealerships and fast food franchises, the neighborhoods will remain isolated from the river and Westside downtown. At a minimum, prohibit drive-through and make landscaping the first nonconforming upgrade required. Depave!
So many folks come into the neighborhood for events at the Rose Quarter, and we just freak them out with the sterile strip malls, etc. at the west end of Weidler/Broadway. Could be a huge opportunity, but I

think we do need to figure out HOW to get them into the neighborhood...do we get mean and make them all take MAX? I'm not sure where they are all driving from.
NE Broadway between 21st and 28th needs traffic calming - crosswalks, curb extensions etc. this is an extremely dangerous an unfriendly pedestrian corridor - dominated by vehicles which. Small businesses are not encouraged – leases are too high. Out of state/town property owners solicit commercial chains that are attracted by high volume traffic - and don't realize the neSGNA and Irvington neighborhood foot traffic potential
Discourage one and two level development
Get rid of Joe Westin, he has already built terrible housing.
PDC loans for new small business! There are a few already, but also many chain restaurants. More connections south are needed.
Much is happening on its own right now, look at Williams north of Russell (Residential Housing)
Make Broadway the Main street as it was generations ago and make it 2-way and traffic calm it.
Encourage Weidler as a commercial corridor as it is already a commercial corridor with a wide range of uses. Focus on vacant areas, not on the existing buildings for your development. Residential could be encouraged possible, if blended with commercial uses. Vary the scales-keep it interesting. Keep views.
The EX zoning has not been good for anywhere in Eliot or Boise. The code describes it as 'Industrial with housing not to dominate that. That is inappropriate for all of these areas.
Broadway/Weidler should be complete streets that are attractive to walk, bike, and take the streetcar around. It shouldn't be a car arterial.
Mixed-use is most appropriate - not single use
Mixed-use development near I-5 in the B/W corridor needs to be in scale with the freeway and the Rose Quarter to buffer Elliot and Lloyd District from heavy commercial activity - both vertically and horizontally.
Undo the Broadway-Weidler couplet to calm traffic. This will increase access, make the area more comfortable for all modes, and create a more livable, vibrant area.

Subarea 5 – Central Lloyd

Q1 Does the existing goal of mixed-use office development with significant hotel and entertainment components make sense for the areas surrounding the convention center (see diagram, Area A)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	73%	41
No	27%	15
answered question		56
skipped question		2

Q2 If not, what would you suggest as an alternative?

Commercial Development as market demands
Additional housing and retail
It hasn't worked very well, so more experimentation is needed -- live/work spaces, pocket parks between MLK and Grand, almost anything. It's NOT picturesque. It IS busy with arterial traffic. It's not attractive. So, lower your expectations and find cheaper uses of the space. Hostels, for example, not major hotels.
Get rid of the entertainment component. It does not belong in mixed-use districts.
ADD RESIDENTIAL AND OPEN SPACE
Drop the entertainment component
If a hotel was built between the convention center and the Rose Quarter so both could benefit would make the most sense
Careful on the hotel occupancy -- it's easy to get to from downtown, so only build more hotels if needed. Otherwise, I like more mixed use.
Commercial uses to support convention center provide some places for people to patronize.
Add in a mix of entertainment and eating, such as those seen in lively southeast, Pearl District, and NW 21st/23rd neighborhoods. Doing so would enhance the area for those of us that live and work here, as well as offer more to the visitors who stay in the hotels, many of whom I regularly see wandering the empty streets between office building, hotels, and parking lots, wondering where they are and where they should go for something to eat or do. Just sending them and us locals on the Max to downtown be not acceptable.
Allow some more residential - but don't let it overwhelm office. Hotel makes sense in connection with Convention Center, but any entertainment components should be year-round throughout the week. More episodic venues will not help activate the area.
But there also needs to be street level activity including dining & entertainment, and residential at least nearby would be necessary to support this.
None
There is already a lot of office development east of Grand. I'd suggest allowing residential IN ADDITION to the uses described in this question.
I want to say "yes", but the area -as it is now- is not very attractive. I have no answers. Perhaps a green park or open area (dog park?). Maybe the skate park goes near here too.

Q3 Should "signature" high-rise development be allowed at the southern edge of the district along NE MLK Boulevard and NE Grand Avenue near I-84 (see diagram, Area B)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	68%	36
No	32%	17
answered question		53
skipped question		5

Q4 Should there be a local traffic and/or pedestrian and bicycle connection to the Rose Quarter along Clackamas Street (see diagram, Area C)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	94%	50
No	6%	3
answered question		53
skipped question		5

Q5 If so, for which modes? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Bicycles	87%	44
Pedestrians	87%	44
Cars (local traffic)	33%	17
Other	16%	8
answered question		51
skipped question		7

Other Responses

Motor Vehicle Traffic Only - Traffic patterns in the area are already too screwed up due to rail and bicycle infrastructure.
Small buses
Not sure its a top priority
Only if Rose Quarter provides "attractors"
Cars might be OK if significant traffic calming is included
Limited vehicular access - local access only - perhaps discontinuous for cars.

None

Kayaks

Q6 Should NE Multnomah Street be upgraded to a major east-west corridor with regional serving retail uses (see diagram, Area D)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	62%	33
No	38%	20
answered question		53
skipped question		5

Q7 If not, what would you suggest as an alternative?

Use parking lots that exist. Discourage single occupancy cars. Promote cabs, bikes, Pedi-cabs etc.

Keep it closer to Broadway

I was under the impression that NE Multnomah Street already is an east/west corridor with regional serving retail uses (i.e. the Lloyd Mall). What about this were you going to change?

Residential towers and office space complement Lloyd Center and the hotels along Multnomah. Can't imagine there's demand for major retail development along that street that closest to Lloyd.

Broadway/Weidler, 9th street pedestrian bike car connection north and south to ESID. Aug 15, 2011

Make driving miserable (I'm serious)

Mixed use with smaller retail on street level with office and residential above.

Don't need any more regional-serving retail in the area. Plus, we're all going to switch to ordering our Target junk online.

But add back parking to activate the retail uses

Traffic calm it, reduce lanes

Broadway and Multnomah as it are now.

Is another major east-west needed?

Allow more mixed-use. It is hard to imagine enough demand to support a lot more regional retail enough to really activate the street along its length so look for more flexible mix of employment, retail, housing, unless development analysis indicates retail-focus would really work.

Clackamas Street

I don't get this question. NE Multnomah St already serves regional retail, the Lloyd Center Mall. What more do you expect? I think the goal should be to make a walkable, comfortable place that encourages more local uses: housing, work, and retail.

Start at Lloyd Mall and work gradually to the west.

I have no answer, but...Multnomah is not big enough to accommodate more traffic unless you make it a one way. Traffic often gets bottle necked on the northeast corner of Holliday Park because of backup. The cars, which are turning south to get to the 84 freeways, illegally block Multnomah eastbound lanes and cause extensive backups often for several blocks. Police really need to regularly monitor that intersection during rush hour and cite people blocking the

Road illegally.

Scenic office environment street. Not enough demand for retail to have a successful Broadway and Multnomah

Q8 Should both MLK Boulevard and Grand Avenue be encouraged as commercial streets, or should one be emphasized as the prominent commercial corridor? Check one.

	RESPONSE PERCENT	RESPONSE COUNT
Encourage both streets	77%	41
Encourage Grand Avenue	4%	2
Encourage MLK Blvd.	8&	4
Other	11%	6
answered question		53
skipped question		5

Other Responses

Traffic on MLK and grand is horrific, reduce things that grow the problem
Let the Market decide with no financial incentives the streetcar is more than enough
Encourage both streets as they are already
Whichever one is most likely to be successful (or both, if they would both be successful)
Emphasize complementary uses to the existing context of each street.
Convert them to two-way operations

Q9 Should we continue the goal of significant residential use in this subarea, or should other uses be encouraged, such as office or retail?

	RESPONSE PERCENT	RESPONSE COUNT
Yes, residential should remain a priority and should be encouraged in the following areas	69%	34
No, other uses should be emphasized, such as	31%	15
answered question		49
skipped question		9

Other Responses

Whatever the market demands
The entire area should be a vibrant mix of high density residential and commercial. Currently, there are only commercial high rises in the area. Residential high rises would add to the vitality of the neighborhood.
I'd like an even mix of residential, office, retail and entertainment (x3); Target residential/employment mix
Follow the Lloyd Crossing plan outline for land uses
Mixed use
Office or retail, no residential (x4); Office, hotel, entertainment, retail. No residential within 600' of freeway.

Work space, studio space, small service shops, etc.
All AREAS
Parks
It can fit well with the larger commercial and office building. Utilize existing parks and plazas.
Strive for a mix for greater activation of the area, but don't close out business uses
Focus residential development along streetcar and Holladay Street with potential pockets around Metro.
No one will want to live here until Grand and MLK are humanized
South of Holladay residential should not be encouraged. Between Holladay and Multnomah, some high-rise residential should be encouraged. North of Multnomah, mainly mixed-use residential declining in scale should be encouraged.

Q10 If you answered yes to question 9, what open space amenities should be planned to encourage and support added housing? Check one.

	RESPONSE PERCENT	RESPONSE COUNT
Single large, public park	10%	4
Mid-sized public parks	56%	22
Public and private pocket parks	21%	8
Other	13%	5
answered question		39
skipped question		19

Other Responses

Whatever the market demands
The park north of the Oregon State office building should be extended in some form north to Lloyd Center and south to the future Sullivan Gulch Trail.
Small park
A variety of parks that serve the population. It should not be one or the other but a phased approach of large-small or small large that will lead to a complete and attractive system.
Parks encourage more homelessness in this area

Q11 Several ideas for future secondary bicycle and pedestrian connections have been identified below. Of these, which two are most important? Check two.

	RESPONSE PERCENT	RESPONSE COUNT
6th Avenue	57%	27
8th Avenue	34%	16
Clackamas Street	49%	23
Hassalo Street	40%	19
answered question		47
skipped question		11

Q12 What methods should be used to address circulation and safety issues along the MLK Boulevard/ Grand Avenue corridor? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Additional crosswalks	51%	25
Curb extensions	41%	20
Additional signals	37%	18
More frequent, controlled intersections	49%	24
Other	45%	22
answered question		49
skipped question		9

Other Responses
Wider higher capacity streets for cars
Many of the safety issues along these streets have been addressed by the new streetcar construction (i.e. added signals & crosswalks, curb extensions, more frequent controlled intersections)
Use existing crossing with longer crossing times for pedestrians. Encourage more density along corridor to create more critical mass - give me a reason to go there!
Use of STOP lines painted at intersections with signals, in addition to marked crosswalks. Having drivers know where they are to STOP the car/truck, and not roll into the first third or half of the crosswalk is important. Adding back this 6' cushion will increase pedestrian safety in this busy multimodal area with many, many visitors.
Cycle-track (x2). Slower speeds through signal timing and narrower travel lanes.
No curb extensions - they create artificial congestion - add bus turnouts instead (x3)
Holladay bike only street! Please! Aug 11, 2011
Fewer lanes,
Provide pedestrian crossing on Grand at the Everett I-84 Ramp before I get Killed.
Don't have them be one-way streets. Having them one-way limits local access, confuses some people,

makes local navigation in fact rather difficult, shuts off access to some pocks on blocks, and encourages high-speed through traffic that is a danger and reduces the local character.
Complete sidewalks/streets with wide, good separation from traffic, etc.) (x3) angled on street parking; wider sidewalks; bike lanes
bike/pedestrian signals and lower speed limits (x3) ;, Flash beacons and lower speed limit, speed bumps, diverters to avoid cut through traffic
Improved lighting, less street parking [difficult to see around parked cars]
Decouple (x3)
Time the lights; don't slow traffic down - make it more efficient. Get traffic out of the area faster with breaks in between islands of cars (with timed lights). This would be safer for peds and bikes.

Q13 Additional Subarea 5 comments:

No more Urban Renewal
This area should promote the passage of bikes. It should not be a barrier to bike traffic. The area is currently a blockage of North and South bike traffic.
Gateway at MLK/Grand and Lloyd Blvd should have "signature" buildings, but not detract from convention center towers. Core of the district should have highest buildings and heights should taper toward the edges.
A bridge is needed over I-84 at 7th Avenue for pedestrians, bicycles and public transportation.
Same problem as Broadway/Weidler with regard to MLK/Grand: traffic expectations on major arterials. If they are going to stay major arterials, then it's going to be difficult to build neighborhoods around them.
Eliminate expansive surface parking; in-fill with mixed use mid-rise apartments with connections to bike routes and MAX
Q. 11 is a false choice, neither Clackamas or Hassalo go anywhere - why put them on this survey? What about Holladay - that was on another survey as a choice - please be consistent. If not Holladay then Multnomah should serve that purpose by removing a lane and adding in better bike and ped facilities.
Prohibit housing within 600' of freeways due to well-documented public health effects of long-term exposure to vehicle emissions. Short-stay hotels exempted.
Add a signature park close to and visible from the convention center that has grass, big shady trees and benches where convention goers and office workers can go and relax
Tell the Lloyd people to shape up and approve a bike-only Holladay. Not worth sacrificing for five parking spots.
Equity requires bicyclists foot the cost of improvements
I think we are going over board with the bike thing and in the wrong places. You also need to think about car circulation. The way that the planning is happening is pushing car traffic into places that it was not before. How do I know? I am that car. I also know that I am not the only car owner that is doing this. You need to make a place for cars to get from point a to point b without having to go 16 miles an hour. I now take side streets so that I can get somewhere in a decent amount of time. That is a planning issue. There needs to be some balance here. Also I also bike. I personally don't want to bike where lots of cars are period. Bike lanes should be one block off of major car lanes. I have noticed that is being considered more. Please continue to do so. I prefer to ride where there are fewer cars so I don't have to breathe the exhaust. I also prefer the aesthetics of the paths that are on side streets. Prefer that in spades. I don't use the paths on Rosa Parks for example for the reason I just stated and I don't feel safe there. There is one exception to that and that is the Williams/ Vancouver paths. That feels ok to me because the traffic is going the same way. If there were a better path to go that direction, one with less traffic, I would take that. I won't take the Greeley even with the bike path no way no how. That feels very scary to me. I don't want to feel like I am on a highway. For one thing there are bikers that race. I do not want to ride on a path where I need to watch for other bikers and cars. There needs to be something that slows down those racer bikers and I think it is being off of major roads. I think that is why I prefer that. It is not the cars so

much as the other bikers. They also slow down in those scenarios and that makes me feel safe I am very concerned about a trend that I am seeing.

This has nothing to do with planning but... I am noticing that cars are passing bikes going into the other lane often across double yellow lines. That is a problem. If our population gets denser this is going to be a really serious problem. Mostly I am noticing this in SE. But I am also noticing it in N and NE but not to the same degree. Where are the questions about where the cars go?

Where are the questions about how to get those big trucks through? That needs to be asked as well.

We have bike lanes established in these areas yet we have bike users on the sidewalk. I do not believe that additional bike lanes are the answer.

Need to deal with the deadening affect of all the parking lots. Need to get confident that we can make people take the MAX to get to the neighborhood.

A safe, comfortable north/south bike route is strongly needed that connects the

Lloyd District with the Central Eastside/SE. A new crossing over I-84 is preferred since MLK/Grand is very congested and unsafe.

Two way Grand Avenue- as local traffic main street. Two way MLK as thru street (but traffic calmed)

There are a small number of houses that have survived all of the previous redevelopments. Retain them to provide variety of uses, sense of history, context and more inviting design character.

Use Holladay St. as exclusive bike/ped street.

Secondary bike-ped connections: How about 7th/9th to cross I-84 and Holladay!

Undoing the MLK/Grand couplet would be challenging, but the benefits to the surrounding community would be enormous. It would calm traffic, reward the local, sustainable trips, encourage access, and help create a comfortable, safe environment for the community. If people need to move more through the area without stopping, that's what I-5 is for.

Question 3. Should “signature” high-rise development be allowed at the southern edge of the district along NE MLK Boulevard and NE Grand Avenue near I-84 (see diagram, Area B) Answer: No, not until traffic issues are resolved and the city figures out how to get the cars which back up along Lloyd Blvd every day from 4:30-6pm across the freeway so they can get on 84. That bridge (11th or 12th St.) is a congestive nightmare every day. Questions 4. Answer - there's already a river crossing for bikes and peds near the convention center. Do we need another one 3 blocks away? Question 9. It could support more hi-rise residential. I also think some city services could move to the east side of the river to save money on rents and make it easier for people to park and do city business. Portland needs to put those new blinking yellow (left turn) lights on many intersections in these areas to facilitate traffic. Portland is not very green to make people sit at lights for no reason when there is no traffic (pedestrian, bike or car). Consider making more streets one-way to move traffic better. Esp. if you plan greater density in this area. It's easier to convert the streets now rather than later. If you make streets one way, you could add bike paths to each street and reduce stop signs thereby facilitating all forms of traffic. This survey is difficult to complete because it won't let me move off the page despite answering all the questions... Grrr. I may have to abort this survey.

Needs something to give it an identity. More residential and some nice parks would be a start.

Subarea 6 – Eastern Lloyd

Q1 Should NE Multnomah Street be upgraded to a major east-west shopping street with regional-serving retail uses (see diagram, Area A)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	65%	34
No	35%	18
answered question		52
skipped question		4

Q2 If not, what would you suggest as an alternative?

I say no, as the question is simplistic. I would prefer to offer a conditional 'yes'. There are questions as to what can be supported and developed. If yes, would this cause a deterioration of retail on the Broadway/Weidler couplet? What is the timeline? This would appear to support Lloyd center, the block to the west of the theater and the east of Holladay Park. But at what cost. A complicated issue.
Affordable housing? Improve Holiday Park. Cultural uses. Mercados, etc. Parking lots into mixed use.
An alternative for a place for regional retail? Or for this area? For this area, improve Holladay park - more cultural uses, programming, etc. Turn the giant parking lot for MAX/the theatre into mixed use or retail development.
Whatever the market demands
Move retail to be in neighborhood streets, with first floor shops in buildings with both low and high-income residents.
Keep it close to Broadway
Isn't it already serving this function with the Lloyd Mall (largest in Oregon)? Does the neighborhood (or Portland, or Oregon) need another street serving this function in the near vicinity? Multnomah appears to already serve the purpose as a major east-west shopping street with regional serving retail uses.
Primarily residential, but more dense
Focus on Broadway instead too much of a suburban arterial design
Broadway/Weidler should be the east/west shopping street 2 lane Multnomah with bike lanes
Mixed use with flex residential
Smaller retail on ground floor with commercial and residential above. I suppose that might be regional serving. Not sure what exactly that would constitute regional serving --- I would not add any additional big chains beyond what is already there (although if one was swapped for another seems fine -- i.e., Target for Sears or something).
A broader mix of uses. Unless market analysis shows that Multnomah could support such activity in the long-term, look for a broader mix that the market will support to activate the street.
Clackamas
It seems fine to me. Don't waste public money changing it.
None on this map.

Q3 Should NE 7th Avenue be enhanced for multimodal transportation (see diagram, Area B1)? Check all that apply

	RESPONSE PERCENT	RESPONSE COUNT
No, do not enhance	14%	7
Bicycles	66%	33
Cars	20%	10
Trucks	4%	2
Buses	14%	7
Pedestrians	66%	33
Other	24%	12
answered question		50
skipped question		6

Other Responses

Again, you isolate one street and ask a simplistic question. 7th is a major N-S route, at least up until Fremont. The next is 15th, the next 21st, and so on. How does it all work together?
Whatever the market demands
Streetcar across I-84
NE 7th already includes streetcar, cars, trucks, bicycles and pedestrians. No busses only in that TriMet hasn't placed a bus route on the street. I believe that NE 7th is already quite multimodal and requires no additional enhancement.
NE 7th is a neighborhood street with neighbors, only buses
Parkway
Keep bikes away from trucks
You already are doing this, why survey it?
Holladay St. should be a bike only corridor from Park to river
Local service vehicles
Streetcar
That street doesn't get as much use as 9th, so would be good for bicycles.

Q4 Should NE 9th Avenue be enhanced for multimodal transportation (see diagram, Area B2)? Check all that apply

	RESPONSE PERCENT	RESPONSE COUNT
No, do not enhance	15%	8
Bicycles	62%	33
Cars	28%	15
Trucks	18%	10
Buses	32%	17
Pedestrians	62%	33
Other	13%	7
answered question		53
skipped question		3

Other Responses

Now you are being silly, right? You are such a funny planner!
Whatever the market demands
See answer from #3 except that NE 9th has a bus route and no streetcar line.
No Bikes on 9th - Put them on 7th Ave & require bicyclists help pay for improvements
Need a bike Blvd. on Holladay street
9th already gets a lot of auto traffic and it's complicated because 1) the MAX messes up the lights (cars have to wait sometimes through 2 lights) and 2) there's no west turn lanes which block a lane of traffic going north when the lights are green.

Q5 Would a connection across I-84 at either NE 7th Avenue or NE 9th Avenue to the Central Eastside make sense?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	82%	45
No	18%	10
answered question		55
skipped question		1

Q6 If so, for which Avenue? Check one.

	RESPONSE PERCENT	RESPONSE COUNT
NE 7th	56%	24
NE 9th	44%	19
answered question		43
skipped question		13

Q7 And for which modes? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Bicycles	87%	40
Cars	41%	19
Trucks	44%	20
Buses	85%	39
Pedestrians	24%	11
Other	17%	8
answered question		46
skipped question		10

Other Responses
Whatever the market demands
Only two vehicular lanes wide, one northbound and one southbound. Don't overwhelm the neighborhood to the south, but take the pressure off 12th. 7th has light vehicular traffic north well past Fremont. 9th stops south of the park.
Streetcar
Franz Needs Better Access - DO Not make it another Sellwood Bridge with those excessively wide sidewalks and more room for bikes than cars
NOT FOR BIKES. You ALREADY STOLE A LANE FROM 12th!
Connect to 7th or 9th, whichever ultimately allows greatest mix of uses
Service vehicles

Q8 What character, scale, and uses would be most desirable for redevelopment surrounding Holladay Park (see diagram, Area C)? Check two.

	RESPONSE PERCENT	RESPONSE COUNT
Entertainment	38%	19
Hotel	30%	15
Retail	44%	22
High-density residential	52%	26
Office/Employment	32%	16
Other	26%	13
answered question		50
skipped question		6

Other Responses

Mixed use, absolutely, residential over retail/ w/ some office, high-density a distinct possibility.
Whatever the market demands
Having a few bars in the area would keep more eyes on the street at night
High density mixed use east of Holladay Park AFTER this area is used as the portal and staging area for the east-west Max tunnel.
Perhaps I'm missing the point here, but all four sides of Holladay Park are developed. To the west is a major hotel. To the north is a huge regional retail center. To the east is a surface parking lot begging to have something taller built on it? To the south is a recently developed office building replete with a multistory parking garage. Let's just add residential (high density) to the east instead of the parking lot. We've got entertainment less than a half mile away in the Rose Garden Arena and the Convention Center.
Restaurant/retail; I can see the need for both of these checked boxes but caution about shading out the park.
Not more than 12 stories of residential
Medium-density residential
24 hour occupancy would help
Mixed use with ground floor commercial and potential mix of office
Anything that provides all-day and all-week activity and eyes on the park
Mixed use residential that complements the Lloyd Shopping Center
Build a parking structure in the corner of the Regal Theaters/OR Sears parking lots for MAX users. This is a very important need that seems to continue to be ignored by the city planners.

Q9 How can the user experience best be improved at Holladay Park (see diagram, Area D)? Check two.

	RESPONSE PERCENT	RESPONSE COUNT
More active programming	53%	26
Reconfiguration of paths	16%	8
Community garden	4%	2
Outdoor markets	55%	27
Events structure (e.g. stage, gazebo, etc.)	27%	13
Child play structure	20%	10
Skate park	10%	5
Other	33%	16
	answered question	49
	skipped question	7

Other Responses

Development of Glimcher/Blackstones lot to the east as per question 8 is essential. The hotel to the west dees to engage the park, as does Lloyd Center to the north, open up the mall, put retail at street level open to the south.
More lighting
I personally like Holladay Park as it is
Checking two aren't enough.
Better security, additional limited access from MAX area to park.
More education for teens-more birth control
Lighting and cameras
Trim trees to make space more open, let in more light
Make it safer/more secure (x4)
Its all about surrounding uses
The fountain draws families and kids which is the best thing that has happened with this park
Program uses - don't change the configuration of the park.
NO skate park = too noisy and too much pedestrian traffic crossing the park.

Q10 As the superblocks (i.e., very large blocks of buildings and parking lots) develop, what are the most important features that should be included in terms of connectivity and open space (see diagram, Area E)? Check two.

	RESPONSE PERCENT	RESPONSE COUNT
Pedestrian connections	76%	38
Park/plazas	60%	30
Bicycle connections	46%	23
Public art	26%	13
Other	30%	15
answered question		50
skipped question		6

Other Responses

Design reviews a must. No "Renaissance Centers" thank you very much Mr. Portman. Good design is the key. (x3)
Whatever the market demands
Playgrounds
-Block pedestrian crossings around Lloyd Center.
Two aren't enough.
Vegetation
Parking (x2)
Away from superblocks. We do not want 400-foot blocks or more.
Access to MAX and streetcar
Art in parks and plazas that are accessible on foot
Cars OK too if reasonable speed
Assure that there is a sequence of parks and open spaces that complements the envisioned development patterns.

Q11 Additional Subarea 6 comments:

This survey is not particularly helpful nor does it work to engage the public in the process. The questions are simplistic and misleading implying there are simple easy either/or choices. I think you can do better. I have answered this one because I live in Sullivan's Gulch and it most directly affects me. I am not going to bother further with the others based on the way they questionnaires are written and set up. I suggest you read Randolph T. Hester's book "Design for Ecological Democracy" and other books to to help you learn to engage and involve the public without being pedantic, bureaucratic, and condescending. Whoever wrote the survey, at least this part, needs some help and guidance. The SAC meetings are being run wonderfully well by all accounts. The website is fabulous, and from what I have seen and heard of the staff, they are bright, engaged, creative, caring and working hard. This survey does not do the rest of the project justice. I have no wish to be harsh, but I do wish to be clear and strait forward to provide constructive input.
No more urban renewal
Promote low income housing
We need more and better bicycle connections. A bike/ pedestrian bridge at 7th over I-84 is a great idea. A

car free Holladay would be great too.
New road through the super blocks will help the district
Work in this area. More local restaurants would be nice. We have fast food and chain restaurants. Not a lot of good lunch options!
A subway station will be needed under Multnomah Street between 7th and 10th
Avenues to serve Lloyd Center and the Lloyd Office blocks.
Either 7th or 9th would make a great ped/bike/transit connection over I-84.
Ideally, the streetcar could utilize this connection on 7th, but it may be too late for that.
Question 7: Design of new bike-ped overcrossing at 7th should not preclude a future auto-truck structure should traffic conditions warrant. Question 8: High-density residential and storefront retail to provide "eyes on the street" to improve security in Holladay Park.
No Plop or junk art - any art should be functional and identifiable (see Providence at 45th & Halsey)
7th ave bridge is super, super important
Regardless of what Ashforth's and PDC say, Holladay should be prioritized for bikes.
This could be a super-cool area if all the dead parking areas were used for something more! Also, need to make sure people can get around on foot.
I think the superblocks should be mixed use with residential, office, retail and entertainment.
Lloyd Center Mall has an unfriendly face to the streets. The Cinema parking lot is a scab on the district - poor use of space, water runoff and lost green space. At least add structured parking for park and ride - with a green roof; or add high density residential - also please add some trees or redevelop in a more sustainable manner - the Eco District is DOA while this parking slab/scab continues to be accepted.
A parking structure is VERY IMPORTANT near the Lloyd Center MAX. It's one of the busiest MAX stops in the entire area. I don't care what the planners have said about keeping vehicles out of core areas. People come with their vehicles. They come to sporting events, music and convention center events in the evenings and weekends. During weekdays they park up Sullivan Gulch and the mall lots and take the MAX across the river to avoid traffic congestion on the West Side. Prudent and intelligent planning and city management would realize this need and deal with it rather than causing the surrounding neighborhood (Sullivan's Gulch) and the Lloyd Center Mall (a private company) to deal with it. If the city does not deal with this "vehicle storage" problem, this shows continued disrespect for the public, it's needs and the needs of both the neighborhood and the mall. It is possible to build a parking structure in the mall lot if equal parking is added elsewhere in their property, btw, so please don't use that as an excuse.
Lloyd center mall needs to improve its facade to be more open and inviting for people visiting the mall as well as people passing by on the street.

Subarea 6a – Sullivan's Gulch Transition

Q1 What types of uses are desirable and/or appropriate in this subarea (see diagram, Area A)? Check all that apply.

	RESPONSE PERCENT	RESPONSE COUNT
Office	57%	30
Light Industrial	17%	9
Hotel	43%	23
Retail	51%	27
Residential	85%	25
Other	22%	12
answered question		53
skipped question		3

Other Responses

Trail development would be improved by retail uses.
Whatever the market demands
Public park, dog park, skate park, tennis courts
Neighborhood serving
Restaurants/Dining (x3)
Mixed use
Open space and Gulch Bike Trail
Some small neighborhood retail in mixed-use developments.
Neighborhood-serving retail only (small scale)
Not build anything commercial in this space. Traffic is horrible during rush hour and the intersection of 21 and Multnomah is dangerous enough due to high use of pedestrians, bikes, autos and buses.

Q2 Do changes to the allowed height and mass of buildings need to be made in this area (see section AA)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	44%	23
No	56%	29
answered question		52
skipped question		4

Q3 If so, what changes?

If it's a barrier to development, sure, but right now, they're not even coming close to the maximum.
Whatever the market demands
Allow tall residential buildings only
Height restrictions seem silly and NIMBYish. Their benefits accrue to a few landowners and their costs are borne by the entire metro area in higher transportation and land prices.
Reduction of height
Views for pedestrians/bicyclists/drivers on the bridge on 21st west downhill towards the river, down Sullivan's Gulch must be maintained. The 75' height shown (against the UP rail line) appears to be FAR

more than 75' AT the rail line, it might be 75' at some imaginary or average point in the lot, but that can be changed by digging a hole or adding a pile of dirt. Instead, making a view line based on a pedestrian on the bridge, from a fixed point on the north side of the bridge, so that the view of the Gulch is maintained... well that would be far preferred than a huge, high wall filling in the gulch.
Increase building heights closer to I-84.
Allowed height should not drop to 45' in middle of area.
Next to and parallel with MAX only as a sound barrier between the neighborhood and the transportation corridor - Max, the RR and I-84 all are noisy
That would divert more light in the neighborhood and just create an unpleasant shadow on the street.
More height (x2)
Review all zoning, FAR, height and bonuses
Higher Density
Retain existing SF/<F Housing
Much higher building heights by i-84
It would help if the projects take advantage of the views of downtown and include green space such as public and private paths
Even thought this is definitely in my backyard, I think we need to make these buildings bigger.
Allow higher uses to the west end of this area. Allow higher uses toward the freeway.
The should be a better transition between the north and south sides of Multnomah - maybe a stepped building requirement that preserves solar access.
The 45' limit seems odd. These could go higher if market forces allowed.
MAX height limits should start at 50-75 feet at Multnomah, and increase to 125- 150 closer to the gulch.
A better transition from natural area to commercial/residential.
Reduce the height to house level (40 feet) on the south side of Multnomah St.
Better transition to uses across the street. Could allow going higher next to freeway. But, I can't really tell because you haven't given me the cross-sections!

Q4 Should allowed building heights increase toward I-84 (see section AA)?

	RESPONSE PERCENT	RESPONSE COUNT
Yes	75%	39
No	25%	13
answered question		52
skipped question		4

Q5 Additional Subarea 6a comments:

For appropriate uses: think ahead to trail development - what can support trail use? buffer any residential from freeway.
No more urban renewal
Taller buildings approaching I-84 would enhance the idea of I-84 as a divider
Maybe a possible MAX Infill station with surrounding TOD at 20th
Prohibit residential development south of Multnomah, or within 600' of freeway, due to well-documented public health hazard of long-term exposure to vehicle emissions. Short-stay hotels exempted.
Be sure plans provide plenty of space for the Sullivan's Gulch Trail alignment and access
Look for bike trail opportunities (x2)
Excited to see city push forward with trail.

Properties in the eastern portion of this site should connect with the residential neighborhood, as does the Residence Inn. An important consideration is for the development to incorporate the Sullivan's Gulch Trail, providing alternative bicycle oriented development.
I-84 should be capped with public parks over the freeway. This would make the area appealing to the large mixed use buildings the area along Sullivan's Gulch could be zoned for.
Whatever goes here it should be encouraged to use the views, proximity to the max and include private and public green spaces such as green paths.
I would love a fancy-pants grocery option in here, although I suppose Broadway/Weidler might make more sense. Ooo, but I bet if you could deal with the sound issues, you could make some very fancy-pants living/dining options with the views...
The gulch offers great potential for open space - with plantings and other interventions it could better support native plant and animal species. Could also absorb water runoff from nearby streets. SG neighborhood does not have any open space or park.
Retain space for gulch trail - consider this as potential amenity for development in this area
The 75-foot height could go to 125' as long as there are requirements for building breakup and step backs to preserve light and air to the public ground level spaces.
Access to the gulch for bicycles and pedestrians!
Whether the city planners know it or not, Multnomah is a fairly fragile street near 21st. Road vibration can be felt in the houses north of Multnomah whenever a medium size delivery truck drives Multnomah. The houses "bounce". If a large development were to be approved on the south side of Multnomah the city and the landowner would most likely face multiple lawsuits due to concussive damage of the 1906-8 vintage homes near the area and across Multnomah to the north. This will be due to concussive damage (cracking and general weakening) caused to the foundations, walls and overall structure of many of these historic houses. I do not believe this damage could be avoided with any type of large-scale development. This is a VERY bad corner to develop when you consider multiple lawsuits, traffic issues and safety. Why not put in a community garden, a grassed open space, or wildlife habitat? Every inch of the city does not need a 4-5-story building despite some people's desire for heavy density. There's a place for such density and this corner is not one of these areas.
I'd like to see a potential development scheme for this subarea.

Open House Comments

There is very little attention to creating strategies that will maximize participation of communities of color in design and implementation of district-wide or sub-area projects. Recent reports demonstrate deep and growing divides between white and non-white residents. Please incorporate such analysis into revised strategies. This is more than simply meeting participation. Job training for youth, employment opportunities, district and sub-areas that benefit people of color. Check out Policy Link's toolkits for some tools. -Thanks!

Need to do a better job with pros and cons of each alternative. What are the neighborhood, land use, and economic development impacts of each freeway alternative?

An effort should be made to make non-conforming zoned properties into conforming zones when it appears that they are in good condition (i.e. have long physical and economic lives) and that they make significant contributions to their neighborhood.

I am disappointed with the constrained scope of this project. Changes to freeway design have large implications. This process is not doing the larger planning concepts justice and I'm worried we can't see the forest for the trees on this one. Let's see another concept that focuses on the role of transit in replacing highway demand. This neighborhood can't handle more cars; we need a more ambitious solution to transform our transportation network here.

I'm a relatively engaged citizen, a bike commuter, and I got really confused to how this project related to the N Williams/Vancouver project and Lloyd District-Holladay project being undertaken by PBOT. I realize this may be a more long term plan but it doesn't seem clear that those projects are being integrated. Also, changes proposed should consider the projections or increased bicycle usage and plan should enable for more bikes infrastructure to be built- not hindered by highway access.

---

1. There are already too many on/off Freeway Ramps in N/NE Quadrant. Don’t add move. In fact, removing ramps would be beneficial to business community.

2. Pedestrian and bicycle connectivity should be top priority.

3. Consider land use and transportation together not separately. Please!

The ODOT concepts for rebuilding I-5 and surface streets (Weidler/Broadway, etc.) are better, but still lack pedestrian perspective that the public needs to see and comprehend.

Thank you for the open house- it was great to have a place to look at the overall plan & voice an opinion. My interest is in mixed use sustainable affordable housing and repurposing existing housing for increased efficient use. I had been hoping to talk to someone who might offer us the ability to contribute to the dialogue from existing residential perspective; self serving, I know.

De-pave! Create feasible rapid (easy to do), scattered green spaces. Increase amenities (i.e. return to pedestrian scale, reduce building heights, re-juggle NC development regulation to promote pedestrian friendly streetscape. Go for housing. Choke off "Broadway I-5 on-ramp."

Overall there is more information presented here than the average person can review and form thoughtful opinions on in one day, let alone 2 hours. In my opinion the I-5/Broadway? Weiler interchange needs to be worked-out before you can make your best plans for the area. Lastly, most of the buildings in this district have significant remaining economic and physical remaining lives, and will not likely change much over the next 50+ years, so most energy should be directed towards transportation issues.

Previous general plans have changed existing zoning or allowed uses so that buildings have become non-conforming. Many of these buildings today are highly economically successful, and some of the most desirable buildings in their respective neighborhoods. This illustrates the difficulty of trying to plan too far ahead. One goal of the next general plan should be to re-zone properties that were conforming when they were built so that they are conforming today.

There are some good ideas surfacing. I would like to see more concept development illustrating the river connection and greenway. Also there seems to be just a mention of green infrastructure or as it relates to the water harvesting corridors-. This piped infrastructure and pumping will be expensive and disruptive. Capturing and reusing on site (locally) makes more sense that directing to a central location only to pump back to the original site. Recommend rethinking this idea. Green infrastructure should include more trees, ecoroofs and green streets, rain gardens. Don't lose site of these goals-climate change, greenhouse gas reduction, and access to nature and open spaces.

I would like to see options that relocate the I-5 on and off ramps. The N Broadway/Weidler area is part of our urban core and should be vibrant and full of people and commerce- rather than a place for a freeway interchange. The area has been blighted enough to make way for cars. It is difficult to understand concepts. Modeling then would be helpful to. (Land use) Make Vancouver/Williams and part of lower Albina more mixed use~ like it used to be! Connect upper to lower Albina, connect greenway, and connect Lloyd center to Eliot neighborhood.

Please consider the ethical responsibility any development/developer has to the people/families who occupied the space before and the cultural heritage this represented the.

Could have had a new baseball stadium and supportive/active development. Now we are stuck with the old coliseum which needs millions in upgrades/

We don't need two arenas.

The strand should include the urban gardens on/off North Williams- there are four of them!

Bigger freeway ramps, more cars, more freeway lanes? I don't see how that fits in with a vision of a vibrant, diverse, people-friendly neighborhood. "Delete" the ramps.

North-south pedestrian-bike trail- possible alternative to trail under Broadway Bridge to Tillamook St. Overpass---> Cross Interstate at existing signal just north of Coliseum---> Cross Broadway on westerly side and have trail pull off and viewpoint(s). Proceed to overpass and use pedestrian-bike on westerly side of overpass to Tillamook-Use concrete dividers to separate pedestrians and bicyclists from vehicles which would utilize easterly side of bridge (traffic heads southerly). Bicyclists and pedestrians on west side of Interstate to Tillamook Street. Bicycle-pedestrian trail proceeds westerly on Tillamook bridge to River Avenue.

*More housing. Focus on River and Walkways and Esplanade or Link Housing to Main Street revitalization possible on Streetcar on Broadway. There is potential for high rise apartments/condos by connection to River. See Tramel Row (?) Denver or Multnomah/MLK for high-end apartments.

Restore Vancouver/Broadway's commercial core

Provide more connectivity from Eliot to Lloyd Area to/from lower to upper Eliot and to/from NE Quadrant to downtown.

Mix of uses

Equity requires that bicyclists pay for bicycle infrastructure and transit users pay for transit improvements. All the funding sourced must not be again placed on the backs of motorists and freight.

Equity requires investment to achieve the practical function of "all" modes of urban/suburban travel: (cars, trucks, transit, walking, bicycling). When motor vehicles dominate, "all" modes of travel fail to achieve their practical function.

Reading the TDM list under Concept 6. I mistook it for "existing conditions." Surely there is more and better TDM to do than what we do today! I am not satisfied with "ensure: and: expand"- doesn't seem like much effort went into this concept.

Equity requires people who use parks pay for them each time they go to them! Same with schools.

Equity requires not sacrificing a local neighborhood's streets for suburban/put of state commuters.

Need to look at wider study area/ Separate ramps-out of Broadway/Weidler Area.

Eliminate suburban concepts (no roundabouts, etc. that disconnect the urban fabric)!

Bring back options that eliminate and relocate ramps.

Three-dimensions! Difficult to understand concepts.

Integrate land use before eliminating concepts.

N/NE Quadrant Plan: 70% Proposed Concept DRAFT 9/23/11

Background
In Spring 2011, staff developed three quadrant-wide concept alternatives, intended to describe different future development scenarios and identify key choices by grouping ideas generated from the following sources:

- Project goals, issues, opportunities and constraints,
- Stakeholder Advisory Committee (SAC) meetings,
- SAC Subcommittee meetings, and
- The Local Issues Charrette, held in February, 2011

Each concept alternative had a different land use emphasis (residential, employment and blend) with supporting infrastructure system diagrams (mobility, open space and green systems). Questions and ideas specific to quadrant subareas were also developed to inform area specific planning and coordinate with the quadrant-wide concept alternatives. Please see the Concept Alternatives Workbook for more information.

The project team conducted extensive outreach to get feedback on the quadrant-wide concepts and subarea choices, including discussions at three SAC meetings, one SAC subcommittee meeting and an open house attended by over 100 people. In addition, staff attended 20 community and stakeholder meetings focused on the draft concepts, and hosted an online survey. Please see the *Concept Alternatives Outreach Summary and Survey Report* for more detailed outreach information and results.

Proposed Concept
This packet contains the draft proposed quadrant-wide concept for land use, urban design and local transportation in the N/NE Quadrant study area. During the fall, this proposed concept will be revised based on direction from the SAC. The concept was prepared by staff, based on feedback received during outreach activities between May and September 2011. The concept packet is grouped into two sections:

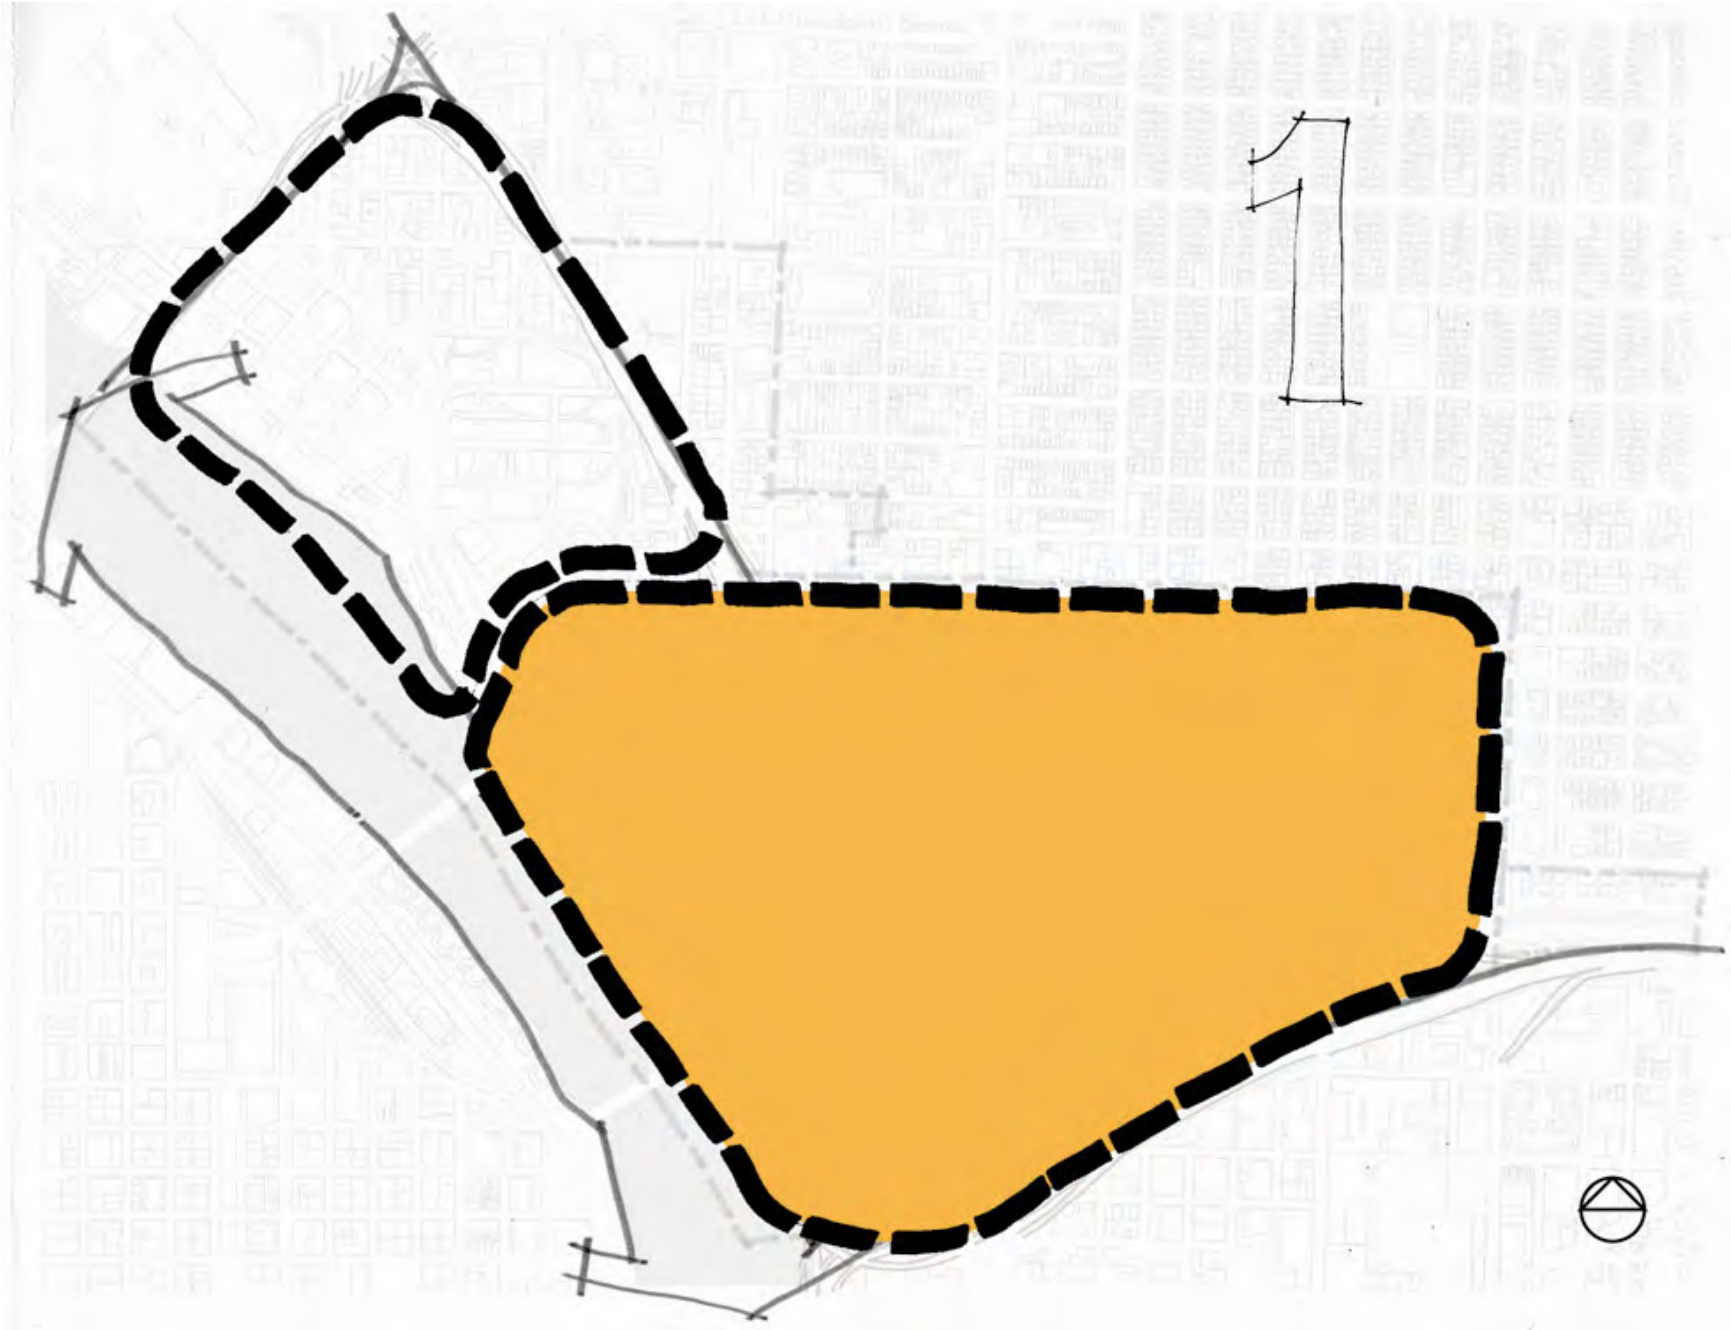
Quadrant-wide Principles – Five ideas that are the organizing principles for quadrant-wide urban form are based on the overall principles of Place, Connectivity, and Scale.

- **PLACE**
  - Two Distinct Places
  - Fill In The Central Core
- **CONNECTIVITY**
  - Strengthen Connectivity
- **SCALE**
  - Take Advantage Of Urban Form
  - Celebrate The Crossroads

Concept Maps – A revised set of maps that outline the proposed major land use categories throughout the quadrant (residential/employment blend) with supporting infrastructure diagrams (mobility, open space and green systems).

For event dates and relevant project materials, please visit the project website: www.portlandonline.com/bps/cc2035/nneq.

CENTRAL CITY 2035
N/NE QUADRANT

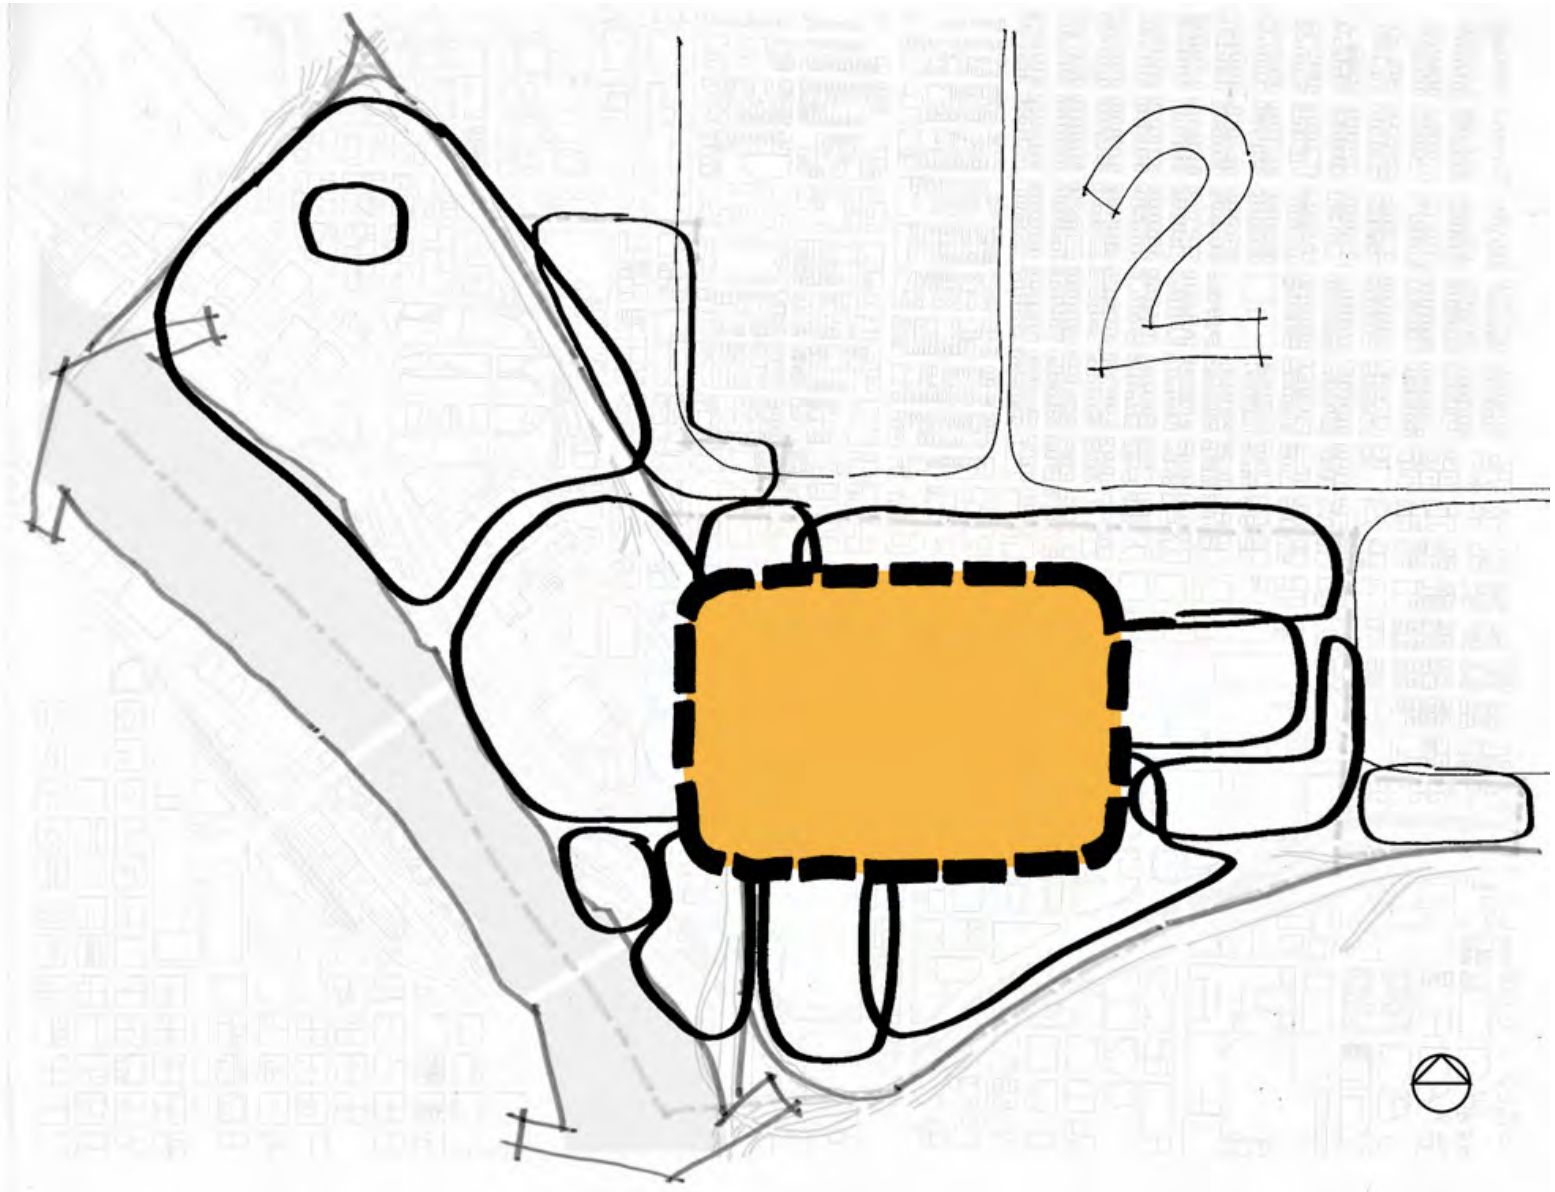


CITY OF PORTLAND OREGON 1851

Oregon Department of Transportation

TWO DISTINCT PLACES: The N/NE Quadrant study area includes two distinctly different areas, headed in different directions.

The first, Lower Albina, is an active industrial and employment district not anticipated to dramatically change in its form, function or character. Overall, the area's character, defined by relatively low scale of buildings (1 – 3 stories typically) in the crook of the I-405/I-5 interchange and Fremont Bridge, will be maintained for the next 25 years. There will likely be incremental changes, including improvements to existing structures, some potential new development in and around the Russell Street Conservation District, and perhaps some new connections that offer new options for north-south mobility off N. Interstate. A notable exception is the PPS Blanchard School site, which is expected to shift from its current industrial zoning to a mixed use zone, adding significantly to the transformative redevelopment opportunity near the Broadway Bridgehead and Rose Quarter.

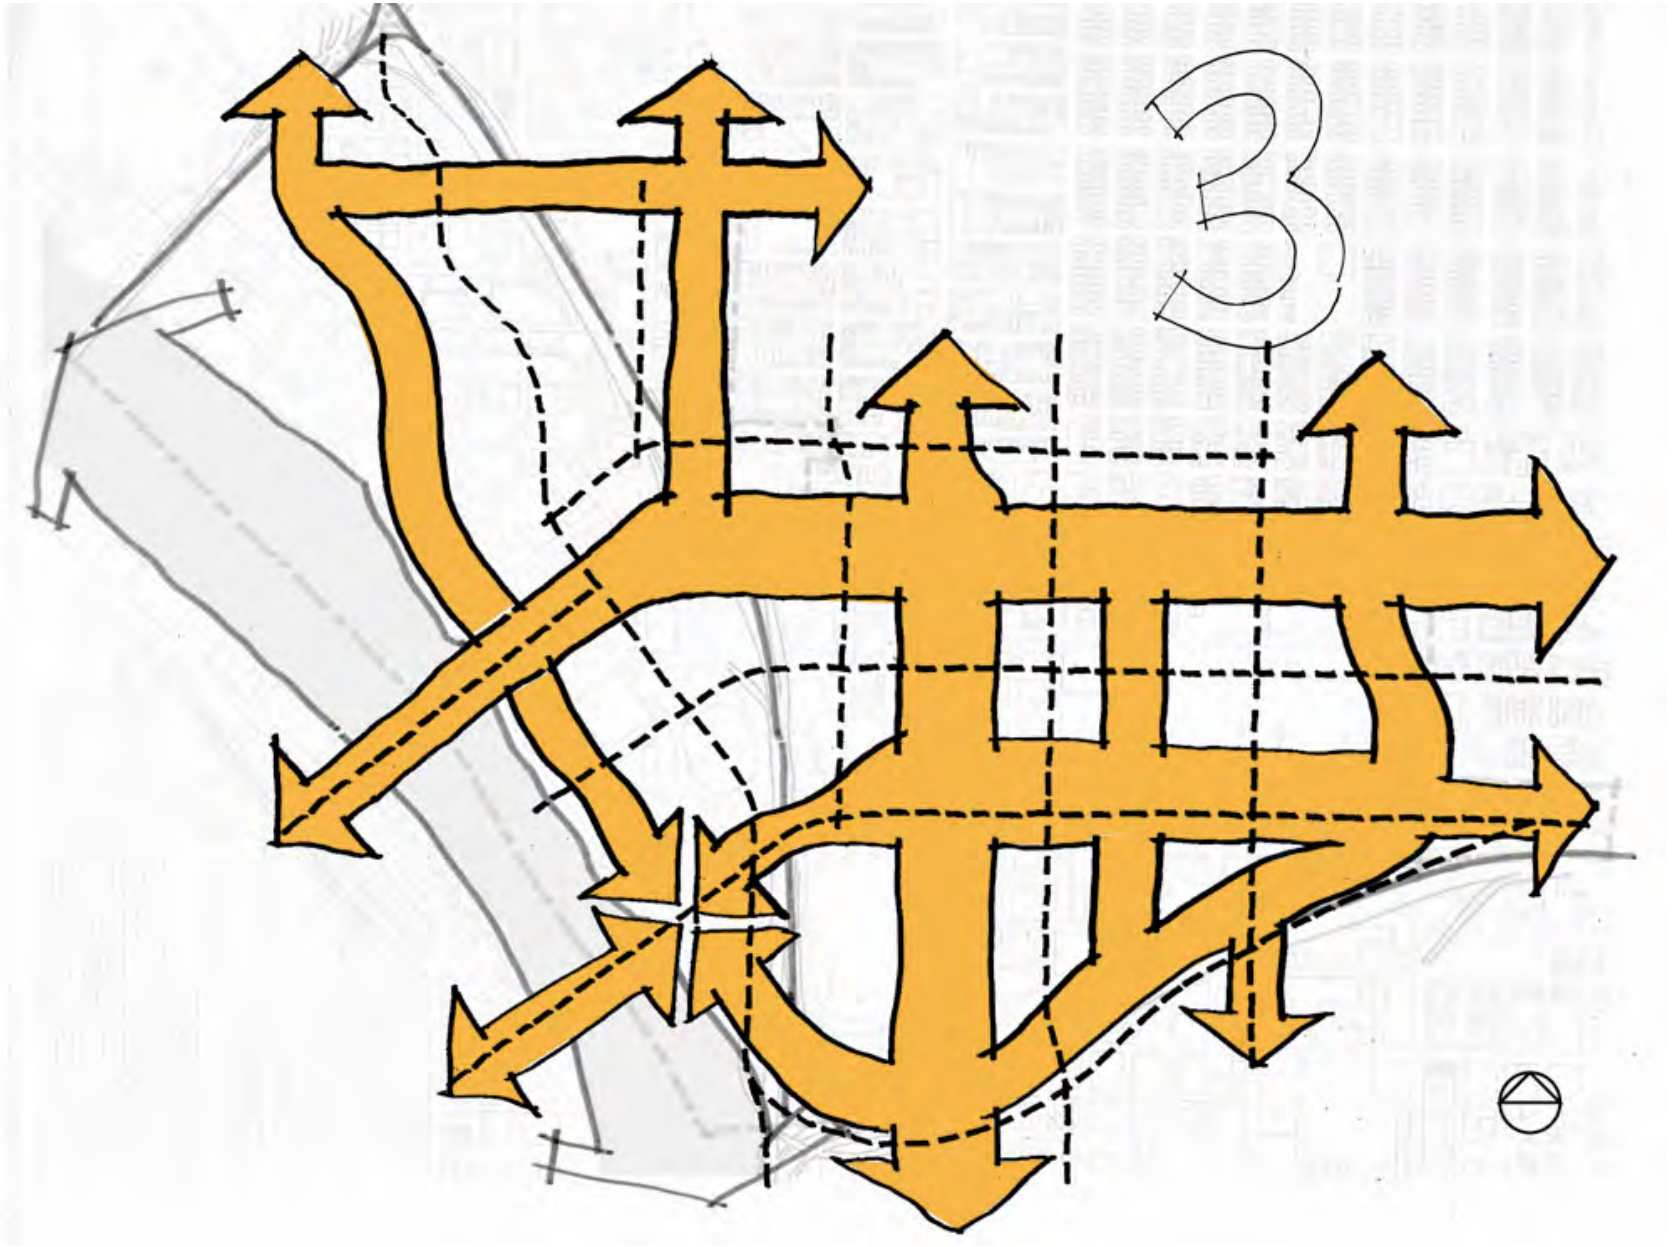


The second area is the Lloyd District, including the Rose Quarter, an area with long-held expectations for considerable redevelopment and change. Around its edges, the Lloyd District has seen slow-paced change over the past decades, including expansion of the Rose Quarter/Oregon Convention Center, new mixed use residential buildings along the eastern Broadway/Weidler corridor, and a steady increase in new office buildings in the office core area along NE Holladay. Notably still missing from the Lloyd is the high-density residential community envisioned decades ago, while significant new residential communities in the amenity-rich Pearl District and South Waterfront areas rapidly emerged during the boom of the late 1990s – early 2000s. The edge areas are expected to continue to grow and evolve, while the focus in Lloyd is on the transformation of the "Central Core" area – roughly bounded by I-5, NE Broadway, NE 9th and Multnomah.

1

FILL IN THE CENTRAL CORE: This is an area where the potential for physical transformation of the landscape is highest.

For the success of the quadrant and specifically the Lloyd District, the "Central Core" area (roughly bounded by I-5, NE Broadway, NE 9th and Multnomah) could transform into a high density, urban place that features a mix of residential and commercial/ employment uses organized around a new, signature public open space system. Currently this area is notable for its lack of a defined identity and sense of place, somewhat different from the other areas surrounding it. Significant redevelopment of the Central Core area could create the mixed use district that would add the missing urban fabric to serve not only the different parts of the quadrant area itself, but also adjacent residential neighborhoods.



Being the least defined/imageable area of the quadrant, new development in the Central Core has the opportunity to help craft a new, marketable image or brand for the Lloyd District. A considerable injection of new housing and office uses, as well as perhaps new institutional or civic amenities, such as a new public open space system, can take advantage of the development potential and create new distinct places. The new streetcar alignment along 7th Avenue could represent a new, transit and pedestrian-oriented focal point, providing a human-scaled, storefront retail center for the Central Core area.

2

STRENGTHEN CONNECTIVITY: Strengthen connectivity to and through the quadrant area.

The N/NE Quadrant enjoys good regional auto and transit connections for its residents, workers and visitors. However, the two freeways – I-5 and 84 – while providing vital regional access to and from the quadrant, create challenges to local connectivity, both within the quadrant area and to adjacent districts. The Broadway/Weidler, MLK/Grand and Vancouver/Williams corridors all serve the quadrant area and offer access to different parts of the Central City and inner neighborhoods, but feature few distinguishing qualities, have higher vehicular volumes and speeds, high crash rates, and in most cases act as boundaries or edges, rather than focal points or centers. The quadrant also features an expanding set of transit corridors, bicycle facilities and some discontinuous segments of a flexible pathway system through and among the larger blocks.

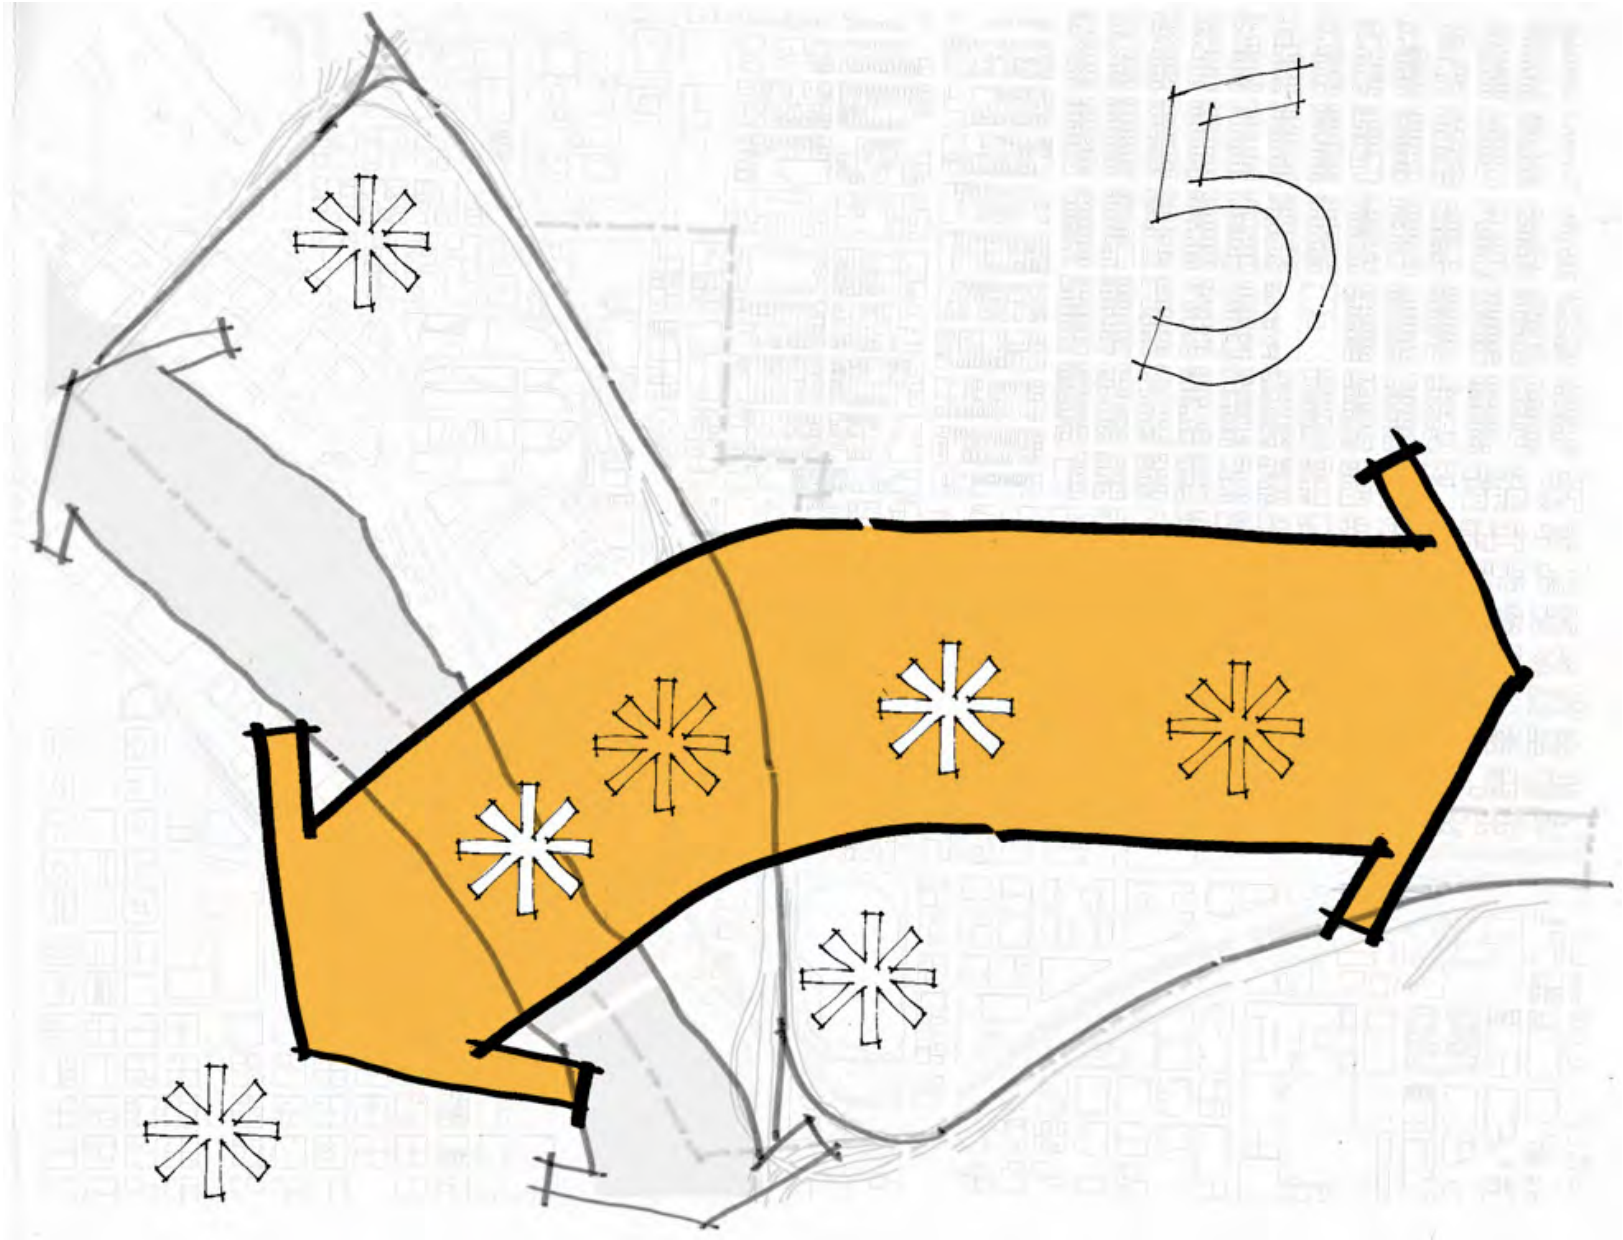
New systems of connectivity in the quadrant could offer bundled choices for quadrant residents, workers and visitors moving east-west and north-south, including bigger "civic" streets, more lush "scenic" parkways, and smaller, quieter and safer "flexible" routes that are oriented to pedestrian and bicycle movement. Some of the biggest streets or corridors will be enhanced and designed to reflect their "civic" roles, becoming focal points for development and urban, active places by both day and night. Other streets or corridors could take on more of a "scenic" function, having less adjacent storefront retail activity but more landscape plantings and a much stronger tree canopy presence. The large blocks in the quadrant also offer quieter, pedestrian and bicycle-oriented streets and pathways, that when linked as a system could provide a distinctly unique option for local residents and workers. NE Holladay Street, with MAX light rail, is planned to have additional pedestrian and bicycle facilities added to it, while 7th Avenue, with the streetcar, has the potential to become a more active, local retail street.

3

TAKE ADVANTAGE OF URBAN FORM: The different urban form, pattern and character of the area present a unique alternative for Central City redevelopment.

The larger scale of blocks and buildings in the quadrant, coupled with significant development entitlements (Floor Area Ratio, or FAR, and building height) present special opportunities not available everywhere in the Central City. The Lloyd District offers many large blocks, some at 460' X 460' and some larger, that present an alternative development platform to the prevalent 200' X 200' small block pattern of the rest of the Central City. Larger office/employment (or other) businesses and uses that require specialized connections between multiple buildings, need larger floorplates, or prefer campus-like arrangements could take advantage of the pattern and forms presented by the district.

The larger block pattern also offers new options for public spaces and overall quadrant connectivity. Today, there are several pedestrian and bicycle-oriented pathway segments, and current regulations require new public connections through the larger blocks. New development, especially on the large blocks, could add new, similarly oriented links to these existing segments, turning the network into a viable pathway system, simultaneously increasing mobility choices for quadrant residents, workers and visitors and providing a major new development attracting amenity.



Architecturally, the Lloyd District presents an opportunity to establish a new design direction, perhaps facilitated by the larger blocks and built on the pattern set by a series of visible 1960s era buildings (Veterans' Memorial Coliseum, Lloyd Center Mall, Calaroga Terrace, Fontaine Condominiums to name a few). Larger, greener building setbacks, increased amounts of landscaping, and more aggressive, contemporary designs could find a place in the southwestern portions of the quadrant where there is less historic streetcar-era fabric and increased visibility presented by the Oregon Convention Center, I-5/84 interchange and MLK/Grand couplet.

CELEBRATE THE CROSSROADS: Connect the quadrant across barriers to the river, the rest of the Central City and adjacent neighborhoods along a signature system of public spaces.

Today, the quadrant features a series of districts or areas, many of which feature large-footprint buildings such as the Rose Garden, Memorial Coliseum, Lloyd Center and the Oregon Convention Center. This series of regionally-scaled facilities, while serving important functions, presents a gauntlet of physical and psychological barriers between central parts of the quadrant and north/northeastern neighborhoods and the rest of the Central City and the Willamette River. A new, centrally-located east-west system of linked public spaces would help quadrant residents, workers and visitors negotiate the gauntlet and reach destinations south and west of the freeways and large event facilities.

The linked public space system would also provide compelling amenities around which to organize new development. To date, the district has seen public event, some streetscape, transit and other transportation-related improvements, but precious few new public parks or open spaces to augment Holladay Park. New, high density employment, institutional and residential uses in the quadrant will need to be supported by new parks and open spaces offering opportunities for recreation, relaxation and respite. Linking new facilities to each other and existing open spaces like Holladay will increase the functionality of the overall system and its service to a variety of potential new users.

5

Proposed Concept Maps

The proposed concept is outlined in the maps on the following pages. The first concept map displays predominant land use; the proposed supporting infrastructure systems are displayed on the following pages.

Predominant Land Use
Each "bubble" on the districts/places maps reflects the predominant land uses that would be encouraged under that development type. With the exception of industrial areas, other uses would generally continue to be allowed, and some mixing of uses would be expected. The following predominant uses are shown on the maps:

High density office, employment: A highly developed office district, with buildings ranging from 6 – 20 plus stories. Ground floor retail and service uses would be expected.

Mixed high density residential, office: High density office, employment uses interspersed with high density residential uses. Buildings ranging from 6 – 20 plus stories.

Industrial, employment: Low-level buildings housing light industrial uses, such as manufacturing and warehousing. Industrial areas are typically set aside exclusively for industrial uses, with the exception of very small scale service uses.

Mixed commercial, employment: An eclectic mix of uses that could include residential, retail, office and light industrial.

Mixed commercial, employment, residential: Mixed commercial and employment uses that also could include residential uses. Scale could vary greatly depending on location.

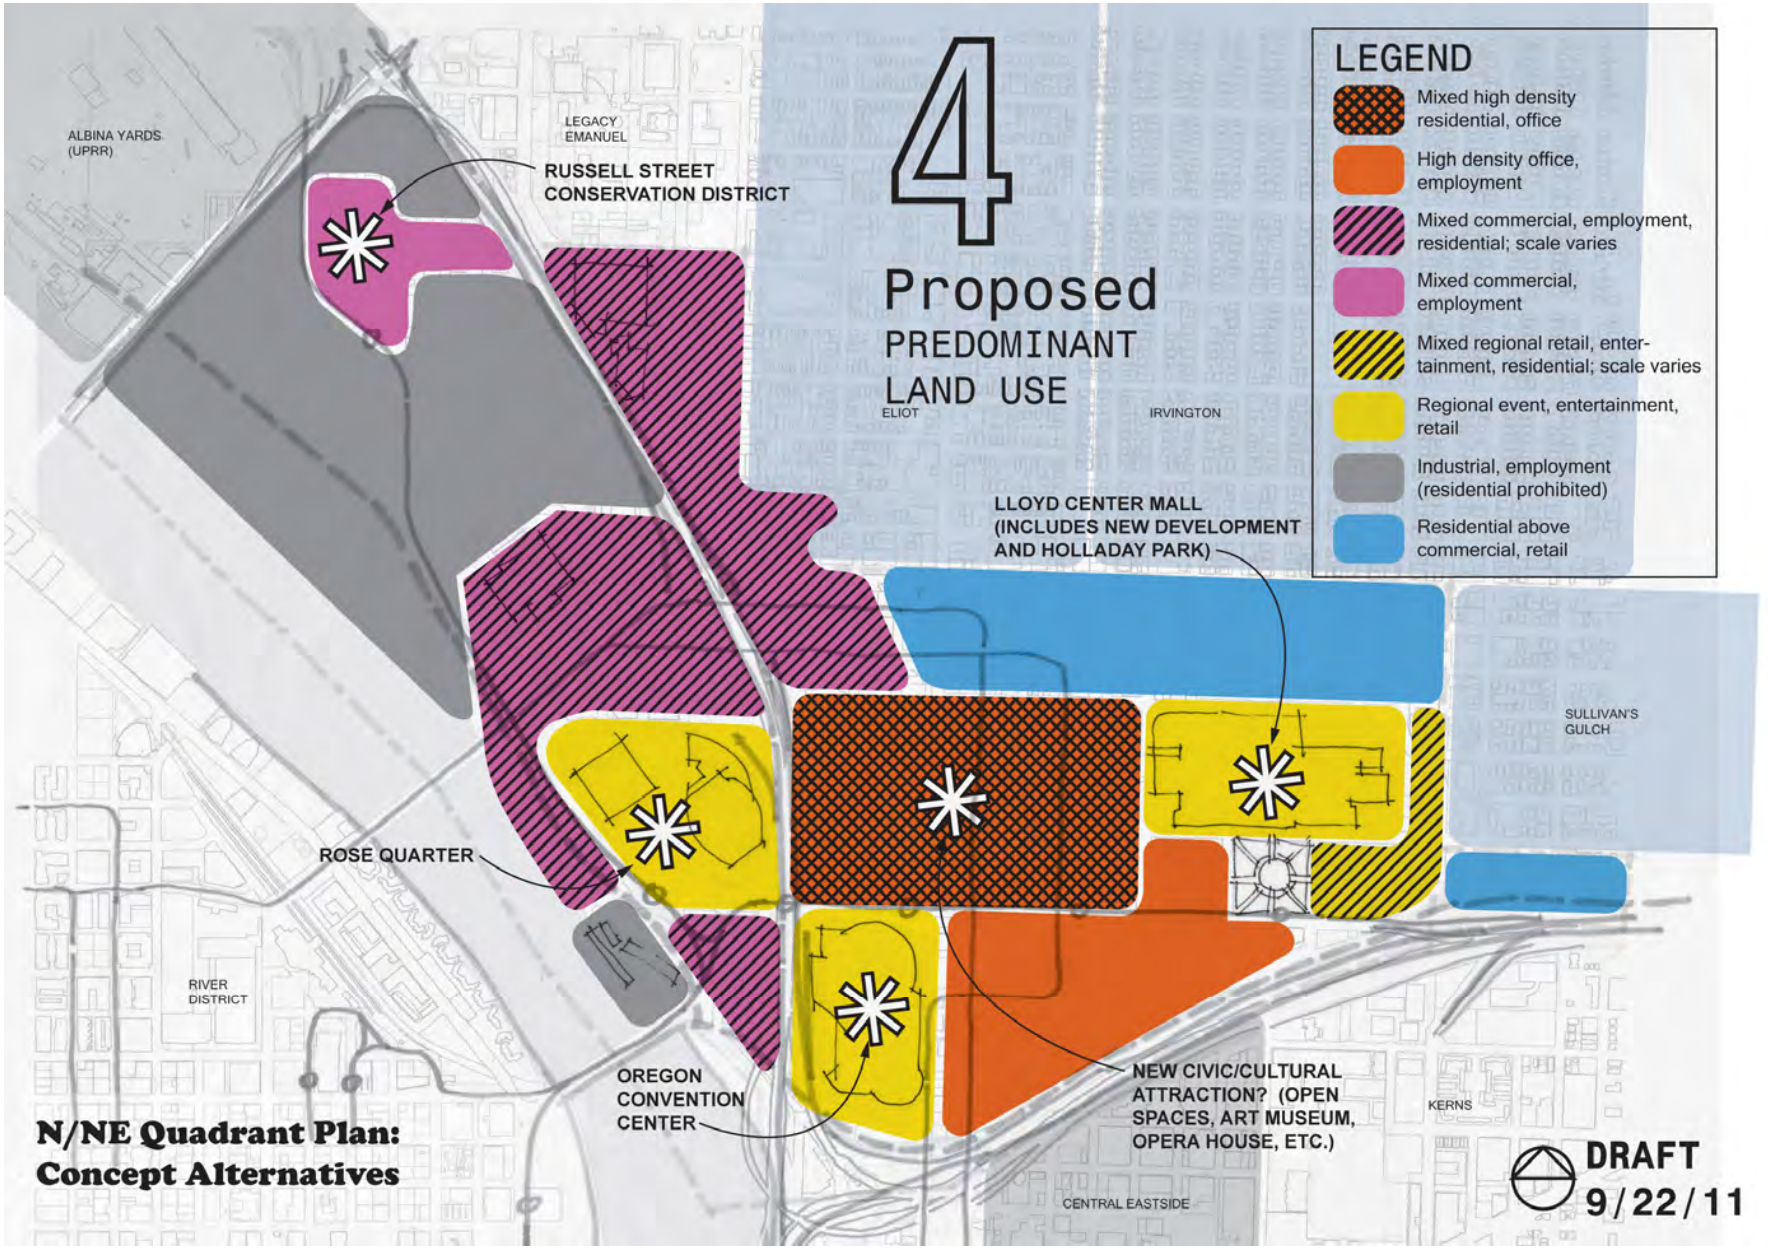
Residential above commercial, retail: Mid-rise buildings (2 – 6 stories) located on busier streets. Ground floor retail or service uses with residential uses above.

Regional event, entertainment, retail: Predominant uses have a regional draw and are characterized by large footprint buildings. Hotels and restaurants could also be expected to locate in the area.

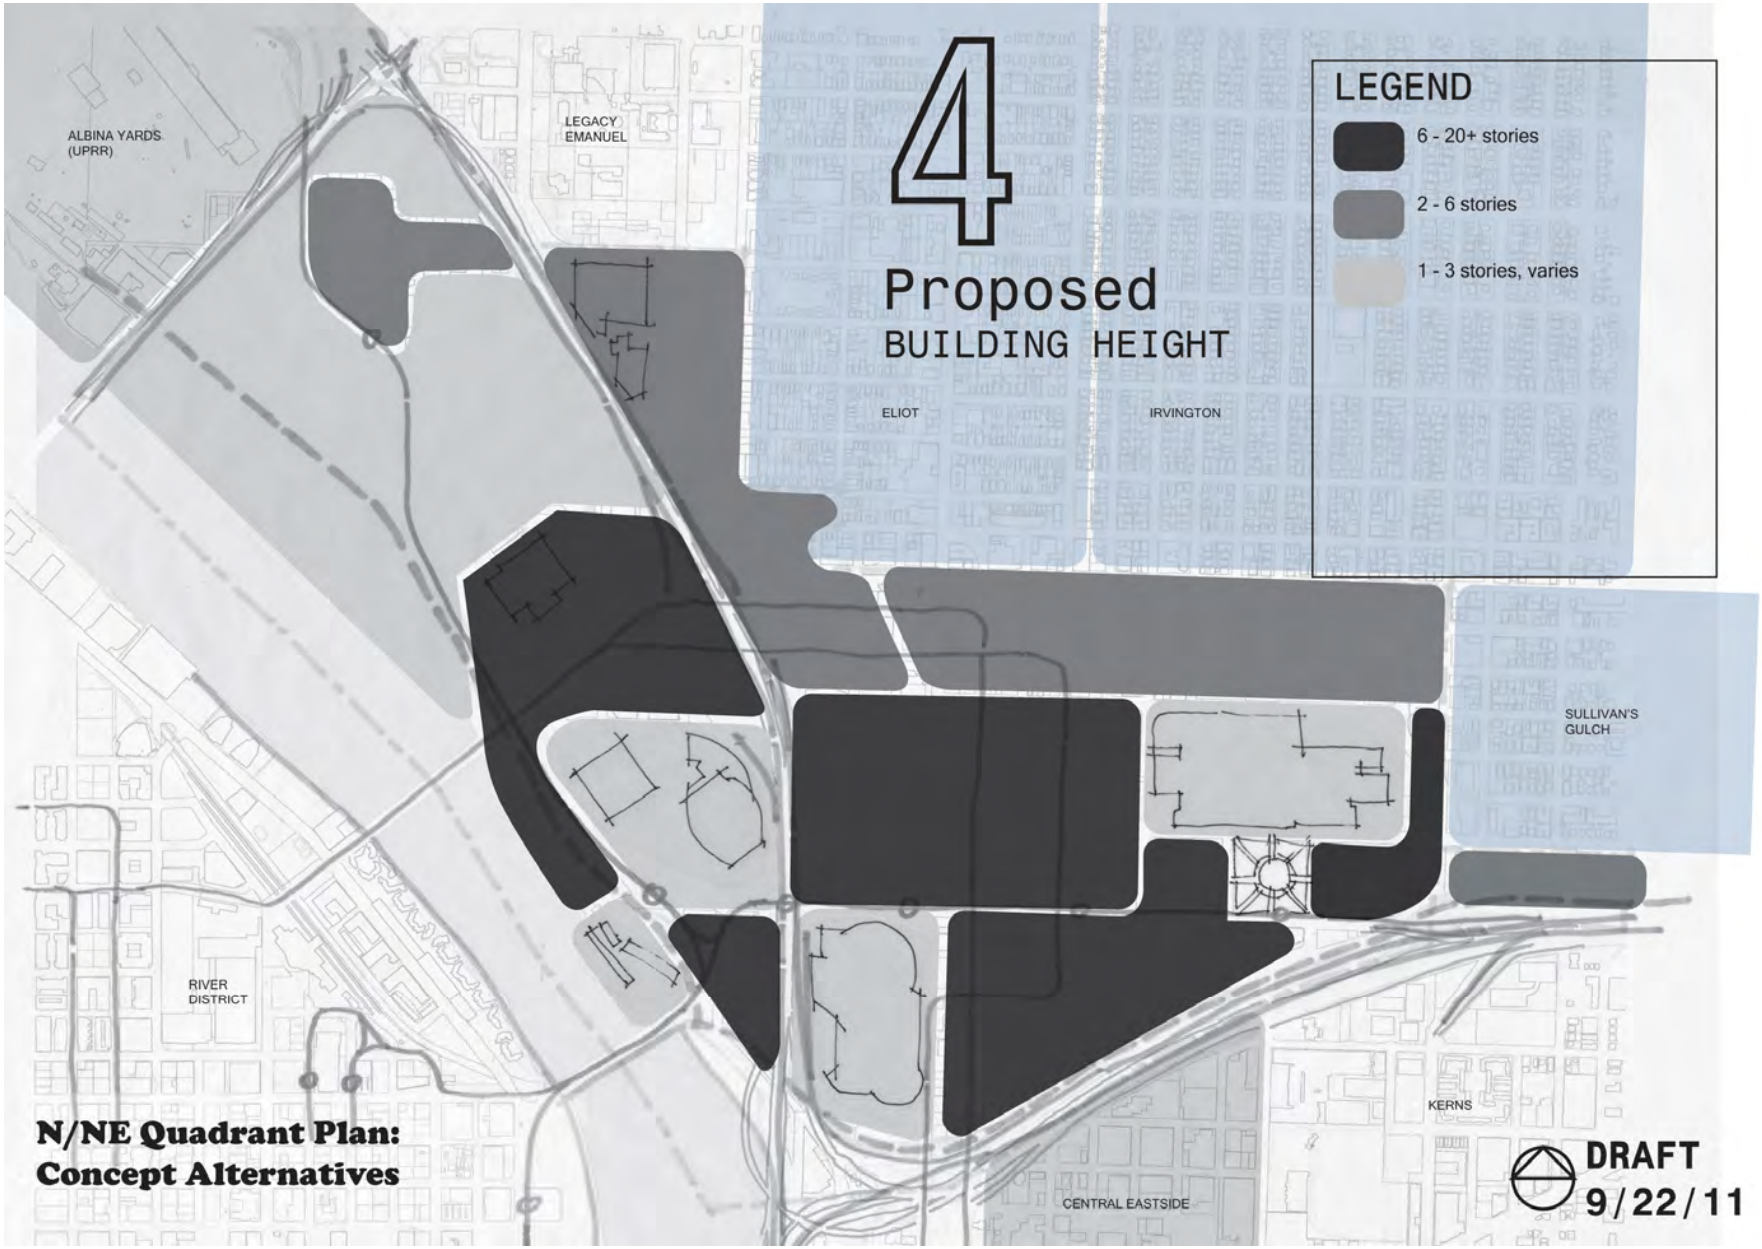
Mixed regional retail, entertainment, residential: Regional event, entertainment and retail uses mixed with residential uses. See above for more information.

Building Height/Scale
The building height map shows proposed building height categories to provide a sense of development scale that could be achieved in the quadrant.

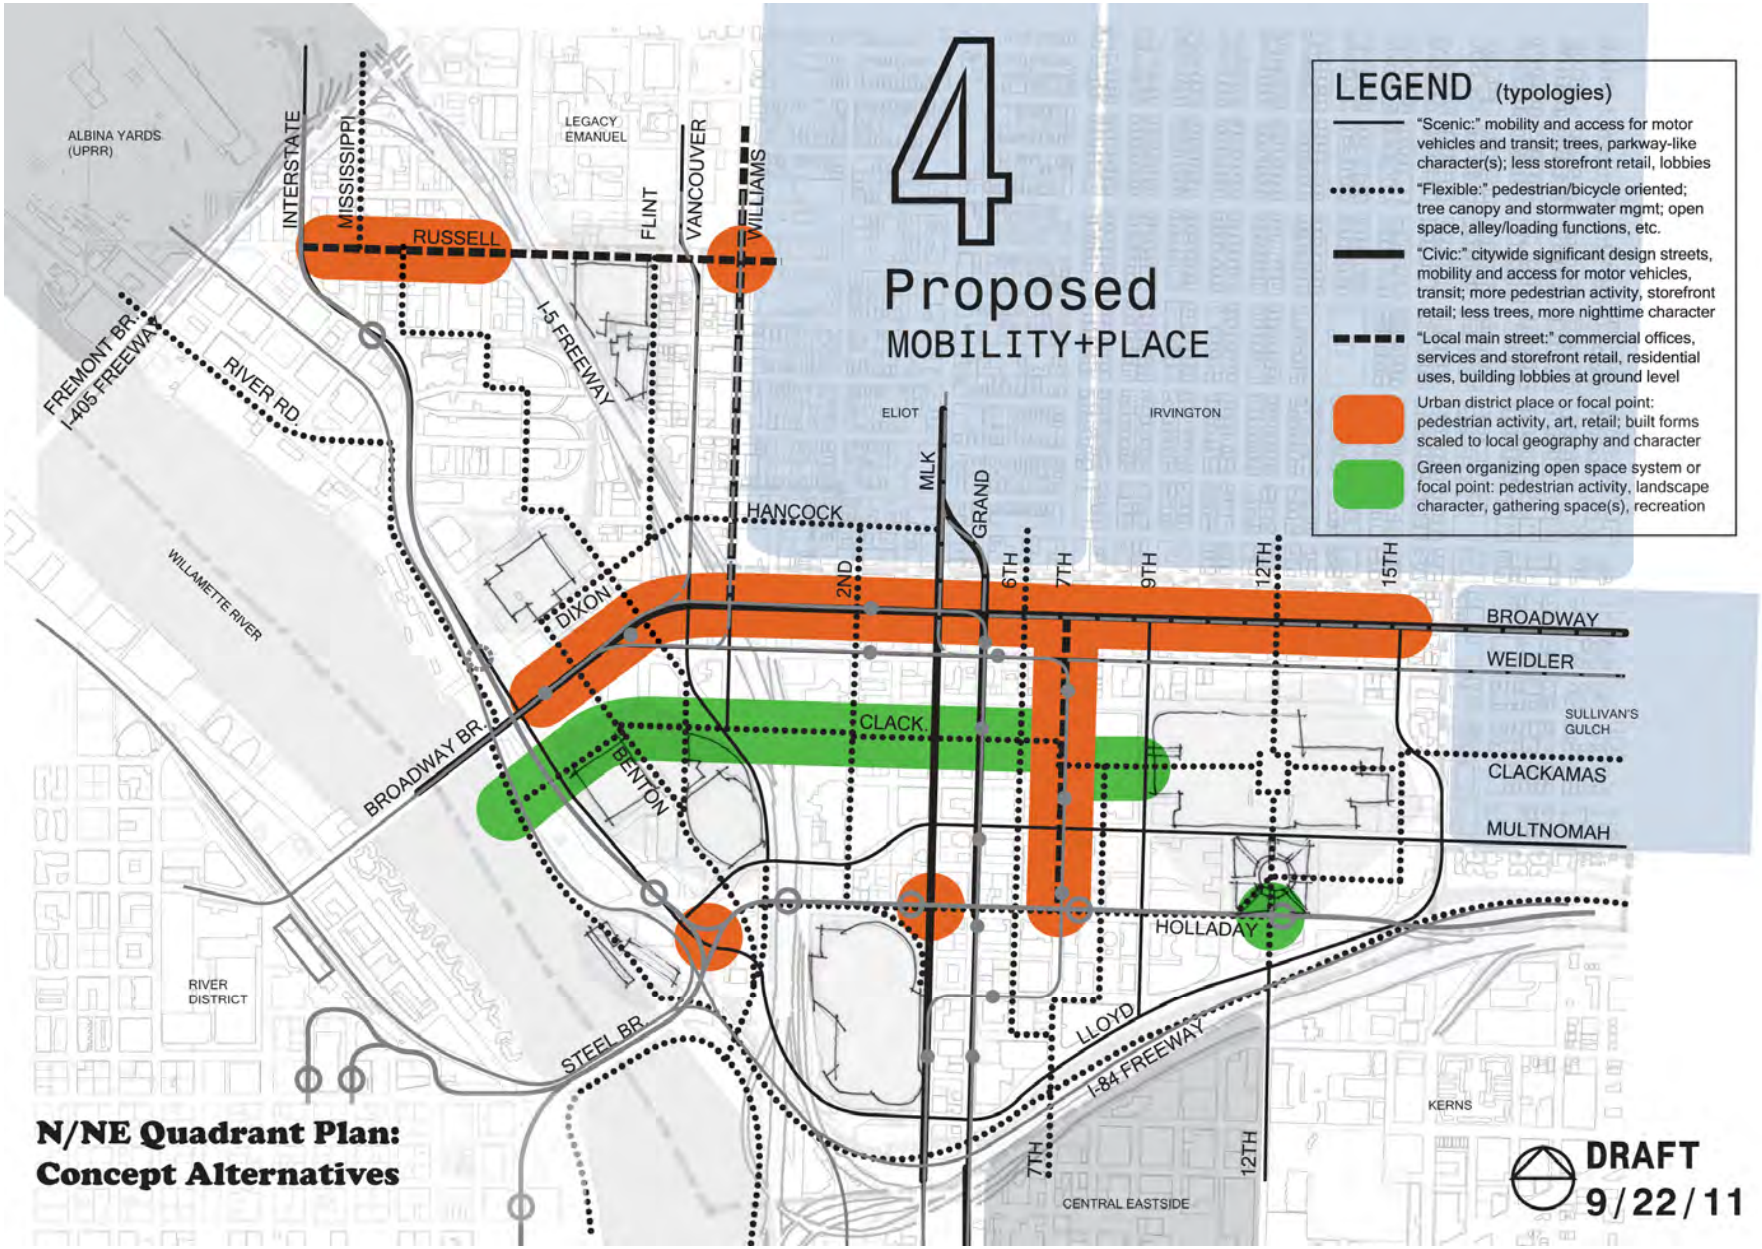
Places + Mobility
Urban district place or focal points: Nodes or corridors that could serve as focal points in the district, potentially centered on storefront retail, pedestrian activity or other attractions, with forms scaled to local geography and character.
Green organizing open space system or focal points: Focal points in the district, potentially centered on pedestrian activity, landscape character, gathering spaces, recreation or other open space attractions.



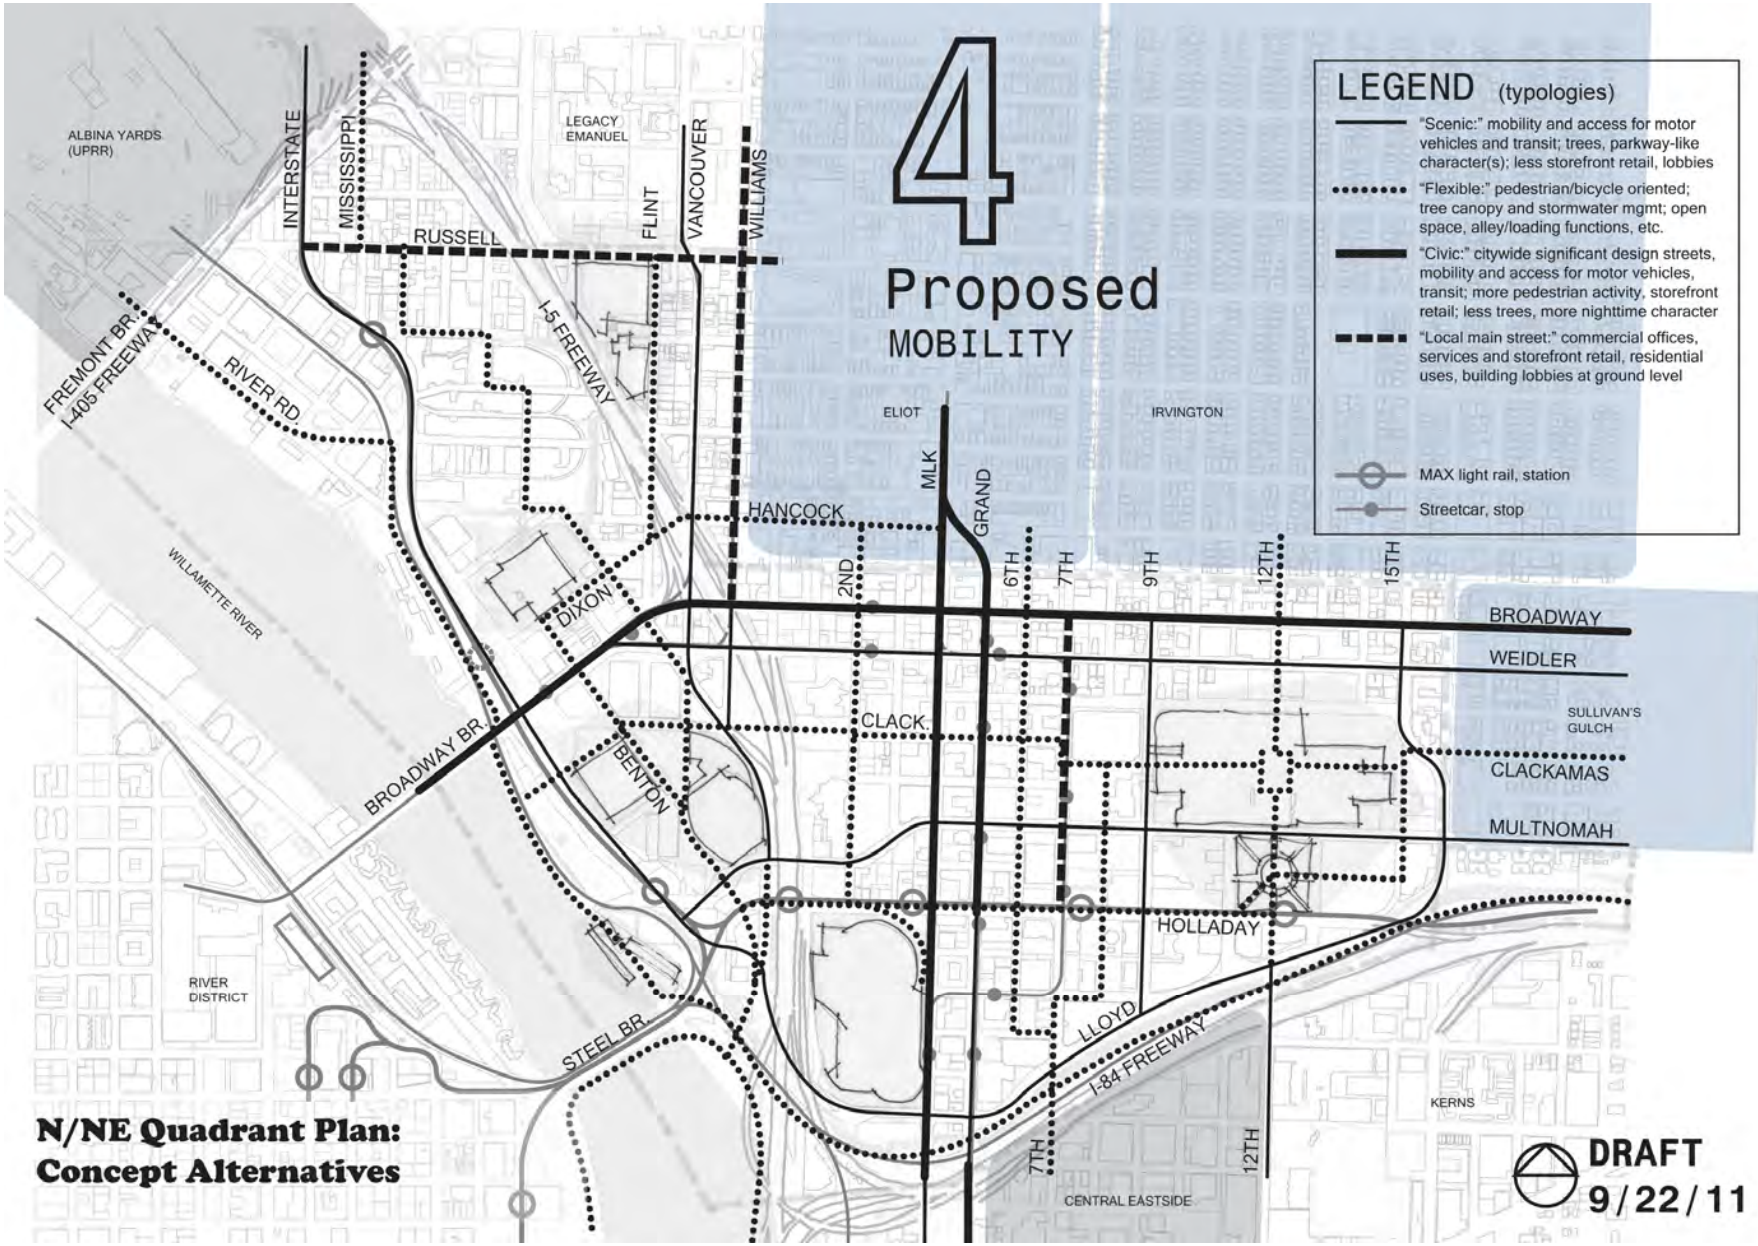
Supporting Infrastructure
The **mobility systems** map illustrates options for the creation of a clearer street hierarchy for the quadrant that emphasizes the development of different streets with distinctly different characters and development responses. The proposed hierarchy includes the following street typologies:



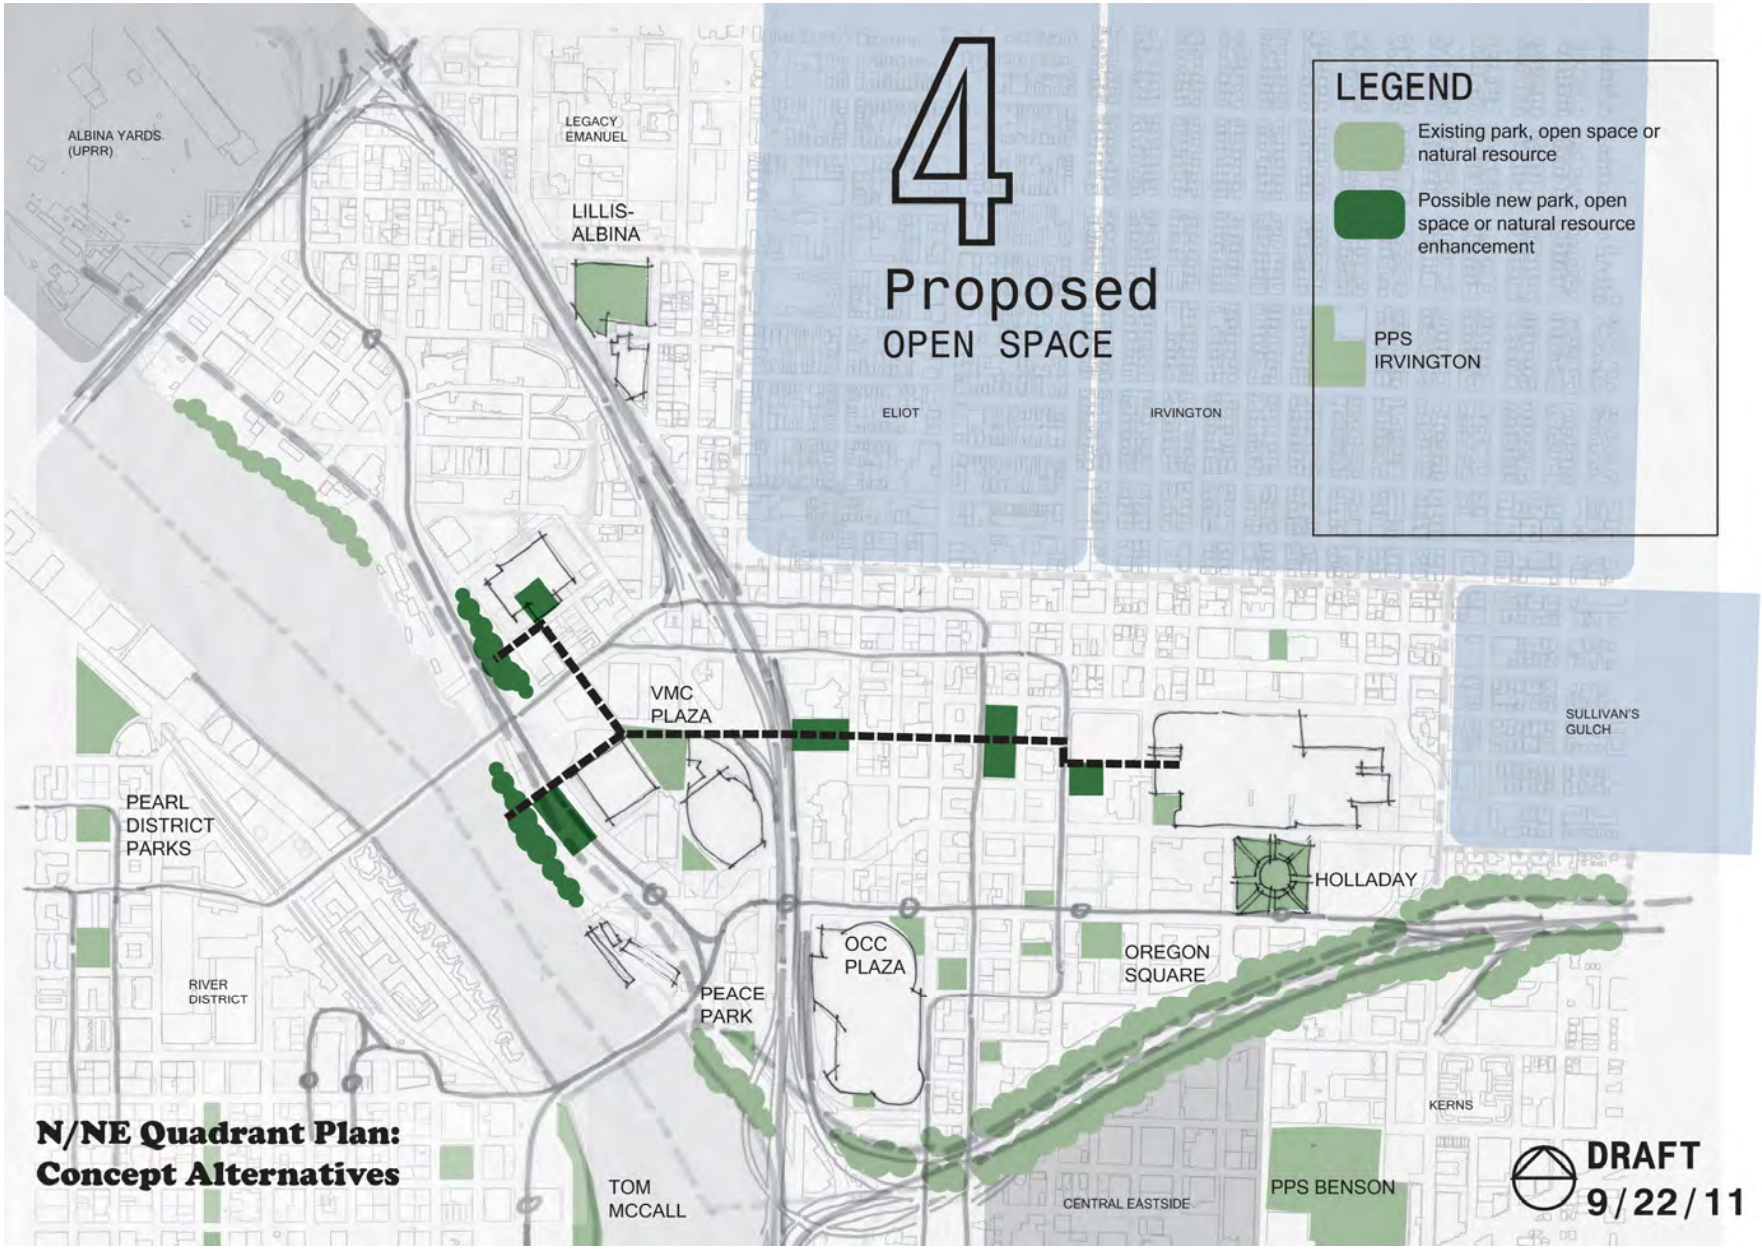
- Civic: Active focal points for new high-density development, offering good transit service, pedestrian-oriented amenities and unique signage and lighting.
- Local main: Active streets with local serving retail, commercial and residential development. Less busy than civic streets.
- Scenic: Less active than civic or local streets, but have more street trees and landscaping.
- Flexible: Streets or pathways that offer an alternative, quieter system of mobility, oriented toward pedestrian and bicycle movement.



The proposed concept includes an **open space** map that illustrates a new open space framework for the quadrant that would serve anticipated residential and employment populations. The proposed concept includes a series of new parks organized along an improved Clackamas Street from the Lloyd Center to the Willamette River.



The **green systems** map illustrates how the Lloyd Ecodistrict effort will integrate green systems and facilities in the quadrant to improve its long term resiliency. The green systems components include the following:



- Water Quality Corridors: Corridors that improve and celebrate surface treatment of stormwater runoff.
- District Energy: A system that could facilitate shared energy production and distribution between different businesses, uses and facilities.
- Rainwater Harvesting: Different strategies for rainwater harvesting, reuse and/or treatment throughout the quadrant.

Concept Alternative Comparison

The chart below presents a comparison of predominant land use designations as represented in existing conditions, the three concept alternatives (residential, employment, blend) and the proposed concept. The table on the reverse compares the concepts using GIS based techniques. The figures are approximate and are intended to be used for a general comparison of the concepts.

Predominant Land Use/Development Type

SAC Meeting – 9/29/11

Concept Alternative Comparison Table

	Existing Conditions	Residential (concept 1)	Employment (concept 2)	Blend (concept 3)	Proposed Concept
Land Use					
Estimate Total Jobs at buildout	21,689	28,715	34,434	32,412	31,316
Estimate Total Housing Units at buildout	1,252	11,408	3,656	8,177	7,007
Estimate Total Residents at Buildout (Assuming 1.5 persons/HH *Subarea Profiles)	1878	19,616	5,484	12,266	10,511
Estimate Jobs/Housing Unit Ratio	17:1	2.5:1	9:1	4:1	4.5:1
Employment Density (jobs/acre)	65	86	103	97	94
Residential Density (units/acre)	4	34	11	24	21
% 2035 Metro Forecast Housing	32%	294%	94%	211%	180%
% 2035 Metro Forecast Jobs	71%	94%	113%	106%	102%
Mobility (miles by street hierarchy type)					
Civic	n/a	5.5	3	3.75	2.25
Local "Main Street"	n/a	n/a	n/a	n/a	1.5
Scenic	n/a	5.75	9	7.75	6.75
Ped/Bike Focus	1.5	10	5.25	7	9.75
# Freeway crossings	14	17	15	15	16
Open Space					
Approx. number of park spaces	10	13	17	13	18
Approx. acreage	14.5	26	18.5	20	24
resident / OS Acres	130	754	296	613	438

Waste Digesters	n/a	0	2	1	0

Proposed 70% Concept Alternative Staff Recommendations (DRAFT 9/23/11)

This document presents draft staff recommendations that respond to the issues, opportunities and questions outlined in the workbook and concept alternatives surveys. These recommendations are reflected in the proposed concept alternative and will become the foundation for the next phase (IV) to develop the N/NE Quadrant Plan's goals, policies, objectives, strategies and actions.

Quadrant-wide Questions

Districts/Places

1. **Which of the following objectives are most important in determining the types of uses that should be encouraged in the quadrant:**

   - **Creating vibrant districts with more 24 hour activity**
   - **Encouraging additional residential opportunities**
   - **Expanding employment opportunities**
   - **Providing a lively entertainment scene**
   - **Offering additional public space for civic and community activities**
   - **Supporting existing uses in the area**

   Background: During the issue identification phase of the project, all of the above issues emerged as important in the quadrant. This question was asked to gauge priority.

   Outreach feedback: Creating vibrant 24 hour districts received the most support in the survey results, followed by encouraging addition employment opportunities, offering additional public space and encouraging addition residential opportunities.

   Staff recommendation: The proposed concept provides a wide range of opportunities to address these objectives.

2. **The current mix of uses in the quadrant has a high level of employment and regional attraction uses and a low level of residential uses, which results in a lack of overall vibrancy. Should the plan encourage this mix to change? If so, in what ways should the mix of uses be encouraged to change?**

   - **Encourage additional employment and regional attraction uses**
   - **Encourage slightly more residential use**
   - **Encourage significantly higher levels of residential use**

   Background: The project goals adopted by the SAC call for a more diverse mix of uses than is currently present in the quadrant. It has been suggested that residential development would help balance the episodic nature of the entertainment uses and contribute to a more vibrant district.

   Outreach feedback: 74% of survey respondents want the mix of uses to change in the quadrant, with the majority favoring higher levels of residential use.

Staff recommendation: The proposed concept calls for a mix of high-density residential and office development in Central Lloyd to balance the episodic nature of the entertainment uses and support additional main street commercial development in the area.

3. **Which concept alternative do you feel best illustrates the appropriate mix of uses for the quadrant? Concept 1: Residential Emphasis; Concept 2: Employment Emphasis; Concept 3: Residential/Employment Blend**

   Background: Three concepts were developed to illustrate different development patterns that could occur over time based on discussions with the public, SAC and land use charrette participants. The concepts were based on three broad land-use options, residential, employment and residential/employment blend, with supporting infrastructure concepts.

   Outreach feedback: Over 70% of survey respondents prefer the residential/employment blend concept. Discussions with other stakeholders and community groups also suggest strong support for a blend concept.

   Staff recommendation: The proposed concept is a revised version of the blend concept.

Mobility

1. **Civic corridors are active focal points for new high-density development, offering good transit service, pedestrian-oriented amenities and unique signage and lighting. In the final plan, which of the following streets should have this emphasis?**

Broadway	**Grand Avenue**	**Lloyd Boulevard**
MLK Boulevard	**Multnomah Avenue**	**Russell Street**
Vancouver Avenue	**Weidler Street**	**Williams Avenue**

   Background: The three alternatives proposed different street hierarchies for the quadrant that emphasized the development of different streets with distinctly different characters and development responses. The proposed hierarchy includes “civic” streets that are active focal point for high-density development, “local main” streets that have commercial and residential development on a smaller scale, “scenic” parkways that have less activity but more tree canopy and landscaping, and smaller, quieter and safer “flexible” routes that are oriented to pedestrian and bicycle movement.

   Outreach feedback: Survey respondents strongly favored Broadway and MLK as the quadrant’s civic corridors with lesser support for Grand, Weidler and Williams.

   Staff recommendation: The proposed concept includes a civic corridor emphasis for Broadway, MLK Blvd. and parts of Grand Avenue. The “local main street” category emerged to respond to the desire for a street typology more suited to main street commercial corridors. The proposed concept envisions Russell St., Williams Ave., and 7th Avenue as local main streets.

2. **Scenic parkways offer good access into and through the quadrant and are defined more by street trees and landscaping; in the final plan, which of the following streets should have this emphasis?**

1st Avenue	**2nd Avenue**	**15th Avenue**	**Weidler Street**
Broadway	**Clackamas Street**	**Grand Avenue**	**Williams Avenue**
Interstate Avenue	**Lloyd Boulevard**	**MLK Boulevard**	
Multnomah Avenue	**Russell Street**	**Vancouver Avenue**	

Background: Staff is proposing new options for a clearer street hierarchy for the quadrant that emphasizes the development of different streets with distinctly different characters and development responses. The proposed connectivity system integrates the quadrant's land use proposals and includes "civic" streets that are active focal point for high-density development, "local main" streets that have commercial and residential development on a smaller scale, "scenic" parkways that have less activity but more tree canopy and landscaping, and smaller, quieter and safer "flexible" routes that are oriented to pedestrian and bicycle movement.

Outreach feedback: Although there was not a strong front runner for this question, survey respondents preferred a scenic focus for 15th, Lloyd, Vancouver, Interstate and Russell.

Staff recommendation: The proposed concept includes a "scenic" emphasis for 9th, 15th, parts of Grand, Interstate, Lloyd, Multnomah, Vancouver, and Weidler.

3. **Flexible streets or pathways would prioritize bicycle and pedestrian trips, providing additional, low stress access throughout the quadrant via streets carrying fewer or no motorized vehicles; in the final plan, which of the following streets should have this emphasis? Choose four.**

2nd Avenue	**6th Avenue**	**8th Avenue**	**The "strand"**
12th Avenue	**Clackamas Street**	**Dixon Street**	
Flint Avenue	**Halsey Street**	**Holladay Street**	
Hancock Street	**Hassalo Street**	**Page Street**	

Background: Staff is proposing new options for a clearer street hierarchy for the quadrant that emphasizes the development of different streets with distinctly different characters and development responses. The proposed connectivity system includes quiet and safe "flexible" routes that are oriented to pedestrian and bicycle movement. In addition to enhancing ped/bike facilities on existing streets, the larger block pattern in the quadrant offers new opportunities for ped/bike connectivity as connections can be incorporated into superblock developments.

Outreach feedback: The streets that received the strongest support to have a flexible focus in the survey responses are Holladay, the "strand" and Hancock.

Staff recommendation: The proposed concept places a great emphasis on the opportunity of strengthening district identity and connectivity by creating a comprehensive and fine grained network of pedestrian /bicycle routes woven between the busy streets and land uses in the quadrant. This includes a "flexible" emphasis for Benton, Clackamas, Flint, Hancock/Dixon, Holladay, Wheeler, 2nd, 6th, 12th, parts of 8th and 15th, and area paths including the Greenway Trail, the strand and the Sullivan's Gulch trail.

4. **Please rank the importance of improving pedestrian and bicycle connections across I-5, across I-84 and to the riverfront.**

   Background: I-5 and I-84 provide vital regional access to and from the quadrant, but also create challenges to connectivity. Ped/bike access to the river is also constrained by heavy infrastructure that serves the industrial waterfront, such as the railroad line.

   Outreach feedback: The majority of survey responses indicated that connections across I-84 and I-5 are most important, followed by connections to the riverfront. Written responses indicated that crossing improvements at MLK/Grand would also be useful.

   Staff recommendation: The proposed concept suggests a ped/bike focus for Clackamas with a new crossing over I-5, a new crossing over I-84 at 7th, and ped/bike improvements for the existing I-84 crossing at 12th. A fully developed Greenway trail and the proposed Sullivan's Gulch trail would also improve access to the river.

Open Space

1. **What type of open space and civic amenities would best suit the needs of the quadrant area?**

   New large, centralized park
   String of mid-sized public parks
   Series of connected, private plazas
   Civic or cultural feature

   Background: To date, the quadrant has seen significant public facilities, transit and other transportation-related improvements, but few new public parks or open spaces. New, high density employment, institutional and particularly residential uses in the quadrant will need to be supported by new parks and open spaces offering opportunities for recreation and relaxation. Linking new facilities to each other and existing open spaces like Holladay will increase the functionality of the overall system and its service to a variety of potential new users.

   Outreach feedback: The majority of survey responses support development of a string of mid-sized public parks with smaller semi-private spaces interspersed in new developments. A minority view favors the idea of a large signature open space somewhere in the Central Lloyd. There is strong interest in new public space at the river's edge in front of the Memorial Coliseum.

   Staff recommendation: The proposed concept includes a series of new parks organized along Clackamas Street from the Lloyd Center to the Willamette River. As a middle ground, the proposed concept suggests the central park could be larger than the others. A future public open space is included at the Willamette River.

2. **What type of functions should open spaces in this area support?**

   Athletic field
   Children's play area
   Community garden
   Habitat/natural system
   Hard courts (basketball, tennis)
   Picnic/lunch space
   Skate park
   Urban plaza

   Background: New, high density employment, institutional and residential uses in the quadrant will need to be supported by new parks and open spaces offering opportunities for recreation, gathering

and relaxation. Linking new facilities to each other and existing open spaces like Holladay will increase the functionality of the overall system and its service to a variety of potential new users.

Outreach feedback: Picnic/lunch space function for new open spaces received the most support in the survey responses, followed by urban plaza and habitat/natural system.

Staff recommendation: The flexible nature of the string of parks included in the proposed concept lends itself to flexibility as different parks can be oriented to meet different needs.

Green Systems

1. **What green infrastructure systems should be encouraged in the N/NE Quadrant?**
   Stormwater capture and reuse systems **Locally-produced, renewable energy**
   Water quality corridors to clean and infiltrate stormwater **District energy**

   Background: The proposed concept includes options to integrate green systems and facilities into the quadrant to support the Lloyd Ecodistrict effort and improve its long term resiliency. Water quality corridors that infiltrate stormwater improve conditions in local streams and rivers by filtering out pollutants contained in runoff and moderating water flow to the drainage systems. Stormwater systems that are designed to capture and reuse rainwater reduce the need to draw water from other supplies and prevent runoff, improving water quality in areas where infiltration is not used. District energy is a system that can facilitate shared heating and cooling between different facilities and locations, which is often more efficient and reliable than traditional systems and can help users lower costs by taking advantage of economies of scale. Using local, renewable energy sources reduces demand for fossil fuels and can limit emissions.

   Outreach feedback: All options for green infrastructure systems received fairly strong support in the survey responses.

   Staff recommendation: The proposed concept calls for water quality corridors along Lloyd, Holladay, Clackamas, Vancouver, 6th and 15th. Rainwater capture systems could be established along Williams, Broadway, Clackamas, Multnomah, Holladay and Lloyd. District energy is envisioned around the Rose Quarter and OCC facilities with a spine extending east along Clackamas to allow future development to connect.

2. **How should natural systems be improved in the quadrant?**
   Increased tree canopy **new/enhanced habitat**
   Use of native vegetation

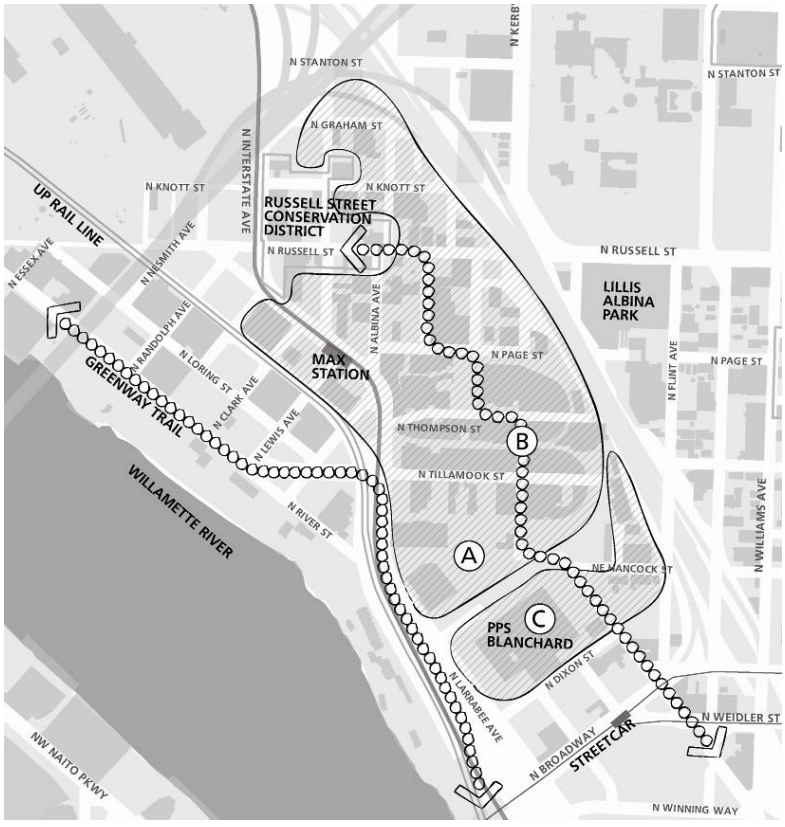
   Background: Natural resources in the N/NE Quadrant have been identified along the Willamette River (shallow water habitat and riverbank vegetation) and in Sullivan's Gulch (vegetation). There is a strong desire to improve natural systems in the quadrant through a variety of means.

   Outreach feedback: All options for improving natural systems received fairly strong support in the survey responses.

Staff recommendation: The proposed concept includes enhanced habitat and tree canopy in water quality corridors, as described above. The draft plan will likely include other action items about improving natural systems throughout the quadrant. Actions along the riverfront could include encouraging removal of unnecessary rip rap, expanding shallow water habitat and creating microhabitat along the river bank. Throughout the quadrant, actions could include removing invasive species and incorporating native plants into existing and new landscaping.

3. **If you would like to see new/enhanced habitat, where should we encourage it?**
   Sullivan's Gulch **Willamette Riverfront**
   Other

Background: Much of the Willamette Riverfront in the quadrant hosts active heavy industrial uses that constrain opportunities for large-scale habitat enhancement. There may be opportunities for small scale enhancement (microhabitats). There are greater opportunities to develop new or enhanced habitat for birds and insects by adding native vegetation throughout the quadrant. Sullivan's Gulch is currently vegetated, but could be enhanced by replacing non-native and invasive plants with native vegetation.



Outreach feedback: Survey responses showed strong support for new or enhanced habitat in both Sullivan's Gulch and along the Willamette Riverfront.

Staff recommendation: The proposed concept does not address issues at this level of detail. The draft plan will likely include action items about improving natural systems throughout the quadrant.

Subarea Choices

Subarea 1 – Lower Albina Industrial

A. **Should the plan increase flexibility by allowing more creative office uses in Lower Albina, such as R&D, software development and media production?**

Background: The portion of the subarea shown as "A" is zoned General Industrial (IG1), with strict limits on non-industrial uses. Increasing flexibility to allow a wider range of compatible employment uses could increase job density, capture growing industry sectors, and foster the continued vitality of Lower Albina as an employment center and business incubator. An example approach taken in the Central Eastside

Economic Opportunity Subarea (EOS) allows additional flexibility for certain kinds of "Industrial Office" uses, while prohibiting residential development, which creates conflicts with industrial activities. See attached IG1 zone informational handout (attached) for more details.

Outreach feedback: Survey responses and discussions with the Eliot Neighborhood Association show strong support for increasing flexibility. Discussion with a small group of Lower Albina stakeholders revealed qualified interest in allowing additional employment types, with concerns voiced about erosion of the Industrial Sanctuary and the potential for conflicts with existing and future industrial activities (e.g. conflicts with freight movement, parking issues and complaints about noises and smells). They strongly felt residential uses should continue to be prohibited. The Local Land Use/Urban Design/Transportation Subcommittee (9/14/11 meeting) generally supported the idea of additional flexibility through an Employment Opportunity Subarea approach or perhaps application of the General Employment (EG1) zone.

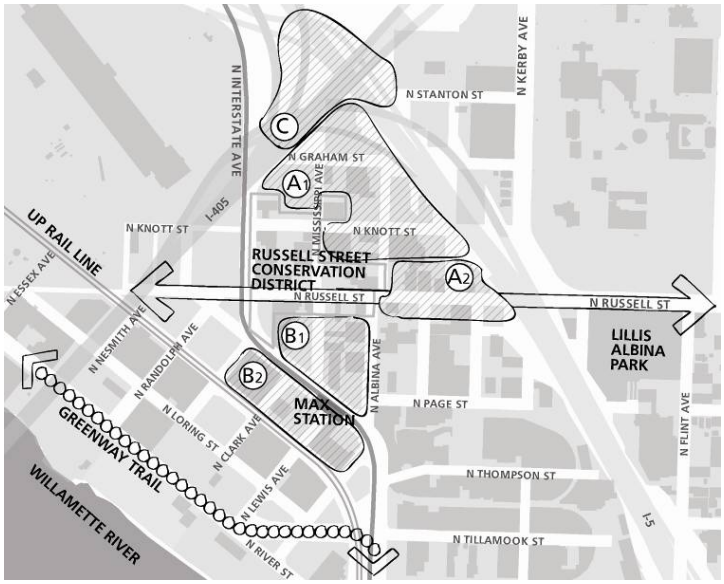
Staff recommendation: Apply the Employment Opportunity Subarea provisions currently used in parts of the Central Eastside to the portion of the Lower Albina IG1 zone shown as area "A" in the Subarea 1 map, above. These provisions are described in more detail in a separate document "Central City IG1 Zone: Existing Non-Industrial Land Use Allowances." Staff believes this targeted approach is less likely to result in land use conflicts with industrial activities than applying the EG1 zone, which has broader allowances for office and retail uses and the potential for residential development.

B. Should the plan call for "the strand" to create greater bicycle and pedestrian connectivity through Lower Albina to link the Russell St area to the Rose Quarter?

Background: A desire has been expressed to better connect the Lower Albina area to the rest of the N/NE Quadrant (particularly to the Rose Quarter and Lloyd District). The idea of "the strand" came out of the land use charrette (February, 2011). It is envisioned as a pedestrian-friendly alternative to N. Interstate Avenue and could include improvements to local streets and new connections where there are currently gaps in the network.

Outreach feedback: Survey responses showed strong support for developing the strand. The Eliot Neighborhood Association supports the idea but would like more definition about how it would be implemented. No clear consensus emerged from the Local Land Use/Urban Design/Transportation Subcommittee (9/14/11 meeting) on this issue. Some attendees expressed support while several had questions about the strand's purpose and intended users. Others were concerned about potential conflicts with industrial activity, and some felt the strand was not needed unless Lower Albina were to become more of a mixed-use district.

Staff recommendation: The proposed concept continues to include the idea of "the strand". However, the idea clearly needs additional study and discussion with the property owners and businesses in the area. This concept could ad to a system of north-south connectivity in an area where the I-5 freeway and heavy industrial infrastructure limits these opportunities. Staff is leaning toward including an action item in the draft plan calling for further study and refinement of the strand concept.



C. Should the zoning for the PPS Blanchard Site and adjacent properties to the east be changed to allow more land use flexibility to encourage future redevelopment of the sites? Ideas for the site have included retail, research and development and mixed use residential.

Background: Portland Public School's (PPS) headquarters building, the Blanchard Educational Service Center, is currently zoned for industrial use. PPS has expressed interest in moving their headquarters to another location in the City, which would open up a large site for redevelopment opportunities that could complement proposed redevelopment in the core area of the Rose Quarter. Most redevelopment options would require a change in zoning to allow a broader range of uses.

Outreach feedback: Survey responses show support for increasing the flexibility of uses on the site, with the strongest support for mixed-use residential, following by moderate support for retail, research and development and office redevelopment. The Eliot Neighborhood Association supports the idea of increasing flexibility on the site, particularly if future development includes elements that serve the surrounding neighborhoods, such as a grocery store. Lower Albina stakeholders voiced concerns about allowing residential uses on the site, particularly the northern portion closest to nearby industrial activities.

Staff recommendation: The proposed concept suggests rezoning the properties to allow future mixed-use redevelopment. Further analysis and discussion of redevelopment options is needed to refine the preferred mix of uses and identify regulations related to height and FAR.

Subarea 1a – Historic Russell Street

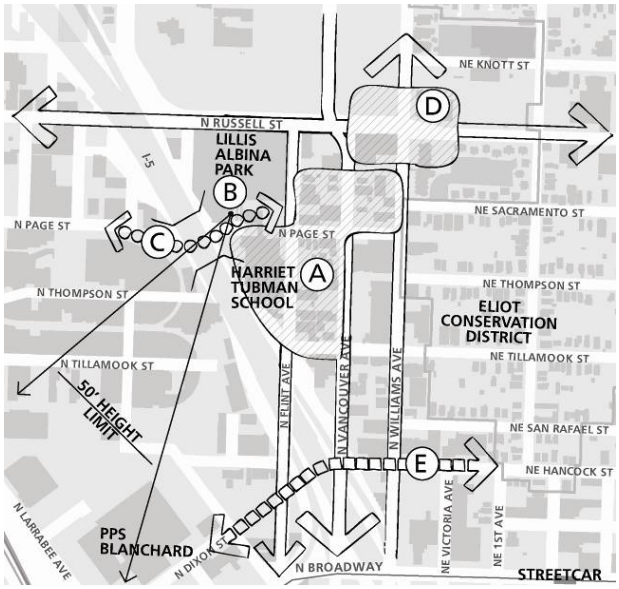
A/B. Which uses should the plan encourage in the following areas: north of Russell St (A1), along Russell St. to the east of the Conservation District (A2), north of the MAX station (B1) and south of the station (B2)? Options include residential, commercial, mixed use and office.

Background: Lower Albina is anchored by a small mixed-use historic area along Russell St., currently zoned EX and designated as a Conservation District. This area is home to a vibrant mix of restaurants, bars and other small-scale retail establishments that balances active late afternoon/evening activities with the industrial morning/afternoon activities. The area of mixed-use zoning is limited to two blocks on both sides of Russell Street. East of this area to the I-5 underpass, properties fronting Russell Street are zoned industrial. However, these blocks are also identified as a residential target area and have design review and other requirements conflicting with industrial base zoning.

The MAX Yellow Line Station on Interstate Ave was originally proposed at the foot of Russell Street adjacent to the mixed use historic main street, but the station was ultimately built a block south on Interstate and is currently surrounded by industrial zoning. It has been suggested that mixed-use zoning is more appropriate in such close proximity to the MAX station.

Outreach feedback: Survey responses show support for mixed-use and commercial development in all areas. Residential uses received minority support in all areas, with the strongest support in the area north of Russell Street. Written survey responses and feedback from the Eliot Neighborhood Association and the Portland Freight Committee express concern about constraining industrial uses and residential/industrial use conflicts. These concerns were also heard from Lower Albina stakeholders, with some support for a limited expansion of mixed-use zoning east along Russell (area A2).

Staff recommendation: The proposed concept suggests modest expansion of mixed-use zoning near the Russell St. Conservation District by extending EX zoning to allow a range of mixed-use development (including residential uses) east along Russell street (area A2) and immediately north of the MAX station (area B1). Further analysis and discussion of options for additional development regulations in these areas, e.g. potential limits to residential allowances is needed. The proposed concept retains existing IG1 zoning in areas A1 and B2.



C. How should the area under the I-5/I-405 Freeway Interchange be utilized? Ideas have included active recreation suitable for a paved environment, such as a skate park or tennis courts.

Background: This subarea is surrounded to the north and east by residential neighborhoods. Additional recreation and park space could serve the needs of area residents and help activate the space under the freeway interchange.

Outreach feedback: Survey responses show moderate support for a skate park, dog park or mountain biking facility. The Eliot Neighborhood Association would like to see active recreation uses in this space that help foster a connection between Russell St. and the Mississippi St. area to the north.

Staff recommendation: The proposed concept is not definitive on this issue. A draft plan recommendation will be developed to explore developing the area for active recreation uses.

Subarea 2 – Eliot: Vancouver/Williams Corridor

A. Should the plan rezone residentially-zoned properties to allow a wider range of uses? If so, are additional incentives for housing development desired?

Background: The area is currently home to a diverse mix of uses, including light manufacturing, warehousing, retail, residential and institutional uses. Some of the area is currently zoned for high density housing that doesn't allow significant other uses and can limit the ability of existing, non-residential uses to expand. More flexible, mixed-use zoning would allow housing along with a wide variety of other uses. Incentives could be added to encourage residential uses.

Outreach feedback: Survey responses show strong support for increasing the flexibility of the zoning to allow mixed-use. Survey respondents also favor including residential development incentives. The Eliot Neighborhood Association supports more flexible zoning that continues to allow housing.

Staff recommendation: The proposed concept suggests changing the zoning in area A on the above map to EX to allow more flexible land use and potential expansion of existing businesses. In the plan development phase of work, incentives to encourage residential development could be explored.

B. Should the plan recommend changes to the designated view corridor from Lillis Albina Park? If so, how?

Background: This designated public viewpoint is currently obscured by trees and cuts through the center of the PPS Blanchard site, restricting building heights to 50 feet on part of the parcel. Changes could include modifying the viewpoint to allow more flexible redevelopment of the Blanchard Site or developing the viewpoint to allow better views of downtown and the Willamette River.

Outreach feedback: The majority of survey respondents do not want the view corridor changed. The Eliot Neighborhood Association would support a change as long as new development continued to allow a view from a designated viewpoint.

Staff recommendation: The proposed concept includes future redevelopment on the PPS Blanchard site. That redevelopment could benefit from modifications to the viewpoint. Future study and analysis is required.

C. Should an additional pedestrian connection be developed at Page Street under I-5 to connect this area to Lower Albina?

Background: I-5 bisects the Lloyd District and Lower Albina, limiting east-west connectivity in many locations. Additional pedestrian, bicycle and multimodal connections would increase opportunities to cross I-5. A connection at Page Street would be limited to pedestrian use due to engineering restrictions.

Outreach feedback: Survey responses show interest in an additional pedestrian connection at Page Street, but the Eliot Neighborhood Association and Lower Albina businesses are not supportive.

Staff recommendation: The proposed concept does not include a pedestrian connection at Page St.

D. Should a main street district be encouraged around the intersection of Williams Avenue and Russell Street, reviving a historic commercial node?

Background: As late as the 1950s, the intersection of Williams Avenue and Russell Street was the heart of a vibrant commercial district.

Outreach feedback: Survey respondents strongly support encouraging commercial development at this intersection. The Eliot Neighborhood Association also supports commercial development around this node and would like Legacy Health to orient new development and develop active uses that front Russell Street at the Legacy Emanuel Medical Center campus.

Staff recommendation: Recognizing the history of the node, the proposed concept includes the idea of a future neighborhood commercial node at this intersection. The portion of this area within the NNE Quadrant Plan's study area already has mixed-use commercial zoning. The draft plan could include a suggestion that this area be the subject of future planning efforts.

E. Should an additional east-west multimodal connection be developed north of the Broadway/Weidler couplet (e.g. Hancock St. to Dixon St.)?

Background: I-5 bisects the Lloyd District and Lower Albina, limiting east-west connectivity in many locations. Additional pedestrian, bicycle and multimodal connections would increase opportunities to cross I-5.

Outreach feedback: Survey responses show very strong support for developing an additional connection for pedestrians and bicycles and minority support for allowing automobile traffic to use the connection. The Eliot Neighborhood Association agreed with survey respondents about the pedestrian and bicycle connection, and could see the benefit of a multimodal connection if it helped connect the neighborhood to future development at the Blanchard site.

Staff recommendation: The proposed concept places great emphasis on improving east-west connections across I-5 in this area. This would increase connectivity to improve the redevelopment of the PPS's Blanchard site. The concept includes a new "flexible" connection along Hancock St to Dixon St to be developed as part of the I-5 Broadway/Weidler Freeway Interchange improvements. Note: some of the I-5 Freeway concepts include options that route Vancouver/Williams traffic around the west side of the "box" at Broadway/Weidler.

F. Should both Vancouver and Williams Avenues be encouraged as neighborhood commercial streets, or should one be emphasized as the prominent commercial corridor?

Background: Staff is proposing new options for a clearer street hierarchy for the quadrant that emphasizes the development of different streets with distinctly different characters and development responses. The proposed connectivity system includes "civic" streets that are active focal point for high-density development, "local main" streets that have commercial and residential development on a smaller scale, "scenic" parkways that have less activity but more tree canopy and landscaping, and smaller, quieter and safer "flexible" routes that are oriented to pedestrian and bicycle movement.

Outreach feedback: Survey responses show support for encouraging both avenues as neighborhood commercial streets.

Staff recommendation: The proposed concept suggests emphasis on Vancouver Avenue as a scenic street and Williams Avenue as a local main street.

Subarea 3 – Rose Quarter and Vicinity

A. Should larger buildings (height, mass) be allowed along N Broadway between the river and N Wheeler Ave to increase density and support a higher level of activity in the Rose Quarter?

Background: The core area of the Rose Quarter has been the subject of extensive development planning over the past few years. The current effort, the Rose Quarter District Plan, calls for a greater level of activity and 24 hour uses to complement the entertainment events currently held in the Rose Quarter. The District Plan suggests increasing building height limits along N Broadway to allow more flexibility in building types.

Outreach feedback: Survey responses show general support for allowing larger buildings along lower Broadway, with the strongest support for allowing buildings of 20+ story development. The Eliot Neighborhood Association would support higher density development on lower Broadway if it helped increase the vibrancy of the area and design conditions were applied.

Staff recommendation: The proposed concept calls for medium-to-high-density mixed-use development in this area. The draft plan will propose increasing maximum height limits in this area to 200-250 feet.

B. Should the zoning for the PPS Blanchard Site and adjacent properties to the east be changed to allow more land use flexibility to encourage redevelopment? Ideas for the site have included retail, research and development and mixed use residential.

Background: Portland Public School's (PPS) headquarters building, the Blanchard Educational Service Center, is currently zoned for industrial use. PPS has expressed interest in moving their headquarters to another location in the City, which would open up the site for redevelopment. Redevelopment at the Blanchard site would complement proposed redevelopment in the Rose Quarter called for by the Rose Quarter District Plan. A zoning change would be required to accommodate most redevelopment scenarios.

Outreach feedback: Survey responses show strong support for increasing the flexibility of uses on the site, with the strongest support for mixed-use residential, following by moderate support for retail, research and development and office redevelopment. The Eliot Neighborhood Association supports the idea of increasing flexibility on the Blanchard Site, particularly if future development includes elements that serve the surrounding neighborhoods, such as a grocery store.

Staff recommendation: The proposed concept includes future mixed-use development on the site and adjacent areas along N. Broadway. The draft plan will include a recommendation to rezone the site for mixed-use. Further analysis and discussion is required to identify specific regulations related to zoning designation, height and FAR.

C. What should the nature of the Willamette riverfront be in this area, in terms of land use, public access, and other features?

Background: There is a desire to increase opportunities to access the Willamette River. The "Thunderbird" site north of the Louis Dreyfus grain terminal is being considered for redevelopment as part of the Rose Quarter District Plan. Draft concepts include mixed use redevelopment with public access and open space features on the site. The Willamette Riverfront is also an area where habitat enhancement is envisioned.

Outreach feedback: Survey responses indicate the highest support for a multi-use trail or a recreation/active use park, with moderate support for enhanced habitat and events/entertainment uses.

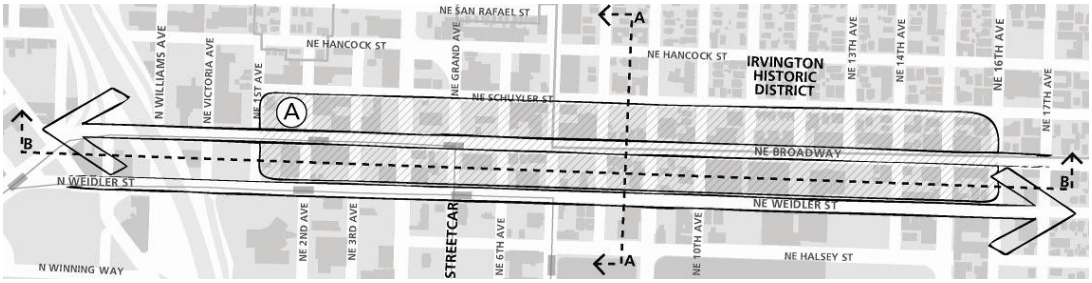
Staff recommendation: The proposed concept preserves the existing industrial use at the Louis Dreyfus grain terminal, suggests a fully developed Greenway Trail and medium-to-high-density office and/or residential uses and open space amenities.

D. Are there ways to improve access between this subarea and other parts of the Lloyd District over and under I-5 with new connections (see D1-Hancock St., D2-Clackamas) or improvements to existing connections (see D3-Multnomah/ Holladay)?

Background: I-5 bisects the Lloyd District and Lower Albina, limiting east-west connectivity in many locations. Additional pedestrian, bicycle and multimodal connections would increase opportunities to cross I-5.

Outreach feedback: Survey responses show strong support for developing new connections for pedestrians and bicycles and moderate support for new multimodal connections and improvements to existing connections. The Eliot Neighborhood Association agreed with survey respondents about developing a pedestrian/bicycle connection, and could see the benefit of a multimodal connection if it helped connect the neighborhood to development at the Blanchard site.

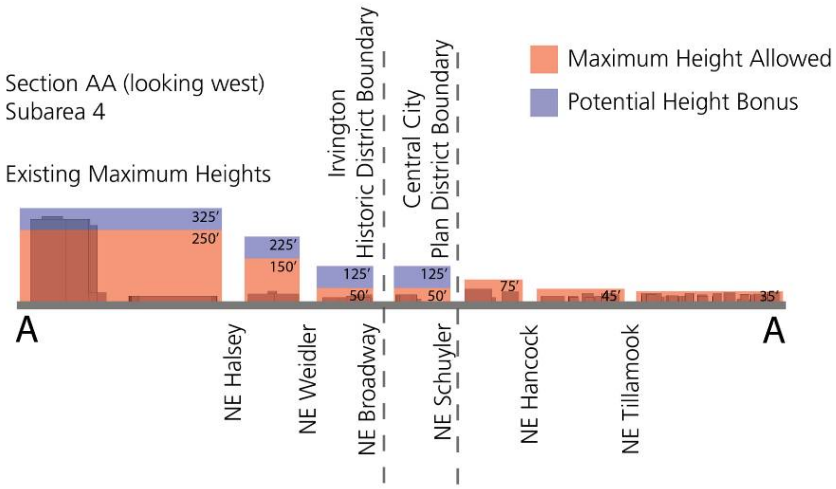
Staff recommendation: The proposed concept includes numerous flexible connections to improve access to the Rose Quarter. Pedestrian-friendly, "flexible" connections over/under I-5 are included at Hancock, Clackamas and Multnomah.



E. Should the local and regional transportation infrastructure around the Steel Bridgehead and the Rose Quarter Transit Center be reconfigured to improve access, circulation and encourage new development?

Background: Currently, the area between the Rose Garden and the Steel Bridge is dominated by transportation infrastructure. MAX, bus, private vehicles, bikes and pedestrians all negotiate the area. Development opportunities in the area are limited by access constraints.

Outreach feedback: Survey responses show support for reconfiguring the transit center**.**



Staff recommendation: The proposed concept suggests long-term mixed-use redevelopment in the area. Because reconfiguration of road and transit infrastructure is likely required to realize significant redevelopment here, the draft plan is likely to include an action item to engage TriMet, PBOT and local property owners to develop options for reconfiguration.

Subarea 4 – NE Broadway Weidler Commercial Corridor

A. Is the current transition in allowed heights from Broadway/Weidler to the neighborhoods to the north appropriate (see section AA)? If not, what changes could be made to improve it?

Background:
A respectful transition from the commercial development on Broadway and Weidler to the residential development in the historic Irvington and Eliot neighborhoods to the north is desired. Current maximum building heights east of 7th Avenue and north of Weidler are 50', however, a variety of height bonuses are in place allowing development to be considerably higher in some cases, provided certain amenities are included in the project.

Outreach feedback: Survey respondents were fairly evenly divided on the question of height along NE Broadway. Comments ranged from leaving regulations as they are, to increasing or reducing height limits. The Irvington Neighborhood Association expressed concern that the bonus heights along Broadway are too generous. The NE Broadway Business Association agreed that a step down approach to building heights from NE Broadway to the neighborhoods to the north is appropriate.

Staff recommendation: The proposed concept calls for increasing the main street character of NE Broadway with medium-density 2-6 story residential-above-retail development. 6 story mixed-use developments typically require 65-75 foot-tall buildings. The draft plan will propose reducing the maximum (base+bonus) height north of Broadway to around 75 feet.

B. Should both Broadway and Weidler be encouraged as neighborhood commercial streets, or should one be emphasized as the prominent commercial corridor? Should the "main street" character present on the east end of the couplet extend toward the Rose Quarter? If so, how far?

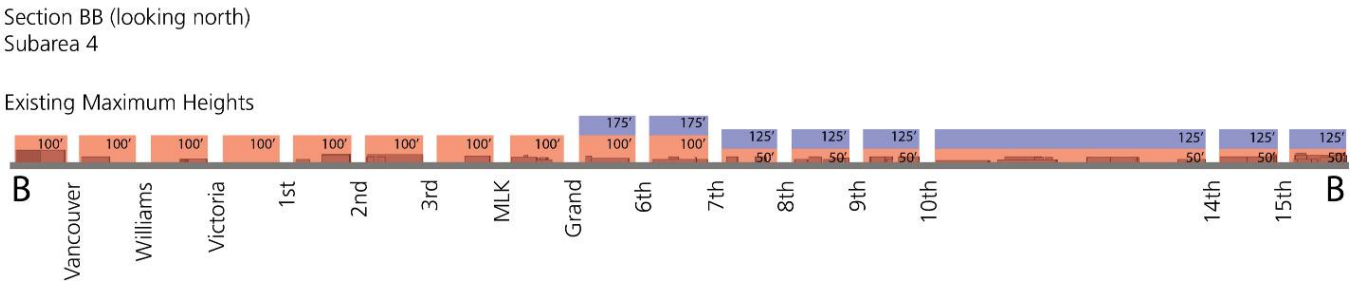
Background: The Broadway/Weidler couplet is a major transportation and commercial corridor that extends from the Broadway Bridge to the eastern edge of the N/NE quadrant. The eastern end of the corridor provides "main street" commercial and retail services for the surrounding neighborhoods, while areas closer to I-5 contain more auto-oriented commercial services such as gas stations and car dealerships. The current planning effort for the Rose Quarter calls for a greater level of activity and 24 hours uses at the Rose Quarter to complement the entertainment events. Emerging concepts to achieve this goal include creating a more contiguous main street environment along NE Broadway that extends through the Rose Quarter to the Broadway Bridge.

Outreach feedback: Survey responses show support for encouraging commercial development on both streets with "Broadway only" as the second choice, and strong support for extending the "main street" character toward the Rose Quarter. The NE Broadway Business Association would like to see mixed use on Weidler, but supports emphasizing Broadway as the main commercial corridor.

Staff recommendation: The proposed concept suggests that Broadway could be a "civic" street, with a focus on high-density development, and Weidler could be a "scenic" street, with a greater emphasis on landscaping and tree canopy than street-level activity. The concept calls for high-density office and residential uses surrounding the couplet between I-5 and the Broadway Bridge, with mixed commercial and residential development extending east from I-5 to MLK Boulevard.

C. What methods should be used to address the circulation and safety issues along the corridor?

Background: The "box" (Broadway/Weidler between Vancouver and Williams Avenues) is a difficult area for all modes of transportation, with poor pedestrian and bicycle conditions and frequent congestion associated with the I-5 freeway interchange. There are also concerns about circulation and safety issues along the rest of Broadway and Weidler, including difficult pedestrian crossings and bicycle safety issues.

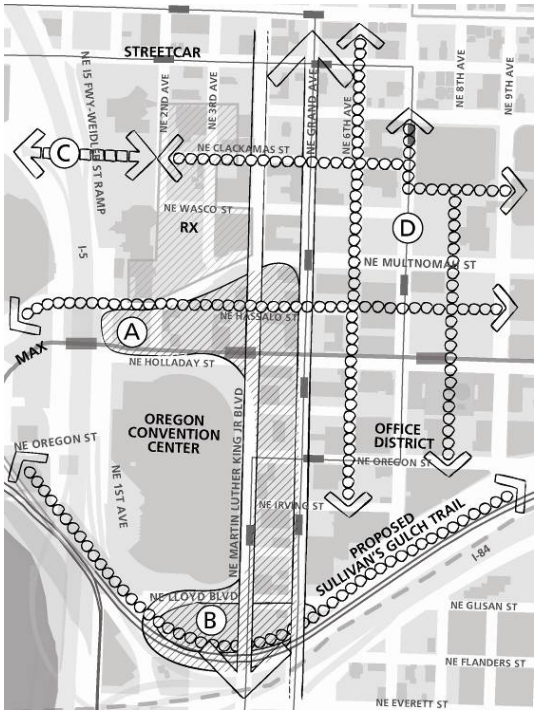


Outreach feedback: Survey responses suggested a range of methods are supported; additional crosswalks received the most support, followed by curb extensions, more frequent controlled intersection and additional signals. A wide variety of "other" methods were also suggested, such as removing the bike lanes, de-coupling and adding center islands. The Irvington Neighborhood Association expressed concern about crossings that don't have signals and want to explore removing a traffic lane. Sullivan's Gulch Neighborhood Association suggested more pedestrian crossings and signals. The NE Broadway Business Association would like to see more signals and crosswalks to improve pedestrian circulation and safety.

Staff recommendation: The proposed concept does not address issues at this level of detail. The draft plan will likely include action items about improving bicycle and pedestrian safety along the corridor and throughout the quadrant.

D. Are the current allowed building heights along Broadway/Weidler appropriate (see section BB)? Should residential development be encouraged on the west end of the corridor?

Background: Current maximum building heights east of 7th Avenue and north of Weidler are 50', however, a variety of height bonuses are in place allowing development to be considerably higher in



some cases, provided certain amenities are included in the project. Section BB displays allowed heights and bonus opportunities along Broadway.

Outreach feedback: The majority of survey responses did not think current heights are appropriate, and written comments were split between those wanting to increase the height limit and those wanting to decrease the allowed heights. The survey showed strong support for high-density residential uses at the west end of the corridor.

Staff recommendation: The proposed concept calls for high-density office and residential uses surrounding the couplet between I-5 and the Broadway Bridge, with mixed commercial and residential development extending east from I-5 to MLK Boulevard. The draft plan will propose increasing height limits along N Broadway between the Broadway Bridge and I-5.

Subarea 5 – Central Lloyd

A. **Does the goal of mixed-use office development with significant hotel and entertainment components make sense for the areas surrounding the convention center?**
Background: Though the area is home to the OCC, relatively little development potential has been realized and the area lacks a strong identity. Streetcar is under construction now along NE Grand Avenue, NE 7th and NE MLK, and is anticipated to help encourage new development in this area. Development ambitions south of NE Multnomah Street, have long focused on projects that would support the OCC. The Development Vision for the OCC Blocks, completed by PDC in 2006, calls for a major hotel in the area and retail and entertainment uses that could add activity to the area around the convention center.

Outreach feedback: The majority of survey responses expressed support for mixed-use office development; written responses also suggested allowing residential uses in the area or developing parks and open space.

Staff recommendation: The proposed concept envisions predominantly high-density employment and office uses to the east of the Convention Center, and a mix of high-density employment and residential uses to the north.

B. Should "signature" high-rise development be allowed at the southern edge of the district along NE MLK and NE Grand near I-84?

Background: The sites along MLK and Grand near I-84 have been suggested as good locations for high-rise signature development, an idea that would likely require some modification of established view corridors.

Outreach feedback: The majority of survey respondents support high-rise development.

Staff recommendation: The proposed concept envisions this area as part of the high-density office/mixed use area. Possible modifications to the view corridor to allow tall buildings here will require further study and analysis.

C. Should there be a local traffic and/or pedestrian and bicycle connection to the Rose Quarter along Clackamas Street?

Background: I-5 bisects the Lloyd District and Lower Albina, limiting east-west connectivity in many locations. Additional pedestrian, bicycle and multimodal connections would increase opportunities to cross I-5.

Outreach feedback: Survey responses show very strong support for a new bike/ped connection.

Staff recommendation: The proposed concept places a strong emphasis on the opportunity of reinventing Clackamas Street by including ped/bike enhancements along Clackamas with a new crossing over I-5 that connects to the Rose Quarter and the Willamette River.

D. Should NE Multnomah Avenue be upgraded to a major east-west corridor with regional retail uses?

Background: Some concepts suggest upgrading NE Multnomah Street to a major retail thoroughfare lined with regional retail, on-street parking, offices and possibly housing to add to the street-level activity and complement the Lloyd Center Mall. Adding entrances and additional store-fronts to the mall on the NE Multnomah Street side was seen as desirable.

Outreach feedback: The majority of survey respondents support upgrading Multnomah Avenue. Responses opposed to this suggestion offered alternative ideas or concerns, including limiting impacts on retail businesses along Broadway/Weidler, encouraging a broader mix of uses along Multnomah and the concern that additional regional retail can't be supported along Multnomah.

Staff recommendation: The proposed concept emphasizes Multnomah as a scenic street, with a focus on landscaping and tree canopy and a lower emphasis on street-level activity. The concept proposes a mix of high-density residential and office uses facing Multnomah west of the Lloyd

Center, and a mix of main street residential and regional event/entertainment uses east of the mall. However, the future character, design, and role of NE Multnomah within the quadrant are topics that could benefit from further study and discussion, including adding on-street parking and better activating the street with retail and active ground level uses.

E. Should both MLK Blvd and Grand Ave be encouraged as commercial streets, or should one be emphasized as the prominent commercial corridor?

Background: Staff is proposing new options for a clearer street hierarchy for the quadrant that emphasizes the development of different streets with distinctly different characters and development responses. The proposed connectivity system includes "civic" streets that are active focal point for high-density development, "local main" streets that have commercial and residential development on a smaller scale, "scenic" parkways that have less activity but more tree canopy and landscaping, and smaller, quieter and safer "flexible" routes that are oriented to pedestrian and bicycle movement.

Outreach feedback: There was strong support in the survey responses for encouraging both MLK and Grand as commercial streets.

Staff recommendation: The proposed concept envisions MLK Blvd. and the segment of Grand Avenue from Broadway to Holladay as civic corridors, with the segments of Grand Avenue to the north and south emphasized as a scenic street.

F. Should there continue to be a focus on residential uses in this subarea, or should other uses be emphasized, such as office or mixed use? If residential development remains a priority, where should it be encouraged and what open space amenities should be planned to encourage and support it (e.g. large public park, series of plazas or pocket parks)?

Background: In the northern half of the subarea, there has long been a desire to see mixed-use development including a substantial residential component. Currently, there is a 3-block area zoned for predominantly residential uses (RX) west of MLK between Halsey and Multnomah, and a zoning incentive for housing that covers large sections of the subarea (residential bonus target area). There is concern that current open space and other amenities and services in the area may be insufficient to attract and support significant residential development.

Outreach feedback: The survey responses support a continued focus on residential uses in this area, supported by a system of mid-sized public parks.

Staff recommendation: The proposed concept shows a mix of high density employment and residential uses north of the OCC, with mixed commercial/residential and main street residential at the north edge of the subarea. A series of new parks of varying size organized along Clackamas Street from the Lloyd Center to the Willamette River is envisioned to support the new residential and employment development.

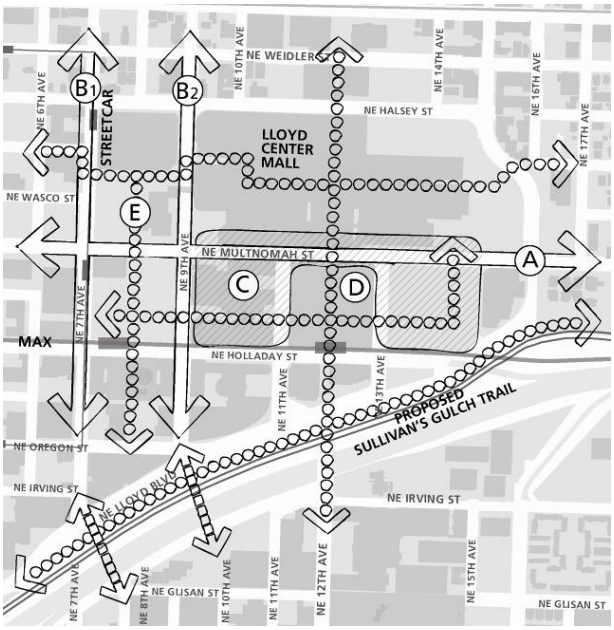
G. Several ideas for future secondary pedestrian and bike connections have been identified (e.g. Clackamas, 8th, 6th, Hassalo). Which of these are most important?

Background: Staff is proposing new options for a clearer street hierarchy for the quadrant that emphasizes the development of different streets with distinctly different characters and development responses. The proposed connectivity system includes quiet and safe "flexible" routes that are oriented to pedestrian and bicycle movement. In addition to enhancing ped/bike facilities on existing streets, the larger block pattern in the quadrant offers new opportunities for ped/bike connectivity. Today, there are several pedestrian and bicycle-oriented paths through the superblocks, and current regulations require new development to include public connections through the larger blocks as they develop. New development could add to the existing segments, turning the network into a viable pathway system, increasing mobility choices for quadrant residents, workers and visitors.

Outreach feedback: Clackamas St and 6th Avenue received the strongest support in the survey responses, followed by Hassalo and 8th Avenue.

Staff recommendation: The proposed concept places significant emphasis on a new network of ped/bike friendly connections throughout the quadrant. In this area, it suggests new or enhanced flexible north-south connections at 2nd, 6th and 8th, and east-west connections along Clackamas and Holladay. Also included in the proposed concept are the Willamette Greenway Trail and the Sullivan's Gulch Trail.

H. What methods should be used to address the circulation and safety issues along the MLK/Grand corridor?



Background: Pedestrians crossing MLK and Grand in the quadrant face numerous unsignalized intersections and high traffic volumes.

Outreach feedback: Survey responses suggested a range of methods are supported; additional crosswalks and more frequent controlled intersections received the most support, followed by curb extensions and additional signals. A wide variety of "other" methods and concerns were listed, including a desire to add wider sidewalks, decouple the streets and concerns about adding curb extensions.

Staff recommendation: The proposed concept does not address issues at this level of detail. The draft plan will likely include action items about improving pedestrian safety along the corridor and throughout the quadrant.

Subarea 6 – Eastern Lloyd

A. Should NE Multnomah Avenue be upgraded to a major east-west corridor with regional retail uses?

Background: Some concepts suggest upgrading NE Multnomah Street to a major retail thoroughfare lined with regional retail, on-street parking, offices and possibly housing to add to the street-level activity and complement the Lloyd Center Mall. Adding entrances and additional store-fronts to the mall on the NE Multnomah Street side was seen as desirable.

Outreach feedback: The majority of survey respondents support upgrading Multnomah Avenue. Responses opposed to this suggestion offered alternative ideas or concerns, including limiting impacts on retail businesses along Broadway/Weidler, encouraging a broader mix of uses along Multnomah and the concern that additional retail can't be supported along Multnomah. The NE Broadway Business Association generally supports the idea of regional retail on Multnomah, as a complement to the "main street" type retail on Broadway.

Staff recommendation: The proposed concept emphasizes Multnomah as a scenic street, with a focus on landscaping and tree canopy and a lower emphasis on street-level activity. The concept proposes a mix of high-density residential and office uses facing Multnomah west of the Lloyd Center, and a mix of main street residential and regional event/entertainment uses east of the mall. The future character, design, and role of NE Multnomah within the quadrant are topics that could benefit from further study and discussion, including adding on-street parking and better activating the street with retail and active ground level uses.

B. Should NE 7th (B1) and/or NE 9th (B2) Avenues be enhanced for multimodal transportation, with a possible future connection across I-84 to the Central Eastside?

Background: North south access is limited in this subarea. MAX light rail and the new streetcar line provide transit options to and through the subarea, but increasing connectivity and safety for pedestrians and bicycles is an important issue. NE 7th Avenue and/ or NE 9th could provide an opportunity to strengthen north/south connections in the district and to the Central Eastside.

Outreach feedback: Survey responses showed majority support for enhancing both avenues for pedestrian and bicycle modes, and minority support for enhancements for motor vehicle use. NE 7th received majority support as a new crossing option, with NE 9th as a close second. Bicycle and pedestrian modes are favored for the new crossing, with moderate support for buses and cars.

Staff recommendation: The proposed concept includes a possible future "flexible" connection over I-84 to the Central Eastside at or around 7th Avenue, establishing a street hierarchy, recognizing the auto access role for NE 9th and enhancing the role of 7th for pedestrians and bikes.

C. What character, scale and uses would be most desirable for redevelopment surrounding Holladay Park?

Background: Holladay Park is one of the largest parks in the Central City and the only significant public open space in the Lloyd District, but the park suffers from public safety concerns and a lack of consistent, diverse activity. Concepts to address these concerns include short term actions such as active programming of the park, and long-term actions such as encouraging high density residential or mixed-use redevelopment surrounding and facing the park and adding design features to the park to attract a wider variety of users.

Outreach feedback: High-density residential development received the strongest support in the survey, but all categories received support from at least 33% of respondents. The Sullivan's Gulch Neighborhood Association would like to see more residential development surrounding the park, and would like to see Macys and the DoubleTree Hotel orient more activity toward the park. The NE Broadway Business Association would like to see more residential uses in the area to increase the overall vitality and improve safety conditions at Holladay Park.

Staff recommendation: The proposed concept suggests high density employment and office uses to the west and south of the park, with a mix of residential and regional event/entertainment uses to the east at the current cinema parking lot.

D. How can the user experience be improved at Holladay Park?

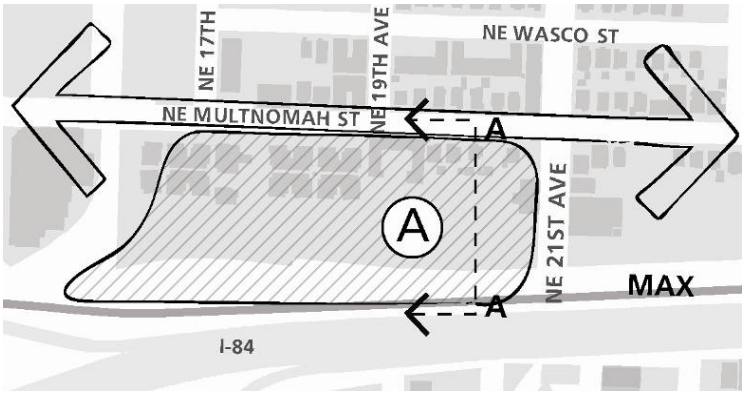
Background: See background for Question C, above.

Outreach feedback: Survey responses show support for increasing active programming of the park and establishing an outdoor market. Written responses refer to increasing the safety and security within the park as a means to improving the user experience.

Staff recommendation: The proposed concept suggests new development and improvements to existing development around Holladay Park. New surrounding development could dramatically improve conditions at the park. However, the proposed concept does not really address issues at this level of detail. The draft plan will likely include action items about improving safety in the area (e.g. interim uses to help activate the area).

E. As the superblocks develop, what are the most important features that should be included, in terms of connectivity and open space (e.g. ped/bike connections, parks)?

Background: Discussion about the future of this subarea focused on encouraging high-density residential or mixed-use development to enliven the district, and enhance street-level activity. As the superblocks redevelop, ensuring that future mid-block connections provide continuous and



convenient pedestrian routes through the study area will be important as well as providing parks and open space to serve additional employees and residents.

Outreach feedback: Survey responses indicate the strongest support for including pedestrian connections and parks/plazas as the superblocks develop.

Staff recommendation: The proposed concept suggests enhanced north south pedestrian connections through the superblocks at 6th, 8th, 12th (through the mall) and 15th, and east west connections along Clackamas, Holladay and connecting through Holladay Park and the cinema parking lot between Holladay and 15th. A string of new parks are suggested along Clackamas Street between the Lloyd Center and the Rose Quarter to support higher-density development, and the proposed Sullivan's Gulch Trail would increase connectivity to the river and adjacent neighborhoods.

Subarea 6a – Sullivan's Gulch Transition

A. What types of uses are desirable and/or appropriate in this subarea (e.g. commercial office or retail, light industrial, residential)?

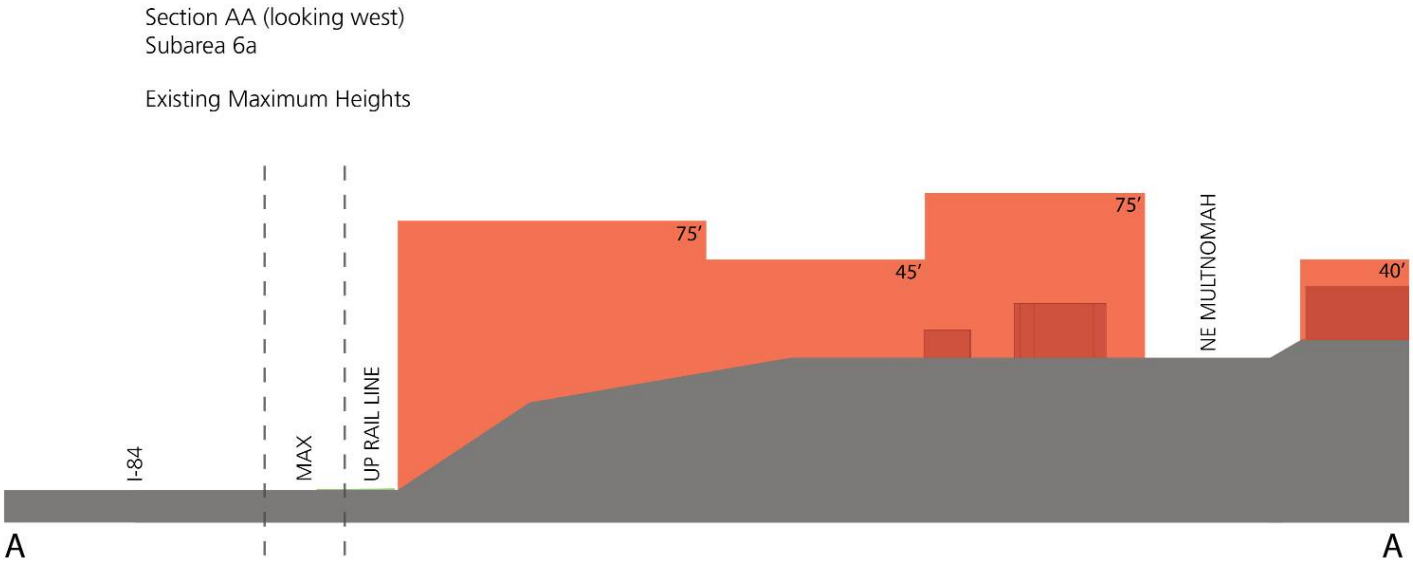
Background: The properties at the corner of NE Multnomah and NE 21st Avenue are currently split-zoned with a mix of high-density residential and commercial office zoning, which complicates redevelopment of the site. The western part of this area has more flexible commercial zoning and is occupied by the Marriott Residence Inn Hotel, while the eastern portion is occupied by a small courtyard apartment building and several older single-family homes. Relative to the current zoning, the eastern portion is significantly underdeveloped. The N/NE Quadrant Plan presents an opportunity to address the character of desired future development and make necessary changes to zoning regulations.

Outreach feedback: Survey responses indicate the greatest support for residential uses in this area, followed by office and retail uses. The Sullivan's Gulch Neighborhood Association also prefers a residential use with ground floor commercial uses.

Staff recommendation: The proposed concept suggests future redevelopment of the site with predominantly residential above commercial or retail uses. Small scale office uses may also be appropriate. Further study and analysis is required on zoning options. Options for consideration will be developed in the draft plan phase of work.

B. Do changes to the allowed height and mass of buildings need to be made in this area?

Background: The properties at the corner of NE Multnomah and NE 21st Avenue are currently split-zoned with a mix of high-density residential and commercial office zoning. Today, residential



buildings up to 75 feet tall are allowed along NE Multnomah Street. The office zoning (CO2) to the south carries a 45-foot height limit, but allows additional uses such as retail and office. The higher density zoning along the south side of NE Multnomah Street to NE 21st Avenue is mirrored by commercial and higher-density zoning in another expanded study area south of Interstate I-84. The area could serve as a visible gateway to the district from the Central Eastside and I-84 and could be an important access point for the future Sullivan's Gulch Trail.

Outreach feedback: Survey responses were split on whether or not height limits should be modified in this area and written responses indicate that there is support for both increasing the height limit, keeping it at current levels or decreasing it.

Staff recommendation: The proposed concept does not address issues at this level of detail. Options for consideration will be developed in the draft plan development phase of work.

C. Should allowed building heights increase toward I-84?

Background: See background for Question B, above.

Outreach feedback: Survey responses indicate fairly strong support for increasing building heights toward I-84. The Sullivan's Gulch Neighborhood Association expressed support for "high-rise" residential as long as the neighborhood can work with the developer to find an appropriate design.

Staff recommendation: The proposed concept does not address issues at this level of detail. Options for consideration will be developed in the draft plan development phase of work.

1. Summary Table: Lower Albina, Central Eastside (CES) & Employment Opportunity Subarea (EOS)

	Lower Albina & CES (non-EOS)	Lower Albina & CES: Historic Resources	Employment Opportunity Subarea (EOS) in CES
Traditional Office: Allowed	1 Office (or Retail) use per site, up to 3,000 SF	12,000 SF Office (or Retail) per site	5,000 SF per site
Traditional Office: Conditional Use	More than 1 Retail or Office use per site More than 3,000 SF, max of 60,000 SF or 1:1 FAR	More than 12,000 SF	More than 5,000 SF, max of 60,000 SF
Industrial Office: Allowed	NA	NA	60,000 SF per site
Industrial Office: Conditional Use	NA	NA	More than 60,000 SF
Retail: Allowed	1 Retail (or Office) use per site, up to 3,000 SF	12,000 SF Retail (or Office) per site	5,000 SF per site
Retail: Conditional Use	More than 3,000 SF, max of 25,000 SF or 1:1 FAR	None	None

2. Use Classification Definitions

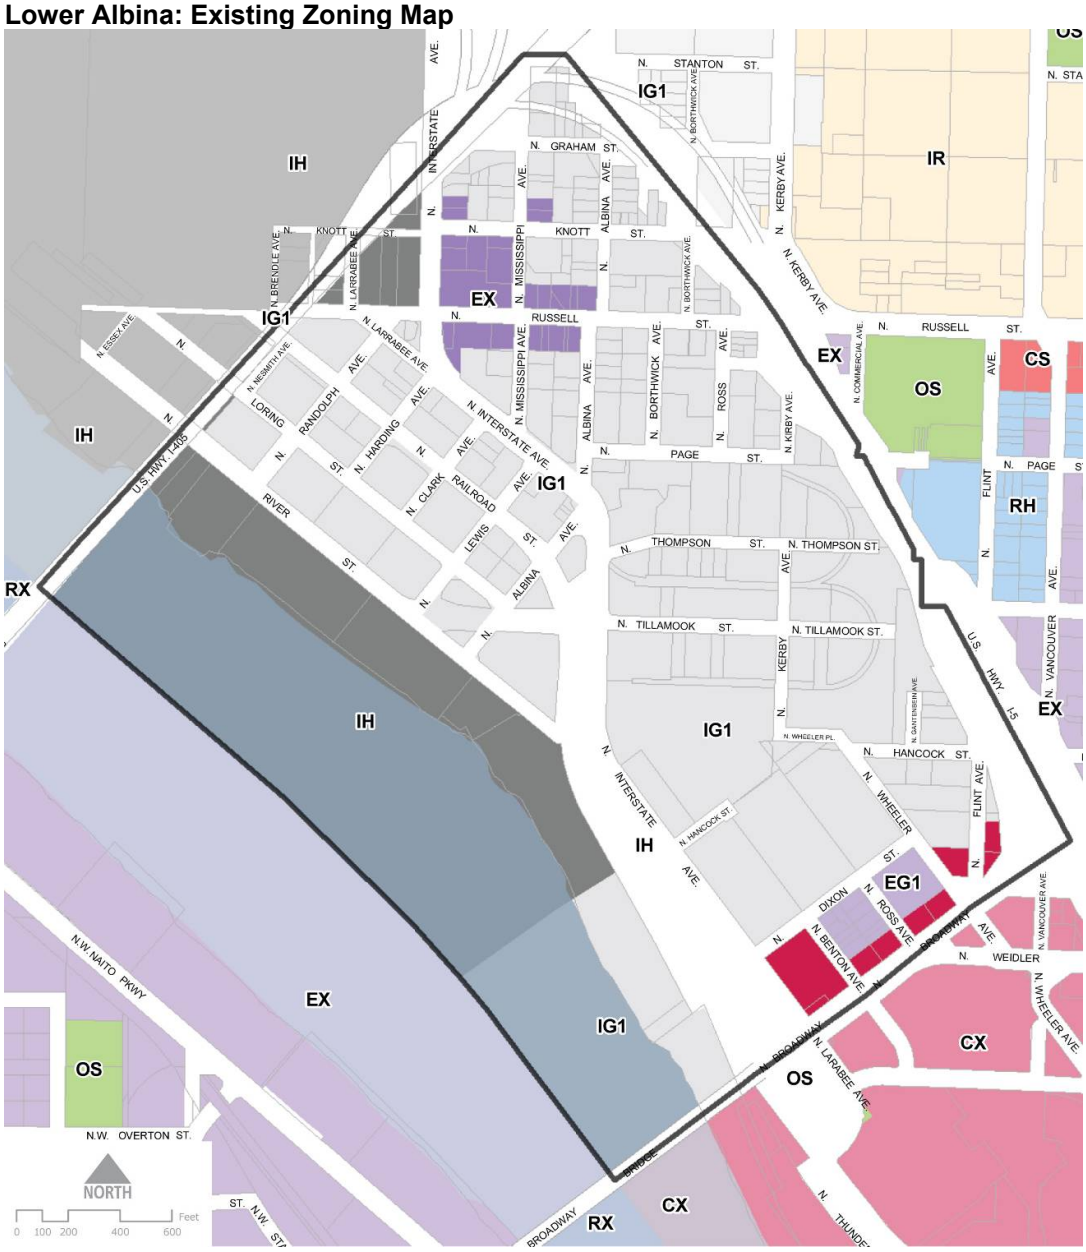
Traditional Office:

- Focus on business, government, professional, medical, or financial services.
- *Examples:* Professional services, lawyers, accountants, real estate agents; financial, bank HQs, brokerage houses; sales offices; government offices; medical and dental clinics

Industrial Office:

- Conducted in an office-like setting but more compatible with industrial activities & districts.
- Less service-oriented with focus on development, production, processing of products, including digital products, e.g. internet & media content, designs & specifications, software, advertising materials.
- Primarily provide products to other businesses.
- Do not require customers or clients to visit the site.
- *Examples:* Software and internet content development & publishing; computer design & programming; graphic & industrial design; engineers & architects; telecommunication providers & data processing; TV, video, radio, internet studios & broadcasting; scientific & technical services; medical & dental labs.

3. Conditional Use Approval Criteria:
Office Uses in the IG1 Zone in the Employment Opportunity Subarea



A. The proposed use will not have a significant adverse effect on truck and freight movement;

B. The transportation system is capable of supporting the proposed use in addition to the existing uses in the area. Evaluation factors include street designations and capacity, level of service or other performance measures; access to arterials; connectivity; transit availability; on-street parking impacts; access restrictions; neighborhood impacts; impacts on pedestrian, bicycle, and transit circulation; safety for all modes; and adequate transportation demand management strategies;

C. The nature of the business does not typically require customers or clients to visit the site.

Central City IG1 Zone: Existing Non-Industrial Land Use Allowances

Lower Albina: Existing Zoning Map

Lower Albina: Existing Predominant Land Use

	Square Feet	% of Total
Industrial	1,013,256	47%
Institutional	328,481	15%
Office	414,565	19%
Residential	87,727	4%
Retail	87,829	4%
Restaurant	74,749	3%
Other	143,821	7%
Total	2,150,428	100%

ELIOT NEIGHBORHOOD ASSOCIATION
LAND USE AND TRANSPORTATION COMMITTEE
Mike Warwick, Chair
September 18, 2011

To: Email addresses

RE: Eliot's Positions on Land Use in Selected NE Quadrant Areas

Based on the by-laws, rules, and procedures of the Eliot Neighborhood Association, the Land Use Committee speaks for the neighborhood on all land use and transportation matters. The neighborhood is represented by the committee chair unless the role is delegated by the chair. The chair currently represents Eliot on the NE Quadrant Citizens Advisory Committee and has actively participated in almost all of the scheduled meetings. In addition the chair has met with State and City staff and/or had staff meet with the land use committee to make Eliot's positions known. Nevertheless, City staff has asked for a letter to consider alongside letters from other neighborhoods and from survey responses solicited by the City from across the region. This letter is our response; however, it comes with two caveats. First, the Quadrant planning process is not complete. Consequently, the positions expressed in this letter are subject to change and refinement as the process proceeds. Second, we believe the response of affected neighborhoods should be given considerably more weight than random survey replies from individuals outside the study area, especially from individuals who have not participated in the process to date and, therefore, do not understand the issues at hand.

Our responses are divided into the two topics of immediate concern, land use in the Lower Albina and the Lloyd District areas (topics of the September 14th meeting). We also include brief comments about transportation issues that provide a context for the land use positions. I will also note that the letter format allows for further reflection, refinement, and explication of positions that have been discussed by the land use committee. Those additions are mine, although the central positions are those of the land use committee, positions expressed during the Quadrant planning process, and/or discussed with other neighborhood representatives.

Lower Albina Industrial Area

This area includes what remains of the commercial and industrial structures associated with the historic City of Albina, including a number of listed and unlisted historic structures. We want these preserved. We are opposed to zoning changes that threaten them and favor changes that may result in their preservation and/or rehabilitation. Our recommendations vary within this district based, generally, on the subarea characterizations staff used at the September 14 meeting.

- West of Interstate. This area should remain an industrial enclave. However it should be noted many of the buildings and land parcels are under-utilized and not providing the level of employment expected in an I zone. Some of the structures

- Area A1 is adjacent to, and north of, a successful commercial corridor along Russell. Existing uses in the A1 area include multi- and single-family structures along with vacant lands and the City's Albina Shops. Proximity to the development along Russell and the presence of multi-story, multi-family buildings suggests it would be appropriate for mixed uses; however, the presence of the Albina Shops discourages this. Since the Mayor has suggested relocation of the shops, at least in part, we recommend adopting a more flexible zone for both A1 and A2. The EX zone may be a better fit given the existing residential use. We also want it noted that the majority of the land in A2 is owned by a single owner and that the plans/intentions of that owner will dictate future development in that area. The City should work with them to develop a plan to realize more value from this property, either in the form of more employees per acre or a higher value use. In addition, both we and the hospital would like to see the City consolidate its property exclusively to the west of Kerby, eliminating the enclave used for heavy equipment storage adjacent to the lower entrance to the hospital. This use is an eyesore.
- The C area is largely beneath the Fremont ramps. Nevertheless, it provides a natural extension to tie development along Mississippi to that in the A area of Lower Albina. Development has been proposed for parcels adjacent to this area that have been withdrawn or delayed due to the recession. These could be revived when the economy recovers if more accommodating EX zoning is extended to this area. The area under the ramps is all but impossible to develop, however; it lends itself to uses such as a skate park or for stalls for temporary farmers' markets or seasonal fairs. Zone changes would be needed to allow either and are also recommended.
- Area B1 is south of area A and abuts the successful commercial uses to the north along Russell. Extending the EX zone to this area is more likely to result in the preservation of historic structures and uses that increase the number of employees in the area.
- The rest of the area, south, except the Blanchard Block/Water Bureau site. This area is currently used for light industrial and warehousing use. It also includes buildings and parcels that are under-utilized for employment. A more flexible zone is recommended to facilitate more intense employment uses and to acknowledge current structures and parcels are inappropriate for heavy industrial uses.

- The Blanchard Block/Water Bureau site. The area around the Broadway Bridgehead centered on the Blanchard Block is ripe for redevelopment to complement development at the Rose Quarter. We agree with the current expectation that development at that site will be dictated by the future owner of the Blanchard site and not by significant City subsidies. We agree the most appropriate use is "employment" but a use that includes an option for residential uses in conjunction with commercial/industrial development. This suggests application of an EX or similar zone, but one that allows for taller structures than EX, so that structures built on the downslope can be the same height as those along Broadway. We also recommend that new zoning be extended to the Water Bureau site. The Mayor has stated that if redevelopment of the Blanchard Block either requires inclusion of the Water Bureau site or if redevelopment leads to higher and better uses for the Water Bureau site, then it should be part of the Blanchard Block development plan. Therefore we request that similar zoning and height allowances be extended to that site.
- While we recommend more flexibility within this industrial area, we want to retain a focus on employment. It is our opinion that the EX zone along MLK has been misused to provide subsidized housing, non-profit social service facilities, and tax-exempt churches, none of which provide significant family-wage employment, stimulate commercial development of adjacent parcels by their owners, and not only don't increase the property tax base, but actually reduce it. A more flexibly I zone that provides some of the flexibility of a C or EX zone could be the best option. Regardless, we would like the City to establish clear expectations about how many jobs per parcel are expected in the zone. Because it is difficult to foresee what uses may emerge in the next 20 years, some residential use may be appropriate, but only as an exception and only to the extent it supports an appropriate employment use. For example, quarters for laboratory technicians working on processes that require 24/7 monitoring. One thing we want to make clear, our expectation is that uses in this area will result in full-time, family wage jobs. That expectation is not consistent with proposals to locate athletic or other single-purpose entertainment facilities here.
- We support the development of a "Strand" to link Lower Albina to the Broadway/Weidler corridor east of I-5. We are skeptical about this being designed to accommodate motor vehicle traffic for its entire length. Consistent with our comments about subarea C above, we would like to see a future Strand connected to Mississippi as well. We suggest that redevelopment of the Blanchard Block could include an elevator to facilitate ADA access in that area where there is a rapid elevation change. We acknowledge that additional pedestrian and bike access along the route may conflict with existing uses. We see this as an opportunity, however, rather than a problem. Specifically, a future Strand should be characterized as an "industrial" path distinct from other bikeways. We also see a Strand as an ideal vehicle to expose the public to the benefits and value of industry in the city. The Esplanade provides a similar connection to the role of the Willamette River in the life of the city. In that context, it should be noted that the Esplanade also presents dangers to users, such as falling into the river. Those

- The "upper" industrial area. The area bounded by Russell, Williams, Broadway, and I-5 is currently zoned residential, however; the dominate use is light industrial (there is only a handful of residential structures, some of which are used commercially). We want the area west of Williams to be rezoned EX and the commercial structures on the east side of Williams, not so zoned, to be rezoned to allow current and future commercial users to continue to thrive. Tubman school is in this area. Because the district proposed closing the school the City should also consider changing the zoning under it from R to EX as well, to facilitate future disposition should the district propose closure in the future.

Area Transportation

Proposed changes to I-5, the freeway ramps, overpasses, and congestion in "the box" color our comments. However, we anticipate providing additional comments on proposed transportation changes once those options have been further refined.

Like all of the other neighborhood representatives to the CAC, Eliot is opposed to demolition and reconstruction of the Broadway and Weidler overpasses. Like them, we believe the uncertainty leading up to reconstruction and actual construction will significantly delay redevelopment at the Rose Quarter and the Burnside Bridgehead. It will also waste the over $150 Million invested in the soon to open Loop Streetcar. Instead, we recommend relocation of the freeway ramps outside the study area, options which have been rejected so far. Assuming neighborhood opposition to ramp reconstruction will be ignored, our second-best (actually least-worst) option is to relocate the northbound ramps to Weidler to First Avenue and merging the southbound ramp to Broadway with Flint. In both cases we would prefer connections away from Broadway and Weidler, such as Dixon on the north and Multnomah on the south to further remove this traffic from the box. Similar minor realignments to the southbound ramp to I-5 and the northbound ramp to I-5 have the potential to significantly improve conditions in the box as well as add length to the "weaving lanes" that would improve freeway conditions without overpass reconstruction. We would also like to observe that the existing ramps are adequate to support a level of service consistent with the attractiveness of regional attractors and access by the adjacent neighborhoods. Otherwise the three regional attractors would have long since failed from impaired access. The current infrastructure may not be adequate to support a continuation of current commuter patterns (using Williams/Vancouver north of Broadway and Broadway/Weidler east of 24th). Proposed bike and pedestrian changes to Williams (to match those already made to Vancouver), increased access provided by the Loop Streetcar, and other changes anticipated in this plan are inconsistent with continued use of surface streets for commuting to locations north of Fremont and east of 24rd. We therefore request that staff acknowledge these facts and discount the need for and value of those uses in its planning. In other words, surface street improvements should benefit local users, bikes, and pedestrians not intra-city commuters. Also to be clear, we do not believe presumed improvements in local access should have any role in the justification of freeway changes. We believe any

proposed freeway improvements must rest squarely and solely on assumed improvements in freeway traffic. For example, offering better bike access or pocket parks or new cultural amenities as a trade-off for increased freeway capacity is "green washing" and an insult to the affected neighborhoods.

Some of the proposed freeway options realign surface streets in Eliot that result in a new overpass at Hancock Street. To the extent this overpass is a substitute for streets that must be dead-ended; we are willing to consider this modification. Otherwise, we are opposed to any additional overpasses that facilitate motor vehicle access into the core of Eliot (direct access to Williams, Vancouver, and Rodney). Additional traffic infiltration into the Eliot Conservation District will threaten the historic residential character of the district and that is unacceptable. Likewise, we are opposed to modifications that primarily facilitate transit through the neighborhood but impair transit from residents in the neighborhood, for example a Hancock overpass that blocks access to Rodney but allows through traffic for commuters on Williams and Vancouver (a "win" for commuters and a "loss" for Eliot residents that currently use Hancock). A bike and pedestrian only overpass has support as it would divert bikes and pedestrians around the box, reducing potential conflicts with motor vehicle traffic.

Lloyd District

Based on existing zoning and metro area projections for growth in employment and housing, this Quadrant has the capacity to absorb all of the growth projected for the City as a whole. This is due in large part to the zoning in Central Lloyd that allows for tall towers on the footprint of superblocks. Obviously, the City's entire growth will not be in this Quadrant. Accordingly, the current zoning leads to unrealistic expectations about development prospects by property owners in Central Lloyd as well as planners about redevelopment prospects outside Central Lloyd including the Broadway Bridgehead and the Broadway corridor. Specifically, if landowners in Central Lloyd construct large, high rise towers it will cannibalize prospective commercial tenants for planned redevelopment at the Broadway Bridgehead. Without employment in the immediate area (and likely public incentives), the Broadway Bridgehead is unlikely to be attractive for residential development given competition it will face from development on the west side of the river. This creates an either/or planning dilemma; either towers are built in Lloyd or the Bridgehead is redeveloped.

We believe this plan must be realistic in its expectations and clear in its intentions. To that end, we recommend the plan suggest public investments to stimulate new commercial and mixed use development be directed exclusively to projects in the Broadway Bridgehead and that landowners in Central Lloyd be encouraged to consider lower-rise development in the near-term rather than banking their holdings until there is demand for high rise towers in the distant future. Owners could be directed to this end through zoning changes, which could be difficult in light of recent ballot measures. Alternatively, the City could provide other inducements in exchange, such as supporting development of district-wide "green" utilities and other innovations that may reduce the cost of development and/or ownership of new buildings and create a unique "brand" for

the area to make it more competitive in the regional commercial and residential market. The following comments are based on this recommendation. In other words, we are assuming property owners in Central Lloyd will not bank their properties but develop projects more appropriate to the market within the next 20 years and that development of complementary commercial and residential projects can be accommodated in the rest of the Quadrant as a result.

- The Rose Quarter area should be developed to complement redevelopment of the area between Hancock and Broadway that contains the Blanchard Block. We agree with the direction of current planning efforts to diversify uses within the Quarter away from single-purpose athletic and entertainment events to create a "full time" use of the site. Accordingly, we are skeptical of proposals to expand those activities. We are also concerned about proposals to further increase "regional attractor" uses, such as cultural venues outside the West End arts district, such as it is. Instead we believe it would be wiser to build on adjacent attractions at the Lloyd and Convention Center and downtown by improving connections to those areas and adding supporting facilities that eliminate the need for commuting to them, such as additional hotel facilities to support activities at the Rose Quarter and Convention Center. (By this statement we are not endorsing the proposed headquarters hotel however.) We also support building on the fact that this area is a regional transportation hub due to its proximity to Tri-Met transfer stations, the new streetcar loop, and a possible intercity/state rail station. The plan should accommodate development of facilities that cater to travelers through this area (think Charing Cross Station in London).
- The area along Clackamas north of Multnomah includes two large residential structures and much under-developed land. These two structures could provide anchors to create a unique urban neighborhood similar to the towers in the South Auditorium area. This area has an advantage South Auditorium does not due to its proximity to the Rose Quarter and Lloyd Center. We recommend that initial residential development efforts in the District focus on this area through some strategic investments. To capitalize on the proximity to two attractors, we recommend extension of Clackamas over the freeway to provide access for bikes and pedestrians (only!). New residential development will strain parking in the area. Therefore the City should consider investment in a parking structure that can support residential development above it as well as service the parking needs of surrounding residents. This structure could be a condition of relocation of the I-5 off ramp to First Avenue as suggested above.
- As noted in the introduction to this section, development of additional commercial and residential property in the Central Lloyd area may conflict with the development expectations of landowners. We believe it is unrealistic for these landowners to expect significant additional public investment or other incentives in light of the significant public investment and other amenities already in Central Lloyd area. Investments that could pay for themselves, such as a "green" district utility system, are exceptions. We also agree that additional development in this area is needed both to take advantage of the areas strengths and to create a more attractive environment for new commercial and residential development.

- One reason Irvington and Sullivan's Gulch choose 7th as a demarcation point for decoupling is that the new streetcar route on 7th will change the character of traffic in all directions at that point. Improvements to bike access have already been made on 7th to accompany the streetcar route. Accordingly, Eliot would like the City to extend these bike improvements north of Broadway. We believe designating 7th as a major bike route will divert bike traffic to/from the east of 7th to downtown via the Steel Bridge and Esplanade reducing bike traffic using the Broadway Bridge and auto/bike conflicts in the box. It would also provide a more direct connection to the Steel Bridge and Esplanade and prepare for a future overpass across I-84 to open up access to SE Portland. We also hope it would attract bike riders who currently use the narrow, cluttered sidewalks along MLK who are creating hazards for pedestrians. Ideally, the City would extend the ban on bikes on sidewalks from downtown proper to the larger Central City area including MLK to address this problem.

September 23, 2011

Karl

You have asked for neighborhood comments on the current status of the Central City plan. Let me begin with the statement that the following is my summary of where I think most residents of Irvington are in connection with the Central City Plan as it affects Irvington. My comments are based on discussions at several land use meetings we have had on the CC planning process and its elements, and on my discussions with numerous Irvington residents. However, there have been no votes, nor has the ICA board weighed in the following.

My comments are also based on the many historic district review cases handled by the land use committee, and finally I will use many of the comments from the Platform for Preservation 2011 ("Platform"), presented by the AHC and others. Jim Heuer is one of the authors of that work, and also a very active member of the Irvington historic district committee and the review process.

Given that all of Irvington, including the Broadway Schuyler strip ("strip"), is part of the historic district and subject to a new set of rules, I first focus on issues affecting our new status. The Irvington plan from the early 1990s was a compromise in that the neighborhood agreed to place more density along the Broadway corridor. Most of that density has not been used for which the neighborhood is thankful, but enough of the 1990s plan has appeared in some projects to show the need for changes in zoning, the FAR, the use of bonuses, and the height restrictions. Zoning regulations constitute the single most powerful aspect of the Portland master planning process. As the Platform points out historic districts, like Irvington, have been so designated because they represent cohesive areas embodying an important Portland narrative. We agree with the Platform that zoning should support and protect that narrative.

Thus, Irvington will seek changes to the current zoning, not only for the strip, but also for other non R-5 zoned areas in the adjoining blocks. It seems to us that the City cannot change the strip without dealing with the adjoining blocks that are RH, R1, and R2. Further, we will ask for building heights that mirror the current historic character of the neighborhood, and for changes in the bonuses that allow additional FAR and height. The City can achieve its density requirements without affecting historic districts. High rise zoning has no place in an historic district like Irvington. Further, the neighborhood will ask the City to deal with the standards for "in fill" development allowed by current zoning in order to avoid in fill that puts too much density in a single lot, and leads to buildings with massing, scale, and height that do not blend with the overall historic district. Within the next few months, we will offer additional comments on the in fill issue.

We agree with the Platform's proposal that zoning and maximum heights in designated Central City historic districts and other significant areas should be adjusted to reflect and support the context of the historic buildings. Although the Platform refers to the 15 blocks fronting NE Broadway at the southwest edge of the Irvington Historic District, we think these

adjustments must cover a wider swath of the Irvington District, and we will be proposing those adjustments in later communications with the CC planning process.

The Platform also points out a significant fact of current City planning and that is that there is more than sufficient land in the Central City where greater heights are permitted, outside of the established Historic Districts. The city's own Buildable Lands Inventory specifically states that there is more than enough land available for the highest population projections. We have had this discussion at several stakeholder meetings.

Additionally, the Platform suggests that Metro's population projections, which underlie many of the proposals in the Central City Plan – "are decidedly not supported by the 2010 Census numbers. Actual growth in population in Portland between 2000 and 2010 was below the projections used during preparation of Central City planning documents. Those projections also do not take into account the distorting effects of the three year economic boom of the mid 2000s that is long past and unlikely again for the foreseeable future."

The Platform correctly, in my opinion, describes the future of the Central core area: "Portland's central core, plus wide expanses of its inner historic neighborhoods, were developed in the years where first horse cars, then cable cars, and finally electric streetcars dominated public transportation. This resulted in smaller blocks and narrower streets than found in cities with more autocentric layouts. The next 25 years will see a shift away from auto centric approaches; energy conservation needs will dictate greater emphasis on public transportation, leading to a revival of the concept of the streetcar oriented central city and streetcar suburbs, like the Grand Avenue/East Portland Historic District. In nearly all of these areas, historic buildings predominate, with their characteristic pedestrian friendly orientation, limited parking options, street facing windows and business access, and clearly defined entry points."

My wife and I are finishing up a five week tour of major Scandinavian cities, Oslo, Stockholm, Copenhagen, Tallinn, and Helsinki, among other places. The first two have initiated inner city tolling or taxing to deal with congestion. All of them, especially Copenhagen, have spent major public dollars to increase the use of bicycles for transportation uses, and it is evident that they are succeeding. They have separated bikes from cars wherever possible, and you see all types on bikes, the young, the old, business persons, students, and families with specially designed bikes and carriers, like Burley. All these cities, especially Tallinn, have paid attention to historic preservation, and that, too, is paying off. These programs and planning will eventually reach Portland, and the CC plan would well advised to anticipate these changes and make accommodations now that support and increase the concepts envisioned by such changes. From first-hand experience, I can report that all of these five capital cities are vibrant, healthy, safe, filled with tourists, and working.

We agree with the Platform that plan should:

1. Encourage retention and preservation of pedestrian friendly features of historic buildings, and promote their inclusion in in fill construction.

2. Establish zoning categories that encourage traditional "streetcar suburb" type construction with clearly differentiated individual retail spaces on the ground floor, and modest numbers of floors (two three) of apartments above. We think there is support for a higher height on Broadway so long as the Schuyler side is 2 or 3 stories.

3. Institute lower existing fees for new retail and service businesses in the central core to reduce the burden on new business development and encourage rental of newly rehabilitated ground floor retail space in historic properties.

4. Coordinate improvements in mobility with rehabilitation programs for historic properties, especially in terms of improved frequency and scope of Central City transit options to approach the levels found in historic periods when much of the inner core was served by streetcars.

Traffic congestion will remain a continual threat to the Central City. Efforts should continue to reduce single passenger automobile commuting. Improvements to light rail, street car, bicycle and pedestrian infrastructure should be encouraged. This is especially important in areas where historic properties lend themselves to conversion from original commercial functions to possible residential uses in areas that may not currently be well served by bike lanes and public transit.

The neighborhood has discussed the concept of decoupling Broadway and Weidler, and there remains significant support for such concept. However, discussions with the Broadway merchants show more support among the merchants for street and transportation improvements that slow traffic and decrease congestion than decoupling. This could be accommodated by street furniture, reducing motor vehicle lanes, additional traffic signals, separated bike lanes, or a myriad of other calming devices. A streetcar would help this cause as well, but that is another matter which has not been discussed thoroughly in the neighborhood. We have discussed having the decoupling take place east of 7th, but there is more support for that area starting east of 16th. At this point in the discussion, we want to keep this significant item on the agenda, and spend more time with the Broadway merchants, and the residents of Irvington, Sullivan's Gulch, and Eliot, to bring forward a proposal that has a broad consensus behind it.

Yours, Dean Gisvold, Chair, Irvington Land Use Committee, ICA Board member, and member of the stakeholder committee.

Outreach Update

Outreach Update

The project team conducted extensive outreach on the concept alternatives over the summer:

- **Public Open House** - June 29
  - Over 100 people attended

- **Community and stakeholder meetings**
  - Attended 20 meetings June - Sept

- **On-line Survey**
  - 140 responses to quadrant-wide survey
  - Between 50 and 75 responses to each of eight subarea surveys

Summer 2011
Outreach Meetings & Events

Neighborhood Associations:
- Irvington Land Use Committee
- Eliot Land Use Committee
- Sullivan's Gulch Land Use Committee
- Lloyd District Community Association

Business Associations:
- Lower Albina Businesses
- NE Broadway Business Association
- Portland Business Alliance Transportation Committee

Transportation:
- Portland Freight Committee
- Bicycle Advisory Committee
- Pedestrian Advisory Committee
- Lloyd TMA

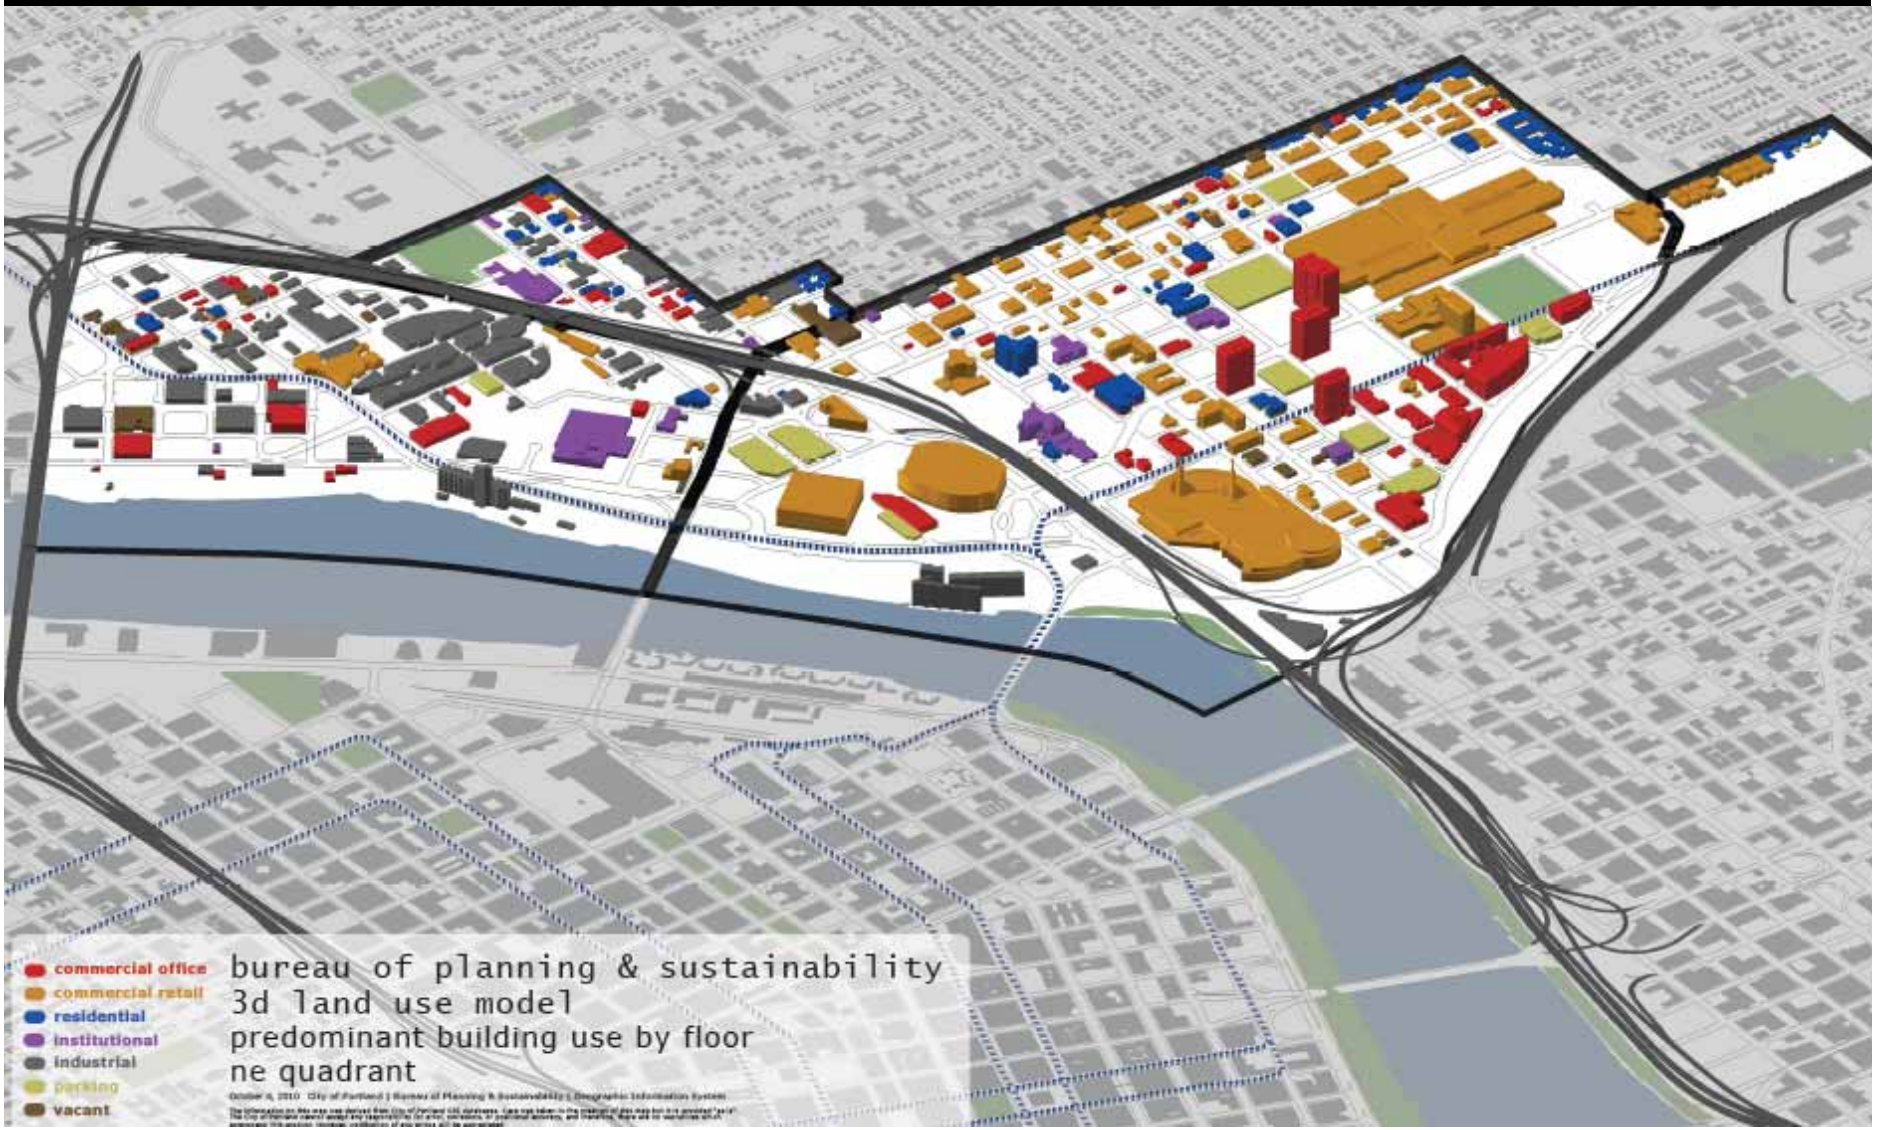
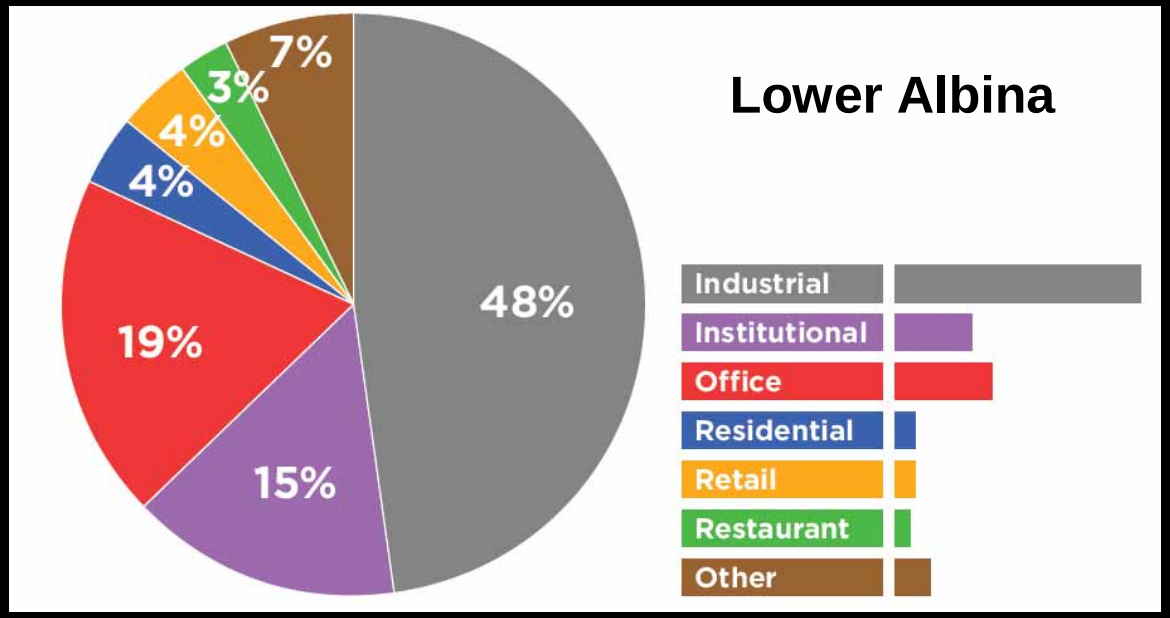
3. Concept Development
4. Urban Design Principles
5. Introduction to Proposed Concept
    - Clarifying Questions Only
6. Discussion
    - Content Questions Encouraged

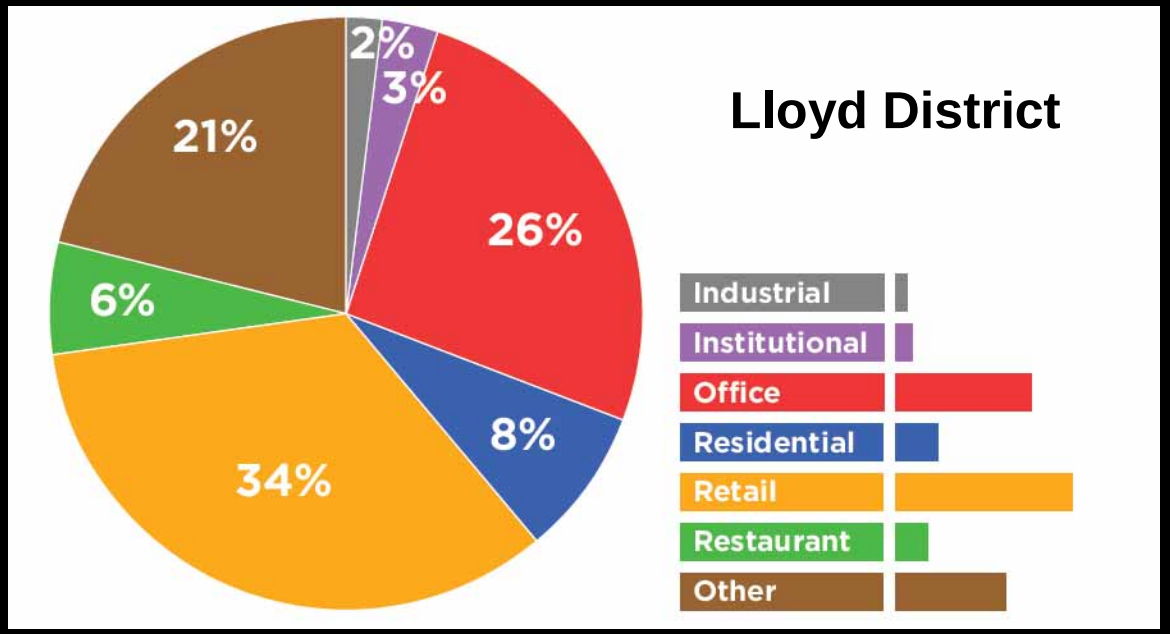
Existing Conditions – Key Points



- Two different districts – both important regionally
- Lots of jobs and potential for growth
- Not much housing
- Limited street-level activity
- Lots of development potential
- Good use of non-auto modes

Regionally Significant Activities / Regional Trips





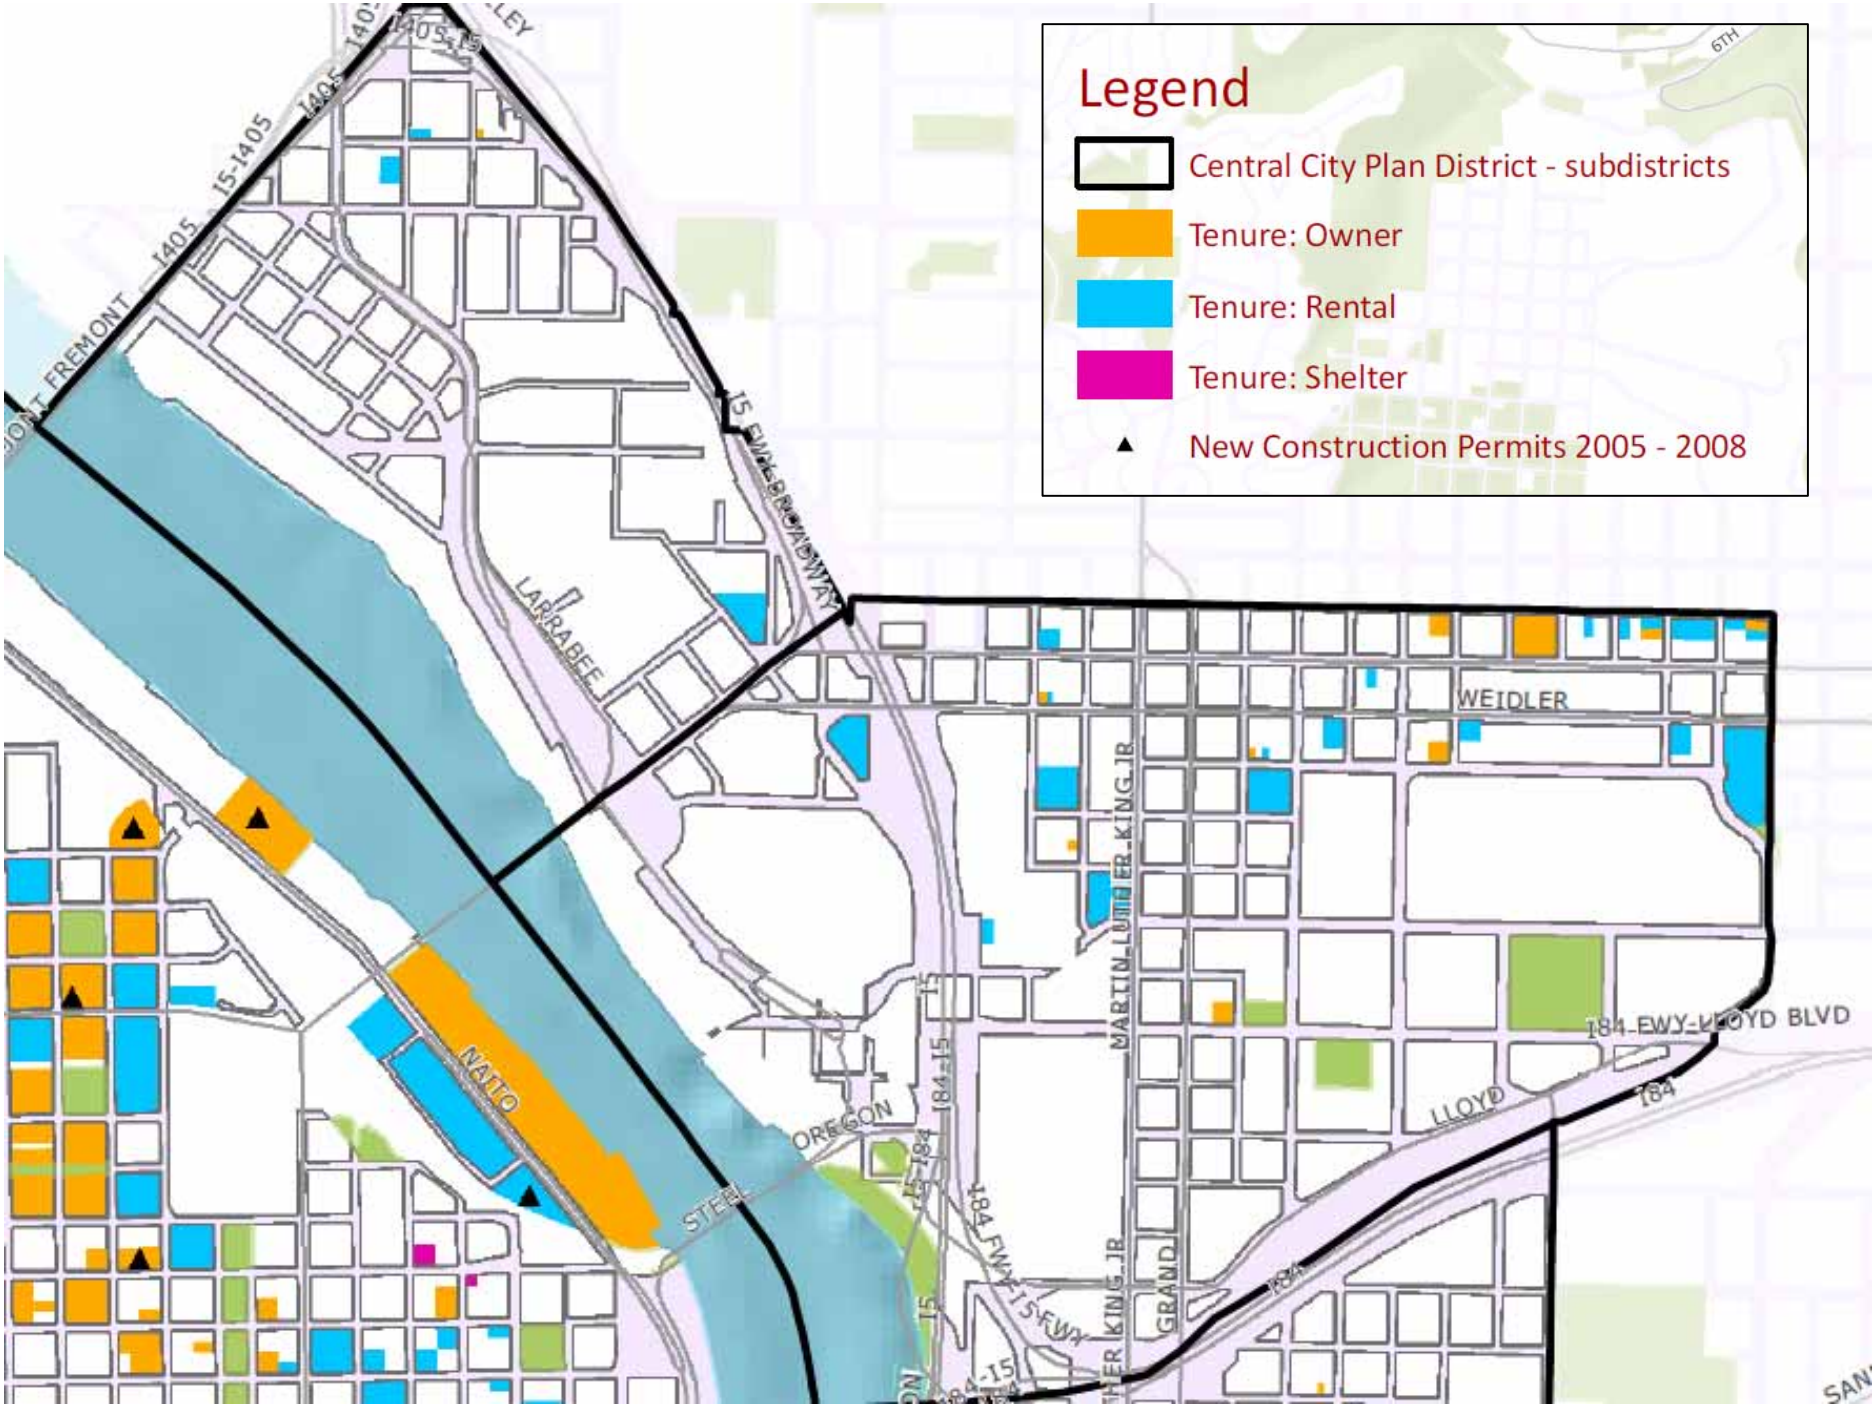
- Regional Attractions
- Regional Retail
- Headquarters Offices
- Industrial

Lloyd and Lower Albina are Very Different

Existing Building Use

Both diverse, mixed-use districts, neither one with much housing

Housing Inventory



2008	Lower Albina	Lloyd District	Central City
Rental	86	1,017	15,601
Owner-Occupied	1	148	7,393
Total Housing Units	87	1,165	22,994

2008 Estimated Jobs to Housing Unit Ratios:

Lloyd – 16 :1

N/NE Quadrant – 17:1

Ground Floor Edge Conditions

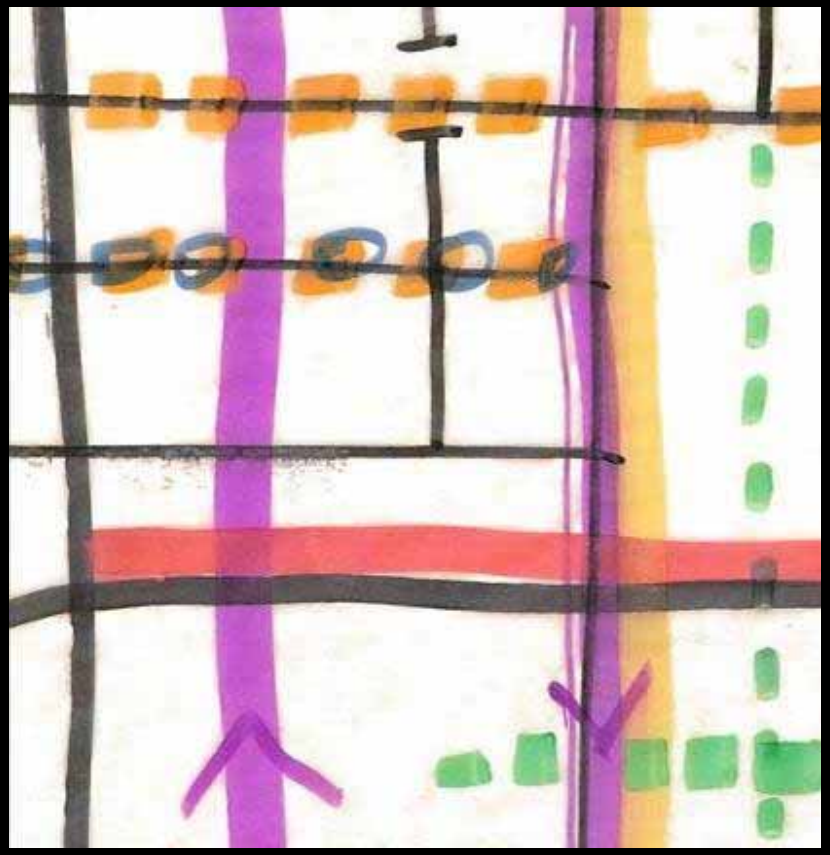
Lloyd lacks urban vibrancy…

Over 20M ft² of New Development Potential

Key Issues and Challenges

- **Urban vibrancy and vitality**
  - –Desire for more housing, improved amenities like open space and pedestrian friendly urban form
- **Economic prosperity**
  - –Employment and business growth
- **Human and Environmental Health**
  - –Air quality, green infrastructure, opportunities to improve habitat
- **Balance and Equity**
  - –Respect cultural heritage; grow while retaining existing residents and businesses and culturally significant buildings
- **Connectivity and access**
  - –Address transportation barriers
  - –Freeway safety and operational issues

Project Goals



1. A diverse mix of land uses and development types;
2. A full multimodal transportation system;
3. Economic development that supports existing and new business;
4. Enhanced habitat, access to nature, and a sustainable built environment;
5. Equitable access to community amenities and economic opportunities;
6. Infrastructure for healthy, livable, safe and vibrant communities;
7. Protection and enhancement of cultural heritage; and
8. Safe traffic operations and freight mobility on I-5 and locally.

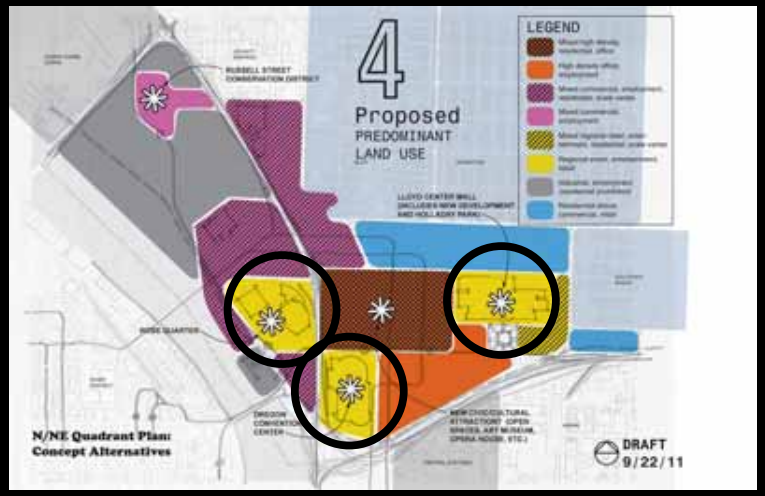
N/NE Quadrant Plan:
Concept Alternatives
DRAFT
9/22/11

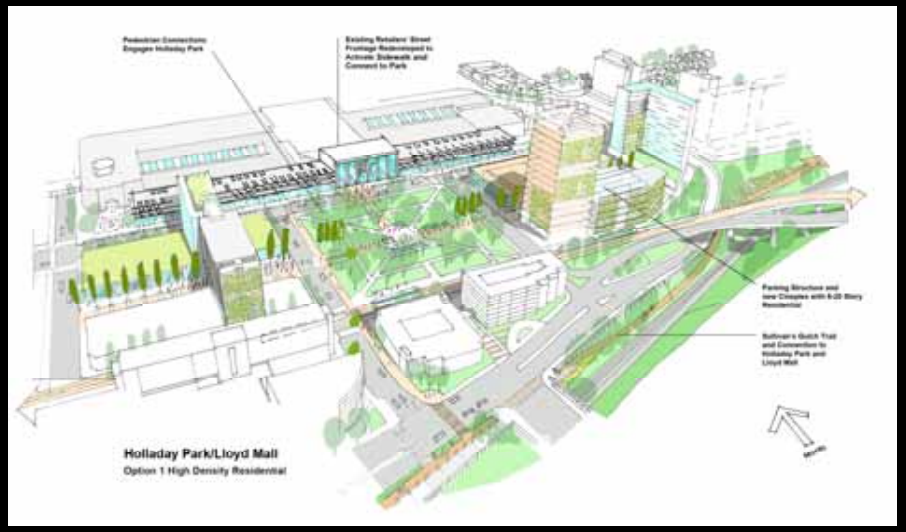
LOWER ALBINA

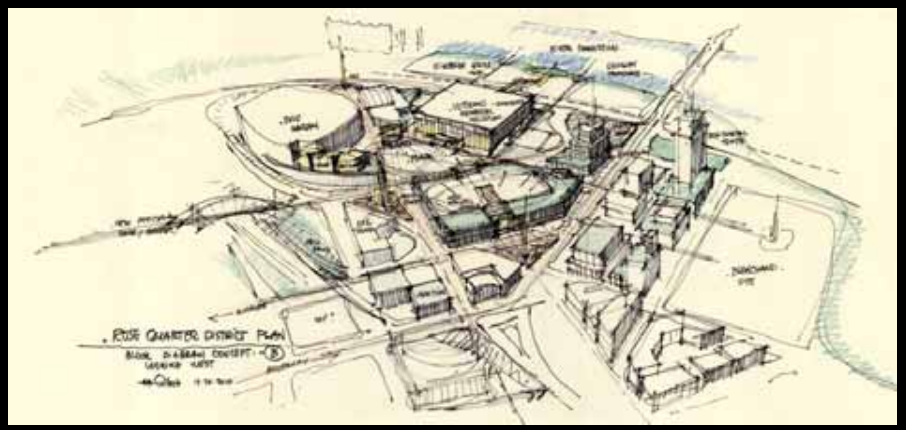
- Continue as a functioning and growing industrial and employment district
- Limited change
- Greater flexibility east of UP rail line



RUSSELL STREET

- Continue to preserve and celebrate the conservation district
- Expand mixed use area east along Russell and south to light rail station
- Not necessarily for residential uses



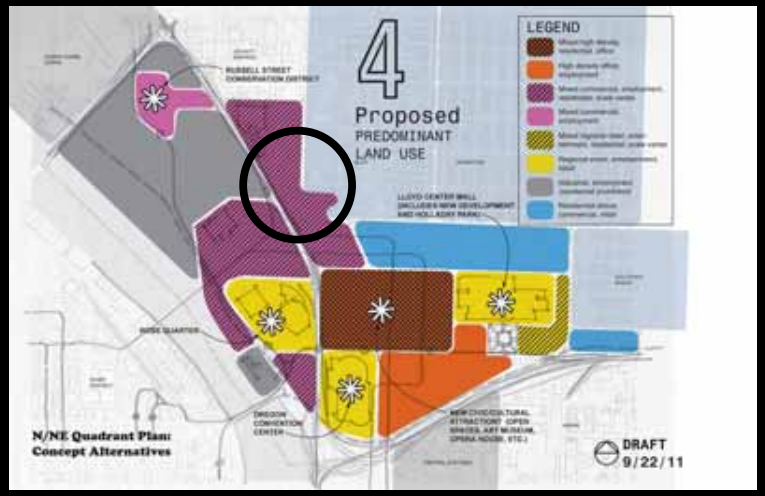


REGIONAL ATTRACTIONS

- Unique in the Central City
- Potential for new attraction in Central Lloyd area
- Encourage new uses, places at edges to improve balance of activity

OFFICE CORE

- Continue as active, expanding office district
- Residential possible, but not encouraged

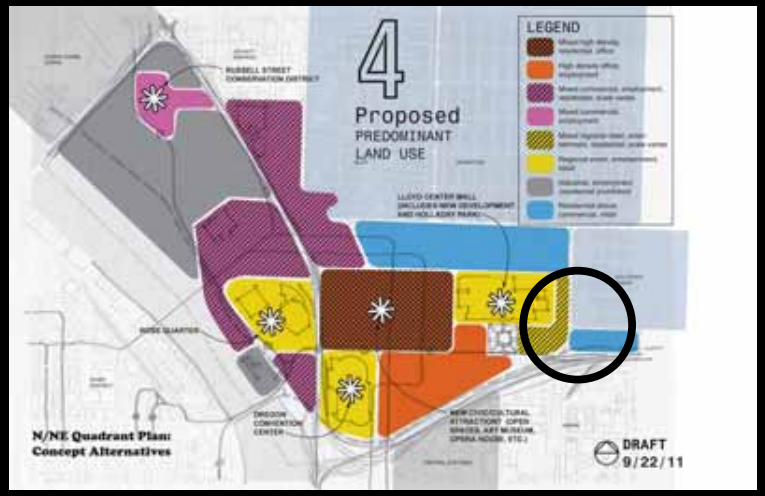


BROADWAY / WEIDLER CORRIDOR

- Extend and expand existing main street development to the west
- 2 to 6 story development, transitioning height down to north
- Housing over ground floor commercial, retail uses

LOWER VANCOUVER / WILLIAMS

- Increase flexibility to allow more commercial, employment uses
- Continue to encourage residential uses
- Integrate and enhance cultural and historic resources in the area



NORTHWEST ROSE QUARTER

- Broad support for changing zoning at Blanchard, residential possible
- Larger scale, more frequently-active development along N. Broadway
- New riverfront open space on Thunderbird site

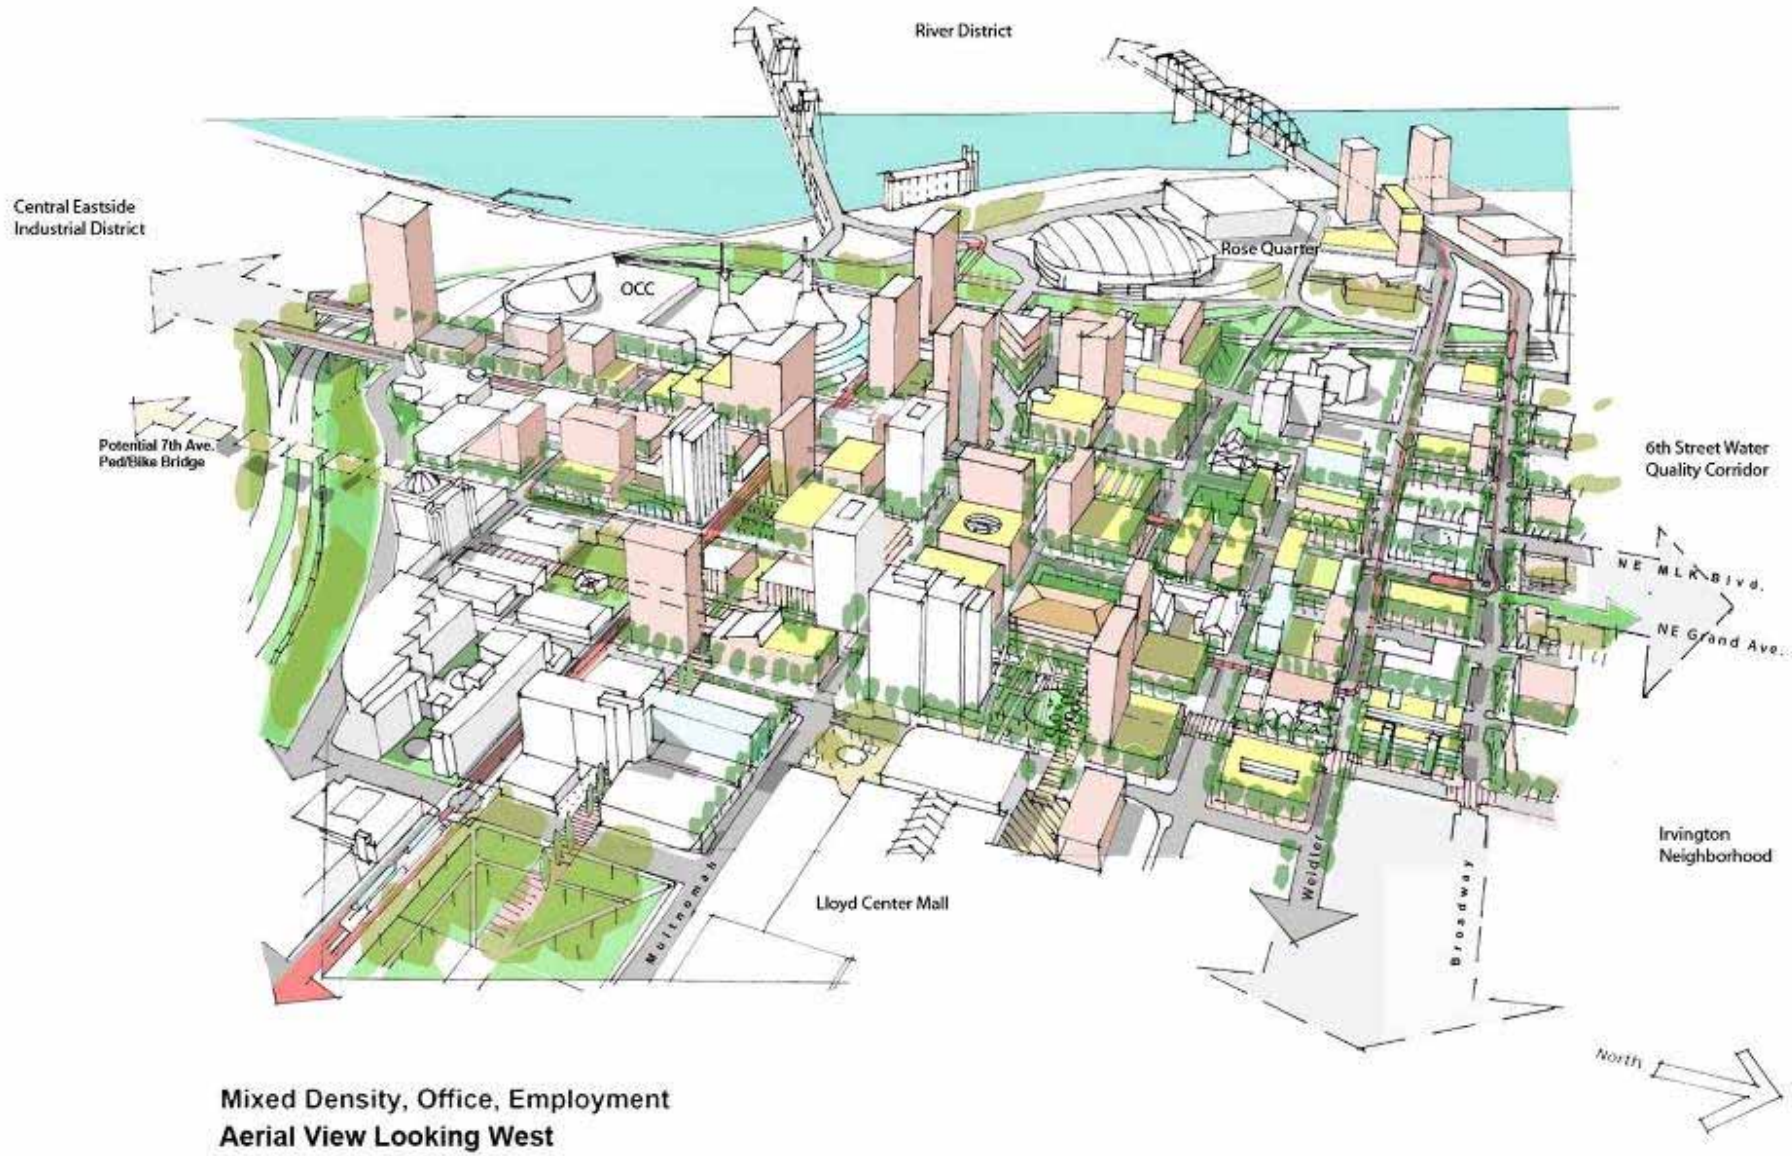
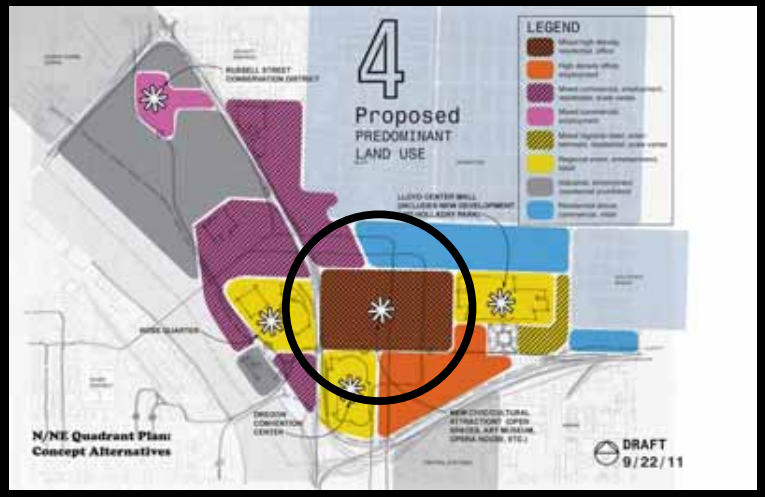
EASTERN EDGE / MULTNOMAH

- Focus on residential development, commercial allowed
- Potential expansion of mall-related regional retail
- 2 to 6 story development



CENTRAL CORE

- Mix of high density residential and office development
- Organized around new, signature open space system
- NE 7th as potential new urban "center" for the area
- Cluster residential buildings



Mixed Density, Office, Employment

Aerial View Looking West

Option 2 Employment District

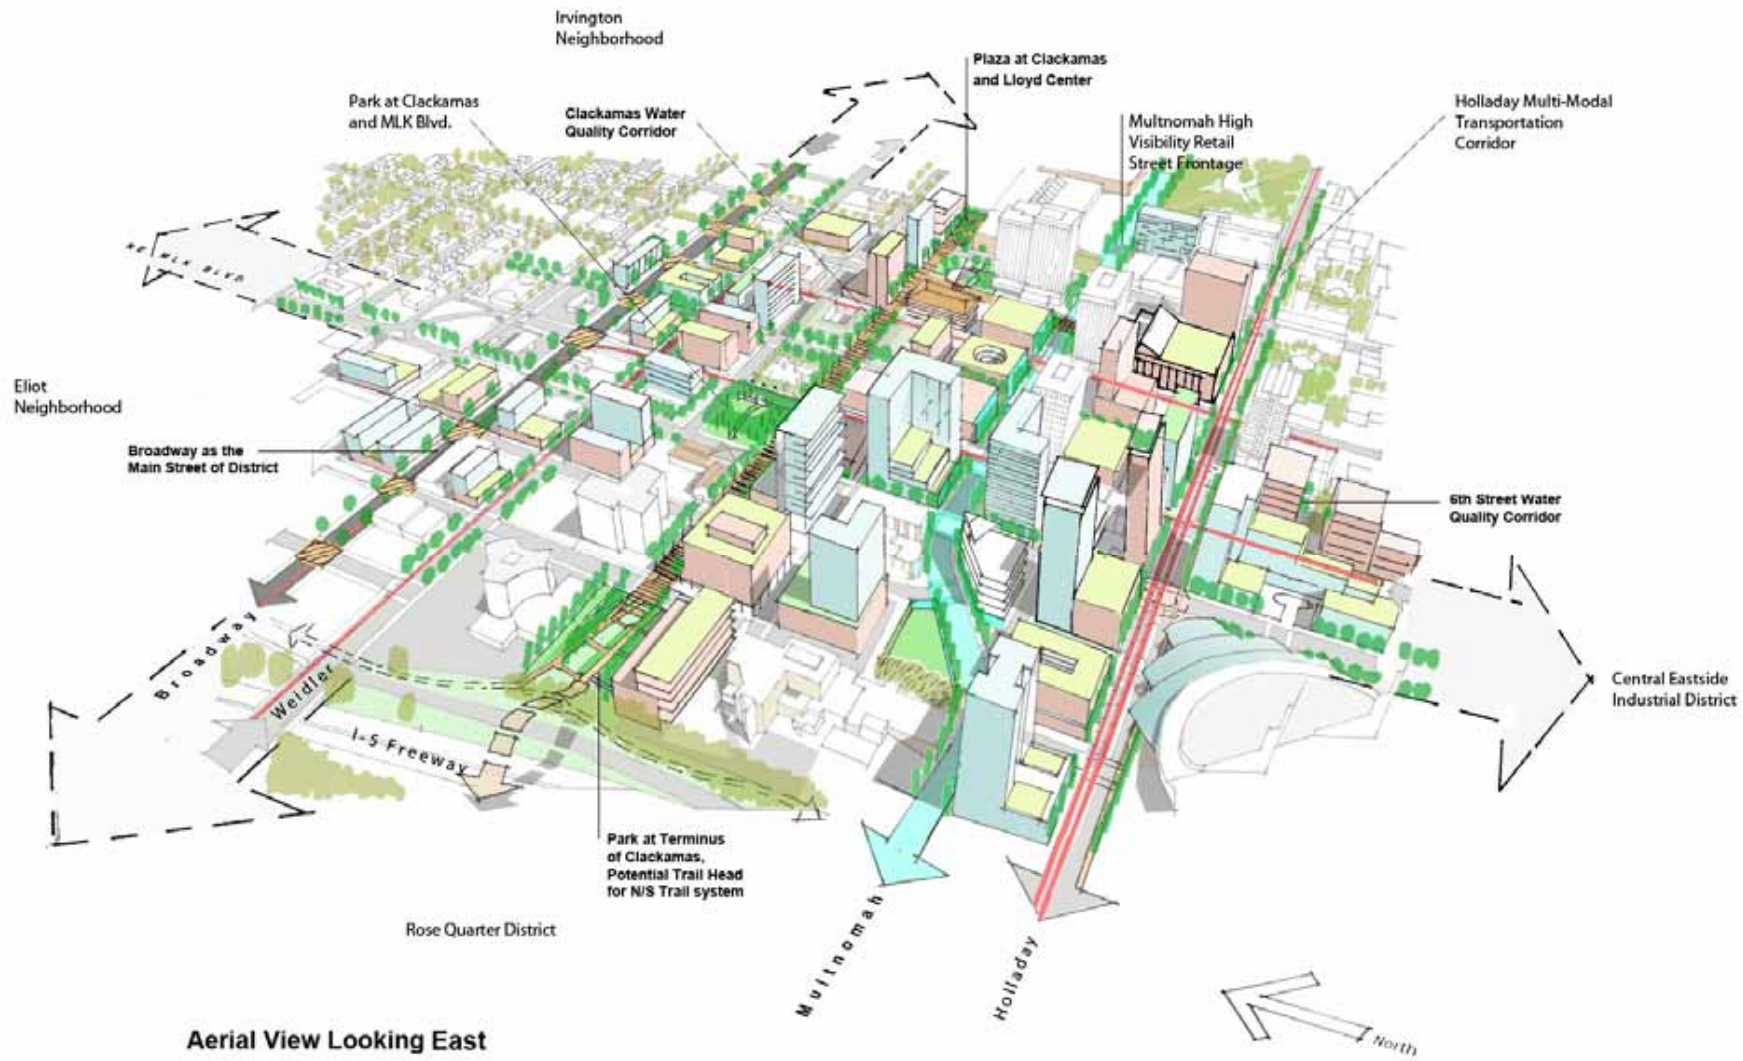
CENTRAL CORE

- Temporary uses
- Surface parking lot activation
- Celebrate creativity, diversity and innovation
- Potential “discovery center”



Land use clarifying questions?

MOBILITY

Aerial View Looking East
Option 3 High Density Blend of Uses

MOBILITY

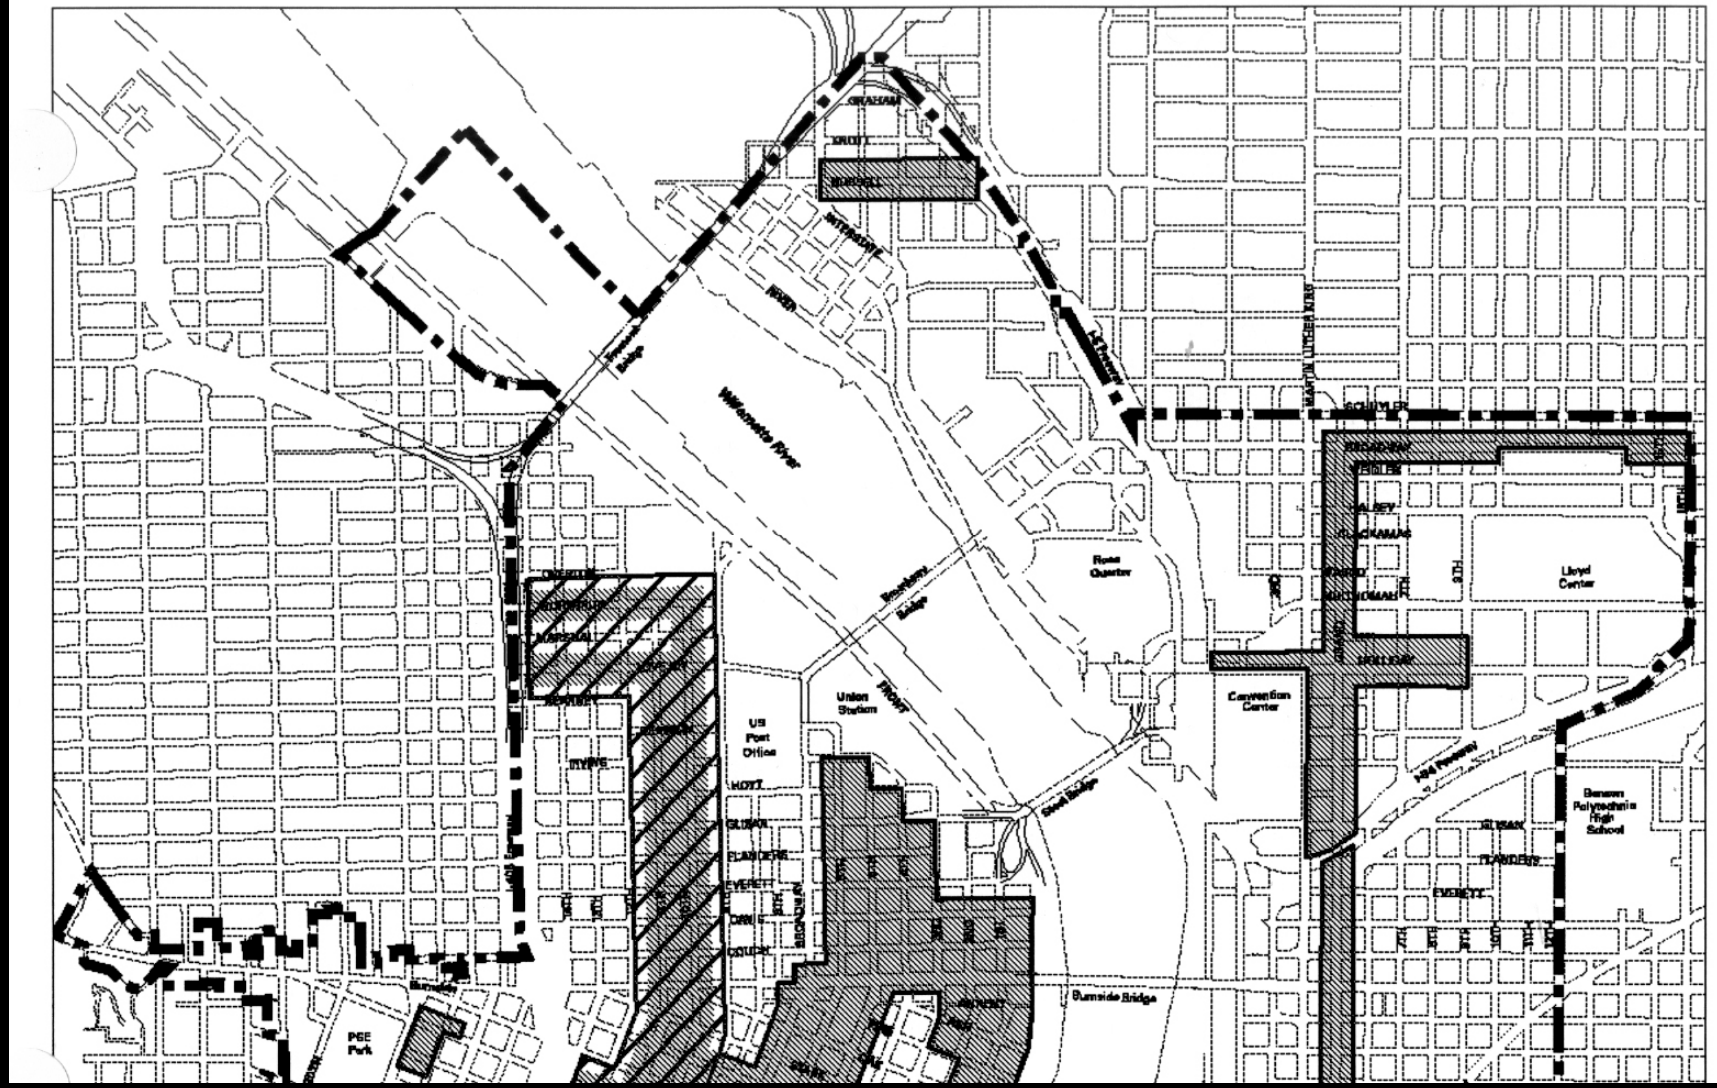
Proposed Typologies:

“CIVIC” – Big, busy, active, public, continuous, regional

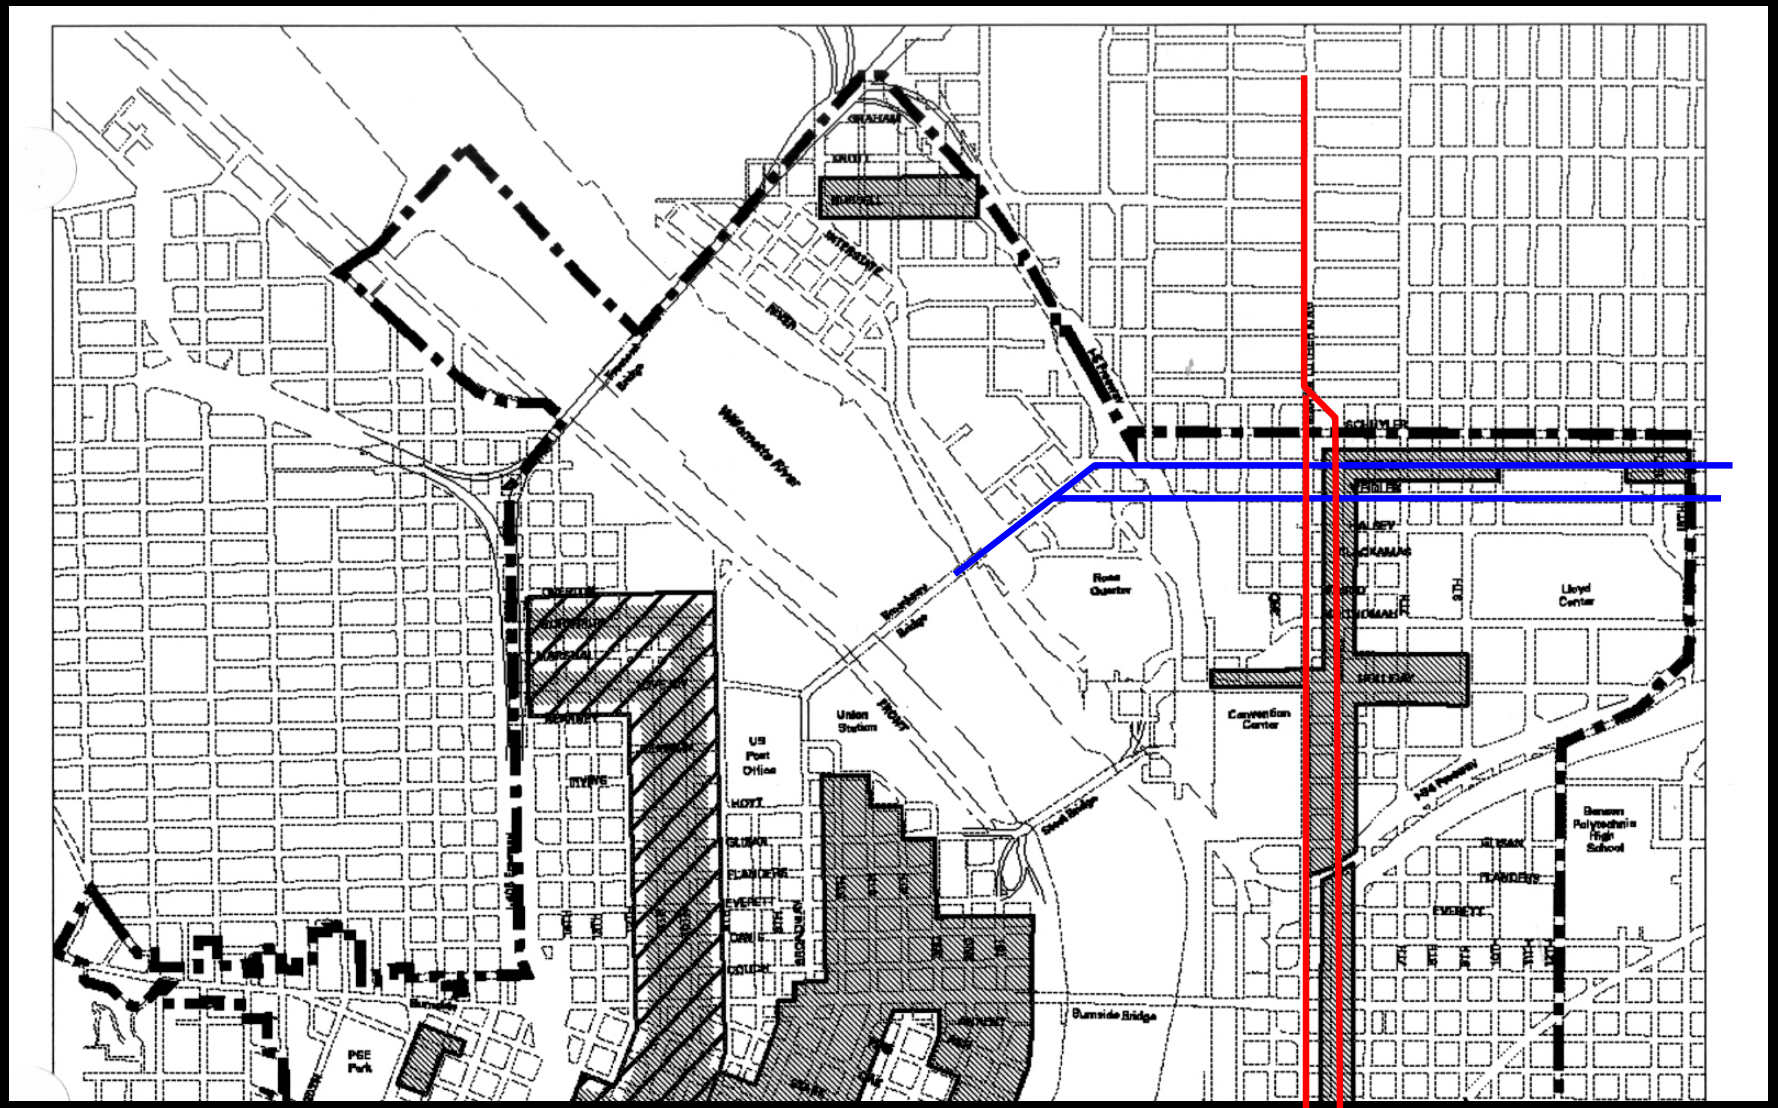
“LOCAL MAIN STREET” – Busy, active, local

“SCENIC” – Movement, access, green

“FLEXIBLE” – Small, open space, quiet, pathway, variety



A FEW GENERAL NOTES ON RETAIL:



1. Retail likes to be around, near and/or across from other retail
2. Even at full build-out, all streets in the quadrant can not be activated with ground floor retail
3. More self-sufficient in high-visibility, high density, well-connected corridors
4. Anchors, on-street parking and/or draws desirable but not always critical

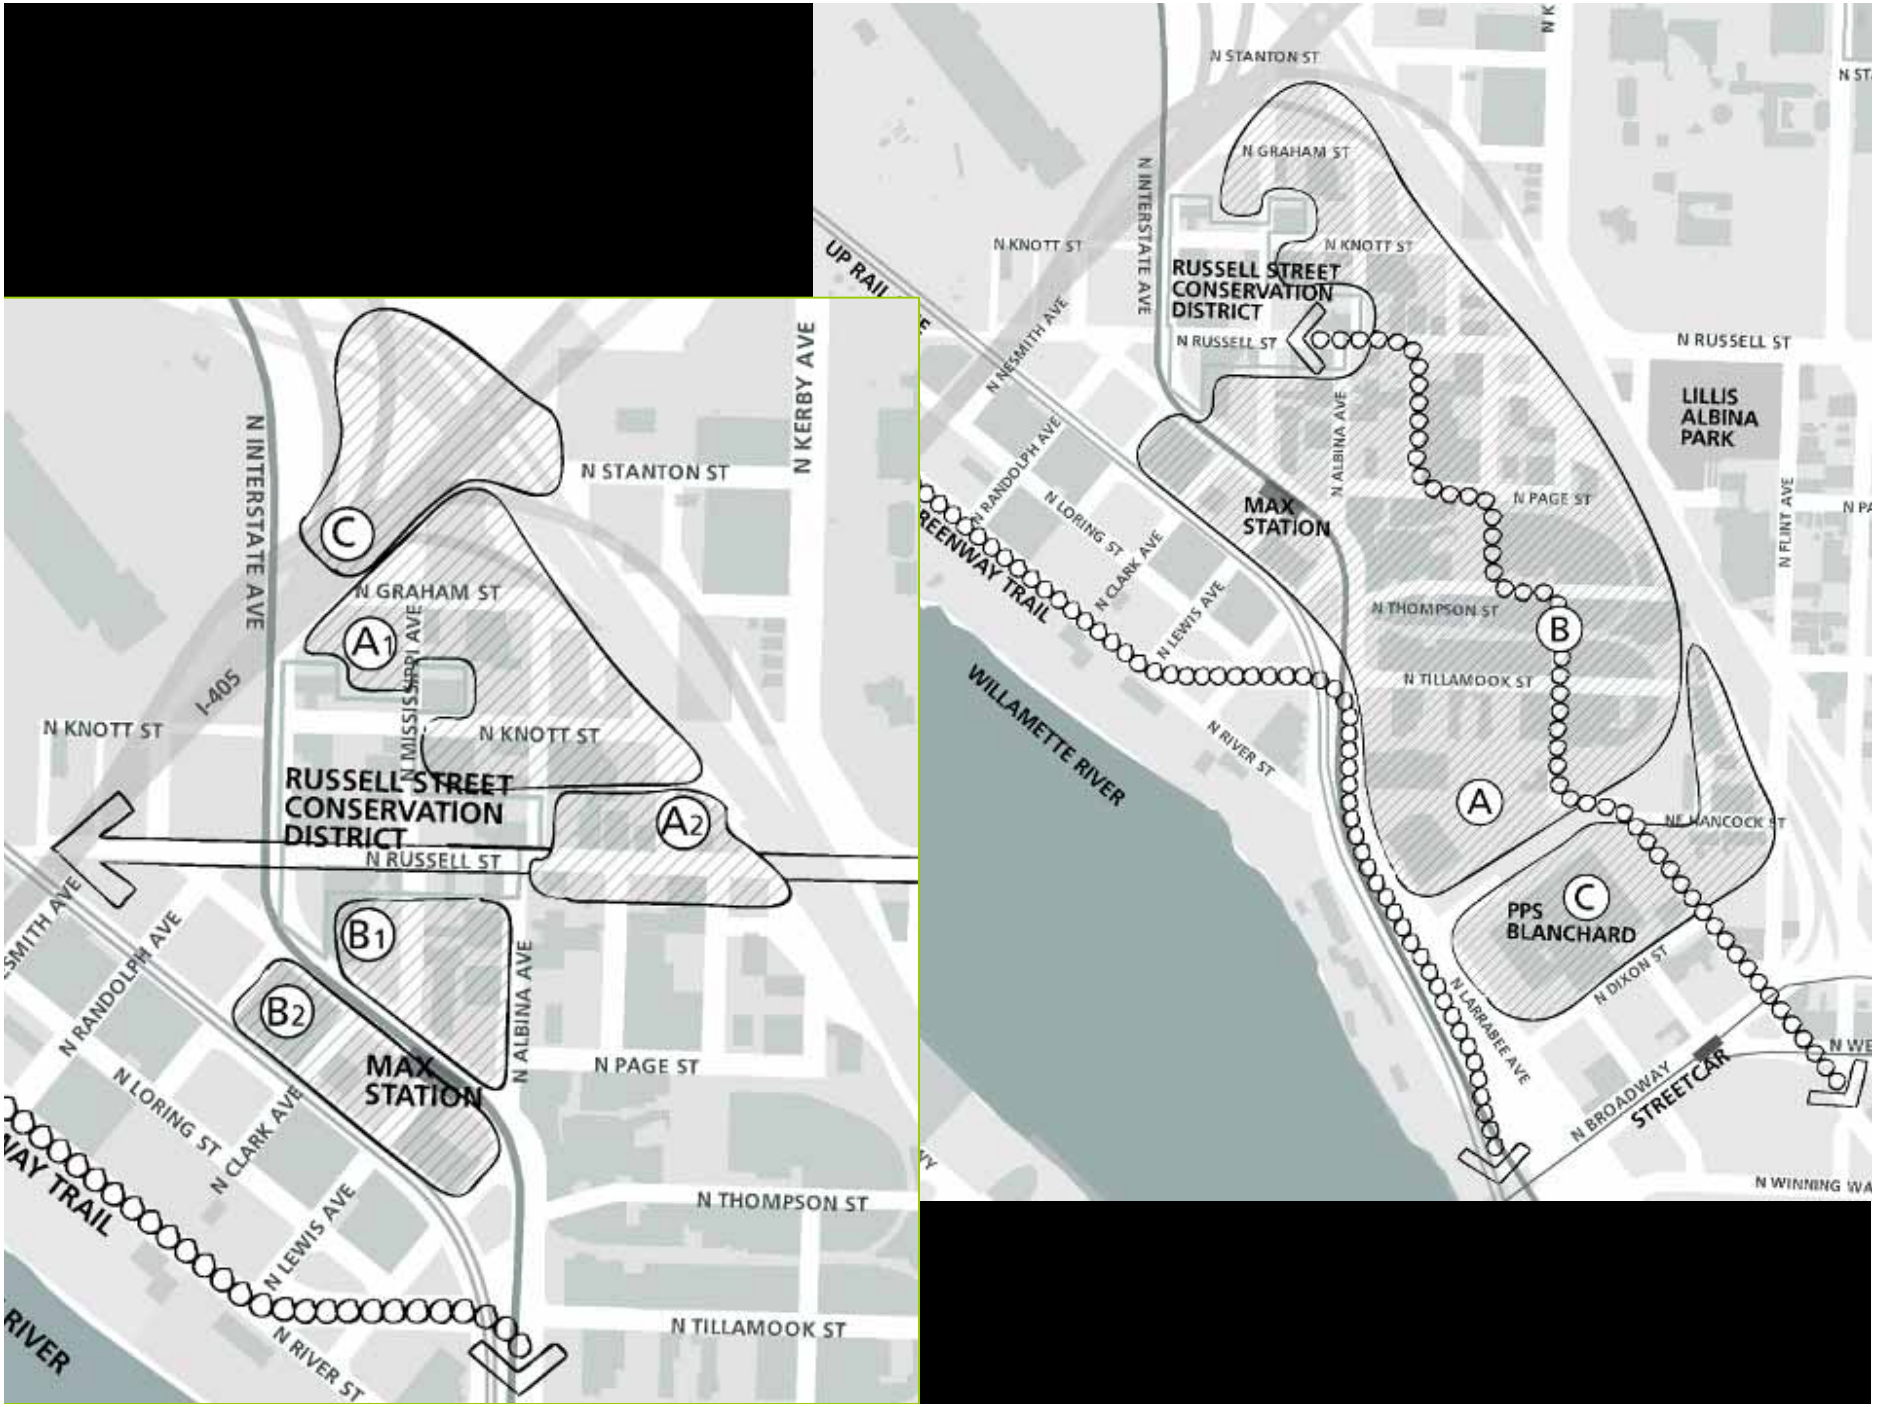
Discussion Objectives

- Looking for feedback / degree of comfort.
- Non-binding approval.
- Discussion Questions on Agenda.
- We'll come back on November 17 with revisions and ask for your approval. That will give staff the direction necessary to develop a draft plan (phase IV).



Do you agree with the proposed housing emphasis areas (Broadway/Weidler Corridor and Central Lloyd)?

INFORMAL DISCUSSION AND MEAL

WELCOME, MEETING PURPOSE, APPROVAL OF MINUTES, AND STANDING BUSINESS – SAM IMPERATI

Sam Imperati welcomed the group and reviewed the agenda.

NEW MEMBER INTRODUCTIONS

Paul Riggs is with Columbia Pacific Building Trades.

Brittain Brewer is here tonight representing Sullivan's Gulch Land Use Planning Committee.

Peter Englander is the new Urban Renewal Manager of Downtown Waterfront and has been with the Portland Development Commission for 10 years.

Joe Zehnder is the Chief Planner with the Bureau of Planning and Sustainability.

Paul Smith is the Transportation Planning Division Manager at the Portland Bureau of Transportation.

Question: are we paying for the dinners we enjoy before each meeting?

Answer: We all should thank and give a round of applause to Gary Warren and the Calaroga Terrace. They generously donate the space and meals for each SAC meeting.

Thank you for your generosity and hospitality, Gary Warren and Calaroga Terrace!
(Applause!)

APPROVAL OF MEETING MINUTES

The May 26, 2011 Meeting Minutes were approved, as written.

Sam called the SAC's attention to copies of communications received by members of the project team:

- May 6, 2011 email from Betsy Reese to Stephanie Beckman regarding the Paramount Apartments

Dean Gisvold: what is the status of the apartment building? Thought it has been clarified that ODOT will not be touching the property.

Andy Johnson: the building has historical significance; the approach is to try to avoid it at all cost.

Dean Gisvold: feels that it is an equivocal answer. He requests that Betsy Reece be notified, as she may not come to all the meetings.

Sam Imperati, to Stephanie Beckman: is she on the distribution list?

Stephanie Beckman: yes.

Additional communications:

- Email from Mike Warwick of the Eliot Neighborhood Association Land Use and Transportation Committee to Sam Imperati with comments on Meeting 6 and the process in general. Mike will bring up his topics at the appropriate point later in the agenda.

Tracy Whalen: noted more communications in the meeting packet, attached to the Betsy Reese email.

Sam Imperati: Good catch, Tracy! Those additional communications are:

- Peter Finley Fry, 4/4/11 email
- Left Bank Project/Daniel Deutsch, 5/19/11 email
- Jim Howell edits to final approved Goals and Scope documents

SCHEDULING ANNOUNCEMENTS

Sam reviewed the upcoming calendar of events for this process. (Document posted on the website.)

A) Open House, July 29, 4:30 – 6:30, Metro Council Chambers

B) Mid-July Sub-committee, July 13, 2011, 5 to 7:30, ODOT

C) SAC Meeting # 8: July 28, 2011, 5 to 8:30, Calaroga Terrace

Open House

The SAC was referred to the brochure about the open house in the meeting packet. There are plenty available if anyone needs more for stakeholder groups. They can also be printed from the website.

UPDATE ON OTHER PORTLAND PLANNING PROCESSES

Lloyd District Bikeways Plan Update – Ellen Vanderslice, PBOT

Ellen Vanderslice of PBOT joined us to provide a brief overview of the bicycle planning efforts, which may intersect with the N/NEQ B-W I-5 Plans. She said it is more than just the Lloyd District, there are several Bikeway Development Projects that the City is doing. All of these are part of implementing the Portland Bicycle Plan for 2030. The next phase is low-stress bikeways, also known as Neighborhood Greenways. These are routes where bicyclists feel safe because many of the identified issues have been addressed and surface and infrastructure improvements have been made. Some features of greenways:

- Help more kids bike to school safely.
- Near-term implementation
- Mainly "operations" improvements, rather than civil construction
- Possible placeholders for future capital projects

Ellen continued, highlighting pertinent projects:

- North Williams Avenue Traffic Safety Operations Projects – this project involves a Stakeholder Advisory Committee, stakeholder interviews and engagement, public open houses
- Lloyd Bikeway Development Projects: Three projects in the Lloyd District are all advised by same advisory committee
    - N Vancouver – NE Weidler – addressing many safety and circulation concerns
    - NE Holliday Project – looking to do a 2-way bike facility on Holliday; would require removing parking – no consensus on that aspect
    - NE 12th Avenue overcrossing – working on options, no final plan or recommendation from advisory committee yet

Ellen talked about options, features, and possible solutions for these projects, some of which overlaps with what the N/NEQ SAC is addressing. She showed maps depicting several different options and concept plans. If anyone has questions, please contact her: Ellen.vanderslice@portlandoregon.gov.

Sam Imperati: where are you timing-wise?

Ellen Vanderslice: on N Vancouver – NE Weidler, they hope to paint and change striping this summer. The other two projects are not there yet. Due to rain, any projects have to be painted by October. If the projects decide to do something larger in scope, it would need to be designed, which is a longer

process and would likely require additional funding. The projects she has discussed tonight are generally near-term projects.

Wayne Kingsley: question regarding projections in traffic growth. There will likely be more demand for traffic of all modes. Are you factoring it in to these planning processes?

Ellen Vanderslice: yes.

Eric Lovell: there are discussions about a possible new I-84 crossing on 7th or 9th. Do you have a preference?

Ellen Vanderslice: we have not weighed in on it, but are going to write a letter of support. It has not been hammered out yet, but she thinks an increase in bicycle traffic would necessitate a new structure.

Pauline Bradford: comment regarding the increase in use of electric bikes; she wonders if you are taking that into consideration. Also, gas prices are high, but people are still driving. As the economy improves, people will continue to drive in increasing numbers. She hopes you are planning for more car traffic on those streets, along with bikes.

Ellen Vanderslice: one of the ways the Bicycle plan for 2030 attempts to address increased traffic is to encourage trips on bikes that are appropriate for bikes. The plan aims to get 25% of all trips on bikes. Bicycling is a pillar of our transportation system.

Pauline Bradford: bikes need to have licenses and insurance.

Portland Plan, Central City 2035, and Rose Quarter Updates – Steve Iwata, BPS

Steve Iwata provided a brief update on the Portland Plan schedule, referring the SAC to the process diagram in the meeting packet. Over the spring, they have been developing strategies. By mid-summer, they will have a draft of the strategic plan for public review. There will be a public hearing before the Planning and Sustainability Commission in the fall. If all goes well, it will be adopted by City Council during the winter.

The Central City 2035 is in progress and NNEQ is a component of the overall plan. They are finishing a series of symposiums; tomorrow is last symposium and the topic is Historic Resources. Steve reviewed the timeline, noting that CC2035 will likely go to the Planning Commission in late winter and then to Council.

On the Rose Quarter District Plan, BPS is working closely with PDC. The Rose Quarter District Plan will have a table at the N/NE Quadrant open house at end of month where PDC will provide more detailed information on their redevelopment work of the Rose Quarter, including the Coliseum.

Central Reach Natural Resources Inventory – Roberta Jorntner, BPS

Roberta Jortner from BPS joined the SAC to announce that the Central Reach Natural Resources Inventory draft is available for public review and comment. This document is the first stage of the inventory that will be completed as part of the Central City 2035 plan. This stage includes resources associated with the central reach of the Willamette River and resources in the N/NE Quadrant. It includes maps and narratives and explains the relative quality based on specific habitat and watershed functions they provide. It can be used to evaluate policies and concepts, helping decision-makers maximize opportunities to enhance natural resources while meeting other important goals for the Central City. The NRI is information only and does not dictate if or how regulations should be updated.

It is available on the website and will remain a draft until it is adopted. They would love to hear comments in the next couple of months.

LOCAL/LU/UD/TRANS DISCUSSION CONTINUED FROM 5/26/11

Karl Lisle began his presentation, noting he wants to use the bulk of the time for discussion, and so he will provide a brief review of the emerging concepts. He called attention to the Subarea Choices Summary in the meeting packet. Mark Raggett, of BPS, and Mauricio Leclerc, of PBOT, both did a lot of work on this as well. All of this material will be featured at the Open House, and we will bring back the feedback to the SAC in July. We will be asking you to make a decision in September – October. At that time you will have the assistance of a lot of outreach to help inform your decision-making. They wanted to introduce this material early, help you keep in mind several of these land use issues.

Karl reviewed the basic framework of the concepts, the categories of which are: Existing Conditions, Residential Focus, Employment Focus, and a Blend. For each of those concept categories, they developed land use, mobility, open space, and green system layers. Bringing all of these together is what forms a complete concept. Karl noted that many decisions are smaller LU/Planning questions, but are related to larger concepts. For example, in Subarea 1a – Historic Russell Street, before we can make a decision, we need to determine what is the role of housing, if any. Those are the kinds of questions they are interested in hearing about from the SAC and at the open houses and other outreach.

Karl said he would like to start with clarifying questions about broad concepts or things that might be missing.

- Are there questions about the broad concepts? Or elements within them?

- Are there questions about the subarea choices? Or elements within them?

Justin Zeulner: did you look at a "Blend-Blend?" By which he means a blend of all elements – residential, employment, land use, mobility, open spaces, green systems – basically making an effort to maximize them all?

Karl Lisle: we looked at all of these elements individually, and he thinks we are heading in a "Blend-Blend" direction. They are still piecing together all the options. The LU side is hoping to progress in a consensus way, hoping for minimal conflict by talking with community groups. If there is conflict, we'll turn it over to Sam. We are moving into the Blend-Blend or in the direction of developing a 4th concept.

Dean Gisvold: missed the May meeting. You may have discussed what you mean by "blend," and now someone has mentioned "blend-blend" – he is confused.

Karl Lisle: in the existing conditions layer, one thing you notice is that the middle is not really filled in. If you were assigning clear future directions, some areas are easier. The middle of this quadrant could go in a lot of directions. As we go through the presentation, I will be explaining the thinking behind looking at a residential focus or an employment focus, and what a mix in an area would mean.

Dean Gisvold: question regarding a 6 – 20 + story designation on the map. What does that mean?

Karl Lisle: it is an urban design and building type question. How high you go depends upon the zoning in the area.

Tracy Whalen: how tall is the Lloyd building? How many stories?

Karl Lisle: the height of a building story is different for office and residential. They are approximately 250-300 feet or 18-20 stores. He showed examples of other building types down at South Waterfront, which are 30+ stories.

Mark Raggett: a residential kind of focus would be, for the sake or discussion and exploration, high rises and higher density.

Wayne Kingsley: where are we going? What are the criteria? How are we making decisions? It is fun talking about concepts, but are we trying to pack more people in? Create jobs?

Joe Zehnder: all of that.

Wayne Kingsley: that is typical of what you hear from the City. But, you cannot do all of those and get the benefits.

Steve Iwata: explained the approach again, noting the land use, mobility, open space, and green system layers. Later in the agenda, we will be talking about evaluation criteria. The project team will be refining concepts through the summer and doing public outreach.

Wayne Kingsley: not answering my question, but ok.

Sam Imperati: to Wayne, are you asking for more information on how, who, and when?

Wayne Kingsley: they have got to have some objectives in their minds. For example, we need so many residential units, so many jobs, and so many bicycle paths. If we had those criteria, some of these things will fall in place. He does not understand how we will get to the decision-making.

Karl Lisle: we do have goals. We have looked at Metro forecasts. The numbers are small compared to the capacity in this particular area. They are trying to be more deliberate about what kind of place we are trying to build. It is not choosing one over the other. There's a lot of potential here.

Lloyd Lindley: the Metro targets are 3,000 housing units and 20,000 jobs. Those will be processed through what we are doing here. We have criteria, we have a vision statement. Thinks these are four good scenarios to work with and he thinks we are on the right track. It will take more time to get there. In addition, on the blend, how is it different from a CXd zone? Is it a visionary arrangement? A toolkit to change CXd? New zoning?

Karl Lisle: base zoning does not really tell you a lot about what is going on there. They are looking at the Pearl for how to blend many things. It is an EX zone. You could do exactly the same thing in the CX zone. The present zoning would allow you to do basically any of these things, too.

Lloyd Lindley: noticed in Lower Albina, you added Area C, which he thinks is really cool, making a connection to Mississippi Avenue. There is a lot of discussion about Williams-Vancouver and MLK, but also likes thinking about Mississippi, and what happens with the surface system for connection up to that area. Conscious of scope creep, but interested in good connectivity and flow. As Justin has talked about previously, how do we get from Russell to the Rose Quarter, etc.

Joe Zehnder: forecasts are targets. We use them for planning purposes. The Metro forecasts are valuable for planning. They are better for larger areas. The Central City itself can easily take the flux of shifting the numbers around. They will be taking all the quadrant plans and coordinating them. This N/NEQ SAC is out of the gate first.

Gary Warren: need for priority of residential uses in Lloyd District. It is a good compliment for entertainment uses. This is a ghost town on non-event nights and more residential will help with that. He is concerned about what he is seeing, the one residential area being proposed for office. He is concerned about that.

Mike Warwick: on the Lower Albina area, during the controversy about tearing down the Coliseum. Mayor Adams put on the Water Bureau site – why is that property not in there?

Karl Lisle: it could come back. However, it is very different from the Blanchard site – those owners want to sell. The Water Bureau site owners currently do not want to sell, but that could change.

Joe Zehnder: compelling reasons for that, need to talk it through. Goes back to commitment of land that can be in-city industrial, and we support that – like the Central Eastside. This has that kind of development potential.

Mike Warwick: planning process comment – this activity gives us the chance to say we planned, did it work? This is an opportunity for us to look at the last twenty years of existing zoning and do we want to preserve it or do something different?

Justin Zeulner: as we roll out to a public open house, it would be good to have existing zoning and a legend on each map. Regarding the future of the quadrant, perhaps we could suggest what we want to see. If we would like to see 6,000 units of housing, for example. He agrees that it is good to know the context/forecast, but also to not let that be limiting. For example, the school district did not want to sell, then changed their mind. Hopefully, things can change with the Water Bureau site, as well.

Tracy Whelan: this is not the Pearl or the South Waterfront. It is an area designed to accommodate trips in and out. It is a corridor district. As you add more residents, there will be a bigger push to get rid of traffic at any cost. Mixed use is fine, but not to the extent we are showing.

Brock Nelson: it is important to frame expectations. There are some greenway trails on these maps, but by virtue of having it on a map does not necessarily change a landowner's position about building a

greenway. When he sees a line on a map that will be going out to a public forum, he has concerns about this being a potential miscommunication.

Paul Smith: they are working with Mayor Adams, the neighborhoods, and have initiated a Sullivan's Gulch Advisory Committee. It is primarily a technical evaluation about where a trail might be sited. He has managed a lot of trail-rail projects and notes that this is a Class I railroad. There are not many trails next to Class I. Also, there is no city ROW, so they will have to deal with that aspect, as well. CH2MHill have provided them with lidar imagery, 3-dimensional terrain data, to help them with the evaluation and siting. The concept of a trail has been discussed for 5 years, but we have not determined the exact location. There are no guarantees that it will be constructed.

Wayne Kingsley: one of the equity objectives is to have jobs available for different range of incomes and abilities of folks who live in the area. Not sure we will achieve that, as new housing is so expensive. This is an objective we need to maintain here.

Dean Gisvold: commented that this is the first document he has received on this material that he could read. Appreciates that. He could not even read it on the web page. Just some feedback for the project team to consider as you create materials.

Britt Brewer: recommends that folks go to www.prezi.com and type in Karl's name, you can read them in exhaustive detail. It is great. Regarding discussion question #3, are there groups we suggest you meet with? Yes, Sullivan's Gulch will be interested in hearing more. Wonders how to go about making arrangements.

Karl Lisle: bulk of outreach will be done by September and just get in touch with him, or any member of the project team, to arrange a presentation.

Britt Brewer: on Subarea 6 – property east of Holliday Park. Mr. Lange is not here tonight, his understanding is that the property has been sold.

Eric Lovell: Lower Albina, Russell Street; from his read of the concepts, it seems to be focused on residential. Increasing residential in either of those areas is something the property owners are almost universally against. Can this be re-considered before it goes out to the public?

Karl Lisle: are you wondering why we are proposing residential in that area?

Eric Lovell: yes, and believes that an industrial/commercial combination, not residential, is the right approach.

Karl Lisle: in the conservation district, there's some residential and residential is allowed. However, outside of the conservation district, there is conflicting policy on the books. The existing industrial zoning prohibits housing, while at the same time there are incentives to provide housing. The plan should address that issue. The SAC and public will be asked to weigh on where residential is appropriate.

Justin Zeulner: would be interesting to check in with non-partisan developers.

Karl Lisle: we have been talking about setting up a developer forum, after things gel a bit. There is still too much to digest. They would like to do the forum in the fall, as it would be a good reality check.

Mike Warwick: following on Eric's comments, just wants folks to know we have been approached by a number of different folks who *do* support residential in that area.

Gary Warren: he is now totally confused when he looks at the Broadway-Weidler commercial corridor; he sees a lot of residential. Thinks we should have a conversation about whether and where we even want it. We have to have that discussion.

BREAK

STATUS OF TRANSPORTATION CONCEPTS - UPDATE

Sam introduced the next topic, queuing up the following question for the SAC to focus their thoughts and comments:

> *SAC Action #2:* Do you agree that the 13 Potential Concepts Recommended by staff adequately represent the range of concepts to be developed, analyzed, and evaluated per Step 2 of the I-5 Broadway/Weidler Interchange Area Screening process?

John Cullerton, with URS, is a consultant to ODOT and the City. He presented a PowerPoint titled, "SAC Meeting #7 June 16, 2011 Concept Development Process." At last month's meeting, the SAC discussed categories and agreed on the elements for no further study, with the caveat that any can be brought back if a concept would require it. Today, he will review the features of the 13 concepts being proposed to develop and analyze further.

Slide 3: Process for moving forward with transportation improvement concepts (endorsed at 5/26 SAC meeting)

- 5 categories of concepts to develop – Table 1 (Recommend adding TSM/TDM/Operations Management)
- A range of potential elements to examine – Table 2
- Elements for no further study at this time – Table 3

Slide 4: Table 1 – Concepts for Further Study Five Categories

1. No Build

2. Mainline Operational Improvements

Ramp modifications (No loop ramps)
Ramp braids
New overcrossings

3. Rebuild Bridges

Ramps remain as is

Ramp modifications (No loop ramps)
Ramp braids
New overcrossings
Auxiliary lane extension

4. Enhance the B/W Interchange

4a. Split diamond
4b. Folded diamond
4c. Collector/distributor road
Auxiliary lane extension with all interchanges

5. New Concepts for the B/W Interchange

5a. Standard diamond (de-couple Broadway/Weidler)
5b. Single point urban interchange (diamond) (SPUI / SPUD)
5c. Diverging diamond interchange
5d. Roundabout-controlled diamond interchange
5e. 3-point interchange
Auxiliary lane extension with all interchanges

Slide 5: Table 2: Elements to be considered

Loop Ramps
SE Quadrant
NW Quadrant
NE Quadrant

CD Roads
Northbound
Southbound

Braids
Northbound - I-84 to Weidler
Southbound - Weidler to I-84

Extra Ramp (Partial Cloverleaf)

Extra Freeway Crossings
Bike/Pedestrian Only
Multi-Modal

De-Couple
Broadway/Weidler
Vancouver/Williams

Remove Freeway Crossing(s)

Local Street Changes

Bicycle/Pedestrian Changes

John noted that a new concept has been added, which is to analyze an approach that utilizes Transportation System Management, Transportation Demand Management and Operations

Management methods; basically, looking at ways to manage traffic, reduce demand, encourage folks not to drive, encourage carpooling, and make other systemic improvements that do not involve large capital expenditures. Developing this stand-alone TSM/TDM concept can be considered a step up from no-build.

Slide 6: TSM/TDM/Operations Management

- What's the best that can be done w/o significant capital improvements?
- All concepts include regional TDM measures
    - TMA transit subsidies
    - Parking costs in more areas
- Develop focused TSM/TDM/Ops Mgmt as a stand-alone concept
    - Variable message signs
    - Travel time and speed information
- Provides comparison with No-Build and Build Concepts

Slide 7: Concepts Proposed for Further Analysis

1. 2035 No-Build

2. Mainline Operational Improvements

2a. Braided ramps
2b. Collector/distributor (C/D) roads

3. Rebuild Structures with Mainline Operational Improvements

(Auxiliary lane extension; ramps remain as they are today)

4. Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements

4a. Split diamond Interchange
4b. Folded diamond Interchange
4c. Three-Point Interchange (couplet)
(Auxiliary lane extension with all interchange options)

5. New Concepts for the Broadway/Weidler Interchange with Mainline Operational Improvements

5a. Standard-Diamond Interchange (de-couple Broadway/Weidler)
5b. Single-Point Urban Interchange (SPUI; de-couple)
5c. Diverging Diamond Interchange (DDI)
5d. Roundabout-Controlled Diamond Interchange
5e. Three-Point Interchange (de-couple)
(Auxiliary lane extension with all interchange options)

6. TSM/TDM/Operations Management

John continued, providing a brief explanation of the Concepts as noted in the chart in Slide 7, above.

Tracy Whelan: question regarding a possible overpass at Clackamas; are you looking at it as multimodal or restricted just to bike/ped?

John Cullerton: we are considering and evaluating both.

Slide 35: Next Steps

- Finalize representative concepts
- Prepare planning-level analysis that will include:
  - Freeway crossing opportunities for all modes
  - Local street circulation
  - Freeway safety and operations
  - Potential right-of-way impacts
- Report to SAC on July 28th

Slide 36: SAC Action Items

- Endorse adding TDM/TSM/OM concept
- Endorse representative concepts for further development and analysis

Lloyd Lindley: question regarding no-build option, analyzed with TDM. Are you going to have a true no-build along with the more aggressive TDM?

Todd Juhasz: you can think of the no-build as the null hypothesis; we are developing it for the sake of comparison. The TDM/TSM/OM concept is a step beyond that.

Paul Smith: question regarding a folded diamond; can a tractor-trailer make that maneuver?

John Cullerton: engineers are going to look at that, see if it can work. We will be reporting back.

Paul Smith: comment; does not seem appropriate to refer to that traffic circle as a roundabout; traffic circle or rotary is more accurate, he thinks.

Justin Zeulner: under current conditions, there is a large amount of on and off circulation. Has the technical staff asked why? Is there something that we can do to get the motorists out of the area? This is related to the question Sam is asking, without the Land Use strategy known, it is impossible to know what to do with most of these concepts, except Concept 3, it seems like you can continue to look at that.

Also, for residential or land use ideas, the large freeway footprint options do not seem to fit. If we know they are not going to fit the other goals we have for the district, then why continue to study them? Lastly, if the future demands dictate that larger concepts are needed, then recommends you look at areas on- or off- north or south of the quadrant.

John Cullerton: he agrees that some freeway options work better with some LU concepts. They are working at a high level now, get them down to 4-ish options, and then, see how they work with the LU ideas.

Todd Juhasz: please note the question marks that are shown on some of the concepts. As we continue our technical analysis and discussions with the SAC, we are starting to get an idea of what works and what does not. We are getting a sense of those ideas that may fall off.

Eric Lovell: sees that you have some new concepts, and thinks that the SPUI consumes so much space, among other drawbacks, it is not an appropriate solution for this area, and thus, it a waste of resources to keep looking at.

Todd Juhasz: you are on the right track. The volume of truck and vehicle traffic, how pedestrians and bikes cross – they are looking at all these factors. When we get down to the four concepts, then we can really begin to apply the evaluation criteria.

Tracy Whalen: a lot of these have come from public process, and we need to thoroughly vet them before they can be removed.

Todd Juhasz: great point.

Britt Brewer: commends how far you've gone. Having these two processes together is great; the next challenge is to merge them fully into one concept.

Gary Warren: agrees with Justin, need to tie the land use into all of this. It is overwhelming and need to understand how all the pieces fit together. In addition, will we be using any computerized traffic flow modeling? Some of these changes, especially Clackamas, will turn into a boulevard. The more complicated Broadway-Weidler is, the more traffic will go onto other streets.

Mike Warwick: I agree with Justin. The City has made 10s of millions in investments on Broadway-Weidler, and as long as we dump traffic in the box, that development will not happen. It is running crosswise with other objectives the city has. If it frustrates the kind of development we want to see on the LU side, we need to look at other things. Pulling the ramps away from the box needs to be taken seriously. Cannot go forward with this plan without having that tradeoff explicitly flagged.

Regarding the overpass on Hancock, it involves use of more of the surface streets in the Eliot Neighborhood and on Flint. It will destroy Flint. Gave explanation of the neighborhood concerns and said that encouraging through traffic onto Rodney or Flint are non-starters.

Todd Juhasz: thanks for your comments. A lot of the concepts we have do show moving the ramps. No decisions have been made. As for an overpass on Hancock or Clackamas, those could be just bike/ped. He is confident that we will find reasonable solutions.

Mike Warwick: confident you are more open-minded than my letter implies. Comfortable with where you are heading, want to be sure you received his opinions.

Dean Gisvold: each of the four or five concepts has a negative impact on Madrona or the Paramount apartments.

Lloyd Lindley: streetcar is a $150M investment from the City. You have mentioned your budget is in the $200M neighborhood. Believes that looking at tearing out a significant chunk of a $150M loop is unwise. If we are discarding some options early, then, he thinks we should focus our resources on what is actually do-able. Concepts that preclude the streetcar or make it more difficult are a waste of time.

Land use, at least some level, needs to come in now. Making big moves, dealing with major pieces of property – we need to know the fatal flaws. Need to have some idea of right-of-way needs. Sees some are concentrated, some might involve 6, 8, or 10 lanes. This could be another fatal flaw.

Todd Juhasz: provided a quick review of charrette process, how they received 70+ ideas, and organized them into like concepts. They are looking at engineering and feasibility. The next step is to apply exactly what you said, such as, is it in budget? What is the impact to quality of life, biking, walking? The technical team is now applying a finer sieve to this.

Lloyd Lindley: thanks, tough process, doing good work.

PUBLIC COMMENT

Sam Imperati: Before I call any of the questions noted on the agenda, I want to make time for public comment. He summarized where we are at before members of the public spoke. He noted that tonight we were presented with Land Use and Transportation concepts, which will be going out to the public for review and comment. The project team is incorporating SAC feedback, seeking public input, and doing further technical analysis. These concepts will be whittled down to four, which will be presented next month. Major thing the project team is looking for is if there is something we should consider that we are not.

Betsy Reese: is here tonight with her husband Rich. They own the Paramount parking lot and the Paramount Apartments. She cannot fully read all the lines, but can you show me the designs that re-route the ramps out of the neighborhood? In addition, are we sure that one of the four will?

Todd Juhasz: we would like to meet to get a better understanding of her concerns.

Betsy Reese: she is looking for a reference as to which concepts include moving the ramps out of the neighborhood.

Sam Imperati: the short answer is that none of these does.

Todd Juhasz: there are concepts that do not touch the Paramount. Every effort we can make to not touch existing structures, we will make. There are elements that may or may not work, but one of the screening criteria is avoiding significant structures.

Betsy Reese: “not touching it” means you will not tear it down?

Todd Juhasz: the goal is to not touch it at all, but no decisions have been made yet. It is one of our highest priorities.

Betsy Reese: is the idea of moving the freeway out of the area off the table?

Steve Iwata: it is not currently in the group of 13 Concepts, but it could be considered later, depending upon what happens with this analysis.

Todd Juhasz: regarding the possible interchange at Clackamas, one of the issues for ODOT is that it shortens the weave and merge lanes, and we would have some heartburn about it.

Allan Rudnick: I put forward a lot of ideas and solutions for getting traffic out of the Lloyd District, and they were thrown away without even showing it on the big screen. He would like to see the opportunity for adding those back in if they prove to address some concerns that the remaining 13 ideas do not. Thanked the staff for doing such a good job.

Brad Perkins: Wants to re-emphasize some points. In this quadrant, there is a major I-5 freeway coming through, the major exit and entry ramp in the city. Respects the need for bike and ped orientation, and hopes we don't lose commercial developable land in the process of selecting the proper exit and entry ramps. Also, re: Jim Howell comments, it is important to select and respect all modes and he respectfully disagrees.

Murray Koodish: is the president of the NE Broadway Business Association. They were asked to be on the committee, but could not, and he commends folks for taking the time to do it. It is a priority for the NEBBA to maintain the character of a retail-friendly, small town feel on Broadway. He supports maximizing the space we have now on Broadway-Weidler. There is already a problem with commercial encroachment. There are approximately 30 vacancies between 6th and 30th on Broadway. Traffic issues are the most significant. Some traffic control could be built into this planning effort. The BBA is generally opposed to decoupling Broadway-Weidler and he encourages the committee to keep open mind toward that.

SCREENING FACTORS FINALIZED & EVALUATION CRITERIA DRAFT PRESENTED

Sam introduced the next topic, noting we have very limited time for discussion.

Justin Zeulner: Tracy brought up a good point a bit ago; can we include the photos of what some of the large footprint options look like?

Steve Iwata: provided a brief reminder as to where we are at in process. He showed the project calendar, and explained the refinement process the concepts have gone through. He reviewed the changes made to the Screening/Evaluation document since the last SAC meeting, being responsive to member comments.

John Cullerton provided a brief review of the high-level analysis they will be doing to get the current 13 interchange concepts down to four concepts by the July SAC.

Steve Iwata referred the SAC to the Step 3 Discussion Draft Evaluation Matrix. This document is their attempt to analyze the land use concepts. As noted before, this is a new and challenging process for staff, as they are integrating long-range land use planning with a near-term freeway improvement project. He reviewed the document, explained the two columns, noting it is based on the Goals that were approved by the SAC in January. We will have a subcommittee meeting in July to have more thorough discussion of this. As we go through this discussion, there will likely be more refinement. They hope to complete the analysis and have specific recommendations to the committee by the end of the year.

*Sam Imperati, i*n the interest of time, provided a summary of what we have heard tonight. Regarding the freeway, there are 13 options that were reviewed. Concerns were expressed that there is something missing in the analysis, which is solutions "outside of the area."

Regarding taking these 13 to down to 4 concepts, we heard from the SAC that this process requires some understanding of how these decisions will be made. The SAC also wants to know what are the steps we will be using to decide the "place" we are trying to make – how are we going to get there?

Sam said that staff has heard the SAC on these issues, and will come to July with further developed ideas about this. In addition, we also understand your feedback that the staff needs to look more at how the land use side is shaping up, and report back to the SAC.

The draft documents will be advanced and worked on, including the evaluation factors. This is Sam's Zen of the group. In lieu of asking all four questions as listed on the agenda due to time constraints, Sam asked if members feel his comments sufficiently represent the take-aways from this evening.

Tracy Whalen: fine with all except for the evaluation matrix. Regarding the section that deals with freeway interchange and local transportation, there seems to be no weighting of the different items, but she finds it interesting that the first three bullets are bike/ped, while at the same time, there is no mention of safety as an important factor. Staff needs to look at traffic and fix the document.

Mike Warwick: need a new "no harm" criterion; need to highlight anything that decreases safety (e.g., an element that puts more traffic by a school) so everyone understands the tradeoffs.

Gary Warren: comment again regarding Clackamas; bisecting the only residential zone in the Lloyd district. This puts seniors at risk and is not ok.

Britt Brewer: will we begin to see a merging of the two, land use, and transportation?

Steve Iwata: We have not figured it out, but we are working on how that will go.

Sam Imperati: when we get down to four interchange concepts, it will be easier to superimpose the two.

Gary Marschke: regarding considerations that are or need to be more heavily emphasized. His question: Do we perceive consistently that our comments are not in the plans or do we bring them up repeatedly to make sure they stay there? He is concerned if they are not being addressed by staff.

Sam Imperati: So your concerns are both substantive and process?

Gary Marschke: yes.

NEXT STEPS AND MEETING EVALUATION

Sam distributed the evaluation form. Sam thanked everyone for a good meeting and adjourned at 8:40 pm, with apologies for keeping folks late.

ADJOURN

SAC #7 Meeting Evaluation Summary
JUNE 16, 2011

10 Evaluation Forms

		Poor	Fair	Good	Very Good	Excellent
1)	**OVERALL MTG QUALITY**			1	5	3
2)	**PACING**			Just right	Little Fast	
				8	2	
3)	**CLARITY PRESENTATIONS**		1	3	4	2
4)	**DOCUMENTS**		1	1	5	3
5)	**DISCUSSION**			2	6	2

6. MOST USEFUL?

- Transportation
- Graphics
- Sam Imperati
- Copies of video sheets.
- All discussions (except Perkins' rail comments)

7. LEAST USEFUL?

- Evaluation matrix – how to be applied? As a checklist?
- Karl's presentation – once again cut short by technical difficulties.

8. COMMENTS, SUGGESTIONS, OR QUESTIONS?

- Co-ordinate with CRC
- Options come up repeatedly that we are not brought back. Special attention should be paid to comments at open houses.
- Review or list items that have <u>been</u> approved.
- Speakers should refer to packets at beginning of their presentations so people can follow along.
- We seem to be on a course for a Clackamas o/c through the will of staff. Need to incorporate the land use side earlier before we drive off a cliff.

Notes respectfully submitted by the Institute for Conflict Management facilitation team.

SAC Feedback Summary and Staff Response from 7-12-11 Email Survey

SAC Comments	Staff Response
SAC Member Participation	
• Clarify SAC role	• From the process Collaboration Principles: *The SAC is advisory to the City and ODOT and it will help inform City and ODOT staff in the development of their recommendations to the respective decision-making entities. City and ODOT staff recommendations to their respective decision-makers will highlight areas of agreement and disagreement with the SAC and other stakeholder interests. The co-chairs of the SAC will represent the recommendations of the SAC to City and ODOT decision-makers in conjunction with City and ODOT staff reports. The City and ODOT will have ultimate responsibility for decision-making.*
• Reaffirm value of SAC member participation: Clarify that the "official" representatives are heard, as well as the public, while giving, I presume, more weight to those of us representing larger constituencies rather than our own interests. But, I think official members appreciate having that confirmed so they know their participation is valued.	• From the process Collaboration Principles: *As the City and ODOT staff involves the broader community in the issues that the SAC will be exploring, they will be providing summaries to the SAC for their consideration and comment.*
Process	
• Applaud the City and ODOT for endeavoring to bring these two planning processes together.	• Thanks
• Concern about how the two planning processes have yet to fully engage each other	• Please see new process overview. The parts will come together this fall.
• Concern about pre-determined outcomes and validity of process	• We are approaching the option evaluation phase of the process. Nothing has been taken off the table except for options determined to be out of scope, prohibitively expensive, or problematic from an engineering perspective. Staff has not made any decisions and will be informed by SAC input and recommendations per above Collaboration Principles quote.
• Process going on too long, involving too much SAC member time; level of commitment was undersold at the beginning	• We acknowledge and are sorry that these processes are so time consuming. We appreciate your dedication and will do our best to use your valuable time efficiently.
• Process has been solid.	• Thanks
Logistics/Meetings	
• Food good and appreciated	• You're welcome – *thanks Calaroga Terrace!*
• Materials must be distributed prior to meetings with adequate review time	• We agree

• Meeting time should be later	• We will consider moving the meeting start time to dinner at 5:30 and the meeting from 6-9 if members desire. Please advise.
• More time for discussion between and among committee members with staff available to answer questions – less presentation time, more discussion time	• Majority of the background has been laid, which should open up more time for SAC deliberation
• Parking should be free	• There are a few free spaces at Calaroga for those arriving early; meetings at ODOT can be validated. The facilitator will reimburse parking or TriMet fares at the end of the process as a thank you to active members.
• Schedule meetings as far in advance as possible; need schedule through year end	• Please see new process chart for schedule through 2011
Technical	
• Concern that the highway/Interchange Plan is significantly behind the progress of the greater project land use planning.	• Both will come together over the summer and early fall.
• Freeway discussions have seemed to dominate a lot of discussion. The visioning of land-use and future development is primary and needs to remain the focus, moving forward.	• Please see new process chart; land use will be the focus of the September Subcommittee and SAC meetings.
• Concern that SAC members do not have expertise to make recommendations; expert consultants and staff should draft recommendations for SAC.	• Staff and the subject-matter consultants will make recommendations to the SAC for their consideration.
• Desire for comprehensive balance between land use and infrastructure and the improved quality of life and economic sustainability in the preservation and enhancement of existing neighborhoods.	• Agree; and this is consistent with the SAC-approved Project Goals
• Incorporation of the City's light rail/streetcar plans into the mix is essential.	• Will be considered as we move forward
• Overlap with the Rose Quarter designs and plans - hope to see more incorporation and discussion of the issues being addressed and explored there within the N/NE Quadrant Project.	• Staff will keep the SAC updated on all related processes.

CENTRAL CITY 2035

N/NE Quadrant Land Use-Urban Design-Transportation-Freeway "Crosswalk"

Introduction

This memorandum provides an analysis of the relationships between the three Land Use/Urban Design/Local Transportation (LU/UD/LT) Concepts and the thirteen Freeway-Local Transportation Interface Concepts developed for the N/NE Quadrant Project. It presents a high-level look at the relative relationships of the different freeway options with the generalized quadrant-wide land use alternatives.

For reference, the Freeway-Local Transportation Interface Concepts developed to-date include:

1: No Build
2: Mainline Operational Improvements
    2A: Braided Ramps
    2B: Collector/Distributor Roads
3: Rebuild Structures
4: Enhance Broadway/Weidler Interchange
    4A: Split Diamond
    4B: Folded Diamond
    4C: 3 Point Interchange (couplet)
5: New Broadway/Weidler Interchange Concepts
    5A: Standard Diamond (decouple)
    5B: Single-Point Urban Interchange (SPUI)
    5C: Diverging Diamond
    5D: Roundabout
    5E: 3 Point Interchange (decouple)
6: Transportation Systems/Demand/Operations Management (TSM/TDM/OM)

To guide this review the following three guiding principles are used, reflecting aspirations for the Central City:

- **Place**: The vitality of Central City districts can be seen in the presence of, and potential for, an interconnected system of distinct and attractive high-density areas that support vibrant, livable and diverse communities, and that allows for the place to evolve and grow.
- **Connectivity:** Desired street connectivity should support a diverse system of land uses, open spaces, amenities and green systems and provide a clear street hierarchy. It should afford multiple safe means of access and circulation that supports the vitality of the district.
- **Scale:** The scale of infrastructure in terms of its size, design and volume of use should support land uses and activity at all scales: regional attractions and employment areas as well as City and local land use and mobility needs.

Current Conditions at the Interchange and Immediate Vicinity

- Place: Current conditions at the interchange suppress opportunities for place-making and hinder high-density development.
- Connectivity: The I-5 Freeway interrupts east-west connectivity and the high traffic volumes on Broadway-Weidler hinder north-south connectivity. The interchange does provide connectivity to the regional system but it is limited by high traffic volumes, congestion, long peak period and unsafe conditions.
- Scale: The current scale of the interchange provides access needed to serve the variety of regional, city, and local land uses in area. The scale (especially in terms of configuration and

volume of use) of the current configuration inhibits use by pedestrians and cyclists and also makes high-density redevelopment more difficult.

Overall Quadrant-Wide Conclusions

The three draft N/NE Quadrant-wide concepts call for land uses, transportation systems and an urban form featuring high-density development and significant use of active transportation modes. They represent approaches that would lead to increased densities and an overall decrease in the proportion of auto trips, but with different emphasis on the type and arrangement of development as follows:

- The **Residential Concept** would increase housing in the quadrant and result in a better jobs-to-housing balance, similar to the River District, and high internal trips by walking, biking or riding transit.
- The **Employment Concept** would de-emphasize new residential development, resulting in a development pattern similar to the current Lloyd District and downtown Portland, featuring transportation and parking management strategies that would support high-density commercial buildings.
- The **Blend Concept** would be a combination of these two concepts.

From a quadrant-wide perspective, all of the freeway interface concepts could accommodate these three broad land use concepts.

In other words, none of the freeway concepts would categorically preclude attaining the generalized aspirations for future development patterns represented in the quadrant-wide LU/UD/LT concepts. However, the impacts of the various freeway concepts vary considerably, with potential land use, urban design and local transportation consequences at various scales. These are discussed below for each of the three LU/UD/LT concepts, with identified issues organized under the categories of Place, Connectivity and Scale.

Concept 1: Residential Emphasis

Key attributes for the Residential Emphasis that relate to the Freeway Concepts are those elements that improve opportunities for high-density, mixed-use residential development, provide for infrastructure that supports livable and safe places for residents and increase connections across I-5.

Place:

1. Concepts that propose crossings at Clackamas and Hancock across the freeway could be supportive of new residential development and create places that support a residential emphasis, such as open spaces, green canopy and streets, and street elements that focuses on the pedestrian. Street designs would need to be at a pedestrian scale and focus on low (or no) vehicle volume, access and safety.

2. In terms of the interchange, concepts in groups 1 and 3 result in no major changes from current conditions.

3. Concepts in group 2 widen the barrier effect of the freeway under Multnomah and Holladay streets, with potential noise and visual impacts, although they could possibly be somewhat mitigated. The 2B Collector/Distributor concept could potentially impact Peace Park, one of the few public open spaces in the area.

4. The concepts in group 4 tend to reduce the number of conflict points for pedestrians and bicyclist.

5. Concepts in the 5 group tend to focus on vehicle movement, are less friendly for pedestrians and bicyclists and create poor freeway edge conditions. Concepts that shift the Broadway-Weidler Couplet east of I-5, could improve place-making opportunities around the East Bank Building, if impact of the widened street could be mitigated.

Connectivity:

1. Concepts that propose the Clackamas and Hancock crossings over the freeway improve the quadrant's east-west connectivity—especially for pedestrians and bicyclists, which could also result in safer routes to the Steel and Broadway Bridges, Rose Quarter, and the Esplanade. With the Residential Emphasis, vehicle access could likely be limited or not be needed.

2. Concepts that improve First or Second Avenues for pedestrians and bicyclist would also improve north-south connectivity in the district.

3. Concepts that disconnect Williams and/or Vancouver from the Rose Quarter/Steel Bridge would reduce north-south connectivity and increase out-of-direction travel, impact the revitalization of the Williams Commercial Corridor, and affect a primary North Portland bicycle route. Alternative measures could potentially reduce these impacts.

Scale:

1. Concepts 1 and 3 result in no major changes from current conditions.

2. Concepts in group 2 widen the barrier effect of the freeway (e.g. freeway footprint, vertical structures, noise, darkness at transit station) and increase the isolation of the Rose Quarter from the Lloyd District.

3. Concepts in the 4 group tend to maintain the current scale of the interchange. The exception would be the 4A Split Diamond, which severs the Williams/Vancouver connections and increases the scale and functional role of Flint north of the interchange and Wheeler south of the interchange. Group 4 concepts that consolidate ramp termini in two (rather than four) locations focus freeway impacts in the two locations while reducing them in the opposite two locations.

4. Concepts in group 5 tend to increase the scale of the interchange in favor of vehicle movement and creates additional impediments for pedestrian and bicycle movements through the interchange. Group 5 concepts that shift the Broadway-Weidler Couplet east of I-5 could create new opportunities to redefine the role of Weidler between Benton and Victoria, around the Left Bank Building, if the impacts of a widened street could be mitigated.

Concept 2: Employment Emphasis

Key attributes for the Employment Emphasis that relate to the Freeway Concepts are those elements that would improve worker access to the quadrant. With a focus on jobs, multi-modal access to the Lloyd District especially will be dependent on increasing carrying capacity of the transportation system via transit, walking, and bicycling to reduce the demand for the automobile.

Place:

1. Concepts that propose the crossings at Clackamas and Hancock over the freeway for all modes could increase traffic in the connecting areas, impacting place-making unless street design can be at a pedestrian scale to focus on low vehicle volume, access and safety. On the other hand, the new connections could increase the attractiveness of adjacent/nearby parcels for new development.

2. Concepts that generally improve the operations of the interchange would better accommodate additional commercial development in the N/NE Quadrant.
3. Concepts 1 and 3 result in no major changes from current conditions.
4. Concepts in group 2 widen the barrier effect of the freeway under Multnomah and Holladay streets, with potential noise and visual impacts, although they could possibly be somewhat mitigated. The 2B Collector/Distributor concept could potentially impact Peace Park, one of the few public open spaces in the area.
5. The Split Diamond and Three-Point Interchange concepts in group 4 could have adverse access impacts to the Left Bank and Annex Buildings, while the Folded Diamond could result in increasing the amount of land for potential development near the interchange.
6. Concepts in group 5 increase the scale of the interchange and reduce the place-making opportunities near the interchange. Concepts that shift the Broadway-Weidler Couplet east of I-5, could improve place-making opportunities around the East Bank Building, if the widened street could be mitigated.

Connectivity:

1. Concepts that propose the Clackamas and Hancock crossing improve the quadrant's east-west connectivity, and provide for alternative access routes for all modes, particularly for the Blanchard area and the Rose Quarter.
2. Concepts that disconnect Williams and/or Vancouver from the Rose Quarter/Steel Bridge would reduce north-south connectivity and increase out-of-direction travel, impact the revitalizing Williams Commercial Corridor, and affect a primary North Portland bicycle route. Alternative measures could potentially reduce these impacts.

Scale:

1. Concepts 1 and 3 result in no changes from current conditions.
2. Concepts in group 2 widen the barrier effect of the freeway (e.g. freeway footprint, vertical structures, noise, darkness at transit station) and increase the isolation of the Rose Quarter from the Lloyd District.
3. Concepts in group 4 tend to maintain the current scale of the interchange. The exception would be the Split Diamond, which severs the Williams/Vancouver connections and increases the scale and functional role of Flint north of the interchange and Wheeler south of the interchange. Group 4 concepts that consolidate ramp termini in two (rather than four) locations focus freeway impacts in the two locations while reducing them in the opposite two locations.
4. Concepts in group 5 tend to increase the scale of the interchange in favor of vehicle movement and create additional impediments for pedestrian and bicycle movements through the interchange. Group 5 concepts that shift the Broadway-Weidler Couplet east of I-5 could create new opportunities to redefine the role of Weidler between Benton and Victoria, around the Left Bank Building, if the widened street could be mitigated.

Concept 3: Blend

The Blend Concept combines attributes of both the Residential and Employment concepts, providing for a more diverse mixture of high-density housing and commercial development in the quadrant.

The above comments regarding the relationships between the freeway concepts and the Residential and Employment Concepts are generally applicable to the Blend Concept, taking into account that the Blend would have relatively less need for access improvements aimed at employee needs or scaled appropriately for nearby residents than in the Employment or Residential emphases, respectively.

Introduction

Background

The N/NE Quadrant and I-5 Broadway/Weidler Plans (N/NE Quadrant Project) will act as a quadrant-level guide for implementation of city-wide goals to ensure a vibrant Central City at the heart of the metropolitan region. It is part of Central City 2035, the City of Portland's effort to update the 1988 Central City Plan, providing detailed planning for Lower Albina and the Lloyd District. The N/NE Quadrant Project is also a collaboration with the Oregon Department of Transportation to explore options for I-5 freeway and local transportation improvements near the Broadway/Weidler Interchange.

The N/NE Quadrant Project will result in the following products:

- A long-range plan for the N/NE Quadrant of the Central City, including a land use/urban design concept, policies, zoning provisions and implementation strategies that direct and inform public and private investment and development over the next 25 years.
- An I-5 facility plan that identifies a preferred concept for freeway and related local transportation improvements near the Broadway/Weidler interchange to occur within the next 5 - 10 years.

The project is guided by a 30-member Stakeholder Advisory Committee (SAC) representing a wide variety of area stakeholders and community interests. In addition to the SAC meetings, the public is involved through general public events held at key milestones, outreach to individual community groups and public hearings as part of the legislative process.

Project Goals

This planning effort will result in integrated land use, urban design, and transportation strategies, policies and plans for the N/NE Quadrant, (Lower Albina, the Lloyd District, and portions of Eliot, Irvington, and Sullivan's Gulch) and the I-5 Broadway/Weidler interchange that balance, complement, enhance, protect, respect, revitalize, support, and sustain economic, environmental, and social interests. The implementable plans will be consistent with the overall goals and policies of the city, region, and state.

Our recommendations will be guided by our desire for:

- *A diverse mix of commercial, cultural, entertainment, industrial, recreational, and residential uses, including affordable housing;*
- *A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system;*
- *Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages;*
- *Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment;*
- *Equitable access to community amenities and economic opportunities;*
- *Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods;*
- *Protection and enhancement of the cultural heritage of the area and its sub-districts; and*
- *Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses.*

Next Steps

The N/NE Quadrant Project uniquely combines a long-range plan for the N/NE Quadrant area with a freeway improvement project for the Broadway/Weidler Interchange area. Combining these processes creates opportunities to address land use and local transportation impacts from the freeway (and vice versa) in a holistic way. Due to the different scales of the quadrant plan and the freeway project, separate concept alternatives have been developed, however each set of concepts has been informed by the other. A more thorough integration of the Quadrant-Wide Concepts with the Freeway/Local Transportation Concepts is an important next step in understanding the relationship between the land use and transportation options and how they support or conflict with each other.

Concept Development Process

Using the Workbook

This workbook contains two primary sections:

- **N/NE Quadrant-wide Concept Alternatives**, illustrating three different options for future land use patterns and supporting infrastructure systems across the whole quadrant; and
- **Subarea Choices**, providing a more detailed look at smaller geographic areas, with questions posed that are specific to each subarea. Consideration of the subarea choices and issues will inform the refinement of the quadrant-wide concept alternatives (and vice versa), assist in developing a preferred concept and provide guidance for more focused plan proposals at the subarea level.

A companion document to this workbook focuses on the area around the I-5 Broadway/Weidler interchange. Thirteen concepts for improvements to the I-5 freeway and the related local transportation system, including ramps, bridges and local circulation, are presented. These concepts were approved for further study by the project's Stakeholder Advisory Committee, with the intent of narrowing the choices down to 3-5 concepts at the end of July (see Concept Development Process Diagram).

We Want Your Input!

You can tell us what you think in any of the following ways:

- Fill out a survey available at the June 29 Open House and on the project web site – www.portlandonline.com/bps/nneq
- Send comments the project email address: nnequadrant@portlandoregon.gov
- Contact the project team with questions or to provide feedback (see inside cover for contact info)

Your comments will be used by the Stakeholder Advisory Committee and project team to inform upcoming decisions over the summer and fall. These decisions will include making any refinements to the quadrant-wide concepts and subarea choices, narrowing the number of freeway improvement concepts under consideration and building a preferred alternative. A public event will be held to present the results of this process in late fall.

56858

Quadrant-wide Concepts

This chapter contains N/NE Quadrant-wide concept alternatives that were developed to illustrate different development patterns that could occur over time and identify key choices to be made during the N/NE quadrant planning process. Ideas illustrated in the concept alternatives were drawn from a number of sources, including the following:

- Examining existing conditions
- Identifying issues, opportunities and constraints
- Stakeholder Advisory Committee and Subcommittee meetings
- February 2011 Local Issues Charrette

The ideas were grouped into three concepts based on broad land use options: residential, employment, and a residential/employment blend. The concept alternatives are further illustrated by three related infrastructure systems: mobility, open space and green systems.

The concepts are not meant to be mutually exclusive; the preferred concept is likely to include some elements from each of the concept alternatives and will be shaped by consideration of the finer-grained issues described in the Subarea Choices chapter.

Interpreting the Maps

The quadrant-wide concept alternatives maps illustrate the predominant land use emphasis for existing conditions and the three concept alternatives, and supporting infrastructure system information for each alternative.

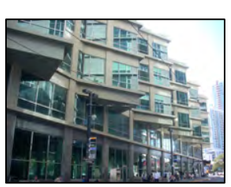
The maps are displayed in a grid format on the facing page to allow comparison of the alternatives by major land use emphasis (vertical) or comparison of the individual infrastructure system components (horizontal). Each of the maps is displayed in a larger format for readability in the following pages with additional examples.

Land Use Emphasis (Districts/Places Maps)

Each "bubble" on the districts/places maps reflects the predominant land use that would be encouraged under that alternative. With the exception of industrial areas, other uses would generally continue to be allowed, and some mixing of uses would be expected. The following predominant uses are shown on the maps:

Office: A highly developed office district, with buildings ranging from 6 - 20 stories. Ground floor retail and service uses would be expected.

Mixed commercial/residential: An eclectic mix of uses that could include residential, retail, office and light industrial. In less intensive areas, 3 - 4 story development could be expected. In more intensive areas, larger 6 - 10 story development might occur.



Medium-Density Residential: Predominantly residential area, with mid-rise buildings ranging from 2 - 6 stories. Development located on busier streets, would likely include ground floor retail or service uses.

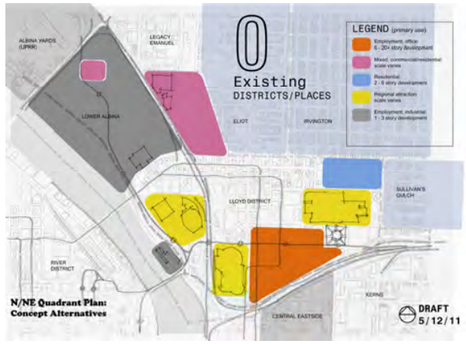
Regional Attraction: Predominant uses have a regional draw and are characterized by large footprint buildings. Hotels and restaurants could also be expected to locate in the area.

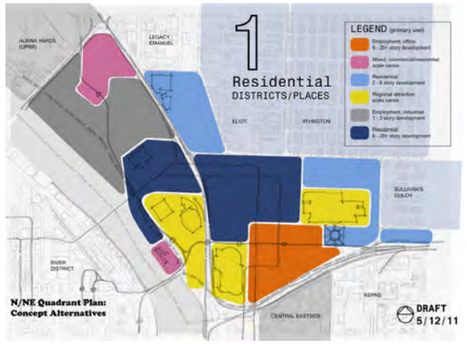
Industrial: Low-level buildings housing light industrial uses, such as manufacturing and warehousing. Industrial areas are typically set aside exclusively for industrial uses, with the exception of very small scale service uses.

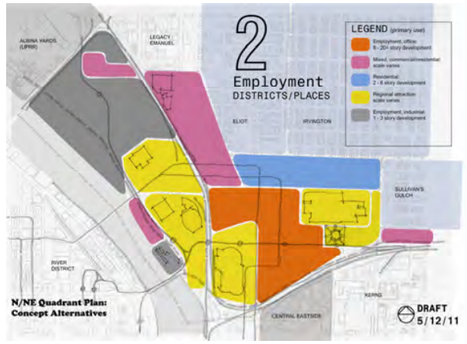
High-Density Residential: A predominantly residential area, with high-rise buildings ranging from 6 to 20 or more stories. Development located on busier streets, would likely include ground floor retail or service uses.

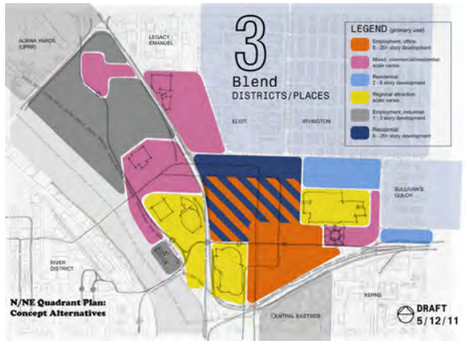
Supporting Infrastructure

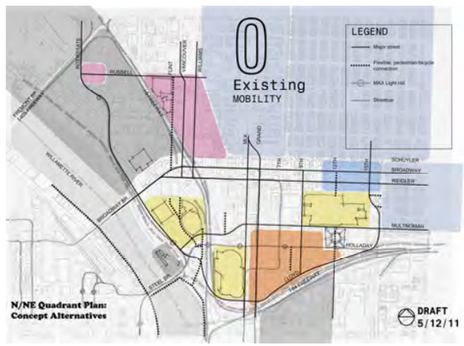
The **mobility systems** maps Illustrate options for the creation of a clearer street hierarchy for the quadrant that emphasizes the development of different streets with distinctly different characters and development responses. The system options could include the following street typologies:

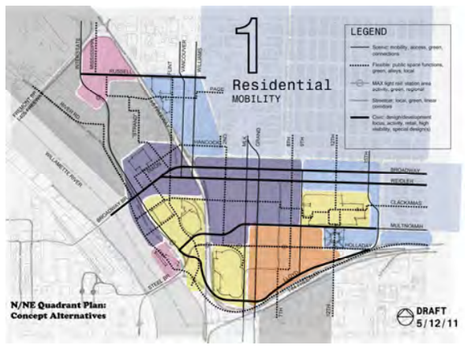


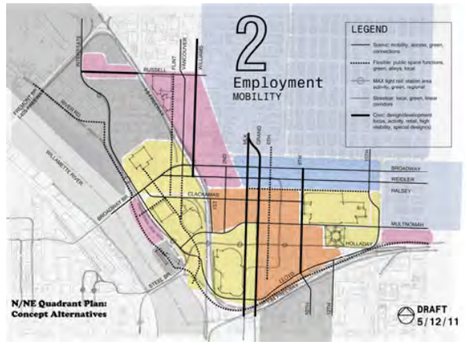


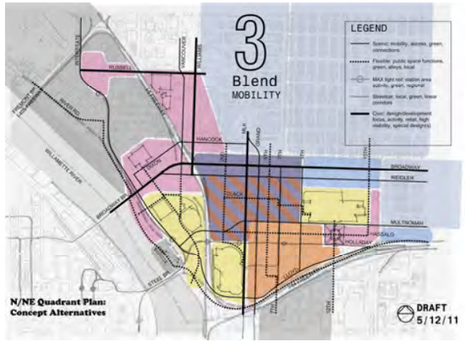


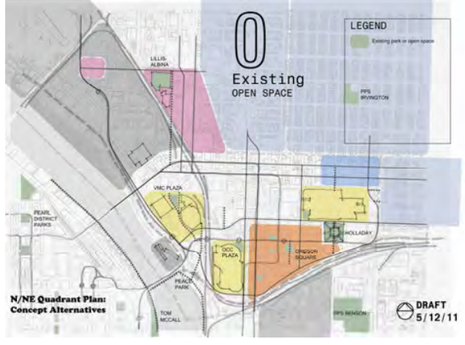


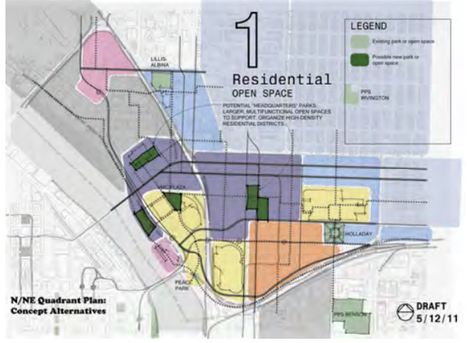


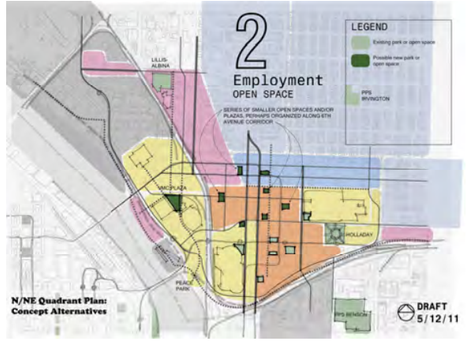


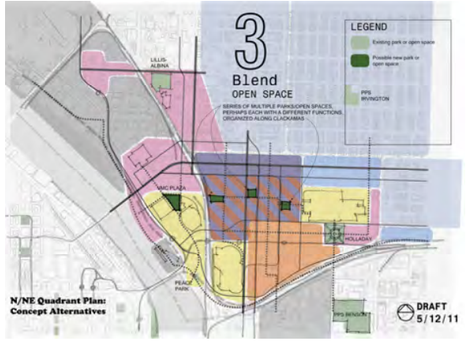


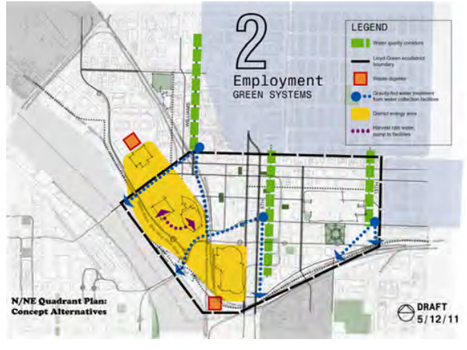










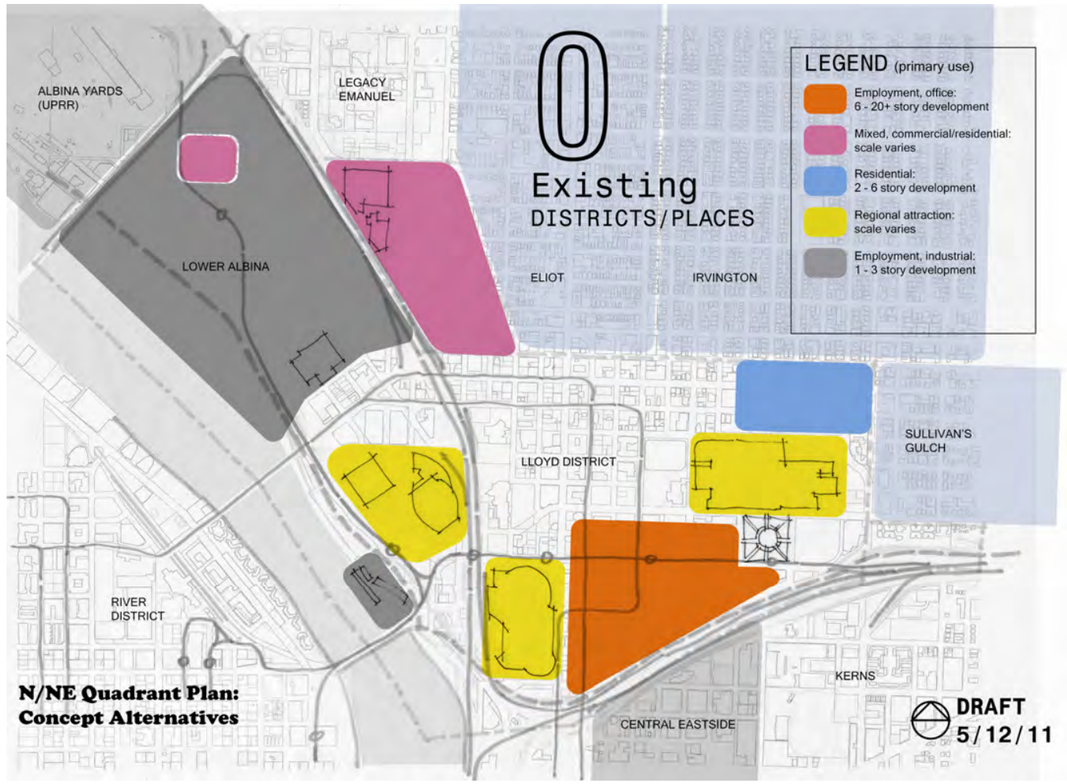


- Civic Corridors: Active focal points for new high-density development, offering good transit service, pedestrian-oriented amenities and unique signage and lighting.
- Scenic parkways: Provide good access into and through the quadrant, and are defined more by street trees and landscaping.
- Flexible Streets: Streets or pathways that offer an alternative, quieter system of mobility, oriented toward pedestrian and bicycle movement.

Options for the creation of new open space systems in the quadrant to serve anticipated residential or employment populations are illustrated in the **open space** maps. Open space options could include the following:

- "Headquarters" Park: A large park that offers a variety of active and passive recreation opportunities.
- Medium parks: A linked set of medium-sized parks that are each designed to a specific function.
- Small parks/plazas: A series of smaller open spaces, some perhaps privately-owned, which offer primarily passive recreation opportunities.

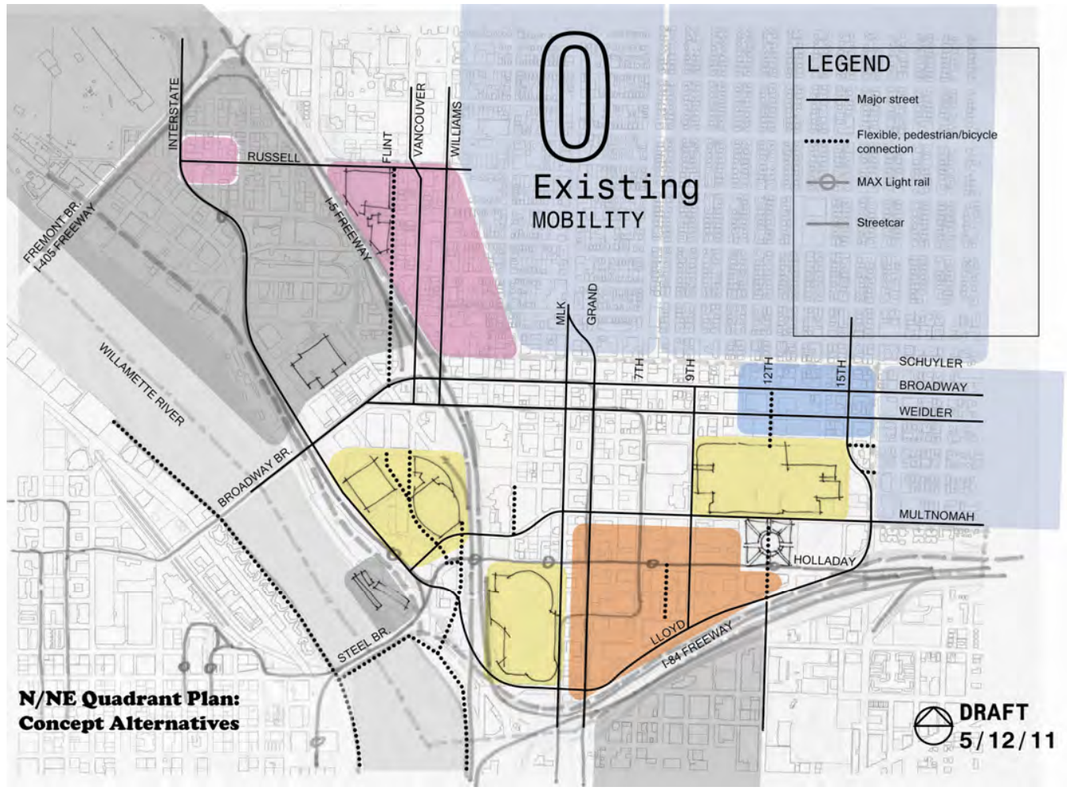
The **green systems** maps illustrate options for the integration of green systems and facilities in the quadrant to improve its long term resiliency. The green systems components include the following:



- Water Quality Corridors: Corridors that improve and celebrate surface treatment of stormwater runoff.
- District Energy: A system that could facilitate shared energy production and distribution between different businesses, uses and facilities.
- Rainwater Harvesting: Different strategies for rainwater harvesting, reuse and/or treatment throughout the quadrant.
- Waste Digesters: Facilities that generate energy through the processing of waste materials.

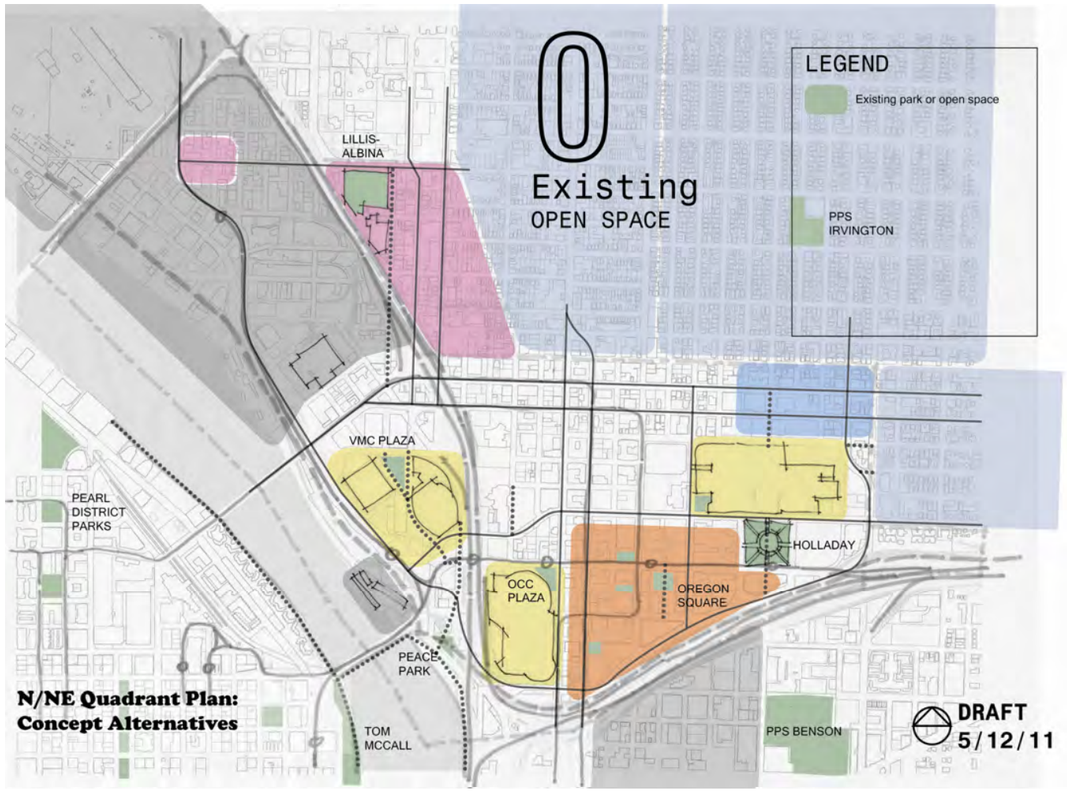
	Existing Conditions	Residential Emphasis	Employment Emphasis	Residential/Employment Blend
Land Use				
Mobility				
Open Space				
Green Systems				

Existing Conditions



The N/NE Quadrant has several areas with established identities:

- Office district
- Regional attractions
- Lower Albina industrial area
- NE Broadway business/ residential district



Issues and opportunities ...

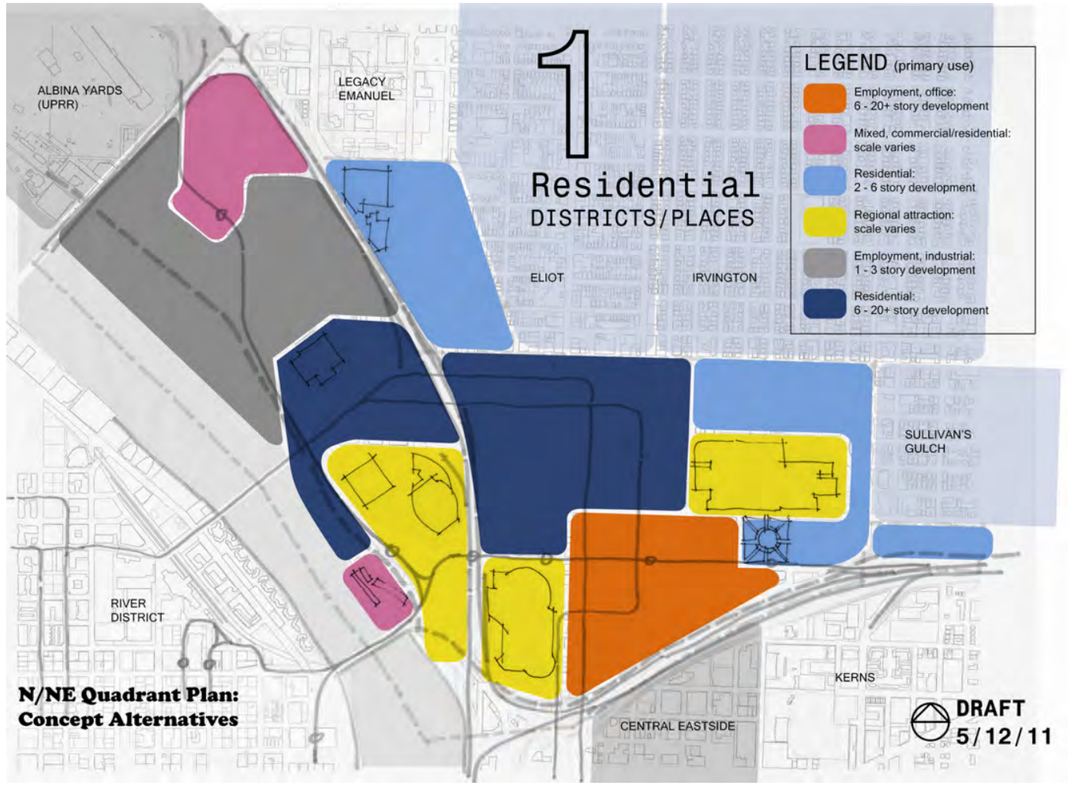
- General lack of vibrancy and pedestrian-friendly places
- Central Lloyd area lacks identity
- Desire for more housing
- Desire to build on existing success in main street, employment and entertainment areas

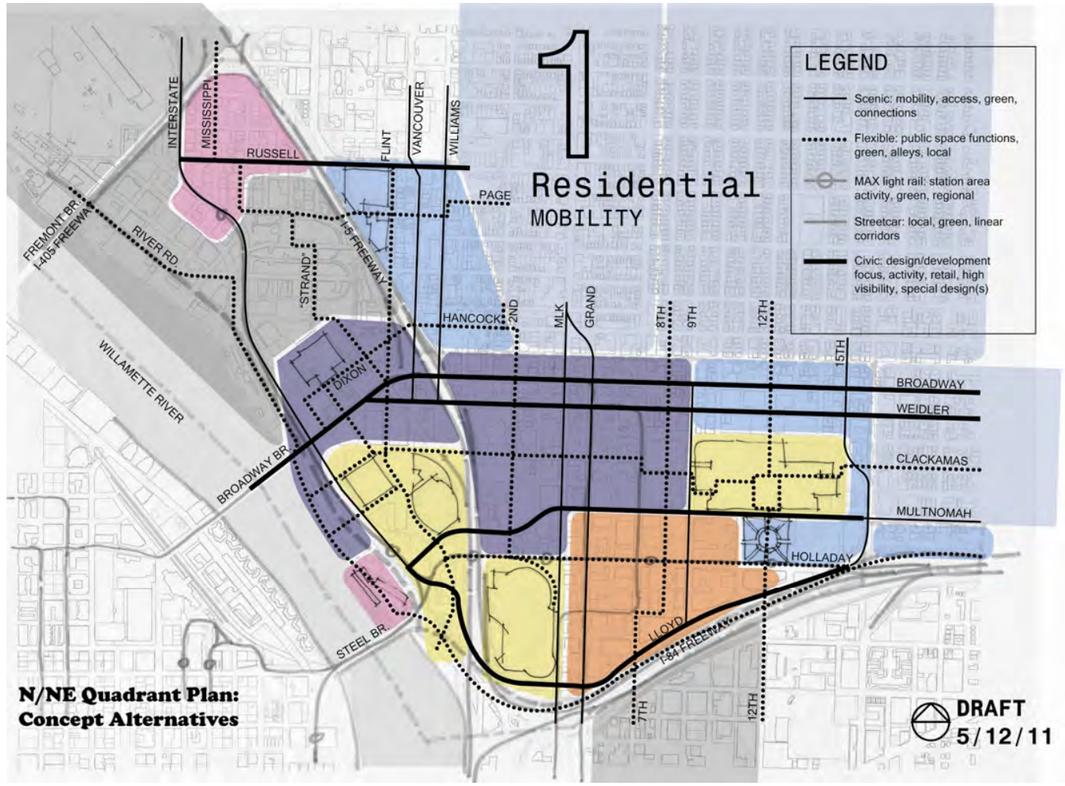
Existing mobility issues ...

- Busy streets, little hierarchy
- Limited, fragmented pedestrian connections
- Barriers created by freeway and other busy streets, large buildings and superblock structure

Existing open space issues ...

- Limited open space
- Existing amenities such as Eastbank Esplanade and private open spaces are poorly linked
- Safety and programming issues at Holladay Park

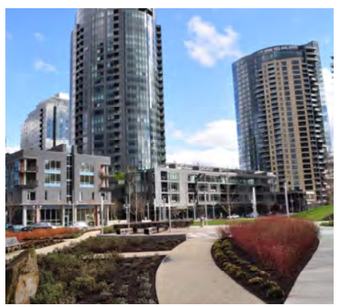




Residential Emphasis

Residential emphasis ...

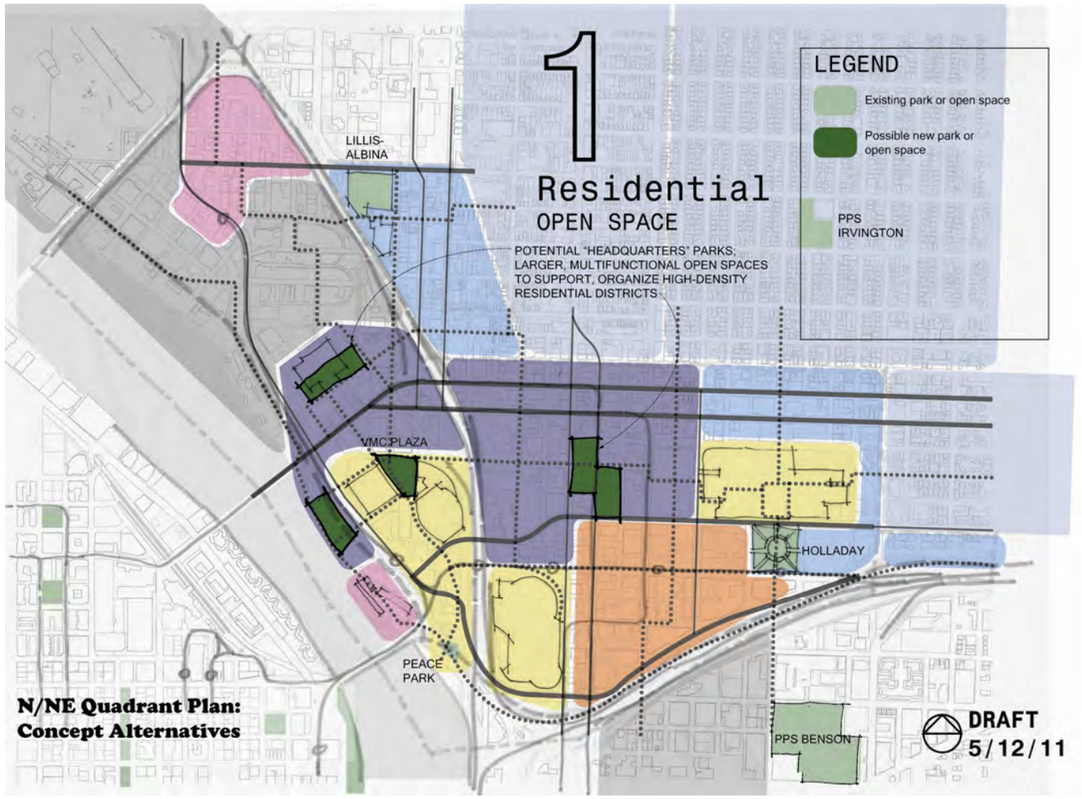
- Focus on highest density residential as predominant use in core area
- Opportunity for predominantly residential enclaves
- Brings residential energy to riverfront
- Features expanded mixed-use district on Lower Russell
- Calls for mid-density predominantly residential development along N Williams and N Vancouver
- Suggests possible long-term redevelopment of grain terminal at Steel Bridge

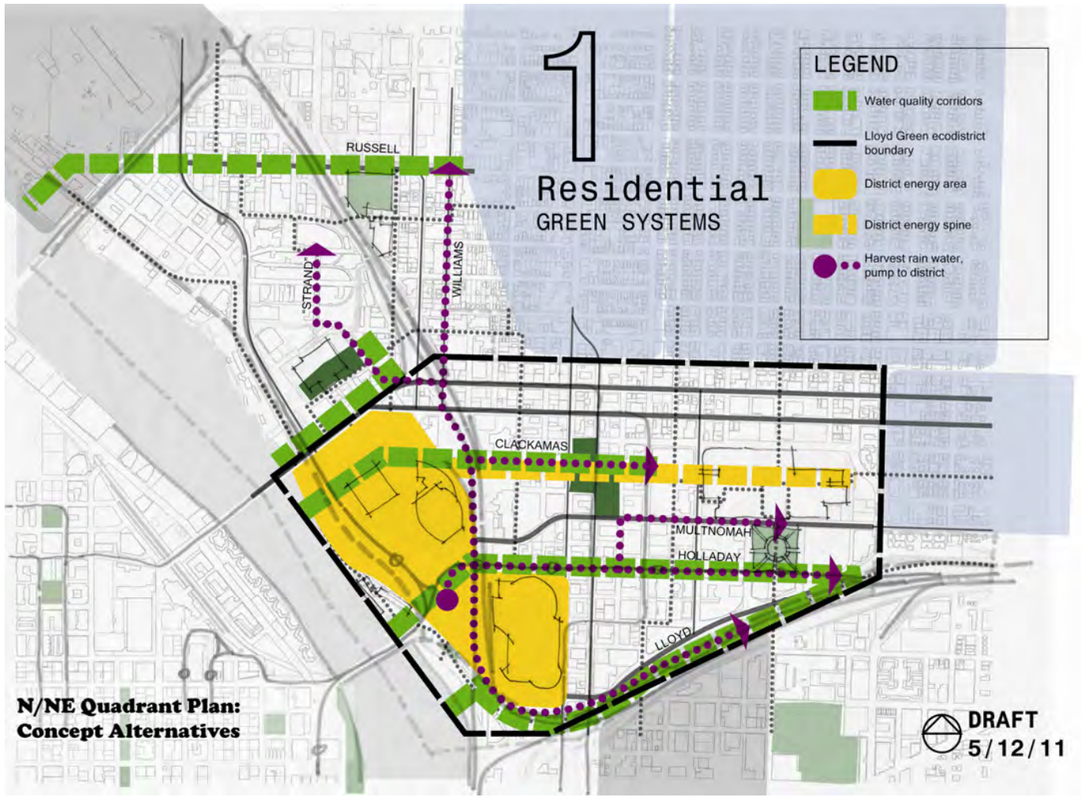


Maximize connections ...

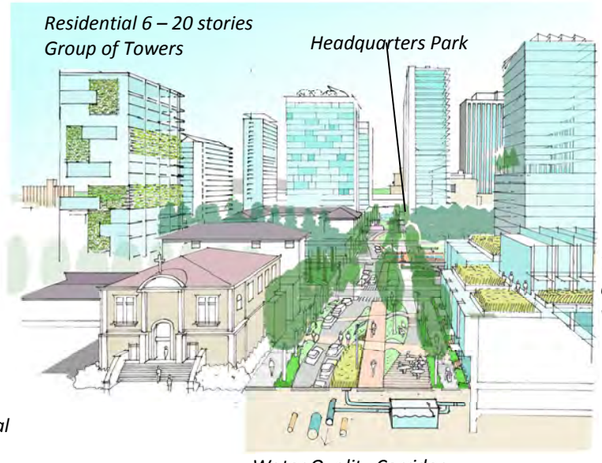
- Strong green, pedestrian system throughout study area
- Emphasizes main street character of Broadway, Weidler and Multnomah
- Several new crossings over I-5/I-84
- New pedestrian connections to riverfront

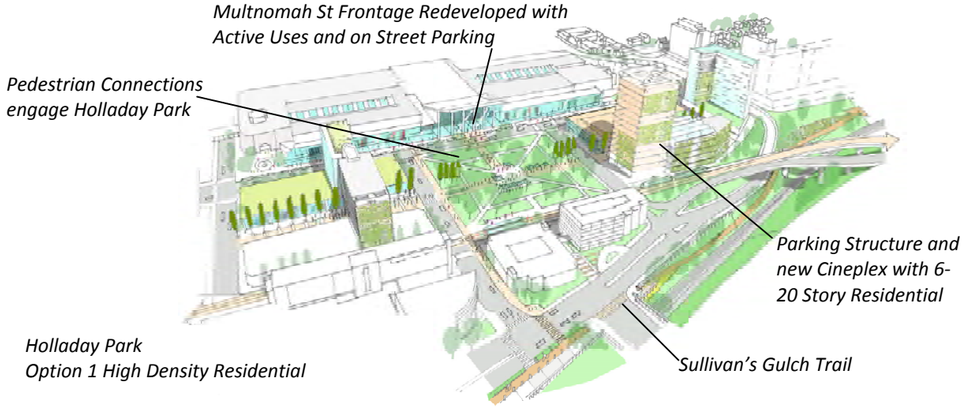
High density residential development (Seattle, San Diego, Portland)





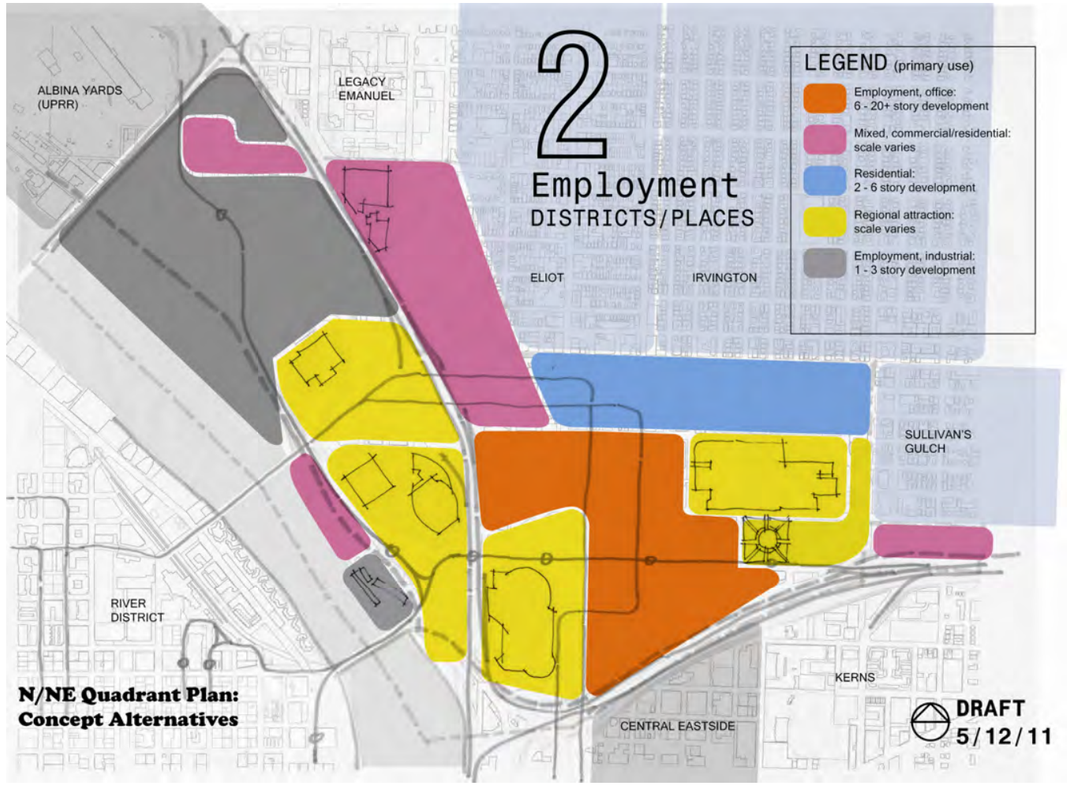
Scenic street (Tokyo)

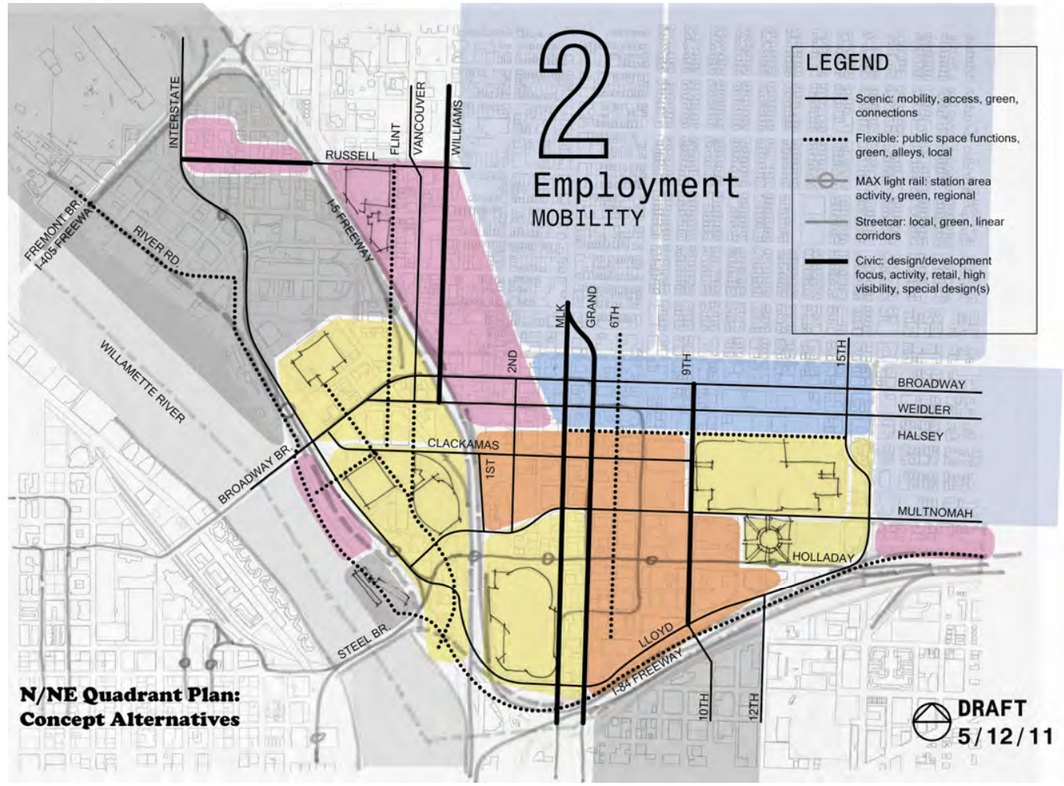




Create major new open space ...

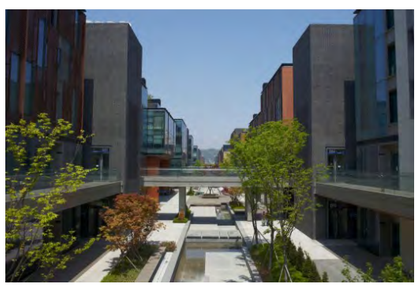
- Large new central park in residential area
- New open space at riverfront
- New open space north of Broadway



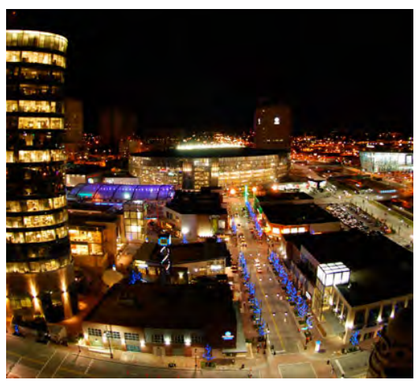


Orient green corridors east-west ...

- Stormwater mined near Rose Quarter pumped back to district for reuse
- Rose Quarter and Convention Center on district energy with Clackamas spine to Lloyd Mall
- Lloyd Green Ecodistrict



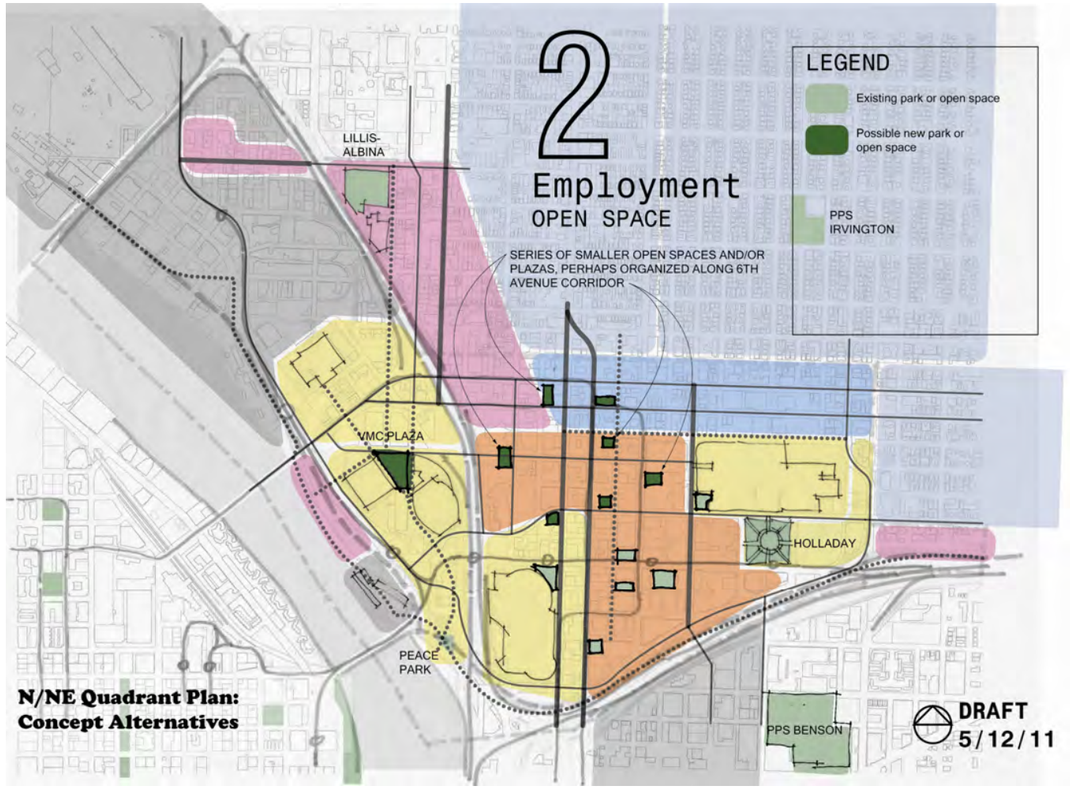
Employment Emphasis

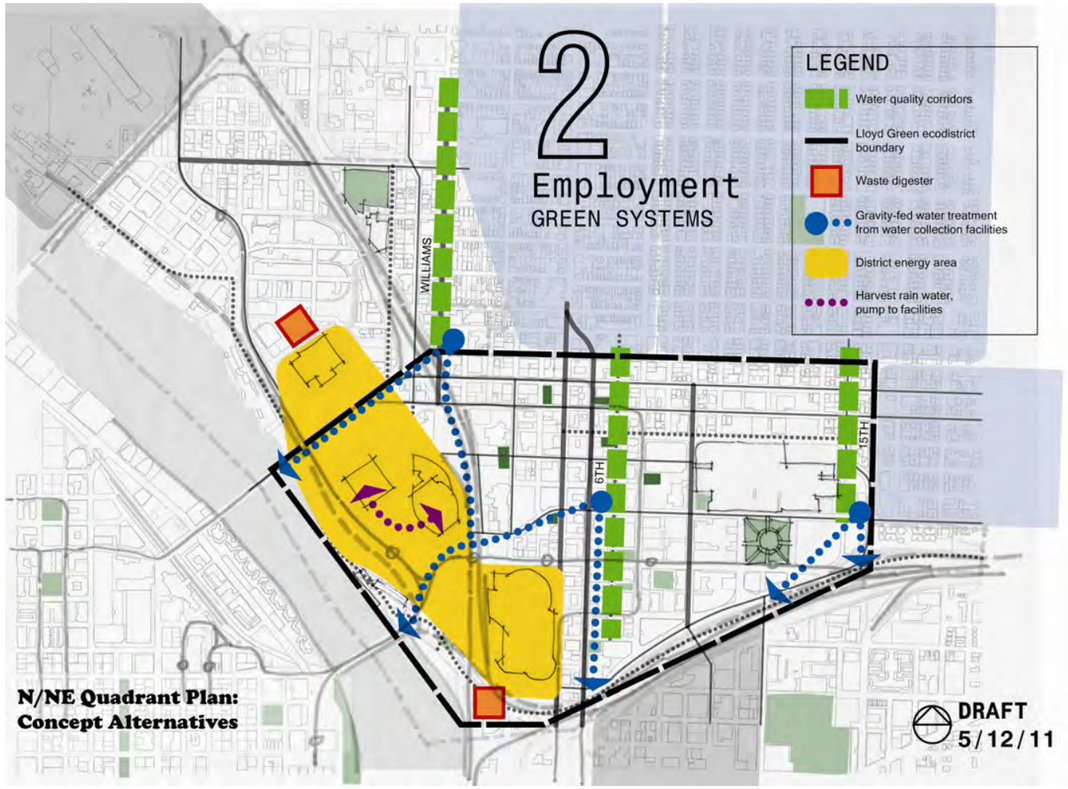


Employment Emphasis ...

- Builds on existing job center and expands office district
- Expands regional attractions
- May include some housing but not as a predominant use
- Limits increased flexibility to small area on N Russell Street
- Embraces mixed employment along N Williams and N Vancouver

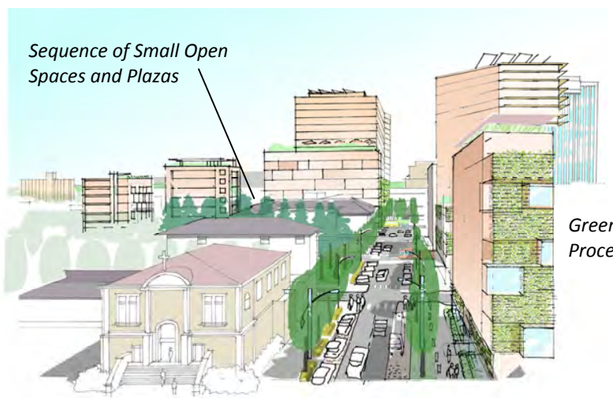
Employment development (Korea, Kansas City)





Use existing transportation infrastructure ...

- Modest connectivity improvements
- Less emphasis on reducing I-5 barrier
- New local street connections over I-5 and I-84

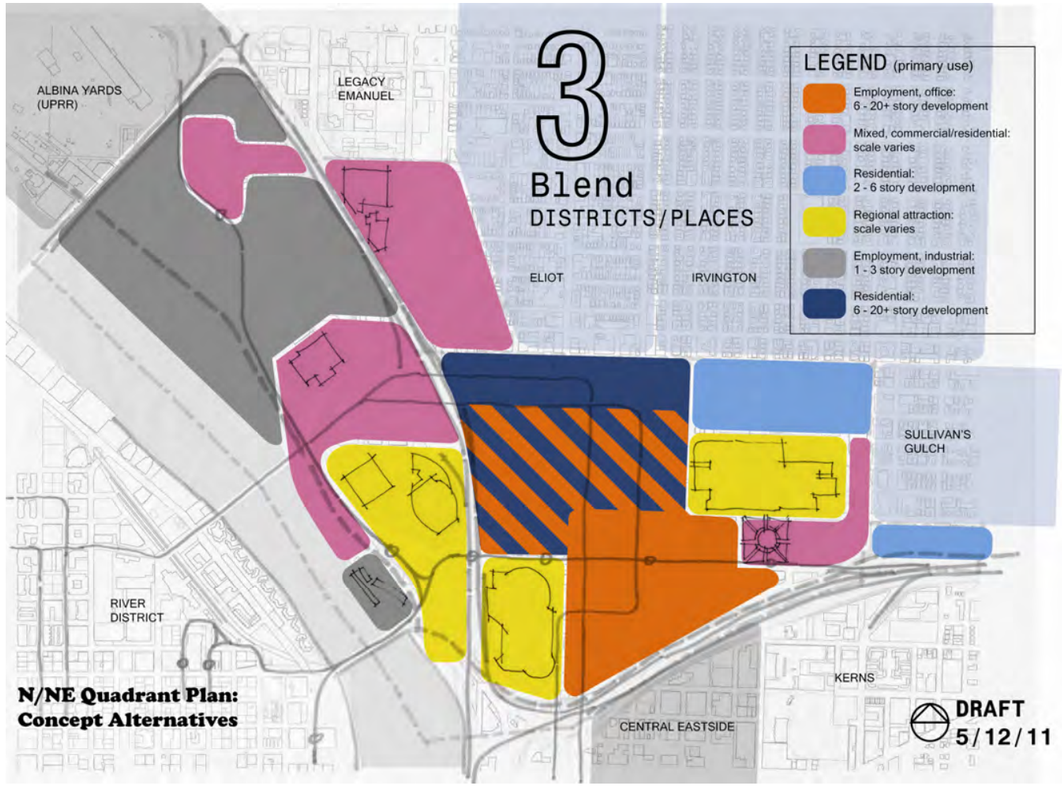


Civic street (Seattle)

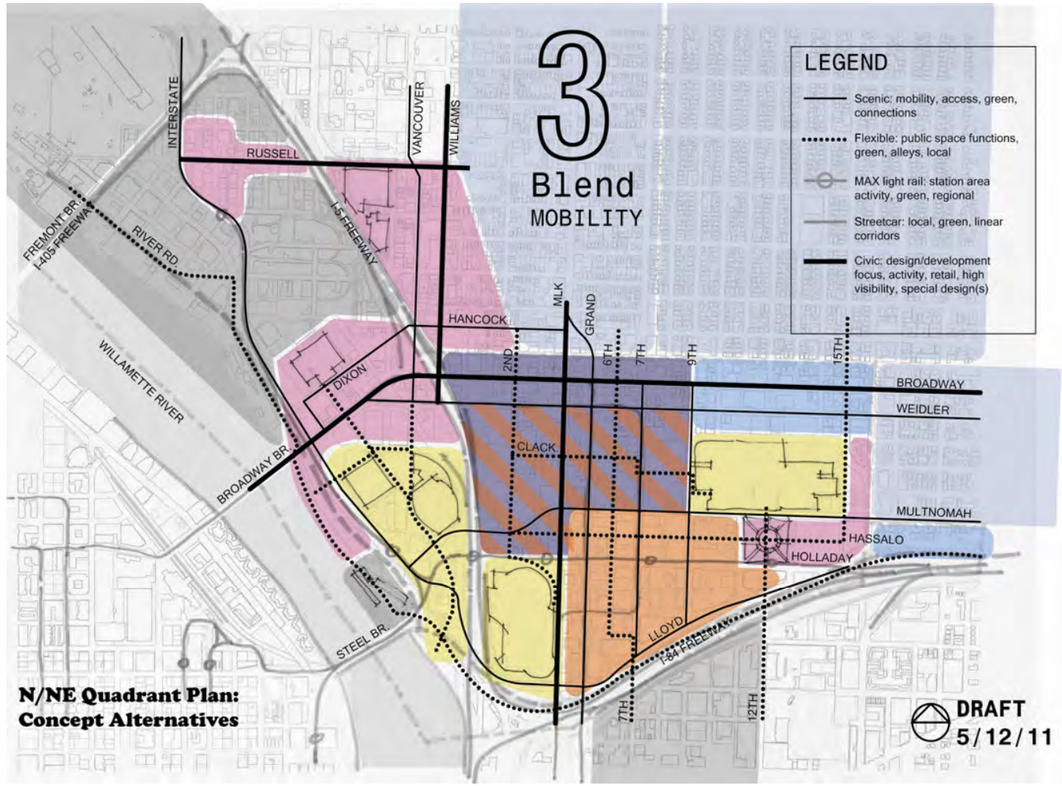
Expand smaller, private open spaces ...

- No major new public parks
- As office core development continues, private plazas and parks will be provided
- Pedestrian connections link system of private parks

NE Clackamas Street View with Office, Employment Uses



Orient green corridors north-south ...



- Mid-district water capture and treatment, gravity fed for reuse downhill
- Rose Quarter and Convention Center on district energy system
- Waste digesters at north and south edges of entertainment area to convert waste to energy
- Rain water harvesting in Rose Quarter
- Lloyd Green Ecodistrict

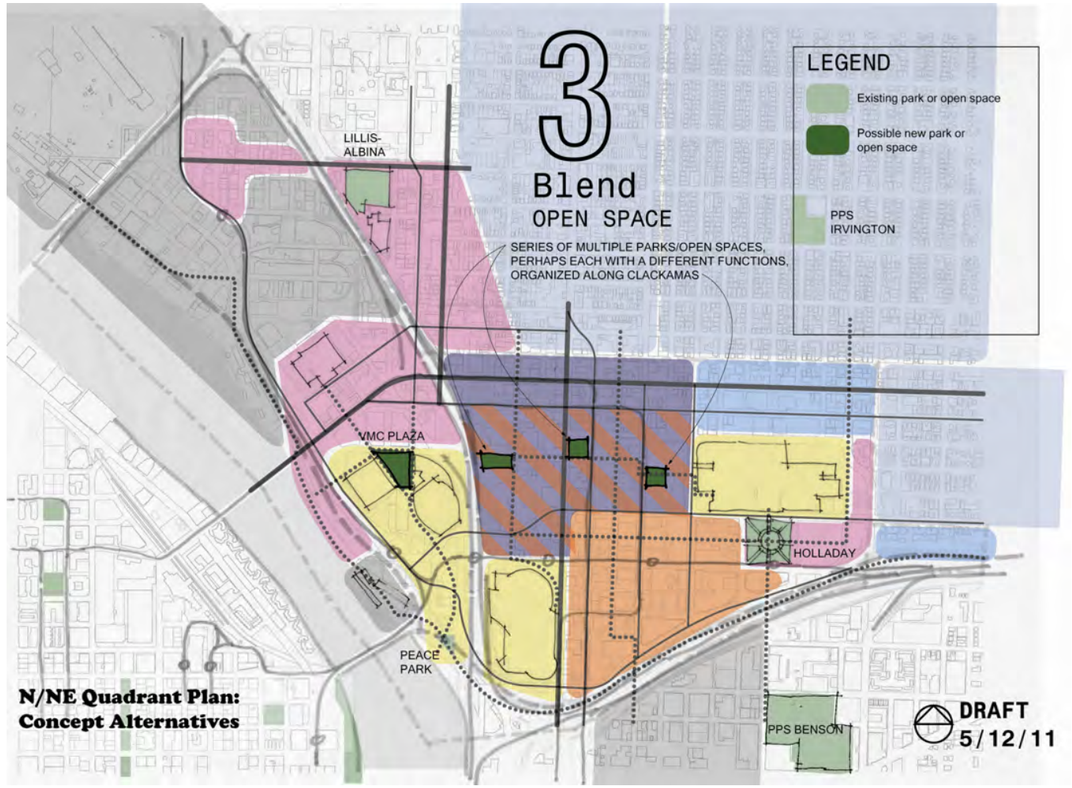
Mixed Density, Office, Employment Aerial View Looking West Option 2 Employment District

Residential / Employment Blend Emphasis

Residential/Employment Blend …

- Market-driven office/residential mix in central core
- Provides maximum flexibility
- Maintains predominant residential focus north of Weidler and predominant office focus south of Multnomah/Holladay
- Modest expansion at N Russell Street
- Mixed employment along N Broadway

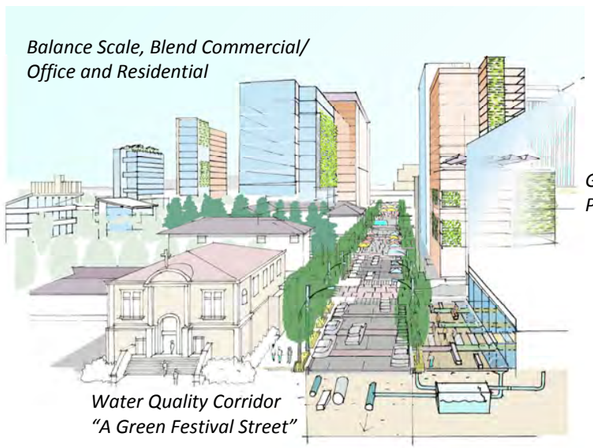
Residential/employment blend development (Seattle)



Strategic transportation improvements ...

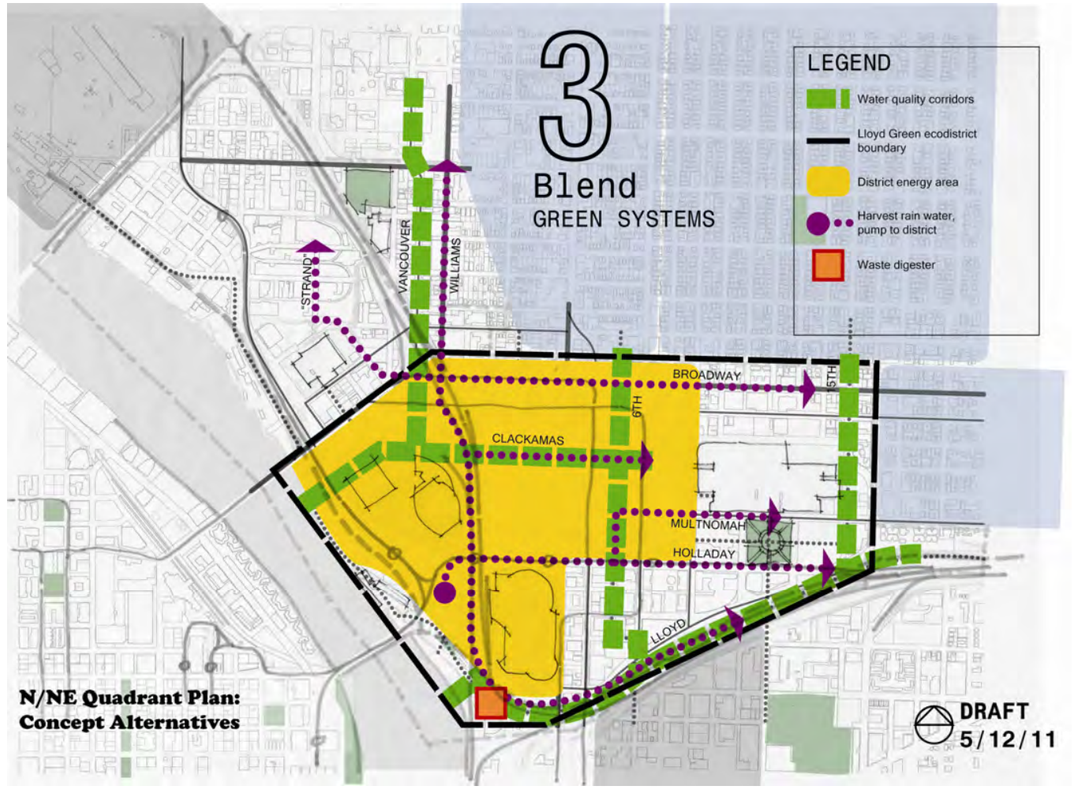
- Improves key connections across freeways including a local street at Hancock/Dixon
- Prioritizes main street development along MLK, Broadway and Williams; Grand, Weidler and Vancouver play a lesser role
- Prioritizes bike/pedestrian connections through Lloyd District

Flexible street (Madrid, Venezuela)



Linked progression of new small/medium-sized parks ...

- Clackamas green connection
- Serves both residents and employees
- Akin to Pearl District open space strategy



NE Clackamas Street with a High Density Blend of Uses

Balance Scale, Blend Commercial/ Office and Residential

Green Walls and Roofs Process Stormwater

Water Quality Corridor "A Green Festival Street"

Strategic blend of green corridors …

- Mix of north/south and east/west rainwater and water quality corridors
- Water collection facility in Rose Quarter could pump back to district for reuse
- Waste digester at southern edge of Convention Center
- Expanded district energy area to serve high-density residential/office blend in Central Lloyd
- Lloyd Green Ecodistrict

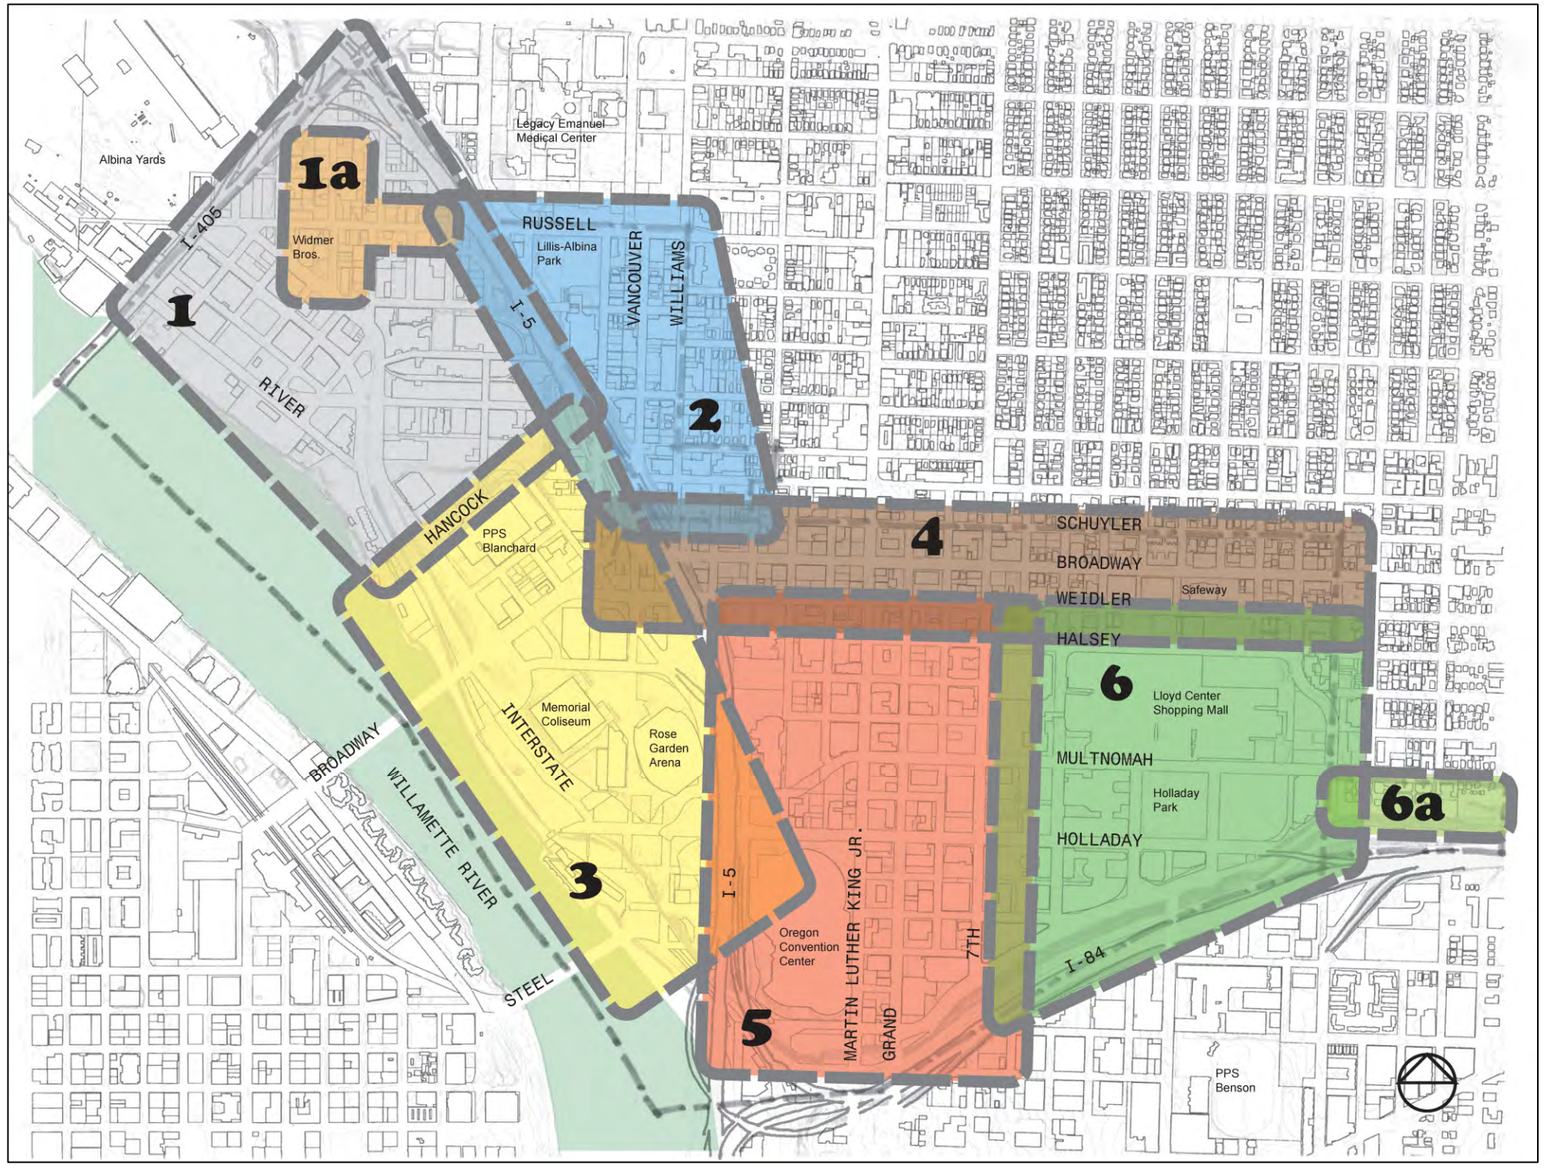
Aerial looking east with blended high density development

56868

Subarea Choices

This chapter summarizes major land use, urban design and local transportation choices for subareas of the N/NE quadrant that were drawn from a number of sources:

- Issues, opportunities and constraints,
- Stakeholder Advisory Committee (SAC) meetings,
- SAC Subcommittee meetings, and
- The Local Issues Charrette, held in February, 2011



The subarea choices were developed to coordinate with and complement the three quadrant-wide concept alternatives. Consideration of these choices will inform the refinement of the concept alternatives (and vice versa), contribute toward the preferred concept and provide guidance for more focused plan proposals at the subarea level.

Each subarea section in this chapter contains background information, area-specific choices with corresponding diagrams, and area-specific snapshots of the three quadrant-wide concepts. The snapshots help illustrate how the subarea choices could influence concepts at the quadrant-wide level.

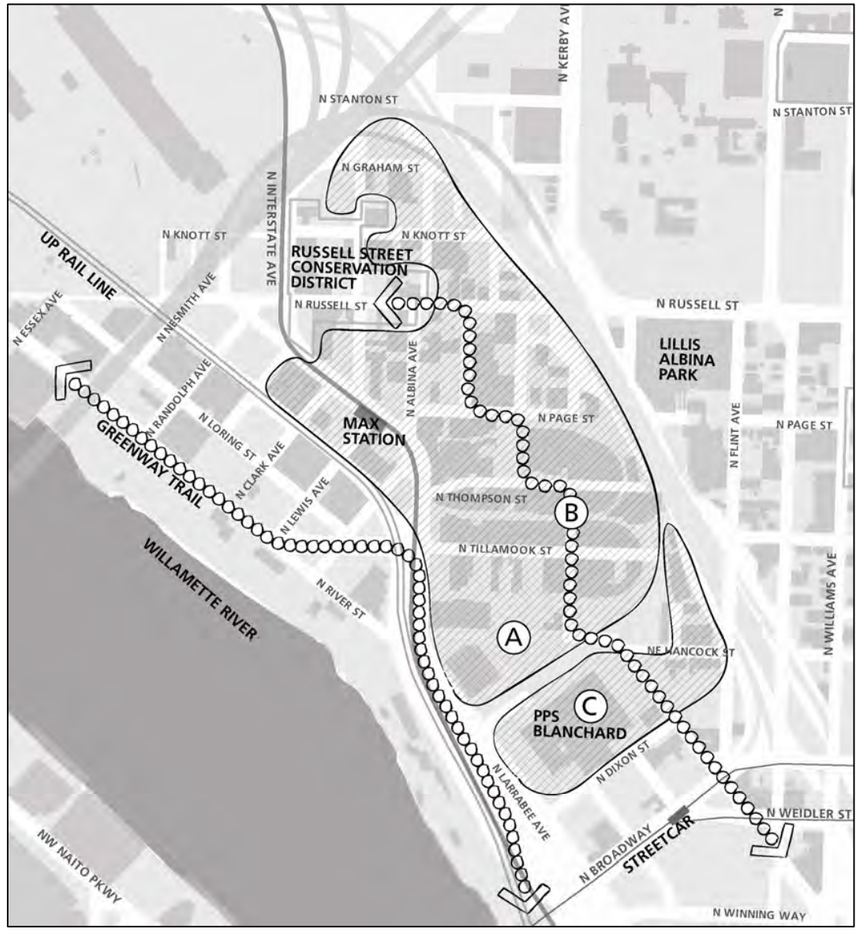
Subarea 1 – Lower Albina Industrial

Background

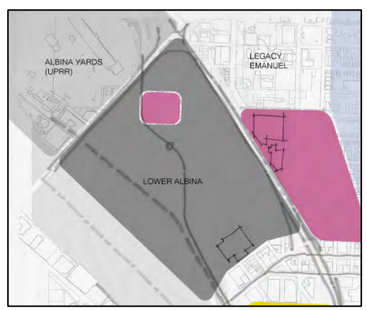
This subarea is bounded by I-5 to the east, I-405 to the north, the Willamette River to the west and N. Hancock Street to the south. Most lands in this subarea have industrial zoning supporting a wide range of both new and older industrial businesses. Generally, there appears to be little interest in major changes to the current land use regulations in this area. One potential zoning change considers increase the land use flexibility of the area within subarea 1a (Historical Russell Street) and the Portland Public Schools (PPS) Blanchard site at the south end of this subarea. Another potential zoning option is to increase the flexibility of the industrial zoning east of the UP main line by allowing more creative office uses, intended to increase the employment density. This approach has been used with the Economic Opportunity Area tool applied in the Central Eastside.



The area west of Interstate Avenue and River Street was included in the River Plan / North Reach, completed in 2010. This planning process will not revisit policies and regulations established by the River Plan in this area. It will remain in industrial use. It has been suggested that the area west of the Union Pacific mainline could be removed from the Central City Plan District.

There has been some discussion about a desire to better connect this area to the rest of the N/NE Quadrant (particularly to the Rose Quarter and Lloyd District) with a pedestrian-friendly alternative to N. Interstate Avenue known as “the strand”; this connection could include improvements to local streets and new connections where gaps currently exist in the network.

Area Choices



A. Should the plan increase flexibility by allowing more creative office uses in Lower Albina, such as software development and media production?
B. Should the plan call for “the strand” to create greater bicycle and pedestrian connectivity through Lower Albina to link the Russell St area to the Rose Quarter?
C. Should the zoning for the PPS Blanchard Site and adjacent properties to the east be changed to allow more land use flexibility to encourage future redevelopment of the sites? Ideas for the site have included retail, research and development and mixed use residential.

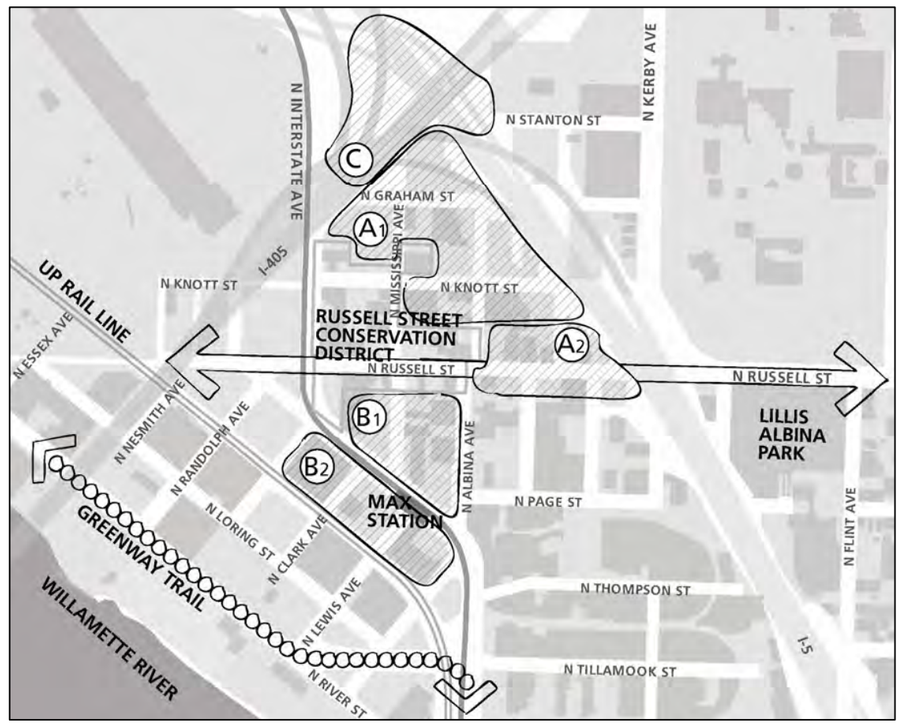
legend (predominant use)

56871

Subarea 1a – Historic Russell Street

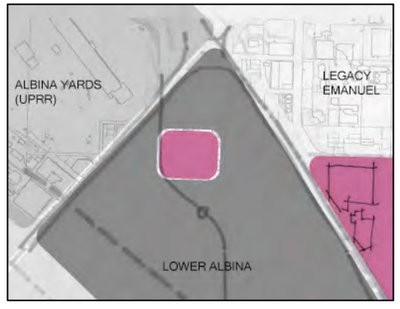


Background

Russell Street stretches from Interstate Avenue at the west end of the subarea to Martin Luther King Jr. Boulevard at the east end. Anchored by the Russell Street Conservation District and historic structures such as the Widmer Brothers Brewery, the west end of the street is home to a small but vibrant mix of restaurants, bars and other small-scale retail establishments. The area of mixed use zoning is limited to the two-blocks between Interstate Ave and N. Albina on both sides of Russell Street. East of this area to the I-5 underpass, properties fronting Russell Street are zoned industrial and non-industrial uses are restricted. Stakeholders have commented that the current balance of uses works well with the existing infrastructure, including parking capacity.

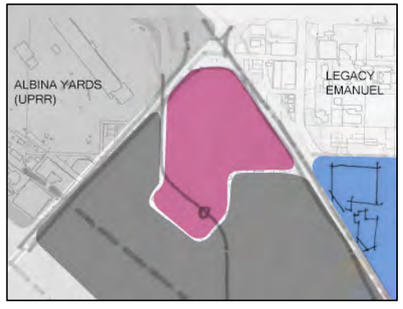
Conflicting policies are currently in place in this subarea. The 1988 Central City Plan map calls for mixed use and housing development. However, current industrial zoning prohibits housing in a part of the subarea that is also designated as a housing bonus target area and a design overlay zone, required ground-floor active uses and other provisions are inappropriately applied to industrially-zoned land.

Another potential zoning consideration in this area is the presence of the MAX Yellow Line Station on Interstate Avenue between N. Mississippi and N. Albina. This station was originally proposed at the foot of N. Russell Street adjacent to the mixed use historic main street. Due to traffic and railroad circulation issues, the station was ultimately built 2 blocks south on Interstate and is currently surrounded by industrial zoning, including some vacant properties.



Area Choices

A/B. Which uses should the plan encourage in the following areas: north of Russell St (A1), along Russell St to the east of the Conservation District (A2), north of the MAX station (B1) and south of the station (B2)? Options include residential, commercial, mixed use and office.



C. How should the area under the I-5/I-405 Freeway Interchange be utilized? Ideas have included active recreation suitable for a hardscape, such as a skate park or tennis courts.

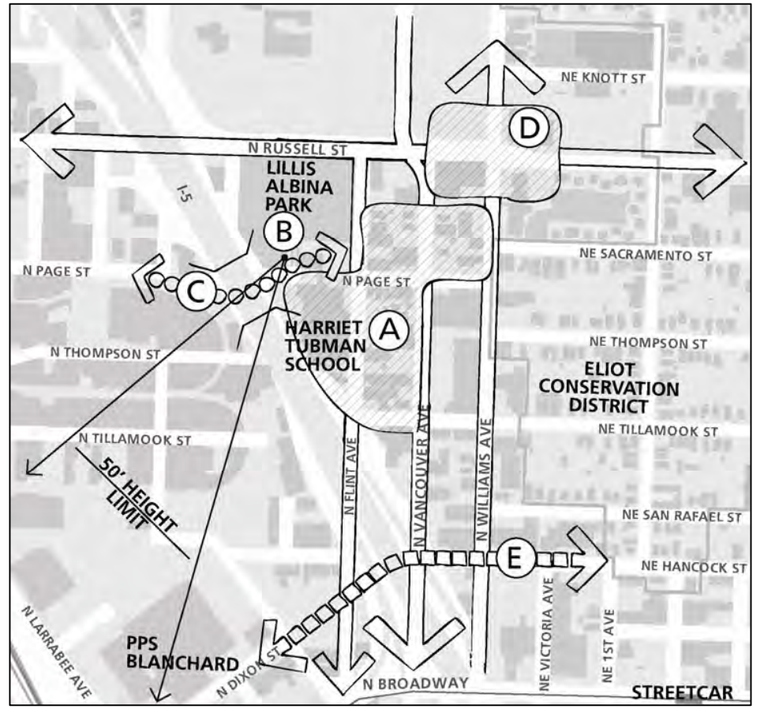
Subarea 2 – Eliot: Vancouver/Williams Corridor



Background

This subarea is located south of Russell St and east of I-5, just outside the current Central City Plan District Boundary. It was added to the N/NE Quadrant study area in order to look at more flexible zoning options and potential impacts from changes to the I-5 Broadway/Weidler on- and off-ramps.

The area is currently home to a diverse mix of uses, including light manufacturing, warehousing, retail, residential and institutional, and also contains the Harriet Tubman School and Lilis Albina Park. Some of the area is currently zoned for high density housing that doesn't allow significant other uses and can limit the ability of existing, non-residential uses to expand. There is interest in shifting more of the area to flexible, mixed-use zoning that would allow housing along with a wide variety of other uses. In addition, this area contains a number of buildings identified in the Cornerstones of Community inventory of African-American historic resources, such as the Mt. Olivet Baptist Church that stakeholders have indicated should be preserved.

An additional issue relates to the designated view corridor from the corner of Lillis-Albina Park. This designated public viewpoint is currently obscured by trees and it cuts through the center of the PPS Blanchard site, restricting building heights to 50 feet on part of the parcel

Area Choices

A. Should the plan rezone residentially-zoned properties to allow a wider range of uses? If so, are additional incentives for housing development desired?
B. Should the plan recommend changes to the designated view corridor from Lillis Albina Park? If so, how?
C. Should an additional pedestrian connection be developed at Page Street under I-5 to connect this area to Lower Albina?
D. Should a main street district be encouraged around the intersection of Williams Avenue and Russell Street, reviving a historic commercial node?
E. Should an additional east-west multimodal connection be developed north of the Broadway/Weidler couplet (e.g. Hancock St. to Dixon St.)?
F. Should both Vancouver and Williams Avenues be encouraged as neighborhood commercial streets, or should one be emphasized as the prominent commercial corridor?

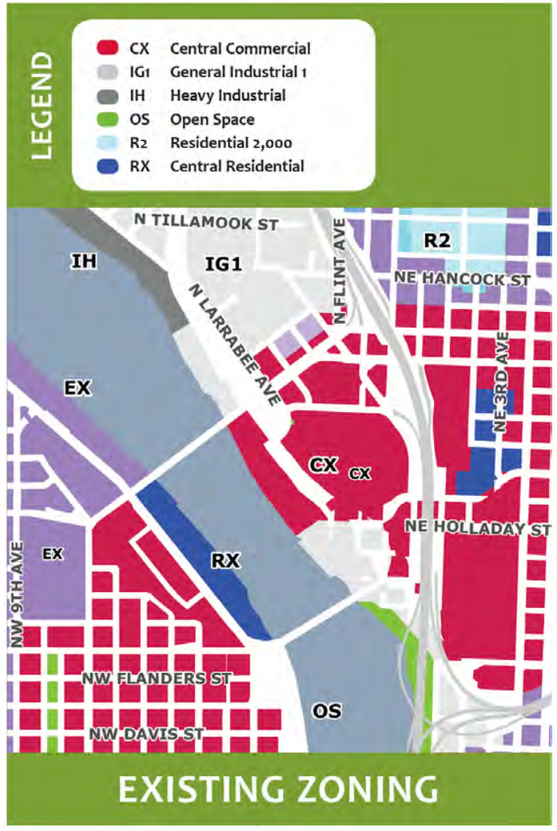
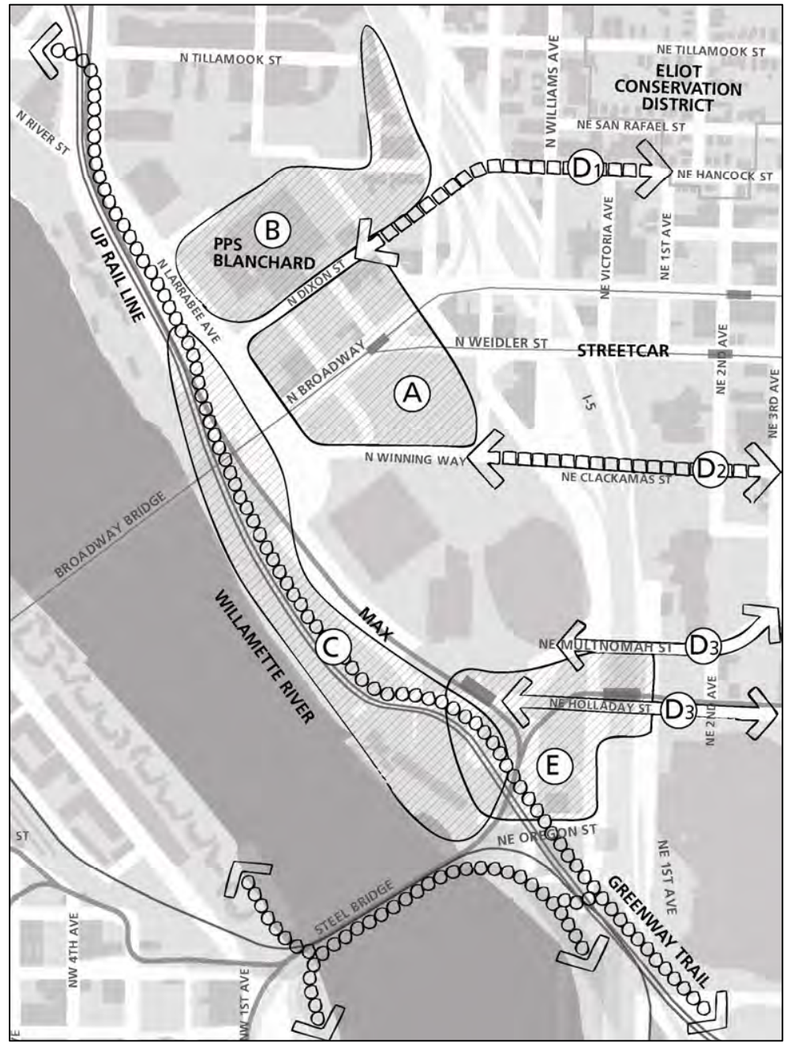
legend (predominant use)



Subarea 3 – Rose Quarter and Vicinity



Background

Home to the Veterans Memorial Coliseum and the Rose Garden Arena, the Rose Quarter is one of the region's largest and busiest regional sports and entertainment districts. Immediately to the north of the Rose Quarter, N Broadway connects the Broadway Bridge to I-5 and NE Portland. Just to the north of Broadway is Portland Public School's (PPS) headquarters building, the Blanchard Educational Service Center. PPS has expressed interest in moving their headquarters to another location in the City, which would open up a large site for redevelopment opportunities to complement proposed redevelopment in the core area of the Rose Quarter.

The core area of the Rose Quarter has been the subject of extensive development planning over the past few years. The current effort, the Rose Quarter District Plan, is being led by the Portland Development Commission and is nearing completion. The Plan sets the direction for long range planning in the core of the area, preserving and renovating the Coliseum and calling for a greater level of activity and 24 hour uses to complement the entertainment events currently held in the Rose Quarter. The N/NE Quadrant Plan will address the areas away from the core of the district – particularly to the north along N. Broadway, to the west along the banks of the Willamette River, and the connections to the south and Lloyd District to the east.

Area Choices

A. Should larger buildings (height, mass) be allowed along N Broadway between the river and N Wheeler Ave to increase density and support a higher level of activity in the Rose Quarter?
B. Should the zoning for the PPS Blanchard Site and adjacent properties to the east be changed to allow more land use flexibility to encourage redevelopment? Ideas for the site have included retail, research and development and mixed use residential?
C. What should the nature of the Willamette riverfront be in this area, in terms of land use, public access, and other features?
D. Are there ways to improve access between this subarea and other parts of the Lloyd District over and under I-5 with new connections (see D1-Hancock St., D2-Clackamas) or improvements to existing connections (see D3-Multnomah/ Holladay)?
E. Should the local and regional transportation infrastructure around the Steel Bridgehead and the Rose Quarter Transit Center be reconfigured to improve access, circulation and encourage new development?

legend (predominant use)

Subarea 4 – NE Broadway Weidler Commercial Corridor

Background

The Broadway/Weidler couplet is a major transportation and commercial corridor that extends from the Broadway Bridge to the eastern edge of the N/NE quadrant. The eastern end of the corridor provides "main street" commercial and retail services for the surrounding neighborhoods, while areas closer to I-5 contain more auto-oriented commercial services such as gas stations and car dealerships. The Irvington neighborhood, located just to the north of the Broadway, has recently been designated as a National Register Historic District. Broadway and Weidler connect to I-5 at the "box". A new streetcar line is under construction from the west side across the Broadway Bridge, traveling along NE Weidler before continuing south on NE 7th Avenue and returning to NE Broadway on NE Grand Avenue.

The "box" (Broadway/Weidler between Vancouver and Williams Avenues) is a difficult area for all modes of transportation, with poor pedestrian and bicycle conditions and frequent congestion associated with the I-5 freeway interchange. There are also concerns about circulation and safety issues along the rest of Broadway and Weidler, including difficult pedestrian crossings and bicycle safety issues. Other issues include enhancing the "main street" character of Broadway and/or Weidler and achieving a respectful transition from the commercial development on Broadway and Weidler to the residential development in the historic Irvington and Eliot neighborhoods to the north. Current maximum building heights east of 7th Avenue and north of Weidler are 50', however, a variety of height bonuses are in place allowing development to be considerably higher in some cases, provided certain amenities are included in the project. Section diagrams on the following page display allowed heights and bonus opportunities.

Emerging concepts include creating a more contiguous main street environment along NE Broadway and NE Weidler that extends through the Rose Quarter and connects to the Broadway Bridgehead, where key redevelopment sites could serve as a gateway to the district. Concepts that call for stronger connections in a north south orientation continue to include greater development along NE Broadway and Weidler. High density residential development suggested for areas surrounding the Broadway/Weidler couplet would support retail development.

Area Choices

A. Is the current transition in allowed heights from Broadway/Weidler to the neighborhoods to the north appropriate (see section AA)? If not, what changes could be made to improve it?
B. Should both Broadway and Weidler be encouraged as neighborhood commercial streets, or should one be emphasized as the prominent commercial corridor? Should the "main street" character present on the east end of the couplet extend toward the Rose Quarter? If so, how far?
C. What methods should be used to address the circulation and safety issues along the corridor?
D. Are the current allowed building heights along Broadway/Weidler appropriate (see section BB)? Should residential development be encouraged on the west end of the corridor?

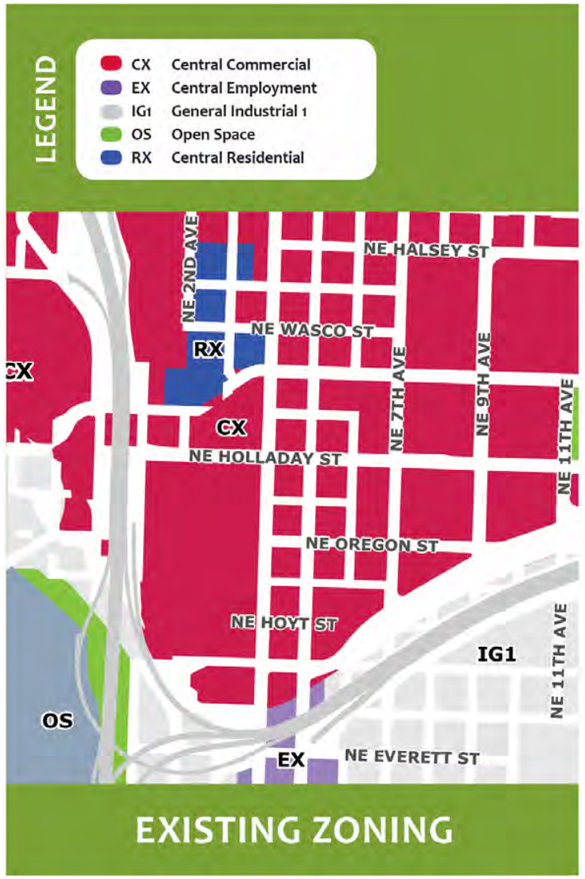
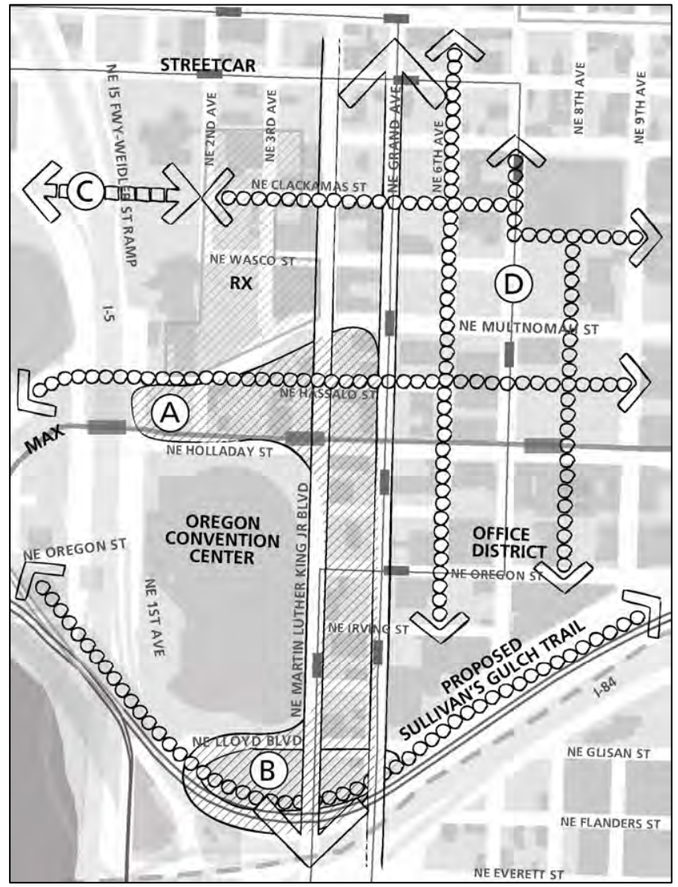
Subarea 5 – Central Lloyd

Background



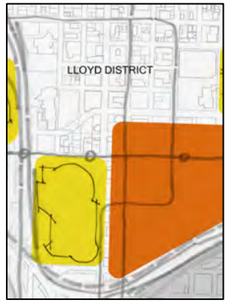
Central Lloyd is the core of the Lloyd District, home to the most generous development entitlements on the east side. The southern half of the subarea includes the Oregon Convention Center (OCC) and several office buildings, while the northern half is occupied by a few residential buildings, several mid-size hotels, medical services and a wide variety of smaller commercial buildings. Though the area is home to the OCC, in the rest of the district, relatively little development potential has been realized and the area lacks a strong identity. Streetcar is under construction now along NE Grand Avenue, NE 7th and NE MLK, and is anticipated to help encourage new development in this area.



Development ambitions south of NE Multnomah Street, have long focused on projects that would support the OCC. The Development Vision for the OCC Blocks, completed by PDC in 2006, calls for a major hotel in the area and retail and entertainment uses that could add activity to the area around the convention center. The sites along MLK and Grand near I-84 have been suggested as good locations for high-rise signature development – an idea that would likely require some modification of established view corridors.

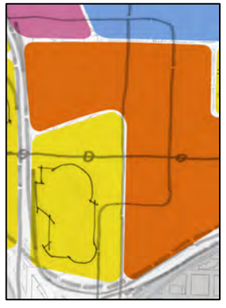
In the northern half of the subarea, there has long been a desire to see mixed-use development including a substantial residential component. Currently, there is a 3-block area zoned for predominantly residential uses (RX), and a zoning incentive for housing that covers large sections of the subarea (residential bonus target area). There is concern that current open space and other amenities and services in the area may be insufficient to attract and support significant residential development.

Area Choices

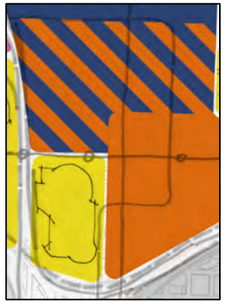


A. Does the goal of mixed-use office development with significant hotel and entertainment components make sense for the areas surrounding the convention center?
B. Should "signature" high-rise development be allowed at the southern edge of the district along NE MLK and NE Grand near I-84?
C. Should there be a local traffic and/or pedestrian and bicycle connection to the Rose Quarter along Clackamas Street?
D. Should NE Multnomah Avenue be upgraded to a major east-west corridor with regional retail uses?
E. Should both MLK Blvd and Grand Ave be encouraged as commercial streets, or should one be emphasized as the prominent commercial corridor?
F. Should there continue to be a focus on residential uses in this subarea, or should other uses be emphasized, such as office or mixed use? If residential development remains a priority, where should it be encouraged and what open space amenities should be planned to encourage and support it (e.g. large public park, series of plazas or pocket parks)?
G. Several ideas for future secondary pedestrian and bike connections have been identified (e.g. Clackamas, 8th, 6th, Hassalo). Which of these are most important?
H. What methods should be used to address the circulation and safety issues along the MLK/Grand corridor?

Quadrant-wide Concept Alternatives for Subarea 5



0 – existing conditions



1- residential

2 – employment

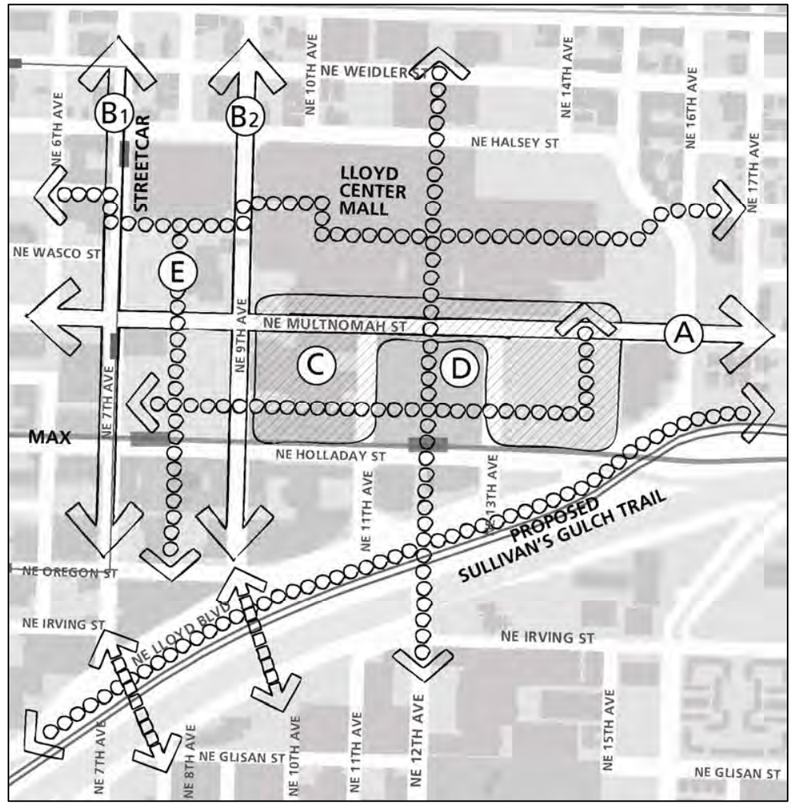
3 – blend

legend (predominant use)

Subarea 6 – Eastern Lloyd

Background

This area has a well-established cluster of office buildings along NE Multnomah and NE Holladay Streets, regional shopping opportunities at Lloyd Center Mall and a predominance of surface parking lots and parking garages. The area is characterized by large blocks and property owners with large holdings. Current policy includes incentives for residential development in much of this area, though little residential development has occurred.

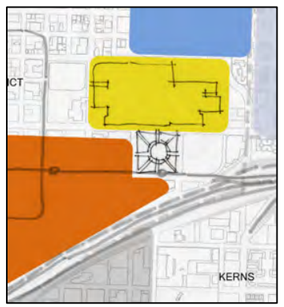


Emerging concepts suggest high-density residential or mixed-use development to enliven the district and enhance street-level activity, adding additional structured parking at the Lloyd Center Mall to allow redevelopment of surface parking lots. As the superblocks redevelop, ensuring that future mid-block connections provide continuous and convenient pedestrian routes through the study area will be important.

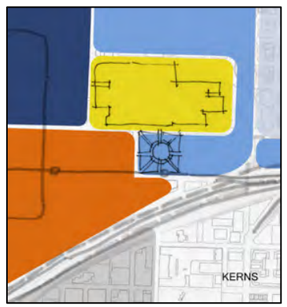
Some concepts suggest upgrading NE Multnomah Street to a major retail thoroughfare lined with regional retail, on-street parking, offices and possibly housing to add to the street-level activity and complement the Lloyd Center Mall. Adding entrances and additional store-fronts to the mall on the NE Multnomah Street side was seen as desirable.

MAX light rail and the new streetcar line provide transit options to and through the subarea, but increasing connectivity and safety for pedestrians and bicycles is an important issue. NE 7th Avenue provides an opportunity to strengthen north/south connections in the district with a new streetcar line and potential improvements to facilitate bike and pedestrian transportation. The Sullivan's Gulch Trail could provide open space and a valuable new connection from the subarea to the riverfront and areas to the east.

Holladay Park is one of the largest parks in the Central City and the only significant public open space in the Lloyd District, but the park suffers from public safety concerns and a lack of consistent, diverse activity. Concepts to address these concerns include short term actions such as active programming of the park, and long-term actions such as encouraging high density residential or mixed-use redevelopment surrounding and facing the park and adding design features to the park to attract a wider variety of users.



Area Choices



A. Should NE Multnomah Avenue be upgraded to a major east-west corridor with regional retail uses?
B. Should NE 7th (B1) and/or NE 9th (B2) Avenues be enhanced for multimodal transportation, with a possible future connection across I-84 to the Central Eastside?
C. What character, scale and uses would be most desirable for redevelopment surrounding Holladay Park?
D. How can the user experience be improved at Holladay Park?
E. As the superblocks develop, what are the most important features that should be included, in terms of connectivity and open space (e.g. ped/bike connections, parks)?

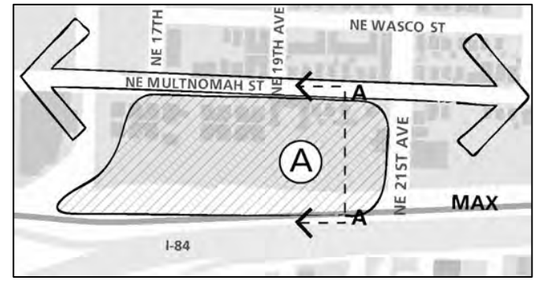
legend (predominant use)



56878

Subarea 6a – Sullivan's Gulch Transition

Background

This subarea is adjacent to, but outside the current Central City Plan District Boundary. It was added to the N/NE Quadrant study area because higher density zoning extends along the south side of NE Multnomah Street to NE 21st Avenue and is mirrored by commercial and higher-density zoning in another expanded study area south of Interstate I-84. Today, the western part of this area is occupied by the Marriott Residence Inn Hotel, while the eastern portion is occupied by a small courtyard apartment building and several older single-family homes. Relative to the current zoning, the eastern portion is significantly underdeveloped.

The properties at the corner of NE Multnomah and NE 21st Avenue are currently split-zoned with a mix of high-density residential and commercial office zoning, which complicates redevelopment of the site. The N/NE Quadrant Plan has the opportunity to address the character of desired future development and make necessary changes to zoning regulations. Concepts consider the mix of uses that would be appropriate and the scale (height and mass) of future buildings in this location. Today, residential buildings up to 75 feet tall are allowed along NE Multnomah Street. The office zoning (CO2) to the south carries a 45-foot height limit, but allows additional uses such as retail and office.

The area could serve as a visible gateway to the district from the Central Eastside and I-84 and could be an important access point for the future Sullivan's Gulch Trail.

Area Choices

A. What types of uses are desirable and/or appropriate in this location (e.g. commercial office or retail, light industrial, residential)?
B. Do changes to the allowed height and mass of buildings need to be made in this area?
C. Should allowed building heights increase toward I-84?

Public Input Received at June 2011 Open House related to the I-5 Broadway/Weidler Interchange

Below is a compilation of survey responses and general comments received at the public open house held on June 29, 2011, plus additional responses received via mail and at the July 13, 2011 Subcommittee meeting.

I-5 Broadway-Weidler Interchange Survey Responses (22 surveys collected)

What are the most important issues on the freeway that should be addressed in planning for improvements to I-5 in the N/NE Quadrant? (Select 2 items)	
Safety	**11**
Freeway Congestion	**6**
Access	**5**
Travel Time	**5**
Reliability	**3**
Freight	**3**

What are the most important issues at the Broadway/Weidler interchange that should be addressed in planning for improvements to the I-5 in the N/NE Quadrant? (Select 3 items)	
Pedestrian Access	**14**
Bicycle Access	**12**
Neighborhood Access	**7**
Safety	**7**
Economic Development	**6**
Travel Time	**5**
Local Street Circulation	**5**
Transit Operations	**4**
Freight Access	**2**

What are the project elements that you consider most important in the vicinity of the Broadway/Weidler interchange? (Select 3 items)		
Improved bicycle routes East/West		**12**
Improved bicycle routes North/South		**11**
Safety improvements at the interchange		**10**
New overcrossing at Clackamas Street for bicycles, pedestrians, and motor vehicles		**6**
New overcrossing at Clackamas Street **for bicycle and pedestrians only**		**6**
Better traffic operations to/from the freeway		**5**
New overcrossing at Hancock Street for bicycles, pedestrians, and motor vehicles		**5**
Improved Operations on freeway mainline		**4**
New overcrossing at Hancock Street **for bicycle and pedestrians only**		**3**
Better traffic operations on Broadway/Weidler		**3**
Other Comments (9 Responses)		
	1.	Smooth even traffic flow east via Broadway/Weidler out to 33rd.
	2.	Do not De-Couple
	3.	Remove on-ramps and off-ramps so freeway operations do not disturb the city above it- the walkers, the bicyclists, businesses, etc. At the least, minimize impacts of on-ramps and off-ramps to bicyclists and walkers. Allow movement for pedestrians on both sides of all streets, and to cross all legs of all intersections.
	4.	All options that increase auto movement into and through the area are harmful to the overall systems.
	5.	Better pedestrian environment-existing is extremely hostile.
	6.	Maintenance if surface streets, public transportation and bicycles. Adapt to moving people around with fewer cars. Improve rail infrastructure for freight. Make Broadway/Weidler more business-friendly by reducing and slowing car traffic.
	7.	Better neighborhood connections. Better traffic operations on Broadway/Weidler if it serves the

		neighborhood and does not increase neighborhood through-traffic and does not damage land uses on Hancock.
	8.	Less traffic.
	9.	This whole interchange is an important access point for 100s, 1000s if cyclists coming down Rodney and Williams to get downtown. Any option must improve this access. Also, I live in Eliot. I don't want to be cut off from downtown.

Which 4 concepts do you think do the best job of blending freeway improvements and the surface street environment?	
1. 2035 No-Build	**7**
4c. Three Point w/Couplet	**6**
3. Rebuild the Structures	**5**
2a. Braided Ramps	**4**
6. TSM/TDM/Operations Management	**3**
4b. Folded Diamond	**2**
5d. Roundabout	**2**
2b. Collector/Distributor Road	**2**
4a. Split Diamond	**2**
5a. Standard Diamond	**1**
5b. Single Point Urban Interchange	**0**
5c. Diverging Diamond	**0**
5e. Three Point w/De-Couple	**0**

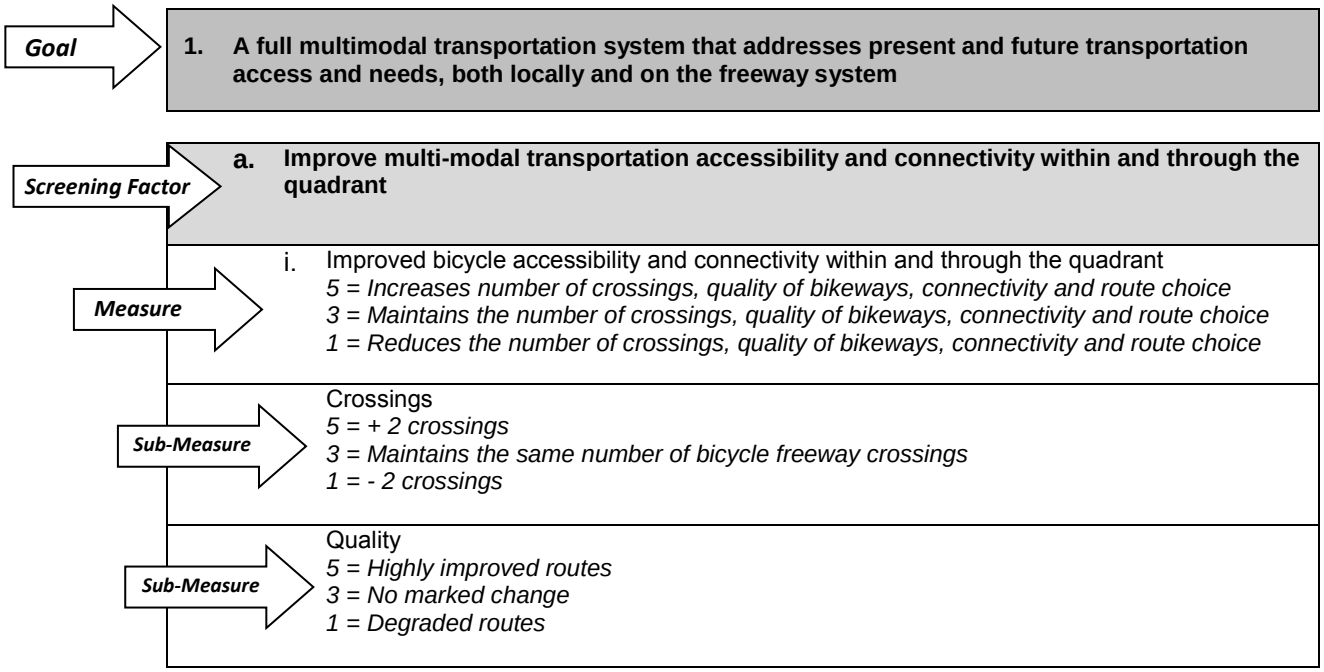
What would you change about your preferred concepts? (Free response)	
1.	Moving SOV trips to Transit Trips. Remove the freeway access in this neighborhood, low-cost solution that accomplishes most of the safety goals of the project. Let's think outside the box.
2.	This area is a major bike and pedestrian travel node, entering N/NE Portland and putting people into Lloyd District or Downtown/ Many of the interchange options negate this. I am offended that we are even considering these "monster" interchanges (5a-5e) for the Inner-City at the great expense of bicycle-pedestrian connectivity and safety.
3.	Reduce freeway capacity with reduced VMT in the region, both that reduction already happening as well as policy-directed VMT reduction. Urban Design- street walls, gaps in urban fabric, buildable sites among the most important issues at the Broadway/Weidler interchange. Remove one S-bound terminus for design option # 3.
4.	Improve access to the bridge for all modes. Avoid traffic circles (rotaries/roundabouts) since Portlanders have no clue about how to merge into traffic.
5.	Focus on motor vehicle travel time specifically. Bicyclists need to pay for any bicycle improvements-it's called equity. Equity means bicyclists pays for bicycle infrastructure and transit users paying for transit improvements.
6.	Reduce automobile volumes moving across the Columbia River.
7.	Whichever is best for autos/trucks on mainline and no harm/better for motor vehicles on surface streets. Bikes are secondary.
8.	Alignments which remove buildings should be discarded as they will further harm economic viability of area and widen the barrier to pedestrians. Suggest SB I-5 exit ramp to intersect with Vancouver at location 1 block north of Broadway. This would be a signalized intersection on the structure. this only shortens ramp by about 80', but reduces V/C of Broadway/Vancouver intersection from 1.01 to 0.76 + or -
9.	Land use is important for Broadway/Weidler interchange. Hard to judge since land use and economic development impacts are unclear.
10.	Not screwing up potential redevelopment in the name of highway expansion.4c only with Option 2 w/ bike only on Williams and Vancouver. Please keep bicycle facilities on Vancouver/Williams and Flint over I-5; vital connections from N/NE neighborhoods that shouldn't be sacrificed for mega highways for Clark County Commuters. I appreciate ODOTs willingness to team up w/BPS and their efforts at considering bike/pedestrian improvements are laudable, but this open house suggests to me that there is a series of unsound assumptions as to our transportation priorities. If highway ramps cause accidents, remove them! Expanding highways at the expense of an important neighborhood flies in the face of all of the city/state/regional goals of livability and climate change mitigation. I could theoretically see expanding I-5 for the auxiliary lane if it didn't impact the neighborhood and didn't need tons of onramps, but maybe we should be investing in getting butts out of cars instead of trying to push them through the N/NE quadrant. Who do these plans benefit? And where is TriMet in this discussion, in terms of how busses might navigate Broadway changes? I remain skeptical that highway expansion is compatible with the attempts at redevelopment proposed in the other half of this charrette? And the streetcar! There are so many assets in this quadrant that we have significantly invested in, as part of an effort to build a livable community, but who wants to walk or bike across lanes and lanes of highways and off ramps to catch a train? You can invest in human-scale

	neighborhoods, and you can invest in highways, but I'm not sure you can do both in one place. It's time to state our priorities directly. I will say that the public outreach on this effort has been tremendous. Kudos!
11.	It is ok as is. We need to adapt to a lower energy economy, and stop facilitating more vehicle traffic.
12.	The freeway will always be congested. Travel time is a product of the number of users. Do not braid the ramps and do not encroach on the adjacent lands with any widening. Focus first on the neighborhoods and surrounding uses/buildings before "improvements" are decided. This is a circular project- land uses/neighborhood vs. Freeway.
13.	Move on/off ramps away from Broadway, de-couple Broadway/Weidler.
14.	I don't like any of them. The interchange should be moved, I know that those other options have been shelved in spite of neighborhood opposition.
15.	Please consider/study putting the Eastbank freeway as a high capacity on-grade arterial or underground in a tunnel! Thanks!

Comments on Flip Charts at 6/29/11 Open House

MOBILITY & FREEWAY INTERCHANGE ALTERNATIVES
Bigger freeway ramps, more cars, more freeway lanes? I don't see how that fits in with a vision of a vibrant, diverse, people-friendly neighborhood. "Delete" the ramps.
North-south pedestrian-bike trail- possible alternative to trail under Broadway Bridge to Tillamook St. Overpass---> Cross Interstate at existing signal just north of Coliseum---> Cross Broadway on westerly side and have trail pull off and viewpoint(s). Proceed to overpass and use pedestrian-bike on westerly side of overpass to Tillamook-Use concrete dividers to separate pedestrians and bicyclists from vehicles which would utilize easterly side of bridge (traffic heads southerly). Bicyclists and pedestrians on west side of Interstate to Tillamook Street. Bicycle-pedestrian trail proceeds westerly on Tillamook bridge to River Avenue.
Provide more connectivity from Eliot to Lloyd Area to/from lower to upper Eliot and to/from NE Quadrant to downtown.
Reading the TDM list under Concept 6. I mistook it for "existing conditions." Surely there is more and better TDM to do than what we do today! I am not satisfied with "ensure:" and "expand"- doesn't seem like much effort went into this concept.
Need to look at wider study area/ Separate ramps-out of Broadway/Weidler Area.
Eliminate suburban concepts (no roundabouts, etc. that disconnect the urban fabric)!
Bring back options that eliminate and relocate ramps.
Three-dimensions! Difficult to understand concepts.
Integrate land use before eliminating concepts.

Comment Cards received at 6/29/11 Open House



MOBILITY & INTERCHANGE ALTERNATIVES
Need to do a better job with pros and cons of each alternative. What are the neighborhood, land use, and economic development impacts of each freeway alternative?
I am disappointed with the constrained scope of this project. Changes to freeway design have large implications. This process is not doing the larger planning concepts justice and I'm worried we can't see the forest for the trees on this one. Let's see another concept that focuses on the role of transit in replacing highway demand. This neighborhood can't handle more cars; we need a more ambitious solution to transform our transportation network here.
I'm a relatively engaged citizen, a bike commuter, and I got really confused to how this project related to the N Williams/Vancouver project and Lloyd District-Holladay project being undertaken by PBOT. I realize this may be a more long term plan but it doesn't seem clear that those projects are being integrated. Also, changes proposed should consider the projections or increased bicycle usage and plan should enable for more bikes infrastructure to be built- not hindered by highway access.
1. There are already too many on/off Freeway Ramps in N/NE Quadrant. Don't add move. In fact, removing ramps would be beneficial to business community. 2. Pedestrian and bicycle connectivity should be top priority. 3. Consider land use and transportation together not separately. Please!
The ODOT concepts for rebuilding I-5 and surface streets (Weidler/Broadway, etc.) are better, but still lack pedestrian perspective that the public needs to see and comprehend.
De-pave! Create feasible rapid (easy to do), scattered green spaces. Increase amenities (i.e. return to pedestrian scale, reduce building heights, re-juggle NC development regulation to promote pedestrian friendly streetscape. Go for housing. Choke off "Broadway I-5 on-ramp."
Overall there is more information presented here than the average person can review and form thoughtful opinions on in one day, let alone 2 hours. In my opinion the I-5/Broadway- Wiedler interchange needs to be worked-out before you can make your best plans for the area. Lastly, most of the buildings in this district have significant remaining economic and physical remaining lives, and will not

likely change much over the next 50+ years, so most energy should be directed towards transportation issues.
I would like to see options that relocate the I-5 on and off ramps. The N Broadway/Weidler area is part of our urban core and should be vibrant and full of people and commerce- rather than a place for a freeway interchange. The area has been blighted enough to make way for cars. It is difficult to understand concepts. Modeling then would be helpful to. (Land use) Make Vancouver/Williams and part of lower Albina more mixed use~ like it used to be! Connect upper to lower Albina, connect greenway, and connect Lloyd center to Eliot neighborhood.

N/NE Quadrant and I-5 Broadway/Weidler Plans
Phase 2 Screening
Evaluation Methodology
July 21, 2011

In the Phase 2 Screening, each concept was evaluated against each of the Phase 2 Screening Factors. These screening factors were made up of the project Goals and Objectives and provided a framework for the evaluation. A series of matrices was developed to summarize the evaluation. The summary matrix provides a rating for each screening factor at the level of the Objective. These ratings are on a scale of one (poor) to five (very good). Within each of the Objective level rankings in the summary matrix are backup data that are shown in the technical matrix.

The backup data varies depending on the evaluation criteria. Generally, each Objective consists of one or more measures. Some of the measures are broken down further into sub-measures to accurately rank each concept. For example, under Objective 1a., there are three measures – i., ii., and iii. Measure i. which includes both connectivity and quality rankings, is further broken down into sub-measures. The attached pages show the measures and sub-measures for each screening factors, as shown in the following example.

Each measure or sub-measure (where used) was given a ranking of 1 to 5, where 1 is the worst ranking and 5 is the best. For several criteria, a ranking of 3 is neutral with higher numbers denoting an improvement and lower numbers denoting a degradation of condition. In other criteria, such as impacts to properties, 5 represents no impact and anything less represents varying levels of impact or risk of impact.

In order to summarize the evaluation results, the following methodology was utilized. Where there are sub-measures, these were averaged to obtain a number from 1 to 5 at the level of the measure. This number was rounded to the nearest whole number. Rounding enables the use of the simple 1 to 5 scale at each evaluation level in order to keep the results simple and digestible.

Then each measure within each Objective was averaged to arrive at a score for each Objective. This score was also rounded to the nearest whole number. These scores are shown on the summary matrix.

Freeway/Local Transportation Interface
Screening Factors and Measures

The following are the measures and factors used to rank the Freeway/Local Transportation Interface concepts.

1. A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system

a. Improve multi-modal transportation accessibility and connectivity within and through the quadrant
i. Improved bicycle accessibility and connectivity within and through the quadrant *5 = Increases number of crossings, quality of bikeways, connectivity and route choice* *3 = Maintains the number of crossings, quality of bikeways, connectivity and route choice* *1 = Reduces the number of crossings, quality of bikeways, connectivity and route choice*
Crossings *5 = + 2 crossings* *3 = Maintains the same number of bicycle freeway crossings* *1 = - 2 crossings*
Quality *5 = Highly improved routes* *3 = No marked change* *1 = Degraded routes*
RDI / Route Choice: East to West *5 = Increases RDI and route choice* *3 = Maintains the same number of connectivity/route choice* *1 = Decreases RDI and route choice*
RDI / Route Choice: North to South *5 = Increases RDI and route choice* *3 = Maintains the same number of connectivity/route choice* *1 = Decreases RDI and route choice*

ii. Improved pedestrian accessibility and connectivity within and through the quadrant *5 = Increases number of crossings, quality of walkways, connectivity and route choice* *3 = Maintains the number of crossings, quality of walkways, connectivity and route choice* *1 = Reduces the number of crossings, quality of walkways, connectivity and route choice*
Crossings *5 = + 2 crossings* *3 = Maintains the same number of bicycle freeway crossings* *1 = - 2 crossings*
Quality *5 = Highly improved routes* *3 = No marked change* *1 = Degraded routes*
RDI / Route Choice: East to West *5 = Increases RDI and route choice* *3 = Maintains the same number of connectivity/route choice* *1 = Decreases RDI and route choice*
RDI / Route Choice: North to South *5 = Increases RDI and route choice* *3 = Maintains the same number of connectivity/route choice* *1 = Decreases RDI and route choice*

iii.	Improve local street circulation and freeway crossing opportunities *5 = Increases number of local street freeway crossings* *3 = Maintains the same number of local street freeway crossings* *1 = Reduces the number of local street freeway crossings*
	Local Street Circulation *5 = Increases circulation options* *3 = Maintains the same level of circulation* *1 = Decreases circulation options*
	Freeway Crossing Opportunities *5 = Increases crossing opportunities* *3 = Maintains crossing opportunities* *1 = Decreases crossing opportunities*

b.	**Increase safety for all modes**
i.	Construct/provide user friendly ramp terminal intersections *5 = Less complex, easier crossings for users* *3 = Same complexity as today, some difficult crossings* *1 = More complex, more difficult crossings*
ii.	Provide pedestrian and bicycle infrastructure and minimize pedestrian and bicycle conflicts with motor vehicles *5 = Reduces the number of pedestrian and bicycle conflict points* *3 = Maintains the same number of pedestrian and bicycle conflict points* *1 = Increases the number of pedestrian and bicycle conflict points*

c.	**Improve freight access from freeway to industrial areas and major destinations**
i.	Freeway on/off ramps designed to facilitate freight travel *5 = Ramp location accommodates all trucks* *3 = Ramp location meets most freight needs* *1 = Ramp location poorly meets freight needs*
	Ramp Location *5 = Decreases out-of-direction travel* *3 = Maintains the same level of access* *1 = Increases out-of-direction travel*

2.	**Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses**

a.	**Improve freeway operations for freight and auto**
i.	Improve weaving lengths on I-5 at Broadway/Weidler *5 = Lengthens and improves at least 2 weave sections* *3 = Lengthens and improves one weave section* *1 = Does not lengthen or improve any weave sections*

b.	**Improve freeway safety**
i.	Maintain or reduce risk of queues backing up onto freeway mainline *5 = Very low risk of freeway queuing* *3 = Some risk of freeway queuing* *1 = High risk of freeway queuing*
	Northbound
	Southbound

c. Improve the local circulation system for safe access for all transportation modes within the quadrant and freeway interchange	
i. Maintain or improve local traffic operations in "the Box" *5 = Box intersections have both better LOS and reduced queuing* *3 = Box intersections have either better LOS or reduced queuing* *1 = Box intersections have neither better LOS nor reduced queuing*	
Average Intersection LOS within "the Box" *5 = LOS A or B* *3 = LOS D* *1 = LOS F*	
Worst Intersection LOS within "the Box" *5 = LOS A or B* *3 = LOS D* *1 = LOS F*	
Total length of queuing within "the Box" (non-freeway) *5 = Decreased* *3 = Same* *1 = Increased*	
Intersections blocked by queuing within "the Box" *5 = Decreased* *3 = Same* *1 = Increased*	

3. Equitable access to community amenities and economic opportunities	
a. Avoid/minimize/mitigate involuntary displacement of quadrant residents and jobs	
i. Minimize risk of displacement of key employment and residential sites adjacent to I-5 *5 = No risk of displacement or other impact to listed facility* *4 = No risk of displacement. Some risk of circulation, access, parking or other impact* *3 = Some risk of displacement or major functional changes to listed facility* *2 = Moderate risk of displacement or major functional changes to listed facility* *1 = High risk of displacement or major functional changes to listed facility*	
- Rose Garden Arena	
- Convention Center	
- Madrona Studios	
- Left Bank	
- Paramount Apartments	
- Eliot Conservation Area	

ii. Minimize number of buildings demolished or properties made obsolete by reduced parking *5 = Property impacts limited to minor right-of-way expansion only. No buildings displaced.* *4 = 2-3 buildings would be demolished or would lose a significant amount of parking or access* *3 = 4-5 buildings would be demolished or would lose a significant amount of parking or access* *2 = 6-8 buildings would be demolished or would lose a significant amount of parking or access* *1 = More than 8 buildings would be demolished or would lose a significant amount of parking or access*	

4. Protection and enhancement of the cultural heritage of the area and its sub-districts

a. Avoid/minimize/mitigate demolition of historic and cultural resources

i. Avoid existing landmarks and potentially eligible historic structures
5 = No risk of demolition of existing landmarks and potentially eligible historic structures
3 = moderate risk of demolition of existing landmarks or potentially eligible historic structures
1 = High risk of demolition of existing landmarks or potentially eligible historic structures

- Serene Court Apartments (1130 NE 1st Ave)
- 211 NE Everett Street
- Left Bank Building (222 to 240 N Broadway)
- Paramount Apartments (253 N Broadway)
- 122 to 140 NE Broadway

ii. Avoid culturally significant structures
5 = No risk of demolition of culturally significant structures
3 = Moderate risk of demolition of culturally significant structures
1 = High risk of demolition of culturally significant structures

- 1609 NE 2nd Avenue

b. Avoid/minimize/mitigate impacts to parks and schools

i. Avoid existing parks and schools
5 = No risk of impact to parks or schools
4 = Potential for minor right-of-way acquisition of parks or schools
3 = Potential for minor right-of-way acquisition of parks or schools affecting internal circulation
2 = Potential for major right-of-way acquisition of parks or schools
1 = Potential for full acquisition of parks or schools

- Tubman School
- Albina Park
- Peace Park/Eastbank Esplanade

5. Urban Design

a. Improve freeway edge conditions

i. Minimize the footprint of the freeway
5 = No expansion from existing footprint
3 = Minimal expansion from existing footprint
1 = Major expansion from existing footprint

b. Urban redevelopment opportunities

i. Remaining/affected parcel sizes accommodate typical residential or commercial developments
5 = Creates new or improved parcels for development
3 = Development opportunities similar to existing
1 = Creates less developable parcels

ii. Maximize access to remnant/impacted parcels
5 = Maintains existing access
3 = Minor access impacts
1 = Major access impacts

c.	**Improve continuity of urban uses across the district**
	i. Enables good connections to major destinations *5 = Improves connections to major destinations* *3 = Maintains access to destinations equal to existing* *1 = Reduces ease of access to major destinations*
	ii. Enables good connections between complementary land uses 5 = Improves connections between neighborhoods and subdistricts 3 = Maintains connections equal to existing 1 = Creates obstacles to connectivity between neighborhoods and subdistricts

Freeway/
Local Transportation Interface:

DRAFT Concepts Recommendation for Phase 3 Design and Analysis

N/NE Quadrant and I-5 Broadway/Weidler Plans

July 21, 2011

DRAFT

CENTRAL CITY 2035
N/NE QUADRANT

Oregon Department of Transportation

The Central N/NE Quadrant and I-5 Broadway/Weidler Plans Project is a collaborative effort by the City of Portland and the Oregon Department of Transportation to integrate land use and urban design planning with freeway planning and concept-level engineering in the N/NE portion of the Central City, which includes Lower Albina and the Lloyd District.

Introduction

The N/NE Quadrant and I-5 Broadway/Weidler Plans Project is a joint project among the Oregon Department of Transportation (ODOT), the City of Portland Bureau of Transportation (PBOT) and the City of Portland Bureau of Planning and Sustainability (BPS). This unique collaborative effort will result in an update of the Central City Plan for the N/NE Quadrant and in transportation improvements that are consistent with and support the land use, local transportation and urban design vision included in that plan. The transportation improvements developed through this planning effort will address multi-modal improvements on the local street system and improvements to I-5 that address existing operational and safety problems.

In conjunction with the project's Stakeholder Advisory Committee (SAC), the city hosted a land use, local transportation and urban design charrette in February 2011. This charrette process resulted in ideas for an evolving land use, urban design and local transportation vision for the N/NE Quadrant.

In April 2011, ODOT hosted a charrette that focused on transportation improvements to I-5 and the surrounding local transportation system. Since this charrette was focused on specific ideas for improving freeway operations and safety, it had a more technical tone than the earlier charrette which resulted in ideas for a broad vision. Similar to the earlier charrette, the transportation charrette was implemented in conjunction with the SAC. The I-5/Local Transportation Interface Charrette resulted in over 70 different ideas for freeway and local roadway improvements.

The project team organized the ideas and proposed a process for further developing the ideas into complete concepts that include mainline freeway and local transportation improvements. This process, which was endorsed by the SAC at their May 26, 2011 meeting, included organizing Concepts for Further Study into five categories.

The five categories endorsed by the SAC include:

- **2035 No-Build**
- **Mainline Operational Improvements**
- **Rebuild the Structures**
  with Mainline Operational Improvements
- **Enhance the Broadway/Weidler Interchange**
  with Mainline Operational Improvements
- **New Concepts for the Broadway/Weidler Interchange**
  with Mainline Operational Improvements

Subsequent to the May SAC meeting, ODOT and City project managers recommended including a sixth category of Concepts for Further Study: Transportation System Management (TSM)/Transportation Demand Management (TDM)/Operations Management. The SAC endorsed adding the TSM/TDM/Operations Management category and the project team is proceeding to define the details of what that concept should include (see Table 1).

It should be noted that all of the concepts will be analyzed using data from the regional travel demand model which includes an assumption that TDM measures will be more widely used and will have a significant impact on reducing single-occupant vehicle (SOV) use throughout the region.

(Auxiliary lane extension with all interchange
6. TSM/TDM/Operations Management

TSM/TDM/OM Concept to be Developed Further

A TSM/TDM concept is often used during project development to provide a comparison of the No-Build and Build (capital improvement) alternatives with the most that can be done with low-cost operational and policy elements.

TSM and Operations Management refers to using operations management tools such as variable-message signs, ramp meters, cameras, etc., to improve traffic operations on roadways. These elements are also often considered to be part of Intelligent Transportation Systems (ITS) treatments. ODOT currently utilizes a number of TSM/ITS techniques to manage traffic operations on the Portland area freeway system including I-5 through the N/NE Quadrant. Ramp meters are currently used at all service interchange (arterial connection) entrance ramps in the study area and are not included on system interchanges (freeway to freeway connections). Ramp meters are programmed to respond to traffic conditions. Using cameras and loop detectors, ODOT's traffic control center monitors freeway operations and adjusts ramp meters and variable-message signs as needed.

TDM or Transportation Demand Management refers strategies and policies that can reduce the demand for a transportation facility using tools such as tolling, transit pass subsidies, carpool programs, parking costs, high-occupancy vehicle (HOV) lanes, etc. The goal of implementing TDM measures is typically to reduce the number of trips that occur in SOVs. There are state, regional and local TDM programs that are typically well coordinated to support policies that can reduce congestion in heavily travelled corridors. TDM measures are currently implemented in the Portland region that have been very successful in supporting reduced use of SOV trips.

The TSM/TDM/OM Concept to be analyzed for the N/NE Quadrant will include existing state, regional and local strategies. In addition, the project team will assess whether there are corridor-specific tools and strategies that should be included in the concept. The TSM/TDM/OM Concept will be analyzed and compared with the other concepts.

DRAFT

July 2011 Recommendation

The project team developed and analyzed thirteen concepts in six categories for addressing safety and operational problems on I-5 and improving multi-modal safety, connectivity and access on the local street system where it interfaces with the freeway. The team structured the planning-level analysis to address the project goals adopted by the SAC. The analysis was prepared using a mix of quantitative and qualitative measures (Phase 2 Screening Factors) and was reviewed with the SAC Joint Subcommittee on July 13, 2011.

To date the concepts have been developed at a sketch-level of design. This level of design has been adequate to prepare the initial, planning-level, Phase 2 analysis and to reach conclusions regarding certain concepts. Based on the technical analysis and input from the SAC Joint Subcommittee, the project team has prepared the following recommendations to further refine and narrow the freeway and local street improvement concepts.

The recommendation is presented in two categories:

- Concepts to move forward into the Phase 3 analysis
- Concepts for no further study

Concepts Recommended for Phase 3 Design and Analysis

The following concepts are recommended to move forward into Phase 3 for design refinement and detailed analysis.

Category 1. 2035 No-Build

The 2035 No-Build Concept will be analyzed for the 2035 forecast year and will provide a basis for comparison with the build concepts.

Rationale for moving forward:

- Baseline for comparison

Category 2. Mainline Operational Improvements

The Mainline Operational Improvements category includes two options: 2a. Braided Ramps and 2b. Collector/Distributor (C/D) Roads. The project team recommends developing a single Category 2 concept for Phase 3 analysis that includes ramp braids in the southbound direction and a C/D road in the northbound direction.

Rationale for moving forward:

- Good freeway operations
- Avoids right-of-way impacts

Category 3. Rebuild the Structures

The Rebuild the Structures Concept includes replacing the existing structures over I-5 and extending an auxiliary lane in both northbound and southbound directions.

Rationale for moving forward:

- Avoids need for additional right-of-way
- Minimal impacts

Category 4. Enhance the Broadway/Weidler Interchange

All concepts included in Category 4 are recommended to be studied further. Opportunities to combine elements of 4a Split Diamond and 4b Folded Diamond and develop a hybrid interchange design should be explored. A promising hybrid concept could replace 4a Split Diamond or 4b Folded Diamond.

4a. Split Diamond

This concept is similar to existing conditions with four ramps accessing Broadway and Weidler, but with the southbound on-ramp located at Weidler rather than at Wheeler/Winning Way.

Rationale for moving forward:

- Good traffic operations
- Limited right-of-way impacts

DRAFT

Concepts Recommended for Phase 3 Design and Analysis (continued)

4b. Folded Diamond

This concept would have loop ramps in the southeast and northwest quadrants of the interchange.

Rationale for moving forward:

- Increases safety by reducing the number of freeway access points
- Provides lengthened weaving distances

4c. Three-Point Interchange (couplet)

This concept would simplify the ramp terminal intersections and create a conventional interchange.

Rationale for moving forward:

- Good safety for all modes
- Limited right-of-way impacts

Category 5. New Concepts for the Broadway/Weidler Interchange

The project team recommends developing and analyzing a standard diamond interchange in Phase 3.

5a. Standard Diamond

Rationale for moving forward:

- Further study of roadway width required with Broadway/Weidler decoupled at the freeway

Category 6. TSM/TDM/Operations Management

This concept is similar to the 2035 No-Build Concept but with maximized policy and operational strategies to reduce travel demand and manage traffic.

Rationale for moving forward:

- Provides analysis of the most that could be done without significant capital investment

Concepts for No Further Study

The following describes the concepts are not recommended to be developed further and provides the rationale for that recommendation. All of the concepts recommended for no further study were in **Category 5. New Concepts for the Broadway/Weidler Interchange**.

5b. Single Point Urban Interchange (SPUI)

Rationale:

- Pedestrian and bicycle safety concerns
- Poor north/south connectivity
- Large footprint leaving poor freeway edge conditions
- Limited developable parcels

5c. Diverging Diamond

Rationale:

- Poor north/south connectivity
- Large footprint leaving poor freeway edge conditions
- Limited developable parcels

5d. Roundabout

Rationale:

- Pedestrian and bicycle safety concerns
- Poor north/south connectivity
- Large footprint leaving marginal freeway edge conditions
- Limited developable parcels

5e. Three Point Interchange (de-couple)

Rationale:

- Large footprint leaving poor freeway edge conditions
- Limited developable parcels

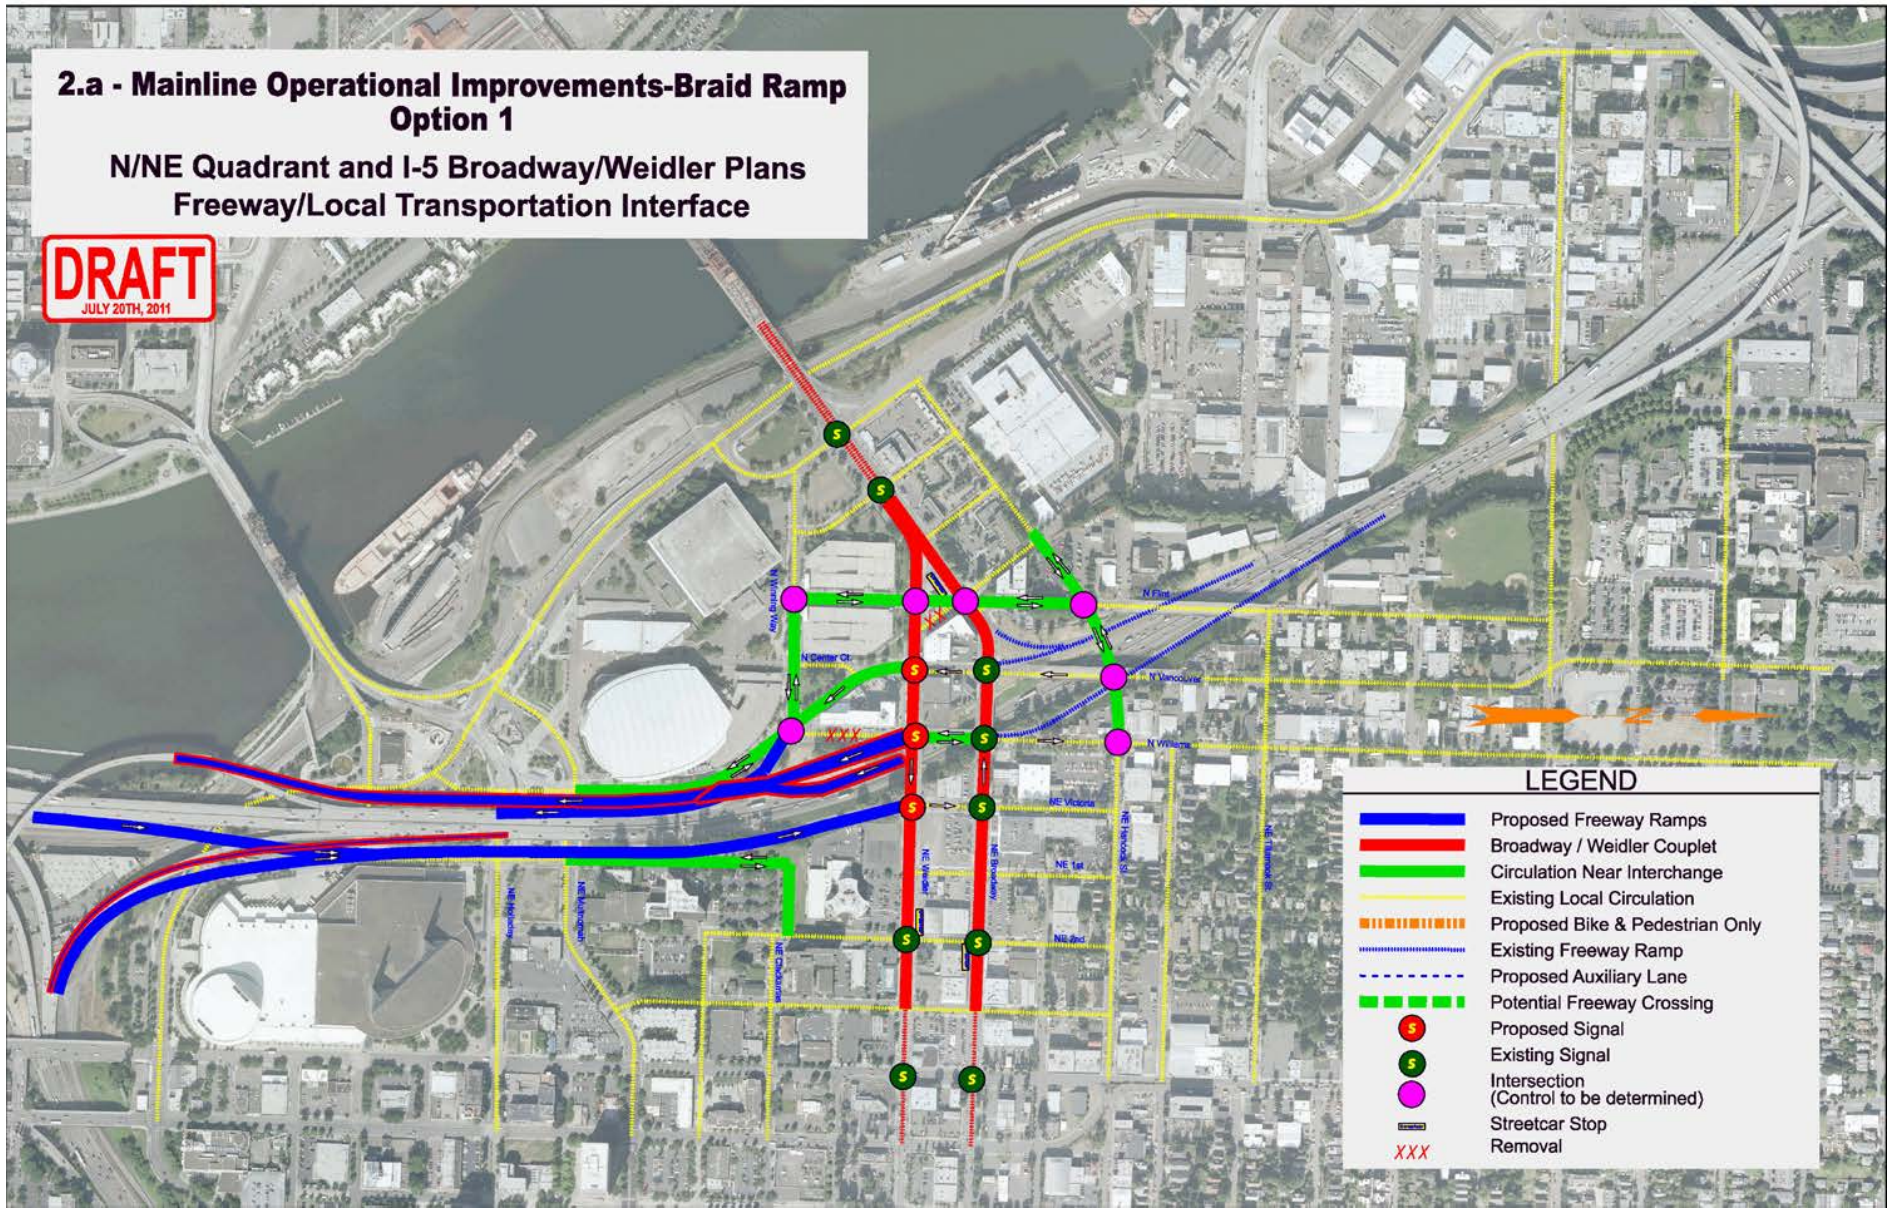
CONCEPT 1. 2035 NO-BUILD

DESCRIPTION



The 2035 No-Build Concept is the baseline for comparing with the other concepts for improving safety and operations on I-5. The 2035 No-Build Concept maintains the existing number of freeway lanes; the existing weaving sections and interchange configuration remain. The 2035 No-Build Concept does not address any safety and operational issues.

MAJOR ELEMENTS TO BE ANALYZED AND EVALUATED

- Projected traffic conditions for 2035.

ASSUMPTIONS:

- No capital improvements.

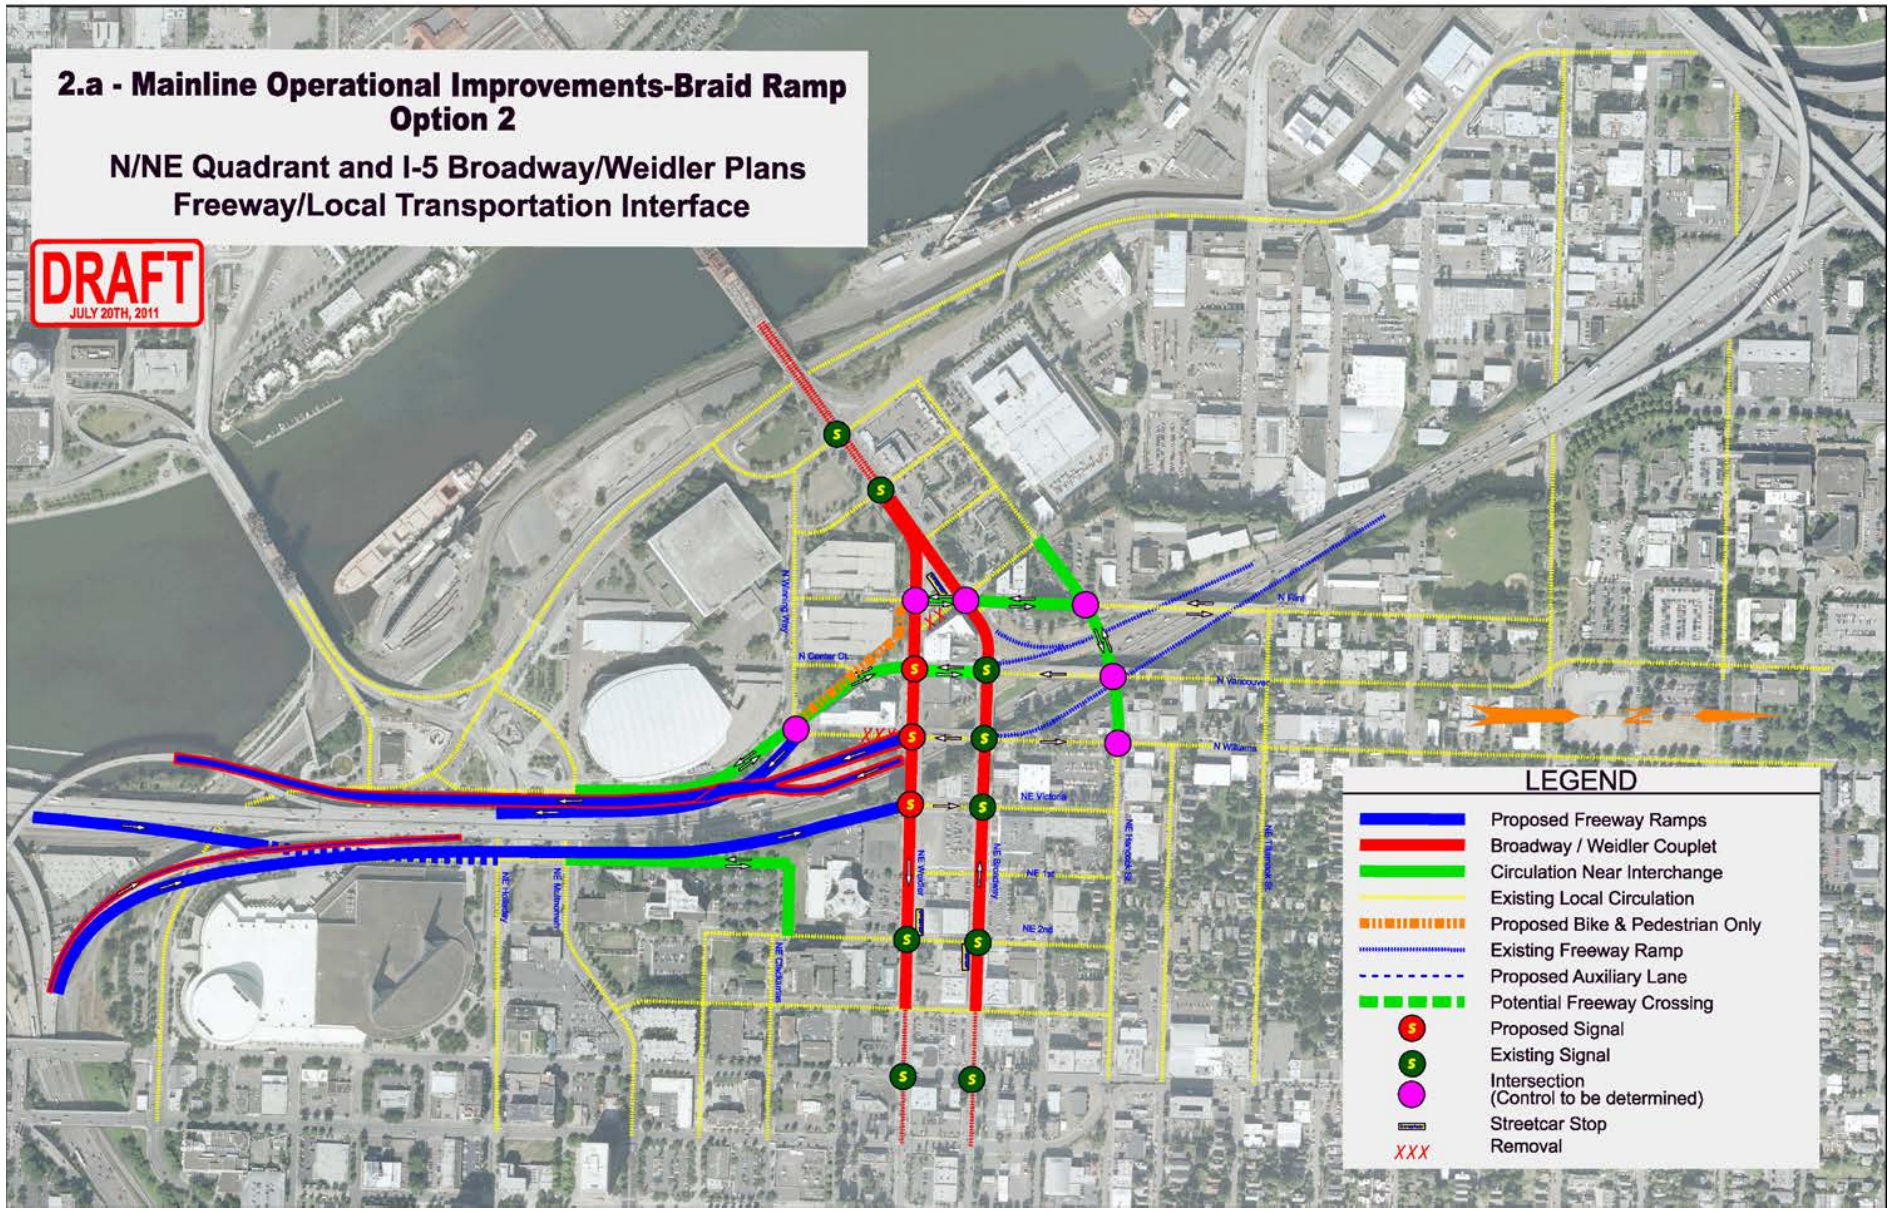
CONCEPT 2A. BRAIDED RAMPS

OPTION 1

DESCRIPTION

This concept is focused on improving the weaving sections on I-5 south of Weidler. This option would address safety by eliminating the weaves between the Broadway/Weidler and I-84 interchanges by braiding the exit and entrance ramps. Option 1 includes additional local circulation on N. Flint.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate braided ramps south of the Broadway/Weidler interchange for northbound and southbound traffic.
- Evaluate relocating the northbound exit ramp currently at Weidler.
- Evaluate relocating the southbound entrance ramp to Weidler.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate a potential new overcrossing at Dixon/Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.

ASSUMPTIONS:

- The existing five structures (Broadway, Weidler, Williams, Vancouver and Flint) and ramps would not be improved.
- The southbound and northbound weaves on I-5 north of the Flint overpass would not be improved.

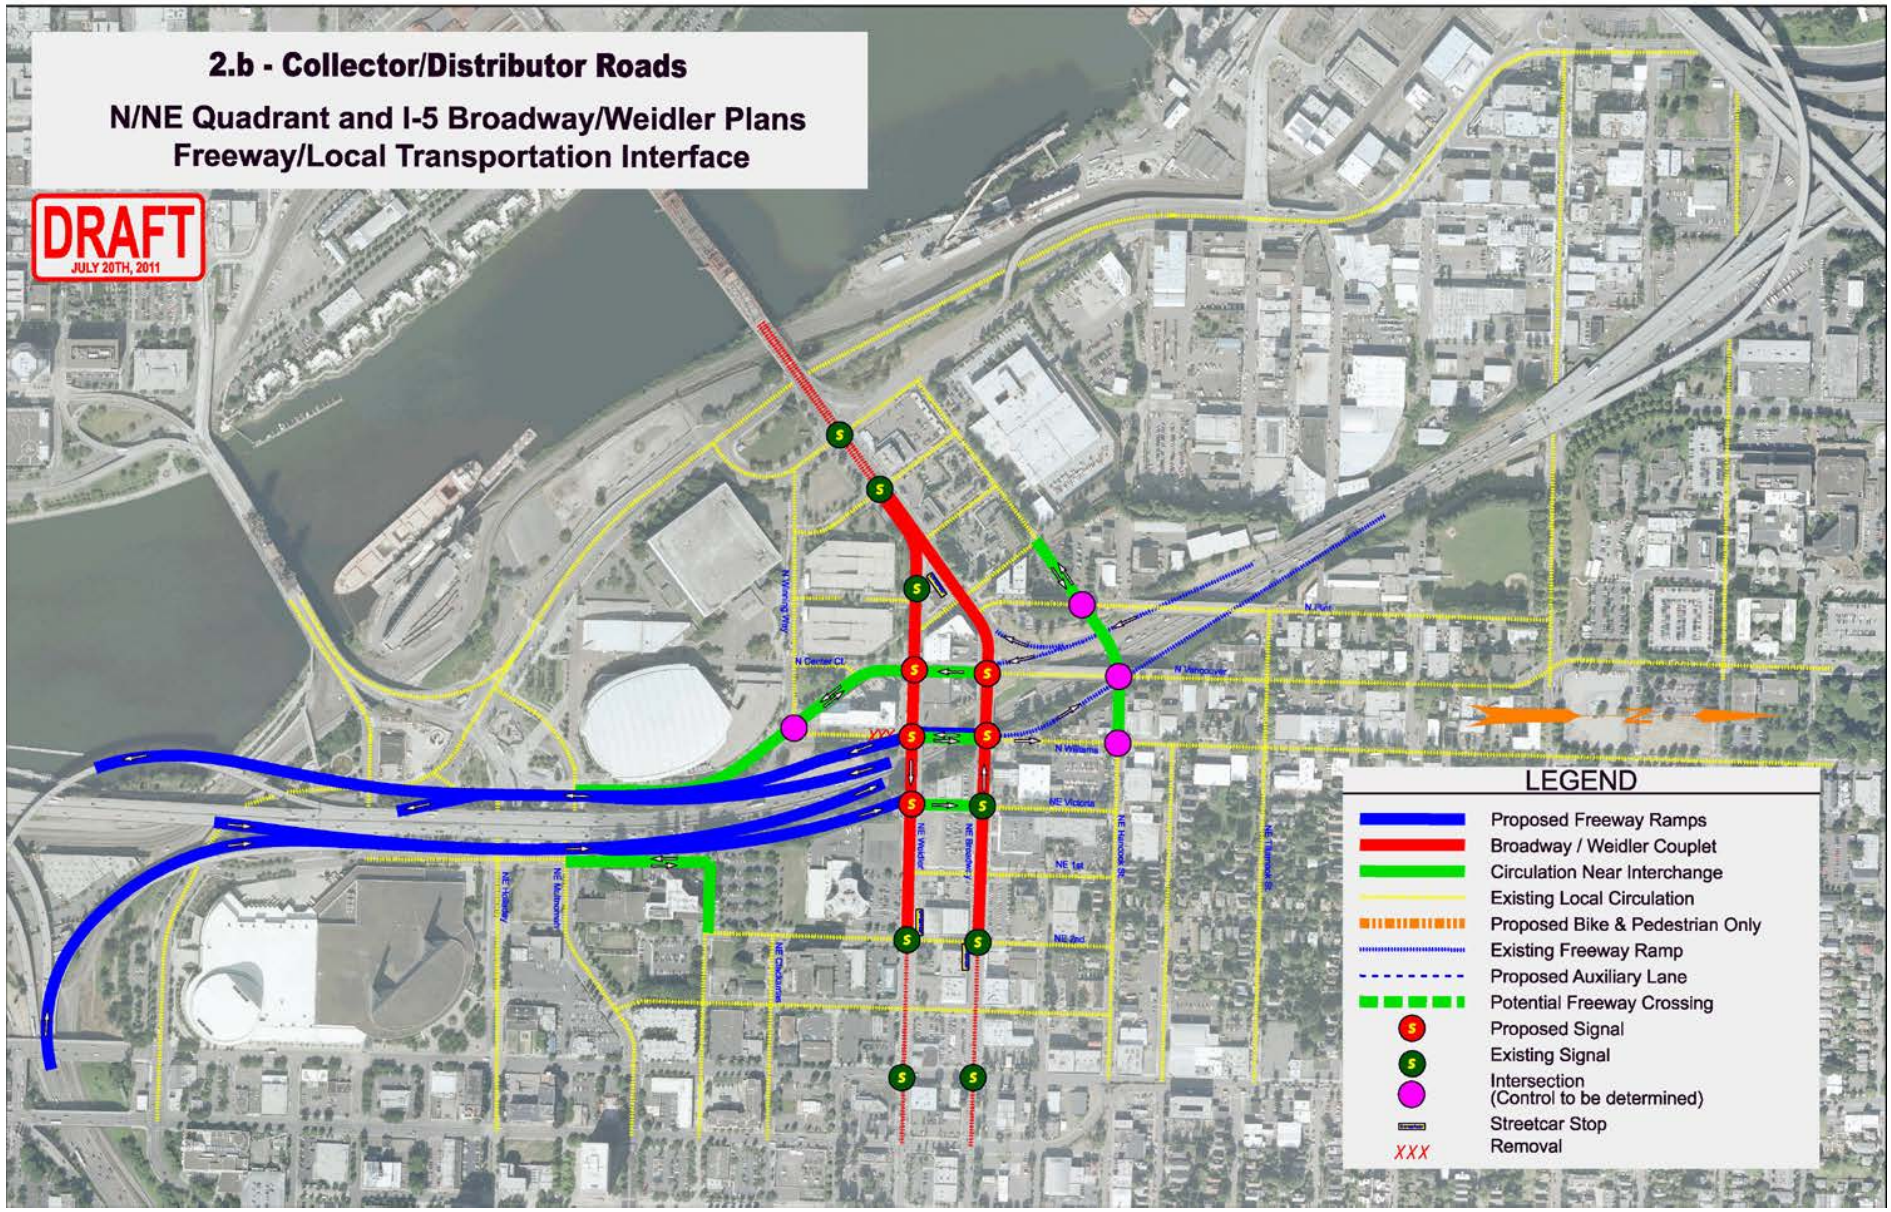
CONCEPT 2A. BRAIDED RAMPS
OPTION 2

DESCRIPTION

This concept is focused on improving the weaving sections on I-5 south of Weidler. This option would address safety by eliminating the weaves between the Broadway/Weidler and I-84 interchanges by braiding the exit and entrance ramps. Option 2 focuses north/south bike/pedestrian circulation on N. Wheeler.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate braided ramps south of the Broadway/Weidler interchange for northbound and southbound traffic.
- Evaluate relocating the northbound exit ramp currently at Weidler.
- Evaluate relocating the southbound entrance ramp to Weidler.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate a potential new overcrossing at Dixon/Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.

ASSUMPTIONS:

- The existing five structures (Broadway, Weidler, Williams, Vancouver and Flint) and ramps would not be improved.
- The southbound and northbound weaves on I-5 north of the Flint overpass would not be improved.

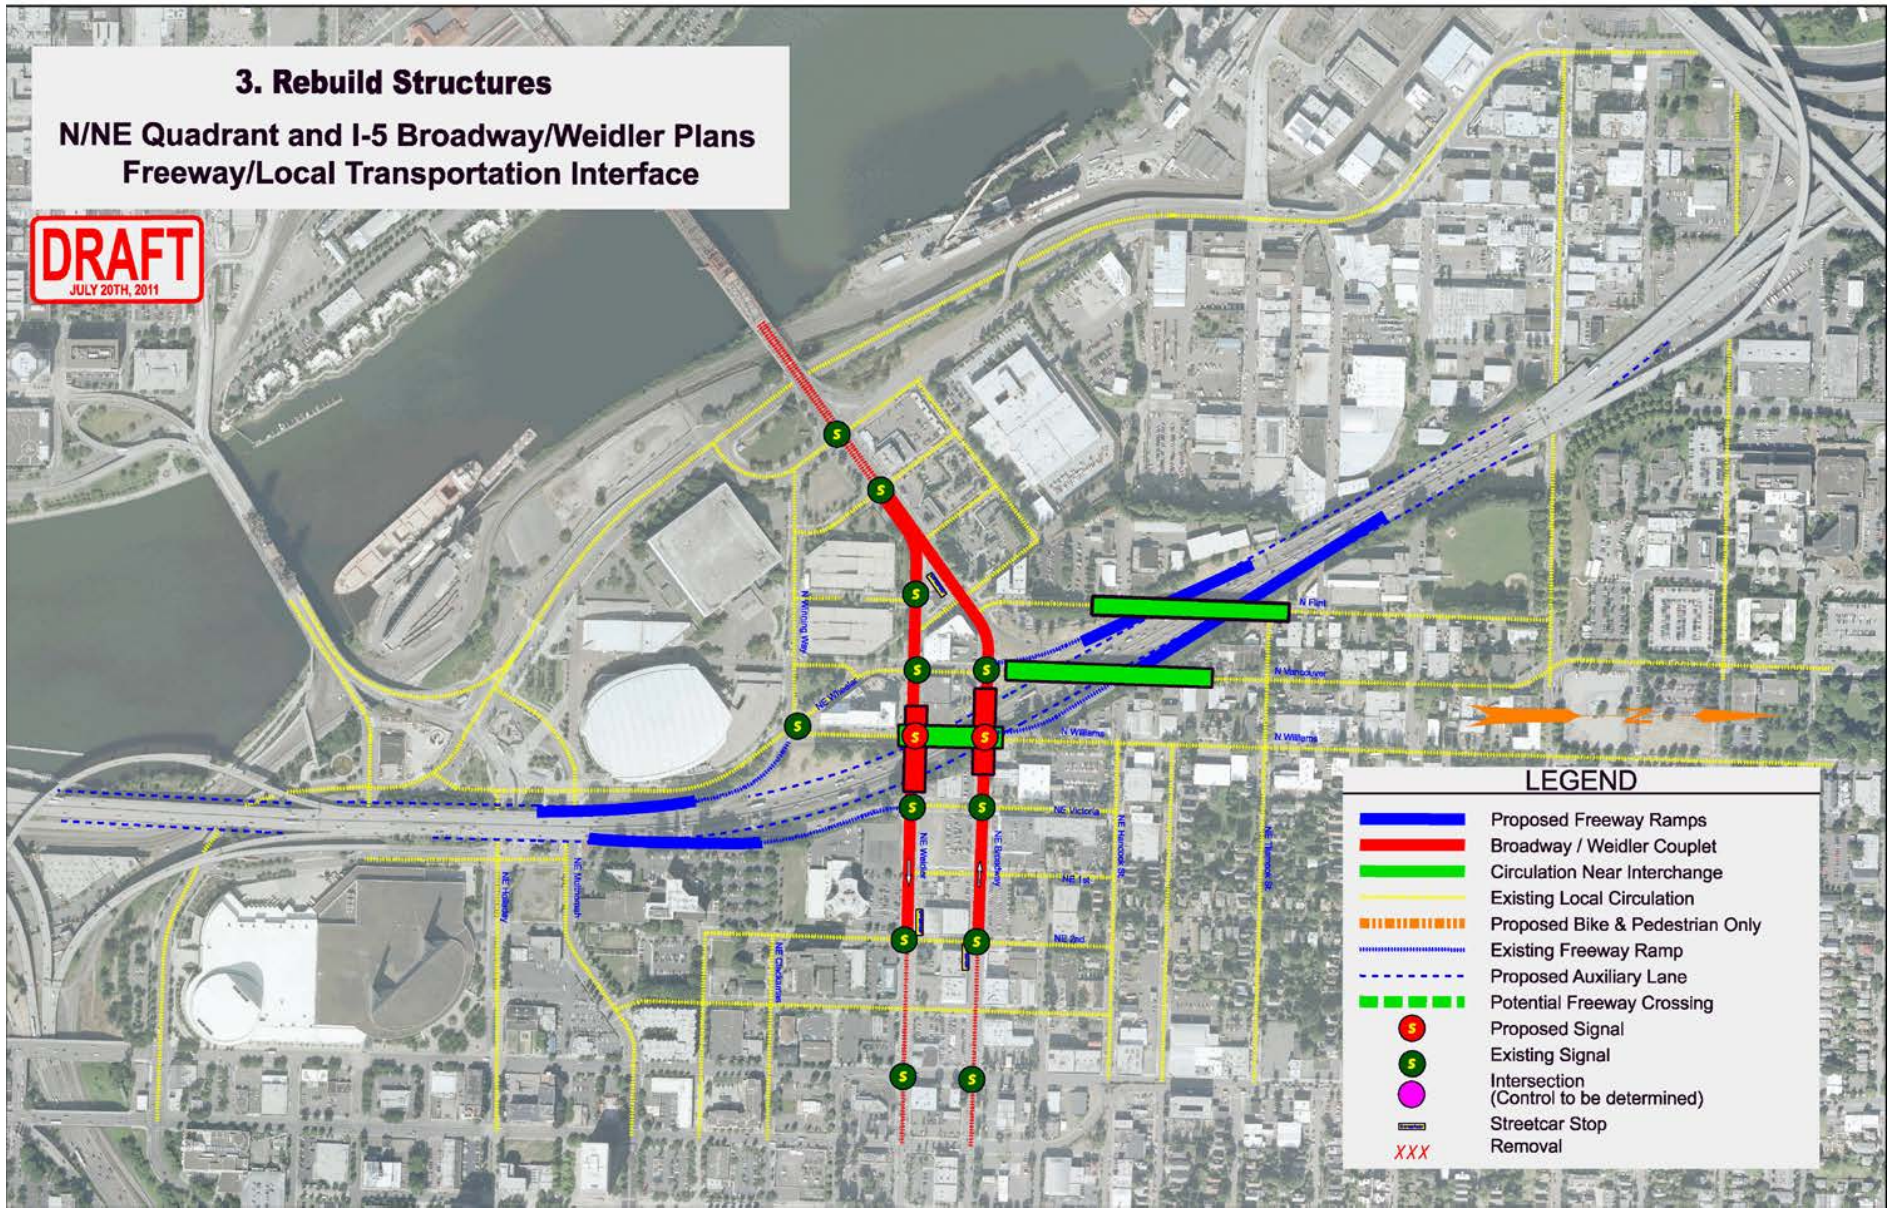
CONCEPT 2B. COLLECTOR/DISTRIBUTOR (C/D) ROADS

DESCRIPTION

This concept is focused on improving the weaving sections on I-5 south of Weidler. The intent of the concept is to address the safety of the short weaving section between the Broadway/Weidler and I-84 interchanges by providing for the weaves to occur on collector/distributor (CD) roads along the side of the freeway.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate collector/distributor roads south of the Broadway/Weidler interchange for northbound and southbound traffic to improve freeway operations.
- Evaluate relocating the northbound exit ramp currently at Weidler.
- Evaluate relocating the southbound entrance ramp to Weidler.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate a potential new overcrossing at Dixon/Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.

ASSUMPTIONS:

- The existing five structures (Broadway, Weidler, Williams, Vancouver and Flint) and ramps would not be improved.
- The southbound and northbound weaves on I-5 north of the Flint overpass would not be improved.

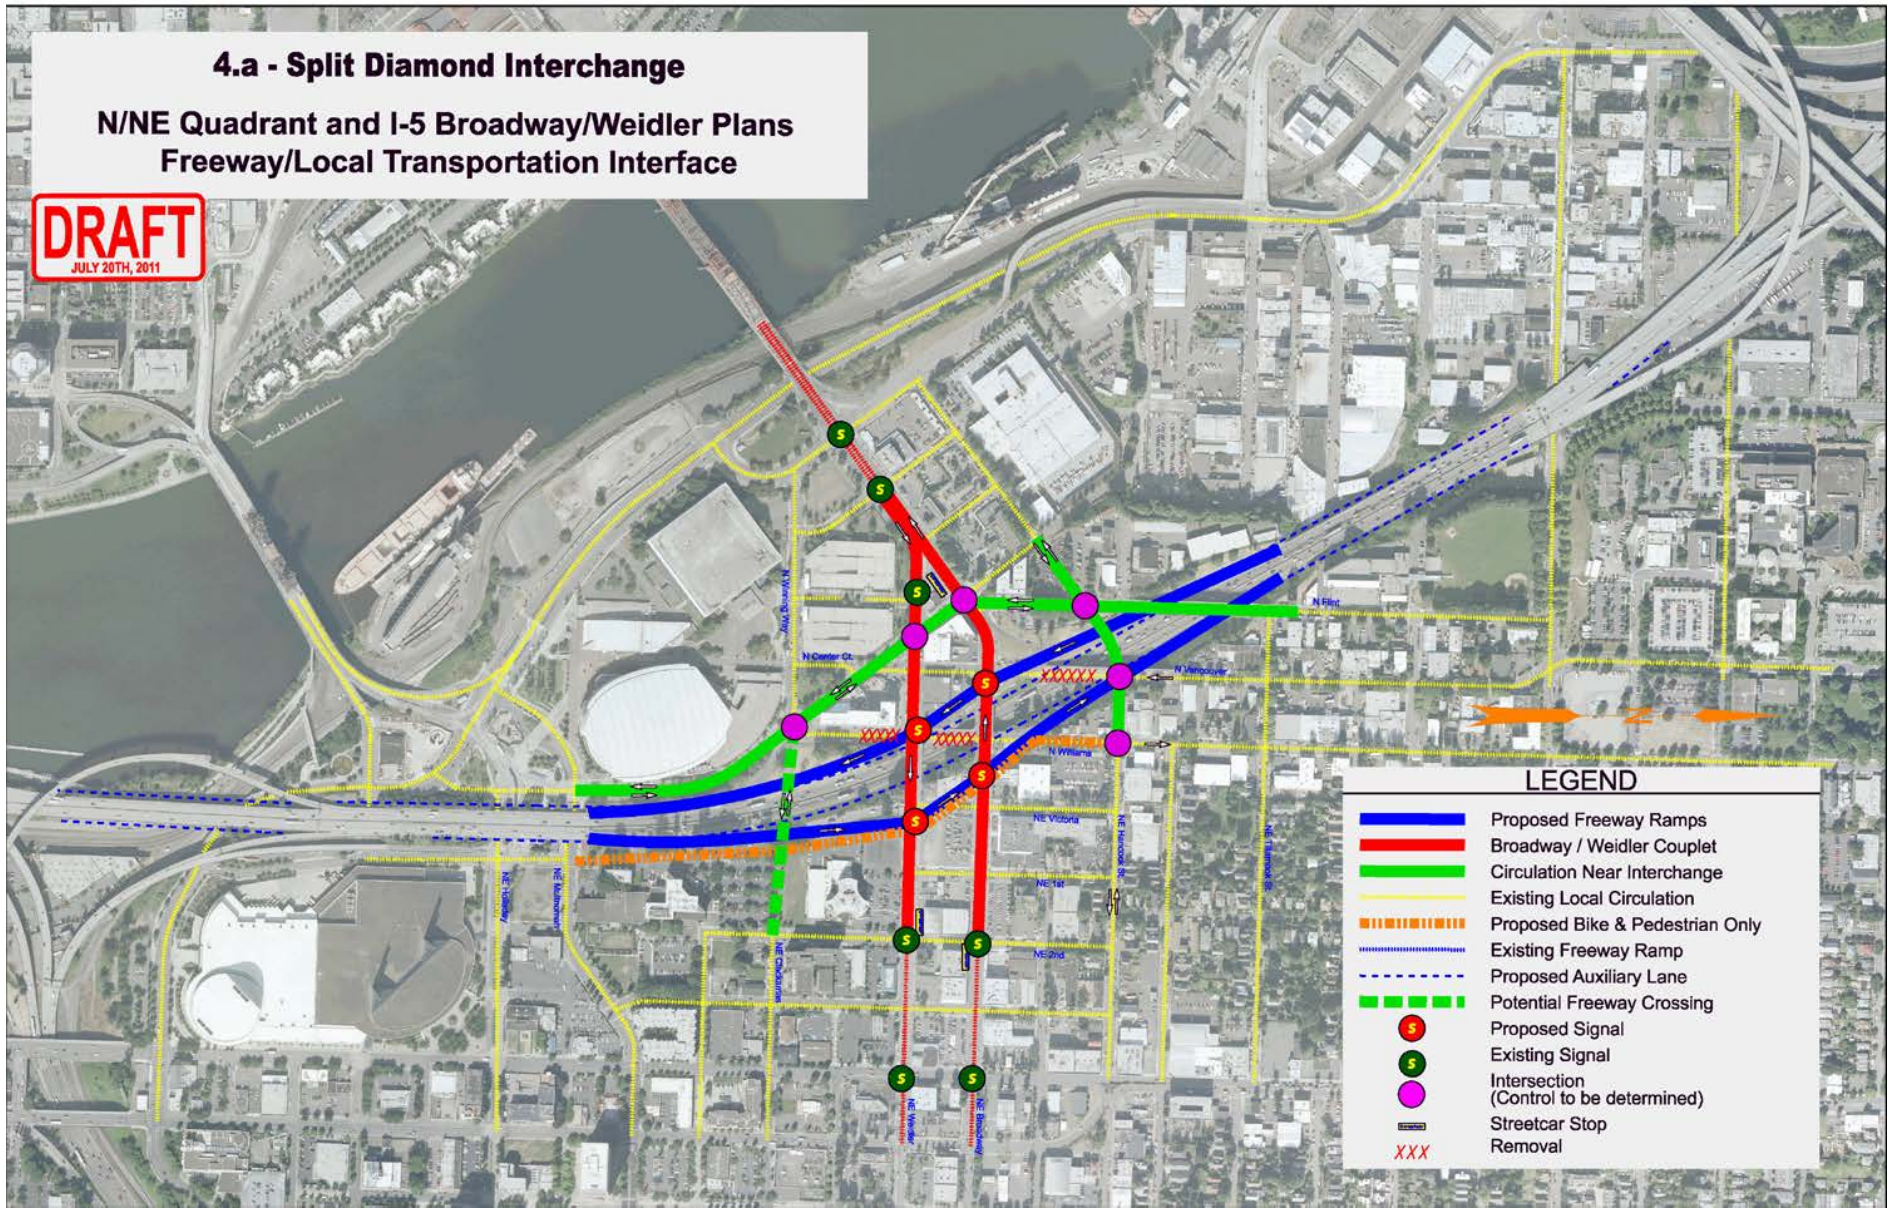
CONCEPT 3. REBUILD THE STRUCTURES

DESCRIPTION

This concept would rebuild the five freeway overcrossing structures in the same location to accommodate an auxiliary lane extension. The intent of the auxiliary lanes under the structures is to improve the safety and operations of I-5.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Construct a northbound and southbound auxiliary lane extension on I-5 under the structures. All structures across the freeway will be rebuilt to accommodate the auxiliary lane.
- Rebuild the five existing structures (Broadway, Weidler, Williams, Vancouver and Flint) in the same location.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Improve Broadway, Weidler, Williams, Vancouver and Flint overcrossings to accommodate bike/ped/transit.

ASSUMPTIONS:

- The existing ramps locations for Broadway and Weidler interchange would not be improved.

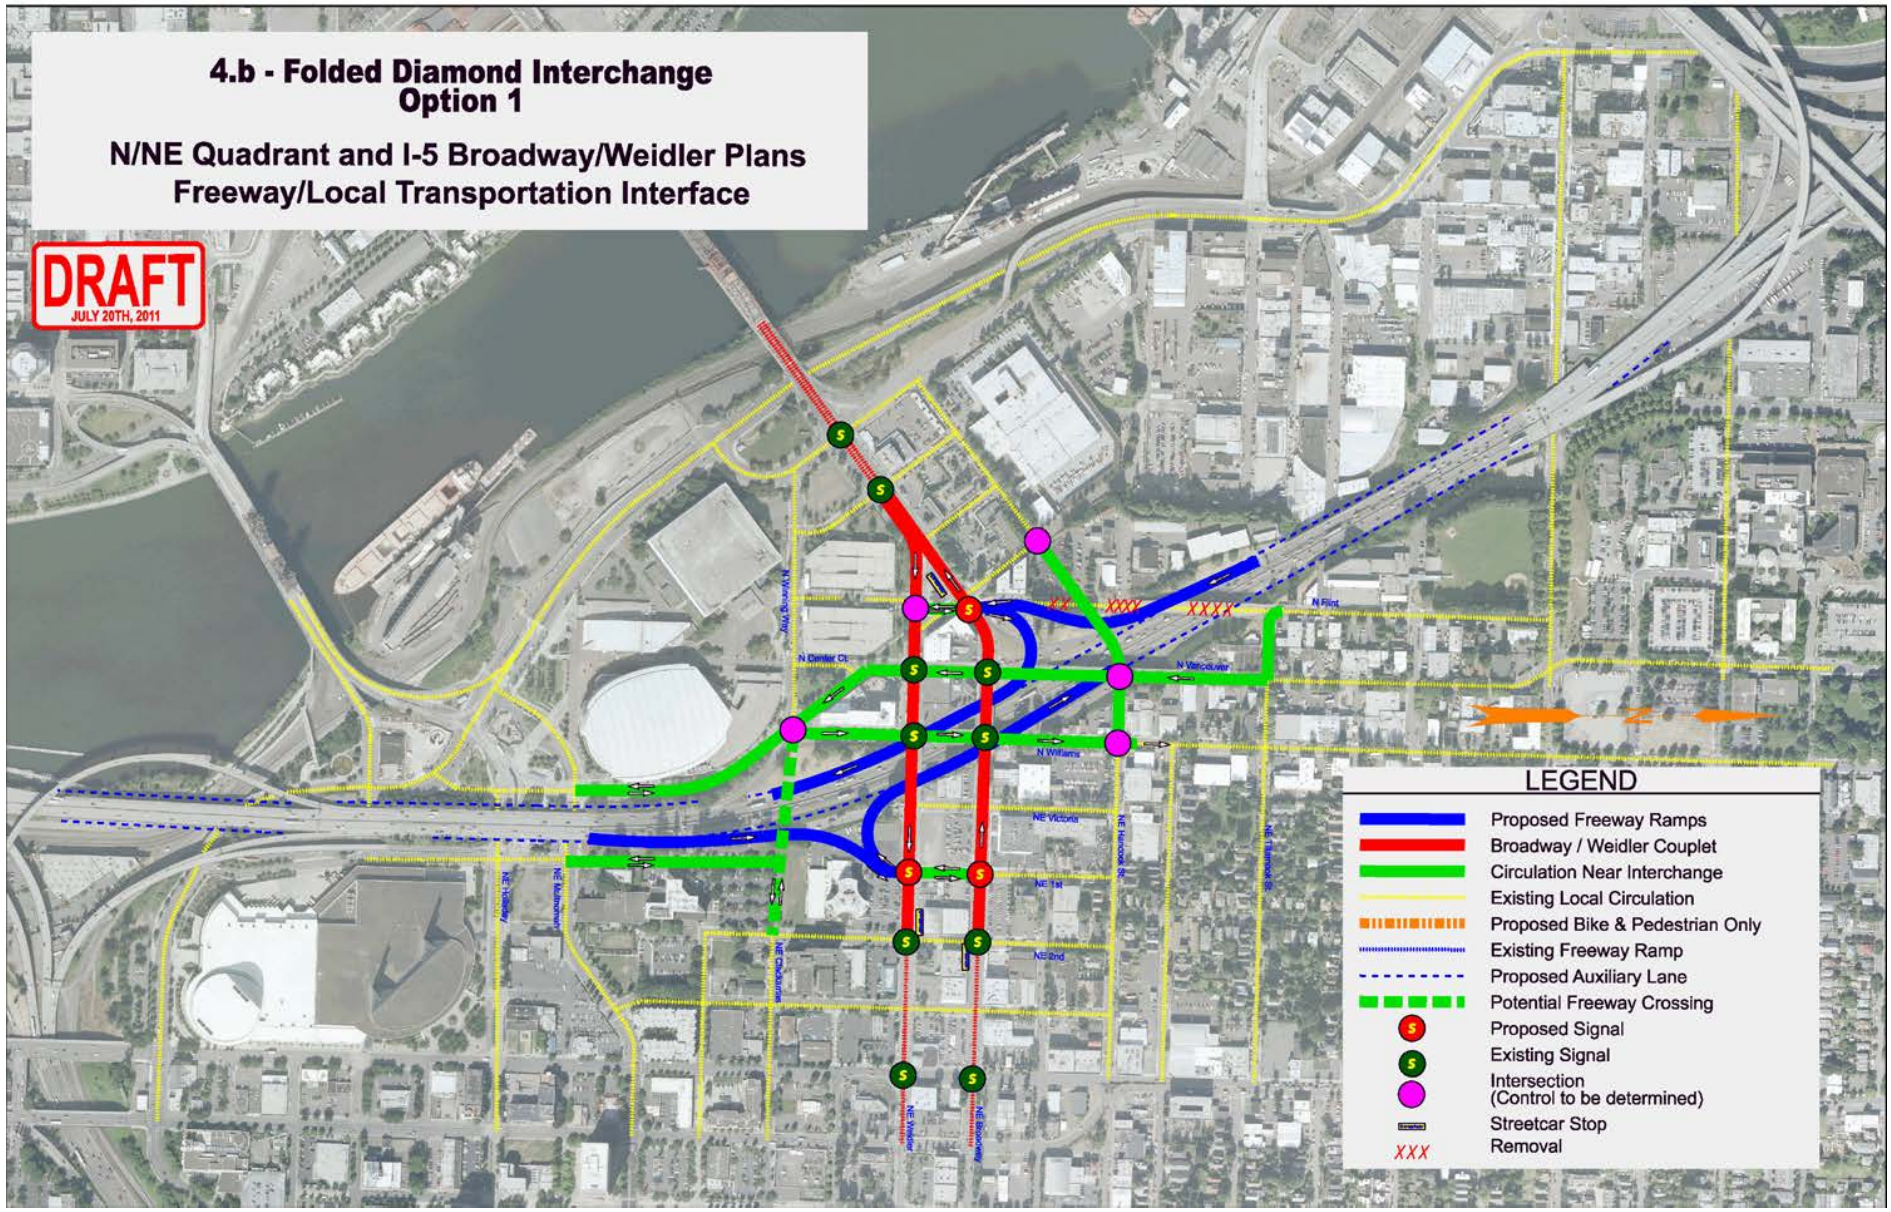
CONCEPT 4A. SPLIT DIAMOND (BROADWAY/WEIDLER COUPLET)

DESCRIPTION

The Split-Diamond Concept is similar to the existing conditions with four ramps accessing Broadway and Weidler with interconnecting roadways between the two arterial streets. This concept would re-locate the southbound I-5 entrance ramp to Weidler. The intent is to improve the weaving distance for safety and improve the operations with the auxiliary lanes on I-5.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the overcrossing structures.
- All structures across the freeway will be rebuilt to accommodate the auxiliary lane.
- Evaluate ramp terminal re-configurations for the Broadway/Weidler interchange.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes or for all modes.
- Evaluate streetcar and bus impacts.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/west ped/bike/transit movements.
- Improve Broadway and Weidler structures to accommodate bike/ped/transit.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with Broadway/Weidler.

ASSUMPTIONS:

- The Broadway/Weidler couplet remains.

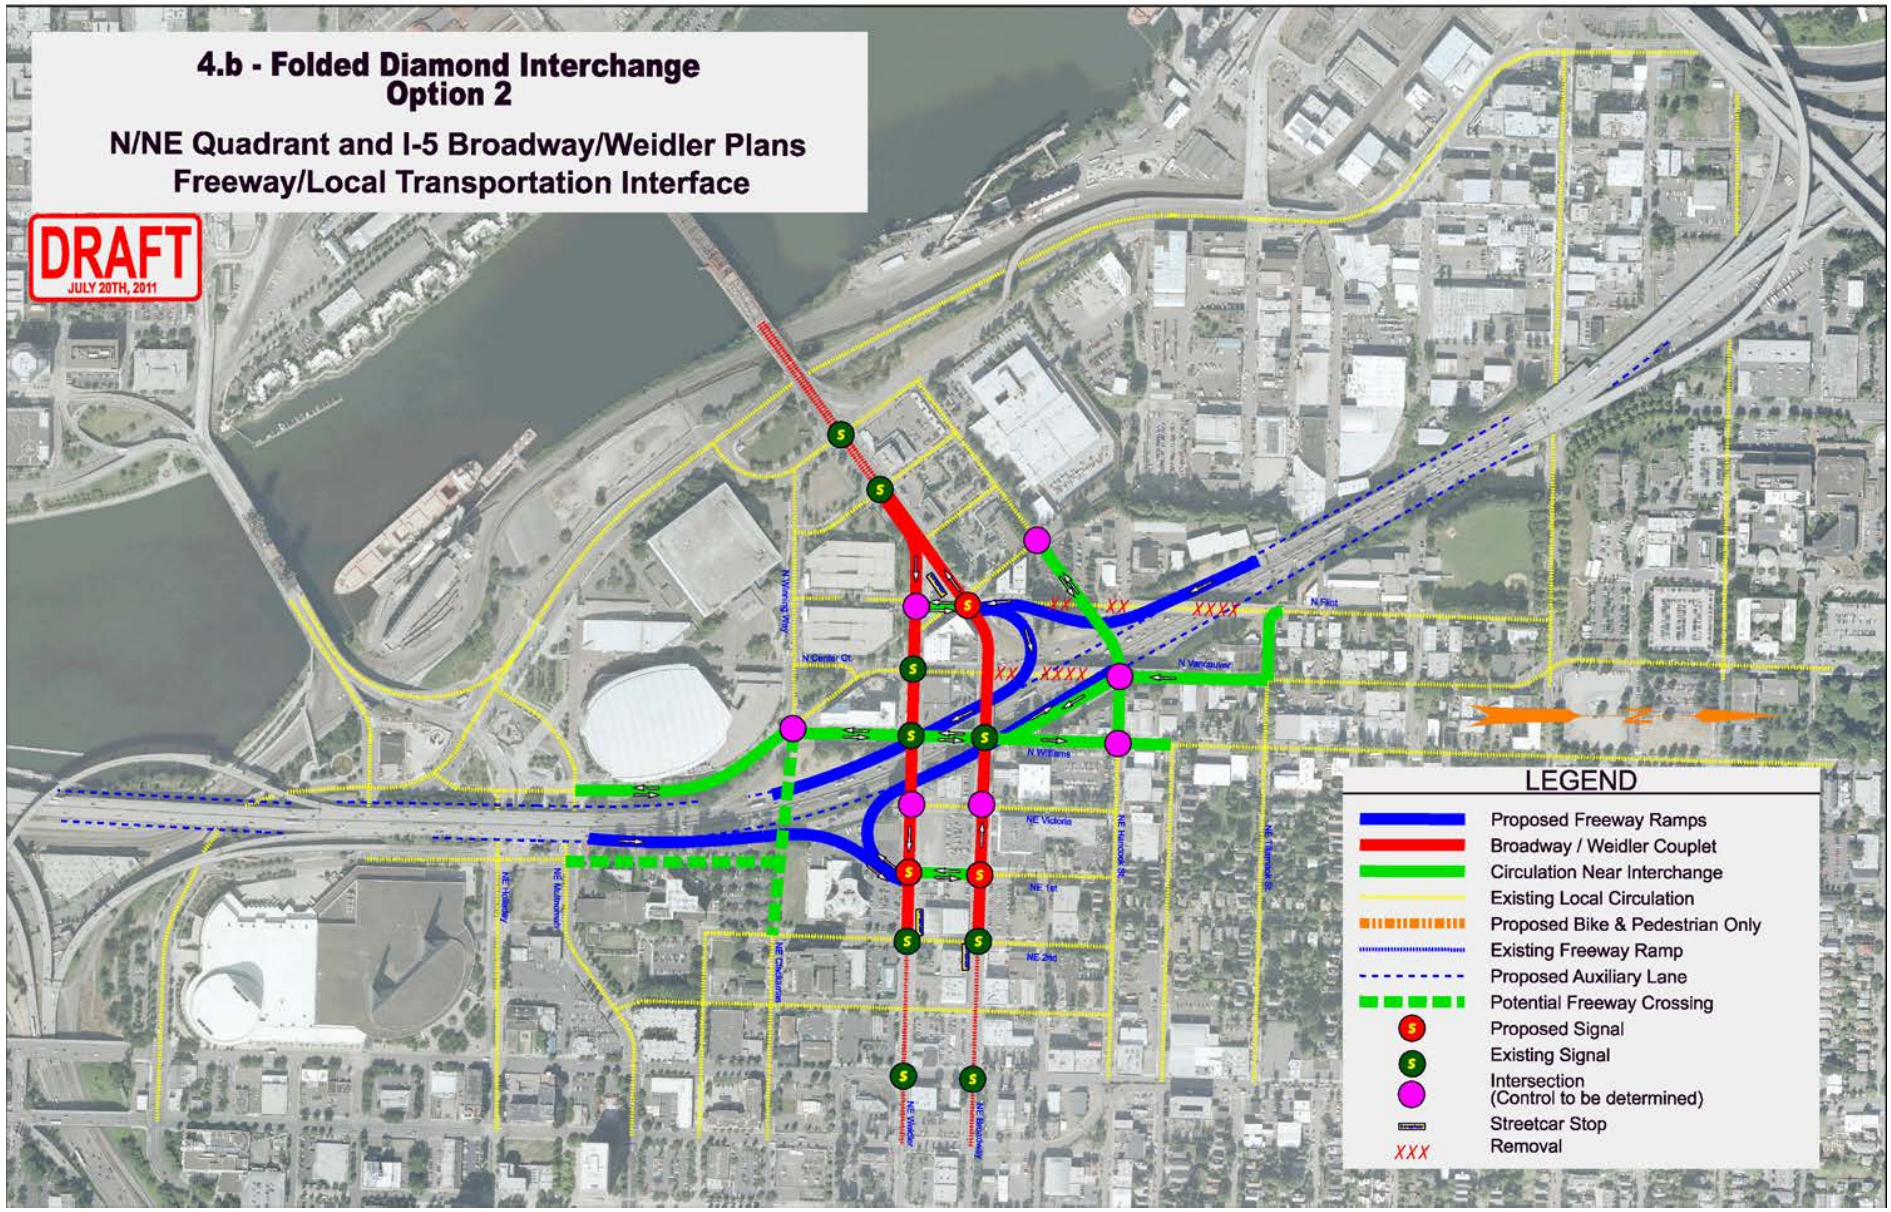
CONCEPT 4B. FOLDED DIAMOND (BROADWAY/WEIDLER COUPLET)
OPTION 1

DESCRIPTION

This concept option would have loop ramps in the southeast and northwest quadrants of the interchange. The loop ramp in the SE quadrant would serve traffic movements from Broadway/Weidler to northbound I-5. The loop ramp in the NW quadrant would serve traffic movements from Broadway/Weidler to southbound I-5. The intent is to improve the northbound and southbound weaving sections for safety and better operations with the auxiliary lanes.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate extending the northbound and southbound auxiliary lanes on I-5 under the overcrossing structures. All structures across the freeway would be rebuilt to accommodate the extensions.
- Evaluate loop ramps connecting I-5 to the Broadway/Weidler couplet that would lengthen the I-5 entrance ramps and therefore increase the weaving distances.
- Evaluate NE 1st Street circulation between the Broadway/Weidler couplet.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate ped/bike/transit movements.
- Improve Broadway and Weidler structures to accommodate bike/ped/transit.
- Evaluate bike/ pedestrian circulation improvements on the east side of I-5.

ASSUMPTIONS:

- The existing five structures and ramps would not be improved.
- The I-5 weaves north of the Flint overpass would not be improved.

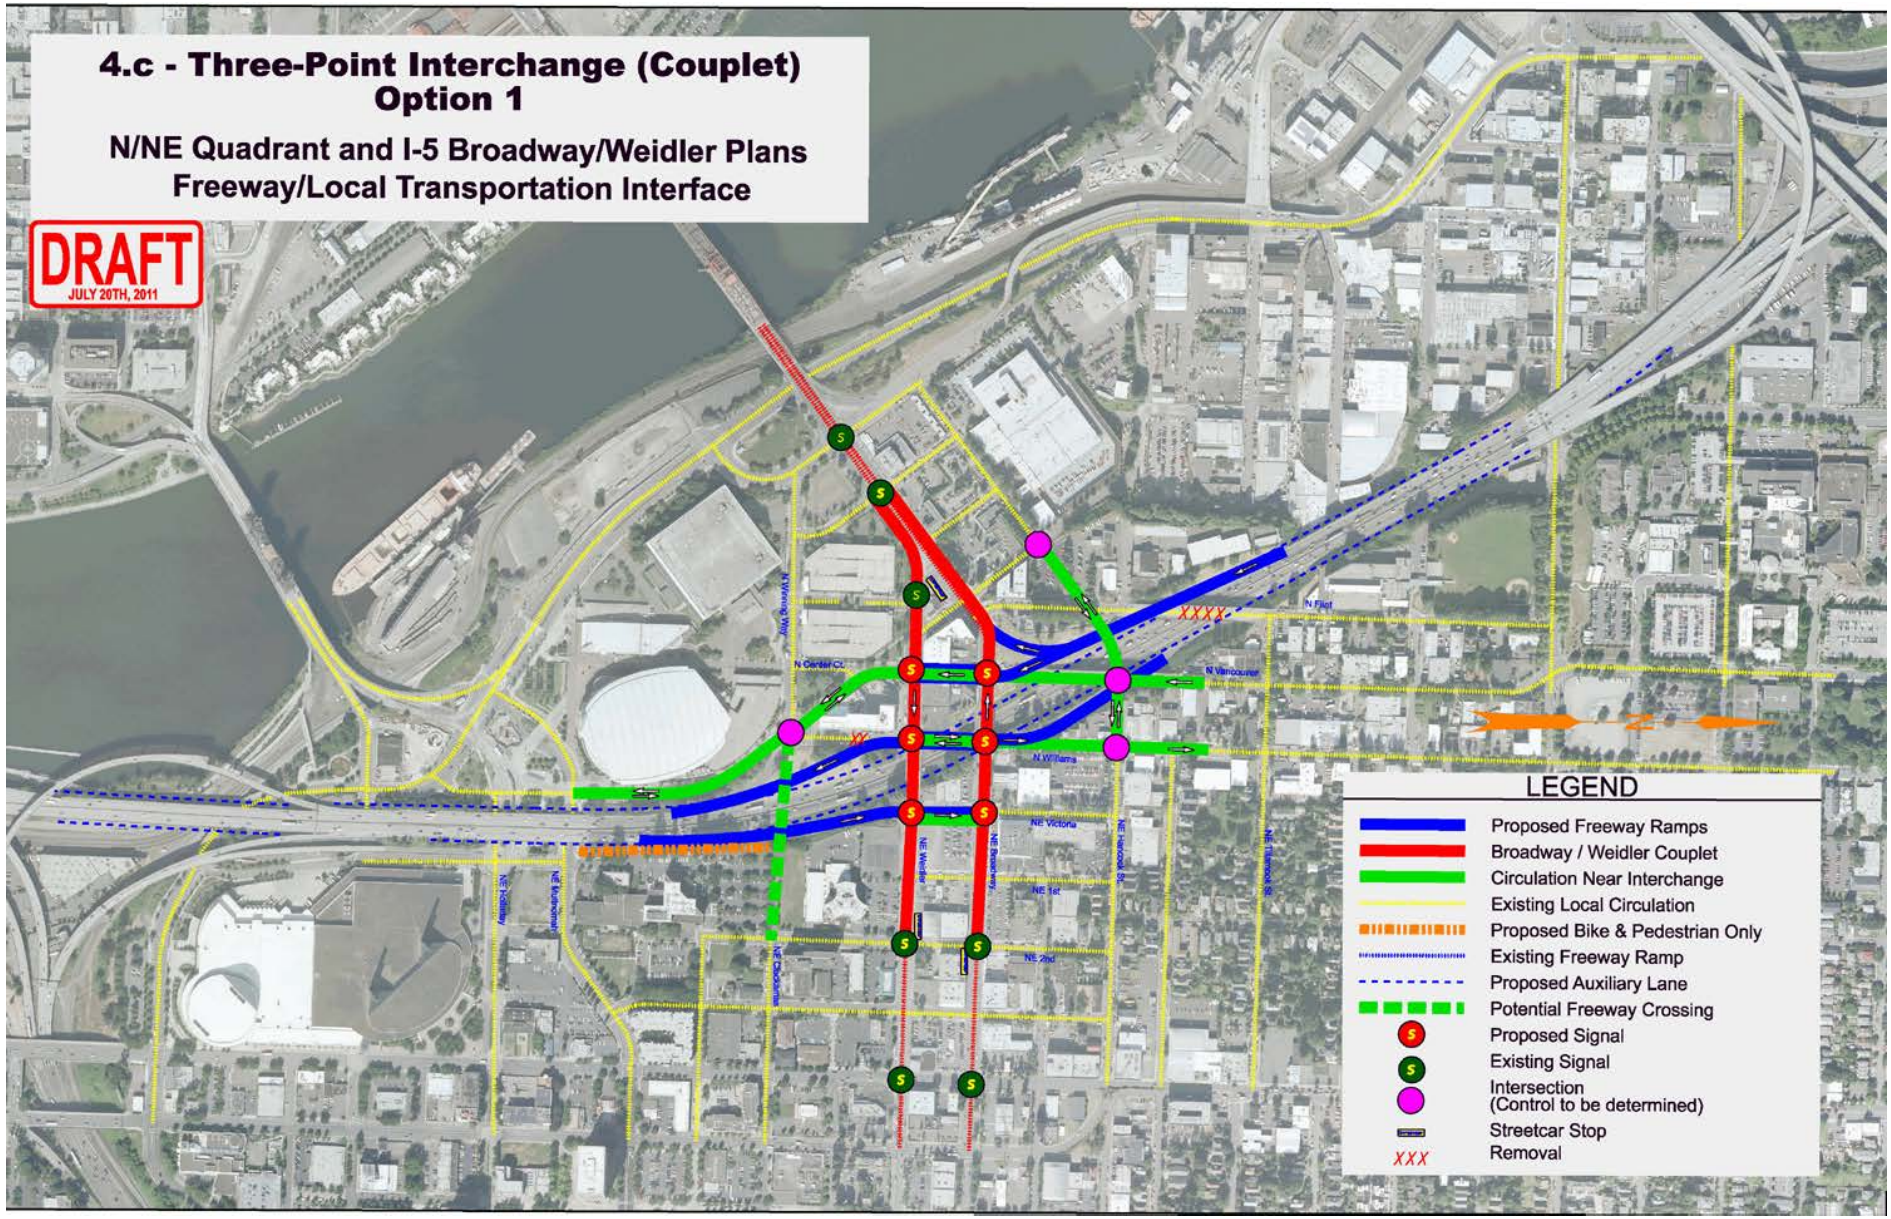
CONCEPT 4B. FOLDED DIAMOND (BROADWAY/WEIDLER COUPLET)
OPTION 2

DESCRIPTION

This option is very similar to Option 1 but would not include a separate structure over I-5 for N. Vancouver; instead, the two-way traffic of the Vancouver/Williams couplet would be combined into one structure over I-5 where the N. Williams structure exists today.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate extending the northbound and southbound auxiliary lanes on I-5 under the overcrossing structures. All structures across the freeway would be rebuilt to accommodate the extensions.
- Evaluate loop ramps connecting I-5 to the Broadway/Weidler couplet that would lengthen the I-5 entrance ramps and therefore increase the weaving distances.
- Evaluate NE 1st Street circulation between the Broadway/Weidler couplet.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate ped/bike/transit movements.
- Improve Broadway and Weidler structures to accommodate bike/ped/transit.
- Evaluate bike/ pedestrian circulation improvements on the east side of I-5.

ASSUMPTIONS:

- The existing five structures and ramps would not be improved.
- The I-5 weaves north of the Flint overpass would not be improved.

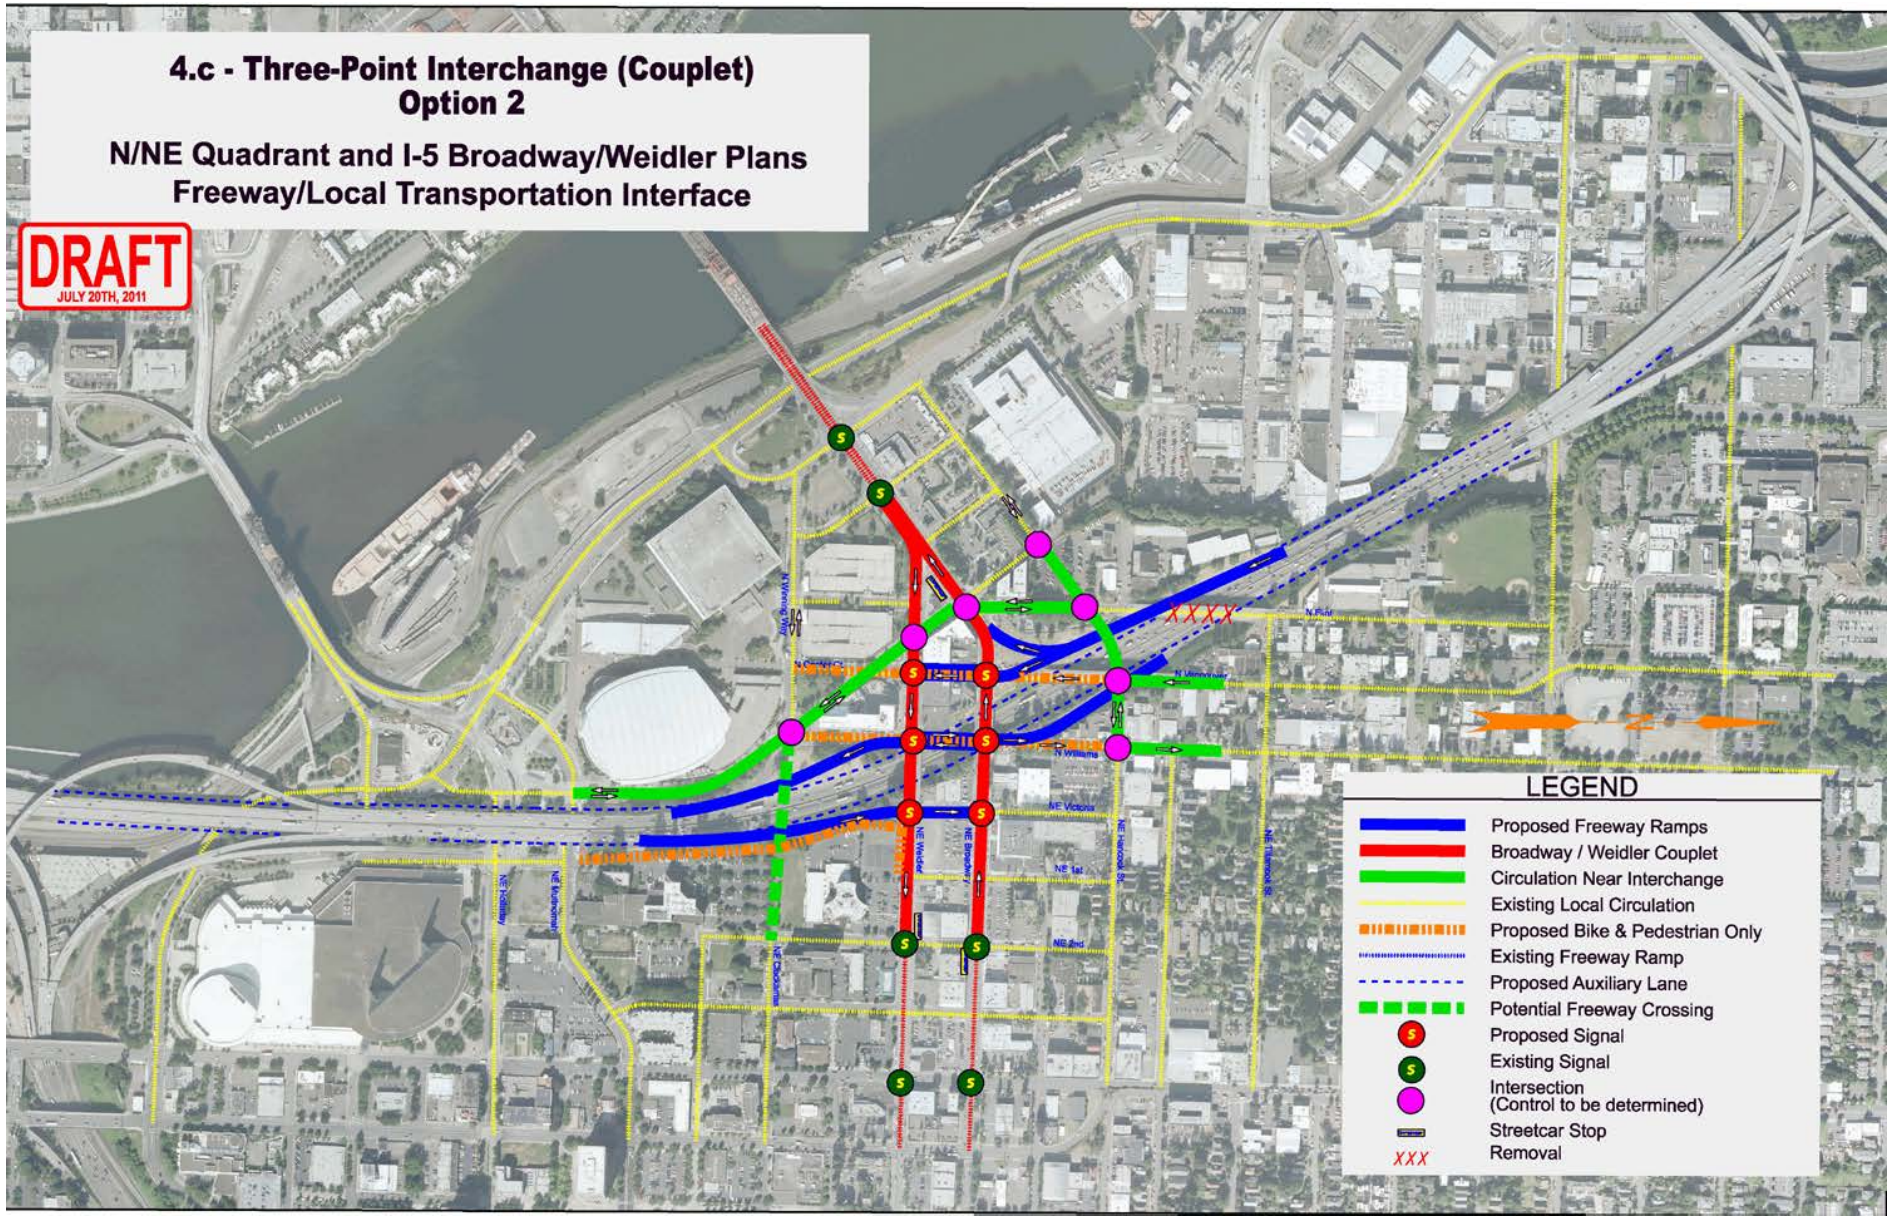
CONCEPT 4C. THREE-POINT INTERCHANGE (BROADWAY/WEIDLER COUPLET)

OPTION 1

DESCRIPTION

The Three-Point Interchange (Couplet) Concept would simplify the ramp terminal intersections to create a conventional interchange. The intent of this concept option is to improve the traffic operations and traffic flow on Broadway/Weidler. This concept would also improve some weaving distances for safety and would improve freeway operations with extended auxiliary lanes on I-5.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the overcrossing structures.
- All structures across the freeway will be rebuilt to accommodate the auxiliary lane.
- Evaluate relocating the I-5 southbound entrance ramp to Weidler; this has the potential to lengthen the weave distance.
- Evaluate the ramp terminal intersection operations.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes or for all modes.
- Evaluate streetcar and bus route impacts.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/ west ped/bike/transit movements.
- Improve Broadway and Weidler structures to accommodate bike/ped/transit.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with Broadway/Weidler.

ASSUMPTIONS:

- The Broadway/Weidler couplet would remain.

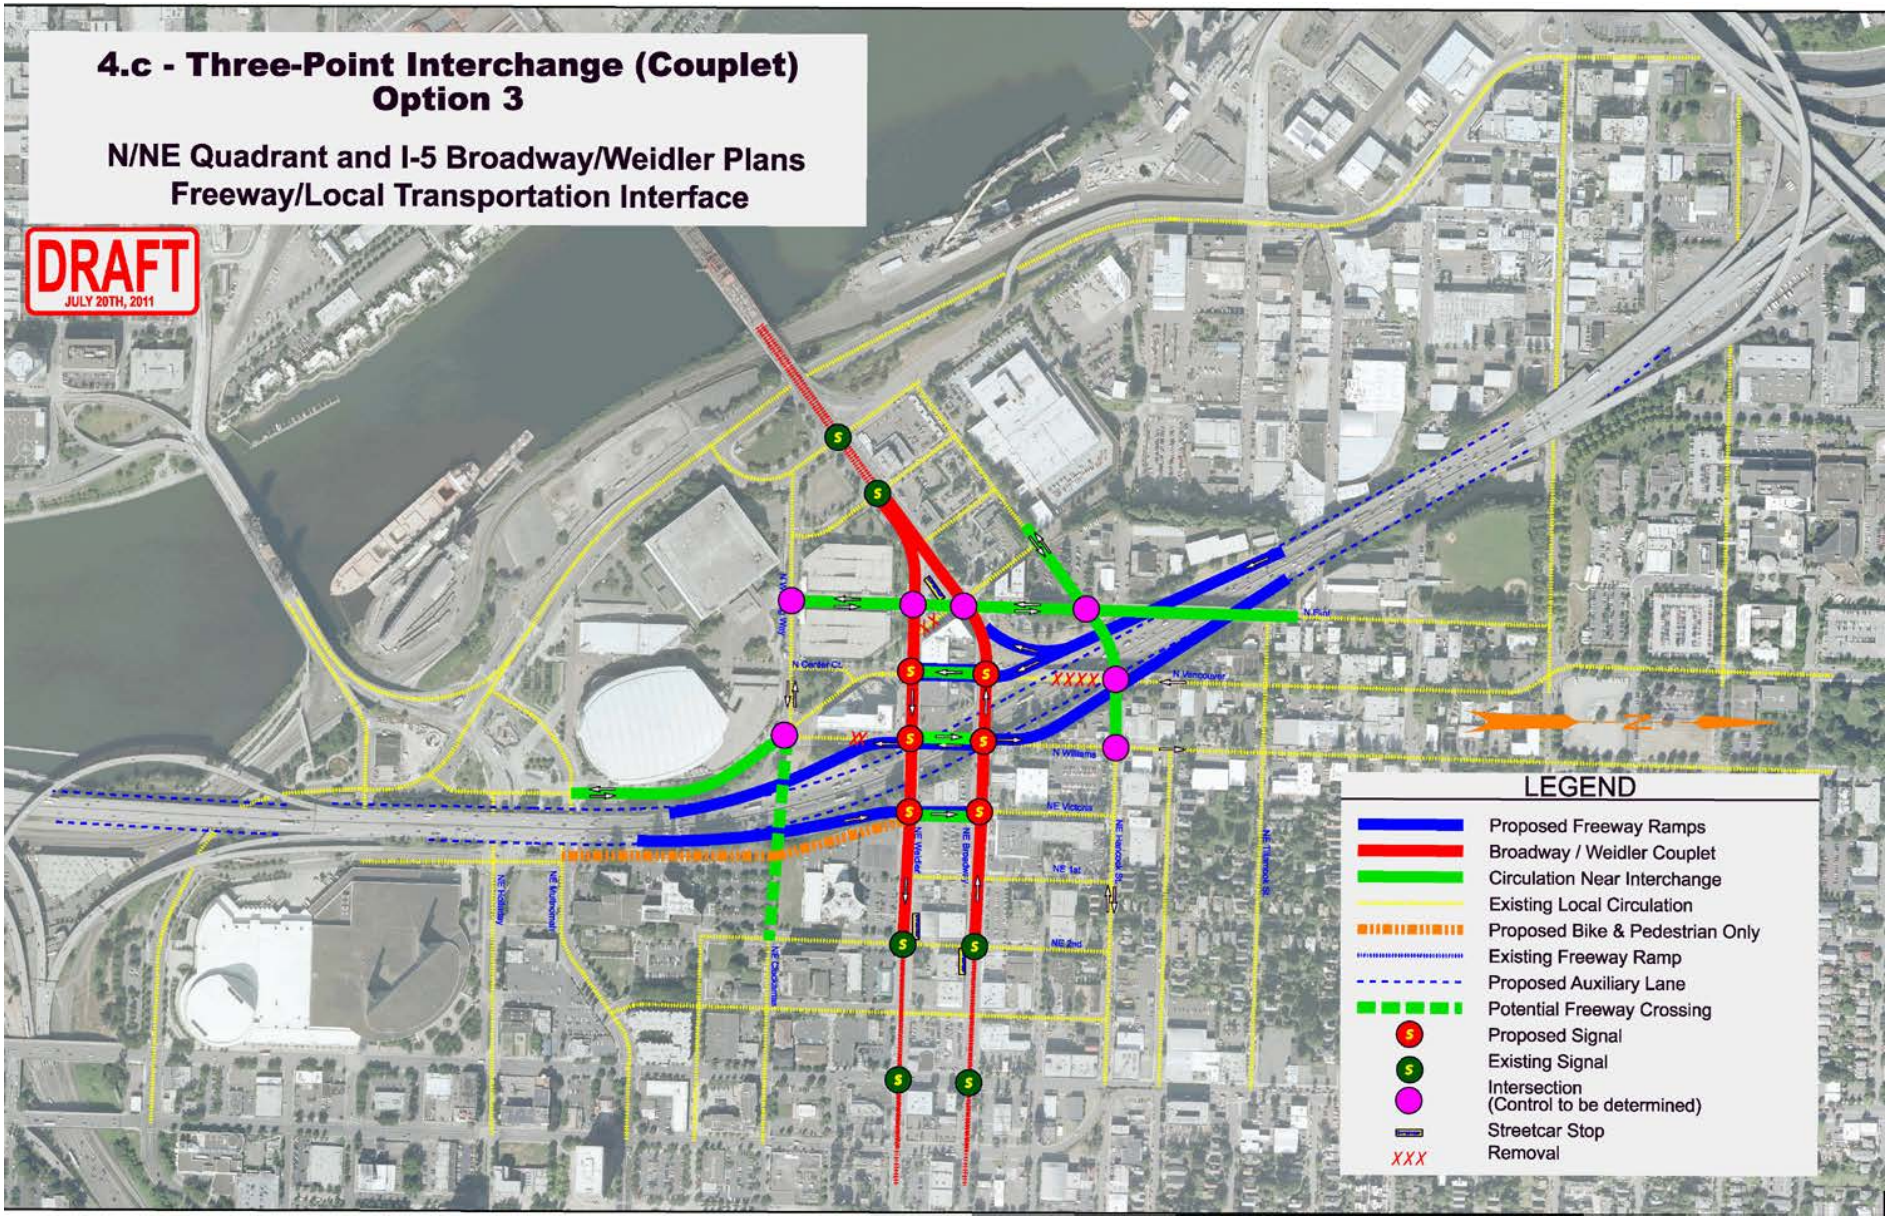
CONCEPT 4C. THREE-POINT INTERCHANGE (BROADWAY/WEIDLER COUPLET)

OPTION 2

DESCRIPTION

This option is similar to Option 1 but it would convert N. Vancouver and N. Williams connections between Clackamas and Hancock to bike and pedestrian only facilities.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the overcrossing structures.
- All structures across the freeway will be rebuilt to accommodate the auxiliary lane.
- Evaluate relocating the I-5 southbound entrance ramp to Weidler; this has the potential to lengthen the weave distance.
- Evaluate the ramp terminal intersection operations.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes or for all modes.
- Evaluate streetcar and bus route impacts.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/ west ped/bike/transit movements.

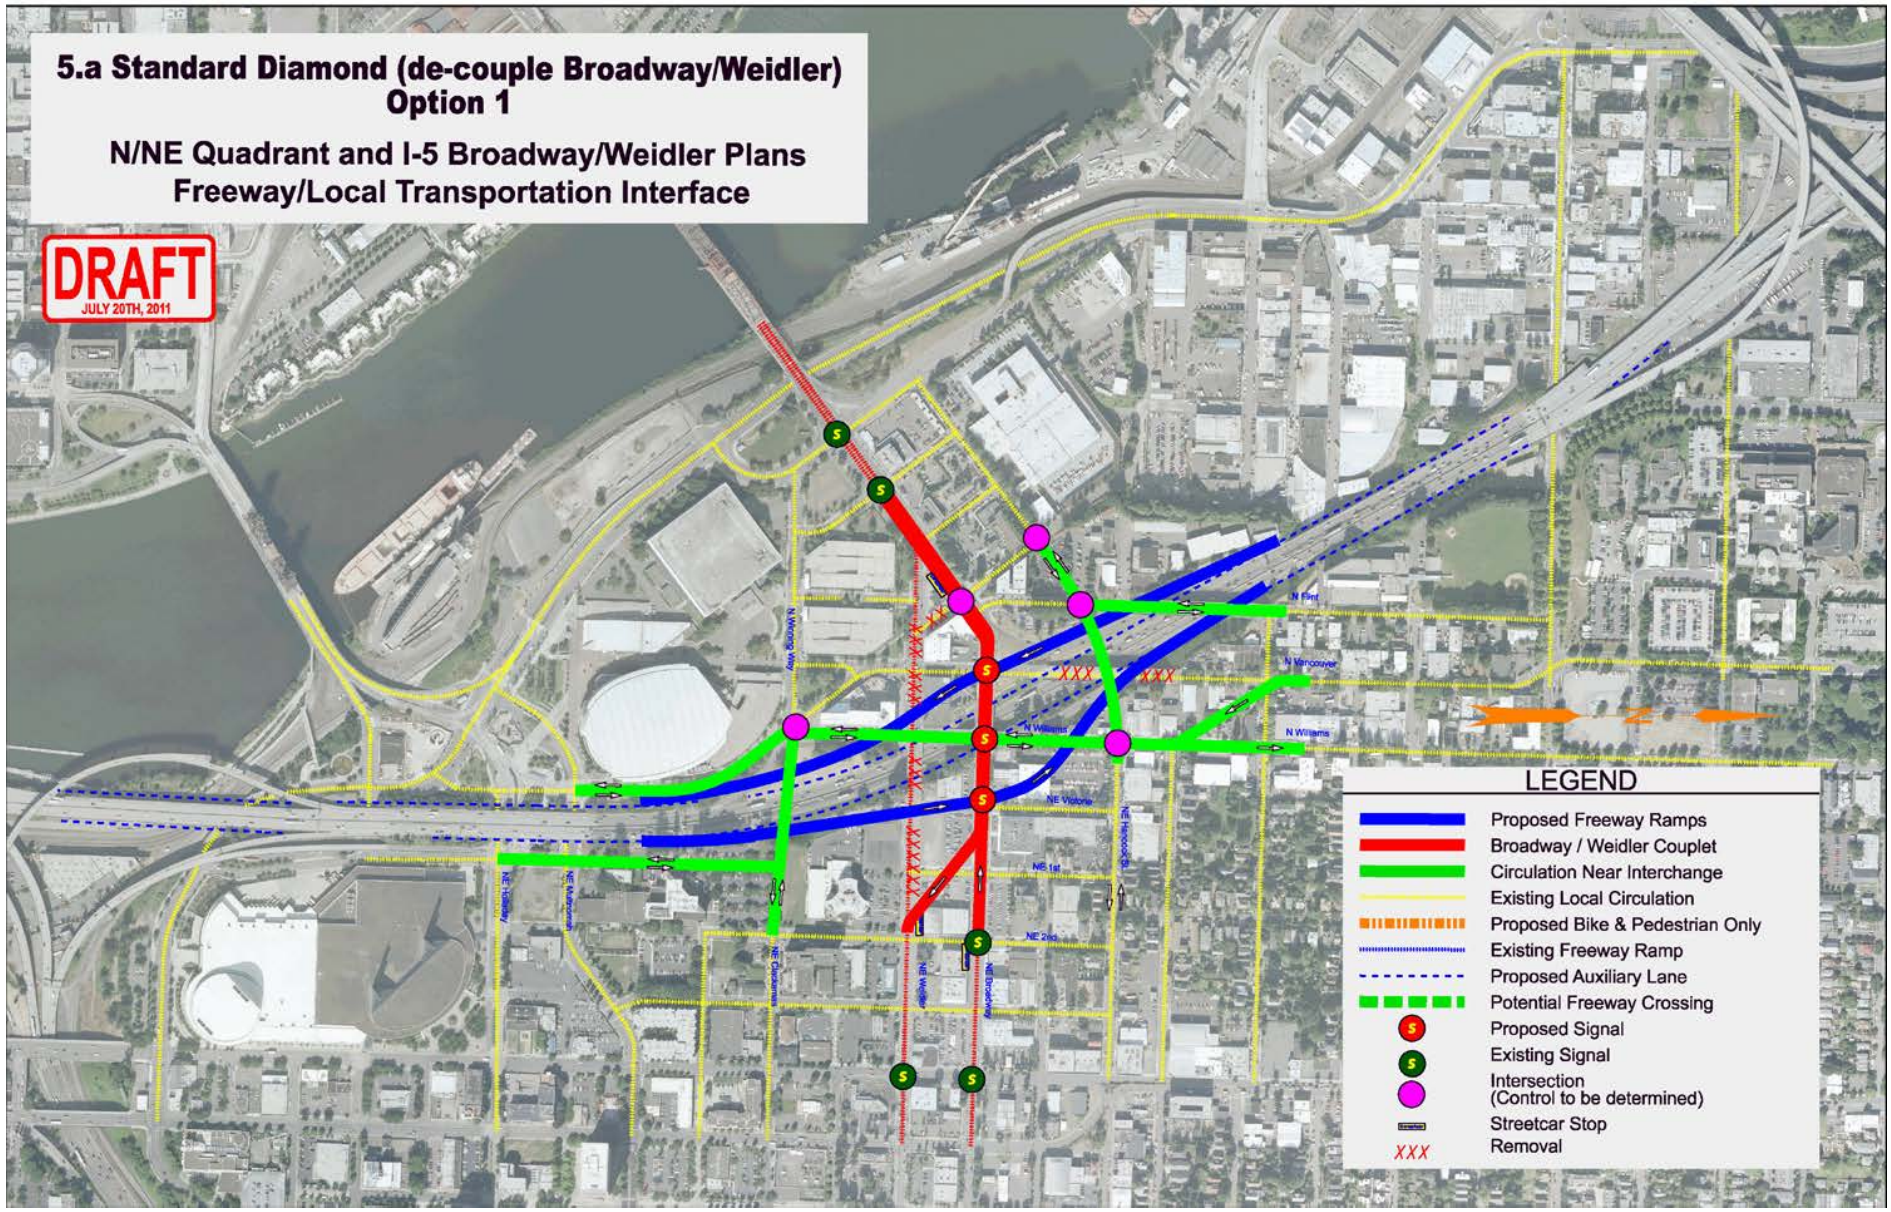
CONCEPT 4C. THREE-POINT INTERCHANGE (BROADWAY/WEIDLER COUPLET)

OPTION 3

DESCRIPTION

Unlike Option 1, this concept option would shift local north-south street connections to the west and east of N. Vancouver and N. Williams.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the overcrossing structures.
- All structures across the freeway will be rebuilt to accommodate the auxiliary lane.
- Evaluate relocating the I-5 southbound entrance ramp to Weidler; this has the potential to lengthen the weave distance.
- Evaluate the ramp terminal intersection operations.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes or for all modes.
- Evaluate streetcar and bus route impacts.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/ west ped/bike/transit movements.
- Improve Broadway and Weidler structures to accommodate bike/ped/transit.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with Broadway/Weidler.

ASSUMPTIONS:

- The Broadway/Weidler couplet would remain.

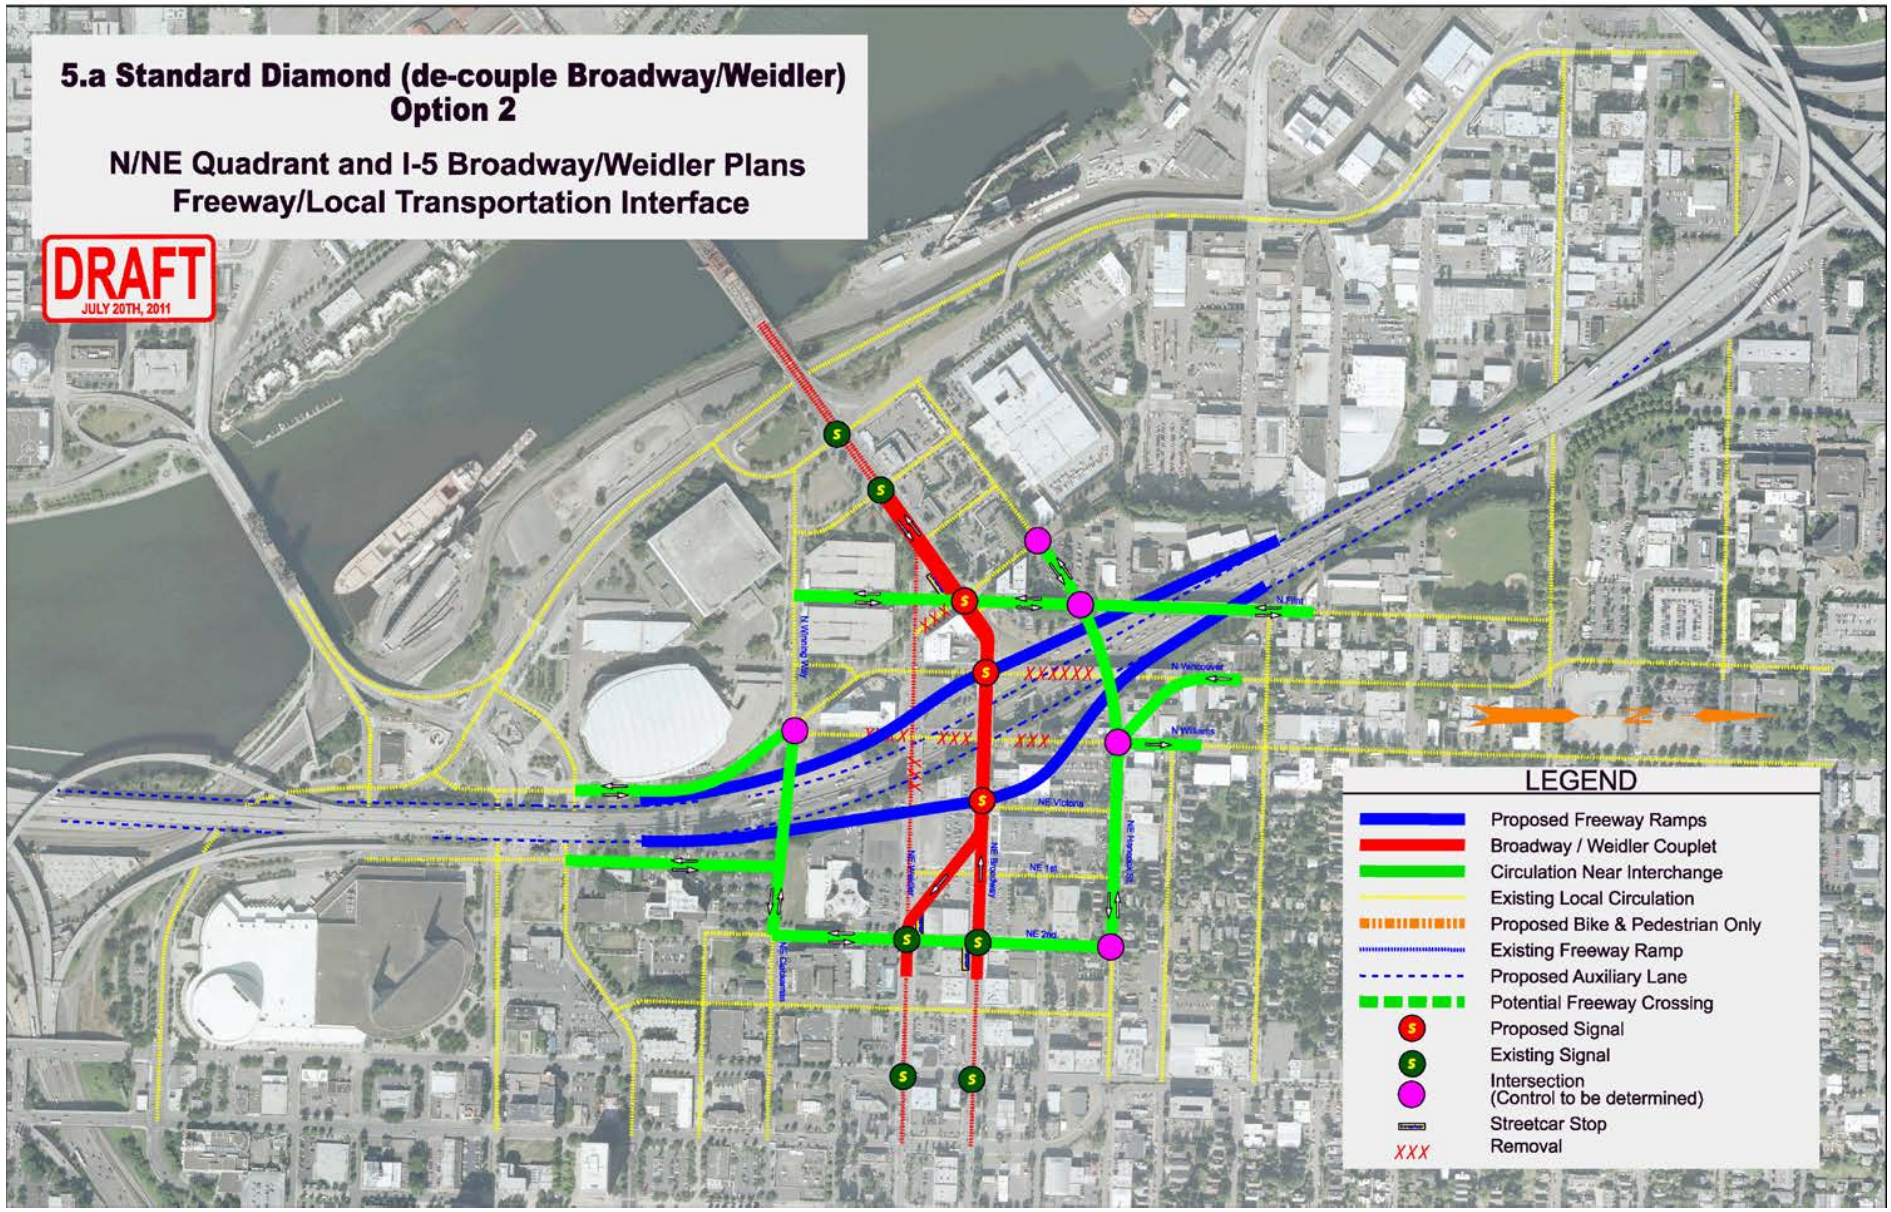
CONCEPT 5A. STANDARD DIAMOND (DE-COUPLE BROADWAY/WEIDLER)

OPTION 1

DESCRIPTION

The Standard Diamond Concept would de-couple Broadway/Weidler at the freeway to create a conventional interchange form. The concept intent is to improve the weaving length between the Broadway/Weidler and I-84 interchanges. The section of I-5 southbound between Weidler and I-84 is the worst weaving section for crashes.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures.
- All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate standard diamond configuration with Broadway/Weidler de-coupled to Broadway at the interchange.
- Evaluate relocating the southbound entrance ramp to I-5/I-84; this has the potential to lengthen the weave distance.
- Evaluate relocating the northbound exit ramp from I-5; this has the potential to lengthen the weave distance.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate potential removal or relocation of three of the existing structure (Flint, Vancouver and Williams) to accommodate the north/south and east/ west ped/bike/transit movements.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

ASSUMPTIONS:

- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

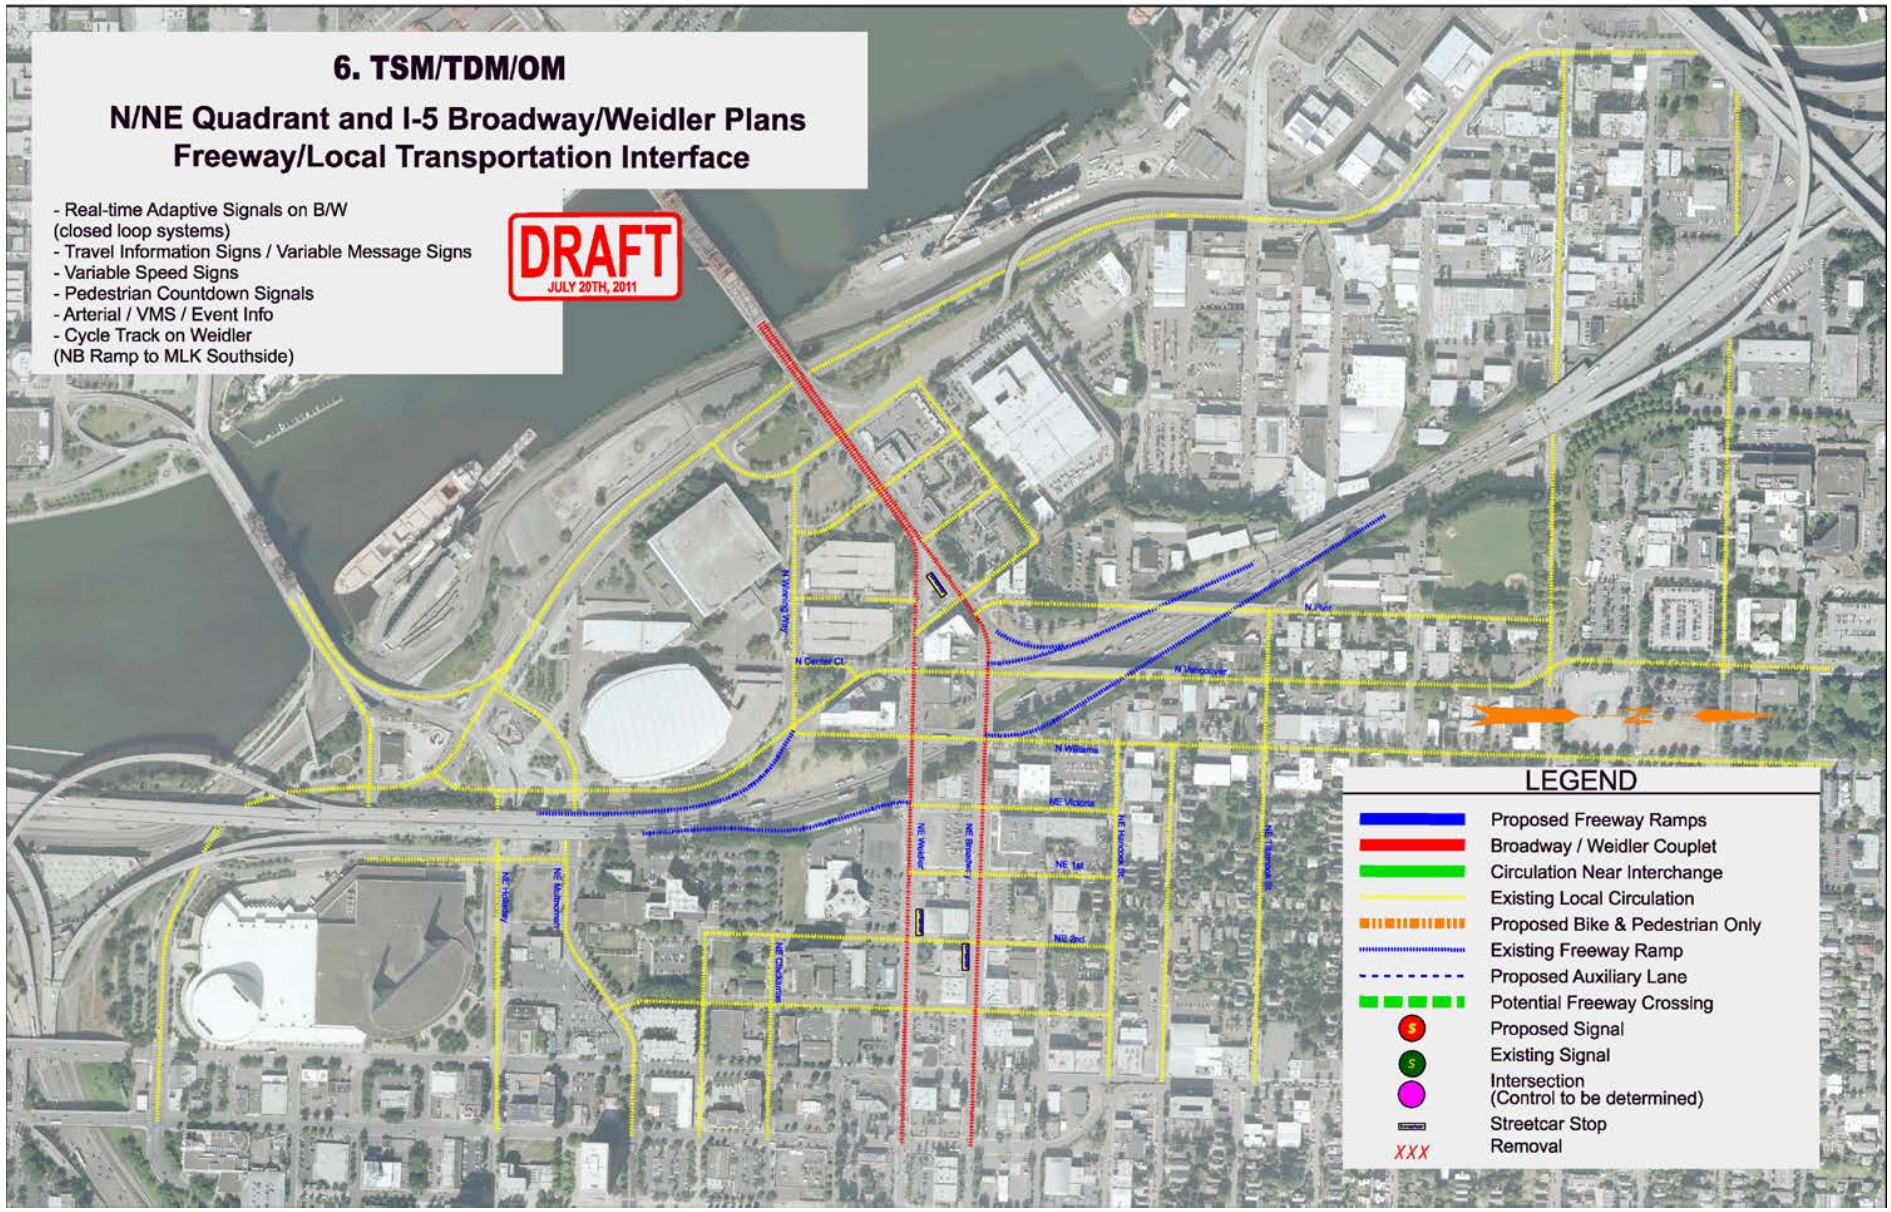
CONCEPT 5A. STANDARD DIAMOND (DE-COUPLE BROADWAY/WEIDLER)

OPTION 2

DESCRIPTION

This concept option is similar to Option 1 but it would shift the convergence of N. Vancouver and N. Williams further south with a new 5-legged intersection with N.E. Hancock.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate standard diamond configuration with Broadway/Weidler de-coupled to Broadway at the interchange.
- Evaluate relocating the southbound entrance ramp to I-5/I-84; this has the potential to lengthen the weave distance.
- Evaluate relocating the northbound exit ramp from I-5; this has the potential to lengthen the weave distance.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/ west ped/bike/transit movements.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

ASSUMPTIONS:

- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

CONCEPT 6. TSM/TDM/OPERATIONS MANAGEMENT

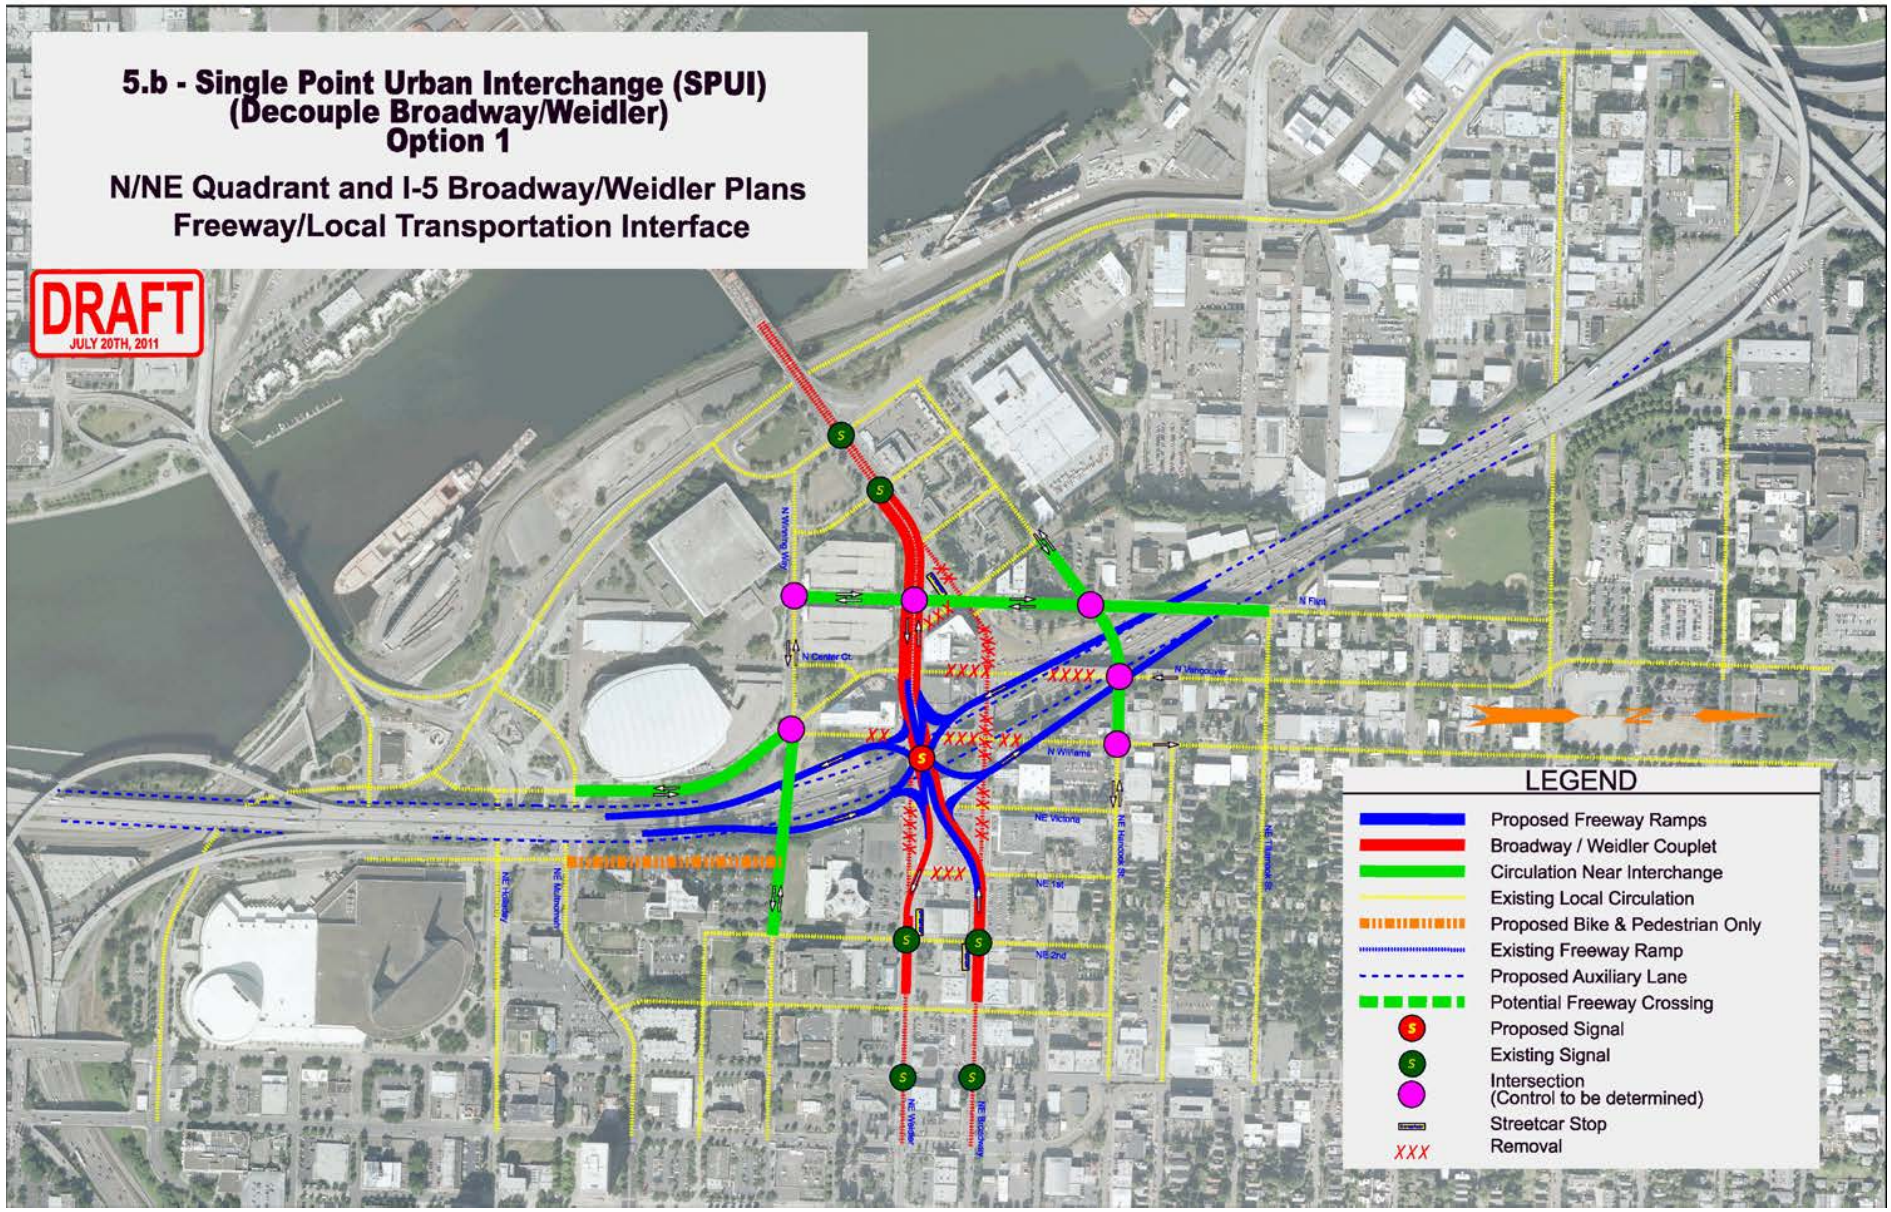
DESCRIPTION

This concept would build on existing Transportation System Management (TSM)/Transportation Demand Management (TDM)/Operations Management (OM) strategies in the study area and ensure that those programs are maximized in order to reduce trip demand and improve traffic flow.

MAJOR TSM ELEMENTS

- Traveler information signs – signs provide real-time information on roadway congestion and travel time.
- Variable speed limit signs – recently implemented on I-5 in Seattle, these signs adjust the legal speed limit based on actual conditions.
- Event information – provide signs with real-time information on preferred access routes and parking opportunities for Rose Quarter and Oregon Convention Center events.
- Real-time, adaptive signals on Broadway/ Weidler – smarter traffic signals that adapt to actual traffic conditions.

MAJOR TDM ELEMENTS



- Rideshare programs – expand the existing services with an emphasis on travelers to and from the N/NE Quadrant and travelers on I-5.
- Parking policies – consider expanding paid parking areas and adjusting rates at public garages.
- Employer programs – expand transit pass subsidy programs and information programs for area employers.

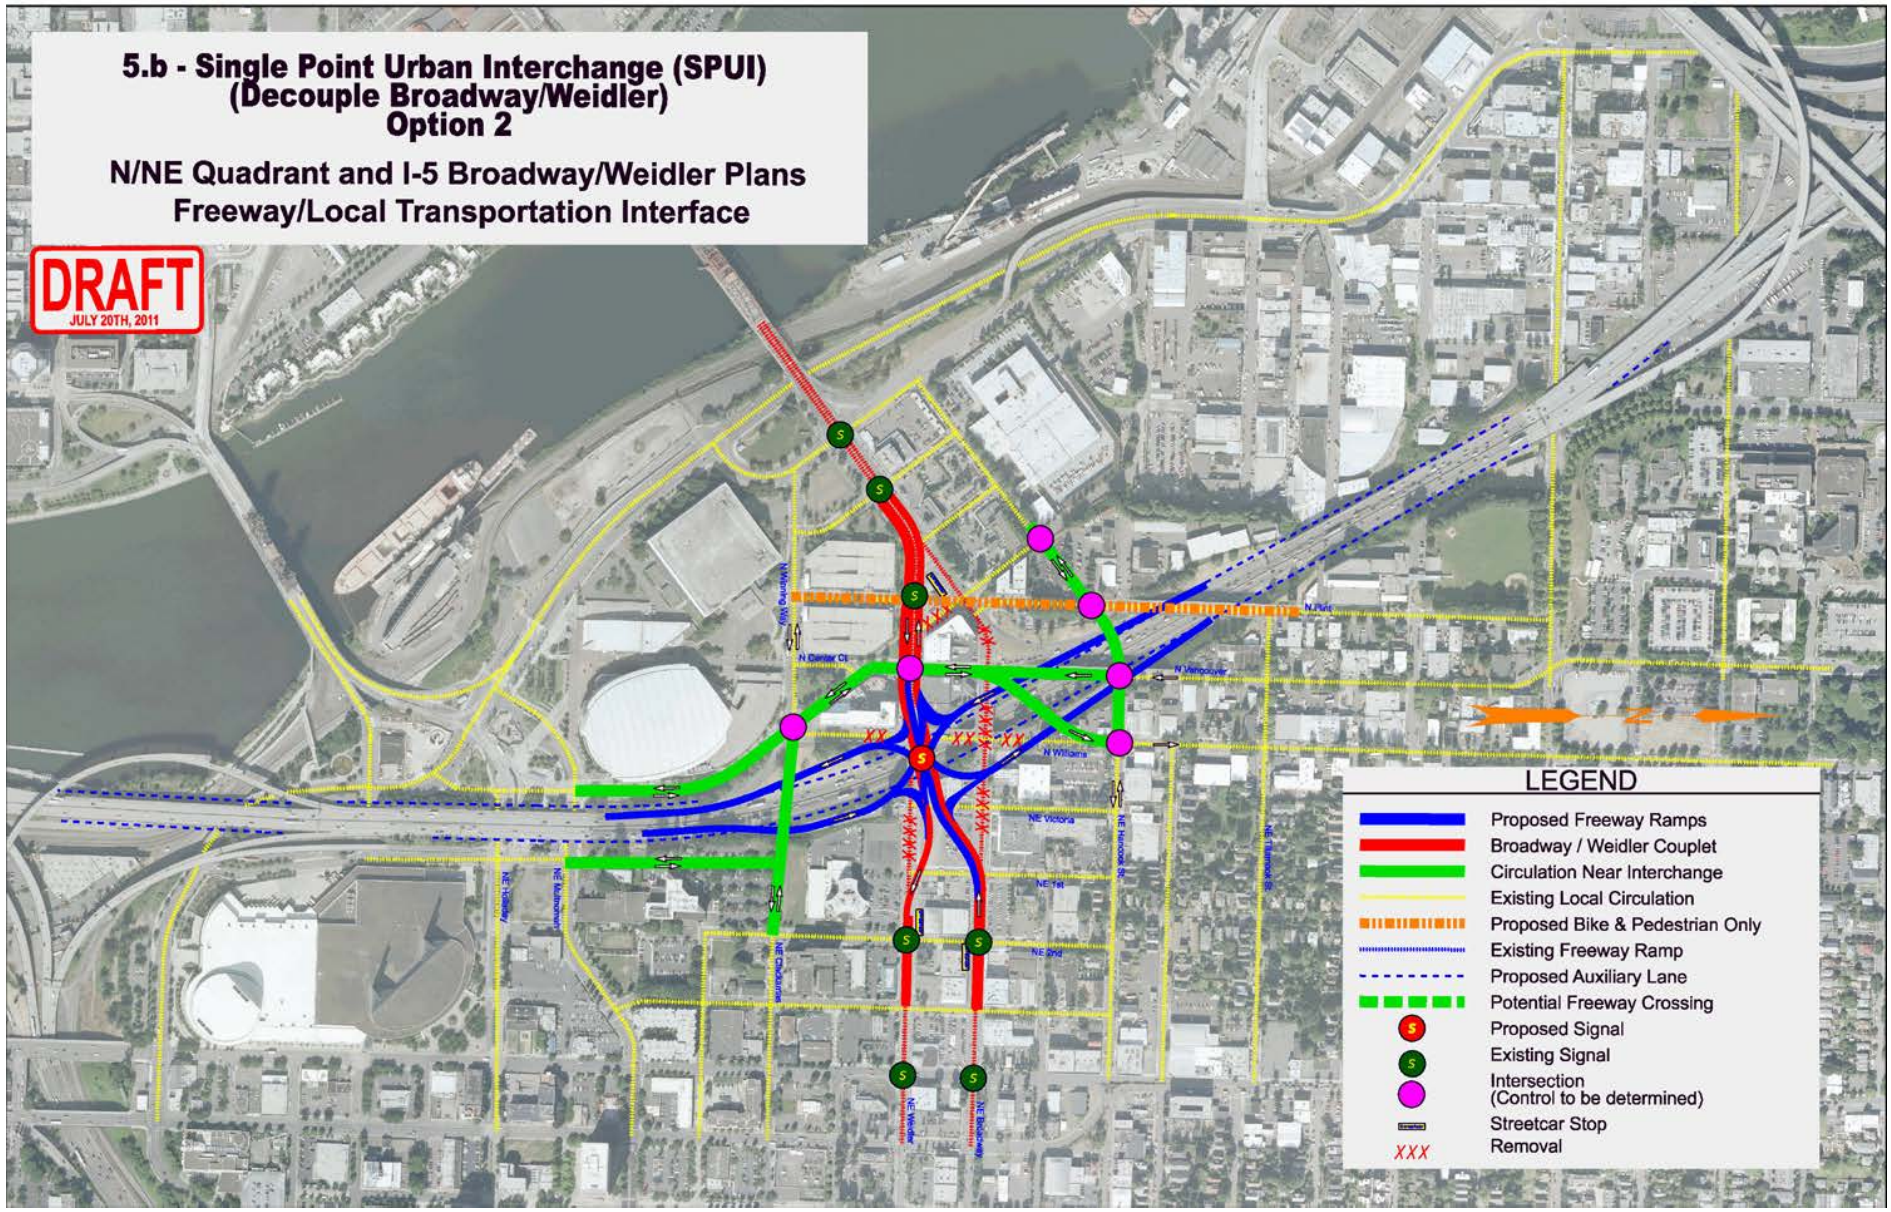
CONCEPT 5B. SINGLE POINT URBAN INTERCHANGE (SPUI) (DE-COUPLE BROADWAY/WEIDLER)

OPTION 1

DESCRIPTION

A single-point urban interchange (SPUI) is similar in form to a diamond interchange, but it has the advantage of allowing opposing left turns to proceed simultaneously by compressing the two intersections of a diamond into one signalized intersection. Traffic passing through the interchange can be controlled by a single signal; vehicles can clear the intersection more quickly than in a diamond interchange.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate a major reconfiguration of the Broadway-Weidler interchange based on the SPUI design concept with Broadway/Weidler de-coupled to Weidler at the interchange.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossings at Clackamas and Dixon/Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/ west ped/bike/transit movements.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

ASSUMPTIONS:

- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

56931

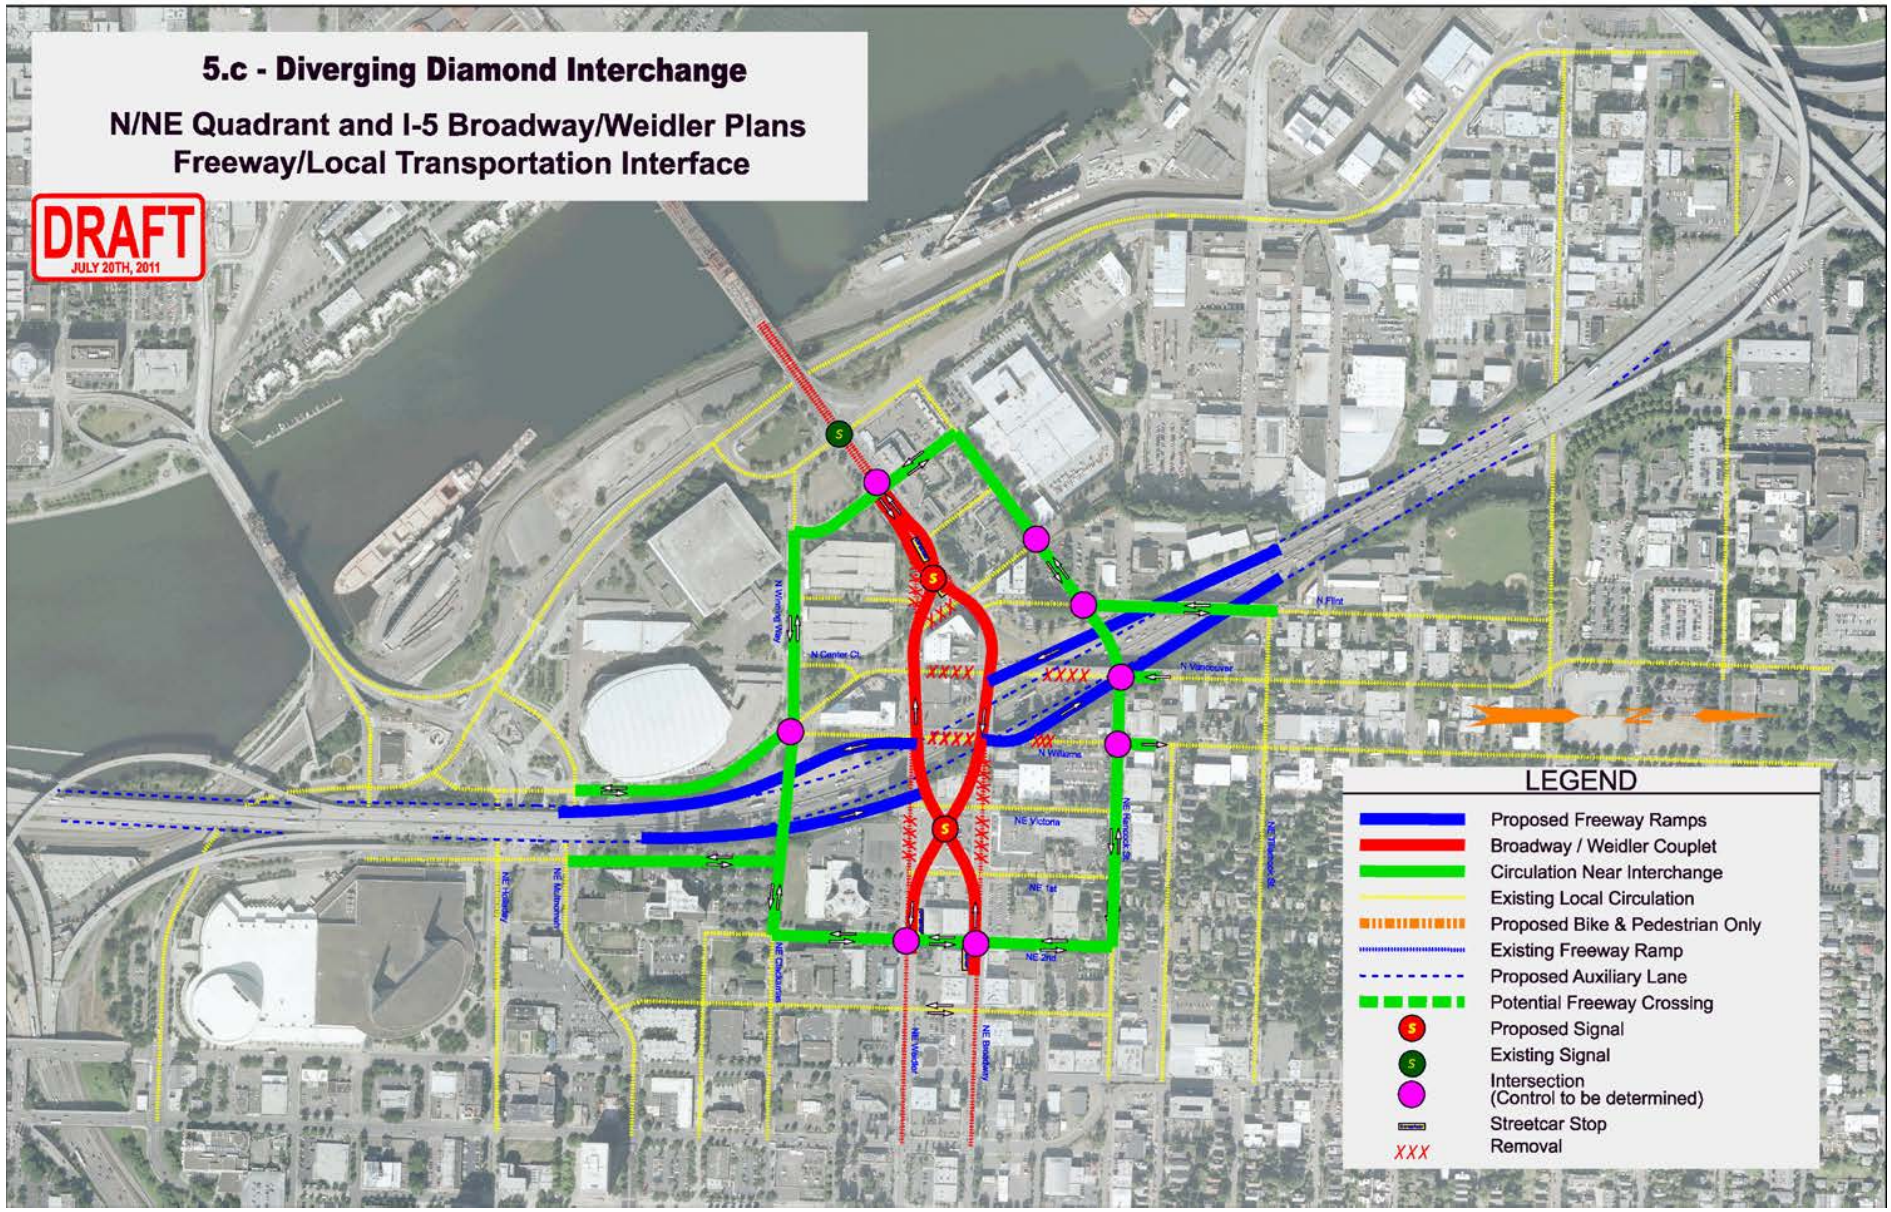
CONCEPT 5B. SINGLE POINT URBAN INTERCHANGE (SPUI) (DE-COUPLE BROADWAY/WEIDLER)

OPTION 2

DESCRIPTION

The intent of the SPUI Concept is to improve the operations and safety at the interchange and improve I-5 operations and safety with the auxiliary lane extensions. This concept option is similar to Option 1 but it would de-couple N. Vancouver and N. Williams just north of Broadway. This concept would also convert N. Flint to a bike/ pedestrian only facility between N. Tillamook and N. Winning Way.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate a major reconfiguration of the Broadway-Weidler interchange based on the SPUI design concept with Broadway/Weidler de-coupled to Weidler at the interchange.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossings at Clackamas and Dixon/Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/ west ped/bike/transit movements.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

ASSUMPTIONS:

- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

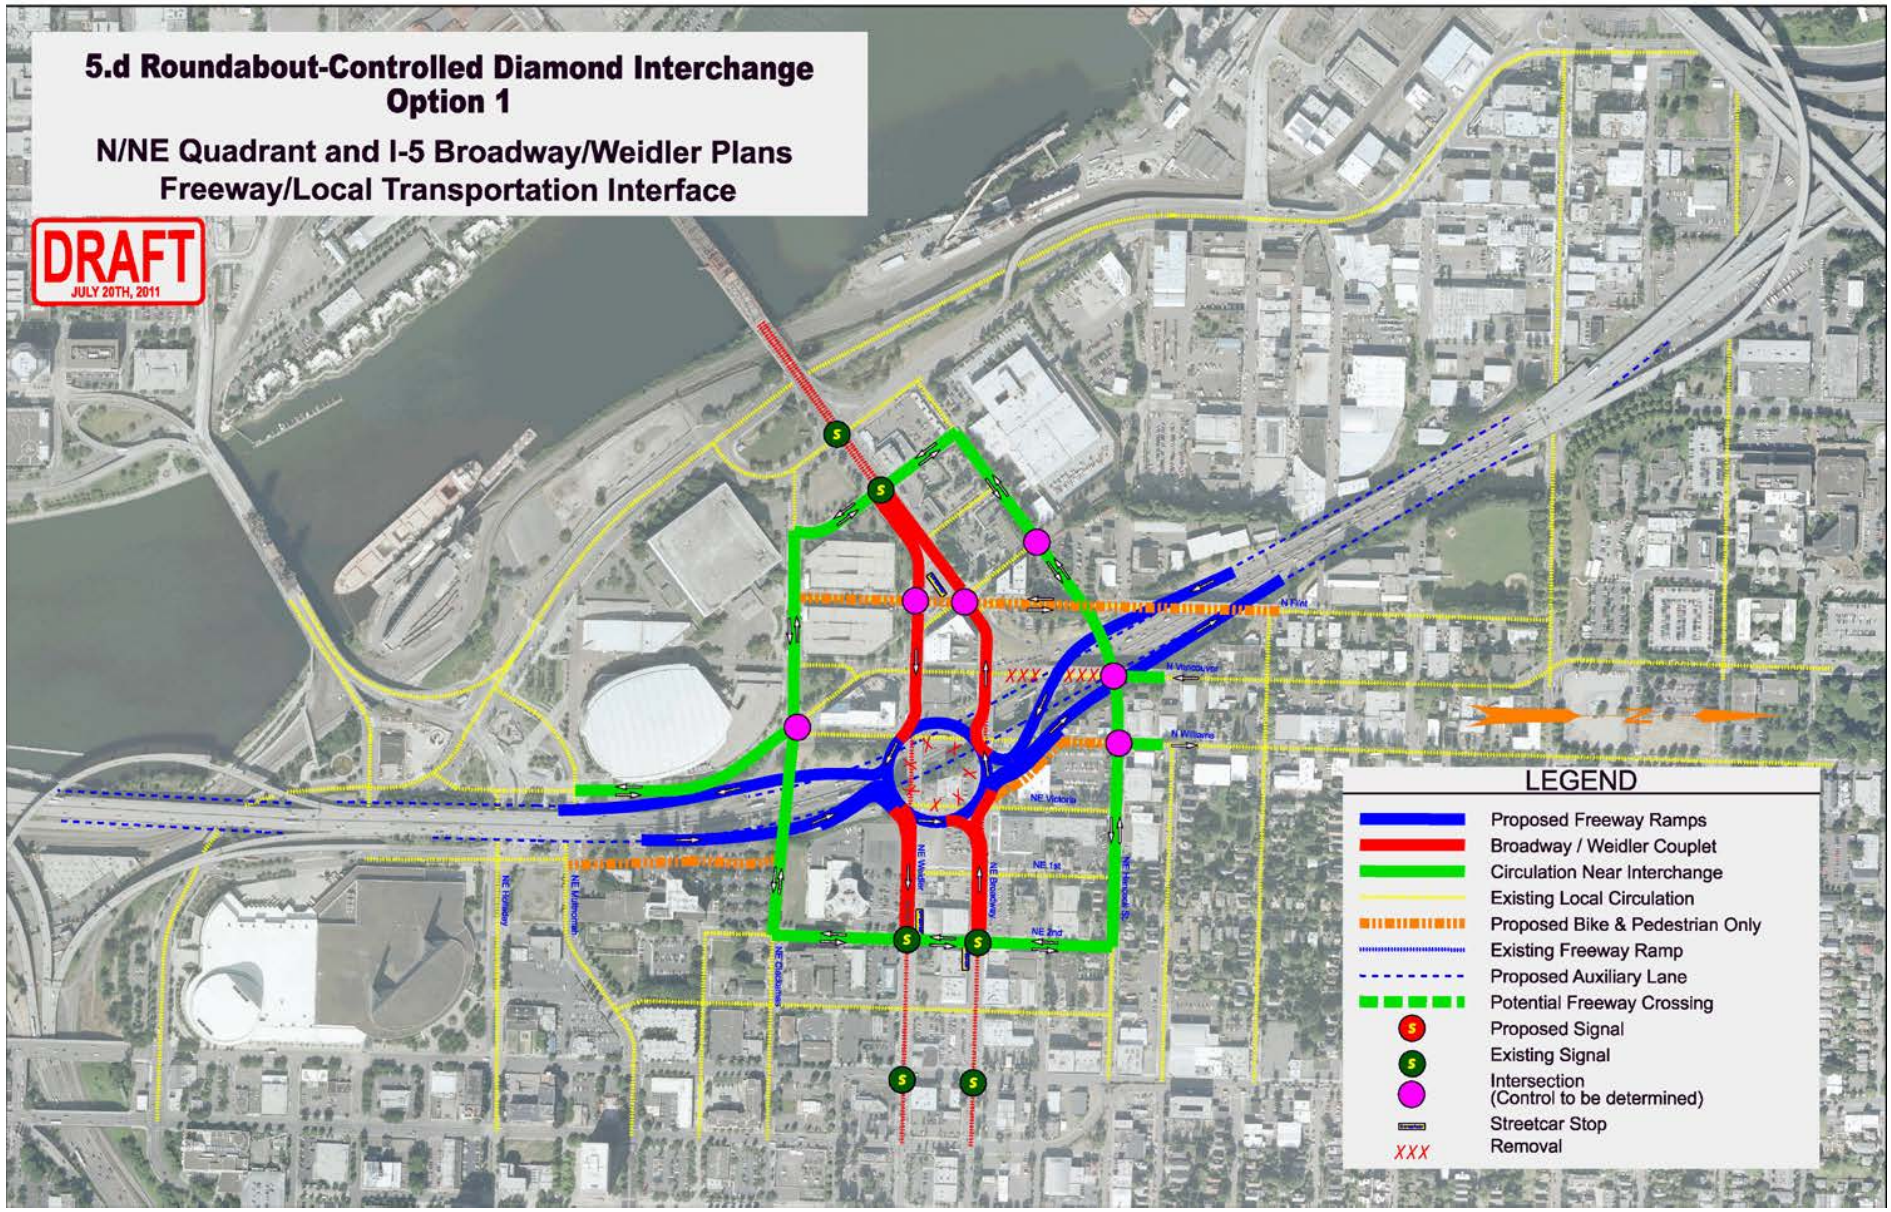
CONCEPT 5C. DIVERGING DIAMOND (DDI)
(DE-COUPLE BROADWAY/WEIDLER)

DESCRIPTION

The intent of the Diverging Diamond Interchange Concept is to improve the safety at the interchange since no left turns must clear opposing traffic and most movements are controlled by traffic signals. The intent of the northbound and southbound auxiliary lane extensions on I-5 is to improve the safety and operations on the freeway.

A diverging diamond interchange is a form of diamond interchange in which the two directions of traffic on the local road cross to the opposite side at the freeway. The direction of travel will change for Broadway and Weidler through the interchange. The diverging diamond interchange allows for two-phase operation at all signalized intersections within the interchange area.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate a major reconfiguration of the Broadway-Weidler interchange based on the SPUI design concept with Broadway/Weidler de-coupled to Weidler at the interchange.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossings at Clackamas and Dixon/Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/west ped/bike/transit movements.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

ASSUMPTIONS:

- The five existing structures (Broadway, Weidler, Williams, Vancouver and Flint) would be removed.
- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

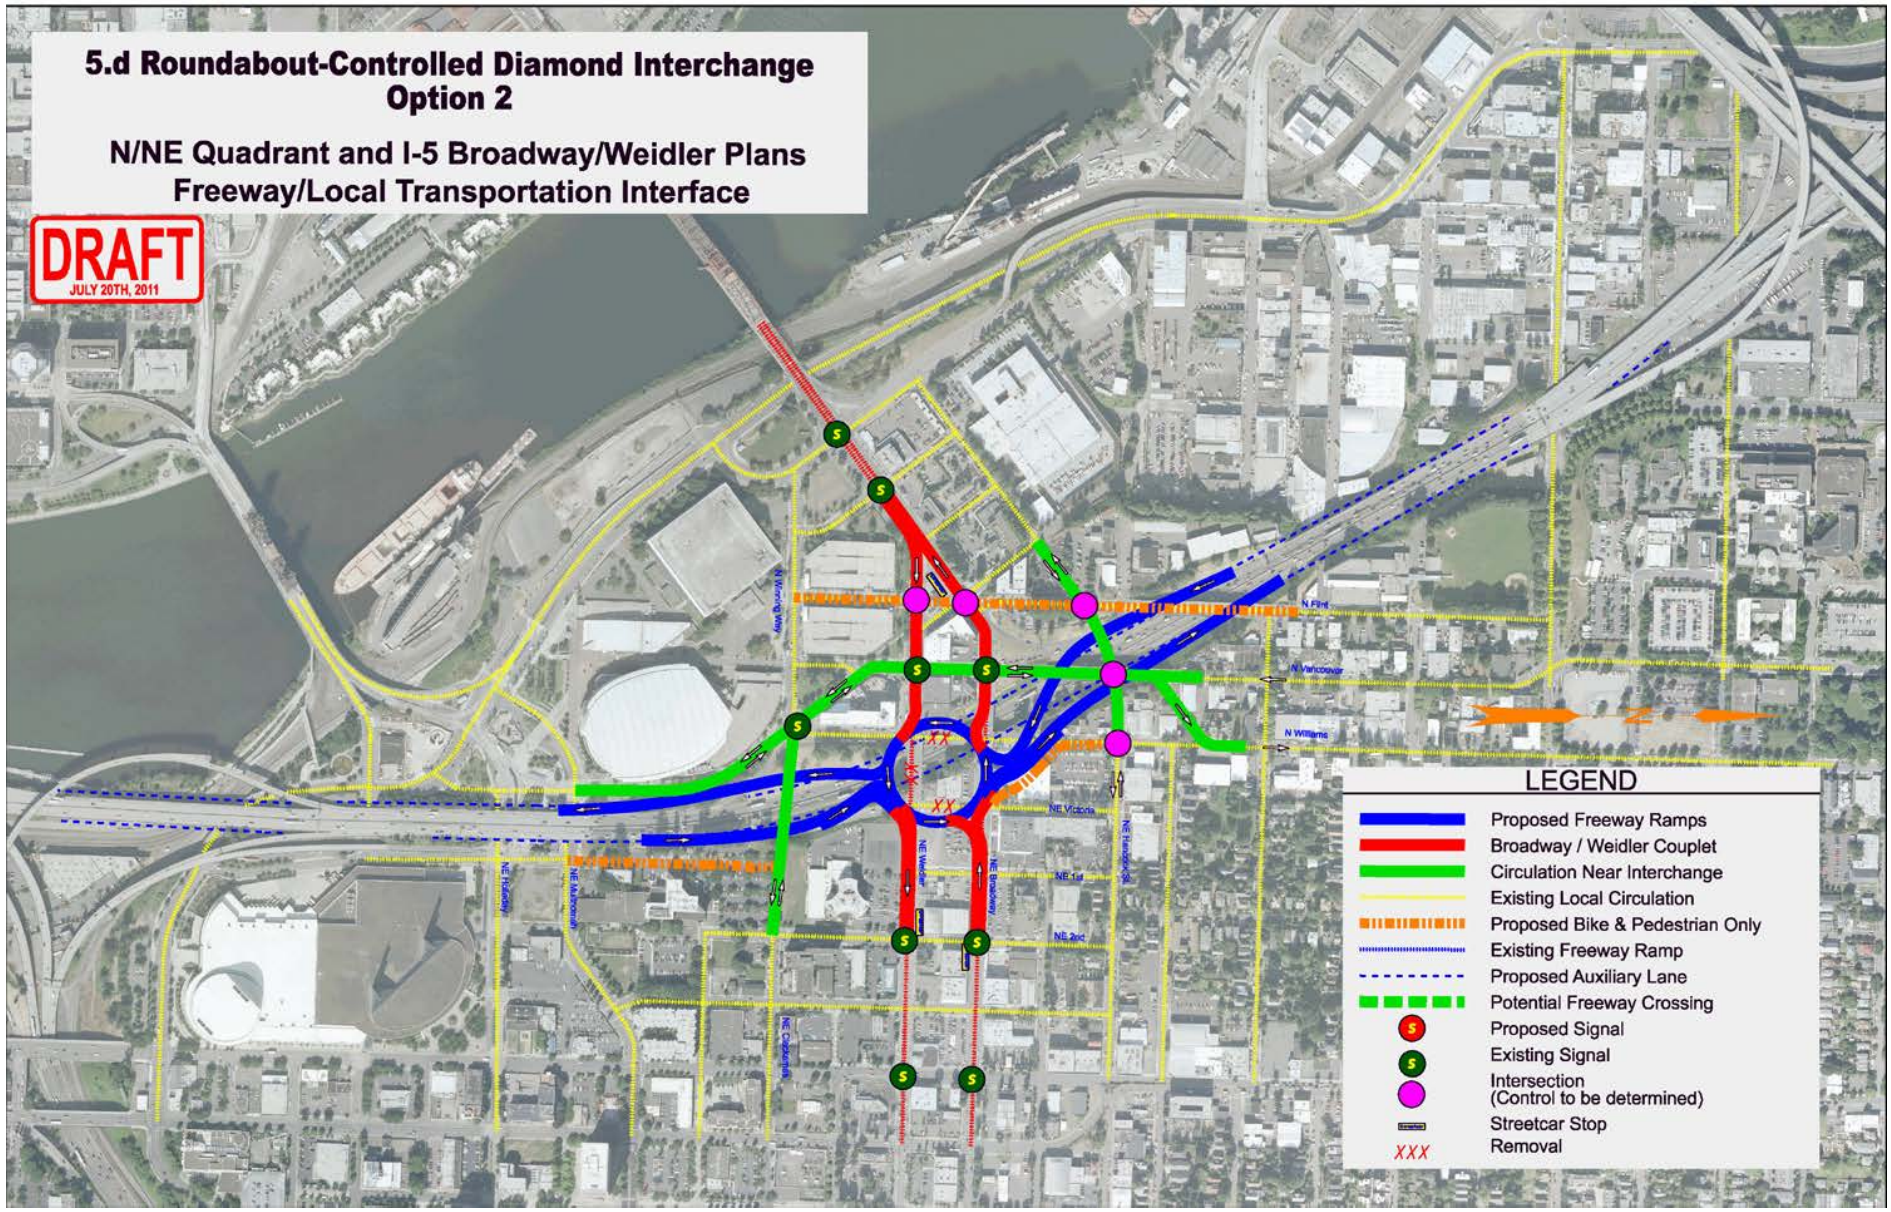
CONCEPT 5D. ROUNDABOUT-CONTROLLED DIAMOND
OPTION 1

DESCRIPTION

The Roundabout-Controlled Diamond Interchange Concept features a one-way circulatory roadway with yield-on-entry into the roundabout. This concept retains the Broadway/Weidler couplet and redirects the circulation of N. Williams, Vancouver and Flint. The intent of the auxiliary lane extensions on I-5 is to improve the safety and operations on the freeway.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate a major reconfiguration of the Broadway-Weidler interchange based on the Roundabout-Controlled Diamond Interchange Concept.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossings at Clackamas and Dixon/Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

ASSUMPTIONS:

- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

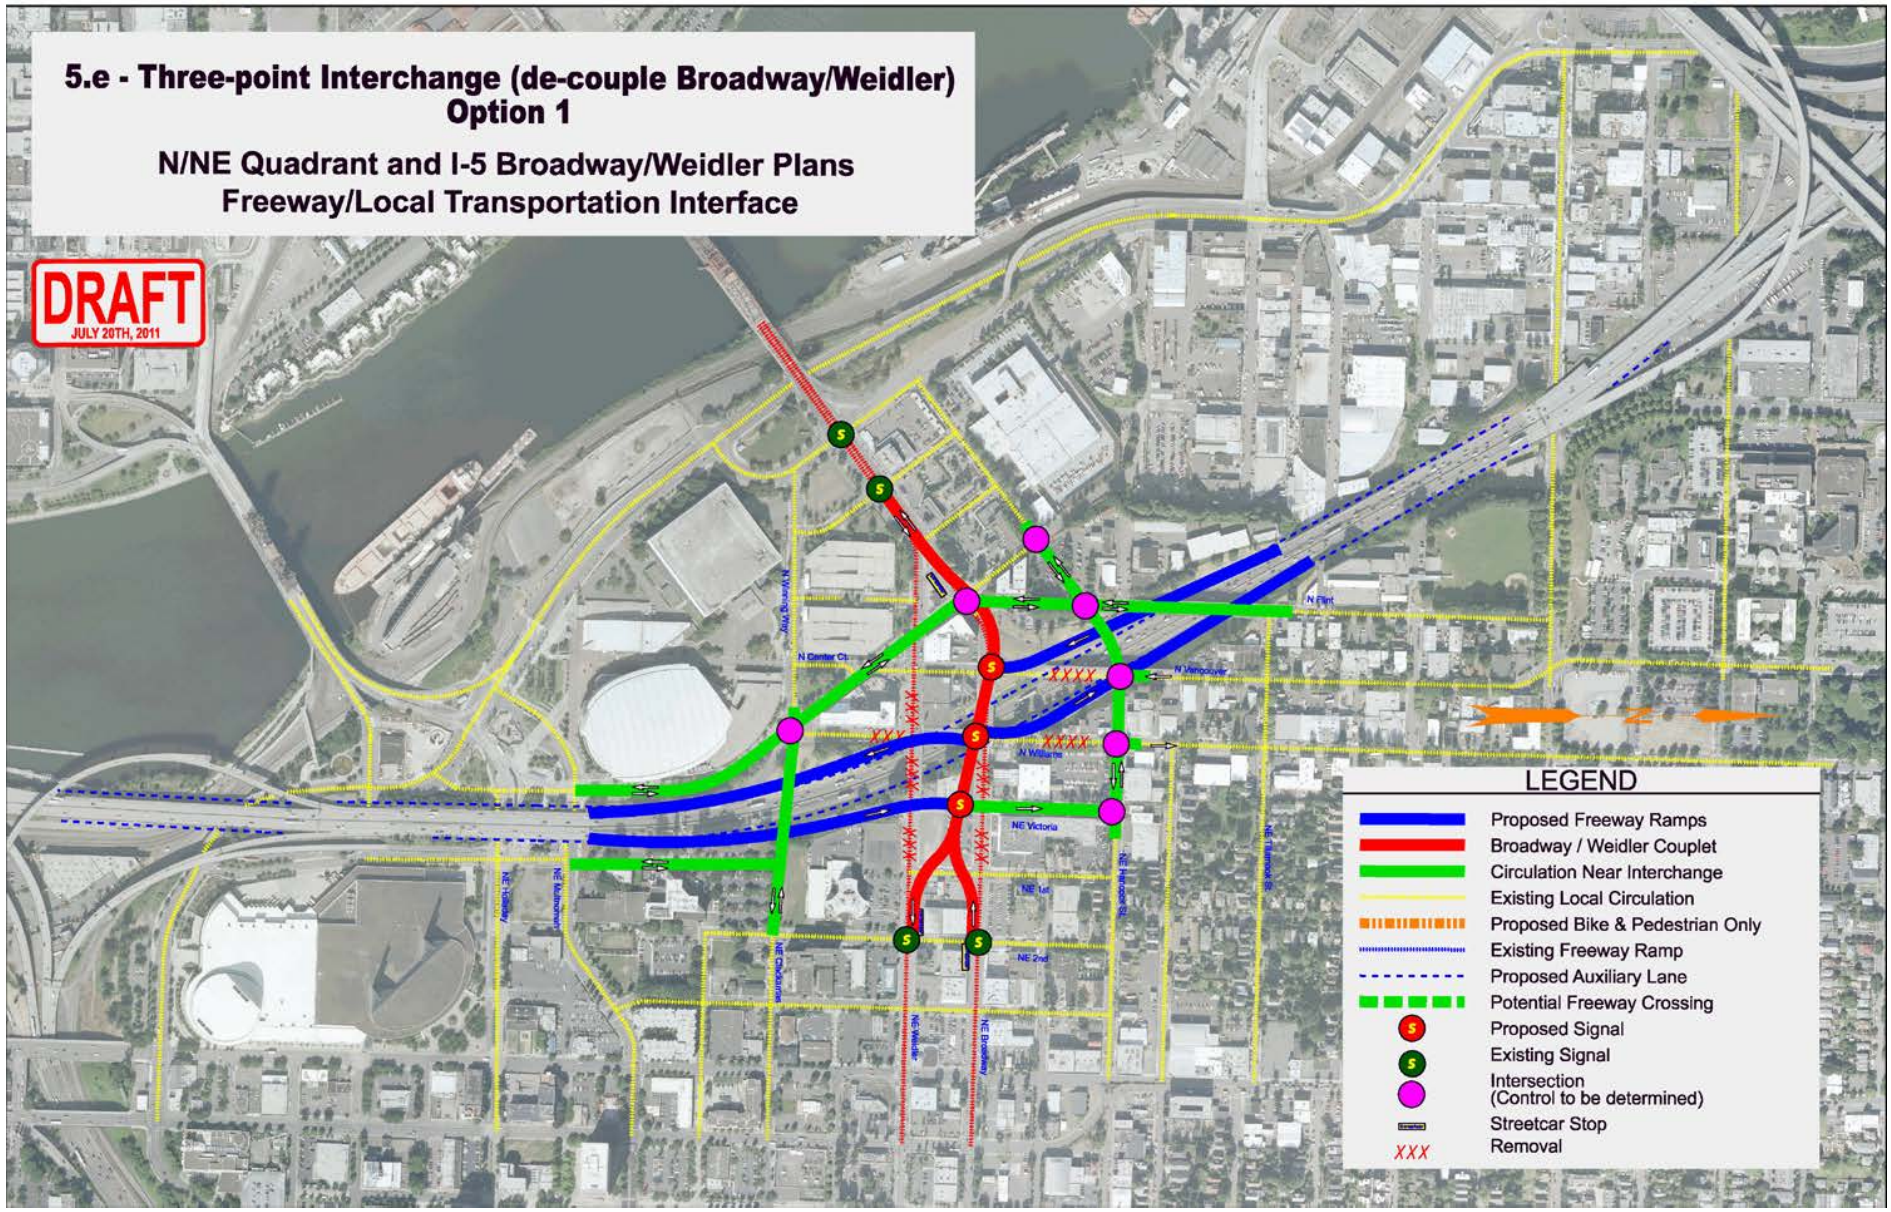
CONCEPT 5D. ROUNDABOUT-CONTROLLED DIAMOND
OPTION 2

DESCRIPTION

This concept option is similar to Option 1 but it would de-couple N. Vancouver and N. Williams just north of Hancock and permit north-south traffic to use N. Vancouver near the roundabout.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate a major reconfiguration of the Broadway-Weidler interchange based on the Roundabout-Controlled Diamond Interchange Concept.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossings at Clackamas and Dixon/Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

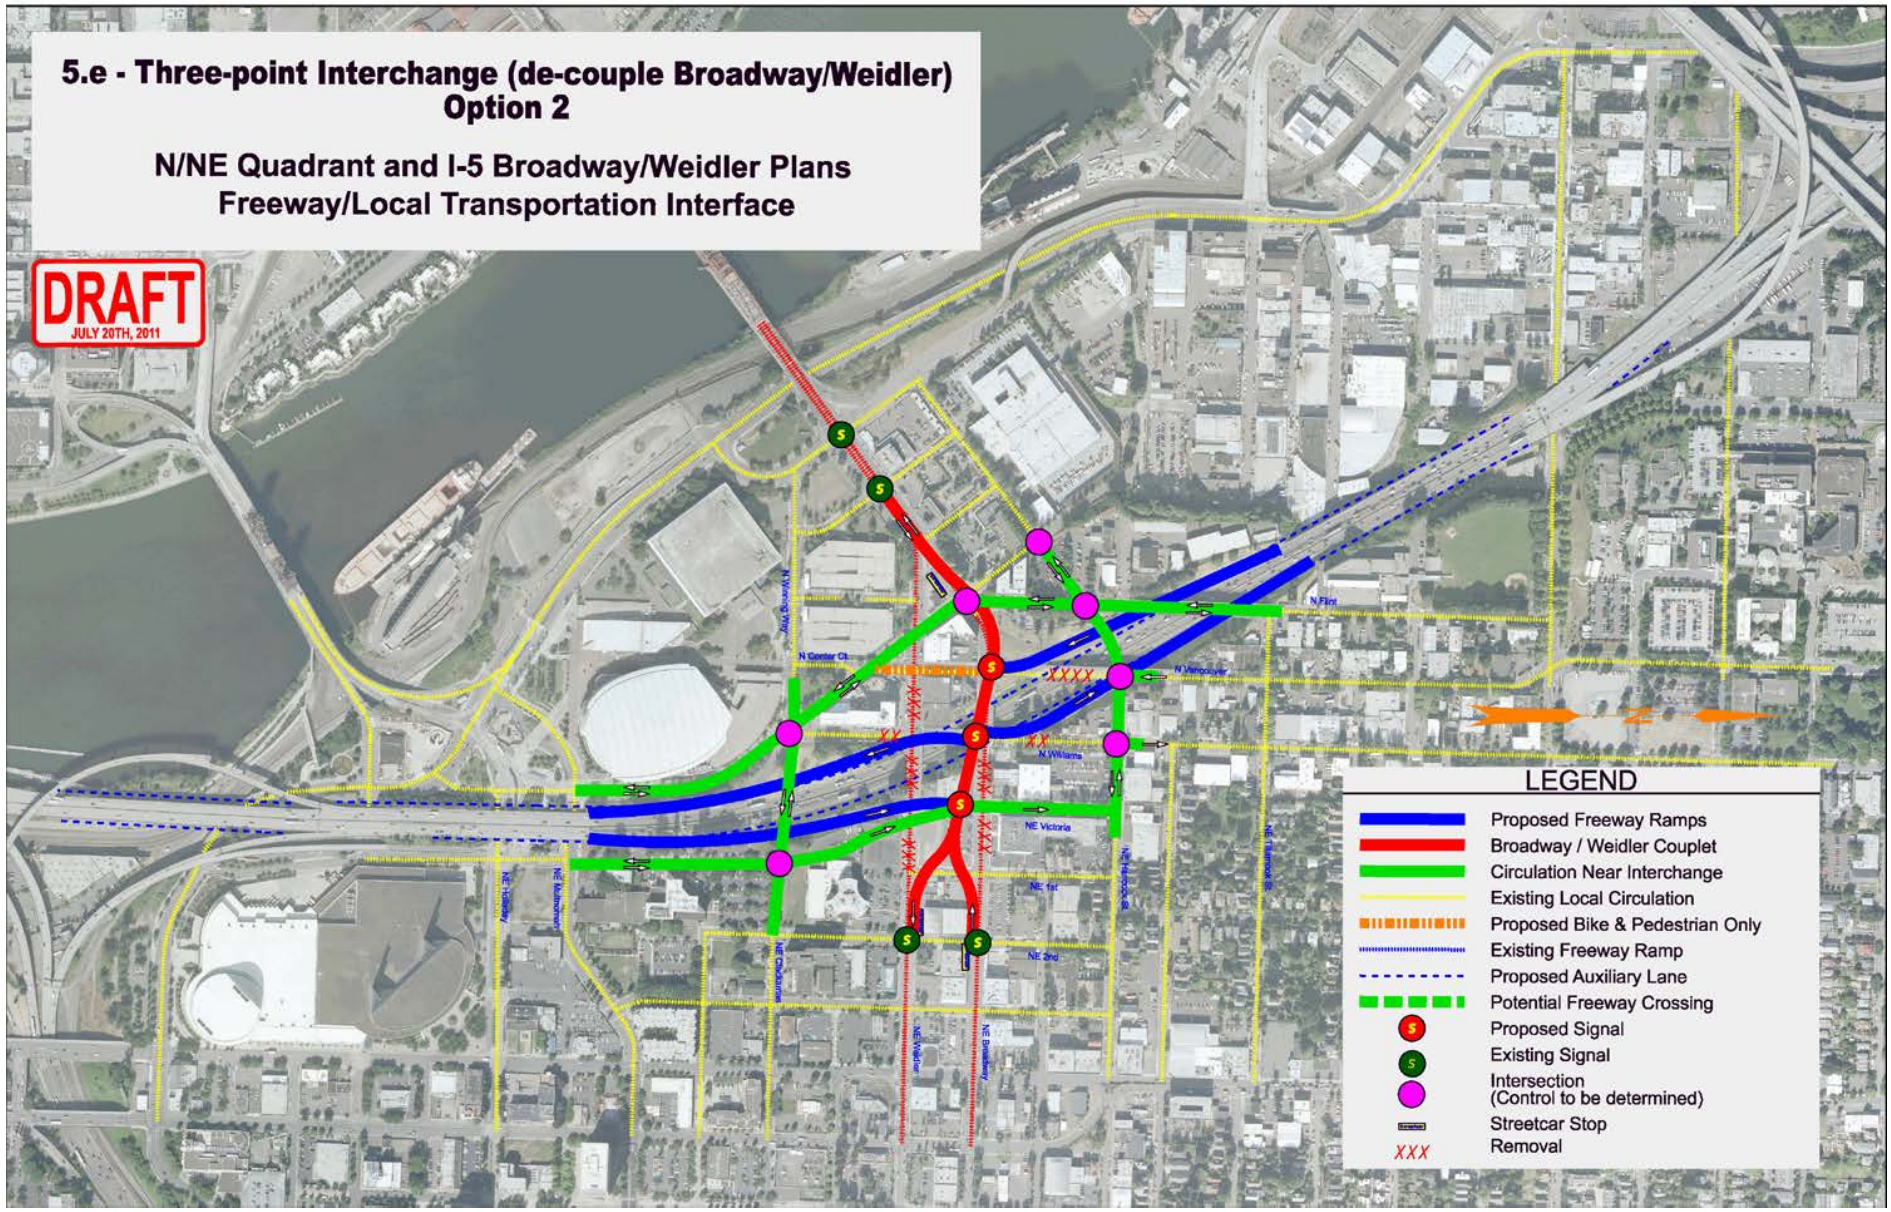
CONCEPT 5E. THREE-POINT INTERCHANGE (DE-COUPLE BROADWAY/WEIDLER)

OPTION 1

DESCRIPTION

The Three-Point Interchange (De-Couple) Concept would simplify the ramp terminal intersections to create a conventional interchange. The intent of this concept is to improve the traffic operations and traffic flow on Broadway. The intent of the northbound and southbound auxiliary lane extensions on I-5 is to improve the safety and operations on the freeway.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED



- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate a major reconfiguration of the Broadway-Weidler interchange based on the Three-Point Interchange (De-Couple) Concept that would include new ramp terminal intersections and de-coupling Broadway/Weidler to Broadway.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossings at Clackamas and Dixon/Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

ASSUMPTIONS:

- The five existing structures (Broadway, Weidler, Williams, Vancouver and Flint) would be removed.
- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

5.e - Three-point Interchange (de-couple Broadway/Weidler)
Option 2
N/NE Quadrant and I-5 Broadway/Weidler Plans
Freeway/Local Transportation Interface

CONCEPT 5E. THREE-POINT INTERCHANGE (DE-COUPLE BROADWAY/WEIDLER)

OPTION 2

DESCRIPTION

This concept option is similar to Option 1 but it would include a local street connection between N.E. 1st/Clackamas and N.E. Victoria/Broadway and a bike/pedestrian only facility along N. Vancouver between N. Wheeler and Broadway.

MAJOR FREEWAY ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate a major reconfiguration of the Broadway-Weidler interchange based on the Three-Point Interchange (De-Couple) Concept that would include new ramp terminal intersections and de-coupling Broadway/Weidler to Broadway.

MAJOR LOCAL STREET ELEMENTS TO BE ANALYZED AND EVALUATED

- Evaluate potential new overcrossings at Clackamas and Dixon/Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

ASSUMPTIONS:

- The five existing structures (Broadway, Weidler, Williams, Vancouver and Flint) would be removed.
- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

Step 3 Evaluation Criteria Matrix – Stakeholder Comments (DRAFT 7/21/11)

I. Comments Submitted at the Joint Land Use/Transportation Subcommittee Meeting (7/13/11)

General comments/questions:

- We need more quantifiable measurables on the left side.
- Don't just measure things; aim to reduce or increase
- Is there a phase 4 where we text the freeway concepts against the land use concepts?
- Has the City done an analysis of the development capacity based on these scenarios?
- Are you going to ask the SAC to approve these criteria?
- Can we look at vacating streets as a jobs supporter, because it creates developable land?

Comments by goal:

1. A diverse mix of commercial, cultural, entertainment, industrial, recreational and residential uses, including affordable housing.
   - 1e – close to multimodal transportation options
   - High density at bridgehead/Blanchard at odds with goal of maximizing lloyd

2. Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages.
   - Separate 2c – fostering commercial development while supporting industrial are two separate thoughts.
   - Which areas are you trading off with the commercial development? Where do you encourage tradeoffs?

4. Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods.
   - Need to make sure we are keeping the existing businesses in mind with freeway impacts.
   - In 4b, need to make sure we are supporting/encouraging small neighborhood businesses.
   - There is confusion about air quality measurements. Will you do a hot spot analysis?

5. A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system.
   - Add access to transit
   - Need more about pedestrians in this section
   - Need to minimize impacts to streetcar operations during freeway construction and ongoing.
   - Should we be prioritizing what type of access is maintained in 5D? Should we de-emphasize single occupancy vehicle (sov) access?
   - Sometimes sov access is what is needed. In the future, we will likely have more single households, so this need will increase. Don't put the local merchants at risk by forcing sov out of the central city.

6. Improve the local circulation system for safe access for all transportation modes within the quadrant and at freeway interchanges.
   - Need more about pedestrians in this section

- Add, increase housing/employment that has good access to transit
- Add “more” to bullet 6a, after “provide”. Also reference reliable, time-saving transportation solutions.
- Add “improve rail operations for freight and passenger rail”.
- Explore options to add a high-speed rail station.

7. Equitable access to community amenities and economic opportunities.
   - Develop 3 criteria to evaluate alternatives?
   - Need to make the objectives more clear.
   - Focus on local jobs and contracting opportunities.

8. Protection and enhancement of the cultural heritage of the area and its sub-districts.
   - Clarify hierarchy in policy context for 8b and 8c.
   - We should separate the gentrification impacts from the transportation impacts.
   - Add something about traffic impacts to neighborhood fabric and character.

II. Written Comments Submitted Outside the Subcommittee Meeting

Upstream Public Health, Active Right of Way, Willamette Pedestrian Coalition, the Bicycle Transportation Alliance, and other interested individuals – SAC and non-SAC members (via email, 7/12/11)

General comments:

- The current evaluation measures do not go far enough in considering the need to reduce SOV trips and increase active transportation modeshare.
- How can we improve transit with this project?
- There are not enough measures examining safety and employment impacts.
- Several of the interchange concepts seem fairly weak against many of these objectives, particularly the criteria in #5 around connecting to key locations. In our opinion, concept 6 and concept 3 looked like the best places to start with respect to meeting the objectives and providing our alternative ideas to improve the concepts.

Although the matrix is for "freeway interchange & local transportation interface concept evaluation measures" and not for the land use concepts (that's another document) it does include some measures, such as "amount of enhanced street tree canopy" that aren't as transportation-focused as the others. Taking a cue from this, we're including some ideas that aren't as strongly tied to the freeway concepts.

Some of the suggestions we have may be more appropriate for the design phase instead of the concept evaluation phase, but we wanted to make sure to capture them and get them on the table ASAP. Please let me know if you want any clarification on these before the meeting tomorrow & I'll do my best to get back to you.

Comments by goal/objective:

1. A diverse mix of commercial, cultural, entertainment, industrial, recreational and residential uses, including affordable housing.

There are seven objectives under this goal but only one evaluation measure listed. The evaluation measure is “Minimize the need to purchase property for right-of-way.”

Other evaluation measures that we might suggest include:

- Measure impacts of configuration changes on major attractions. (1c)
- Would configuration remove residential or RX zoning areas? (1f)
- Does the configuration block access or development for parks and recreation areas? (1g)

2. Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages.
There are four objectives under this goal and only one evaluation measure – the same as for goal #1.

Other evaluation measures that we might suggest include:

- Check whether the configuration removes jobs or commercial space. (2d)
- Does configuration prevent or degrade access to current and future employment locations through the active and local transportation systems? (2)

3. Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment.
There are four objectives under this goal and three evaluation measures: "Amount of enhanced street tree canopy;" "Reduction of storm water run-off and energy use;" and "Location and level of local connectivity improvements."

Other evaluation measures that we might suggest include:

- Measure parks/open space per user (including workers and residents). (3a)
- Specifically improve east-west connections across the freeway. (3b)

4. Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods.
There are three objectives for this goal and three evaluation measures: "Health and safety impacts of proposed new infrastructure;" "Measure air quality;" and "Measure greenhouse gas emissions." These measures, though, are not directly connected to the objectives mentioned in the goal. Many of the measures that we'd suggest for this goal are also appropriate for other goals & relate more strongly to the objectives (see #5 & 6).

Other evaluation measures that we might suggest include:

- *Improving* air quality and *reducing* greenhouse gas emissions.

5. A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system.
This goal has eight objectives and five evaluation measures (one of which includes a lot!): "Increase quality (comfort/safety) of bicycle freeway crossing opportunities;" "Increase quality (comfort/safety) of pedestrian freeway crossing opportunities;" "Provide direct pedestrian and bicycle connections to and from the Broadway Bridge, the Steel Bridge, the Rose Quarter/Transit Center, the Oregon Convention Center, the Lloyd Center, the Vancouver/Williams corridor north of Hancock, and the Broadway/Weidler corridor east of I-5;" "Minimize conflicts between freight traffic and other modes;" and "Maintain or improve local traffic operations in the vicinity of the Broadway/Weidler Interchange."
Other evaluation measures that we might suggest include:

- Connectivity measures – block length, node connectivity (alpha & gamma measures). (5a)
- Evaluation of bike/ped/transit facility type (width, buffers, amenities, etc.). (5a & 5f)

- Overall street width. (5a & 5f)
- Traffic volume and speed. (5a & 5f)
- A measure related to parking & TDM – not sure what this would look like, but there's nothing here so far. (5h)
- Not just quality of freeway crossing opportunities but of local connections and crossings. (5a & 5f)
- Current crash rate of relevant locations. (5f)

6. Improve the local circulation system for safe access for all transportation modes within the quadrant and at freeway interchanges.
This goal has seven objectives and twelve measures, including all of those listed for goals #1, 5, 8, & 9. The remaining five are: "Improve weaving LOS on I-5 at Broadway/Weidler;" "Lower likelihood of collisions on I-5 between Broadway and I-84;" "Mainline through traffic performance;" and "Improve local circulation and freeway crossing opportunities."

Other evaluation measures that we might suggest include:
- Nearly everything we'd suggest for #5. (6f)
- Travel time through the corridor by mode (and add "efficient, fast, safe, and comfortable" to "affordable range of multimodal transportation solutions" objective. (6a and 6e, which are essentially the same)
- HCM 2010 bicycle and pedestrian LOS. (6a)
- Share of network with speeds less than 20mph, 25mph, 30mph, etc. (6f)
- Rather than "seek to reduce accident potential" as an objective, shoot for a better outcome! Vision Zero? Exemplary safety record for freeway interchange of this type? (6f)
- Improve freeway access & mobility for transit & not just freight and auto. (6c)
- TDM measures seem to belong in here and in #5, too – parking pricing & availability, carpooling, transit improvements, enhanced SmartTrips program? (6c)

7. Equitable access to community amenities and economic opportunities.
This goal has nine objectives and relies on the evaluation measures for goals #4, 5, & 6.

Other evaluation measures that we might suggest include:
- Instead of "ensure that infrastructure improvements do not have disproportionate public health impacts," we'd like to see that objective say "…do not have negative public health impacts."
- Many of the suggestions made for goals #4, 5, & 6 would fit here, too.

9. Additional criteria.
This goal has four objectives and one measure: "Develop Broadway/Weidler Interchange and Local Transportation Interface cost estimates."

To ensure that plan proposals are consistent with relevant adopted local, regional and state land use and transportation goals and policies, we encourage particular attention be paid to the following:

- Multnomah County and the City of Portland's Climate Action Plan calls for us to: "Create vibrant neighborhoods where 90 percent of Portland residents and 80 percent of Multnomah County residents can easily walk or bicycle to meet all basic daily, non-work needs and have safe pedestrian or bicycle access to transit." And: "Reduce per capita daily vehicle-miles traveled (VMT) by 30 percent from 2008 levels."

- The Portland Bicycle Plan for 2030 as well as the Climate Action Plan calls for (In Resolution 36748): "…twenty-five percent share of commute trips to be made by bicycling by 2030."

- City of Portland's Economic Development Strategy (Resolution 36714) establishes the City's intent to make Portland "the most sustainable city in the world"

- Metro's Regional Transportation Plan for 2035 (Ordinance 10-1241B) calls for: Provision for bikeways along arterials, collectors and local streets, and bicycle parking in centers, at major transit stops shown in Figure 2.15 in the RTP, park-and-ride lots and associated with institutional uses.

- Oregon Revised Statute 366.514 states: "Footpaths and bicycle trails, including curb cuts or ramps as part of the project, *shall* be provided wherever a highway, road, or street is being constructed, reconstructed, or relocated."

- Oregon Revised Statute 184.653 calls for least cost planning principles: "As used in this section, "least-cost planning" means a process of comparing direct and indirect costs of demand and supply options to meet transportation goals, policies or both, where the intent of the process is to identify the most cost-effective mix of options." And: "The Department of Transportation shall, in consultation with local governments and metropolitan planning organizations, develop a least-cost planning model for use as a decision-making tool in the development of plans and projects at both the state and regional level."

- Oregon Revised Statue 468A.205 which sets policy; greenhouse gas emissions reduction goals states: "The Legislative Assembly declares that it is the policy of this state to reduce greenhouse gas emissions in Oregon pursuant to the following greenhouse gas emissions reduction goals: (a) By 2010, arrest the growth of Oregon's greenhouse gas emissions and begin to reduce greenhouse gas emissions. (b) By 2020, achieve greenhouse gas levels that are 10 percent below 1990 levels. (c) By 2050, achieve greenhouse gas levels that are at least 75 percent below 1990 levels."

Another consideration is that one objective is to "ensure capital costs within project limits," but we don't know what those limits are. What about budget for programs, operations (especially for TDM)?

Chris Deffebach – SAC member representing Metro (via email, 7/14/11)
You asked for follow up emails for comments. I wanted to summarize a few points that I don't think came up last night.

Transportation options and evaluation:

- Add a measure under the multi-modal criteria (#1) that includes the impact on transit operations. The N/NE area has the significant Rose Quarter transit station, frequent bus services on Multnomah, Broadway, Weidler and other services on MLK/Grand in addition to the brand new streetcar investment. One of the tools to redevelop the land use in the area is to take advantage of the relatively good transit access and the options should evaluate the effect on transit from that point as well as just access in general. Metro has transit service volumes forecast in the RTP if you want to use that.

- Include the effect of street connectivity on redevelopment opportunities as part of the urban design criteria (#5) as well as #1 (multimodal) a ii. The options that increase street connections and offer alternatives to MLK, Grand and Broadway/Weidler across the freeway should help open up access to adjacent areas for development. The opposite effect should be noted for those options that eliminate connections.
- Add another measure under the displacement measure (#3) to reflect effects other than physical displacement such as noise or the effect of faster traffic speeds or higher volume streets on the ability to develop adjacent areas. This could also be included as an urban design measure.
- Include a measure of the impact on special event traffic operations. We heard that the Rose Quarter traffic plans work well now in terms of discharging high volumes of traffic. How do the options affect that? This could be part of the heritage criteria (#4) as these are special facilities in the district.

Land use options evaluation criteria.

The land use evaluation criteria do not yet include measures. As you develop measures to see if the various options support the goals and objectives, I suggest these measures as a way to link back to Metro policies and the community investment strategy:

- Which options increase the number of jobs or households near transit? These support goals to reduce cost burdened households (considering cost of transportation and housing) and promote jobs that are accessible to people without cars.
- Which options align or support the market to facilitate job and housing devleopment? Or in some way consider what the market will bear/support. With all of the zoned capacity in Lloyd district now, it will be important to answer how the new proposed land use mix will be more likely to be built.

That's all I could think of to add to your long list you already have. If you need any help with the evaluation against Metro policies, let me know how we can help.

Jenny Lyman – SAC member representing transit riders (via email, 7/14/11)
#5/#6 - The evaluation measures specifically include bikes and peds - we should also include access to transit.

Mike Warwick – SAC member representing Eliot Neighborhood Association (via email, 7/19/11)
I agreed with the discussion that the current version is too abstract and has too many subparts. So, naturally, I rewrote the whole thing [see below]. It isn't a formatted document, just my idea of how the goals and sub-objectives could be reworked to make the document shorter and more focused with more measurable metrics, at least in my opinion.

In terms of "highest 2 priorities" based on the current (not mine) matrix, I vote for the following:
1b and f
2a and c
3a and d
4a and b
5g
6e and g
7b and c
8a, b, and c (you think I can ignore any?) 9a and d

This whole goal and matrix process confuse me. There are multiple sub areas. Each should have area appropriate goals and objectives. Calling the goals and matrix N/NE Quadrant AND Broadway/Weidler

goals and objectives invites the assumption there is some kind of division. Since the fundamental division in the matrix is between land use and freeway access, I think the title should be titles to sharpen the focus on Quadrant-wide land use versus freeway improvements/ramps.

The major land use goals are also confusing and leave themselves open to too many interpretations what with the multiplicity of goals in each title. I would suggest the following simplification:

1. Vibrant urban neighborhoods
2. Economic development
3. Environmental health
4. Social health
5. Transportation systems for the future
6. Local transportation options that serve the neighbors
7. Social equity
8. Honor the area's heritage
9. Cost effectiveness

These could be phrased as "action" goals so long as it doesn't diffuse the focus. I added the last on, 9, from the also rans because I think it deserves to be among the major goals. The others are, I think, subsumed in the ones already selected.

As noted at the subcommittee meeting, the objectives are qualitative and vague. There are also too many of them. Both allow the process to unfold in a way that facilitates a check the box approach to claim they have been achieved when the results fall short of expectations. I have tried to address this.

Vibrant urban neighborhoods have the following characteristics:

1. Diversity of housing types to provide residents of any income level to find housing.
2. Structures appropriate to their zoning and adjacent development (shorter near established single family homes, taller near other tall buildings or in zones for tall structures).
3. Development that enhances rather than damages existing neighborhoods and preserves historic structures and sites.
4. Transportation projects minimize conversion of land for rights of way or divide or isolate developable parcels.
5. An urban form that fosters healthy living with safe, walkable neighborhoods with ample access to greenspaces and natural areas.

Economic development in the area has the following characteristics:

1. Fosters new retail and employment options for existing area residents and workers and attracts new residents.
2. Allows existing businesses and residential communities to thrive consistent with underlying zoning.
3. Targets properties that are un- or underdeveloped to support a vibrant urban neighborhood for redevelopment through appropriate zoning.

Environmental health means

1. Development that utilizes marginal lands such as brownfields and airspace over transportation or other infrastructure projects,
2. Protects both the built and natural areas from construction impacts,
3. Improves access to greenspaces, plazas, and natural areas both literally and visually,

4. Building and neighborhood designs that minimize use of fossil energy and potable water, including shared use of energy and water among buildings.

Societal health means

1. Human scale transitions between various neighborhood districts and urban structures including use of set backs and vegetative treatments for high rise structures and along pathways between neighborhoods,
2. Parks and plazas for quiet contemplation as well as ones for social gatherings,
3. Integration of educational, medical, and care facilities into the urban fabric of retail, commercial, light industrial and residential areas.

Transportation systems for the future includes

1. Freeway enhancements that improve traffic flow, reduce accident rates, and facilitate freight access compared to current traffic volume and levels of service.
2. Increased and improved access to and from current and future inter- and intra-state rail options for passengers and freight.
3. Modifications of freeway access points that improve other transportation modes so as to facilitate urban neighborhood development in a timely manner.
4. Improvements to local transportation facilities to enhance travel within and through the area by pedestrians, bikes, and modes used by the mobility impaired. Such enhancements shall improve access to greenspaces, plazas, and other refuges from traffic and weather for travelers in and through the area.

Equity

1. Equity means unimpaired choice by any individual of housing, employment, retail and commercial services offered in any market within the area.
2. It also means new development that does not impair those choices for current residents, businesses, or industries but rather enhances to choices consistent with underlying zoning and goals of this plan.
3. Finally, it means development does not reduce the well-being and quality of life of current residents, workers, landlords, and business owners.

Honor the area's heritage

1. Means exactly that. Nothing should result from this plan that facilitates the involuntary demolition or diminution of the character or significance of historic resources and sites and unique attributes that make the area and its sub areas characteristic. Specifically, the areas including remnants of the historic City of Albina and the Eliot and Sullivan's Gulch, and Lloyd neighborhoods, the high-rise residential enclave centered at Clackamas and Second, and the Broadway Business District.

Cost effectiveness

1. Cost effectiveness means capital improvements represent the "best value" considering the potential benefits weighed against the costs. In this context, it means the benefits from transportation improvements must be greater than the liabilities associated with construction and lost opportunity costs of that investment as measured in terms of local health, local economic development, local increase in equity and environmental health, historic preservation, efficiency of land use and timeliness of those benefits. In other words, the time and resources invested in transportation changes should be more than offset by the beneficial effects of timely

economic and housing developments, employment, historic preservation, equity, and enhancements to environmental and social health and well being.

Freeway/Transportation Metrics – (As I understand these, these are not measures of the project per se, but data to be developed to facilitate comparison of proposed alternatives against the Land Use goals. These will mostly be modeled, rather than actually measured.)

Vibrant urban neighborhoods and Economic development.

2. Construction timing (when it can start) and duration (lapsed time for construction). Metric is best synchronization to development of "greater" Rose Quarter area and least disruptive to area businesses and established commuting patterns, including users reliant on Loop Streetcar.
3. Property acquisition and development or "enjoyment" impairment. How much land will be impacted by construction directly and indirectly?
4. Number of historic or characteristic properties impacted directly by construction and indirectly by increased traffic in adjacent streets, noise on nearby freeways from increase traffic.
5. Net change in walkability indices.
6. Net change in greenspaces, plazas, and natural areas.
7. Ease of access to/from area for local freight firms, neighborhood travelers, bikes, pedestrians, and the mobility impaired.
8. Parcels where transportation access is improved/reduced, as measured by access by local freight service by parcels zoned commercial/industrial. Residential parcels where access to pedestrian/bike infrastructure is enhanced/diminished.

Environmental and Social health

1. Plan that minimizes disturbance of the land (to prevent larger scale soil erosion, dust formation, etc.) and demolition of existing infrastructure (to reduce noise and waste).
2. Plan that minimizes "taking" of land outside the existing right of way.
3. Plan that creates new greenspaces, public spaces, and access to natural areas as a result of relocation of roadways.
4. Plan that removes nuisance and blight in existing rights of way.
5. Plan that provides more direct routes for through traffic to reduce idling and standing in the area.
6. Plan that directs heavy freight away from the surface street system.

Transportation system of the future

1. Plan that "fits" with likely larger 30-year freeway Loop studies/improvements to minimize future construction in the area.
2. Plan that accommodates increased use of area street system and rights of way by non-vehicles and potentially next generation of vehicles, which could be much smaller.
3. Plan that accommodates local freight access to service new development in the area.

Honor area heritage

1. Plan that minimizes disturbance of existing historic and iconic structures and sites (avoids and provides the largest buffer around).
2. Plan that avoids directing traffic to and through historic and established residential neighborhoods.

3. Plan that supports development of new residential neighborhoods. (High volume streets don't bisect areas zoned for residential development and local streets discourage cut-through traffic and out-of-area parking.)

Cost effectiveness

1. Lowest cost plan.
2. Plan that provides greatest potential benefits in terms of new development.

Northeast Coalition of Neighborhoods (via mail, attn. to Mayor Adams, received 7/1 9/11)
The Northeast Coalition of Neighborhoods is dedicated to the safety and livability of our twelve inner North and Northeast neighborhoods. We appreciate the proactive nature of the N/NE Quadrant and I-5 Broadway/Weidler Planning project and the associated public involvement efforts thus far.

Given the history of destruction to inner N/NE Portland by the I-5 corridor and other major projects in this area, we also want to be proactive in voicing the overall priorities of our neighborhoods and the criteria with which we hope you and the project staff will evaluate any plans. These priorities follow:

- Preservation of historical buildings and neighborhoods. Any freeway improvement projects should "do no harm" to existing neighborhoods.
- The freeway improvements should be accommodating to the land use and urban design project goals, rather than the other way around.
- The ongoing and significant public expenditures for streetcar improvements and associated development priorities should be carefully considered in any freeway changes.
- Plans and priorities should increase the livability for all of our inner N/NE Portland residents and equitable access to jobs, services and other neighborhood improvements is of the utmost importance.

We appreciate your attention to this project and look forward to collaborating to create a thriving inner N/NE corridor that increases livability for all.

N/NE Quadrant and I-5 Broadway/Weidler Plans			
Step 3 Evaluation Criteria - Stakeholder Comments and Staff Responses (DRAFT 7/28/11)			
Comment Source		**Comment**	**Staff Response**
SAC Meeting (6/16)	1	The items related to the freeway interchange and local transportation need to be weighted.	The proposed evaluation measures include measures to analyze impacts on all transportation modes for local, city and regional travel needs. Measures will depend on the type of street and type of trips. Each SAC member will determine their own priorities or weighting as they recommend alternatives to forward.
SAC Meeting (6/16)	2	There are many measures related to bike/ped, but no mention of safety.	See 5.f. and 6.f.: Increase quality (comfort/safety) of bicycle freeway crossing opportunities and• Increase quality (comfort/safety) of pedestrian freeway crossing opportunities
SAC Meeting (6/16)	3	When will we see a merging of the two categories of concepts, land use and transportation?	During Phase 3, a recommended Quadrant concept will be proposed prior to finalizing a freeway concept. This recommended Quadrant Concept will be evaluated against the Transportation Concepts .
Subcommittee Meeting (7/13)	4	We need more quantifiable measurable on the land use side.	Phase 3 will develop a recommended Quadrant Concept based on land use and urban design principles. Measures, where appropriate, for the Goals and Objectives for the Quadrant Plan will be part of the final plan, Phase 4.
Subcommittee Meeting (7/13)	5	Don't just measure things; aim to reduce or increase	Both land use and transportation concepts are designed to improve conditions (reduce or increase). However, there are tradeoffs, so improving one element may make another element not as good as in another option. We will measure the results, and report them so the SAC can see which elements are improved or impacted to help in the decision process of which options to recommend. The NNE Quadrant plan would propose potential targets for Phase 4.
Subcommittee Meeting (7/13)	6	Is there a phase 4 where we test the freeway concepts against the land use concepts?	See response to #3. In Phase 4, a recommended freeway concept will be evaluated with the recommended land use concepts for assess the overall transportation impacts.
Subcommittee Meeting (7/13)	7	Has the City done an analysis of the development capacity based on these scenarios?	The Subdistrict Profiles as part of the existing conditions identify the development capacity for the NNEQ, and has capacity to accommodate these land use scenarios.

N/NE Quadrant and I-5 Broadway/Weidler Plans			
Step 3 Evaluation Criteria - Stakeholder Comments and Staff Responses (DRAFT 7/28/11)			
Comment Source		**Comment**	**Staff Response**
Subcommittee Meeting (7/13)	8	Are you going to ask the SAC to approve these criteria?	Yes, on July 28
Subcommittee Meeting (7/13)	9	Can we look at vacating streets as a jobs supporter, because it creates developable land?	Street vacation is a separate city process. This plan could identify potential opportunities for street vacation if needed for economic development or other reason.
Subcommittee Meeting (7/13)	10	Focus on creating affordable housing close to multimodal transportation systems and social services.	Access to transit for housing and jobs will be examined. NNEQ overall has high transit coverage and will be documented. Objective 1.e. has been reworded to encourage affordable housing close to multimodal transportation systems. Within the Central City, access to social services is not anticipated to be an issue.
Subcommittee Meeting (7/13)	11	High density at bridgehead/Blanchard at odds with goal of maximizing Lloyd	The Land Use, Urban Design, and Local Transportation Workbook contains subarea questions that ask the community questions on where to focus commercial development. NNEQ Quadrant Plan is a 25 -year plan and will support strategies for economic development throughout the study area. Infrastructure investments have been in place to stimulate development in the Lloyd, such as LRT and current streetcar project.
Subcommittee Meeting (7/13)	12	Separate 2c – fostering commercial development and supporting industrial activities are two separate thoughts.	Commercial development can complement industrial activities. Widmer for example is both manufacturing and commercial. Each subarea may also have a different emphasis, similar to Central Eastside Industrial area.
Subcommittee Meeting (7/13)	13	Which areas are you trading off with the commercial development? Where do you encourage tradeoffs?	The Land Use, Urban Design, and Local Transportation Concept Alternative Workbook contains subarea questions that ask the community questions of where to focus commercial development.
Subcommittee Meeting (7/13)	14	Make sure we are keeping the existing businesses in mind with freeway impacts.	See 2.d. and 7.a. for example. Impacts on existing businesses will be measured - including access and circulation changes, parking impacts and building impacts.
Subcommittee Meeting (7/13)	15	In 4b, make sure we are supporting/encouraging small neighborhood businesses.	Goals and Objectives contained in 2.d., 7.e., 7.f., and 7.h. addresses this comment.

N/NE Quadrant and I-5 Broadway/Weidler Plans			
Step 3 Evaluation Criteria - Stakeholder Comments and Staff Responses (DRAFT 7/28/11)			
Comment Source		**Comment**	**Staff Response**
Subcommittee Meeting (7/13)	16	There is confusion about air quality measurements. Will you do a hot spot analysis?	Hot Spot analysis is done at the most congested intersections where traffic is queuing significantly. ODOT has requested more information from URS (project consultant) on the level of effort and cost of this analysis. This analysis may need to be conducted in the NEPA phase.
Subcommittee Meeting (7/13)	17	Add access to transit to measures under goals 5 and 6	See response to #10. Access to transit for housing and jobs will be examined within a 1/4 mile of bus stops, streetcar stops, and LRT Stations.
Subcommittee Meeting (7/13)	18	Need more about pedestrians in this section	Staff believes these measures are appropriate. Pedestrian is included under "multimodal." See 5a-d, 5f, 5i, 6a, 6b, 6d for original and edited language.
Subcommittee Meeting (7/13)	19	Minimize impacts to streetcar operations during freeway construction and ongoing.	Added measures 5.a, 6.d. and 6.g.
Subcommittee Meeting (7/13)	20	Should we be prioritizing what type of access is maintained in 5D? Should we de-emphasize single occupancy vehicle (sov) access?	Added "multimodal" to objective 5.d. Balancing the access needs for all travel modes will be important for the economic vitality of businesses in the study area. See comment 15.
Subcommittee Meeting (7/13)	21	Preserve single occupancy vehicle access as it relates to local merchants.	Added "multimodal" to objective. See response to #20.
Subcommittee Meeting (7/13)	22	increase housing/employment that has good access to transit	See response to #17. Also, note the N/NEQ currently has very good transit coverage.
Subcommittee Meeting (7/13)	23	Add “more” to bullet 6a, after “provide”. Also reference reliable, time-saving transportation solutions	Added "reliable, time -saving and effective" to objective 6.a., instead of "more".
Subcommittee Meeting (7/13)	24	Add “improve rail operations for freight and passenger rail”	Added as 6.h.
Subcommittee Meeting (7/13)	25	Explore options to add a high-speed rail station	High speed rail options are part of a state-wide planning effort. This plan will coordinate with this effort. SAC could recommend to ODOT Rail to include in scope of EIS alternatives that look at the I-5 corridor for HSR, including tunneling portions of the route entering Portland, and alternative station locations on the east side of the Willamette River and a route to Vancouver on the UPRR alignment through North Portland instead of the BNSF alignment in NW Portland. See new objective 5.j regarding supporting the ODOT high speed rail study.

N/NE Quadrant and I-5 Broadway/Weidler Plans			
Step 3 Evaluation Criteria - Stakeholder Comments and Staff Responses (DRAFT 7/28/11)			
Comment Source		**Comment**	**Staff Response**
Subcommittee Meeting (7/13)	26	Develop 3 Equitable Access criteria to evaluate alternatives?	See change to 1.e. Also, Objective 7.d. includes connections to services, including access to multimodal transportation options.
Subcommittee Meeting (7/13)	27	Need to make the objectives more clear	Agree. As part of planning process, staff will continue to refine the goals and objectives based on community inputs with the intention for developing clearer objective statements.
Subcommittee Meeting (7/13)	28	Focus on local jobs and contracting opportunities	Not applicable for alternatives evaluation - broad procurement policy on contracting and subcontracting goals
Subcommittee Meeting (7/13)	29	Clarify hierarchy in policy context for avoid/minimize/mitigate approach to preserving cultural heritage.	Avoid means try not to impact a resource at all. Minimize means if you cannot avoid it; impact the resource as little as possible. Mitigate means if impacted, there may be mitigation required: payments for property, relocation costs, replace equivalent area of resource impacted, etc.
Subcommittee Meeting (7/13)	30	We should separate the gentrification impacts from the transportation impacts.	Objective 7.a. is focused on the issue of gentrification.
Subcommittee Meeting (7/13)	31	Add something about traffic impacts to neighborhood fabric and character.	Added 5.a. and 6.d.
Upstream Public Health et al.	32	The current evaluation measures do not go far enough in considering the need to reduce SOV trips and increase active transportation mode share.	Added Vehicle Miles Traveled (VMT) and Mode Split to 5.b. As part of the CC2035 and NNEQ Planning Process, BPS and PBOT will be updating the CCTMP to address mode split targets.
Upstream Public Health et al.	33	How can we improve transit with this project?	Added 6.e.; also transit service improvements are assumed in the transportation model and the RTP; funding and implementation are functions of the TriMet budget.
Upstream Public Health et al.	34	There are not enough measures examining safety and employment impacts.	Staff believes the proposed measures are appropriate.
Upstream Public Health et al.	35	Concepts 6 and 3 look like the best places to start with respect to meeting the objectives and providing alternative ideas to improve the concepts.	The SAC will discuss and recommend the alternatives they, as a group, believe best meet all of the Goals and Objectives.
Upstream Public Health et al.	36	Measure impacts of configuration changes on major attractions. (1c)	1.f., 2.d., 6.d. and 7.a. measure impacts on all land uses, including major attractions.

N/NE Quadrant and I-5 Broadway/Weidler Plans			
Step 3 Evaluation Criteria - Stakeholder Comments and Staff Responses (DRAFT 7/28/11)			
Comment Source		**Comment**	**Staff Response**
Upstream Public Health et al.	37	Would configuration remove residential or RX zoning areas? (1f)	Overall zoning issues will be addressed as part of the CC2035 and NNEQ to identify best strategies to support existing residential dwellings and to support future residential developments. 1.f. will measure both acreage of RX zoning required for ROW and any residential dwellings displaced by the freeway project.
Upstream Public Health et al.	38	Does the configuration block access or development for parks and recreation areas? (1g)	The alternatives are intended to improve access to existing open space; additional open space opportunities have been incorporated into the Quadrant concepts and will be refined with the freeway options.
Upstream Public Health et al.	39	Check whether the configuration removes jobs or commercial space. (2d)	2.d. will measure both acreage of employment zoning required for ROW and any businesses displaced
Upstream Public Health et al.	40	Does the configuration prevent or degrade access to current and future employment locations through the active and local transportation systems? (2)	5.a. measures bicycle and pedestrian access to employment and other locations
Upstream Public Health et al.	41	Measure parks/open space per user (including workers and residents). (3a)	Park deficient areas were identified in the Design Central City Report (http://www.portlandonline.com/bps/index.cfm?c=51133&), and incorporated into the Quadrant Concepts. Objective 7.d. address the need for appropriate parks and open space.
Upstream Public Health et al.	42	Specifically improve east-west connections across the freeway. (3b)	Incorporated into the Quadrant Concepts and Freeway Concepts. 3.b. and 5.a. measure bicycle and pedestrian access and freeway connections.
Upstream Public Health et al.	43	Change measures to *Improve* air quality and *reduce* greenhouse gas emissions.	See reworded 5.b.
Upstream Public Health et al.	44	Connectivity measures – block length, node connectivity (alpha & gamma measures). (5a)	5.a. measures bicycle and pedestrian connection quality
Upstream Public Health et al.	45	Evaluation of bike/ped/transit facility type (width, buffers, amenities, etc.). (5a & 5f)	5.a. measures bicycle and pedestrian connection quality
Upstream Public Health et al.	46	Overall street width. (5a & 5f)	Complete inventory of street width is contained in Atlas, linked: http://www.portlandonline.com/bps/index.cfm?c=53634&a=327972
Upstream Public Health et al.	47	Traffic volume and speed. (5a & 5f)	8.c. and 5.f. measure traffic volumes and speeds

N/NE Quadrant and I-5 Broadway/Weidler Plans			
Step 3 Evaluation Criteria - Stakeholder Comments and Staff Responses (DRAFT 7/28/11)			
Comment Source		**Comment**	**Staff Response**
Upstream Public Health et al.	48	A measure related to parking & TDM – not sure what this would look like, but there's nothing here so far. (5h)	As part of the overall planning for NNEQ, mode split targets to increase the use of alternative transportation modes, reduce VMT, and greenhouse gas emission will be developed as part of the plan.
Upstream Public Health et al.	49	Not just quality of freeway crossing opportunities but of local connections and crossings. (5a & 5f)	5.a. measures connections and circulation across and around the freeway
Upstream Public Health et al.	50	Current crash rate of relevant locations. (5f)	See Existing Conditions Report
Upstream Public Health et al.	51	Nearly everything we'd suggest for #5. (6f)	Each measure will be used once; will not repeat the measures under 5 in 6.
Upstream Public Health et al.	52	Travel time through the corridor by mode (and add "efficient, fast, safe, and comfortable" to "affordable range of multimodal transportation solutions" objective. (6a and 6e)	Deleted 6.e.; added "reliable, time-saving and effective" to 6.a.
Upstream Public Health et al.	53	HCM 2010 bicycle and pedestrian LOS. (6a)	HCM bicycle and pedestrian LOS is essentially what we're measuring in 5.a.
Upstream Public Health et al.	54	Share of network with speeds less than 20mph, 25mph, 30mph, etc. (6f)	The Quadrant Concept proposes alternatives for street functions and could lead to a system of street hierarchy that could relate a system of network of travel speed. Refer to the Workbook.
Upstream Public Health et al.	55	Rather than "seek to reduce accident potential" as an objective, shoot for a better outcome! Vision Zero? Exemplary safety record for this type of freeway interchange? (6f)	Human behavior is very unpredictable and as a result nearly impossible to achieve a situation of Zero incidents of accidents.
Upstream Public Health et al.	56	Improve freeway access & mobility for transit & not just freight and auto. (6c)	Added transit to 6.c.
Upstream Public Health et al.	57	TDM measures seem to belong in 5 and 6c, too – parking pricing & availability, carpooling, transit improvements, enhanced SmartTrips program?	See response to #48. City anticipates continuing partnership with Lloyd TMA and other organization to define specific strategies.
Upstream Public Health et al.	58	Change 7g to "do not have negative public health impacts."	Will measure air quality and estimate safety improvements to see what impacts are reduced
Upstream Public Health et al.	59	Many of the suggestions made for goals #4, 5, & 6 would fit here, too.	Each measure will be used once; will not repeat the measures under 5 in 6.
Upstream Public Health et al.	60	One objective is to "ensure capital costs within project limits," but what are those limits? What about budget for programs and operations (especially for TDM)?	ODOT is anticipating a project cost range of $100-200 million

N/NE Quadrant and I-5 Broadway/Weidler Plans			
Step 3 Evaluation Criteria - Stakeholder Comments and Staff Responses (DRAFT 7/28/11)			
Comment Source		**Comment**	**Staff Response**
Upstream Public Health et al.	61	Ensure plan proposals are consistent with adopted policy. See comment summary for complete list of highlighted policies. Or we could list each policy…	Both the Quadrant Plan and the Freeway Plan will make findings for consistency with State, Regional, and city policies and statutes. Also, include in objectives 9.c and 9.d.
Chris Deffebach (Metro)	62	Make sure there is a transportation criterion that measures impacts on transit operations.	Added 6.g. and measure under 5.a.
Chris Deffebach (Metro)	63	Include transportation criteria that capture effect of street connectivity on redevelopment opportunities as related to urban design and multimodal transportation.	Current City policies in the Central City Plan and the Transportation System identifies a system of street connectivity and street grid for the Central City. The Quadrant Concepts suggests alternative system of connectivity to link development, open space, and multi-modal network for public discussion.
Chris Deffebach (Metro)	64	Add a transportation criterion under the displacement measure to reflect the impacts of non-physical displacement on potential redevelopment, such as noise.	Noise impact will be modeled in NEPA process
Chris Deffebach (Metro)	65	Add a transportation measure to capture the impact on special event traffic operations.	Staff will review Rose Quarter traffic plans and develop circulation system in each alternative to accommodate Rose Quarter traffic if existing plan traffic patterns are impacted
Chris Deffebach (Metro)	66	Measure which options increase the number of jobs or households near transit.	Access to transit for housing and jobs will be examined within a 1/4 mile of bus stops, streetcar stops, and LRT Stations.
Chris Deffebach (Metro)	67	Measure which options align with or support the market to facilitate job and housing development.	Access to transit for housing and jobs will be examined within a 1/4 mile of bus stops, streetcar stops, and LRT Stations.
Jenny Lyman (transit riders)	68	Include access to transit as a measure under goals 5 and 6.	Added 6.e.; also transit service improvements are assumed in the transportation model and the RTP; funding and implementation are functions of TriMet budget. Agree
Mike Warwick	69	The goals and objectives should be reworked to make the document shorter and focused with more measurable metrics.	See response to # 27.
Mike Warwick	70	Each subarea should have individualized and appropriate goals and objectives.	Agree. The Workbook with the subarea questions and survey will help inform the goals and objectives for each subarea.

N/NE Quadrant and I-5 Broadway/Weidler Plans			
Step 3 Evaluation Criteria - Stakeholder Comments and Staff Responses (DRAFT 7/28/11)			
Comment Source		**Comment**	**Staff Response**
Mike Warwick	71	The major land use goals should be simplified. Suggested new goals: 1)Vibrant urban neighborhoods, 2)Economic development; 3)Environmental health; 4)Social health; 5)Transportation systems for the future; 6)Local transportation options that serve the neighbors; 7)Social equity; 8) Honor the area's heritage; 9)Cost effectiveness.	See response to #27.
Mike Warwick	72	See the comment summary for a detailed re-write of objectives.	See response to #27.
Mike Warwick	73	The highest 2 priorities for each goal based on the current matrix are as follows: 1b, 1f, 2a, 2c, 3a, 3d, 4a, 4b, 5g, 6e, 6g, 7b, 7c, 8a, 8b, 8c, 9a, 9d.	Each SAC member will determine their own priorities as they recommend alternatives to forward.
NE Coalition of Neighborhoods	74	Freeway improvement projects should "do not harm" to existing neighborhoods.	Goals and objectives are to avoid/minimize impacts. See 8.c. There are tradeoffs and mitigation to consider with each alternative
NE Coalition of Neighborhoods	75	Freeway improvements should be accommodating to the land use and urban design project goals.	They will be evaluated for land use and urban design goals
NE Coalition of Neighborhoods	76	Streetcar improvements and associated development priorities should be carefully considered in any freeway changes.	See 6.g.
NE Coalition of Neighborhoods	77	Livability for all inner N/NE Portland residents should be increased, and equitable access to jobs, service and other neighborhood improvements is most important.	These comments are reflected in the Goals and Objectives in 1,2, 4 and 7.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Revised DRAFT Phase 3 Evaluation Matrix
July 28, 2011

The following is a revised Evaluation Matrix that incorporates the comments received on the previous draft dated June 15, 2011. Changes have also been made to provide clarity as to the types of decisions that will be made in Phases 3 and 4 and to incorporate updated thinking on the evaluation process resulting from recent staff work. This work includes analysis of the interrelationships between the Quadrant Concepts and Freeway Concepts (see "crosswalk" memorandum) and the process to narrow the wide range of freeway concepts (see Phase 2 screening matrix).

Many of the comments received at the SAC meeting, Subcommittee meetings, and from the community are focused on the final products of the planning process and will be incorporated into the plan as policies or strategies during Phase 4.

Phase 3 will involve additional analysis and evaluation of the concepts under consideration. It is intended to accomplish the following:

- SAC endorsement of a recommended Quadrant Concept; and
- SAC endorsement of a recommended Freeway Concept.

Phase 4 will involve development of the final plan products, where additional detail will be added to support the recommended concepts. It is intended to accomplish the following:

- Development and SAC endorsement of the N/NEQ Plan, including the goals, policies, land use/urban design/ transportation diagrams, zoning actions and future strategies; and
- Development and SAC endorsement of the I-5 Broadway-Weidler Freeway Interchange Plan, including the final project diagram, cost estimates, next step actions and construction strategies.

The column on the left contains the N/NE Quadrant and I-5 Broadway-Weidler Plans project goals as adopted by the SAC, numbered from 1 to 8. Under each goal are related *draft* objectives derived from a number of sources including SAC and subcommittee meetings, the Issues, Opportunities and Constraints report, the November open house and other public and agency input.

Together, the goals and objectives represent what we hope to achieve with the N/NE Quadrant and I-5 Broadway-Weidler Plans as a whole. They will guide development of a recommended Quadrant Concept during Phase 3 and provide a means for determining whether the final proposed plan, as a package, is balanced and complete and meets the aspirations and intent of project stakeholders.

Evaluation of the Quadrant Concepts will also be based on the three guiding principles of Place, Connectivity, and Scale, which represent general aspirations for the Central City. Ideas included in the Quadrant Concepts will be evaluated against these principles, as well as the overall plan goals and objectives. The guiding principles are described below:

- PLACE: Create opportunities for a diverse series of "places" that can be seen in the presence of or potential for an interconnected system of distinct and attractive high-density areas that support vibrant, livable and diverse communities, and that allows for the place to evolve and grow.

- CONNECTIVITY: Enhance street connectivity to support a diverse system of land uses, open space. Green system and a clear street hierarchy that provide multiple safe means of access and circulation that support the vitality of the district.

- SCALE: Creates the desirable scale of infrastructure in terms of its size, design, and volume to respond to the scale of quadrant's and adjacent land use activity: regional attractors and employment areas as well as City and local land use and mobility needs.

The column on the right contains evaluation measures specific to the freeway interchange and related local transportation interface element of the project. Each evaluation measure is tied to one or more goal or objective. They are generally more specific or quantitative than the objectives and are tailored to the infrastructure project characteristics of the freeway planning element. They will be used to evaluate the pros and cons of the SAC recommended concepts that emerge from the screening undertaken under Phase 2.

Highlighted text denotes changes to the June 15, 2011 draft.

N/NE Quadrant and I-5 Broadway/Weidler Plan Goals and Objectives	Freeway Interchange & Local Transportation Interface Concept Evaluation Measures
1. A diverse mix of commercial, cultural, entertainment, industrial, recreational and residential uses, including affordable housing: a. Provide opportunities for a variety of desired land uses in the quadrant and its Subdistricts b. Foster distinct and complementary subarea identities within the quadrant. c. Encourage uses that complement regional facilities including the Rose Garden, Memorial Coliseum, Convention Center and Lloyd Center, while seeking to balance the episodic nature of these attractions with additional activities. d. Foster increased residential density and improve jobs to housing ratio in the quadrant by 2035. e. Create opportunities for affordable housing close to multimodal transportation systems. f. Preserve existing housing in the quadrant. • Consider the impacts of proposed Freeway Interchange improvements on nearby residential dwelling-including land use and zoning impacts. g. Provide open space, parks and recreation opportunities.	• (1.f. and 2.d.) Minimize the need to purchase property for right-of-way. (measure acres needed by land use) • (1.f.) Minimize residential units displaced • (2.d.)Minimize businesses displaced (2.) See 5.a. for active transportation access
2. Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages: a. Create opportunities for new employment and a variety of employment types and levels. b. Maintain or increase development potential, e.g. through zoning, infrastructure and creation of new parcels. c. Foster increase in future high density commercial development while supporting and encouraging industrial activities in current industrial areas. d. Retain and support existing and local businesses in the quadrant.	
3. Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment: a. Create opportunities for new parks and open spaces. b. Maintain and create new access points to the river. c. Enhance and create new fish and wildlife habitat, tree canopy, and green infrastructure. d. Support sustainable development goals and practices, including creation of the Lloyd Eco-District.	• (3.c.) Amount of enhanced street tree canopy • (3.c.) Reduction of storm water run-off and energy use • (3.b.) Location and level of local connectivity improvements (See also 5.a.) • (4.) Health and safety impacts of proposed new infrastructure (see air quality under 5.b.) (see transportation safety under 5 and 6)
4. Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods: a. Create sensitive transitions between the more highly urban Central City and adjacent residential neighborhoods. b. Foster concepts that support high-density development in the Lloyd District and minimize their impacts on adjacent neighborhoods-Eliot, Irvington, and Sullivan's Gulch. c. Provide for amenities and services, such as parks, schools and connections, at a level appropriate to support the type and intensity of development proposed.	

N/NE Quadrant and I-5 Broadway/Weidler Plan Goals and Objectives	Freeway Interchange & Local Transportation Interface Concept Evaluation Measures
5. A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system: a. Improve multi-modal transportation accessibility and connectivity within and through the quadrant (e.g. via new or improved connections across freeway and in the district) b. Encourage the use of transportation modes other than single occupancy vehicles and reduces auto gas emissions and vehicle miles traveled.(e.g. via reduced median work and non work trip distance and auto mode split) c. Improve circulation for all modes in the Rose Quarter Transit Center. d. Accommodate present and future multimodal access needs of the quadrant e. Improve freight access from freeway and railroads to industrial areas and major destinations. f. Increase safety within the quadrant for all modes. g. Provide a street hierarchy system that supports the quadrant's desired urban form, land use and livability goals. h. Provide parking and transportation demand management strategies that better support the needs of the quadrant. i. Provide for Quadrant portal capacity to accommodate future multi-modal access needs for all trips destined to, from, and through the quadrant, with a distribution of trips appropriate to the desired street hierarchy. j. Support the ODOT High Speed Rail study, including analysis of alternative routes and station locations from existing rail facilities.	(5.a., 5.f. and 6.f.) Provide pedestrian and bicycle infrastructure and minimize pedestrian and bicycle conflicts with motor vehicles: • Increase quality (comfort/safety) of bicycle freeway crossing opportunities • Improve transit access and operations via fast, direct connections, better reliability and access • Increase quality (comfort/safety) of pedestrian freeway crossing opportunities • Provide direct pedestrian and bicycle connections to and from the following key locations: ○ Broadway Bridge ○ Steel Bridge ○ Rose Quarter/Transit Center ○ Oregon Convention Center ○ Lloyd Center ○ Vancouver/Williams Corridor north of Hancock ○ Broadway/Weidler Corridor east of I-5 • (5.b.) Reduce auto emissions ○ Reduction of emissions (improve air quality) ○ Reduction of greenhouse gas emissions • (5.b.) Reduce single occupancy vehicles (SOVs) with Transportation Demand Management (TDM) measures in Land Use Plan ○ Vehicle Miles Travelled per Capita ○ Increase Mode Split on non-SOVs • (6.c.) Improve weaving Level of Service (LOS) on I-5 at Broadway/Weidler • (6.f.) Lower likelihood of collisions on I-5 between Broadway and I-84 • (6.c.) Mainline through traffic performance • (5.e., 6.c. and 6.f.) Minimize conflicts between freight traffic and other modes • (6.d.) Improve local circulation and freeway crossing opportunities • (5.a. and 6.d.) Identify and address system-wide transportation impacts of proposed interchange improvements, including traffic diversion, local access and circulation, transit operations, and on land uses. • (5.f.) Reduced opportunities for traffic speeding on local street network (peak and off peak)
6. Improve the local circulation system for safe access for all transportation modes within the quadrant and at freeway interchanges. a. Provide affordable, reliable, time saving and effective range of multimodal transportation solutions. b. Connect regional trail system via local pedestrian and bicycle network. c. Improve freeway operations for transit (C-TRAN), freight and auto. d. Improve local access across freeways and rail crossings via improved, safer crossings and additional separated facilities for cars, pedestrians and cyclists. e. Improve access to transit for residents, employees and visitors. f. Seek to reduce accident potential. g. Minimize local land use impacts of transportation infrastructure. h. Improve rail operations for freight and passengers (e.g. “S” curve in UPRR Mainline).	• (6.g.)Potential construction impacts on land uses and transportation network and transit operations • (6.a.) Refer to 9.b. below: • (6.g.) Refer to 1. above and 8 below:

N/NE Quadrant and I-5 Broadway/Weidler Plan Goals and Objectives	Freeway Interchange & Local Transportation Interface Concept Evaluation Measures
7. Equitable access to community amenities and economic opportunities: a. Avoid/minimize/mitigate involuntary displacement of quadrant residents and jobs. b. Provide for a broad array of employment types and encourage living-wage jobs. c. Provide for diversity of housing types that meets the needs of all income-levels and a variety of household types and lifestyles. d. Provide for amenities and services, such as parks, schools and connections, at a level appropriate to support the type and intensity of development proposed. e. Increase the capacity of existing residents and business owners to share in the benefits from growth in the quadrant. f. Ensure that the plan compliments economic development and housing strategies to build capacity for existing area residents and businesses. g. Ensure that infrastructure improvement do not have disproportionate public health impacts. h. Ensure that plan proposals address the needs of local residents and businesses while recognizing the importance of the quadrant's region-serving facilities and infrastructure. i. Ensure the plan broadly supports the equity objectives established through the Portland Plan process.	• (7.a.) Minimize impacts to access, circulation, parking for major destinations / facilities • (7.g.) Health and safety impacts of proposed new infrastructure (see 5.b.(air quality), 5. and 6. (safety) above). • (See 1.f., 2.d. and 8.b.)

8. Protection and enhancement of the cultural heritage of the area and its sub-districts:
a. Preserve, enhance and celebrate historic and cultural resources.
b. Avoid/minimize/mitigate demolition of historic and cultural resources. Avoid or minimize adverse impacts on cultural or high priority community sites.
	• (8.b., c.) Measure impacts to existing historic and culturally significant structures
	• (8.c.) Minimize negative traffic pattern changes in residential neighborhoods (forecast traffic volumes)
	  • NE 2nd.Ave
	  • NE 3rd.Ave
	  • NE Hancock St
	  • NE Rodney St
	  • NE Tillamook St
	  • NE Schuyler St
	  • NE Clackamas
	  • NE Flint

9. Additional Criteria: a. Ensure plan proposals are practical, implementable and cost-efficient. b. Ensure capital costs within project limits. c. Ensure plan proposals are consistent with relevant adopted local, regional and state land use and transportation goals and policies. d. Ensure plan concepts and proposals are consistent with relevant goals and objectives of the Portland Plan and Central City 2035 processes.	• (9.b.) Develop Broadway/Weidler Interchange and Local Transportation Interface cost estimates

NECN

NORTHEAST COALITION OF NEIGHBORHOODS

July 7, 2011

Mayor Sam Adams
1221 SW 4th Avenue, Room 340
Portland, OR 97204

Dear Mayor Adams,

The Northeast Coalition of Neighborhoods is dedicated to the safety and livability of our twelve inner North and Northeast neighborhoods. We appreciate the proactive nature of the N/NE Quadrant and I-5 Broadway/Weidler Planning project and the associated public involvement efforts thus far.

Given the history of destruction to inner N/NE Portland by the I-5 corridor and other major projects in this area, we also want to be proactive in voicing the overall priorities of our neighborhoods and the criteria with which we hope you and the project staff will evaluate any plans. These priorities follow:

- Preservation of historical buildings and neighborhoods. Any freeway improvement projects should "do no harm" to existing neighborhoods.
- The freeway improvements should be accommodating to the land use and urban design project goals, rather than the other way around.
- The ongoing and significant public expenditures for streetcar improvements and associated development priorities should be carefully considered in any freeway changes.
- Plans and priorities should increase the livability for all of our inner N/NE Portland residents and equitable access to jobs, services and other neighborhood improvements is of the utmost importance.

We appreciate your attention to this project and look forward to collaborating to create a thriving inner N/NE corridor that increases livability for all.

Sincerely,

Chris Lopez, President
Board of Directors

CC: Commissioner Fritz, Commissioner Fish, Commissioner Saltzman, Commissioner Leonard, N/NE Quadrant Stakeholder Advisory Group, Stephanie Beckman, BPS, Todd Juhasz, ODOT

N/NE Quadrant and I-5 Broadway/Weidler Plans

JUNE 16, 2011 SAC MEETING # 7 AGENDA

CALAROGA TERRACE, 1400 NE SECOND AVENUE, PORTLAND, OR 97232

TIME	MIN	ITEM	LEAD(S)
5:00	30	Informal Discussion and Meal	All
5:30	30	Standing Items: A) Welcome B) Meeting Purpose C) Approval of Minutes D) Announcements 1) Schedule over summer: Open House; Mid-July Sub-committee; July SAC 2) Other process updates: • Lloyd District Bikeways Plan Update – Ellen Vanderslice, PBOT (10 min) • Portland Plan, CC2035, Rose Quarter Update – Steve Iwata, BPS (5 min) • Central Reach Natural Resources Inventory – Roberta Jortner, BPS (5 min)	Imperati
6:00	60	Local/LU/UD/Trans – discussion continued from 5/26/11 A) 3 Concepts B) 8 Sub-area Choices *SAC Action #1:* Discuss and comment on 3 concepts (Residential, Employment, and Blend) and 4 layers (Land Use, Mobility, Open Space, and Green Systems). Provide feedback to staff for refinement.	Iwata, Lisle
7:00	10	Break	
7:10	30	Status of Transportation Concepts A) Organizing and Screening of Ideas (~13 Concepts) *SAC Action #2:* Do you agree that the 13 Potential Concepts Recommended by staff adequately represent the range of concepts to be developed, analyzed, and evaluated per Step 2 of the I-5 Broadway/Weidler Interchange Area Screening process?	Cullerton Juhasz
7:40	30	Screening Factors Finalized & Evaluation Criteria Draft Presented *SAC Action #3:* Do you agree with the Land Use/Local Transportation (side 1) Screening Factors document as revised? *SAC Action #4:* Do you agree with the Freeway (side 2) Screening Factors document as revised? *SAC Action #5:* Do you agree that the draft Evaluation Criteria as presented today is heading in the right direction and is sufficient for staff to continue their work until we revisit this topic at the July 28 SAC Meeting?	Iwata, Cullerton, Imperati
8:10	10	Public Comment	Imperati
8:20	10	Next Steps and Meeting Evaluation A) Open House, June 29, 4:30 – 6:30, Metro Council Chambers B) Mid-July Sub-committee, C) SAC Meeting # 8: July 28, 2011	Imperati
8:30	0	Adjourn

INFORMAL DISCUSSION AND MEAL

WELCOME, MEETING PURPOSE, APPROVAL OF MINUTES, AND STANDING BUSINESS – SAM IMPERATI

Sam Imperati welcomed the group and reviewed the agenda.

NEW MEMBER INTRODUCTIONS

Carol Gossett is with Sullivan's Gulch Neighborhood Association. Will Elder has resigned his position, so she and Britt Brewer will be attending the SAC meetings to represent Sullivan's Gulch. She just moved to Portland, has owned her own business for 20 years, and has done economic development.

Leonard Shelley is an Air and Heating Planning Manager for UPS, sitting in for Malina Downey. He has been with UPS for 30 years, happy to be here tonight.

Lindsey Walker with Lloyd TMA, is attending on behalf of Owen Ronchelli.

Jonna Papaefthimiou is the new Planning and Sustainability Policy Advisor for Mayor Adams.

REVIEW OF SCOPE AND GOALS

Sam briefly reviewed the Project Goals and Scope documents, noting these were discussed and agreed upon earlier in the process. He gave the SAC time to review the documents and bring up any questions. Sam said these are the foundation for the next agenda item, the Screening and Evaluation Process Overview.

APPROVAL OF MEETING MINUTES

The March 9, 2011 Meeting Minutes were approved as written.

DRAFT SCREENING/EVALUATION PROCESS OVERVIEW

Steve Iwata with BPS will review the process the project team has gone through to date. They are essentially bringing two distinct processes together, the update of the Central City Plan for the N/NE Quadrant and the I-5/Broadway-Weidler interchange improvement project with ODOT, to create a very unique plan. They have been working to gather all the necessary data, and have a roadmap for what comes next.

Steve reviewed the process diagram, noting the steps have been divided up into different phases:

- Phase I: Background and Existing Conditions; Project Goals and Scope; and Issue, Opportunities and Constraints
- Phase II: Develop Concept Alternatives
- Phase III: Further Develop, Analyze, and Evaluate Concepts
- Phase IV: Plan Development
- Phase V: Legislative Process

Staff has received a lot of input, which they have spent considerable time organizing. The meetings today and June 16 are two very important opportunities for the SAC to have input. The project team hopes to have all the work completed roughly by the beginning of 2012.

Steve said that for land use, the intent today is to get some feedback on how the ideas have been organized. On the freeway side, they are still screening the 70-80 ideas into concepts. When all of this work is done, they will do outreach to get public review and input, and then do more detailed engineering and analysis. Staff will seek a recommendation at the end of phase three.

Steve referred the group to the Draft Screening criteria document, and reviewed it in detail. (The document can be found on the project website at: http://www.portlandonline.com/bps/index.cfm?c=52841). Staff is seeking comments on the concepts and screening criteria. This is an important step because the screening criteria will be used to narrow the options, which will lead to the final recommendation.

Lloyd Lindley: question for clarification: are we going to hear about the 70-80 ideas and then move to step 2?

Steve Iwata: yes.

Sam Imperati referred the SAC to the Process Overview chart, noting that we are at the point where staff will present tonight the 3-4 land use concepts - no build, employment focus, residential focus, and a blend of employment and residential. On the ODOT/transportation side, staff did a similar process, and we will show the SAC how and why they whittled down the 70-80 ideas to 12-14 concepts. Tonight, staff will review and hopefully the SAC will approve the screening criteria. This topic will be re-visited at the next meeting, but staff needs SAC feedback and approval to continue with the screening and organization process.

Sam Imperati: We will open the floor for questions, comments, and discussion. The main question to the SAC is do you agree with the proposed screening process?

Alan Lehto: in general, the approach looks fine. He suggests emphasis on the crosswalk between the quadrant-wide concepts and the Broadway/Weidler Interchange area concepts, which may involve iterative adjustment to each. It is going to take some focus to make sure these things really are integrating. He endorses the idea that the screening criteria are based on the goals, and encourages spending enough time on this key phase of the process.

Steve Iwata: our intent is to do that, noting at the same time, this is a unique planning process. With TriMet, we have a different process. This is the first time the City has tried to integrate an urban interchange with a land use process. It is an interesting challenge for staff.

Todd Juhasz: as we get closer, he agrees it is going to take a lot of care and thinks the SAC will find that these things really can work together.

Sam Imperati: noted there are two forms of evaluation we are discussing. There are “Screening Criteria,” which staff are using for packaging, screening, and synthesizing the vast amount of data to get it into a manageable

format. Then there is "Evaluation Criteria." The Screening Criteria are not the ultimate Evaluation Criteria. There is the crosswalk between the two, which is still in the development stage. The staff will be back to the SAC with fully flushed out Evaluation Criteria for review and approval. Some criteria are subjective, some are objective. We can create metrics to measure each. We'll have a better, refined version by the July SAC meeting. Right now, we are working at a high level, and will get down to the details soon.

Gary Warren: how are we integrating the Lloyd District Bicycle Plan into this SAC process?

Mauricio Leclerc: that is a separate process which he is a part of, so there is crossover and information being shared between the two processes. We will bring the project manager to the next SAC to provide a update.

Gary Warren: confirming that one of our goals is to talk about multi-modal transportation?

Mauricio Leclerc: correct.

Eric Lovell: likes the outline, it helps him understand what is going on. He would like to hear more about public review. Also, noting that as these ideas go out to the public, new people will get involved without any background, and is worried about getting "11th hour outrage." What is staff planning when it comes to public review?

Steve Iwata: will have to plan for more of that in phase three. There will be an open house in the end of June. Staff is happy to meet with any community or neighborhood groups. When we get a discreet set of alternatives and concepts, we will have more outreach in August.

Eric Lovell: a presentation or soliciting input?

Steve Iwata: a little of each. They are also drafting a workbook for the land use side of things, to get a better look at the sub areas regarding what are the issues and choices. There will be public meetings for those.

Eric Lovell: follow-up question regarding public process.

Sam Imperati: yes, as Steve said, will have the open houses. We may have the "11th hour outrage," but we are open to ideas all throughout the process. After the planning process is complete, it also goes through the legislative process. We are striving to balance efficiency and inclusiveness.

Andy Johnson: to add to Sam's comments, we will have public involvement events, and also there is on-going project communications and solicitation of feedback via website.

Karl Lisle: this is the group at which the project makes progress and moves things forward. We take what you do, out to public for review.

Sam Imperati: framed up the questions to the SAC, per the agenda.

Lloyd Lindley: will there be numbers? How will the screening be done?

Sam Imperati: we have not gotten to that level of detail, but we are working on it. We could choose a weighted scale to quantify using objective data, and also quantify subjective views. Staff will then develop a matrix to organize, display, and help with analyzing the information. Some evaluation factors are truly subjective. We just have not gotten to that level of detail yet.

Justin Zeulner: suggests we vote.

Gary Warren: sees a lot of comment re: adjacent residential, but nothing about existing. Would like to ask to see that in the document. Does not have a suggestion as to where.

Steve Iwata: could add that to Number 1.

Ed Abrahamson: in addition to what Gary has said, we talk about Weidler, Vancouver, and MLK as main streets. He wants to encourage supporting local businesses, not just chains. We must ensure economic development, with a focus on local businesses and main streets.

Lloyd Lindley: when speaking with Karl, these issues came up. It is really the zoning that is significant. Thinks that language should be in there. It is really quite specific.

Gary Marschke: a term that came up when we were talking about this was, "concentric circle" alignment, which implies protection of existing and support for new economic development that would focus on local businesses, rather than national chains.

Bob Sallinger: his overall comment is that the document seems somewhat random . #3C could be written to be clearer – currently it reads that we will "create new fish!" He also strongly recommends that it needs to have "green infrastructure" in there.

Cynthia Carmina Gomez: she is not sure, but is wondering if anyone has any thoughts about schools. She has not studied the document in detail, but from her read of it, she thinks it is not in there. There should be an acknowledgement of the need for schools if the area will develop as a residential neighborhood, or to create an environment suitable for school-aged youth.

Steve Iwata: see #4. That is the intent of #4.

Andy Johnson: a couple meetings ago you mentioned the residential component, and making sure there is infrastructure in place for families. We have that on our radar.

Cynthia Carmina Gomez: does anyone know if VOS, the day laborer site, is in the area? It is near MLK and I-84.

Staff: no; it is out of the area.

Cynthia Carmina Gomez: Would that be considered an adjacent type of property?

Steve Iwata: it is part of the Central East Side Quadrant plan.

Alan Lehto: it goes without saying but bears repeating - he hopes that staff, when they indicate "multi-modal," they truly think of all modes: bike, wheelchairs, cars, buses, MAX, etc.

SAC ACTION #1: Sam Imperati: asked the SAC if they can give a general thumbs up on next two months for the screening process as it has been described today – if we implement it as such, does it makes sense?

SAC: yes.

Sam said the next steps on the screening criteria are that staff will go ahead and propose track change language, with the suggestions we have heard in tonight's discussion.

SAC ACTION #2: Sam asked the SAC if they agree with the Draft Screening/Refinement Criteria for purposes of moving forward over next month?

SAC: yes.

LAND USE, URBAN DESIGN AND LOCAL TRANSPORTATION QUADRANT-WIDE CONCEPTS - UPDATE

Sam introduced Karl Lisle from BPS, who will discuss the current status of the land use, urban design, and local transportation quadrant-wide concepts. Sam noted that Karl will be using a new presentation software called Prezi.

Karl explained that his presentation will show the results of the organizing and repackaging of ideas which came from the February 2011 charrette. Each concept alternative has a different land use emphasis: Residential, Employment, or Blend. Existing Conditions are also shown for the sake of comparison. Each land use concept is supported by three related infrastructure system diagrams: Mobility, Open Space, and Green Systems. Karl noted that the individual concept ideas are not mutually exclusive and will likely be mixed and matched to form the preferred concept.

Karl said that today the project team hope to get feedback from SAC, especially:

- Does this approach to grouping of ideas make sense?
- Is anything missing?

Karl reviewed several concept alternatives, explaining some of the pros and cons, and providing the SAC with an idea how the layers work together: land use, mobility, open space, and green systems with existing, residential, employment, and blend options. The concept alternative maps and descriptions can be found on the project website. Karl noted that none of the uses are exclusive, unless the area is shaded gray on the map; gray is industrial. All others should be understood to identify the predominant land use in an area. However, a mix of uses would be allowed.

Gary Marschke: question regarding what is meant by mixed use.

Karl Lisle: what we mean by the mixed designation (pink) is that it is the most flexible, mixed, transition zoning that we have in the current code. The intention is to not prioritize one thing over another, but to make them all work together for complete communities.

Karl did not have time to review every map, and encouraged folks to take the time to review them between meetings, as we will revisit this information on June 16. He said that the quadrant-wide alternatives are linked to the discussion about the interchange by showing different options for local freeway crossings.

Lloyd Lindley: when thinking about these alternatives, he would like to challenge the group to think about what is the amenity that would draw people to the Lloyd district to live? Where is the draw for residential? He would like to see that in the evaluation criteria.

Sam Imperati: reminds the group that nothing in Karl's presentation is final, and staff is not trying to preclude anything; this is an organizational framework.

Justin Zeulner: this clearly involved a lot of work, and it is a great way to look at it. From a context standpoint, are we going into this level of detail on the other plans?

Steve Iwata: for the Central City Plan, staff will provide an update on that process. Then the SW quadrant plan will be starting a year from now. This N/NEQ planning process will set the precedent for the structure, process, and collaborative approach we will use for the others.

Justin Zeulner: thinks this is a really interesting area to do this in, even if it is still not fully defined. He is glad to be part of it.

Gary Marschke: question regarding budget issues. Is he safe in presuming that the types of things we are seeing tonight as alternatives, in a very broad sense, are ok from a budget perspective? In other words, are they do-able or aspirational?

Karl Lisle: the second.

Steve Iwata: as it is a long range plan, if you are patient, it may happen.

Mauricio Leclerc: for now, we are analyzing the options and developing what are the good ideas.

Andy Johnson: on the ODOT side, we are hoping to do these improvements in the next 5-10 years.

Sam asked the SAC if, based on the presentation and discussion, they feel confident to give staff the go-ahead to work using this approach for the next couple months, leading us to Phase III.

SAC ACTION #3: do you agree with the proposed grouping of the various ideas into the three quadrant-wide concepts?

SAC: yes.

BREAK

STATUS OF TRANSPORTATION CONCEPTS - UPDATE

John Cullerton from URS will provide an update regarding the status of transportation concepts, discussing existing conditions, 2035 future year forecast information, and how the project team has been working with the vast number of ideas from the March charrettes. He explained that the area we are working in is really the crossroads of the region, involving I-5, I-405, and I-84.

John briefly reviewed the city, state, regional transportation policies and current conditions for the area.

Slide 10: City Transportation Policy

City

Balanced transportation system

Encourage non auto modes

Central City

Growth with livability

Pinch the parking supply

Mode split commute goals (2010)

	Auto	Transit	Bike/Ped
Lloyd District Goal:	50%	40%	10%
Lower Albina Goal:	80%	10%	10%

Slide 11: Area Statistics

- Mode Split: percentage of commute trips (2009 Source Lloyd TMA, PBA, City Auditor)

	CBD (Downtown, River)	Lloyd	City
Auto	41%	63%	75%
Transit	45%	27% (40% Lloyd TMA)	13%
Bike	10%	5%	7%
Walk	4%	2.5%	5%

- Parking: stalls per 1,000 sf of office (off street)

Lloyd District	2.2 (1.2 in Downtown)
Lower Albina	1.4

Slide 12: State and Regional Transportation Policies

State

- Provide a balanced, efficient, cost-effective system
- Optimize existing infrastructure with improved operations

- Promote economic diversification and expansion through effective movement of people, goods, services & information
- Operate and maintain a safe system

Regional
- Improve local street connectivity
- Reduce delay and increase reliability for freight
- Throughways accommodate longer distance travel and provide access to major activity centers

John noted that Metro is working on a new forecast, which they hope to have available by the end of the year. The numbers will likely be lower than those we are currently working with. John reviewed the trends we can see, such as the likely eventual institution of on-street parking costs for the Lloyd District. For traffic, he believes the forecast will indicate the growth rates have flattened out and the current relatively slow growth will continue.

Slide 15: Future Year Forecast 2035

- Based on adopted regional growth forecast
  +1.3 million in the region – 72% increase
- NNE Quadrant forecast
  Over 400% increase in households
- New Metro forecast - end of 2011
- Includes TDM measures
  - Transit pass programs
  - Expanded parking cost areas
- Includes major highway and transit projects
  - Milwaukie LRT -CRC
  - LO Streetcar -Phase 2 I-5 Delta Park
  - Light rail to Vancouver

Gary Warren: when did the I-205 open?

John Cullerton: late 1980s.

John continued, noting we are currently forecasted to go up to 13 hours of congestion a day on I-5. Freight is becoming a bigger proportion of traffic in the quadrant. Most trips are staying the in Portland area – as opposed to through traffic. Also, most trips, 80%, require a weave (I-84 to I-5, etc.).

Slide 18: Traffic Growth on I-5

- Freeway at capacity during peak hours
- By 2035 the hours of congestion on I-5 in the Quadrant are forecast to more than double

Slide 20: Who is Using I-5 to, from and through the NNE Quadrant?

- Most trips on I-5 in the Quadrant stay within the Portland region
- Most trips on I-5 in the Quadrant require a weave between ramps and freeway mainline

Slide 25: Who is using the Broadway/Weidler Interchange in Evening Rush Hour?

- On-Ramps - Workers from Lloyd District, Lower Albina, Central Eastside – heading home
- Off-Ramps - Residents from Eliot, Irvington, Sullivan's Gulch – coming home from work

John reviewed several slides, explaining the current functioning of the interchanges, and notes that in the future, we can expect all the interchanges to degrade, some to Level of Service F and that I-5 in the quadrant is one of the worst safety sections in the state.

Slide 34: What does traffic growth and ramp usage mean to how I-5 functions?

- Short weave distances contribute to safety and operational problems.
- High crash rates create frequent safety and traffic problems.

Slide 37: Weaving Analysis

- Weaving analysis based on level of service (LOS)
- Analysis considers speeds, weaving distance, traffic volumes, etc.
- Findings:
  - I-84 to B/W interchange weaves are very bad today (rated F) and forecast to worsen
  - B/W interchange to I-405 weaves are marginal today (rated C) and forecast to worsen (rated D)
- Poor weaving conditions result in:
  - High crash rates
  - Slow speeds
  - Congestion

John reviewed the charrette process, how the ideas were gathered and the data has been processed. He referred folks to the large print out of the matrix of transportation elements and the Summary of Freeway/Local Transportation Interface Charrette, which will be posted on the project website. It includes a map of each idea, with a high-level analysis and sorting. No ideas were taken off the table unless they are cost-prohibitive, out of scope, or infeasible due to engineering. The plan is to come to the SAC in June with a recommendation for 12-14 concepts that should be further evaluated.

Slides 43 and 44: What We Heard

Ideas fell into the following general interchange form categories:

- 8% of Ideas: Diagonally Folded Diamond
- 18% of Ideas: Standard Diamond
- 27% of Ideas: Split Diamond
- 20% of Ideas: Folded Diamond

Several other ideas included:

- Move the interchange
- Separate the weaves
- More crossing locations
  - Hancock
  - Clackamas
- Improve bike/ped connections

Slide 45: Organizing the work

Elements and Concepts

- "Elements" are individual pieces
  - Examples:
    - Clackamas overcrossing
    - Northbound braided ramp from I-84
- "Concepts" are a combination of "elements"

The tables below display the results of staff's efforts in organizing the work thus far.

Table 1: Concepts for Further Study

1. No Build
2. Mainline Operational Improvements
Ramp modifications (No loop ramps)
Ramp braids
New overcrossings
3. Rebuild Bridges
Ramps remain as is
Ramp modifications (No loop ramps)
Ramp braids
New overcrossings
Auxiliary lane extension
4. Enhance the B/W Interchange
4a. Split diamond
4b. Folded diamond
4c. Collector/distributor road
Auxiliary lane extension with all interchanges
5. New Concepts for the B/W Interchange
5a. Standard diamond (de-couple Broadway/Weidler)
5b. Single point urban interchange (diamond) (SPUI / SPUD)
5c. Diverging diamond interchange
5d. Roundabout-controlled diamond interchange
5e. 3-point interchange
Auxiliary lane extension with all interchanges

Table 2: Major Elements for Further Study

Loop Ramps
SE Quadrant
NW Quadrant
NE Quadrant
CD Roads
Northbound
Southbound
Braids
Northbound - I-84 to Weidler
Southbound - Weidler to I-84
Extra Ramp (Partial Cloverleaf)
Extra Freeway Crossings
Bike/Pedestrian Only
Multi-Modal
De-Couple
Broadway/Weidler
Vancouver/Williams
Remove Freeway Crossing(s)
Local Street Changes
Bicycle/Pedestrian Changes

Table 3: Elements Recommended for No Further Analysis at this Time

Elements Recommended for No Further Analysis at This Time	Charrette Idea Number(s)	Rationale for Dropping at this Time	Possible Future Discussion
Remove I-5	73	Out of Scope for N/NE Quadrant Project	RTP Refinement Plan Loop Study
Move Interchange Location			
North			
Hancock Interchange (Wheeler)	7, 8, 16, 19, 23		
Dixon Interchange	25, 65		
Tillamook Interchange	52	Out of Scope for N/NE Quadrant Project	
Russell/Borthwick Interchange	35		
Mississippi/Interstate Interchange	66	Moving the location of the interchange would significantly reduce the lengths of the weaving sections on I-5	
Fremont Bridge Ramps	22		
South			
Multnomah Interchange	9, 16, 24, 25, 65, 66		
Clackamas Interchange	11, 12, 21, 65		
MLK/Grand Interchange	35		
Lloyd/1st Interchange	66, 67		

Lloyd/7th Interchange	66		
Double Deck I-5	71	Out of Scope for N/NE Quadrant Project	RTP Refinement Plan Loop Study
Water Taxi/Ferry	68	Out of Scope for N/NE Quadrant Project	CC2035 Concept Plan to consider water taxi
New Willamette River Bridge	73	Out of Scope for N/NE Quadrant Project	
Braids North of Weidler	None	Not Suggested in Charrette	Possible Future Improvement
Widen I-405	72, 73	Out of Scope for N/NE Quadrant Project	RTP Refinement Plan Loop Study
I-5/I-405 Loop	69	Out of Scope for N/NE Quadrant Project	RTP Refinement Plan Loop Study

Sam Imperati: asked the SAC for questions, wondering if there anything missing or if there are any questions for clarification on Table 1, Table 2, or Table 3?

Question: Were you looking at access and adjacent property development?

Answer: Yes.

Gary Marschke: wonders what the difference is regarding the terms "disadvantage" and "fatal flaw."

Todd Juhasz: "fatal flaw" means it will not work. To use federal funding it must enhance safety and operations. A "disadvantage" means they have simply identified an issue.

Gary Marschke: would it be useful for him to know, on the charts, which is which?

Todd Juhasz: Table 3 contains some of this information.

Gary Marschke: what about when he is looking at the individual concepts?

Todd Juhasz: see page 7 of the Freeway/Local Transportation Interface Charrette Summary. It explains what things that have been screened out and why. The south bound exit ramp – there's a lot of engineering issues and high costs, which results in it being out of scope.

Gary Warren: one of his major objections is the Clackamas overpass.

Todd Juhasz: we are screening out the idea of Clackamas as a new location for the interchange.

Andy Johnson: both a ped/bike only and local street connection are still options on the table as elements. The Clackamas idea could be for bikes only, bike/ped, and ped/bike/vehicle. All are on the table and no decisions made yet.

Gary Warren: strongly opposed to vehicles; ok with bikes.

John Cullerton: we are not recommending it as a full interchange.

Sam Imperati: the staff proposal is that Clackamas is off the table as a major interchange, if the SAC agrees. Any other comments on Table 1 showing concepts going forward for further study. Is there something not in there? Sam said that we will hear public comment before voting.

Alan Lehto: he is highly skeptical that we could decouple Broadway-Weidler and make it work. The only way you could make it work is a SPUI, which is not bike and ped friendly. Encourages you to drop it more quickly than others.

Todd Juhasz: there are some things that may not survive but are still being looked at.

Gary Warren: ditto, opposed to decouple.

Lloyd Lindley: when a document refers to "multimodal" does it truly mean all modes?

Answer: Yes.

Gary Marschke: confirming that at this stage, the ideas determined to be fatal flaws were due to scope and engineering, not due to perceived opposition.

Todd Juhasz: correct.

Eric Lovell: it seems like there is no support for removing a freeway crossing, wonders why it is on there. We are trying to increase the safety and operations, does not think closing anything is a good idea.

John Cullerton: it is more a function of developing a whole concept; elements of concepts are interchangeable. It was an idea that we received, so we represented it in the data summary.

Ed Abrahamson: regarding decoupling, this is just for interface with freeway?

Answer: correct.

Gary Marschke: none of these things are mutually exclusive?

Todd Juhasz: it is like what John explained regarding concepts and elements, that we can mix and match elements to create whole concepts.

Steve Iwata: wants to clarify the process. The freeway component is a 2-step process. Step 2 will be at the June meeting. Regarding decoupling, we may have more information in June to take it off the table, but we do not have all the data at this point, and we needed to hear from the SAC about our approach to organizing the work.

Justin Zeulner: need to really guide the technical team form the SAC perspective; tables 1 and 2 do that very well. He has concerns about table 3. For example, what if we decide to create a really residentially focused area. The function will impact the form we choose; have to decide what we want to be as a district before thinking what we want for the freeway options. So, since we have not defined it yet, feels we should not take things off the table just yet.

PUBLIC COMMENT

Sam noted that in an effort to be efficient with our time and make it through our tightly packed agendas, we will be keeping public comment to that slot on the agenda, rather than throughout the meeting as we have done in the past.

Allan Rudnick: following on Justin's point, removing options to move the interchange is not a good idea yet.

Brad Perkins: going back to discussion of what Karl brought up, he wants to keep people thinking about the long range uses for the district and to think outside the box. Do not be so quick to rule out the Broadway-Weidler decoupling, there is a small area that is looking at it, on 15th Avenue going East (Irvington, Sullivan's Gulch). He again spoke about the importance of high speed rail, which he thinks should be referred to in Table 2. You would have a great decrease of commuters coming from Vancouver.

Gary Marschke: regarding table 3, an element may be dropped at this time, but wonders about it being removed completely. That is to say, if a form would necessitate one of these elements, could it be brought back?

Todd Juhasz: yes.

Sam Imperati: does not want to have a fly by on this point. Requested more clarification from ODOT.

Andy Johnson: Karl did a nice job of overlaying the land use and transportation and as we go forward, we will do what is necessary to blend them together. As Steve said, this is a new way of doing things. We know where we want to get; so yes things can later be brought back if needed to make a concept work.

Gary Warren: comment re: zoning. An overcrossing on Clackamas would bisect the only residential area in the quadrant. It would create a big problem. Also, he supports Justin's comment that the SAC need to keep a tight reign on this.

POST-MEETING CORRECTION: at the meeting, votes from all members at the table were taken. The SAC is divided into Voting and Non-Voting members, so that was a process error. We have indicated the Non-Voting members with a strike-through, below.

SAC Action #4: Do you agree with the Table 1 list of "Concepts for Further Study?"

All Voting Members voted 1, except ~~Alan Lehto~~ and Gary Warren, who voted 2.

SAC Action #5: Do you agree with the Table 2 list of "Major Elements for Further Study?"

All Voting Members voted 1, except Ed Abramson, ~~Alan Lehto,~~ Lindsey Walker (alternate for Owen Ronchelli), and Gary Warren, who voted 2.

SAC Action #6: Do you agree with the Table 3 list of "Elements Recommended for No Further Study at this Time?" *(With the addition of "at this time" on the table)*

Voting 1- Pauline Bradford Gary Eichman, ~~Alan Lehto,~~ Lloyd Lindley Eric Lovell, Lindsey Walker (alternate for Owen Ronchelli), and ~~John Williams~~
Voting 2 – everyone else
Voting 3 – Ed Abramson

Sam asked if the 2's and 3's would like to comment on their votes.

Ed Abramson: supports keeping options for moving the interchange to the north or south of its current location.

Justin Zeulner: voted 2, agrees with Ed. It is an intriguing idea, not sure if it is a fatal flaw yet

William Ruff: agrees with Justin.

Sean Hubert: agrees with Justin.

NEXT STEPS AND MEETING EVALUATION

Eric Lovell: comment regarding scheduling. Please try to schedule meetings further in advance. He would appreciate 4-5 months notice. Between now and June 16, hopes the staff will look at between now and end of process and let us know about the schedule.

Gary Eichman: compliments staff! Well done, so much information,

Gary Marschke: yes, thank you for your hard work, staff!

ADJOURN

Sam thanked everyone for a good meeting and adjourned at 8:30 pm.

Notes respectfully submitted by the Institute for Conflict Management facilitation team.

SAC #6 Meeting Evaluation Summary
MAY 26, 2011

14 Evaluation Forms

	Poor	Fair	Good	Very Good	Excellent
1. OVERALL MTG QUALITY			4	8	2
2. PACING			Just right = 9	2	
3. CLARITY PRESENTATIONS		1	5	6	2
4. DOCUMENTS			7	5	2
5. DISCUSSION		1	5	6	2

6. MOST USEFUL?

- Excellent work summarizing tons of info. Keep it up.
- Good job staff!
- LU Overlay presentation
- Maps

7. LEAST USEFUL?

- Too much minutia discussions

8. COMMENTS, SUGGESTIONS, OR QUESTIONS?

- Limited time for discussion. Good staff work.
- Not enough time for LU concepts
- Want print of transportation matrix
- Would have been more beneficial to have heard all of Karl's presentation prior to vote.

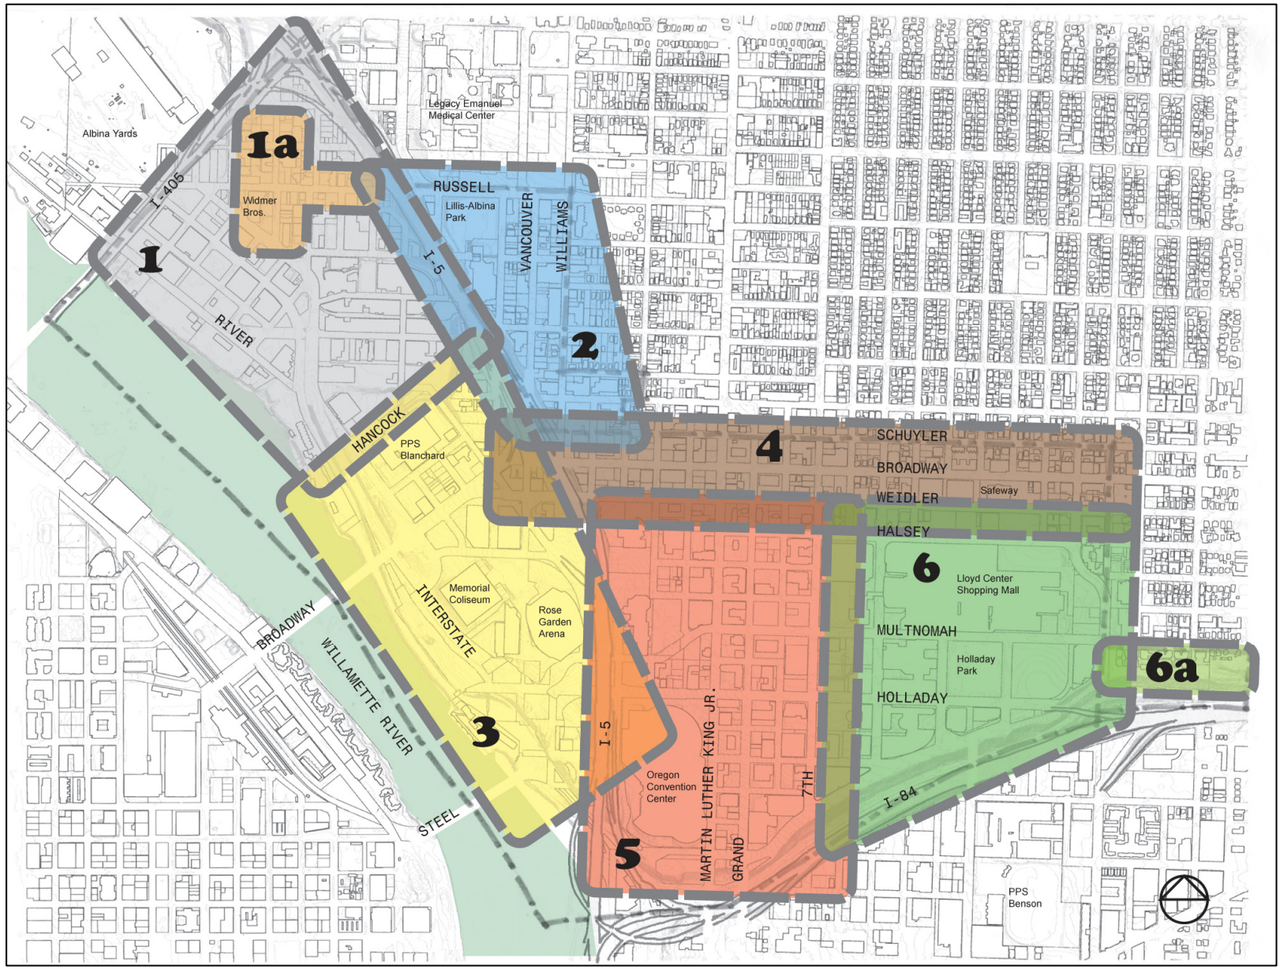
Oregon Department of Transportation

N/NE Quadrant Project: Land Use, Urban Design and Local Transportation Subarea Choices Summary

WORKING DRAFT 6/10/11

This draft document summarizes major land use, urban design and local transportation choices for subareas of the N/NE quadrant (see map at right). It draws from a number of sources:



- Issues, opportunities and constraints,
- Stakeholder Advisory Committee (SAC) meetings,
- SAC Subcommittee meetings, and
- The Local Issues Charrette, held in February, 2011 (charrette summary on web: http://www.portlandonline.com/bps/index.cfm?c=53634&a=345474)

The subarea ideas and choices were developed to coordinate with and complement the three quadrant-wide concept alternatives presented to the SAC on May 26, 2011 (see summary on web: http://www.portlandonline.com/bps/index.cfm?a=350123&c=53634). Each quadrant-wide concept alternative has a different land use emphasis (residential, employment and blend) and is supported by three related infrastructure system diagrams (mobility, open space and green systems). The individual concept ideas are not mutually exclusive and will likely be mixed and matched to form the preferred concept for the quadrant area.

Each subarea section in this packet contains background information, area-specific choices, diagrams that correspond to the choices, and area-specific snapshots of the three quadrant-wide concepts. The snapshots help illustrate how the subarea choices could influence concepts at the quadrant-wide level.

Consideration of these choices will inform the refinement of the quadrant wide concept alternatives (and vice versa), contribute toward the preferred concept and provide guidance for more focused plan proposals at the subarea level.

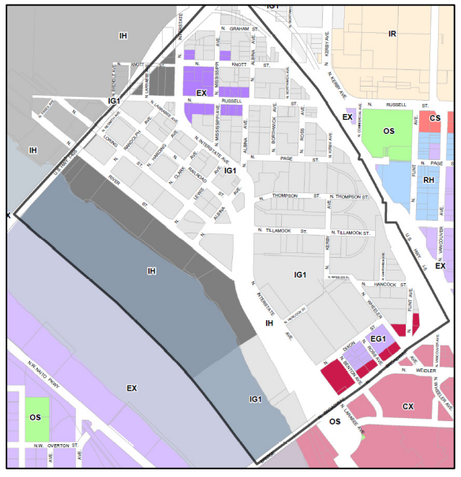
For event dates and relevant project materials, please visit the project website: www.portlandonline.com/bps/cc2035/nneq.

CENTRAL CITY 2035 N/NE QUADRANT

CITY OF PORTLAND OREGON 1851

Oregon Department of Transportation

Subarea 1 – Lower Albina Industrial

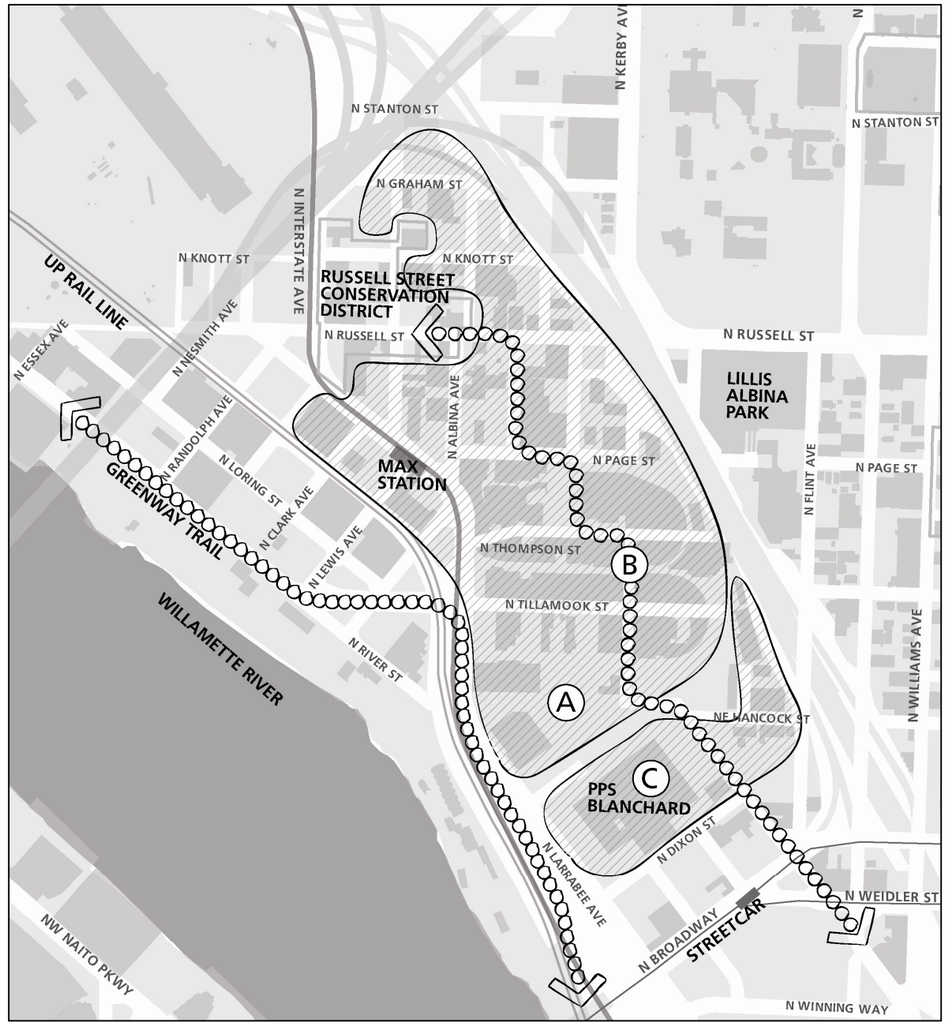


Background

This subarea is bounded by I-5 to the east, I-405 to the north, the Willamette River to the west and N. Hancock Street to the south. All lands in this subarea have industrial zoning supporting a wide range of both new and older industrial businesses. Generally, there appears to be little interest in major changes to the current land use regulations in this area. The conversation about potential zoning changes has focused almost exclusively on the area within subarea 1a (Historical Russell Street) and the Portland Public Schools (PPS) Blanchard site at the south end of this subarea and also within subarea 3. Another potential zoning option is to increase the flexibility of the industrial zoning east of the UP main line by allowing additional creative office space, intended to increase the employment density. This approach has been used with the Economic Opportunity Area tool applied in the Central Eastside.

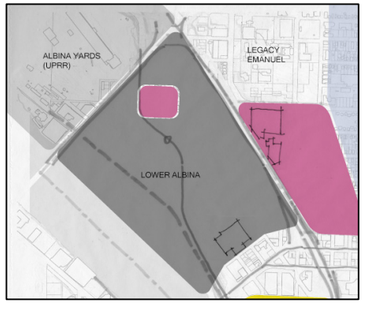
Planning for the area west of Interstate Avenue and River Street was included in the River Plan / North Reach, completed in 2010, and will therefore not be reexamined in this process. It will remain in industrial use. It has been suggested that the area west of the Union Pacific mainline could be removed from the Central City Plan District.

There has been some discussion about a desire to better connect this area to the rest of the N/NE Quadrant (particularly to the Rose Quarter and Lloyd District) with a pedestrian-friendly alternative to N. Interstate Avenue known as the strand; this connection could include improvements to local streets and new connections where gaps currently exist in the network.



Existing Zoning

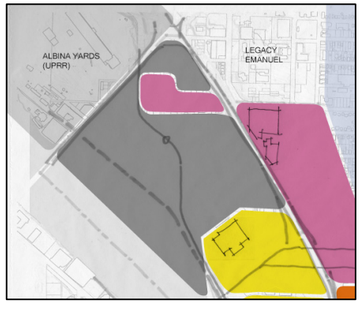
Area Choices



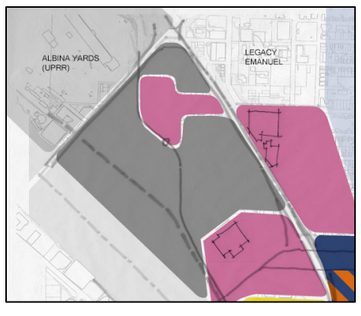
The choices and ideas for consideration in this area are summarized in the following questions: (also see diagram)

A. Should the plan increase flexibility by allowing more office-like uses in Lower Albina through a tool such as Economic Opportunity Area regulations?
B. Should the plan call for the strand to create greater bicycle and pedestrian connectivity through Lower Albina to link the Russell St area to the Rose Quarter?
C. Should the zoning for the PPS Blanchard Site and possibly adjacent properties to the east be changed to allow a greater range of uses? Ideas for the site have included retail, research and development and mixed use residential?

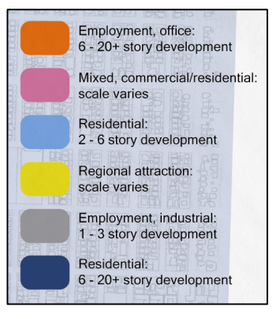
Quadrant-wide Concept Alternatives for Subarea 1



0 – existing conditions



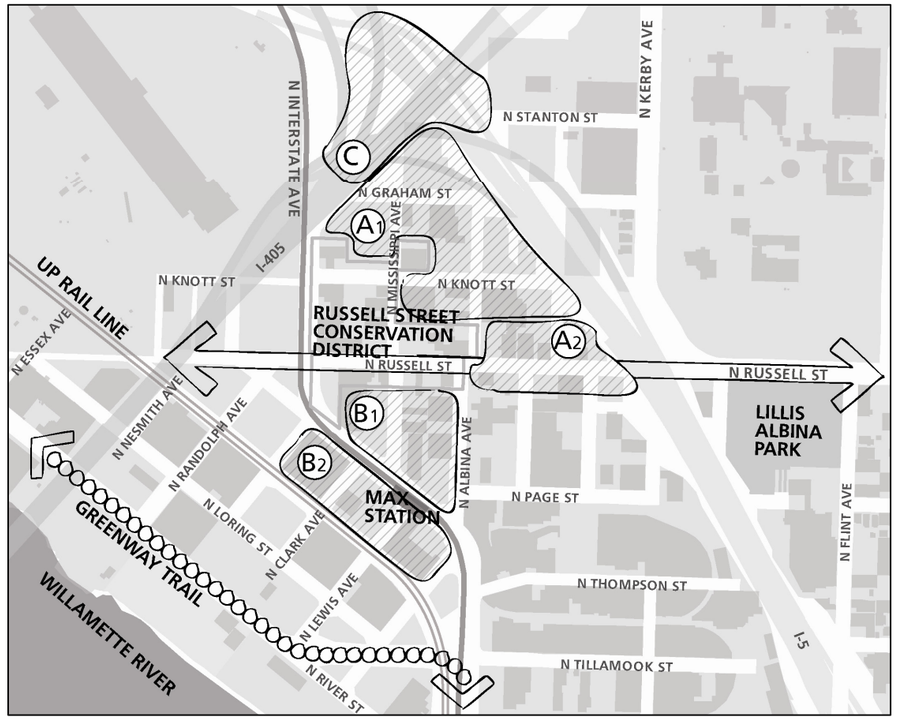
1- residential



2 – employment

3 – blend

legend (predominant use)



Subarea 1a – Historic Russell Street

Background

Russell Street stretches from Interstate Avenue to the east, where it intersects with Vancouver/Williams and eventually ends at Martin Luther King Jr. Boulevard. Anchored by the Russell Street Conservation District and historic structures such as the Widmer Brothers Brewery, the west end of the street is home to a small but vibrant mix of restaurants, bars and other small-scale retail establishments. The area of mixed use zoning is limited to the two-blocks between Interstate Ave and N. Albina on both sides of Russell Street. East of this area to the I-5 underpass, properties fronting Russell Street are zoned industrial and non-industrial uses are restricted. Stakeholders have commented that the current balance of uses works well with the existing infrastructure, including parking capacity.

Conflicting policies are currently in place in this subarea. The 1988 Central City Plan map calls for mixed use and housing development. However, current industrial zoning prohibits housing in a part of the subarea that is also designated as a housing bonus target area. In addition, a design overlay zone, required ground-floor active uses and other provisions are inappropriately applied to industrially-zoned land. At a minimum, the N/NE Quadrant Plan should reconcile these policies regarding housing and land use.

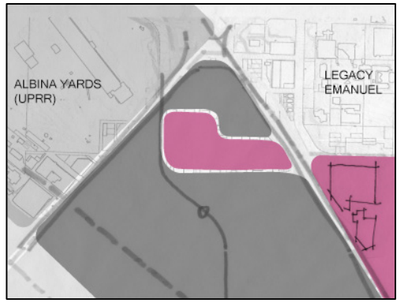
Another potential zoning consideration in this area is the presence of the MAX Yellow Line Station on Interstate Avenue between the intersection with N. Mississippi and N. Albina. This station was originally proposed at the foot of N. Russell Street adjacent to the mixed use historic main street. Due to traffic and railroad circulation issues, the station was ultimately built a block south on Interstate. As a result, the station is surrounded by industrial zoning, including some vacant properties.

Area Choices

The choices and ideas for consideration in this area can be summarized into the following questions: (see also diagram)

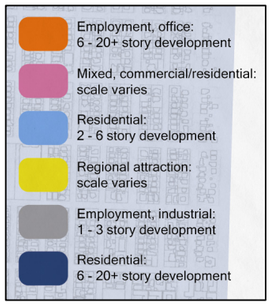
A. Should the plan allow more flexible uses north of Russell St (A1) and/or along Russell St to the east of the Conservation District (A2)?
B. Should the plan encourage new mixed use development around the MAX station north of the station (B1) and/or south of the station (B2)?
C. How should the area under the I-5/I-405 Freeway Interchange be utilized? Ideas have included active recreation suitable for a hardscape, such as a skate park or tennis courts.
D. How should the plan prohibit or encourage additional housing in all or parts of this area? If so, where?

Quadrant-wide Concept Alternatives for Subarea 1a



0 – existing conditions

1- residential



2 – employment

3 - blend

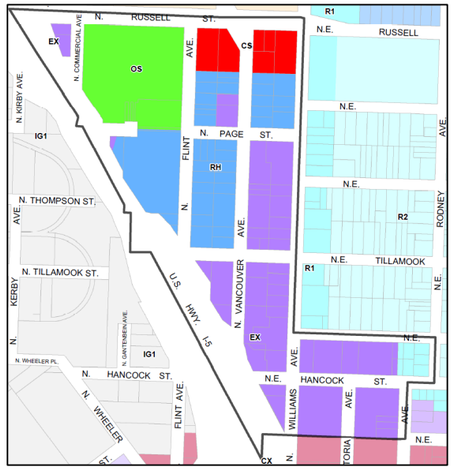
legend (predominant use)

Subarea 2 – Eliot: Vancouver/Williams Corridor

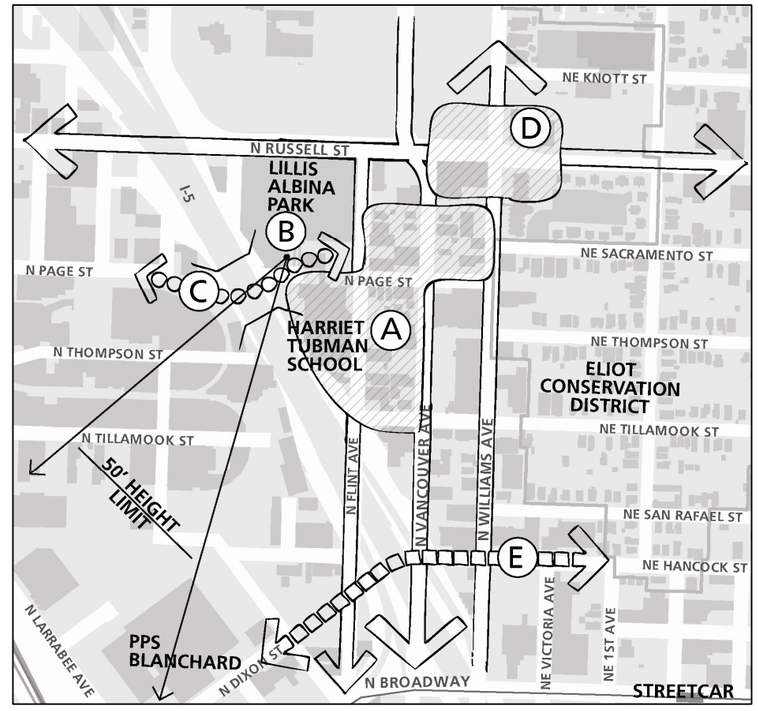
Background

This subarea is located south of Russell St and east of I-5, just outside the current Central City Plan District Boundary. It was added to the N/NE Quadrant study area in order to look at more flexible zoning options and potential impacts from changes to the I-5 Broadway/Weidler on- and off-ramps.

The area is currently home to a diverse mix of uses, including light manufacturing, warehousing, retail, residential and institutional, and also contains the Harriet Tubman School and Lilis Albina Park. Some of the area is currently zoned for high density housing that doesn't allow significant other uses and can limit the ability of existing, non-residential uses to expand. There is interest in shifting more of the area to flexible, mixed-use zoning that would allow housing along with a wide variety of other uses. In addition, this area contains a number of buildings identified in the Cornerstones of Community inventory of African-American historic resources, such as the Mt. Olivet Baptist Church. Stakeholders have indicated that these resources should be preserved.



An additional issue relates to the designated view corridor from the corner of Lillis-Albina Park. This designated public viewpoint is currently obscured by trees and it cuts through the center of the PPS Blanchard site, restricting building heights to 50 feet on part of the parcel. Guidance is sought regarding the importance of this view corridor and the potential to adjust, remove or relocate it.



Area Choices

The choices and ideas for consideration in this area can be summarized into the following questions: (see also diagram)

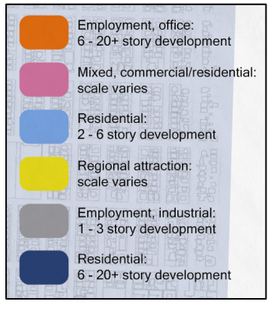
A. Should the plan rezone residentially-zoned properties to allow a wider range of uses? If so, are additional incentives for housing development desired?
B. Should the plan recommend changes to the designated view corridor from Lillis Albina Park? If so, how?
C. Should an additional pedestrian connection be developed at Page Street under I-5 to connect this area to Lower Albina?
D. Should a main street district be encouraged around the intersection of Williams Avenue and Russell Street, reviving a historic commercial node?
E. Should an additional east-west multimodal connection be developed north of the Broadway/Weidler couplet (e.g. Hancock St. to Dixon St.)?
F. Should both Vancouver and Williams Avenues be encouraged as neighborhood commercial streets, or should one be emphasized as the prominent commercial corridor?

Existing Zoning

Quadrant-wide Concept Alternatives for Subarea 2

0 – existing conditions

1- residential



2 – employment

3 - blend

legend (predominant use)

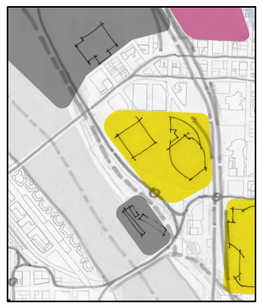
Subarea 3 – Rose Quarter and Vicinity

Background

Home to the Veterans Memorial Coliseum and the Rose Garden Arena, the Rose Quarter is one of the region's largest and busiest regional sports and entertainment districts. Over 2,500 parking spaces are contained in several garages and surface lots in the area. Immediately to the north of the Rose Quarter, N Broadway connects the Broadway Bridge to I-5 and NE Portland. Just to the north of Broadway is Portland Public School's (PPS) headquarters building, the Blanchard Educational Service Center. PPS has expressed interest in moving their headquarters to another location in the City, which would open up a large site for redevelopment opportunities to complement proposed redevelopment in the core area of the Rose Quarter.

The core area of the Rose Quarter has been the subject of extensive development planning over the past few years. The current effort, the Rose Quarter District Plan, is being led by the Portland Development Commission and is nearing completion. The Plan sets the direction for long range planning in the core of the area, preserving and renovating the Coliseum and calling for a greater level of activity and 24 hour uses to complement the entertainment events currently held in the Rose Quarter. The N/NE Quadrant Plan will address the areas away from the core of the district – particularly to the north along N. Broadway, to the west along the banks of the Willamette River, and the connections to the south and Lloyd District to the east.

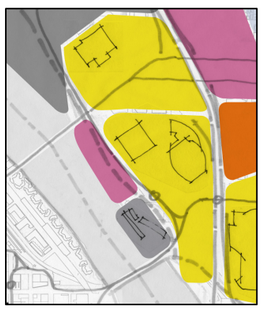
Area Choices



The Rose Quarter District Plan raises several issues and questions the N/NE Quadrant Plan should consider. (see also diagram) These are:

A. Should larger buildings (height, mass) be allowed along N Broadway to support an increased level of activity in the Rose Quarter?
B. Should the zoning for the PPS Blanchard Site and possibly adjacent properties to the east be changed to allow a greater range of uses? Ideas for the site have included retail, research and development and mixed use residential?
C. What should the nature of the Willamette riverfront be in this area, in terms of land use, public access, and other features?
D. Are there ways to improve access between this subarea and other parts of the Lloyd District over and under I-5 with new connections (see D1-Hancock St., D2-Clackamas) or improvements to existing connections (see D3-Multnomah/ Holladay)?
E. Should the local and regional transportation infrastructure around the Steel Bridgehead and the Rose Quarter Transit Center be reconfigured to improve access, circulation and encourage new development?

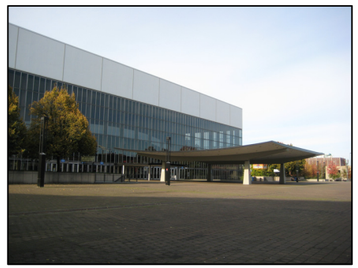
Quadrant-wide Concept Alternatives for Subarea 3



0 – existing conditions

1- residential

2 – employment



3 – blend

legend (predominant use)

Subarea 4 – NE Broadway Weidler Commercial Corridor

Background

The Broadway/Weidler couplet is a major transportation and commercial corridor that extends from the Broadway Bridge to the eastern edge of the N/NE quadrant. The eastern end of the corridor provides "main street" commercial and retail services for the surrounding neighborhoods, while areas closer to I-5 contain more auto-oriented commercial services such as gas stations and car dealerships. The Irvington neighborhood, located just to the north of the Broadway, has recently been designated as a National Register Historic District. Broadway and Weidler connect to I-5 at the "box". A new streetcar line is under construction from the west side across the Broadway Bridge, traveling along NE Weidler before continuing south on NE 7th Avenue and returning to NE Broadway on NE Grand Avenue.

The "box" (Broadway/Weidler between Vancouver and Williams Avenues) is a difficult area for all modes of transportation, with poor pedestrian and bicycle conditions and frequent congestion associated with the I-5 freeway interchange. There are also concerns about circulation and safety issues along the rest of Broadway and Weidler, including difficult pedestrian crossings and bicycle safety issues. Other issues include enhancing the "main street" character of Broadway and/or Weidler and achieving a respectful transition from the commercial development on Broadway and Weidler to the residential development in the historic Irvington and Eliot neighborhoods to the north. Current maximum building heights east of 7th Avenue and north of Weidler are 50', however, a variety of height bonuses are in place allowing development to be considerably higher in some cases, provided certain amenities are included in the project. Section diagrams on the following page display allowed heights and bonus opportunities.

Concepts that have emerged from the process to date include creating a more contiguous main street environment along NE Broadway and NE Weidler that extends through the Rose Quarter and connects to the Broadway Bridgehead, where key redevelopment sites could serve as a gateway to the district. Concepts that call for stronger connections in a north south orientation continue to include greater development along NE Broadway and Weidler. High density residential development suggested for areas surrounding the Broadway/Weidler couplet would support greater retail development. A variety of concepts have emerged to address the multi-modal issues at the "box" and are being evaluated in parallel to the land use concepts and choices.

Area Choices

The choices and ideas for consideration in this area can be summarized into the following questions (see also diagram):

A. What scale (height and mass) of buildings should be allowed to achieve a respectful transition from Broadway/Weidler to the neighborhoods to the north (see section AA on following page)?
B. Should both Broadway and Weidler be encouraged as neighborhood commercial streets, or should one be emphasized as the prominent commercial corridor? Should the "main street" character present on the east end of the couplet extend toward the Rose Quarter? If so, how far?
C. What methods should be used to address the circulation and safety issues along the corridor?
D. What level of residential density and scale (height and mass) should be encouraged along the Broadway/Weidler corridor (see section BB on following page)? Should it ramp up on the west end of the corridor?

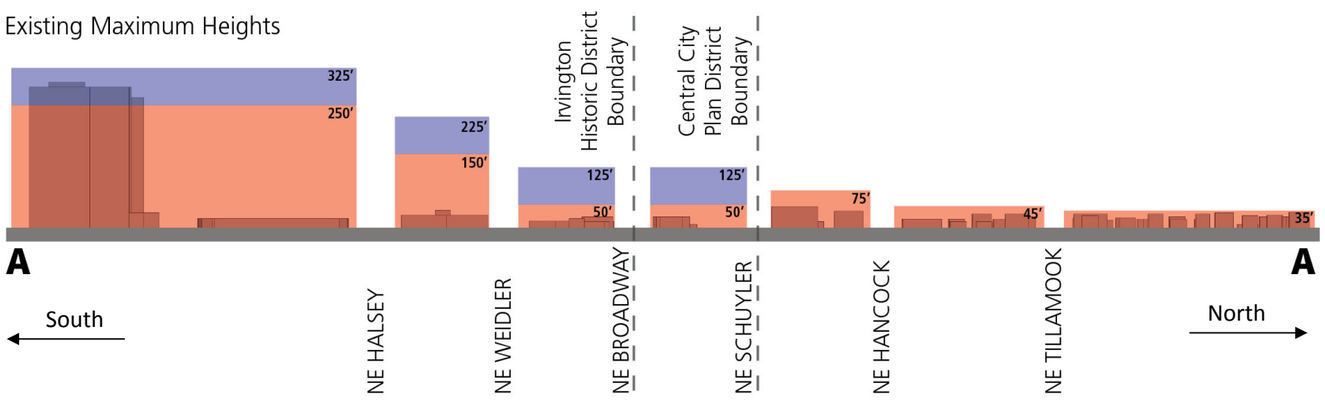
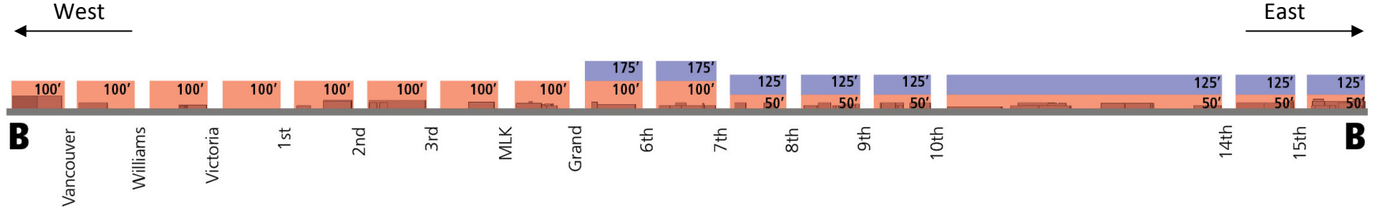
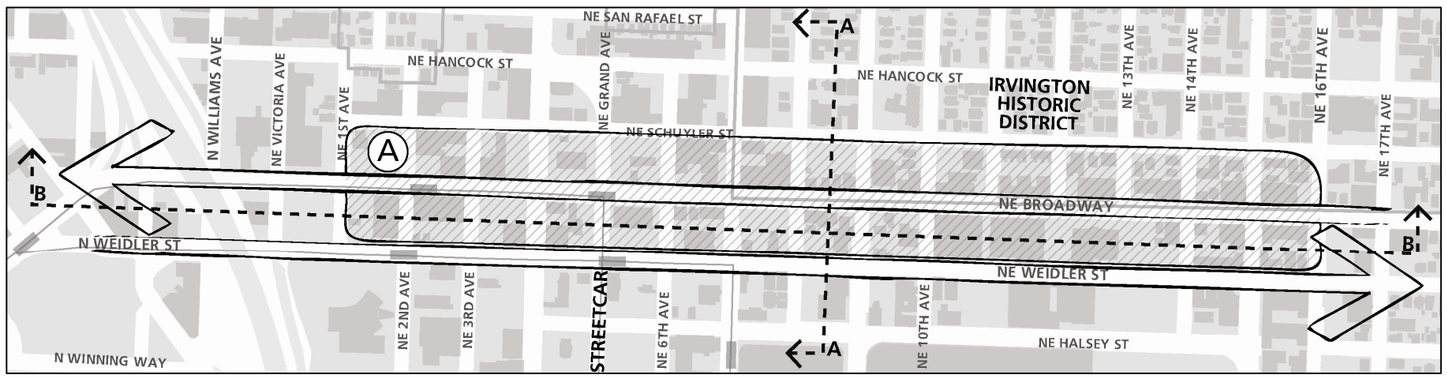
2 – employment



3 – blend



Section AA (looking west)
Subarea 4



Existing Maximum Heights

Section BB (looking north)
Subarea 4

Existing Maximum Heights

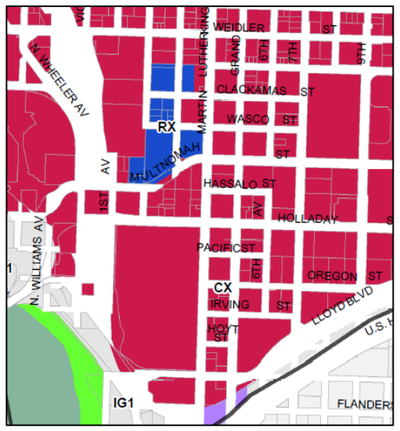
Subarea 5 – Central Lloyd

Background

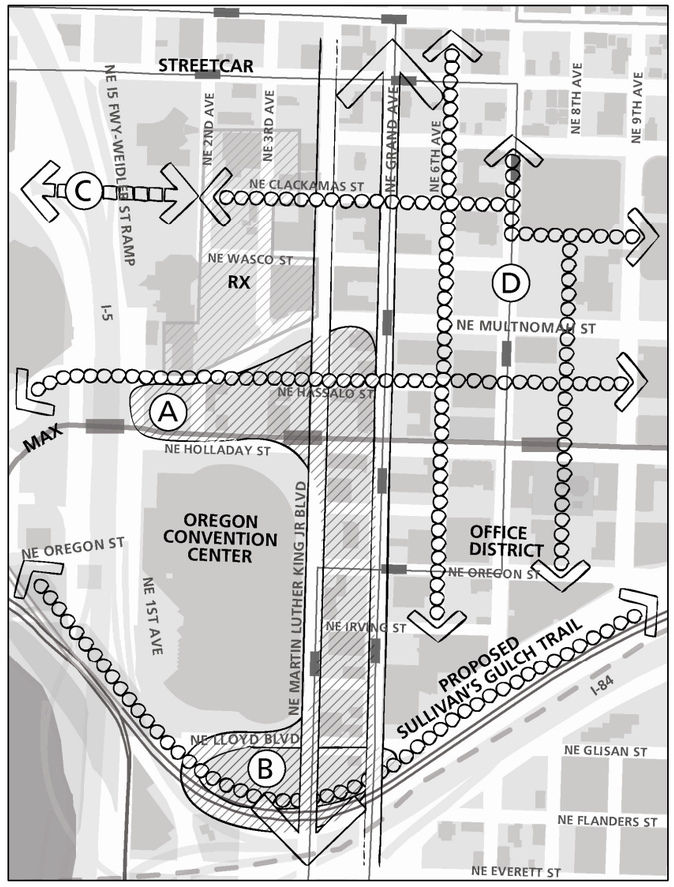
This is the core of the Lloyd District, home to the most generous development entitlements on the east side – similar to the height and mass characteristics of Portland's west side downtown. To date, relatively little of this development potential has been realized and the area lacks a strong identity.

The southern half of this large subarea includes the Oregon Convention Center and several office buildings, while the northern half is occupied by a few residential buildings, several mid-size hotels, medical services and a wide variety of smaller commercial buildings, including many auto-oriented businesses with drive-through facilities. Streetcar is under construction now along NE Grand Avenue, NE 7th and NE MLK, and is anticipated to help encourage new development in this area.

Development ambitions south of NE Multnomah Street, near the entrances to the Oregon Convention Center (OCC) have long focused on projects that would support this major draw. The Development Vision for the OCC Blocks, completed by PDC in 2006, calls for a major hotel in the area and retail and entertainment uses that could add activity to the area around the convention center. The sites along MLK and Grand near I-84 have been suggested as good locations for high-rise signature development – an idea that would likely require some modification of established view corridors.



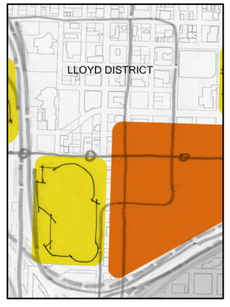
In the northern half of the subarea, there has long been a desire to see mixed-use development including a substantial residential component. Currently, there is a 3-block area in the northern part of this subarea zoned for predominantly residential uses (RX), and a zoning incentive for housing (the residential bonus target area) that covers large sections of the subarea. There is concern that current open space and other amenities and services in the area may be insufficient to attract and support significant residential development.



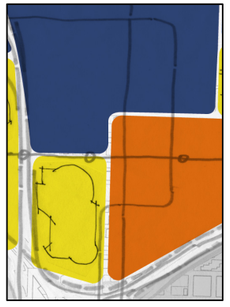
Area Choices

The choices and ideas for consideration in this area can be summarized into the following questions (see also diagram):

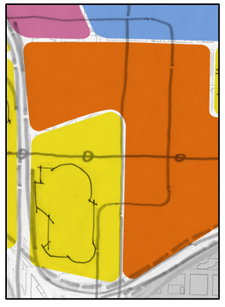
A. Does the goal of mixed-use office development with significant hotel and entertainment components make sense for the areas surrounding the convention center?
B. Should "signature" high-rise development be allowed at the southern edge of the district along NE MLK and NE Grand?
C. Should there be a local traffic and/or pedestrian and bicycle connection to the Rose Quarter along Clackamas Street?
D. Should NE Multnomah Avenue be elevated to a major east-west corridor with regional retail uses?
E. Should both MLK and Grand Avenues be encouraged as neighborhood commercial streets, or should one be emphasized as the prominent commercial corridor?
F. Should there continue to be a focus on residential uses in this subarea, or should other uses be emphasized, such as office use or mixed use? If residential development remains a priority, where should housing be encouraged? What amenities should be planned to encourage and support added housing (e.g. parks, open space, civic/cultural attractions)? Quadrant-wide concepts include a range of parks and open space options, from a headquarters-type park to a series of pocket parks.
G. What are the most important pedestrian and/or bike connections through the district to develop over the life of the plan (e.g. Clackamas, 8th, 6th, Hassalo)?
H. What methods should be used to address the circulation and safety issues in this area?



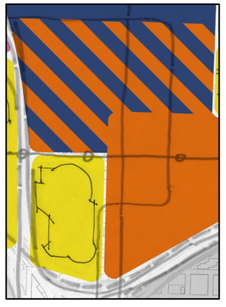
Existing Zoning



Quadrant-wide Concept Alternatives for Subarea 5



0 – existing conditions



1- residential

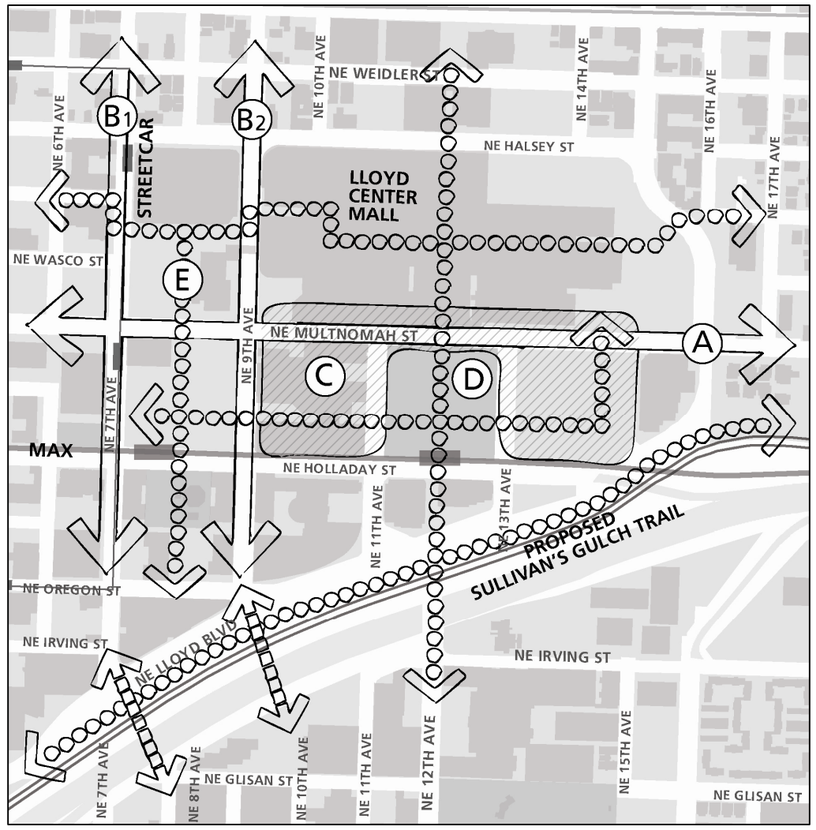
2 – employment

3 – blend

legend (predominant use)

Subarea 6 – Eastern Lloyd

Background



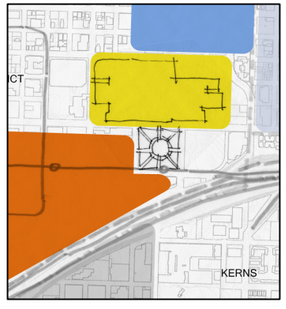
This area has a well-established cluster of office buildings along NE Multnomah and NE Holladay Streets, regional shopping opportunities at Lloyd Center Mall and a predominance of surface parking lots and parking garages. The area is characterized by large blocks and property owners with large holdings, with limited residential development in the area. Current policy includes incentives for residential development (residential bonus target area) in much of this area, though little residential development has occurred. The pedestrian experience is diminished by limited street-level activity and a lack of connectivity through the large blocks.

Many of the concepts emerging from the process to date suggest high-density residential or mixed-use development to enliven the district and enhance street-level activity, adding additional structured parking at the Lloyd Center Mall to allow redevelopment of surface parking lots and new pedestrian connections through the superblocks and the mall. As the superblocks redevelop, ensuring that future mid-block connections provide continuous and convenient pedestrian routes through the study area will be important.

Some concepts suggest elevating NE Multnomah Street to a major retail thoroughfare lined with regional retail, offices and possibly housing to add to the street-level activity and complement the Lloyd Center Mall. Adding entrances and additional store-fronts to the mall on the NE Multnomah Street side was seen as desirable. On-street parking to help support street-facing retail was suggested for consideration on NE Multnomah.

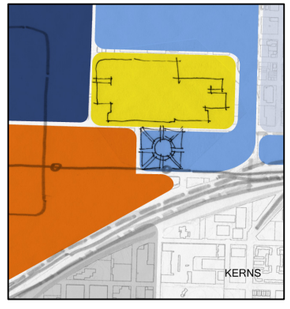
MAX light rail and the new streetcar line provide transit options to and through the subarea, but increasing connectivity and safety for pedestrians and bicycles is an important issue. NE 7th Avenue provides an opportunity to strengthen north/south connections in the district with a new streetcar line and potential improvements to facilitate bike and pedestrian transportation. The Sullivan's Gulch Trail could provide open space and a valuable new connection from the subarea to the riverfront and areas to the east.

Holladay Park is one of the largest parks in the Central City and the only significant public open space in the Lloyd District, but the park suffers from public safety concerns and a lack of consistent, diverse activity. Concepts to address these concerns include short term actions such as active programming of the park, and long-term actions such as encouraging high density residential or mixed-use redevelopment surrounding and facing the park and adding design features to the park to attract a wider variety of users.



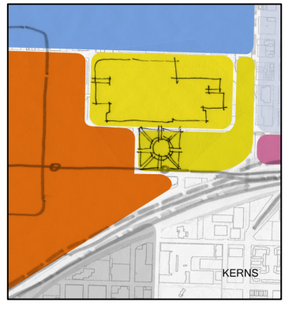
Area Choices

The choices and ideas for consideration in this area can be summarized into the following questions (see also diagram):

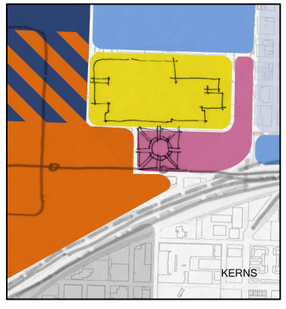


A. Should NE Multnomah Avenue be elevated to a major east-west corridor with regional retail uses?
B. Should NE 7th (B1) or NE 9th (B2) Avenues be enhanced for multimodal transportation, with a possible future connection across I-84 at NE 7th Ave to the Central Eastside?
C. What character, scale and uses would be most desirable for redevelopment surrounding Holladay Park?
D. How can the user experience be improved at Holladay Park?
E. As the superblocks develop, what are the most important features that should be included, in terms of connectivity and open space?
F. Should the residential bonus target area be modified to encourage a wider range of uses? If so, where?

Quadrant-wide Concept Alternatives for Subarea 6



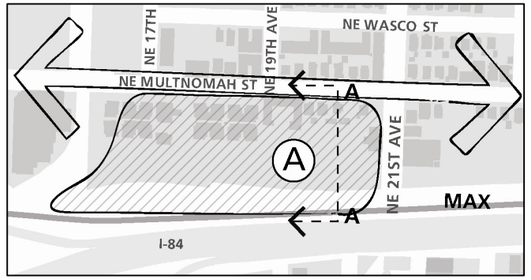
0 – existing conditions



1- residential

2 – employment

3 – blend



legend (predominant use)

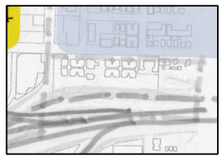
Subarea 6a – Banfield Portal

Background

This subarea is adjacent to, but outside the current Central City Plan District Boundary. It was added to the N/NE Quadrant study area because higher density zoning extends along the south side of NE Multnomah Street to NE 21st Avenue and is mirrored by commercial and higher-density zoning in another expanded study area south of Interstate I-84. Today, the western part of this area is occupied by the Marriott Residence Inn Hotel, while the eastern portion is occupied by a small courtyard apartment building and several older single-family homes. Relative to the current zoning, the eastern portion is significantly underdeveloped.

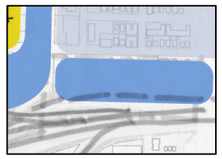
The properties at the corner of NE Multnomah and NE 21st Avenue are currently split-zoned with a mix of high-density residential and commercial office zoning. While not precluded, redevelopment of the site is complicated by the current zoning pattern. The N/NE Quadrant Plan has the opportunity to address the character of desired future development and make necessary changes to zoning regulations. Primary considerations are around the mix of uses that would be appropriate and the scale (height and mass) of future buildings in this location. Today, residential buildings up to 75 feet tall are allowed along NE Multnomah Street. The office zoning (CO2) to the south carries a 45-foot height limit, but allows additional uses such as retail and office.

The area could serve as a visible gateway to the district from the Central Eastside and I-84 and could be an important access point for the future Sullivan's Gulch Trail.



Area Choices

The specific choices and ideas for consideration in this subarea can be summarized by the following questions (see also diagram):



A. What types of uses are desirable and/or appropriate in this location (e.g. commercial office or retail, light industrial, residential)?
B. What scale (height and mass) of buildings are appropriate here?
C. Should lower building heights be encouraged or required along NE Multnomah Street but taller building heights allowed further south along I-84?

Freeway/Local Transportation Interface Concepts for Further Study

N/NE Quadrant and I-5 Broadway/Weidler Plans

DRAFT

June 16, 2011

The Central N/NE Quadrant and I-5 Broadway/Weidler Plans Project is a collaborative effort by the City of Portland and the Oregon Department of Transportation to integrate land use and urban design planning with freeway planning and concept-level engineering in the N/NE portion of the Central City, which includes Lower Albina and the Lloyd District.

Concepts for Further Study

Introduction

The N/NE Quadrant and I-5 Broadway/Weidler Plans Project is a joint project among the Oregon Department of Transportation (ODOT), the City of Portland Bureau of Transportation (PBOT) and the City of Portland Bureau of Planning and Sustainability (BPS). This unique collaborative effort will result in an update of the Central City Plan for the NNE Quadrant and in transportation improvements that are consistent with and support the land use, local transportation and urban design vision included in that plan. The transportation improvements developed through this planning effort will address multi-modal improvements on the local street system and improvements to I-5 that address existing operational and safety problems.

In conjunction with the project's Stakeholder Advisory Committee (SAC), the city hosted a land use, local transportation and urban design charrette in February 2011. This charrette process resulted in ideas for an evolving land use, urban design and local transportation vision for the N/NE Quadrant.

In April 2011, ODOT hosted a charrette that focused on transportation improvements to I-5 and the surrounding local transportation system. Since this charrette was focused on specific ideas for improving freeway operations and safety, it had a more technical tone than the earlier charrette which resulted in ideas for a broad vision. Similar to the earlier charrette, the transportation charrette was implemented in conjunction with the SAC. The I-5/Local Transportation Interface Charrette resulted in over 70 different ideas for freeway and local roadway improvements.

The project team organized the ideas and proposed a process for further developing the ideas into complete concepts that include mainline freeway and local transportation improvements. This process, which was endorsed by the SAC at their May 26, 2011 meeting, included organizing Concepts for Further Study into five categories. The five categories endorsed by the SAC include:

- **2035 No-Build**
- **Mainline Operational Improvements**
- **Rebuild Structures**
  with Mainline Operational Improvements
- **Enhance the Broadway/Weidler Interchange**
  with Mainline Operational Improvements
- **New Concepts for the Broadway/Weidler Interchange**
  with Mainline Operational Improvements

Subsequent to the May SAC meeting, ODOT and City project managers recommended including a sixth category of Concepts for Further Study: Transportation System Management (TSM)/Transportation Demand Management (TDM)/Operations Management. The project team will seek the SAC's endorsement of adding a TSM/TDM/Operations Management category and, with that endorsement, would proceed to define the details of what that concept should include (see Table 1).

It should be noted that all of the concepts will be analyzed using data from the regional travel demand model which includes an assumption that TDM measures will be more widely used and will have a significant impact on reducing single-occupant vehicle (SOV) use throughout the region.

DRAFT

Concepts for Further Study

Table 1: Concepts for Further Study

1. 2035 No-Build
2. Mainline Operational Improvements
2a. Braided ramps
2b. Collector/distributor (C/D) roads
3. Rebuild Structures with Mainline Operational Improvements
(Auxiliary lane extension; ramps remain as they are today)
4. Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements
4a. Split diamond Interchange
4b. Folded diamond Interchange
4c. Three-Point Interchange (couplet)
(Auxiliary lane extension with all interchange options)
5. New Concepts for the Broadway/Weidler Interchange with Mainline Operational Improvements
5a. Standard-Diamond Interchange (de-couple Broadway/Weidler)
5b. Single-Point Urban Interchange (SPUI; de-couple)
5c. Diverging Diamond Interchange (DDI)
5d. Roundabout-Controlled Diamond Interchange
5e. Three-Point Interchange (de-couple)
(Auxiliary lane extension with all interchange options)
6. TSM/TDM/Operations Management

TSM/TDM/OM Concept to be Developed Further

A TSM/TDM concept is often used during project development to provide a comparison of the No-Build and Build (capital improvement) alternatives with the most that can be done with low-cost operational and policy elements.

TSM and Operations Management refers to using operations management tools such as variable-message signs, ramp meters, cameras, etc., to improve traffic operations on roadways. These elements are also often considered to be part of Intelligent Transportation Systems (ITS) treatments. ODOT currently utilizes a number of TSM/ITS techniques to manage traffic operations on the Portland area freeway system including I-5 through the N/NE Quadrant. Ramp meters are currently used at all service interchange (arterial connection) entrance ramps in the study area and are not included on system interchanges (freeway to freeway connections). Ramp meters are programmed to respond to traffic conditions. Using cameras and loop detectors, ODOT's traffic control center monitors freeway operations and adjusts ramp meters and variable-message signs as needed.

TDM or Transportation Demand Management refers strategies and policies that can reduce the demand for a transportation facility using tools such as tolling, transit pass subsidies, carpool programs, parking costs, high-occupancy vehicle (HOV) lanes, etc. The goal of implementing TDM measures is typically to reduce the number of trips that occur in SOVs. There are state, regional and local TDM programs that are typically well coordinated to support policies that can reduce congestion in heavily travelled corridors. TDM measures are currently implemented in the Portland region that have been very successful in supporting reduced use of SOV trips.

The TSM/TDM/OM Concept to be analyzed for the N/NE Quadrant will include existing state, regional and local strategies. In addition, the project team will assess whether there are corridor-specific tools and strategies that should be included in the concept. The TSM/TD/OM Concept will be analyzed and compared with the other concepts.

DRAFT

13 Concepts for Further Study

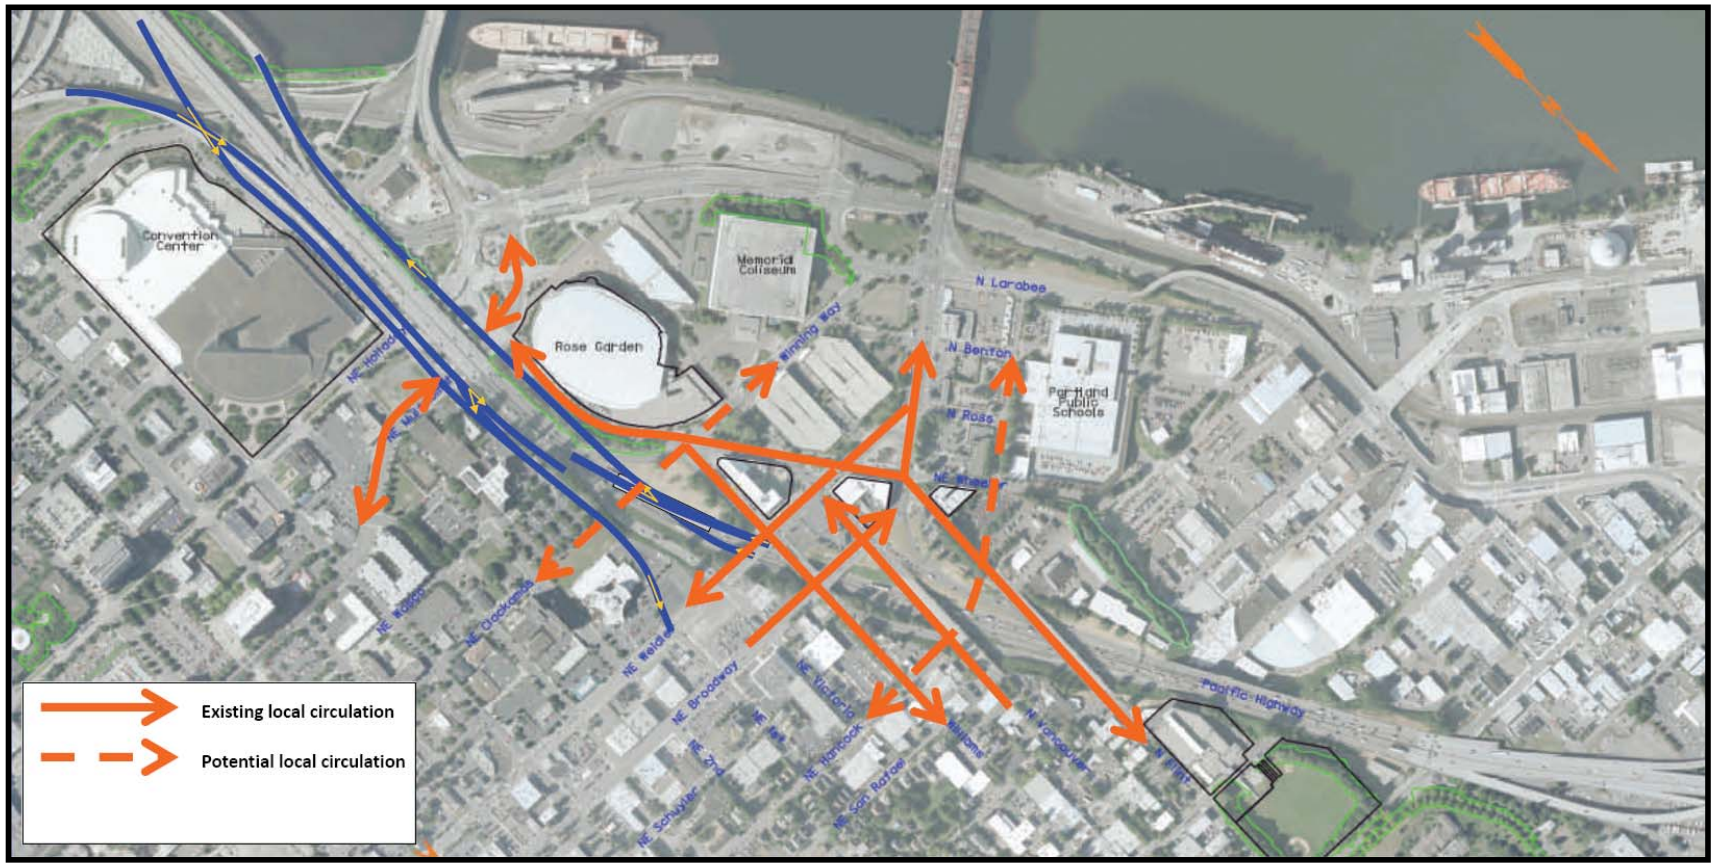
DRAFT

Concept 1: 2035 No-Build

Concept Description

The 2035 No-Build Concept is the baseline for comparing with the other concepts for improving safety and operations on I-5. The 2035 No-Build Concept maintains the existing number of freeway lanes and the existing weaving sections and existing interchange configuration remain. The 2035 No-Build Concept does not address any safety and operational issues.

Major Elements to be Analyzed and Evaluated



- Projected traffic conditions for 2035
- No capital improvements

DRAFT

This page left intentionally blank.

DRAFT

Category 2: Mainline Operational Improvements
Concept 2a. Braided Ramps
Concept 2b. Collector/Distributor (C/D) Roads

Concept Description

The Mainline Operational Improvements Concept is focused on improving the weaving sections on I-5 south of Weidler. The intent of this concept is to address the safety of the short weaving section between the Broadway/Weidler interchange and the I-84 interchange by providing for weaves to occur on either braided ramps or collector/distributor roads.

DRAFT

Category 2: Mainline Operational Improvements (continued)
Concept 2a. Braided Ramps
Concept 2b. Collector/Distributor (C/D) Roads

Major Freeway Elements to be Analyzed and Evaluated

- Evaluate freeway operational elements:
  - Braided ramps on I-5 south of the Broadway/Weidler interchange for northbound and southbound traffic; or
  - Collector/distributor roads south of the Broadway/Weidler interchange for northbound and southbound traffic
- Evaluate relocating the north bound exit ramp at Weidler
- Evaluate relocating the southbound entrance ramp to Weidler

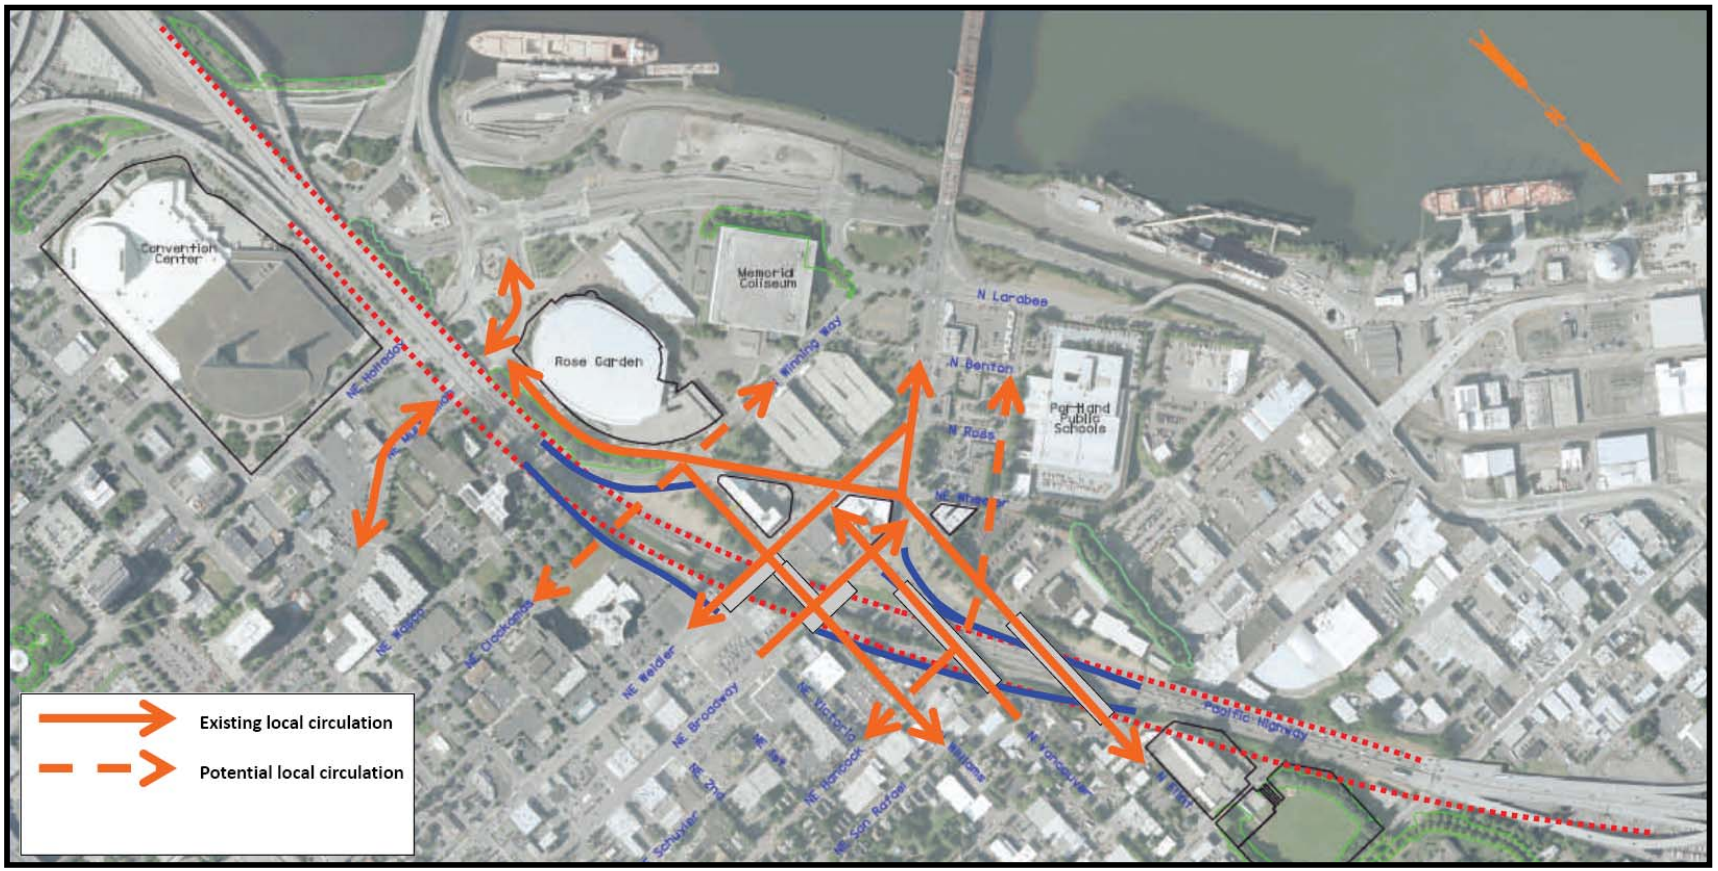
Assumptions:

- The existing five structures (Broadway, Weidler, Williams, Vancouver and Flint) and ramps would not be improved.
- The southbound and northbound weaves on I-5 north of the Flint overpass would not be improved.

Major Local Street Elements to be Analyzed and Evaluated

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.

Braided Ramp:



A freeway ramp, typically connecting two freeways or a freeway and two interchanges, that provides physical separation for vehicles destined to or originating from different ramp terminals.

Collector/Distributor Road:

This road type, often abbreviated as C/D road, is a one-way road next to a freeway that is used for some or all of the ramps that would otherwise merge into or split from the main lanes of the freeway.

DRAFT

Concept 3: Rebuild the Structures with Mainline Operational Improvements

Concept Description

This concept would rebuild the five freeway overcrossing structures in the same location to accommodate an auxiliary lane extension. The intent of the auxiliary lanes under the structures is to improve the safety and operations of I-5.

DRAFT

Concept 3: Rebuild the Structures with Mainline Operational Improvements (continued)

Major Freeway Elements to be Analyzed and Evaluated

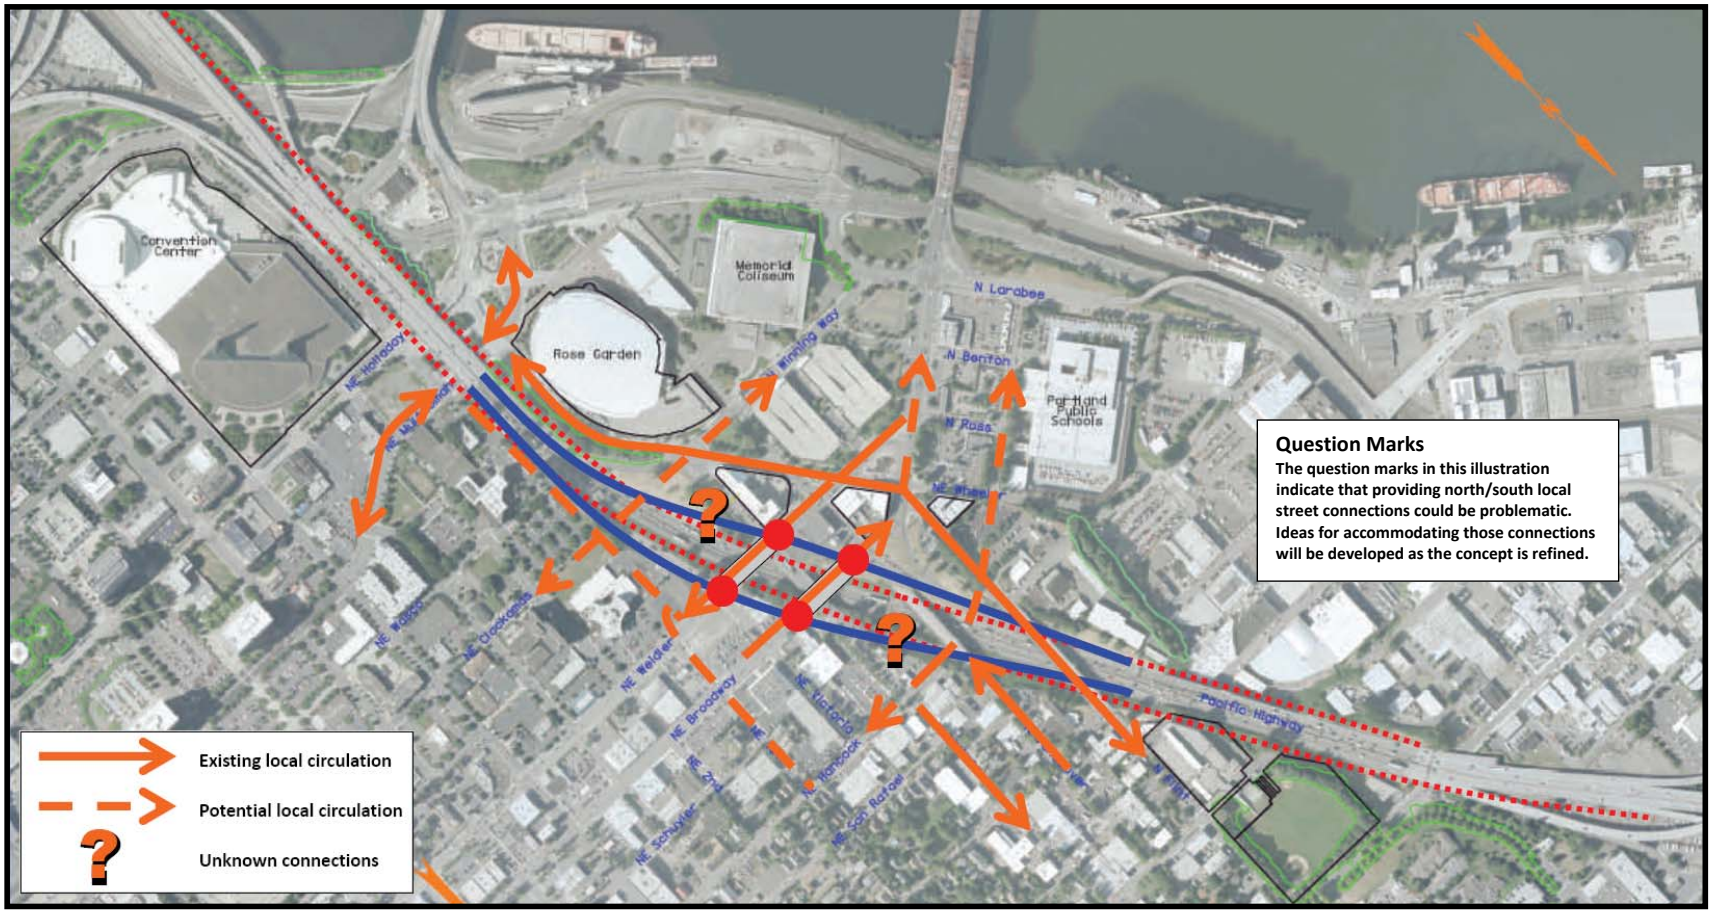
- Construct a northbound and southbound auxiliary lane extension on I-5 under the structures. All structures across the freeway will be rebuilt to accommodate the auxiliary lane.
- Rebuild the five existing structures (Broadway, Weidler, Williams, Vancouver and Flint) in the same location.

Assumptions

- The existing ramps locations for Broadway and Weidler interchange would not be improved.
- There would be no loop ramps.

Major Local Street Elements to be Analyzed and Evaluated

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Improve Broadway, Weidler, Williams, Vancouver and Flint overcrossings to accommodate bike/ped/transit.



Auxiliary Lane:

A lane provided, in addition to the normal through travel lanes, to facilitate weaving, acceleration and/or deceleration, or slow moving vehicle operation.

DRAFT

Category 4: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements

Concept 4a. Split Diamond

Concept Description

The Split-Diamond Concept is similar to the existing conditions with four ramps accessing Broadway and Weidler with interconnecting roadways between the two arterial streets. This concept would re-locate the southbound entrance ramp to I-5 to Weidler. The intent is to improve the weaving distance for safety and improve the operations with the auxiliary lanes on I-5.

DRAFT

Category 4: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements
4a. Split Diamond (continued)

Major Freeway Elements to be Analyzed and Evaluated

- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the overcrossing structures. All structures across the freeway will be rebuilt to accommodate the auxiliary lane.
- Evaluate ramp terminal re-configurations for the Broadway/Weidler interchange.

Assumptions:

- The Broadway/Weidler couplet would remain.

Major Local Street Elements to be Analyzed and Evaluated

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate streetcar and bus route alignment impacts.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/west ped/bike/transit movements.
- Improve Broadway and Weidler structures to accommodate bike/ped/transit.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with Broadway/Weidler.

Auxiliary Lane:

A lane provided, in addition to the normal through travel lanes, to facilitate weaving, acceleration and/or deceleration, or slow moving vehicle operation.

DRAFT

Category 4: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements

Concept 4b. Folded Diamond

Concept Description

The Folded-Diamond Concept would have loop ramps in the southeast and northwest quadrants of the interchange. The loop ramp in the SE quadrant would serve traffic movements from Broadway/Weidler to northbound I-5. The loop ramp in the NW quadrant would serve traffic movements from Broadway/Weidler to southbound I-5. The intent is to improve the northbound and southbound weaving sections for safety and to improve I-5 operations with the auxiliary lanes.

DRAFT

Category 4: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements
Concept 4b. Folded Diamond (continued)

Major Freeway Elements to be Analyzed and Evaluated

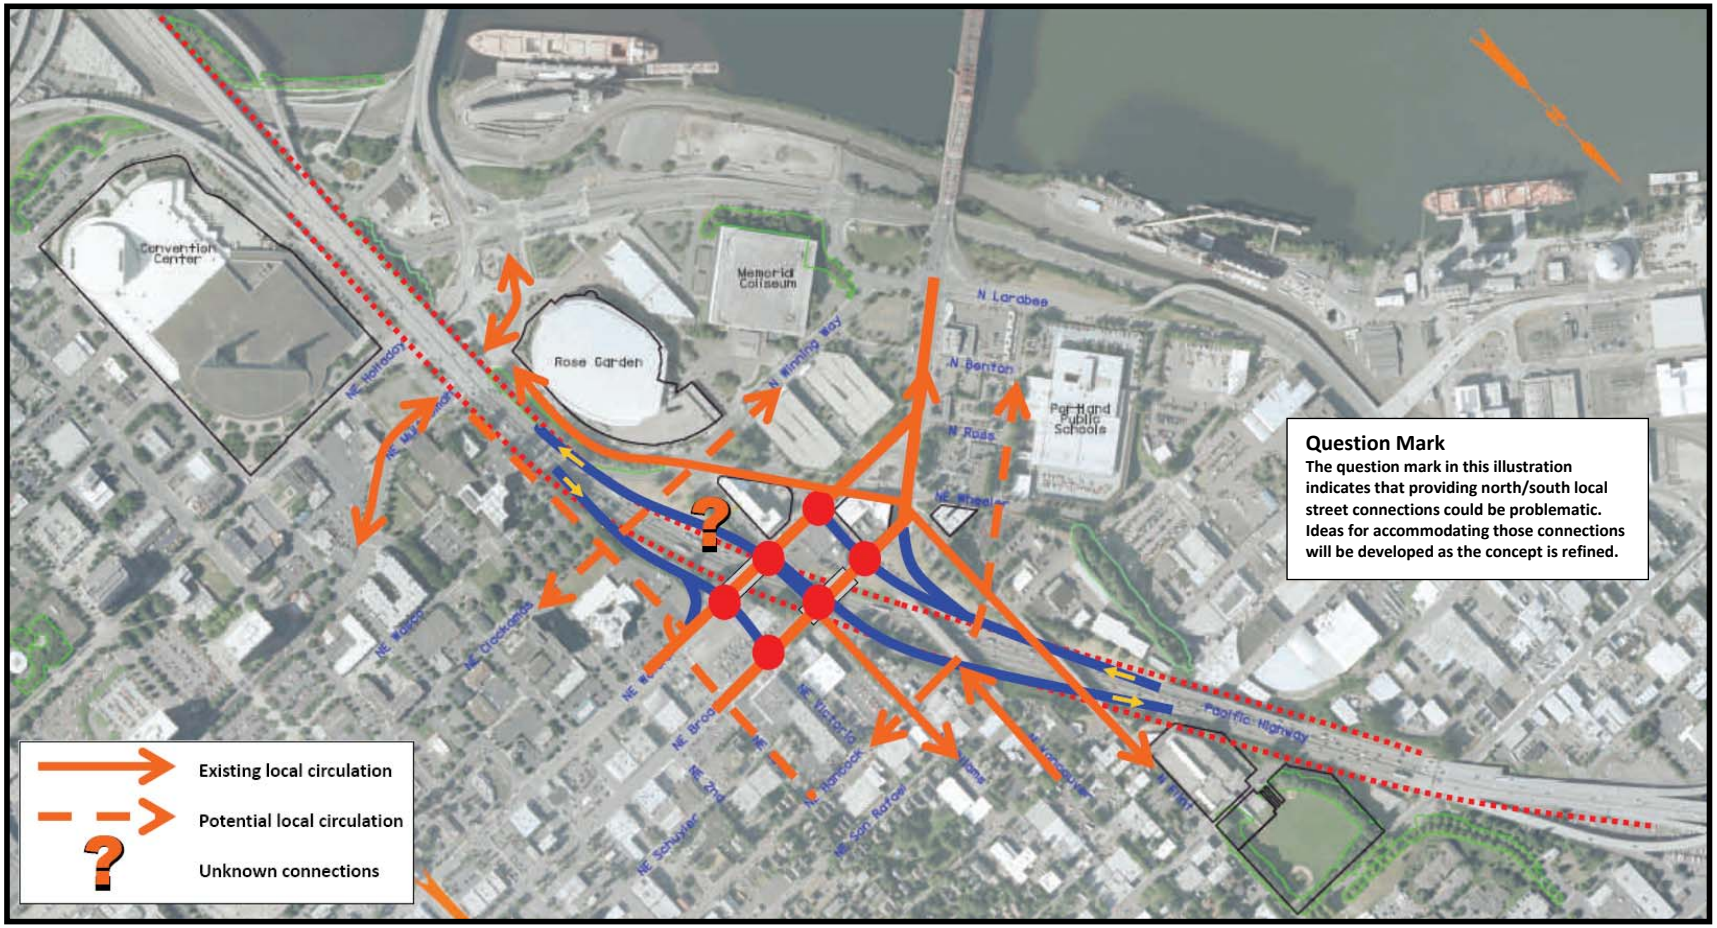
- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the overcrossing structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate loop ramps connecting I-5 to the Broadway/Weidler couplet that would lengthen the I-5 northbound entrance ramp from Broadway and southbound entrance ramp from Weidler and therefore increase the weaving distances.
- Evaluate NE 1st Street circulation between the Broadway/Weidler couplet.

Assumptions:

- The Broadway/Weidler couplet remains

Major Local Street Elements to be Analyzed and Evaluated

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/west ped/bike/transit movements.
- Improve Broadway and Weidler structures to accommodate bike/ped/transit.
- Evaluate bike/ pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.



Auxiliary Lane:

A lane provided, in addition to the normal through travel lanes, to facilitate weaving, acceleration and/or deceleration, or slow moving vehicle operation.

DRAFT

Category 4: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements

Concept 4c. Three-Point Interchange (couplet)

Concept Description

The Three-Point Interchange (Couplet) Concept would simplify the ramp terminal intersections to create a conventional interchange. The intent of this concept is to improve the traffic operations and traffic flow on Broadway/Weidler. This concept would also improve some weaving distances for safety and would improve freeway operations with extended auxiliary lanes on I-5.

DRAFT

Category 4: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements
Concept 4c. Three-Point Interchange (couplet; continued)

Major Freeway Elements to be Analyzed and Evaluated

- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate relocating the I-5 southbound entrance ramp to Weidler; this has the potential to lengthen the weave distance.
- Evaluate the ramp terminal intersection operations.

Assumptions:

- Broadway/Weidler couplet remains

Major Local Street Elements to be Analyzed and Evaluated

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/west ped/bike/transit movements.
- Improve Broadway and Weidler structures to accommodate bike/ped/transit.
- Evaluate bike/ pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

Auxiliary Lane:

A lane provided, in addition to the normal through travel lanes, to facilitate weaving, acceleration and/or deceleration, or slow moving vehicle operation.

DRAFT

Category 5: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements

Concept 5a. Standard Diamond (de-couple B/W)

Concept Description

The Standard Diamond Concept would de-couple Broadway/Weidler at the freeway to create a conventional interchange form. The concept intent is to improve the weaving length between the Broadway/Weidler and I-84 interchanges. The section of I-5 southbound between Weidler and I-84 is the worst weaving section for crashes. The intent of the northbound and southbound auxiliary lane extensions on I-5 under the structures is to improve the safety and operations on I-5.

DRAFT

Category 5: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements
Concept 5a. Standard Diamond (de-couple B/W; continued)

Major Freeway Elements to be Analyzed and Evaluated

- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate standard diamond configuration with Broadway/Weidler de-coupled to Broadway at the interchange.
- Evaluate relocating the southbound entrance ramp to I-5/I-84; this has the potential to lengthen the weave distance.
- Evaluate relocating the northbound exit ramp from I-5; this has the potential to lengthen the weave distance.

Assumptions:

- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

Major Local Street Elements to be Analyzed and Evaluated

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/west ped/bike/transit movements.
- Evaluate bike/ pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

Auxiliary Lane:

A lane provided, in addition to the normal through travel lanes, to facilitate weaving, acceleration and/or deceleration, or slow moving vehicle operation.

DRAFT

Category 5: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements

Concept 5b. Single-Point Urban Interchange (SPUI; de-couple B/W)

Concept Description

A single-point urban interchange (SPUI) is similar in form to a diamond interchange, but it has the advantage of allowing opposing left turns to proceed simultaneously by compressing the two intersections of a diamond into one signalized intersection. Traffic passing through the interchange can be controlled by a single signal; vehicles can clear the intersection more quickly than in a diamond interchange. The intent of the SPUI Concept is to improve the operations and safety at the interchange and improve I-5 operations and safety with the auxiliary lane extensions.

DRAFT

Category 5: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements
Concept 5b. Single Point Urban Interchange (SPUI; de-couple B/W; continued)

Major Freeway Elements to be Analyzed and Evaluated

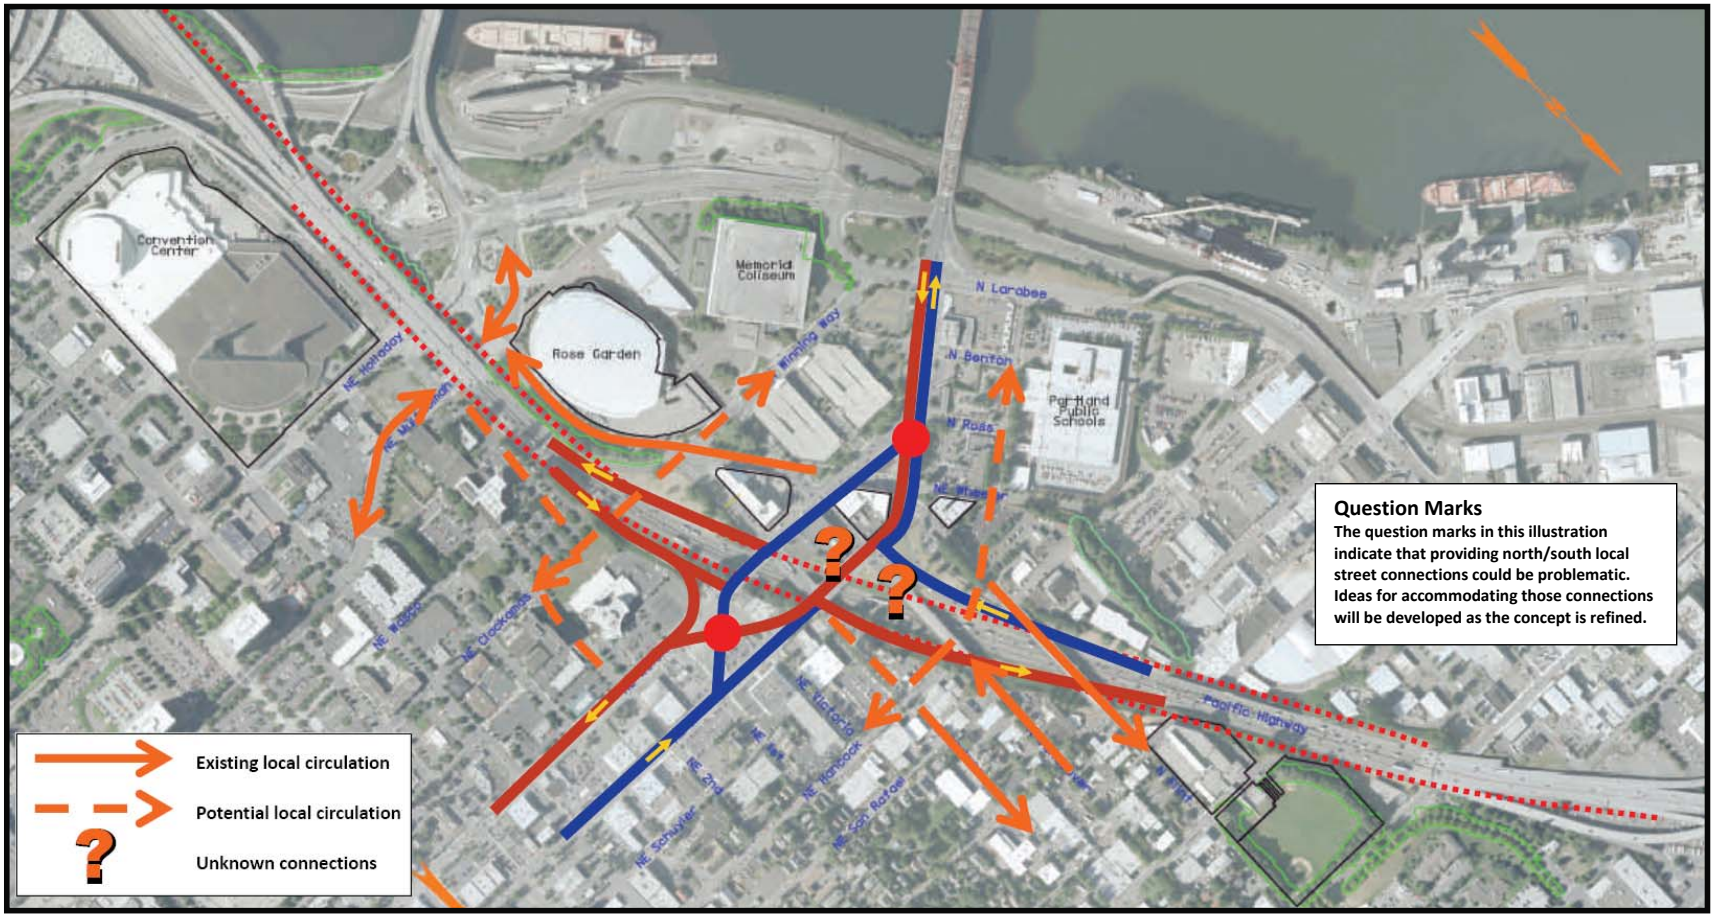
- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate a major reconfiguration of the Broadway-Weidler interchange based on the SPUI design concept described above with Broadway/Weidler de-coupled to Weidler at the interchange.

Assumptions:

- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

Major Local Street Elements to be Analyzed and Evaluated

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/west ped/bike/transit movements.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.



Auxiliary Lane:

A lane provided, in addition to the normal through travel lanes, to facilitate weaving, acceleration and/or deceleration, or slow moving vehicle operation.

DRAFT

Category 5: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements

Concept 5c. Diverging Diamond Interchange (DDI)

Concept Description

A diverging diamond interchange is a form of diamond interchange in which the two directions of traffic on the local road cross to the opposite side at the freeway. The direction of travel will change for Broadway and Weidler through the interchange. The diverging diamond interchange allows for two-phase operation at all signalized intersections within the interchange area. The intent of the Diverging Diamond Interchange Concept is to improve the safety at the interchange since no left turns must clear opposing traffic and most movements are controlled by traffic signals. The intent of the northbound and southbound auxiliary lane extensions on I-5 is to improve the safety and operations on the freeway.

DRAFT

Category 5: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements
Concept 5c. Diverging Diamond Interchange (continued)

Major Freeway Elements to be Analyzed and Evaluated

- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate a major reconfiguration of the Broadway-Weidler interchange based on the Diverging Diamond Interchange Concept described above.
- Evaluate signalized intersections of the diverging movements
- Evaluate ramp entrances and exits for gap acceptance

Assumptions:

- The five existing structures (Broadway, Weidler, Williams, Vancouver and Flint) would be removed.
- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

Major Local Street Elements to be Analyzed and Evaluated

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/west ped/bike/transit movements.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

Auxiliary Lane:

A lane provided, in addition to the normal through travel lanes, to facilitate weaving, acceleration and/or deceleration, or slow moving vehicle operation.

DRAFT

Category 5: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements

Concept 5d. Roundabout-Controlled Diamond Interchange

Concept Description

The Roundabout-Controlled Diamond Interchange Concept features a one-way circulatory roadway with yield-on-entry into the roundabout. This concept retains the Broadway/Weidler couplet and redirects the circulation of N Williams, Vancouver and Flint. The intent of the northbound and southbound auxiliary lane extensions on I-5 is to improve the safety and operations on the freeway.

DRAFT

Category 5: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements
Concept 5d. Roundabout-Controlled Diamond Interchange (continued)

Major Freeway Elements to be Analyzed and Evaluated

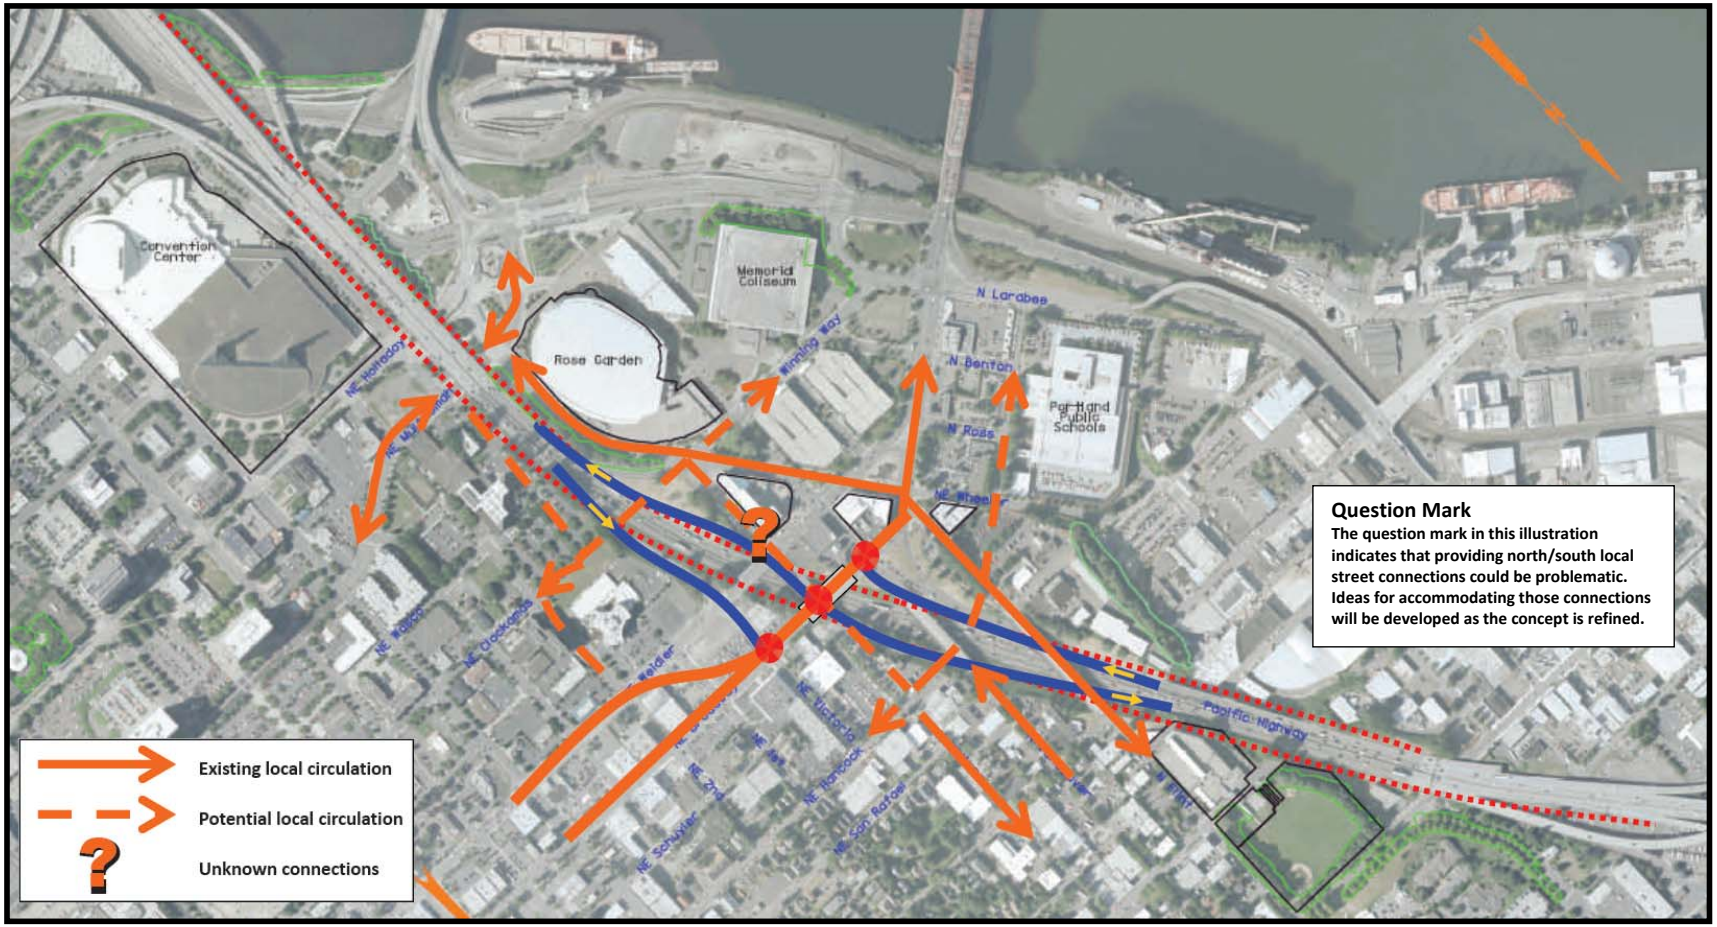
- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate a major reconfiguration of the Broadway-Weidler interchange based on the Roundabout-Controlled Diamond Interchange Concept described above.

Assumptions:

- The five existing structures (Broadway, Weidler, Williams, Vancouver and Flint) would be removed.
- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

Major Local Street Elements to be Analyzed and Evaluated

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.



Auxiliary Lane:

A lane provided, in addition to the normal through travel lanes, to facilitate weaving, acceleration and/or deceleration, or slow moving vehicle operation.

DRAFT

Category 5: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements

Concept 5e. Three-Point Interchange (de-couple B/W)

Concept Description

The Three-Point Interchange (De-Couple) Concept simplifies the ramp terminal intersections to create a conventional interchange. The intent of this concept is to improve the traffic operations and traffic flow on Broadway. The intent of the northbound and southbound auxiliary lane extensions on I-5 is to improve the safety and operations on the freeway.

DRAFT

Category 5: Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements
Concept 5e. Three-Point Interchange (de-couple B/W; continued)

Major Freeway Elements to be Analyzed and Evaluated

- Evaluate constructing northbound and southbound auxiliary lane extensions on I-5 under the structures. All structures across the freeway would be rebuilt to accommodate the auxiliary lane extensions.
- Evaluate a major reconfiguration of the Broadway-Weidler interchange based on the Three-Point Interchange (De-Couple) Concept described above that would include:
  - New ramp terminal intersections
  - De-coupling Broadway/Weidler to Broadway

Assumptions:

- The five existing structures (Broadway, Weidler, Williams, Vancouver and Flint) would be removed.
- Potential alternative configurations and relocations will be needed to mitigate the impacts to access and circulation for all modes.

Major Local Street Elements to be Analyzed and Evaluated

- Evaluate potential new overcrossing(s) at Clackamas and/or Hancock that could be built to improve local connectivity for non-motorized modes (bikes and pedestrians) or for all modes.
- Evaluate the impacts to streetcar and bus route alignments and identify mitigation measures.
- Evaluate potential removal or relocation of three of the existing structures (Flint, Vancouver and Williams) to accommodate the north/south and east/west ped/bike/transit movements.
- Evaluate bike/pedestrian circulation improvements on the east side of I-5 to connect the Rose Quarter Transit Center with the Broadway/Weidler couplet.

Auxiliary Lane:

A lane provided, in addition to the normal through travel lanes, to facilitate weaving, acceleration and/or deceleration, or slow moving vehicle operation.

DRAFT

Concept 6: TSM/TDM/Operations Management

Concept Description

The project team will seek the SAC's endorsement of adding a TSM/TDM/Operations Management concept and, with that endorsement, would proceed to define the details of what that concept would include.

DRAFT

N/NE Quadrant and I-5 Broadway/Weidler Plans
DRAFT Refinement and Screening Process

A. Land Use/Urban Design/Local Transportation Screening (revised based on 5/26 SAC input)

The following describes the approach to convert the wide range of ideas from SAC, Subcommittee, Charrettes, and public inputs into a smaller number of alternative concepts for further study. The screening factors were based on the following:

- Step One Land Use/Urban Design/Local Transportation screening factors are based on adopted SAC Project Goals and are indicated by number and **bold** type.
- Issues, Opportunities, and Constraints complied by Project Staff, which are the lower case letters, provide additional screening factors.
- Factors common to the Land Use/Urban Design/Local Transportation screening and the I-5 screening are underlined.

Step One: Land Use/Urban Design/Local Transportation Screening

3 Quadrant-wide concepts; subarea choices and issues

Screening Steps/Goals:

A. Staff reviews results of Land Use, Urban Design, and Local Transportation Charrette, public comments, SAC and Subcommittee inputs.
B. Staff organizes ideas into alternative, quadrant-wide concepts and subarea choices and issues.
C. SAC reviews and approves Step One screening factors.

Land Use/Urban Design/Local Transportation Refinement Factors (Adapted from Project Scope and Goals)

1. **A diverse mix of commercial, cultural, entertainment, industrial, recreational, and residential uses, including affordable housing:**
   a. Foster distinct and complementary subarea identities within the quadrant.
   b. Encourage uses that complement regional facilities including the Rose Garden, Memorial Coliseum, Convention Center and Lloyd Center, while seeking to balance the episodic nature of these attractions with additional activities.
   c. Foster increased residential density and improve jobs to housing ratio in the quadrant by 2035.
   d. Preserve existing housing in the quadrant.
   e. Provide open space, parks and recreation opportunities.

2. **Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages:**
   a. Create opportunities for new employment and a variety of employment types and levels.
   b. Foster increase in future high density commercial development while supporting and encouraging industrial activities in current industrial areas.
   c. Retain and support existing and local businesses in the quadrant.

3. **Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment:**
   a. Create opportunities for new parks and open spaces.
   b. Maintain and create new access points to the river.
   c. Enhance and create new fish and wildlife habitat, tree canopy, and green infrastructure.
   d. Support sustainable development goals and practices, including creation of the Lloyd Eco-District.

4. **Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods:**
   a. Create sensitive transitions between the more highly urban Central City and adjacent residential neighborhoods.
   b. Foster concepts that support high-density development in the Lloyd District and minimize their impacts on adjacent neighborhoods-Eliot, Irvington, and Sullivan's Gulch.

5. **A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system;**
   a. Accommodate present and future access needs of the quadrant.
   b. Improve multi-modal transportation accessibility and connectivity within and through the quadrant.
   c. Increase safety for all modes.
   d. Improve circulation for all modes in the Rose Quarter Transit Center.
   e. Improve freight access from freeway to industrial areas and major destinations.

6. **Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses.**
   a. Improve the local circulation system for safe access for all transportation modes within the quadrant and freeway interchange.
   b. Provide affordable range of multimodal transportation solutions.
   c. Connect regional trail system.

7. **Equitable access to community amenities and economic opportunities:**
   a. Avoid/minimize/mitigate involuntary displacement of quadrant residents and jobs.
   b. Provide for a broad array of employment types and encourage living-wage jobs.
   c. Provide for diversity of housing types that meets the needs of all income-levels and a variety of household types and lifestyles.
   d. Provide for amenities and services, such as parks, schools and connections, at a level appropriate to support the type and intensity of development proposed.
   e. Increase the capacity of existing residents and business owners to share in the benefits from growth in the quadrant.

8. **Protection and enhancement of the cultural heritage of the area and its sub-districts:**
   a. Preserve, enhance and celebrate historic and cultural resources.
   b. Avoid/minimize/mitigate demolition of historic and cultural resources.

Step Two: Land Use/Urban Design/Local Transportation Screening

- **Continue refinement of quadrant-wide concepts and subarea choices and issues using the refinement factors listed above and input from the 5/26/11 SAC meeting, open house and other outreach.**
- **SAC review and approval of refined alternative quadrant-wide concepts and subarea choices and issues for additional analyses through summer.**

Step Three: Evaluation of the Combined Packages of Land Use/Urban Design/Local Transportation and I-5 Freeway Alternatives.

- **SAC and public review of evaluation criteria.**
- **Full integration of Land Use/Urban Design/Local Transportation and I-5 Broadway/Weidler Concepts.**
- **Evaluation of integrated alternatives.**
- **Selection of preferred alternative.**

B. I-5 Broadway/Weidler Interchange Area Screening (revised)

The following describes the approach to convert the wide range of ideas from SAC, Subcommittee, Charrettes, and public inputs into a smaller number of alternative concepts for further study. The screening factors were based on the following:

- Step One I-5 Screening is based on staff evaluation.
- Step Two I-5 Screening is based on adopted SAC Project Goals and indicated by number and **bold** type.
- Issues, Opportunities, and Constraints complied by Project Staff, which are the lower case letters, provide additional screening factors.
- Factors common to the Land Use/Urban Design/Local Transportation screening and the I-5 screening are underlined.

Step One: I-5 Broadway/Weidler Interchange Area Grouping and Screening

70 - 80 ideas

Screening Steps/Goals:

A. Review results of Transportation and Freeway Charrette, public comments, SAC and Subcommittee Inputs
B. Organize ideas into alternative concepts
C. SAC review of Step One Grouping and Screening

Grouping and Screening Factors

I. Group ideas into like concepts based on the following:
   A. Improving freeway options
   B. Interchange ideas
   C. Local transportation connections

II. Eliminate ideas based on the following:
   A. Out-of-Scope
   B. Infeasible due to engineering impractically and/or excessive costs

Step Two: I-5 Broadway/Weidler Interchange Area Screening

Identify Range of Concept Alternatives for Detailed Evaluation - HIGH LEVEL QUALITATIVE SCREENING REVIEW

Screening Goals:

A. Narrow Step One alternative concepts to smaller handful for additional analyses
B. SAC and public review of Step Two Screening of recommended alternative concepts
C. SAC Approval of Step Two Screening and alternatives for additional analyses through the summer

Screening Factors

1. A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system;
   a. Improve multi-modal transportation accessibility and connectivity within and through the quadrant.
      i. Increase number and quality of bicycle freeway crossing opportunities
      ii. Increase number and quality of pedestrian freeway crossing opportunities
      iii. Improve local circulation and freeway crossing opportunities
   b. Increase safety for all modes.
      i. Provide ramp head intersections with good sightlines and manageable crossing distances
      ii. Provide pedestrian and bicycle infrastructure and minimize pedestrian and bicycle conflicts with motor vehicles
   c. Improve freight access from freeway to industrial areas and major destinations.
      i. Freeway on/off ramps designed to facilitate freight travel

2. Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses.
   a. Improve freeway operations for freight and auto.
      i. Improve weaving lengths on I-5 at Broadway/Weidler
   b. Improve freeway safety.
      i. Geometry consistent with general engineering practices and standards
      ii. Maintain or improves risk of queues backing up onto freeway mainline
      iii. Lower likelihood of collisions on I-5 between Broadway and I-84
   c. Improve the local circulation system for safe access for all transportation modes within the quadrant and freeway interchange.
      i. Maintain or improve local traffic operations in “the Box”

3. Equitable access to community amenities and economic opportunities;
   a. Avoid/minimize/mitigate involuntary displacement of quadrant residents and jobs
      i. Avoid major impacts to key employment and residential sites adjacent to I-5

4. Protection and enhancement of the cultural heritage of the area and its sub-districts
   a. Avoid/minimize/mitigate demolition of historic and cultural resources.
      i. Avoid existing landmarks and potentially eligible historic structures
      ii. Avoid culturally significant structures

Step Three: Evaluation of Integrated Land Use/Urban Design/Local Transportation and I-5 Broadway/Weidler Interchange Area Alternatives

- **SAC and public review of evaluation criteria.**
- **Full integration of Land Use/Urban Design/Local Transportation and I-5 Broadway/Weidler Concepts.**
- **Evaluation of integrated alternatives.**
- **Selection of preferred alternative.**

DISCUSSION DRAFT Step 3 Evaluation Matrix

The Step 3 Evaluation Matrix is intended to guide the development of the recommended concepts for the North/Northeast Quadrant Plan and the I-5 Broadway/Weidler Plan. The SAC will be advising the City of Portland and the Oregon Department of Transportation on both of these planning efforts.

The matrix is divided into two columns: the left column will be used to evaluate the quadrant wide concepts and the right column will be used for the I-5 freeway alternative concepts.

The column on the left contains the N/NE Quadrant and I-5 Broadway-Weidler Plans project goals as adopted by the SAC, numbered from 1 to 8. Under each goal are related *draft* objectives derived from a number of sources including: SAC and subcommittee meetings, the Issues, Opportunities and Constraints report, the November open house and other public and agency input. Together, the goals and objectives represent what we hope to achieve with the N/NE Quadrant and I-5 Broadway-Weidler Plans as a whole. They will guide further development and refinement of plan elements and provide a means for evaluating whether the final proposed plan, as a package, is balanced and complete and meets the aspirations and intent of project stakeholders.

The column on the right contains evaluation measures specific to the freeway interchange and related local transportation interface element of the project. Each evaluation measure is tied to one or more goal or objective. They are generally more specific or quantitative than the objectives and are tailored to the infrastructure project characteristics of the freeway planning element. They will be used to evaluate the pros and cons of the SAC recommended concepts that emerge from the screening undertaken under Step 2.

N/NE Quadrant and I-5 Broadway/Weidler Plan Goals and Objectives	Freeway Interchange & Local Transportation Interface Concept Evaluation Measures
1. A diverse mix of commercial, cultural, entertainment, industrial, recreational and residential uses, including affordable housing: a. Provide opportunities for a variety of desired land uses in the quadrant and its subdistricts b. Foster distinct and complementary subarea identities within the quadrant. c. Encourage uses that complement regional facilities including the Rose Garden, Memorial Coliseum, Convention Center and Lloyd Center, while seeking to balance the episodic nature of these attractions with additional activities. d. Foster increased residential density and improve jobs to housing ratio in the quadrant by 2035. e. Create opportunities for affordable housing. f. Preserve existing housing in the quadrant. g. Provide open space, parks and recreation opportunities.	• (1.f. and 2.d.) Minimize the need to purchase property for right-of-way.
2. Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages: a. Create opportunities for new employment and a variety of employment types and levels. b. Maintain or increase development potential, e.g. through zoning and creation of new parcels. c. Foster increase in future high density commercial development while supporting and encouraging industrial activities in current industrial areas. d. Retain and support existing and local businesses in the quadrant.	
3. Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment: a. Create opportunities for new parks and open spaces. b. Maintain and create new access points to the river. c. Enhance and create new fish and wildlife habitat, tree canopy, and green infrastructure. d. Support sustainable development goals and practices, including creation of the Lloyd Eco-District.	• (3.c.) Amount of enhanced street tree canopy • (3.c.) Reduction of storm water run-off and energy use • (3.b.) Location and level of local connectivity improvements • (4.) Health and safety impacts of proposed new infrastructure o Measure air quality (emissions) o Measure greenhouse gas emissions (see transportation safety under 5 and 6)
4. Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods: a. Create sensitive transitions between the more highly urban Central City and adjacent residential neighborhoods. b. Foster concepts that support high-density development in the Lloyd District and minimize their impacts on adjacent neighborhoods-Eliot, Irvington, and Sullivan's Gulch. c. Provide for amenities and services, such as parks, schools and connections, at a level appropriate to support the type and intensity of development proposed.	

DISCUSSION DRAFT Step 3 Evaluation Matrix

N/NE Quadrant and I-5 Broadway/Weidler Plan Goals and Objectives	Freeway Interchange & Local Transportation Interface Concept Evaluation Measures
5. A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system: a. Improve multi-modal transportation accessibility and connectivity within and through the quadrant. b. Encourage the use of transportation modes other than single occupancy vehicles and reduces auto gas emissions. c. Improve circulation for all modes in the Rose Quarter Transit Center. d. Accommodate present and future access needs of the quadrant. e. Improve freight access from freeway to industrial areas and major destinations. f. Increase safety within the quadrant for all modes. g. Provide a street hierarchy system that supports the quadrant's desired urban form, land use and livability goals. h. Provide parking and transportation demand management strategies that better support the needs of the quadrant.	(5.a., 5.f. and 6.f.) Provide pedestrian and bicycle infrastructure and minimize pedestrian and bicycle conflicts with motor vehicles: • Increase quality (comfort/safety) of bicycle freeway crossing opportunities • Increase quality (comfort/safety) of pedestrian freeway crossing opportunities • Provide direct pedestrian and bicycle connections to and from the following key locations: o Broadway Bridge o Steel Bridge o Rose Quarter/Transit Center o Oregon Convention Center o Lloyd Center o Vancouver/Williams Corridor north of Hancock o Broadway/Weidler Corridor east of I-5 • (6.c.) Improve weaving LOS on I-5 at Broadway/Weidler • (6.f.) Lower likelihood of collisions on I-5 between Broadway and I-84 • (6.c.) Mainline through traffic performance • (5.e., 6.c. and 6.f.) Minimize conflicts between freight traffic and other modes • (6.d.) Improve local circulation and freeway crossing opportunities • (5.a. and 6.d.) Maintain or improve local traffic operations in the vicinity of the Broadway/Weidler Interchange • (6.a. and 6.e.) Refer to 9.b. below: • (6.g.) Refer to 1. above and 8 below:
6. Improve the local circulation system for safe access for all transportation modes within the quadrant and at freeway interchanges. a. Provide affordable range of multimodal transportation solutions. b. Connect regional trail system. c. Improve freeway operations for freight and auto. d. Improve local access across freeways and rail crossings via improved, safer crossings and additional separated facilities. e. Provide affordable and cost-effective range of multimodal transportation solutions. f. Seek to reduce accident potential. g. Minimize local land use impacts.	
7. Equitable access to community amenities and economic opportunities: a. Avoid/minimize/mitigate involuntary displacement of quadrant residents and jobs. b. Provide for a broad array of employment types and encourage living-wage jobs. c. Provide for diversity of housing types that meets the needs of all income-levels and a variety of household types and lifestyles. d. Provide for amenities and services, such as parks, schools and connections, at a level appropriate to support the type and intensity of development proposed. e. Increase the capacity of existing residents and business owners to share in the benefits from growth in the quadrant. f. Ensure that the plan compliments economic development and housing strategies to build capacity for existing area residents and businesses. g. Ensure that infrastructure improvement do not have disproportionate public health impacts. h. Ensure that plan proposals address the needs of local residents and businesses while recognizing the importance of the quadrant's region-serving facilities and infrastructure. i. Ensure the plan broadly supports the equity objectives established through the Portland Plan process.	• (7.g.) Health and safety impacts of proposed new infrastructure (see 4.(air quality), 5. and 6. (safety) above).
8. Protection and enhancement of the cultural heritage of the area and its sub-districts: a. Preserve, enhance and celebrate historic and cultural resources. b. Avoid/minimize/mitigate demolition of historic and cultural resources. c. Avoid or minimize adverse impacts on cultural or high priority community sites.	• (8.b., c.) Measure impacts to existing historic and culturally significant structures
9. Additional Criteria: a. Ensure plan proposals are practical, implementable and cost-efficient. b. Ensure capital costs within project limits. c. Ensure plan proposals are consistent with relevant adopted local, regional and state land use and transportation goals and policies. d. Ensure plan concepts and proposals are consistent with relevant goals and objectives of the Portland Plan and Central City 2035 processes.	• (9.b.) Develop Broadway/Weidler Interchange and Local Transportation Interface cost estimates

Subject: Input from Paramount Apartments on I-5 Broadway/Weidler and N/NE Quadrant Plans
Attachments: Paramount Apartments 253 N. Broadway.jpg

To the City of Portland, ODOT and all others involved in the I-5 Broadway/Weidler and N/NE Quadrant Plans
(via Stephanie Beckman, City Planner Bureau of Planning and Sustainability 503-823-6042, stephanie.beckman@portlandoregon.gov - Thank you, Stephanie! Please remember to cc me in when you forward this so I will know who has received it.)

My husband, Rich, and I have owned and operated Paramount Apartments LLC (253 N. Broadway, tax lot 3400) and Paramount Parking LLC (tax lot 3300) since September 2nd, 1998. After attending the April 13th charrette and reviewing a variety of suggested plans, we'd like to take the opportunity to submit some input.

It was a shock to us to see drawings showing freeway off-ramps running through tax lot 3300 and the Paramount building torn down. It was like seeing your own future death in a crystal ball. I found out at the charrette that the PDC had not previously listed the Paramount as one of the buildings they wanted preserved, and that now that ODOT knows they do in fact want it preserved, they are not considering any plans that include tearing it down. Some of the subsequent plans however showed what may be a fate worse than death for the Paramount: freeway ramps running right alongside the building, right behind the building, or practically encircling the building; Broadway approach and front access to our building eliminated, and high-rise buildings built along the north side of Broadway from Wheeler to Larrabee blocking our city views.

It is hard for us as average people without urban planning or traffic engineering backgrounds who are busy with running a small business to keep up on all the different proposals under consideration in the area of the Paramount: Rose Quarter Redevelopment, Lower Albina/Blanchard Site Redevelopment, I-5 Broadway/Weidler, Eastside Streetcar Loop, Bikeways improvements, etc. We would like to request that you help us out by forwarding e-mails, announcements, articles, reports, etc., to us so we can try to stay informed and not miss anything being considered and have the opportunity for input.

All of these plans will affect us in the following areas:

1. The value of the Paramount properties, which are our primary investment and means of livelihood,
2. The quality of life of our tenants, for whom we advocate, in terms of safety and the peaceful, pleasant enjoyment of their home and neighborhood, and
3. Two of our personal ideals:
   a. Preservation of a classic old building which we have extensively renovated and filled with excellent tenants over the last 12+ years, and
   b. Bicycle safety re-engineering needed at our intersection - which every year ranks as one of the top three in the city for incidence of bicycle-motor vehicle collisions

While we don't feel especially qualified to present a viable alternative plan, we would like the

chance to give the following feedback on some of what we've seen on the drawing board thus far:

1. Please do not come any closer to the Paramount with freeway lanes, freeway off-ramps, or more busy streets.

2. Please do not eliminate the approach to the Paramount front entry via Broadway, nor access to our building via our front entrance. Our street address in on Broadway. We are the "The Paramount on Broadway". We do not want to have to direct prospective tenants, or ask our tenants to direct their guests, to come to our building via a back street and the back entrance. What business wants to eliminate the front curb from their "curb appeal" and ask customers and guests to access them from the rear like a delivery truck?

3. Please take into consideration the the site lines of the Paramount Apartment tenants to avoid blocking our city views, one of our top features and a significant part of the appeal of our charming vintage apartments.

4. Please ensure that plans further the progress toward the stated city goal of making this area more pedestrian-oriented. We already have made a huge investment in this direction by routing the streetcar down N. Broadway. We would like to see development plans in this area, including those concerning I-5 N/NE Quadrant traffic, the Rose Quarter, and Lower Albina (Blanchard site included) to address the issue of making our neighborhood both safe and pleasant for pedestrians and bicyclists. This must include a safer way for north- and south-travelling bikes to get past Broadway.

5. Please make sure that in planning and carrying out whatever projects get approved that the 80+ people who make their home at 253 N. Broadway don't get overlooked in an otherwise non-residential area. This request is particularly in regards to noise disturbance, but also includes interruption to or contamination of basic services (water, gas, etc.), street parking and closures, etc.

Thanks for giving us the opportunity to have input. We'd love to read a reply from each of you.

Betsy (& Rich) Reese

Peter Finley Fry AICP Ph.D. *(503) 274-2744*

April 4, 2011

RECEIVED
PLANNING BUREAU
2011 APR -5 A 11: 34

Memorandum

TO: **Portland Bureau of Planning and Sustainability**
FROM: **Peter Finley Fry**
RE: **N/NE Quadrant and I-5 Broadway/Weidler Plans**
Preliminary Issues, Opportunities, and Constraints, draft
CC: **Joseph Weston**
William Ruff, LRS Architects

The following comments are offered.

The draft is based on interviews and testimony that are valuable, yet they are subjective and selective in that many will not participate if they are not aware or do not perceive vested interest. The draft needs to include research and objective observation.

Issues

1) **Height issues** are critically important. The City met with property owners several years ago and pledged to address the height issues after the Pearl Study had been completed. The property owners advocated for unlimited heights if the floor plates above the third floor where limited to 7,500 square feet or less. This methodology preserves (for the life of the development) over 90% of the airspace to be public. The allowance supports the streetcar with residential point towers and creates incredible views and an iconic skyscape for the traveling public on I-5.

2) **Convention Center/Rose Garden.** This area's function continues to be misunderstood. This area is like the rumpus room of a home that is not used for long periods of time until there is a family celebration when it is the most active area of the house. Residential uses are not compatible with major event entertainment. Retail uses such as restaurants need to be geared to cater events and close for the rest of the time. The area needs to be planned for intense use for short periods of time and passive amenities for long periods for quiet strolls through a park with art and landscaping.

3) **Third Rail.** The elimination of the eastbank freeway (I-5) and relocation of the Union Pacific rail line is suicidal. These are arterials as important as the arterials to a human heart and cannot be treated capriciously.

4) **Pedestrian and Bicycle Access.** The Sullivan's Gulch provides a unique and important opportunity to connect the center of the city to Gateway.

2153 SW Main Street, #105, Portland, Oregon USA 97205
Cell (503) 703-8033 • Fax (503) 274-1415 • pfinleyfry@aol.com

5) **Waterfront.** The waterfront downstream from the Broadway Bridge is the working harbor and upstream is a public amenity.

6) **Lower Albina.** The area performs two essential functions. Lower Albina is a regionally significant transportation terminal for the transfer of freight to and from rail and trucks through the Albina Rail Yards. Cement, gravel, wheat are transferred through silos to and from ships and rail/trucks. The area provides a unique location for innovative businesses and specialty manufacturing. The unique area east of interstate around Tillamook and Thompson Streets (Little Gotham) with their curved alignments and rail line alleys provide a unique opportunity for furniture, glass, and pottery craft people who could produce their art and sell retail out of storefronts to the public. Historic Russell Street provides restaurants and shops to support the needs of the area.

Residential uses are blindly advocated as a holy grail of planning. Yet, in fact, residential uses can be an invasive species no different than ivy or blackberries that will strangle the ability for industry to function. Industry and residential neighborhoods have their space; they are the two halves of human activity. They are not compatible in the same place.

the
leftbank
project

Karl Lisle, Bureau of Planning and Sustainability
Mauricio Leclerc, Portland Bureau of Transportation
Todd Juhasz, Oregon Department of Transportation

RE: Stakeholder input related to I-5 Broadway / Weidler and N / NE Quadrant

Dear Karl, Mauricio, Todd, and others involved in planning,

As stakeholders in the neighborhood, myself and the tenant community at Leftbank Project understand that balanced transportation planning for the area is imperative. This neighborhood not only serves every Portland visitor attending events at Rose Quarter, Memorial Coliseum, and Oregon Convention Center, but it is also a critical hub. These blocks constitute the primary connection between downtown and the N/NE side. The area is also home to an existing, growing residential and business population. For motorists, cyclists, pedestrians, transit, residents and businesses we have to get this right.

Not long ago, the area we're considering was exclusively a path into and out of downtown to most who passed through. Recent developments including the eastside of the Portland Streetcar Loop, Madrona Studios and my own project - Leftbank and Leftbank Annex have already had an indirect calming influence on traffic. The daytime population has grown substantially bringing more people onto the sidewalks, more bikes into the streets, and greater numbers of people dedicated to improvement. What these developments and others have in common is that they bring a human-scale focus. The millions of dollars already invested here illustrate the challenges that Portlanders have the vision and will to meet, and they offer momentum in the direction of shared goals.

While access for drivers is important, it must be our equal priority to make the area welcoming and safe for multi-modal transportation. Closely watching the neighborhood for five years now, I have an urgent and constant concern: N Williams and N Vancouver between Broadway and Weidler are extraordinarily dangerous. Before construction projects slowed traffic, my staff and I witnessed daily accidents, and accidents are still frequent. Here, cars get on and off the freeway, bicycles travel on marked paths and pedestrians use major crosswalks. In this high traffic, pressured context, drivers are unsure about which lanes turn or continue, there is poor visibility into crosswalks where two lanes of traffic both turn, and cyclists have a bike lane that morphs into a lane shared with buses, along with very dangerous lane-changes to make for turns. These issues present risks every day for people who live and work here, but may affect event-goers even more significantly.

Event-goers are often unfamiliar with the neighborhood and the risks of particular intersections. They are often here after dark. They are distracted by their excitement before and after concerts and games. And whether driving or using

240 n broadway, portland, oregon 503 286 6442 www.leftbankproject.com

the
leftbank
project

alternative transportation, they are more likely than daytime users to be under the influence of alcohol. When the Streetcar begins eastside service, more people unfamiliar with the neighborhood will be here on foot. We must make the neighborhood safe for pedestrians. In doing so, we support area businesses and make the neighborhood more livable.

From a slightly broader view geographically, I strongly support increasing pedestrian and bike-friendly connectivity between Rose Quarter and Oregon Convention Center. RQ and OCC are a primary draw to Portland for people regionally and nationally. Measures that improve the experience of getting through the district without a car will enhance the visitor experience and overall district designation.

Thank you for your consideration of input from those of us personally dedicated to the vitality of the neighborhood. Don't hesitate to contact me directly if you'd like clarification.

Sincerely,

Daniel Deutsch

CENTRAL CITY 2035

N/NE QUADRANT

N/NE Quadrant and I-5 Broadway/Weidler Plans

JIM H

Jim Howell edits to Final, approved documents Rec'd 9-26 SAC

Project Goals Statement

This planning effort will result in integrated land use, urban design, and transportation strategies, policies and plans for the N/NE Quadrant, (Lower Albina, the Lloyd District, and portions of Eliot, Irvington, and Sullivan's Gulch) and the I-5 Broadway/Weidler interchange that balance, complement, enhance, protect, respect, revitalize, support, and sustain economic, environmental, and social interests. The implementable plans will be consistent with the overall goals and policies of the city, region, and state.

Our recommendations will be guided by our desire for:

- A diverse mix of commercial, cultural, entertainment, industrial, recreational, and residential uses, including affordable housing;
- A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system(s) (AND RAILWAY)
- Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages;
- Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment;
- Equitable access to community amenities and economic opportunities;
- Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods;
- Protection and enhancement of the cultural heritage of the area and its sub-districts; and
- Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses.

N/NE Quadrant Project Scope and Topics of Other Studies

This document lists general topic areas that are within the scope of the N/NE Quadrant and I-5 Broadway/Weidler Plans and those that will be addressed by other projects or studies. More specific topics to be addressed by the N/NE Quadrant Project are identified in the Preliminary Issues, Opportunities, and Constraints report.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies
Land Use & Urban Design			
LU 1	Land Use & Urban Design	Identify land use and urban design/urban form issues in Lloyd and Lower Albina subdistricts, and the two study areas - Vancouver/Williams and NE Multnomah. Develop quadrant-specific land use and urban design policies and implementation tools consistent with direction from CC2035 and the Portland Plan. The planning effort will respond to opportunities related to light rail ~~and~~ street car (AND PASSENGER RAIL) facilities within the quadrant.	Portland Plan will develop the strategic framework for the City of Portland. CC2035 will develop the overall policy framework for the Central City, addressing economic development, housing, transportation, open space, and arts/civic/cultural policy issues.
LU 2	Growth	Seek to accommodate 2035 growth projections for population and employment in the study area.	Metro Region 2040 established high-growth expectations for the Central City. Conversations on this topic will need to happen at the regional level.
LU 3	Housing	Develop detailed housing goals and policies within the study area.	
LU 4	Zoning	Revisit, and as necessary, recommend changes to comprehensive plan and zoning designations, development standards, and design guidelines.	The broader CC2035 project will evaluate the need for structural code changes regarding how zoning and development review works in the Central City.
LU 5	Rose Quarter	Coordinate with the Rose Quarter Development Project and integrate the resulting development strategy with the rest of the N/NE Quadrant Project to support success in both the Rose Quarter and the surrounding areas.	The Rose Quarter Development Project is currently developing a detailed development strategy for the Rose Quarter.
LU 6	Willamette River	Coordinate with River Plan / Central Reach to identify land use/urban design issues and develop regulatory guidance for the Willamette Riverfront in the N/NE Quadrant within the Central Reach.	River Plan / Central Reach will be developed as part of the CC2035 Plan. The River Plan will contribute policy guidance for the Willamette River. The policies and regulations adopted through the River Plan / North Reach (April, 2010) that apply to the riverfront in Lower Albina will not be revised through the N/NE Quadrant Plan or CC2035.
LU 7	EcoDdistricts	Coordinate with the Portland Oregon Sustainability Institute (POSI) and Lloyd Green on the policy framework for EcoDistricts.	EcoDistricts study is led by POSI, which has identified the Lloyd District as a pilot project. Lloyd Green is the active association in the Lloyd District pursuing EcoDistrict formation.

57036

N/NE Quadrant Project Scope and Topics of Other Studies

This document lists general topic areas that are within the scope of the N/NE Quadrant and I-5 Broadway/Weidler Plans and those that will be addressed by other projects or studies. More specific topics to be addressed by the N/NE Quadrant Project are identified in the Preliminary Issues, Opportunities, and Constraints report.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies
LOCAL TRANSPORTATION			
LT 1	Purpose	Identify multi-modal transportation issues in the Lloyd and Lower Albina subdistricts, and the two study areas-Vancouver/Williams and NE Multnomah. Consider strategies to reduce single occupancy vehicle trips in the district. (INITIAL)	The Central City Transportation Management Plan (CCTMP) will be updated as part of CC2035. Recommendations from the N/NE Quadrant Plan may lead to amendments to the City's Transportation System Plan (TSP).
		The Regional Transportation Plan 2035 forecast will be the basis for the transportation analysis for the N/NE Quadrant Project.	The CCTMP will revise and, if needed, recommend changes to Central City wide transportation policies.
LT 2	Regional Trails (Sullivan's Gulch Trail & The Willamette River Greenway Trail)	The N/NE Quadrant Plan will coordinate with and recognize the future general alignment for the Sullivan's Gulch Trail and will coordinate with Parks to update the alignment of the Willamette River Greenway Trail as necessary.	This Plan will not determine the specific location for the Sullivan's Gulch Trail, which is a separate project led by the PBOT and Parks.
			The North Portland Greenway Trail Alignment Project is a Parks project that will determine the alignment for segments of the North Portland Greenway Trail.
LT 3	Transit (CONNECTIONS)	Identify transit needs in the Quadrant, including potential transit ~~"hubs"~~, and conceptual long-term improvements to the Rose Quarter Transit Center.	This plan will not result in a resolution on the Rose Quarter Transit Center. The project will study some of the major transportation issues in the area and identify some overall direction for long term improvements, but will not recommend a solution.
		The N/NE Quadrant Plan may influence, but will not determine, the alignment of the next streetcar line.	The Streetcar System Concept Plan calls for potential streetcar routes through the quadrant. To determine feasibility and choose a route, a separate alternatives analysis is needed.
LT 4	Local ~~Transportation~~ (ROAD) System	Consider street hierarchy and conceptual level design approaches to different streets in the study area.	No major expansion in local auto capacity. Central City policy calls for prioritizing non auto improvements to meet Central City economic development and livability goals.

57037

57038

N/NE Quadrant Project Scope and Topics of Other Studies

This document lists general topic areas that are within the scope of the N/NE Quadrant and I-5 Broadway/Weidler Plans and those that will be addressed by other projects or studies. More specific topics to be addressed by the N/NE Quadrant Project are identified in the Preliminary Issues, Opportunities, and Constraints report.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies
FREEWAY TRANSPORTATION			
F1	Improvements to I-5	Consider improvements to address capacity, operations, and safety issues on I-5 from I-84 to I-405. Improvements will be developed based on the current fiscally constrained Regional Transportation Plan (RTP) forecast for the Region.	Planning Beyond the 2035 Horizon is not a part of this Plan.
		Acceptable parameters on which alternative improvement proposals will be evaluated will include: engineering, safety, operations and whether the state can fund the proposals during the current process. Promising proposals that may be beyond the scope of this process will be considered when discussing a more comprehensive solution.	More comprehensive solution for freeway issues will be determined at a later date. No timeframe for a comprehensive study has been determined. Moving the Eastbank Freeway is not feasible during 2035 time frame.
		Focus on safety improvements to reduce the number of crashes. Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	
		Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need. Particular attention will be paid to the urban context of the area and avoiding impacts on key historic/cultural sites.	
		Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	The N/NE Quadrant Plan will be prepared pursuant to the RTP. The Columbia River Crossing Study is a long-term, comprehensive plan to address safety and congestion between Marine Drive and SR 500. CRC ~~will~~ replace the I-5 bridge (with tolling) over the Columbia River and extend light rail to Vancouver. I-5 improvement are needed in our study area with or without the CRC. Traffic volumes on I-5 in this section are not substantially different with or without the CRC, as ~~defined~~ in the EIS. (STATED) (PROPOSES TO)

N/NE Quadrant Project Scope and Topics of Other Studies

This document lists general topic areas that are within the scope of the N/NE Quadrant and I-5 Broadway/Weidler Plans and those that will be addressed by other projects or studies. More specific topics to be addressed by the N/NE Quadrant Project are identified in the Preliminary Issues, Opportunities, and Constraints report.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies
F1	Improvements to I-5 (continued)		This Plan will not determine tolling. The 2007 Oregon legislature directed the Oregon Transportation Commission (OTC) to develop tolling policy recommendations for a consistent framework and foundation on which to develop, implement and evaluate potential projects.
F2	~~High Speed~~ Rail (INTERCITY PASSENGER)	(INTERCITY PASSENGER) The N/NE Quadrant Plan will monitor the Oregon ~~High Speed~~ Rail Study for potential action items for the N/NE Quadrant. The rail study will also be monitored for potential action items for CC2035, Portland TSP, and other related plans.	The N/NE Quadrant Plan will not determine ~~High Speed~~ Rail. The ODOT Rail Division is developing a ~~High Speed~~ Rail Plan for service improvements including one-way travel time under two hours, six round trips per day and increasing on-time performance to 95% between Eugene and Portland.
INTERFACE TOPICS (Between Local Transportation and Freeway or Transportation and Land Use)			
INT 1	Bicycle and Pedestrian Routes	Enhance pedestrian and bicycle routes and access to trails. Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway. Help implement the City's Bicycle Master Plan.	Plan recommendations may lead to amendments to the City's TSP and Pedestrian Master Plan and Bicycle Plan for 2030.
		The N/NE Quadrant Plan will coordinate with the PBOT Bikeway Development project.	Some bicycle improvements in the study area will be addressed as part of the PBOT Bikeway Project Development project.
INT 2	Freight Movement	Improve freight movement. Focus on improving the truck reliability (low frequency of incidents), and the improvement of turning, stopping and other movements for freight vehicles on key freight routes and freight districts.	Plan recommendations may lead to amendments to the City's TSP and Freight Master Plan.
		~~Improve~~ freight access to the freeway and industrial areas. (ADDRESS)	The improvement of freight rail is beyond the scope of this project ~~as the infrastructure is privately held~~.

570039

N/NE Quadrant Project Scope and Topics of Other Studies

This document lists general topic areas that are within the scope of the N/NE Quadrant and I-5 Broadway/Weidler Plans and those that will be addressed by other projects or studies. More specific topics to be addressed by the N/NE Quadrant Project are identified in the Preliminary Issues, Opportunities, and Constraints report.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies
INT 3	Climate change and air quality	Analyze plan proposals for potential climate and greenhouse gas (GHG) impacts. This Plan will not directly address regional climate change and GHG issues.	Other efforts will develop regional and statewide climate change and greenhouse gas (GHG) strategies. The 2010 Oregon Legislature passed a statewide, comprehensive bill aimed at reducing GHG emissions from transportation. That effort will involve coordinating and consulting with stakeholders, local governments, Metropolitan Planning Organizations (MPOs) and other state agencies to develop a state-level strategy to reduce GHG from transportation.
		Transportation alternatives analysis for the Quadrant will include modeling of alternative land use and transportation concepts on vehicle miles traveled, greenhouse gas emissions, air quality, and impacts on Central City land use and transportation. The modeling will be coordinated with that done for the broader CC2035 process.	CC2035 will include GHG and air quality modeling in the policy analysis of land use and transportation relationships.
INT 4	Parking	Examine parking strategies for the N/NE Quadrant planning area that support existing land uses and new development, while encouraging the use of alternative transportation modes, including proximity to transit, demand management strategies, bicycling, and proximity to housing. Identify parking issues to be addressed as part of the CC2035/CCTMP process.	The CCTMP will be updated as part of CC2035, and will revise and, if needed, recommend changes to Central City wide transportation policies, including parking.

INFORMAL DISCUSSION AND MEAL

WELCOME, MEETING PURPOSE, APPROVAL OF MINUTES, AND STANDING BUSINESS – SAM IMPERATI

Sam Imperati welcomed the group.

NEW MEMBER INTRODUCTIONS

Laurie Simpson is an alternate, attending on behalf of Mike Warwick and the Eliot Neighborhood Association.

Malina Downey is a new member of the SAC. She is with UPS and is here to represent freight interests.

AGENDA REVIEW

The purpose of this meeting is to report on the successful charrette from late February and make note of some emerging concepts. We will provide background and updated information, which will allow us to hit the ground running with the next charrette in April concerning the transportation components.

APPROVAL OF MEETING MINUTES

The January 20, 2011 Meeting Minutes are approved, as written.

PUBLIC INVOLVEMENT UPDATE

None.

LAND USE SUBCOMMITTEE UPDATE

This topic will be covered in the Land Use Charrette Update section of the agenda.

TRANSPORTATION SUBCOMMITTEE UPDATE

This topic will be covered in the Land Use Charrette Update section of the agenda.

FOLLOW UP FROM LAST MEETING

To follow-up on the high speed rail topic from the January 20, 2011 SAC meeting, Jim Cox from the ODOT Office in Salem, will give a ten-minute presentation, with time for questions after.

JIM COX, OREGON DEPARTMENT OF TRANSPORTATION, MAJOR PROJECTS BRANCH

By way of introduction, Jim explained that as part of his responsibilities in the Major Projects Branch, he works on the environmental impact statement (EIS) for rail from Eugene to Portland. He presented a PowerPoint titled, “Faster Trains in Oregon: Where are we?” Jim provided a brief overview of current services and then explained the feasibility studies that have been conducted and the alternatives that were developed from studies. Feedback from the public involvement activities revealed that on-time performance is the most important factor from the public’s perspective.

Goals from feasibility studies:

1. On-time performance from 68% to 95%
2. Increase roundtrips from two to six
3. Reduce trip time from two hours and 35 minutes to two hours

Jim said that there are three current Portland projects funded by the American Reinvestment & Recovery Act (ARRA): one to make improvements to Union Station downtown, and two for track improvement projects. In addition, there is $4.2M for the EIS from Eugene to Portland. There have been delays because there is no mechanism in place to facilitate the funds disbursement, so they are still waiting on the funds. The current estimate on the timeline is mid-year or later, due to their work backlog.

When funds are disbursed, ODOT can get started on their National Environmental Protection Act (NEPA) process. David Evans and Associates have been hired for engineering. JLA has been hired for public involvement. JLA is in the process of conducting approximately 60 stakeholder interviews on the issues, concerns, and how we ought to set up the decision-making process.

Jim said that ODOT knows this group is interested in future developments in rail and how they may impact this planning process. He reaffirmed that they have made no decisions regarding where any stations will be located. They will go through very public process to screen alternatives for the EIS, looking at such questions as do we do higher speed on the existing alignment? Alternatively, do we build true high-speed rail on a new alignment?

Given the delays, Jim said they are doing everything they can to position themselves to be ready for when funds become available.

Justin Zeulner: referring to an earlier point made regarding a 2-hour trip, is that for Eugene to Portland?

Jim Cox: Yes.

Justin Zeulner: also, noting that Jim said that speed was not a priority, he believes people are interested in speed; would like more information.

Jim Cox: apologizes if he misrepresented the information. It is not that people are not interested in speed, at all; it is that they are more interested in reliability, over speed.

Brad Perkins, from the audience: noted that he went to many of the meetings, said that those in attendance were from “our generation,” (Facilitator Note: Handsome and Intelligent Baby Boomers – excuse the redundancy) and, he believes that younger generations will prefer speed.

Jim Cox: said he believes this data does represent a broad selection of the public. They are holding meetings at universities and working with social media specifically to broaden their reach to younger Oregonians.

Alan Lehto: did the study look at alignments in this area?

Jim Cox: it did not.

Alan Lehto: will there be some analysis on that aspect?

Jim Cox: there is very limited funding, but they want to.

Audience member: is there a timeline?

Jim Cox: no. However, they should have funding in place to do the first tier EIA this year. Once that is completed, they are eligible to apply for funding for final design and construction. The current analysis, which is a planning-level estimate, indicates it is about $2B for a project in the 90 mile-an-hour range. The program requires matching funds, meaning Oregon taxpayers will be making a significant contribution to any rail project.

Brad Perkins, from the audience: an exclusive corridor has not yet been thought about, but clearly would be considered in an EIS. Would it be useful for this group to come up with recommendations on a location for a new station?

Jim Cox: we are taking input from everyone who wants to give it to us.

Alan Lehto: for clarification, do you mean $2B in today's dollars?

Jim Cox: probably today's, not completely sure. ODOT generally uses a 3% inflation rate when making estimates.

LAND USE/LOCAL ISSUES CHARRETTE UPDATE – STEVE IWATA, BPS AND MARK RAGGETT, BPS, URBAN DESIGN STUDIO

Steve Iwata provided an overview of the February 22-23 charrette, noting the overall purpose was to generate ideas and begin to formulate concepts. A combined group of the Land Use and Transportation Subcommittees was convened before the charrette, and that information was used as a base for the 2-day process. Steve introduced Mark Raggett, from the City's Urban Design Studio, who will provide an overview of the results of the charrette. Steve asked the SAC members to let the ideas be presented first, before any debate. In addition, he wants everyone to understand that all of this information must still be integrated into the freeway work, and that we are all basically digesting the information. Staff will be analyzing and summarizing the ideas in April and May, which will be presented to the SAC when it is available.

Note: the sketches shown in the PowerPoint were redrawn for legibility and clarity; there were no substantive changes made to the content from when they were drawn at the charrette in February to the March 10, 2011 presentation.

Lloyd Lindley: wanted to compliment Steve, Mark and all of the consultants. The charrette was well run, and actually pretty fun. You will see many great ideas presented here.

Mark Raggett presented a PowerPoint titled "Local Issues Charrette Summary (February 22-23)." He said there were over 30 participants in attendance. On the first day, they reviewed the project goals, covering a lot of ground this group has seen at previous meetings. They looked at the whole quadrant, trying to get a sense of the big picture of how it connects to the larger context of the city. On the second day, they focused on specific areas in greater detail.

The discussions focused on the Central Core area, and residential development in that area. Mark pointed out areas where some high-visibility changes could likely result as planning and development processes continue. The presentation continued, showing the hand-drawn concept plans, which depicted numerous options of how to implement development.

The charrette discussions were summarized as follows:

Overarching Themes

- Residential development in the central core area
- Tying the quadrant together

System Concepts

- Local connectivity, diversity
- Parks and open spaces
- Sustainability

More Detail

- Lloyd infill strategies
- Urban form, Neighborhood transition
- Lower Albina alternatives

Mark said that, while some valuable information was gathered, no concept plans have been selected and no decisions have been made. Implementation was not part of the charrette process, but there was some discussion of it. The charrette participants also discussed an employment and mixed use-higher density development emphasis. It was also an opportunity to do some creative thinking about development of the quadrant, e.g., how to best use the land under the freeway in the Lower Albina area. It is currently somewhat of an eyesore. Participants came up with ideas such as a dog park, a skate park, or as an area for public art.

Steve Iwata said the next step is to do the freeway alternatives charrette, and then, to work with ODOT to integrate the land use, local transportation, urban design and freeway concepts and combine it all together into a summary document. They also need to work more closely with Tri-Met on issues related to the Rose Quarter Transit Center. There is a lot of work and coordination still to come.

Mark and the staff will be taking these rough drawings and turning them into a few clear concept ideas. They are aiming to have these ideas coalesced into concepts and ready for an open house in May, in coordination with PDC as they finish the Rose Quarter planning.

Wayne Kingsley: question about the Lloyd Crossing Master Plan. It is an Ashforth development. He wonders about the status.

Mark Raggett: it is a sustainable development, urban design plan for that area, meaning it requires high-density and sustainable uses. This topic was discussed at the charrette.

Steve Iwata: Ashforth Pacific was at the charrette and participated. We will continue working with AP and other property owners.

Wayne Kingsley: it seems like you are trying to force residential development in this area. He is getting the feeling you are trying to put residential in there, and he is not quite sure why. Why not more employment opportunities?

Mark Raggett: the feedback we keep getting is that increasing the amount of residential in the area could address some other interrelated issues, so that is why it is a theme.

Justin Zeulner: the Lloyd Crossing study has been used on a national-international scale; it has been rolled up into the ecodistrict conversations. In his view, it has not gone by the wayside; the idea of that particular area has been expanded.

Lloyd Lindley: is it still a Central City transit hub?

Steve Iwata: that concept was included in recent planning studies, but it was never adopted as an official part of the Central City design plan. This process could do that.

Wanda Rosenbarger: has been on vacation. She hears you mention that you were trying to improve pedestrian access in the mall area, and wonders what that means.

Mark Raggett: there have been many discussions on this topic. The goal discussed was continuing the pedestrian network through the mall so it does not act as a barrier to movement through the district. There was also discussion of improving the face of the mall to make it friendlier to pedestrians and the adjacent park.

Steve Iwata: there is general acknowledgement that is an important, current issue because of how the mall is laid out; pedestrian and transit options are a feature of some of the concept diagrams.

Alan Lehto: concerning earlier comments about a Central City transit hub, you must consider that there is light rail on Holladay and frequent buses on Multnomah. In his opinion, you would not want a transit center there, because you want the land for development not vehicles.

Dean Gisvold: commends the staff and consultants on the charrette work. Wonders if the PowerPoint will be on the on web? He would like to be able to refer members of his neighborhood association to it.

Staff: yes.

Justin Zeulner: to staff and consultants - great work; thanks for taking time to listen to the feedback from this group, regarding making the best use of what we already have. He feels connectivity is really important, and notes that there are some other planning efforts going on which could really impact what happens in our process. He is curious to know if and how the conversations are linked up between agencies and staff, especially related to projects where auto access and capacity is potentially reduced.

Mauricio Leclerc: agrees with Justin that coordination is important, and notes that, for example, he is staff on both the N/NEQ I-5 and the Portland Bureau of Transportation bicycle improvements in the Lloyd District, including Holladay Street, Vancouver/Williams/Wheeler Avenues from Broadway to the Rose Quarter Transit Center, and NE12th Avenue bridge. There are linkages and information sharing between the projects, but it is always good to keep it in mind as a priority. (Note: website to the bicycle projects http://www.portlandonline.com/transportation/index.cfm?c=53906)

Owen Ronchelli: agrees with what everyone has said about all the good work done by the staff and consultants, and would like clarification re: the note on the Mixed use Emphasis Slide, which said "exclusion from the Central City."

Steve Iwata: that refers to an area in question about whether it should it be connected to the Central City boundary, or lumped in with heavy industrial use activity to the north, known as the "North Reach."

Lloyd Lindley: noted that through another process, it was thought best to include it with the North Reach.

Cynthia Carmina Gomez: regarding increasing the residential use in this area. When you talk about how we meet the needs of the people in the area, do you talk about where will their school be? Are you talking mixed-income housing? She wants to bring up the topics, not necessarily for today, but to be sure, the issues are thought about. Also, what about space for a cultural center?

Eric Lovell: regarding "the strand." He likes that idea and wants to hear more.

Lloyd Lindley: the idea came from a study on the OCC a few years ago. The issue that keeps coming up, and came up in the Lloyd District Development Strategy, is how do we enliven the Rose Quarter? He noted a couple options they discussed in that process. Justin Zeulner said they would really like to get pedestrians safely between businesses in the area and the Rose Garden. Then they sketched out a path that serves as a bike and pedestrian path and a storm water interceptor. It enables a hierarchy of North-South ways to move through that portion of town, providing an alternative to Interstate.

Eric Lovell: your "gap" is right where my building is! He wonders if there is another way to work around the building.

Wayne Kingsley: back to Justin's point on the other planning processes happening, he knows of three companies who are very upset about possibly losing access or capacity on 12th Avenue, and who have always been on the fence about staying here. We are talking 1,200 jobs. In addition, he believes that bikers and students would appreciate better access as well. He just wanted to be sure that folks in this process were aware of the issues, especially the potential job losses.

Chris Deffebach: in her view, all the options we saw sketches of tonight look great, but she wonders how do we decide? She is an alternate so it may be that she has not seen everything, but she is curious to know how we will decide.

Steve Iwata: we are digesting the material, going through the steps to create distinct concepts, all while integrating information from the SAC and looking at and coordinating with other related planning processes.

Matt Arnold: had comments regarding the need to balance all modes. He hopes the impact of the overall land-use pattern is not auto-dominant, and that sufficient consideration will be given to bikes and peds.

Sam Imperati: asked if anyone had any further comments or questions.

Brad Perkins, from the audience: everybody's time is precious here; he is in real estate and looks at things differently. What is going to be the catalyst to get some of these great ideas going? He discussed some of the implementation/funding mechanisms, which were noted in the charrette PowerPoint: SDC, undeveloped land tax, surface parking tax, and a public tenant deal. Brad said to think about the importance of the environment; we need better bikeways, plus heavy rail system. He feels a transit hub is very important. Want to get incentives going with major landowners.

Alan Lehto: everybody who rides transit is also a pedestrian, so at some point the micro-level is important, and sidewalks.

Sean Hubert: there is very important interplay between retail and residential development. Nationally, there is currently one million square feet of vacant retail space. It is important to integrate retail and residential uses.

Owen Ronchelli: commented that decoupling Broadway-Weidler would be a problem for the streetcar.

Debra Dunn: will there be an overlay for freight routes on any of these drawings? She is curious when that step will be. As we talk about integrating all the information, freight is a key component.

Gary Eichman: agrees with Debra. The process has to incorporate infrastructure, have to keep it in mind.

Lloyd Lindley: would like a map of freight routes.

Staff: we will email those out as a follow-up to this meeting.

Note: On March 17, Sam Imperati sent SAC members an email with links to freight maps in the Transportation Existing Conditions Report: http://www.portlandonline.com/bps/index.cfm?c=53634&a=328035. Page 9 of this report has links for the Regional Freight Plan (Metro, 2010) and the Freight Master Plan (City of Portland, 2008).

BREAK

RECENT LOCAL FREEWAY PLANNING HISTORY AND NEPA – TODD JUHASZ, ODOT

Todd Juhasz from the Oregon Department of Transportation presented a PowerPoint titled, "The History of Freeway Improvement Plans." The purpose of the presentation is to review I-5 studies to the present and to explain a few key points:

- The size of proposed improvements have become smaller and less costly
- The City and State have looked at various proposals and have disagreed on the design concepts and the best use of land adjacent to the freeway (development vs. roadway)
- With the City and State working together. Now is the best opportunity to see improvements realized

Introduction to the History of I-5

- Before I-5:
  - the State highway route was Harbor Freeway, across Steel Bridge to Interstate Ave.
- I-5 opened in 1966, when:
  - the population of the metro area was less than 1 million
  - average daily traffic on I-5 was 66,000 vehicles per day (VPD) in both directions
- By mid 1990s:
  - the population of the metro area was approx. 1.5 million
  - the average daily traffic volume was 140,000 VPD despite heavy investment in transit
- I-5 has not been widened:
  - still two lanes in each direction

Todd reviewed four past studies and projects:

- Greeley-North Banfield Concepts (1980s to 1990s)
- Portland/Vancouver I-5 Trade Corridor Study (1999-2002)
- I-5/405 Freeway Loop Study (2005)
- City/State workshop to look at potential improvements between I-84 and I-405 (2007)

These freeway-planning projects provide some historical data and a backdrop for our planning efforts today. The tough, persistent issue that remains is the bottleneck area in the I-5 and I-84 interchange area.

On April 11-13, the SAC members are invited to attend the Freeway and Local Transportation Interface Charrette. Information will be emailed and there is a one-pager in the packet.

Sam Imperati: opened the floor for questions and comments. He added that the freeway charrette would use the same exploratory process as they did for land use, which we saw today.

Wayne Kingsley: wonders if we will overlay the freeway options on land use?

Todd Juhasz: yes. They guide each other; land use impacts transportation and so this process is designed to consider them together.

Eric Lovell: wonders what was the general feedback on the most recent study? Did any of the options rise to the top?

Andy Johnson: the short answer is, no. A lot in the past has been ODOT having a proposal that did not meet the City's needs; and the City creating proposals that did not work for ODOT. We are working together and more effectively now. We wanted to take the good work from previous studies, but wanted to have a broader public process before deciding.

Todd Juhasz: One thing to keep in mind is that the solutions in the 2007 CH2MHILL report were in the $400-600M range.

Justin Zeulner: do any of these options work within that budget?

Todd Juhasz: yes; and we have to manage expectations in the charrette.

Justin Zeulner: have we looked at things such as taking away shoulders, and other, simpler fixes?

Todd Juhasz: yes. We want to hear from you first, and are open to all ideas.

Matt Arnold: in presentation, we saw some history, some refined concepts, and some pretty big interventions. He hears you describe it as a more surgical approach, "leaner and meaner." He thinks the fixes we are looking at will not be addressed by these ideas.

Todd Juhasz: perhaps, but some of the things you saw do a really good job of managing projected future levels of traffic.

Matt Arnold: offered some constructive criticism for Todd on his presentation, saying felt it was not fully accurate to say they are working toward "leaner and meaner" projects, when just a few miles up the road (I-5), we are looking at the biggest infrastructure project ever built in the region.

Chris Deffebach: you mentioned design, but not performance on some of the fixes.

Fred Eberle: we did focus on design, not performance. We know some things about performance we can assume, but the process was not thorough enough or intended to assess performance. It was a short, inexpensive process. None of these was designed to accommodate additional traffic with CRC.

Lloyd Lindley: said this segment might be trying to be all things to all audiences. Encourages all of the SAC members to think about priorities. Freight, commute, local services, build out capacity, etc. If we have a better idea of priorities, then can be more efficient in charrettes. In addition, it would be good to know about the monetary investment, how long will it last until we are back in the same place? He feels we need to focus on urban solutions, e.g., a big cloverleaf is more appropriate for a rural area.

Sam Imperati: brought the attention of the group to the four-page handout Draft Freeway and Local Street Interface Charrette. The document summarizes much of what has been heard thus far in a Problem Definition Summary, Framework Elements, Project Goals, and Concept Screening Criteria.

This document will be sent out to the SAC, folks can redline edit, and it will be further developed in the charrette.

Pauline Bradford: wants to be sure that cultural and historical sites are protected and considered in this process.

Eric Lovell: would appreciate a primer on transportation information before the charrette. Feels his participation will be more effective if he has a better understanding of pros and cons.

Fred Eberle: referred the SAC to the 2007 CH2MHill report posted on web with pros and cons. This will be sent out in an email.

Brad Perkins: we are going to be pressuring the system; anything we propose will have to go through an EIS. It was not done for the CRC EIS. It is worth noting that for anything we do in this area, we need to know where drivers are coming from and going to. We need an alternative mode of high-speed rail system to bring people from Vancouver to Portland, and from the south. Lloyd mentioned congestion pricing, which is also an idea that needs to be explored.

Ed Abrahamson: following on Pauline's comment, he said staff needs to look at neighborhood systems and how they may be interrupted.

PROCESS TIMELINE AND NEXT STEPS

Steve reviewed the charrette schedule, which will be on April 11-13, 2011. Final details are being arranged and will be emailed to the SAC distribution list as soon as possible.

On March 30, there will be a LU/T Subcommittee meeting, in preparation for the freeway charrette.

Andy Johnson: made brief comments on the National Environmental Protection Act (NEPA), explaining that the basis of the law is regarding disclosure. Before anyone spends any federal money on large infrastructure projects, a thorough analysis of the environmental impacts must be done. This planning work helps narrow the range of work that goes into the NEPA process, in essence, truing up the planning and NEPA processes to address duplication of efforts and funds as much as possible.

PUBLIC COMMENT

Allan Rudnick: wondered if he can make his own design and have it included in this process?

Staff: yes. All input is welcome.

Justin Zeulner: has basketball tickets for this weekend for anyone interested!

Sam announced a transportation equity event with numerous speakers and participating organizations on April 6, at noon, at SEIU Local 49 Hall, 3526 SE 26th Avenue at Powell. The contact person is Heidi Guenin, who is a member of the SAC, but not here this evening.

ODOT staff will be in the hall for further Q&A regarding any of the previous freeway planning projects discussed tonight.

Sam thanked everyone for a good meeting and adjourned at 7:50 pm.

ADJOURN

Notes respectfully submitted by the Institute for Conflict Management facilitation team.

SAC #5 Meeting Evaluation Summary
March 10, 2011

14 Evaluations returned

	Poor	Fair	Good	Very Good	Excellent
Overall Meeting Quality:		1	4	3	4
Pacing:			Just Right - 11		
Clarity of Presentations:		1	7	4	2
Documents:		1	5	5	3
Discussion:		1	6	6	1

Most Useful?

- Concepts of land use
- Re: Documents, confusing when some figures are north up and some are north left.
- Good history on I-5/I-84 plans
- Overall conceptual "thoughts" on land-use designs
- PPT

Least Useful?

- Could use more description of the differences between the options and implications
- Higher speed rail presentation. Very useless.
- Planning terminology tough to understand
- Redundancy of high-speed rail study – still very "pie in the sky" concept – best use of our time?
- Wayne's comments (from Wayne!)

Comments, Suggestions, or Questions?

- Bulleted list of pros/cons of 4 proposed freeway options – easier to digest
- Having trouble hearing some folks on committee
- It appears there was editing of the charrette documents as prepared – presented to public committees and then tonight.
- Vegetarian dinner options would be appreciated

N/NE Quadrant and I-5 Broadway/Weidler Plans

Project Goals Statement

This planning effort will result in integrated land use, urban design, and transportation strategies, policies and plans for the N/NE Quadrant, (Lower Albina, the Lloyd District, and portions of Eliot, Irvington, and Sullivan's Gulch) and the I-5 Broadway/Weidler interchange that balance, complement, enhance, protect, respect, revitalize, support, and sustain economic, environmental, and social interests. The implementable plans will be consistent with the overall goals and policies of the city, region, and state.

Our recommendations will be guided by our desire for:

- A diverse mix of commercial, cultural, entertainment, industrial, recreational, and residential uses, including affordable housing;
- A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system;
- Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages;
- Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment;
- Equitable access to community amenities and economic opportunities;
- Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods;
- Protection and enhancement of the cultural heritage of the area and its sub-districts; and
- Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses.

N/NE Quadrant Project Scope and Topics of Other Studies

This document lists general topic areas that are within the scope of the N/NE Quadrant and I-5 Broadway/Weidler Plans and those that will be addressed by other projects or studies. More specific topics to be addressed by the N/NE Quadrant Project are identified in the Preliminary Issues, Opportunities, and Constraints report.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies
Land Use & Urban Design			
LU 1	Land Use & Urban Design	Identify land use and urban design/urban form issues in Lloyd and Lower Albina subdistricts, and the two study areas - Vancouver/Williams and NE Multnomah. Develop quadrant-specific land use and urban design policies and implementation tools consistent with direction from CC2035 and the Portland Plan. The planning effort will respond to opportunities related to light rail and street car facilities within the quadrant.	Portland Plan will develop the strategic framework for the City of Portland. CC2035 will develop the overall policy framework for the Central City, addressing economic development, housing, transportation, open space, and arts/civic/cultural policy issues.
LU 2	Growth	Seek to accommodate 2035 growth projections for population and employment in the study area.	Metro Region 2040 established high-growth expectations for the Central City. Conversations on this topic will need to happen at the regional level.
LU 3	Housing	Develop detailed housing goals and policies within the study area.	
LU 4	Zoning	Revisit, and as necessary, recommend changes to comprehensive plan and zoning designations, development standards, and design guidelines.	The broader CC2035 project will evaluate the need for structural code changes regarding how zoning and development review works in the Central City.
LU 5	Rose Quarter	Coordinate with the Rose Quarter Development Project and integrate the resulting development strategy with the rest of the N/NE Quadrant Project to support success in both the Rose Quarter and the surrounding areas.	The Rose Quarter Development Project is currently developing a detailed development strategy for the Rose Quarter.
LU 6	Willamette River	Coordinate with River Plan / Central Reach to identify land use/urban design issues and develop regulatory guidance for the Willamette Riverfront in the N/NE Quadrant within the Central Reach.	River Plan / Central Reach will be developed as part of the CC2035 Plan. The River Plan will contribute policy guidance for the Willamette River. The policies and regulations adopted through the River Plan / North Reach (April, 2010) that apply to the riverfront in Lower Albina will not be revised through the N/NE Quadrant Plan or CC2035.
LU 7	EcoDistricts	Coordinate with the Portland Oregon Sustainability Institute (POSI) and Lloyd Green on the policy framework for EcoDistricts.	EcoDistricts study is led by POSI, which has identified the Lloyd District as a pilot project. Lloyd Green is the active association in the Lloyd District pursuing EcoDistrict formation.

N/NE Quadrant Project Scope and Topics of Other Studies

This document lists general topic areas that are within the scope of the N/NE Quadrant and I-5 Broadway/Weidler Plans and those that will be addressed by other projects or studies. More specific topics to be addressed by the N/NE Quadrant Project are identified in the Preliminary Issues, Opportunities, and Constraints report.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies
LOCAL TRANSPORTATION			
LT 1	Purpose	Identify multi-modal transportation issues in the Lloyd and Lower Albina subdistricts, and the two study areas-Vancouver/Williams and NE Multnomah. Consider strategies to reduce single occupancy vehicle trips in the district.	The Central City Transportation Management Plan (CCTMP) will be updated as part of CC2035. Recommendations from the N/NE Quadrant Plan may lead to amendments to the City's Transportation System Plan (TSP).
		The Regional Transportation Plan 2035 forecast will be the basis for the transportation analysis for the N/NE Quadrant Project.	The CCTMP will revise and, if needed, recommend changes to Central City wide transportation policies.
LT 2	Regional Trails (Sullivan's Gulch Trail & The Willamette River Greenway Trail)	The N/NE Quadrant Plan will coordinate with and recognize the future general alignment for the Sullivan's Gulch Trail and will coordinate with Parks to update the alignment of the Willamette River Greenway Trail as necessary.	This Plan will not determine the specific location for the Sullivan's Gulch Trail, which is a separate project led by the PBOT and Parks.
			The North Portland Greenway Trail Alignment Project is a Parks project that will determine the alignment for segments of the North Portland Greenway Trail.
LT 3	Transit	Identify transit needs in the Quadrant, including potential transit "hubs", and conceptual long-term improvements to the Rose Quarter Transit Center.	This plan will not result in a resolution on the Rose Quarter Transit Center. The project will study some of the major transportation issues in the area and identify some overall direction for long term improvements, but will not recommend a solution.
		The N/NE Quadrant Plan may influence, but will not determine, the alignment of the next streetcar line.	The Streetcar System Concept Plan calls for potential streetcar routes through the quadrant. To determine feasibility and choose a route, a separate alternatives analysis is needed.
LT 4	Local Transportation System	Consider street hierarchy and conceptual level design approaches to different streets in the study area.	No major expansion in local auto capacity. Central City policy calls for prioritizing non auto improvements to meet Central City economic development and livability goals.

N/NE Quadrant Project Scope and Topics of Other Studies

This document lists general topic areas that are within the scope of the N/NE Quadrant and I-5 Broadway/Weidler Plans and those that will be addressed by other projects or studies. More specific topics to be addressed by the N/NE Quadrant Project are identified in the Preliminary Issues, Opportunities, and Constraints report.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies
FREEWAY TRANSPORTATION			
F1	Improvements to I-5	Consider improvements to address capacity, operations, and safety issues on I-5 from I-84 to I-405. Improvements will be developed based on the current fiscally constrained Regional Transportation Plan (RTP) forecast for the Region.	Planning Beyond the 2035 Horizon is not a part of this Plan.
		Acceptable parameters on which alternative improvement proposals will be evaluated will include: engineering, safety, operations and whether the state can fund the proposals during the current process. Promising proposals that may be beyond the scope of this process will be considered when discussing a more comprehensive solution.	More comprehensive solution for freeway issues will be determined at a later date. No timeframe for a comprehensive study has been determined. Moving the Eastbank Freeway is not feasible during 2035 time frame.
		Focus on safety improvements to reduce the number of crashes. Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	
		Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need. Particular attention will be paid to the urban context of the area and avoiding impacts on key historic/cultural sites.	
		Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	The N/NE Quadrant Plan will be prepared pursuant to the RTP. The Columbia River Crossing Study is a long-term, comprehensive plan to address safety and congestion between Marine Drive and SR 500. CRC will replace the I-5 bridge (with tolling) over the Columbia River and extend light rail to Vancouver. I-5 improvement are needed in our study area with or without the CRC. Traffic volumes on I-5 in this section are not substantially different with or without the CRC, as defined in the EIS.

N/NE Quadrant Project Scope and Topics of Other Studies

This document lists general topic areas that are within the scope of the N/NE Quadrant and I-5 Broadway/Weidler Plans and those that will be addressed by other projects or studies. More specific topics to be addressed by the N/NE Quadrant Project are identified in the Preliminary Issues, Opportunities, and Constraints report.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies
F1	Improvements to I-5 (continued)		This Plan will not determine tolling. The 2007 Oregon legislature directed the Oregon Transportation Commission (OTC) to develop tolling policy recommendations for a consistent framework and foundation on which to develop, implement and evaluate potential projects.
F2	High Speed Rail	The N/NE Quadrant Plan will monitor the Oregon High Speed Rail Study for potential action items for the N/NE Quadrant. The rail study will also be monitored for potential action items for CC2035, Portland TSP, and other related plans.	The N/NE Quadrant Plan will not determine High Speed Rail. The ODOT Rail Division is developing a High Speed Rail Plan for service improvements including one-way travel time under two hours, six round trips per day and increasing on-time performance to 95% between Eugene and Portland.
INTERFACE TOPICS (Between Local Transportation and Freeway or Transportation and Land Use)			
INT 1	Bicycle and Pedestrian Routes	Enhance pedestrian and bicycle routes and access to trails. Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway. Help implement the City's Bicycle Master Plan.	Plan recommendations may lead to amendments to the City's TSP and Pedestrian Master Plan and Bicycle Plan for 2030.
		The N/NE Quadrant Plan will coordinate with the PBOT Bikeway Development project.	Some bicycle improvements in the study area will be addressed as part of the PBOT Bikeway Project Development project.
INT 2	Freight Movement	Improve freight movement. Focus on improving the truck reliability (low frequency of incidents), and the improvement of turning, stopping and other movements for freight vehicles on key freight routes and freight districts.	Plan recommendations may lead to amendments to the City's TSP and Freight Master Plan.
		Improve freight access to the freeway and industrial areas.	The improvement of freight rail is beyond the scope of this project as the infrastructure is privately held.

N/NE Quadrant Project Scope and Topics of Other Studies

This document lists general topic areas that are within the scope of the N/NE Quadrant and I-5 Broadway/Weidler Plans and those that will be addressed by other projects or studies. More specific topics to be addressed by the N/NE Quadrant Project are identified in the Preliminary Issues, Opportunities, and Constraints report.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies
INT 3	Climate change and air quality	Analyze plan proposals for potential climate and greenhouse gas (GHG) impacts. This Plan will not directly address regional climate change and GHG issues.	Other efforts will develop regional and statewide climate change and greenhouse gas (GHG) strategies. The 2010 Oregon Legislature passed a statewide, comprehensive bill aimed at reducing GHG emissions from transportation. That effort will involve coordinating and consulting with stakeholders, local governments, Metropolitan Planning Organizations (MPOs) and other state agencies to develop a state-level strategy to reduce GHG from transportation.
		Transportation alternatives analysis for the Quadrant will include modeling of alternative land use and transportation concepts on vehicle miles traveled, greenhouse gas emissions, air quality, and impacts on Central City land use and transportation. The modeling will be coordinated with that done for the broader CC2035 process.	CC2035 will include GHG and air quality modeling in the policy analysis of land use and transportation relationships.
INT 4	Parking	Examine parking strategies for the N/NE Quadrant planning area that support existing land uses and new development, while encouraging the use of alternative transportation modes, including proximity to transit, demand management strategies, bicycling, and proximity to housing. Identify parking issues to be addressed as part of the CC2035/CCTMP process.	The CCTMP will be updated as part of CC2035, and will revise and, if needed, recommend changes to Central City wide transportation policies, including parking.

N/NE Quadrant and I-5 Broadway/Weidler Plans
DRAFT Refinement and Screening Process

A. Land Use/Urban Design/Local Transportation Screening

The following describes the approach to convert the wide range of ideas from SAC, Subcommittee, Charrettes, and public inputs into a smaller number of alternative concepts for further study. The screening factors were based on the following:

- Step One Land Use/Urban Design/Local Transportation screening factors are based on adopted SAC Project Goals and are indicated by number and **bold** type.
- Issues, Opportunities, and Constraints complied by Project Staff, which are the lower case letters, provide additional screening factors.
- Factors common to the Land Use/Urban Design/Local Transportation screening and the I-5 screening are underlined.

Step One: Land Use/Urban Design/Local Transportation Screening

3 Quadrant-wide concepts; subarea choices and issues

Screening Steps/Goals:

A. Staff reviews results of Land Use, Urban Design, and Local Transportation Charrette, public comments, SAC and Subcommittee inputs.
B. Staff organizes ideas into alternative, quadrant-wide concepts and subarea choices and issues.
C. SAC reviews and approves Step One screening factors.

Land Use/Urban Design/Local Transportation Refinement Factors (Adapted from Project Scope and Goals)

1. A diverse mix of commercial, cultural, entertainment, industrial, recreational, and residential uses, including affordable housing:
a. Foster distinct and complementary subareas identities within the quadrant.
b. Encourage uses that complement regional facilities including the Rose Garden, Memorial Coliseum, Convention Center and Lloyd Center, while seeking to balance the episodic nature of these attractions with additional activities.
c. Foster increased residential density and improve jobs to housing ratio in the quadrant by 2035.

2. Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages:
a. Create opportunities for new employment and a variety of employment types and levels.
b. Foster increase in future high density commercial development while supporting and encouraging industrial activities in current industrial areas.

3. Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment:
a. Create opportunities for new parks and open spaces.
b. Maintain and create new access points to the river.
c. Enhance and create new fish, tree canopy, and wildlife habitat.
d. Support sustainable development goals and practices, including creation of the Lloyd Eco-District.

4. Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods:
a. Create sensitive transitions between the more highly urban Central City and adjacent residential neighborhoods.
b. Foster concepts that support high-density development in the Lloyd District and minimize their impacts on adjacent neighborhoods-Eliot, Irvington, and Sullivan's Gulch.

5. A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system;
a. Accommodate present and future access needs of the quadrant.
b. Improve multi-modal transportation accessibility and connectivity within and through the quadrant.
c. Increase safety for all modes.
d. Improve circulation for all modes in the Rose Quarter Transit Center.
e. Improve freight access from freeway to industrial areas and major destinations.

6. Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses.
a. Improve the local circulation system for safe access for all transportation modes within the quadrant and freeway interchange.
b. Provide affordable range of multimodal transportation solutions.
c. Connect regional trail system.

7. Equitable access to community amenities and economic opportunities:
a. Minimize involuntary displacement of quadrant residents and jobs.
b. Provide for a broad array of employment types and encourage living-wage jobs.
c. Provide for diversity of housing types that meets the needs of all income-levels and a variety of household types and lifestyles.
d. Provide for amenities and services at a level appropriate to support the type and intensity of development proposed.

8. Protection and enhancement of the cultural heritage of the area and its sub-districts:
a. Preserve, enhance and celebrate historic and cultural resources.
b. Avoid/minimize/mitigate demolition of historic and cultural resources.

Step Two: Land Use/Urban Design/Local Transportation Screening

- **Continue refinement of quadrant-wide concepts and subarea choices and issues using the refinement factors listed above and input from the 5/26/11 SAC meeting, open house and other outreach.**
- **SAC review and approval of refined alternative quadrant-wide concepts and subarea choices and issues for additional analyses through summer.**

Step Three: Evaluation of the Combined Packages of Land Use/Urban Design/Local Transportation and I-5 Freeway Alternatives.

- **SAC and public review of evaluation criteria.**
- **Full integration of Land Use/Urban Design/Local Transportation and I-5 Broadway/Weidler Concepts.**
- **Evaluation of integrated alternatives.**
- **Selection of preferred alternative.**

B. I-5 Broadway/Weidler Interchange Area Screening

The following describes the approach to convert the wide range of ideas from SAC, Subcommittee, Charrettes, and public inputs into a smaller number of alternative concepts for further study. The screening factors were based on the following:

- Step One I-5 Screening is based on staff evaluation.
- Step Two I-5 Screening is based on adopted SAC Project Goals and indicated by number and **bold** type.
- Issues, Opportunities, and Constraints complied by Project Staff, which are the lower case letters, provide additional screening factors.
- Factors common to the Land Use/Urban Design/Local Transportation screening and the I-5 screening are underlined.

Step One: I-5 Broadway/Weidler Interchange Area Grouping and Screening

70 - 80 ideas

Screening Steps/Goals:

A. Review results of Transportation and Freeway Charrette, public comments, SAC and Subcommittee Inputs
B. Organize ideas into alternative concepts
C. SAC review of Step One Grouping and Screening

Grouping and Screening Factors

I. Group ideas into like concepts based on the following:
   A. Improving freeway options
   B. Interchange ideas
   C. Local transportation connections

II. Eliminate ideas based on the following:
   A. Out-of-Scope
   B. Infeasible due to engineering impractically and/or excessive costs

Step Two: I-5 Broadway/Weidler Interchange Area Screening

Identify Range of Concept Alternatives for Detailed Evaluation - HIGH LEVEL QUALITATIVE SCREENING REVIEW

Screening Goals:

A. Narrow Step One alternative concepts to smaller handful for additional analyses
B. SAC and public review of Step Two Screening of recommended alternative concepts
C. SAC Approval of Step Two Screening and alternatives for additional analyses through the summer

Screening Factors

1. A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system;
   a. Accommodate present and future access needs of the quadrant.
   b. Improve multi-modal transportation accessibility and connectivity within and through the quadrant.
   c. Increase safety for all modes.
   d. Improve circulation for all modes in the Rose Quarter Transit Center.
   e. Improve freight access from freeway to industrial areas and major destinations.

2. Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses.
   a. Improve freeway operations for freight and auto.
   b. Improve freeway safety.
   c. Improve the local circulation system for safe access for all transportation modes within the quadrant and freeway interchange.

3. Equitable access to community amenities and economic opportunities;
   a. Minimize involuntary displacement of quadrant residents and jobs
   b. Provide for a broad array of employment types and encourage living-wage jobs.
   c. Provide for amenities and services at a level appropriate to support the type and intensity of development proposed

4. Protection and enhancement of the cultural heritage of the area and its sub-districts
   a. Preserve, enhance and celebrate historic and cultural resources.
   b. Avoid/minimize/mitigate demolition of historic and cultural resources.

Step Three: Evaluation of Integrated Land Use/Urban Design/Local Transportation and I-5 Broadway/Weidler Interchange Area Alternatives

- **SAC and public review of evaluation criteria.**
- **Full integration of Land Use/Urban Design/Local Transportation and I-5 Broadway/Weidler Concepts.**
- **Evaluation of integrated alternatives.**
- **Selection of preferred alternative.**

N/NE Quadrant and I-5 Broadway/Weidler Plans

Timeline

Fall/Winter 2010

SAC #1-4: Sept – Jan
Community Walks: Sept
Public Open House: Nov
Subcommittee Meetings: Dec

Spring/Summer 2011

Subcommittee Meeting: 2/9
Local Issues Charrette: 2/22 – 2/23
SAC #5: 3/10
Subcommittee Meeting: 3/2
Subcommittee Meeting: 3/30
Freeway/Local Transportation Charrette: 4/11 – 4/13
SAC #6: 5/26 **We are here**
SAC #7: 6/16
Public Open House: Late June/Early July
SAC #8: 7/28 (tentative)

Fall/Winter 2011

SAC Meetings: Sept – Dec
Public Workshop: Nov

Winter/Spring 2012

SAC Meetings: To be determined
Public Open House: March

Spring 2012

Hearings to be determined

Transportation Background Policies and Conditions

At the crossroads of major regional transportation network

Transportation Policy

City
- *Balanced transportation system*
- *Encourage non auto modes*

Central City
- *Growth with livability*
- *Pinch the parking supply*
- *Mode split commute goals* (2010)

	Auto	Transit	Bike/Ped
Lloyd District Goal:	50%	40%	10%
Lower Albina Goal:	80%	10%	10%

Area Statistics

- Mode Split: percentage of commute trips
  (2009 Source Lloyd TMA, Portland Business Alliance, City Auditor)

	CBD (Downtown, River)	Lloyd	City
Auto	41%	63%	75%
Transit	45%	27% (40% Lloyd TMA)	13%
Bike	10%	5%	7%
Walk	4%	2.5%	5%

- Parking: stalls per 1,000 sf of office (off street)
  Lloyd District 2.2 (1.2 in Downtown)
  Lower Albina 1.4

State and Regional Transportation Policies

- State
  - Provide a balanced, efficient, cost-effective system
  - Optimize existing infrastructure with improved operations
  - Promote economic diversification and expansion through effective movement of people, goods, services & information
  - Operate and maintain a safe system

- Regional
  - Improve local street connectivity
  - Reduce delay and increase reliability for freight
  - Throughways accommodate longer distance travel and provide access to major activity centers

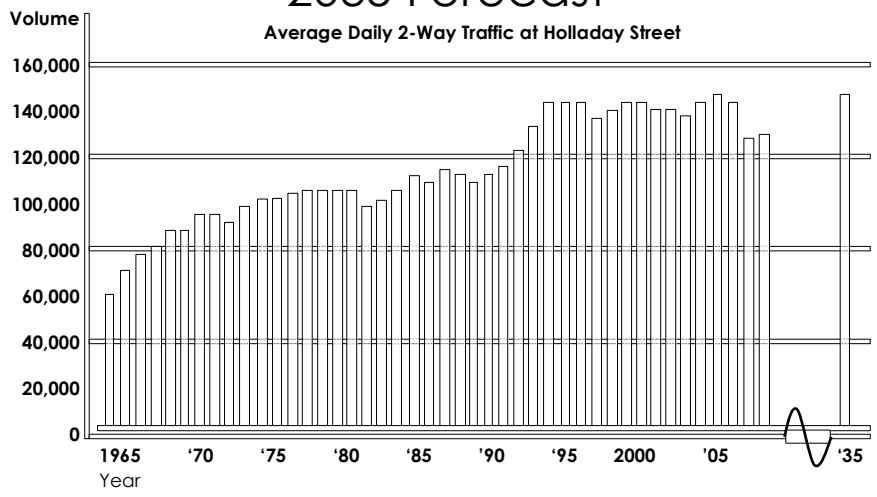
Transportation Findings Based on 2008 Data and 2035 Forecast

What is included in the 2035 transportation forecast?

The adopted regional growth forecast and a set of planned projects

Future Year Forecast 2035

- Based on adopted regional growth forecast
  +1.3 million in the region – 72% increase
- NNE Quadrant forecast
  Over 400% increase in households
- New Metro forecast - end of 2011
- Includes TDM measures
  –Transit pass programs
  –Expanded parking cost areas
- Includes major highway and transit projects
  –Milwaukie LRT
  –LO Streetcar
  -Light rail to Vancouver
  -CRC
  -Phase 2 I-5 Delta Park

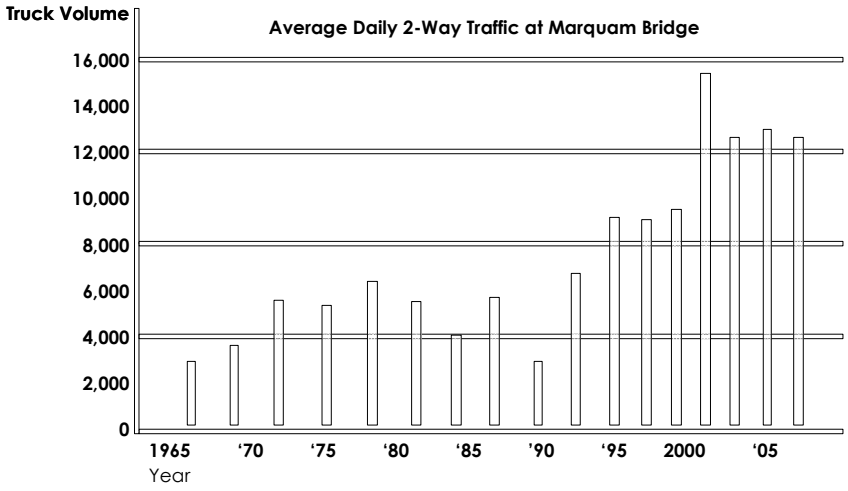


Historic Growth Patterns for Traffic on I-5

Rapid traffic growth in the 80's and 90's flattening out in recent years

Forecast for slow, but continued growth in traffic volumes

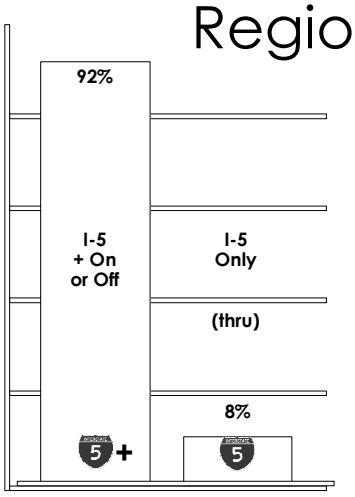
Historical I-5 Traffic Growth & 2035 Forecast

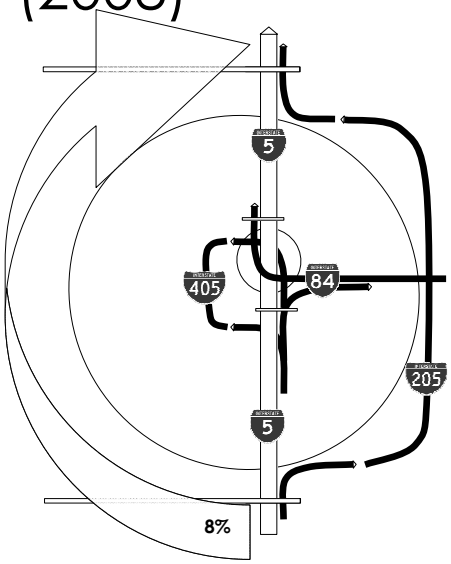


Traffic Growth on I-5

- Freeway at capacity during peak hours
- By 2035 the hours of congestion on I-5 in the Quadrant are forecast to more than double

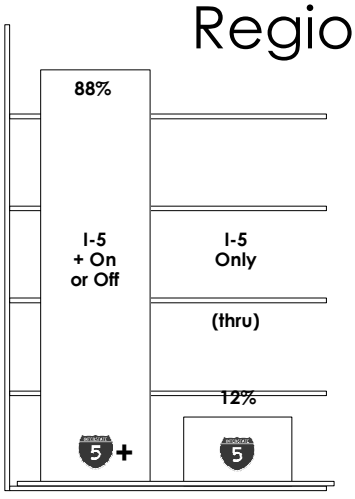
Historical I-5 Truck Traffic Growth



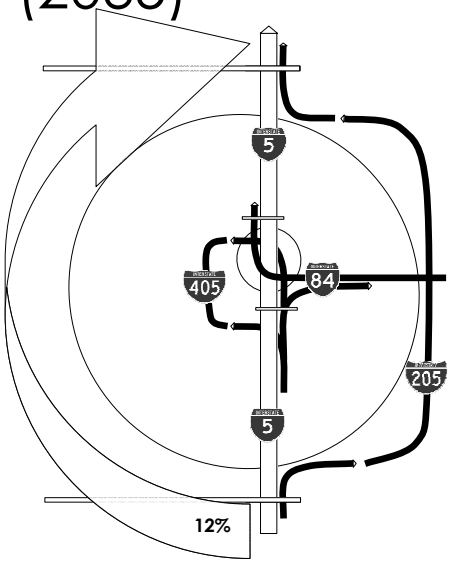


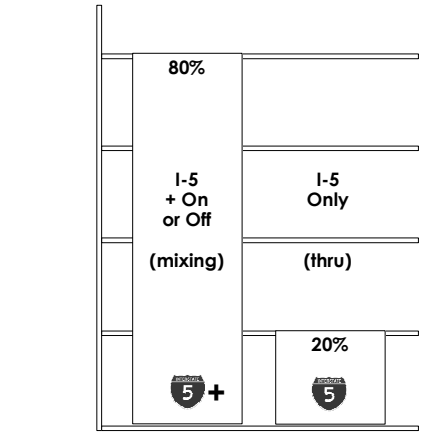
Who is Using I-5 to, from and through the NNE Quadrant?

- Most trips on I-5 in the Quadrant stay within the Portland region
- Most trips on I-5 in the Quadrant require a weave between ramps and freeway mainline

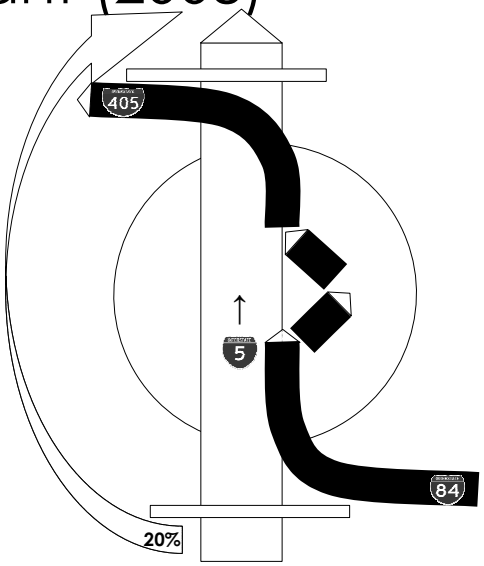


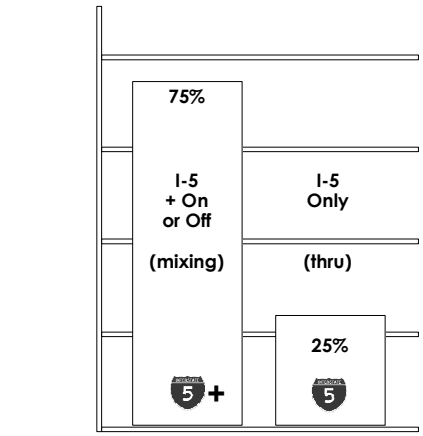
I-5 Movement Through the Region (2008)



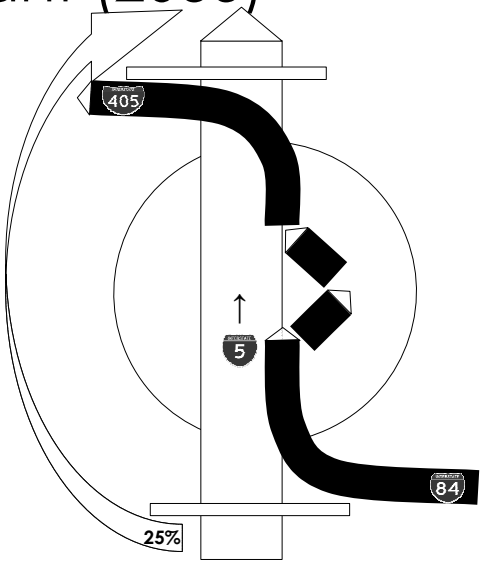


I-5 Movement Through the Region (2035)





I-5 Trips Through the N/NE Quadrant (2008)

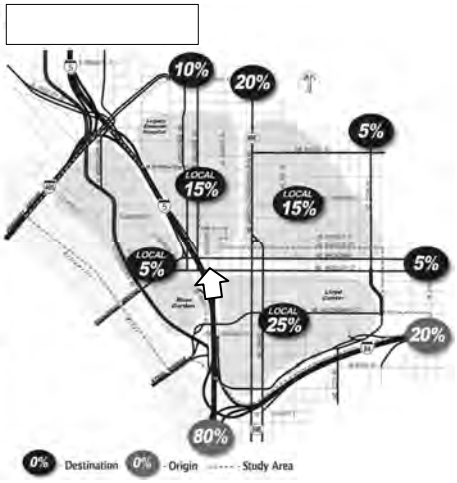


I-5 Trips Through the N/NE Quadrant (2035)

Who is using the Broadway/Weidler Interchange in Evening Rush Hour?

- On-Ramps - Workers from Lloyd District, Lower Albina, Central Eastside – heading home
- Off-Ramps - Residents from Eliot, Irvington, Sullivans Gulch – coming home from work

Northbound Off-Ramp to Weidler



Northbound
Off-Ramp to Weidler

Off-ramp traffic
PM Peak

20% from I-84
80% from I-5

25% to Lloyd District

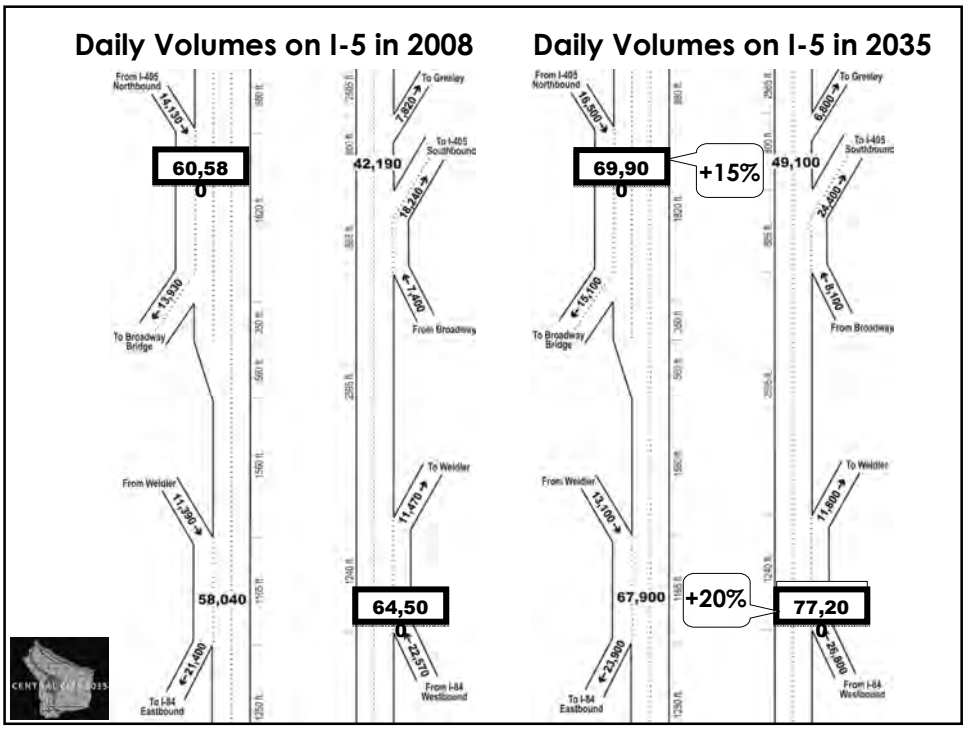
10% from Eliot/Irvington
25% from North of Knott
10% from Broadway Br.

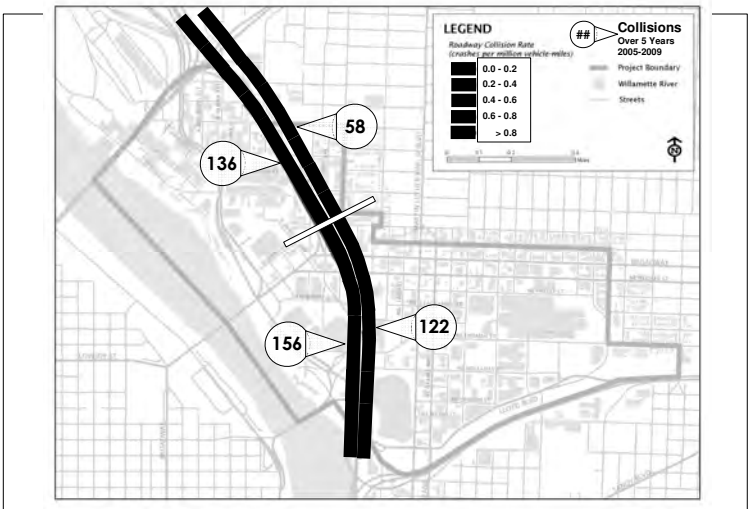


70% south on I-5
30% east on I-84

What does traffic growth and ramp usage mean to how I-5 functions?

Short weave distances contribute to safety and operational problems

High crash rates create frequent safety and traffic problems



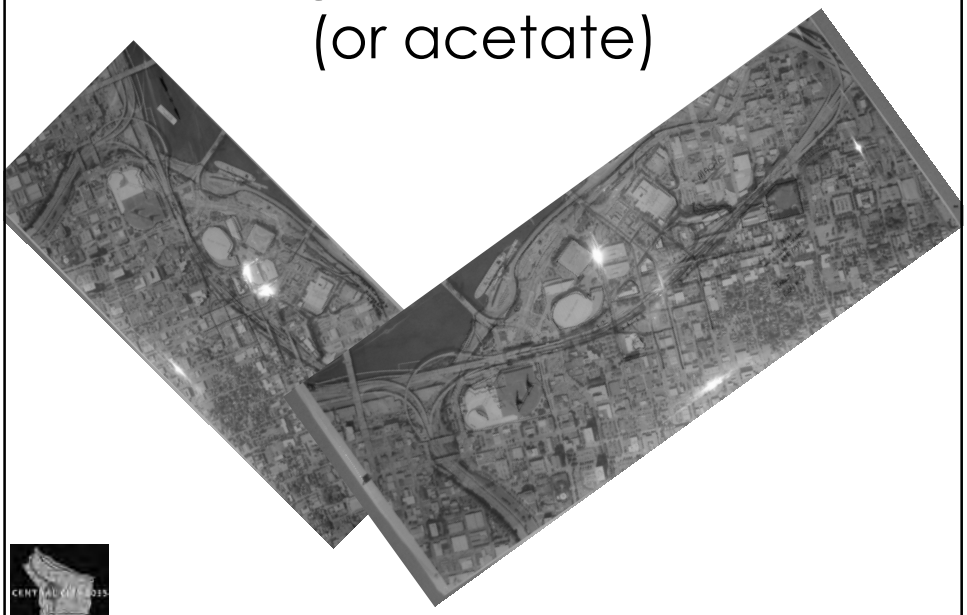
Weaving Analysis

- Weaving analysis based on level of service (LOS)
- Analysis considers speeds, weaving distance, traffic volumes, etc.

- Findings:
  - I-84 to B/W interchange weaves are very bad today (rated F) and forecast to worsen
  - B/W interchange to I-405 weaves are marginal today (rated C) and forecast to worsen (rated D)
- Poor weaving conditions result in:
  - High crash rates
  - Slow speeds
  - Congestion

I-5 Crashes within the Study Area

Ideas to Address Freeway and Interchange Circulation, Safety and Operational Problems



Transportation Improvement Charrette

- SAC Subcommittee worksession on 3/30
- Public worksession on 4/11
- Technical worksessions 4/12 & 4/13
- Public report evening of 4/13
- SAC Subcommittee review on 4/20

Over 70 Ideas Generated

Getting Ideas onto Paper (or acetate)

What We Heard

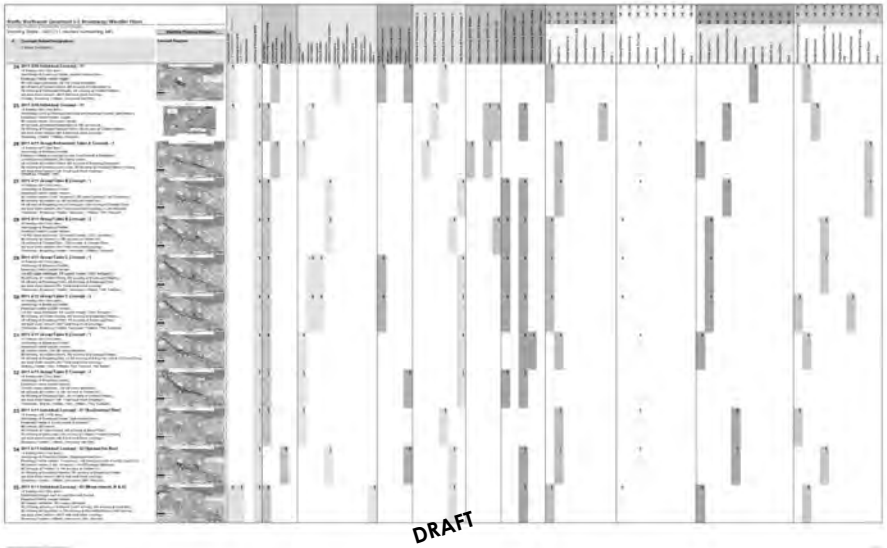
Ideas fell into the following general interchange form categories:

- 8% of Ideas: Diagonally Folded Diamond
- 18% of Ideas: Standard Diamond
- 27% of Ideas: Split Diamond
- 20% of Ideas: Folded Diamond

What We Heard

Several other ideas included:

- Move the interchange
- Separate the weaves
- More crossing locations
  - **Hancock**
  - **Clackamas**
- Improve bike/ped connections



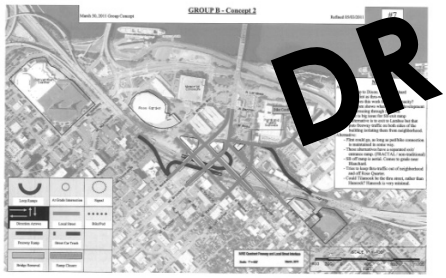
Organizing the Work

Elements and Concepts

- "Elements" are individual pieces
  - Examples:
    - Clackamas overcrossing
    - Northbound braided ramp from I-84
- "Concepts" are a combination of "elements"

Concept Tracking Matrix

Freeway/Local Transportation Interface Charrette Summary



- Preliminary draft summary report
- One-page description and disposition

7

Freeway/Local Transportation Interface Charrette Screening

2011 3/30 SAC-Group B Concept 2

Description:
I-5 freeway with 3rd auxiliary lane,
Interchange at Broadway/Weidler, Diagonally-folded diamond,
Broadway/Weidler couplet remains,
NB exit ramp at Weidler/1st, NB on-ramp at Weidler/1st,
SB exit ramp at Wheeler/Hancock, SB entrance ramp loop at Broadway/Wheeler/Flint,
and local street network with 6 total local street crossings
(Weidler, Broadway, Hancock, Williams, Vancouver and Flint)

N/NE Quadrant Project Scope Screening Criteria

INT 1	Improvements to I-5			
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.			
	Focus on safety improvements to reduce the number of crashes			
	Auxiliary lane extension on the Broadway/Weidler interchange and on/off ramps, ramp spacing and connections to local arterials.			
	Multi-modal facility design standards to balance improvements to peak hour or LOS congestion, if improvements will improve safety and operations on the freeway			
	Minimize ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban fabric of the area.			
	Focus on modest improvements - no overall/any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.			
INT 1	Bicycle and Pedestrian Routes			
	Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including weave between access across the freeway			
INT 2	Freight Movement			

DRAFT

Preliminary Engineering Assessment

Advantages:
- Improves weaving distance for NB entrance ramp
- Improves weaving distance for SB entrance ramp

Disadvantages/Fatal Flaws:
- Wheeler/Hancock Southbound exit ramp grades
- Southbound exit weave length decreases

Recommendation:

Elements for Further Study:
- Diagonally folded diamond at Broadway/Weidler
- Broadway/Weidler couplet at freeway
- New crossing at Hancock

Elements for No Further Study at this Time
- Ramp connection at Wheeler/Hancock

How we are moving forward with transportation improvement concepts

- 5 categories of concepts to develop – Table 1
- A range of potential elements to examine – Table 2
- Elements recommended to not study further at this time – Table 3

From Table 1:

1. No-Build

- Serves as a baseline for comparison

From Table 1:

2. Mainline Operational Improvements

- Provides a minimal cost/impact comparison
- Develop with:
  - Ramp modifications (but no loops)
  - Braided ramps
  - New overcrossings

From Table 1:

3. Rebuild Bridges

- Implied in some charrette concepts
- Develop with:
  - Ramps remain in current locations
  - Ramp modifications (but no loops)
  - Braided ramps
  - New overcrossings

From Table 1:

4. Enhance B/W Interchange

- Included in 47 concepts
- Includes concepts with:
  - Split diamond (23 concepts)
  - Folded diamond (24 concepts)

From Table 1:

5. New Concepts for the B/W Interchange

- Included in 23 concepts
- Includes concepts with:
  - Standard Diamond (15 concepts)
  - Single Point Interchange (3 concepts)
  - Diverging diamond (2 concepts)
  - Roundabout (3 concepts)

From Table 2:

Elements to be Studied Further

- Loop ramps (34)
- Collector/Distributor (CD) Roads (7)
- Braided ramps (25)
- Extra ramp concepts – partial cloverleaf (3)
- Additional crossings (26)
- Other (remove crossings, bike/ped imps, local street changes, etc)

From Table 3:

Elements Recommended for No Further Study at this Time

- Move interchange north or south (scope)
- Remove I-5 on the eastbank (scope)
- Double-deck I-5 (scope)
- Water ferry (scope)
- New Willamette River bridge (scope)
- Braided ramps north of B/W (eng)
- Widen I-405(scope)
- I-5/I-405 Loop (scope)

SAC Action Items

- Endorse 5 categories of concepts to develop further – Table 1
- Endorse elements to be considered for concept development – Table 2
- Endorse elements to not study further at this time – Table 3

N/NE Quadrant Plan: Concept Alternatives
DRAFT 5/24/11

This packet contains draft quadrant-wide concepts for land use, urban design and local transportation ideas in the N/NE Quadrant study area.

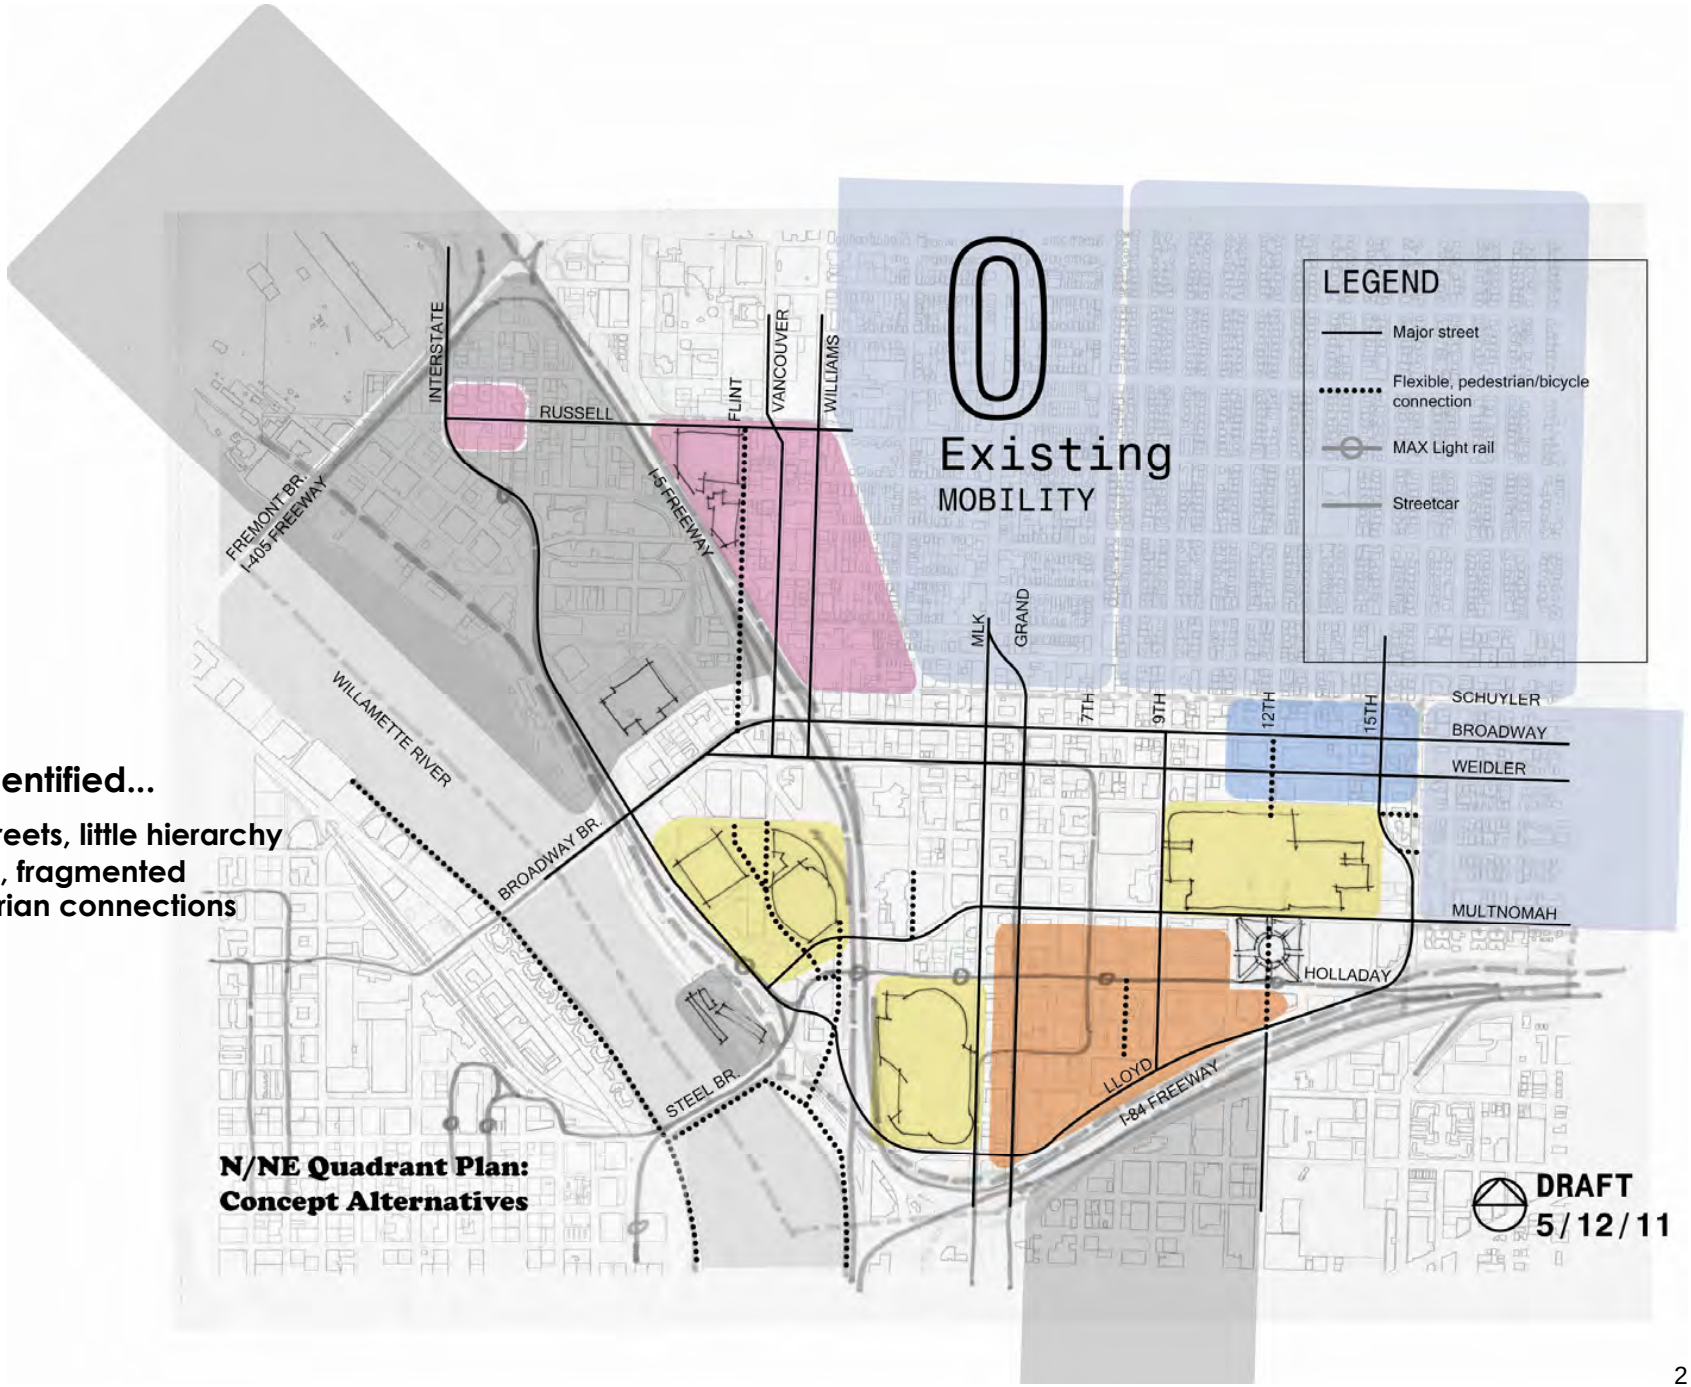
Staff developed three quadrant-wide concept alternatives, intended to describe different development characters and identify key choices, by grouping ideas generated from the following sources:

- Issues, opportunities and constraints,
- Stakeholder Advisory Committee (SAC) meetings,
- SAC Subcommittee meetings, and
- The Local Issues Charrette, held in February, 2011 (charrette summary on web: http://www.portlandonline.com/bps/index.cfm?c=53634&a=345474)

Each concept alternative has a different land use emphasis: Residential (1), Employment (2) and Blend (3). Each land use concept is supported by three related infrastructure system diagrams: Mobility, Open space and Green Systems. It should be noted that the individual concept ideas are not mutually exclusive and will likely be mixed and matched to form the preferred concept, with accompanying local system frameworks, for the quadrant area.

Many ideas generated during SAC or subcommittee meetings and/or the Local Issues Charrette are specific to quadrant subareas, such as the Lower Albina Industrial Area. These more specific questions and/or localized ideas are under development and will be available for public discussion in June. The draft quadrant-wide concepts and subarea choices will be refined with input from the SAC, other stakeholders and the general public.

For event dates and relevant project materials, please visit the project website: www.portlandonline.com/bps/cc2035/nneq.

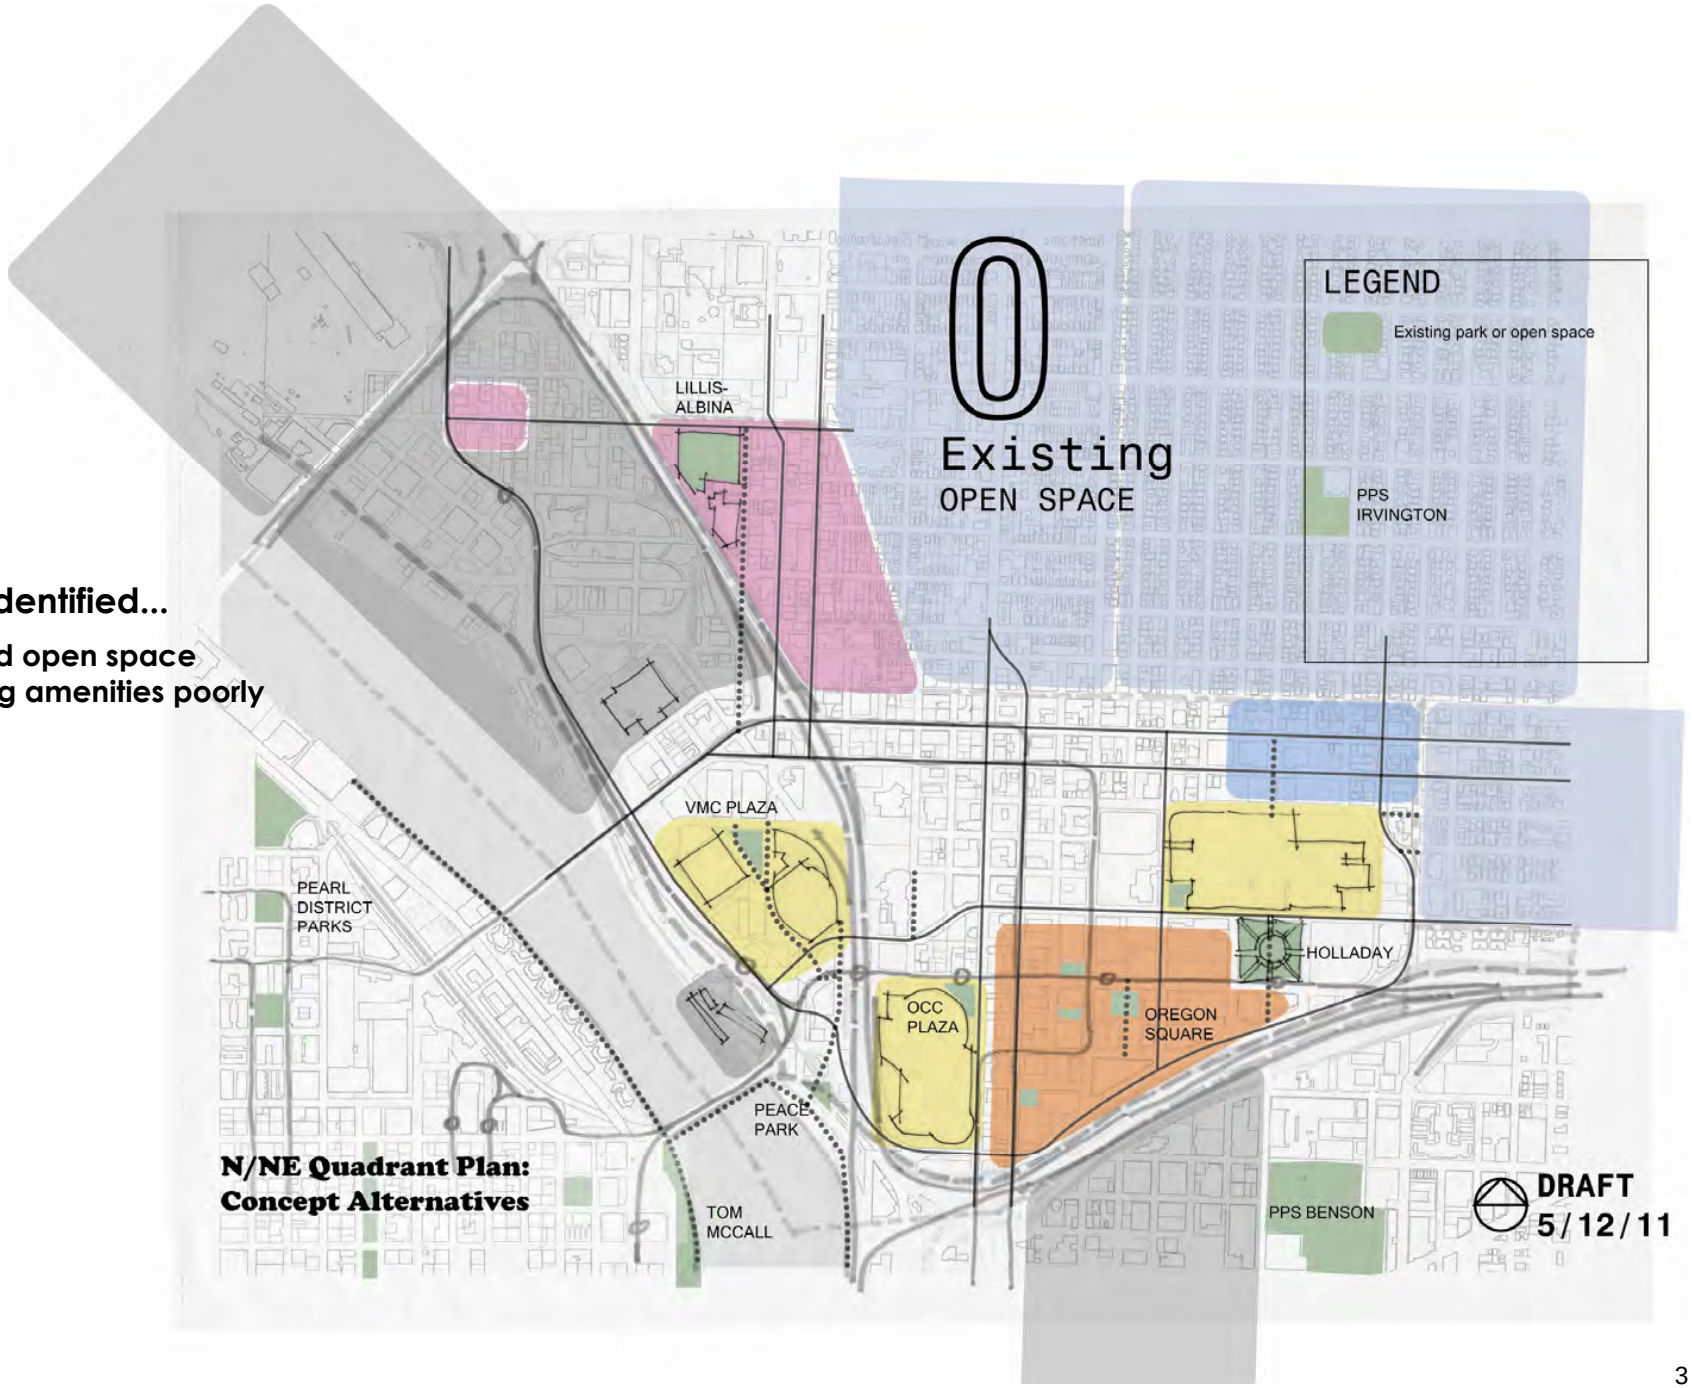


Existing Conditions...

- Several areas with established identities:
  - office district
  - regional attractions
  - Lower Albina industrial area
  - NE Broadway business/ residential district

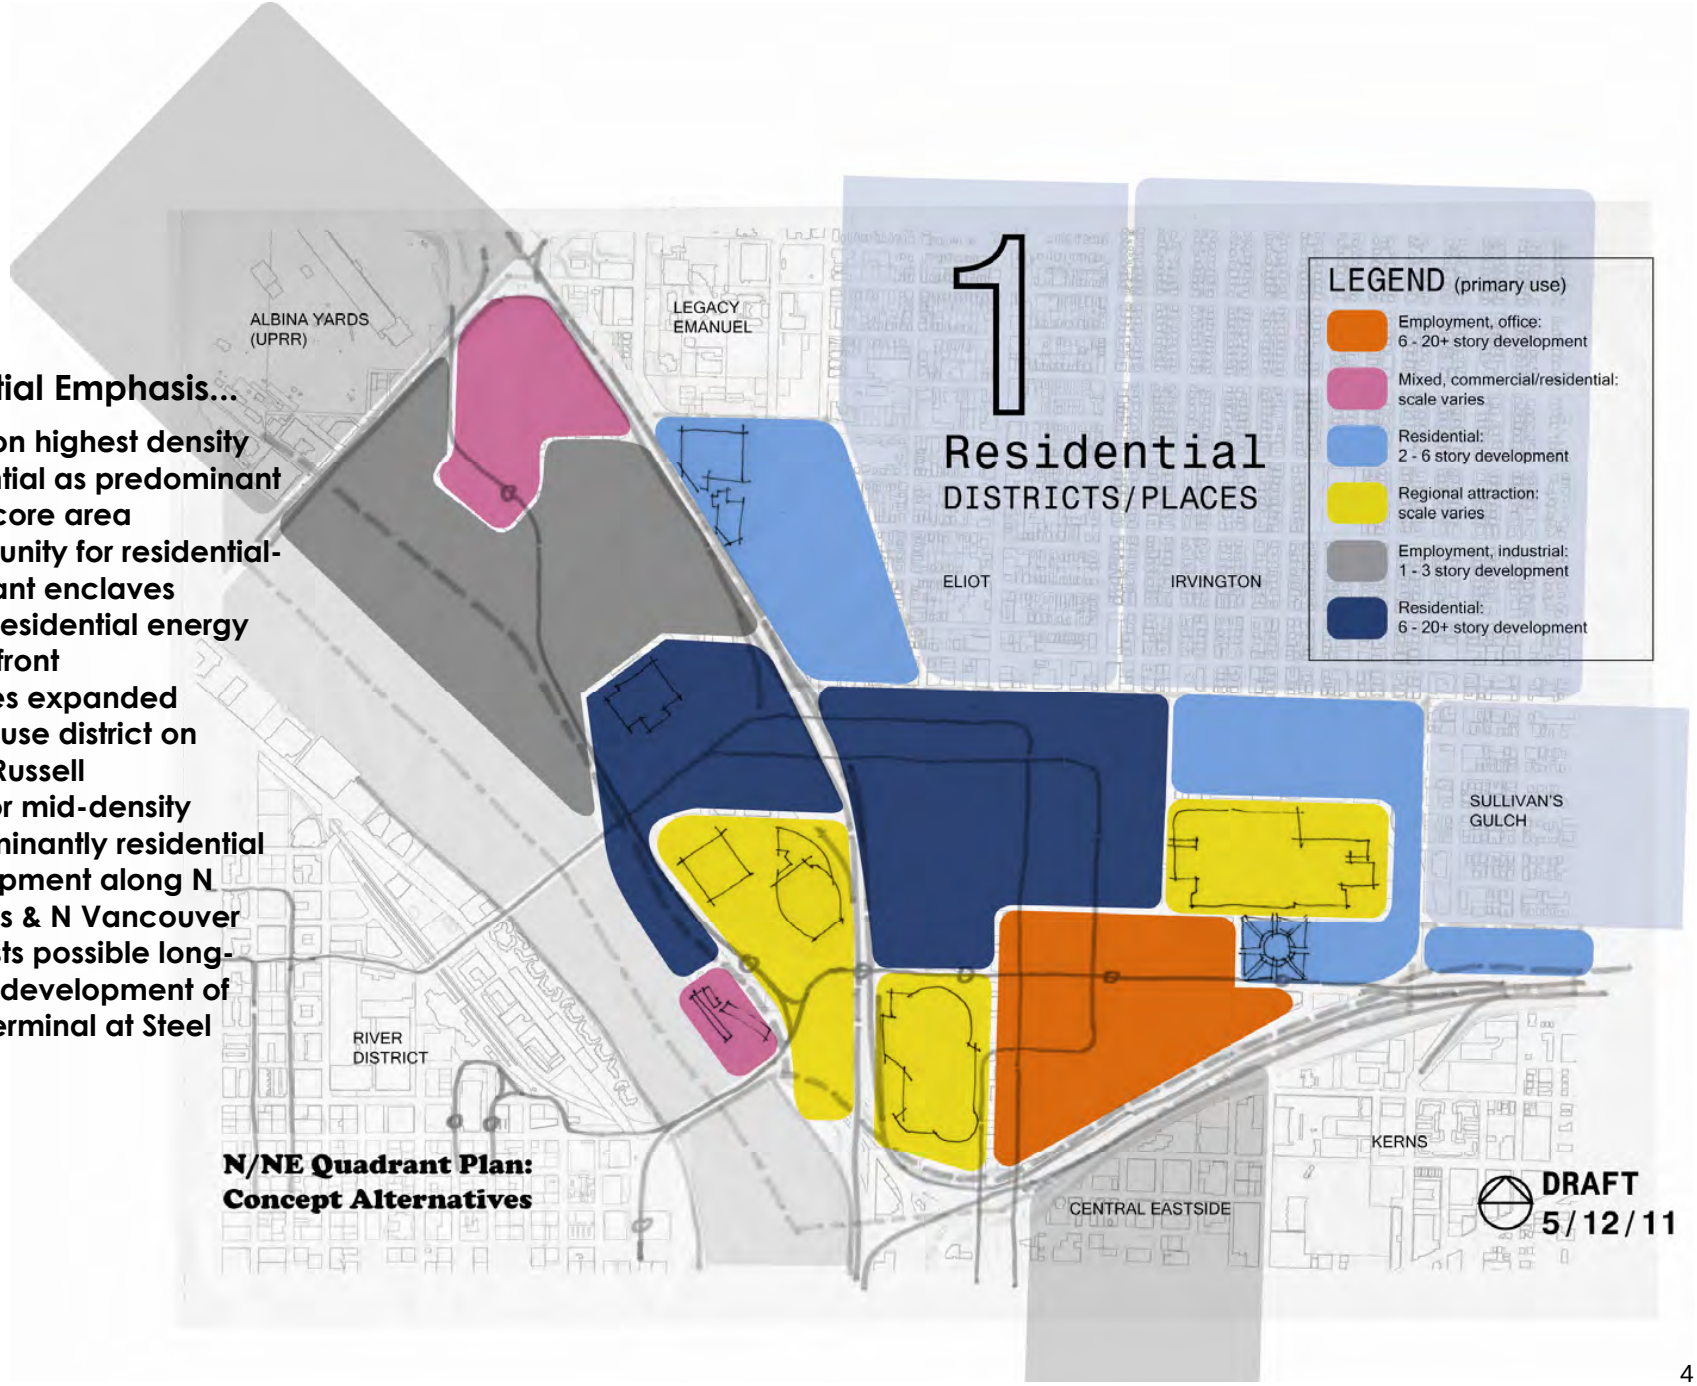
Issues identified...

- Central core lacks identity
- Very little residential; lack of vibrancy



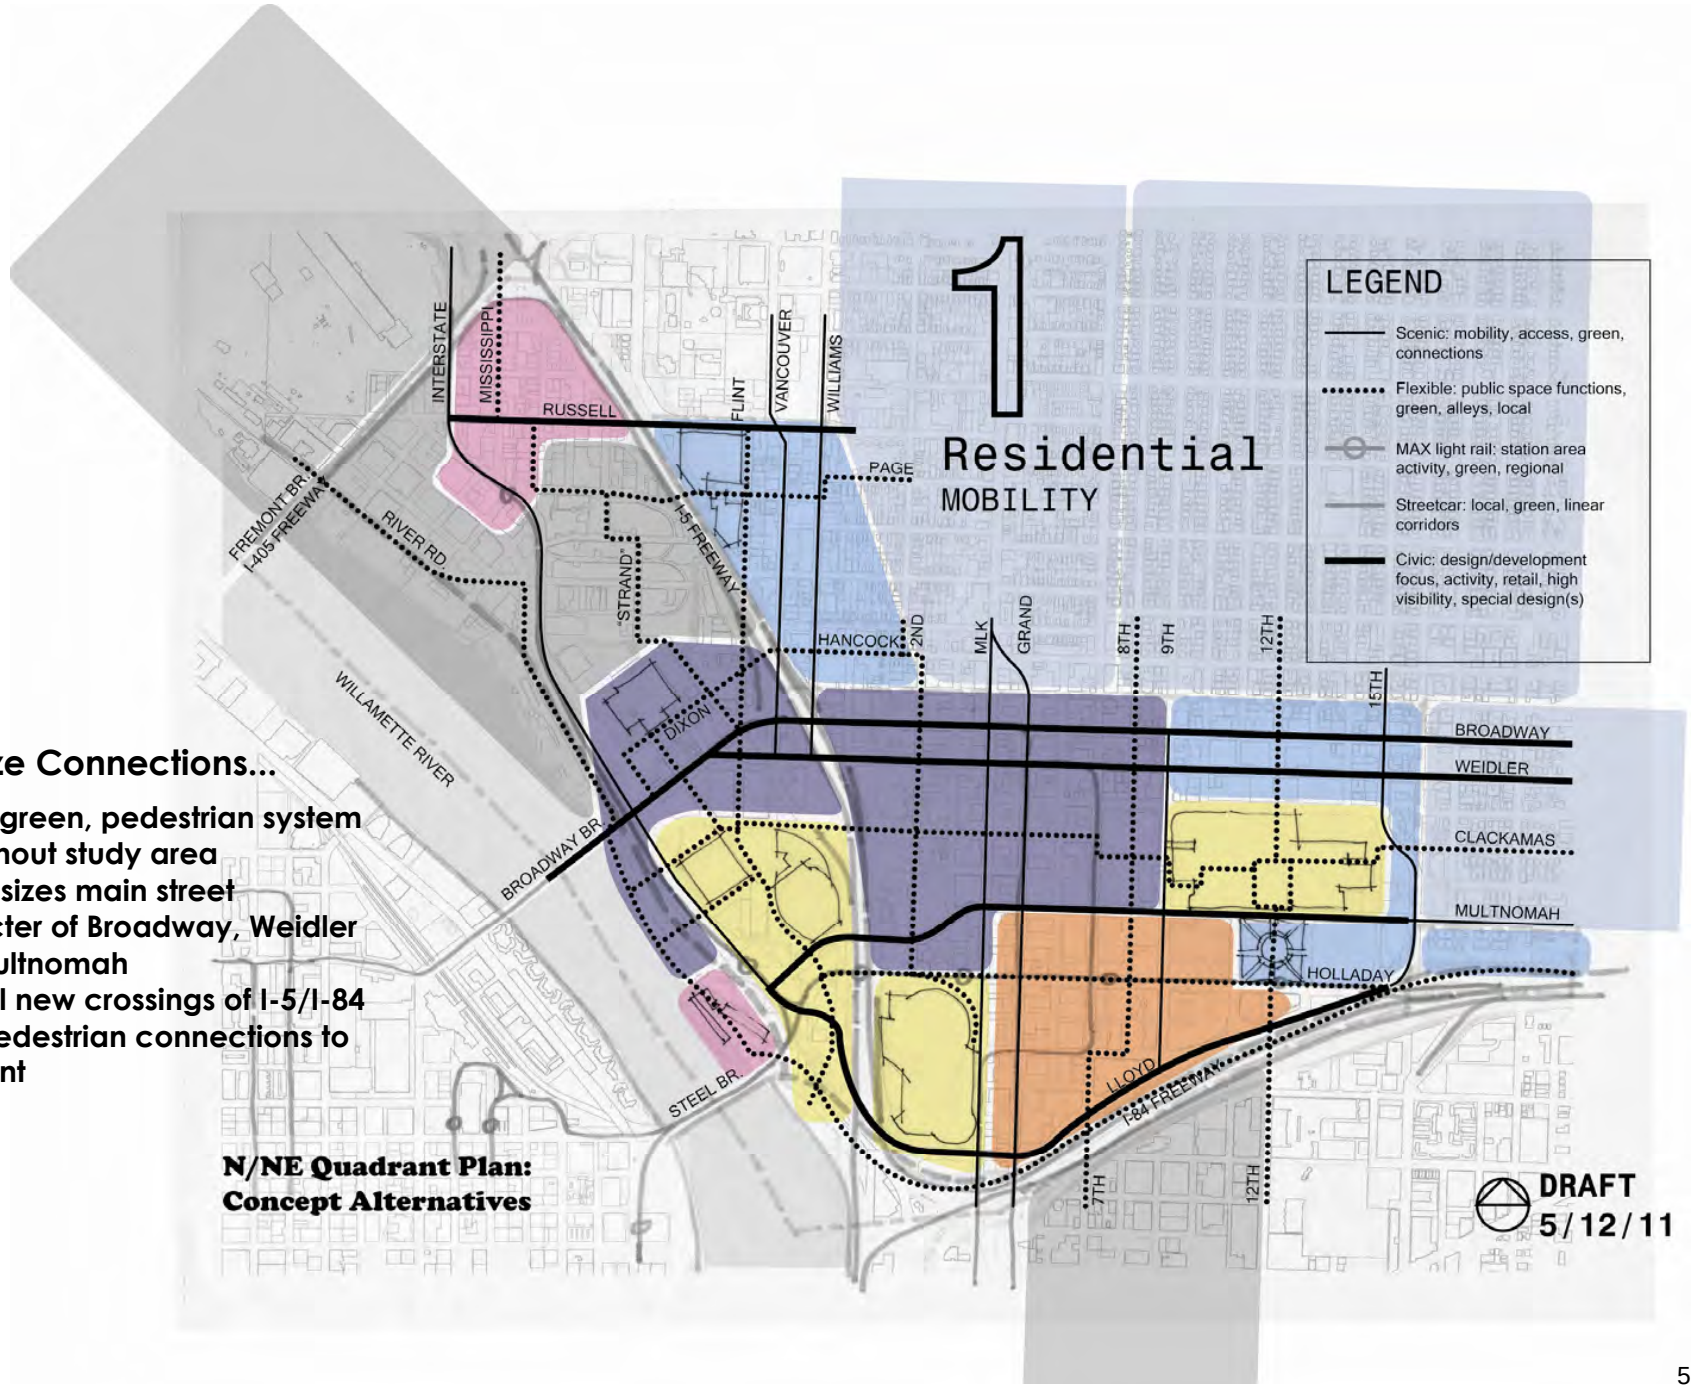
Issues identified...

- **Busy streets, little hierarchy**
- **Limited, fragmented pedestrian connections**



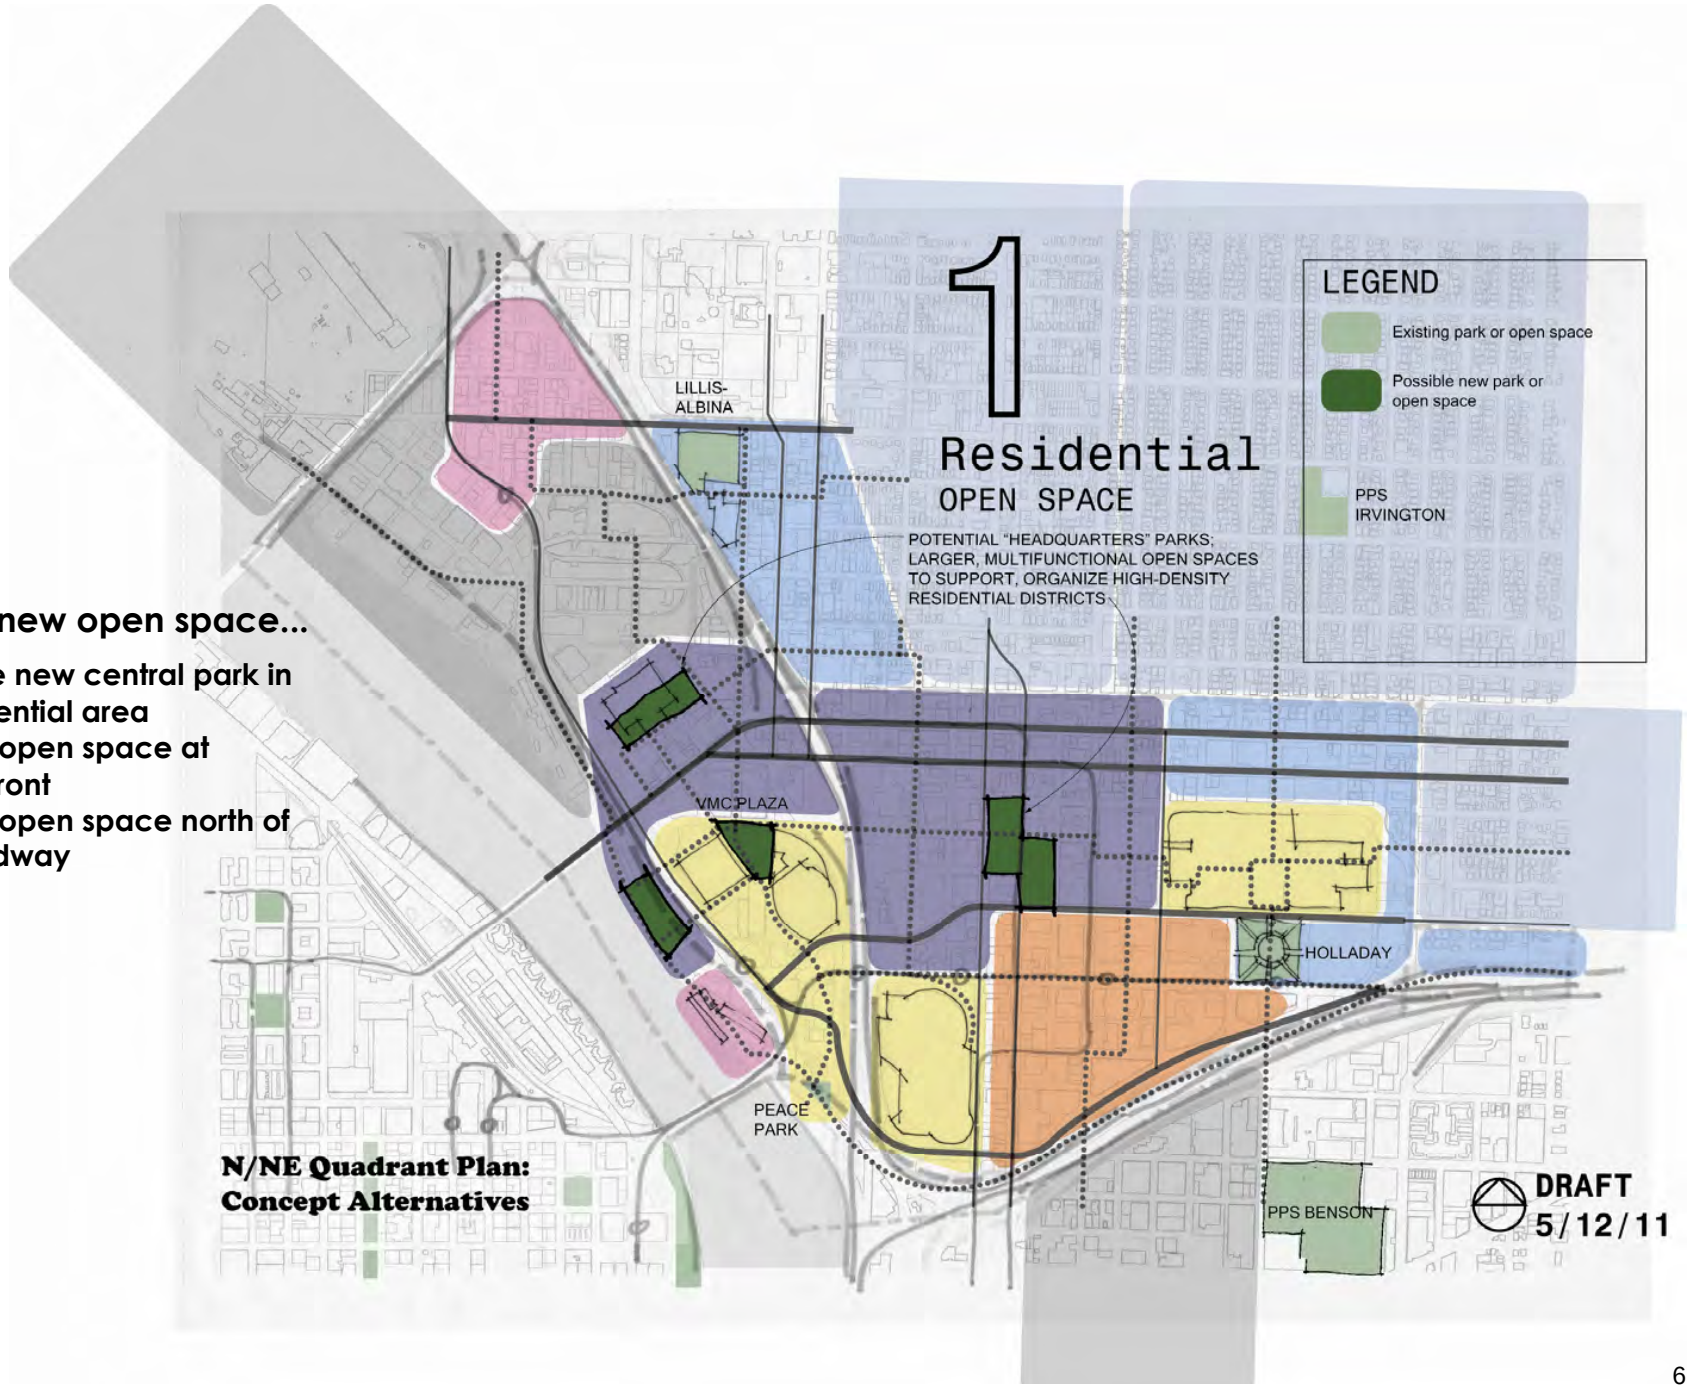
Issues identified...

- **Limited open space**
- **Existing amenities poorly linked**



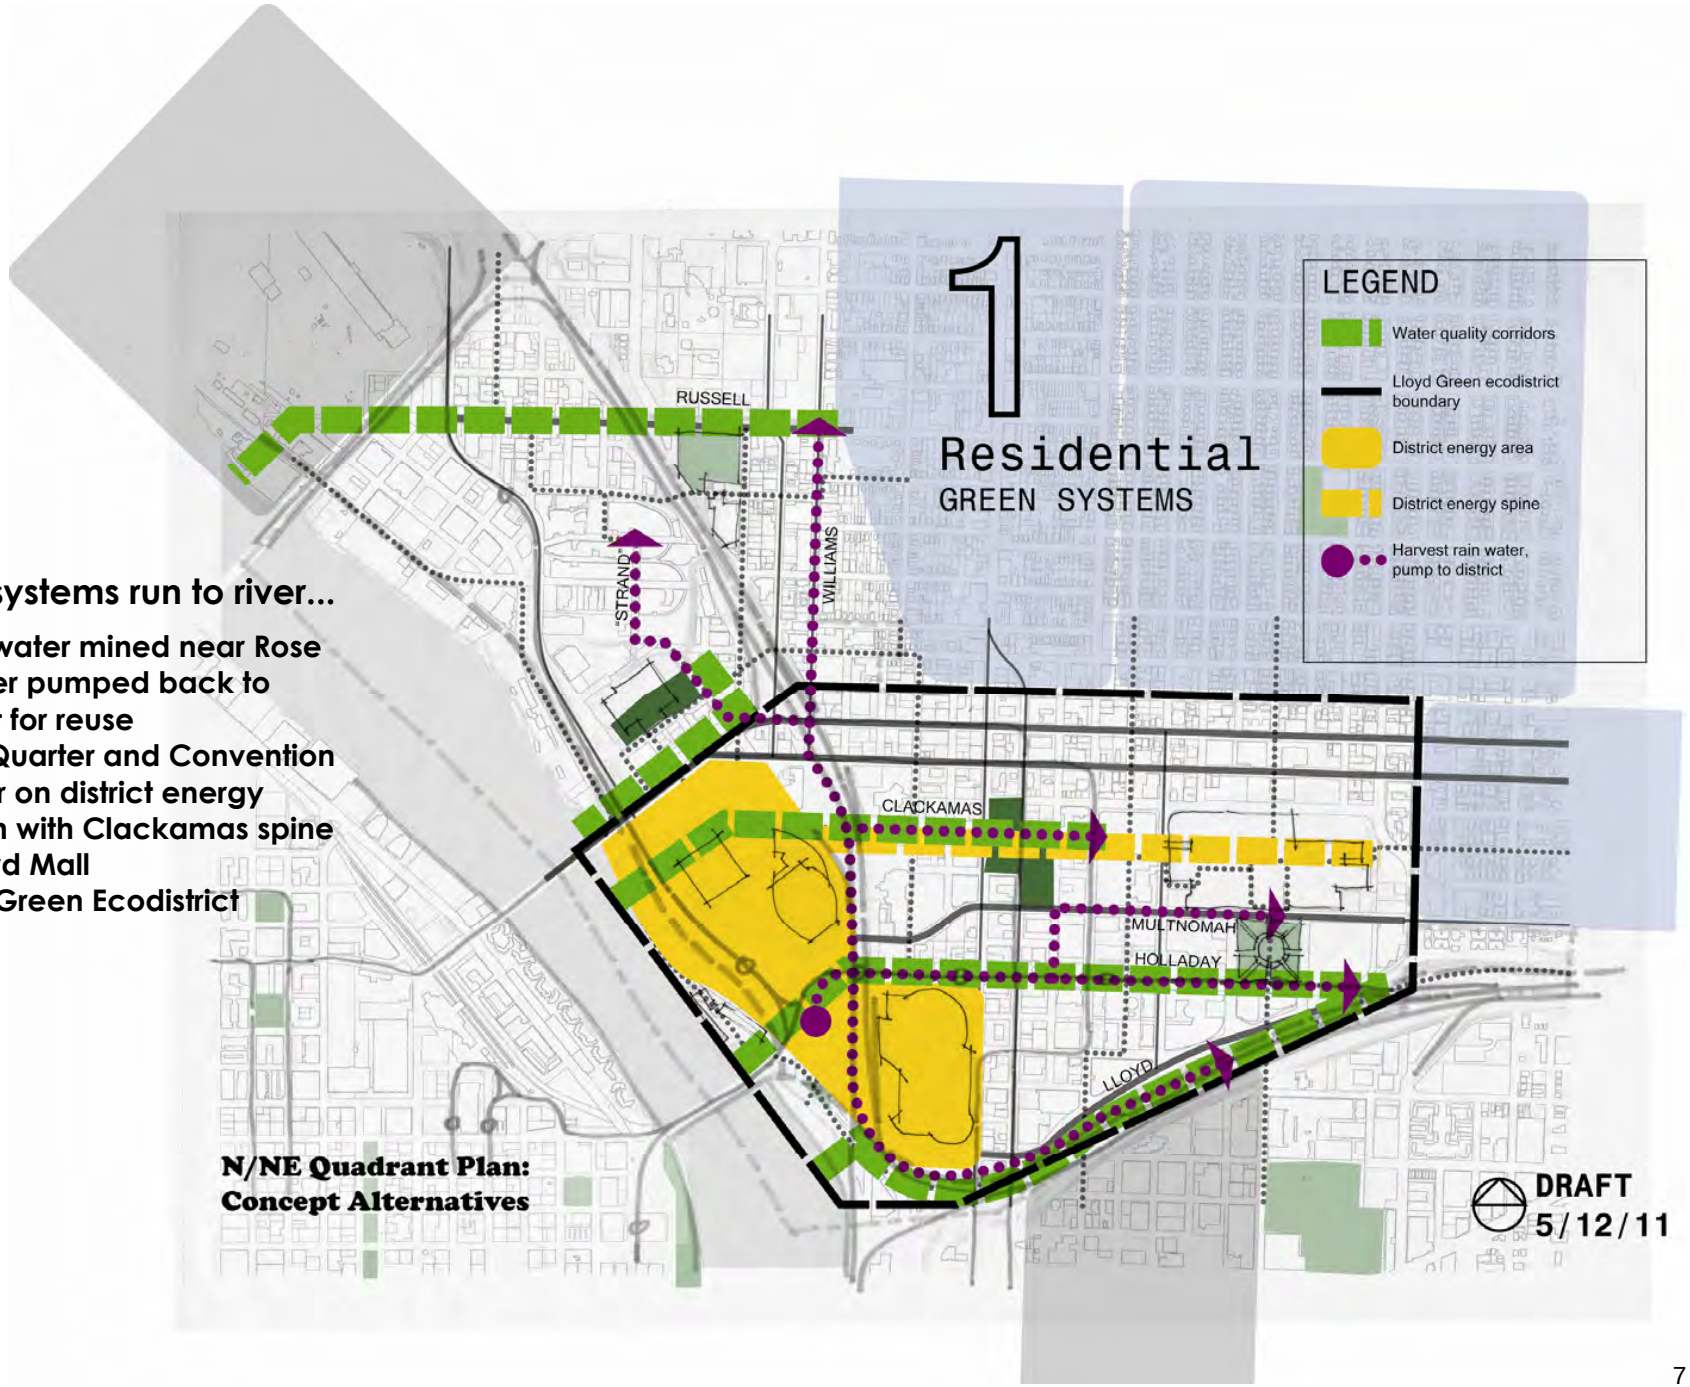
Residential Emphasis...

- Focus on highest density residential as predominant use in core area
- Opportunity for residential-dominant enclaves
- Brings residential energy to riverfront
- Features expanded mixed-use district on Lower Russell
- Calls for mid-density predominantly residential development along N Williams & N Vancouver
- Suggests possible long-term redevelopment of grain terminal at Steel Bridge

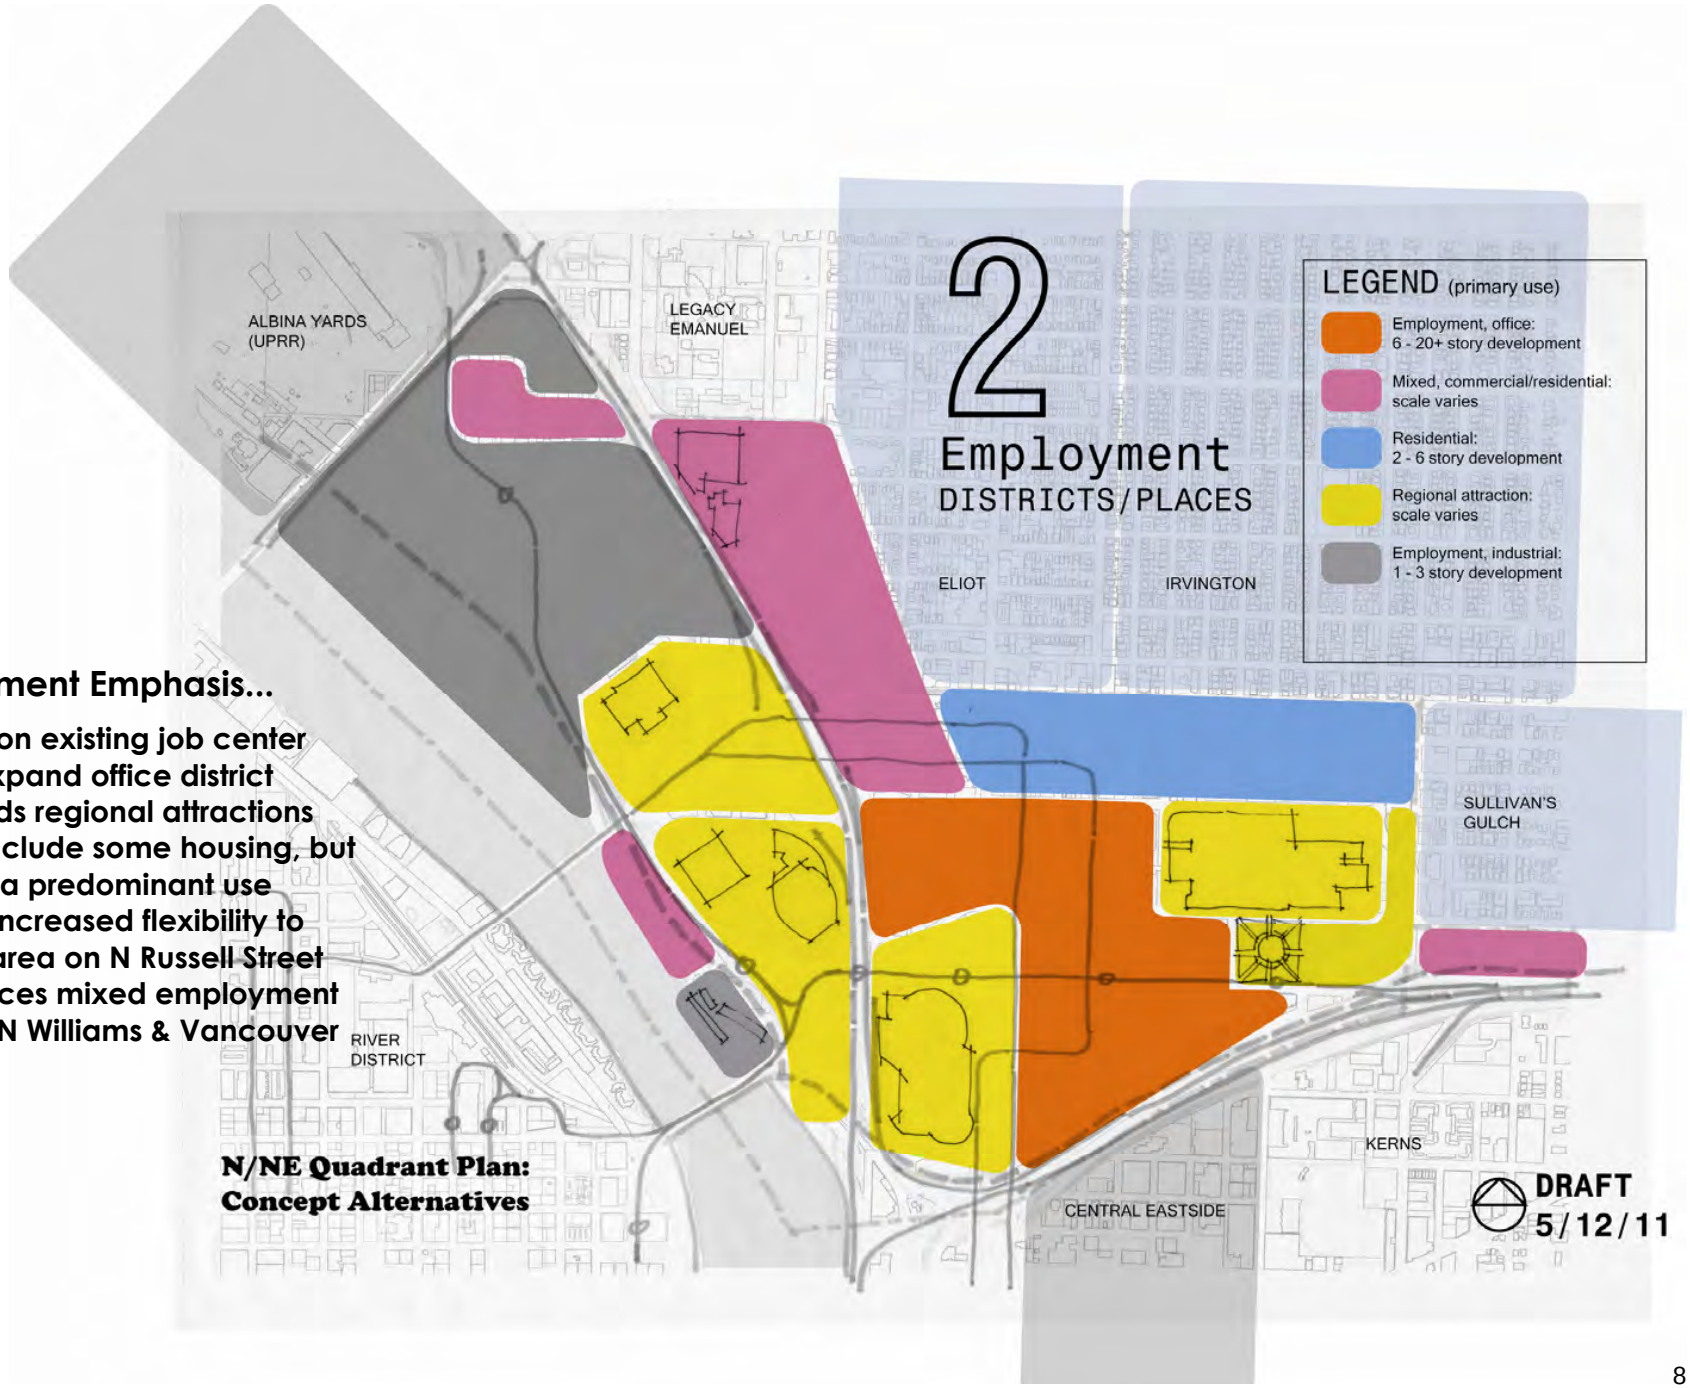


Maximize Connections...

- Strong green, pedestrian system throughout study area
- Emphasizes main street character of Broadway, Weidler and Multnomah
- Several new crossings of I-5/I-84
- New pedestrian connections to riverfront



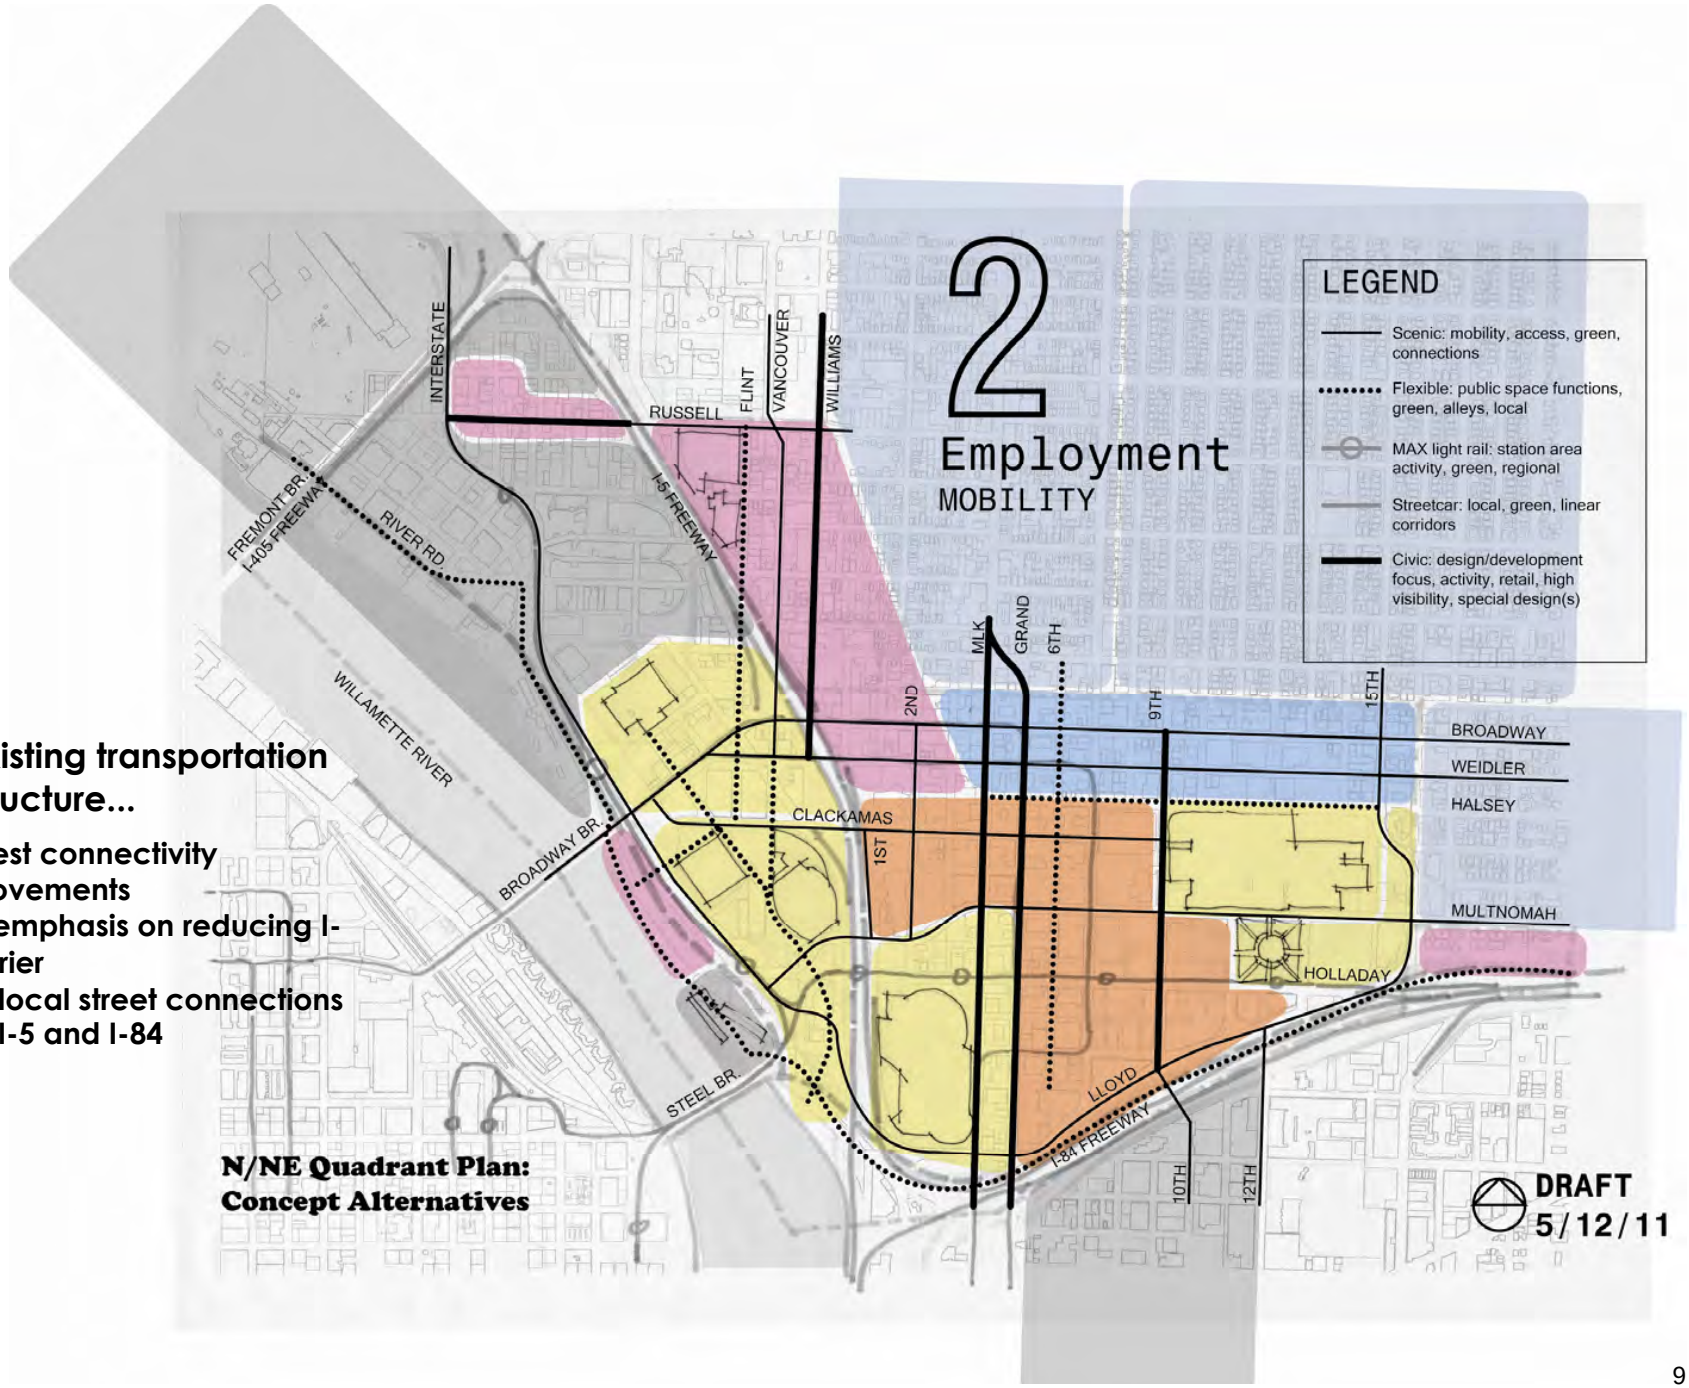
Major new open space...



- Large new central park in residential area
- New open space at riverfront
- New open space north of Broadway

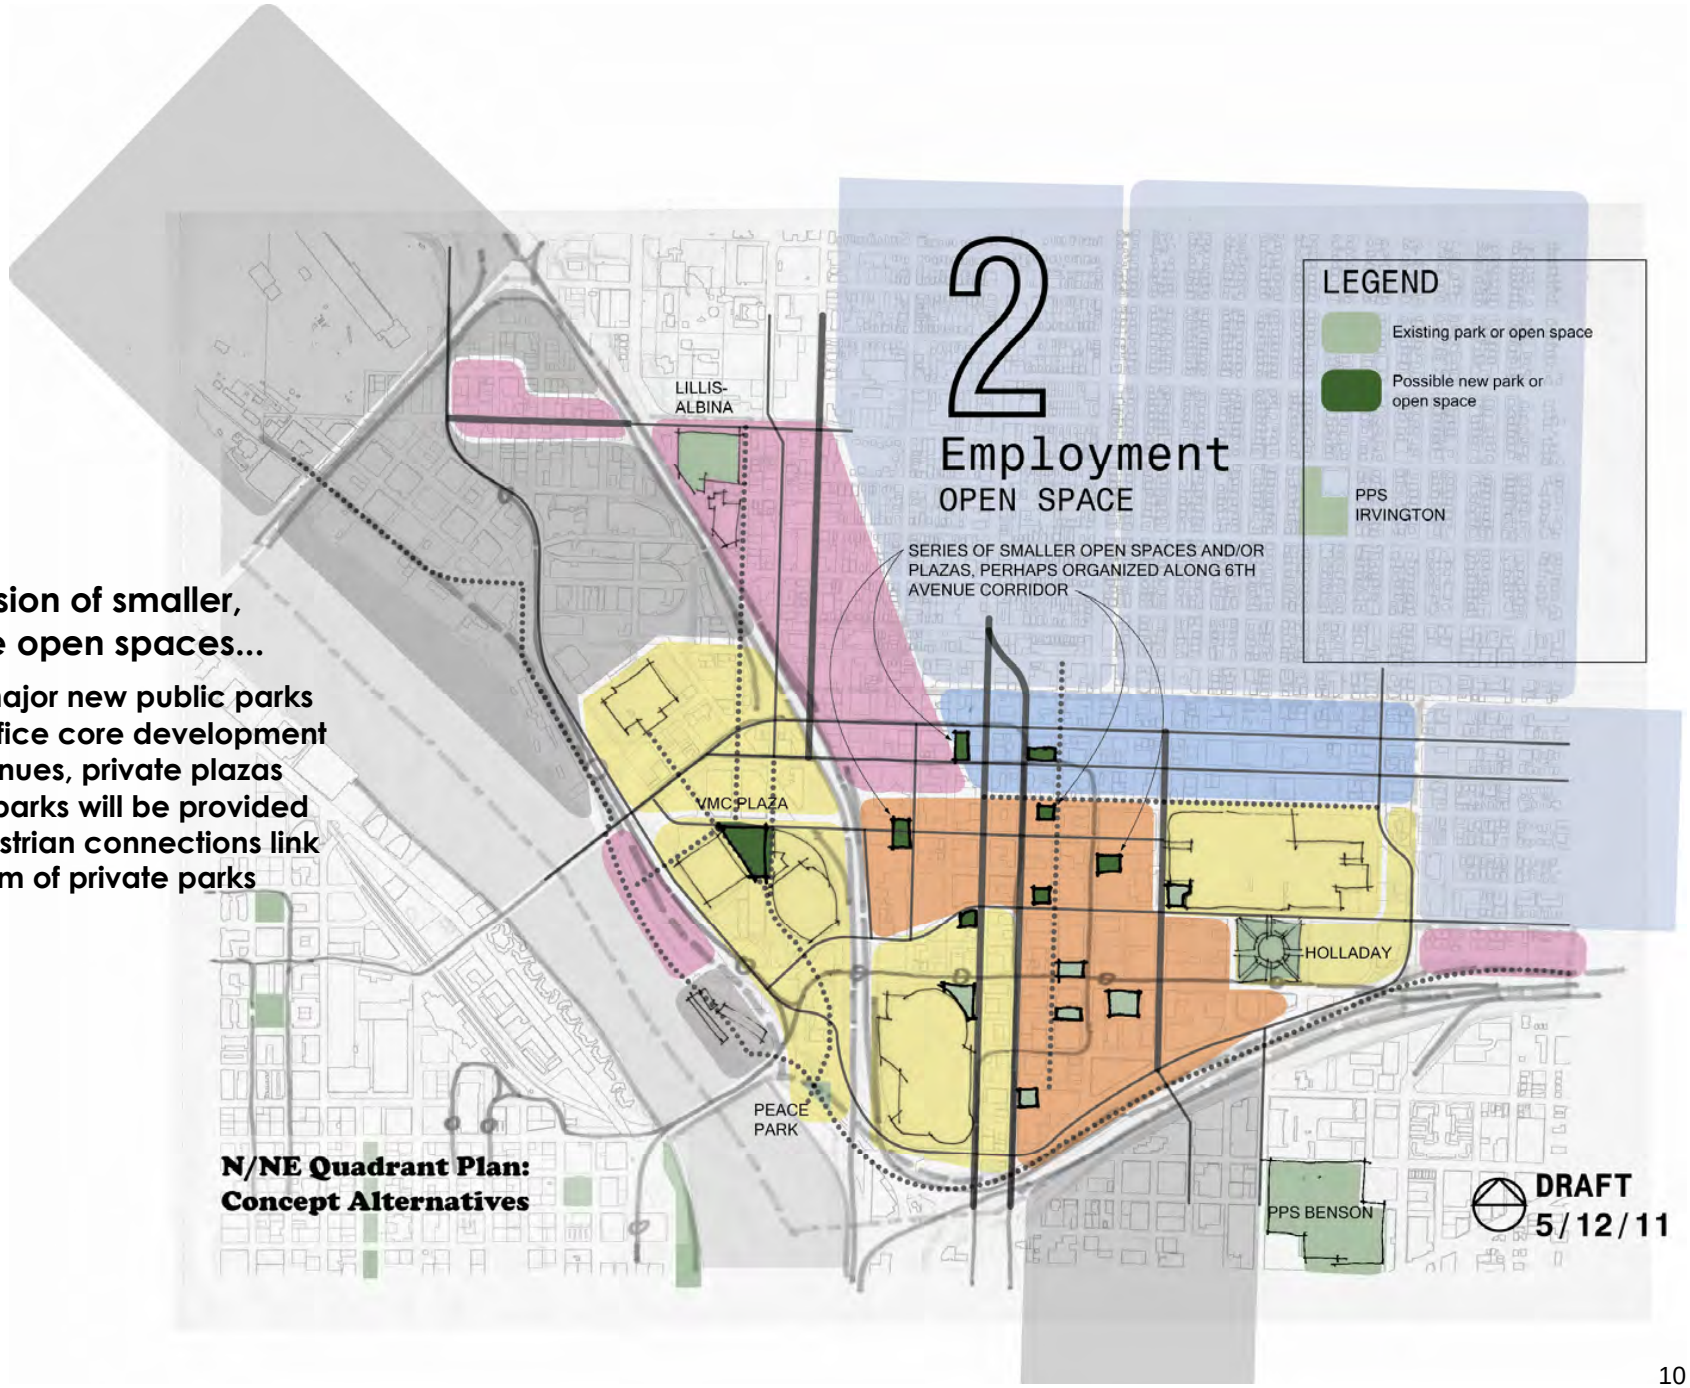
Green systems run to river...

- Stormwater mined near Rose Quarter pumped back to district for reuse
- Rose Quarter and Convention Center on district energy system with Clackamas spine to Lloyd Mall
- Lloyd Green Ecodistrict



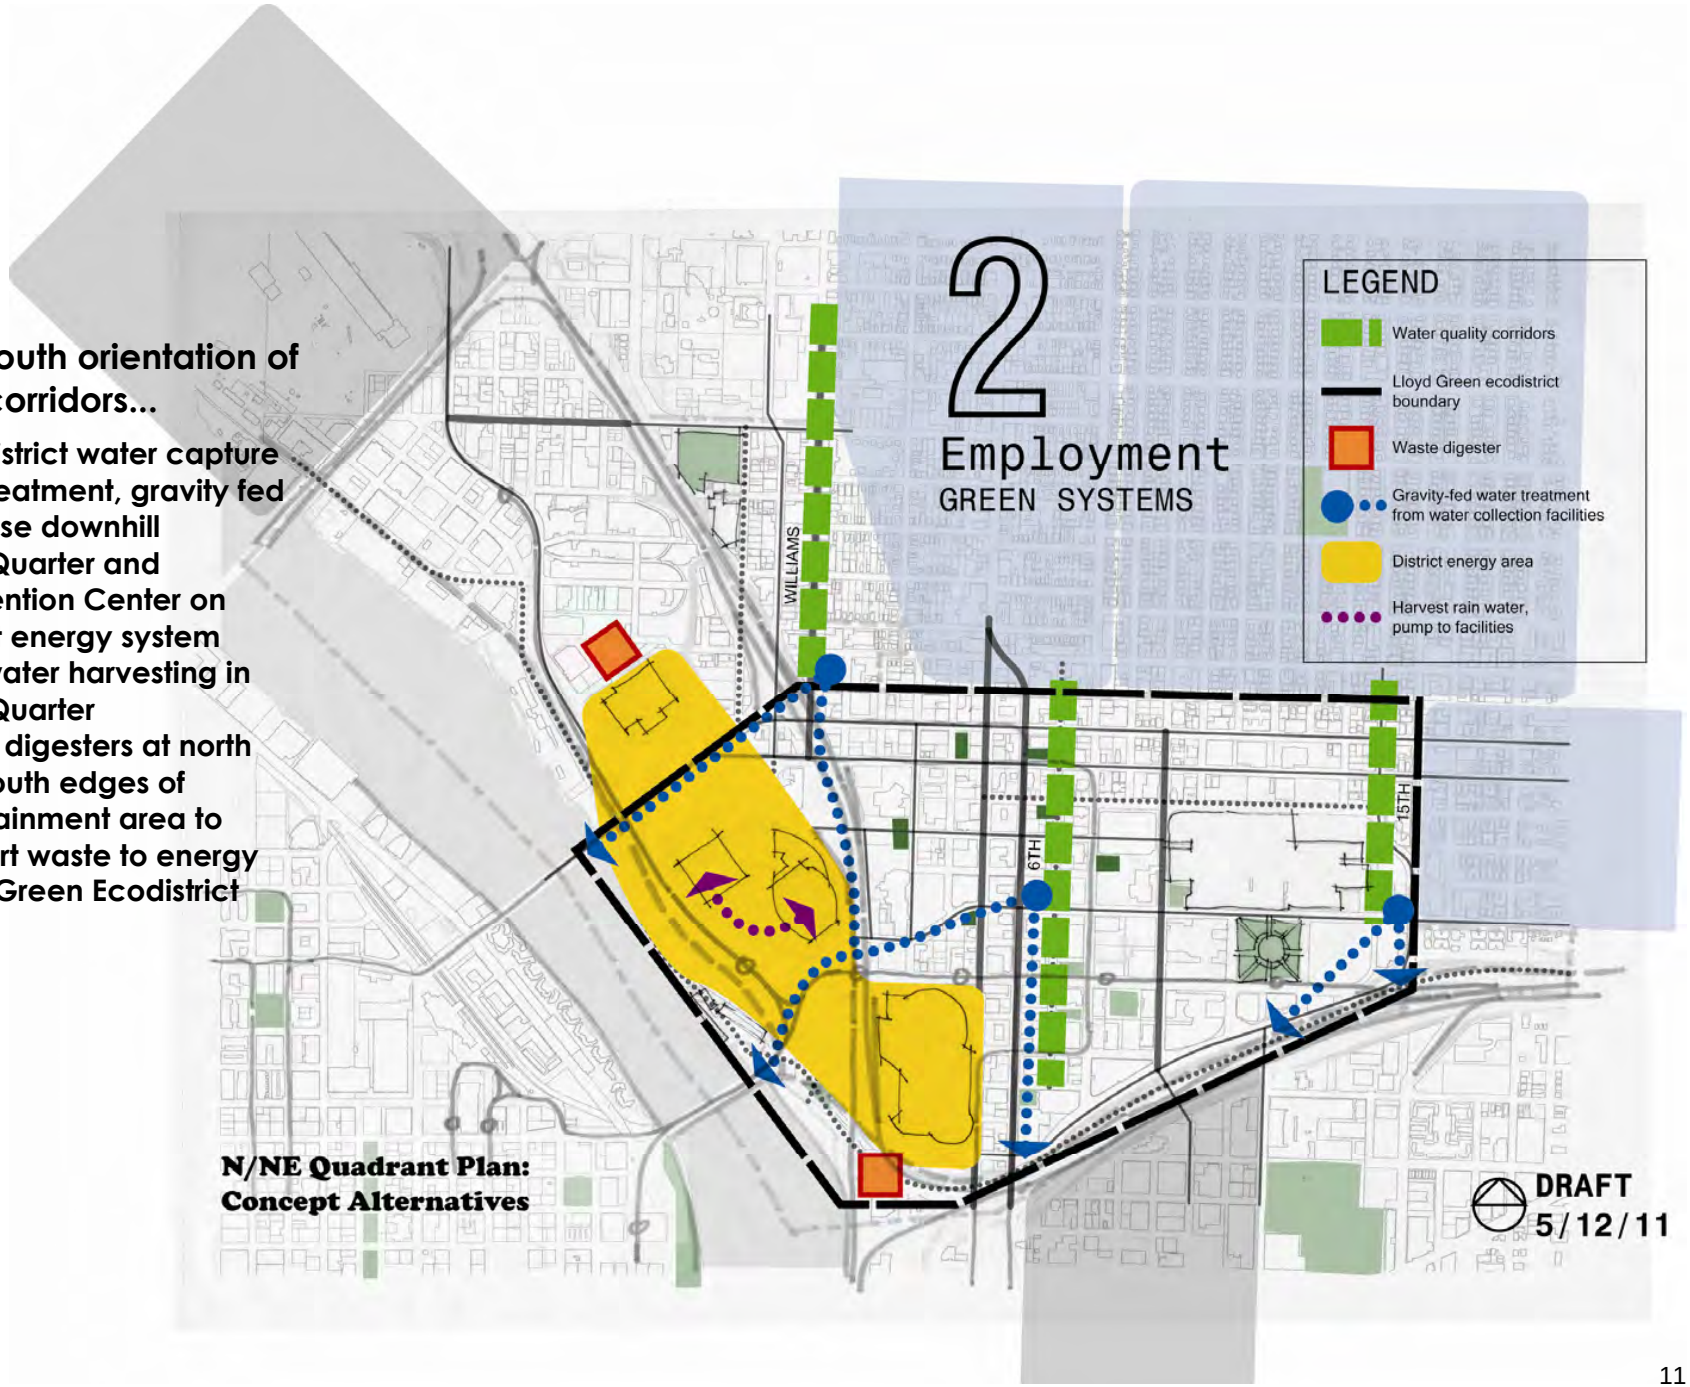
Employment Emphasis...

- **Builds on existing job center and expand office district**
- **Expands regional attractions**
- **May include some housing, but not as a predominant use**
- **Limits increased flexibility to small area on N Russell Street**
- **Embraces mixed employment along N Williams & Vancouver**



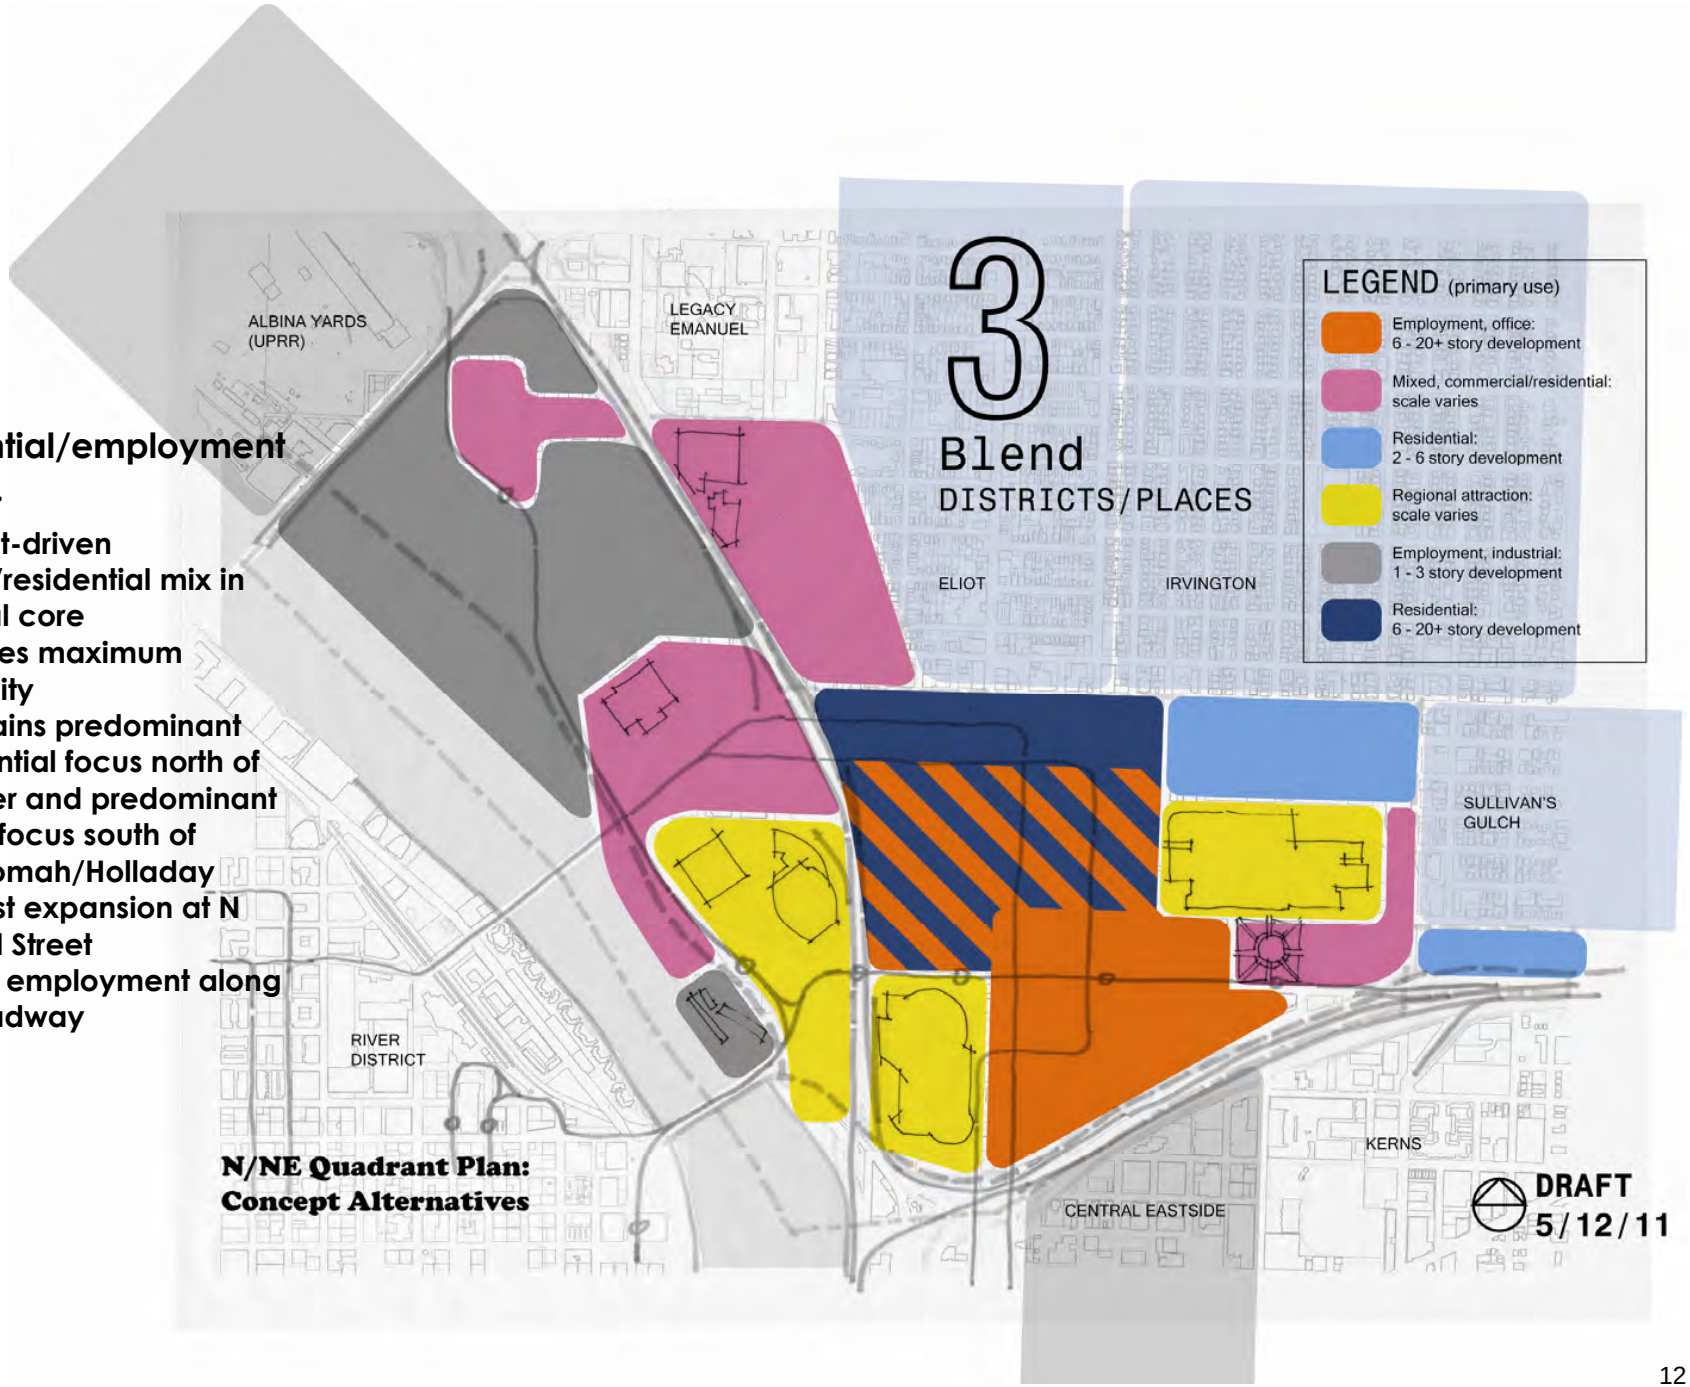
Use existing transportation infrastructure...

- **Modest connectivity improvements**
- **Less emphasis on reducing I-5 barrier**
- **New local street connections over I-5 and I-84**



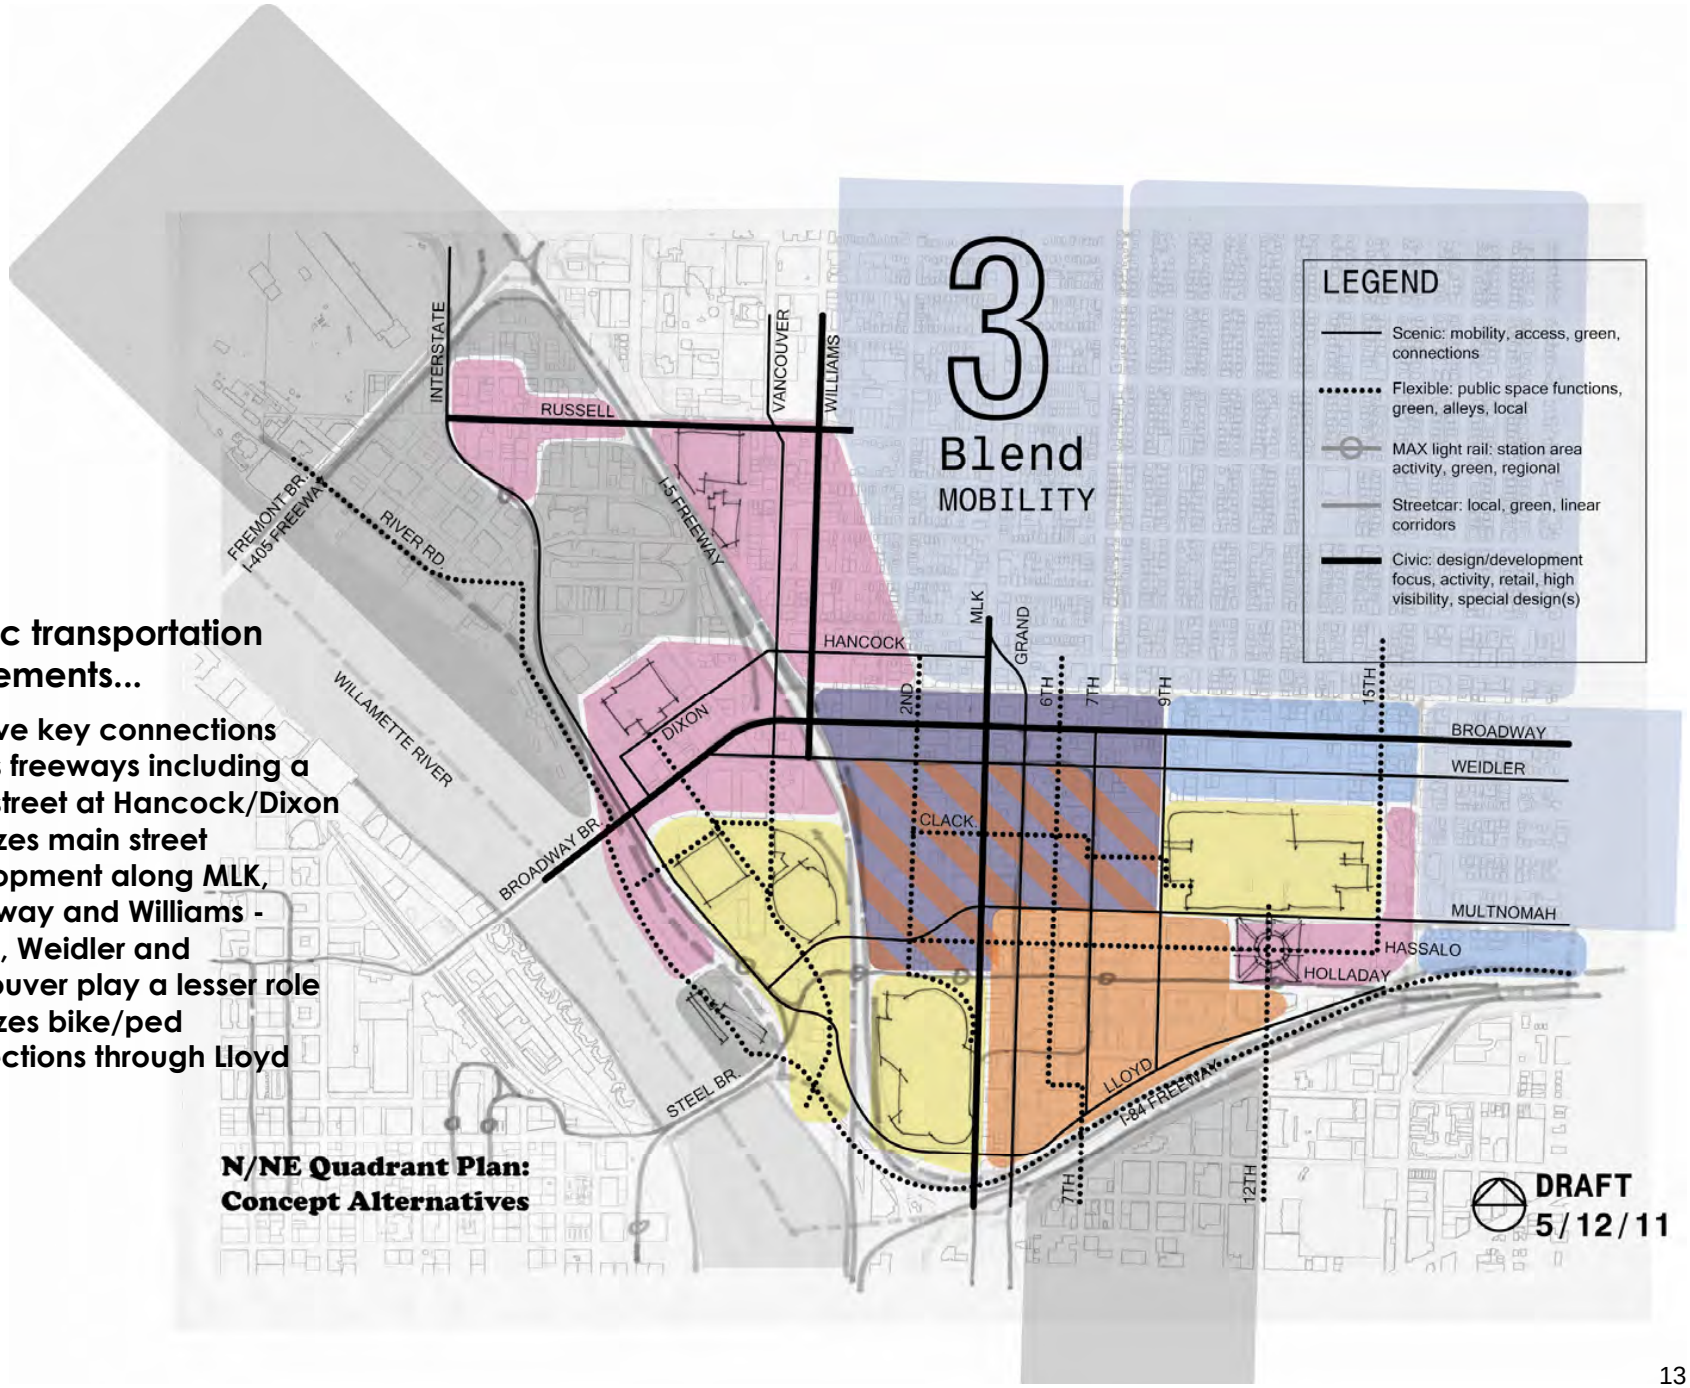
Expansion of smaller, private open spaces...

- **No major new public parks**
- **As office core development continues, private plazas and parks will be provided**
- **Pedestrian connections link system of private parks**



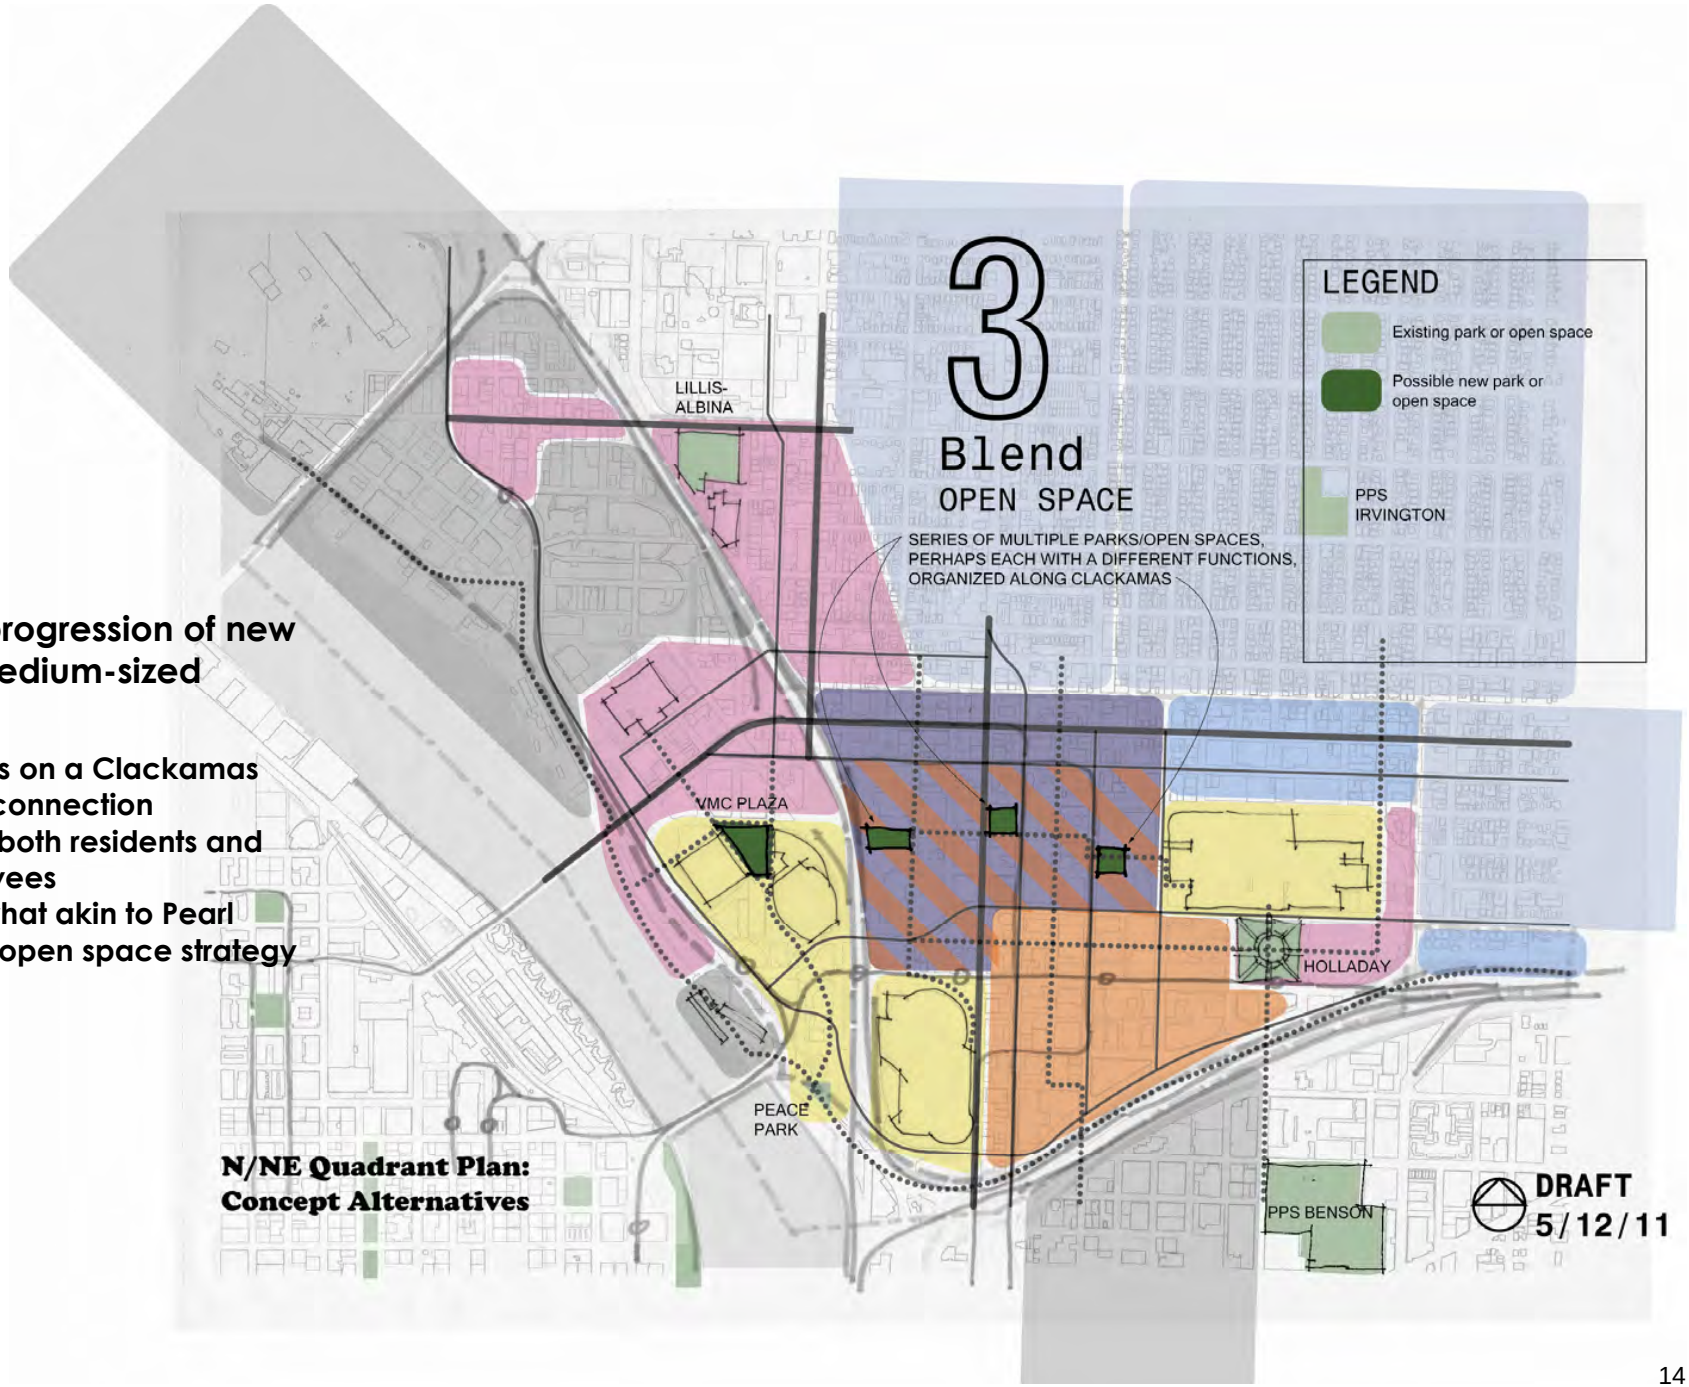
North-south orientation of green corridors...

- Mid-district water capture and treatment, gravity fed for reuse downhill
- Rose Quarter and Convention Center on district energy system
- Rain water harvesting in Rose Quarter
- Waste digesters at north and south edges of entertainment area to convert waste to energy
- Lloyd Green Ecodistrict



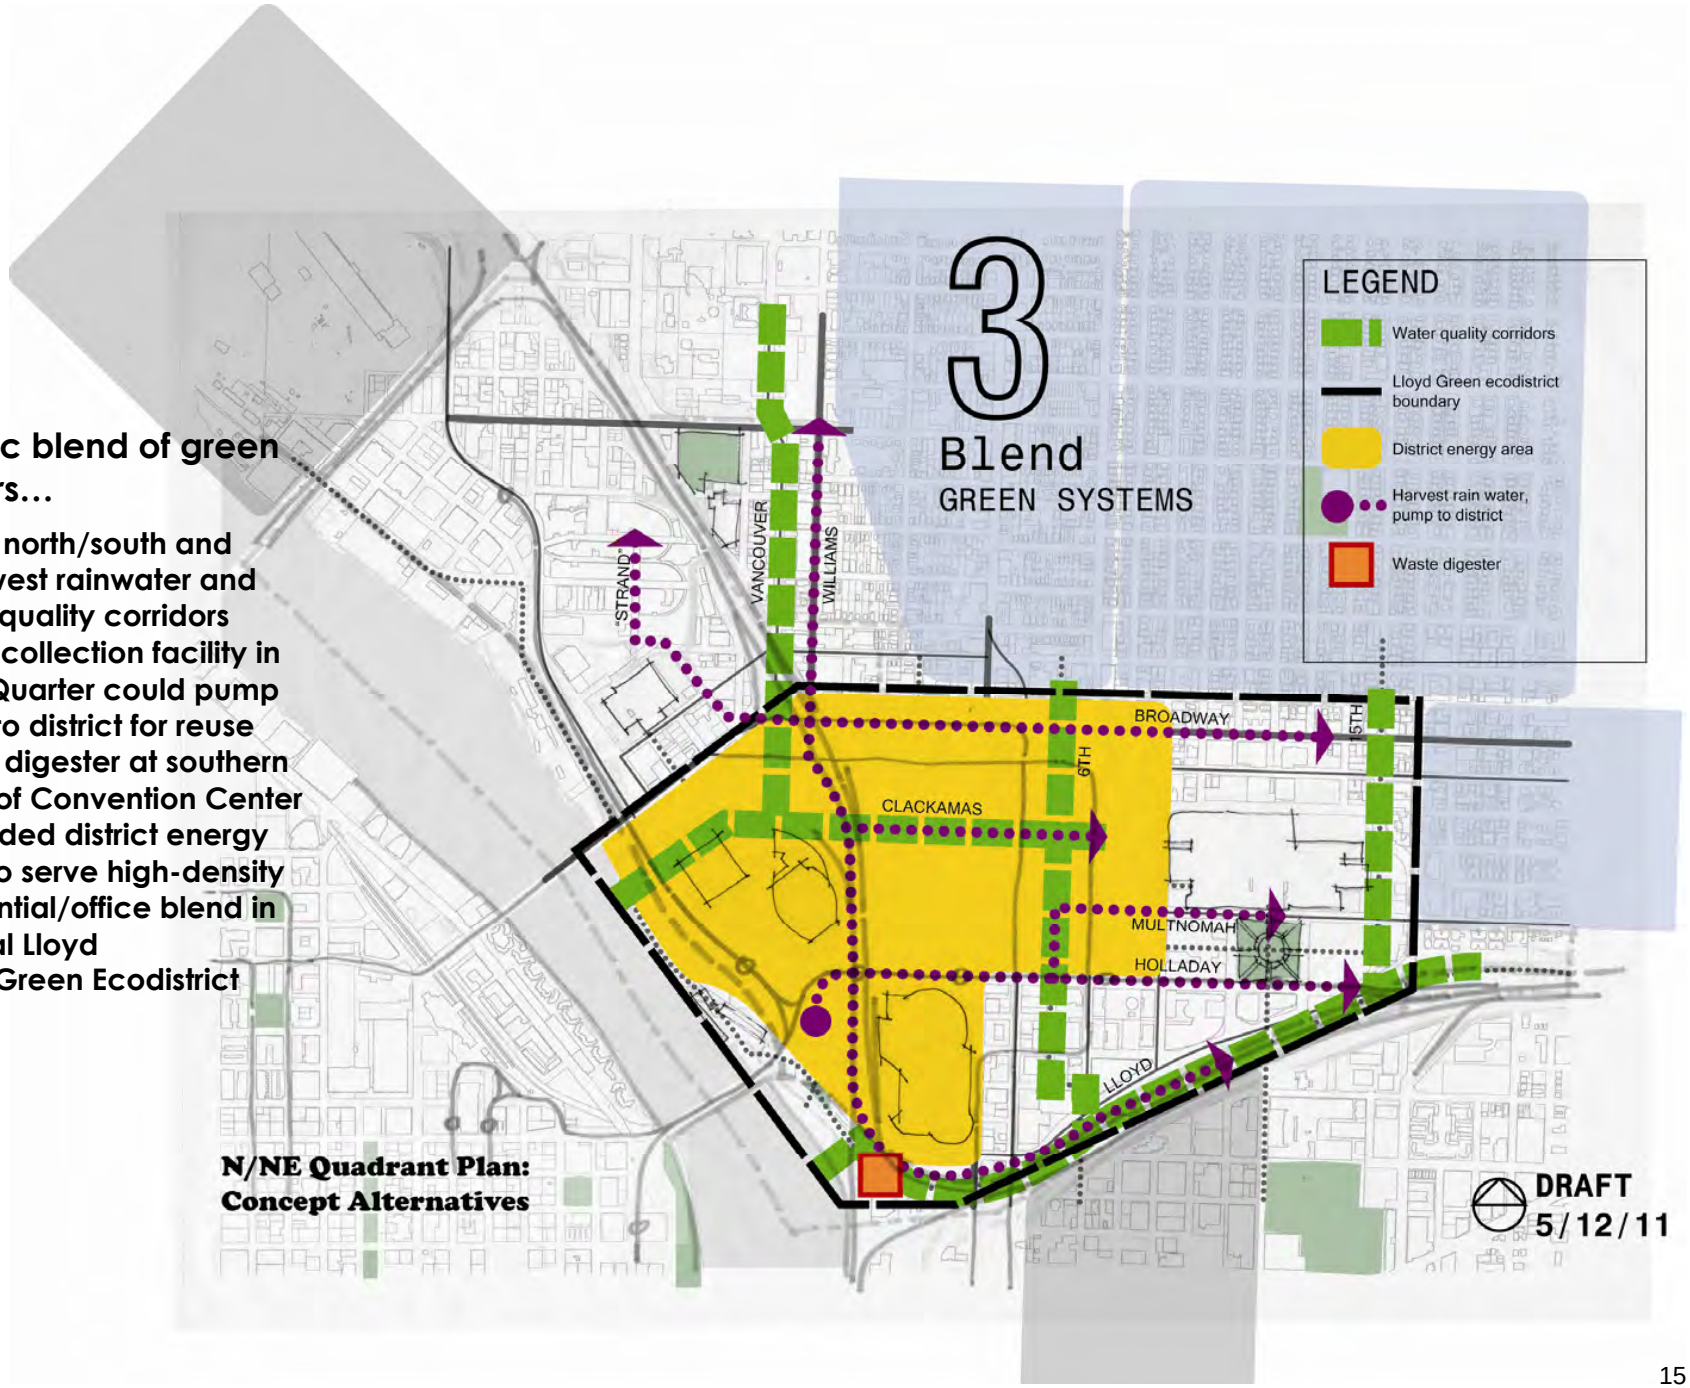
Residential/employment blend…

- **Market-driven office/residential mix in central core**
- **Provides maximum flexibility**
- **Maintains predominant residential focus north of Weidler and predominant office focus south of Multnomah/Holladay**
- **Modest expansion at N Russell Street**
- **Mixed employment along N Broadway**



Strategic transportation improvements...

- Improve key connections across freeways including a local street at Hancock/Dixon
- Prioritizes main street development along MLK, Broadway and Williams - Grand, Weidler and Vancouver play a lesser role
- Prioritizes bike/ped connections through Lloyd



Linked progression of new small/medium-sized parks...

- **Perhaps on a Clackamas green connection**
- **Serves both residents and employees**
- **Somewhat akin to Pearl District open space strategy**

Strategic blend of green corridors…

- Mix of north/south and east/west rainwater and water quality corridors
- Water collection facility in Rose Quarter could pump back to district for reuse
- Waste digester at southern edge of Convention Center
- Expanded district energy area to serve high-density residential/office blend in Central Lloyd
- Lloyd Green Ecodistrict

Freeway/Local Transportation Interface Charrette Summary

N/NE Quadrant and I-5 Broadway/Weidler Plans

May 24, 2011

The Central N/NE Quadrant and I-5 Broadway/Weidler Plans are collaborative efforts by the City of Portland and the Oregon Department of Transportation to integrate land use and urban design planning with freeway planning and concept-level engineering in the N/NE portion of the Central City, which includes Lower Albina and the Lloyd District.

DRAFT

DRAFT

Introduction

The NNE Quadrant and I-5 Broadway/Weidler Plans Project is a joint project among the Oregon Department of Transportation (ODOT), the City of Portland Bureau of Transportation (PBOT) and the City of Portland Bureau of Planning and Sustainability (BPS). This unique collaborative effort will result in an update of the Central City Plan for the NNE Quadrant and in transportation improvements that are consistent with and support the land use, local transportation and urban design vision included in that plan. The transportation improvements developed through this planning effort will address multi-modal improvements on the local street system and improvements to I-5 that address existing operational and safety problems.

In conjunction with the project's Stakeholder Advisory Committee (SAC), the city hosted a land use, local transportation and urban design charrette in February 2011. This charrette process resulted in ideas for an evolving land use, urban design vision for the NNE Quadrant.

In April 2011, ODOT hosted a charrette that focused on transportation improvements to I-5 and the surrounding local transportation system. Since this charrette was focused on specific ideas for improving freeway operations and safety, it had a more technical tone than the earlier charrette which resulted in ideas for a broad vision. Similar to the earlier charrette, the transportation charrette was implemented in conjunction with the SAC and included the following steps:

- March 30, 2011 – SAC worksession that provided context and elicited ideas on freeway operations, ramp locations, interchange function, overcrossings and a range of other local and freeway transportation improvements.

- April 11, 2011 – Public worksession, similar to the March 30th SAC worksession, which generated additional ideas on a range of improvements.

- April 12, 2011 – Staff worksession which processed ideas received from the earlier sessions. Included a midday public check-in period.

- April 13, 2011 – Additional staff worksession which developed 6 general concepts for freeway improvements and reported to a public open house that evening.

A total of 73 unique concepts were received from the SAC and the public during the transportation charrette process. This draft report currently includes a summary of the outcomes of the charrette and a one-page description of the 24 proposed concepts that include elements that are recommended not to be studied further at this time. Each one-page sheet includes a description and map of the concept, pros and cons and the recommended disposition of the concept and its elements.

Concepts and Elements

In order to manage and describe the various components included in the wide range of ideas received during the transportation charrette, certain terminology has been developed to provide consistency. Two key terms are Concepts and Elements. *Concepts* refer to ideas that include a group of ideas that define all of the key elements that are needed to make an idea work for the freeway and local transportation system. *Elements* refer to the individual building block ideas that comprise the complete concepts. Elements include things such as specific ramp and crossing locations, interchange location, interchange type, braided ramps, etc. One concept could include several different elements.

Concepts for Further Study

The next step for the study is to refine the concepts received through the charrette process and evaluate their performance, costs, impacts, etc. The following describes the general categories of concepts that will be developed using elements that were embodied in charrette concepts. The concepts range from doing nothing (No Build) to minimal operational improvements to new interchange types that would be new to the Portland area (such as a roundabout-controlled diamond or a diverging diamond).

Table 1: Concepts for Further Study

1. No Build
2. Mainline Operational Improvements
Ramp modifications (No loop ramps)
Ramp braids
New overcrossings
3. Rebuild Bridges
Ramps remain as is
Ramp modifications (No loop ramps)
Ramp braids
New overcrossings
Auxiliary lane extension
4. Enhance the B/W Interchange
4a. Split diamond
4b. Folded diamond
4c. Collector/distributor road
Auxiliary lane extension with all interchanges
5. New Concepts for the B/W Interchange
5a. Standard diamond (de-couple Broadway/Weidler)
5b. Single point urban interchange (diamond) (SPUI / SPUD)
5c. Diverging diamond interchange
5d. Roundabout-controlled diamond interchange
5e. 3-point interchange
Auxiliary lane extension with all interchanges

Major Elements for Further Study

There were many consistent elements included in the submitted transportation improvement concepts. The following table summarizes the major elements recommended to be considered for inclusion in the complete concepts.

Table 2: Major Elements for Further Study

Loop Ramps
SE Quadrant
NW Quadrant
NE Quadrant
CD Roads
Northbound
Southbound
Braids
Northbound - I-84 to Weidler
Southbound - Weidler to I-84
Extra Ramp (Partial Cloverleaf)
Extra Freeway Crossings
Bike/Pedestrian Only
Multi-Modal
De-Couple
Broadway/Weidler
Vancouver/Williams
Remove Freeway Crossing(s)
Local Street Changes
Bicycle/Pedestrian Changes

Elements Recommended for No Further Analysis at this Time

Certain elements that were included in the submitted concepts are not recommended to be studied further because they were either out of the adopted project scope, would reduce the lengths of the weaving sections on I-5 or they required heroic engineering that would not be feasible or would be very costly. The following table provides a summary of the elements recommend to not be studied further. The table is followed by one page descriptions of each charrette idea that includes elements recommended to not be studied further. These one page summaries provide additional detail on the rationale for the recommendation.

The ideas included in the one-page descriptions in this report are considered to be concepts, most of which include several different elements. Each sheet describes the concept and the major elements and includes a recommendation on which elements should not be forwarded for further study at this time. If an element is not removed from further study, it will be considered and developed as the technical team formulates a set of promising concepts to be considered.

The recommendation on screening out certain elements at this stage in the study is based on:

- ***Out-of-Scope*** – This evaluation uses the NNE Quadrant and I-5 Broadway/Weidler Plans Project Scope document adopted by the SAC on January 20th, 2011.

- ***Engineering Feasibility*** – This evaluation uses engineering judgment based on the concept sketches to determine if an element could be physically possible, if heroic (and costly) measures would be required or improved the weaving sections of I-5.

Table 3: Elements Recommended for No Further Analysis at this Time

Elements Recommended for No Further Analysis at This Time	Charrette Idea Number(s)	Rationale for Dropping at this Time	Possible Future Discussion
Remove I-5	73	Out of Scope for N/NE Quadrant Project	RTP Refinement Plan Loop Study
Move Interchange Location			
North			
Hancock Interchange (Wheeler)	7, 8, 16, 19, 23		
Dixon Interchange	25, 65		
Tillamook Interchange	52	Out of Scope for N/NE Quadrant Project	
Russell/Borthwick Interchange	35		
Mississippi/Interstate Interchange	66	Moving the location of the interchange would significantly reduce the lengths of the weaving sections on I-5	
Fremont Bridge Ramps	22		
South			
Multnomah Interchange	9, 16, 24, 25, 65, 66		
Clackamas Interchange	11, 12, 21, 65		
MLK/Grand Interchange	35		
Lloyd/1st Interchange	66, 67		
Lloyd/7th Interchange	66		
Double Deck I-5	71	Out of Scope for N/NE Quadrant Project	RTP Refinement Plan Loop Study
Water Taxi/Ferry	68	Out of Scope for N/NE Quadrant Project	CC2035 Concept Plan to consider water taxi
New Willamette River Bridge	73	Out of Scope for N/NE Quadrant Project	
Braids North of Weidler	None	Not Suggested in Charrette	Possible Future Improvement
Widen I-405	72, 73	Out of Scope for N/NE Quadrant Project	RTP Refinement Plan Loop Study
I-5/I-405 Loop	69	Out of Scope for N/NE Quadrant Project	RTP Refinement Plan Loop Study

DRAFT

7

Freeway/Local Transportation Interface Charrette Screening
2011 3/30 SAC-Group B Concept 2

Description: Move Interchange Location North or South
I-5 freeway with aux lane,
Interchange at Broadway/Weidler, Diagonally-folded diamond form,
Broadway/Weidler couplet remains,
NB exit ramp at Weidler/1st, NB on-ramp at Weidler/1st,
SB exit ramp at Wheeler/Hancock, SB entrance ramp loop at Broadway/Wheeler/Flint,
and local street network with 6 total local street crossings
(Weidler, Broadway, Hancock, Williams, Vancouver and Flint)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Improves weaving distance for northbound entrance ramp
- Improves weaving distance for southbound entrance ramp

Disadvantages/Fatal Flaws:

- **Wheeler/Hancock southbound exit ramp would be well above the contour of the land and would require extensive structure**
- **Wheeler/Hancock southbound exit ramp would significantly decrease the weaving section**
- **Wheeler/Hancock southbound exit ramp would significantly degrade safety and operations on I-5**

N/NE Quadrant Project Scope Screening

		Major Elements			
		Diagonally Folded Diamond at B/W	B/W Couplet	Ramp connection at Wheeler/Hancock	New crossing at Hancock
F 1	Improvements to I-5				
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	Y	NA	**N**	NA
	Focus on safety improvements to reduce the number of crashes.	Y	NA	**N**	NA
	Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	Y	Y	**N**	NA
	Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	NA	NA	NA	NA
	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.	Y	Y	NA	NA
	Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	Y	Y	Y	Y
INT 1	Bicycle and Pedestrian Routes				
	Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway	Y	Y	Y	Y
INT 2	Freight Movement				
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y	Y	NA

Recommendation:

Elements for No Further Study at this Time

•Ramp connection at Wheeler/Hancock

Elements for Further Study:

- Diagonally folded diamond at Broadway/Weidler
- Broadway/Weidler couplet at freeway
- New crossing at Hancock

8

Freeway/Local Transportation Interface Charrette Screening
2011 3/30 SAC-Group B Concept 3

Description: Move Interchange Location North or South
I-5 freeway with aux lane,
Interchange at Broadway/Weidler, Diagonally-folded diamond form,
Broadway/Weidler couplet remains,
NB braided ramps,
NB exit ramp at Weidler/1st, NB entrance loop ramp at Weidler/1st,
SB exit ramp at Wheeler/Hancock, SB entrance loop ramp at Wheeler/Hancock and local street network with 5 total local street crossings (Weidler, Broadway, Hancock, Vancouver and Flint)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Improves weaving distance for northbound entrance ramp
- Improves weaving distance for southbound entrance ramp

Disadvantages/Fatal Flaws:

- **Wheeler/Hancock southbound exit ramp would be well above the contour of the land and would require extensive structure**
- **Wheeler/Hancock southbound exit ramp would significantly decrease the weaving section**
- **Wheeler/Hancock southbound exit ramp would significantly degrade safety and operations on I-5**

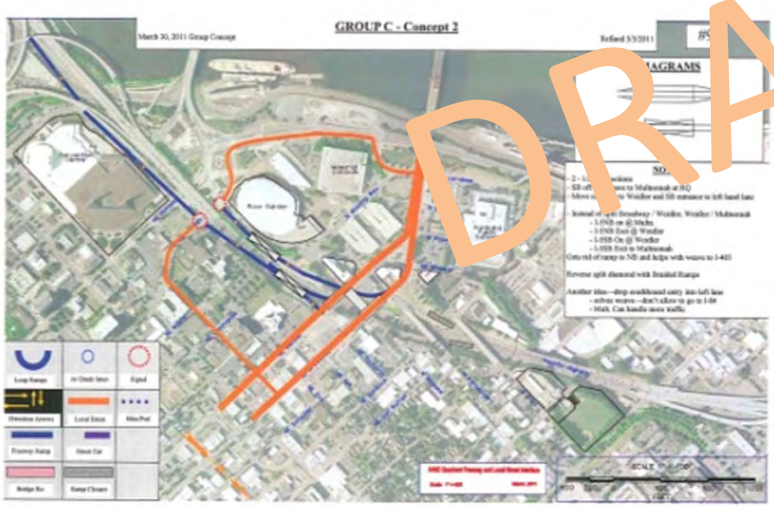
N/NE Quadrant Project Scope Screening

		Major Elements: Diagonally Folded Diamond at B/W	B/W Couplet	NB braided ramps south of Weidler	Ramp connection at Wheeler/Hancock	New crossing at Hancock
F 1	Improvements to I-5					
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	Y	NA	Y	**N**	NA
	Focus on safety improvements to reduce the number of crashes.	Y	NA	Y	**N**	NA
	Focus improvements on the Broadway/Weidler Interchange on nd off ramps, ramp spacing and connections to the local erials.	Y	Y	Y	**N**	NA
	Us lexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	NA	NA	NA	NA	NA
	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.	Y	Y	UNK	NA	NA
	Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	Y	Y	Y	Y	Y
INT 1	Bicycle and Pedestrian Routes					
	Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway	Y	Y	NA	Y	Y
INT 2	Freight Movement					
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y	Y	Y	NA

Recommendation:

Elements for No Further Study at this Time

•Ramp connection at Wheeler/Hancock



Elements for Further Study:

- Diagonally folded diamond at Broadway/Weidler
- NB braided ramps south of Weidler
- New crossing at Hancock

9

Freeway/Local Transportation Interface Charrette Screening
2011 3/30 SAC-Group C Concept 2

Description: Move Interchange Location North or South
Interchange at Multnomah and Weidler, Inverted diamond form, Broadway/Weidler couplet remains,
NB exit ramp at Weidler/Victoria, NB entrance ramp at Multnomah,
SB exit ramp at Multnomah, SB entrance ramp at Weidler/Williams,
and local street network with 5 total local street crossings
(Weidler, Broadway, Williams, Vancouver and Flint)

DRAFT

N/NE Quadrant Project Scope Screening

		Major Elements: Inverted daimond w/ramps at Multnomah and B/W	Major Elements: B/W Couplet
F 1	Improvements to I-5		
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	**N**	NA
	Focus on safety improvements to reduce the number of crashes.	UNK	NA
	Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	**N**	Y
	Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	NA	NA
	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.	Y	Y
	Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	UNK	Y
INT 1	Bicycle and Pedestrian Routes		
	Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway	Y	Y
INT 2	Freight Movement		
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y

Preliminary Engineering Assessment

Advantages:

- Improves weaving distance for southbound exit ramp
- Improves weaving distance for northbound entrance ramp

Disadvantages/Fatal Flaws:

- **Reduces weaving at southbound entrance ramp**
- **Moves freeway traffic over to Multnomah**
- **Inverted diamond interchange would significantly degrade safety and operations on I-5**

Recommendation:

Elements for No Further Study at this Time

- **Inverted diamond with ramps at Multnomah and Broadway/Weidler**

Elements for Further Study:

- Broadway/Weidler couplet at freeway

11

Freeway/Local Transportation Interface Charrette Screening
2011 3/30 SAC-Group D Concept 1

Description: Move Interchange Location North or South
I-5 freeway with aux lane,
Interchange at Clackamas/Broadway/Weidler, Diamond form,
Broadway/Weidler de-coupled (combined into 2-way arterial),
NB exit ramp at shifted Weidler/1st,
NB entrance ramp at shifted Clackamas,
SB exit ramps at shifted Broadway/Vancouver and at Clackamas,
SB entrance ramp at Clackamas,
and local street network with 4 total local street crossings
(Clackamas, Broadway, Vancouver and Flint)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Improves bike/ped environment on Broadway/Weidler
- Improves local connectivity across I-5
- Increases options for distributing Rose Quarter event traffic.

Disadvantages/Fatal Flaws:

- **Decreases weaving distances south of Weidler**
- **Adds arterial-level traffic to Clackamas/Winning Way**
- **Complex ramp connections may cause driver confusion**

N/NE Quadrant Project Scope Screening

		Major Elements: Partial interchange ¾ diamond at Clackamas w/ connections to B/W	B/W decouple	New Crossing at Clackamas
F 1	Improvements to I-5			
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	**N**	NA	NA
	Focus on safety improvements to reduce the number of crashes.	**N**	NA	NA
	Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	**N**	NA	NA
	Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	NA	NA	NA
	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.	UNK	NA	NA
	Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	Y	NA	NA
INT 1	Bicycle and Pedestrian Routes			
	Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway	Y	Y	Y
INT 2	Freight Movement			
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y	NA

Recommendation:

Elements for No Further Study at this Time

•Partial interchange ¾ diamond at Clackamas with connections to Broadway/Weidler

Elements for Further Study:

- Broadway/Weidler decouple
- New crossing at Clackamas

12

Freeway/Local Transportation Interface Charrette Screening
2011 3/30 SAC-Group D Concept 2

Description: Move Interchange Location North or South

I-5 freeway with aux lane,
Interchange at Clackamas/Weidler, Inverted Diamond form (w/ scissor ramps),
Broadway/Weidler de-coupled (combined into 2-way arterial),
NB exit ramp at shifted Weidler/Victoria, NB entrance ramp at Clackamas,
SB exit ramp at Clackamas, SB entrance ramp at Weidler/Vancouver,
and local street network with 6 total local street crossings
(Clackamas, Broadway/Weidler, shifted Williams, Hancock, Vancouver and Flint)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Increases NB and SB weave distances between Broadway/Weidler and I-405
- Improves bike/ped environment on Broadway/Weidler

Disadvantages/Fatal Flaws:

- **No improvement to weave south of Broadway/Weidler**
- **Adds arterial-level traffic to Clackamas/Winning Way**
- **Complex ramp connections may cause driver confusion**
- **Interchange at Clackamas/Weidler and inverted diamond would significantly degrade safety and operations on I-5.**

N/NE Quadrant Project Scope Screening

		Major Elements: Inverted diamond at Clackamas/Weidler	B/W decouplet	Vancouver/Williams decouple	New Crossing at Hancock	New Crossing at Clackamas
F 1	Improvements to I-5					
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	**N**	NA	NA	NA	NA

	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y	Y	NA	NA

Recommendation:

Elements for No Further Study at this Time

•Inverted diamond at Clackamas/Weidler

Elements for Further Study:

- Broadway/Weidler decouple
- Vancouver/Williams decouple
- New crossing at Hancock
- New crossing at Clackamas

16

Freeway/Local Transportation Interface Charrette Screening
2011 3/30 Individual Concept - 03

Description: Move Interchange Location North or South
Interchange at Wheeler/Broadway/Weidler, ½ Diamond form, Broadway/Weidler couplet remains,
NB exit ramp at Multnomah, NB entrance ramp at Hancock/Williams,
SB exit ramp at Broadway/Wheeler, SB entrance ramp at Broadway,
and local street network with 3 total local street crossings
(Broadway, Weidler and Williams)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Spreads out congestion in the box.
- Improves northbound weave south of Broadway/Weidler

Disadvantages/Fatal Flaws:

- **Weaves north of Broadway/Weidler become shorter**
- **Reduces connectivity across I-5**
- **The ½ diamond and interchange at Holladay/Multnomah would significantly degrade safety and operations on I-5**
- **Wheeler/Hancock southbound exit ramp would be well above the contour of the land and would require extensive structure**
- **SB exit ramp at Wheeler/Broadway would significantly decrease the weaving section**
- **SB ramp connection at Wheeler/Broadway would significantly degrade safety and operations on I-5**

N/NE Quadrant Project Scope Screening

		Major Elements: ½ diamond at Broadway/Wheeler	SB exit ramp at Wheeler/Broadway	NB exit-ramps to Holladay/Multnomah	NB entrance ramp at Hancock/Williams
F 1	Improvements to I-5				
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	**N**	**N**	Y	**N**
	Focus on safety improvements to reduce the number of crashes.	**N**	**N**	Y	**N**
	Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	**N**	**N**	**N**	**N**
	Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	NA	NA	NA	NA
	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.	NA	NA	UNK	Y
	Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	**N**	N	UNK	Y
INT 1	Bicycle and Pedestrian Routes

INT 2	Freight Movement				
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y	Y	Y

Recommendation:

Elements for No Further Study at this Time

- **½ diamond SB at Wheeler/Broadway**
- **NB exit ramp to Holladay/Multnomah**
- **NB entrance ramp at Hancock/Williams**
- **SB ramp connection at Wheeler/Broadway**

Elements for Further Study:
None

19

Freeway/Local Transportation Interface Charrette Screening
2011 3/30 Individual Concept – 06 Element #2

Description: Move Interchange Location North or South
I-5 freeway with aux lane,
Northbound Interchange at Broadway/Weidler, southbound interchange at Wheeler/Dixon, Folded diamond form,
Broadway/Weidler remains couplet,
SB exit ramp at Dixon/Wheeler, SB entrance ramp at Wheeler/Dixon, and local street network with 6 total local street crossings
(Weidler, Broadway, Williams, Vancouver, Dixon and Flint)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Lengthens SB weave south of Broadway/Weidler
- Removes SB exit ramp from the Vancouver/Broadway five-legged intersection
- Improves connectivity across I-5

Disadvantages/Fatal Flaws:

- **Shortens southbound weave north of Broadway**
- **Traffic on neighborhood streets**
- **Could increase driver confusion in interchange area**
- **Diamond at Wheeler/Dixon would significantly decrease the SB exit ramp weaving section and degrade safety and operations on I-5**

N/NE Quadrant Project Scope Screening

		Major Elements: Diamond form at Wheeler/Dixon	Major Elements: New connection at Dixon and San Rafeal
F 1	Improvements to I-5		
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	**N**	NA
	Focus on safety improvements to reduce the number of crashes.	**N**	NA
	Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	Y	NA
	Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	NA	NA
	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.	Y	NA
	Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	Y	NA
INT 1	Bicycle and Pedestrian Routes		
	Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway	Y	Y
INT 2	Freight Movement		
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	NA

Recommendation:

Elements for No Further Study at this Time

•Diamond at Wheeler/Dixon

Elements for Further Study:

• New connection at Dixon and San Rafael

21

Freeway/Local Transportation Interface Charrette Screening
2011 3/30 Individual Concept - 08

Description: Move Interchange Location North or South
I-5 freeway with aux lane,
Interchange at Clackamas, Diamond form,
Broadway/Weidler remains couplet,
NB exit ramp at Clackamas/Winning, NB entrance ramp at Halsey/1st,
SB exit ramp at Clackamas/Williams, SB entrance ramp at Clackamas/Williams,
and local street network with 6 total local street crossings
(Clackamas, Weidler, Broadway, Williams, Vancouver and Flint)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Eliminates freeway ramp from the "Box"
- Improves safety for east/west bike and ped movements
- Lengthens weaves north of Broadway/Weidler

Disadvantages/Fatal Flaws:

- **Significantly shortens worst weave sections south of Broadway/Weidler**
- **Introduces arterial level traffic to Clackamas and Winning Way**
- **Significant grades present challenges for the Clackamas interchange**
- **Clackamas interchange would significantly degrade safety and operations of the NB I-5 weaves**

N/NE Quadrant Project Scope Screening

		Major Elements: Diamond form at Clackamas	New street connection via 1st Ave.	Clackamas overcrossing
F 1	Improvements to I-5			
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	**N**	NA	NA
	Focus on safety improvements to reduce the number of crashes.	**N**	NA	NA
	Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	**N**	NA	NA

INT 1	Bicycle and Pedestrian Routes			
	Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway	Y	Y	Y
INT 2	Freight Movement			
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y	NA

Recommendation:

Elements for No Further Study at this Time

•Diamond at Clackamas

Elements for Further Study:

- New street connection at 1st Ave
- Overcrossing at Clackamas

22

Freeway/Local Transportation Interface Charrette Screening
2011 3/30 Individual Concept - 09 (partial concept)

Description: Move Interchange Location North or South
Existing interchange would remain at Broadway/Weidler,
New ramps near Emanual/Lower Albina,
Broadway/Weidler remain couplet,
NB exit ramp at Weidler/Victoria, NB entrance ramp at Broadway/Williams,
SB exit ramp at Broadway/Vancouver, SB entrance ramp at Winning/Wheeler/Williams,
and local street network with 5 total local street crossings
(Weidler, Broadway, Williams, Vancouver and Flint)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Improved access for hospital and freight
- Would reduce traffic volumes at Broadway/Weidler interchange area

Disadvantages/Fatal Flaws:

- **Does not address freeway weaving problems**
- **Not a full interchange**
- **Introduces additional traffic in Boise neighborhood**

N/NE Quadrant Project Scope Screening

		Major Elements: NB exit-ramp near Emanuel Hospital	Major Elements: SB entrance-ramp in Lower Albina
F 1	Improvements to I-5		
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	**N**	**N**
	Focus on safety improvements to reduce the number of crashes.	**N**	**N**
	Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	**N**	**N**
	Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	NA	NA
	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.	UNK	UNK
	Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	Y	Y
INT 1	Bicycle and Pedestrian Routes		
	Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway	Y	Y
INT 2	Freight Movement		
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y

Recommendation:

Elements for No Further Study at this Time

•NB exit ramp near Emanuel Hospital

•SB entrance ramp in Lower Albina

Elements for Further Study:
None

23

Freeway/Local Transportation Interface Charrette Screening
2011 3/30 Individual Concept - 10

Description: Move Interchange Location North or South
Interchange at Broadway/Weidler, Split diamond form,
Hancock overcrossing included in split diiamond,
Broadway/Weidler remain couplet,
NB exit ramp at Weidler/Victoria, NB entrance ramp at Hancock/Vancouver,
SB exit ramp Hancock/Flint, SB entrance ramp at Weidler/Williams,
and local street network with 3 total local street crossings
(Weidler, Broadway and Hancock)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Increase connections and access via Hancock
- Logical patterns meet driver expectations

Disadvantages/Fatal Flaws:

- **Shortens NB weave north of Broadway/Weidler**
- **Degrades bike/ped access through the area**
- **NB exit and entrance ramps at Hancock would significantly degrade safety and operations on I-5**

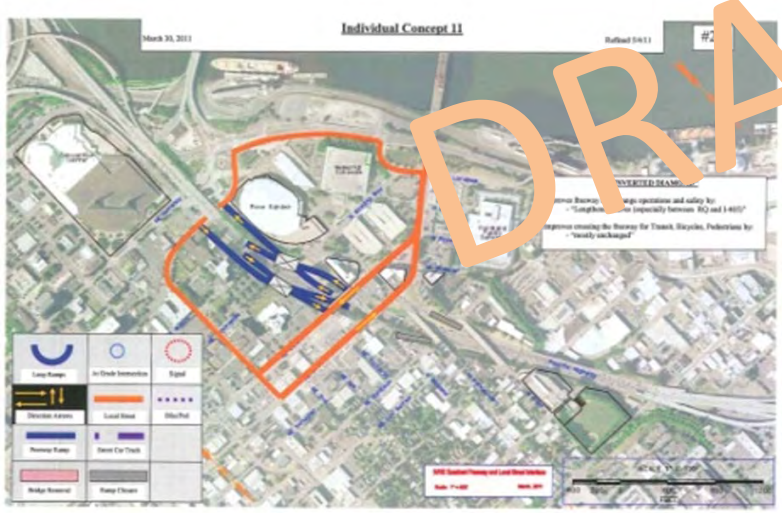
N/NE Quadrant Project Scope Screening

		Major Elements			
		Split diamond	Entrance and exist ramps at Hancock	CD roads	Hancock overcrossing
F 1	Improvements to I-5				
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	**N**	**N**	Y	NA
	[illegible]on safety improvements to reduce the number of crashes.	**N**	**N**	NA	NA
	[illegible]s improvements on the Broadway/Weidler Interchange on and off ra[illegible], ramp spacing and connections to the local arterials.	**N**	**N**	NA	NA
	Use f[illegible]bility in design standards to accept more than two hours of Level F conge[illegible]n, if improvements will improve safety and operations on the freeway	NA	NA	NA	NA
	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.	Y	Y	NA	NA
	Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	Y	Y	NA	NA
INT 1	Bicycle and Pedestrian Routes				
	Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway	**N**	**N**	Y	Y
INT 2	Freight Movement				
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y	Y	NA

Recommendation:

Elements for No Further Study at this Time

- **Split diamond form**
- **Entrance and exit ramps at Hancock**



Elements for Further Study:

- Hancock overcrossing
- CD roads

24

Freeway/Local Transportation Interface Charrette Screening
2011 3/30 Individual Concept - 11

Description: Move Interchange Location North or South
Interchange at Broadway/Weidler, Inverted diamond form,
Broadway/Weidler remain couplet,
NB I-84 weave eliminated, SB I-84 weave eliminated,
NB off-ramp at Weidler/Victoria, NB on-ramp at Multnomah/1st,
SB off-ramp at Multnomah/Wheeler, SB on-ramp at Weidler/Williams,
and local street network with 5 total local street crossings
(Weidler, Broadway, Williams, Vancouver and Flint)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Improves weaving distance for southbound exit ramp
- Improves weaving distance for northbound entrance ramp

Disadvantages/Fatal Flaws:

- **Reduces weaving southbound entrance ramp**
- **Moves freeway traffic over to Multnomah**
- **Inverted diamond with ramps at Multnomah and Broadway/Weidler would significantly degrade safety and operations on I-5**

N/NE Quadrant Project Scope Screening

		Major Elements: Inverted diamond at B/W and Multnomah	Major Elements: B/W couplet
F 1	Improvements to I-5		
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	**N**	NA
	Focus on safety improvements to reduce the number of crashes.	UNK	NA
	Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	**N**	Y
	Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	NA	NA
	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.	Y	Y
	Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	UNK	Y
INT 1	Bicycle and Pedestrian Routes		
	Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway	Y	Y
INT 2	Freight Movement		
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y

Recommendation:

Elements for No Further Study at this Time

- **Inverted diamond with ramps at Multnomah and Broadway/Weidler**

Elements for Further Study:

- Broadway/Weidler couplet at freeway

25

Freeway/Local Transportation Interface Charrette Screening
2011 3/30 Individual Concept - 12

Description: Move Interchange Location North or South
NB exit to Multnomah,
NB braid south of Weidler,
SB exit to Interstate, SB entrance from Weidler,
Broadway/Weidler remains couplet,
and local street network with 4 total local street crossings
(Broadway, Weidler, Williams, Hancock)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Moves traffic away from Broadway/Weidler
- Eliminates NB weave south of Weidler
- Eliminates NB weave north of Broadway

Disadvantages/Fatal Flaws:

- **Shorter SB weave distance north of Broadway**
- **Out of direction travel from Interstate**
- **No NB entrance ramp shown**
- **May be confusing for drivers**
- **SB exit ramp connection to Interstate would significantly degrade safety and operations on I-5**

N/NE Quadrant Project Scope Screening

		Major Elements					
		NB braids south of Weidler	B/W couplet	NB exit-ramp to Multnomah	SB exit-ramp to Interstate	SB entrance-ramp at Weidler	Over crossing at Hancock
F 1	Improvements to I-5						
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	Y	NA	Y	**N**	**N**	NA
	safety improvements to reduce the number of crashes.	Y	NA	Y	**N**	**N**	NA
	Focus i ovements on the Broadway/Weidler Interchange on and off ps, ramp spacing and connections to the local arterials.	NA	Y	**N**	NA	**N**	NA
	Use flexibil n design standards to accept more than two hours of Level F co gestion, if improvements will improve safety and operations on the freeway	NA	NA	NA	NA	NA	NA
	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.	UNK	Y	UNK	UNK	**N**	NA
	Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	UNK	Y	UNK	**N**	**N**	NA

INT 2	Freight Movement						
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y	Y	Y	Y	Y

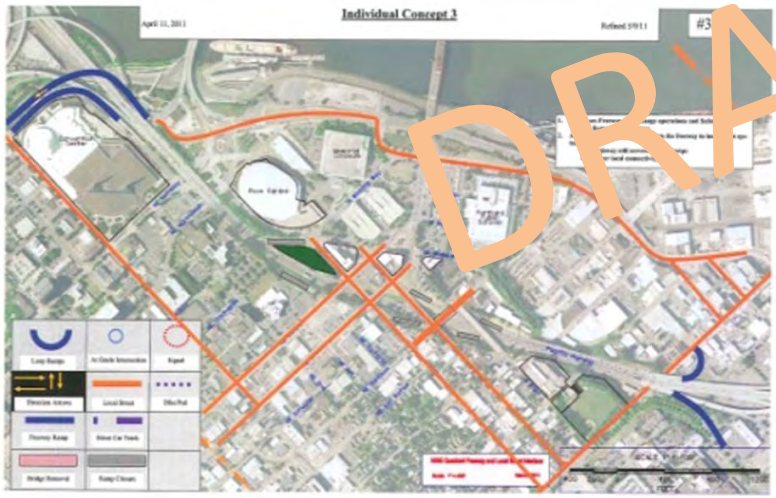
Recommendation:

Elements for No Further Study at this Time

- **NB braids south of Weidler**
- **NB exit ramp to Multnomah**
- **SB exit ramp to Interstate**
- **SB entrance ramp at Weidler**

Elements for Further Study:

- Broadway/Weidler couplet at freeway
- Overcrossing at Hancock



35

Freeway/Local Transportation Interface Charrette Screening

2011 4/11 Individual Concept - 03 (Move interchange N & S)

Description:

I-5 freeway with 3 thru lanes,
Partial interchanges each at Lloyd Blvd and Russell/Emmanuel,
Broadway/Weidler couplet remains,
Overcrossing at Hancock,
NB exit ramp at Kerby or Borthwick (I-405 off-ramp), NB entrance ramp at Lloyd Blvd,
SB exit ramp at Lloyd/MLK Jr, SB entrance ramp at Russell/Borthwick (I-405 on-ramp),
and local street network with 6 total local street crossings (Broadway, Weidler, Williams, Vancouver, Flint, Hancock)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Removes weaving sections
- Local connection at Hancock
- Bike/ped improved

Disadvantages/Fatal Flaws:

- **Point loading traffic at SB exit, SB entrance**
- **Out of direction travel**
- **May be confusing to drivers**

N/NE Quadrant Project Scope Screening

		Major Elements: ½ interchange at Lloyd	½ interchange at Russell/Emanuel Hospital	B/W couplet	Hancock overcrossing
F 1	Improvements to I-5				
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	Y	Y	NA	NA
	Focus on safety improvements to reduce the number of crashes.	Y	Y	NA	NA
	Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	Y	Y	Y	NA
	Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	NA	NA	NA	NA
	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.	UNK	UNK	Y	NA
	Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	Y	Y	Y	Y
INT 1	Bicycle and Pedestrian Routes				
	Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway	Y	Y	Y	Y
INT 2	Freight Movement				
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y	Y	NA

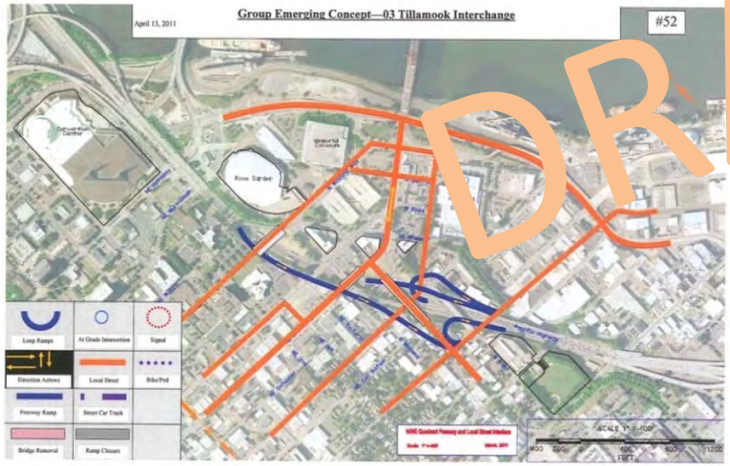
Recommendation:

Elements for Further Study:

- Hancock overcrossing

Elements for No Further Study at this Time

- **½ interchange at Lloyd**
- **½ interchange at Russell/Emanuel Hospital**



52

Freeway/Local Transportation Interface Charrette Screening

2011 4/12 Group Emerging Concept - 03 (Tillamook Interchange)

Description:

I-5 freeway with 3 thru lanes,
Interchange at Tillamook,
Broadway/Weidler de-coupled (to one 2-way arterial at Broadway),
Overcrossing at Hancock, overcrossing at Clackamas,
NB exit ramp at Tillamook/~Williams, NB entrance ramp at Tillamook/~Williams,
SB exit ramp at Tillamook/~Wheeler, SB entrance ramp at Tillamook/~Wheeler,
and local street network with 5 total local street crossings (Clackamas, Broadway, Hancock, Vancouver, and Tillamook)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Lengthens NB weave south of Weidler
- Lengthens SB weave south of Weidler
- Bike/ped connectivity
- Reduces traffic on Broadway/Weidler

Disadvantages/Fatal Flaws:

- **Decreases weave distance north of Broadway**
- **Reasonable grades not achievable on Tillamook**
- **Interchange at Tillamook would significantly degrade safety and operations on I-5**

N/NE Quadrant Project Scope Screening

		Major Elements: Interchange at Tillamook	B/W decouple	New overcrossings at Hancock	New overcrossings at Clackamas
F 1	Improvements to I-5				
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	**N**	NA	NA	NA
	Focus on safety improvements to reduce the number of crashes.	**N**	NA	NA	NA
	Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	Y	NA	NA	NA
	Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	NA	NA	NA	NA
	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.	**N**	UNK	NA	NA
	Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	**N**	Y	NA	NA
INT 1	Bicycle and Pedestrian Routes				
	Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway	Y	Y	Y	Y
INT 2	Freight Movement				
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y	NA	NA

Recommendation:

Elements for Further Study:

- Overcrossing at Clackamas
- Overcrossing at Hancock

Elements for No Further Study at this Time

- **Interchange at Tillamook**

65

Freeway/Local Transportation Interface Charrette Screening
2011 Charrette Allan Rudwick #1

Description: Move Interchange Location North or South
¾ interchange to Clackamas,
SB exit to Dixon/Benton,
SB braid south of Weidler,
Overcrossing at Clackamas,
Local street network with 5 crossings
(Flint, Williams, Broadway, Weidler, Clackamas)

DRAFT

Preliminary Engineering Assessment

Advantages:

- Braids SB entrance/I-84 exit
- Lid for commercial/park
- Improves NB entrance weave
- Moves traffic off of Broadway/Weidler

Disadvantages/Fatal Flaws:

- **Decreases weave distance at SB exit**
- **Out of direction travel at SB exit**
- **Moves traffic onto Clackamas**
- **Significant grades present challenges at the Clackamas interchange**
- **Clackamas interchange would significantly degrade safety and operations of NB I-5 weaves**

N/NE Quadrant Project Scope Screening

		Major Elements				
		¾ Interchange at Clackamas	B/W decouplet remains	SB braid south of Weidler	SB exit ramp at Dixon/Benton	New overcrossings at Clackamas
F 1	Improvements to I-5					
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	**N**	NA	Y	**N**	NA
	Focus on safety improvements to reduce the number of crashes.	**N**	NA	Y	**N**	NA

INT 2	Freight Movement					
	Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Y	Y	Y	Y	NA

Recommendation:

Elements for No Further Study at this Time

- **¾ Interchange at Clackamas**
- **SB exit ramp to Dixon/Benton**

Elements for Further Study:

- Overcrossing at Clackamas
- SB braid south of Weidler
- Lid

66

Freeway/Local Transportation Interface Charrette Screening
2011 Charrette Allan Rudwick #41

Description: Move Interchange Location North or South

I-5 freeway with aux lane,
½ diamond interchange NB with Multnomah,
SB loop entrance from Broadway,
½ diamond interchange ramps north of I-405 (Mississippi/Interstate),
WB I-84 exit to Lloyd,
Clackamas overcrossing,
New bike/ped overcrossing at 7th or 9th

DRAFT

Preliminary Engineering Assessment

Advantages:

- Removes NB weave south of Weidler
- Lengthens SB weave south of Weidler
- Removes SB weave north of Broadway
- Lengthens NB weave north of Broadway
- Clackamas overcrossing

Disadvantages/Fatal Flaws:

- **Point loading SB exit and NB entrance at Mississippi/Interstate**
- **Out of direction travel**
- **Confusing to drivers**
- **Moves traffic into neighborhoods**

N/NE Quadrant Project Scope Screening

		Major Elements: ½ Interchange at Multnomah	SB loop entrance from Broadway	½ Interchange ramps north of I-405	WB I-84 exist to Lloyd	New overcrossings at Clackamas	I-84 crossing at 7th/9th (Bike/ped)
F 1	Improvements to I-5						
	Improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	Y	Y	NA	Y	NA	NA
	Focus on safety improvements to reduce the number of crashes.	Y	Y	**N**	UNK	NA	NA

Stakeholder Advisory Committee Meeting #5, March 10, 2011

Local Issues Charrette Summary (February 22-23)

CENTRAL CITY 2035

N/NE QUADRANT

CITY OF PORTLAND, OREGON 1851

Oregon Department of Transportation

Process, Purpose, Participants

Intensive two-day work session to generate preliminary land use, urban design and local transportation concepts

Set the stage for preliminary freeway concepts development and begin moving from issue identification to alternatives development

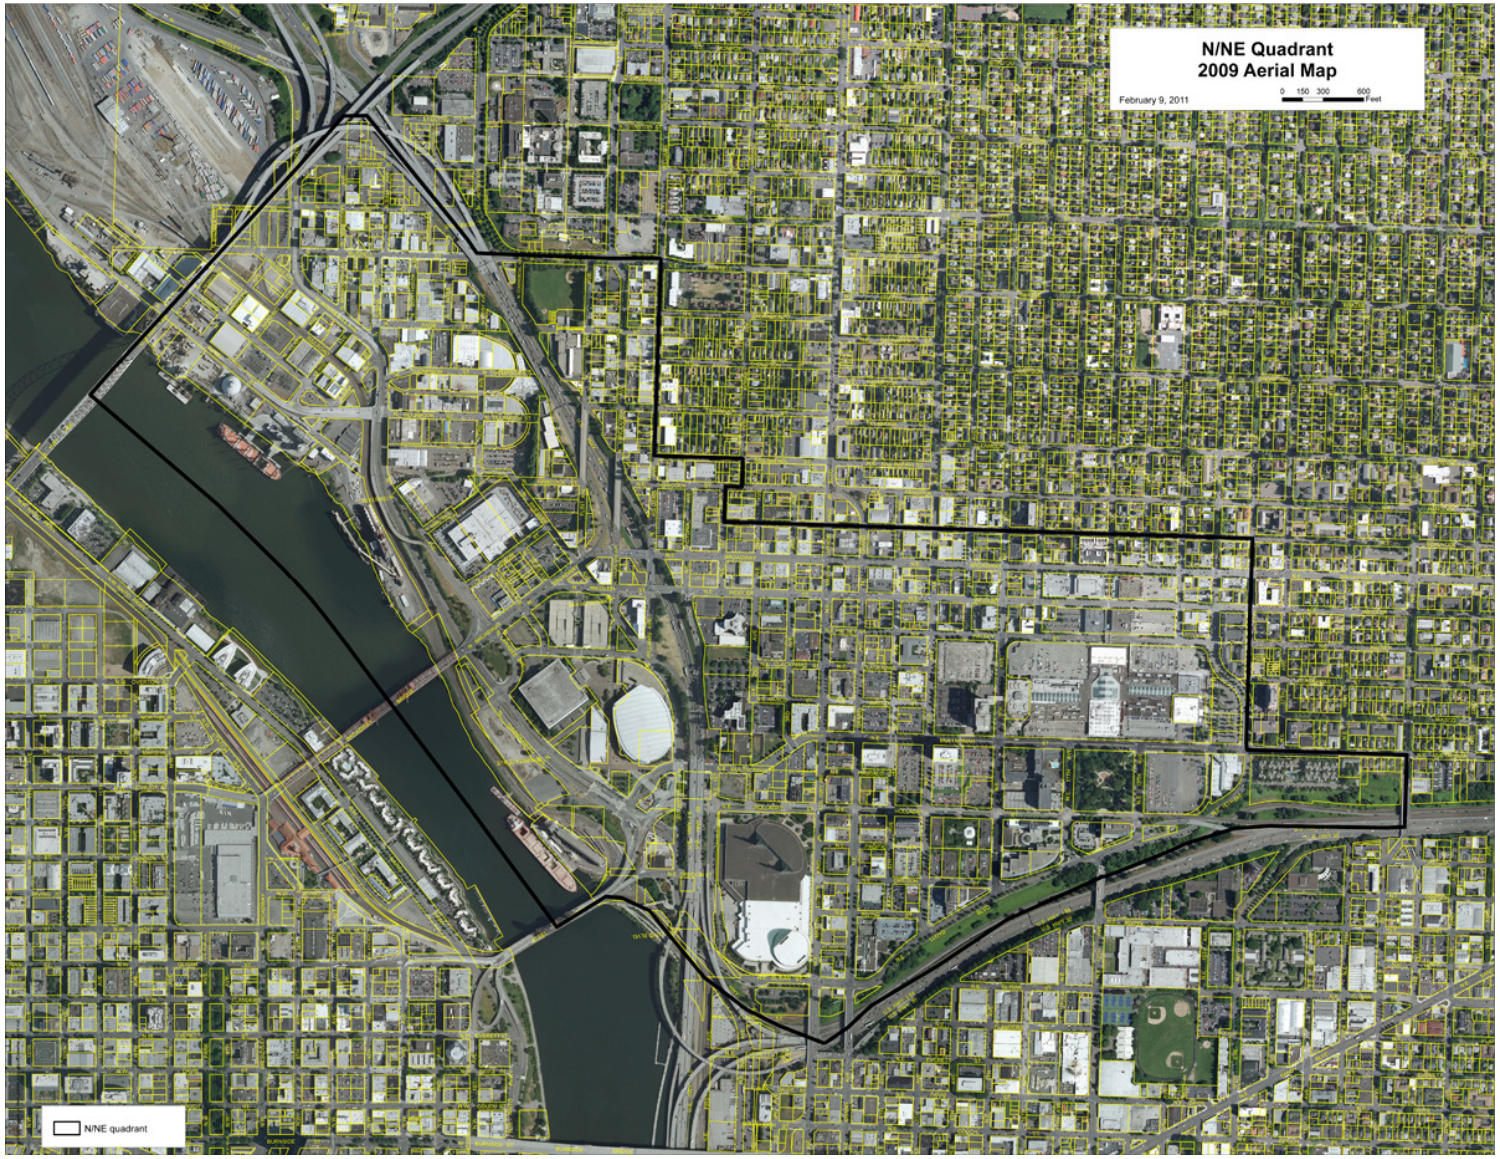
Participants: design consultants, project staff, other agencies, N/NE Quadrant SAC and subcommittee members (over 30 attendees)

Charrette Approach

Day 1: Reviewed project goals, issues, and opportunities

Reviewed subcommittee ideas

Quadrant-wide concepts



Day 2: Localized, subarea-specific concepts

N/NE Quadrant & I-5 Broadway/Weidler Plans

Stakeholder Advisory Committee Meeting #5 March 10, 2011

History of Freeway Improvement Plans

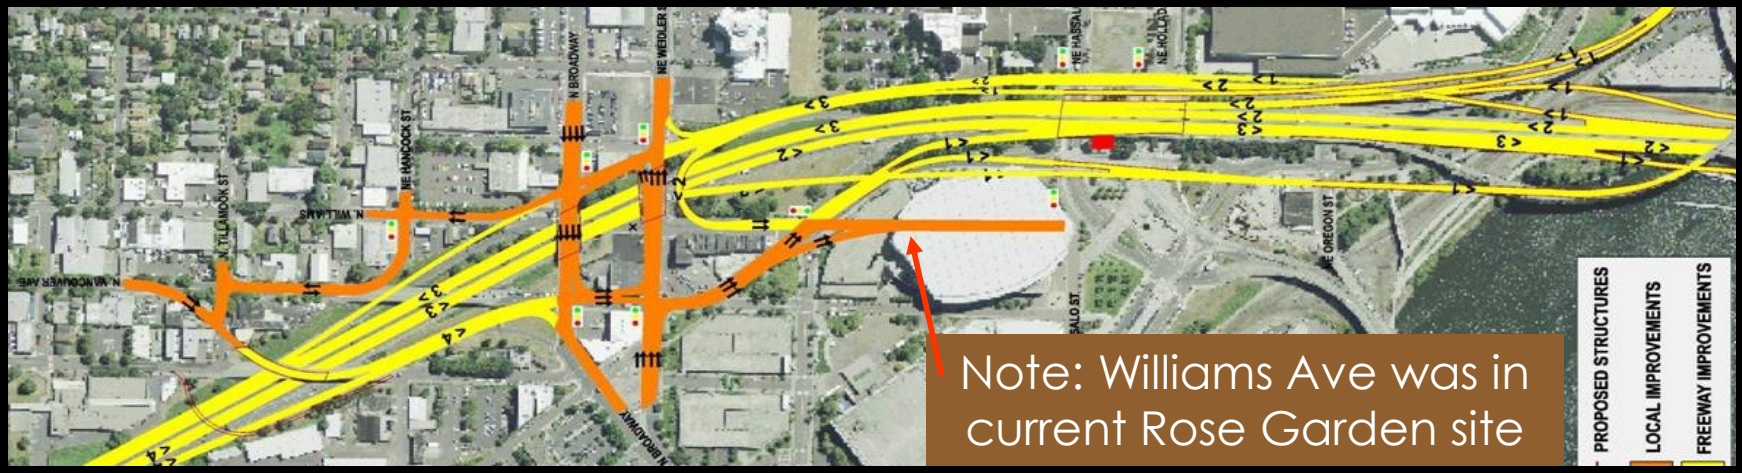
Presentation Objectives

- Review I-5 studies to the present
- The size of proposed improvements have become smaller and less costly
- The City and State have looked at various proposals and have disagreed on the best use of land adjacent to I-5 (development vs. roadway)
- With the City and State working together, now is the best opportunity to see improvements realized

Introduction to the History of I-5

- Before I-5:
  - the State highway route was Harbor Freeway, across Steel Bridge to Interstate Ave.
- I-5 opened in 1966, when:
  - the population of the metro area was less than 1 million
  - average daily traffic on I-5 was 66,000 vehicles per day (VPD) in both directions
- By mid 1990s:
  - the population of the metro area was approx. 1.5 million
  - the average daily traffic volume was 140,000 VPD despite heavy investment in transit
- I-5 has not been widened:
  - still two lanes in each direction

I-5 Freight Volumes



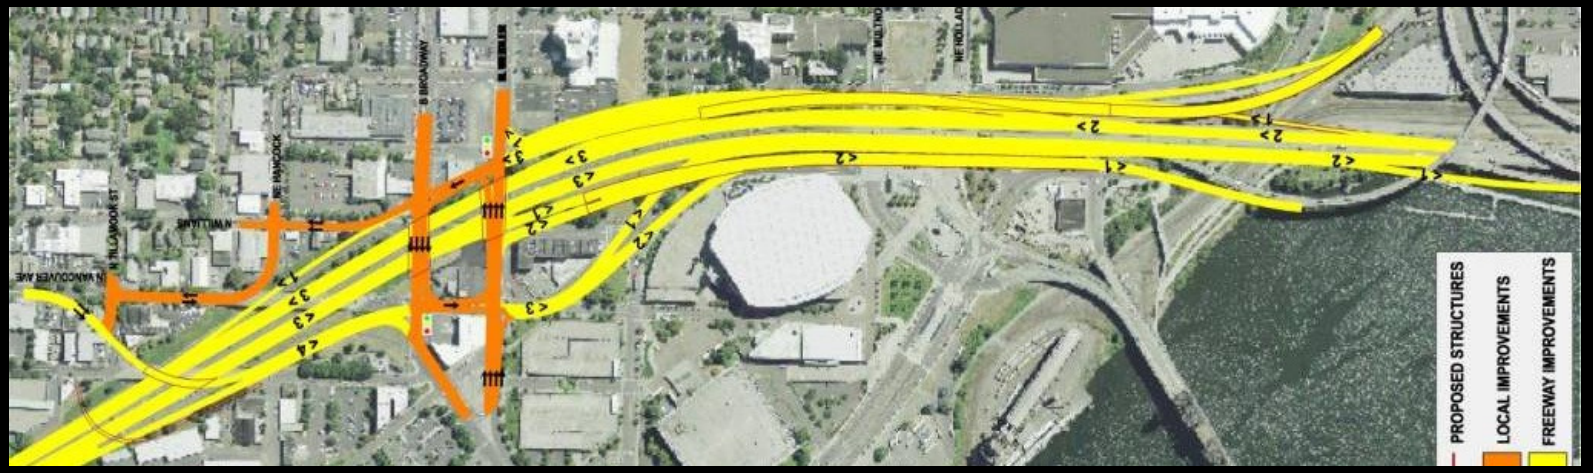
- Truck traffic on I-5 has increased at a higher rate than overall traffic
- Late 1960s to mid 1970s daily truck volumes on I-5 at the Marquam Bridge less than 6,000 per day
- In 2000s average daily truck volumes grew to over 12,000 per day

Past Studies

- Past studies and projects have included:
  - Greeley-North Banfield Concepts (1980s to 1990s)
  - Portland/Vancouver I-5 Trade Corridor Study (1999-2002)
  - I-5/405 Freeway Loop Study (2005)
  - City/State workshop to look at potential improvements between I-84 and I-405 (2007)

Greeley-North Banfield (1987)

Purpose: Concept to improve the system connection between I-84 and I-405



Note: Williams Ave was in current Rose Garden site

Concept would have:

- 3 lanes on I-5 between I-84 and Greeley
- Collector-Distributor (C-D) roads parallel to I-5 NB and SB
- Braided ramps to eliminate traffic weaving between exit and entrance ramps

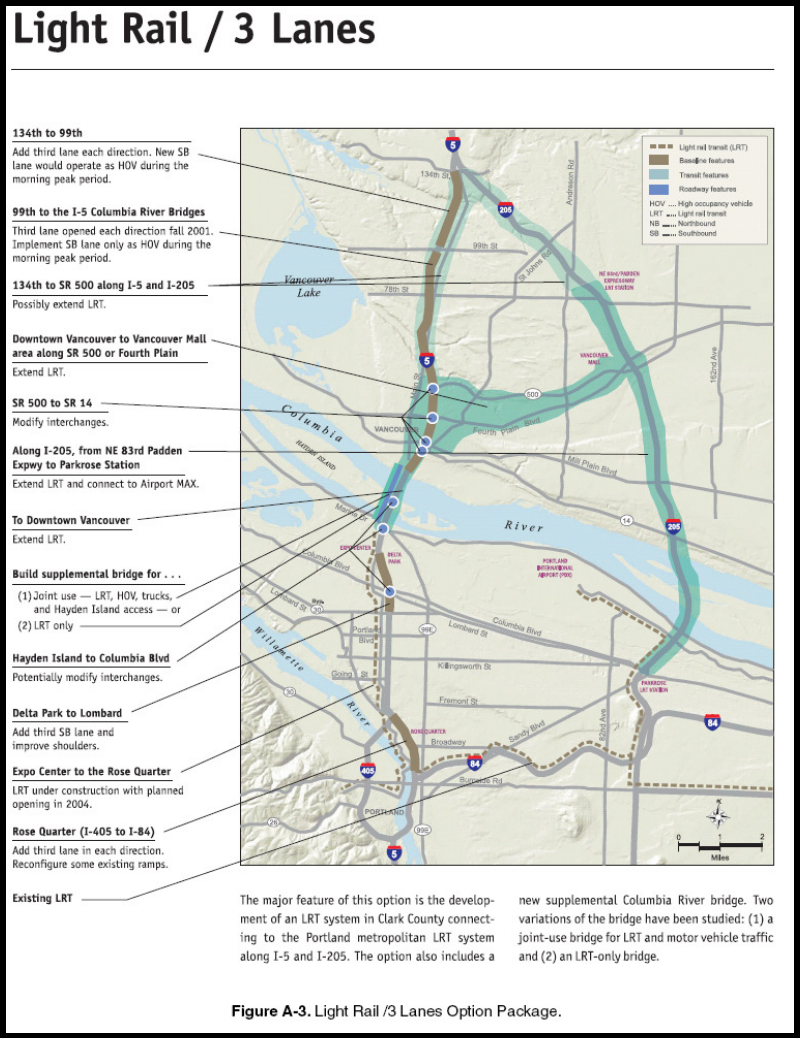
Greeley-North Banfield (1990s)

Purpose: Concept modified to accommodate arena

Concept would have:

- 3 lanes on I-5 between I-84 and Greeley and braided ramps
- Collector-Distributor (C-D) roads allow arena footprint
- Removed Williams Avenue impacting arena site

Portland/Vancouver I-5 Transportation and Trade Corridor/Partnership (1999-2002)



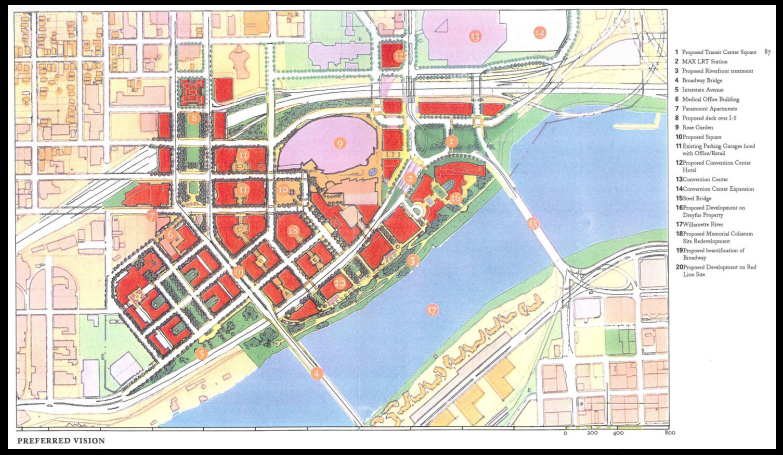
Study originally included I-5 from I-84 to I-205 in WA

Study Included:

- Widening I-5 to 3 lanes from Fremont Bridge/I-405 to I-84 interchanges

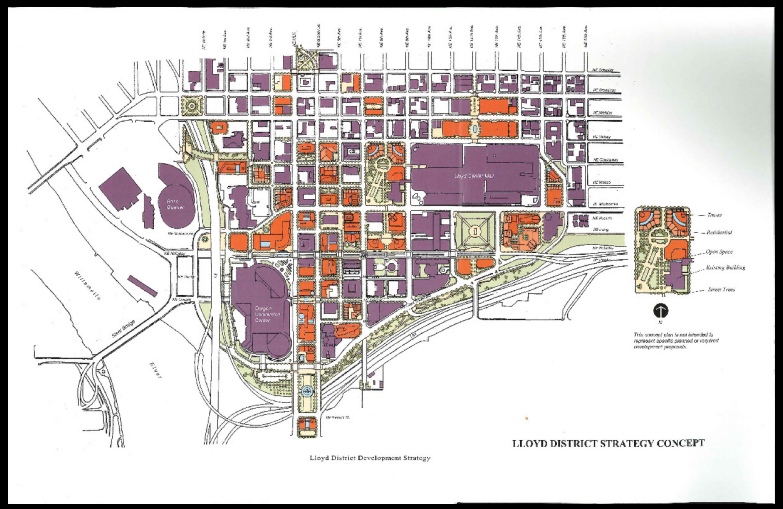
Study Recommended:

- To study I-5, from I-84 to I-405, in context of the Freeway Loop Study



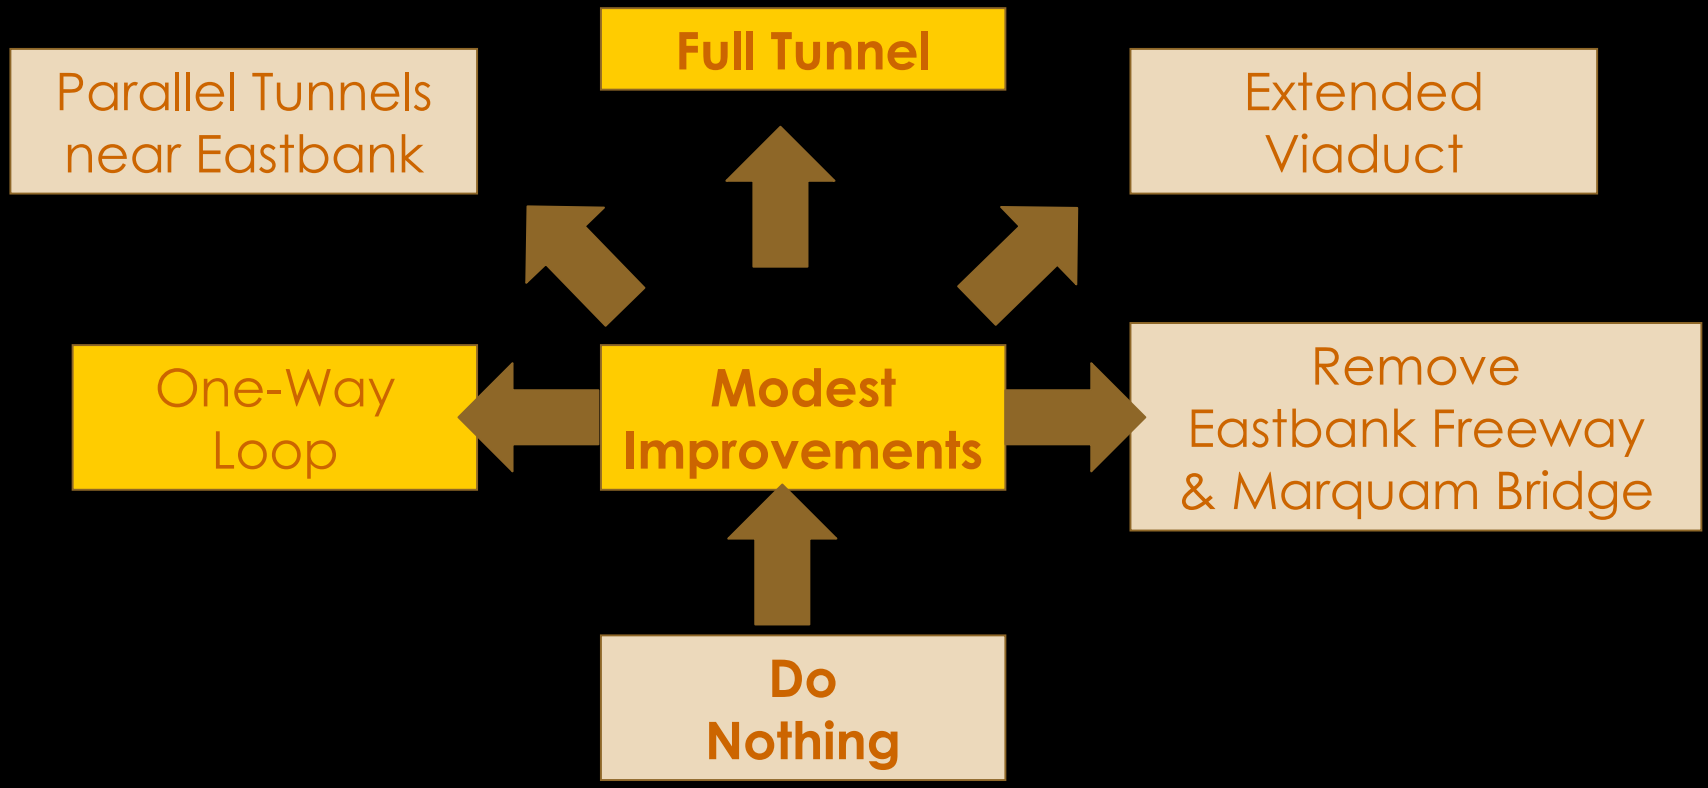
CENTRAL CITY 2035 N/NE Quadrant and I-5 Broadway/Weidler Plans

PDC's Rose Quarter and Lloyd District Studies (2001)



Rose Quarter:

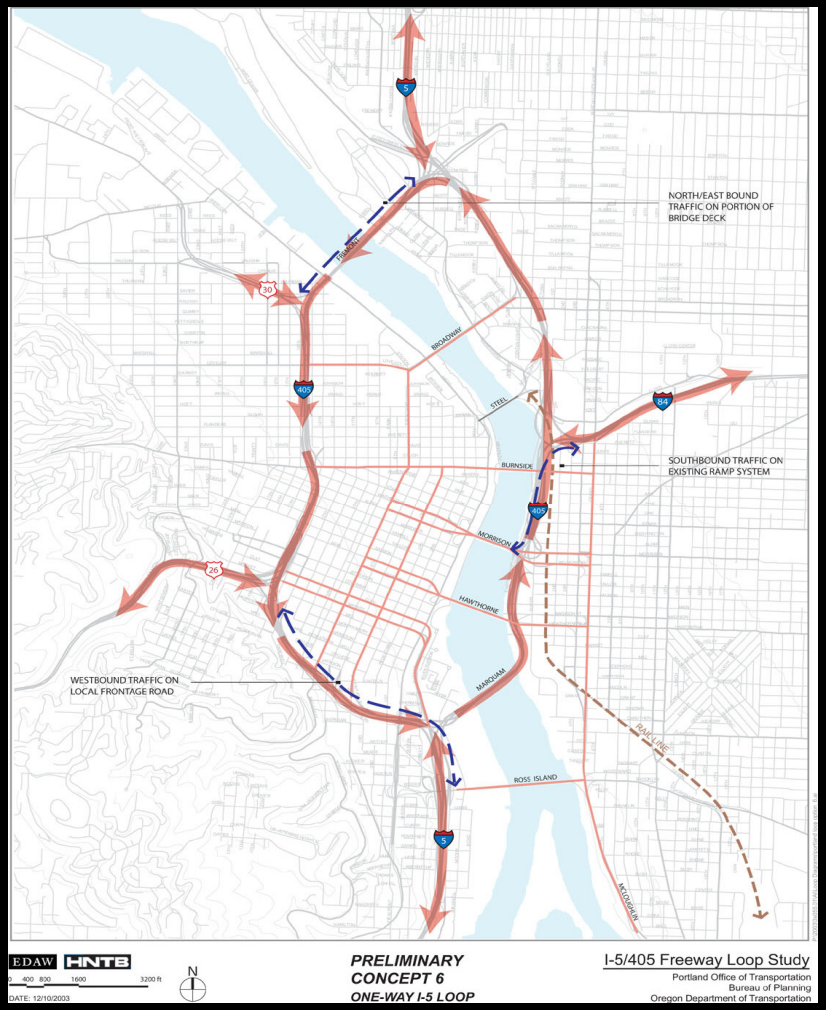
- Addressed vitality in Lloyd District's Rose Quarter sub-area
- Potential ped. bridge at Clackamas St.
- Proposed changes to Broadway-Weidler "box"



Lloyd District:

- Focused on a portion of district
- Recommendations included:
  - New bridge at Clackamas St.
  - Improve pedestrian crossings at NE Broadway/Weidler

I-5/I-405 Freeway Loop Study (2005)

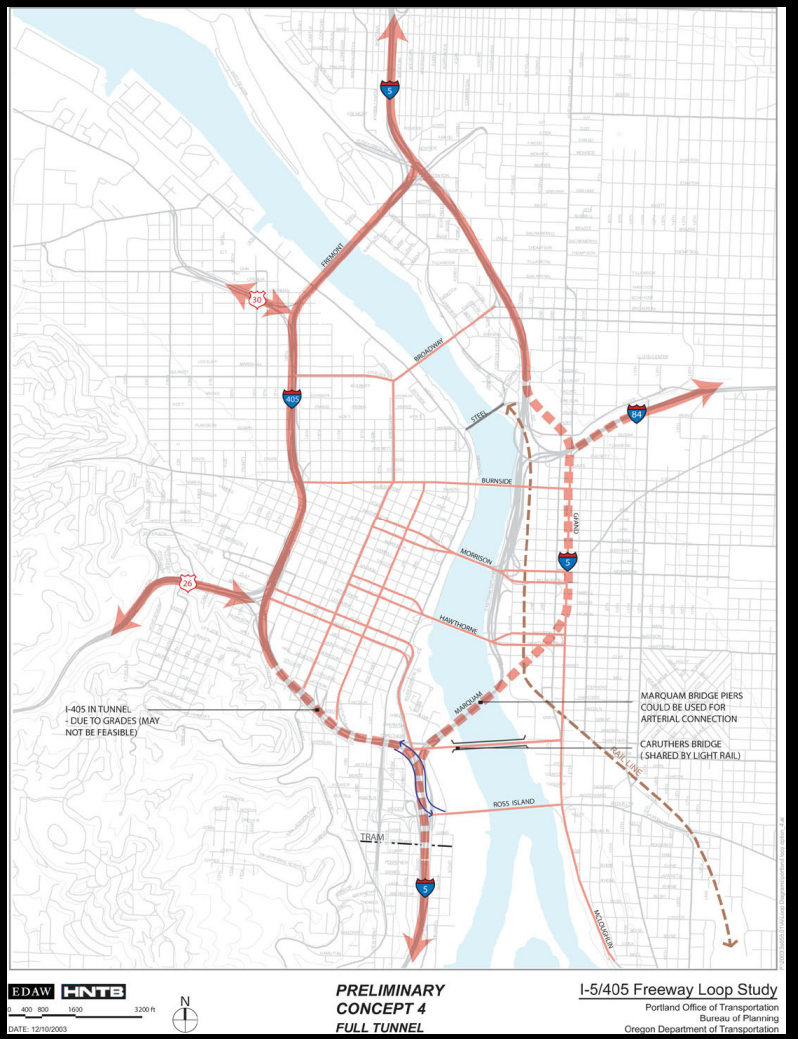


I-5/405 Freeway Loop Study (2005)

- Remove Eastbank Freeway
  - System would be overloaded
- Extended Viaduct Concept and Parallel Tunnels near Eastbank
  - Would be included in the three studies that were advanced
- Three Studies to be Advanced
  - One Way Loop
  - Full Tunnel
  - Modest Improvements

I-5/405 Freeway Loop Study (2005)
One-Way Loop

- I-5 Would Travel NB
- I-405 SB
- Major Increase in Out of Direction Travel
- Would Remove Nearly 1/2 of the On- and Off-Ramps

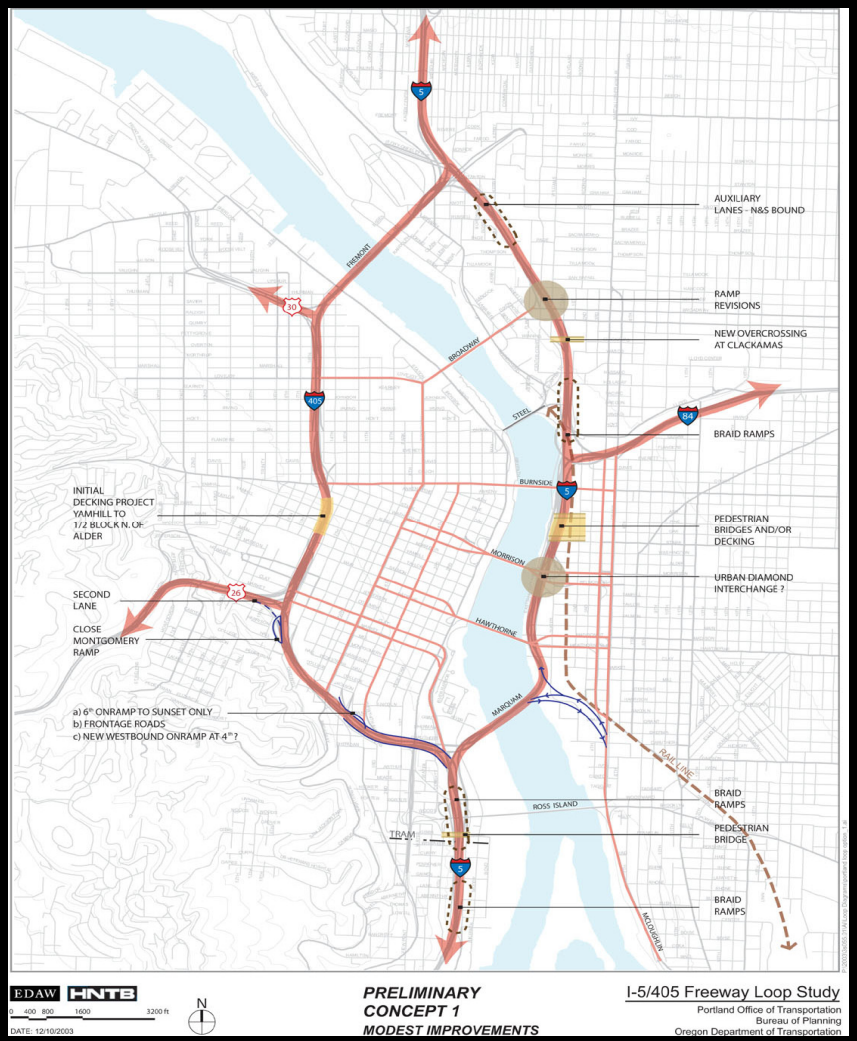


CENTRAL CITY 2035

N/NE Quadrant and I-5 Broadway/Weidler Plans

I-5/405 Freeway Loop Study (2005)
Full Tunnel

- Tunnel would Begin North of Corbett, Surfacing at Rose Quarter
- Solution Likely to Cost Tens of Billions of Dollars
- Tabled for Potential for Long-Term Fix (50 Years Plus)

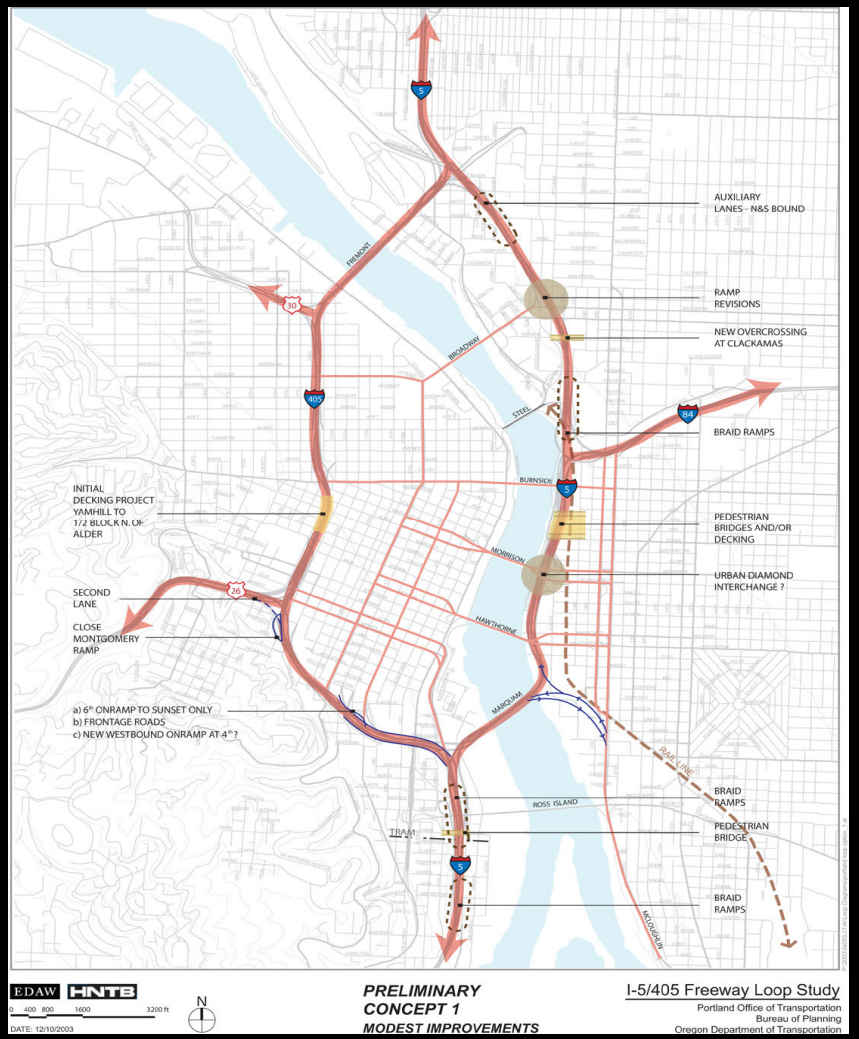


CENTRAL CITY 2035

N/NE Quadrant and I-5 Broadway/Weidler Plans

I-5/405 Freeway Loop Study (2005)
Modest Improvements

- New Braided Ramps On I-5 and I-84
- New Connection Between I-5 and OR-99E
- Improve Connections to and From SWF District



CENTRAL CITY 2035

N/NE Quadrant and I-5 Broadway/Weidler Plans

I-5/405 Freeway Loop Study (2005)
Modest Improvements

- Does not improve travel delay or the projected increase in congestion
- Reinforces need to fix bottleneck on I-5 between I-84 and I-405 now

CENTRAL CITY 2035

N/NE Quadrant and I-5 Broadway/Weidler Plans

I-5: I-84 to I-405 Design Workshop Concept Report (2007)

As a result of Loop Study, the City and ODOT looked at ways to reach agreement on RQ area improvements

- Ways to improve the bottleneck on I-5 between I-84 and I-405
- No decisions were made
- Agreed to hold State/City/public process to seek consensus on improvements
- The workshop considered a beginning, not an end

I-5: I-84 to I-405 Concepts Design

Diamond Interchange

- Weidler/Broadway would merge to create more-conventional intersection
- Would eliminate 5-leg intersection at ramp terminals

I-5: I-84 to I-405 Concepts Design

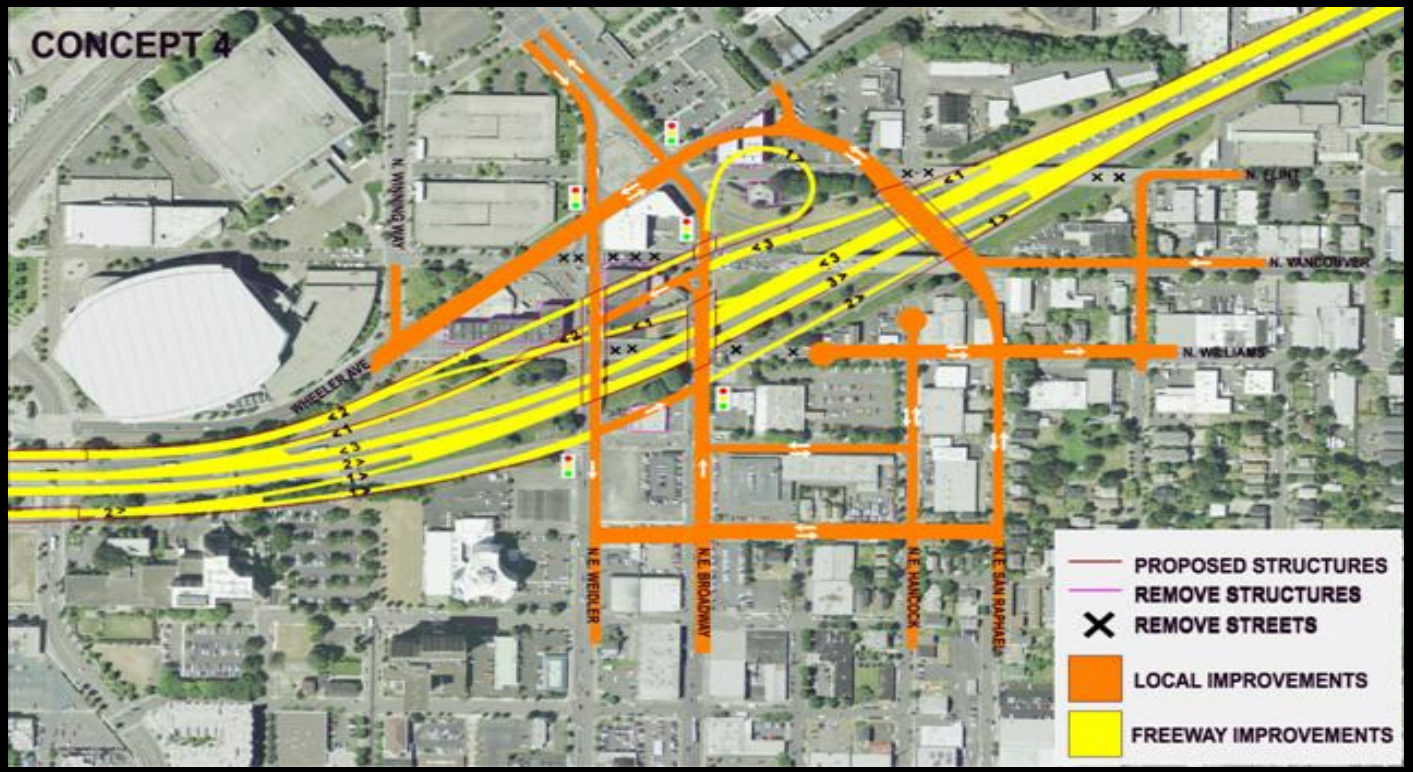
Partial Cloverleaf

- Two loop ramps would eliminate left turns
- Would create ramp storage space for queuing vehicles
- Would require large foot print and ROW acquisition

CENTRAL CITY 2035

N/NE Quadrant and I-5 Broadway/Weidler Plans

I-5: I-84 to I-405 Concepts Design



Partial Cloverleaf (Parclo-A)

- Would create loop ramps in opposite quadrants
- Would require large foot print and ROW acquisitions

I-5: I-84 to I-405 Concepts Design

Split Diamond with Loop Interchange

- Would include a small loop, and consolidation or closing of specific streets
- Would include braided ramps

CENTRAL CITY 2035

N/NE Quadrant and I-5 Broadway/Weidler Plans

Next Steps: Freeway and Local Transportation Interface Charrette

The Charrette will focus on developing workable ramp and freeway improvements resulting from public input as guided by staff and professional consultants

Public Charrette Dates:

- Day One: Evening Charrette
  April 11th, 5:00-8:30 PM at ODOT
- Day Two: Noon Session
  April 12th, 12:00 -1:00 PM at URS
- Day Three: Evening Session
  April 13th, 4:00 - 6:00 PM at ODOT

N/NE Quadrant and I-5 Broadway/Weidler Plans
Freeway/Local Transportation Interface Charrette Schedule

The Freeway/Local Interface charrette will be a focused effort by project staff, urban design and engineering consultants to review and guide participants in designing freeway and ramp interfaces with local streets. Much of the decision on ramp and bridge design will be driven by city and stakeholder suggestions for proposed circulation patterns. The sessions will be guided by planners, urban designers and engineers to facilitate creative thinking. During and after each public charrette session, charrette staff will do some analysis to determine the operations, safety and potential "fatal flaws" in particular concepts. After initial screening, we will refine remaining proposals with charrette staff and offer suggestions on operable solutions and preliminary evaluation of concepts.

Participants: Members of the N/NE Quadrant SAC, Transportation and Land Use Sub-Committees and other stakeholders are welcome to participate in the public work sessions. Charrette products will also be presented at the April 20th Sub-Committee meeting and April 28th SAC meeting.

Day One of the Charrette - April 11	**5pm to 8:30pm at ODOT (123 NW Flanders, Conference Rooms A & B)**		
	Evening Charrette Session - **stakeholders/interest groups and public**		
	Introduction of Charrette and Process		30 minutes
	Expectations / Freeway and interchange design "101"		30 minutes
	Discussion on Screening of Concepts		30 minutes
	Participants break into groups to develop concepts		2 hours
Day Two of the Charrette - April 12	8am to 5pm at URS (1100 SW Columbia St., Suite 1500)		
AM Session	Technical Work Groups - Consultants and Staff Refine and Develop concepts form evening workshop Screening and consolidation of concepts		4 hours
NOON Session	**Stakeholders / Public Presentation / Review / Check-in** Review / Feedback on Draft Concepts Review / Feedback on Draft Screening of Concepts		1 hour
PM Session	Technical Work Groups - Consultants and Staff Refinement of concepts Further screening and evaluation of concepts		4 hours
Day Three of the Charrette - April 13	8am to 10am at URS; 4pm to 6pm at ODOT (123 NW Flanders, Conference Rooms A & B)		
AM Session	Technical Work Groups - Consultants and Staff Refinement of concepts Further screening and evaluation of concepts		2 hours
PM Session	Technical Work Groups - Consultants and Staff Clean up presentation materials Move and set up at ODOT		3 hours
PM Session	**Public Presentation - 4pm to 6pm at ODOT** Review / Feedback on Draft Concepts Review / Feedback on Draft Screening of Concepts Review / Feedback on Draft Evaluation of Concepts		2 hours

Key Public and Stakeholder input opportunities

Oregon Department of Transportation

3/10/2011

N/NE Quadrant and I-5 Broadway/Weidler Plans

Freeway and Local Street Interface Charrette

3-10-11 SAC Meeting Discussion Draft

A. Problem Definition Summary

How can we develop a transportation system that meets the needs for efficient movement, strong urban form, vibrant waterfront districts, livable neighborhoods, and a healthy economy?

1) There is insufficient mainline capacity to meet travel demand. Hours of delay are increasing and expanding into the non-peak hours that serve freight needs. The drop from three to two lanes in southbound direction adds to the problem. The current design does not handle the existing and projected volumes.
2) The proximity of on and off ramps creates weaving distances that are too short.
3) Rear end crashes are high in both northbound and southbound directions.
4) I-84 traffic backs up onto I-5.
5) Ramps off I-5 lead to congested local cross streets and intersections.
6) There is a dangerous speed differential on the freeway between lanes on the mainline in some locations.

B. Framework Elements

1) Study area boundaries:
   a) North: I-405 exit and entrance ramps
   b) South: I5 to I-84 exit ramp, and I-84 to Holladay St exit ramp
   c) East: NE 2nd Avenue
   d) West: N. Ross Avenue
2) Focus for improvements: Broadway/Weidler Interchange
3) Use year 2035 traffic model (City of Portland and Metro Regional Models)

C. Project Goals

The Project Goals have been developed and approved by the Stakeholder Advisory Committee after review by the public and the project subcommittees. The following goal statements are the two, transportation-related, Project Goals with additional details:

1) ***A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system.***

   a) Desired Transportation Objectives

   These are the desired transportation objectives that will be used to test concepts developed in the charrette. The objectives are from the preliminary issues, opportunities,

DRAFT

and constraints gathered during public open houses, one-on-one interviews with the project SAC members, and brainstorming sessions with the projects subcommittees. The Desired Transportation Objectives address the issues, opportunities, and constraints that relate to the freeway and interchange area.

b) Improve Bicycle and Pedestrian Connections

- Consider separate Bicycle and Pedestrian crossing(s) of the freeway
- Consider a 'Clackamas Street' Bicycle and Pedestrian Crossing of the freeway

c) Improve Transit Movements and Connections

- Maintain or enhance streetcar operations
- Maintain or enhance bus routes operating across I-5

2) ***Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses.***

a) Provide Affordable and Cost-effective range of multimodal transportation solutions

- Minimize the need to purchase property for right-of-way

b) Improve Freeway Operations for Freight and Auto

- Improve freeway operations using practical engineering and safety guidance to provide good reliability, and good geometrics for turning, stopping, and other movements.
- Improve traffic movement and safety for all modes on the freeway.
- Consider adding a third lane to I-5 in the existing two-lane section between I-405 exit and entrance ramps and I-84 exit and entrance ramp to improve traffic flow and eliminate the bottleneck.
- Consider improving the weaving distance and ramp spacing within the two-lane section of I-5.

c) Improve the local circulation system

- Provide an adequate system of local street connections to provide access and circulation within the interchange area.
- Improve the functioning of the street grid where possible to improve the local circulation and separate modes.

d) Improve Freeway Safety

- Consider widening shoulders
- Seek to reduce accident potential

e) Avoid or minimize adverse impacts on cultural or high priority community sites.

DRAFT

D. Concept Screening Criteria

The Concept Screening Criteria will be used during the charrette process to eliminate proposed concepts that do not meet the exercise objectives and retain concepts that do address the desired transportation objectives for further refinement and evaluation. Examples include:

1) Interchange ramp geometry and safety

2) Right of Way impacts to be avoided:

    a) Rose Garden
    b) Convention Center
    c) Harriet Tubman School and Albina Park
    d) "Big Pipe" access points
    e) Central City Concern building near Rose Garden (former Ramada Inn)
    f) The Left Bank Building
    g) The Paramount Apartments building on Flint Avenue

3) Maintain or enhance bicycle/pedestrian access both east/west and north/south across I-5

4) Maintain or enhance streetcar operations across I-5

5) Maintain or enhance bus routes operating both east/west and north/south across I-5

6) Improve freeway operations by providing good geometrics for turning, stopping, and other movements.

7) Maintain or improve the weaving distance and ramp spacing on I-5.

DRAFT

E. Preliminary Evaluation Elements

The Preliminary Evaluation Elements will be used during the charrette process to measure how proposed concepts address the desired transportation objectives. They are not the final evaluation elements of the N/NE Quadrant and I-5 Broadway/Weidler Plans.

The project team will provide qualitative/quantitative evaluations, as appropriate, on these elements for each of the proposed concepts. Examples include:

1) The Preliminary Evaluation Elements will address the following:

   a) Improve I-5 geometry and safety
      - Improved conditions at high crash locations (e.g. shoulders, etc.)
      - Eliminated weaving sections
      - Eliminated a significant number of weaving vehicles (loop ramps or braided ramps?)
      - Eliminated lane drops
   b) Reduce system delay / Improve operations
      - I-5 traffic
      - I-5 Freight traffic
      - Local Street traffic (in "the box", as well as around and across the freeway)
   c) Enable long term interchange and freeway solutions (potential for implementation of Loop Study findings/possibility for lower profile)
   d) Retain parcels for future development (maximize opportunities)
      - Retain/provide access to potential development sites
   e) Capital costs
   f) Minimize project development time (i.e. NEPA process time line)
   g) Maintain traffic during construction
   h) Provide improved access
      - Freight movements
      - Special events
      - To central city
      - Within the "box" (Broadway/Weidler)
   i) Enhance aesthetics and livability
      - Footprint of freeway
      - Barrier effect (freeway crossings, visual)
   j) Provide opportunities for stormwater retention
   k) Bicycle Circulation / safety
   l) Pedestrian circulation / safety
   m) Bus route circulation

SAC #3 Meeting Evaluation Summary
December 9, 2010

15 Evaluations returned

Overall Meeting Quality:			Good – 8	Very Good – 5	
Pacing:		A little slow - 4	Just Right -9	A little fast - 2	
Clarity of Presentations:			Good - 7	Very Good - 6	Excellent - 1
Documents:		Fair - 1	Good - 7	Very Good - 5	Excellent - 2
Discussion:		Fair - 1	Good - 5	Very Good - 8	

Most Useful?

- All
- Condensing of goals/scope of SAC work
- Review of public comments for goal statements
- Sam's humor, levity, patience

Least Useful?

- "Writing" text as a committee - good thing we weren't writing a book!
- Cookies (or is it my willpower?)
- Debate re: I-5 funding $$ inclusion
- Parking - Blazer game and payment
- Perhaps too much staff discussion as opposed to response to questions
- Slogging through the requisite scaling issues before the policy part
- Spent too much time discussing ODOT's $200 million budget for improvements

Comments, Suggestions, or Questions?

- It's necessary but not as interesting
- More pointed reminders about location in email subject line, and let ODOT guard know where the meetings are in case people show up there
- Presentations too fast
- Re: documents: they were good, though a lot of paper (which is both good and bad)
- well paced and responsive

N/NE Quadrant and I-5 Broadway/Weidler Plans

Facilitator 1-13-2011 Draft Proposed "Project Goals Statement"

This planning effort will result in integrated land use, urban design, and transportation strategies, policies and plans for the N/NE Quadrant, (Lower Albina, the Lloyd District, and portions of Eliot, Irvington, and Sullivan's Gulch) and the I-5 Broadway/Weidler interchange that balance, complement, enhance, protect, respect, revitalize, support, and sustain economic, environmental, and social interests. The implementable plans will be consistent with the overall goals and policies of the city, region, and state.

Our recommendations will be guided by our desire for:

- A diverse mix of commercial, cultural, entertainment, industrial, recreational, and residential uses, including affordable housing;
- A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system.
- Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages;
- Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment;
- Equitable access to community amenities and economic opportunities;
- Necessary infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods;
- Protection and enhancement of the cultural heritage of the area and its sub-districts; and
- Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses.

DRAFT

N/NE Quadrant Project Scope and Topics of Other Studies

DRAFT - January 13, 2011

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies	Comments From SAC and Subcommittee Meetings	Staff Response/Notes
Land Use & Urban Design					
LU 1	Land Use & Urban Design	Identify land use and urban design/urban form issues in Lloyd and Lower Albina subdistricts, and the two study areas - Vancouver/Williams and NE Multnomah. Develop quadrant-specific land use and urban design policies and implementation tools consistent with direction from CC2035 and the Portland Plan.	Portland Plan will develop the strategic framework for the City of Portland. CC2035 will develop the overall policy framework for the Central City, addressing economic development, housing, transportation, open space, and arts/civic/cultural policy issues.	Could we talk about developing a strategy to address the episodic nature of the district? Until there is a vast amount of development here, how can we create consistent vibrancy?	Agree - Will be included in District-Wide Land Use/Urban Design Issues.
				We need to make sure that we don't negatively affect other areas by changes we make in this quadrant. Any major changes of transportation thoroughfares may change/reshape subdistricts/neighborhoods – we need to be really cognizant of the ramifications of changes we make.	Agree - Will be included in District-Wide Land Use/Urban Design Issues. The role of the Central City and it's relationship to adjacent areas are also key considerations and tasks of the broader Central City 2035 Advisory Group.
				Streetcar development should be pulled out into it's own section because it crosses several areas and issues (and that shouldn't get missed).	Agree - Will be included in the discussion of issues and opportunity in the next phase of work. Encouraging development around new streetcar stations is a key issue in the Lloyd District. This plan effort will work with PDC to develop policies and actions to support it.
				There are four key points to this plan: housing, employment, retail, and events. Where do we really key in on those priorities?	These land uses are included as a component of both LU1, Land Use and Urban Design and LU3, Zoning. Identifying issues and setting priorities for the quadrant around these land uses will be a big part of the planning process.
				What about topics that are in the goals but not in the scope - like greenspace?	Green/open space is a component of the broad scope of identifying "land use and urban design/urban form issues." Access to open space has also been included in the list of issues being developed for the quadrant.
LU 2	Growth	Seek to accommodate 2035 growth projections for population and employment in the study area.	Metro Region 2040 established high-growth expectations for the Central City. Conversations on this topic will need to happen at the regional level.	Tax abatement is going to be sunsetted, and it's an issue that has potential to impact the barriers to greater density and development (the FAR is there, but the market isn't – how can we build out to our potential)	The future of tax abatement is a larger Central City-wide discussion currently under consideration by the Central City 2035 Advisory Group.
LU 3	Housing	Develop detailed housing goals and policies within the study area.		Housing is big enough and important enough that it should have it's own scope section.	Agree. See revised project scope.
				We should talk about urban renewal, which sunsets in 2013.	The future of urban renewal is an important plan implementation issue. However, if changes were to be made to the current URAs in the study area, they will have to be developed through separate processes led by the PDC.
LU 4	Zoning	Revisit, and as necessary, recommend changes to comprehensive plan and zoning designations, development standards, and design guidelines	The broader CC2035 project will evaluate the need for structural code changes regarding how zoning and development review works in the Central City.	This is maybe already in zoning, but there should be something about freight movement and distribution areas (like in lower albina, etc.). Industrial sanctuary zoning is important for us to pay attention to.	Agree - Will be included in Lower Albina Issues.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies	Comments From SAC and Subcommittee Meetings	Staff Response/Notes
LU 5	Rose Quarter	Coordinate with the Rose Quarter Development Project and integrate the resulting development strategy with the rest of the N/NE Quadrant Project to support success in both the Rose Quarter and the surrounding areas.	The Rose Quarter Development Project is currently developing a detailed development strategy for the Rose Quarter.	We should say we're preserving *and* also enhancing the large event institutions (3 out of 4 of Portland's large event institutions - all but PGE park - are in this area).	Agree - Will be included in Rose Quarter and Lloyd District issues. Also, see revised project scope.
				Encourage more language about coordinating the various efforts that are going on (including the possibility of eliminating the S-curve in the rail system in this area, etc.)	Agree - Will be included in Rose Quarter issues. This is also under consideration in Rose Quarter Development Project.
LU 6	Willamette River	Coordinate with River Plan / Central Reach to identify land use/urban design issues and develop regulatory guidance for the Willamette Riverfront in the N/NE Quadrant within the Central Reach.	River Plan / Central Reach will be developed as part of the CC2035 Plan. The River Plan will contribute policy guidance for the Willamette River. The policies and regulations adopted through the River Plan / North Reach (April, 2010) that apply to the riverfront in Lower Albina will not be revised through the N/NE Quadrant Plan or CC2035.	Should we have people here that let us know what is going on with other plans, such as the River Plan. How are we actually coordinating?	River Plan staff are integrated with the Central City team and are participating in planning and outreach efforts related to the N/NE Quadrant Project.
LU 7	EcoDistricts	Coordinate with the Portland Oregon Sustainability Institute (POSI) and Lloyd Green on the policy framework for EcoDistricts.	EcoDistricts study is led by POSI, which has identified the Lloyd District as a pilot project. Lloyd Green is the active association in the Lloyd District pursuing EcoDistrict formation.	There should also be something about stormwater in the interface section.	Agree - Stormwater will be added to Quadrant-wide issues, as well as in freight transportation, public realm and eco-district areas.
LOCAL TRANSPORTATION					
LT 1	Purpose	Identify multi-modal transportation issues in the Lloyd and Lower Albina subdistricts, and the two study areas-Vancouver/Williams and NE Multnomah.	The Central City Transportation Management Plan (CCTMP) will be updated as part of CC2035.	Will what we do here update the CCTMP? Will we get a chance to weigh in on some of the larger goals in the CCTMP as they relate to this area?	There will be an opportunity for a feedback loop between the broader CC2035 process and the more detailed quadrant planning. That will allow quadrant plans to inform the broader framework set for transportation, as well as other topics.
				Motorized 2 wheeled vehicles should be called out/encouraged.	Agree - will be included in the multi-modal transportation issues.
		The Regional Transportation Plan 2035 forecast will be the basis for the transportation analysis for the N/NE Quadrant Project.	The CCTMP will revise and, if needed, recommend changes to Central City wide transportation policies.		No comments received
			Plan recommendations may lead to amendments to the City's Transportation System Plan (TSP).		No comments received
		Consider strategies to reduce single occupancy vehicle trips in the district.		Add language about how to remove short auto trips on the freeway to improve the freeway system through this area (particularly with regard to focusing on freight, and multiple-occupancy or bike transportation).	Agree -see revised project scope.
				We should consider reducing/eliminating single-occupancy vehicle trips as a companion to improving freight movement – make the freeway for freight and for higher-occupancy transport and bike options.	Agree - see revised project scope.
LT 2	Regional Trails (Sullivan's Gulch Trail & The Willamette River Greenway Trail)	The N/NE Quadrant Plan will coordinate with and recognize the future general alignment for the Sullivan's Gulch Trail and will coordinate with Parks to update the alignment of the Willamette River Greenway Trail as necessary.	This Plan will not determine the specific location for the Sullivan's Gulch Trail. This is a separate project led by the PBOT and Parks.	Include language about connectivity to the trails.	Agree - See INT 1 for trail connectivity language.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies	Comments From SAC and Subcommittee Meetings	Staff Response/Notes
LT2	Regional Trails (continued)			Should we have people here that let us know what is going on with other projects, such as the Sullivan's Gulch Trail? How are we actually coordinating?	Coordination on the Sullivan's Gulch Trail will be included as part of the scope of work for developing Concept Alternatives.
			The North Portland Greenway Trail Alignment Project is a Parks project that will determine the alignment for segments of the North Portland Greenway Trail.		No comments received
LT 3	Transit	Identify transit needs in the Quadrant and conceptual long-term improvements to the Rose Quarter Transit Center.	This plan will not result in a resolution on the Rose Quarter Transit Center. The project will study some of the major transportation issues in the area and identify some overall direction for long term improvements, but will not recommend a solution.		No comments received
		The N/NE Quadrant Plan may influence, but will not determine, the alignment of the next streetcar line.	The Streetcar System Concept Plan calls for potential streetcar routes through the quadrant. To determine feasibility and choose a route, a separate alternatives analysis is needed.		No comments received
LT 4	Local Transportation System	Consider street hierarchy and conceptual level design approaches to different streets in the study area.	No major expansion in local auto capacity. Central City policy calls for prioritizing non auto improvements to meet Central City economic development and livability goals.		No comments received
FREEWAY TRANSPORTATION					
F1	Improvements to I-5	Consider improvements to address capacity, operations, and safety issues on I-5 from I-84 to I-405. Improvements will be developed based on the current fiscally constrained Regional Transportation Plan (RTP) forecast for the Region.	Planning Beyond the 2035 Horizon is not a part of this Plan.	Several comments were made requesting that the specific $200 million dollar amount in the scope be removed. The specific dollar amount was considered too limiting and participants noted that the appropriate level of improvements could be discussed without having a dollar cap written into the scope.	Agree - see revised project scope.
				I like that there is a number attached because that helps me understand what can be done.	Improvements will be based on funding available within the RTP.
				Consider improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	Agree - see revised project scope.
				Add language about project phasing.	Once preferred alternatives are agreed upon, SAC members and staff will discuss the proposed phasing of individual plan elements that fit within the available project budget.
				We could revise to focus on scale, being visionary, and cost-prudent (not cost-constrained). We need to be ready with a plan in case funding becomes available.	ODOT will look at proposed solutions that fit within our current project scope and welcome proposals that can inform a future process where larger improvements will be assessed.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies	Comments From SAC and Subcommittee Meetings	Staff Response/Notes
F1	Improvements to I-5 (continued)	Acceptable parameters on which alternative improvement proposals will be evaluated will include: engineering, safety, operations and whether the state can fund the proposals during the current process. Promising proposals that may be beyond the scope of this process will be considered when discussing a more comprehensive solution.		I don't want our ideas cast aside because they are outside of the scope.	See revised project scope.
			This Plan will not determine tolling. The 2007 Oregon legislature directed the Oregon Transportation Commission (OTC) to develop tolling policy recommendations for a consistent framework and foundation on which to develop, implement and evaluate potential projects.		OR HB 2001 directs ODOT to implement a congestion pricing pilot within three years of passage. While the pilot(s) will not be within the study area, the desire is to evaluate opportunities for the development of congestion pricing strategies to be applied more broadly.
		Focus on safety improvements to reduce the number of crashes.	More comprehensive solution for freeway issues will be determined at a later date. No timeframe for a comprehensive study has been determined.	No consideration is being given to a comprehensive solution. When will this be considered?	The development of new freeway configurations within the district should support fixes that improve safety, capacity and operational issues on I-5 between I-84 and the Fremont Bridge. This does not preclude discussions regarding future desired improvements for consideration beyond the scope of this project time frame. No time frame for a more comprehensive study has been determined. See revised topic of other studies.
		Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	Moving the Eastbank Freeway is not feasible during 2035 time frame (does not preclude planning for later date).		No comments received
		Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	The N/NE Quadrant Plan will be prepared pursuant to the RTP. The Columbia River Crossing Study is a long-term, comprehensive plan to address safety and congestion between Marine Drive and SR 500. CRC will replace the I-5 bridge (with tolling) over the Columbia River and extend light rail to Vancouver. I-5 improvement are needed in our study area with or without the CRC. Traffic volumes on I-5 in this section are not substantially different with or without the CRC, as defined in the EIS.		Plans for operational, and capacity upgrades should be viewed as specific to the study area, and not designed to match the proposed CRC expansion.
		Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need. Particular attention will be paid to the urban context of the area and avoiding impacts on key historic/cultural sites.			Excepting the location of potential new on and off ramps, any freeway operational improvements should be designed to stay within the confines of the existing freeway envelope as much as feasibly possible. Should the SAC recommend improvements that deviate from the existing freeway envelope, care should be taken to weigh: cost, safety, environmental impacts, impacts on adjacent land uses, and equity impacts on local neighborhoods.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies	Comments From SAC and Subcommittee Meetings	Staff Response/Notes
F2	High Speed Rail	The N/NE Quadrant Plan will not determine High Speed Rail. Oregon High Speed Rail Study will be monitored for potential action items for CC2035, Portland TSP, and other related plans.	The ODOT Rail Division is developing a High Speed Rail Plan for service improvements including one-way travel time under two hours, six round trips per day and increasing on-time performance to 95% between Eugene and Portland.	To what extent, if any, will high-speed rail be included in this process?	This planning process will defer to the State's High Speed Rail process. More information can be found about that process on the State Rail Division's website: http://www.oregon.gov/ODOT/RAIL/Passenger_Rail.shtml#High_Speed_Rail
				We should discuss how we can best address long-term issues given our short time horizon (for example, we could include things like "our planning for 2035 will not preclude the possibility of a station here, or expanded rail tracks here")	See above.
				The rail transportation that serves/interacts with this area should be discussed (the number of trains that travel on the tracks, and the shortcomings of the Steel Bridge, etc)	The Quadrant Plan will coordinate with private rail providers to determine needs and issues within the planning horizon of 2035.
INTERFACE TOPICS (Between Local Transportation and Freeway or Transportation and Land Use)					
INT 1	Bicycle and Pedestrian Routes	Enhance pedestrian and bicycle routes and access to trails. Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway. Help implement the City's Bicycle Master Plan.	Plan recommendations may lead to amendments to the City's TSP and Pedestrian Master Plan and Bicycle Plan for 2030.	Include language about connectivity to the trails.	Agree. See revised project scope
		The N/NE Quadrant Plan will coordinate with the PBOT Bikeway Development project.	Some bicycle improvements in the study area will be addressed as part of the PBOT Bikeway Project Development project.	In bike/ped, maybe we could talk about pulling bikeways off of large high-vehicle traffic areas, and give them separate lanes/trails/streets (for cyclists' safety and for larger space for cars in big streets – like Broadway/Weidler)	Agree, will include in sub-district issues.
INT 2	Freight Movement	Improve truck freight movement. Focus on improving the truck reliability (low frequency of incidents), and the improvement of turning, stopping and other movements for freight vehicles on key freight routes and freight districts.	Plan recommendations may lead to amendments to the City's TSP and Freight Master Plan.	This is maybe already in zoning, but there should be something about freight movement and distribution areas (like in Lower Albina, etc.). Industrial sanctuary zoning is important for us to pay attention to.	Agree, will include in Lower Albina issues.
		Improve freight access to the freeway and industrial areas.	The improvement of freight rail is beyond the scope of this project as the infrastructure is privately held.	Encourage more language about coordinating the various efforts that are going on (including the possibility of eliminating the S-curve in the rail system in this area, etc.)	The Quadrant Plan will coordinate with private rail providers to determine needs and issues within the planning horizon, however implementation of specific freight rail improvements is beyond the scope of this project as the infrastructure is privately held. See revised topics of other studies.
INT 3	Climate change	Analyze plan proposals for potential climate and greenhouse gas (GHG) impacts. This Plan will not directly address regional climate change and GHG issues.	Other efforts will develop regional and statewide climate change and greenhouse gas (GHG) strategies. The 2010 Oregon Legislature passed a statewide, comprehensive bill aimed at reducing GHG emissions from transportation. That effort will involve coordinating and consulting with stakeholders, local governments, Metropolitan Planning Organizations (MPOs) and other state agencies to develop a state-level strategy to reduce GHG from transportation.	Include something about the type of fuels/energy used.	The Quadrant Plan will defer to regional and statewide greenhouse gas (GHG) strategies. Emissions monitoring will continue within the N/NE Quadrant as part of *one* input to Metro's regional climate change model to be used in determining progress in meeting regional GHG goals.

Topic		N/NE Quadrant Project Scope	Topics of Other Projects or Studies	Comments From SAC and Subcommittee Meetings	Staff Response/Notes
INT 3	Climate change (continued)			Climate change isn't entirely about greenhouse gas. We should be mindful about how our decisions impact the region's climate change goals. Let's use it as a filter for how we look at things. We can contribute to the solution.	Agree. See revised project scope.
		Transportation alternatives analysis for the Quadrant will include modeling of alternative land use and transportation concepts on vehicle miles traveled, greenhouse gas emissions, and impacts on Central City land use and transportation. The modeling will be coordinated with that done for the broader CC2035 process.	CC2035 will include GHG modeling in the policy analysis of land use and transportation relationships.	GHG modeling and analysis is an important issue to deal with.	Agree. See scope of work.
INT 4	Parking	Examine parking strategies for the N/NE Quadrant planning area that support existing land uses and new development, while encouraging the use of alternative transportation modes, including proximity to transit, demand management strategies, bicycling, and proximity to housing. Identify parking issues to be addressed as part of the CC2035/CCTMP process.	The CCTMP will be updated as part of CC2035, and will revise and, if needed, recommend changes to Central City wide transportation policies, including parking.	Change from "may" identify parking issues for the CC2035/CCTMP process, to "will" identify issues.	Agree. See revised project scope.
				There should be something about parking and transit in the Interface section - Land use development and opportunities are greatly impacted by parking and transit (their existence or lack thereof).	Agree. See revised project scope.
				We need to incorporate discussion about parking issues for existing uses, as well as new development.	Agree. See revised project scope.

N/NE Quadrant and I-5 Broadway/Weidler Plans

N/NE Quadrant & I-5 Broadway/Weidler Planning Process
Stakeholder Advisory Committee (SAC)
Collaboration Principles
1-13-11 Draft

For any complex collaborative process, the participants should establish procedures to govern the process. Such agreement increases success and decreases meeting time by assuring a good faith process that explores competing needs and fashions equitable, practical, and durable solutions. This document contains the agreements of the participants in this "N/NE Quadrant & I-5 Broadway/Weidler Planning Process."

I. Process Background

The City of Portland and the Oregon Department of Transportation (ODOT) have a unique opportunity to collaborate on land use and transportation problems in the north/northeast quadrant of the central city. This opportunity has surfaced due to concurrent interest on the part of both entities to develop a plan to address long-standing issues and new opportunities in this area.

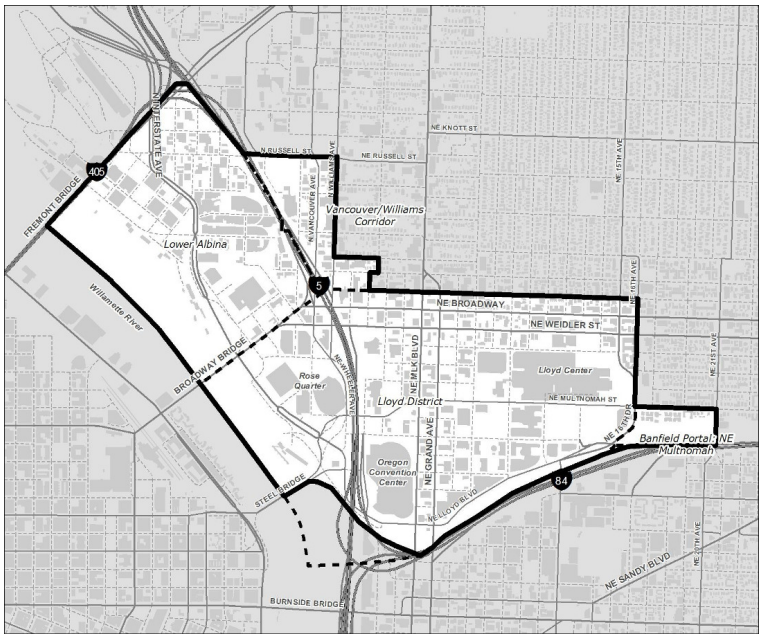
The City of Portland will be updating its 1980 Comprehensive Plan and 1988 Central City Plan. The first phase of this process is the Portland Plan, which will be a strategic plan to guide the city for the next 25-years. The update of Comprehensive Plan will follow the completion of the Portland Plan. The Central City 2035 Plan (CC2035) will update the 1988 Central City Plan. The vitality of the Central City is key to state and regional policies for growth management and economic development and for addressing new policy directives such as those for peak oil and climate change. The CC2035 plan will produce new guiding policies, updated land use and urban design plans, and more detailed sub-area plans for specific Central City districts. Additionally, the Portland Bureau of Transportation (PBOT) will update the Central City Transportation Management Plan (CCTMP), which is part of the Portland Transportation System Plan (TSP), as part of this planning effort. The first phase of CC2035 will produce a Concept Plan that will define the desired overall direction for development for the entire Central City. The Concept Plan will be the foundation for more detailed planning and implementation work at the sub-district level.

The N/NE Quadrant & I-5 Broadway/Weidler Plans will be the first of these more focused plans, covering Lower Albina and the Lloyd District. Although this area contains significant facilities and functions of state-wide and regional significance, including the Rose Garden, Oregon Convention Center, federal, state and regional government offices, and Lloyd Center Shopping Mall, this area has not met Central City Plan economic development goals and jobs and housing targets. The N/NE Quadrant & I-5 Broadway/Weidler Plans will address land use, urban design, transportation, public infrastructure and investment, and development entitlements. It will be coordinated with and incorporate ongoing related efforts, such as the Rose Quarter Development Project.

The Oregon Department of Transportation (ODOT) has long identified the need to make improvements to the I-5 Corridor. In the late 1980's, ODOT developed for the Rose Quarter area freeway-design recommendations to address capacity, operational, and safety issues. However, these recommendations have not received sufficient funding or public consensus to advance planning and engineering studies for this freeway segment. As part of the I-5 Partnership Plan, ODOT with the Washington Department of Transportation (DOT) examined longer-term I-5 needs from the Rose Quarter to SR500 in Clark County. The segment south of the Fremont Bridge was separated from the I-5 Partnership because of issues related to the I-5/405 Freeway Loop. ODOT with the City of Portland completed the I-5/405 Freeway Loop Study in 2005. This study recognized both near-term and long-term issues for this facility. Near-term issues included addressing the bottleneck at the I-5/I-84 interchange.

The City of Portland and ODOT will collaborate on combining the Portland Central N/NE Quadrant Plan with the ODOT I-5 Broadway/Weidler Interchange Plan to seek to identify both near-term and long-term land use, urban design, and transportation needs in the area. This unique opportunity will integrate land use and urban design planning with freeway planning and concept-level engineering.

The project area includes two existing Central City Plan (sub) Districts:



1) Lower Albina, and
2) Lloyd District.

Additionally, the planning study area will consider two adjacent areas likely to see significant change through redevelopment in the future and which could impact or be impacted by development in the Central City:

1) Vancouver-Williams, and
2) Area along NE Multnomah-between NE 16th and NE 21st. (see map).

Finally, the plan will consider the context of surrounding districts and neighborhoods.

A map of the project area follows:

II. Project Goals Statement

The Stakeholder Advisory Committee (SAC) adopted a Project Goals Statement that can be found at (Insert website link) (Pending)

III. Stakeholder Advisory Committee (SAC) Charge and Scope of Work

A. Charge

The SAC is advisory to the City and ODOT and it will help inform City and ODOT staff in the development of their recommendations to the respective decision-making entities. City and ODOT staff recommendations to their respective decision-makers will highlight areas of agreement and disagreement with the SAC and other stakeholder interests. The co-chairs of the SAC will represent the recommendations of the SAC to City and ODOT decision-makers in conjunction with City and ODOT staff reports. The City and ODOT will have ultimate responsibility for decision-making.

B. SAC Scope of Work and Timeline

The Stakeholder Advisory Committee (SAC) adopted a Scope of Work that can be found at (Insert website link) (Pending) The project timeline can be found at (Insert website line) (Pending)

While it is the intent of the City-ODOT project team to conclude this planning process within a one and one half year period, it is impossible to contemplate all eventualities. As a result, the dates shown in the attached work plan are projected, not fixed.

C. Public Involvement Overview

A detailed Public Involvement Program for this joint planning process can be found on the joint project website. (www.portlandonline.com/bps/cc2035/neq) As the City and ODOT staff involves the broader community in the issues that the SAC will be exploring, they will be providing summaries to the SAC for their consideration and comment.

IV. SAC Membership and Support

A. Members

The SAC has broad representation and is balanced to reflect many diverse interests and those who may be impacted by decisions made during the planning process. On behalf of Portland Mayor Sam Adams and ODOT Director Matt Garrett, the City's Director of Planning and Sustainability, Susan Anderson, the City's Director of Transportation, Susan Keil, and ODOT's Region I Manager, Jason Tell, made the SAC appointments noted in Section VIII, below.

B. Co-Chairs

There will be two co-chairs. Each co-chair will chair one of the major subcommittees, as proposed in section E below. The SAC co-chairs and City and ODOT project managers will meet regularly with the SAC facilitator to schedule the work of the SAC and subcommittees, and determine the timing of the information brought before the SAC. This Coordinating Committee will be available to make recommendations to the SAC on the logistics of the planning process, not to make substantive decisions on issues before the SAC.

C. SAC Alternates and Replacements

Due to the complexity of the process, it is best to have one person represent each interest throughout the planning process to maintain continuity of discussion and recommendations. If necessary, SAC members may identify an alternate to represent them in their absence, preferably at the outset of the process.

It will be the responsibility of the primary SAC member to keep the alternate informed so they can represent their group in case the primary SAC member is absent. Alternates may attend SAC meetings, but will not sit at the main table or vote, unless they are substituting for the primary SAC member. Notice of substitution must be submitted to the SAC facilitator in advance of SAC meetings.

SAC member resignations, changes, and replacements must be submitted in writing to the SAC co-chairs by the representative interest group/organization. As noted above, Susan Anderson, Sue Keil, and Jason Tell, or those holding their positions, will make all appointments to the SAC, including replacements of existing SAC members due to resignations or extended absences, based on nominations from the process interests.

D. SAC Subcommittees and Work Groups

The SAC co-chairs will determine subcommittees and their charges, time parameters, and deliverables. Subcommittees will help frame the issues for the full SAC, especially on specific subject areas requiring more analysis and input. They will be established in advance to allow adequate time for subcommittees to inform the planning process at key junctures. If broader issues are brought to a subcommittee, they will be noted in its meeting notes and not pursued without SAC approval.

Subcommittee memberships will be open to any interested SAC member once they are approved by the co-chairs. Each subcommittee should include representation from government, commercial/business, and community interests to ensure a balanced discussion. Staff will assist the subcommittee chairs in establishing agendas, making decisions on how to run the meetings, and reporting to the SAC on the subcommittee's work and recommendations within the established timeframe to keep the planning process on schedule. Subcommittees will be encouraged to invite non-SAC and Technical Advisory Committee (TAC) members to make presentations and participate in the discussion.

City and ODOT staff will assist subcommittees with meeting locations. There will be advance notice of all subcommittee meetings posted on the project website as soon as scheduled. These meetings will be open to the public and will include, at a minimum, one public comment period. Staff will assist subcommittees in preparing summary notes of meeting discussions and decisions for posting on the project website within one week of the meeting. The SAC facilitator will be available to assist subcommittees with meeting mechanics and decision-making guidance. This assistance may be requested by the subcommittee chair with the approval of the other SAC co-chair. The proposed subcommittees are:

1) Land Use, and
2) Transportation.

There also may be work groups under each subcommittee to explore more limited geographic and/or policy issues. These work groups will open to any interested person with approval of the co-chairs.

E. Technical Advisory Committee (TAC)

TAC is a resource pool of organizations and agencies with specialized expertise related to this planning process. The TAC will address specific questions raised by the SAC, staff, and SAC subcommittees. TAC members will serve as resources to SAC subcommittees related to their area of expertise. The City and Project staff will brief TAC and hold TAC meetings, as needed. Project staff will report to the SAC on TAC meetings. TAC meetings are open to the SAC and the public.

F. Retained Technical Consultants

ODOT retained URS to serve as technical consultants.

G. Project Staff

The City and ODOT will staff the SAC process. A list of project staff and their roles can be found at www.portlandonline.com/bps/cc2035/neq. Their goal is to provide a process that will be open, honest, and transparent with a special emphasis on early involvement in providing policy-setting input.

The project staff commits to:

1) Clearly define opportunities where the public can provide timely input so that there is an opportunity to affect change.
2) Be accessible, inclusive, meaningful, regular, timely, open, fair, and honest. This includes providing information in as much advance as practical.
3) Ensure a collaborative involvement process between the City, ODOT, and stakeholders, and meet the planning timelines of both the City and ODOT.
4) Provide an ongoing record of public input, questions and responses, as well as a mechanism to make this information available to the public.
5) Include periodic community-based meetings in Portland where the public will be updated on committee activities and have the opportunity to inform policy-making.
6) Provide the public with a way to stay involved and informed during the process.
7) Provide interactive meetings with small group breakouts, which distinguish between information and input opportunities in public meetings.
8) Wherever possible, design interactive formats for all meetings to ensure a balanced and fair discussion of issues, ensuring all perspectives are heard.
9) Provide the SAC with the relevant, objective information, in a timely fashion, necessary to make informed decisions. Presentations will provide the facts – pro and con – surrounding the issues in a readily understandable format.
10) Provide the big picture context and interconnections surrounding all issues, before asking the SAC to make a recommendation.
11) Be responsive to SAC requests for information and process support, be clear and transparent about staff positions, and be open to carefully considering SAC recommendations.

H. The Facilitator

An independent facilitator has been hired as a process manager by ODOT with the concurrence of the City, separately from the other consultants. He will assist the SAC co-chairs, the SAC, staff, and subcommittees. He will also facilitate SAC meetings, the Coordinating Committee,

and provide advice on the public involvement program. The facilitator's "client" is the SAC process, but neither SAC membership, nor process participation is a substitute for independent legal or other professional advice. That is the responsibility of the process participants. The facilitator will be responsible to ensure the SAC process is fair, well run, and productive. The facilitator will be available as a resource to the City and ODOT for minor conflict resolution and process improvement suggestions. As a neutral collaborative process provider, the facilitator will not act as an advocate for anyone on any substantive issue. However, the facilitator may propose substantive suggestions for SAC consideration, but will not make decisions on substantive issues.

The Institute *for* Conflict Management, Inc. (ICM, or the facilitator) has been hired for this process. ICM's Executive Director, Sam Imperati, will act as the facilitator. ICM, Sam Imperati, and any subcontractors are not employees of any participant. ICM's written contract is available for review. The facilitator will not be influenced by payment source. ODOT has agreed that his status of facilitator will not be changed without first consulting with the City and the SAC co-chairs.

The facilitator may have non-confidential, informal communications and perform facilitation activities with staff and SAC members, between and during meetings. The facilitator will address situations where it appears a participant is not acting according to these Collaboration Principles and will advise the co-chairs if it appears probable that the SAC will be unable to fulfill its Charge.

V. Collaboration Protocols

A. Quorum

A quorum is a simple majority of voting SAC members or their alternates. If there is no quorum, the co-chairs can cancel/reschedule or conduct the SAC meeting and send all meeting notes and materials to the members for voting at the next meeting.

B. Open Meetings

Meetings of the SAC, TAC, and SAC subcommittees are open to the public and will include an opportunity for public comment. Notice of SAC meetings will be posted in advance of meetings on the joint project website. Notice of subcommittee meetings will be posted in advance of meetings. SAC and SAC subcommittee meeting summaries will be posted on the website as soon as possible following each meeting.

C. Public Comment

The co-chairs or the facilitator will provide periodic public comment opportunities for non-SAC members during meetings before SAC makes a decision. Comments from the public will be limited in time to allow sufficient opportunity to conduct the other portions of the SAC agenda. Typically, comments will be limited to a maximum of three minutes per person. The public is encouraged to submit written comments to project staff for circulation to the full SAC.

D. Meeting Agendas and Meeting Materials

The Coordinating Committee will develop Working Agendas for SAC meetings. Meeting agendas and meeting materials will be mailed and sent electronically to SAC members one week in advance of the meetings, and will be posted on the project website. SAC meetings will begin and end as scheduled.

E. SAC Member Commitments to Each Other

The SAC members, project staff and participants will participate in good faith, which means:

1) Prepare for and set aside time for the meetings and the whole process,
2) Participate fully, honestly and fairly, commenting constructively and specifically,
3) Speak respectfully, briefly and non-repetitively; not speaking again on a subject until all other members desiring to speak have had the opportunity to speak,
4) Allow people to say what is true for them without fear of reprisal from SAC members, the City, or ODOT,
5) Avoid side conversations during meetings,
6) Provide information as much in advance as possible of the meeting in which such information is to be used and share all relevant information to the maximum extent possible,
7) Generate and explore all options on the merits with an open mind, listening to different points of view with a goal of understanding the underlying interests of other SAC members,
8) Consult regularly with their interest groups/organizations and provide their input in a clear and concise manner,
9) Agreeing to work toward fair, practical and durable recommendations that reflect the diverse interests of the entire SAC and the public,
10) When communicating with others, accurately summarize the SAC process, discussion and meetings, presenting a full, fair and balanced view of the issues and arguments out of respect for the process and other members,
11) Success depends on a full airing of the ideas and opinions of each committee member. Members should be forthcoming and honest during discussions and in the consensus process. When a consensus recommendation is reached, each member owes it to the others and to the process to not attempt to effect a different outcome outside of the SAC process once the SAC has reached a consensus recommendation,
12) Strive vigorously for consensus and closure on issues, and
13) Self-regulate and help other members abide by these commitments.

VI. Decision-Making Process

A. Developing Recommendations

The co-chairs and the facilitator will assist the SAC in identifying objectives, addressing the diversity of perspectives and developing substantive, practical recommendations to implement its Charge. The SAC will use a *Discussion Draft* process and a *Consensus Decision-Making* model to assist the process. The SAC will make draft recommendations on an “issue-by-issue”

basis, and then final recommendations as a "package" at each milestone, and again at the conclusion of the process.

B. Representative Voting

Each SAC member will have one vote except those non-voting members (Ex Officio members. Issue: and/or co-chairs?) A vote represents that the member will recommend to his or her organization or group that they should support or oppose the voted-upon proposal consistent with the member's vote. The names of those voting in favor and those voting against a proposal will be noted and included in the SAC's recommendations and the City and ODOT staff recommendations to their respective decision-makers.

C. Consensus

Consensus decision-making is a process that allows SAC members to distinguish underlying values, interests and concerns with a goal of developing widely accepted solutions. Consensus does not mean 100% agreement on each part of every issue, but rather support for a decision, *"taken as a whole."* This means that a member may vote to support a consensus proposal even though they would prefer to have it modified in some manner in order to give it their full support. Consensus is a process of *"give and take*," of finding common ground and developing creative solutions in a way that all interests can support. Consensus is reached if all members at the table support an idea or can say, *"I can live with that."*

C.1. "1-2-3" Consensus Voting Method

The co-chairs and facilitator will assist the SAC in articulating points of agreement, as well as articulating concerns that require further exploration. SAC will use a "**Consensus Voting**" procedure for testing the group's opinion and adjusting proposals. In "**Consensus Voting**," the co-chair or the facilitator will articulate the proposal. Each SAC member will then vote "one," "two," or "three," reflecting the following:

- **"One"** indicates **full support** for the proposal as stated.
- **"Two"** indicates that the participant **agrees with the proposal as stated, but would prefer to have it modified in some manner in order to give it unconditional support. Nevertheless, the member will fully support the consensus even if his/her suggested modifications are not supported by the rest of the group because the proposal, taken as a whole, is worthy of support, as written.**
- **"Three"** indicates **refusal to support** the proposal as stated.

The co-chairs or facilitator will repeat the consensus voting process, as reasonably necessary, to assist the group in achieving **consensus** regarding a particular recommendation, so that all members are voting "one" or "two."

C.2. Cooling-Off Period

If a consensus is not reasonably forthcoming, the co-chairs or the facilitator may table the issue for additional discussion with constituencies, the gathering of new information, or perhaps just sufficient time to consider options more carefully. The "cooling off" period recognizes we value getting as close to consensus as possible by way of dialogue, clarification, and consideration of alternatives. Absent an emerging consensus, the co-chairs or the facilitator may make a

recommendation for the SAC to consider taking into consideration all of the available information and views. The SAC may then revisit the issue.

C.3. No Consensus – Majority and Minority View

If a consensus on an issue is still not reasonably likely, as determined by the co-chair, the votes of those present at the meeting will be taken and recorded as a majority - minority vote. Majority is defined as at least 50% plus one of the SAC voting membership in attendance. The proposed language and reasoning supported by the majority will be noted along with their names in the SAC's recommendations. Members voting in the minority will have their names, proposed language, and reasoning noted in the Minority Report(s). The facilitator will document these issues, the differences of opinion involved, and submit the report to the City and ODOT staff for inclusion in the SAC recommendations along with other stakeholder comments.

VII. Additional Understandings

A. Communications Outside of SAC

SAC members and staff can refer press, public, and other inquiries to the SAC co-chairs, City/ODOT project managers, or the project website, if they desire. Additionally, project staff is available upon request.

B. Meeting Summaries

The facilitator will prepare SAC meeting summaries. They will be provided electronically in draft form to the SAC for proposed correction and comment. The final meeting summaries will be posted on the project website.

The chair of each SAC subcommittee or their designee is responsible for preparing, and submitting for posting, meeting summaries on the project website within one week of the subcommittee meeting.

C. Public Records and Confidentiality

SAC records, such as formal documents, discussion drafts, transcripts, meeting summaries, and exhibits are public records. This is not a mediation. It is a facilitation. As a result, SAC communications (oral, written, electronic, etc.) are not confidential and may be disclosed. However, the private documents of individual SAC members and the private documents of the facilitator that are not shared with the City or the ODOT are not considered public records and are not subject to disclosure under public records laws.

D. Process Conclusion

The SAC process will conclude with submission of its recommendations to the City and ODOT, when necessary funding and resources are no longer available, or when the City and ODOT determine it is unlikely the SAC will fulfill its Charge.

E. Amendment and Interpretation

Amendments to this document can be made by vote of the SAC. The co-chairs or facilitator shall lead a SAC discussion designed to reach a consensus on any process dispute or proposed amendment to these Collaboration Principles.

VIII. Signatures

We agree:

DRAFT

PRELIMINARY ISSUES, OPPORTUNITIES AND CONSTRAINTS

Over the past few months, N/NE Quadrant and I-5 Broadway/Weidler Plans (N/NE Quadrant Project) staff have gathered a wide range of issues and ideas from a broad spectrum of stakeholders. Major sources of input to date include one-on-one interviews with members of the Stakeholder Advisory Committee, verbal and written comments collected at public events (community walks held in September and public open house held in November), comments submitted during the brainstorming session with the two project subcommittees on December 1st and 2nd, and individuals contacting the project staff through the project website and/or email. In addition, project staff has identified some issues for discussion that are included here. This compilation of comments represents a good starting place for the next phase of the process - developing options or alternatives to guide future development and investments in the study area.

This document sorts the comments received so far by geography (see attached map), and groups similar comments together. It also begins to differentiate between general issues and specific opportunities, constraints or ideas that may lead to proposals in the upcoming alternatives development phase of work. Several issues suggested that are beyond the scope of this project are briefly listed at the end.

This is not a final product, but summarizes the issues identified thus far. **It is intended to move the discussion forward.** Additional issues can still be considered in the process as appropriate.

GENERAL QUADRANT-WIDE ISSUES

Staff received a great number of general comments that seem to apply to most or all of the N/NE Quadrant study area. These can generally be grouped into five main categories. These are increasing the area's **urban vibrancy and vitality**, increasing **economic prosperity** in the area, and **embracing environmental leadership**, seeking **balance and equity**, and improved **access and connectivity**.

1. Urban Vibrancy and Vitality

This category includes statements encouraging increased development (particularly on current surface parking lots) including retail, office and housing to provide better/more interesting pedestrian experiences, and new amenities like pocket parks and pedestrian routes. Introducing a diverse range of new uses was suggested to help overcome the highly episodic nature of activity in many parts of the district. It was suggested that an updated urban design strategy will help achieve these goals. A more robust and integrated open space system is seen as needed in parts of the study area. Public safety is seen by some as a major issue threatening livability and investment.

2. Economic Prosperity

This category includes numerous references to increasing employment and business growth in the quadrant – particularly by building on existing businesses and existing major attractors like the Oregon Convention Center, Rose Quarter, and Lloyd Center Mall. Several stakeholders voiced strong support for continuing efforts to locate a new major hotel near the convention center in the future. Several people suggested that districts within the study area would benefit from stronger identities – more "there there".

3. Environmental Leadership

Comments in this area primarily focused on supporting and embracing the Lloyd Green pilot EcoDistrict concept currently under development. Specific topics mentioned included continued progress on stormwater management, finding opportunities for urban gardens, and pioneering green building technologies including measures to improve migratory bird-friendliness in new and existing buildings. Specific opportunity sites mentioned for improving or creating new natural habitat areas include the banks of the Willamette River in the Rose Quarter and the northern slope of Sullivan's Gulch stretching the length of the study area's southern edge. Improving the jobs to housing ratio in the district by encouraging more housing at appropriate affordability levels along with job growth is also seen as a means to improve environmental performance in the study area through commute trip reduction.

4. Balance and Equity

Issues identified generally focused on finding room in the quadrant for new people, business, development, etc. while retaining existing people, businesses and culturally/historically significant buildings, etc. and minimizing or mitigating negative impacts on surrounding areas. Including local people and businesses in the economic growth of the area is desired. Specifically mentioned for preservation were buildings appearing in the *Bosco-Milligan Cornerstones of Community* inventory and existing affordable housing. Building new affordable and middle-income (often referred to as "workforce") housing is also seen as important to maintain a diverse and equitable community in the study area. A "concentric circles" model of economic development that prioritizes local sourcing of goods and talent was suggested. Finally, desire was expressed to see more multi-cultural gathering places in the study area - community centers and marketplaces were mentioned specifically.

5. Connectivity and Access

Issues applicable to the entire study area included maintaining and improving access to, within, and through the quadrant for all modes of transportation including pedestrian, bicycle, auto, transit (bus, light rail and streetcar), truck/freight. I-5 and I-84 are seen as significant pedestrian/bike barriers. Current and future trails should be included as part of the future transportation network. Improving safety across all transportation modes and reducing conflict between different modes is highly desirable. There is a general desire to increase the overall efficiency of our transportation system while adequately serving current and future facilities, businesses and residents and reducing emissions and climate impact. Specific measures to improve efficiency mentioned include: increasing trips by bicycle and walking, increasing transit use, reducing single-occupant vehicle travel, eliminating vehicles from

certain areas, promoting motor cycles and scooters, and increasing the use of alternative fuel vehicles. Increasing housing in the quadrant was suggested as an important opportunity to increase bike and walk commute trips. On parking, the general sentiment is that there are too many surface parking lots in the area, but there is acknowledgement that constrained parking supply may be discouraging new development and business growth. Regional traffic access to and parking available for the major regional event attractors in the quadrant (Rose Garden, convention center, etc.) remains extremely important both now and in the future.

SUBAREA ISSUES

1. Subarea 1 and 1a - Lower Albina and Russell Street

a. Most of the issues identified specific to this area focused on one of two themes: preserving and enhancing the viability of industrial nature of the district, and revitalizing and improving the historic Russell street main street.

b. Key issues related to preserving and enhancing the **industrial viability of Lower Albina** included:
   - Improving **freight access** and parking;
   - Continuing **industrial sanctuary** policies, though possibly with some increased flexibility with regards to allowed office uses

c. Improving pedestrian conditions and bicycle parking were also mentioned. While a few people expressed interest in allowing wide-spread redevelopment including tall residential towers, those voices seem to be a minority opinion.

d. On **Russell Street**, numerous opportunities for renovation and preservation of historic structures exist. These projects could increase retail and restaurant activity on Russell. Several stakeholders have commented that more mixed use development (possibly including housing) would improve the vitality of the main street. Others have noted that there are several vacant parcels adjacent to the **MAX light rail station** and that mixed-use, transit-oriented development might be appropriate in a limited area around the station - targeted zoning changes may be needed to facilitate mixed use development. Improving connections from Russell Street up to N. Mississippi Street and up Russell to Emanuel Hospital also were suggested.

e. This being a predominantly industrial area, **freight capacity and movement** is extremely important including truck-friendly street/intersection design and freeway access.

f. Additional issues raised specific to this area were:
   - Poor access to the **Willamette River** and potential future greenway trails; and
   - A potential opportunity to do more with the lands under the elevated I-5/I-405 freeway interchange.

2. Subarea 2 -Vancouver/Williams Corridor

a. Most comments specific to this area supported efforts for **gradual redevelopment** of the area, while preserving important historic and culturally-significant buildings. Some blocks within this area currently have a residential zoning designation, complicating mixed use redevelopment that includes significant non-residential uses. It has been suggested that **zoning should be more flexible**, however preserving existing housing and encouraging new residential construction in this area continues to be important to the Eliot Neighborhood. Generally, lower scale development seems to be the desired urban form in this area. It should help transition from the single family character in Eliot to the taller buildings allowed in the Rose Quarter and Lloyd District.
   - Should **incentives** be developed to encourage, but not require, residential construction?
   - Should the current high density residential zoning in parts of this area be relaxed to allow more non-residential development?

b. **Access** is an important issue in this area – particularly as potential reconfigurations of I-5 and the over-crossings at Flint, Broadway, Vancouver, and Williams are considered. Multiple, pedestrian- and bike-friendly access options are desirable - including access from this area to the Eastbank Esplanade and future greenway trail.
   - Could there be an additional bike/ped crossing at Hancock?

c. **Views** from the area across Lower Albina and the Rose Quarter to the west side were identified as a potential issue. In particular, the current public view mapped from the southwest corner of Lillis Albina Park is fully obstructed by trees and could be impacted by some development scenarios under consideration in the Rose Quarter / Blanchard Building area.
   - How important is this viewpoint?
   - Should it be improved or relocated?

3. Subarea 3 -Rose Quarter

a. The N/NE Quadrant Project will seek to support and coordinate with the results of the **Rose Quarter Development Project**. To this end, there appears to be substantial support for considering redevelopment at the **School District's Blanchard Building** site. This would likely require a zoning change from the current industrial to commercial/mixed use zoning. Other changes to development regulations might also be recommended by the Rose Quarter work. Additionally, the theme emerged of supporting and strengthening the current role of the Memorial Coliseum and Rose Garden arenas while encouraging new uses.

b. The **Willamette riverfront** is seen as a key opportunity in the Rose Quarter. Suggestions emphasize a desire for:
   - Better access to and along the river (both physical and visual);
   - Increasing water recreation and transportation opportunities; and
   - Creating riverfront habitat.

c. The **Dreyfus grain terminal** is generally assumed to remain for the foreseeable future and is seen as a challenge to redevelopment in the area. Some suggested that even if this facility were no longer in use as a grain terminal, it would be an interesting opportunity for historic preservation and repurposing.

d. **Safe, multi-modal access** to and through the Rose Quarter is an important issue – particularly to the riverbank, as well as across I-5. The current configuration of the I-5/Broadway/Weidler "Box" is viewed as dangerous and unpleasant for all modes (see also freeway/interchange-specific issues below). Specific transportation ideas to consider here include:
   - A new separate bike/ped bridge over I-5 (possibly at Clackamas);
   - Bringing N. Dixon Street across I-5 to connect to Flint; and
   - Reversing the direction on N Vancouver and N Williams Avenues to improve the flow in the "Box".

c. In the longer-term, improvements or reconfigurations to the **Rose Quarter Transit Center** could be an opportunity to reduce the distance between the MAX platforms, create more development opportunity and increase multi-modal access to the area. There is also some desire to consider eventual realignment of the **mainline railroad tracks** along the riverbank inland to reduce the Steel Bridge bottleneck caused by the current s-curve and also allow public access to the river, habitat restoration, and future development along the river.

4. Subarea 4 - Broadway/Weidler Corridor and transition to Irvington and Eliot neighborhoods

a. Most comments received specific to this area related to improving the **main street character** of the district and achieving a **respectful transition** from the Central City to the Irvington Historic District to the north. Specifically, it was suggested that the main street qualities present on the eastern portion of NE Broadway should continue through the entire study area to the Broadway Bridge.

b. Transportation issues have also been raised. Some stakeholders are interested in looking at changes to the current **one-way street traffic configuration on Broadway and Weidler**. Several stakeholders mentioned that there are several **difficult pedestrian crossings** (without signals) on NE Broadway and that improving bicycle safety along the length of the corridor is a priority.
   - Would there be benefits to de-coupling these streets and making them 2-way?

c. Other specific transportation issues mentioned for consideration include:
   - Looking at ways to improve multi-modal safety at the intersections of Broadway/Weidler at MLK/Grand and Broadway/Weidler at 15^{th}/16^{th};
   - Reducing the number of driveways on Weidler; and
   - Untangling the situation at the "Box".

5. Subarea 5 -Central Lloyd

a. Many issues raised specific to this area focus on the opportunity to support both the development and continued success of the **Oregon Convention Center** and the established office district immediately to the east. Opportunities to help support the convention center include the headquarters hotel and entertainment-related development around the facility. **Opportunities in the office core** include unique potential for development with distinctive amenities on the superblocks in the area. Holladay Park Medical Center was also seen as a potential opportunity for growth. The need for a stronger district identity was also identified as something that would help the area thrive.

b. **Residential development** – and the general lack thereof – is frequently cited as a major issue in this part of the study area. Streetcar construction is seen as a major opportunity to help encourage more residential construction here, but questions remain about the market-readiness of the area for housing. There is clear desire for new housing at a wide range of affordability levels – ideally to roughly match the employment profile of the study area. Some questions to think about include:
   - Are the **limited parks and open space amenities** in the area sufficient to support large-scale residential construction?
   - Is the current zoning working to encourage housing?
   - What parking strategies are appropriate? Currently, parking in the area is challenging, discourages residential development, and is a burden to existing residents as new development makes use of the already limited supply.

c. Other issues raised specific to this area include:
   - A lack of clear **urban form and street hierarchy** and large blocks and buildings. What are the main streets? How can other streets in the area evolve to serve multiple purposes? The proposed Holladay green street improvements were cited as a positive example.
   - The many **large blocks** in the district are seen as a challenge to access and pedestrian connectivity, but are also seen as a unique opportunity in the Central City with typically much smaller blocks. Including pocket parks in new development was suggested as a way to achieve new green/open space amenities incrementally.

d. Regarding transportation and access, **improved pedestrian and bike access** on MLK and Grand and across/under I-5 was frequently suggested as was the importance of maintaining efficient truck access to the Rose Quarter and Convention Center. Specific ideas suggested included: considering new pedestrian crossings to the Rose Quarter at Clackamas, and to the Central Eastside at 7th Avenue (over I-84).

6. Subarea 6 and 6a -Lloyd Center Mall, Office Core, Holladay Park and Sullivan's Gulch transition

a. The poor quality of the **pedestrian experience** and limited street-level activity is cited as a challenge to be addressed in this plan. **Increasing vitality** through redevelopment and new development is a common desire. Some specific suggestions include:

- Improving the outside face of the Lloyd Mall with more windows and obvious entrances facing outward; and
- Developing the **Lloyd Cinema parking lot** with a mix of uses, including possibly residential, retail and other uses.

b. The predominance of **large property owners** and **large blocks** was noted as both a challenge and an opportunity in this area. Existing residential development in this area is limited and typically has little or no parking. Residents are interested in residential permit programs.

c. Public safety concerns in **Holladay Park** are widespread and a variety of measures to improve conditions there have been suggested. These range from near-term actions like increased tree trimming and more active programming of the park to longer-term ideas, such as improving surrounding development conditions with new buildings facing (embracing) the park and adding additional design features to the park to attract a wider variety of users.

d. Increasing **pedestrian connectivity and safety** both within this part of the study area and between this area and adjacent areas was cited as an important issue. Suggestions for improvements include:
- A new pedestrian bridge between this area (somewhere around NE 9th Ave) and the Central Eastside (across I-84),
- Adding bicycle lanes to the 12th Avenue bridge; and
- Continuing bike lanes on Multnomah all the way to NE 21st Ave.

e. The properties at the SW corner of **NE Multnomah and NE 21st** are seen as an interesting development opportunity. There is some concern about possible demolition of the existing older homes on part of the site, but generally there seems to be interest in looking at redevelopment scenarios for the corner. There appear to be differing opinions on what scale of building would be appropriate here. The site currently has split zoning, and may need to be rezoned to accommodate desired development. This area could also provide a convenient access point to the potential future Sullivan's Gulch Trail.
- What type of development at this site would be appropriate and desirable?

7. The Freeway and Interchanges

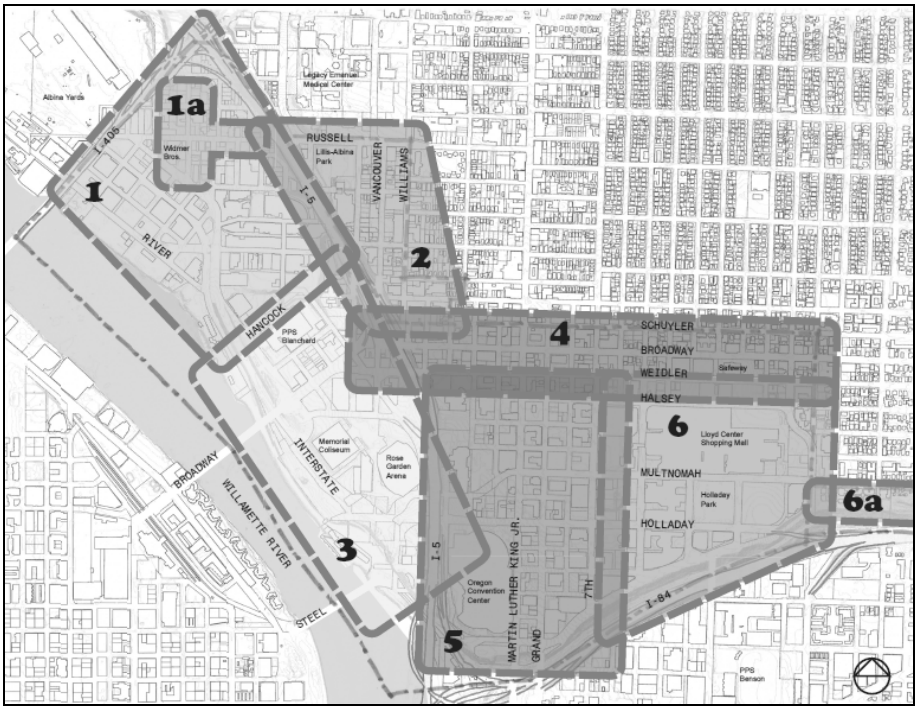
a. Freeway related issues mentioned by study participants have focused on three themes: **safety**, **operational issues** as related to the freeway and overpasses, as well as **improved freight movement**.

b. Expressed **safety** related issues have included a desire to reduce weaving and improve merge lengths on I-5 as a way to help reduce the incidence of rear end and sideswipe collisions. On overpasses and interfaces with the local street network, there is a desire to improve safety especially by clarifying vehicular patterns and/or to separate vehicular, bikes and pedestrian traffic at identified conflict areas. The Broadway/Weidler box and the intersection of Vancouver and Larrabee were singled out as particularly problematic areas, especially during major events in the Rose Quarter.

c. Comments related to freeway **operational issues** generally focused on:
   - Improvements related to the reliability of traffic flow;
   - Reducing delay;
   - Increasing levels of service; and
   - A desire to increase average freeway speeds through the district.

d. It was also suggested that the reconfiguration or removal of specific **on and off ramps** to limit the number of intersections that feed onto the local street grid is desirable. Spreading the ramps and reducing the number of lights in specific locations to improve traffic flow was also mentioned, as was a desire to lengthen specific on ramps to minimize traffic bound for the freeway from backing up on local streets. Finally, a strong desire was expressed to **avoid impacts on key cultural sites** when looking at proposed freeway improvements.

e. **Freight movement** in support of local and regional economies was highlighted as a desired outcome of this process. Maintaining and improving freight movement and distribution on the freeways, as well as to locally designated freight routes, such as Lower Albina, are needed to ensure the reliable flow of goods. Freight movement improvements may take the form of reconfigured freight geometries on local streets and at on ramps, especially inareas like the Broadway/Weidler "box".



f. A desire to increase the **reliability of travel times** and to increase capacity for freight movements on the freeways was also expressed. It was suggested that this study should identify alternative freight access routes to and from Lower Albina, Swan Island and NW industrial areas.

ISSUES BEYOND THE SCOPE OF THIS PROJECT

Staff prepared a scope document to clarify the types of issues the N/NE Quadrant and I-5 Broadway/Weidler Plans will consider. The Stakeholder Advisory Committee reviewed the document at their December 9th meeting and is expected to approve a revised version at their meeting on January 20th. Using that document as guidance, a number of issues have been raised that are clearly not within the scope of this project. As a result they have not been included above in this document. Issues commonly raised in this category include but are not necessarily limited to:

- Questions about the future of the I-5 Eastbank Freeway in the Central Eastside.
- Issues pertaining to possible future high speed rail system needs in the quadrant.
- Determining future streetcar system priorities or alignments.
- Decisions on current or future Urban Renewal Areas.

N/NE QUADRANT SUB AREAS MAP
(Freeway – not shown – is area 7)

N/NE Quadrant Project- Issues and Opportunities List

Comments Collected from the project website, email correspondence, open house (11/15/10), SAC subcommittee meetings (12/1/10 and 12/2/10), SAC comments and interviews, project staff and the Lower Albina Business Survey.

N/NE QUADRANT-WIDE

#	Subarea	Topic Area	Issue Comment
1	Quad-Wide	Land Use	District Vibrancy/Vitality & Creating a Livable Community: Need more human-scale architecture
2	Quad-Wide	Land Use	District Vibrancy/Vitality & Creating a Livable Community: Develop Underutilized Land with "responsible" Density
3	Quad-Wide	Land Use	District Vibrancy/Vitality & Creating a Livable Community: Health Aspects of Plan
4	Quad-Wide	Land Use	Social/Environmental/Economic Balance Sustainability & Equity – respect Albina Plan and Increasing Diversity
5	Quad-Wide	Land Use	Increasing Employment: Business Vitality
6	Quad-Wide	Land Use	Increasing Employment: Risk of Displacing Existing Businesses
7	Quad-Wide	Land Use	Natural Areas & Natural Resources
8	Quad-Wide	Land Use	District Identity (multiple) lacking
9	Quad-Wide	Land Use	Lack of Resources for Implementation/ Need to see real changes – not just plans: Partnerships needed
10	Quad-Wide	Land Use	Bird friendly building design district wide
11	Quad-Wide	Land Use	Consider tax incentives or other carrots to push development off surface parking lots
12	Quad-Wide	Land Use	Centralized bike facilities (shared) with lockers
13	Quad-Wide	Land Use	Relook at development incentive programs and regulations
14	Quad-Wide	Land Use	Target development support: rose quarter, 7th/9th/Multnomah/Holladay, Blanchard, and Lloyd Mall properties
15	Quad-Wide	Land Use	Green metropolis David Owen
16	Quad-Wide	Land Use	Residential Development: New market involved strategies and workforce housing
17	Quad-Wide	Land Use	Concentric circle economic development opportunities: focus on engaging local skills and resources
18	Quad-Wide	Land Use	Asset based community development using existing human magnet nodes
19	Quad-Wide	Land Use	Approach major land holders: public and private partnerships and master planning
20	Quad-Wide	Land Use	River access near and distant. Obstacles: I-5, MLK/Grand, and Railroad
21	Quad-Wide	Land Use	Connect Clackamas to River
22	Quad-Wide	Land Use	Improve all pedestrian connections under I-5- create lively places
23	Quad-Wide	Land Use	Safety concern elsewhere as well as Holladay Park (ex. Homeless issue around Lloyd)
24	Quad-Wide	Land Use	Green infrastructure/sustainable storm water: green street trees, ecoroofs, bioswales, etc.
25	Quad-Wide	Land Use	Ensure all sides of any/every new development is pedestrian friendly not just a wall or a window- but doors and access
26	Quad-Wide	Land Use	Land value/timing economic strategy
27	Quad-Wide	Land Use	Identify/enhance commercial "main streets" business districts and new potential Business Districts
28	Quad-Wide	Land Use	Develop and preserve parks, trails, gardens, and open spaces. Encourage private pocket parks. Trade FAR for green available to public.
29	Quad-Wide	Land Use	View corridors evaluation and barriers to development
30	Quad-Wide	Land Use	Housing incentives, employer-supported housing, other incentive to achieve residential goals
31	Quad-Wide	Land Use	Preserve/enhance current attractors
32	Quad-Wide	Land Use	Urban farms and community gardens as health and healing green spot
33	Quad-Wide	Land Use	Isolation of various segments of the district by roadways, freeways, and soon streetcar lines. Need to bridge these with more controlled intersections from MLK and MLK/Grand from San Rafael on the north through to I-84. Streetcar stops need to include controlled intersections at least every 3 "regular" blocks for its entire length.

#	Subarea	Topic Area	Issue Comment
34	Quad-Wide	Land Use	Existing zoning codes need to be re-evaluated in light of experience with mixed-use developments. Higher density residential zones don't seem to be attracting new development. Consideration should be given to reverting back to the "commercial" zones they had before the last Plan BUT with a "mixed-use" overlay that allows residential above commercial on floors one and two and requires developers to pay into a housing fund if they do not develop housing on-site within 5 years.
35	Quad-Wide	Land Use	The district is lacking in parks and open space. The north side of Sullivan's Gulch should be designated for development into a linear park with terraces and a new ped/bike path.
36	Quad-Wide	Land Use	Reserve area above I-5 for high speed rail- already publicly owned- from north cross Willamette by the Fremont Bridge (or tunnel). Realign Union Pacific tracks to be adjacent to light rail. Build plaza above (from Larrabee to Steel Bridge) with development above. Build multipurpose Willamette River Greenway Trail adjacent to river in wide pullouts. Access in commercial- coffee shop(s), restaurants adjacent to trail.
37	Quad-Wide	Land Use	Re-align Union Pacific tracks across from Rose Garden (straighten out S curve) Move tracks east and bury/tunnel. Build terrace and development above light rail and UP- connect Rose Garden/Coliseum with River. Build multipurpose trail (16'-20' wide) along the river.
38	Quad-Wide	Land Use	Balanced policies which respect long time residential uses and need for more residential development in the area. Don't ignore the R zoned properties on parking issues.
39	Quad-Wide	Land Use	Freeze renewals to expired PDC URA's
40	Quad-Wide	Land Use	Public funds 20% of structure the public expects 20% of net profit e.g. medal on NFL Green bay
41	Quad-Wide	Land Use	Concern about traffic impacts/congestion generated by light rail infrastructure and now
42	Quad-Wide	Land Use	Concerns about URA expenditures to property owners who may not need it, and not getting enough public benefit in return
43	Quad-Wide	Land Use	The walkable character must include and link from the Lloyd center to the convention center an on to the Rose Quarter. MAX and trolley must feel like they fit the local surroundings so that they are an easy option for short hops. Day tickets for tourists and regional visitors should include use of both without multiple tickets.
44	Quad-Wide	Land Use	the plan needs to include development of the Sullivan's Gulch bike path and the North Willamette Greenway. In addition to being major daily links to the area these would develop into significant tourist amenities with development of Gateway Green and easy access to Kelly Point Park.
45	Quad-Wide	Land Use	Water Recreation
46	Quad-Wide	Land Use	Create better connections between Albina and Lloyd/Rose Quarter
47	Quad-Wide	Land Use	Parking for residential uses is a problem- we need permits! Yes!
48	Quad-Wide	Land Use	I hope we can plan for: short term safety concerns (closing Broadway on/off ramp) and long term- do we really want a highway on our waterfront? Please analyze what we can do in 30,40,50 years. It severely disrupts walkability in an area we want to activate and all areas near off/on ramps consume significant amount of traffic and parking lots that could be developed.
49	Quad-Wide	Land Use	can you address the usual freeway damage> Splitting neighborhoods, limiting access from local street to otherwise nearby local street cries to be remedied. Figure out how.
50	Quad-Wide	Land Use	Linear commercial corridor along N. Broadway featuring restaurants that will be popular pre- and post- Rose Quarter events but also outside of and independent of Rose Quarter events that also rely on traffic going by on Broadway. Tame "the box", de couple Broadway and Weidler, traffic calm streets, move I-5 on/off ramps at Broadway/Weidler. Excessive auto traffic. The box, I-5 ramps. Wide streets. One-way streets. Single/isolated uses. Lack of vibrancy.
51	Quad-Wide	Land Use	Move residential influence- encourage the need for essential public service needs such as parks and schools. Parking- the existing policies and planned development are in conflict with each other. Want more residential but restrictions on existing users.
52	Quad-Wide	Land Use	Restore fine grain grid. More sidewalk connectivity. Emphasis always seems to be on automobile throughput. This must be revisited. 1st priority should be bike/pedestrian.
53	Quad-Wide	Land Use	Need to develop a strategy to address the episodic nature of the vibrancy in the Quadrant.
54	Quad-Wide	Land Use	Need to be cognizant of the effects of our work on other areas in the city.

#	Subarea	Topic Area	Issue Comment
55	Quad-Wide	Land Use	Connections to the River! Easier to walk and bike. Easy connection between neighborhood and Rose Quarter. Traffic calmed on Broadway/Weidler. Right now the SOV is the priority not people. Make people the priority.
56	Quad-Wide	Transportation	Just wanted to say how much I agree with those who went to the meeting: bike and pedestrian improvements should be top priority. Moreover, I frankly think that only two options should be considered vis-a-vis freeway congestion: 1. leave it as it is and let the congestion limit driving and push more freight to go by train rather than truck, since trucks on the freeway are dangerous and undesirable. 2. add highway tolls that will discourage freeway driving and push Vancouverites to finally extend the MAX into Vancouver. Under no circumstances should ODOT widen the freeway, as the best peer-reviewed research suggests that this will only allow greater pollution without actually lessening congestion. Thank you Portland for taking citizen comment seriously! This is our town, and planning processes in it should not be dominated either by Salem or by trucking companies not even based in our state!
57	Quad-Wide	Transportation	The pollution created by I-5 acceleration/deceleration and general traffic is causing higher than average asthma rates and this is just being imposed on the residents of N/NE Portland with minimal benefits to them. Electric vehicles will be part of the solution, as well as tolling for congestion management, etc.
58	Quad-Wide	Transportation	Freeway entrances clog local traffic at prime commute times- slowing commuter and local traffic. Is there a way to address this?
59	Quad-Wide	Transportation	Bicycling can be scary
60	Quad-Wide	Transportation	Further development of the freeways must be done in a minimalist way with priority given to the through movement of traffic. Priority needs to be given to the through movement of traffic. This could involve creation of separate through lanes, or timed closure of certain ramps when their use would impede the general flow of traffic. This plan needs to be linked in a realistic way to the effects that the development of the CRC will have on flow through the area. without building monolithic roadways we need to make realistic plans for the movement of commerce. Specific attention must be directed to the flow from the north onto Broadway and Weidler. the volume and speed of this flow has a major negative impact on the human scale of the area, and is a specific block to comfortable ingress into the Rose Quarter area.
61	Quad-Wide	Transportation	Consider lowering the posted speed to 35 mph for those merging onto I-5
62	Quad-Wide	Transportation	When is ODOT going to remove I-5?
63	Quad-Wide	Transportation	Traffic on I-5 has forced me to avoid the interstate as much as possible and use local streets. If traffic in the area continues to increase, I may consider moving business
64	Quad-Wide	Transportation	Tolling/congestion pricing should be considered
65	Quad-Wide	Transportation	Vision: to deliver local freight and visitors only- not for through travel. Dislike: Places where vehicles leaving or entering the freeway conflict with pedestrians and bicyclists.
66	Quad-Wide	Transportation	Vision: 1. Primary use freight. 2. Limited access to surface grid. 3. Much better bike/pedestrians accessibility. Dislike: Conflicts between surface traffic and those entering/exiting freeway reduce access to/from surface grid.
67	Quad-Wide	Transportation	50 mph speed limit is too high. Lower it to 30 or 35 mph and you'll achieve: a more even flow of traffic, fewer accidents due to short merge/weave distances, and lower severity of accidents= less property damage and fewer serious injuries. Add a bike/pedestrians path to the 405 bridge upper deck. use the left side of the Kirby St on ramp from Cook St. to the bridge structure. Use the left shoulder across the entire bridge and south towards the Glisan overpass (on the median at turn point). Build a connecting ramp from the median to Glisan Street.
68	Quad-Wide	Transportation	See this by 2011!: Reduce vehicle lanes on city streets to 12 feet and allocate the extra space to bike lanes. See example on rear for Williams Ave between Weidler/Broadway.
69	Quad-Wide	Transportation	Freeway access works well right now from a local standpoint. Noise from freeway has not been mitigated like other portions of town.

#	Subarea	Topic Area	Issue Comment
70	Quad-Wide	Transportation	I like that I-5 is only 2 lanes in each direction. Please keep it that way. Dislike: The Box and especially the ramps at Broadway/Weidler. Barrier qualities of I-5. Excessive traffic, fast traffic on streets leading to I-5. Max station under I-5. Noise of I-5. I see more potential in Broadway then the Rose Quarter superblock. Would prefer improving N. Broadway at the expense of Winning Way (as far as traffic is concerned). Consider moving ramps to Winning Way and Clackamas to free up Broadway (I-5 southbound on ramp already exists).
71	Quad-Wide	Transportation	There's an over abundance of parking- both surface and structured. The interstates (I-5, I-405, I-405, I-84) negatively impact quality of life. They are unpleasant to be around.
72	Quad-Wide	Transportation	No highway widening that tears out buildings. "Tinkering" ok. Hope that Broadway Bridge can handle all the uses- like streetcar.
73	Quad-Wide	Transportation	Increase the number of bikes, pedestrians, public transportation, commuters and visitors- reduce the number of drivers! Improved residential development will only be possible with improved parking for residents! Lack of street parking for residents in the district. I would like a permit program for residents.
74	Quad-Wide	Transportation	Vision: Be able to get from point A to point B on my commuter vehicle- bicycle- without fearing for my life or resorting to riding on sidewalks.
75	Quad-Wide	Transportation	Use small size buses operating on alternative fuels or solar. Maintain charge stations for electric cars. Make ticket sales easy and close to the platforms of stations. Put parking areas in the neighborhood, not huge lots (Gateway) ripe for crime. I know people who will not use the parking for fear of crime.
76	Quad-Wide	Transportation	More pedestrian oriented and friendly. Less dominated by auto traffic. Separated cycle tracks and multi-use paths. More LRT and Streetcars down NE Broadway to Hollywood and up MLK to Alberta and down Alberta. Better bus system. Keep passenger rail on the west side and at Union Station including high speed rail.
77	Quad-Wide	Transportation	Decouple and traffic calm MLK/Grand and Broadway/Weidler. Max speed over Steel Bridge- fix bottleneck on bridge. MAX station under I-5. Consider consolidating MAX stations between Rose Quarter and Lloyd Center to speedride. The box- dangerous and avoided by peds and bikes.
78	Quad-Wide	Transportation	Maintain key linkages to downtown
79	Quad-Wide	Transportation	Bicycle and Pedestrian safety
80	Quad-Wide	Transportation	Improve access to the Willamette River
81	Quad-Wide	Transportation	Greenhouse gas/air quality improvement - pollution is causing higher asthma rates
82	Quad-Wide	Transportation	Conflict among modes of travel
83	Quad-Wide	Transportation	Ensure adequate turning radii for freight
84	Quad-Wide	Transportation	Too much surface parking
85	Quad-Wide	Transportation	How much is too much surface parking>
86	Quad-Wide	Transportation	Pedestrian access and adequate infrastructure
87	Quad-Wide	Transportation	Promote motorcycles (motorized 2 wheeled vehicles) to reduce congestion
88	Quad-Wide	Transportation	Maintain or improve traffic capacity to major attractions
89	Quad-Wide	Transportation	Disconnected destinations and commercial corridors discourage walking
90	Quad-Wide	Transportation	Protect and improve transportation access for existing industrial and port jobs
91	Quad-Wide	Transportation	Identify alternative freight access routes to and from Lower Albina, Swan Island, and NW Industrial areas other than I-5, such as a new bridge between NW Industrial area and Swan Island
92	Quad-Wide	Transportation	Remove short auto trips from the freeway to improve the freeway system through this area (particularly with regard to focusing on freight, and multiple-occupancy or bike transportation).
93	Quad-Wide	Transportation	Reduce/eliminate single-occupancy vehicle trips as a companion to improving freight movement- make the freeway for freight and for higher occupancy or bike options
94	Quad-Wide	Transportation	connectivity to trails should be planned
95	Quad-Wide	Transportation	Identify parking issues to be addressed as part of the CC2035/CCTMP process
96	Quad-Wide	Transportation	Land use development and opportunities are greatly impacted by parking and transit (their existence or lack thereof)
97	Quad-Wide	Transportation	Improve geometrics for turning, stopping and other movements for freight routes to the district
98	Quad-Wide	Transportation	Improve geometrics for turning, stopping and other movements for freight vehicles in key freight routes to the district

#	Subarea	Topic Area	Issue Comment
99	Quad-Wide	Transportation	Rail freight- include the possibility of eliminating the S-curve in the rail system in this area
100	Quad-Wide	Transportation	Include something about the type of fuels/energy used.
101	Quad-Wide	Transportation	Examine the relationship between parking strategies to support land use development strategies while encouraging the use of alternative transportation modes, including proximity to transit, demand management strategies, bicycling, and proximity to housing
100	Quad-Wide	Transportation	Stormwater needs to be analyzed/planned
101	Quad-Wide	Transportation	Consider pulling bikeways off of large high-vehicle traffic areas, and give them separate lanes/trails/streets (for cyclists' safety and for larger space for cars in big streets- like Broadway/Weidler)

LOWER ALBINA (MAP AREAS 1&2)

#	Subarea	Topic Area	Issue Comment
1	Lower Albina	Land Use	Revitalizing Russell Street
2	Lower Albina	Land Use	Opportunity for Mixed-Use development around MAX Station?
3	Lower Albina	Land Use	Best long-term use of industrial land?: Increase business growth and employment density?
4	Lower Albina	Land Use	Best long-term use of industrial land?: Need thoughtful transition from Rose Quarter/Broadway to industrial land to the north
5	Lower Albina	Land Use	Best long-term use of industrial land?: Continue policy to limit housing?
6	Lower Albina	Land Use	Best long-term use of industrial land?: Make alleyways people-friendly?
7	Lower Albina	Land Use	Advantage/disadvantages of slope
8	Lower Albina	Land Use	Protection and restoration of riverbanks. Fish and wildlife habitat along River/Rose Quarter.
9	Lower Albina	Land Use	MAX stop also close to hospital- increases potential for visitors and staff to use MAX by making that eight blocks vibrant interesting and safe (including under I-5)
10	Lower Albina	Land Use	Improve connectivity of historic Russell St/ Widmer Brothers both north to Mississippi and east to Russell/Vancouver
11	Lower Albina	Land Use	Area below elevated I-5 and 405 interchange where city equipment is kept- best location for city- alternative uses
12	Lower Albina	Land Use	Industrial Area west of Interstate: This is a 25 year plan. The UP yards and cement and grain silos are unlikely to be economic for that much longer. The plan should anticipate what should come after. Since the current landowners will oppose any zone change that threatens their current operations, this should be a "conditional zone" that would only be implemented if current uses change significantly. Note that a change in use at each of these sites WILL provide an opportunity for riverside access. Also should work with PDC to "vision" current industrial uses in this area and prospects for their survival for 25 years and what kinds of industries of the "future" may benefit from location in this district.
13	Lower Albina	Land Use	Area east of Interstate: This area is significantly under-developed. The predominate use is either "mixed" or warehousing, including City uses by the Water Bureau and for the Albina Yards. The entire area should be rezoned for mixed use that allows light industrial but facilitates residential development. Also, it appears this is an area where "point towers" so popular in Vancouver BC should be facilitated. Taller, narrower towers can tack advantage of the views that are blocked by the bluff and freeway, increase density, and yet avoid the "wind tunnel" and "urban canyon" effects of the Pearl.
14	Lower Albina	Land Use	Russell Street favorable zoning for mixed use/housing/etc.
15	Lower Albina	Land Use	Need better business funding
16	Lower Albina	Land Use	Government regulations
17	Lower Albina	Land Use	Parking
18	Lower Albina	Land Use	Vandalism/graffiti
19	Lower Albina	Land Use	Increase area of residential zoning
20	Lower Albina	Land Use	Lack of business association activity
21	Lower Albina	Land Use	Lack of expansion space
22	Lower Albina	Land Use	Need 24 hour activity
23	Lower Albina	Transportation	I-5 Barrier for pedestrian/bike connections to Eliot
24	Lower Albina	Transportation	Limited east/west transit connectivity
25	Lower Albina	Transportation	Need better wayfinding from Russell St to N Mississippi MAX Station

#	Subarea	Topic Area	Issue Comment
26	Lower Albina	Transportation	N Russell/Interstate intersection - confusing operations
27	Lower Albina	Transportation	Lack of sidewalks west of Interstate
28	Lower Albina	Transportation	Constrained freight rail capacity
29	Lower Albina	Transportation	Locate North Portland Greenway Trail north-south through Lower Albina connecting to Swan Island at the north end
30	Lower Albina	Transportation	Maintain freight movement and distribution areas (like in Lower Albina, etc.)

NE BROADWAY MAIN ST. & VANCOUVER/WILLIAMS TRIANGLE (MAP AREAS 3&5)

#	Subarea	Topic Area	Issue Comment
1	Broadway & Vancouver/Williams	Land Use	Revitalize entire length of Broadway from River through the study area: Historic Preservation
2	Broadway & Vancouver/Williams	Land Use	Revitalize entire length of Broadway from River through the study area: Need sensitive transitions to neighborhoods at Central City edges (Irvington, Elliott, Sullivan's Gulch)
3	Broadway & Vancouver/Williams	Land Use	Consider changing high-density residential zoning to allow more commercial uses
4	Broadway & Vancouver/Williams	Land Use	Criss-Cross Lloyd to connect SE and NE on 124th and Grand (Streetcar)
5	Broadway & Vancouver/Williams	Land Use	Include sensitive cultural historic buildings in this area
6	Broadway & Vancouver/Williams	Land Use	Revitalize both Broadway and Weidler Streets
7	Broadway & Vancouver/Williams	Land Use	"Affordable" housing will not (usually) be "new" development but restoration and preservation of existing residential units. Ensure affordable parking for residents.
8	Broadway & Vancouver/Williams	Land Use	City and community with Emanuel Hospital work together in developing hospital vacant land
9	Broadway & Vancouver/Williams	Land Use	NE Broadway: Remove bikeways on Broadway/Weidler when other bike corridors are enhanced. Enhance Broadway as a Main Street.
10	Broadway & Vancouver/Williams	Land Use	DO NOT remove Flint or the overpass unless it is replaced (don't simply redirect traffic to Williams and Vancouver). This route is needed to access businesses and for bike and pedestrian passage to/from the District and bridges. Facilitate development along streetcar route based on passenger traffic (shift away from current auto-oriented businesses)
11	Broadway & Vancouver/Williams	Land Use	This is an area where "point towers" so popular in Vancouver BC should be facilitated. Taller, narrower towers can tack advantage of the views that are blocked by the bluff and freeway, increase density, and yet avoid the "wind tunnel" and "urban canyon" effects of the Pearl.
12	Broadway & Vancouver/Williams	Land Use	The box area is such a problem that my company will no longer deliver using company trucks
13	Broadway & Vancouver/Williams	Transportation	frequent driveway placement on Weidler is hazardous to bicyclists and pedestrians. Minimize driveways especially for drive thus.
14	Broadway & Vancouver/Williams	Transportation	Move freeway ramps away from Broadway/Weidler. Move to new bridge connection at Clackamas St/Winning Way
15	Broadway & Vancouver/Williams	Transportation	Decouple Broadway/Weidler- major bike and vehicular flows eases traffic and increases bike safety
16	Broadway & Vancouver/Williams	Transportation	Interest in more transportation mode clarity in the system: add more ped/bike corridors through the area, but then also remove them from the busier corridors like Broadway/Weidler
17	Broadway & Vancouver/Williams	Transportation	Sherwin Williams Paint store - corporate won't deliver because of traffic queues - don't own property if ROW is needed, owner gets money - like location - get certain amount of pass-by/drop-in customers
18	Broadway & Vancouver/Williams	Transportation	Tough to get bikes through Wheeler/Williams intersection
19	Broadway & Vancouver/Williams	Transportation	Weaves on both NB I-84 to Weidler and SB Wheeler to I-84 are difficult
20	Broadway & Vancouver/Williams	Transportation	Broadway Weidler intersection is a nightmare with traffic backing up on through streets

#	Subarea	Topic Area	Issue Comment
21	Broadway & Vancouver/Williams	Transportation	Conflict between off ramp traffic and bikes/peds at the convergence of Vancouver and Broadway ramp
22	Broadway & Vancouver/Williams	Transportation	Limited pedestrian/bike connection to Lower Albina District and the proposed North Willamette Greenway Trail
23	Broadway & Vancouver/Williams	Transportation	Bike connection to/from Eastbank Esplanade
24	Broadway & Vancouver/Williams	Transportation	No east/west transit connections (across I-5) between Broadway and Fremont
25	Broadway & Vancouver/Williams	Transportation	Improve bike/ped safety on Vancouver/Williams
26	Broadway & Vancouver/Williams	Transportation	Difficult ped connections to Rose Quarter
27	Broadway & Vancouver/Williams	Transportation	Limited ped connections to Broadway Bridge and downtown
28	Broadway & Vancouver/Williams	Transportation	Need another ped/bike connection across I-5 at Hancock
29	Broadway & Vancouver/Williams	Transportation	The Box: High Collisions- westbound Broadway to northbound I-5
30	Broadway & Vancouver/Williams	Transportation	The Box: Bike safety at Broadway/I-5 ramp
31	Broadway & Vancouver/Williams	Transportation	The Box: Weidler/Victoria/I-5 ramp- bike,ped,safety
32	Broadway & Vancouver/Williams	Transportation	Weaving on Weidler east of "the box"
33	Broadway & Vancouver/Williams	Transportation	The smaller Box: High collisions at Broadway/Weidler at MLK Jr./Grand
34	Broadway & Vancouver/Williams	Transportation	Another Box: High ped collisions at Broadway/Weidler at 15th and 16th avenues
35	Broadway & Vancouver/Williams	Transportation	Lane imbalances- Grand approaching Broadway & Broadway approaching I-5
36	Broadway & Vancouver/Williams	Transportation	Improve bike/ped safety on Broadway/Weidler
37	Broadway & Vancouver/Williams	Transportation	Too many driveways on Weidler
38	Broadway & Vancouver/Williams	Transportation	Move traffic from Vancouver to Flint overpass
39	Broadway & Vancouver/Williams	Transportation	Improve bike crossing of Broadway/Weidler on 7th and 9th
40	Broadway & Vancouver/Williams	Transportation	Need more traffic lights to slow traffic on Broadway/Weidler. Treat like downtown
41	Broadway & Vancouver/Williams	Transportation	Recent lane revisions on Broadway constrain easy auto access between I-5 and the bridge
42	Broadway & Vancouver/Williams	Transportation	Improve access for peds along MLK at San Rafael
43	Broadway & Vancouver/Williams	Transportation	It would be easy to extend streetcar to the east along Broadway/Weidler

ROSE QUARTER & N BROADWAY (MAP AREA 4)

#	Subarea	Topic Area	Issue Comment
1	Rose Quarter	Land Use	Redeveloping PPS Blanchard Site: Reserve PPS site for AAA Baseball Stadium?
2	Rose Quarter	Land Use	Access to River & Public spaces on the riverbank: Realign UP Rail line to make river bank accessible with new development and greenway trail.
3	Rose Quarter	Land Use	Access to River & Public spaces on the riverbank: Future of Louis-Dreyfus Grain Terminal? Public attraction?
4	Rose Quarter	Land Use	Access to River & Public spaces on the riverbank: River attraction? Yachts? Amphitheater?
5	Rose Quarter	Land Use	Support Rose Quarter Redevelopment: Capitalize on Streetcar

57236

#	Subarea	Topic Area	Issue Comment
6	Rose Quarter	Land Use	Support Rose Quarter Redevelopment: Long-term development opportunities around redesigned Rose Quarter Transit Center
7	Rose Quarter	Land Use	Support Rose Quarter Redevelopment: Create more developable lots at east end of Broadway Bridge?
8	Rose Quarter	Land Use	Buildings too large and blocks too long for pedestrian comfort
9	Rose Quarter	Land Use	PPS Blanchard site: multicultural gathering and community center, world market incubator
10	Rose Quarter	Land Use	Riverplace development: accessible housing for aging population
11	Rose Quarter	Land Use	New bike/pedestrian bridge over I-5 from Clackamas to Winning Way
12	Rose Quarter	Land Use	Redevelop east side transit center to provide a viable train station and stimulate development
13	Rose Quarter	Land Use	Preserve station site for future high-speed commuter rail west of Coliseum
14	Rose Quarter	Land Use	Provide for eastside LRT connection between Rose Quarter and OMSI
15	Rose Quarter	Land Use	PPS cannot endorse a reservation of property to a specific use at this point
16	Rose Quarter	Land Use	Protection and restoration of riverbanks. Fish and wildlife habitat along River/Rose Quarter.
17	Rose Quarter	Land Use	Reserve PPS site for AAA or pro baseball stadium (capable of future second level seating)
18	Rose Quarter	Land Use	Blanchard/ Water Bureau and redevelopment for employment uses
19	Rose Quarter	Land Use	Keep option to remove Coliseum for another more viable use
20	Rose Quarter	Land Use	Develop discovery zoning map on urban edge with arts and non-profit for bikes and health
21	Rose Quarter	Land Use	Enhance views or view corridors on eastbank
22	Rose Quarter	Land Use	Food carts: in Rose Quarter and Memorial Coliseum plazas
23	Rose Quarter	Land Use	Keep the grain elevators by the steel bridge
24	Rose Quarter	Land Use	Amphitheater
25	Rose Quarter	Land Use	Constructed wetlands along the river
26	Rose Quarter	Land Use	Create habitat under bridges/esplanade
27	Rose Quarter	Land Use	Make the parcels around the East side of the Broadway Bridge developable
28	Rose Quarter	Land Use	Why would the city consider eliminating these historic grain elevators? They reflect the bounty of the whole Willamette Valley and Portland's agricultural and port history. And seeing huge grain ships practically downtown is simply amazing. How many other cities can say they have this? Please don't remove the grain elevators! (Even if they are not economically viable as working grain elevators, maybe they could be repurposed?) There is a lot of other riverside parkland already in place.
29	Rose Quarter	Land Use	Need to coordinate various planning efforts going on
30	Rose Quarter	Land Use	Need to preserve and enhance large event institutions
31	Rose Quarter	Land Use	Vision: Lively pedestrian-oriented waterfront thronged with people. So much of the waterfront near downtown Portland is empty and underutilized even including Waterfront Park. Dock space for boats. Mixed use neighborhood directly on the water- something like a greatly improved River Place would be great in this area. Moving the railroad tracks toward Interstate Ave to free up waterfront. Steep topography between Interstate Ave and river. Dock Space for boats- big to small.
32	Rose Quarter	Transportation	The signal lights are timed against the pedestrian deboarding the MAX at Rose Quarter, and therefore hundreds of pedestrians jay-walk across four streets: Interstate, Multnomah Blvd, and then across the tracks of NE Holladay and/or Rose Quarter Terrace/Transit Center. Pedestrians in these intersections dodge light rail trains, buses, bicyclists, other pedestrians, cars, and trucks coming off Interstate/Greeley from Swan Island. The transit center has a great walkway from the RQ to the transit center west-bound, but there are chains and bollards across the street preventing pedestrian movement to the east side of the street.
33	Rose Quarter	Transportation	1st Avenue requires pedestrians to navigate train tracks, a lane of fast-moving traffic off the highway and 1st avenue traffic. The signals and walkways are not convenient, time-sensitive, and not safe for pedestrians/transit-users. Yet thousands of pedestrians and transit users navigate these streets everyday for work and for games/events. Please improve the pedestrian condition for able bodied people and those with disabilities, including wheelcars, and those with different abilities, like parents with strollers. Take the engineers/planner/politician on a walking tour.
34	Rose Quarter	Transportation	Should we be looking at moving the freeway away from the riverfront?

#	Subarea	Topic Area	Issue Comment
35	Rose Quarter	Transportation	Bike lanes from Rose Quarter MAX to Vancouver/Williams need to be wider and better timed signals. Two "bike lanes" wide where possible
36	Rose Quarter	Transportation	Steel Bridge: Close Steel Bridge to car traffic? High congestion pricing?
37	Rose Quarter	Transportation	West side of Steel Bridge: Stockholm style inner city toll charge
38	Rose Quarter	Transportation	Rose Quarter Transit Center: Move/reconfigure MAX tracks to create new developable parcel
39	Rose Quarter	Transportation	Remove parking meters from NE 1st Ave north of Multnomah and make it permit only. Issue parking permits to residents.
40	Rose Quarter	Transportation	There is too much traffic on Broadway - need to make bike / ped environment
41	Rose Quarter	Transportation	Pedestrians trying to get to Rose Garden for events park east of I-5 (free) and then have trouble walking over Broadway/Weidler with all the traffic also trying to get to Rose Garden
42	Rose Quarter	Transportation	1. Either decouple Williams/Vancouver or consider reversing direction on Williams/Vancouver. It would make access to I-5/I-84 much safer as well as enhance bike/pedestrian access. 2. Decouple Broadway/Weidler- It would make the neighborhood businesses much more accessible to all modes as well as slow down traffic.
43	Rose Quarter	Transportation	The Box: High traffic volume from I-5 southbound off-ramp to Weidler
44	Rose Quarter	Transportation	The Box: Ped crossing conflicts - especially during events
45	Rose Quarter	Transportation	The Box: Vancouver/I-5 ramp/Broadway intersections - high volumes
46	Rose Quarter	Transportation	The Box: Rose Quarter event access/egress
47	Rose Quarter	Transportation	High accidental locations: Broadway & Weidler at Vancouver, Broadway at Larrabee
48	Rose Quarter	Transportation	Queuing at east end of Steel Bridge back from Multnomah Street
49	Rose Quarter	Transportation	Rose Quarter Transit Center: transit functions are too spread out
50	Rose Quarter	Transportation	Pedestrian management and safety at Rose Quarter TC
51	Rose Quarter	Transportation	Bike/pedestrian: I-5 barrier- limited crossings between Weidler and Lloyd
52	Rose Quarter	Transportation	Freight access to freeway ramps
53	Rose Quarter	Transportation	Improve freight rail speeds through quadrant
54	Rose Quarter	Transportation	Improve future passenger rail speeds through quadrant
55	Rose Quarter	Transportation	Future high speed rail or commuter rail station at Rose Quarter?
56	Rose Quarter	Transportation	Light-rail and Amtrak capacity over Steel Bridge is constrained
57	Rose Quarter	Transportation	Constrained freight rail capacity
58	Rose Quarter	Transportation	Straighten rail "S" curve
59	Rose Quarter	Transportation	Redesign off-ramps from I-5 and I-84 that serve the Rose Quarter and Lloyd District so they feed into the street grid (simplify the intersections with the ramp terminals)
60	Rose Quarter	Transportation	Restore street grid for peds and bikes across I-5 with ped overpasses
61	Rose Quarter	Transportation	Improve ped and bike connections to the river from the Rose Quarter. Current ped and bike connection to Eastbank Esplanade is indirect
62	Rose Quarter	Transportation	Connection between North Portland Willamette Greenway Trail and Sullivan Gulch Trail
63	Rose Quarter	Transportation	The Box: Bike access is challenging and intimidating, especially for inexperienced riders
64	Rose Quarter	Transportation	Need better bike access from Broadway to Flint
65	Rose Quarter	Transportation	Connect Dixon St past Wheeler to Flint
66	Rose Quarter	Transportation	Need to improve transit capacity, safety, and operations at Rose Quarter TC, including consideration of both auto and transit operations
67	Rose Quarter	Transportation	Prep Rose Quarter TC area for more active development
68	Rose Quarter	Transportation	Rail and street access to Dreyfus Storage is an impediment to development
69	Rose Quarter	Transportation	Consider reversing the flow of Vancouver and Williams, with southbound traffic on Williams and northbound traffic on Vancouver
70	Rose Quarter	Transportation	Parking capacity at Rose Quarter
71	Rose Quarter	Transportation	Ensure truck access to Rose Quarter venues

LLOYD DISTRICT (MAP AREAS 6&7)

#	Subarea	Topic Area	Issue Comment
1	Lloyd District	Land Use	Unlock Development Potential in Lloyd: Too many surface parking lots
2	Lloyd District	Land Use	Unlock Development Potential in Lloyd: Urban Design Strategy w/Emphasis Areas Needed

#	Subarea	Topic Area	Issue Comment
3	Lloyd District	Land Use	Unlock Development Potential in Lloyd: Street hierarchy needed to organize development?
4	Lloyd District	Land Use	Unlock Development Potential in Lloyd: Open Space is Deficient, Existing OS is
5	Lloyd District	Land Use	Unlock Development Potential in Lloyd: Food carts? (arguments both for and against)
6	Lloyd District	Land Use	Unlock Development Potential in Lloyd: Land use and development to support Lloyd Green (EcoDistrict Initiative)
7	Lloyd District	Land Use	Unlock Development Potential in Lloyd: Large Property Owners& Large Block Dimensions
8	Lloyd District	Land Use	Unlock Development Potential in Lloyd: Support the Oregon Convention Center with New Adjacent Development
9	Lloyd District	Land Use	Unlock Development Potential in Lloyd: Improve street-level development (Mall and others)
10	Lloyd District	Land Use	More Housing: Jobs Housing Imbalance
11	Lloyd District	Land Use	More Housing: Broader Diversity of Housing
12	Lloyd District	Land Use	More Housing: More Affordable Housing (Concentration of Retail-Wage Jobs)
13	Lloyd District	Land Use	More Housing: Capitalize on Streetcar
14	Lloyd District	Land Use	Public safety & crime concern around Holladay Park
15	Lloyd District	Land Use	NE 21st & Multnomah redevelopment opportunity (Map area 6A)
16	Lloyd District	Land Use	Lloyd Mall is as vibrant as it is because it is not just the mall, including outlying shops- maintain it's vibrancy and health, including their outlying low FAR properties
17	Lloyd District	Land Use	Higher density residential development
18	Lloyd District	Land Use	Maintain opportunity site(s) for HQ Hotel
19	Lloyd District	Land Use	Urban design needs to address sad look of area between Rose Garden and Lloyd Center
20	Lloyd District	Land Use	Preserve portal site for future east/west MAX subway from Lloyd center to Goose Hollow (parking lot between Holladay Park and Lloyd Cinema)
21	Lloyd District	Land Use	Parking issues with new and existing housing. Preserve rights, existing standards for new.
22	Lloyd District	Land Use	Facilitate multi-site permitting/planning for eco-district
23	Lloyd District	Land Use	Holladay Street development = green street approach (Sullivan's Gulch to Lloyd to Rose Quarter)
24	Lloyd District	Land Use	Incorporate Holiday Park hospital planning
25	Lloyd District	Land Use	7th Ave crossing over I-84 for multi-modal
26	Lloyd District	Land Use	Specify: Headquarters Hotel developed for OCC. Support OCC.
27	Lloyd District	Land Use	Consider support services (i.e.. Schools) when looking at restricted development
28	Lloyd District	Land Use	Increased pedestrian (and bike) access across I-5 may relieve parking problem during MC/Rose Quarter events
29	Lloyd District	Land Use	It was suggested to have more food vendors at the parking lot of the Lloyd Theater across the street from Holladay Park. I am very much against food handlers. I think it makes the city cheap looking and takes away from the restaurant people who have to provide seats/tables/ restrooms/ADA etc. I think parking lots full of vendors is terrible- there are so many vacant storefronts and closed restaurants because some of them cannot compete with the street food vendors. I don't see vendors in the Pearl District! So why downtown Portland?
30	Lloyd District	Land Use	Slowly move South to North with zoning to encourage breweries, pubs, dining, hostels and hotels, residential. Make Lower Albina with alleyways (very British or Victoria like) people friendly. Plan for high speed rail after I-5 is moved to an underground configuration after 30 years (I-5 curves to the east to line up with 8th/10th). High speed rail could possibly use the former I-5 land (maybe trains below a eastside park corridor). Plan the subway station now.
31	Lloyd District	Land Use	Food carts: at NE corner of convention center near MAX station
32	Lloyd District	Land Use	No 'there there' in the Lloyd, why would anyone want to build residential development there or even live there?
33	Lloyd District	Land Use	Need to preserve and enhance large event institutions
34	Lloyd District	Land Use	Encourage green streets and shops under I-5, on Multnomah. Create pedestrian friendly environment
35	Lloyd District	Transportation	Bike Boulevard/Cycle Tracks would be good to connect neighborhoods and Lloyd District
36	Lloyd District	Transportation	I-84 traffic is often backed up onto I-5
37	Lloyd District	Transportation	Close Wheeler to I-84 and force those vehicles to MLK / Grand on ramp

#	Subarea	Topic Area	Issue Comment
38	Lloyd District	Transportation	Add an extra lane from I-405 to I-84 Southbound
35	Lloyd District	Transportation	Decouple Broadway/Weidler- it would greatly enhance business as well as make it more accessible for neighbors
36	Lloyd District	Transportation	Northbound queuing on Grand back from Broadway
37	Lloyd District	Transportation	Northbound queuing on Grand in left lanes at Multnomah
38	Lloyd District	Transportation	Accommodating bikes on Lloyd Blvd. at MLK Jr. and Grand
39	Lloyd District	Transportation	Convention center as a bike/ped barrier
40	Lloyd District	Transportation	Queuing at Everett & Grand/MLK at I-84 on ramp
41	Lloyd District	Transportation	Streetcar on MLK/Grand; future TriMet line 6
42	Lloyd District	Transportation	High collision locations on Grand @ Multnomah, Holladay, Wasco
43	Lloyd District	Transportation	Potential 7th Avenue overcrossing - bike/ped/motor vehicle
44	Lloyd District	Transportation	Ensure truck access to convention center
45	Lloyd District	Transportation	Build a full interchange with I-84 at 7th Ave overcrossing to replace ramps at Grand Avenue
46	Lloyd District	Transportation	Improve bike connections to Southeast Portland
47	Lloyd District	Transportation	Unsafe and uncomfortable bike crossing of I-84 along MLK and Grand
48	Lloyd District	Transportation	Too many ramps from I-84 to I-5 and the Rose Quarter. Eliminate Steel Bridge off ramp
49	Lloyd District	Transportation	High ped collisions on Multnomah
50	Lloyd District	Transportation	Improve overcrossing at 12th for bikes - no bike lanes on overcrossing make it unsafe and uncomfortable for bikes
51	Lloyd District	Transportation	Southbound left onto NE Irving at 12th - backups
52	Lloyd District	Transportation	I-84 off-ramp queuing at Lloyd Blvd
53	Lloyd District	Transportation	Lloyd Center is a barrier for bikes and peds
54	Lloyd District	Transportation	Eastbound bike lane on Multnomah ends to early prior to 21st Ave
55	Lloyd District	Transportation	Lloyd Blvd intersections unsafe for peds and bikes, particularly bike connection between Lloyd and 12th
56	Lloyd District	Transportation	Protect parking permit programs
57	Lloyd District	Transportation	Too much surface parking
58	Lloyd District	Transportation	Would like a bike/ped path along I-84 on north side of Sullivan's Gulch
59	Lloyd District	Transportation	Recognize historical residential uses and protect parking

FREEWAYS (I-84 and I-5)

#	Subarea	Topic Area	Issue Comment
1	Freeways	Transportation	I-5: Closely spaces ramps- consider removing some I-5 ramps to reduce access
2	Freeways	Transportation	I-5: Weaving from I-84 to Weidler northbound
3	Freeways	Transportation	I-5: Weaving from Wheeler to I-84 southbound
4	Freeways	Transportation	I-5: South of Weidler (I-84 to Weidler NB) worst weave due to high volume
5	Freeways	Transportation	I-5: High collisions due to weaving
6	Freeways	Transportation	I-5: Event access via Broadway/Weidler ramps
7	Freeways	Transportation	I-5: High incidence of rear end crashes
8	Freeways	Transportation	I-5: Southbound at I-84 eastbound ramp- backs up onto I-5 mainline
9	Freeways	Transportation	I-5: Freight impacts from lack of reliable travel times
10	Freeways	Transportation	I-5: Address 2 lane section on I-5 southbound, consider adding a lane up to I-84 exit
11	Freeways	Transportation	I-5: Decouple Broadway and Weidler
12	Freeways	Transportation	I-5: Reconfigure northbound off-ramp to Weidler - dangerous to peds and bikes
13	Freeways	Transportation	I-84: Highest collisions westbound east of Lloyd center off-ramp
14	Freeways	Transportation	I-84: Westbound weaving and queuing
15	Freeways	Transportation	I-84: Westbound off-ramp at Lloyd Blvd - seasonal queuing back onto freeway
16	Freeways	Transportation	I-84: Freight impacts from lack of reliable travel times
17	Freeways	Transportation	I-84: No safe and comfortable bike crossings of I-84

N/NE Quadrant Project

Proposed Concept Development Process Overview and Phase I Scope

Purpose and Overview

The N/NE Quadrant and I-5 Broadway/Weidler Plans process just completed the review of existing conditions and will establish goals to guide the planning process shortly. The project team has also collected input from a variety of sources to identify issues, opportunities, and constraints within the planning area. The next phase will be to translate these into preliminary alternative concepts for public review and discussion. Following public review and refinement, a recommended preferred concept will be developed.

This document outlines the proposed phased and iterative process for generating concept alternatives. The work will take place in four phases:

- Phase I will generate preliminary land use, urban design, and local transportation concepts.
- Phase II will generate preliminary freeway improvement concepts and integrate them with the land use, urban design, and local transportation concepts developed in Phase I.
- Phase III will allow for broad public review and refinement of the preliminary concepts.
- Phase IV will evaluate the concept alternatives and determine a preferred concept that will ultimately guide the development of recommended policy changes and actions for consideration by decision-makers.

Summary of Proposed Process to Develop Concept Alternatives

Phase	Description	Events	Timeline
I	Develop Preliminary Land Use/Urban Design/Local Transportation Concepts	Subcommittee Mtgs; Charrette	Jan – March 2011
II	Develop Preliminary Freeway Concepts and integrate with Land Use/Urban Design/Local Transportation Concepts	Subcommittee Mtgs; Charrette	March – May 2011
III	Public review & refinement of Preliminary N/NE Quadrant and I-5 Concept Alternatives	Public Workshop	May – June 2011
IV	Evaluate Preliminary Concept Alternatives and develop a recommended Preferred Concept	TBD	June – Oct. 2011

Phase I: Develop Preliminary Land Use, Urban Design, and Local Transportation Concepts

Process and Structure

Phase I will create preliminary land use, urban design, and local transportation (LU/UD/LT) concepts. The products generated in this phase will address project goals and issues identified in the planning process to-date and will inform the work that will occur in Phase II.

The process of generating land use, urban design and local transportation concept alternatives will consist of three primary steps: 1) assembling information and input; 2) generating preliminary concept alternatives (charrette); and 3) review and comment on preliminary concepts. These steps are outlined below.

Step 1: Assemble Information and Gather Additional Input (January - Mid-February)

In this stage, staff and the consultant will assemble a **Workbook** containing background documents, policies, maps and data, and information generated by the SAC and subcommittees, such as the Project Goals and Issues, Opportunities and Constraints Report. The workbook will be used to inform the development of concept alternatives during the charrette. In addition, project staff will solicit additional input through the following:

Subcommittee Meeting: Staff will meet with the land use and transportation subcommittees in a joint meeting to review existing information and the Workbook, gather ideas and elicit input that will assist in the development of the System Concept Maps (see the "Work Products" section, below).

Property Owner/Stakeholder Interviews: In preparation for the charrette, staff will hold a series of focused interviews with a representative cross-section of property owners and stakeholders to discuss their needs, concerns and potential development plans that could inform concept development. This will include interests/stakeholders that do not have representation on the SAC and/or have not participated directly in the process so far. Please let the project team know if you would like to be interviewed or if you have ideas about specific stakeholders that should be contacted.

Step 2: Generate Preliminary Concept Alternatives - 2-Day "Charrette" (Late February)

This stage will consist of a focused intensive 2-Day effort by project staff and consultants resulting in Preliminary North/Northeast Quadrant System Concept Maps (see "Work Products" section below):

Day One:

- Morning Session: Project staff and consultants review and synthesize information gathered to-date. Community comment period at end.
- Afternoon Session: Project staff and consultants work to generate concept alternatives. Community comment period at end.
- SAC, subcommittee members, and other stakeholders will be invited to observe the charrette activities and comment during designated times.

Day Two:

- Morning Session: Project staff and consultants refine concept alternatives.
- Afternoon Session: Project staff and consultants present charrette products. SAC, subcommittee members and other stakeholders are encouraged to attend the presentation and participate in the discussion.

Step 3: Review and Comment on Preliminary Concepts (Early March)

Following the charrette, additional input will be solicited from the subcommittees and SAC on the preliminary concept alternatives. Those meeting will also set the stage for the development of freeway alternatives and the land use-transportation integration that will occur in Phase II.

Phase I Work Products

A Series of **N/NE Quadrant System Concept Maps** will be developed. Below is a preliminary list:

A. Local Transportation System: street hierarchy/diversity**,** modes**,** transit

B. Open Space and Parks: types and function, trails, habitat, riverfront

C. Sustainability/Eco-Districts: storm and waste water, district energy, solar orientation

D. Use Clusters: employment/industrial, residential, event/entertainment, retail

E. Urban Form: height, bulk, views

Phase II: Develop Freeway Concepts and integrate with Phase I Land Use/Urban Design/Local Transportation Concepts

A proposed schedule and scope for Phase II will be presented at the March SAC meeting. The scope of the Phase II charrette will be to develop preliminary freeway concept alternatives for possible reconfigurations of the Broadway/Weidler Interchange and other freeway overcrossings and integrate them with the LU/UD/LT concepts developed during Phase I.

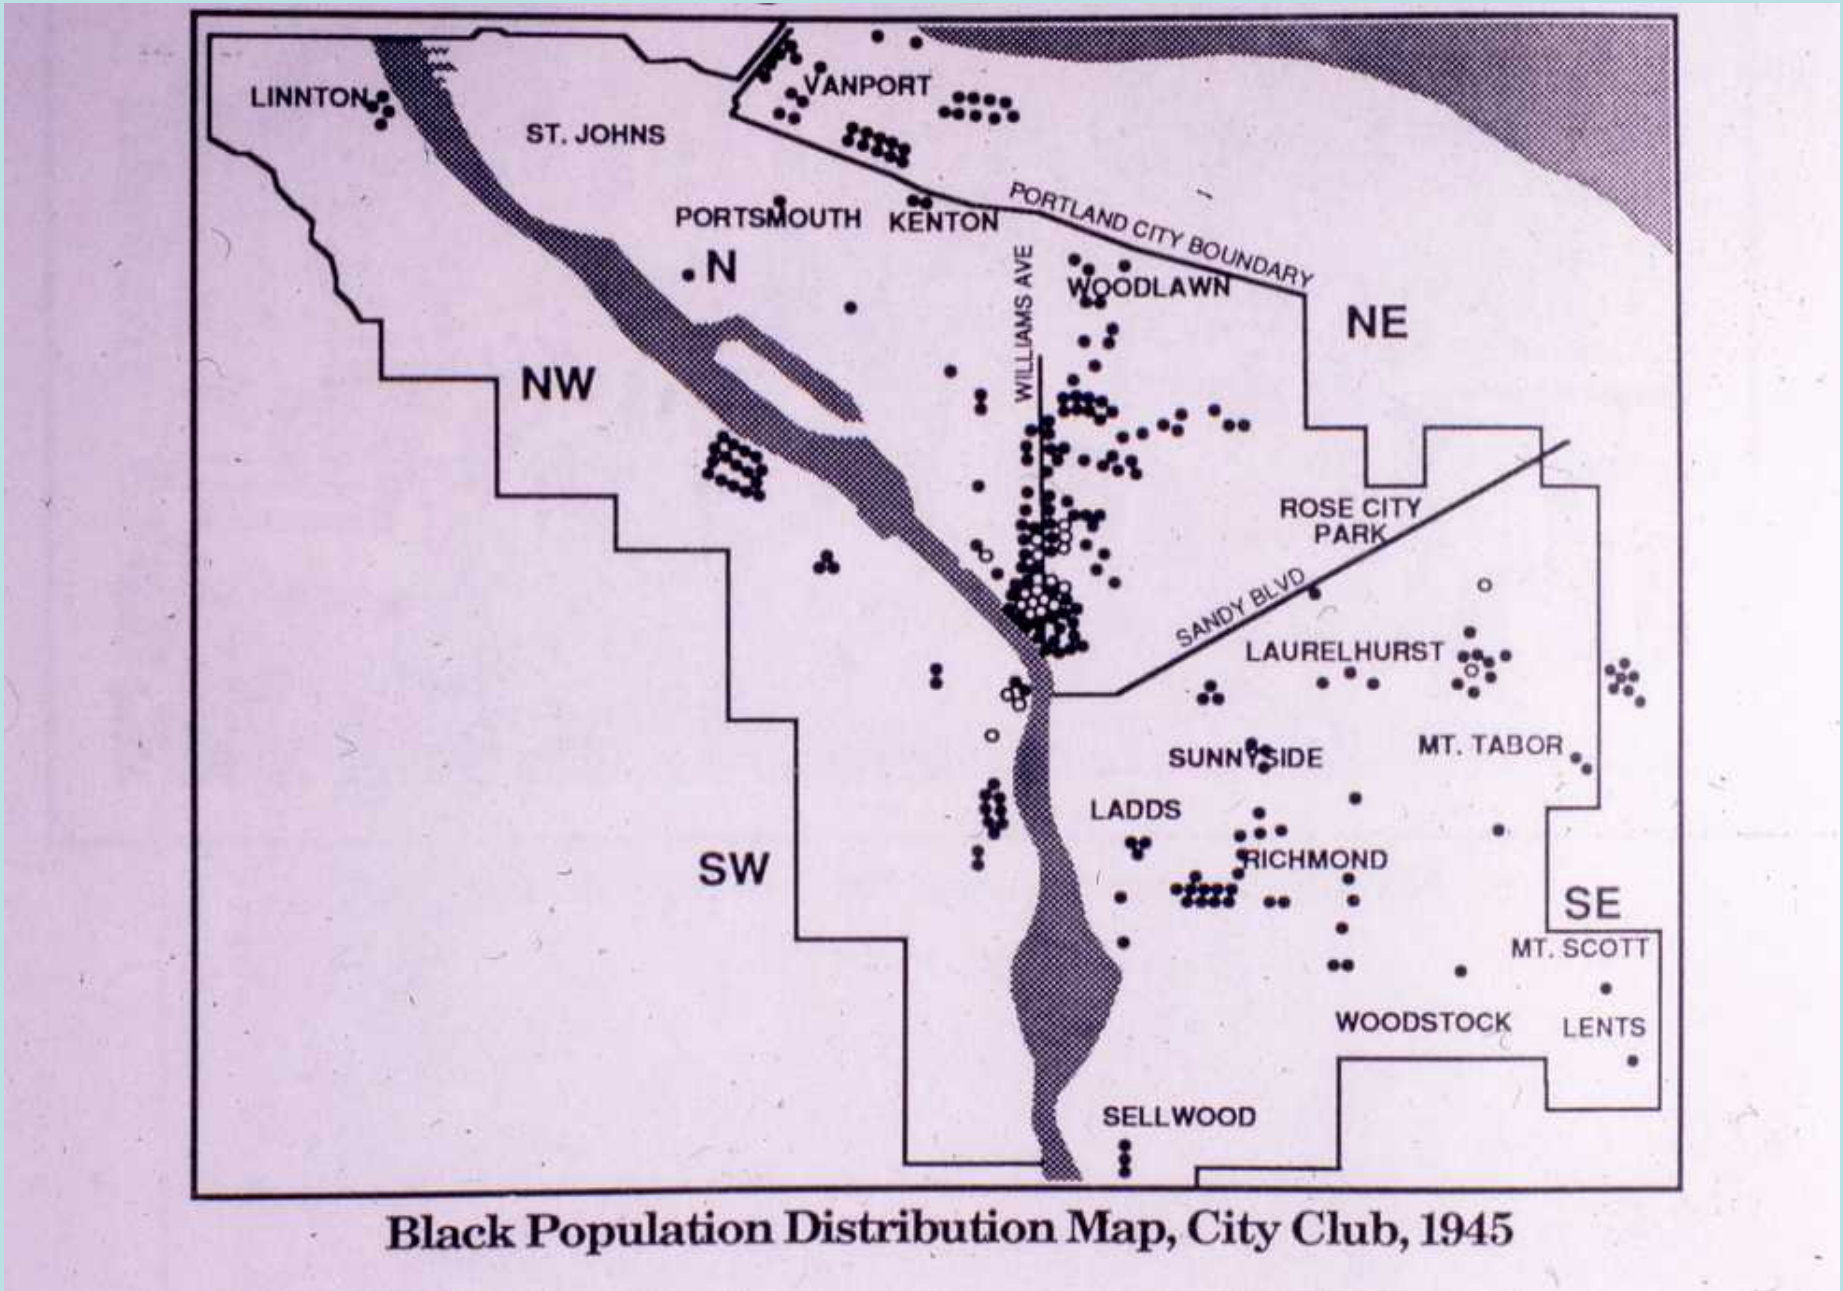
REALTY MEN INTEND TO STOP SALES TO NEGROES, ORIENTALS

Property Values Said to Drop With Influx of Any but White Residents.

Members of the Portland Realty board will not be permitted to sell property in white residence districts of this city to colored people or orientals if a proposed amendment to the code of ethics governing the board carries at the regular meeting Friday noon. The meeting will be held in the Crystal room of the Benson hotel at 12:15 p. m.



The proposed amendment was recommended by the executive committee of the board and was read at the last meeting. Realty men are adopting this rule because of the depreciation in property values which they say follows an influx of 'colored' or oriental population to any residence district, and not because of any prejudice against members of these races.

Frederick Coan, D. D., a missionary from Armenia, will be the principal speaker. Dr. Coan was born in Asia Minor and has lived until recently in Armenia. He was an eye witness to many atrocities perpetrated by the Turks on the native population.

W. B. Shively, chairman of the legal committee, will explain: "Where a tenant vacates and abandons leased premises, may the landlord take possession thereof and still hold the tenant to the terms of the written lease; and under the same circumstances, may the landlord re-let the premises to another and not thereby release the tenant from further obligation to pay rent?"

Harry G. Beckwith will be chairman

Informal Discussion and Meal

Welcome, Meeting Purpose, Approval of Minutes, and SAC Input Forms

Sam welcomed the group and went over the purpose of the meeting - primarily focus on the area history and the existing conditions of the Central City's N/NE Quadrant & I-5 area.

Approval of Minutes:

The SAC affirmed that the general tenor of the Meeting #1 minutes was appropriate (length, breadth, and depth).

Wayne Kingsley clarified that, in his opening statement at the last meeting, he said he was interested in the I-5 corridor as well as the intersection between I-5 and I-84. His statement in the Meeting #1 Minutes will be revised to say: "I'm primarily concerned with the I-5 corridor and the I-84/I-5 intersection, and the jobs that come about from having good highways."

The Meeting #1 Minutes were approved unanimously, with changes noted.

SAC Member Introduction

The SAC members went around the table, stating their name, their organizational interest or affiliation, and their hopes for the process.

Lloyd Lindley – AIA Portland / ASLA Portland

Lloyd apologized for missing the first meeting due to a previous engagement. I'm a landscape architect and urban designer, and I came here in 1980. I have worked on lots of public policy plans and projects in north and northeast Portland. I sat on the urban forestry commission and urban design commission, and hope to bring my history and expertise to help you through this process. This area is near and dear to my heart. I'm honored to be here and part of this group. If I were a land use, I would be parks and recreation.

Gary Eichman – President of Oregon Transfer Company, member of Portland Freight Committee

My company literally grew up with the state (it's 142 years old), and has been involved with all kinds of important work here. Our current focus is warehousing, mostly with fortune 100 companies. We're a regional company, with some locations in Montana, some northern California, etc. I'm also chair of the Oregon Draymen & Warehousemen's Association, and member of, Oregon Trucking Association, International Warehouse Logistics Association, etc. I'm not right-wing, though; I drive a biodiesel automobile and a Vespa, and sustainability is important to me. I come from the existentialist school of zoning!

Damien Hall – At large member

I am a land use attorney with a background in urban planning and development. My hope is that this process will lay the groundwork for future plans that will eliminate congestion and the lack of connectivity that can serve as an impediment to the development of this area.

Matt Arnold – Chair of City's Bicycle Advisory Committee

I'm interested in bike connectivity throughout the district and more robust bike access and safety.

Daniel Deutch – Principal of the Left Bank Project

I hope we can explore reasonable solutions for something that is very complex. I'm interested in observing the process as it unfolds.

Eric Lovell – Owns a small art glass manufacturing business in Lower Albina

I'm interested in the human, as well as, built aspects of the area. Transportation is also important to me, but my top priorities are diversity, small businesses, and working class families.

Gary Marschke- Vice chair of the North/Northeast Business Association

My hope is for a process that, rather than exclude or result in the displacement of indigenous businesses and residents, invites them to enjoy the fruits of the development.

Mike Warwick – Elliot Neighborhood Association Land Use Committee Chair

The historic significance of this area is rich and it is important to me to maintain it.

Paul Riggs – Columbia Pacific Building Trades

My hope is that this process elegantly removes the bottleneck on I-5.

Will Elder – Sullivan's Gulch Neighborhood Association

My hope is that this plan can enhance the district for current residents and make it into a unique destination for visitors.

Heidi Guinin – Upstream Public Health

Our organization is located in this area. My work is focused on transportation health equity.

Brock Nelson - Union Pacific Railroad

We have a main line that runs through this area, as well as Albina yard. I'm interested in answering any questions this group has about us and playing a role in moving this process forward.

Wayne Kingsley – Central Eastside Industrial Council

I'm primarily concerned with the congestion on the I-5 corridor and the I-84/I-5 intersection, and the jobs that come about from having good highways

Bob Russell – Oregon Trucking Association & Oregon Freight Advisory Committee

I served on the Columbia River Crossing Task Force, which unfortunately moved the bottleneck down to the Rose Quarter. Now, I'm excited to work on the rose quarter bottleneck.

John Williams – Metro

My organization works on land use and transportation, and it's a good fit for us to be involved in this process. We also own property in this area.

Justin Zeulner – Portland Arena Management

Besides working for Portland Arena Management, I'm also the chair of the Alliance of Portland Neighborhood Business Associations, and I want to bring that hat to this work too. This is such an interesting area; there are a lot of opportunities for us.

J. Isaac – Trailblazers

I am pretty active in various business associations, including serving as vice chair of the Lloyd Business Improvement District, and Chair of the Portland Business Alliance. I'm interested in economic development in this area. If I were a zoning regulation, I would be a height limitation!

Wade Lange – Ashforth Pacific

I seem to have a fetish for volunteering and committee service. I'm very interested in this quadrant, and want to be a voice for economic development.

Pauline Bradford – Resident in this area for the past 65 years

I am convinced that this is the best area in Portland. I want to see something buildable, fair, equitable, and something that respects all of the work that has been done already, and all of the people who have occupied this area.

Wanda Rosenbarger – General Manager at the Lloyd Center

Ditto to everything that has been said thus far.

Owen Ronchelli – Lloyd Transportation Management Association and chair of Portland Streetcar Citizens' Advisory Committee

My hope is that this will be a plan that people look to, to inform good decision-making for land and transportation development here and in the future. I don't want to plan just to plan.

Sean Hubert – Central City Concern, Housing

I'm interested in the overall vitality of this area.

Wynn Avocette – At-large, live and work in this area

I'm looking for practical, common-sense solutions to transportation problems in the area and along the interstate.

Byron Estes – Portland Development Commission

I'm excited about a vision to revitalize Russell street, paying attention to history, supporting small businesses in that area, and redeveloping the Blanchard public school site. If I were a zoning code, I would be a form-based code.

Bill Ruff – Lloyd Community Association

I'm interested in planning, connectivity, and responsible density in the Lloyd district.

Alan Lehto – TriMet

We have a lot of facilities in the Lloyd district, and I'm a former resident of this area. I want to add to the vibrancy of the Lloyd district. I'm also interested in exploring what the best thing is that we can do with the rose quarter in the long term.

Andrea Marquez-Horna – Latino network

I want to find a balance between environmental, economic, and social sustainability.

Carolyn Briggs – Involved with a variety of work on pedestrian access/issues

I live and work within/nearby this general area. I don't own a car, making me a pedestrian or public transit user everywhere I go. I want to work on how vehicles (cars, freight, etc.) impact pedestrians.

Area History Presentation with Q&A

Nicholas Starin from the Portland Bureau of Planning and Sustainability (BPS) presented on the history of this area, from before Europeans arrived through today. There was particular attention given to the change in demographics and land use over time, and the impact that large city and regional planning and infrastructure projects has had on the residents of the area - particularly the African American community. The PowerPoint presentation is posted on the project website: N/NE Quadrant History Presentation. (http://www.portlandonline.com/bps/index.cfm?a=322714&c=53257)

Nicholas also drew the SAC's attention to the draft "Cornerstones of Community - Portland's African American History – Extant Buildings in the Central N/NE Quadrant" map created by the Bosco-Milligan Foundation. The SAC will talk more about that work later.

Questions/Comments on Presentation:

Great presentation.

Existing Conditions Presentation: District Profiles & Urban Design Context with Q&A

Karl Lisle and Mark Raggett from BPS presented on the existing conditions for this area's land use, including demographic breakdowns, employment data, land use data, and urban design context. The PowerPoint presentation can be found on the project website: Land Use, Urban Design and Demographics Presentation. (http://www.portlandonline.com/bps/index.cfm?a=324401&c=53257)

Questions/Comments on Presentation:

Wade Lange asked if there is a similar slide to the "Major Development projects" slide (Slide # 11 in the presentation) but with dollars of investment rather than square footage?

Staff: Not right here, but we'll look into it and get back to you.

A SAC Member asked whether the Metro employment forecasts used in the presentation came from pre-recession data. Do we have any similar data available that takes the recession into account?

Staff: Yes, the data we have is from Metro's model, and their data is still in pre-recession numbers. Unfortunately, there is not new data yet.

Wayne Kingsley asked where BPS's Central City total employment numbers came from, and the geographic area that those numbers were derived from. His understanding, based partially on a different BPS presentation from two or three years ago, was that the central city included around 80,000 jobs, and showed a recent job loss.

Staff: We're not quite sure which presentation you are referring to, but these are the best numbers we have at the moment for this particular area.

John Williams from Metro commented that the presentations have all been great so far. He further explained that Metro's employment forecasting uses a market-based model, which includes looking at land and construction costs. Metro's forecasts are based on what we know

about current zoning and planned public investment in the areas in question. If public investment rises (a new streetcar line is put in, for example), the projections could also rise.

Wayne Kingsley asked if the Lloyd Crossing redevelopment plan is included in the models and data presented. He also asked whether BPS was suggesting, in their presentations, that the quadrant be built out to the full envelope.

Staff: The models and data are complex, and take into account many factors. The models are based on development that would be allowed under current zoning. They wouldn't specifically incorporate the Lloyd Crossing plan, but do anticipate a more densely built out Lloyd District. . As to building out to the full envelope allowed, we don't have a recommendation on that, but we wanted to show the SAC what the full potential for building could be for the area.

Wynn Avocette asked whether staff saw potential for something like the South Waterfront high rises going into the Lloyd district.

Staff: That's a possibility. The area could be built up in several ways, and that's one of the options. The Lloyd District's zoning actually allows for greater density than the South Waterfront, so there is potential for it to be even denser. However, the South Waterfront development's circumstances were different; particularly having a large employer (OHSU) located at the top of the hill. That gave opportunity for a connection from the waterfront to OHSU through the tram. This area has different circumstances and opportunities that will play into it's development. This question about how the area should build out is one of the issues the group will discuss and make recommendations on in this process.

Sean Hubert asked what kind of open space currently exists or is planned for the riverfront.

Staff: Peace Park is the only open space in close proximity to the river in the quadrant. We can think more aggressively about riverside open space in this process.

Lloyd Lindley asked for more information on how the staff arrived at a "retail" designation for the arena, coliseum, convention center, etc. Those buildings being considered retail may skew our understanding of the mix of uses in this area. Also, there are pedestrian streets in the Lloyd district. Those could form the bones of a framework when we look at connectivity down the road. There is also light rail and will soon be a streetcar. In some ways, it feels like the Lloyd district is waiting for other districts to "fill up" (the pearl, south waterfront, etc.). Is that accurate/good? Are there other ways to approach this area?

Staff: We can certainly pull the "special uses" (convention center, Rose Garden, etc.) out of the retail category easily if we want a more detailed look. Your observations about the Lloyd District offer a good starting point for discussions on issues, opportunities and constraints.

Carolyn Briggs commented that the staff didn't mention high speed rail opportunities in their presentation.

Staff: That's true. Rail discussion will likely take place in the SAC meeting where we discuss "opportunities and constraints."

Owen Ronchelli commented on the zoning and the amount of commercial development in the area, and the perceived assumption about how much housing will be increased in the area (particularly the Lloyd district). First, how would it be possible to increase housing in the way

the staff has described, and second, if you put residential development in a commercial area, is that it's highest and best use?

Staff: We have two sources of data – Metro's modeling and our agency's analysis of capacity. To answer the first question, commercial zoning in this area is mostly flexible and allows housing. To answer the second question, we looked at other examples of development patterns in similar situations, and the way we have described our projections is largely in keeping with what we've seen historically.

Break

Existing Conditions: Freeway & Local Transportation System with Q&A

Mauricio Leclerc from the Portland Bureau of Transportation (PBOT) and Todd Juhasz from the Oregon Department of Transportation (ODOT) presented on the existing conditions for this area's transportation systems, including freight and auto movement, bicycling, pedestrian, and public transit. The PowerPoint presentation can be found on the project website: Transportation Existing Conditions Presentation. (http://www.portlandonline.com/bps/index.cfm?a=324407&c=53257)

Questions/Comments on Presentation:

Several SAC Members asked for greater detail about parking as a resource in the Central City as well as the North/Northeast Quadrant.

Staff: We have a lot more detailed information, but not with us right now. Please feel free to contact us with specific detailed data questions and we can get answers to you.

Will Elder asked staff about the slide that showed 7% of people getting off the freeway to go to the northeast. He is curious how we will discuss the intersection of the different modes. For example, are those 7% getting off the freeway to bypass traffic and taking MLK instead, etc.

Staff: A main focus of this process will be to talk about those kinds of issues. We'll also be using some models which will help us identify potential results depending on how we alter the current system.

Will Elder asked how many of the crashes on the highways in the area were fatal.

Staff: Over a five year period, there were three fatalities on I-5, and one on I-84. Most of the crashes are side-swipes and rear end collisions.

Matt Arnold commented that, though getting across MLK and Grand are indeed big difficulties for bikes and pedestrians, tonight's presentations focused closely on a few intersections and missed some larger general problem areas.

Staff: That's true; there are many issues besides the few we pointed out in the slides. We will look at more detailed maps in the future, especially in sub-committee work, to address additional problem areas.

Gary Marschke asked how many of the highway crashes involve trucks, and how many involve "through traffic" versus traffic that is moving on and off the highway within this area. His hunch is that most of the "through traffic" is also commercial, even if it's just auto.

Staff: We can probably tease out how many crashes involve trucks, using percentages involving trucks.

Carolyn Briggs asked ODOT if they have counts of the number of freight vehicles using the on/off ramps (such as at 12th and I-84, etc.).

Staff: There are a few places where we specifically count the number of trucks passing through, but mostly we just have tubes on the road that give us traffic counts. We could try combining our actual traffic counts and average truck percentages to get an estimate.

Justin Zeulner reiterated comments from the first meeting that the separation of the committee into 2 subcommittees might complicate the overall process. Justin also commented that, according to the project timeline, we'll be spending the next four months trying to determine whether the system needs improvement. We all know the system needs improvement, so let's jump ahead 4 months!

Staff: Subcommittees are up next on the agenda.

Justin Zeulner also commented that we should also be looking at sustainability and the carbon impact of the transportation in this area, and thinking about what our goals will be in 20 years.

Staff: Agreed, and this will be part of the SAC's work. Greenhouse gas impacts of planning are difficult to measure, but we're working on some models to help us.

Paul Riggs commented that the SAC's work will have to strike a delicate balance. For example, to remove the bottleneck on the freeway, it's possible that it will have to be expanded, and some current buildings may need to be torn down. But you obviously can't bulldoze the real estate that you're trying to serve. But I'm assuming we're going to lose some real estate somehow to solve the problems. If ODOT had a free hand here, what would they do?

Staff: We are clear that there is a problem with the freeway, but we don't have a clear idea of how to solve it. That's a big reason why the SAC is here; to advise ODOT and the City on how best to balance competing demands.

Wynn Avocette asked a general question about potentially using "temporal control" measures to reduce congestion. For example, if we only allowed large boats under the bridges at certain times, we could avoid huge traffic jams on the bridges at rush hour. Could we do anything about that with trucks on the highways?

Staff: That is a really sticky area, and a really difficult issue to work through. Solutions like that are probably beyond the scope of the problems we'll be addressing, but it's good to bring it up. Also, most truck traffic is already trying to avoid driving through bottleneck areas at rush hours, simply because its bad for business to get stuck in traffic if you could avoid it.

Bob Russell: The local traffic is also an issue, because some of the city streets aren't big enough to accommodate the traffic for the interstate on/offs. For example, the trucking industry used to use Interstate Avenue to make deliveries, but now that there is light rail along Interstate, there isn't a big enough turning radius for many trucks, and they are forced to use I-5 for local deliveries.

Eric Lovell asked if the city has had bike count data/robust information about bike travel the way it does for auto travel.

Staff: We have some bike counts, but we don't have a robust model yet like we have for autos (though we'd like to develop one in the future). We do, however, have some data from PSU where they gave cyclists GPS trackers and allowed them to bike around their normal routes which gave us a general feel for how cyclists move through the area (that data was used in the Bicycle Master Plan).

Public Involvement Update

Stephanie Beckman from BPS presented an update on the public involvement plan.

To date, we have hosted two **community walks**, with about 20 members of the public participating. This number is fairly low, but we had good discussions during the walks. The handouts from those walks are up on the website, and we welcome your comments on them. We also hope to post video footage from the walks on the website soon.

Next up, we will be co-hosting an **open house** on Monday, November 15, 2010, from 4:30 – 7:00pm at Memorial Coliseum concourse with the Portland Development Commission, who will be getting input on their Rose Quarter Development Plan. Our goal for that open house will be to get the public to help us identify the most important issues for this process, so that this group can work together to find solutions. An email will go out to the SAC and to the public about this open house, and we hope some of the SAC will be able to be there.

Stephanie also thanked the SAC members who provided comments and input on the draft public involvement plan since the last meeting. The staff welcomes comments and thoughts about the plan going forward, and will revise the plan and strategy as necessary. Since the last meeting, we've been in conversations with a member of the community about how to better engage communities of color in this process, and we will continue to work on it and update the plan. We want to reiterate that, in addition to hosting events and asking for public participation to "come to us," we want to come out into the community and solicit feedback. The SAC members were encouraged to let staff know if there is a group meeting or event that staff could attend.

Questions/Comments on Presentation:

What was the racial breakdown of the members of the public at the community walks?

Staff: We don't have a firm answer to that, as we didn't ask for the public to self-identify their racial/ethnic background at the event. Our hunch is that they weren't hugely diverse, though.

At this point, we'd like SAC approval of the Public Involvement Plan, with the understanding that it will continue to evolve over time.

The Public Involvement Plan was approved unanimously.

Collaboration Principles: Scope (Defer)and Process Elements (Explore)

Sam Imperati thanked the SAC for submitting their comments on the Collaboration Principles since the last meeting. The comments received basically fell into two categories: 1) substantive, and 2) process-oriented. Sam suggested that we defer discussing the substantive comments

(which were mostly around the SAC's Vision and Values, Scope, and Operating Assumptions) until the next SAC meeting, when we'll be talking about issues, opportunities, and constraints.

The process-oriented comments were more about how the SAC will do its work.

The first set of comments came on page 6, under IV. G) Project staff commitments:

> 2) Be accessible, inclusive, meaningful, regular, ~~and~~ timely~~, in addition to~~ open, fair and honest. This includes providing information in as much advance as practical.

The staff realizes we need to do a better job so far with providing materials far in advance, but promises to do better.

The second set of comments came on page 8, under V. E) SAC Member Commitments to Each Other:

> 11) Success depends on a full airing of the ideas and opinions of each committee member. Members should be forthcoming and honest during discussions and in the consensus process. When a consensus recommendation is reached, each member owes it to the others and to the process to ~~N~~not attempt to effect a different outcome outside of the SAC process once the SAC has reached a consensus recommendation,

This change is intended to make sure there is no constraint on SAC member's free speech. This language helps to clarify that, if we agree on X, we will not change our minds or go back on our agreement (barring some huge unforeseen need for change.) This point emphasizes that this group will deal transparently with each other, and if we have issues, we will deal with them at the table rather than doing a run-around at the end of the process. See also the changes under VII. A, Communications Outside of SAC, on page 10.

Questions/Comments on Collaboration Principles:

Wynn Avocette asked what the chances are of the SAC actually reaching consensus at the end of this process.

Sam's Answer: I have had a lot of experience with these processes, and believe it is very possible for us to reach consensus.

Gary Marschke asked what SAC members would do it they did want to affect change individually outside of the room?

Sam's Answer: Based on these Principles, if a SAC member votes a 1 or 2, they are essentially saying they can live with the group's recommendations, and that they won't work against the group. If you can't live with the group's recommendations and want to work for change outside of this process, the you should vote a 3 at the table, and the whole group will discuss the issues.

Wade Lange commented that there is some potentially conflicting language before about a quorum versus a majority. How will those interact?

Sam's Answer: We will need a quorum to take any votes (with a quorum being "half plus one" of members or their alternates) . If we don't achieve full consensus amongst the quorum, we move to the majority/minority report process. That said, our sense is that, if we achieve a

consensus set of recommendations out of a diverse group like the SAC, elected officials are much more likely to adopt our recommendations. If we only achieve a 55-45% majority, we will have a majority-minority report.

A question was asked about how subcommittees will interact with the committee as a whole.

Sam's Answer: Assuming we choose to move forward with the two subcommittees, there will be a standing agenda item for subcommittee report-out to the full SAC with discussion following the report-out.

Sam Imperati asked for a vote on adopting the process-oriented sections of the Collaboration Principles (as edited), reiterating that the SAC will discuss the more substantive issues at the next meeting.

Adopted unanimously

Subcommittees

Sam Imperati described the likely process for how subcommittees will work with the committee. Staff will often do a test run of their full-committee presentations with the subcommittees, looking for subcommittee comments to help them refine the presentations for relevancy/appropriate detail for the full committee. The staff will then make the refined presentations to the full committee. There won't be any secrets at the subcommittee level, and there will be a lot of cross-fertilization amongst/between subcommittees and the full committee. No decisions will be made at the subcommittee level.

Staff needs a working group that can meet between meetings to vet ideas, issues, and presentations and can help to develop preliminary recommendations. This could be done by one smaller group, two subcommittees divided on content, or some other breakdown. The benefit of having two subcommittees is that SAC members have the opportunity to pick and choose the detailed issues they become involved with, while also having the opportunity to be involved in both subcommittees. A concern with having two subcommittees is that they might not be balanced across the interest groups, but the staff believes the current lists of SAC members who have signed up for subcommittees are fairly balanced.

Sam suggested that the SAC try the "two subcommittee" option for a couple of months, and see how it goes. We can change our approach in the future if it doesn't work well.

Questions/Comments on Subcommittees:

Lloyd Lindley requested that there be a mix of staff serving each subcommittee (i.e. land use staff work with the transportation subcommittee and vice versa).

Staff: Yes, we can do that.

Matt Arnold commented that there has been some back-and-forth about whether local transportation issues will go in the Transportation subcommittee or the Land Use subcommittee. Which subcommittee should a SAC member join if s/he is interested in bicycle/pedestrian issues?

Staff: Again, the subcommittees will cross-pollinate, so those issues will come up in both groups, but the general subcommittee responsible for bike/ped issues will be the transportation

subcommittee. Also, all SAC members will receive notice about subcommittee meeting dates/times and agendas in advance, and members are welcome to attend a meeting if the agenda is of interest to them.

Meeting Days and Times: W or TH, 4:00 or 5:00 start times (Final Survey Form)

SAC Members received a survey to fill out and return to the facilitation team on their availability for future meetings.

Public Comment

Angela Kremer, a member of the Eliot Neighborhood Board, and Good Neighbor Agreement (GNA) Chair spoke about her concerns. Angela's comments were as follows (compiled from her spoken words and comment card):

1) Please think about the people who live and use this area. I'm disappointed there isn't a "neighborhood" subcommittee, or something similar, that addresses the human element of this planning process.
2) Please look at the impact the Esplanade has had in revitalizing the area - how it has drawn walkers and bikers from neighborhoods along the central city to river, even through difficult areas like the Rose Quarter and MLK crossing.
3) Please look at successfully revitalized neighborhoods such as the Mississippi area as an example for how we could revitalize the Lloyd district.
4) Look at attractive cross district walkways like 12th Avenue that connect schools (like Benson High School) to Lloyd offices and to housing in Lloyd.
5) Consider the big blocks being held by large, conservative developers as a barrier; some blocks have been sitting there forever, when we would like to see development moving forward.
6) Consider a vision of neighborhoods within and near the Central City. Creating a neighborhood feel would make high density housing in Lloyd more attractive.

Meeting Evaluation

SAC Members filled out meeting evaluation forms and submitted them to the facilitation team.

Meeting Adjourned at 8:30pm

Post-meeting Follow-up Information:

The following information was compiled by the staff of BPS, PBOT, and ODOT in response to questions asked by SAC members at the 10/14/10 meeting (where specific answers weren't readily available at the actual meeting):

Q: How many crashes within the I5/84/405, N/NE Quad area involve trucks vs. other vehicles over the last five years?

A: Between 2005 and 2009, there have been 83 crashes within the study area on I-5, out of 578 (14%). Within the study area on I-405, 15 out of 141 have involved trucks (or 11%). On I-84 there were 17 out of 331 (or 5%).

Q: Percent of freight trucks vs other vehicles during a typical two hour pm peak?

A: Truck % for I-5, I-405 and I-84 mainlines within the study area.
Weekday 2-hr pm peak
I-5: 6-7%
I-84: 3%
I-405: 5%

Q: Where do the employment numbers come from?

A: The jobs figures presented are drawn from the Economic Opportunities Analysis conducted by E.D. Hovee and Company in 2009 for the Portland Plan. The below link leads the Portland Plan Background Reports page. The three Economic Opportunities Analysis reports are on the right side. These reports are an analysis of economic conditions across the entire city, but the numbers are broken down by sub areas, and include numbers for the Central City as well as the subdistricts within the Central City.
http://www.portlandonline.com/portlandplan/index.cfm?c=51427

Q: Is it possible to get a more detailed breakdown of the retail uses that doesn't group the convention center into the retail category?

A: Yes. The spreadsheet (next page) includes estimated square footages by use in the NNE Quadrant study area broken down by sub category. Of the estimated 4.1 million square feet of retail in the Quadrant, 1.8 million are "major event entertainment" uses (this include the Convention Center and the Arenas at the Rose Quarter). 1.7 million is in "shopping" (the majority of this space is in the Lloyd Center Mall). Please keep in mind that these numbers are estimates based on visual observations of uses and linked up to the City's 3D building model.

bureau of planning & sustainability | 3d land use model
ne quadrant -- summary of estimated building square footages by use

industrial uses

building use	*square footage*	*percent of total*	*percent of industrial*
manufacturing	441,248	3.0%	32.0%
warehouse	606,038	4.1%	43.9%

grocery store	32,529	0.2%	0.8%
major event entertainment	1,830,089	12.3%	44.3%
self storage	73,769	0.5%	1.8%
shopping	1,723,560	11.6%	41.7%
vehicle repair	27,121	0.2%	0.7%
other	417,277	2.8%	10.1%
total square footage	**4,133,114**	**27.7%**	

restaurant uses

building use	*square footage*	*percent of total*	*percent of restaurant*
bar	88,055	0.6%	11.8%
coffee shop	95,306	0.6%	12.8%
fast food	317,541	2.1%	42.6%
other restaurant	245,314	1.6%	32.9%
total square footage	**746,217**	**5.0%**	

Q: Do we have data on the value of past/recent development projects in the Central City and NNE Quadrant respectively?

A: Unfortunately, the database we've assembled of major Central City development projects built during the past 20 years doesn't include the information on the value of projects. We could come up with an estimate by assuming average costs per s.f. of residential and commercial buildings, because we do have square footage estimates, but the accuracy likely wouldn't be that great. We can also research the permit values of specific major projects if that's of interest.

Comment: It would be good to have some background information on the River Plan.

A: The *River Plan* is a comprehensive multi-objective plan for the Willamette riverfront. It is an update of the Willamette Greenway Plan, zoning code and design guidelines, which were last adopted in 1987. The River Plan is being carried out in three phases, each focusing on a different stretch of the Willamette River. The first phase of the River Plan focused on the North Reach, which includes Lower Albina. City Council adopted the River Plan / North Reach in April, 2010. Key highlights of the River Plan / North Reach regulations related to Lower Albina include strengthening the industrial zoning along the riverfront and removing the greenway setback requirement from sites in the river industrial overlay zone; realigning the greenway trail alignment through Lower Albina along River St. and Interstate Avenue; and applying river environmental overlay zoning to most of the Lower Albina riverbank to conserve resources identified in the Natural Resources Inventory and establishing a vegetation enhancement requirement.

The second phase of the River Plan focuses on the Central Reach, which includes the Lloyd District. The River Plan / Central Reach will be completed as part of CC2035. River Team staff are working with the Central City team to coordinate efforts and will convene river-specific committees, meetings and public events as needed. River-related existing conditions can be found in the subdistrict profiles included in the Stakeholder Advisory Committee (SAC) background materials distributed the first meeting. General River Plan / Central Reach topics include riverfront vitality - creating vibrant waterfront districts through good urban design and lively, interesting places; portland's front yard - providing visual and physical access to the water and drawing people to the riverfront to play; and watershed health - improving conditions for fish, wildlife and people.

Q: Can you provide more detail about parking as a resource in the Central City s well as the North/Northeast Quadrant?

A: Below is a table summarizing parking in subdistricts of the Central City in relation to the number of people in the districts. These numbers are in some cases approximations, as comparable data is difficult to find. South Waterfront is not included given that its rapid transformation makes the number of employees in the district difficult to estimate. The parking figures for Central Eastside were estimated via a number of methodologies; a more accurate count is being developed by the City.

In general, the table shows that when all parking (on and off street) is counted in relation to the number of people in each subdistrict, the Lloyd District has the highest number of stalls per person, at 1.1 spaces per person. The ratio is more than twice the number for downtown Portland. In Lower Albina the number is .77 spaces per person, similar to the other industrial district in the Central City, the Central Eastside.

Subdistrict	Employees	Residents	Total People	All Parking	Parking/people
Central Eastside	15,733	1,400	17,133	13,900	0.81
Downtown	69,586	10,400	79,986	38,800	0.49
Goose Hollow	4,844	4,400	9,244	5,950	0.64
Lloyd District	18,977	1,700	20,677	23,050	1.11
Lower Albina	2,712	130	2,842	2,200	0.77
River District	17,187	12,200	29,387	18,400	0.63
University District (PSU area)	5,831	2,200	8,031	4,650	0.58

N/NE Quadrant and I-5 Broadway/Weidler Plans

November 2010 Open House Summary

Overview of the Event

The November Open House was the first large public outreach event on the N/NE Quadrant and I-5 Broadway/Weidler Plans (N/NE Quadrant Project), a collaboration by the City of Portland and Oregon Department of Transportation. The N/NE Quadrant Project will update the policy framework and land use plan for the Lower Albina and Lloyd District areas of the Central City, as well as evaluate improvement options for the I-5 corridor within the area. The Open House was co-hosted with the Portland Development Commission, who presented the Draft Rose Quarter District Plan. Outcomes of the Rose Quarter process are expected to feed into and inform the N/NE Quadrant Project and the two projects share many of the same stakeholders. The co-hosted event allowed the community to provide input on both of these related projects at one venue.

All members of the community, especially those who live, work, visit or travel through the N/NE Quadrant area, were encouraged to attend. A postcard mailing went to over 2,000 addresses, including all property owners and site addresses within the N/NE Quadrant boundary and two study areas. Flyers were posted announcing the event at locations within the quadrant, and the event was posted online on the city website, as well as on several community calendars. The event was also announced via media news releases and emails to the project mailing list.

Event Details

- **Location:** Memorial Coliseum, 300 N Winning Way (located in the Lloyd District)
- **Participants:** General public (over 127 attendees)
- **When:** November 15, 2010, from 4:30pm to 7pm
- **Format:** Open house, with a rolling PowerPoint presentation and informational display boards. There was opportunity to discuss topics with staff and other community members, and opportunity to provide comments in several different ways.
- **Intent:** To provide an interactive opportunity for attendees to learn about the N/NE Quadrant Project and provide input on the desired future of the area and issues that should be addressed in the planning process.

Materials

There were large display boards prepared by project staff throughout the space covering the following topics: Project Overview, History of the Area, Existing Development and Growth Potential, Identifying Distinct Places and Issues, The Willamette River, The Local Transportation System, and The I-5 Freeway. A group of high school students from Catlin Gable's PLACE program (Planning and Leadership Across City Environments**)** also presented information about a recent study they conducted of Holladay Park, located in the Lloyd District.

Questions Asked

Topic specific questionnaires on Land Use and Urban Design, the Riverfront, Local Transportation, and the I-5 Freeway, posed the following discussion questions:

- What Vision or goals do you have for the area?
- What do you like? Tell us what should be preserved or enhanced.
- What do you dislike? Tell us what issues should be addressed in the planning process?

Flip charts located throughout the room also gave people the chance to offer comments and ideas.

A large aerial map of the area laid out on a table, gave people the chance to offer location specific comments and ideas. These comments were recorded on sticky notes that were placed on the map. ODOT also had a comment board that asked attendees, "What issues are the most important to address as we consider improvements to the I-5 Freeway within the N/NE Quadrant?" The board listed eight issues and attendees were given four dots to "vote" on the issues they felt were the most important.

General response cards were also available for attendees to fill out and return at the open house or mail in after the event.

Summary of Comments

Participants completed topic specific comment forms and general response forms, as well as wrote comments on flip charts, made notes on an aerial map and did sticker voting, generating more than 140 separate comments or ideas. Transportation specific comments were the most common, followed by Land Use and Urban Design and then Riverfront.

Local Transportation

Within the local transportation comments, there was a high level of interest in making the quadrant more pedestrian and bicyclist friendly and making public transit (bus, MAX, streetcar) move available to and from the quadrant. Specific concerns about the Broadway/Weidler Couplet were brought up. Some people recommended that Broadway/Weidler be decoupled or showed interest in traffic calming. The MAX and bus system in the area was praised, while parking for residents was raised as a concern. Several comments emphasized the need for trail connections.

I-5 Freeway

Comments on the freeway expressed significant concerns about the on/off ramp conflicts with pedestrians, bicyclists and local vehicular transportation. Many people commented that they see the freeway as a throughway, primarily for freight and other long-distance travelers, and think that use of the freeway by local traffic should be discouraged. Other suggestions included lower speed limits of the freeway, removing on/off ramps and use of tolling or congestion pricing. Noise mitigation was also raised as a need for the quadrant.

Twenty-two people participated in ODOT's sticker exercise, which asked: "What issues are the most important to address as we consider improvements to the I-5 Freeway?" Below is

a list of the eight issues and the percentage of responses that issue received, in order from highest importance to lowest importance.

- Pedestrian and bike travel improvements: 31%
- Impacts on quality of life: 22%
- Impacts of improvements on adjacent properties: 15%
- Economic impact on local business: 13%
- Regional economic impact: 7%
- Freeway traffic safety: 5%
- Local and street access to freeway: 5%
- Freeway congestion: 3%

Land Use and Urban Design

Land Use and Urban Design comments discussed the desire for pedestrian-oriented neighborhoods built at a human scale. Several comments suggested smaller scale buildings within the Lloyd District that would provide for a variety of activities and foster a sense of community. The need for more residential development was also raised. The abundance of parking lots in Lloyd District was raised as a concern and some people provided suggestions of implementing food carts as an interim solution. Others were opposed to food carts. Russell Street in Lower Albina was mentioned as a favorable street for mixed-use and residential development.

The Willamette Riverfront

The riverfront comments highlighted the public's interest in getting better access to and along the river, including ideas to relocate the railroad tracks, construct trails, create a terraced green space and encourage residential development along the riverfront. Water recreation was also highlighted with suggestions for boat docks, a marina and water taxi. The need for enhancing riverfront habitat was noted, including ideas to create habitat under bridges and to construct wetlands along the river. There was a lot of interest in the future of the grain elevators, with mixed opinions on whether they should be retained.

PLACE Program Study of Holladay Park

High school students from the PLACE program received feedback on their study of Holladay Park. Attendees had a positive response to hearing youth representatives give unique perspectives about what specific improvements could be made in the park. The project was well received, with some critical feedback regarding a few specific improvement recommendations. Several people commented that the project highlighted the key role the park plays in the Lloyd District, a fact they had not thought of before.

This summary provides a rough snapshot of people’s ideas at the November 2010 Open House for the N/NE Quadrant Project. For more information about comments provided on the N/NE Quadrant Project, see the attached detailed list of comments.

Topic Specific Comments

These comments were generated from the topic specific comments forms. The 3 questions asked on each form are listed at the top of this chart.

Commenter	Topic	What Vision or goals do you have for the area?	What do you like?	What do you Dislike?
1	Freeway	I hope we can plan for: short term safety concerns (closing Broadway on/off ramp) and long term- do we really want a highway on our waterfront? Please analyze what we can do in 30,40,50 years.	Compared to almost any major city, we have much less traffic.	It severely disrupts walkability in an area we want to activate and all areas near off/on ramps consume significant amount of traffic and parking lots that could be developed.
2	Freeway	To deliver local freight and visitors only- not for through travel.	That the freeway is "below ground" is nice. I think that having the slow-down may encourage non-commercial drivers to select an alternative route or choose to not drive.	Places where vehicles leaving or entering the freeway conflict with pedestrians and bicyclists.
3	Freeway	1. Primary use freight. 2. Limited access to surface grid. 3. Much better bike/pedestrians accessibility.	Not much. Adding lanes is the solution.	Conflicts between surface traffic and those entering/exiting freeway reduce access to/from surface grid.
4	Freeway	Less traffic, slower traffic, less stop and go traffic.	2 lanes each way is very good. A wider freeway will only draw more traffic.	50 mph speed limit is too high. Lower it to 30 or 35 mph and you'll achieve: a more even flow of traffic, fewer accidents due to short merge/weave distances, and lower severity of accidents= less property damage and fewer serious injuries. Add a bike/pedestrians path to the 405 bridge upper deck. use the left side of the Kirby St on ramp from Cook St. to the bridge structure. Use the left shoulder across the entire bridge and south towards the Glisan overpass (on the median at turn point). Build a connecting ramp from the median to Glisan Street.

Commenter	Topic	What Vision or goals do you have for the area?	What do you like?	What do you Dislike?
5	Freeway	See this by 2011!: Reduce vehicle lanes on city streets to 12 feet and allocate the extra space to bike lanes. See example on rear for Williams Ave between Weidler/Broadway.		
6	Freeway	You'll hate me for this, but I want fuel costs so high that the freeway gets very little use.	I drive it occasionally and haven't gotten killed yet. I have no problem with slow freeway speeds.	can you address the usual freeway damage> Splitting neighborhoods, limiting access from local street to otherwise nearby local street cries to be remedied. Figure out how.
7	Freeway	As a benefit to the local Neighborhood and the region	Freeway access works well right now from a local standpoint.	Noise from freeway has not been mitigated like other portions of town.
8	Freeway	Preferably for I-5 not to exist in 2035. But if not, then to have as minimal impact as possible on both adjacent land and streets feeding it. Make Broadway pedestrian friendly and focus energy here for Rose Quarter area.	I like that I-5 is only 2 lanes in each direction. Please keep it that way.	The Box and especially the ramps at Broadway/Weidler. Barrier qualities of I-5. Excessive traffic, fast traffic on streets leading to I-5. Max station under I-5. Noise of I-5. I see more potential in Broadway then the Rose Quarter superblock. Would prefer improving N. Broadway at the expense of Winning Way (as far as traffic is concerned). Consider moving ramps to Winning Way and Clackamas to free up Broadway (I-5 southbound on ramp already exists).
9	Land Use and Urban Design	Linear commercial corridor along N. Broadway featuring restaurants that will be popular pre-and post- Rose Quarter events but also outside of and independent of Rose Quarter events that also rely on traffic going by on Broadway. Tame "the box", de couple Broadway and Weidler, traffic calm streets, move I-5 on/off ramps at Broadway/Weidler.	Fine grain historic buildings. Pedestrian- oriented neighborhoods. Mixed-use buildings. Tree-lined streets.	Excessive auto traffic. The box, I-5 ramps. Wide streets. One-way streets. Single/isolated uses. Lack of vibrancy. **Do these Preliminary subarea boundaries make sense?** Extend #5 down Broadway to Broadway Bridge to include all of the Broadway corridor. Have #1 and #4 end at Broadway (#1 north of Broadway and #4 south of Broadway).

Commenter	Topic	What Vision or goals do you have for the area?	What do you like?	What do you Dislike?
10	Local Transportation	(In 2035) A majority of all trips are made by non-SOV modes. The area is known as a bike and pedestrian friendly district. It's easy to get around without being on loud, fast moving streets.	MAX and bus service is great. The Vancouver/Williams corridor is fast and safe for biking.	There's an over abundance of parking- both surface and structured. The interstates (I-5, I-405, I-405, I-84) negatively impact quality of life. They are unpleasant to be around.
11	Local Transportation	No highway widening that tears out buildings. "Tinkering" ok.	I-5 will always be too busy!	Hope that Broadway Bridge can handle all the uses- like streetcar.
12	Local Transportation	Move residential influence- encourage the need for essential public service needs such as parks and schools	Increase mass transit/regional hub	Parking- the existing policies and planned development are in conflict with each other. Want more residential but restrictions on existing users.
13	Local Transportation	Increase the number of bikes, pedestrians, public transportation, commuters and visitors- reduce the number of drivers! Improved residential development will only be possible with improved parking for residents!	MAX and bus great, strengthen and improve public transportation, pedestrian and bike access. Ask freight to use Interstate/Greely to access I-5 and I-84.	Lack of street parking for residents in the district. I would like a permit program for residents.
14	Local Transportation	1. Either decouple Williams/Vancouver or consider reversing direction on Williams/Vancouver. It would make access to I-5/I-84 much safer as well as enhance bike/pedestrian access. 2. Decouple Broadway/Weidler- It would make the neighborhood businesses much more accessible to all modes as well as slow down traffic.		
15	Local Transportation	Be able to get from point A to point B on my commuter vehicle- bicycle- without fearing for my life or resorting to riding on sidewalks.	Vancouver/Williams north or Broadway	Getting here from Portland State Office Building. Miserable. And no bike racks here for open house. Are we actually being considered?
16	Local Transportation	Restore fine grain grid. More sidewalk connectivity.	Not much	Emphasis always seems to be on automobile throughput. This must be revisited. 1st priority should be bike/pedestrian.

Commenter	Topic	What Vision or goals do you have for the area?	What do you like?	What do you Dislike?
17	Local Transportation	Connections to the River! Easier to walk and bike. Easy connection between neighborhood and Rose Quarter. Traffic calmed on Broadway/Weidler.	Not much	Right now the SOV is the priority not people. Make people the priority.
18	Local Transportation	Use small size buses operating on alternative fuels or solar. Maintain charge stations for electric cars. Make ticket sales easy and close to the platforms of stations.	Clean electric energy used by light rail. Improve-Maintain neighborhood parking lots in the city to access light rail without walking more than a mile. I would use the Hollywood station much more if I could park near.	See #1. Put parking areas in the neighborhood, not huge lots (Gateway) ripe for crime. I know people who will not use the parking for fear of crime. Credit the inventor of 3rd rail, monorail and trolley at the coliseum/convention center area- Granville T. Woods.
19	Local Transportation	More pedestrian oriented and friendly. Less dominated by auto traffic. Separated cycle tracks and multi-use paths. More LRT and Streetcars down NE Broadway to Hollywood and up MLK to Alberta and down Alberta. Better bus system. Keep passenger rail on the west side and at Union Station including high speed rail.	Streetcar and MAX. Local buses.	Decouple and traffic calm MLK/Grand and Broadway/Weidler. Max speed over Steel Bridge-fix bottleneck on bridge. MAX station under I-5. Consider consolidating MAX stations between Rose Quarter and Lloyd Center to speedride. The box- dangerous and avoided by peds and bikes.
20	Riverfront		If the grain elevator and ship dock did not already exist by steel bridge, I think the concept of a terraced park from the Rose Garden/VMC down to the river sounds great. I can understand that the grain elevator blocks the view of the city from VMC. But Portland has done a fabulous job of saving historic structures.	Downtown. Why would the city consider eliminating these historic grain elevators? They reflect the bounty of the whole Willamette Valley and Portland's agricultural and port history. And seeing huge grain ships practically downtown is simply amazing. How many other cities can say they have this? Please don't remove the grain elevators! (Even if they are not economically viable as working grain elevators, maybe they could be repurposed?) There is a lot of other riverside parkland already in place.

Commenter	Topic	What Vision or goals do you have for the area?	What do you like?	What do you Dislike?
21	Riverfront	Lively pedestrian-oriented waterfront thronged with people. So much of the waterfront near downtown Portland is empty and underutilized even including Waterfront Park. Dock space for boats. Mixed use neighborhood directly on the water- something like a greatly improved River Place would be great in this area.	Grain silo- vestige of working waterfront. I also like seeing industry on the water and industrial traffic traveling by river- ships and barges.	Moving the railroad tracks toward Interstate Ave to free up waterfront. Steep topography between Interstate Ave and river. Dock Space for boats- big to small.

General Comments

These comments were generated from the yellow general comment forms, the 3 flipcharts, and sticky notes on maps.

Commenter	Topic	Open Comment about the N/NE Quadrant Project
1	Freeway, Land Use, and Riverfront	Reserve area above I-5 for high speed rail- already publicly owned- from north cross Willamette by the Fremont Bridge (or tunnel). Realign Union Pacific tracks to be adjacent to light rail. Build plaza above (from Larrabee to Steel Bridge) with development above. Build multipurpose Willamette River Greenway Trail adjacent to river in wide pullouts. Access in commercial- coffee shop(s), restaurants adjacent to trail.
2	Land Use	It was suggested to have more food vendors at the parking lot of the Lloyd Theater across the street from Holladay Park. I am very much against food handlers. I think it makes the city cheap looking and takes away from the restaurant people who have to provide seats/tables/ restrooms/ADA etc. I think parking lots full of vendors is terrible- there are so many vacant storefronts and closed restaurants because some of them cannot compete with the street food vendors. I don't see vendors in the Pearl District! So why downtown Portland?
3	Land Use and Freeway	Reserve the Blanchard site plus enough land (zoned) for an expandable AAA baseball stadium/outdoor concert venue. Only spend enough for the land set aside (make it a temp. park for now with baseball diamond field where the permanent diamond will be (think ahead). Slowly move South to North with zoning to encourage breweries, pubs, dining, hostels and hotels, residential. Make Lower Albina with alleyways (very British or Victoria like) people friendly. Plan for high speed rail after I-5 is moved to an underground configuration after 30 years (I-5 curves to the east to line up with 8th/10th). High speed rail could then possibly use the former I-5 land (maybe trains below a eastside park corridor). Plan the subway station now.
4	Land Use and Urban Design	Should we be looking at moving the freeway away from the riverfront?
5	Land Use and Urban Design	Too many surface parking lots in Lloyd
6	Land Use and Urban Design	Re-align Union Pacific tracks across from Rose Garden (straighten out S curve) Move tracks east and bury/tunnel. Build terrace and development above light rail and UP- connect Rose Garden/Coliseum with River. Build multipurpose trail (16'-20' wide) along the river.
7	Land Use and Urban Design	Balanced policies which respect long time residential uses and need for more residential development in the area. Don't ignore the R zoned properties on parking issues.
8	Land Use and Urban Design	Freeze renewals to expired PDC URA's (5) fives!
9	Land Use and Urban Design	Public funds 20% of structure the public expects 20% of net profit e.g. medal on NFL Green bay
10	Land Use and Urban Design	Land use and urban design and all public/private partnerships including parks
11	Land Use and Urban Design	Convention Center and Lloyd center: mixed use development and human scale!

Commenter	Topic	Open Comment about the N/NE Quadrant Project
12	Land Use and Urban Design	Food carts: at NE corner of convention center near MAX station
13	Land Use and Urban Design	Food carts: in Rose Quarter and Memorial Coliseum plazas
14	Land Use and Urban Design	Russell Street favorable zoning for mixed use/housing/etc.
15	Land Use and Urban Design	Concern about traffic impacts/congestion generated by light rail infrastructure and now streetcar. Just making it harder to get around.
16	Land Use and Urban Design	Concerns about URA expenditures to property owners who may not need it, and not getting enough public benefit in return
17	Land Use and Urban Design	No 'there there' in the Lloyd, why would anyone want to build residential development there or even live there?
18	Land Use and Urban Design	Interest in lower, mid-rise development or building types in the Lloyd, maybe taking a break from the high rise stuff
19	Land Use and Urban Design	The overriding goal must be human scale and community. The streets (all of them) must feel good for walking and have adequate and safe cycle ways. Mixed development of a local community feel for the area. This would allow people to choose to live near their job and contribute to the development of a local community feel for the area. On the surface use of the automobile should be discouraged. This would cause visitors to the area to arrive, park and use other means of mobility in the neighborhood.
20	Land Use and Urban Design	The walk able character must include and link from the Lloyd center to the convention center an on to the Rose Quarter. MAX and trolley must feel like they fit the local surroundings so that they are an easy option for short hops. Day tickets for tourists and regional visitors should include use of both without multiple tickets.
21	Land Use and Urban Design	Finally the plan needs to include development of the Sullivan's Gulch bike path and the North Willamette Greenway. In addition to being major daily links to the area these would develop into significant tourist amenities with development of Gateway Green and easy access to Kelly Point Park.
22	Local Transportation	Freeway entrances clog local traffic at prime commute times- slowing commuter and local traffic. Is there a way to address this?
23	Riverfront	Keep the grain elevators by the steel bridge
24	Riverfront	What is the future of the grain silos? Is the city going to buy it?
25	Riverfront	Access to the river
26	Riverfront	Water recreation
27	Riverfront	Greenways/trails/paths
28	Riverfront	Amphitheater
29	Riverfront	Constructed wetlands along the river
30	Riverfront	Create habitat under bridges/esplanade
31	Riverfront	Create better connections between Albina and Lloyd/Rose Quarter

Commenter	Topic	Open Comment about the N/NE Quadrant Project
32	Riverfront	Paul Allen should display his yacht collection along the riverfront at Thunderbird site. The public could pay to see the yachts.
33	Riverfront	Let's make the grain elevators an interesting focus of this working neighborhood- how about developing a walking tour with plaques with info about the shipping, the steel and Broadway bridges, the rail and water industry. Have it be something folks want to go and see- with viewpoints from bridges and from the memorial coliseum.
34	Riverfront	Please "no" Jumptown (it's the Lloyd District) It could change into junk town
35	Riverfront	Bury the railroad track to get rid of the curve and free up land
36	Riverfront	What can we learn from Pittsburgh?
37	Riverfront	Access and transportation and paths/greenways (marinas, water taxis)
38	Transportation	Is there space for a potential high speed rail line (through this space)?
39	Transportation	Decouple Broadway/Weidler- it would greatly enhance business as well as make it more accessible for neighbors
40	Transportation	Reverse directions on Vancouver/Williams couplet
41	Transportation	Parking for residential uses is a problem- we need permits! Yes!
42	Transportation	The box area is such a problem that my company will no longer deliver using company trucks
43	Transportation	Bike lanes from Rose Quarter MAX to Vancouver/Williams need to be wider and better timed signals. Two "bike lanes" wide where possible
44	Transportation	Williams from Weidler to Hancock needs to be 2 bike lanes wide, same with Wheeler from Multnomah to Winning Way
45	Transportation	Better signal timing- now you need to stop at every light from Broadway to Oregon (on Vancouver/Wheeler)
46	Transportation	Turn for bike lanes from East Broadway to Flint (its silly to add bikes into the I-5/Broadway interchange when you can reroute them around it).
47	Transportation	Bike traffic has quadrupled since 2000- you need to add capacity throughout and at the next open house can you add bicycle traffic growth to the display board?
48	Transportation	Reduce I-5 speed limit to 30 mph from 405 to Marquam Bridge- reduce number of collisions and severity
49	Transportation	Bicycling can be scary
50	Transportation	Bike Boulevard/Cycle Tracks would be good to connect neighborhoods and Lloyd District
51	Transportation	Steel Bridge: Close Steel Bridge to car traffic? High congestion pricing?
52	Transportation	West side of Steel Bridge: Stockholm style inner city toll charge
53	Transportation	Rose Quarter Transit Center: Move/reconfigure MAX tracks to create new developable parcel
54	Transportation	Remove parking meters from NE 1st Ave north of Multnomah and make it permit only. Issue parking permits to residents.
55	Transportation	Make the parcels around the East side of the Broadway Bridge developable
56	Transportation	frequent driveway placement on Weidler is hazardous to bicyclists and pedestrians. Minimize driveways especially for drive thus.
57	Transportation	Move freeway ramps away from Broadway/Weidler. Move to new bridge connection at Clackamas St/Winning Way

Commenter	Topic	Open Comment about the N/NE Quadrant Project
58	Transportation	Decouple Broadway/Weidler- major bike and vehicular flows eases traffic and increases bike safety
59	Transportation	Interest in more transportation mode clarity in the system: add more ped/bike corridors through the area, but then also remove them from the busier corridors like Broadway/Weidler
60	Transportation	Further development of the freeways must be done in a minimalist way with priority given to the through movement of traffic. Priority needs to be given to the through movement of traffic. This could involve creation of separate through lanes, or timed closure of certain ramps when their use would impede the general flow of traffic. This plan needs to be linked in a realistic way to the effects that the development of the CRC will have on flow through the area. without building monolithic roadways we need to make realistic plans for the movement of commerce. Specific attention must be directed to the flow from the north onto Broadway and Weidler. the volume and speed of this flow has a major negative impact on the human scale of the area, and is a specific block to comfortable ingress into the Rose Quarter area.
61	Urban Design and Local Transportation	1. Consider a car-free zone in the Lloyd District. 2. There is a lot of large scale architecture in the N/NE Quadrant. More human scale design would vastly improve quality of life here. 3. Minimize drive through. 4. The highways are noisy, stinky, ugly and hard to get over/under. Mitigating this would be a true success for the plan.
62	Transportation	Sherwin Williams Paint store - corporate won't deliver because of traffic queues - don't own property if ROW is needed, owner gets money - like location - get certain amount of pass-by/drop-in customers
63	Transportation	Tough to get bikes through Wheeler/Williams intersection
64	Transportation	Weaves on both NB I-84 to Weidler and SB Wheeler to I-84 are difficult
65	Transportation	I-84 traffic is often backed up onto I-5
66	Transportation	Close Wheeler to I-84 and force those vehicles to MLK / Grand on ramp
67	Transportation	Add an extra lane from I-405 to I-84 Southbound
68	Transportation	There is too much traffic on Broadway - need to make bike / ped environment
69	Transportation	Pedestrians trying to get to Rose Garden for events park east of I-5 (free) and then have trouble walking over Broadway/Weidler with all the traffic also trying to get to Rose Garden
70	Transportation	Broadway Weidler intersection is a nightmare with traffic backing up on through streets
71	Transportation	Encourage green streets and shops under I-5, on Multnomah. Create pedestrian friendly environment
72	Transportation	Consider lowering the posted speed to 35 mph for those merging onto I-5
73	Transportation	When is ODOT going to remove I-5?
74	Transportation	Conflict between off ramp traffic and bikes/peds at the convergence of Vancouver and Broadway ramp
75	Transportation	Traffic on I-5 has forced me to avoid the interstate as much as possible and use local streets. If traffic in the area continues to increase, I may consider moving business
76	Transportation	Tolling/congestion pricing should be considered

N/NE Quadrant Project Scope and Topics of Other Studies

Topic		N/NE Quadrant Project Scope	Topics of Other Studies	Comments From Subcommittee Meetings	Staff Reponse/Notes
Land Use & Urban Design					
LU 1	Land Use & Urban Design	Identify land use and urban design/urban form issues in Lloyd and Lower Albina subdistricts, and the two study areas - Vancouver/Williams and NE Multnomah.	Portland Plan will develop the strategic framework for the City of Portland. CC2035 will develop the overall policy framework for the North/Northeast Quadrant Plan. CC2035 will provide the framework for economic development, housing, transportation, open space, and arts/civic/cultural policy issues.	Could we talk about developing a strategy to address the episodic nature of the district? Until there is a vast amount of development here, how can we create consistent vibrancy?	Agree - Will be included in District-Wide Land Use/Urban Design Issues.
				We need to make sure that we don't negatively affect other areas by changes we make in this quadrant. Any major changes of transportation thoroughfares may change/reshape subdistricts/neighborhoods – we need to be really cognizant of the ramifications of changes we make.	Agree - Will be included in District-Wide Land Use/Urban Design Issues and evaluation critieria. The role of the Central City and it's relationship to adjacent areas are also key considerations and tasks of the broader Central City 2035 Advisory Group.
				Streetcar development should be pulled out into it's own section because it crosses several areas and issues (and that shouldn't get missed).	Agree - Encouraging development around new streetcar stations is a key issue in the Lloyd District. This plan effort will work with PDC to develop policies and actions to support it.
LU 2	Growth	Seek to accommodate 2035 growth projections for population and employment in the study area.	Metro Region 2040 established high-growth expectations for the Central City. Conversations on this topic will need to happen at the regional level.	Tax abatement is going to be sunsetted, and it's an issue that has potential to impact the barriers to greater density and development (the FAR is there, but the market isn't – how can we build out to our potential)	The future of tax abatement is a larger Central City-wide discussion currently under consideration by the Central City 2035 Advisory Group.
				Housing is big enough and important enough that it should have it's own scope section.	Agree. Revised Project Scope - *Develop detailed housing goals and policies within the study area.*
				We should talk about urban renewal, which sunsets in 2013.	The future of urban renewal is an important plan implementation issue. However, if changes were to be made to the current URAs in the study area, they will have to be developed through separate processes led by the PDC.
LU 3	Zoning	Revisit, and as necessary, recommend changes to comprehensive plan and zoning designations, development standards, and design guidelines	The broader CC2035 project may propose some structural code changes regarding how zoning and development review works in the Central City.	This is maybe already in zoning, but there should be something about freight movement and distribution areas (like in lower albina, etc.). Industrial sanctuary zoning is important for us to pay attention to.	Agree - Will be included in Lower Albina Issues.

N/NE Quadrant Project Scope and Topics of Other Studies

Topic		N/NE Quadrant Project Scope	Topics of Other Studies	Comments From Subcommittee Meetings	Staff Reponse/Notes
LU 4	Rose Quarter	Coordinate results of the Rose Quarter Development Study and help implement the development strategy.	Rose Quarter Development Project is currently developing a detailed development strategy for the Rose Quarter.	We should say we're preserving *and* also enhancing the large event institutions (3 out of 4 of Portland's large event institutions - all but PGE park - are in this area).	Agree - Will be included in Rose Quarter and Lloyd Issue. Revised Project Scope - *Coordinate results of the Rose Quarter Development Study and help implement the development strategy in the Rose Quarter and by inte3rating the strategy with the rest of the study to support both Rose Quarter success and development in surrounding areas.*
				Encourage more language about coordinating the various efforts that are going on (including the possibility of eliminating the S-curve in the rail system in this area, etc.)	Agree - Will be included in Rose Quarter issues. Also under consideration in Rose Quarter Development Project.
LU 5	Willamette River	Coordinate to identify land use/urban design issues and develop regulatory guidance for the Willamette Riverfront in the N/NE Quadrant.	River Plan / Central Reach will be developed as part of the CC2035 Plan. The River Plan will contribute policy guidance for the Willamette River. The policies and regulations adopted through the River Plan / North Reach (April, 2010) that apply to the riverfront in Lower Albina will not be revised through the N/NE Quadrant Plan or CC 2035.		No comments received
LU 6	EcoDistricts	Coordinate with Portland Oregon Sustainability Institute-POSI/Lloyd Green on the policy framework for EcoDistricts.	EcoDistricts study is led by POSI; has identified the Lloyd District as a pilot project. Lloyd Green is the active association in Lloyd pursuing EcoDistrict formation.	There should also be something about stormwater in the interface section.	Stormwater issue will be included in Quadrant-wide issues as well as in freight transportation, public realm and eco district areas.
LOCAL TRANSPORTATION					
LT 1	Purpose	Identify multi-modal transportation issues in the Lloyd and Lower Albina subdistricts, and the two study areas-Vancouver/Williams and NE Multnomah.	The Central City Transportation Management Plan (CCTMP) will be updated as part of CC2035.		No comments received
		The Regional Transportation Plan 2035 forecast will be the basis for the transportation analysis	The CCTMP will revise and, if needed, recommend changes to Central City wide transportation policies.		No comments received
			Plan recommendations may lead to amendments to the City's Transportation System Plan (TSP).		No comments received
				Motorized 2 wheeled vehicles should be called out/encouraged	Agree - will be included in the multi-modal transportation issues

N/NE Quadrant Project Scope and Topics of Other Studies

Topic		N/NE Quadrant Project Scope	Topics of Other Studies	Comments From Subcommittee Meetings	Staff Reponse/Notes
				Add language about how to remove short auto trips on the freeway to improve the freeway system through this area (particularly with regard to focusing on freight, and multiple-occupancy or bike transportation).	Agree -see below
				We should consider reducing/eliminating single-occupancy vehicle trips as a companion to improving freight movement – make the freeway for freight and for higher-occupancy transport and bike options	Revised Project Scope - *Consider strategies to reduce single occupancy vehicle trips in the district.*
LT 2	Regional Trails (Sullivan's Gulch Trail & The Willamette River Greenway Trail)	The N/NE Quadrant Plan will coordinate and recognize the future general trail alignment for the Sullivan's Gulch and will coordinate with Parks to update the alignment of the Willamette River Greenway Trail as necessary.	This Plan will not determine the specific location for the Sullivan's Gulch Trail. This is a separate project led by the PBOT and Parks.	Include language about connectivity to the trails. Connectivity to trails should be called out	Agree - See INT 1
			The North Portland Greenway Trail Alignment Project is a Parks project that will determine the alignment for segments of the North Portland Greenway Trail.		No comments received
LT 3	Parking	The N/NE Quadrant Plan may identify parking issues to be addressed as part of the CC2035/CCTMP process.	The CCTMP will be updated as part of CC2035, and will revise and, if needed, recommend changes to Central City wide transportation policies, including parking.	The N/NE Quadrant Plan ***will*** identify parking issues to be addressed as part of the CC2035/CCTMP process.	Accept comment and combine with INT 4
				There should be something about parking and transit in the Interface section - Land use development and opportunities are greatly impacted by parking and transit (their existence or lack thereof)	Agree - will be included in the parking issues
LT 4	Transit	Identify transit needs and conceptual long-term improvements to the Rose Quarter Transit Center.	No resolution on the Rose Quarter Transit Center. The project will study some of the major transportation issues in the area and identify some overall direction for long term improvements, but will not recommend a solution.		No comments received
		This Plan may influence but will not determine the next streetcar line	The Streetcar System Concept Plan calls for potential streetcar routes through the corridor. To determine feasibility and choose a route, a separate alternatives analysis is needed.		No comments received
LT 5	Local Transportation System	Consider street hierarchy and conceptual level design approaches to different streets in the study area.	No major expansion in local auto capacity. Central City policy calls for prioritizing non auto improvements to meet Central City economic development and livability goals.		No comments received

FREEWAY TRANSPORTATION

N/NE Quadrant Project Scope and Topics of Other Studies

Topic		N/NE Quadrant Project Scope	Topics of Other Studies	Comments From Subcommittee Meetings	Staff Reponse/Notes
F1	Improvements to I-5	Modest improvement less than $200 million. Consider improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	Planning Beyond the 2035 Horizon is not a part of this Plan.	Modest improvement ß or maybe eliminate the language that is overly limiting in this box.	Revised Project Scope - *Consider improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405. Modest improvements in the range of $200 million will be developed (based on the current Financial Constrained RTP forecast for the Region).*
				Some of the statements here limit us unnecessarily ($ amount on the improvements to I-5, etc.). We can discuss the appropriate level of improvements without having a dollar cap written into the scope.	Refer to Revised Project Scope
				Consider improvements addressing capacity, operational, and safety issues on I-5 from I-84 to I-405.	The study will focus on developing modest improvements that address capacity, operations and safety issues on I-5 between the I-84 ramps and the Fremont Bridge (I-405) ramps. These modest, shorter-term improvements will be developed to be compatible with a longer range vision for the Quadrant.
			This Plan will not determine tolling. The 2007 Oregon legislature directed the Oregon Transportation Commission (OTC) to develop tolling policy recommendations for a consistent framework and foundation on which to develop, implement and evaluate potential projects.		No comments received
		Focus on safety improvements to reduce the number of crashes.	The Freeway Loop Study will be undertaken in future (~5 years?) to try to determine the long-term (50+ year horizon) design for I-5 through the Central City. I-5 tunnel not feasible during 2035 time frame (does not preclude planning for later date)		No comments received
		Focus improvements on the Broadway/Weidler Interchange on and off ramps, ramp spacing and connections to the local arterials.	Moving the Eastbank Freeway is not feasible during 2035 time frame (does not preclude planning for later date)		No comments received

N/NE Quadrant Project Scope and Topics of Other Studies

Topic		N/NE Quadrant Project Scope	Topics of Other Studies	Comments From Subcommittee Meetings	Staff Reponse/Notes
		Use flexibility in design standards to accept more than two hours of Level F congestion, if improvements will improve safety and operations on the freeway	The N/NE Quadrant Plan will be prepared pursuant to the RTP. The Columbia River Crossing Study is a long-term, comprehensive plan to address safety and congestion between Marine Drive and SR 500. CRC will replace the I-5 bridge (with tolling) over the Columbia River and extend light rail to Vancouver. I-5 improvement are needed in our study area with or without the CRC. Traffic volumes on I-5 in this section are not substantially different with or without the CRC, as defined in the EIS.		No comments received
		Focus on modest improvements - to avoid any major (corridor wide) ROW impacts. Therefore, the ROW requirements will be more localized for a specific need.	No major ROW expansion - Try to avoid impact on key historic/cultural sites. Be very sensitive to the urban context of the area.		No comments received
F2	High Speed Rail	The N/NE Quadrant Plan will not determine High Speed Rail. Oregon High Speed Rail Study will be monitored for potential action items for CC2035, Portland TSP, and other related plans.	The ODOT Rail Division is developing a High Speed Rail Plan for service improvements including one-way travel time under two hours, six round trips per day and increasing on-time performance to 95% between Eugene and Portland.	To what extent, if any, will high-speed rail be included in this process?	This planning process will defer to the State's High Speed Rail study.
				We should discuss how we can best address long-term issues given our short time horizon (for example, we could include things like “our planning for 2035 will not preclude the possibility of a station here, or expanded rail tracks here”)	This planning process cannot determine if High Speed Rail is needed in the district or where it might be located. Refer to State's process.
				The rail transportation that serves/interacts with this area should be discussed (the number of trains that travel on the tracks, and the shortcomings of the Steel Bridge, etc)	The Quadrant Plan will coordinate with private rail providers to determine needs and issues within the planning horizon of 2035.
INTERFACE TOPICS (Between local and freeway or Transportation and Land Use)					
INT 1	Bicycle and Pedestrian Routes	Enhance pedestrian and bicycle routes. Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway. Will help implement the City’s Bicycle Master Plan.	Plan recommendations may lead to amendments to the City’s TSP and Pedestrian Master Plan and Bicycle Plan for 2030.		Revised Project Scope - *Enhance pedestrian and bicycle routes and access to trails. Retain and enhance pedestrian and bicycle connectivity throughout the Quadrant including west-east access across the freeway. Will help implement the City’s Bicycle Master Plan.*
		The N/NE Quadrant Plan will coordinate with the PBOT Bikeway Development project.	Some bicycle improvements in the study area will be addressed as part of the PBOT Bikeway Project Development project.		No comments received

N/NE Quadrant Project Scope and Topics of Other Studies

Topic		N/NE Quadrant Project Scope	Topics of Other Studies	Comments From Subcommittee Meetings	Staff Reponse/Notes
				In bike/ped, maybe we could talk about pulling bikeways off of large high-vehicle traffic areas, and give them separate lanes/trails/streets (for cyclists' safety and for larger space for cars in big streets – like Broadway/Weidler)	Agree will incorporate
INT 2	Freight Movement	Improve freight movement. Focus on improving the reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes.	Plan recommendations may lead to amendments to the City's TSP and Freight Master Plan.		Revised Project Scope - I*mprove truck freight movement. Focus on improving the truck reliability (low frequency of incidents), and good geometrics for turning, stopping and other movements for freight vehicles in key freight routes and freight district.*
				Encourage more language about coordinating the various efforts that are going on (including the possibility of eliminating the S-curve in the rail system in this area, etc.)	Revised Project Scope - *Rail freight to coordinate the various efforts that are going on (including the possibility of eliminating the S-curve in the rail system in this area, etc.)*
		Improve freight access to the freeway and industrial areas.		This is maybe already in zoning, but there should be something about freight movement and distribution areas (like in lower albina, etc.). Industrial sanctuary zoning is important for us to pay attention to.	Agree will incorporate
INT 3	Climate change	This Plan will not directly address regional GHG issues.	Other efforts will develop regional and statewide GHG strategies. The 2010 Oregon Legislature passed a statewide, comprehensive bill aimed at reducing greenhouse gas (GHG) emissions from transportation. That effort will involve coordinating and consulting with stakeholders, local governments, Metropolitan Planning Organizations (MPOs) and other state agencies to develop a state-level strategy to reduce GHG from transportation.	Include something about the type of fuels/energy used.	The Quadrant Plan will defer to regional and statewide GHG strategies.
		Transportation alternatives analysis will include modeling of alternative land use and transportation concepts on vehicle miles traveled, greenhouse emissions, and impacts on Central City land use and transportation. Project will coordinate with the CC2035 process.	CC2035 will include GHG modeling in the policy analysis of land use and transportation relationships.		No comments received
INT 4	Parking			There should be something about parking and transit in the Interface section - Land use development and opportunities are greatly impacted by parking and transit (their existence or lack thereof).	Revised Project Scope - *Examine the relationship between parking strategies to support land use development strategies while encouraging the use of alternative transportation modes, including proximity to transit, demand management strategies, bicycling, and proximity to housing.*

N/NE Quadrant and I-5 Broadway/Weidler Plans

12/9/10 Draft Project Goals with Subcommittee Comments and Facilitator Proposal

I. Original Draft

The following is provided to promote discussion – not end it. It will evolve over time. The goals are listed in alphabetical order, not in order of importance.

1. **Adopt a N/NE Quadrant Plan.** This planning effort will result in integrated land use, urban design and transportation policies and plans that balance and sustain economic, environmental, and social interests.
2. **Balanced transportation system**. Develop a safe, efficient and convenient multimodal transportation system (pedestrian, bicycle, transit, freight, vehicle) that addresses present and future transportation needs and encourages the use of non-automobile modes of transportation.
3. **Connectivity**. Mitigate physical barriers within the district and enhance connections to adjacent areas and to the Willamette River.
4. **Culture and heritage**. Honor and build on the rich historical and cultural heritage of the district.
5. **Economic development**. Promote economic development and opportunity, support the development goals of the district and protects, enhance and complement the district's diverse uses.
6. **I-5 in the N/NE Quadrant area.** Improve traffic operations, safety, and regional and local freight movement on I-5 as well as in the interface between the freeway and the local street system.
7. **Livability**. Enhance livability, support the unique assets of the district and respect and complement adjacent neighborhoods.
8. **Parks and open space**. Provide additional and improved public open spaces to enhance and complement the district and connect it to the Willamette River and the regional trail system.
9. **Policy context**. Develop a plan that is consistent with the overall goals and policies of the City's Comprehensive and Central City plans, and meets regional and state land use and transportation policies.
10. **Sustainability**. Support the City's goals of reducing carbon emissions and enhancing the natural environment.
11. **Vibrant and distinct district**. Support the creation of a healthy and vibrant district that includes a mix of residential, commercial, industrial, recreational, cultural, and historic areas.

DRAFT

II. Comments Received at December Transportation and Land use Subcommittee Meetings:

Under 2: Balanced Transportation System:

- Perhaps rename “Complete transportation system?”
- In list of modes, perhaps add bus, light-rail, high-speed rail, and heavy rail, and water transportation - both for freight, and commuting (river taxi).
- Alternately, remove list of modes entirely and instead say “transportation that moves people and goods” or something similar.
- Perhaps specify that the project should also reduce the use of single-occupancy vehicles ←there is some disagreement about whether to do this.
- Sustainability of development along streetcar.
- Use this plan to identify potential sites for large transportation infrastructure.
- Add a goal of reducing single-occupancy vehicle usage.

Under 3: Connectivity:

- Currently there is no freight access to railroad, grain elevators, etc. on the river – it’s technically “not allowed” – should the reference to Willamette be removed?
- Perhaps call out the river further – have a specific goal that is connectivity to the river, or add more language about the river in other bullets.
- Add to the end of this goal: “and interconnecting transportation systems” (streetcar, Max, etc. – those connections should be enhanced)
- More specificity in what type of connectivity is needed? Bike and Ped?
- Figure out how the waterfront is going to work – the different uses needed along the waterfront (and maybe separate out)
- This district is unique in terms of transit options – calling out the increase of public and sustainable transit and reducing single-occupancy vehicles here is important in connectivity.

Under 4: Culture and Heritage:

- Add in better language about equity here or somewhere else.

Under 7: Livibility:

- Call out Eliot and Lloyd neighborhoods.
- Specify increased residential development.

Under 9: Policy context:

- Or identify key policy or legislative changes needed in order to implement this plan (incorporate this idea either in #9 or in #1 above).

Under 10: Sustainability:

- Separate out carbon emissions and natural environment

DRAFT

- Add a green infrastructure goal (greenroofs, green building, sustainable storm water, etc.)

Under 11: Vibrant and distinct district:

- Add at the end of this goal something like “and complements the surrounding historical context.”
- Maybe focus more on the individual subdistricts and address connectivity between them.

Other Thoughts:

- Perhaps rename as “Strategies” or “Objectives” or “Things we’ll have to make trade-offs around” (i.e. are there too many for them to really be “goals”?)
- Perhaps dial down the focus on transportation stuff and dial up the focus on housing, employment, and livability.
- Maybe consolidate #9 and # 1 (#9 is a helper to #1)
- Maybe consolidate 4, 7, and 11
- Maybe consolidate the “through movement” themed ones – water, I-5, etc.
- **Add #**: Preserve Industrial jobs (or family-wage jobs, or focusing on job equity) in Lower Albina.
- **Add #**: Transportation from, to, and through study area (paying attention to whether/how much more traffic and congestion is optimal through this area).
- **Add #**: Possibly call out the ways in which this area has big “draws” – Lloyd district, rose quarter, convention center, etc.
- **Add #**: a goal about the diverse industrial land uses
- Add more language around balancing types of development (housing, types of housing, commercial, etc.)
- Somewhere, encourage density in development
- Somewhere, address the Job to Housing Ratio and type of housing
- Somewhere, add idea about “Empowering and enhancing economic opportunities in this area” (engage talents in this area first before looking outside - the “concentric circles” idea).
- Somewhere, address High Speed Rail
- Somewhere, address Trail systems – can they be better connected with other transportation systems
- Somewhere, address Homelessness – issues with fears around homelessness should be called out (fears around crime, safety, etc.)
- Somewhere, address the additional support systems needed to support additional housing (schools, grocery stores, increase in parking for residential purposes, etc.)

DRAFT

III. Facilitator's Proposal Based Upon Above Comments

Project Statement

This planning effort will result in integrated land use, urban design and transportation policies and plans for the N/NE Quadrant and I-5 Broadway / Weidler that balance and sustain economic, environmental, and social interests. The plans will be consistent with the overall goals and policies of the City's Comprehensive, the Central City plans, and will meet regional and state land use and transportation policies.

Our recommendations will be guided by the following:

A) Promote economic development and opportunity, support the job goals of the district, and protect, enhance, balance the district's diverse mix of residential, commercial, industrial, recreational, cultural, and historic uses.

B) Honor and build on the rich historical and cultural heritage of the district, enhance livability and safety, support the unique assets and necessary infrastructure, and respect and complement adjacent neighborhoods.

C) Develop a safe, efficient, and convenient full multimodal transportation system, address present and future transportation needs and facilities, encourage the use of non-automobile modes, mitigate physical barriers within the district, and enhance multimodal connections to adjacent areas and resources.

D) Improve traffic operations, safety, and regional and local freight movement on I-5 as well as in the interface between the freeway and the local street system.

E) Provide additional, improved, and accessible public open spaces to enhance and complement the district.

F) Support the City and Regional sustainability, environmental, housing, social equity goals.

DRAFT

Preliminary Land Use and Urban Design Issues for N/NE Quadrant

N/NE QUADRANT-WIDE:

- District Vibrancy/Vitality & Creating a Livable Community
  - Need more human-scale architecture
  - Develop Underutilized Land with "responsible" Density
  - Health Aspects of Plan
- Social/Environmental/Economic Balance Sustainability & Equity – respect Albina Plan
  - Increasing Diversity
- Increasing Employment
  - Business Vitality
  - Risk of Displacing Existing Businesses
- Natural Areas & Natural Resources
- District Identity (multiple) lacking
- Lack of Resources for Implementation/ Need to see real changes – not just plans
  - Partnerships needed

#	***LU & UD Subcommittee Additions & Comments from 12/2*** **N/NE Quadrant-Wide**
1	Bird friendly building design district wide
2	Consider tax incentives or other carrots to push development off surface parking lots
3	Centralized bike facilities (shared) with lockers
4	Relook at development incentive programs and regulations
5	Target development support: rose quarter, 7th/9th/Multnomah/Holladay, Blanchard, and Lloyd Mall properties
6	Green metropolis David Owen
7	Residential Development: New market involved strategies and workforce housing
8	Concentric circle economic development opportunities: focus on engaging local skills and resources
9	Asset based community development using existing human magnet nodes
10	Approach major land holders: public and private partnerships and master planning
11	River access near and distant. Obstacles: I-5, MLK/Grand, and Railroad
12	Connect Clackamas to River
13	Improve all pedestrian connections under I-5- create lively places
14	Safety concern elsewhere as well as Holladay Park (ex. Homeless issue around Lloyd)
15	Green infrastructure/sustainable storm water: green street trees, ecoroofs, bioswales, etc.
16	Ensure all sides of any/every new development is pedestrian friendly not just a wall or a window- but doors and access
17	Land value/timing economic strategy
18	Identify/enhance commercial "main streets" business districts and new potential Business Districts
19	Develop and preserve parks, trails, gardens, and open spaces. Encourage private pocket parks. Trade FAR for green available to public.
20	View corridors evaluation and barriers to development
21	Housing incentives, employer-supported housing, other incentive to achieve residential goals
22	Preserve/enhance current attractors

#	*LU & UD Subcommittee Additions & Comments from 12/2* **N/NE Quadrant-Wide**
23	Urban farms and community gardens as health and healing green spot
24	Isolation of various segments of the district by roadways, freeways, and soon streetcar lines. Need to bridge these with more controlled intersections from MLK and MLK/Grand from San Rafael on the north through to I-84. Steetcar stops need to include controlled intersections at least every 3 "regular" blocks for its entire length.
25	Existing zoning codes need to be re-evaluated in light of experience with mixed-use developments. Higher density residential zones don't seem to be attracting new development. Consideration should be given to reverting back to the "commercial" zones they had before the last Plan BUT with a "mixed-use" overlay that allows residential above commercial on floors one and two and requires developers to pay into a housing fund if they do not develop housing on-site within 5 years.
26	The district is lacking in parks and open space. The north side of Sullivan's Gulch should be designated for development into a linear park with terraces and a new ped/bike path.

LOWER ALBINA (MAP AREAS 1&1a)

- Revitalizing Russell Street
- Opportunity for Mixed-Use development around MAX Station?
- Best long-term use of industrial land?
    - Increase business growth and employment density?
    - Need thoughtful transition from Rose Quarter/Broadway to industrial land to the north
    - Continue policy to limit housing?
    - Make alleyways people-friendly?
- Advantage/disadvantages of slope

#	*LU & UD Subcommittee Additions & Comments from 12/2* **Lower Albina**
1	Protection and restoration of riverbanks. Fish and wildlife habitat along River/Rose Quarter.
2	MAX stop also close to hospital- increases potential for visitors and staff to use MAX by making that eight blocks vibrant interesting and safe (including under I-5)
3	Improve connectivity of historic Russell St/ Widmer Brothers both north to Mississippi and east to Russell/Vancouver
4	Area below elevated I-5 and 405 interchange where city equipment is kept- best location for city-alternative uses
5	Industrial Area west of Interstate: This is a 25 year plan. The UP yards and cement and grain silos are unlikely to be economic for that much longer. The plan should anticipate what should come after. Since the current landowners will oppose any zone change that threatens their current operations, this should be a "conditional zone" that would only be implemented if current uses change significantly. Note that a change in use at each of these sites WILL provide an opportunity for riverside access. Also should work with PDC to "vision" current industrial uses in this area and prospects for their survival for 25 years and what kinds of industries of the "future" may benefit from location in this district.
6	Area east of Interstate: This area is significantly under-developed. The predominate use is either "mixed" or warehousing, including City uses by the Water Bureau and for the Albina Yards. The entire area should be rezoned for mixed use that allows light industrial but facilitates residential development. Also, it appears this is an area where "point towers" so popular in Vancouver BC should be facilitated. Taller, narrower towers can tack advantage of the views that are blocked by the bluff and freeway, increase density, and yet avoid the "wind tunnel" and "urban canyon" effects of the Pearl.

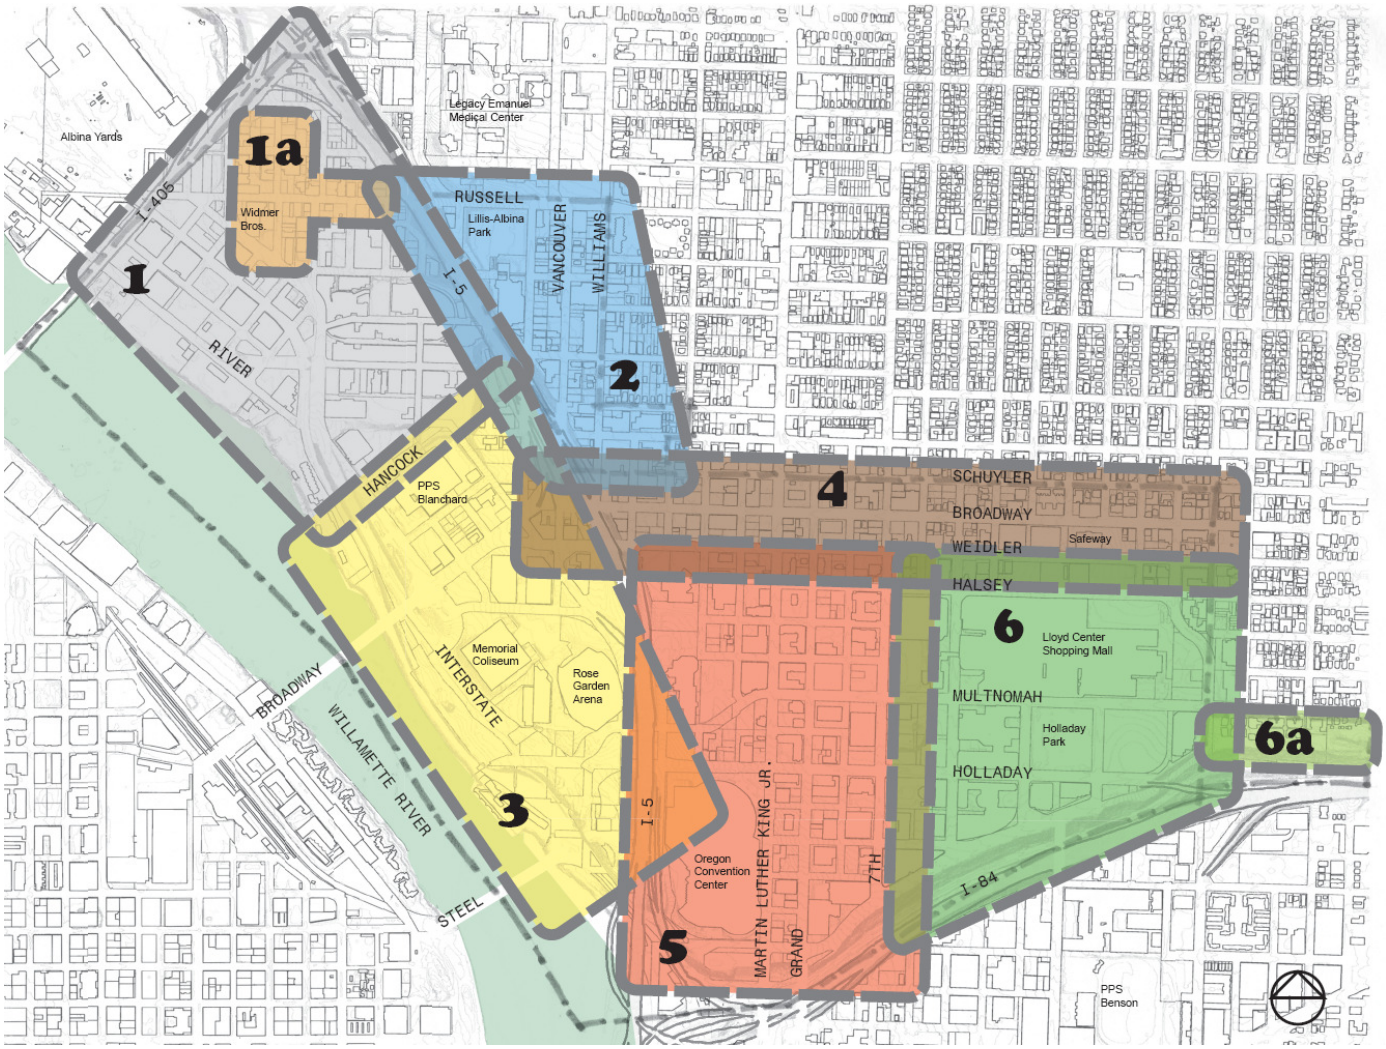
NE BROADWAY MAIN ST. & VANCOUVER/WILLIAMS TRIANGLE (MAP AREAS 2&4)

- Revitalize entire length of Broadway from River through the study area
  - Historic Preservation
  - Need sensitive transitions to neighborhoods at Central City edges (Irvington, Elliott, Sullivan's Gulch)
- Consider changing high-density residential zoning to allow more commercial uses

#	***LU & UD Subcommittee Additions & Comments from 12/2*** **NE Broadway & Vancouver/Williams**
1	Criss-Cross Lloyd to connect SE and NE on 124th and Grand (Streetcar)
2	Include sensitive cultural historic buildings in this area
3	Revitalize both Broadway and Weidler Streets
4	"Affordable" housing will not (usually) be "new" development but restoration and preservation of existing residential units. Ensure affordable parking for residents.
5	City and community with Emanuel Hospital work together in developing hospital vacant land
6	NE Broadway: Remove bikeways on Broadway/Weidler when other bike corridors are enhanced. Enhance Broadway as a Main Street.
7	DO NOT remove Flint or the overpass unless it is replaced (don't simply redirect traffic to Williams and Vancouver). This route is needed to access businesses and for bike and pedestrian passage to/from the District and bridges.Facilitate development along streetcar route based on passenger traffic (shift away from current auto-oriented businesses)
8	This is an area where "point towers" so popular in Vancouver BC should be facilitated. Taller, narrower towers can tack advantage of the views that are blocked by the bluff and freeway, increase density, and yet avoid the "wind tunnel" and "urban canyon" effects of the Pearl.

ROSE QUARTER & N BROADWAY (MAP AREA 3)

- Redeveloping PPS Blanchard Site
  - Reserve PPS site for AAA Baseball Stadium?
- Access to River & Public spaces on the riverbank
  - Realign UP Rail line to make river bank accessible with new development and greenway trail.
  - Future of Louis-Dreyfus Grain Terminal? Public attraction?
  - River attraction? Yachts? Amphitheater?
- Support Rose Quarter Redevelopment
  - Capitalize on Streetcar
  - Long-term development opportunities around redesigned Rose Quarter Transit Center
  - Create more developable lots at east end of Broadway Bridge?



#	***LU & UD Subcommittee Additions & Comments from 12/2*** **Rose Quarter & N Broadway**
1	Buildings too large and blocks too long for pedestrian comfort
2	PPS Blanchard site: multicultural gathering and community center, world market incubator
3	Riverplace development: accessible housing for aging population
4	New bike/pedestrian bridge over I-5 from Clackamas to Winning Way
5	Redevelop east side transit center to provide a viable train station and stimulate development
6	Preserve station site for future high-speed commuter rail west of Coliseum
7	Provide for eastside LRT connection between Rose Quarter and OMSI
8	PPS cannot endorse a reservation of property to a specific use at this point

#	*LU & UD Subcommittee Additions & Comments from 12/2* **Rose Quarter & N Broadway**
9	Protection and restoration of riverbanks. Fish and wildlife habitat along River/Rose Quarter.
10	Reserve PPS site for AAA or pro baseball stadium (capable of future second level seating)
11	Blanchard/ Water Bureau and redevelopment for employment uses
12	Keep option to remove Coliseum for another more viable use
13	Develop discovery zoning map on urban edge with arts and non-profit for bikes and health
14	Enhance views or view corridors on eastbank

LLOYD DISTRICT (MAP AREAS 5&6)

- Unlock Development Potential in Lloyd
  - Too many surface parking lots
  - Urban Design Strategy w/Emphasis Areas Needed
  - Street hierarchy needed to organize development?
  - Open Space is Deficient, Existing OS is underutilized
  - Food carts? (arguments both for and against)
  - Land use and development to support Lloyd Green (EcoDistrict Initiative)
  - Large Property Owners& Large Block Dimensions
  - Support the Oregon Convention Center with New Adjacent Development
  - Improve street-level development (Mall and others)
- More Housing
  - Jobs Housing Imbalance
  - Broader Diversity of Housing
  - More Affordable Housing (Concentration of Retail-Wage Jobs)
  - Capitalize on Streetcar
- Public safety & crime concern around Holladay Park
- NE 21st & Multnomah redevelopment opportunity (Map area 6A)

#	*LU & UD Subcommittee Additions & Comments from 12/2* **Lloyd District**
1	Lloyd Mall is as vibrant as it is because it is not just the mall, including outlying shops- maintain it's vibrancy and health, including their outlying low FAR properties
2	Higher density residential development
3	Maintain opportunity site(s) for HQ Hotel
4	Urban design needs to address sad look of area between Rose Garden and Lloyd Center
5	Preserve portal site for future east/west MAX subway from Lloyd center to Goose Hollow (parking lot between Holladay Park and Lloyd Cinema)
6	Parking issues with new and existing housing. Preserve rights, existing standards for new.
7	Facilitate multi-site permitting/planning for eco-district
8	Holladay Street development = green street approach (Sullivan's Gulch to Lloyd to Rose Quarter)
9	Incorporate Holiday Park hospital planning
10	7th Ave crossing over I-84 for multi-modal
11	Specify: Headquarters Hotel developed for OCC. Support OCC.
12	Consider support services (i.e.. Schools) when looking at restricted development
13	Increased pedestrian (and bike) access across I-5 may relieve parking problem during MC/Rose Quarter events

N/NE Quadrant and I-5 Broadway/Weidler Plans – Transportation Issues List 12-3-10

The following is a list of N/NE Quadrant transportation issues by sub-district that has been compiled from a variety of sources including:

- SAC Committee survey feedback
- Public comments from the 11/15 Open House
- SAC Transportation Subcommittee input
- Transportation Existing Conditions Report
- Input from ODOT, City and consultant staff

Sub-District 1: Lower Albina

1. I-5 barrier for pedestrian/bike connections to Eliot
2. Limited east/west transit connectivity
3. Need better wayfinding from Russell St to N Mississippi MAX station
4. N Russell/Interstate intersection – confusing operations
5. Lack of sidewalks west of Interstate
6. Freight access to regional freeways
7. *Constrained freight rail capacity*
8. *Locate North Portland Greenway Trail north-south through Lower Albina connecting to Swan Island at the north end*
9. *Maintain freight movement and distribution areas (like in Lower Albina, etc.)*

Sub-District 2: Eliot

1. Limited pedestrian/bike connection to Lower Albina District *and the proposed North Willamette Greenway Trail*
2. Bike connection to/from Eastbank Esplanade
3. No east/west transit connections (across I-5) between Broadway and Fremont
4. Improve bike/ped safety on Vancouver/Williams
5. *Difficult ped connections to Rose Quarter*
6. *Limited ped connections to Broadway Bridge and downtown*
7. *Need another ped/bike connection across I-5 at Hancock*

DRAFT

Sub-District 3: Rose Quarter

1. The Box: High traffic volume from I-5 southbound off-ramp to Weidler
2. The Box: Ped crossing conflicts – especially during events
3. The Box: Vancouver/I-5 ramp/Broadway intersections - high volumes
4. The Box: Rose Quarter event access/egress
5. High accident locations: Broadway & Weidler at Vancouver, Broadway at Larrabee
6. Queuing at east end of Steel Bridge back from Multnomah Street
7. Rose Quarter Transit Center - transit functions are too spread out
8. Pedestrian management and safety at Rose Quarter TC
9. Bike/pedestrian: I-5 barrier – limited crossings between Weidler and Lloyd
10. Freight access to freeway ramps
11. Improve freight rail speeds through quadrant
12. *Improve future passenger rail speeds through quadrant*
13. *Future high-speed rail or commuter rail station at Rose Quarter?*
14. *Light-rail and Amtrak capacity over Steel Bridge is constrained*
15. *Constrained freight rail capacity*
16. *Straighten rail "S" curve*
17. *Redesign off-ramps from I-5 and I-84 that serve the Rose Quarter and Lloyd District so they feed into the street grid (simplify the intersections with the ramp terminals)*
18. *What is the issue with queuing at the east side of the Steel Bridge?*
19. *Restore street grid for peds and bikes across I-5 with ped overpasses*
20. *Improve ped and bike connections to the river from the Rose Quarter. Current ped and bike connection to Eastbank Esplanade is indirect*
21. *Connection between North Portland Willamette Greenway Trail and Sullivan Gulch Trail*
22. *The Box: Bike access is challenging and intimidating, especially for inexperienced riders*
23. *Need better bike access from Broadway to Flint*
24. *Connect Dixon Street past Wheeler to Flint*
25. *Need to improve transit capacity, safety, and operations at Rose Quarter TC, including consideration of both auto and transit operations*

DRAFT

26. *Prep Rose Quarter TC area for more active development*
27. *Rail and street access to Dreyfus Storage is an impediment to development*
28. *Consider reversing the flow of Vancouver and Williams, with southbound traffic on Williams and northbound traffic on Vancouver*
29. *Parking capacity at Rose Quarter*
30. *Ensure truck access to Rose Quarter venues*

Sub-District 4: Broadway/Weidler Corridor

1. The Box: High collisions – westbound Broadway to northbound I-5
2. The Box: Bike safety at Broadway/I-5 ramp
3. The Box: Weidler/Victoria/I-5 ramp – bike, ped, safety
4. Weaving on Weidler east of "The Box"
5. The smaller Box: High collisions @ Broadway/Weidler at MLK Jr./Grand
6. Another Box: High ped collisions @ Broadway/Weidler at 15th/16th avenues
7. Lane imbalances - Grand approaching Broadway & Broadway approaching I-5
8. Improve bike/ped safety on Broadway/Weidler
9. Too many driveways on Weidler
10. *Move traffic from Vancouver to Flint overpass*
11. *Improve bike crossing of Braodway/Weidler on 7th or 9th*
12. *Need more traffic lights to slow traffic on Broadway/Weidler. Treat like downtown*
13. *Recent lane revisions on Broadway constrain easy auto access between I-5 and the bridge*
14. *Improve access for peds along MLK at San Rafael*
15. *It would be easy to extend streetcar to the east along Broadway/Weidler*

Sub-District 5: MLK/Grand Corridor

1. Northbound queuing on Grand back from Broadway
2. Northbound queuing on Grand in left lanes at Multnomah
3. Accommodating bikes on Lloyd Blvd. at MLK Jr. and Grand

4. Convention center as a bike/ped barrier
5. Queuing at Everett & Grand/MLK at I-84 on-ramp
6. Streetcar on MLK Jr./Grand; future of TriMet Line 6
7. High collision locations on Grand @ Multnomah, Holladay, Wasco
8. Potential 7th Avenue overcrossing – bike/ped/motor vehicle
9. *Ensure truck access to convention center*
10. *Build a full interchange with I-84 at 7th Avenue overcrossing to replace ramps at Grand Avenue*
11. *Improve bike connections to Southeast Portland*
12. *Unsafe and uncomfortable bike crossing of I-84 along MLK and Grand*
13. *Too many ramps from I-84 to I-5 and the Rose Quarter. Eliminate Steel Bridge off ramp*

Sub-District 6: Lloyd Center

1. High ped collisions on Multnomah
2. Improve overcrossing at 12th for bikes *– no bike lanes on overcrossing make it unsafe and uncomfortable for bikes*
3. Southbound left onto NE Irving at 12th - backups
4. I-84 off-ramp queuing at Lloyd Blvd
5. Lloyd Center is a barrier for bikes and peds
6. *Eastbound bike lane on Multnomah ends to early prior to 21st Ave*
7. *Lloyd Blvd intersections unsafe for peds and bikes, particularly bike connection between Lloyd and 12th*
8. *Protect parking permit programs*
9. *Too much surface parking*
10. *Would like a bike/ped path along I-84 on north side of Sullivan's Gulch*
11. *Recognize historical residential uses and protect parking*

DRAFT

Sub-District 7: I-5

1. Closely spaced ramps *– consider removing some I-5 ramps to reduce access*
2. Weaving from I-84 to Weidler northbound
3. Weaving from Wheeler to I-84 southbound
4. South of Weidler (I-84 to Weidler NB) worst weave due to high volume
5. High collisions due to weaving
6. Event access via Broadway/Weidler ramps
7. High incidence of rear end crashes
8. Southbound at I-84 eastbound ramp – backs up onto I-5 mainline
9. Freight impacts from lack of reliable travel times
10. *Address 2-lane section on I-5 southbound, consider adding a lane up to I-84 exit*
11. *Decouple Broadway and Weidler*
12. *Reconfigure northbound off ramp to Weidler – dangerous to peds and bikes*

Sub-District 8: I-84

1. Highest collisions westbound east of Lloyd Center off-ramp
2. Westbound weaving and queuing
3. Westbound off-ramp at Lloyd Blvd – seasonal queuing back onto freeway
4. Freight impacts from lack of reliable travel times
5. *No safe and comfortable bike crossings of I-84*

Overall N/NE Quadrant Issues

1. Maintain key linkages to downtown
2. Bicycle and Pedestrian Safety
3. Improve access to the Willamette River
4. Greenhouse gas/air quality improvement *– pollution is causing higher asthma rates*
5. Conflicts among modes of travel
6. Ensure adequate turning radii for freight

DRAFT

7. Too much surface parking
8. *How much is too much surface parking?*
9. *Pedestrian access and adequate infrastructure*
10. *Promote motorcycles (motorized 2 wheeled vehicles) to reduce congestion*
11. *Maintain or improve traffic capacity to major attractions*
12. *Disconnected destinations and commercial corridors discourage walking*
13. *Protect and improve transportation access for existing industrial and port jobs*
14. *Identify alternative freight access routes to and from Lower Albina, Swan Island, and NW Industrial areas other than I-5, such as a new bridge between NW Industrial area and Swan Island*
15. *Remove short auto trips from the freeway to improve the freeway system through this area (particularly with regard to focusing on freight, and multiple-occupancy or bike transportation).*
16. *Reduce/eliminate single-occupancy vehicle trips as a companion to improving freight movement – make the freeway for freight and for higher-occupancy transport and bike* options
17. *Connectivity to trails should be planned*
18. *Identify parking issues to be addressed as part of the CC2035/CCTMP process*
19. *Land use development and opportunities are greatly impacted by parking and transit (their existence or lack thereof)*
20. *Improve truck reliability (low frequency of incidents) in key freight routes to the district.*
21. *Improve geometrics for turning, stopping and other movements for freight vehicles in key freight routes to the district.*
22. *Rail freight - include the possibility of eliminating the S-curve in the rail system in this area*
23. *Include something about the type of fuels/energy used.*
24. *Examine the relationship between parking strategies to support land use development strategies while encouraging the use of alternative transportation modes, including proximity to transit, demand management strategies, bicycling, and proximity to housing.*
25. *Stormwater needs to be analyzed/planned*

DRAFT

26. *Consider pulling bikeways off of large high-vehicle traffic areas, and give them separate lanes/trails/streets (for cyclists' safety and for larger space for cars in big streets – like Broadway/Weidler)*

DRAFT

To: North-Northeast Quadrant Study Stakeholders Committee
Care of: Steve Iwata
From: Lee Perlman
Subject: Background on Eliot neighborhood housing
To whom it may concern,

On the basis of "better late than never," I wish to provide you with some historic background on land use in the Eliot neighborhood. I do not currently hold any position in the Eliot Neighborhood Association, but I was a member of and did help to formulate the Eliot Neighborhood Plan of 1994.

According to Bureau of Planning background reports compiled as part of the Albina Community Plan process, between 1960 and 1989 the Eliot neighborhood lost more than 50 percent of its housing stock. Much of this was due to clearing of the land for such projects as the creation of Memorial Coliseum and the Rose Quarter, the creation of the I-5 Freeway, and preparation of the planned expansion of Emanuel Hospital. However, much of it was due to what my neighbor and former Eliot chair Steve Rogers called "the nibble effect." Lot by lot throughout the neighborhood, housing was either demolished or converted to non-residential uses. On my block alone, three residential structures, one a potential landmark, were demolished to make way for a planned expansion of the Cintax Company parking lot which never in fact occurred.

Eliot in this period was viewed as a neighborhood in transition, with the existing housing stock a temporary use. Many owners, either owner-occupant or absentee, treated the structures as temporary, providing maintenance that was inadequate to non-existent. Zone changes from residential to non-residential were routinely granted, and on more than one occasion the Portland Development Commission was an advocate for such changes.

The objectives of the Eliot Plan Committee included preserving what was left of our housing stock, and restoring as much of our lost housing as we reasonably could to the point where we had a viable residential community. The two objectives initially seemed somewhat in conflict. The easiest way to provide more housing in quantity would have been to rezone everything to high density. However, we also wanted to do everything reasonable to retain what was left of the older, historic structures that gave the neighborhood its character. Simply putting everything back the way it was was not an option; even if a developer could be found to pursue such an option, the land much of our housing had been sitting on was no longer available.

We did the following:

The area between what is now Martin Luther King Boulevard and Seventh Avenue was rezoned from R1 to R2 – one of the few downzonings in the Albina Plan process – to avoid the wholesale destruction of single family homes to make way for apartment complexes.

Most of the area between MLK and Williams was rezoned from R2.5 to R2 to allow for a moderate increase in density.

Some areas, such as parts of MLK, the Williams-Vancouver Corridor and the land now occupied by the Knott Street Town Homes, was rezoned for high density housing. Critics would say that much of this land stands vacant because of this zoning. I would reply that, to the contrary, it was rezoned BECAUSE it had been vacant for so long. (In fact, which of the high-rise development on MLK occurred on property zoned EXD for mixed-use, and intended primarily for commercial development. Developers found the EXD zone easier to deal with than the high-rise residential zones.) The neighborhood also adopted a goal of adding at least 1,000 more housing units in the next 20 years.

A related issue was to not only create more housing, but a diversity of housing to meet a diversity of needs. To some extent, we anticipated an increase in the value of the single family houses (from the virtual zero they had at one time), and we knew we wanted an opportunity for people who could no longer afford these dwellings to nonetheless be able to live here.

As part of the planning process, language was inserted into the Eliot Plan to make any further residential to commercial zone changes difficult to do on a spot-zone basis; this succeeded in stabilizing the single family neighborhood to a large degree.

With this background in mind, I would urge those involved in examining Eliot's zoning to consider the following:

If residential to commercial zone changes are enacted, will it have a domino effect that would lead to a resumption of “the nibble effect” spoken of earlier?

What effect would this change have on the goal of increasing our housing stock, or at least reserving the land for residential development to take place at a more propitious time?

I might add that when the neighborhood referred to “housing,” we meant permanent residences that occupants would consider to be their homes, not treatment facilities occupied for 90 days at a time. There is a place for the latter, but it is not the same as the former in terms of creating and preserving a stable neighborhood, and when the latter occupies some of the finite amount of available residential land, it means less opportunity for the former to happen.

Very truly yours, Lee Perlman

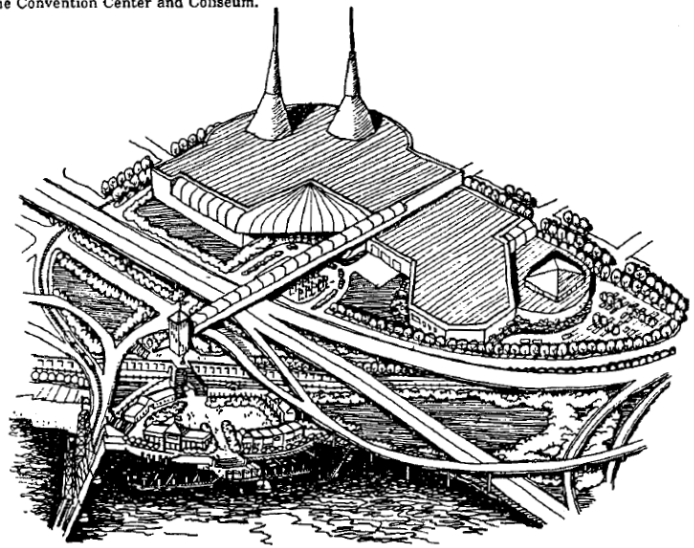
Previous Plans: Central City Plan, 1988

Policy 19: LLOYD CENTER-COLISEUM



Reinforce the Lloyd Center as the eastern anchor of Central City retailing and locate the highest density new development in areas served by light rail.

FURTHER:

A. Recognize the Lloyd Center-Coliseum District's role as a major entrance to the Central City.

B. Improve the environment for pedestrians throughout the district and create a regional civic facilities campus which brings together the Convention Center and Coliseum.

C. Promote and encourage the development of uses supporting the Convention Center and Coliseum.

Subdistrict Policies

Policy 18: LOWER ALBINA

Strengthen the economic development of the district as an industrial employment area while preserving its historic buildings and providing a connection for pedestrians to the Willamette River.

FURTHER:

A. Preserve the riverbank for water-dependent industrial uses.

B. While preserving the cluster of historical buildings along Russell Street, allow a mix of uses which promote the economic health of the district.

C. Provide improvements which attract industry to the district, and remove barriers to the movement of industrial goods and equipment.

D. Provide a connection for the adjacent neighborhoods to the district and river.

CENTRAL CITY 2035

N/NE Quadrant and I-5 Broadway/Weidler Plans

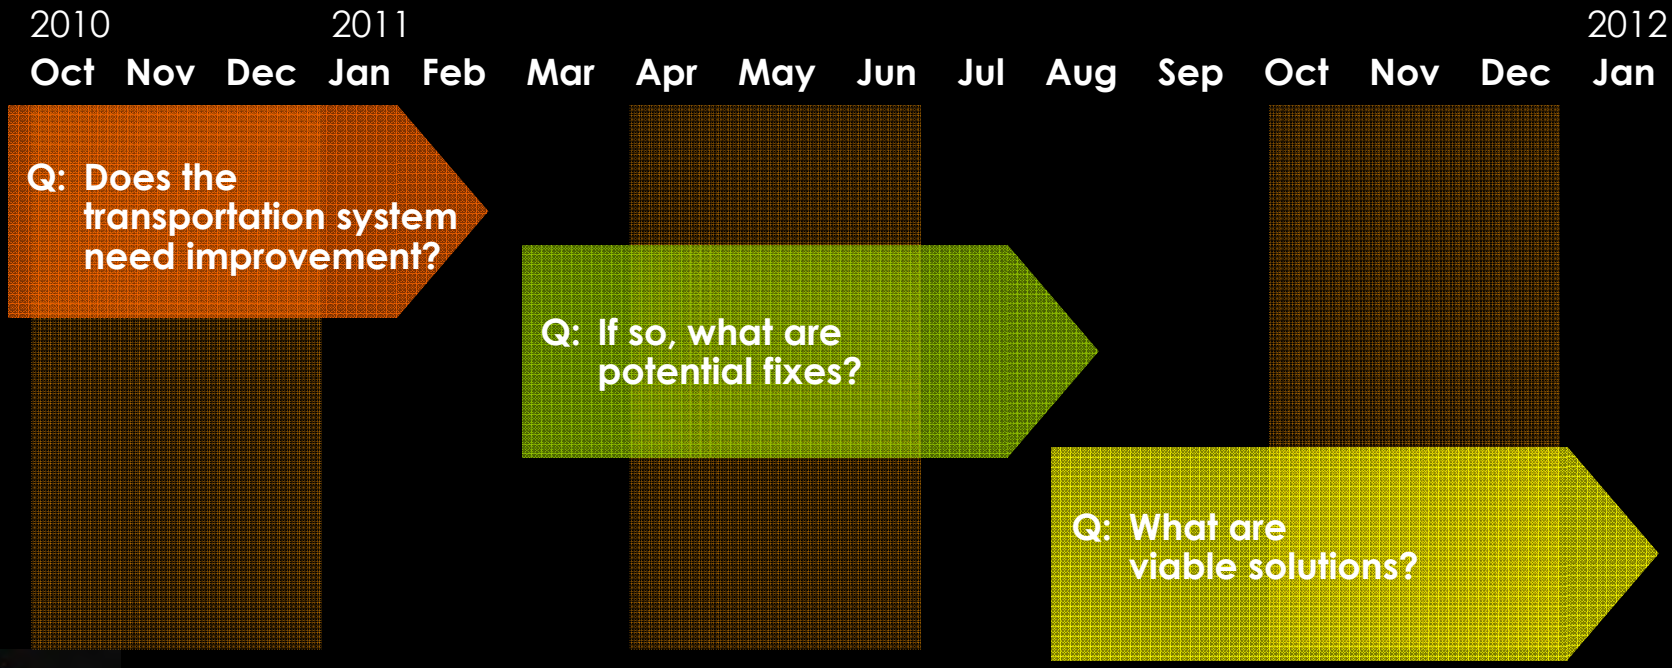
I-5 Crash Rates

- I-5 within the study area has the highest crash rate within the entire state
- Three times the Crash Rates than at the Terwilliger Curves

Why are Crash Rates High?

- Short weaving sections
- Conflicting movements
- Friction for through movements
- 30,000 NB ons and 30,000 NB offs between I-84 & I-405



Preliminary Findings

- Local transportation system constrained by physical barriers
- Reliance on auto uses, but
  - Lloyd TMA making a big difference
  - Growth in bicycling and transit
  - Streetcar will add a transit circulation function
- Modes converge at busy crossings
  - Safety/comfort issues for pedestrians, bicyclists and transit users
- I-5
  - Volume trends
  - Safety as result of volumes and weaving

Transportation Subcommittee

- Finalize Existing Conditions
- Define opportunities and challenges
- Identify improvements

N/NE Quadrant & I-5 Broadway/Weidler Planning Process
Stakeholder Advisory Committee (SAC)
Collaboration Principles
10-12-10 DRAFT WITH SUGGESTED EDITS

For any complex collaborative process, the participants should establish procedures to govern the process. Such agreement increases success and decreases meeting time by assuring a good faith process that explores competing needs and fashions equitable, practical, and durable solutions. This document contains the agreements of the participants in this "N/NE Quadrant & I-5 Broadway/Weidler Planning Process."

I. Process Background

The City of Portland and the Oregon Department of Transportation (ODOT) have a unique opportunity to collaborate on land use and transportation problems in the north/northeast quadrant of the central city. This opportunity has surfaced due to concurrent interest on the part of both entities to develop a plan to address long-standing issues and new opportunities in this area.

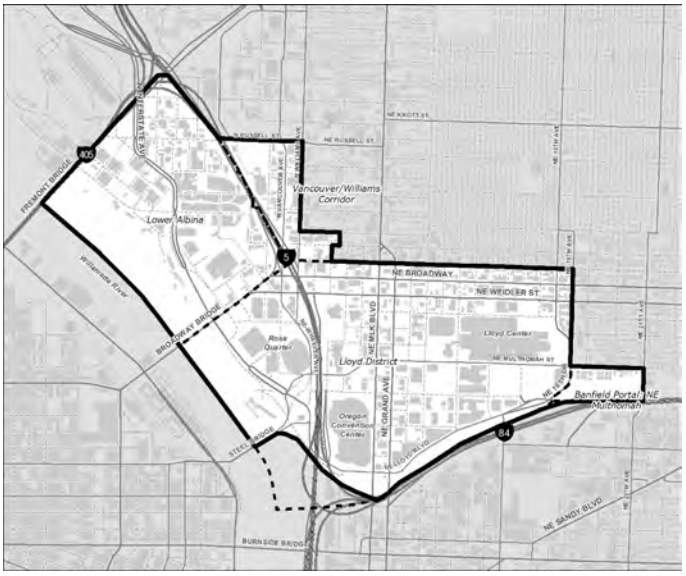
The City of Portland will be updating its 1980 Comprehensive Plan and 1988 Central City Plan. The first phase of this process is the Portland Plan, which will be a strategic plan to guide the city for the next 25-years. The update of Comprehensive Plan will follow the completion of the Portland Plan. The Central City 2035 Plan (CC2035) will update the 1988 Central City Plan. The vitality of the Central City is key to state and regional policies for growth management and economic development and for addressing new policy directives such as those for peak oil and climate change. The CC2035 plan will produce new guiding policies, updated land use and urban design plans, and more detailed sub-area plans for specific Central City districts. Additionally, the Portland Bureau of Transportation (PBOT) will update the Central City Transportation Management Plan (CCTMP), which is part of the Portland Transportation System Plan (TSP), as part of this planning effort. The first phase of CC2035 will produce a Concept Plan that will define the desired overall direction for development for the entire Central City. The Concept Plan will be the foundation for more detailed planning and implementation work at the sub-district level.

The N/NE Quadrant & I-5 Broadway/Weidler Plans will be the first of these more focused plans, covering Lower Albina and the Lloyd District. Although this area contains significant facilities and functions of state-wide and regional significance, including the Rose Garden, Oregon Convention Center, federal, state and regional government offices, and Lloyd Center Shopping Mall, this area has not met Central City Plan economic development goals and jobs and housing targets. The N/NE Quadrant & I-5 Broadway/Weidler Plans will address land use, urban design, transportation, public infrastructure and investment, and development entitlements. It will be coordinated with and incorporate ongoing related efforts, such as the Rose Quarter Development Project.

The Oregon Department of Transportation (ODOT) has long identified the need to make improvements to the I-5 Corridor. In the late 1980's, ODOT developed for the Rose Quarter area freeway-design recommendations to address capacity, operational, and safety issues. However, these recommendations have not received sufficient funding or public consensus to advance planning and engineering studies for this freeway segment. As part of the I-5 Partnership Plan, ODOT with the Washington Department of Transportation (DOT) examined longer-term I-5 needs from the Rose Quarter to SR500 in Clark County. The segment south of the Fremont Bridge was separated from the I-5 Partnership because of issues related to the I-5/405 Freeway Loop. ODOT with the City of Portland completed the I-5/405 Freeway Loop Study in 2005. This study recognized both near-term and long-term issues for this facility. Near-term issues included addressing the bottleneck at the I-5/I-84 interchange.

The City of Portland and ODOT will collaborate on combining the Portland Central N/NE Quadrant Plan with the ODOT I-5 Broadway/Weidler Interchange Plan to seek to identify both near-term and long-term land use, urban design, and transportation needs in the area. This unique opportunity will integrate land use and urban design planning with freeway planning and concept-level engineering.

The project area includes two existing Central City Plan (sub) Districts:



1) Lower Albina, and
2) Lloyd District.

Additionally, the planning study area will consider two adjacent areas likely to see significant change through redevelopment in the future and which could impact or be impacted by development in the Central City:

1) Vancouver-Williams, and
2) Area along NE Multnomah-between NE 16th and NE 21st. (see map).

Finally, the plan will consider the context of surrounding districts and neighborhoods.

A map of the project area follows:

II. Process Vision and Values

The Stakeholder Advisory Committee (SAC) adopted a Vision and Values statement, attached as **Attachment A**. (Pending) - Defer

III. Stakeholder Advisory Committee (SAC) Charge and Scope of Work

A. Charge

The SAC is advisory to the City and ODOT and it will help inform City and ODOT staff in the development of their recommendations to the respective decision-making entities. City and ODOT staff recommendations to their respective decision-makers will highlight areas of agreement and disagreement with the SAC and other stakeholder interests. The co-chairs of the SAC will represent the recommendations of the SAC to City and ODOT decision-makers in conjunction with City and ODOT staff reports. The City and ODOT will have ultimate responsibility for decision-making.

B. SAC Scope of Work - Defer

The scope of work for this planning process on the joint project website is at www.portlandonline.com/bps/cc2035. (Look for the N/NE Quadrant Plan tab on the Central City 2035.) The work plan is organized by key milestones and decision points. The current draft appears as **Attachment B**. While it is the intent of the City-ODOT project team to conclude this planning process within a one and one half year period, it is impossible to contemplate all eventualities. As a result, the dates shown in the attached work plan are projected, not fixed.

C. Public Involvement Overview

A detailed Public Involvement Program for this joint planning process can be found on the joint project website. (www.portlandonline.com/bps/cc2035/neq) As the City and ODOT staff involves the broader community in the issues that the SAC will be exploring, they will be providing summaries to the SAC for their consideration and comment.

D. Operating Assumptions - Defer

This section summarizes the process operating assumptions and those topics outside the scope of the project.

1. Portland's Central City currently plays a critical regional role in meeting statewide land use goals to support the State, Region, and City economy, manage urban growth, and manage transportation demand by increasing the use of alternative transportation modes. The role of the Central City is recognized in Metro's 2040 Plan. The results of City of Portland plans and policies have contributed significantly to creating jobs, minimizing urban sprawl, reinforcing 2040, and reducing VMT and greenhouse gas emissions.
2. The City of Portland has initiated the Central City 2035 Plan, a project to update the 1988 Central City Plan. The first phase of this project will develop a policy framework for the entire Central City that will guide more focused quadrant planning projects. The first of these efforts will be the N/NE Quadrant & I-5 Broadway/Weidler Plans, which will address land use, urban design, transportation, public investment, and development entitlements. It will be a joint effort between the City and ODOT, coordinating land use, transportation and urban design planning with freeway planning and concept-level

engineering. (TO DO: Add language about the role this process plays in the Central city Plan and the Portland Plan.)

3. Although the Central City Plan has been successful in implementing many of its goals and objectives, many remain unfulfilled and new challenges have arisen. Central City has not met its employment target and has not kept pace with overall growth in the region. Housing has been a key strategy for the Central City and has been successful in terms of increasing housing units in some areas, but others, including the Lloyd District, have lagged. Creating a diversity of housing types, particularly workforce and family housing units, are also key challenges. Planning efforts will focus on developing an integrated policy framework that connects land use, economic development, transportation and urban design to meet new challenges, including peak oil, climate change, and regional growth management.
4. As a conduit for people and goods, the Interstate freeway system is a vital component of the economy, now and for many decades. This economic role extends to local, regional, statewide, and national geographies. Through traffic mobility on I-5 in the project area is one of the primary needs for the economic well-being of the Portland region and the State of Oregon, along with access to Portland's Central City, industrial areas, to Portland International Airport, and other destinations in the Portland region.
5. I-5 and the local transportation facilities and services in the Rose Quarter need to function as an integrated system to provide for statewide, regional and city mobility needs and to enhance high-quality urban development.
6. Shorter-term needs will be addressed within the broader context of long-range planning. Implementation of the ultimate solution to the freeway loop question is most likely beyond this effort's planning horizon (2035).
7. The current freeway system is constrained and prudent and practical freeway improvements in this study area may require flexibility from mobility and access standards. There is a need to balance community aspirations and freeway performance when addressing the applicability of existing standards.
8. The planning effort will identify opportunities for safety, operations, and a marginal increase in capacity to I-5 to solve bottlenecks. The project is not designed to add through travel lanes on I-5 to address long-term projected capacity needs. However, adding a short, non-through lane for weaving and merging *within this section appears required to improve the operations and safety between the I-84 interchange and the Broadway/Weidler interchange.*
9. Among other issues, this planning effort will explore the advantages and disadvantages of requiring an Interchange Area Management Plan in an effort to achieve the project's purposes.
10. Potential property impacts (e.g. right-of-way needs) and redevelopment opportunities (e.g. PPS Blanchard building opportunity site) need to be identified and analyzed.

IV. SAC Membership and Support

A. Members

The SAC has broad representation and is balanced to reflect many diverse interests and those who may be impacted by decisions made during the planning process. On behalf of Portland Mayor Sam Adams and ODOT Director Matt Garrett, the City's Director of Planning and Sustainability, Susan Anderson, the City's Director of Transportation, Susan Keil, and ODOT's Region I Manager, Jason Tell, made the SAC appointments noted in Section VIII, below.

B. Co-Chairs

There will be two co-chairs. Each co-chair will chair one of the major subcommittees, as proposed in section E below. The SAC co-chairs and City and ODOT project managers will meet regularly with the SAC facilitator to schedule the work of the SAC and subcommittees, and determine the timing of the information brought before the SAC. This Coordinating Committee will be available to make recommendations to the SAC on the logistics of the planning process, not to make substantive decisions on issues before the SAC.

C. SAC Alternates and Replacements

Due to the complexity of the process, it is best to have one person represent each interest throughout the planning process to maintain continuity of discussion and recommendations. If necessary, SAC members may identify an alternate to represent them in their absence, preferably at the outset of the process.

It will be the responsibility of the primary SAC member to keep the alternate informed so they can represent their group in case the primary SAC member is absent. Alternates may attend SAC meetings, but will not sit at the main table or vote, unless they are substituting for the primary SAC member. Notice of substitution must be submitted to the SAC facilitator in advance of SAC meetings.

SAC member resignations, changes, and replacements must be submitted in writing to the SAC co-chairs by the representative interest group/organization. As noted above, Susan Anderson, Sue Keil, and Jason Tell, or those holding their positions, will make all appointments to the SAC, including replacements of existing SAC members due to resignations or extended absences, based on nominations from the process interests.

D. SAC Subcommittees and Work Groups

The SAC co-chairs will determine subcommittees and their charges, time parameters, and deliverables. Subcommittees will help frame the issues for the full SAC, especially on specific subject areas requiring more analysis and input. They will be established in advance to allow adequate time for subcommittees to inform the planning process at key junctures. If broader issues are brought to a subcommittee, they will be noted in its meeting notes and not pursued without SAC approval.

Subcommittee memberships will be open to any interested SAC member once they are approved by the co-chairs. Each subcommittee should include representation from government, commercial/business, and community interests to ensure a balanced discussion. Staff will assist the subcommittee chairs in establishing agendas, making decisions on how to run the meetings, and reporting to the SAC on the subcommittee's work and recommendations within the established timeframe to keep the planning process on schedule. Subcommittees will be encouraged to invite non-SAC and Technical Advisory Committee (TAC) members to make presentations and participate in the discussion.

City and ODOT staff will assist subcommittees with meeting locations. There will be advance notice of all subcommittee meetings posted on the project website as soon as scheduled. These meetings will be open to the public and will include, at a minimum, one public comment period. Staff will assist subcommittees in preparing summary notes of meeting discussions and decisions for posting on the project website within one week of the meeting. The SAC facilitator

will be available to assist subcommittees with meeting mechanics and decision-making guidance. This assistance may be requested by the subcommittee chair with the approval of the other SAC co-chair. The proposed subcommittees are:

1) Land Use, and
2) Transportation.

There also may be work groups under each subcommittee to explore more limited geographic and/or policy issues. These work groups will open to any interested person with approval of the co-chairs.

E. Technical Advisory Committee (TAC)

TAC is a resource pool of organizations and agencies with specialized expertise related to this planning process. The TAC will address specific questions raised by the SAC, staff, and SAC subcommittees. TAC members will serve as resources to SAC subcommittees related to their area of expertise. The City and Project staff will brief TAC and hold TAC meetings, as needed. Project staff will report to the SAC on TAC meetings. TAC meetings are open to the SAC and the public.

F. Retained Technical Consultants

ODOT retained URS to serve as technical consultants.

G. Project Staff

The City and ODOT will staff the SAC process. A list of project staff and their roles can be found at www.portlandonline.com/bps/cc2035/neq. Their goal is to provide a process that will be open, honest, and transparent with a special emphasis on early involvement in providing policy-setting input.

The project staff commits to:

1) Clearly define opportunities where the public can provide timely input so that there is an opportunity to affect change.
2) Be accessible, inclusive, meaningful, regular, timely, open, fair and honest. This includes providing information in as much advance as practical.
3) Ensure a collaborative involvement process between the City, ODOT, and stakeholders, and meet the planning timelines of both the City and ODOT.
4) Provide an ongoing record of public input, questions and responses, as well as a mechanism to make this information available to the public.
5) Include periodic community-based meetings in Portland where the public will be updated on committee activities and have the opportunity to inform policy-making.
6) Provide the public with a way to stay involved and informed during the process.
7) Provide interactive meetings with small group breakouts, which distinguish between information and input opportunities in public meetings.
8) Wherever possible, design interactive formats for all meetings to ensure a balanced and fair discussion of issues, ensuring all perspectives are heard.
9) Provide the SAC with the relevant, objective information, in a timely fashion, necessary to make informed decisions. Presentations will provide the facts – pro and con – surrounding the issues in a readily understandable format.

Deleted: and

Deleted: in addition to

10) Provide the big picture context and interconnections surrounding all issues, before asking the SAC to make a recommendation.
11) Be responsive to SAC requests for information and process support, be clear and transparent about staff positions, and be open to carefully considering SAC recommendations.

H. The Facilitator

An independent facilitator has been hired as a process manager by ODOT with the concurrence of the City, separately from the other consultants. He will assist the SAC co-chairs, the SAC, staff, and subcommittees. He will also facilitate SAC meetings, the Coordinating Committee, and provide advice on the public involvement program. The facilitator's "client" is the SAC process, but neither SAC membership, nor process participation is a substitute for independent legal or other professional advice. That is the responsibility of the process participants. The facilitator will be responsible to ensure the SAC process is fair, well run, and productive. The facilitator will be available as a resource to the City and ODOT for minor conflict resolution and process improvement suggestions. As a neutral collaborative process provider, the facilitator will not act as an advocate for anyone on any substantive issue. However, the facilitator may propose substantive suggestions for SAC consideration, but will not make decisions on substantive issues.

The Institute *for* Conflict Management, Inc. (ICM, or the facilitator) has been hired for this process. ICM's Executive Director, Sam Imperati, will act as the facilitator. ICM, Sam Imperati, and any subcontractors are not employees of any participant. ICM's written contract is available for review. The facilitator will not be influenced by payment source. ODOT has agreed that his status of facilitator will not be changed without first consulting with the City and the SAC co-chairs.

The facilitator may have non-confidential, informal communications and perform facilitation activities with staff and SAC members, between and during meetings. The facilitator will address situations where it appears a participant is not acting according to these Collaboration Principles and will advise the co-chairs if it appears probable that the SAC will be unable to fulfill its Charge.

V. Collaboration Protocols

A. Quorum

A quorum is a simple majority of voting SAC members or their alternates. If there is no quorum, the co-chairs can cancel/reschedule or conduct the SAC meeting and send all meeting notes and materials to the members for voting at the next meeting.

B. Open Meetings

Meetings of the SAC, TAC, and SAC subcommittees are open to the public and will include an opportunity for public comment. Notice of SAC meetings will be posted in advance of meetings on the joint project website. Notice of subcommittee meetings will be posted in advance of

meetings. SAC and SAC subcommittee meeting summaries will be posted on the website as soon as possible following each meeting.

C. Public Comment

The co-chairs or the facilitator will provide periodic public comment opportunities for non-SAC members during meetings before SAC makes a decision. Comments from the public will be limited in time to allow sufficient opportunity to conduct the other portions of the SAC agenda. Typically, comments will be limited to a maximum of three minutes per person. The public is encouraged to submit written comments to project staff for circulation to the full SAC.

D. Meeting Agendas and Meeting Materials

The Coordinating Committee will develop Working Agendas for SAC meetings. Meeting agendas and meeting materials will be mailed and sent electronically to SAC members one week in advance of the meetings, and will be posted on the project website. SAC meetings will begin and end as scheduled.

E. SAC Member Commitments to Each Other

The SAC members, project staff and participants will participate in good faith, which means:

1) Prepare for and set aside time for the meetings and the whole process,
2) Participate fully, honestly and fairly, commenting constructively and specifically,
3) Speak respectfully, briefly and non-repetitively; not speaking again on a subject until all other members desiring to speak have had the opportunity to speak,
4) Allow people to say what is true for them without fear of reprisal from SAC members, the City, or ODOT,
5) Avoid side conversations during meetings,
6) Provide information as much in advance as possible of the meeting in which such information is to be used and share all relevant information to the maximum extent possible,
7) Generate and explore all options on the merits with an open mind, listening to different points of view with a goal of understanding the underlying interests of other SAC members,
8) Consult regularly with their interest groups/organizations and provide their input in a clear and concise manner,
9) Agreeing to work toward fair, practical and durable recommendations that reflect the diverse interests of the entire SAC and the public,
10) When communicating with others, accurately summarize the SAC process, discussion and meetings, presenting a full, fair and balanced view of the issues and arguments out of respect for the process and other members,
11) Success depends on a full airing of the ideas and opinions of each committee member. Members should be forthcoming and honest during discussions and in the consensus process. When a consensus recommendation is reached, each member owes it to the others and to the process to not attempt to effect a different outcome outside of the SAC process once the SAC has reached a consensus recommendation,

Deleted: N

12) Strive vigorously for consensus and closure on issues, and
13) Self-regulate and help other members abide by these commitments.

VI. Decision-Making Process

A. Developing Recommendations

The co-chairs and the facilitator will assist the SAC in identifying objectives, addressing the diversity of perspectives and developing substantive, practical recommendations to implement its Charge. The SAC will use a *Discussion Draft* process and a *Consensus Decision-Making* model to assist the process. The SAC will make draft recommendations on an "issue-by-issue" basis, and then final recommendations as a "package" at each milestone, and again at the conclusion of the process.

B. Representative Voting

Each SAC member will have one vote except those non-voting members (Ex Officio members. Issue: and/or co-chairs?) A vote represents that the member will recommend to his or her organization or group that they should support or oppose the voted-upon proposal consistent with the member's vote. The names of those voting in favor and those voting against a proposal will be noted and included in the SAC's recommendations and the City and ODOT staff recommendations to their respective decision-makers.

C. Consensus

Consensus decision-making is a process that allows SAC members to distinguish underlying values, interests and concerns with a goal of developing widely accepted solutions. Consensus does not mean 100% agreement on each part of every issue, but rather support for a decision, *"taken as a whole."* This means that a member may vote to support a consensus proposal even though they would prefer to have it modified in some manner in order to give it their full support. Consensus is a process of *"give and take*," of finding common ground and developing creative solutions in a way that all interests can support. Consensus is reached if all members at the table support an idea or can say, *"I can live with that."*

C.1. "1-2-3" Consensus Voting Method

The co-chairs and facilitator will assist the SAC in articulating points of agreement, as well as articulating concerns that require further exploration. SAC will use a "**Consensus Voting**" procedure for testing the group's opinion and adjusting proposals. In "**Consensus Voting**," the co-chair or the facilitator will articulate the proposal. Each SAC member will then vote "one," "two," or "three," reflecting the following:

- **"One"** indicates **full support** for the proposal as stated.
- **"Two"** indicates that the participant **agrees with the proposal as stated, but would prefer to have it modified in some manner in order to give it unconditional support. Nevertheless, the member will fully support the consensus even if his/her suggested modifications are not supported by the rest of the group because the proposal, taken as a whole, is worthy of support, as written.**
- **"Three"** indicates **refusal to support** the proposal as stated.

The co-chairs or facilitator will repeat the consensus voting process, as reasonably necessary, to assist the group in achieving **consensus** regarding a particular recommendation, so that all members are voting "one" or "two."

C.2. Cooling-Off Period

If a consensus is not reasonably forthcoming, the co-chairs or the facilitator may table the issue for additional discussion with constituencies, the gathering of new information, or perhaps just sufficient time to consider options more carefully. The "cooling off" period recognizes we value getting as close to consensus as possible by way of dialogue, clarification, and consideration of alternatives. Absent an emerging consensus, the co-chairs or the facilitator may make a recommendation for the SAC to consider taking into consideration all of the available information and views. The SAC may then revisit the issue.

C.3. No Consensus – Majority and Minority View

If a consensus on an issue is still not reasonably likely, as determined by the co-chair, the votes of those present at the meeting will be taken and recorded as a majority - minority vote. Majority is defined as at least 50% plus one of the SAC voting membership in attendance. The proposed language and reasoning supported by the majority will be noted along with their names in the SAC's recommendations. Members voting in the minority will have their names, proposed language, and reasoning noted in the Minority Report(s). The facilitator will document these issues, the differences of opinion involved, and submit the report to the City and ODOT staff for inclusion in the SAC recommendations along with other stakeholder comments.

VII. Additional Understandings

A. Communications Outside of SAC

SAC members and staff can refer press, public, and other inquiries to the SAC co-chairs, City/ODOT project managers, or the project website, if they desire. Additionally, project staff is available upon request.

Deleted: Whenever reasonable,

Deleted: will

Deleted: or

Deleted: and

Deleted: It is often advisable simply to refer others to the project website or the project managers.

Deleted: ¶

B. Meeting Summaries

The facilitator will prepare SAC meeting summaries. They will be provided electronically in draft form to the SAC for proposed correction and comment. The final meeting summaries will be posted on the project website.

The chair of each SAC subcommittee or their designee is responsible for preparing, and submitting for posting, meeting summaries on the project website within one week of the subcommittee meeting.

C. Public Records and Confidentiality

SAC records, such as formal documents, discussion drafts, transcripts, meeting summaries, and exhibits are public records. This is not a mediation. It is a facilitation. As a result, SAC communications (oral, written, electronic, etc.) are not confidential and may be disclosed. However, the private documents of individual SAC members and the private documents of the

facilitator that are not shared with the City or the ODOT are not considered public records and are not subject to disclosure under public records laws.

D. Process Conclusion

The SAC process will conclude with submission of its recommendations to the City and ODOT, when necessary funding and resources are no longer available, or when the City and ODOT determine it is unlikely the SAC will fulfill its Charge.

E. Amendment and Interpretation

Amendments to this document can be made by vote of the SAC. The co-chairs or facilitator shall lead a SAC discussion designed to reach a consensus on any process dispute or proposed amendment to these Collaboration Principles.

VIII. Signatures

We agree:

N/NE Quadrant & I-5 Broadway/Weidler Plans

Stakeholder Advisory Committee Meeting #1 September 16, 2010

Project Overview

CENTRAL CITY 2035

N/NE QUADRANT

CITY OF PORTLAND, OREGON 1851

Oregon Department of Transportation

Why N/NE Quadrant Planning?

- Making people's lives better
- Making Portland more:
  - Vibrant
  - Prosperous
  - Equitable
  - Livable
  - Sustainable
- Quadrant full of exciting opportunities and interesting challenges

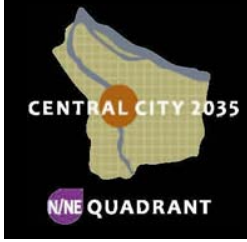
CENTRAL CITY 2035

N/NE QUADRANT

Process Goals

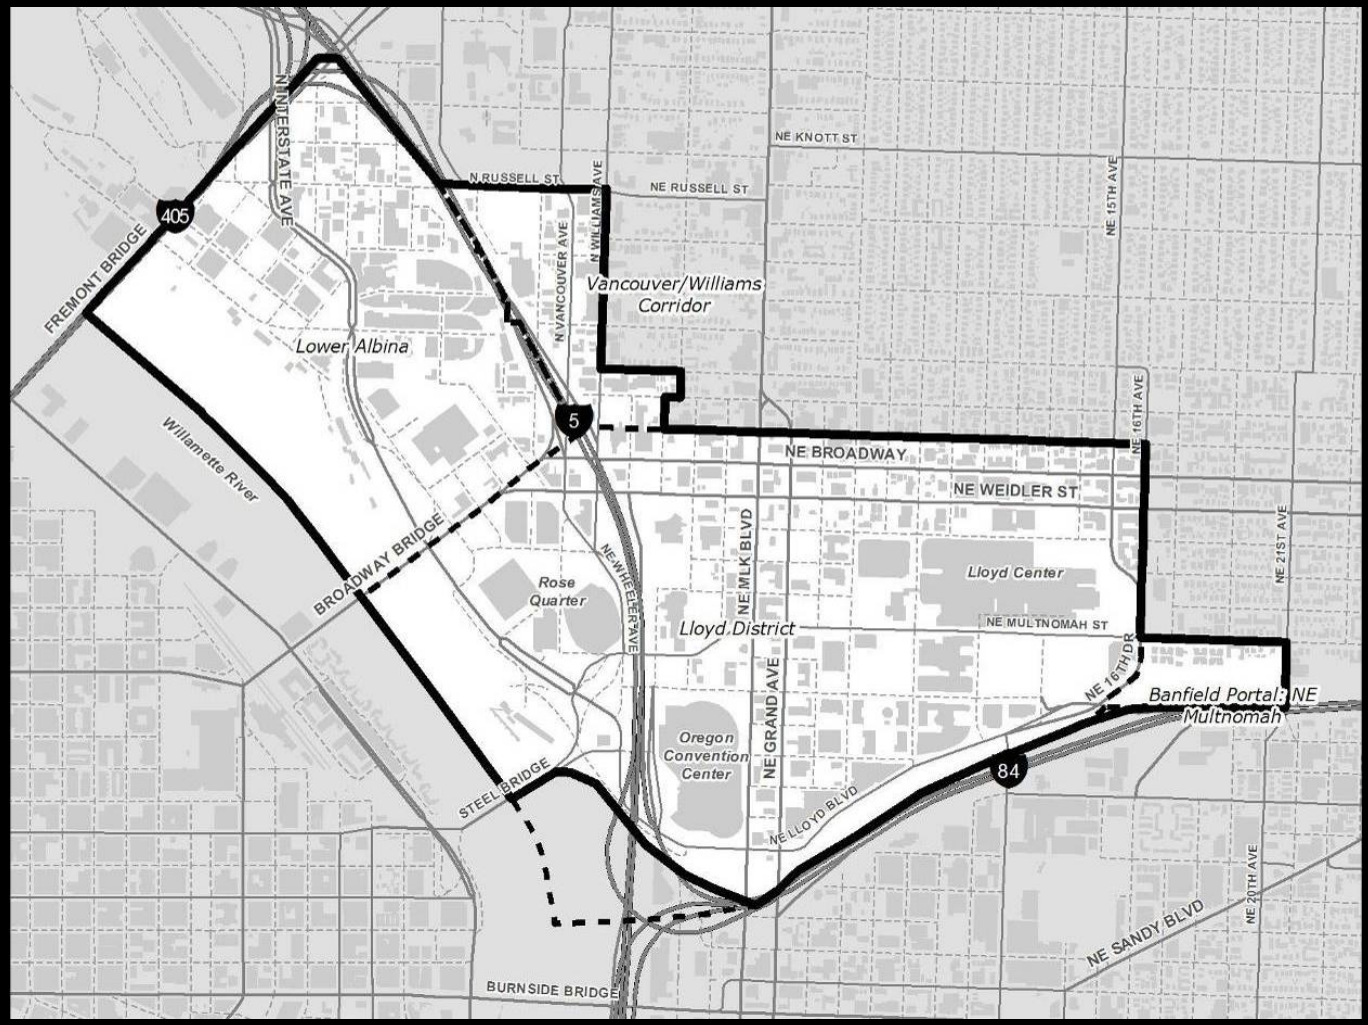
- Stakeholder Advisory Committee (SAC), City, and ODOT working together to find solutions to long-standing issues:
  - Safety, access, mobility, healthy neighborhoods and multi-modal connectivity
  - Land use and urban design integrated with freeway improvements
  - Practical highway design solutions

- Specific recommendations for the next 25 years



CENTRAL CITY 2035

N/NE QUADRANT



How?

- ODOT & City Unique Collaborative Partnership to integrate planning and public involvement for:
  - Central City 2035 Plan (City)
  - Addressing bottleneck to improve economy/freight movement and safety (ODOT)

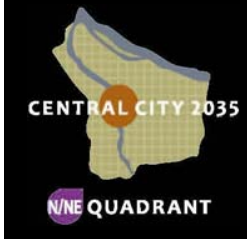
- Stakeholder Advisory Committee
  Balanced, knowledgeable group of public stakeholders to provide meaningful recommendations to the City and ODOT

Project Boundaries

CENTRAL CITY 2035

N/NE QUADRANT

City Purpose: Central City Plan



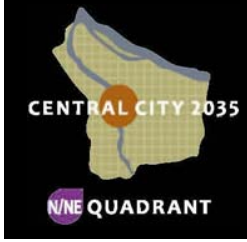
Central City today is very different than it was in 1988 with many new challenges.

Responses must address:

- *Regional growth*
- *Climate change*
- *Potential peak oil impacts*
- *A rapidly changing global economy*

Need updated strategies, policies, and actions to:

- *Be poised for the next economic recovery*
- *Capitalize on existing investments*
- *Initiate new public-private partnerships*

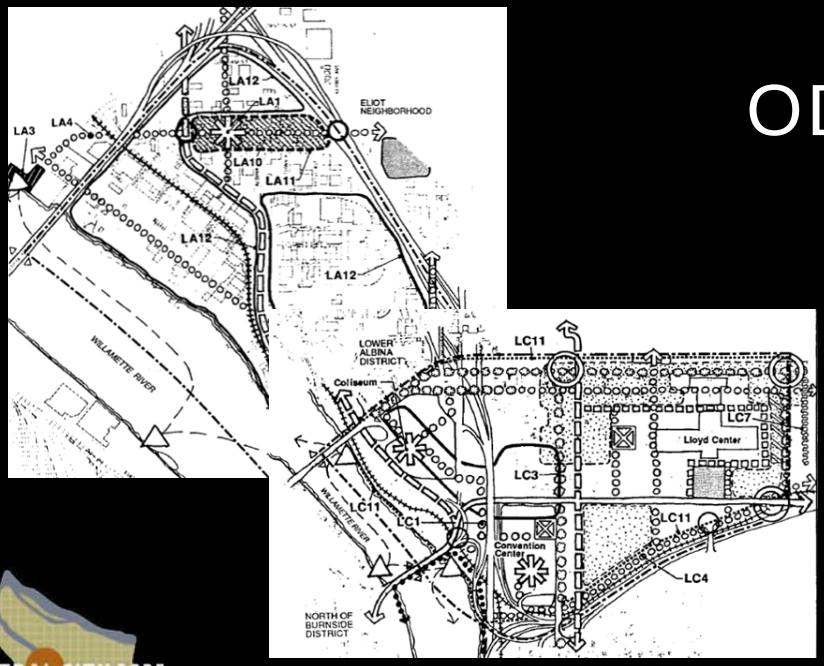


ODOT Purpose: I-5 Improvement Plan5

- Urgent need to improve from I-405 to I-84
- Traffic volumes and congestion have increased substantially since constructed
- Safety and operational issues need to be addressed
- One of worst freight bottlenecks in state
- Looking for modest freeway improvements to relieve it
- Develop solutions from recent studies
- Realistic affordable solutions that can be implemented soon

Planning Process Expectations

- Identify:
  - Near-term and long-term recommendations on Land Use, Urban Design and Transportation for the N/NE Quadrant.
  - Realistic Improvement strategy for I-5 in the vicinity of the Broadway/Weidler Interchange



CENTRAL CITY 2035

N/NE QUADRANT

End Products

City:

- Central City 2035 Plan with Updated Lloyd and Lower Albina Subdistrict Plans
  - Urban Design Concept Diagram
  - Land Use Plan with Goals, Policies and Actions

ODOT:

- I-5 Improvements Project Agreement
- I-5 Facility Plan for project area

  - Parking
  - Incentives/programs

CENTRAL CITY 2035

N/NE QUADRANT

Project Assumptions

- Central City Plan plays a critical role in meeting statewide land use goals to support the State, Regional, and City economy and manage urban growth
- Manage transportation demand by increasing the use of alternative modes
- Focus on an integrated policy framework that connects land use, economic development, transportation, and urban design
- Planning horizon is 2035
  - Longer term issues, including I-5 Eastbank will be addressed as part of future process.

CENTRAL CITY 2035

N/NE QUADRANT

Assumptions (cont'd)

- I-5 is a vital economic component and conduit for people/goods on a national, statewide, and local level
  - New growth in Portland and the region needs to be accommodated
- Future planning processes will address broad, regional transportation issues including congestion pricing and long range capacity additions
- Here: deal with safety, weave and merge issues.
- Seeking flexible, prudent and practical freeway improvements to solve bottleneck and safety issues that are implementable by 2035.

N/NE Quadrant & I-5 Broadway/Weidler Planning Process
Stakeholder Advisory Committee (SAC)
Collaboration Principles
9-8-10 DRAFT

For any complex collaborative process, the participants should establish procedures to govern the process. Such agreement increases success and decreases meeting time by assuring a good faith process that explores competing needs and fashions equitable, practical, and durable solutions. This document contains the agreements of the participants in this "N/NE Quadrant & I-5 Broadway/Weidler Planning Process."

I. Process Background

The City of Portland and the Oregon Department of Transportation (ODOT) have a unique opportunity to collaborate on land use and transportation problems in the north/northeast quadrant of the central city. This opportunity has surfaced due to concurrent interest on the part of both entities to develop a plan to address long-standing issues and new opportunities in this area.

The City of Portland will be updating its 1980 Comprehensive Plan and 1988 Central City Plan. The first phase of this process is the Portland Plan, which will be a strategic plan to guide the city for the next 25-years. The update of Comprehensive Plan will follow the completion of the Portland Plan. The Central City 2035 Plan (CC2035) will update the 1988 Central City Plan. The vitality of the Central City is key to state and regional policies for growth management and economic development and for addressing new policy directives such as those for peak oil and climate change. The CC2035 plan will produce new guiding policies, updated land use and urban design plans, and more detailed sub-area plans for specific Central City districts. Additionally, the Portland Bureau of Transportation (PBOT) will update the Central City Transportation Management Plan (CCTMP), which is part of the Portland Transportation System Plan (TSP), as part of this planning effort. The first phase of CC2035 will produce a Concept Plan that will define the desired overall direction for development for the entire Central City. The Concept Plan will be the foundation for more detailed planning and implementation work at the sub-district level.

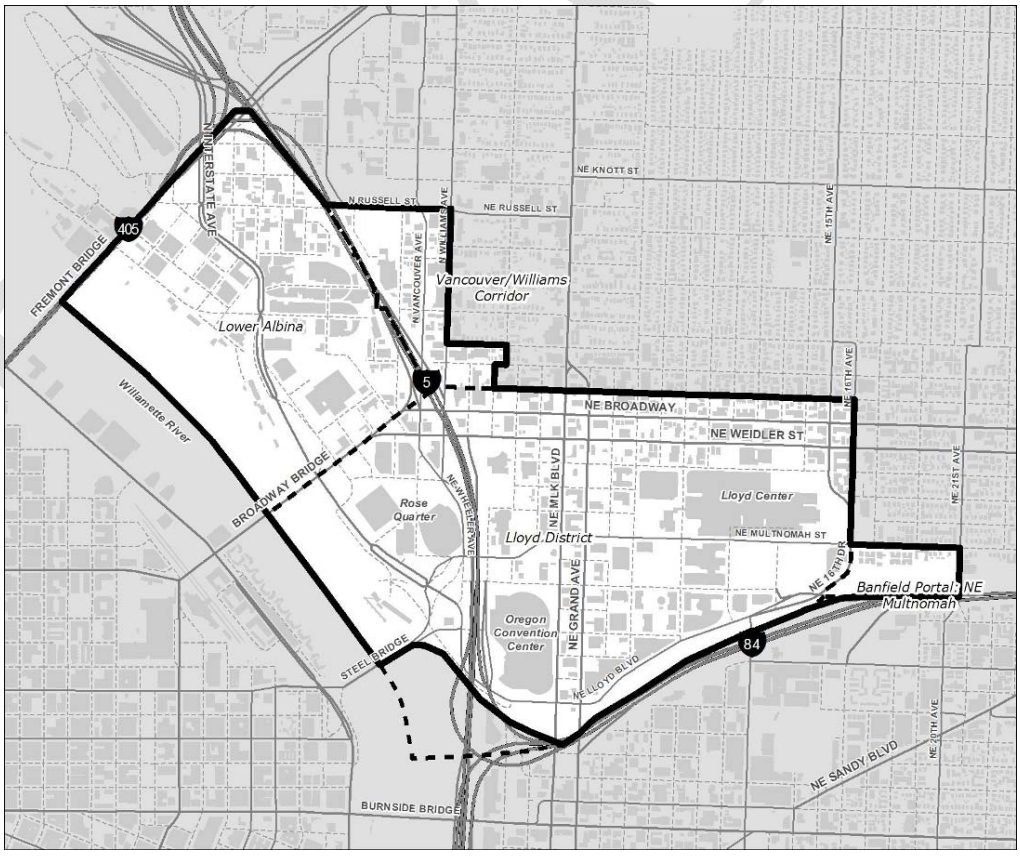
The N/NE Quadrant & I-5 Broadway/Weidler Plans will be the first of these more focused plans, covering Lower Albina and the Lloyd District. Although this area contains significant facilities and functions of state-wide and regional significance, including the Rose Garden, Oregon Convention Center, federal, state and regional government offices, and Lloyd Center Shopping Mall, this area has not met Central City Plan economic development goals and jobs and housing targets. The N/NE Quadrant & I-5 Broadway/Weidler Plans will address land use, urban design, transportation, public infrastructure and investment, and development entitlements. It will be coordinated with and incorporate ongoing related efforts, such as the Rose Quarter Development Project.

The Oregon Department of Transportation (ODOT) has long identified the need to make improvements to the I-5 Corridor. In the late 1980's, ODOT developed for the Rose Quarter area freeway-design recommendations to address capacity, operational, and safety issues. However, these recommendations have not received sufficient funding or public consensus to advance planning and engineering studies for this freeway segment. As part of the I-5 Partnership Plan, ODOT with the Washington Department of Transportation (DOT) examined longer-term I-5 needs from the Rose Quarter to SR500 in Clark County. The segment south of the Fremont Bridge was separated from the I-5 Partnership because of issues related to the I-5/405 Freeway Loop. ODOT with the City of

Portland completed the I-5/405 Freeway Loop Study in 2005. This study recognized both near-term and long-term issues for this facility. Near-term issues included addressing the bottleneck at the I-5/I-84 interchange.

The City of Portland and ODOT will collaborate on combining the Portland Central N/NE Quadrant Plan with the ODOT I-5 Broadway/Weidler Interchange Plan to seek to identify both near-term and long-term land use, urban design, and transportation needs in the area. This unique opportunity will integrate land use and urban design planning with freeway planning and concept-level engineering.

The project area includes two existing Central City Plan (sub) Districts:



1) Lower Albina, and
2) Lloyd District.

Additionally, the planning study area will consider two adjacent areas likely to see significant change through redevelopment in the future and which could impact or be impacted by development in the Central City:

1) Vancouver-Williams, and
2) Area along NE Multnomah-between NE 16th and NE 21st. (see map).

Finally, the plan will consider the context of surrounding districts and neighborhoods.

A map of the project area follows:

II. Process Vision and Values

The Stakeholder Advisory Committee (SAC) adopted a Vision and Values statement, attached as **Attachment A**. (Pending)

III. Stakeholder Advisory Committee (SAC) Charge and Scope of Work

A. Charge

The SAC is advisory to the City and ODOT and it will help inform City and ODOT staff in the development of their recommendations to the respective decision-making entities. City and ODOT staff recommendations to their respective decision-makers will highlight areas of agreement and disagreement with the SAC and other stakeholder interests. The co-chairs of the SAC will represent the recommendations of the SAC to City and ODOT decision-makers in conjunction with City and ODOT staff reports. The City and ODOT will have ultimate responsibility for decision-making.

B. SAC Scope of Work

The scope of work for this planning process on the joint project website is at www.portlandonline.com/bps/cc2035. (Look for the N/NE Quadrant Plan tab on the Central City 2035.) The work plan is organized by key milestones and decision points. The current draft appears as **Attachment B**. While it is the intent of the City-ODOT project team to conclude this planning process within a one and one half year period, it is impossible to contemplate all eventualities. As a result, the dates shown in the attached work plan are projected, not fixed.

C. Public Involvement Overview

A detailed Public Involvement Program for this joint planning process can be found on the joint project website. (www.portlandonline.com/bps/cc2035/neq) As the City and ODOT staff involves the broader community in the issues that the SAC will be exploring, they will be providing summaries to the SAC for their consideration and comment.

D. Operating Assumptions

This section summarizes the process operating assumptions and those topics outside the scope of the project.

1. Portland's Central City currently plays a critical regional role in meeting statewide land use goals to support the State, Region, and City economy, manage urban growth, and manage transportation demand by increasing the use of alternative transportation modes. The role of the Central City is recognized in Metro's 2040 Plan. The results of City of Portland plans and policies have contributed significantly to creating jobs, minimizing urban sprawl, reinforcing 2040, and reducing VMT and greenhouse gas emissions.
2. The City of Portland has initiated the Central City 2035 Plan, a project to update the 1988 Central City Plan. The first phase of this project will develop a policy framework for the entire Central City that will guide more focused quadrant planning projects. The first of these efforts will be the N/NE Quadrant & I-5 Broadway/Weidler Plans, which will address land use, urban design, transportation, public investment, and development entitlements. It will be a joint effort

between the City and ODOT, coordinating land use, transportation and urban design planning with freeway planning and concept-level engineering.

3. Although the Central City Plan has been successful in implementing many of its goals and objectives, many remain unfulfilled and new challenges have arisen. Central City has not met its employment target and has not kept pace with overall growth in the region. Housing has been a key strategy for the Central City and has been successful in terms of increasing housing units in some areas, but others, including the Lloyd District, have lagged. Creating a diversity of housing types, particularly workforce and family housing units, are also key challenges. Planning efforts will focus on developing an integrated policy framework that connects land use, economic development, transportation and urban design to meet new challenges, including peak oil, climate change, and regional growth management.
4. As a conduit for people and goods, the Interstate freeway system is a vital component of the economy, now and for many decades. This economic role extends to local, regional, statewide, and national geographies. Through traffic mobility on I-5 in the project area is one of the primary needs for the economic well-being of the Portland region and the State of Oregon, along with access to Portland's Central City, industrial areas, to Portland International Airport, and other destinations in the Portland region.
5. I-5 and the local transportation facilities and services in the Rose Quarter need to function as an integrated system to provide for statewide, regional and city mobility needs and to enhance high-quality urban development.
6. Shorter-term needs will be addressed within the broader context of long-range planning. Implementation of the ultimate solution to the freeway loop question is most likely beyond this effort's planning horizon (2035).
7. The current freeway system is constrained and prudent and practical freeway improvements in this study area may require flexibility from mobility and access standards. There is a need to balance community aspirations and freeway performance when addressing the applicability of existing standards.
8. The planning effort will identify opportunities for safety, operations, and a marginal increase in capacity to I-5 to solve bottlenecks. The project is not designed to add through travel lanes on I-5 to address long-term projected capacity needs. However, adding a short, non-through lane for weaving and merging within this section appears required to improve the operations and safety between the I-84 interchange and the Broadway/Weidler interchange.
9. Among other issues, this planning effort will explore the advantages and disadvantages of requiring an Interchange Area Management Plan in an effort to achieve the project's purposes.
10. Potential property impacts (e.g. right-of-way needs) and redevelopment opportunities (e.g. PPS Blanchard building opportunity site) need to be identified and analyzed.

IV. SAC Membership and Support

A. Members

The SAC has broad representation and is balanced to reflect many diverse interests and those who may be impacted by decisions made during the planning process. On behalf of Portland Mayor Sam Adams and ODOT Director Matt Garrett, the City's Director of Planning and Sustainability, Susan Anderson, the City's Director of Transportation, Susan Keil, and ODOT's Region I Manager, Jason Tell, made the SAC appointments noted in Section VIII, below.

DRAFT

B. Co-Chairs

There will be two co-chairs. Each co-chair will chair one of the major subcommittees, as proposed in section E below. The SAC co-chairs and City and ODOT project managers will meet regularly with the SAC facilitator to schedule the work of the SAC and subcommittees, and determine the timing of the information brought before the SAC. This Coordinating Committee will be available to make recommendations to the SAC on the logistics of the planning process, not to make substantive decisions on issues before the SAC.

C. SAC Alternates and Replacements

Due to the complexity of the process, it is best to have one person represent each interest throughout the planning process to maintain continuity of discussion and recommendations. If necessary, SAC members may identify an alternate to represent them in their absence, preferably at the outset of the process.

It will be the responsibility of the primary SAC member to keep the alternate informed so they can represent their group in case the primary SAC member is absent. Alternates may attend SAC meetings, but will not sit at the main table or vote, unless they are substituting for the primary SAC member. Notice of substitution must be submitted to the SAC facilitator in advance of SAC meetings.

SAC member resignations, changes, and replacements must be submitted in writing to the SAC co-chairs by the representative interest group/organization. As noted above, Susan Anderson, Sue Keil, and Jason Tell, or those holding their positions, will make all appointments to the SAC, including replacements of existing SAC members due to resignations or extended absences, based on nominations from the process interests.

D. SAC Subcommittees and Work Groups

The SAC co-chairs will determine subcommittees and their charges, time parameters, and deliverables. Subcommittees will help frame the issues for the full SAC, especially on specific subject areas requiring more analysis and input. They will be established in advance to allow adequate time for subcommittees to inform the planning process at key junctures. If broader issues are brought to a subcommittee, they will be noted in its meeting notes and not pursued without SAC approval.

Subcommittee memberships will be open to any interested SAC member once they are approved by the co-chairs. Each subcommittee should include representation from government, commercial/business, and community interests to ensure a balanced discussion. Staff will assist the subcommittee chairs in establishing agendas, making decisions on how to run the meetings, and reporting to the SAC on the subcommittee's work and recommendations within the established timeframe to keep the planning process on schedule. Subcommittees will be encouraged to invite non-SAC and Technical Advisory Committee (TAC) members to make presentations and participate in the discussion.

City and ODOT staff will assist subcommittees with meeting locations. There will be advance notice of all subcommittee meetings posted on the project website as soon as scheduled. These meetings will be open to the public and will include, at a minimum, one public comment period. Staff will assist subcommittees in preparing summary notes of meeting discussions and decisions for posting on the project website within one week of the meeting. The SAC facilitator will be available to assist subcommittees with meeting mechanics and decision-making guidance. This assistance may be

requested by the subcommittee chair with the approval of the other SAC co-chair. The proposed subcommittees are:

1) Land Use, and
2) Transportation.

There also may be work groups under each subcommittee to explore more limited geographic and/or policy issues. These work groups will open to any interested person with approval of the co-chairs.

E. Technical Advisory Committee (TAC)

TAC is a resource pool of organizations and agencies with specialized expertise related to this planning process. The TAC will address specific questions raised by the SAC, staff, and SAC subcommittees. TAC members will serve as resources to SAC subcommittees related to their area of expertise. The City and Project staff will brief TAC and hold TAC meetings, as needed. Project staff will report to the SAC on TAC meetings. TAC meetings are open to the SAC and the public.

F. Retained Technical Consultants

ODOT retained URS to serve as technical consultants.

G. Project Staff

The City and ODOT will staff the SAC process. A list of project staff and their roles can be found at www.portlandonline.com/bps/cc2035/neq. Their goal is to provide a process that will be open, honest, and transparent with a special emphasis on early involvement in providing policy-setting input.

The project staff commits to:

1) Clearly define opportunities where the public can provide timely input so that there is an opportunity to affect change.
2) Be accessible, inclusive, meaningful, regular, and timely in addition to open, fair and honest.
3) Ensure a collaborative involvement process between the City, ODOT, and stakeholders, and meet the planning timelines of both the City and ODOT.
4) Provide an ongoing record of public input, questions and responses, as well as a mechanism to make this information available to the public.
5) Include periodic community-based meetings in Portland where the public will be updated on committee activities and have the opportunity to inform policy-making.
6) Provide the public with a way to stay involved and informed during the process.
7) Provide interactive meetings with small group breakouts, which distinguish between information and input opportunities in public meetings.
8) Wherever possible, design interactive formats for all meetings to ensure a balanced and fair discussion of issues, ensuring all perspectives are heard.
9) Provide the SAC with the relevant, objective information, in a timely fashion, necessary to make informed decisions. Presentations will provide the facts – pro and con – surrounding the issues in a readily understandable format.
10) Provide the big picture context and interconnections surrounding all issues, before asking the SAC to make a recommendation.

11) Be responsive to SAC requests for information and process support, be clear and transparent about staff positions, and be open to carefully considering SAC recommendations.

H. The Facilitator

An independent facilitator has been hired as a process manager by ODOT with the concurrence of the City, separately from the other consultants. He will assist the SAC co-chairs, the SAC, staff, and subcommittees. He will also facilitate SAC meetings, the Coordinating Committee, and provide advice on the public involvement program. The facilitator's "client" is the SAC process, but neither SAC membership, nor process participation is a substitute for independent legal or other professional advice. That is the responsibility of the process participants. The facilitator will be responsible to ensure the SAC process is fair, well run, and productive. The facilitator will be available as a resource to the City and ODOT for minor conflict resolution and process improvement suggestions. As a neutral collaborative process provider, the facilitator will not act as an advocate for anyone on any substantive issue. However, the facilitator may propose substantive suggestions for SAC consideration, but will not make decisions on substantive issues.

The Institute *for* Conflict Management, Inc. (ICM, or the facilitator) has been hired for this process. ICM's Executive Director, Sam Imperati, will act as the facilitator. ICM, Sam Imperati, and any subcontractors are not employees of any participant. ICM's written contract is available for review. The facilitator will not be influenced by payment source. ODOT has agreed that his status of facilitator will not be changed without first consulting with the City and the SAC co-chairs.

The facilitator may have non-confidential, informal communications and perform facilitation activities with staff and SAC members, between and during meetings. The facilitator will address situations where it appears a participant is not acting according to these Collaboration Principles and will advise the co-chairs if it appears probable that the SAC will be unable to fulfill its Charge.

V. <u>Collaboration Protocols</u>

A. Quorum

A quorum is a simple majority of voting SAC members or their alternates. If there is no quorum, the co-chairs can cancel/reschedule or conduct the SAC meeting and send all meeting notes and materials to the members for voting at the next meeting.

B. Open Meetings

Meetings of the SAC, TAC, and SAC subcommittees are open to the public and will include an opportunity for public comment. Notice of SAC meetings will be posted in advance of meetings on the joint project website. Notice of subcommittee meetings will be posted in advance of meetings. SAC and SAC subcommittee meeting summaries will be posted on the website as soon as possible following each meeting.

DRAFT

C. Public Comment

The co-chairs or the facilitator will provide periodic public comment opportunities for non-SAC members during meetings before SAC makes a decision. Comments from the public will be limited in time to allow sufficient opportunity to conduct the other portions of the SAC agenda. Typically, comments will be limited to a maximum of three minutes per person. The public is encouraged to submit written comments to project staff for circulation to the full SAC.

D. Meeting Agendas and Meeting Materials

The Coordinating Committee will develop Working Agendas for SAC meetings. Meeting agendas and meeting materials will be mailed and sent electronically to SAC members one week in advance of the meetings, and will be posted on the project website. SAC meetings will begin and end as scheduled.

E. SAC Member Commitments to Each Other

The SAC members, project staff and participants will participate in good faith, which means:

1) Prepare for and set aside time for the meetings and the whole process,
2) Participate fully, honestly and fairly, commenting constructively and specifically,
3) Speak respectfully, briefly and non-repetitively; not speaking again on a subject until all other members desiring to speak have had the opportunity to speak,
4) Allow people to say what is true for them without fear of reprisal from SAC members, the City, or ODOT,
5) Avoid side conversations during meetings,
6) Provide information as much in advance as possible of the meeting in which such information is to be used and share all relevant information to the maximum extent possible,
7) Generate and explore all options on the merits with an open mind, listening to different points of view with a goal of understanding the underlying interests of other SAC members,
8) Consult regularly with their interest groups/organizations and provide their input in a clear and concise manner,
9) Agreeing to work toward fair, practical and durable recommendations that reflect the diverse interests of the entire SAC and the public,
10) When communicating with others, accurately summarize the SAC process, discussion and meetings, presenting a full, fair and balanced view of the issues and arguments out of respect for the process and other members,
11) Not attempt to effect a different outcome outside of the SAC process once the SAC has reached a consensus recommendation,
12) Strive vigorously for consensus and closure on issues, and
13) Self-regulate and help other members abide by these commitments.

DRAFT

VI. Decision-Making Process

A. Developing Recommendations

The co-chairs and the facilitator will assist the SAC in identifying objectives, addressing the diversity of perspectives and developing substantive, practical recommendations to implement its Charge. The SAC will use a *Discussion Draft* process and a *Consensus Decision-Making* model to assist the process. The SAC will make draft recommendations on an "issue-by-issue" basis, and then final recommendations as a "package" at each milestone, and again at the conclusion of the process.

B. Representative Voting

Each SAC member will have one vote except those non-voting members (Ex Officio members. Issue: and/or co-chairs?) A vote represents that the member will recommend to his or her organization or group that they should support or oppose the voted-upon proposal consistent with the member's vote. The names of those voting in favor and those voting against a proposal will be noted and included in the SAC's recommendations and the City and ODOT staff recommendations to their respective decision-makers.

C. Consensus

Consensus decision-making is a process that allows SAC members to distinguish underlying values, interests and concerns with a goal of developing widely accepted solutions. Consensus does not mean 100% agreement on each part of every issue, but rather support for a decision, *"taken as a whole."* This means that a member may vote to support a consensus proposal even though they would prefer to have it modified in some manner in order to give it their full support. Consensus is a process of *"give and take*," of finding common ground and developing creative solutions in a way that all interests can support. Consensus is reached if all members at the table support an idea or can say, *"I can live with that."*

C.1. "1-2-3" Consensus Voting Method

The co-chairs and facilitator will assist the SAC in articulating points of agreement, as well as articulating concerns that require further exploration. SAC will use a "**Consensus Voting**" procedure for testing the group's opinion and adjusting proposals. In "**Consensus Voting**," the co-chair or the facilitator will articulate the proposal. Each SAC member will then vote "one," "two," or "three," reflecting the following:

- **"One"** indicates **full support** for the proposal as stated.
- **"Two"** indicates that the participant **agrees with the proposal as stated, but would prefer to have it modified in some manner in order to give it unconditional support. Nevertheless, the member will fully support the consensus even if his/her suggested modifications are not supported by the rest of the group because the proposal, taken as a whole, is worthy of support, as written.**
- **"Three"** indicates **refusal to support** the proposal as stated.

The co-chairs or facilitator will repeat the consensus voting process, as reasonably necessary, to assist the group in achieving **consensus** regarding a particular recommendation, so that all members are voting "one" or "two."

C.2. Cooling-Off Period

If a consensus is not reasonably forthcoming, the co-chairs or the facilitator may table the issue for additional discussion with constituencies, the gathering of new information, or perhaps just sufficient time to consider options more carefully. The "cooling off" period recognizes we value getting as close to consensus as possible by way of dialogue, clarification, and consideration of alternatives. Absent an emerging consensus, the co-chairs or the facilitator may make a recommendation for the SAC to consider taking into consideration all of the available information and views. The SAC may then revisit the issue.

C.3. No Consensus – Majority and Minority View

If a consensus on an issue is still not reasonably likely, as determined by the co-chair, the votes of those present at the meeting will be taken and recorded as a majority - minority vote. Majority is defined as at least 50% plus one of the SAC voting membership in attendance. The proposed language and reasoning supported by the majority will be noted along with their names in the SAC's recommendations. Members voting in the minority will have their names, proposed language, and reasoning noted in the Minority Report(s). The facilitator will document these issues, the differences of opinion involved, and submit the report to the City and ODOT staff for inclusion in the SAC recommendations along with other stakeholder comments.

VII. Additional Understandings

A. Communications Outside of SAC

Whenever reasonable, SAC members and staff will refer press, public and other inquiries to the SAC co-chairs or City and ODOT project managers. It is often advisable simply to refer others to the project website or the project managers.

B. Meeting Summaries

The facilitator will prepare SAC meeting summaries. They will be provided electronically in draft form to the SAC for proposed correction and comment. The final meeting summaries will be posted on the project website.

The chair of each SAC subcommittee or their designee is responsible for preparing, and submitting for posting, meeting summaries on the project website within one week of the subcommittee meeting.

C. Public Records and Confidentiality

SAC records, such as formal documents, discussion drafts, transcripts, meeting summaries, and exhibits are public records. This is not a mediation. It is a facilitation. As a result, SAC communications (oral, written, electronic, etc.) are not confidential and may be disclosed. However, the private documents of individual SAC members and the private documents of the facilitator that are

DRAFT

not shared with the City or the ODOT are not considered public records and are not subject to disclosure under public records laws.

D. Process Conclusion

The SAC process will conclude with submission of its recommendations to the City and ODOT, when necessary funding and resources are no longer available, or when the City and ODOT determine it is unlikely the SAC will fulfill its Charge.

E. Amendment and Interpretation

Amendments to this document can be made by vote of the SAC. The co-chairs or facilitator shall lead a SAC discussion designed to reach a consensus on any process dispute or proposed amendment to these Collaboration Principles.

VIII. Signatures

We agree:

N/NE Quadrant & I-5 Broadway/Weidler Plans

Stakeholder Advisory Committee Meeting #1 September 16, 2010

Public Involvement

CENTRAL CITY 2035

N/NE QUADRANT

CITY OF PORTLAND, OREGON 1851

Oregon Department of Transportation

Goals

- Open, balanced and fair process
- Provide residents, property owners, businesses, community organizations and other interested parties convenient and meaningful opportunities to inform the planning process

Guiding Principles

- Build on existing relationships
- Involve as many people as possible
- Engage broader and diverse groups
- Clearly define opportunities for public input
- Provide multiple venues and means for involvement
- Emphasize early involvement and interactive formats
- Ensure community members are being heard

Involvement Methods

STAKEHOLDER ADVISORY COMMITTEE (SAC)

- Represents diverse set of stakeholders
- Highly involved in all aspects of planning process

PUBLIC EVENTS

- Community Walks to gather early input
- Public workshops and open houses at key milestones

CENTRAL CITY 2035

N/NE QUADRANT

Community Walks

Coming Soon:

Lloyd District:
Sat. Sept 25

Lower Albina:
Wed. Sept 29

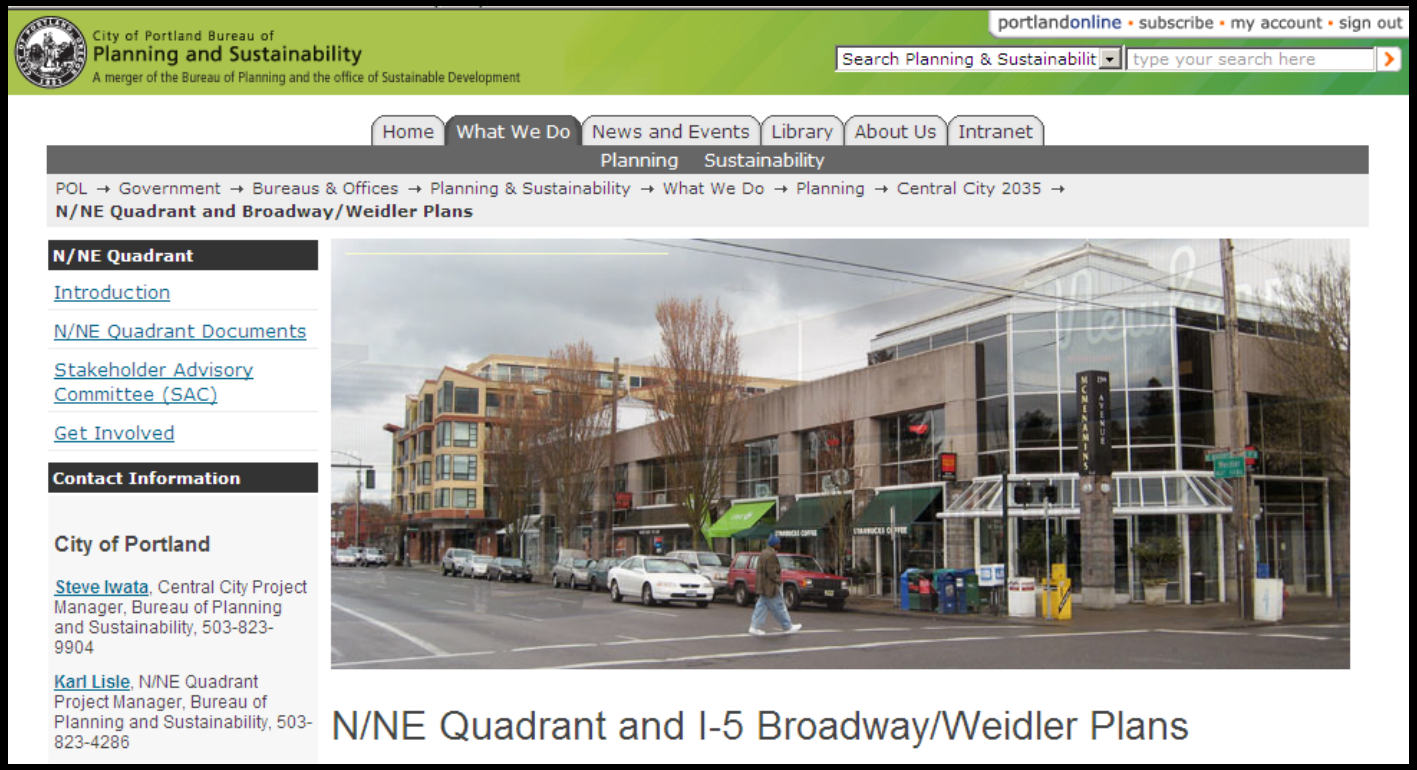
CENTRAL CITY 2035
N/NE QUADRANT

Involvement Methods

MEETING WITH COMMUNITY GROUPS

- Neighborhood associations, business and other interest groups
- Let us know who should be involved

PUBLIC HEARINGS



- Planning and Sustainability Commission
- City Council
- Oregon Transportation Commission *(depends on outcome)*

CENTRAL CITY 2035

N/NE QUADRANT

Communication Tools

Project website: **www.portlandonline.com/bps/cc2035/neq**

Electronic mailing list • newsletters • community calendars
media announcements • hearing notices

CENTRAL CITY 2035

N/NE QUADRANT

Public Involvement Plan

COMMENTS or QUESTIONS?

- Provide feedback on draft Public Involvement Plan by September 30.

DRAFT
Public Involvement Plan

Central City N/NE Quadrant and I-5 Broadway/Weidler Plans

I. Introduction

II. Project Description and Background

- **A. Overview**
- **B. Study Area**
- **C. Project Goals and Anticipated Outcomes**
- **D. Previous Planning Efforts**
- **E. Concurrent Efforts and Coordination**
- **F. Project Budget**
- **G. Project Timeline**

III. Public Involvement Process

- **A. Public Involvement Principles and Goals**
- **B. Key Stakeholders and Project Advisory Committees**
- **C. Public Involvement Opportunities**
- **D. Decision Making Process**
- **E. Public Involvement Timeline**

IV. Accountability and Evaluation

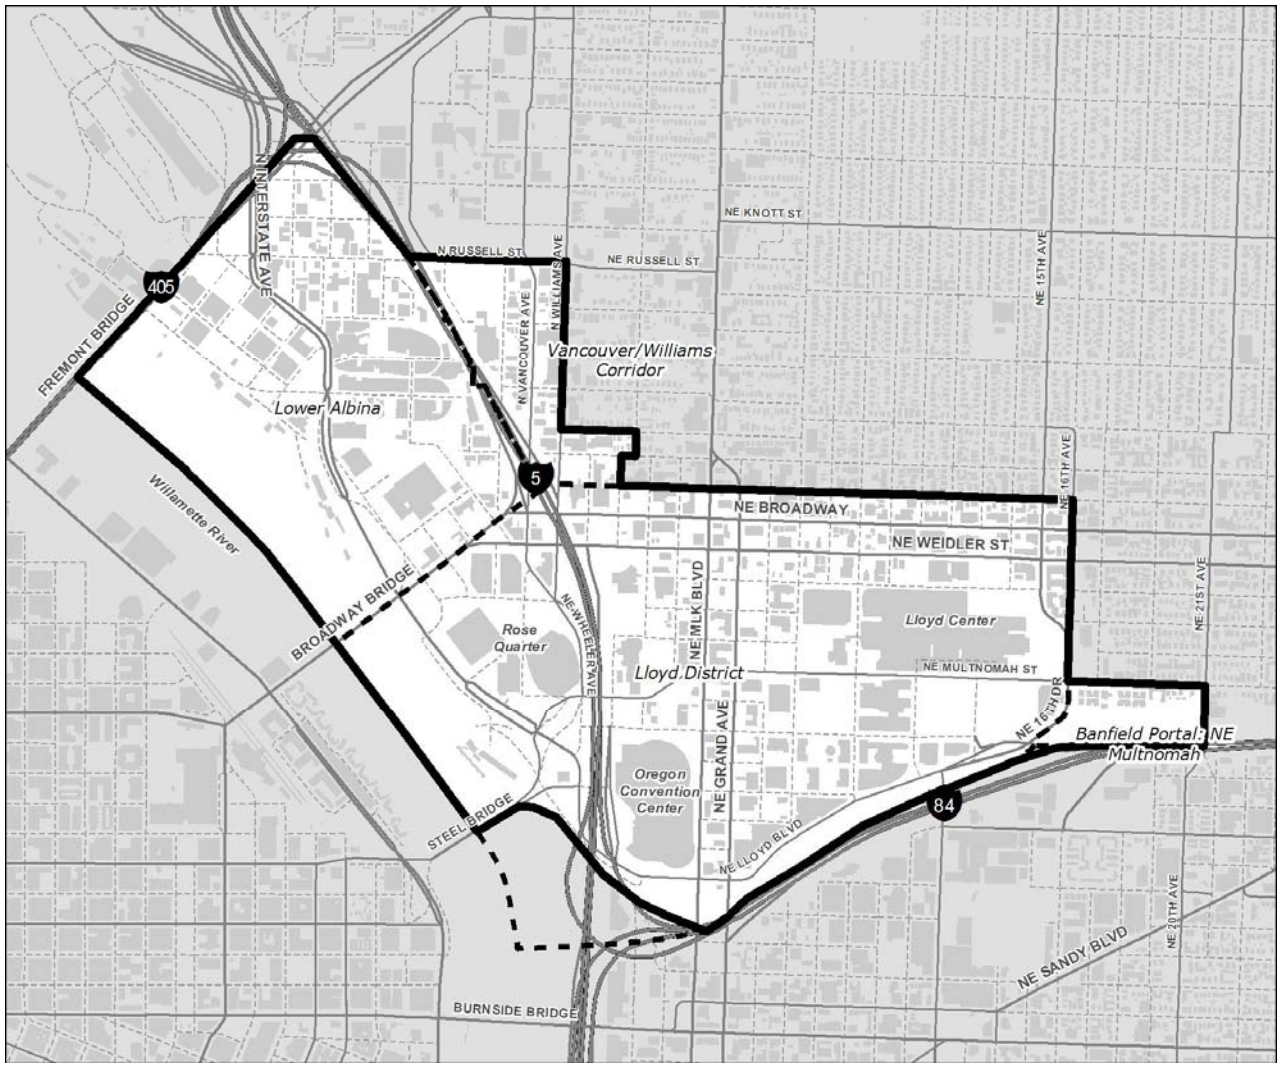
- **A. Public Involvement Feedback Loop**
- **B. Public Involvement Evaluation**

I. Introduction

This public involvement plan will guide the joint planning process initiated by the City of Portland and Oregon Department of Transportation for the N/NE Quadrant of the Central City, including the I-5 freeway corridor in the area. The overarching goal of the involvement program is to ensure there is an open, balanced and fair process that provides residents, property owners, businesses, community organizations and other interested parties convenient and meaningful opportunities to inform the planning process. This public involvement plan will be considered by the project's Stakeholder Advisory Committee at the outset of the planning process and any revisions or recommendations incorporated.

II. Project Description and Background

II.A. Overview



Central City 2035 is an update to the 1988 Central City Plan, which provides the existing policy framework for downtown and central areas of Portland. The first phase of CC2035 will produce a Concept Plan that will define the desired overall direction for development for the entire Central City. The Concept Plan will be the foundation for more detailed planning and implementation work at the sub-district level. The N/NE Quadrant and I-5 Broadway/Weidler Plans are the first of these more focused plans, covering Lower Albina and the Lloyd District. Although this area contains significant facilities and functions of state-wide and regional significance, including the Rose Garden, Oregon Convention Center, Lloyd Center Shopping Mall, federal, state and regional government offices and significant transportation infrastructure, this area has not met Central City Plan economic development goals and jobs and housing targets. The N/NE Quadrant & I-5 Broadway/Weidler Plans will address land use, urban design, transportation, public infrastructure and investment, and development entitlements. It will be coordinated with and incorporate ongoing related efforts, such as the Rose Quarter Development Project.

The Oregon Department of Transportation (ODOT) has long identified the need to make improvements to the I-5 Corridor. In the late 1980's, ODOT developed for the Rose Quarter area freeway-design recommendations to address capacity, operational, and safety issues. However, these recommendations have not received sufficient funding or public consensus to advance planning and engineering studies for this freeway segment. As part of the I-5 Partnership Plan, ODOT with the Washington Department of Transportation (DOT) examined longer-term I-5 needs from the Rose Quarter to SR500 in Clark County. The segment south of the Fremont Bridge was separated from the I-5 Partnership because of issues related to the I-5/405 Freeway Loop. ODOT with the City of Portland completed the I-5/405 Freeway Loop Study in 2005. This study recognized both near-term and long-term issues for this facility. Near-term issues included addressing the bottleneck at the I-5/I-84 interchange.

The City of Portland and ODOT will collaborate on combining the Portland Central N/NE Quadrant Plan with the ODOT I-5 Broadway/Weidler Interchange Plan to seek to identify both near-term and long-term land use, urban design, and transportation needs in the area. This unique opportunity will integrate land use and urban design planning with freeway planning and concept-level engineering.

II.B. Study Area

The project area includes two existing Central City subdistricts: Lower Albina and the Lloyd District. The plan will also consider two adjacent areas likely to see significant change through redevelopment in the future, which could impact or be impacted by development in the Central City: a portion of the Vancouver-Williams corridor and NE Multnomah between NE 16th and NE 21st. The plan will also consider the context of surrounding districts and neighborhoods.

II.C. Project Goals and Anticipated Outcomes

The Central N/NE Quadrant and I-5 Broadway/Weidler Plans will help fulfill Portland Plan and Central City 2035 policy goals to support and enhance a vibrant Central City at the heart of the metropolitan region. It will support and balance social, economic development, land use, transportation and environmental goals and policies at the local, regional and state level, including the City-County Climate Action Plan and the City's Economic Development Strategy.

To achieve these goals the project will:

- Revisit and update the current goals and policies for the district as described in the Central City Plan (1988) with subsequent amendments and other relevant policy documents within the policy framework of the Central City Plan update.
- Develop a district urban design framework and open space plan.
- Develop a transportation plan, including demand management strategies, and inform changes to the Central City Transportation Management Plan (CCTMP).
- Identify needed local system infrastructure improvements.
- Develop broad agreement around street circulation, freeway access, ramps, freeway operations and other topics for the Broadway/Weidler Interchange area.
- Produce a facility plan with a conceptual layout of the I-5 Broadway/Weidler Interchange area with engineering sufficient to determine feasibility and the right of way impacts.
- Revisit, and if necessary, recommend comprehensive plan and zoning designations, development standards, and design guidelines that should be incorporated into the Central City 2035 Plan.
- Incorporate plans for a redeveloped Rose Quarter (conceptual plans under development concurrently with the larger Central N/NE Quadrant and I-5 Rose Quarter Plans.)
- Coordinate and integrate relevant findings with the River Plan / Central Reach project.

II.D. Previous Planning Efforts

Previously adopted plans and policy documents at the state, regional and local level will guide planning for the N/NE Quadrant. Selected plans that are relevant to the specific geography of the N/NE Quadrant include:

- Central City Plan (1988)
- Proposed Oregon Convention Center Area Development Strategy (1988)
- Oregon Convention Center Urban Renewal Plan (1989)
- Albina Community Plan (1993)
- Eliot Neighborhood Plan (1993)
- Broadway/Weidler Corridor Plan (1996)
- Interstate Corridor Urban Renewal Plan (2000)
- Interstate Transportation Strategy (2001)
- Rose Quarter Urban Design Plan and Development Strategy (2001)
- Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan (2001)
- Lloyd District Development Strategy (2002)
- Lloyd District Housing Strategy (2002)
- Russell Street Improvement Plan (2003)
- Lloyd Crossing Sustainable Urban Design Plan (2004)
- Freeway Loop Study (2005)
- Development Vision for the Oregon Convention Center Blocks (2006)
- River Plan / North Reach (2010)

In addition, recently adopted citywide planning and policy documents that will guide the project include:

- Climate Action Plan (2009)
- Portland Streetcar System Concept Plan (accepted 2009, under refinement)
- Portland Bicycle Plan for 2030 (2010)

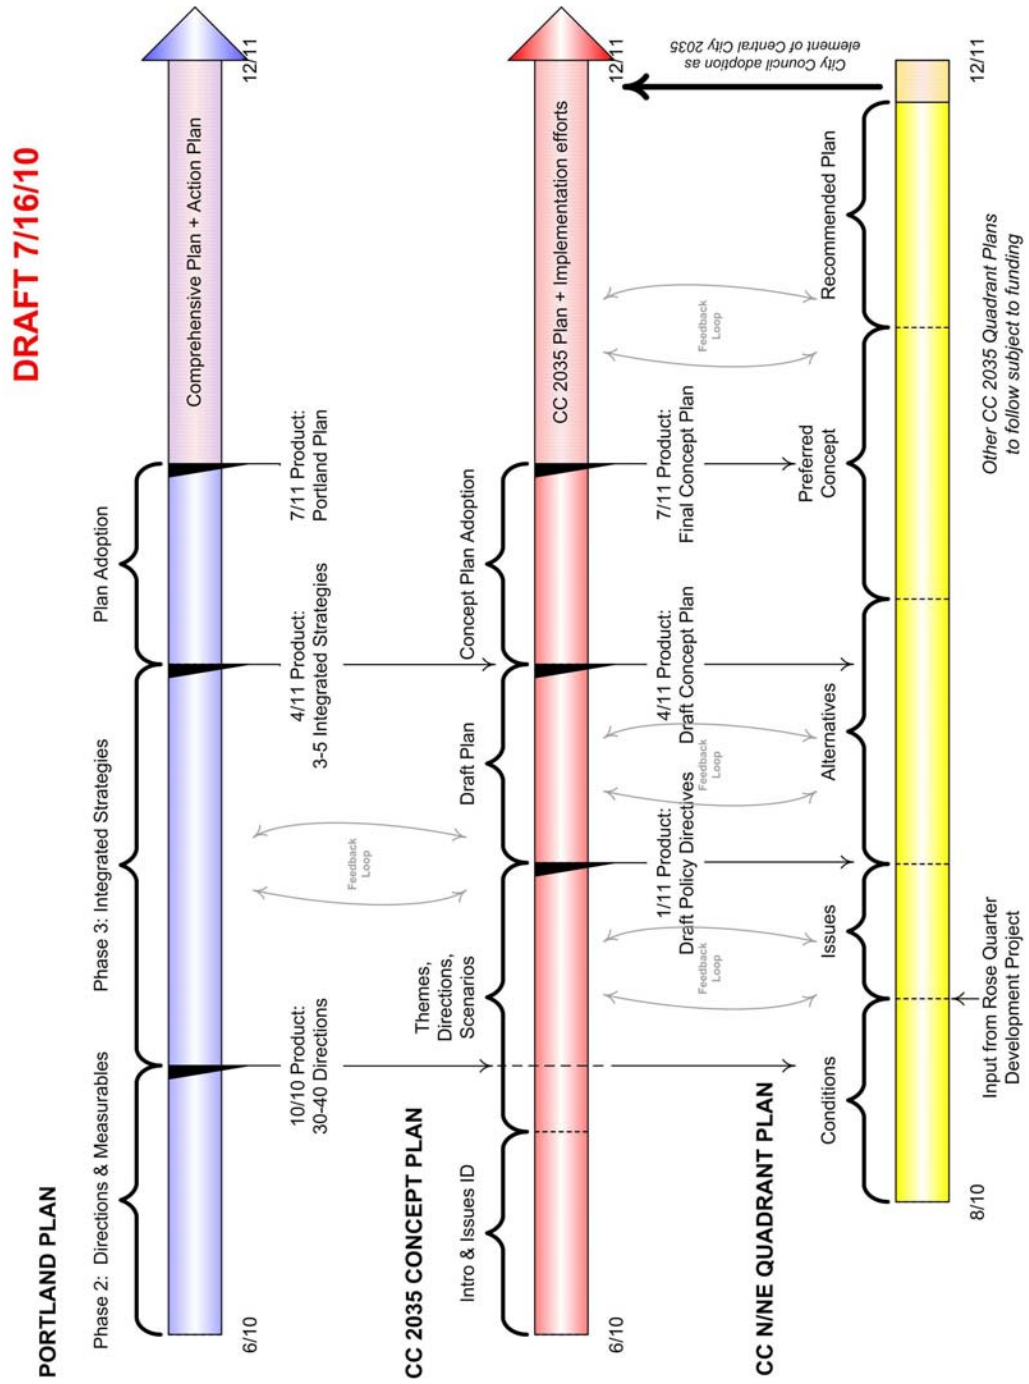
II.E. Concurrent Efforts and Coordination

The project will be coordinated with several ongoing and related public planning projects, including:

CC 2035 Related Projects

CC 2035 Concept Plan
The first phase of CC 2035, the City's update of the 1988 Central City Plan, will include a Concept Plan to serve as the foundation for development of the rest of the Plan. The Concept Plan will define the overall long range direction for development of the Central City, a new policy framework and general land use and urban design plans. It will also define the general role and expectations for the different districts that make up the Central City and inform the N/NE Quadrant and I-5 Broadway/Weidler Plans and subsequent quadrant plans. The chart on the next page illustrates the timing and relationship between the N/NE Quadrant and I-5 Broadway/Weidler Plans, the Central City 2035 Concept Plan and the Portland Plan processes.

Central City Transportation Management Plan (CCTMP) Update
The CCTMP is the adopted transportation system plan for the Central City. The plan's goals include encouraging economic growth and housing in a compact urban form in the Central City, which will limit urban sprawl and the loss of agricultural and forest land at the edge of the metropolitan area. This urban form pattern should also increase the use of alternative transportation modes resulting in fewer vehicle miles traveled by workers and residents. The CCTMP will be updated as part of the CC 2035 and quadrant planning processes.

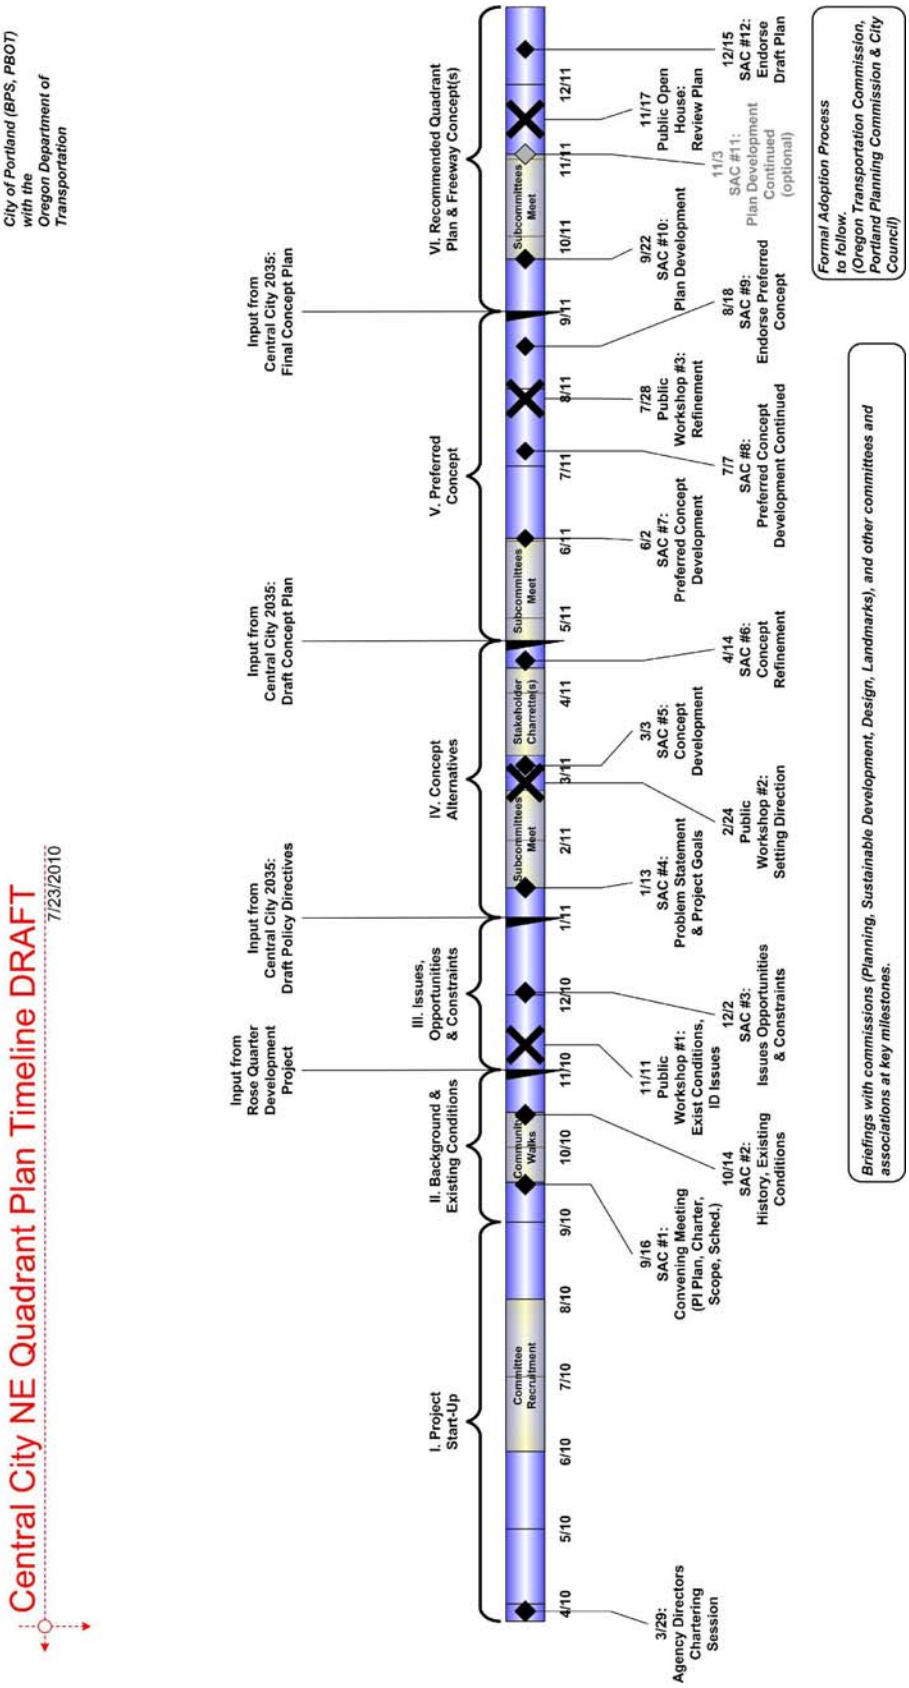


River Plan / Central Reach
The River Plan is a multi-objective plan that will update the 1988 Willamette Greenway Plan. The Plan will address topics related to river access, water-based recreation, fish and wildlife habitat and other topics as identified. It is being carried out in phases, each focusing on a different stretch of the Willamette River. Planning for the Central Reach, extending south from the Broadway Bridge on the east bank and the Fremont Bridge on the west bank to the Ross Island Bridge, will be completed as part of the CC 2035 and quadrant planning processes.

Portland Plan
The Portland Plan is a 25 year plan that will include long-term goals and immediate short-term actions. It will also guide future City policy work, including the upcoming Comprehensive Plan update and the CC 2035 Plan. The chart on the next page illustrates the timing and relationship between the N/NE Quadrant and I-5 Broadway/Weidler Plans, the Central City 2035 Concept Plan and the Portland Plan processes.

Rose Quarter Development Project
PDC is leading this community-based effort to prepare a development strategy for the Rose Quarter that will identify potential uses and the financial feasibility of future development, including the possible renovation or reuse of Memorial Coliseum. The project is building on a vision for the area to create a vibrant, pedestrian-oriented, mixed use district with year-round night and day active public uses that support the future of the Rose Quarter district, showcase leading edge sustainability practices, create jobs, provide visitor amenities, and integrate and connect with neighboring portions of the Lloyd District and Oregon Convention Center area, as well as the Willamette River and surrounding neighborhoods.

N/NE Economic Development Initiative
The North/Northeast Economic Development Initiative is a PDC project that is assessing the need for possible boundary adjustments and priorities for new investments in the Interstate Corridor and Oregon Convention Center Urban Renewal Areas, which cover portions of the N/NE quadrant. PDC is working with the community to ensure that PDC investments enhance livability and economic opportunity within the two urban renewal areas and the city at-large.



Project Coordination Chart

II.F. Project Budget

This planning project is a collaborative effort between the Portland Bureau of Planning and Sustainability, Portland Bureau of Transportation and Oregon Department of Transportation. The City's involvement is funded as part of the CC 2035 project through a combination of general fund and urban renewal sources. ODOT's involvement is funded through a combination of state and federal planning and preliminary engineering sources.

II.G. Project Timeline

III. Public Involvement Process

III.A. Public Involvement Principles and Goals

The level of interest in this project and its outcomes among key stakeholders and community members is expected to be high, particularly around freeway issues. Historically, in this study area urban renewal and freeway projects have had adverse impacts to the community. The N/NE Quadrant and I-5 Broadway/Weidler Plans process will need to be inclusive, thoughtful and responsive to public concerns and sensitivities. Therefore, public involvement strategies will go beyond informing the community about the project; they will seek to actively involve and engage the public and stakeholders, with opportunities for meaningful public input.

Principles

The public involvement efforts for the Central City N/NE Quadrant and I-5 Broadway/Weidler Plans will be guided by the public involvement goals developed by the Community Involvement Committee (CIC) for the Portland Plan, the current long-range planning effort for all of Portland. While the N/NE Quadrant Plan, will be examining issues on a more localized level, it will incorporate the public involvement goals for the Portland Plan to facilitate consistent public involvement efforts. These goals are:

- Build on existing relationships
- Engage broader and diverse groups with education and information and provide all interested with enough education so they can meaningfully participate
- Provide multiple venues and means for community involvement and engagement
- Involve as many people as possible
- With feedback and continuous engagement throughout Portland Plan development and implementation, ensure community members are being heard

In addition, this project will strive to:

- Provide a process that is open, and transparent with a special emphasis on early involvement in providing policy-setting input
- Clearly define opportunities where the public can provide timely input so that there is an opportunity to inform policy-making and otherwise affect change
- Wherever possible, design interactive formats for meetings and ensure a balanced and fair discussion of issues

III.B. Key Stakeholders and Project Advisory Committees

The Bureau of Planning and Sustainability, working with the other project partners, will involve a variety of stakeholders and interested parties in the N/NE Quadrant planning process that have varying levels of interest in the planning process, ranging from property owners who will be directly impacted by the plan outcomes to members of the general public who want to stay informed about what is happening in the Central City.

Stakeholder Identification

The project team identified the following stakeholder categories and interests:

- Affordable housing
- Business organizations
- Neighborhood associations
- Community/Civic organizations
- Community health
- Cultural heritage
- Environment
- Environmental justice
- Economic equity
- Organized labor
- Retail
- Development
- Automobile transportation
- Pedestrian transportation
- Bicycle transportation
- Truck freight transportation
- Rail freight transportation
- Local transportation management assoc
- Public transportation
- Urban design
- Historic resources
- Minority populations
- Communities of faith
- Property owners
- Residents
- Employees
- Youth
- Seniors

Stakeholder Advisory Committee (SAC)

A Stakeholder Advisory Committee (SAC) will be one of the primary means of ensuring that the public has opportunities to provide meaningful input into the planning process. SAC members were selected to represent key stakeholder interests and contribute to a balanced committee perspective in the planning effort. All SAC members will be appointed by the directors of the Portland Bureau of Planning and Sustainability, the Portland Bureau of Transportation and the Oregon Department of Transportation Region 1 Office. The role of SAC members is to report back to and solicit input from their stakeholder groups and constituencies, represent the broader interests of those groups and promote public involvement in project events.

Subcommittees of the SAC will be formed to address specific issues, such as transportation, land use and urban design, and may include additional stakeholders with expertise and interest in the specific topic areas. Subcommittees will help frame the issues for the full SAC, especially on specific subject areas requiring more analysis and input.

The SAC and subcommittee meetings will be open to the public and have opportunities for public comment. More information about the SAC process and procedures may be found in the SAC *Collaboration Principles (http://www.portlandonline.com/bps/index.cfm?c=53258&a=313101)*.

A Technical Advisory Committee (TAC) representing public agencies with specialized expertise related to the plan and implementation will serve as a resource for the SAC and report back to their agencies throughout the planning process.

Voting SAC members represent the following groups and interests:

- Central City Concern (Affordable housing)
- Central Eastside Industrial Council (Business organization)
- NNE Business Association (Business organization)
- Lower Albina Council (Business organization)
- Portland Business Alliance (Business organization)

Urban League (Community/Civic organization)
Interstate Urban Renewal Area Advisory Committee (many interests)
NE Coalition of Neighborhoods (Cultural heritage/neighborhood interests)
Latino Network (Environmental justice / Economic equity)
Portland State University Engineering Department (Research institute)
Building Trades (Labor organization)
Lloyd Center Mall (Major retailer)
Lloyd Community Association (Neighborhood association)
Sullivan's Gulch Neighborhood Association (Neighborhood association)
Elliot Neighborhood Association (Neighborhood association)
Irvington Neighborhood Association (Neighborhood association)
Ashforth – Pacific (Property owner, local business, developer)
Trail Blazers/Portland Arena Management (Property owner, local business, developer)
American Automobile Association (AAA) (Automobile transportation)
Bicycle Advisory Committee (Bicycle transportation)
Lloyd Transportation Management Association (Local TMA)
Pedestrian Advisory Committee (Pedestrian transportation)
Portland Freight/Oregon Freight Committees (Freight transportation)
Union Pacific Railroad (Rail transportation)
Oregon Trucking Association (Trucking transportation)
American Society of Landscape Architects (Urban design)
Audubon Society (Environment)
Upstream Community Health (Community Health)
At Large Members (2)

Non-voting SAC members represent the following agencies and organizations:

Oregon Department of Transportation
Portland Bureau of Planning and Sustainability
Portland Bureau of Transportation
Portland Development Commission
TriMet
Metro
Oregon Convention Center/Metropolitan Exposition Recreation Commission (MERC)

III.C. Public Involvement Opportunities

Events (See project timeline for estimated timing. All events will be publicized on the project website)

SAC Meetings - SAC and its subcommittee meetings will be open to the public. Opportunity for public comment will be provided at SAC meetings and written public comments will be circulated to SAC members.

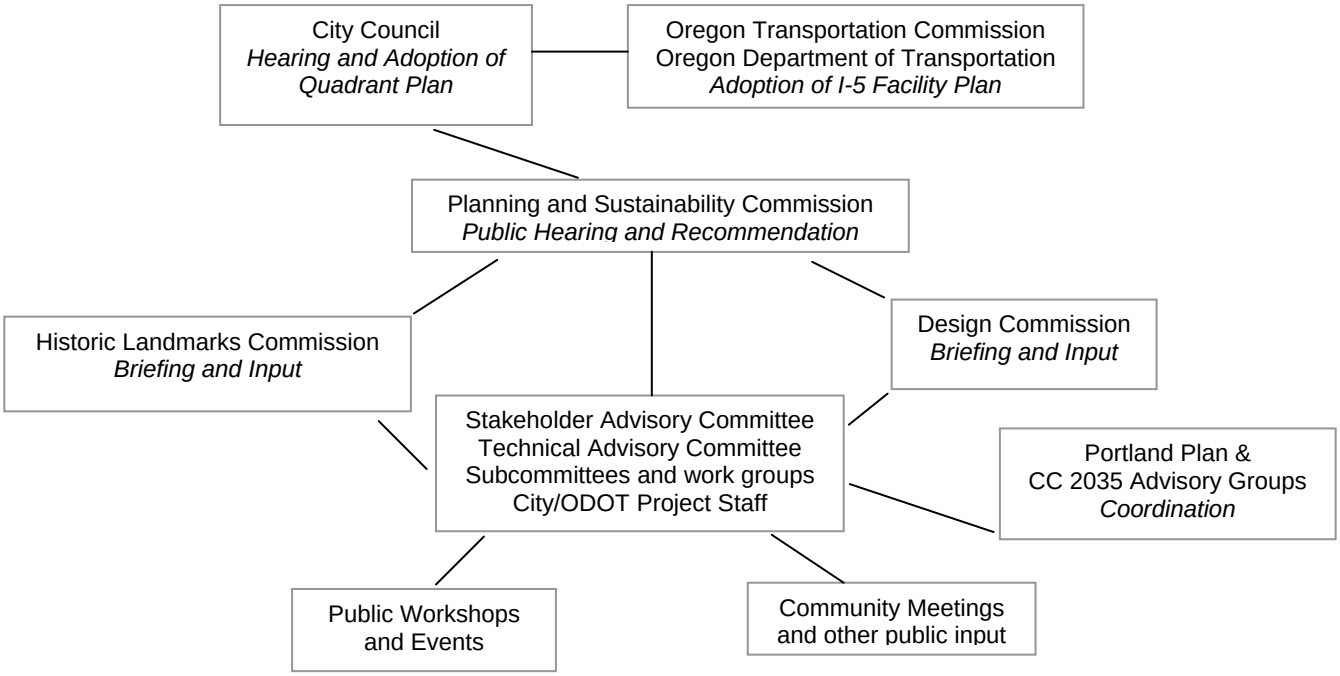
Public Workshops/Charrettes - A series of three to four public workshops or design charrettes will be held at key points during the project. These will be designed to allow stakeholders and the public to engage directly in the planning process and provide input that will meaningfully shape project outcomes.

Open House - An open house will be held when a recommended Quadrant Plan and Freeway Concept(s) is developed. Staff will present recommendations, answer questions and take public comments.

Community Walks - Community walks will be led during the existing conditions phase of the planning process. Staff and community members will share their knowledge of the N/NE quadrant with the SAC and other members of the public. The walks are also expected to prompt discussion about issues, opportunities and constraints in key areas. This input will be used to help frame issues and opportunities discussed during the planning process.

Community Group Meetings - The project team will contact community groups to inform them about the process and seek their input. Staff will ensure that interested groups are made aware of project proposals and milestones, offer opportunities for groups to submit comments and attend community group meetings at key project milestones.

Communication/Information Tools



Project Website - A project website has been developed and will be regularly updated: http://www.portlandonline.com/bps/cc2035/neq. It will serve as a primary source of information for the public and as a means to solicit and receive public feedback. The website will include a project description, planning documents, project schedule, calendar of events, meeting agendas and minutes, links to other related planning efforts and other information as needed. It will also include a means for the public to submit comments and feedback to project staff.

Mailings and Newsletters – An electronic mailing list will be used to provide frequent updates to interested parties regarding meetings, events and new products. Occasional articles and notices will be distributed through the BPS bimonthly e-newsletter. Hard copy notices of important events such as public hearings will be mailed to businesses and residents within the N/NE Quadrant area and other interested parties.

Media - Announcements for key events and document releases will be distributed to local media outlets (Oregonian, Daily Journal of Commerce, neighborhood newspapers and other outlets).

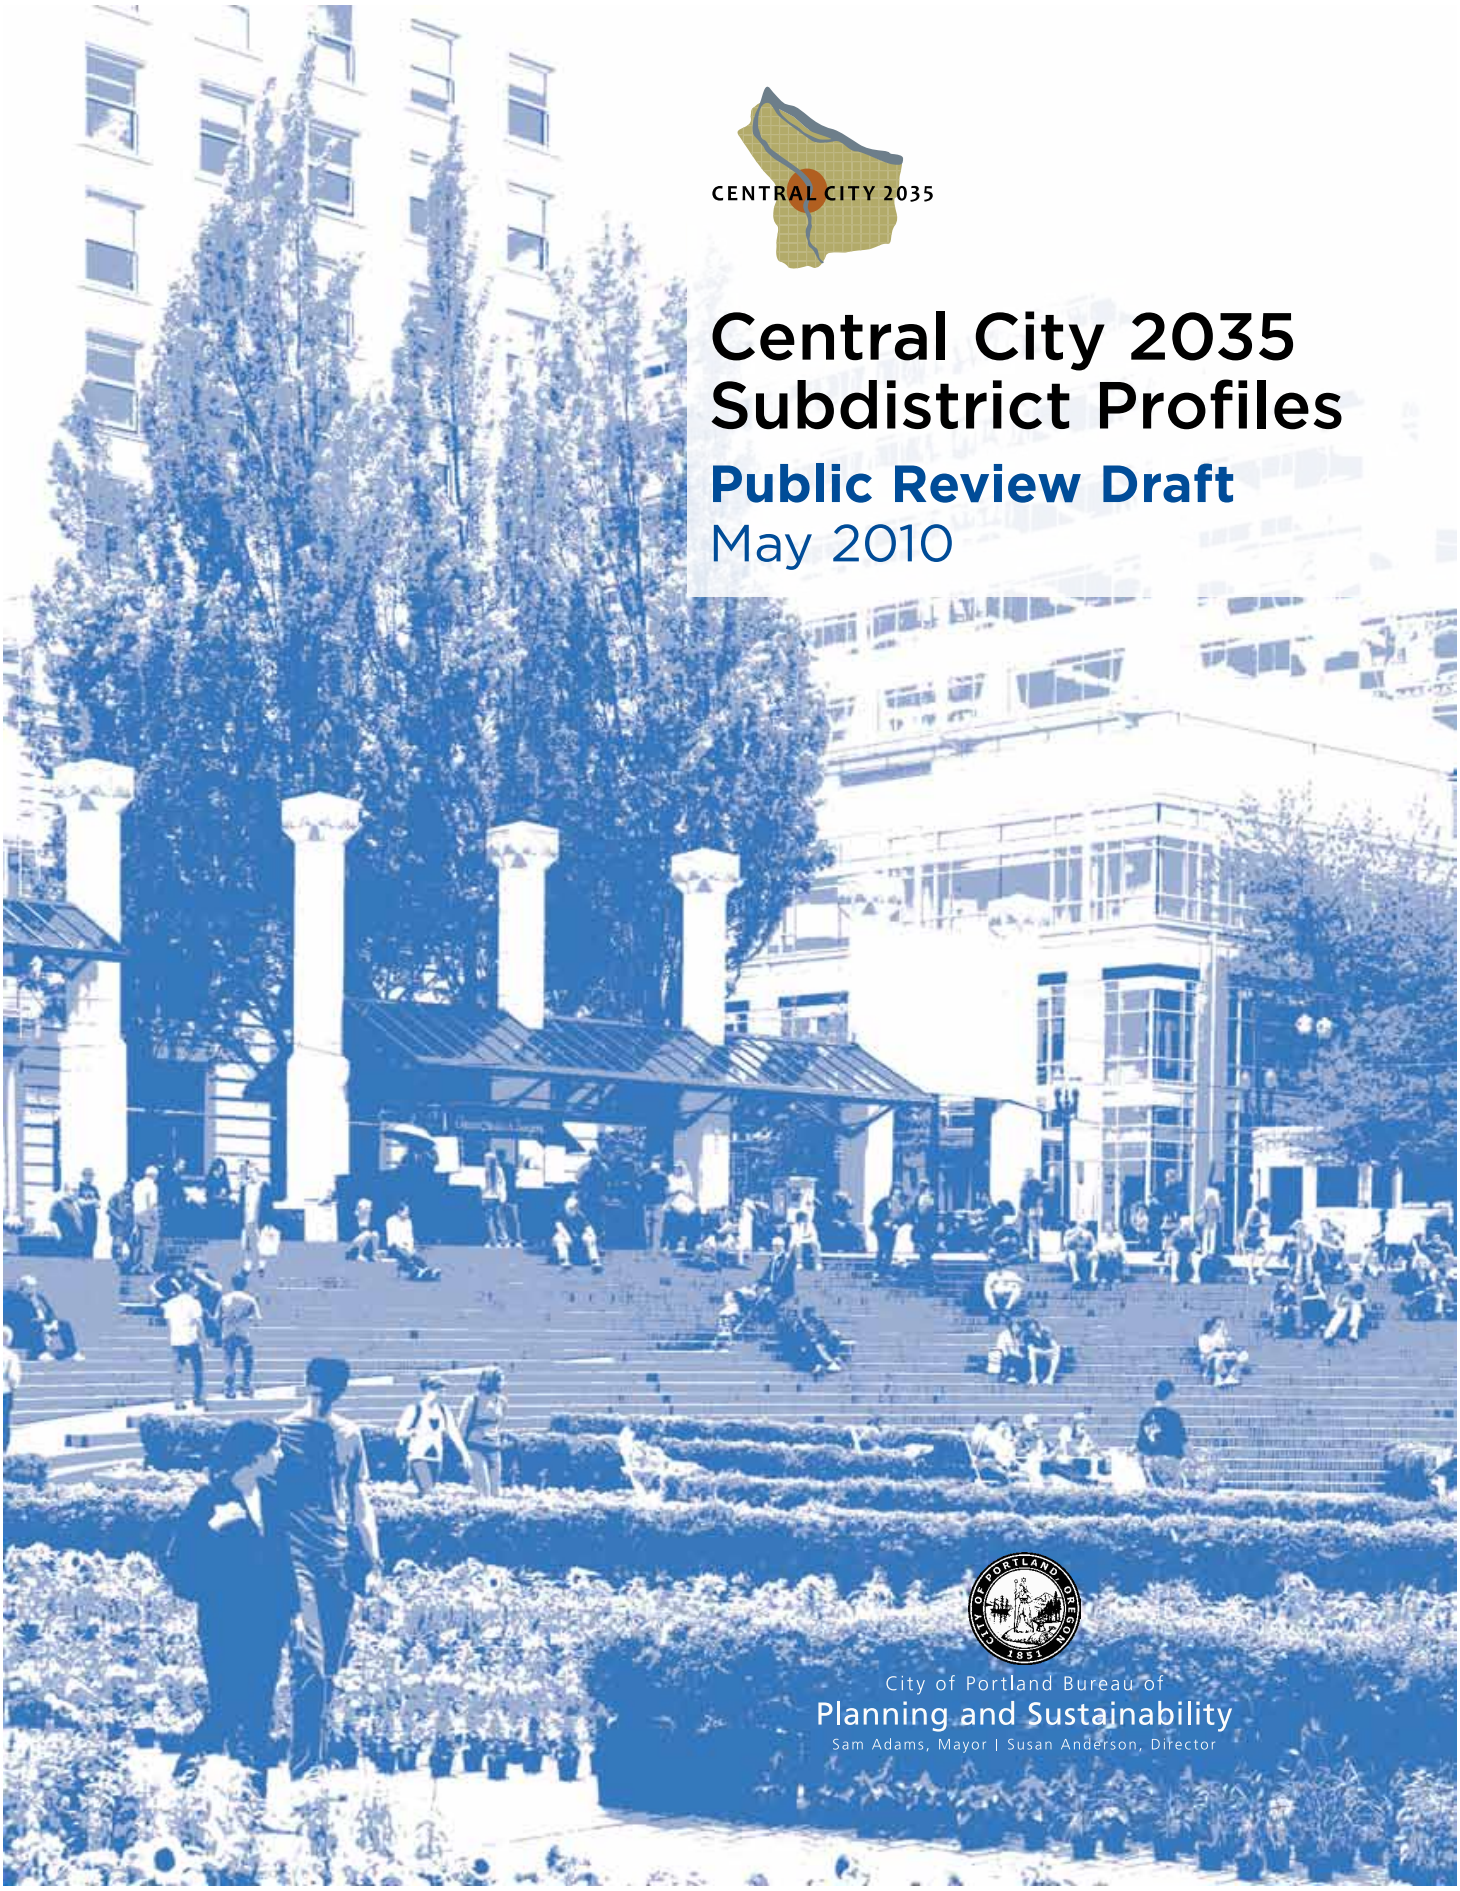
III.D. Decision Making Process

Final decisions regarding outcomes of the planning process will be made by the Portland City Council and the Director of the Oregon Department Transportation based on recommendations from staff, the Stakeholder Advisory Committee, Portland Planning and Sustainability Commission, Oregon Transportation Commission, Historic Landmarks Commission, Design Commission and public input. The SAC will be a major public involvement feature of this planning process, providing stakeholders direct input on recommendations that are brought forward to decision makers. Public input will also be incorporated through public workshops and other outreach opportunities with interest groups and the general public throughout the process. Briefings will be provided at key milestones to the City Commissions, and the plan will undergo a formal public hearing process before the Portland Planning and Sustainability Commission and City Council prior to adoption.

III.E. Public Involvement Timeline

	Project Phase and Products	Public Involvement Tasks
4/10 to 9/10	**Project Start-up** Scope and Schedule Public Involvement Plan SAC Charter	Form Stakeholder Advisory Committee (SAC) Form Technical Advisory Committee (TAC) Develop project website Create project fact sheet Compile project mailing list SAC #1: Convening Meeting
9/10 to 11/10	**Background & Existing Conditions** Combined Technical Background Report	SAC #2: History, Existing Conditions Community walks Update website
11/10 to 1/11	**Issues, Opportunities & Constraints** Issues, Opportunities and Constraints Analysis	Public workshop #1: ID Issues SAC #3: Issues, Opportunities & Constraints Update website
2/11 to 5/11	**Concept Alternatives** Alternative Land Use, Urban Design and Transportation Concepts	Stakeholder charrette SAC #4: Problem Statement & Project Goals Public workshop #2: Setting Direction SAC #5: Concept Development SAC #6: Concept Refinement Update website
5/11 to 9/11	**Preferred Concept** Preferred Land Use, Urban Design and Transportation Concept and Policy Framework	SAC #7: Preferred Concept Development SAC #8: Preferred Concept Development Cont. Public workshop #3: Refinement SAC #9: Endorse Preferred Concept Update website
9/11 to 12/11	**Recommended Quadrant Plan & Freeway Concept(s)** Proposed N/NE Section Plan and I-5 Broadway/Weidler Recommendations	SAC meeting #10: Plan Development SAC meeting #11: Plan Development Cont. (optional) Open House: Review Plan SAC meeting #12: Endorse Draft Plan Update website
to follow	**Legislative Process and Adoption** Adopted N/NE Section Plan and I-5 Broadway/Weidler Recommendations	Legal notices and general mailings Briefings Public hearings

IV. Accountability and Evaluation



IV.A. Feedback Loop

Staff will compile public input and comments throughout the planning process and make them available to the Stakeholder Advisory Committee on an on-going basis. Stakeholder Advisory Committee Meeting minutes will be posted on the project website on a regular basis and public input will be summarized and posted on the project website at key milestones. The project team will brief commissions and decision-makers on the progress of the plan, results of outreach efforts and public input at key points in the planning process and during the formal hearing and adoption process. These briefings will describe input received from SAC meetings and comments collected through the website, workshops and other venues. In these briefings, and in plan reports, staff will describe how the project has responded to public feedback. Commission and Council decisions will be communicated to stakeholders and the general public through the website, electronic/hard copy mailings and local media outlets.

IV.B. Public Involvement Evaluation

The project team will evaluate the Public Involvement Plan from time to time to determine if changes are needed to achieve the stated goals and objectives. The following evaluation tools will be used:

- **Debriefs** with project staff after meeting and events to discuss outcomes and agree on improvements for future activities.
- **Informal feedback** from stakeholders and interested parties about the process will be sought on a regular basis.
- **Questionaires** will be used to obtain feedback from SAC members and from the public who attend workshops.

PREFACE

This report is part of a trio of documents prepared for phase one of the *Central City 2035 Plan,* which will update the existing *Central City Plan,* adopted in 1988. Each document provides a foundation for discussion of key issues to be addressed in the creation of a new plan for Portland's Central City. Together, the three documents provide a wealth of essential facts, figures and ideas to help start the in-depth, citywide conversation and spur further ideas.

The *Central City 2035: Introduction* is the main document, supported by two specialized companion documents, *Design Central City* and *Central City 2035 Subdistrict Profiles.* The purpose of each is summarized below.

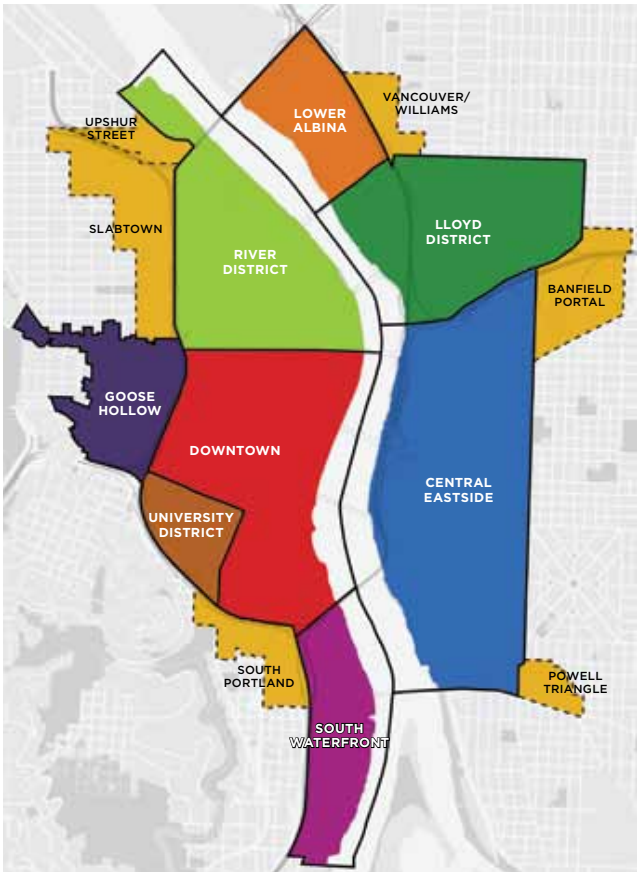
Central City 2035: Introduction

- Orients the reader to the Central City 2035 (CC2035) planning process — including study boundary, schedule and planning approach
- Suggests provocative policy concepts to initiate community discussion
- Identifies potential regulatory changes to strengthen connections between policy concepts and implementation strategies

Design Central City

- Frames and assesses the existing urban design context of the Central City
- Identifies current urban design issues, tools, challenges and opportunities
- Suggests three guiding themes — reclaim the river, elevate the east side, and transform the public realm — to stimulate public discussion on the development of a new urban design concept for the Central City

Central City 2035 Subdistrict Profiles



- Provides an "Encyclopedia" of information on existing conditions, historical background and evolution of the Central City as a whole and its eight existing planning Subdistricts
- Provides a policy review of current plans and policies
- Identifies current and future trends for the Central City and each subdistrict

The Central City plays a crucial, unique role in the health and well-being of the City of Portland and the region. New challenges now confront the Central City. To continue to reinforce its key role for the regional economy, land use planning, and air quality, these challenges need to be addressed. They include climate change, jobs and housing for people of all incomes, educational and workforce training to provide economic opportunities for a growing and diverse population, and providing services for those in need.

To address these challenges, the *Central City Plan* needs to be updated now. It has been more than 20 years since it was adopted and about 88 percent of the *Central City Plan* recommended "action items" have been completed (or at least begun). The time is now for recalibrating the policies and objectives to meet the Central City's needs for the next 25 years. City staff has been gathering background information, recording issues to be addressed in a new plan, and producing the documents listed above to start the community discussion for updating the *Central City Plan.*

INTRODUCTION

Stretching over 3,000 acres, the Central City is the economic, cultural, transportation, entertainment, and educational heart of the Portland metropolitan area. It is where people, roads and rail lines from all across the region come together, mix and meet in the middle. With its 135,000 jobs, the Central City is the most concentrated employment center in the region. A healthy and growing Central City, with its higher density development reduces development pressure on farmland and natural areas on the urban fringe. Central City's many amenities and unique offerings attract investment throughout the City. Continued intense development in the Central City also helps reduce greenhouse gas emissions.

4 miles of the Willamette River

4 MAX lines with 32 stops

1 streetcar system with 34 stops

Given its significance, it's no surprise that the Central City has been the subject of numerous plans over the years. In fact, a strong and vibrant Central City is a key element of helping the city and region achieve significant overarching goals laid out in Portland's *Comprehensive Plan* (1980), Metro's *2040 Regional Growth Concept* (1995), and the Portland and Multnomah County *Climate Action Plan* (2009). Plans addressing the Central City have been created and backed by both the public and private sectors. Indeed, Central City's plans have helped create the city's legacy of public-private partnerships that have brought the city and region much success. However, the last complete, holistic look at the long-term future of the Central City was the *Central City Plan,* adopted by the City Council in 1988. This plan has been shaping public and private investments and guiding decision making in the Central City for over 20 years. The *Central City Plan* includes thirteen "Functional Policies" which address a range of issues, such as economic development, housing, transportation, and education. Eight "District Policies" relate to the Central City subdistricts. To implement these policies, the plan originally proposed 261 actions — a number which grew to 464 as the plan was amended over time. To date, 88 percent of these actions have been accomplished, or are on the way to completion.

Among the more dramatic changes seen in the Central City over the past 20 years is its expansion as the hub of an extensive regional rail transit system. The modern system began in 1986 with a single MAX light rail line connecting downtown to the east along a 15-mile alignment. A Westside alignment was opened in 1998. By now, the MAX extends 52 miles, connecting from Central City to the north, northeast and southeast as well. A new streetcar system opened in 2001, linking through downtown to the northwest, and now being extended across the river to the Central Eastside. More and more of the Portlanders using these rail lines are able to live in the Central City: during the past twenty-year period, the Central City also saw the construction of nearly 14,000 new residential units, tripling the housing inventory and providing homes for close to 20,000 additional people. In 2010, an estimated 34,000 people call the Central City home.

With so many changes — including much success — since the *Central City Plan* was completed, a thorough update is overdue. *Central City 2035* will be this update. *Central City 2035* will engage the community to create a new plan with goals, policies, and implementation actions which will guide investment and development to ensure the heart of the city remains vibrant and strong in the coming decades. This new plan will align with and support other City priorities including the *Climate Action Plan* and *Economic Development Strategy* as well as other recent policy directives. *Central City 2035* is not a stand-alone effort but part of a larger suite of efforts intended to ensure that Portland is a "Thriving and Sustainable City" — the overarching theme of the concurrent *Portland Plan,* which emphasizes expanding prosperity, health, and opportunity for all Portlanders.

Central City 2035 will address goals and policies for the broader Central City as well as address subdistrict-specific issues. This document, the *Central City 2035 Subdistrict Profiles*, provides a wide range of existing conditions and background information both at an overall Central City-wide level, and at a detailed level for each of the eight subdistricts and some other adjacent areas.

The Central City's eight subdistricts are remarkably diverse. They complement each other by playing different and yet equally crucial roles. The Central City includes industrial areas and recreational waterfront, residential neighborhoods, office towers, shopping districts, natural areas and playgrounds all tied together by proximity, transit and eight Willamette River bridges.

Downtown *is the business and government hub of the region and home to the most intensely developed real estate in the state. About 70,000 people work in the subdistrict, and 10,000 live here. With its skyscrapers, Waterfront Park, Pioneer Square, and civic buildings such as City Hall and the Multnomah County Courthouse, Downtown is the most recognizable and visible part of the City. It receives the most out-of-town visitors of any subdistrict, and is home to the most hotel rooms, the majority of Portland's large arts and cultural venues, and 2.7 million square feet of retail space.*

The ***River District*** *is an unlikely combination of one of Portland's oldest neighborhoods (Old Town/Chinatown) with one of its newest (the Pearl District). Although although the subdistrict is home to three National Register Historic Districts, many of its blocks— including large former rail yards — have seen rapid transformation into new high-density, mixed use neighborhoods. With over 8,000 housing units, the River District in 2010 has more residents than any other Central City subdistrict. It has also seen the most recent construction of affordable housing, with nearly 2,000 affordable units built in the past decade.*

Lower Albina *seems a world apart from the rest of the Central City, even though it is in close proximity to Downtown and connected by the MAX Yellow Line to other parts of the Central City. Primarily an active industrial area, the subdistrict is home to many local companies including the well-known Widmer Brothers Brewery and a rich variety of creative industries including recording studios, glass makers and architectural modeling services. The small scale, walkable historic N. Russell Street main street area is just blocks away from a working industrial riverfront regularly visited by oceangoing bulk cargo ships.*

The ***Central Eastside*** *is home to an eclectic mix of businesses that range from light manufacturing to creative offices. It has been an important incubator area for new start-up businesses, and is emerging as a center for creative and design-related services (such as computer software, advertising and film, architecture, building construction and materials, and home decorating and fixtures), reaching both local and national markets. While the Central Eastside has fewer than 1,000 housing units, it provides close to 16,000 jobs, which is 37 workers/acre — the highest job density of any of Portland's industrial areas.*

The ***Lloyd District*** *is second only to Downtown in office and retail space and is home to many large, regional facilities including the Rose Garden Arena and Memorial Coliseum, the Convention Center and the 1.4 million square foot Lloyd Center Mall. Despite these large facilities and close to 20,000 jobs, the Lloyd District has tremendous capacity to accommodate new development. The existing zoned capacity on redevelopable sites here is sufficient to more than double the current amount of development in the district. The Lloyd Transportation Management Association (TMA) has successfully changed the travel habits of workers in the subdistrict, as more people use alternatives to single-occupant cars for their daily commute.*

South Waterfront *is the newest Central City neighborhood, and has just recently begun a dramatic transformation. Once an active waterfront industrial area with lumber mills and ship-dismantling businesses, in the past five years this subdistrict has seen the construction of over 2,000 housing units, a 400,000 square foot medical building, an aerial tram connecting to Marquam Hill and a new park. All this activity is just the beginning for a subdistrict in transition. At buildout, South Waterfront will accommodate over 7,000 housing units as well as Oregon Health Sciences University's 2 million square foot Schnitzer Campus, all connected by light rail, streetcar and a continuous greenway park stretching more than a mile along the Willamette River's bank.*

The ***University District*** *is home to Portland State University. University-related activities dominate the subdistrict. Since 1949 when it was "Portland State College" with just one building on the South Park Blocks, Portland State has grown rapidly and is now Oregon's largest university with over 28,000 students and close to 4,000 employees. The regional economic impact of the university is well over 1 billion dollars. This growth is far from complete: the university estimates that by 2035, student enrollment will be somewhere between 36,000 and 52,000 students. To meet the needs of the growing university, Portland State will require an additional 4 million square feet of space, including housing for 7,000 students.*

Goose Hollow *is well connected to Downtown by multiple pedestrian routes, bus lines and light rail. Just down the hill from beautiful Washington Park with its variety of attractions and adjacent to the King's Hill Historic District, Goose Hollow contains a diverse mix of housing types and affordability levels. Goose Hollow is home to Lincoln High School, the only public school within the Central City. It's also home to the Multnomah Athletic Club and to PGE Park, which in 2011 will become the home stadium for Portland's new Major League Soccer franchise. Despite these amenities, the pace of development in Goose Hollow has been somewhat slower than in other west side Central City subdistricts, with around 900 housing units and few commercial projects built in the past decade. Goose Hollow is also the only area in the Central City that has never had the benefit of inclusion in an urban renewal area.*

Study Areas Adjacent to the Central City

In addition to detailed information about the eight existing Central City subdistricts, six areas totaling a little over 400 acres adjacent to the current Central City boundary have been included in the Central City 2035 study area. For a variety of reasons, these areas are all expected to see significant change in the future. Including them in the Central City 2035 study area, and providing some basic information about them in this report allows an opportunity for a thorough planning conversation. It does not imply they will necessarily be included in the final boundaries of Central City.

This Document provides answers to a wide variety of potential questions about the Central City. A few examples:

How much affordable housing is there in the Central City?	*Of the roughly 16,000 rental housing units in the Central City, about 50% are income-restricted, affordable units.* ***See page 22***
How many parking spaces are in the Central City?	*There are 112,073 parking spaces that must be managed to meet the needs of workers, shoppers, visitors, and residents.* ***See page 37***
Are there any large vegetated areas in the Central City?	*There are about 150 acres of vegetated areas in the Central City that are at least 1/2 acre in size. In addition, there are over 300 acres of tree canopy.* ***See page 41***
How much room for new development is there in the Central City?	*In 2007, 400 acres of land in the Central City were identified as redevelopable. If all this land were developed to the maximum allowed, it could accommodate over 100 million square feet of new development — effectively doubling the amount of built area in the Central City.* ***See page 45***
What percentage of trips in the Downtown are made on transit? How about on bikes?	*45% of trips in the Downtown subdistrict are made on transit, 16% on bicycles.* ***See page 60***
Are there neighborhoods in the Central City where a lot of families with children live?	*On average, 47 children are born every year to families living in the River District, which is a rate on par with the birthrate found in traditional single-family-home neighborhoods.* ***See page 91***
How many of the buildings in the Central Eastside are used for industry?	*Approximately 41% of the building square footage in the Central Eastside subdistrict is used for industry, making this the predominant use in that subdistrict.* ***See page 151***
What types of jobs are most common in Goose Hollow?	*42% of jobs in Goose Hollow are in the Retail, Arts, and Accommodations sectors.* ***See page 216***

57547

CENTRAL CITY

POLICY OVERVIEW

In **1988, the *Central City Plan* was adopted** by the City Council as the comprehensive policy framework that would shape public and private investments and drive decision making in the Central City for the next 20 years, and it has been our guiding document ever since. The plan contains **13 "Functional Policies," addressing a range of global issues**, such as economic development, housing, transportation, and education. The plan also contains **eight "District Policies"** related to the 1988 Central City subdistricts. Following the *Central City Plan*, the *Central City Transportation Management Plan* (CCTMP) was adopted in 1995 to implement the *Central City Plan* transportation goals and objectives by developing a comprehensive transportation policy framework.

To implement the Central City policies, the 1988 plan proposed 261 actions — a number that rose to 464 with amendments over the years, and of which 88 percent have been accomplished, or are on the way to completion. Indeed, most of the larger goals outlined in the *Central City Plan* have been achieved. For instance, more than **10,000 residential units have been developed**, new residential mixed-use neighborhoods have been created, and more than 34,000 people now make their home in the Central City. About **135,000 jobs** are now located in the Central City, which represents about one-third of Portland's jobs and about 15 percent of all jobs in the region. These jobs and residential neighborhoods are supported by a rich and ever-expanding **multimodal transportation system** that includes streetcar, light rail, bike and pedestrian routes, and a street and freeway network that connects the Central City to all quarters of Portland and the larger metropolitan area.

As envisioned in the 1988 plan, the Central City is home to a vibrant **downtown retail core,** supported by world-class restaurants, a diverse collection of arts and cultural institutions, and a large number of public parks and plazas. **Oregon's largest university, Portland State,** is located here, as are other distinguished institutions such as the Portland Art Museum, Pacific Northwest College of Art, Western Culinary Institute, and a new campus of Oregon Health & Science University.

Although other plans have been done since the Central City Plan and the Central City Transportation Management Plan, and much has been accomplished in the Central City since they were each adopted, more remains to be done. To ensure past successes continue, additional growth is accommodated, and new opportunities are pursued, a new set of policies, objectives, and actions needs to be developed. The *Subdistrict Profiles* are intended to provide a wealth of background information about the Central City in order to help the community as it develops a new policy framework as part of the Central City 2035 (CC2035) project.

57549

LOCATION AND HISTORY

As the Portland metropolitan region's **business, transportation and cultural hub,** the Central City is where the region's largest buildings and greatest density of human activity are located. The many distinctive places within the Central City range from historic districts to new high density residential neighborhoods; from busy industrial districts to gleaming office towers and shopping malls; and from major stadiums and arenas to tranquil parks.

The Central City **straddles the Willamette River**, and covers roughly 3,000 acres (4.5 square miles), with about 15 percent of that total occupied by the river. Eight bridges connect the two sides of the river within the Central City and a ninth is currently planned. The CC2035 study area includes five officially designated neighborhoods in their entirety and portions of seven others.

The original settlement that now is Portland was **founded in 1843** on the west side of the Willamette, in the area that is today's Downtown and Old Town. The region had been inhabited by Native Americans for thousands of years, but permanent settlements and development did not occur until 40 years after the arrival of the Lewis and Clark expedition in 1805.

Three distinct 19th-century cities had their origins in what is now the Central City. The original town site of Portland was chosen because it was the furthest upriver that oceangoing vessels could comfortably venture. The City of East Portland developed later, as a separate jurisdiction with a business center along SE Grand Avenue and E Burnside. The City of Albina was yet another separate city with a business center along NE Russell Street.

The construction of bridges and a streetcar system in the later 19th Century strengthened the links between the three cities. **Consolidated in 1891**, they began to function as part of the larger economy of a rapidly growing City of Portland. Downtown continued to dominate as the location of choice for commerce and business. The areas east of the River became increasingly industrial in character. Further inland, there were **growing residential communities.** More bridges and a robust streetcar system were built through the turn of the century and on into the early 20th Century.

In the **1920s, use of the automobile** began to shift the urban landscape. Many streets were widened, and/or paired as one-way couplets to speed traffic and lessen auto congestion. By the 1950s and 1960s numerous **older buildings were being demolished** and replaced with surface parking lots. The streetcar system gave way to buses and private automobiles, and by 1950 the last streetcar had made its final run.

Some areas of the Central City came to be considered "blighted" and were subject to **urban renewal** planning projects in the 1950s and 1960s. A new City agency, the Portland Development Commission (PDC), was founded in 1958 to implement renewal plans. The method of revitalization carried out through urban renewal in this period began with clearing the area of "blight." Numerous blocks of existing neighborhood residential and commercial buildings were razed on both the eastside and westside of the Central City. Areas of urban renewal included the South Auditorium District, which was the first PDC renewal district, and the Rose Quarter.

The **construction of freeways** around the Central City in the 1950s and 1960s also has had a lasting effect. The Interstate 84 (I-84) Banfield Expressway opened in 1955, Interstate 5 (I-5) Eastbank Freeway was completed in 1964, and the Marquam Bridge portion of I-5 opened in 1966. The Interstate 405 (I-405) freeway, which edges the west side of Downtown, opened in 1969. When the I-405 Fremont Bridge opened in 1973, the existing "freeway loop" around the downtown core was complete. Now, more than 30 years later, these roads in many ways define our geographical understanding of what is Portland's inner, "central" city.

Despite the efforts of urban renewal and the construction of new freeways, by the **late 1960s, Downtown was in decline and facing significant challenges**. In addition to urban renewal, Portlanders continued to search for ways to stem the decline. The seeds were planted for various projects which, either because they were or were not built, have had significant positive influences on the Central City. In 1966, federal funding for the planned Mt. Hood Freeway was turned down in favor of using the funds for transit projects. In 1968, the City's *Downtown Waterfront Plan* called for the multilane highway along the west waterfront, Harbor Drive, to be replaced by a park. In 1970, a permit for a multi-story addition to the existing Meier & Frank parking garage was denied by the Planning Commission. This block, located in the heart of Downtown, eventually became Pioneer Courthouse Square.

Efforts to **revitalize the urban core,** along with severe air pollution problems and new federal environmental regulations, led to the creation of the ***Downtown Plan*** **in 1972**. Strong state and regional growth management laws magnified the positive change. Senate Bill 100 (which in 1972 established the Oregon Land Conservation and Development Commission), Oregon Land Use Law and the adoption of the first urban growth boundary in 1979 were major milestones. Additionally, the creation of the **Transit Mall in 1978** was also a benchmark.

The **1988** ***Central City Plan*** **expanded the boundaries** and ambitions of the *Downtown Plan*. The plan crossed the river to **bring the eastside into the core,** and recognized that a strong Central City is necessary for a healthy city and region.

The area's first light rail transit line, linking downtown to the outer eastside, was completed in 1986. In each decade since, TriMet, the regional transit agency, has added new lines. The most recent is the MAX Green Line, which opened in Fall of 2009. The Portland Streetcar also has added to the non-automobile transportation alternatives being offered to Portlanders in recent decades. The first streetcar opened Downtown in 2001 — some 50 years after the last of the original streetcars made its final run. The streetcar has helped some of the former industrial areas on the westside become new neighborhoods. Expansion of both light rail and the streetcar continues into the present, further linking Downtown to other parts of the Central City and the City of Portland as a whole. This shift towards **reinvestment in the center** continues to this day; the Central City has become a much more vibrant place in the past 35 years.

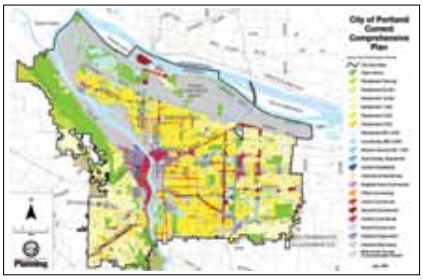
Portland Planning History

1924	1959	1968	1972
First zoning enacted in Portland; there were four zones	*Revised more extensive zoning code adopted; there were 15 zones*	Downtown Waterfront Plan, *Harbor Drive to be replaced by parks on waterfront*	*The* Downtown Plan

PRIOR PLANNING

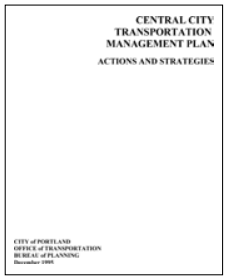
Two primary policy documents mentioned above have provided long-term guidance for the growth of the Central City and have had a lasting effect on the city's form and its method of planning. The 1972 *Downtown Plan* created a strategy to revitalize the Downtown by creating the Transit Mall and organizing the City's highest densities and its transit hub in a linear corridor along NW and SW 5th and 6th Avenues. The 1988 *Central City Plan* extended this linear concept to arc across the Willamette River into the Central Eastside and Lloyd District. Both these plans involved **extensive public engagement**, which helped to establish their credibility, increase their effectiveness, and set a standard for Portland city planning.

Especially when seen in retrospect, the *Downtown Plan* was realistic and focused, addressing a relatively small geography — westside, downtown Portland — and defining a limited number of goals, which were illustrated by a **simple Concept Plan diagram**. The plan included an implementation program of first- and second-phase projects. A map indicated 17 first-phase projects, designated for action within the first three years after the adoption of the plan. A wide range of functions and characteristics of the City were included in the *Downtown Plan*'s "Citizen Goals," including:



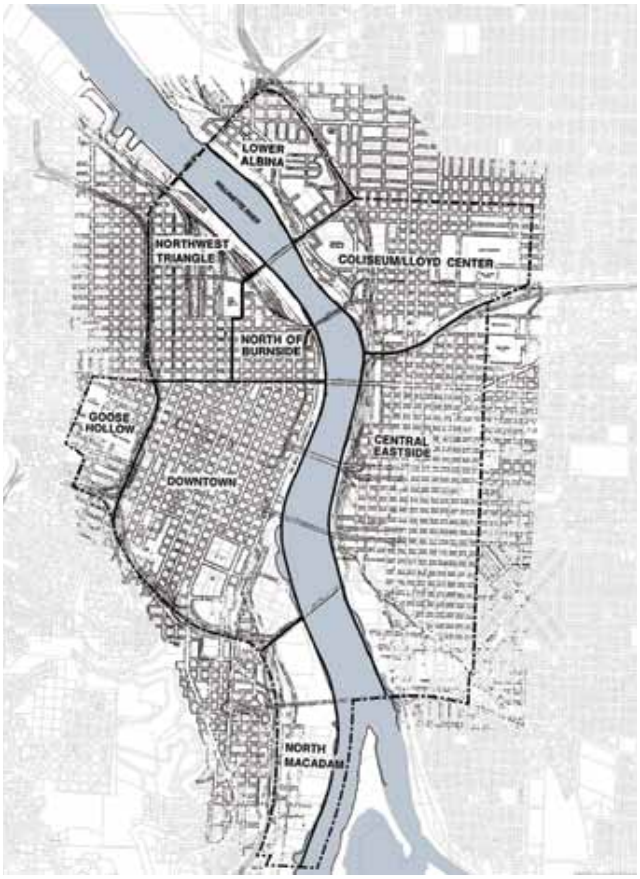
- increasing **housing** production at a range of incomes,
- improving the **pedestrian** experience,
- maintaining a vibrant and compact **retail core**,
- embracing the **river** through improvements to increase human activity along the waterfront,
- improving the connections to and relationship with **Portland State University**,
- designing a **balanced transportation system** including attention to transit and pedestrian facilities in the core and peripheral parking facilities,
- continuing to grow the **office core**,
- supporting **arts and culture**,
- seeking new opportunities for public and private **open spaces**,
- preserving and restoring significant **historic resources**, and
- undertaking analysis of **warehousing and industrial** functions in or near the core.

Expanding on the foundations of the Downtown Plan, the *Central City Plan* (1988) was adopted in 1988 and has been amended several times since then. It includes both geographically-focused, subdistrict-specific goals and policies and more general Central City-wide policies. The body of the plan included 13 general Functional Policies addressing these topics:



- **Economic Development** set a target of 50,000 new jobs by 2010 (this goal was increased in 1995 to 75,000 jobs).
- **Willamette Riverfront** called for further improvements to the Riverfront as a focal point for public activities and development.
- **Housing** called for the creation of 5,000 new housing units by 2010 (this goal was increased in 1995 to 15,000 new units).
- **Transportation** focused largely on transit and encouraged alternative modes.

1979	1980	1988	1995
Urban Growth Boundary	Portland Comprehensive Plan	Central City Plan	Central City Transportation Management Plan



- **Human Services** called for the provision of social and health services for special needs populations and preservation of shelter and service providers in the Central City.
- **Public Safety** identified areas in which to increase police visibility and encouraged the creation of a vibrant, 24-hour city as a means to improving safety.
- **Natural Environment** focused primarily on reducing pollution, increasing vegetation, and improving wildlife habitat.
- **Parks and Open Spaces** encouraged expanding the parks system and linking open space resources together with green connections.
- **Culture and Entertainment** promoted the Central City as the region's cultural and entertainment center.
- **Education** focused on providing a range of adult educational and learning opportunities in the Central City.
- **Historic Preservation** called for preserving significant architectural resources, both buildings and districts.
- **Urban Design** applied many of the concepts from the *Downtown Plan* to a larger area and called for distinctive districts within the Central City.
- **Plan Review** recommended ongoing monitoring of plan implementation progress and periodic updates to the plan as conditions change.

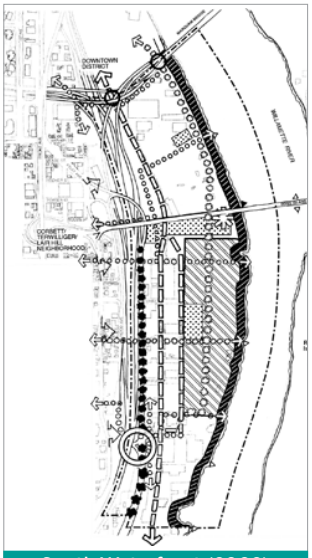
Other important plans also within the past decades have focused on the Central City's **transportation system**. For instance, the *Downtown Parking and Circulation Policy* accompanied the 1972 *Downtown Plan*, while the *Central City Transportation Management Plan* (1995) followed and supplemented the *Central City Plan*. These transportation plans are discussed in more detail later in this chapter in the section on Transportation.

The goals and policies of the *Central City Plan* were accompanied by **urban design plans** at both the Central City-wide and subdistrict-specific levels. The City has since updated the urban design plans for some of the subdistricts. These changes have affected the original urban design cohesiveness of the subdistricts, their goals and policies, and their relationship with the original Central City Concept Plan. Such **inconsistencies** support the need to update the plan today. Specifically,

- On the westside, several study areas and/or subdistrict **boundaries overlap** with each other.
- On the eastside, the original urban design plans for each district have **not been updated** since 1988.
- The **River District was created**, consolidating and renaming what had been in 1988 the North of Burnside and NW Triangle districts.

Original District Boundaries

The Central City Plan *identified eight subdistricts. The boundaries generally followed previously adopted planning study boundaries, neighborhood boundaries, or other common boundaries. The original plan identified policy, objectives, and proposals for action for each subdistrict.*



Updated Urban Design Maps

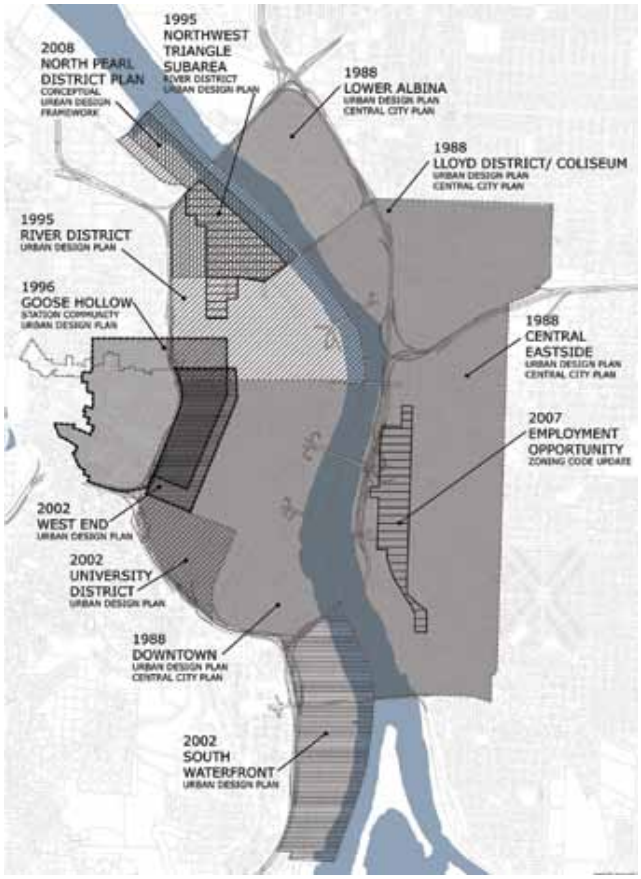
University District (1995)

River District (1995)

West End (2002)

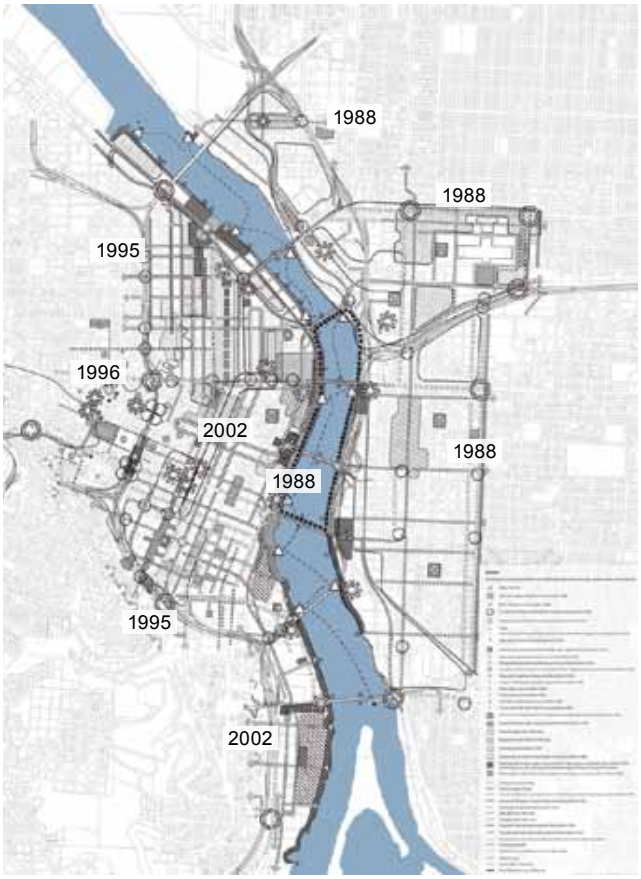
Goose Hollow (1996)

South Waterfront (2002)



These maps reflect revised or added subdistrict urban design plans. The Central City Plan *included an urban design plan for each subdistrict. As subdistricts were updated or added, five new plans were adopted. Each revision has not been entirely consistent with adjacent subdistrict urban design plans.*

- Since 1995, three **new subareas have been created:** the West End (Downtown Subdistrict); the Employment Opportunity Subarea (Central Eastside Subdistrict); and the Northwest Triangle Subarea (which was updated with the consolidation of the River District in 1995 and later replaced with the North Pearl Subarea in 2008).
- **Some subdistrict areas have significantly changed** since the 1988 Plan, especially the River District and South Waterfront.



As subdistrict plans have been modified from the originals and new ones have been created, the resolution, cohesiveness, and **overall big ideas at the Central City-wide level have lost their strength**. Some revisions have been inconsistent with adjacent subdistrict urban design plans, and some of these plans are outdated. For instance, the proposed transit network does not reflect current configuration and supports the rationale for completing an update to the plan now.

When combined into a single composite map of all adopted district urban design plans (reflecting changes, updates, and revisions since 1988), the resulting map shows that individual urban design boundaries overlap and where many elements conflict with each other.

Current District Boundaries

Subdistrict Composite

Since the Central City Plan's *adoption in 1988, several subdistricts have been updated or added. This map reflects boundaries of the areas included in currently adopted subdistrict plans. The entire east side still retains its status from 1988, while the west side has seen two updated urban design plans and three new ones.*

The composite urban design map of plans also illustrates that some areas of the Central City have received more planning emphasis than others. For example, the westside has been planned and revised to a great extent, while the eastside essentially has been left as originally illustrated in the 1988 Plan. Recent plans have included more complex plan elements, creating unequal levels of resolution between plans.

Other BPS background documents offer further detail on the above issues and are available online. In particular, the *Urban Design Assessment* (2008) contains a more complete analysis of the Central City Plan's urban design elements and actions. *Design Central City* (as described in the preface, one of the trio of documents prepared for the CC2035 process), builds on the *Urban Design Assessment* and proposes some new policy and form ideas to be considered as part of the CC2035 planning process.

CENTRAL CITY CONDITIONS

Portland's Central City is composed of many elements and layers: physical places, people, and the activities people do in these places. City policies and regulations help shape how these elements come together to make the Central City we have today. The following sections discuss the current conditions of the Central City as a whole, providing relevant context for each of the individual subdistricts that make up the many parts of the Central City. Topics covered in these next sections — from the arts to zoning, demographics to parks — will be examined at a finer scale in the subdistrict chapters that follow.

Table 1.1: Central City Characteristics (1997–2008)

Residents (2008 estimate)	34,400
Median age (2000)	36
Education — bachelor's degree or higher (2000)	38%
Average household income (2000)	$35,624
Housing units (2008)	22,994
Affordable* housing units (2008)	56%
Jobs (2006)	134,870
Jobs/residential population ratio (2008 estimate)	4:1
Change in crime rate between 1997–2008	–32%

** Affordable = units that are restricted by tenant or income*

People

The population of the Central City has grown dramatically in the past two decades, from about 17,000 in 1997 to an estimated 34,400 in 2008. The 2008 estimate is based on the PDC Central City Housing Inventory and the average household size of approximately 1.5 people. Most of the detailed demographic data available dates back to the 2000 census, and is thus out of date.

Housing

There have been many new housing developments built in the Central City in recent years. Construction has been especially strong in the River District and more recently in South Waterfront. The West End area of Downtown has also seen significant housing development in recent years. Central City added roughly 10,000 new units in the past decade, nearly doubling the total number of Central City residences to almost 23,000. Although an additional 1,500 units are currently under construction, permitting activity for new residential development has slowed dramatically in the recession of 2009–2010 and likely will take several years to reach previous construction levels. More than 90 percent of the housing in the Central City is on the west side of the river.

Close to 70 percent of the housing in the Central City is rental, roughly half of which is low income/income-restricted. Despite recent market rate condominium development, the Central City continues to have the region's greatest concentration of very low income housing.

There has been significant development of new affordable, income-restricted housing units in the Central City — more than 2,800 income-restricted units have been constructed in the past 10 years (primarily in the River District). The City continues to meet the 2002 No Net Loss Policy established by the City Council. This policy requires that, either through preservation or replacement, the City will maintain the number of units that were affordable (at 60 percent of the median family income [MFI] or below) in 2002; that baseline number is 8,286. Currently, an estimated 8,473 rental units are classified as being within the No Net Loss affordability category.

Ownership units (primarily condominiums) comprise 32 percent of the housing in the Central City, with relatively few units affordable to those making between 80 percent and 120 percent of MFI. Most of

Table 1.3: Central City New Construction of Affordable Rental Projects (1998–2008)

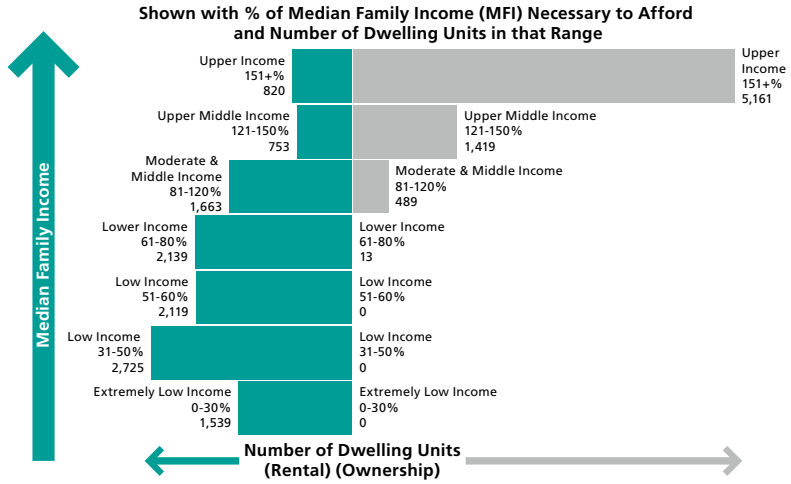
Subdistrict/Area	Unit types	Totals	Percent of total Central City-wide
Downtown	Total units	633	16.8%
	Total subsidized units	482	16.9%
Goose Hollow	Total units	639	17.0%
	Total subsidized units	538	18.9%
River District	Total units	1,931	51.3%
	Total subsidized units	1,293	45.5%
University District	Total units	564	15.0%
	Total subsidized units	531	18.7%
Central City-wide	Total units	3,767	100.0%
	Total subsidized units	2,844	100.0%

For a complete list of all projects by subdistrict, please see the appendix. Other subdistricts not listed here did not have any recorded construction of affordable rental projects during this timeframe.

Table 1.2: Central City Estimated Total Number of Housing Units (2008)

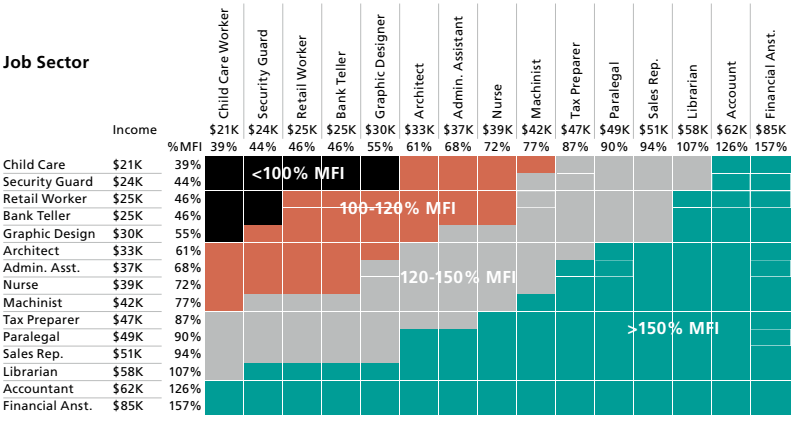
Tenure	Central Eastside	Downtown	Goose Hollow	Lloyd District	Lower Albina	River District	South Waterfront	University	Central City Total
Rental	863	4,940	2,162	1,017	86	4,573	503	1,457*	15,601
Owner	94	2,002	798	148	1	3,582	767	1	7,393
CC total	957	6,942	2,960	1,165	87	8,155	1,270	1,458	22,994
Percent of CC units	4.2%	30.2%	12.9%	5.1%	0.4%	35.5%	5.5%	6.3%	

**This includes student housing*



the ownership units are affordable only to households with MFI of 150 percent or higher. Currently, the housing available in the Central City may not be diverse enough to attract people with a lower or moderate income who would like to buy a home *(see accompanying table).*

In 2008, the median family income for a family of two in the Portland metro region was $54,000. For an ownership unit in Central City to be attainable, the two-person family would need to have an income greater than 120 percent of the MFI of $54,000, or more than $64,800. An example of average incomes by job types can be seen in Graph 1.2.



In 2006, the Central City average wage (total average pay for all Central City employees/total number of jobs in the Central City) was about $42,200. Thus while jobs that provide lower- to moderate-income wages are a significant portion of the total number of jobs in the Central City, there is limited availability of ownership units at these income levels. This suggests a greater need for workforce housing.

In addition to affordability issues, the size of residential units might also be a barrier to accommodating the average Central City worker. The vast majority of the Central City's housing units are one-bedrooms or studios. Among rentals, almost 90 percent of units have one bedroom or less. Less than one percent of rental units in the Central City have three or more bedrooms. Equivalent data on bedroom counts are not available for ownership units, and while they tend to be larger than rental units, the predominant unit type remains studio and one-bedroom units. (For more information on housing in the Central City, please refer to the Portland Development Commission 2008 *Central City Housing Inventory*).

Jobs

As is typical in U.S. cities, Portland's Central City is the traditional commercial heart of the greater metropolitan area. The Central City is the largest employment center in the region, the state of Oregon, and southwest Washington. It is the center for banking, insurance, and real estate. While the Central City experienced some "blight" since the 1960s, as mentioned earlier, the degree of urban decay was less than that which plagued many American cities. However, between the 1960s and the 1990s, the Central City's share of regional job growth has declined. In 1988, roughly 25 percent of the region's jobs were located in the Central City; by 2008 that percentage had dropped to less than 15 percent.

However, more recent employment data suggest a reversal of this trend in the past few years. Between 2000 and 2006 (the period for which the most recent data exists), the Central City significantly outperformed the rest of the region in job growth and added about 12,000 jobs, which is a 1.6% growth rate compared to the regional growth rate of 0.7% over the same period. Even so, the City's net job growth target of 75,000 new jobs in the Central City area (established in 1995) clearly has not been met.

Not only the rate but also the type of employment within the Central City changed from 2000 to 2006. Manufacturing, transportation and utility industries lost jobs over this period. The service, retail, education, health and accommodation sectors saw employment increases. As the mix of the employment sector changes over time, so does the purchasing power and economic needs of the Central City workforce.

Table 1.4: Central City Employees and Residents

	Total employees (2006)	Total residential population (2008 estimate)	Employee/ residential population ratio
Central Eastside	15,733	1,400	11:1

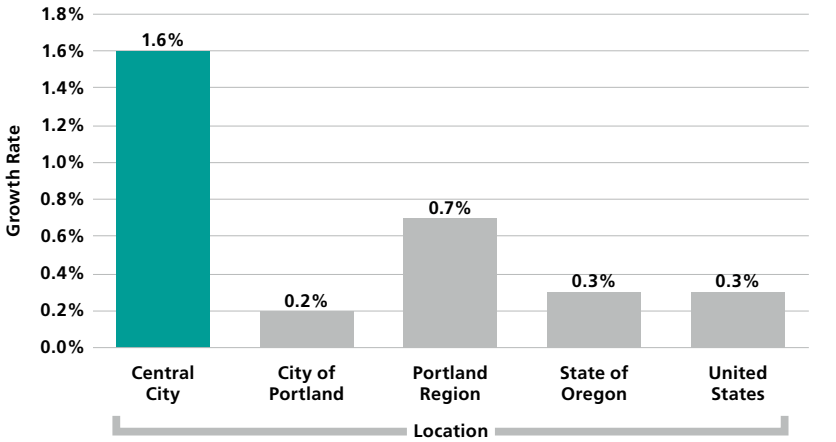
River District	17,187	12,200	1:1
South Waterfront	**	1,900	N/A
University District	5,831	2,200	3:1
Central City total	134,870	34,400	4:1



Job creation strategies can build on the fact that, compared to the City and region as a whole, the Central City offers many **advantages** as an employment location:

- **Center of office sectors**: Professional services, finance, headquarters, utilities, and government are centered within the Central City.
- **Active downtown:** Retail, restaurants, bars and night life in the Central City attract firms with workforces (such as the professional office sector) that thrive in a vibrant urban setting.
- **Transportation access**: The Central City is strategically located at the center of the regional system of highways, transit and bicycle facilities. Rail transit is free in most of the Central City. Downtown is directly linked to the airport by light rail.
- **Growing educational institutions**: Both Portland State University and the Oregon Health Sciences University are located in or adjacent to the Central City. A number of smaller institutions also are expanding in the Central City. The Pacific Northwest College of Art, the National College of Naturopathic Medicine, the Portland Campus of the University of Oregon, and a Portland Community College branch are all located in the Central City and most have expanded recently or have plans to expand.
- **High-quality public amenities:** Waterfront Park, neighborhood parks, fountains, public squares and plazas, historic buildings and districts, recreational and tourist attractions such as sports arenas, entertainment venues, art and historic museums are located in the Central City.
- **More than 20,000 housing units:** Homes are available at a variety of income levels, particularly at the income-restricted affordable and high-end levels, in the Central City.
- **The Oregon Convention Center**: Located on the Central City's eastside, the region's premier tradeshow and convention facility hosts more than 600 events each year with over 800,000 attendees.
- **Capacity for new development**: Despite its status as the most densely developed urban area in the state, the Central City has ample land for new construction of both commercial and residential space. About 400 acres of land has been identified as either available now or potentially available for redevelopment at some

point in the next 20 years. At current development trends, this space, if fully developed, could accommodate up to 30 million square feet of commercial development and more than 50,000 new housing units.

- **Access to a strong labor supply**: A large population of educated, creative people live in either the Central City or the surrounding region.
- **Active industrial and commercial businesses:** The Central City areas along the Willamette Riverfront include marine cargo and industrial manufacturing uses in Lower Albina, South Waterfront, and the Central Eastside, all of which provide a strong job base. Employers include Glacier NW Cement and Zidell Marine.

Graph 1.3: Average Annual Employment Growth Rate (2000–2005)

There are also many possible challenges to Central City job growth relative to the region and to other western cities:

- **City Business License Fee and County Business Income Tax**: These two local business taxes raise critical revenue for services but may put the Central City at a competitive disadvantage for new business recruitment.
- **High rents and parking costs:** compared with other parts of the region.
- **Congestion**: While Portland's congestion is less than that found in most other western cities, it is a growing problem as the region continues to add residents, and much of the Central City's congestion is a result of through-traffic.
- **Lack of new construction:** Portland's Class A office space rents are less than those in other West Coast cities. While this is a positive for some businesses, it also means that achievable rents are frequently not high enough to justify new high-rise construction.

Table 1.5: Central City Employment (2006)

	CBD and South Waterfront	University District	River District	Goose Hollow	Lloyd District	Central Eastside	Lower Albina	Central City total	Average pay	Change 2000–2006

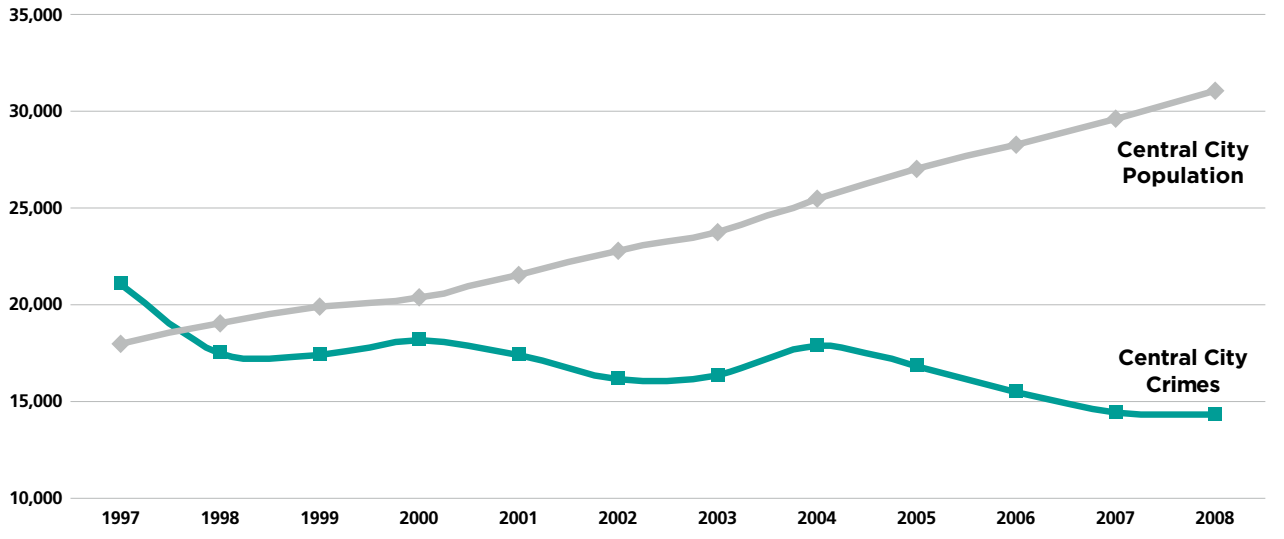
2006 Distribution	51.59%	4.32%	12.74%	3.59%	14.07%	11.67%	2.01%	***		



- **Perception of lack of safety and cleanliness:** Parts of the Central City suffer from visible vagrancy and homelessness, which fuel perceptions of crime and detract from the urban experience.
- **Perception that Portland Public Schools are inferior to suburban counterparts:** There are also very few public schools in (or near) the Central City, particularly grades K–8.
- **Challenge of workforce housing:** The Central City has been successful at creating new housing, but not at the "workforce" income level. Instead, new housing has been built above and below this middle-market level. New housing affordable to people making below 60 percent of the median family income also has been built, most of it with various local and federal subsidies.

Crime

Crime and the perception of crime are issues within the Central City, despite a significant decrease in the crime rate in Portland's core over the last decade. As population has increased from around 17,000 in 1997 to an estimated 34,400 in 2008, over the same time period crimes have dropped from around 20,000 to less than 15,000. This steady decline is likely due not only to City efforts to increase safety and overall livability, but also to the increasing population. As more people live in the Central City, there is greater ongoing activity and observation in Central City neighborhoods. Ideally, as population increases, the overall decrease in crimes will continue as well.

Graph 1.4: Central City Crimes Compared to Estimated Population (1997–2008)

Zoning

Zoning is the most basic way in which the City implements its plans and it affects the types of development and where they occur. The zoning system starts with a set of "base zones" which can then be augmented by further regulatory layers, such as "additional use and development regulations" and "overlay zones." As layers are added over the base zones, these base zones can be superceded, and often become only one small part of the larger picture of regulation.

Citywide there are some 28 base zones. Those applied to the Central City are the most intense; they allow the most density of all the zones in Portland and the region. The majority of the Central City is one of five base zones: Central Commercial (CX), Central Employment (EX), Central Residential (RX), General Industrial (IG1), and Open Space (OS). The first three are "X" zones to indicate that a mix of uses is allowed alongside the primary, "named" use in the zone.

Of these base zones, CX and EX both allow a wide range of residential and commercial uses. Together they make up almost 60 percent of the zoned area of the Central City, with CX comprising about 44 percent and EX about 15 percent of the Central City.

While RX (about 7 percent of the Central City) allows some commercial uses, it requires that most development be residential. Similarly IG1 (about 23 percent of the Central City) is reserved primarily for industrial uses, places limitations on commercial development, and prohibits all housing. Open Space is essentially parks, though some major spectator facilities like PGE Park are also in this zone.

Maximum heights and building densities are an additional layer of regulation. The greatest heights

Table 1.6: Central City Zoning

Category	Zone	Central City Acres	Percent of Central City	Citywide Acres	Percent of that zone Citywide
Commercial	Central Commercial (CX)	668.9	44.4%	1,036.3	64.5%
Employment	General Employment 1 (EG1)	9.3	0.6%	64.8	14.3%
	General Employment 2 (EG2)	13.7	0.9%	1,455.1	0.9%
	Central Employment (EX)	229.3	15.2%	779.6	29.4%
Industrial	General Industrial 1 (IG1)	335.9	22.3%	730.5	46.0%
	Heavy Industrial (IH)	41.6	2.8%	7,881.9	0.5%
Open Space	Open Space (OS)	66.2	4.4%	15,186.9	0.4%

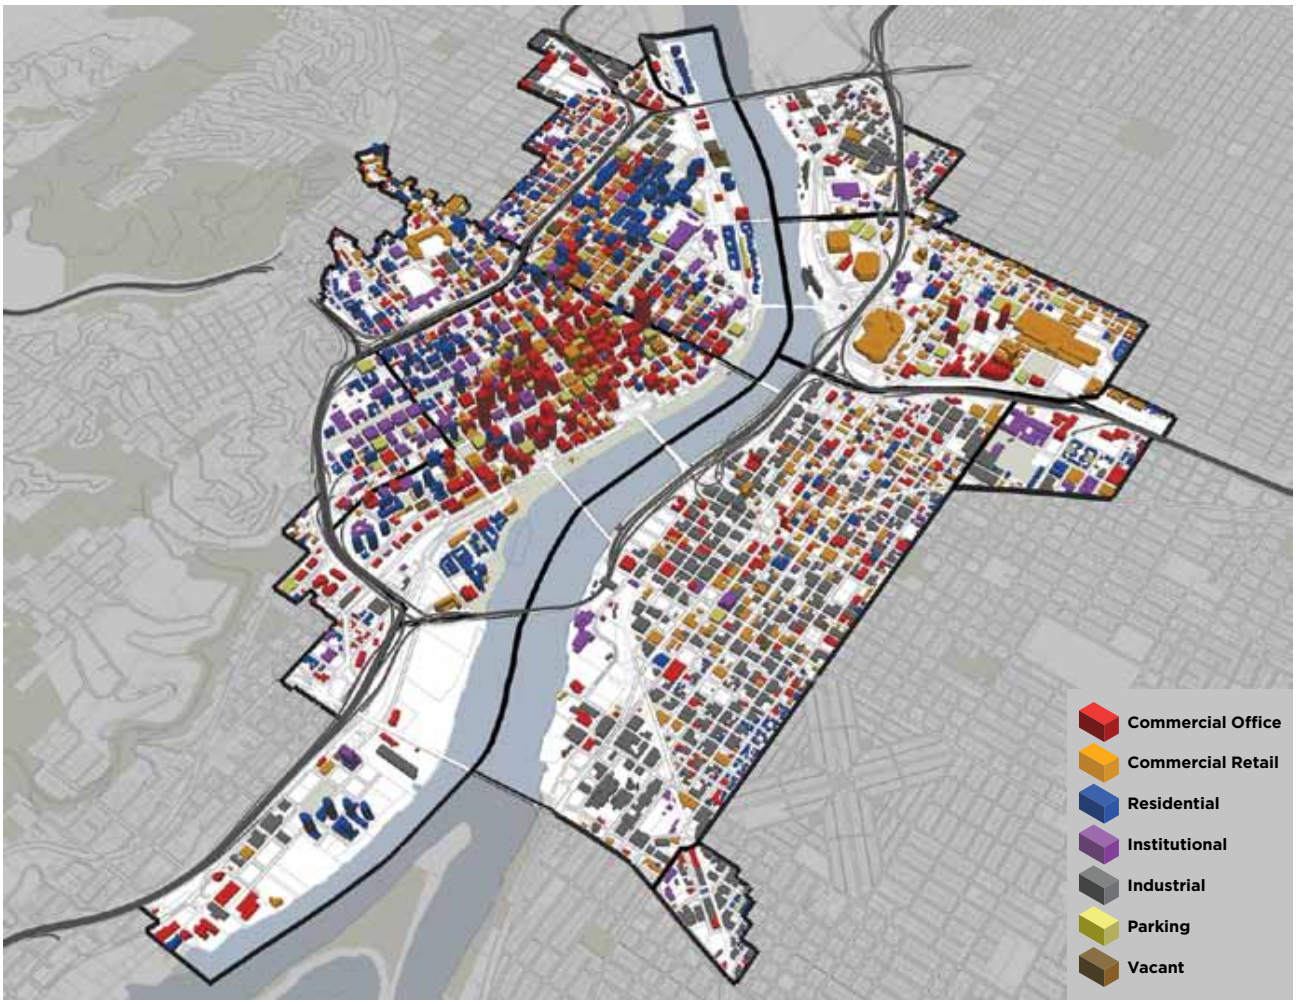
	Residential 2,000 (R2)	1.4	0.1%	3,351.8	0.0%
	High Density Residential (RH)	27.7	1.8%	489.8	5.7%
	Central Residential (RX)	102.8	6.8%	214.3	48.0%
		1,507.9	**100.0%**		

Note: River and right-of-way acres are not included.

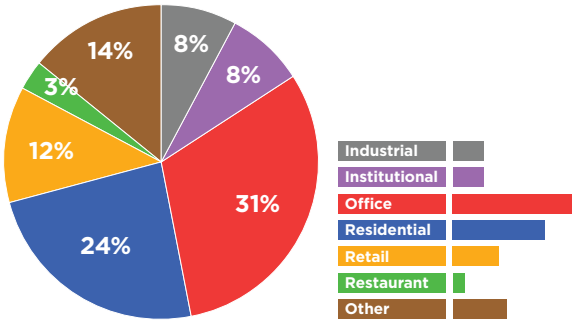
57562



and building densities allowed in the Central City are located along the Transit Mall and the light rail alignment through the Lloyd District. Heights and densities generally step down away from the Transit Mall toward the Riverfront and toward adjacent neighborhoods. Industrial areas have no maximum height or floor area limits because the uses allowed in these areas would not typically be more than one or two stories.

Existing Uses

In 2008, the Bureau of Planning (now the Bureau of Planning and Sustainability) inventoried land and building uses within the Central City. Staff conducted visual inspections of all buildings in the entire Central City, including all eight designated subdistricts and six additional study areas, and estimated the proportions of different uses by floors of buildings. This database, when linked to the City's 3-D building model, provides estimates for square footage of different uses in the Central City. The results of this calculation are not precise, but do provide more up-to-date estimates of uses than previously available.



The 2008 City inventory of existing building uses in the Central City revealed that office and residential uses account for the most square footage in the Central City, together comprising over 56 million square feet. This is almost 55 percent of the 102.5 million "developed square feet" in the Central City.

Central City Existing Uses

March 2010 **City of Portland | Bureau of Planning and Sustainability | Geographic Information System**
The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

Graph 1.5: Central City Existing Building Uses

It is also important to note the strong retail and industrial sectors in the Central City. The Central City has a broad array of retail establishments, ranging from art galleries, to major event entertainment such as at the Rose Quarter, to the shopping found in Downtown and other neighborhoods. Industrial uses in the Central City comprise about eight percent of the existing developed building square footage in the Central City (whereas about 25% of Central City land is actually zoned industrial).

When viewing the Existing Building Uses illustration, some interesting trends start to become clear. Residential uses are concentrated on the westside, in the Pearl and North Pearl, through the West End, and southward through the South Auditorium and RiverPlace areas. These residential areas almost form a crescent around the denser Downtown core in which office, retail and hotel uses are concentrated.

By contrast, the east side of the river has some very different patterns. The Central Eastside and Lower Albina subdistricts are largely defined by lower buildings and industrial uses. The Lloyd District is dominated by massive retail uses and major event entertainment.

One trend that may not be obvious at the Central City-wide scale, but is more apparent in the individual subdistricts, is the recent development of the vertical integration of uses. Many buildings in the Central City are now housing multiple uses. Recent examples include the new Safeway in the Pearl District and the renovated former Meier and Frank department store building, which now is home to a Macy's department store, the Nines hotel, and two restaurants.

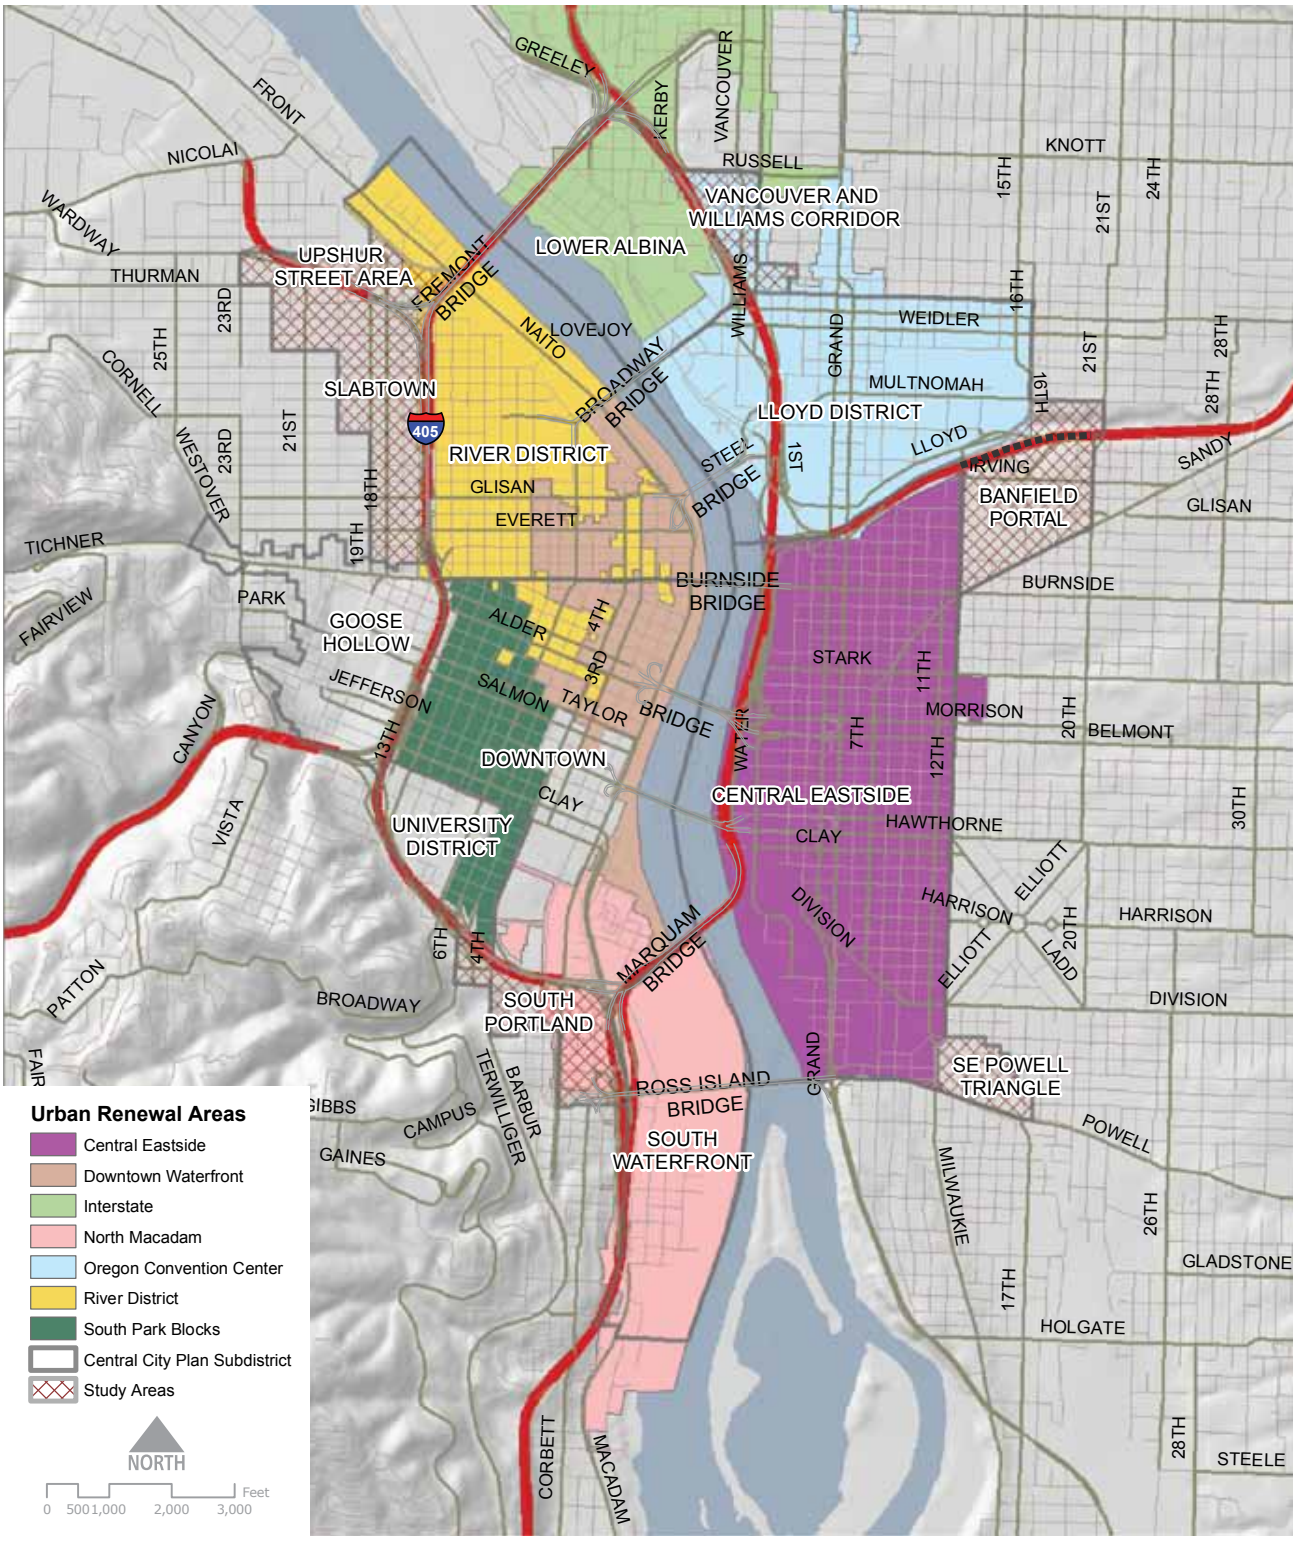


Table 1.7: Central City Existing Building Uses (including all Subdistricts and Study Areas)

Building Use	Total Sq. Footage	Percent of Total

Urban Renewal Areas

September 23, 2009 **City of Portland | Bureau of Planning and Sustainability | Geographic Information System**
The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

The amount of developed uses in the Central City totals more than 102 million square feet. Currently, there is over 65 million square feet of zoned land (this does not include the river and rights-of-way). Since floor area ratio (FAR) is the amount of built square footage on a site divided by the site's total area, the Central City-wide FAR comes to 1.56:1. In simple terms, this means that for every square foot of land, there is more than one and one-half square feet of developed building space. Of course, the permitted FAR in the Central City varies widely, from 15:1 at the high end to 2:1 at the low end.

The dense urban nature of Portland's Central City is reflected in the diverse uses that can be found within its limits. As the Central City continues to grow, much of its development is expected to be in residential and office uses, but other uses will likely still continue to thrive and support one another.

Urban Renewal Areas

Urban Renewal has been one plan implementation tool used generally with success in the Central City. The tool, if used carefully, can greatly enhance the development pace and potential, and dramatically improve the quality of the resulting urban environment. The Central City currently includes all or part of seven urban renewal areas. For specific information on these urban renewal areas, including indebtedness, acreage, and plan expiration dates, please see the appendix.

Transportation

Current transportation conditions in the Central City are highly affected by its:

- small block sizes (typical 200-foot by 200-foot),
- extensive public transit; and
- limits on auto parking.

How the Central City arrived at these conditions, and the mutually reinforcing benefits of each, involves a long history of significant community actions and policies dating back to the original town settlement, when the small blocks were laid out.

Like many U.S. cities, Portland experienced an exodus of residents and jobs to the rapidly developing suburbs in the 1960s and 1970s. New freeways encouraged auto travel, sprawl and the conversion of Downtown buildings into surface parking lots.

Central City Fundamental Design Guidelines, 2001

Central City is regulated not just by the base zones of the zoning code but also by a set of design guidelines — in zoning language, the "d" overlay — applied on top of the base zones. These guidelines, called the Central City Fundamental Design Guidelines (CCFDG), *apply throughout Central City. They address basic issues about the design of buildings in the urban environment, and are intended to "preserve the Central City's heritage, enhance its livability, and maintain its design quality." The* CCFDG *describe the urban design vision of the Central City as a "livable, walkable, urban community that focuses on the Willamette River." They provide a framework for how to implement this vision by stating broad design objectives for development within the Central City and providing illustrated examples of how to achieve these objectives as well. A discretionary design review process requires evaluation of the new project against the design guidelines applicable to the site and the type of proposal.*

Subdistrict and Historic Design Guidelines

A second layer of design guidelines applies to more specific geographic locations within the Central City, and in the case of conflicts between guideline layers, the more geographically specific layer takes precedence. While most, though not all, of the Central City subdistricts or historic districts have their own design guidelines, only a two have been updated in the last decade.

Table 1.8: Transportation Related Plans

Plan	Year	Agency
Downtown Plan	1972	BOP
Downtown Parking and Circulation Policy	1972	PDOT
Central City Transportation Management Plan	1995	PDOT
Bicycle Master Plan	1996	PDOT
Pedestrian Master Plan and Design Guidelines	1998	PDOT
Freeway Loop Study	2005	PDOT
Freight Master Plan	2008	PDOT

Policymakers reacted to mitigate these trends by drafting the 1972 *Downtown Plan* (discussed earlier in this document) and the *Downtown Parking and Circulation Policy*.

Both plans outlined a vision for Downtown as an employment, commercial, and entertainment center, connected to the region by a balanced (i.e. not exclusively auto), accessible transportation system. These plans limited how much new surface parking could be created and established an emphasis on transit for commuter trips. They resulted in significant improvements in air quality during the 1980s and 1990s, with sharp reductions in carbon monoxide levels.

The current *Central City Transportation Management Plan* (CCTMP) was adopted in 1995. It was designed to support growth in the Central City while managing parking, improving air quality and enhancing the transportation system. It revised the 1970s parking management strategy by introducing the "Preservation Parking policy," which was intended to address the parking needs of older, mostly Class B and C office buildings. The general policy directive was to "pinch" the supply of parking and provide the necessary incentives for people to use alternatives to single-occupancy auto travel. The CCTMP also set mode split goals for commute trips in each subdistrict.

Overall, a transportation system that provides options will lead to a reduction in emissions of air pollutants (such as carbon monoxide and carbon dioxide) and fossil-fuel use, particularly on a per capita basis. A reduction in automobile use will help manage traffic congestion and improve freight mobility. This transportation management approach has led to innovative projects, such as the expansion of Fareless Square (now the Free Rail Zone) and development of the Lloyd District Transportation Management Association (TMA), as well as numerous transit projects, including the Portland Streetcar.

Transportation Mode Split

Mode split is one of the most important transportation measures. It indicates the percentage of trips made by different modes (single-occupancy vehicle, carpool, transit, pedestrian, or bicycle) into the different parts of the Central City. It can help identify the relative ease of transportation and improvement possibilities.

In 2005, Metro transportation models showed that auto use was the predominant means of commuting to the Central City, accounting for 72% of trips. Transit carried about a quarter of all commute trips, and bicycle and walking trips accounted for about 2% each. According to Metro's transportation models, by 2030 auto use as a share of total commute trips will decrease to 56%. Transit use will increase to 38% of all commute trips. Bicycle and walking will also see increases. For information on each of the subdistricts *(see Table 1.9)*.

Table 1.9: Forecast Commute to Work Trips (2005 and 2030)

	Drove Alone		Carpool		Transit		Bicycle		Walk	
	2005	2030	2005	2030	2005	2030	2005	2030	2005	2030
Downtown	54.2%	35.9%	10.1%	9.2%	32.8%	47.9%	2.2%	3.2%	0.8%	3.9%
Lower Albina	83.8%	77.9%	8.3%	9.1%	7.2%	11.4%	0.5%	0.7%	0.3%	1.0%
Lloyd District	71.9%	55.8%	9.7%	10.7%	16.6%	30.7%	1.0%	1.6%	0.8%	1.3%
Central Eastside	82.6%	68.2%	8.5%	10.6%	7.5%	18.6%	0.7%	1.4%	0.6%	1.3%
South Waterfront	86.1%	61.7%	8.7%	13.5%	4.6%	21.7%	0.5%	2.1%	0.2%	1.0%
Goose Hollow	77.9%	47.1%	8.4%	11.1%	10.7%	32.2%	1.0%	3.0%	2.1%	6.7%
River District	62.7%	42.6%	10.2%	9.8%	23.9%	36.9%	1.9%	3.5%	1.3%	7.3%

Note: The data found in this table is from a Metro model and shows forecasted or modeled trips. This does not align with mode split data in other graphs due to varying sources and methodologies. Graphs 2.4, 3.3, 5.3, 6.3, 7.3, and 9.3, were derived from a PBOT non-scientific transportation survey. Data in graph 8.2 was derived from a PSU transportation survey. For more information please review the Supporting Information document, including Appendix 4: Transportation.

57567

Pedestrians

The quality of the pedestrian space can be a city's defining element, as it shapes the everyday experience of most residents, workers and visitors. There is a strong need for this shared space to be attractive and accessible to all, regardless of age, income, physical limitations, or any other limiting or defining factor. Most travelers are pedestrians at some point during each trip.

The Central City, and Downtown in particular, are known for having a high-quality pedestrian environment. The 200-foot block pattern and narrow streets provide frequent intersections, abundant natural light and many public gathering spaces, resulting in a positive experience for pedestrians. Downtown traffic signals are timed to allow comfortable and convenient pedestrian crossings. This high-quality pedestrian environment has been replicated in the new construction in the Pearl District and the central part of the South Waterfront Subdistrict. Both areas have street plans that ensure street connectivity and high design standards.

As more people and businesses locate in the Central City, it is expected that trips by pedestrians will be the fastest-growing mode over the next two decades. An important concern for pedestrians is "system connectivity" between pedestrian and transit facilities. Better pedestrian connections to the transit system, particularly for transfers between bus lines, are needed in some locations in the Central Eastside Industrial District, Lloyd District and River District.

Pedestrian Volumes

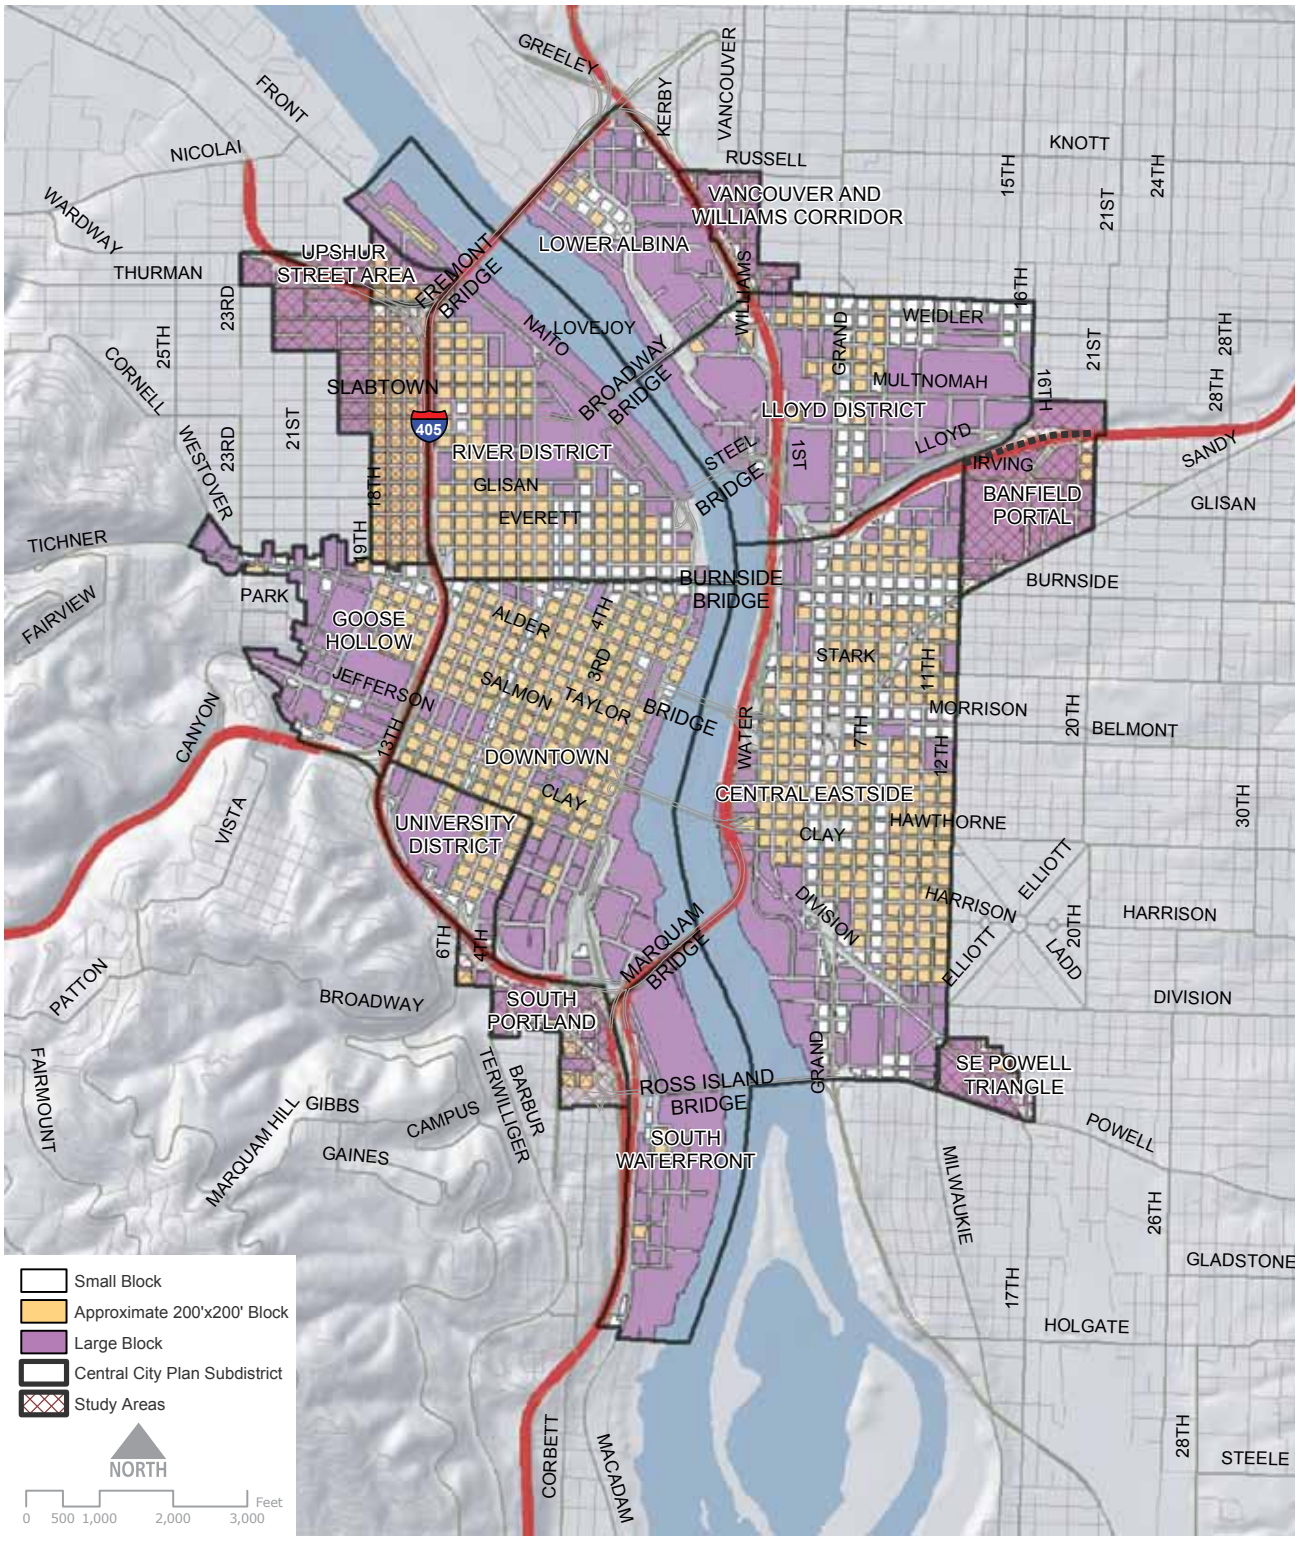
Walking in the Central City has increased dramatically in part because many more people are living in the Central City now than previously.

Table 1.10: Central City Pedestrian Volumes

Subdistrict	Employees residing in subdistrict			Subdistrict residents who walked to work in 2000	
	1990	2000	Percent Change	Trips	Mode Split
Central Eastside	2,193	3,826	74%	236	6%
Lower Albina	96	242	152%	22	9%
Lloyd District	1,065	2,785	162%	201	7%
River District	1,078	4.125	383%	562	14%
Goose Hollow	1,723	3,640	111%	624	17%
Downtown	3,835	9,290	242%	1,791	19%
South Waterfront	471	775	65%	26	3%
Total	10,461	24,683	136%	3,462	14%

For instance, between 1990 and 2000, the resident population of the Central City increased by 235%, and the number of pedestrian commute trips by those residents increased 31%. All subdistricts (except the Central Eastside) experienced more walk-to-work trips, and most experienced double-digit increases.

Pedestrian Safety and Access



New infrastructure has improved the safety, accessibility and quality of the pedestrian environment in recent years. Major pedestrian system improvements include the Eastbank Esplanade, the Springwater Corridor, and sidewalk improvements along the NE Martin Luther King, Jr. Boulevard/NE Grand Avenue couplet. The Broadway and Steel Bridge Accessibility Projects improved pedestrian access to the bridges. At-grade pedestrian crossings were added on the west end of the Broadway Bridge, and the closure of the Lovejoy Ramp provided more pedestrian access to the Broadway Bridge from the Pearl District.

Safe access for pedestrians across major roadways and freeways, such as I-405, will continue to be a concern. At present, I-405 effectively serves as a pedestrian barrier for Goose Hollow, Downtown, University District, and southwest neighborhoods, with pedestrian crossing available on only a few busy streets.

Streets with an unusually high number of serious pedestrian crashes, and in need of engineering to make them safer, include NE Broadway-NE Weidler Street, E and W Burnside, SE Powell Boulevard, and the intersections at SW 1st Avenue/SW Market Street/SW Clay Street. From 1995 to 2007 in the Central City there have been 419 crashes resulting in pedestrian injury, with 18 fatalities.

Burnside Street and Naito Parkway have seen the greatest number of fatalities, six and four, respectively. Both of these corridors have been identified as Pedestrian Crash Corridors, meaning they are areas of concern for transportation planning purposes. These streets have a high vehicle volume and are major roads through the Central City. Of all subdistricts, Downtown has the largest number of crashes resulting in pedestrian injury, but it also has the largest number of pedestrians. On the east side of the River, pedestrian injuries are also more common on the MLK-Grand couplet, another Pedestrian Crash Corridor in the Central Eastside and Lloyd Districts.

Block Size

September 23, 2009 **City of Portland | Bureau of Planning and Sustainability | Geographic Information System**
The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

Bicycles

Bicycling is becoming an important mode of transportation for many commuters, shoppers, students and other visitors to the Central City. The short block lengths, off-street paths, and generally slow-moving traffic flows in much of the area help make the Central City a good place for these types of bicycle activities.

Bicycle use in the Central City has more than doubled since the year 2000. In 2009, cyclists comprised 6–8% of all commuters citywide, and bikes accounted for 13% of total vehicles crossing the four bridges with bicycle facilities on a daily basis (21% on the Hawthorne Bridge). Portland has the highest bike-commute-to-work rate of the 50 biggest U.S. cities. In large part, these increases directly correlate to the City's rapid development of bikeway miles and other investments in the City's bikeway network and programs. Portland's current bikeway network consists of roughly 300 miles of bicycle lanes, bicycle boulevards, and off-street paths, of which 34 miles are in place in the Central City.

Between 1995 and 2007 there were 336 crashes reported in the Central City; these resulted in injuries to bicyclists and four fatalities. The bicycle crashes reported were almost evenly split between cyclist and motorist error. While bicycle crashes are distributed evenly throughout the Central City, the couplet intersection of NE Broadway/Weidler and N Vancouver/Williams Streets has seen the highest number of reported crashes resulting in injury, with 20. Since 2001, crashes resulting in injuries to cyclists have increased by more than one-third. However, as bicycle traffic leading into the Central City (as measured on Willamette River bridges) has increased by more than 400% in recent years, some increase in crashes is not surprising.

An update to the 1996 *Bicycle Master Plan,* which helped steer Portland toward Platinum status for Bicycle Friendly Cities from the League of American Bicyclists in April 2008, is now completed. The *Portland Bicycle Plan for 2030* will propose several next-generation facilities in the Central City. Bicycling will be a key component of the transportation system as the Central City continues to grow.

Transit

The Central City's transit system (including TriMet bus, MAX light rail, streetcar, OHSU tram) provides critical access to the Central City, promotes higher density development, and reduces reliance on single-occupant vehicles. When combined with quality public spaces, such as the Transit Mall, Jamison Square, and Waterfront Park, transit can encourage higher density development. This in turn can lead to increased pedestrian and bicycle travel, as trip distances shorten and the trips become more interesting and attractive. Moreover, areas with high pedestrian and bicycle use also tend to be areas of higher transit use, with each mode reinforcing the others. Providing transit in the Central City triggers multiple benefits to Portland's overall health.

Vehicle Miles Traveled

Vehicle miles traveled (VMT) indicates the average number of miles a person travels each day. The lower the VMT per capita, the less distance a person is typically traveling in his or her daily routine, including work and other trips. A person who is

traveling less is also meeting his or her daily needs within a closer distance to home, or perhaps grouping destinations together for a consolidated trip. Ideally people should not have to travel great distances to meet their daily needs.

VMT per capita can be one indicator of the overall diversity and amenities in an area, and is also an indicator for greenhouse gas emissions (GHG). Recent studies show that motorists in the Portland region travel four fewer miles per day, and use automobiles much less frequently for commute trips, than the national average.

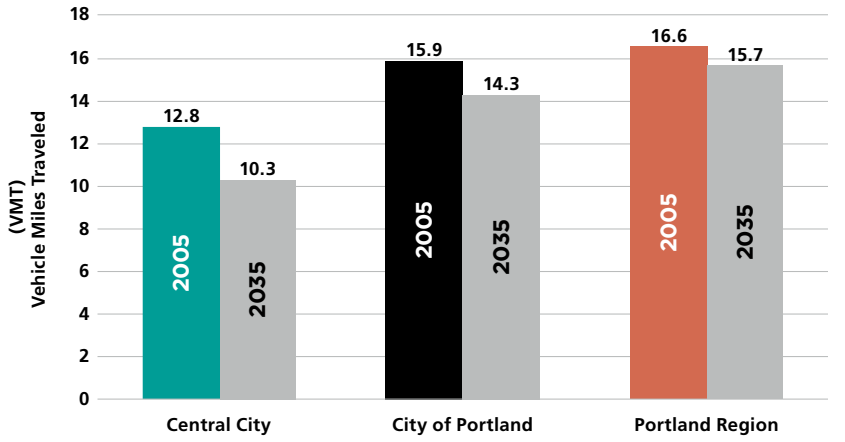
Based on recent forecasts, the VMT per capita for residents of the Central City is quite low compared with the entire city and the region. The Central City's VMT is projected to decline from 12.8 per capita in 2005 to 10.3 in 2035. The availability of transit service and the emergence of mixed-use residential and commercial/employment areas contribute strongly to this trend. However, even though VMT per capita are projected to decrease, preliminary analysis using transportation modeling data indicates that GHG emissions will increase by 27% in the Central City by 2035 as population rises.

(It is important to note that the boundaries represented in the table do not exactly align with the Central City Plan District boundaries, but are close enough for general accuracy in the numbers.)

Congestion

More than 40 percent of the Central City land area is devoted to right-of-way for cars, trucks, bicycles and pedestrians (excluding freeways). Due to the high costs of right-of-way acquisition, particularly in the Central City, roadway space is essentially a fixed quantity. As population and employment grow, the importance of modes of transportation that utilize space more efficiently will become even more important.

In 2008, congestion was concentrated on the Central City bridges (Steel, Hawthorne eastbound, Marquam, and Ross Island eastbound), on streets leading from downtown and from OHSU to SW Portland (Terwilliger and Barbur Boulevards, Campus Drive) and on some freeway segments.



Forecasts of congestion in 2035

Transportation models forecast that by 2035 congestion on roadways throughout the Central City will have increased significantly. For example, segments of I-405 are forecast to be congested. That freeway, with its other factors such as weaving and tight interchanges, already has a high accident rate. US 26 is over capacity leading into the Vista Ridge tunnel, and I-5 is over capacity through the Central Eastside. Naito Parkway sees increased congestion leading to the Hawthorne Bridge, and north of the Broadway Bridge. Approaches to the Morrison Bridge are over capacity on both the east and west side.

Table 1.11: Vehicle Miles Traveled per Capita and Greenhouse Gas Emissions (GHG) (2005 and 2035)

Area	2005 VMT/Capita	2035 VMT/Capita	2005–2035 Reduction	2005 GHG daily tons	2035 GHG daily tons	2005–2035 Change
CBD (Downtown, University)	9.5	7.5	–21.6%	835	912	9%
River District	8.7	6.4	–26.5%	277	422	52%
Lower Albina	13.0	13.9	7.3%	32	37	16%
Lloyd District	29.6	18.4	–28.1%	400	486	22%
Central Eastside	16.3	16.1	–1%	235	337	43%
South Waterfront	14.4	13.1	–9.1%	113	267	136%
Goose Hollow	20.6	15.7	–24%	152	156	3%
Central City	12.8	10.3	–19.3%	2,014	2,556	27%
City of Portland	15.9	14.3	–10.3%	9,139	11,034	21%
Portland Region	16.6	15.7	–5.4%	19,140	28,730	50%

Graph 1.6: Daily Vehicle Miles Traveled per Capita

Source: PBOT, City's 2005/2035 RTP Transportation Model

Eastside portals such as Sandy, McLoughlin, and Milwaukie Boulevards are over capacity. The most significant increases in congestion, however, occur in South Portland and near OHSU, where nearly every arterial road will be over capacity at buildout. The City policy must adapt to the growing demands on the transportation system and seek innovative solutions to accommodate the continued growth of the Central City.

Parking

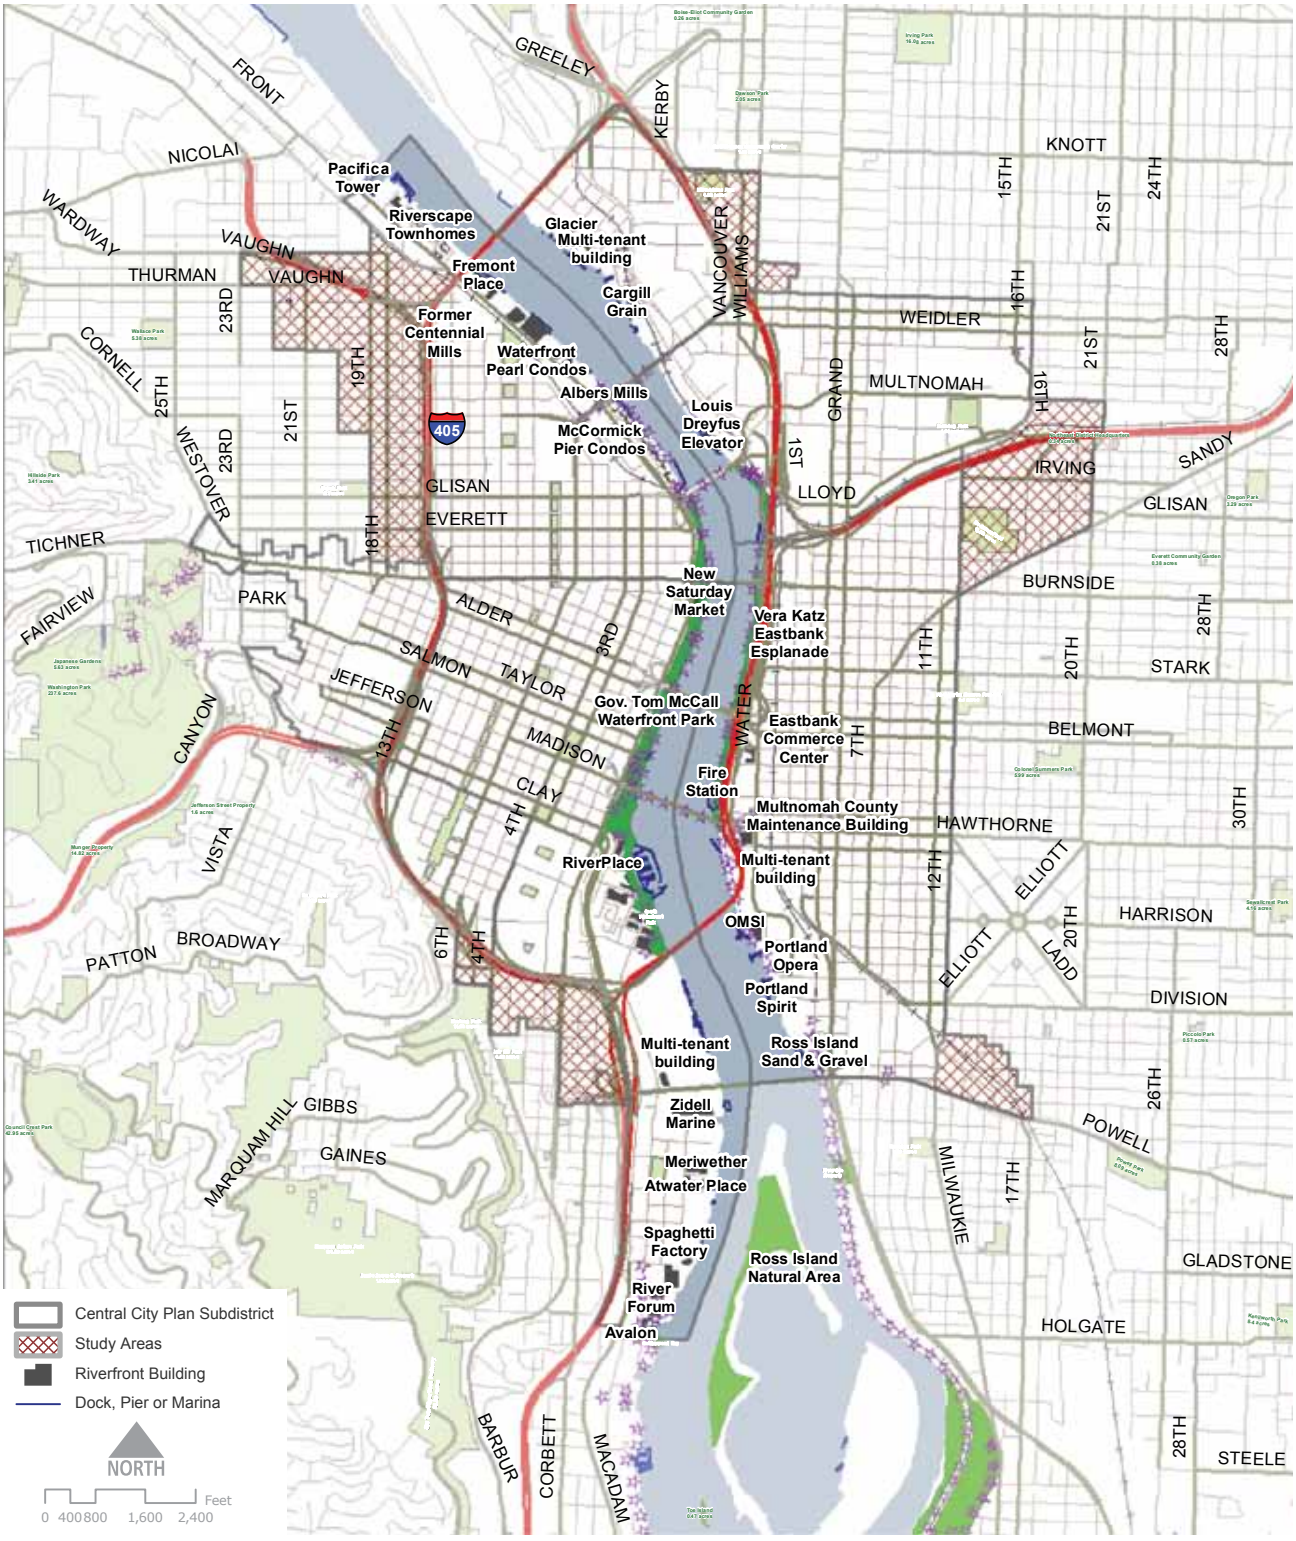
Parking within the Central City is varied and includes:

- on-street parking (metered or non-metered);
- surface parking lot (pay or user-specific); and
- structured parking lot (pay or user-specific).

Development of new parking within the Central City is limited through adopted regulations. As mentioned earlier, the general policy directive in the CCTMP is to "pinch" the supply of parking and provide the necessary incentives for people to use alternative transportation modes. The Zoning Code has established ratios for parking maximums within the different areas of Central City.

These maximum ratios can be seen in Table 1.12. The actual parking ratios in each subdistrict were determined after a land use inventory and parking inventory were completed, the results of which are also shown in Table 1.12. In the Central City, residential parking currently averages 0.6 spaces per unit, while commercial parking averages in the range of 1.3–1.6 spaces per 1,000 square feet of building area. When comparing the regulated and existing parking ratios, it can be seen that the existing parking is generally at or below the adopted ratios.

Condition of Transportation Infrastructure



Transportation infrastructure conditions vary in the Central City. The Central City, as the historic site of Portland contains an especially complex infrastructure, with a wide range in terms of both age and capacity to serve the community. Infrastructure in the Central City, as in inner neighborhoods, tends to be more complete than in other parts of the city. However, some deficiencies may adversely affect the quality of life for Central City residents. Key transportation infrastructure characteristics and deficiencies in the Central City include:

- The street network in the Central City generally meets Portland's connectivity standards.
- The area has lower vehicle miles traveled per capita than other areas and than the city as a whole. However, as the hub of transportation systems, congestion — particularly during peak hours — can be severe.
- Overall, the Central City has relatively high levels of sidewalk coverage. Approximately 20 to 26 percent of streets in the Central City (along with inner areas of northeast and southeast) have no sidewalk coverage.
- A number of high-crash locations exist in the Central City, including at the NE Broadway/Weidler and N/NE Vancouver/Williams intersections in the Lloyd District, and Downtown at SW Washington and 2nd Avenue.

Table 1.12: Central City Parking Ratios (2009)

Subdistrict	Total Parking	Residential Parking: ratio per unit		Office/Non-Residential Parking: ratio per 1,000 sf	
		Zoning Code	Inventory	Zoning Code	Inventory
Central Eastside	13,900	none	0.0	2.5–3.4	1.5
Downtown	38,798	1.35–1.7	0.5	0.7–2.0	1.2
Goose Hollow	5,946	none	0.4	2.0	1.7
Lloyd District	23,044	none	0.5	2.0	2.2
Lower Albina	2,205	none	0.9	2.5	1.4
River District	18,394	1.5–1.7	0.8	1.5–2.0	1.4
South Waterfront	5,121	1.7	1.4	2.4	2.5
University District	4,651	1.35	0.3	1.0	1.3
Central City	Total: 112,073	Range: 1.35–none	Average: 0.6	Range: 0.7–3.4	Average: 1.6

River-related Features

September 21, 2009 City of Portland | Bureau of Planning and Sustainability | Geographic Information System
The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

- Sixteen bridges in the Central City are in poor condition and in need of major rehabilitation or replacement. All are currently weight restricted. These bridges include local street bridges and some major bridge ramps, but not the Willamette River bridges, which are not owned by the City of Portland.
- Traffic signal hardware has experienced substantial declines in condition, which reflects a reduction in signal maintenance funds. The majority of traffic signals are located in the Central City and neighborhoods. A number of priority signal optimization corridors also have been identified in this area.

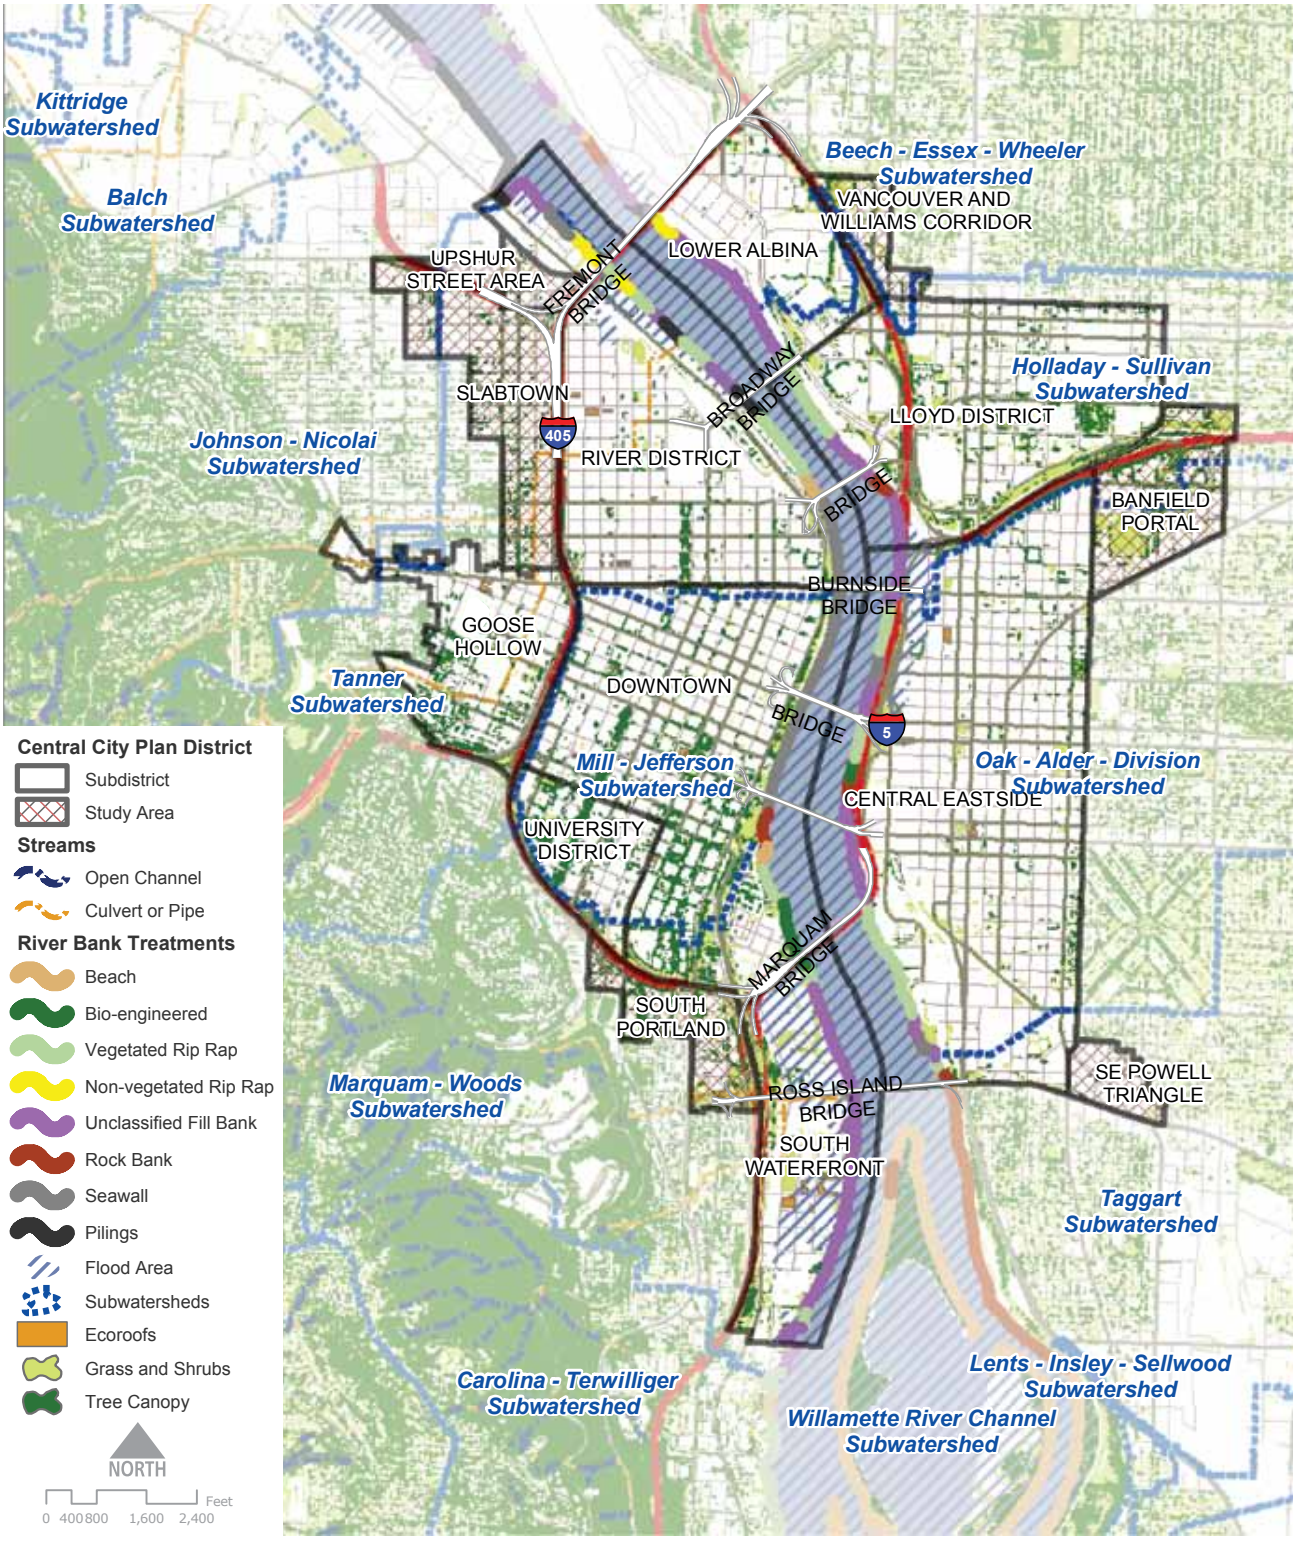
For more information about infrastructure conditions, please review the Portland Plan Infrastructure Condition and Capacity Report *(2009).*

Willamette Riverfront

The Willamette River plays a key role in the Central City. It stretches about four miles through the Central City and gives Portland much of its character. It provides opportunities for recreational, industrial, and commercial activities, and habitat for fish and wildlife. It is important, not just as a focus for the City, but also as a natural system within the region. Although the Willamette is generally not yet safe enough to swim in, it is cleaner today than it has been in the past.

Several key planning efforts of the last few decades guide land use, development and planning along the riverfront, including:

- *Willamette Greenway Plan* (1987)
- *River Renaissance Vision* (2001)
- *River Renaissance Strategy* (2004)
- *The River Concept* (2006)
- *Portland Watershed Management Plan* (2006)



The River Plan is currently underway to update and replace the 1987 *Willamette Greenway Plan.* It is a comprehensive, multi-objective plan for the riverfront, updating design guidelines and the zoning code. Building on the overarching direction provided by previous efforts (listed above), *the River Plan* is being carried out in three phases, each focusing on a different geographic segment or "reach" of the Willamette River. The reaches are interrelated but distinct; each has a unique set of issues. *The River Concept,* adopted by City Council in 2006, characterizes the North Reach as Portland's working waterfront, the Central Reach as the region's gathering place and the South Reach as neighborhoods and natural areas. The plan for the Central Reach is currently underway as part of the Central City 2035 planning project.

River-related Natural Resources

While the Central City is a largely manmade, built-up landscape, it still includes important undeveloped natural resources, particularly along and including the Willamette River. Roughly four miles of the Willamette River channel, totaling about 450 acres, are located in the Central City. The Willamette River provides significant habitat for fish, river-dependent mammals, and amphibians. The Willamette is also part of the Pacific Flyway, a major north-south route of travel for migratory birds in the Americas, and is utilized by more than 100 resident and migratory bird species.

The banks of the lower Willamette River have been altered over time. In the Central City, most of the flood area has been filled and developed in the past century. Due to these alterations, during a 100-year flood event, rising water would generally be confined

Natural Resource Features

September 21, 2009 **City of Portland | Bureau of Planning and Sustainability | Geographic Information System**
The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

Table 1.13: Central City Natural Resource Features		
Willamette River	Miles	4
	Acres	446
Stream	Miles	0
Wetlands	Acres	0
Flood Area*	Vegetated (acres)	24
	Non-vegetated (acres)	154
	Open Water** (acres)	446
Vegetated Areas > = ½ acre***	Forest (acres)	8.5
	Woodland (acres)	78.5
	Shrubland (acres)	14.2
	Herbaceous (acres)	53.1
Impervious Surfaces	Acres	1,906 (including 177 miles of road)

* *The flood area includes the FEMA 100-year floodplain plus the adjusted 1996 flood inundation area.*

** *Open Water includes portions of the Columbia Slough, Buffalo Slough and Peninsula Canal.*

*** *The vegetation classifications are applied in accordance with the National Vegetation Classification System specifications developed by The Nature Conservancy. The data within the primary study area and within 300 feet of all open water bodies in Portland is draft and is currently being updated based on 2006 aerial photography.*

within the Willamette River itself. There are a few locations of developed flood area, most of it in the South Waterfront. Wharves and piers extend into the river channel, and bulkheads (similar to retaining walls) and riprap (stones on the embankment slope to limit erosion) armor the riverbank. The seawall constructed along much of Central City's west Willamette bank has further altered the natural conditions of the waterfront. Active dredging has produced a uniform channel with little diversity. However, pockets of shallow water habitat and less hardened banks provide remnant fish and wildlife habitat areas.

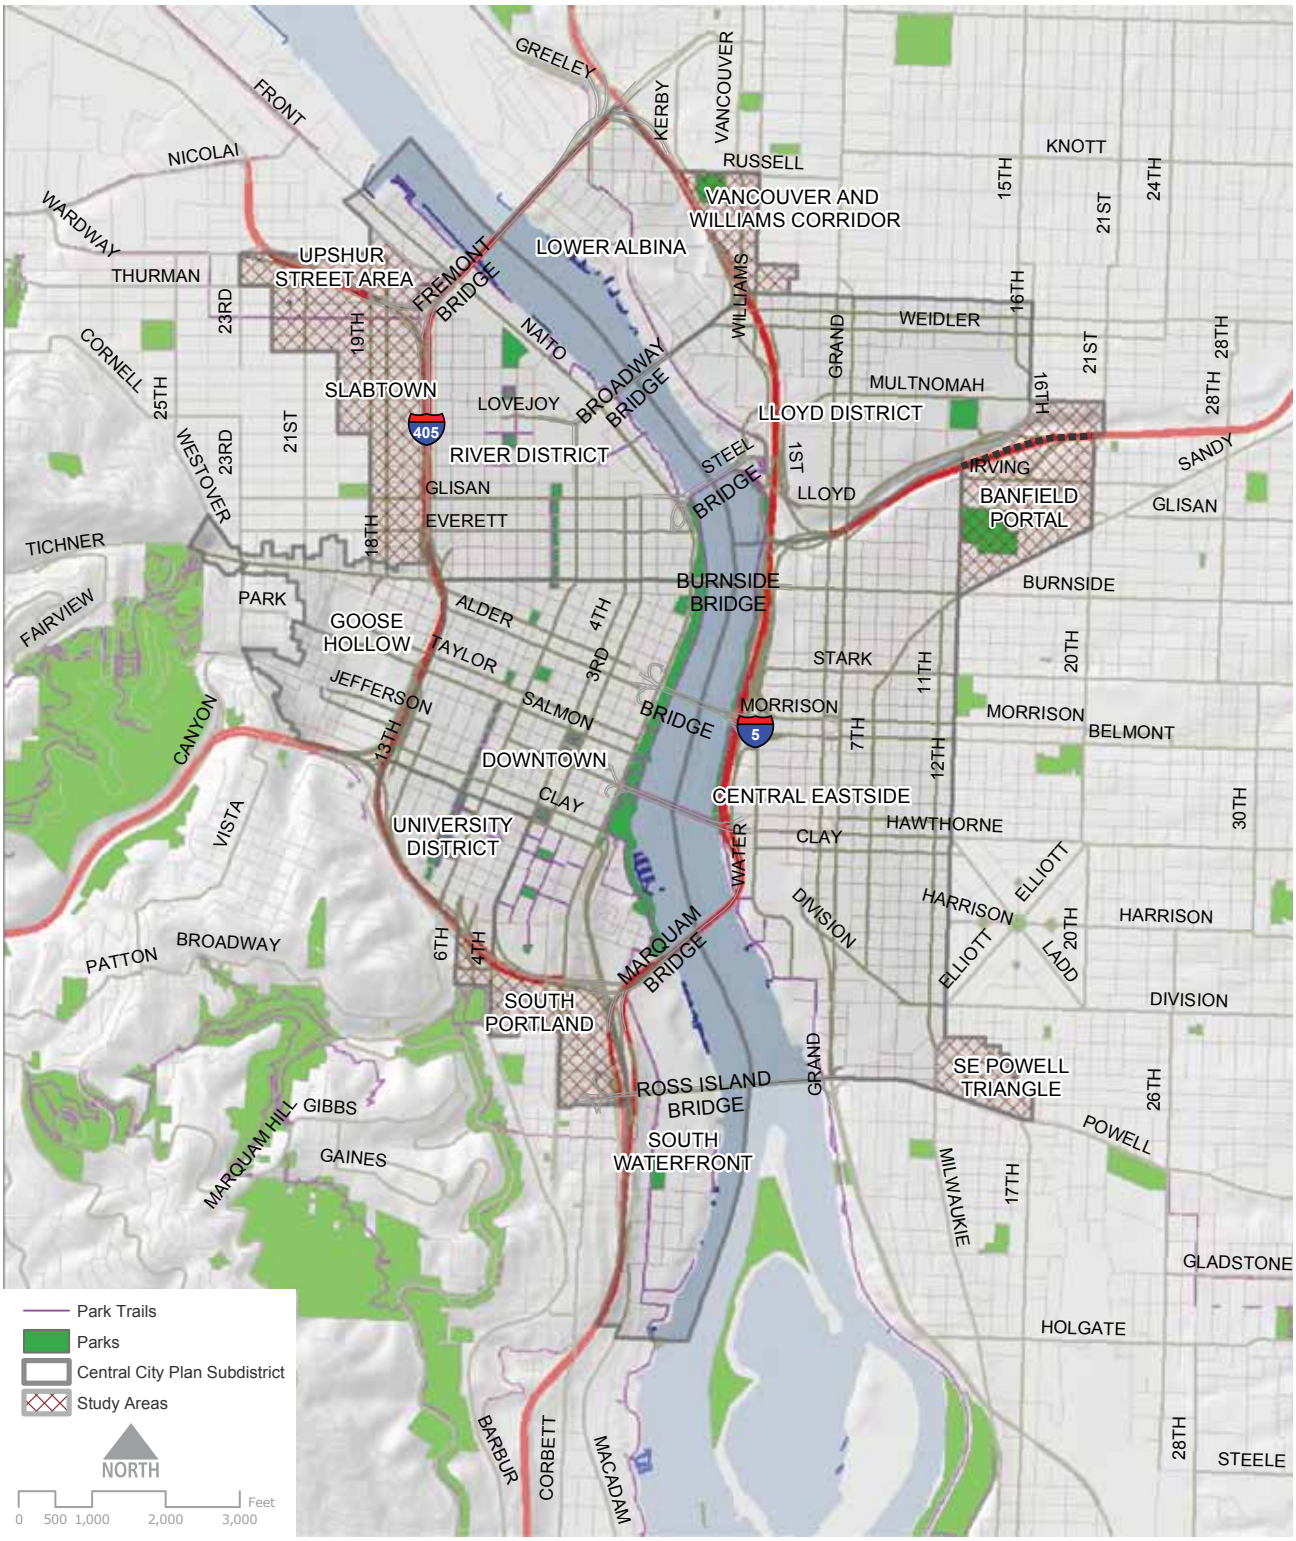
Currently, the Lower Willamette River does not meet water quality standards for bacteria, mercury, dioxin, and temperature. Many tributaries to the Lower Willamette do not meet standards for temperature and pollutants, both of which can affect many aquatic species. There is a fish advisory for the main stem of the River. The Lower Willamette River also is generally deemed unsafe for swimming.

The riverbank and land in close proximity to the river is called the "riparian" area. Vegetation in the riparian area provides important natural resource functions. For example, trees that overhang the water provide shade that can create localized areas of cooler water, which is healthy for fish. Trees, shrubs and grasses along the river provide food sources and perching, nesting and resting areas for resident and migratory birds.

Along the Central City portions of the Willamette River, the riparian area is approximately 49 percent impervious surfaces (e.g. roads, buildings, parking lots) and 17 percent is vegetated with patches greater than one-half-acre in size. However, there are also individual trees and landscaped areas that contribute to natural resources functions.

Upland Natural Resources

Development separates the river and riverbank areas from upland natural resources, such as vegetated slopes, and this separation has generally negative consequences for fish and wildlife habitat. For instance, streams that once flowed in open channels from the west and southwest hills to the Willamette today are largely piped through the Central City, offering limited aquatic habitat and restricting fish passage.



Animals living in the Central City are predominantly tolerant species — terrestrial species such as raccoon and squirrel, and resident birds like pigeons. However, many bird species use the Willamette River corridor during their annual migration along the Pacific Flyway. As the Central City grows, there could be an increased risk of bird mortality due to building collisions. Emerging innovative 'bird-safe' building and lighting designs and technologies could, where feasible, help prevent bird strikes.

There are 154 acres of upland vegetation that are at least ½ acre in size. The Central City, including riparian areas, also contains roughly 308 acres of tree canopy and 6.5 acres of ecoroofs, such as the Portland Building ecoroof. Street trees, ecoroofs and other vegetated landscaping located throughout the Central City intercept rainwater and reduce runoff, provide shade, cool and filter the air, and provide habitat for birds, small mammals (e.g., squirrels), and pollinators.

There are three areas with steep slopes:

- along Interstate 5 and Interstate 84 in the Lower Albina and Lloyd Districts,
- west of SW Macadam Avenue in South Waterfront, and
- at the foot of the west hills in the Goose Hollow District, near NW 23rd Avenue and near SW Market Street

Parks and Open Space

September 23, 2009 **City of Portland | Bureau of Planning and Sustainability | Geographic Information System**
The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

These slopes are vegetated primarily with shrubs and grasses, interspersed with large trees. Slopes are subject to landslides and wildfire.

Sewer, Stormwater, and Water

Sewer, stormwater, and water infrastructure conditions in the Central City vary, especially because many facilities date back to the early days of downtown, the oldest part of Portland. Key sewer, stormwater, and water deficiency issues in Central City include:

- Combined Sewer Overflow
  - The Central City has a combined sanitary and stormwater sewer system, which is a relatively older system in which sanitary sewer effluent and stormwater runoff are all handled by a single pipe. (Newer systems typically separate these sources.) During rainstorms, when runoff exceeds the pipe capacity, the overflow is directed to pipes that discharge this overflow directly into the Willamette River. To meet Federal Clean Water Act requirements, the Combined Sewer Overflow (CSO) Project was initiated in the early 1990s. This project constructed large capacity underground storage tanks and pipes to handle the overflow from storm events. The project is being constructed in two phases, the West Side Big Pipe (completed in 2006) and the East Side Big Pipe (to be completed in 2011).
- Local Capacity
  - Key local capacity concerns include possible basement sewer back-ups in portions of the Central Eastside, Lloyd District, and River District.
- Green Infrastructure
  - Street and landscape trees, ecoroofs and other vegetated areas located throughout the Central City contribute to stormwater management by intercepting and filtering rainwater. Vegetated areas also cool the air, capture greenhouse gases and improve overall air quality. The importance of this 'green infrastructure' has recently been acknowledged through the City's 'Grey to Green' initiative. Investments in tree preservation and plantings, and incentives for ecoroofs, have occurred. But additional green infrastructure projects would improve water and air quality.
- Maintenance and Usage
  - The Central City contains some of the oldest water infrastructure in the City. Maintenance, rehabilitation, and/or replacement of these assets will be an ongoing need in the future.
  - A new seismically hardened Willamette River water transmission line crossing will be necessary within the next 20 years.
  - Central Eastside water systems, originally sized for industrial uses, are facing water quality issues as lower water demand has reduced the flushing of these pipes.

Parks and Recreation

The Central City has a wide range of parks for residents and visitors. They range in size from a few square feet (Mill Ends Park) to almost 30 acres (Waterfront Park). There are more than 60 acres of public parks in the Central City. Most of that space is within the Downtown, River District, and University District. There are two parks in South Waterfront and one each in both the Lloyd District and Central Eastside. Goose Hollow and Lower Albina have no public park space. For a complete list of all parks and open spaces in the Central City, please refer to the appendix.

The Willamette River flows through the heart of the Central City and many parks and open spaces in the Central City provide year-round opportunities for recreation and access to the River. Tom McCall Waterfront Park dominates the west bank, extending from the Steel Bridge to Riverplace, south of the Hawthorne Bridge. This park is home to many festivals throughout the summer. South Waterfront Park provides beach access near the base of the Marquam Bridge on the west side of the River. The east side of the River contains the Eastbank Esplanade, a popular off-street path that is extensively used for recreation and transportation in the Central City.

Docks and other river access facilities support activities on the River that add to the vitality of the Central City, enhancing experiences for residents and visitors. The Central City contains many private docks and four public boat docks, one public light watercraft launch facility and public beach access at South Waterfront Park. These access points are shown on the accompanying map.

Table 1.14: Central City Park Space by Subdistrict

Subdistrict	Acres	Number of Parks	Sq. ft. Per Resident	Sq. ft. Per Employee
Central Eastside	0.14	1	4.36	0.39
Downtown	44.99	12	188.44	28.16
Goose Hollow	0	0	0	0
Lloyd District	4.37	1	111.97	10.03
Lower Albina	0	0	0	0
River District	4.97	3	17.75	12.60
South Waterfront	2.79	2	63.96	Unavailable
University District	5.30	1	104.94	39.59
Grand Total	62.56	20		

The Central City includes a "greenway" trail that is almost fully developed along both sides of the River. The east side portion includes the Eastbank Esplanade, which extends 1.5 miles from the Steel Bridge to the Hawthorne Bridge. The off-street greenway path continues along the River south of the Hawthorne Bridge to SW Caruthers Street, where on-street bike lanes connect the path to the Springwater Corridor trail. On the west side of the River the greenway trail is almost fully developed as an off-street path through Tom McCall Waterfront Park. Sections north of the Broadway Bridge and in the South Waterfront Riverfront are not yet developed.

The parks and open spaces in the Central City vary both in condition and in whether they are meeting the needs of residents. Some deficiencies may adversely influence the quality of life for area residents. The majority of the Central City is within a one-half-mile walk of a park. However, key park deficiencies do exist, and include:

- Few undeveloped park properties in the Central City.
- Key park development deficiencies in the River District and South Waterfront.
- Some parkland acquisition deficiencies in the Lloyd District; South Waterfront; and Downtown.
- Recreation facility distribution (particularly for pools) is uneven, and improvements are needed to expand or enhance existing facilities that are in poor condition or operating at capacity.

Arts and Cultural Facilities

The Central City is the arts and cultural center of the region. It is home to a diverse range of arts and cultural facilities and organizations. Larger, well-established facilities range from the Oregon Symphony Association and the Portland Art Museum, both founded in the 1890s, to the Museum of Contemporary Craft and the Portland Center for the Performing Arts. There are also many non-traditional arts facilities and organizations, as well as private galleries and studios, within the Central City. Public art exists in many parks and open spaces and also along the MAX line, as part of a program instituted by TriMet. (For a map showing Central City arts and cultural facilities, please see the appendix).

Education

The Central City hosts a variety of educational choices within the Central City. Portland State University is the largest university in the state, as measured by enrollment, and is the namesake of Central City's University subdistrict. Several alternative, private, and post-secondary schools are also located within the Central City, providing a range of learning opportunities for young and old and in many specialties. The various schools include the Pacific Northwest College of Art, the Western Culinary Institute, and St. Mary's Academy. The one Portland Public School located in the Central City is Lincoln High School in Goose Hollow. Benson High School is adjacent to the Central Eastside boundary on NE 12th Avenue. No public K–5 or middle schools are within easy walking distance from the Central City.

FORECASTS AND GROWTH

Metro Forecast

Where the region's population and employment numbers ultimately land will be determined by several factors. Varying conditions in the local and global economies, climate change and changing population and workforce demographics will influence how much growth comes to this region. Policy decisions and investments made in local communities and across the region may also attract particular types of population and employment growth.

Metro regional government's computer model, Metroscope, forecasts significant growth in the Central City over the coming decades. How and where the jobs and households are accommodated represents a great opportunity to reinvest in the Central City by creating vibrant new districts and rebuilding existing areas.

Table 1.15: Central City Forecasted Growth (2005–2035)

Year	Central City Households	Central City Employment
2005*	17,766	150,479
2035	51,794	224,891
Increase	34,028	74,412

It is important to note that due to the modeling methods used by Metro, household and employment numbers for 2005 do not align with more recent data from other sources cited in this report.

Redevelopment Capacity

In 2007, the *Central Portland Development Capacity Study* looked at vacant and underutilized land in the Central City to determine what sites were potentially available for redevelopment and what kinds of development could be built there. It is estimated that roughly 400 acres of vacant or underutilized land within the Central City study area either is now, or could become, available for development/redevelopment at some point in the next 20 years within the Central City study area. The study area for the *Capacity Study* included the area within the current Central City Plan District boundaries.

Considering a combination of zoning regulations and entitlements as well as historic and current building trends, the Bureau of Planning in 2007 estimated that redevelopment of identified sites could produce an approximate net increase of more than 100 million square feet of new building area. Considering development trends since 1990, the Bureau estimated that future development could include:

- 25 percent to 30 percent commercial office development (25 to 30 million square feet).
- 50 percent to 60 percent residential development (50,000 to 60,000 new housing units).

This level of residential development would represent an increase of more than 200 percent from the estimated 23,000 housing units currently in the study area.

These capacity numbers are not an estimate of the market demand for development. They represent the potential capacity of identified redevelopable lands at current entitlements; that is, they do not consider the conversion of any significant industrial lands to other uses, nor do they assume redevelopment within existing

Identified potentially redevelopable sites (2007)

industrial areas. These capacity numbers also do not assume any expansion of the current Central City District boundary.

So how much development is this and how long might it take to absorb? For context, the total square footage of new development completed in the Central City since 1990 amounts to about 23 million square feet, an average of roughly 1.3 million square feet per year. Just as the market for development has often increased in the past decades, the coming decades are likely to bring periods of intense development. Assuming the Central City could see an average of two million square feet of new development per year in the future, it could take between 40 and 60 years to exhaust the identified development capacity.

There are no guarantees, however, that this identified capacity can be achieved. Most of the land identified as potentially redevelopable is not currently available, some would require zoning regulation changes or environmental cleanup, and many areas would necessitate improvements to infrastructure to accommodate growth.

Table 1.16: Central City Redevelopment Capacity Summary (2007)

Generalized Zone	Total Acres	Developed Building Area (million sq. ft.)	Redevelopable Acres	Potential Net Increase @ Base FAR (million sq. ft.)	Potential Net Increase with Maximum FAR Bonus (million sq. ft.)	Projected Net Increase (million sq. ft.)	Projected Commercial (million sq. ft.)	Projected Retail (million sq. ft.) LOWER ALBINA

SNAPSHOT OF PLACE

Lower Albina has a very different feel and character than the rest of Central City, despite its location directly across from the high rises of Downtown and the Pearl District. The subdistrict is a mostly industrial area with a working waterfront. Massive grain elevators dominate the riverside. Bulk cargo ships dock on the Willamette and take on grain brought to Portland by rail from the inland northwest and upper Midwest. Outside of the industrial uses, there is also a school administration site, restaurants, bars, and limited residences focused around the Russell Street Conservation District.

57582

Lower Albina Subdistrict

Russell Street at Interstate Avenue (1940s)

Russell Street at Interstate Avenue (2009)

Location

Lower Albina is 200 acres, located on the east bank of the Willamette River, bounded by the Fremont Bridge/I-405 to the northwest, I-5 to the northeast, and NE Broadway to the south.

Evolution of the Subdistrict

What is now Lower Albina began in the 19th Century as part of the **City of Albina,** a town all its own located across the river from the original City of Portland. Albina was founded in 1873 when prominent Portland businessmen Edwin Russell, William W. Page and George H. Williams filed a plat with the County Clerk's office. The town was named after Page's wife, Albina (pronounced Al-beena) who'd migrated from Canada in 1859. Incorporated in 1887, the City of Albina was initially inhabited mainly by first- and second-generation Germans, Scandinavians and other Northern and Eastern Europeans.

Albina covered some 13 square miles, extending over much of what is now north and northeast Portland. From the beginning it developed as upper and lower areas, because of its dramatic topography. What is now defined as the Lower Albina subdistrict was the smaller area, covering some 200 acres, or about one-third of a square mile adjacent to the river. To the north and east, bluffs overlooking the river developed as middle-class suburbs. The lower areas around the railroad yards and industry on the Willamette River in "Lower Albina" emerged as a more **working-class neighborhood.**

A river ferry linked Downtown to Lower Albina, and the Riverside District developed with **river-related industries and businesses**. The ferry landed at the foot of Russell Street, which became the main street of the Lower Albina area. The east-west-oriented Russell Street and north-south-oriented Williams Avenue, which extended up the hill to upper Albina, were the neighborhood's primary commercial streets. Commercial buildings with businesses on the first floor and housing above lined these major streets. Williams Avenue in particular was a fashionable street, planked, as was the habit of the day, from Russell Street north to Alberta, and lined with establishments serving the many Volga Germans living in Albina. Russell Street had a rougher character, with its ferry slip and some 30 saloons from there, east to what is now Martin Luther King Boulevard.

1887 marked the opening of the **first bridge** crossing the Willamette, the Morrison, linking Downtown to the eastside. The bridge spurred further eastside growth northward into Albina, as a streetcar line was built running north up the steep hill of Mississippi Avenue, from the City of East Portland.

Albina's development was especially tied to the Oregon Railroad and Navigation Company (OR & N), which owned the extensive Albina railroad yards. Directed by Henry Failing and William S. Ladd, the company was a dominant presence in Albina and one of the most powerful corporations in Oregon. In real estate alone, the OR & N owned nearly two miles of waterfront property and controlled nearly 40 city blocks of track and terminal operations along Albina's streets. As many as 900 rail cars passed through the area each day. The opening in 1883 of a second rail line, the Union Pacific Railway, cemented the area's connection to the railroads. City ordinances were mostly concerned with the interests of the railroad and other large investors.

In 1891, Albina joined with the cities of Portland and of East Portland, forming the newly consolidated, expanded City of Portland, with an area of 25 square miles and population of more than 63,000. Albina was such a railroad-oriented town that certain laws were passed just prior to consolidation, so that preferences for the rail industry could be put into place before the City merged with its two neighbors. Development continued along the same lines in the early decades of the 20th Century, with rail- and river-oriented industry providing jobs for workers who found housing nearby.

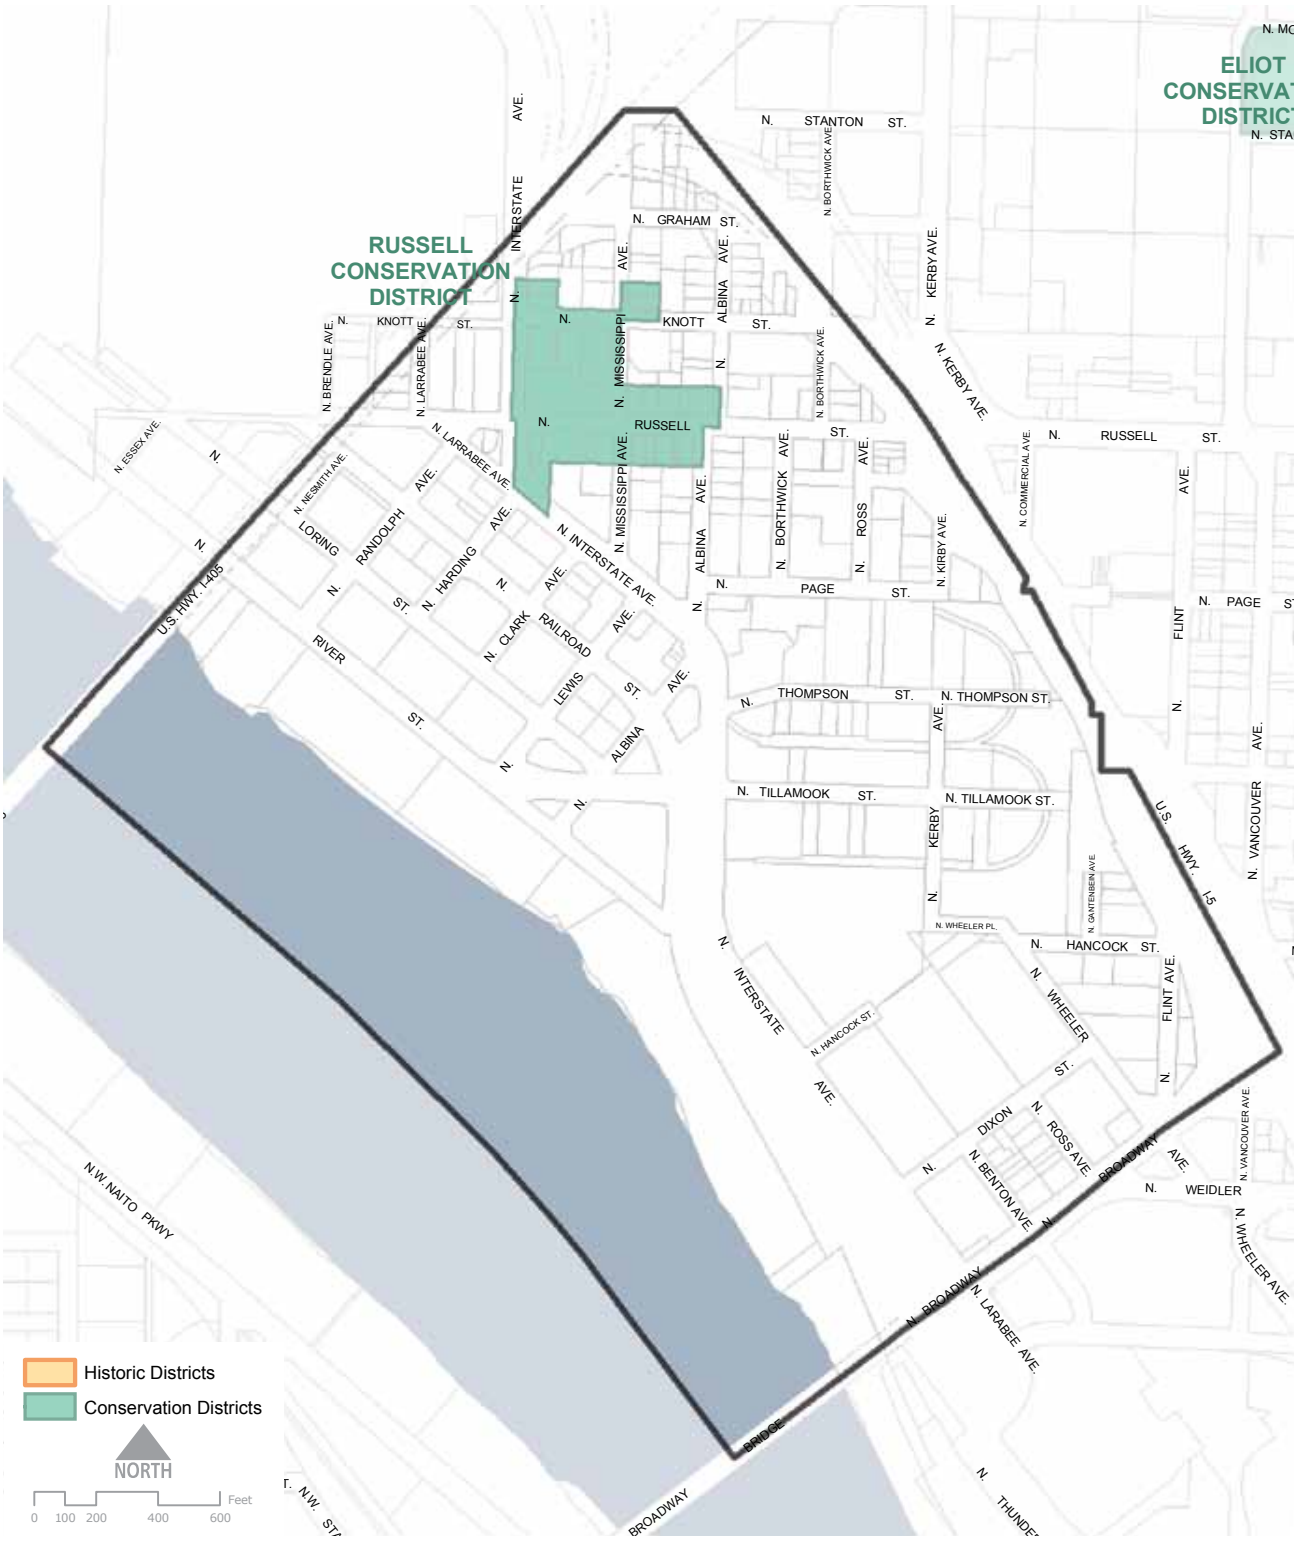
Today, Lower Albina includes the Russell Street Conservation District. Conservation districts are locally designated areas with a collection of individual resources that is of historical or cultural significance at the local or neighborhood level and are created by the City of Portland. The Lower Albina area also includes a Multiple Property Submission (MPS) for the Eliot Neighborhood, which was listed in the National Register of Historic Places.

The **industrial character of Lower Albina** has remained. The *City of Portland Comprehensive Plan* designates the area Industrial Sanctuary. Corresponding industrial zoning for much of the Lower Albina area has remained in place, and the industrial uses have been stable. The steep hill separating the industrial riverside area of the district from the residential neighborhoods also has helped maintain these industrial uses in the face of gentrification and racial transition caused by the 1990s-era economic boom in the nearby, more residential neighborhoods of North and Northeast Portland. Lower Albina — with fewer housing units, greater proximity to industrial areas and the bisection of Interstate 5 — has been little affected. The industrial area remains isolated by Interstate Avenue and its light rail line, which opened in 2004, and by the hills east of Interstate and to the south, leading up to Broadway and the Rose Quarter.

Outside of the industrial area, **some redevelopment** occurred in the 1990s and more recently. There has been some change in the Russell Street historic area and in a few spots near the new light rail line and its station stop between North Mississippi and North Albina Avenues. These areas seem to hold potential for further revitalization, as a gateway between the north and northeastern neighborhoods, the Rose Quarter Transit Center and downtown.

Albina: 1880 population: 143; 1888: 3,000; 1891: 6,000. Albina covered a large area, most of it upland from the Lower Albina industrial lands.

Much of the early industrial infrastructure has been demolished, but the Albina Yards remain, marked by the 1887 Union Pacific power plant smokestack, and are a designated Portland Historic Landmark.



The two- to four-story buildings have mostly been demolished in Lower Albina. The remaining historic structures are concentrated on lower Russell Street between Interstate Avenue and I-5. Buildings listed on the National Register of Historic Places include the McKay Brothers Block built in 1893, an Italianate and Romanesque Revival Cast Iron framed storefront with recessed entries, the Romanesque Revival Davis Block, built in 1890 and the Romanesque Revival Smithson Block, built in 1890. The White Eagle Saloon (AKA the Bucket of Blood), dating from 1905 (or constructed in 1915, according to the individual national register listing noted in the Albina Community Plan*), was a working-class tavern operated by Polish immigrants Barney Soboleski and William Hryszko.*

Lower Albina Historic Districts

The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

Planning History

Lower Albina has received relatively little planning attention, compared to most of the other *Central City Plan* subdistricts. Policies set in the 1988 *Central City Plan* have been carried out, without the radical change or development pressures that have affected other areas. The 1988 Plan called for strengthening economic development as an industrial employment area, preserving historic buildings, preserving the industrial uses on the River and also providing pedestrian access to it, allowing mixed-use along Russell Street, and providing improvements for both industry and adjacent neighborhoods. The 1993 *Albina Community Plan* also set goals for encouraging growth that increases the area's attractiveness, improving livability, and improving options for area residents.

Of the few actions listed in the *Central City Plan* section for Lower Albina, there has been relative success. This area is still largely dominated by industrial use, but has been improved by the Interstate MAX and revitalization near Russell Street.

Table 4.1: Lower Albina Plans

Plan	Year	Agency
Central City Plan	1988	BOP
Albina Community Plan	1993	BOP

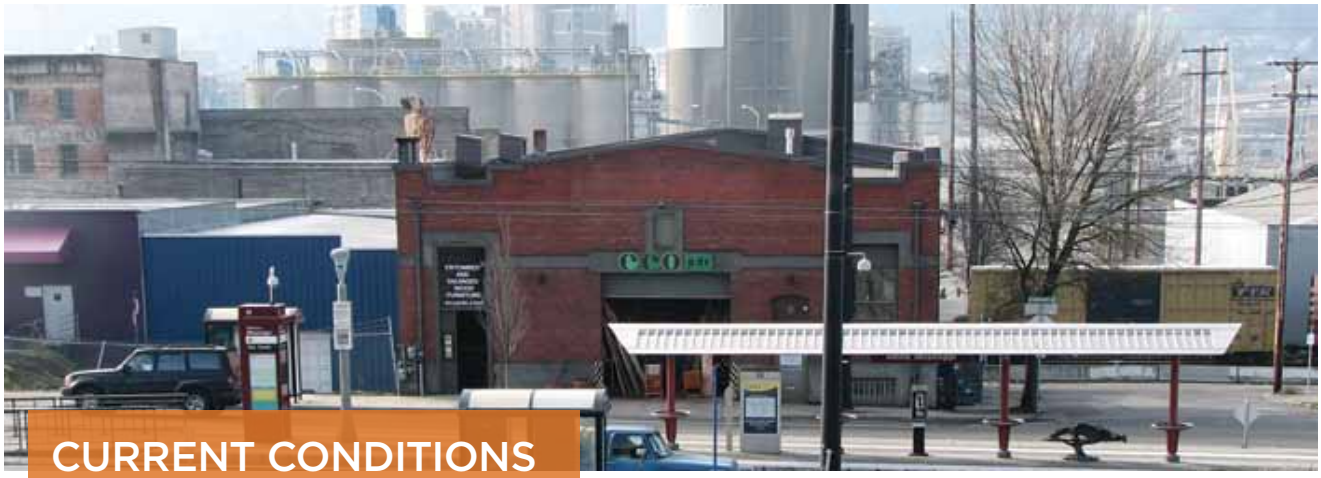
Interstate Transportation Strategy	2001	PDC
Russell Street Improvement Plan	2003	PDOT

Albina, African Americans, and Urban Renewal

In Albina, the residential community became more and more African American in the first half of the 20th Century. Black community life in Portland centered on Williams Avenue, which is part of Lower Albina at its southernmost block.

After World War II, the 1948 Vanport flood destroyed that heavily African American, war-era-constructed "company town" in North Portland, and its residents and business owners became refugees, most of them relocating to Albina. Many of these former war workers opened black-owned businesses in Lower Albina, including Neighborhood Bill's Grocery, Johnson and Smith's record shop, and Portland's first black-owned funeral home — Vann's Walnut Park Chapel. One-fifth of Lower Albina's population was African American in 1950; by the end of the decade, half of its population was black (Gibson, 2007).

However, even as the African-American population of Portland was continuing to move in the 1950s and '60s, they also were being displaced by urban renewal and infrastructure projects further south. The large-scale projects resulted in a disproportionate number of African Americans moving north to the already overcrowded Lower Albina neighborhood. The projects that forced these people to move are prominent in the landscape of Portland today — the Memorial Coliseum and Interstate 5 most notably — but what they replaced is often forgotten.



Lower Albina in 1955

The blocks immediately to the south of Albina were home to many commercial establishments and 476 homes, roughly half of them inhabited by African Americans that were demolished with the construction of Memorial Coliseum. Later in the 1960s, 300 people were displaced when their homes were demolished to build Interstate 5 and Highway 99.

Another major displacement occurred for the Emmanuel Hospital expansion urban renewal project. Beginning in 1970, many of the commercial buildings along Williams were demolished to Charlene's Tot and Teen Shop (already relocated from the Coliseum area) to make way for the hospital. The project included 55 acres bounded by the junction of the Fremont Bridge and I-5, North Russell Street and Williams Avenue. The intent was to remedy substandard housing while expanding the hospital and related facilities. More than 1,100 housing units were lost in Lower Albina, and the black population in Eliot shrank by two-thirds. After construction halted in 1973 after federal budget cuts, large areas of land were left vacant for decades.

The Albina neighborhood fabric of small blocks, and its community of African Americans, was further displaced to allow for the construction of large government buildings — the City's water bureau facilities in 1974 and the Portland school district's central office in 1980. This cluster of public maintenance facilities created stability for industrial uses in the majority of Lower Albina, but continued to change the local neighborhoods, creating gaps between what had once been neighboring districts. In the 10 years between 1960 and 1970 Albina lost more than half of its residents, and the center of the black community moved north into the nearby Mississippi, King and Humboldt neighborhoods

57587

CURRENT CONDITIONS

Land

Zoning

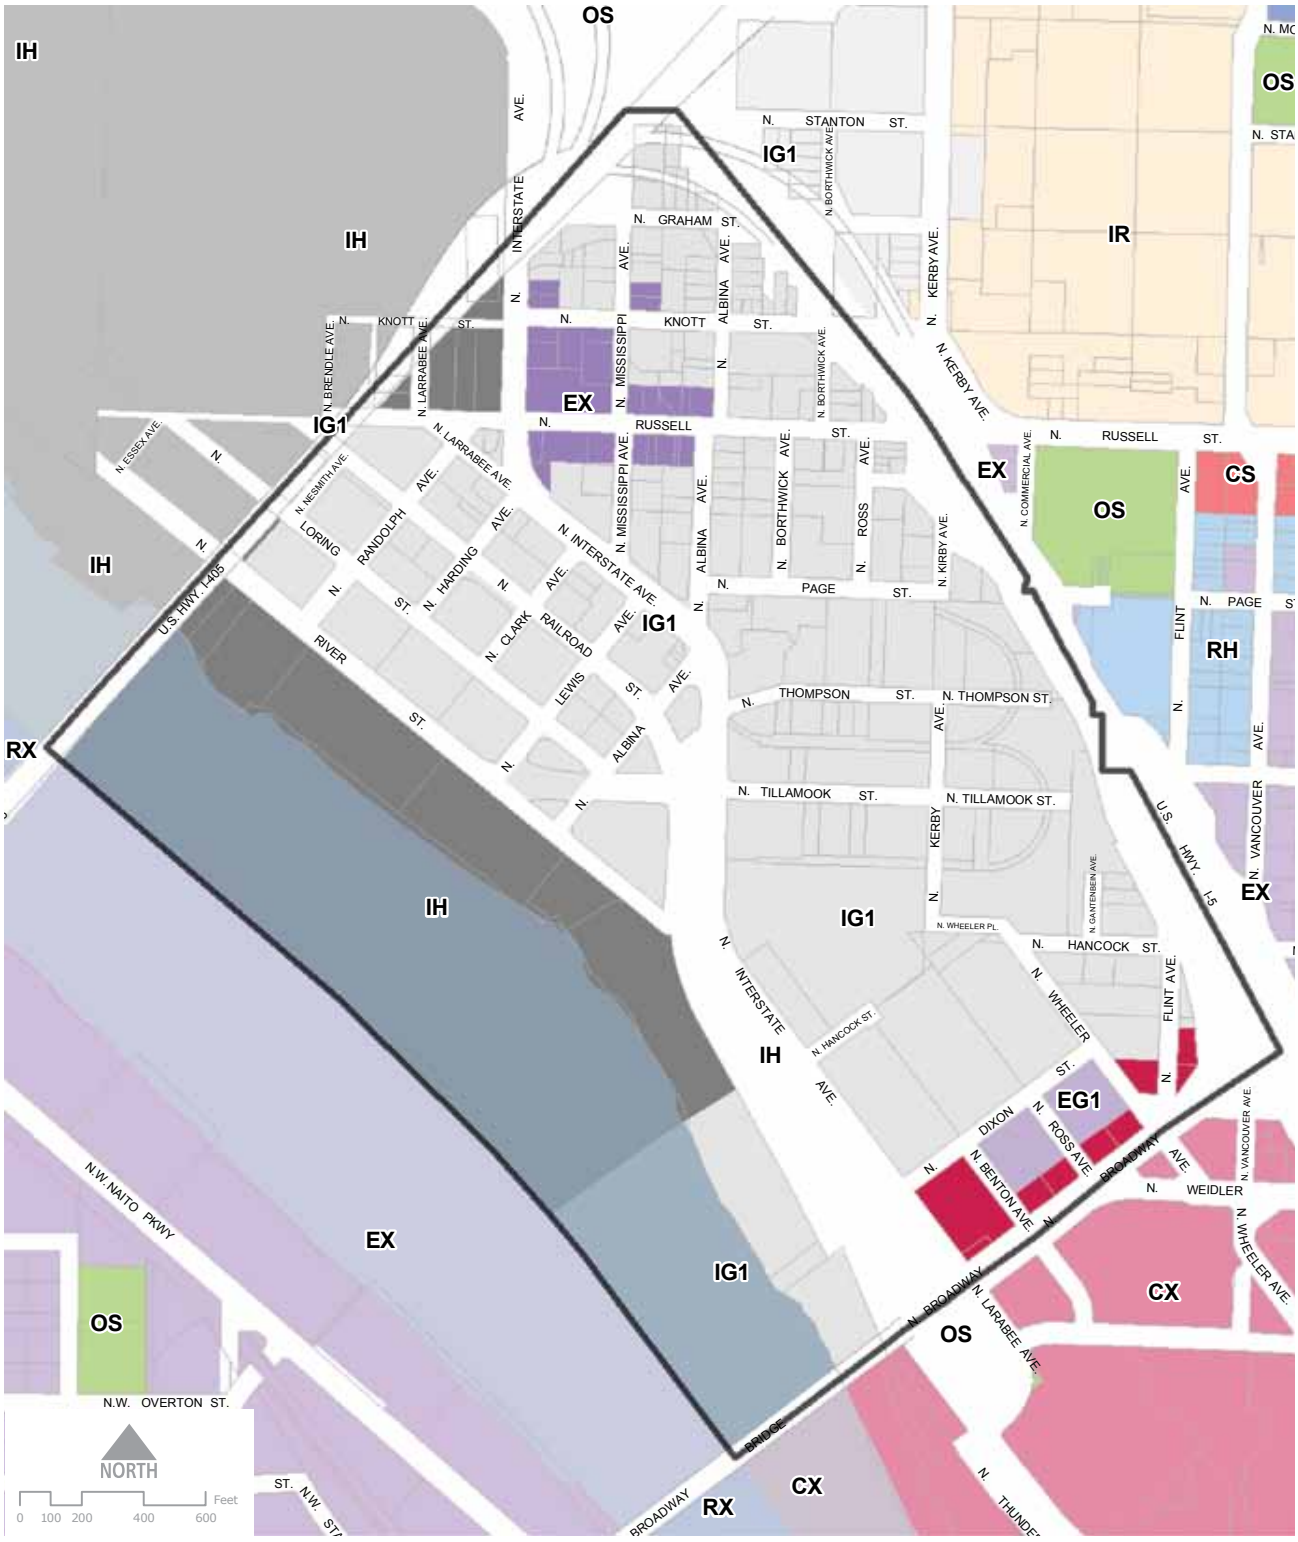
Lower Albina is primarily industrial, with relatively little housing or open space. The General Industrial 1 (IG1) zone makes up 76% of the land in Lower Albina. The area is mostly developed, with sites having high building coverages and buildings usually close to the street. IG1 areas tend to be the City's older industrial areas. Heavy Industrial (IH) makes up 16% of the district total, and is concentrated along the riverfront. Together the industrial zones make up more than 90% of Lower Albina.

Mixed-use zones total only a few acres each: Central Employment (EX), accounts for 4% of the district, and applies to roughly two blocks in the lower Russell "Main Street" area; and Central Commercial (CX) makes up 3%, concentrated at the southern boundary of the subdistrict adjacent to the Rose Quarter.

Existing Uses

In 2008, the Bureau of Planning inventoried the various land and building uses within the Central City. Staff conducted visual inspections of all buildings in Lower Albina and estimated the proportions of different uses by floors of buildings. This database, when linked to the City's 3-D building model provides estimates of different uses in the subdistrict. The results of this calculation are not precise but do provide more up-to-date estimates of uses than previously available.

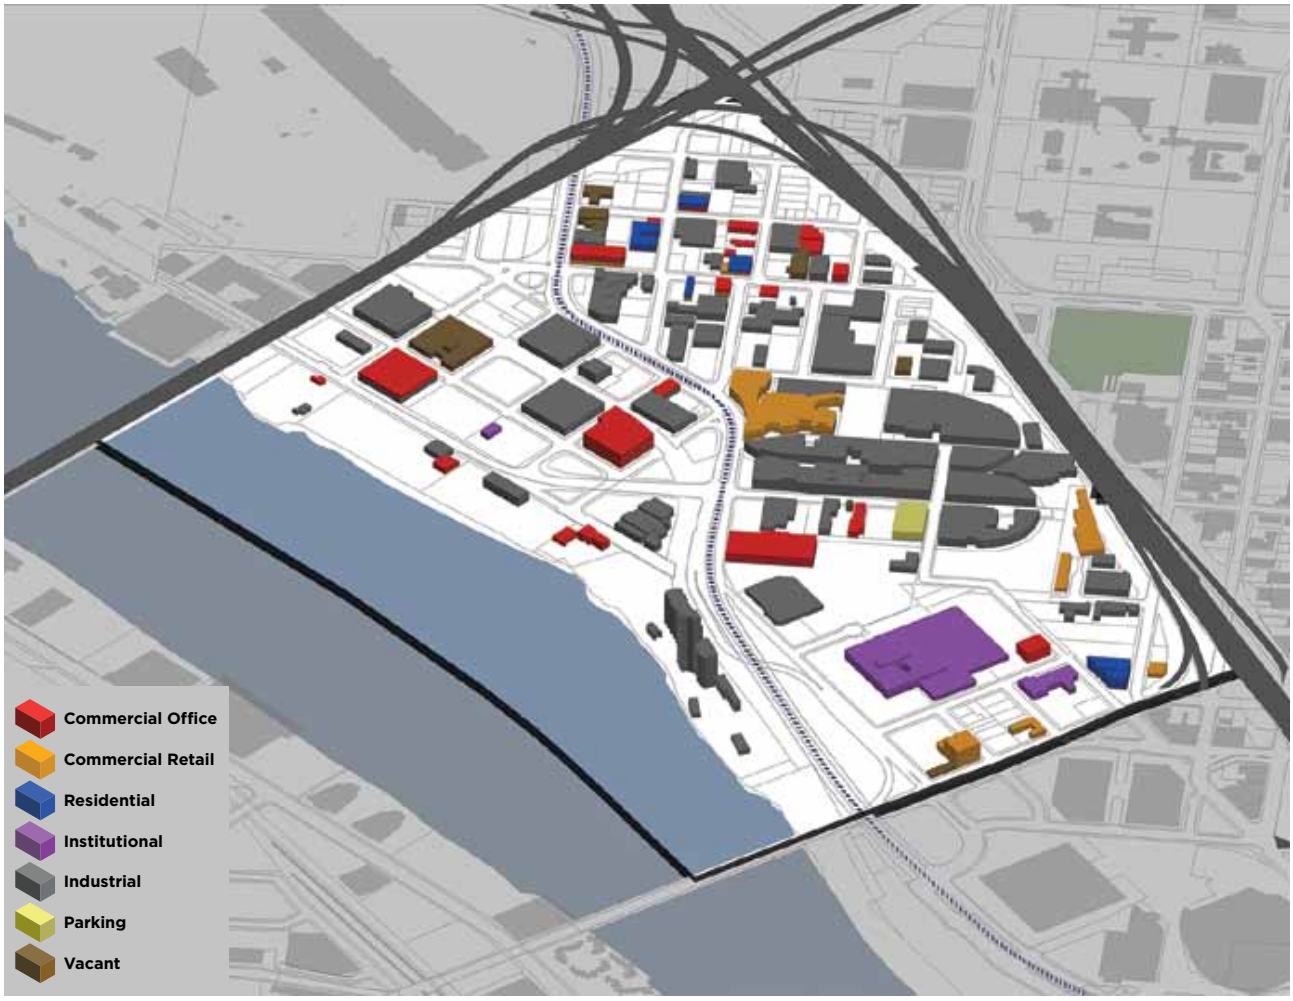
The existing building uses in Lower Albina show about 48% of the developed building area is in industrial use, whereas the zoning is roughly 80% of the land area. This can be explained with the office and industrial uses which are in industrial areas. The land-use inventory also showed that about 15% of the developed building area is office uses, and 5% is residential uses. Lower Albina has fewer than 90 residential units.



Lower Albina has somewhat limited retail, with most clustered around Russell Street. The area boasts dining and bar establishments as well as some local specialty stores. Lower Albina has an interesting dynamic, with industrial uses dominating during the day and an active nightlife which thrives along Russell Street. These uses generally do not conflict with each other and add to the diversity of the area. The Portland Public School administrative building, which Multnomah County government also occupies, is located in Lower Albina. Just to the north of this is the Portland Water Bureau campus as well as Legacy Emmanuel Hospital. Each of these uses has the potential to more strongly influence retail uses in the future.

Table 4.2: Lower Albina Zoning

Zone	Lower Albina Acres	Percent of Lower Albina	Central City Acres	Percent of that zone in Central City	Citywide Acres	Percent of that zone Citywide
Central Commercial (CX)	2.5	2.5%	668.9	0.4%	1,036.3	0.2%
General Employment 1 (EG1)	1.8	1.8%	9.3	19.4%	64.8	2.8%
Central Employment (EX)	3.9	3.9%	229.3	1.7%	779.6	0.5%
General Industrial 1 (IG1)	75.2	76.1%	335.9	22.4%	730.5	10.3%
Heavy Industrial (IH)	15.4	15.6%	41.6	37.0%	7,881.9	0.2%
	98.8	100.0%				



Note: River and right-of-way acres are not included; the small amount of land zoned Open Space in the district is actually in the right-of-way.

Restaurant Uses	74,749	3.5%
Other Uses	143,821	6.7%
Total Developed Sq. Footage	2,153,428	100.0%

Recent Development

Lower Albina has seen very limited development in recent decades, of either a commercial or residential nature. There has been some activity along the Russell Street area. The most obvious project demonstrating this activity is the Widmer Brewery Expansion. The Left Bank Lofts is the only residential project in Lower Albina in the last two decades.

Commercial/Industrial

Widmer Brewing
North Russell Street and Mississippi Avenue

Year built or proposed to be built	2008
Developer/owner	Widmer Brothers Brewing Co.
Number of units or square feet	Approximately 52,000 SF
Use	3-story expansion of industrial facility. Facilities for: fermentation, keg washing and filling, new cold keg and bottle storage, additional shipping, expanded lab and office space
Average rent or sales price	Construction: $22 million
Result of planning effort or private plan	Private
Unique features	Addition of 6 additional fermentation tanks expected to double the capacity at Widmer to 550,000 barrels annually — or more than 136 million pints. Expansion expected to lead to hiring of 45 more employees

Commercial/Industrial

Gotham Building
2240 N. Albina Avenue

Year built or proposed to be built	1915, renovation 2005
Developer/owner	North Interstate LLC
Number of units or square feet	22,985 SF
Use	3 stories, more than 10 office/service type businesses and a restaurant/bar
Average rent or sales price	Real market value: $3.7 million (2008)
Result of planning effort or private plan	Private
Unique features	Historic building originally built in 1915. Underwent a major renovation that took four years. Located along the Interstate MAX line.

Table 4.4: Lower Albina Recent Major Development Projects

Development Name Address	Year Built/Rehabilitated	# of Residential Units	Residential sq. ft.	Office/Other Commercial sq. ft.	Building sq. ft.	Site sq. ft.	Base Zone	Base FAR	Project Final FAR

Widmer Brewery Expansion 2424 N Interstate	2008			52,000	52,000	55,505	EX, IG1	3.1, BZ	0.94

Transportation

The main identity of Lower Albina is of a freight district. Access to I-5, I-84, and the Willamette River are essential for freight and industrial users. Its major industrial uses are also dependent on the rail access provided in the area. Additionally, Lower Albina serves as a major transportation throughway for automobiles, bicycles, and transit. The Russell Street area has many diverse uses, and draws in people at different times of the day than would be typical for a mainly industrial area. Russell Street serves two roles, both that of an industrial and entertainment center.

Automobiles and Streets

Freight movements by trucks are an important part of the economic well being for businesses in Lower Albina. Access to and from I-5 and I-84 are important. The access route to I-5 North is N. Interstate Avenue to the N. Going Street interchange. The access to I-5 South and I-84 is NE Broadway to the Wheeler on-ramp. This route is difficult due to the congestion at the Broadway-Weidler Interchange. Interstate Avenue is the only north/south arterial in Lower Albina and is used for automobiles, trucks, light rail, transit, bicycles, and pedestrians.

Parking

There are around 1,400 off-street parking spaces in Lower Albina. Additionally there are about 800 on-street parking spaces. Parking in Lower Albina, though limited, is not generally as heavily used as other subdistricts, except on rare occasions such as during events at the nearby Rose Quarter.

Bicycles, Transit, Pedestrians

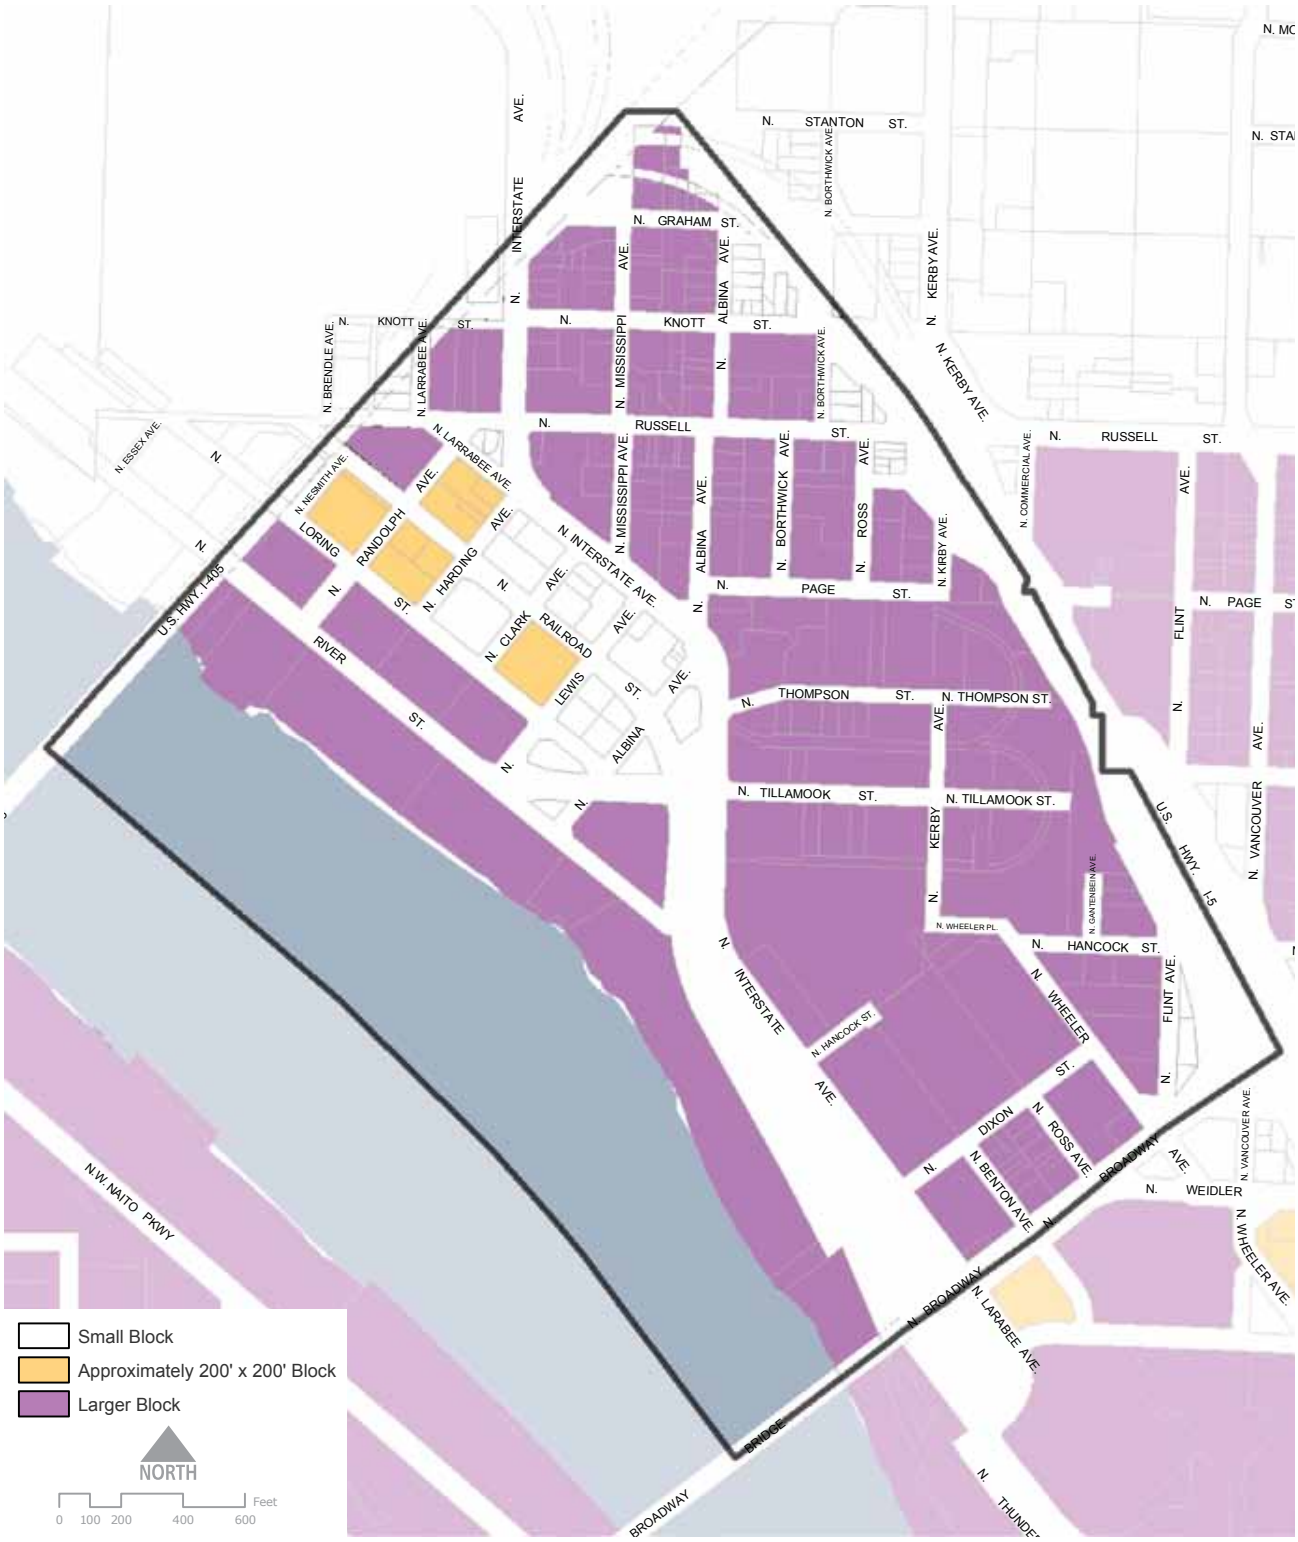
Bike infrastructure is incomplete in Lower Albina. A significant issue is extending bicycle access along N. River Street, into Albina Yards, and eventually to and past Swan Island. Portland Parks and Recreation has long considered that project, and it is currently ranked as a high priority in the *River Plan/North Reach* Action Agenda. In Lower Albina, crashes involving either pedestrians or cyclists resulting in injury are relatively low compared to other subdistricts. Most occur along Broadway, on the border with the Lloyd District.

The Interstate Avenue MAX line runs through Lower Albina and provides key access for the subdistrict with a station at Mississippi Avenue. There are also three TriMet bus lines that run through the subdistrict. For pedestrians who use transit, or walk within the subdistrict, adequate infrastructure generally exists. There are some obstacles, such as breaks in the street grid caused by the rail yard, bridge approaches, and topography.

Table 4.5: Transportation in Lower Albina

STREETS	Highest Average Daily Trips	Broadway and Interstate between Tillamook and Thompson (20–30K); rest of Interstate 10–20K
	Total	29,136 feet
	Poor Condition	729 feet or 2.5%
	Very Poor Condition	1,528 feet or 2.3%
	Failing Condition	0 feet
PARKING	On-street Free Parking Spaces	834
	On-street Metered Parking Spaces	0
	Surface Lot Parking Spaces	1,363
	Structured Lot Parking Spaces	8
	Surface/Structure Parking Spaces	0
	Total Parking Spaces	2,205
	Surface Parking Lot Area	23 acres
BIKE	Bike Lanes	1.6 miles
TRANSIT	Light Rail Lines*	0.8 miles
	Other Transit Lines	None
	No. of Bus Routes**	6
PEDESTRIAN	General Block Size	2.0 acres or 87,120 square feet
FREIGHT	Busiest Freight Route***	Tillamook/ Interstate

* *Length of street segments with rail in them, whether 1 or 2 way. Includes Transit Mall MAX.*



** *Through routes (i.e., 4 Division/St. Johns) counted as 2 routes. This affects total in River District and University District, where most of the changes occur.*

*** *Listed are streets with highest TSP freight classification.*

Freight

Freight is an important component of transportation in Lower Albina, due to the many active industrial uses. The Union Pacific rail yard is classified as a Freight District. Several streets leading into the rail yard are classified as Major Truck Streets and Priority Truck Streets (defined in appendix).

Lower Albina Block Size

September 21, 2009 **City of Portland | Bureau of Planning and Sustainability | Geographic Information System**
The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Willamette Riverfront

The riverfront in Lower Albina is part of Portland's deep water port and is largely industrial in nature. Although Lower Albina is designated as part of the Central City district, its character is more like the industrial areas to the north. As a result, planning for the land along the Willamette River in this subdistrict is being completed as part of the *River Plan/North Reach,* currently underway. Industrial infrastructure, including private docks, rail lines and freight routes, support river-dependent businesses throughout the subdistrict.

Lower Albina contains scenic views while crossing the Fremont and Broadway Bridges, but public access at the water's edge is restricted due to private land ownership and the river-dependent nature of the industrial businesses. Three private docks facilitate marine cargo and manufacturing activity. An on-street greenway trail is partially developed along N. Interstate Avenue and the Tillamook Overpass, but work on both northern and southern connections to the trail is needed.

Historically the Willamette River in the Portland area was comprised of an extensive interconnected system of active channels, open slack waters, emergent wetlands, riparian forests, and adjacent upland forests. Today Lower Albina is a largely developed landscape. The predominant existing natural resources are the Willamette River, including the flood area and vegetation along the banks, and elements of the built environment such as street trees, ecoroofs and vegetated landscaping.

Steep slopes along the banks south of N Tillamook Street are identified by the City as a landslide hazard and also are vulnerable to wildfires where they are vegetated.

Due to the alterations made to the banks of the Willamette River in Lower Albina, during a 100-year flood event, rising water would generally be confined within the River itself. However, there is a section of developed flood area near N River St. and N Albina Ave. Docks and piers extend into the river channel and bulkheads, and riprap armor the riverbank.

Upland Natural Resources

Steep slopes located near N Kerby Avenue and along Interstate 5 slopes are identified by the City as a landslide hazard, and, where vegetated, are also vulnerable to wildfires.

Table 4.7: Lower Albina Characteristics 1997–2008

	Lower Albina	Central City
Residents (2008 estimate)	130	34,400
Median age (2000)	32	36
Education — bachelor's degree or higher (2000)	25%	38%
Average household income (2000)	$24,802	$35,624
Housing units (2008)	87	22,994
Affordable* housing units (2008)	0%	56%
Jobs (2006)	2,712	134,870

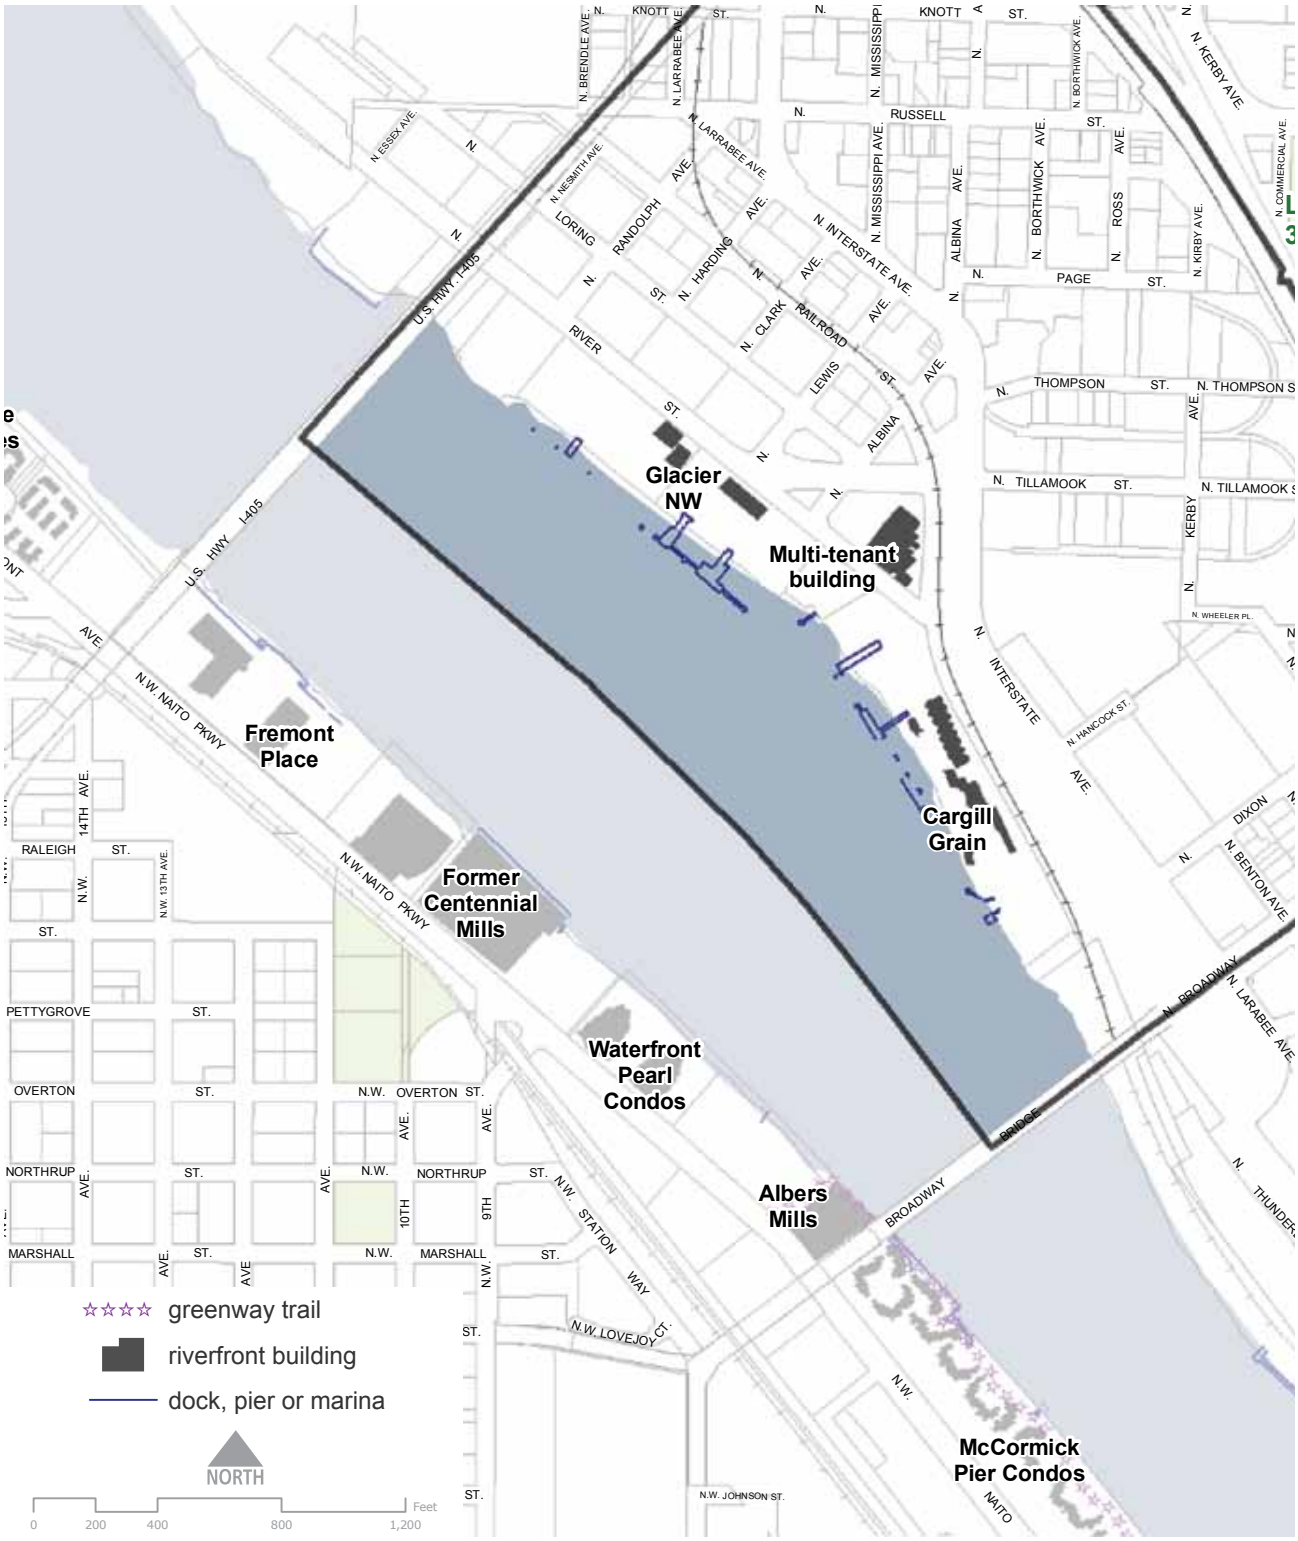
Change in crime rate between 1997–2007	–47%	–32%

** Affordable = units that are restricted by tenant or income*

Table 4.6: Lower Albina Residents Race and Gender (2000)

	Lower Albina	Central City
White	50%	79%
Black	33%	7%
Asian	3%	7%
Hispanic	9%	5%
Male	55%	60%
Female	45%	40%

People



While very few people live in the Lower Albina subdistrict, in 2000 the average Lower Albina resident was a bit younger than the typical Central City resident (median age 32 versus 36), with less education and a significantly lower income than is typical for the Central City. Of these residents, there are fewer whites and more African Americans than in the Central City population overall.

It is important to note that the most recent data available on demographics is from the 2000 U.S. Census. As such, the information is dated and there is a recognized inaccuracy in information.

Housing

In 2000, Lower Albina was home to about 141 residents, making up less than one percent of the Central City residential population. Of Lower Albina residents, almost all are renters. Only one unit was owner-occupied. In 2008, Lower Albina contained 87 housing units, which is a negligible amount of the units in Central City.

57596

Lower Albina doesn't have significant residential neighborhoods and has no land zoned for residential development. However, the few residential units located in Lower Albina are relatively affordable. The average rent per square foot is $1.21, the second lowest of any subdistrict, according to the Portland Development Commission 2008 Central City Housing Inventory.

Table 4.8: Lower Albina Employees and Residents

	Lower Albina	Central City	Percent within Lower Albina
Total Employees (2006)	2,712	134,870	2%
Total Residential Population (2008 estimate)	130	34,400	< 1%
Employee/Residential Population Ratio	21:1	4:1	—

Jobs

Lower Albina has a relatively high amount of business activity. Between 2000 and 2006, Lower Albina had an annual job growth rate of 8.3% compared to 1.6% for the Central City overall. During that time, the area gained around 1,000 jobs. However, it is important to note that the reported job gains appear entirely related to public schools and likely reflect reporting variation rather than actual gains.

Lower Albina has almost 21 employees for every resident, compared to the Central City which has almost four employees for every resident. This reflects Lower Albina's business and industrial focus, and its almost complete lack of residents.

About two percent of people working in the Central City work in Lower Albina, accounting for a total of 2,713 jobs. Some of the biggest employment sectors are:

- Education and Health (52%),
- Transportation, Warehousing, and Wholesale (14%), and
- Manufacturing (13%).

Crime

In 2008, 86 crimes took place in Lower Albina, totaling less than one percent of all Central City crimes. The 86 crimes represent a slightly lower average than the subdistrict's annual average of 120 offenses, which occurred between 1997 and 2008. This does not appear to be a significant fluctuation.

Public Facilities and Services

Schools

Considering its small residential population, it is not surprising that there are no public schools in Lower Albina. However, children in the area would attend Boise Eliot (K–8) and Grant High School (9–12). Alternative public schools include: Da Vinci Middle School (6–8), Benson Polytechnic High School (9–12), and Harriet Tubman Leadership Academy for Young Women (6–11). The 2000 United States Census estimated there were 24 residents under the age of 19 in Lower Albina.

Parks and Open Space

Although there is land zoned as open space in Lower Albina, there is in reality no usable open space. The land that is zoned OS is part of the light rail right-of-way.

Arts and Cultural Facilities

There are no known arts and cultural facilities located in Lower Albina. It is unlikely that this will change dramatically in the future as the main identity of the area is as an industrial district.

Community and Social Services

Neighborhood Associations

The Eliot Neighborhood Association includes Lower Albina in its western portion; it is bounded by the Willamette River, Broadway, Fremont, and NE 7th Avenue.

Social Services

LifeWorks NW is the only known social service with facilities located in Lower Albina. It is an organization that provides prevention, mental health and addiction services to community members.

FORECASTS AND GROWTH

Metro Forecast

The most recent forecast prepared by Metro was in 2008, for the year 2035. It projects a loss in households in the Lower Albina area. This is likely due to its zoning and industrial sanctuary status. Jobs are expected to grow by about 16 percent compared to the 49 percent growth forecast for the Central City overall.

Metro's forecasts project no increase in households in Lower Albina. To meet the 2035 job forecast, the district will need to add 15 to 20 new jobs per year (on average) for the next 25 years.

Note: Metro forecasts are done every five years. The most recent forecast was completed in 2008. Numbers differ from "actual" numbers for present and past dates because they are based on forecasts from an econometric model, not on census data. It is also important to note that the most recent census data is quite old at this point, dating from 2000.

Table 4.9:
Lower Albina Metro Forecast
Household Growth 2005–2035

	Lower Albina	Central City
2005	71	17,766
2035	66	51,794
Growth	–7%	192%
Net Increase	–5	34,028

Table 4.10:
Lower Albina Metro Forecast
Employment Growth 2005–2035

	Lower Albina	Central City
2005	2,474	150,479
2035	2,880	224,891
Growth	16%	49%
Net Increase	406	74,412

Redevelopment Capacity

In 2007 the Planning Bureau's *Central Portland Development Capacity Study* looked at vacant and underutilized land in the Central City to determine what sites were potentially available for redevelopment and what kinds of development could be built on the sites. The summary map and table from this study for Lower Albina are shown on the next page.

Lower Albina's redevelopment potential is very much tied to zoning. The vast majority of the buildable land in Lower Albina is zoned industrial. The only exceptions are the small area of Central Employment (EX) zoning along N Russell Street and a strip of commercial zoning (CX) along N Broadway immediately to the east of the Broadway Bridge. Without changes to the zoning, it is unlikely much of the development capacity would be fully realized.

57598

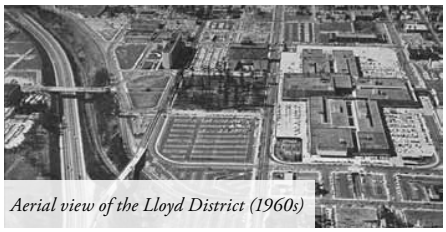
LLOYD DISTRICT

SNAPSHOT OF PLACE

The Lloyd District provides a different mix from other parts of Central City. Its buildings range from large, unique complexes like the Rose Quarter, Convention Center, and Lloyd Center Mall, to mid- and high-rise apartments, and to office towers paired with adjacent surface parking lots or parking structures. Block sizes break from the typical 200-foot grid found throughout Downtown and the Central Eastside, forming super blocks to accommodate the large entertainment and commercial uses. The area has access to two major freeways and to light rail, as well as to a streetcar system beginning construction soon. Because of the many existing surface parking lots, vacant parcels, and underutilized properties, the subdistrict offers substantial redevelopment potential.



57600

Lloyd District Subdistrict

Demolition for Lloyd Center (1950s)

Aerial view of the Lloyd District (1960s)

Lloyd Center (1960s)

Location

The Lloyd District is 407 acres located on the eastbank of the Willamette, bounded by I-84 on the south, 16th Avenue to the east, and NE Broadway and NE Schuyler to the north.

Evolution of the Subdistrict

The essential character of today's Lloyd District came about with the opening in 1960 of the **Lloyd Center Mall and the Memorial Coliseum.** Later in the decade came the construction of the I-5 freeway, cutting north-south along the western part of the subdistrict, and the I-84 freeway, built in Sullivan's Gulch along the former Banfield Expressway. The Gulch defines the southern edge of the district.

Long before these freeways and large car-oriented structures, in the 1840s and 1850s, Euro-Americans claimed large swaths of land and settled in what is now the Lloyd area. They made their claims as part of the Donation Land Claims Act, which encouraged widespread western migration in the early and mid-19th Century. Parcels totaling several hundred square acres were awarded in what is now the Lloyd District to Jacob Wheeler in 1845 and to the Irving family in 1851. Today's Irvington neighborhood was platted on 200 acres of the Irving family's claim, north of what is now Lloyd Center Mall. These plats followed the lead of Portland's westside, generally using a 200-foot x 200-foot grid. Other early uses of the land, until the 1870s, were for timber, farming, and grazing for animals.

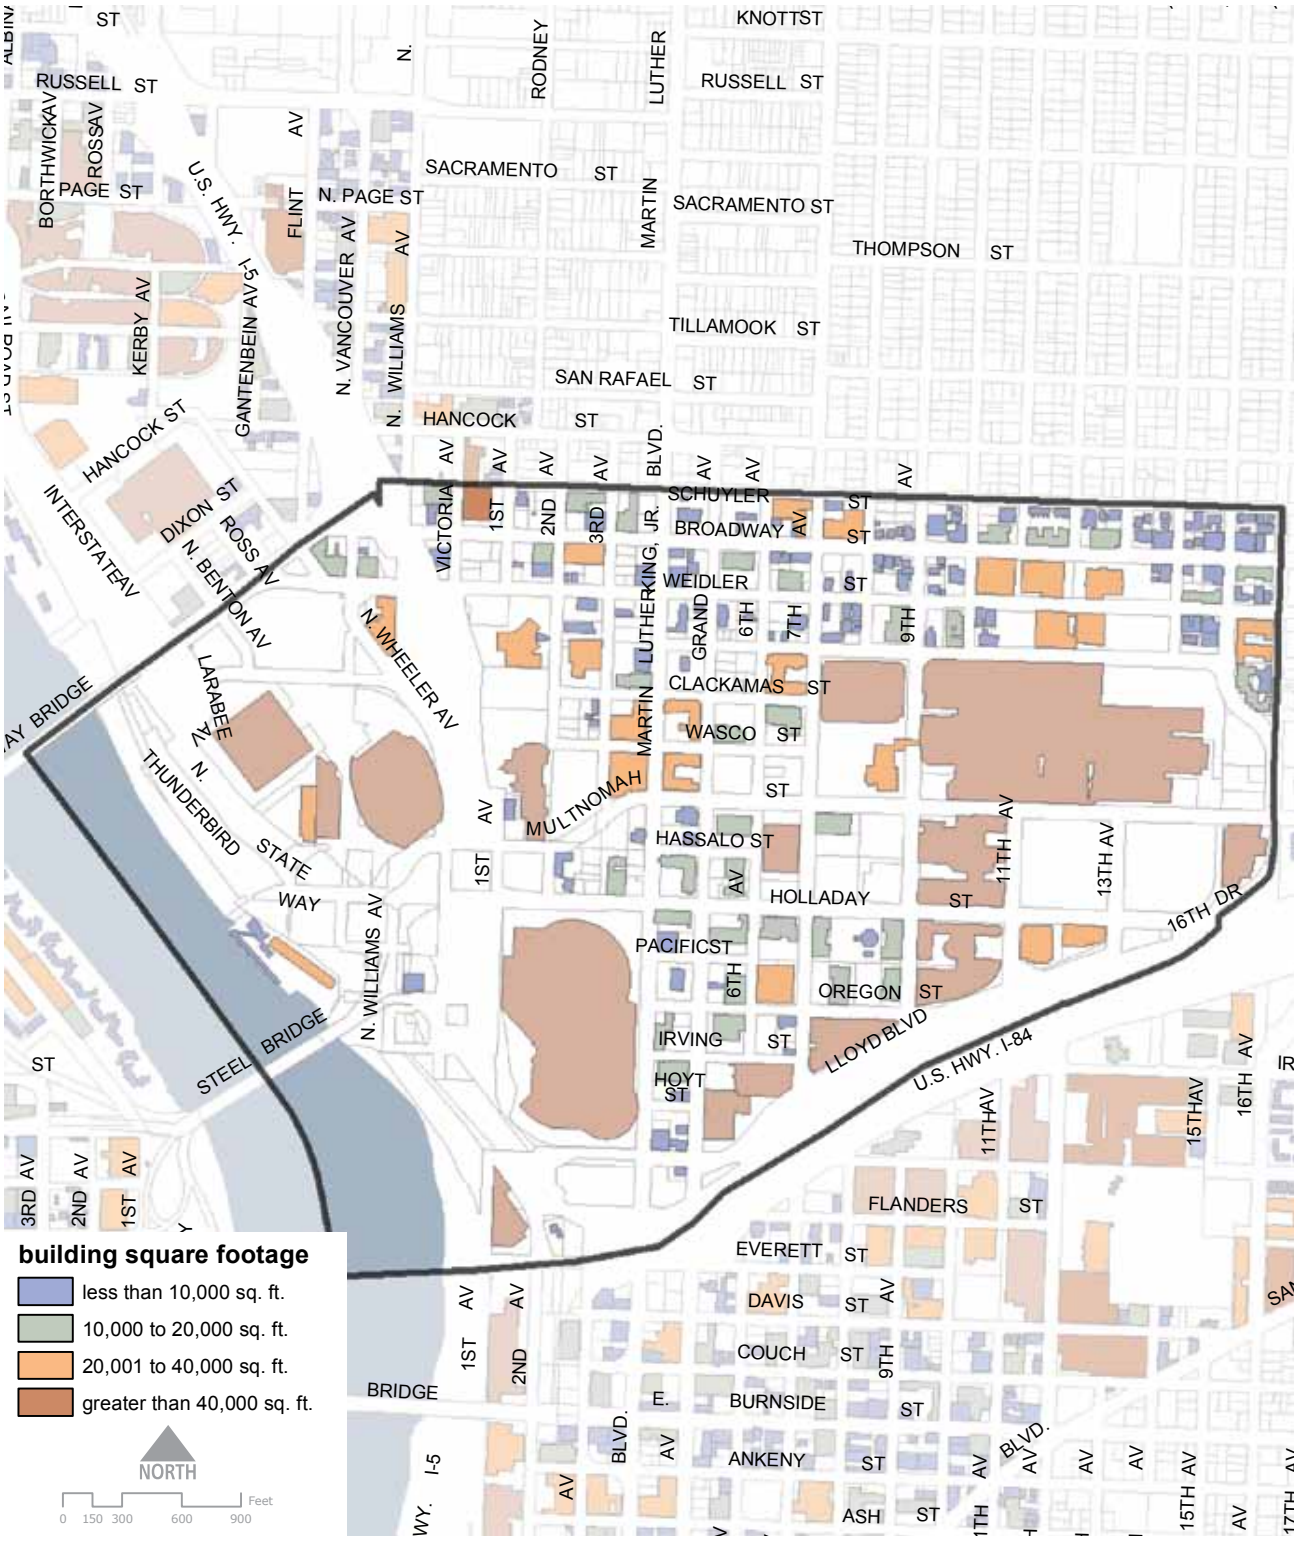
Wheeler sold his holdings to Ben Holladay, who platted the land in 1871 as the Holladay's Addition residential neighborhood, again on the 200-foot square grid. This area, like the others, became part of the adjacent City of East Portland, located to the south and incorporated in 1870. Holladay also included as part of his development more than four acres for **Holladay Park,** the first public open space on the eastside, which remains a park. Holladay Park Addition was platted in 1902, extending the residential development pattern eastward. These middle- to upper-middle class residential areas were similar to the Irvington neighborhood to the north. Some of the grid pattern was a rectangular variation on the westside type, at 200-foot by 400-foot.

The **City of East Portland** was consolidated into Portland in 1891 (as was the City of Albina, located immediately to the north of East Portland). At around the same time, early bridges were being constructed across the Willamette River. The first was the Morrison Bridge, completed in 1887. In 1891 and 1892 came the opening of the Hawthorne and Burnside Bridges, respectively, with the Broadway Bridge opening nine years later.

The area was **primarily single-family homes in 1910** when Ralph Lloyd and family began acquiring properties. Commercial uses were concentrated along major streets that were also the streetcar lines, including Union Street (now Martin Luther King Boulevard) and NE Broadway. Over the next three decades, Lloyd and his descendants continued to purchase property, accumulating 100 city blocks. They demolished the existing single-family housing on these blocks and built **new commercial and multi-story apartment buildings.**

Memorial Coliseum under construction (1960)

Memorial Coliseum after completion (1960)



Just north, what had originally been the City of Albina had grown up in the later 19th Century around river-related industries. In the 1930s, '40s and '50s, it became the hub of Portland's African-American community, as neighborhoods elsewhere excluded non-whites with restrictive real estate covenants and "redlining" that cut off bank loans to African Americans. Parts of what is now the Lloyd District were the southern edges of Albina, and home to a vibrant jazz and bebop music scene, especially in the 1940s and 1950s. Williams Avenue was the focus of this scene. One of the remaining buildings in the Lloyd, now called the Left Bank Building, was a jazz club where Duke Ellington, one of many famous musicians, had played. Many of the residents of both Lower Albina and the Lloyd District were displaced by the large-scale projects that would take place in the area over the coming decades.

At the same time as Albina was thriving as an African-American enclave, Ralph Lloyd and family were accumulating land in the central and eastern portions of the subdistrict, planning Lloyd's vision of that area as a **"city within the city."** He imagined not just a shopping mall but also a grand hotel, garden apartments and recreational facilities, including a golf course or professional stadium. Not all of this came to fruition, but the Lloyds did manage to transform the low-density residential neighborhood into a commercial and higher-density area. The Lloyd Corporation broke ground for its shopping mall in 1952. Not coincidentally, in the 1940s, the State of Oregon had begun developing plans for east-west and north-south freeways through the area; the east-west I-84/Banfield opened in 1955, the north-south I-5 in 1966. Lloyd's shopping mall opened in 1960, located conveniently near the new freeways. Indeed, the Lloyd Center and the 20th Century transformation of the area would not have happened without the growing popularity of the automobile.

The Center covered 90 city blocks, 56 of which were occupied by shops and offices, including 200 tenants, 100 in the open-air retail mall. Blocks not covered by buildings were used for parking, providing some 8,000 free parking spaces. Lloyd Center was one of the first large-scale, open-air shopping malls in the country, and was a regional market draw. Disconnected as it was from the existing downtown retail core, the expected result (according to a Planning Commission report in the 1950s recommending approval of the project), would be that "Portland would in effect have a split central shopping core."

The Lloyd District was also greatly affected by other mid-20th Century efforts to build major new uses not in Downtown but rather on the eastside and to build them at a new, **large, car-oriented scale.** For instance, in 1945, voters rejected the idea of locating a new Civic Center in Downtown, and subsequent efforts began to focus on an eastside location. The following year, 1946, two separate referenda approved building a Coliseum — to be part of the new civic center — on the east bank of the Willamette River between the Steel and Broadway Bridges. The Veterans Memorial Coliseum was financed by an $8 million bond measure approved by voters in 1954. Land clearance to make way for the Coliseum started around the same time as the Lloyd Center was being constructed, in the 1950s. The building was completed in 1960, the same year the Lloyd Center opened. Also known as the "Glass Palace," the Coliseum is an icon of Portland

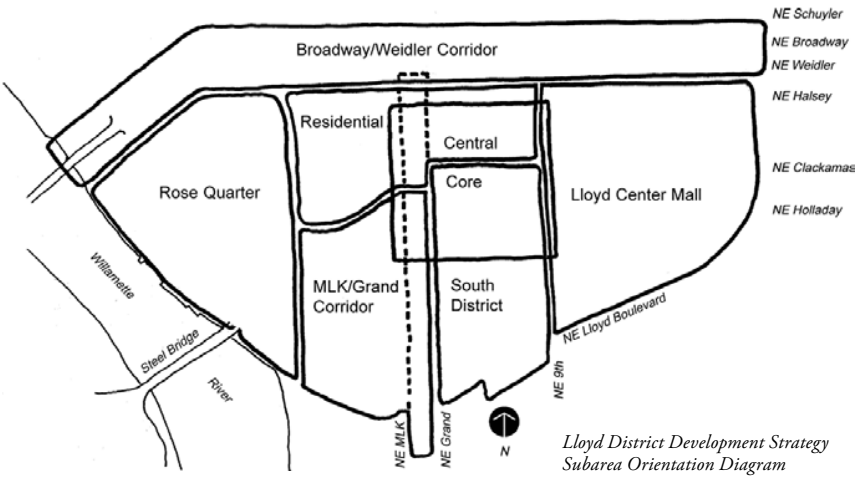
modernist architecture, designed by internationally known architecture firm Skidmore, Owings and Merrill. It is monumentally sited on the bluff above the Willamette, a glass-curtain-walled box with a freestanding concrete seating bowl inside.

Large-scale projects continued to be built in the Lloyd District during the remainder of the 1960s and on into the next decades, sprinkling the area with an assortment of corporate office towers, medical buildings and hotels, each accompanied by surface parking lots or parking structures. The new construction greatly contributed to the amount of Class A office space available in the Lloyd District; the space is comparable to parts of Downtown. Though the total square footage developed over the years is significant, the many buildings and new workers have never provided a sense of place or pedestrian level activity. The tall buildings are scattered through the district and do not provide a critical mass or memorable visual impression or "place". For instance, in the early 1970s, the Lloyd Corporation built two prominent office towers on NE Multnomah, one at 5th Street, the other at 7th Street, both with corresponding parking. The triangular shaped hotel tower that stands prominently alongside the I-5 freeway dates from 1970; Legacy hospital built the Holladay Park Medical Center in 1981; another office tower rose in 1981 at Multnomah and 9th; and the federal government in 1985 built an office tower at the southern edge of the subdistrict, on Lloyd Boulevard at 9th Street. Other major buildings include the Bonneville Power Authority, State Office Building, and the Metro renovation of the Sears Tower. In 1990 the Oregon Convention Center opened, another large, public facility drawing large numbers of people from outside the area. In 1997, the Liberty Centre office tower was built at 6th and NE Holladay.

Even while this car-oriented pattern of development occurred, the Lloyd District has also been a pioneer in more recent, latter-20th Century-era efforts to provide alternatives to the auto. On the heels of the eastside MAX light rail line that opened through the area in 1986, connecting through the Lloyd District from Downtown to the eastern suburbs, a public-private partnership of local business and property owners and City agencies founded the **Lloyd Transportation Management Association** (LTMA) in 1998. The LTMA has successfully mounted efforts to share parking spaces and encourage walking, bicycling and transit use for commuters, including advocating for the new streetcar line beginning construction in later 2009. (The LTMA is described further in the *Transportation* section of this chapter.)

Besides the Lloyd Center Mall, there are other large, key sites in the subdistrict owned by single landowners. For instance, the bulk of the Rose Quarter is owned by either the Trail Blazers or the City of Portland, and Ashforth Pacific owns many of the office towers and parking structures and surface lots.



Planning History

While the *Downtown Plan* (1972) focused solely on the westside of the Central City, the *Central City Plan* (1988) crossed the river to encompass the Coliseum/Lloyd District area (as well as riverfront areas to the north and south). The major intent was to connect eastside commercial development in the Lloyd District with the Downtown core as a continuous swath of Central City downtown activities, reinforcing the Lloyd Center as the eastern anchor of the Central City retail. Other goals were for improving the pedestrian environment; and recognizing and enhancing major focal points such as Lloyd Center, the Convention Center, and the Coliseum District.

Of the action items identified in the 1988 *Central City Plan*, roughly two-thirds have been completed. Completed actions include many pedestrian improvement projects and a feasibility study, which laid the foundation for the current Urban Renewal District. However, intentions of 1988 plan for

57605

Lloyd District Development Strategy Subarea Orientation Diagram

a continuation of dense downtown commercial development across the River to the eastside Lloyd District have not materialized. The area still has a very distinct development type and pattern that does not necessarily align with Downtown.

(See appendix for table of action items and status)

Subsequent plans continued to implement these initial goals for the Lloyd District. The *Proposed Oregon Convention Center Area Development Study* (1988) set the stage and created momentum for the future of the Oregon Convention Center (OCC) and the Lloyd Center area. It was developed by the Portland Development Commission (PDC) in cooperation with the City's Bureau of Planning and Bureau of Transportation. The plan contained policies and guidelines as well as blueprints for specific actions and development opportunities for both the public and private sector. This was the key planning effort that changed the Lloyd District. Important recommendations include Holladay Street improvements, the ring road concept (which linked Lloyd Blvd., Interstate, and 15th/16th Avenues), Multnomah and Hassalo Street improvements, renovation of Lloyd Mall and the Red Lion Hotel, and Union (MLK) Station.

Since the late 1980s ODOT has studied improvements on I-5 between Greeley and I-84. However, due to a lack of community consensus and funding, improvements have not been made and the section of the freeway remains a concern for safety and access.

The Oregon Convention Center Urban Renewal Area (OCCURA) was adopted by City Council in 1989, and its ensuing Plan developed the same year "to revitalize the area around the Convention Center while creating jobs and greater livability for visitors and residents." Goals included maximizing regional job potential, targeting jobs and businesses for local benefits, reinforcing the expansion of Central City to the eastside, upgrading the physical setting, and stabilizing adjacent neighborhoods.

Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan (1991) were prepared by the Bureau of Planning to further implement prior goals. Additionally they supplemented the overall Central City Design Guidelines, produced the same year, with more specific recommendations based on the particular circumstances and character of subdistricts.

The *Lloyd District Development Strategy* (2001) followed up on the earlier work of the *Oregon Convention Center Area Development Study* (1988). The purpose of the strategy was to refresh the vision and guide new public and private development in the Lloyd District for the next 10 to 20 years. Major concepts of the plan included the designation of subareas (including a central core and a residential area), emphasizing residential development (especially affordable), creating a secure 24-hour community with a lively mix of activities and services, and becoming an active and vital part of the Central City. The existing strong features of the area, which were envisioned to remain as such, were Lloyd Mall, the cinema, Oregon Convention Center, Rose Garden, and the Broadway and Weidler corridor.

The *Rose Quarter Urban Design Plan and Development Strategy* was completed in 2001 in a public process run by the PDC and consultants, including Urban Design Associates of Pittsburgh. The push to smaller-scale, smaller-block pedestrian-oriented development continued and solidified. The preferred alternative proposed by the project would have reinstituted the 200-foot square grid into the Rose Quarter site, populating the new blocks with a mix of uses to replace the large scale, intermittently-used Memorial Coliseum building.

The *Lloyd District Housing Strategy* was developed in 2002 as an "action plan to implement housing development through urban renewal investments and activities supported by the PDC and private partners in the Oregon Convention Center Urban Renewal Area (OCCURA). It establishes housing goals and specific actions to accomplish the vision of a healthy, urban neighborhood. Goals include increasing housing availability, affordability, diversity, and development as well as overall district livability.

The *Lloyd Crossing Sustainable Urban Design Plan* was a 2004 PDC study proposing a new 35-acre urban district that would maximize development potential while achieving environmental goals like carbon neutrality, habitat restoration and reliance on solar energy. It was perhaps ahead of its time and is being revived now in light of recent interest in "EcoDistricts."

CURRENT CONDITIONS

Land

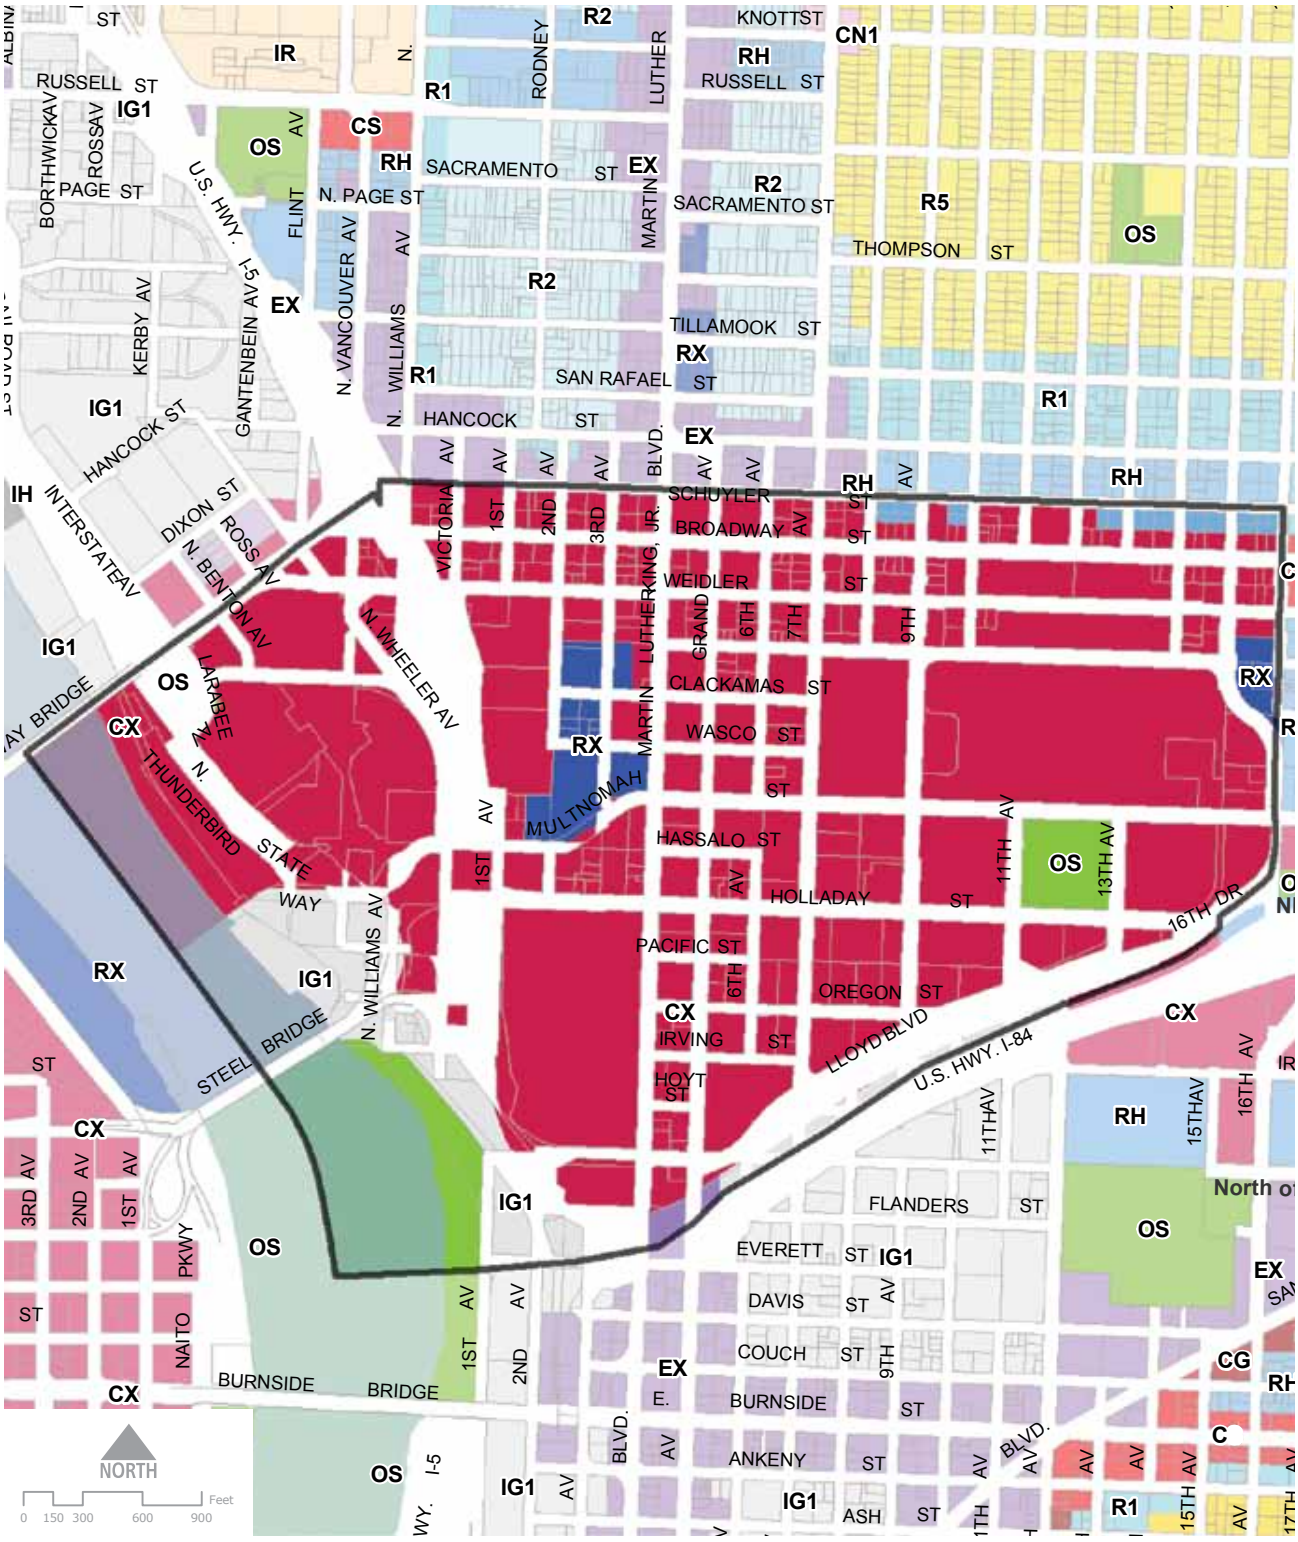
Zoning

The Central Commercial (CX) zone is a mixed use zone making up 87% of the Lloyd District. It allows a range of uses such as office, government, cultural, and residential. Other zones in the subdistrict include General Industrial 1 (IG1) at 5% of the area and Open Space (OS) at 3% of the area.

Existing Uses

In 2008, the Bureau of Planning inventoried the various land and building uses within the Central City. Staff conducted visual inspections of all buildings in the Lloyd District and estimated the proportions of different uses by floors of buildings. This database, when linked to the City's 3-D building model provides estimates of different uses in the subdistrict. The results of this calculation are not precise, but do provide more up-to-date estimates of uses than previously available.

According to the 2008 land-use inventory, most of the Lloyd District is used for some sort of commercial activity. Of the commercial uses, office accounts for 26%. About 16% is retail/major event entertainment and 14% is retail/shopping. Hotels make up about 10%. Another 10% goes to parking structures — though it should be noted that this figure does not include surface parking lots, which are not "developed" land and not considered in the land-use inventory of buildings.



Lloyd District retail mainly focuses around two areas, the Convention Center and Rose Quarter area, and the Lloyd Center Mall area. The Rose Garden Arena, home of the NBA Trail Blazers and a venue for large national attractions, and the Veterans Memorial Coliseum, are key buildings in the area. The two buildings together host 300 events annually. Anchoring the southern portion of the study area is the Oregon Convention Center (OCC), which hosts industry trade shows and meetings. The area is dominated by regional and national visitors and is mostly empty when events are not taking place. Three restaurants existed there a decade ago with none remaining.

Table 5.2: Lloyd District Zoning

Zone	Lloyd District Acres	Percent of Lloyd District	Central City Acres	Percent of that zone in Central City	Citywide Acres	Percent of that zone Citywide

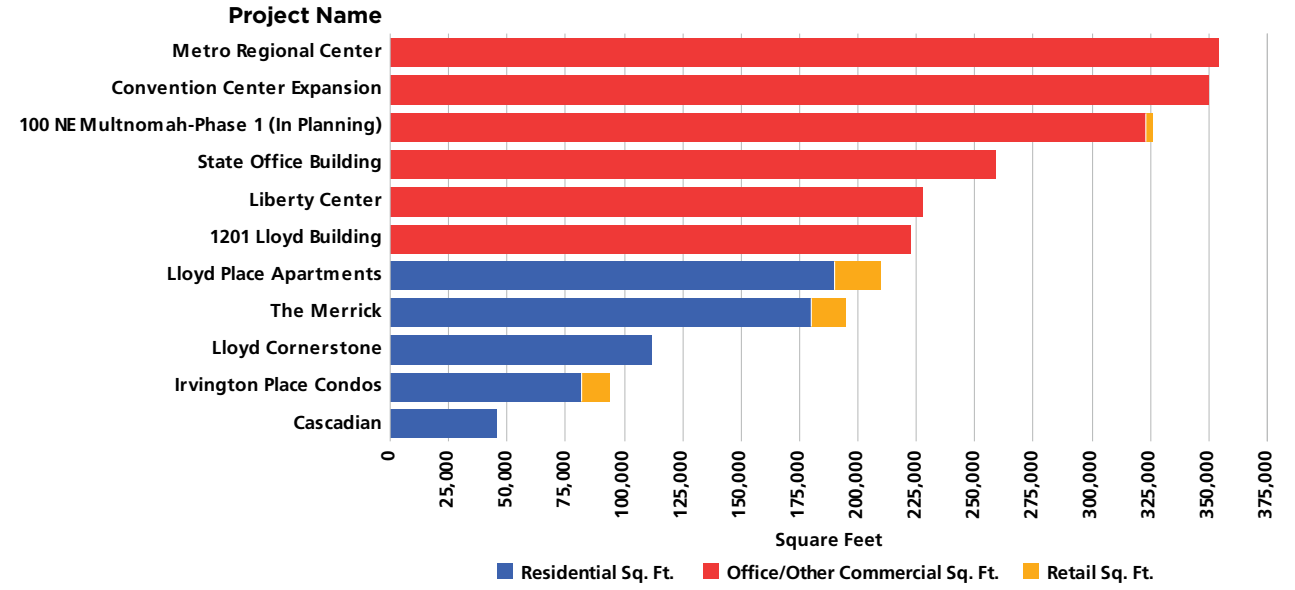
Total Developed Sq. Footage	11,816,038	100.0%



The Lloyd Center Mall fills an important role as a middle-market retail center. It is a regional draw, serving a seven-mile market area and one million customers a month. There are 31,000 employees within a one-mile radius of the mall. The 1.4 million square foot mall serves a regional market. It also includes six anchors, 180 stores, an ice skating rink, movie theater, restaurants and a 900-seat food court.

The small commercial area to the north of the mall expanded steadily during the 1980s. Anchors on the east-west one-way couplet of Weidler and Broadway include neighborhood stores and restaurants, such as Safeway and Newport Grill. Broadway has a strong cluster of independently owned shops and boutiques, mainly serving the neighborhood between 7th and 16th Avenues.

Recent Development

Ten major projects, mainly commercial and residential, have been built in the Lloyd District since 1990. The new residential projects consist of 620 units, and some of those are mixed-use and provide retail space as well. The area encompassing the 10 completed projects totals 1.7 million square feet.

Graph 5.2: Lloyd District Major Projects 1990-2009: Amount of sq. ft. by Use

Development in the Lloyd District has been limited in recent years. Some examples of recent development and renovations are shown here.

Residential

Use	6-story, mixed-use development, ground floor commercial
Average rent or sales price	Project cost: $18,700,000
Result of planning effort or private plan	Planning effort (received a transit-oriented development easement in Metro's Transit-Oriented Development Program)
Unique features	Residential exercise room, rooftop community room and spa, within a short walk of three MAX light rail lines and five frequent service bus lines.

Commercial/Industrial

1201 Lloyd Building

1201 NE Lloyd Boulevard

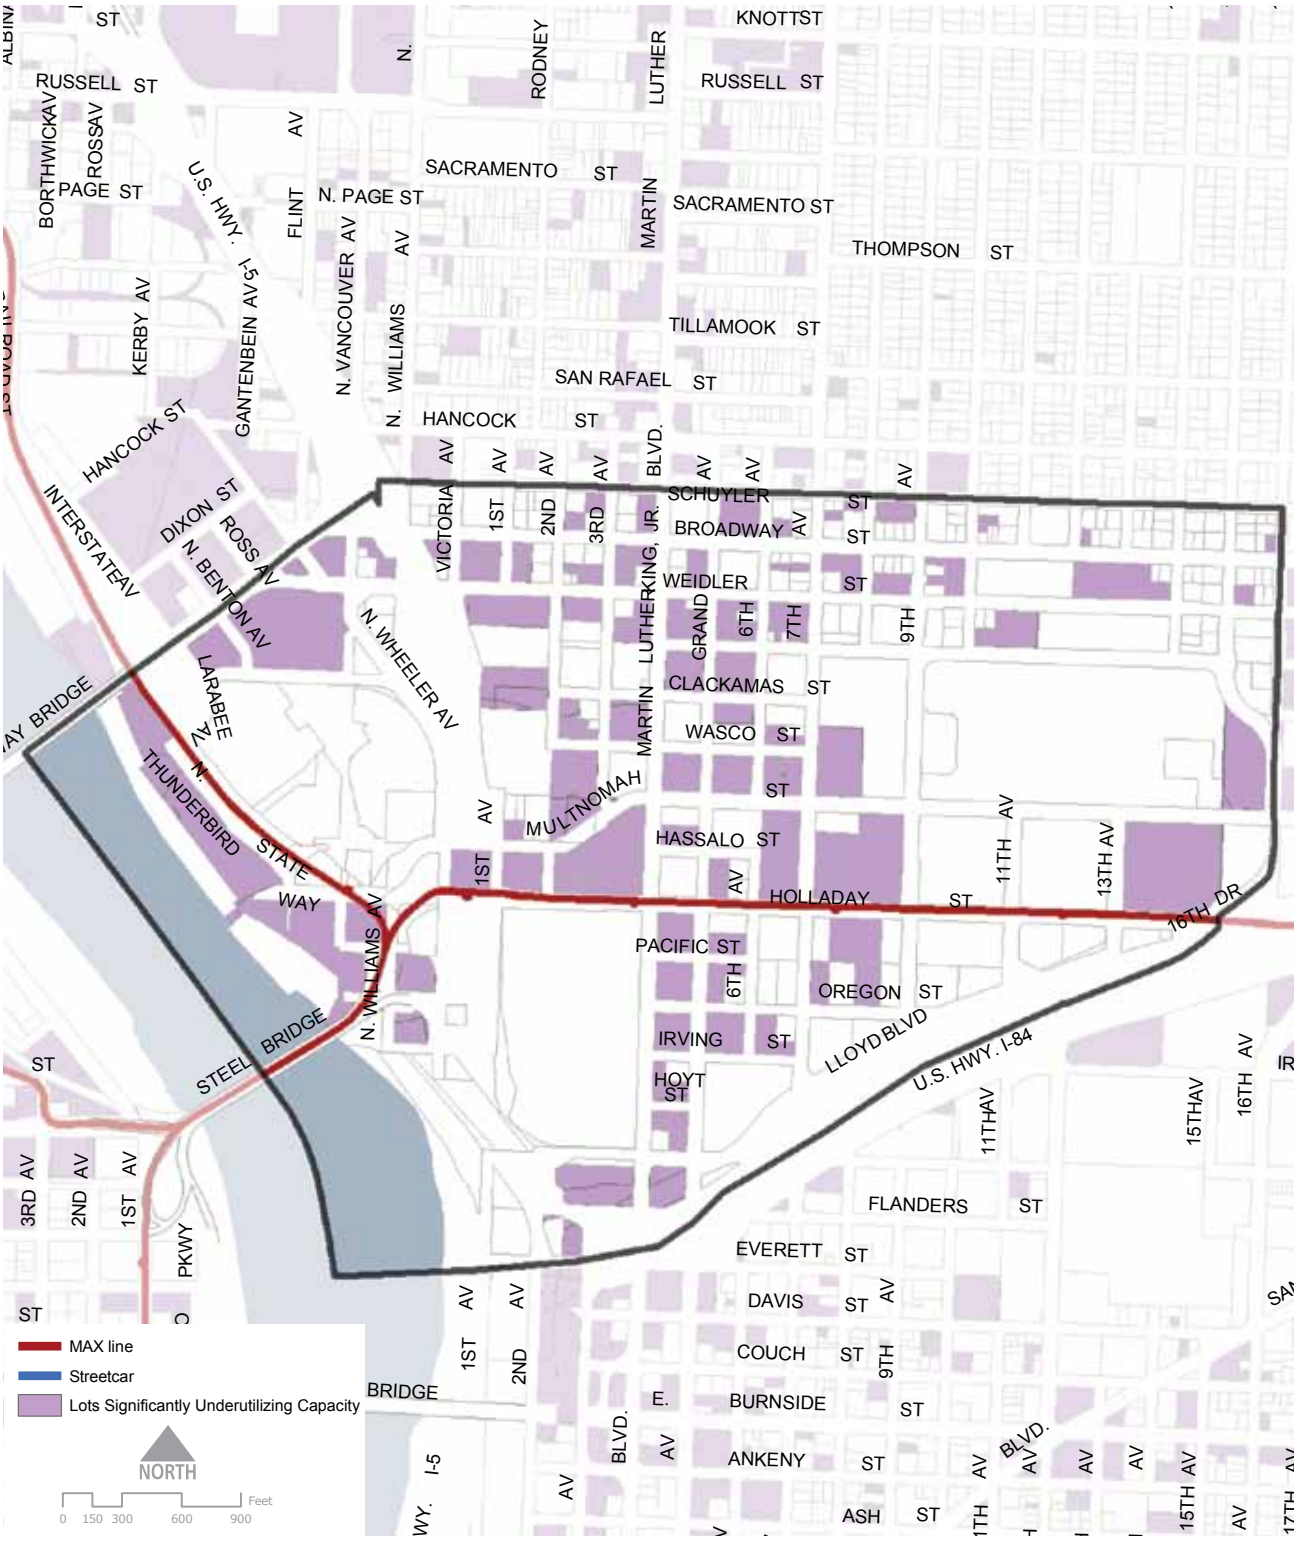
Year built or proposed to be built	2002
Developer/owner	1201 Lloyd Associates LLC (O)
Number of units or square feet	Total square feet: 237,769 SF Commercial square feet: 222,777 SF
Use	11-story, mixed-use development: retail, commercial and government offices with 471 parking spaces
Average rent or sales price	Price at last sale: $50,437,000 (2005)
Result of planning effort or private plan	Private
Unique features	High security office tenant improvements took place in over 57,000 SF of the building to accommodate several federal government agency tenants
Photo	www. twproperties.com

Commercial/Industrial

Left Bank Building

240 N Broadway Street

Year built or proposed to be built	1923, renovation 2008
Developer/owner	Leftbank LLC (O)
Number of units or square feet	53,094 SF
Use	3 stories commercial
Average rent or sales price	Market value: $1.8 million (2008)
Result of planning effort or private plan	Private
Unique features	Originally restaurant and bakery, later well-known jazz club, now a community of mission-driven tenants
Photo	The Leftbank Project



Commercial/Industrial

McMenamins, Starbucks, Kitchen Kabooble on Broadway

1532 NE Broadway Street

Year built or proposed to be built	1989
Developer/owner	NE Broadway Partners (O)
Number of units or square feet	20,600 SF
Use	3 stories commercial, 1-2 retail and restaurant
Average rent or sales price	unknown
Result of planning effort or private plan	Private
Unique features	One of Portland's earliest east side electric streetcar stops was at this site at 15th and Broadway. Later purchased by Lloyd family, redeveloped in 1989.

Lloyd District Surface Parking Lots

September 21, 2009 **City of Portland | Bureau of Planning and Sustainability | Geographic Information System**

The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

Transportation

In many ways, transportation dominates the identity and character of the Lloyd District. A major defining feature is the I-5/I-84 freeway interchange. The interchange results in elevated ramps and trenches that limit east-west local circulation, creates visual blight and generates high levels of noise and air pollution. Transit is also a key feature with the Rose Quarter Transit Center that brings together five light rail lines and several bus routes. The Steel Bridge provides an important link with Downtown and was further enhanced with pedestrian and bicycle connections with the Eastbank Esplanade that also includes a dramatic steel-truss bridge. Freight rail tracks along the river edge connect with the Albina rail yards to the north and tracks over the lower deck of the Steel Bridge reach the Northwest Industrial Area. Amtrak trains also use the same tracks to access Union Station.

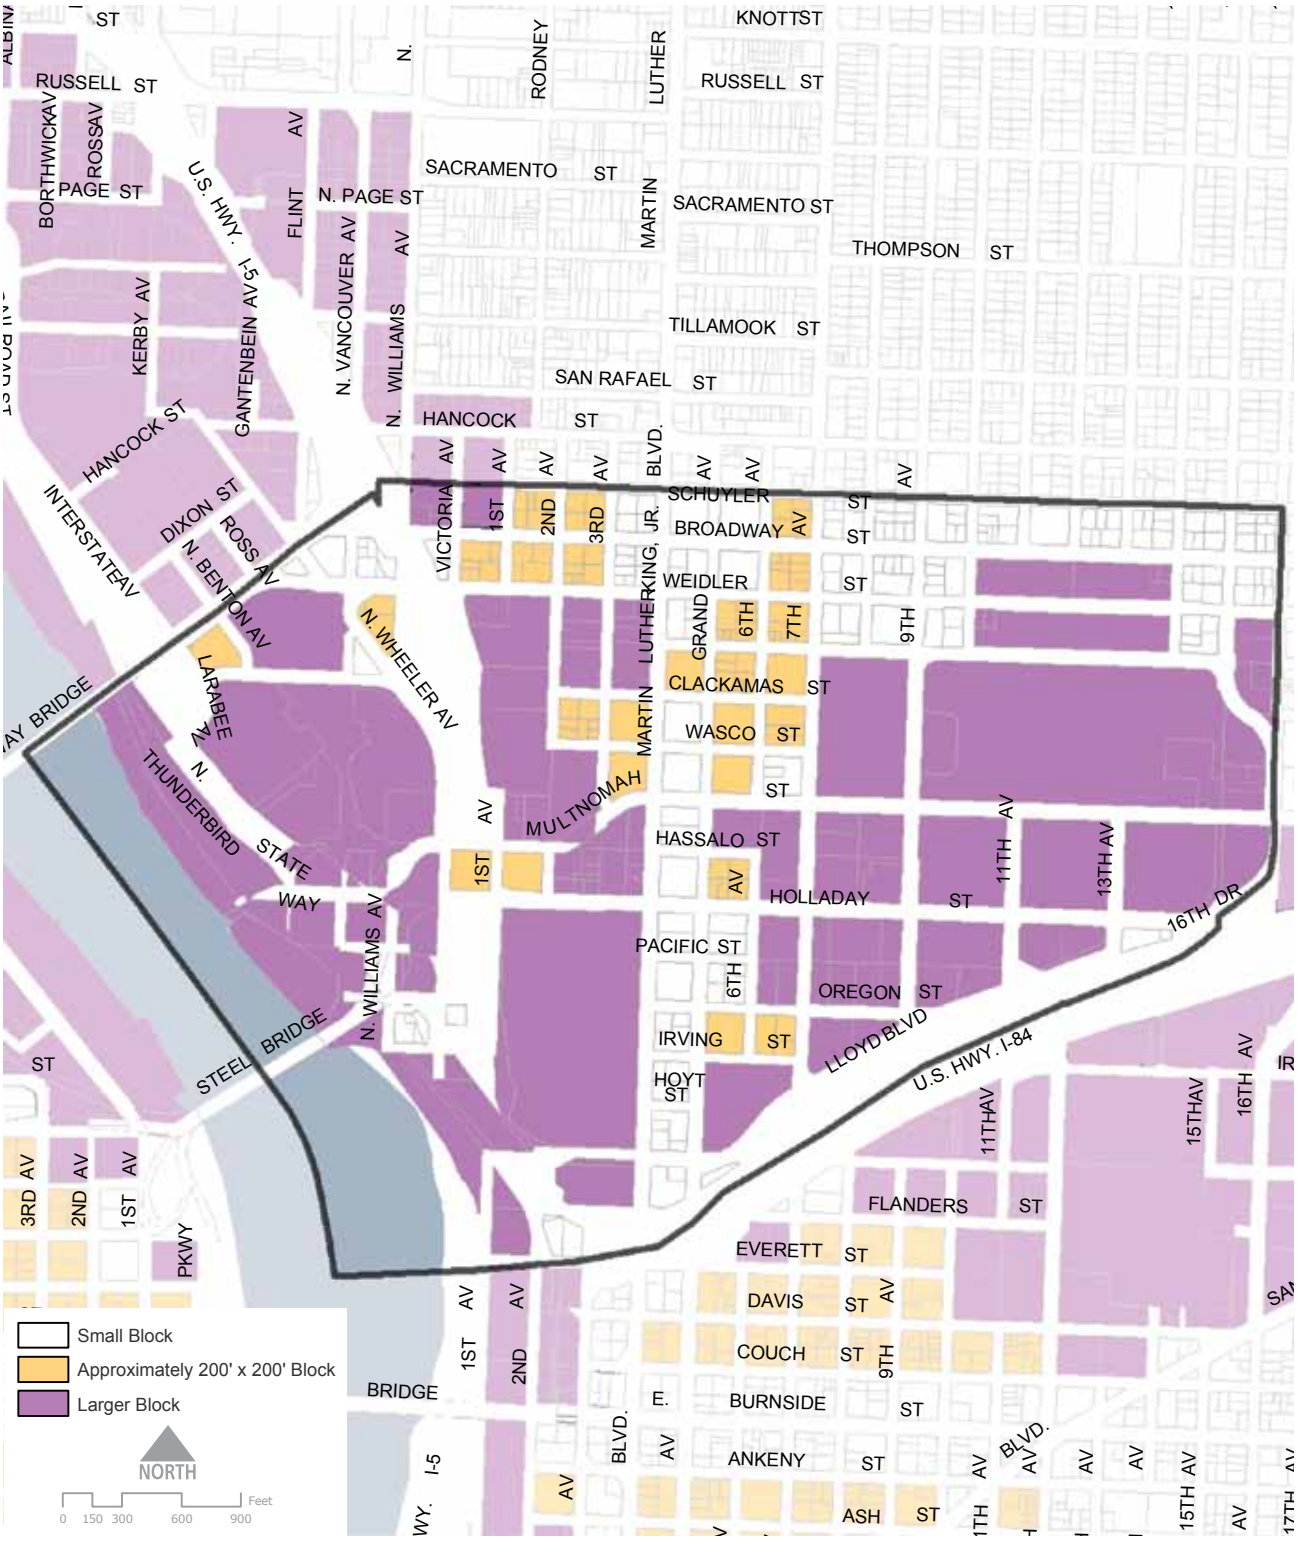
With the public investments in light rail transit routes and the creation of the Lloyd Transportation Management Association, commuters have dramatically shifted from less than 10% transit use in the early 1990s to over 42% by TMA members in 2008. In addition to increasing transit use by workers, bicycling has also increased.

Automobiles and Streets

The Lloyd District is home to many heavily traveled roads and freeways. The busiest freeway interchange in Oregon is in the Lloyd District, where I-5 and I-84 meet; more than 155,000 vehicles pass through it daily. Safety on the interstate system is a problem. The closeness of the interchanges and constricted travel lanes cause a high accident rate. Some of the most heavily-trafficked auto streets (called "Major Traffic Streets" in City transportation planning terms) include two couplets in the subdistrict: Broadway-Weidler and MLK-Grand (Oregon State Highway 99E). They serve as ways for vehicles to pass quickly through the subdistrict yet also as main shopping and commercial streets for the district itself. Major access points for local traffic into the Lloyd District include the Steel and Broadway Bridges. Some roads in the Lloyd District are meant to function as a peripheral "ring" road system, but the effectiveness is somewhat limited.

Parking

The abundant parking available in the Lloyd District is a highly visible characteristic of the area. There are roughly 23,000 parking spaces, with roughly 21,000 surface lots or multi-story structures. Many of the surface lots cover whole or multiple blocks. About 1,700 parking spaces are on-street, some of them metered. The Lloyd Center Mall alone has 6,880 parking spaces. Table 1.11 shows that inventoried parking in the Lloyd District is close to code requirements. There is about 0.5 spaces for every residential unit and 2.2 spaces for every 1,000 sq. ft. of office/non-residential uses.



Bicycles, Transit, and Pedestrians

The Lloyd District serves as a major conduit for bicycle routes to and from North and Northeast Portland, particularly the Broadway-Weidler and Vancouver-Williams couplets. Cyclist crashes with injuries are concentrated around the Broadway-Weidler and MLK-Grand intersections. The Eastbank Esplanade, a popular route for commuting and recreational cyclists, connects the District to Downtown and the Central Eastside.

In the west side of the Lloyd District, the Rose Quarter Transit Center is the only place in the region where all light rail lines converge, and is served by many TriMet and C-Tran bus lines. Light rail stops in the district are included in the Downtown-oriented "free rail zone" and are supported with parking revenues from on-street parking meters.

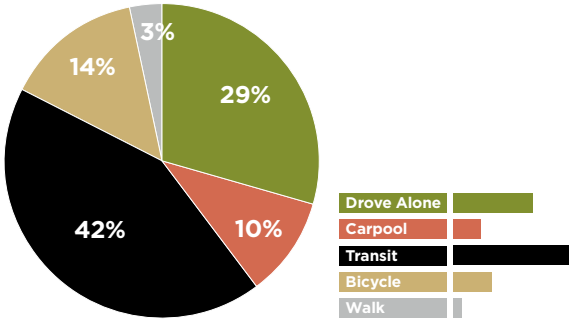
The many large-scale facilities in the Lloyd District, including the Convention Center, the Rose Garden Arena complex, and the Lloyd Center Mall, present major disruptions to the local street grid. They are so large and generate so much activity, it is problematic for the area. The block size created by these uses also makes it difficult for pedestrians in the area. Additionally the freeway creates a barrier for safe and efficient bicycle and pedestrian movement. Even though many uses in Lloyd create a significant amount of pedestrian traffic, major arterial roadways and a generally auto-oriented streetscape detract from the pedestrian environment. The Lloyd District is at a crossroads for many modes of transportation, and crashes are concentrated around the convergence points. Pedestrian and auto crashes with injuries mainly occur around the MLK-Grand couplet, which is classified as a Pedestrian Crash Corridor by the City.

Lloyd District Block Size

September 21, 2009 **City of Portland | Bureau of Planning and Sustainability | Geographic Information System**

The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

Freight



The freeways I-5 and I-84 and the MLK-Grand couplet (State Highway 99W) are all important freight routes through the Lloyd District. Freight is also shipped on the Willamette River, through the grain elevators in Lower Albina. The Union Pacific Railroad also maintains freight rail lines along the waterfront parts of the district. The high level of freight moving through the Lloyd District is influenced by the presence of the Lower Albina area immediately to the north, an active freight district.

Transportation Demand Management

The concept of "transportation demand management" programs arose in the 1990s as a way to use transportation resources more efficiently, to enable growth in an area without creating ever-increasing auto traffic or denigrating livability and access. The Lloyd Transportation Management Association (TMA), which began in 1997, is one of the most successful of these programs in the country. Impetus for this comprehensive public-private partnership came in part from the City's initiation in 1995 of the *Central City Transportation Management Plan* (CCTMP). Recognizing that their desired job growth would stress the existing transportation system and compromise the Lloyd District environment, both public and private entities were motivated to devise proactive solutions.

For instance, "mode split" could be improved — that is, reducing the number of employees driving a single occupancy vehicle and parking at work. Auto parking had through the decades been built to accommodate these solo drivers. The TMA aimed to significantly enhance commute mode choices over a 20-year period. It has successfully reduced commuting by cars, eliminated the need for additional car parking facilities, increased transit service, and advocated for bike improvements and new buses. Parking meters for on-street parking were introduced in 1997. Transit ridership also has been encouraged in the Lloyd District, for example through employers buying bulk transit passes. The TMA is involved in advocating for the new streetcar loop, which will cross the Broadway Bridge and pass through the heart of the Lloyd District.

Graph 5.3: Lloyd District Transportation Mode Split: 2008

Source: PBOT 2008 Transportation Surveys (non-scientific)

Note: The data found in this graph is derived from a PBOT non-scientific transportation survey. It does not align with Table 1.8 due to varying sources and methodologies. Table 1.8 uses data from a Metro model and shows forecasted or modeled trips. For more information please review the Supporting Information document, including Appendix 4: Transportation.

Table 5.4:Transportation in Lloyd District

STREETS	Highest Average Daily Trips	Broadway Bridge to 1st (>50K)
	Total	67,008 feet
	Poor Condition	845 feet or 1.3%
	Very Poor Condition	1,528 feet or 2.3%
	Failing Condition	0 feet
PARKING	On-street Free Parking Spaces	598
	On-street Metered Parking Spaces	1,136
	Surface Lot Parking Spaces	4,408
	Structured Lot Parking Spaces	7,680
	Surface/Structure Parking Spaces	9,222
	Total Parking Spaces	23,044
	Surface Parking Lot Area	48 acres
BIKE	Bike Lanes	6.6 miles
TRANSIT	Light Rail Lines*	1.4 miles
	Other Transit Lines	None
	No. of Bus Routes**	12
PEDESTRIAN	General Block Size	2.1 acres or 91,476 square feet
FREIGHT	Busiest Freight Route***	MLK-Grand; Broadway-Weidler from bridge to MLK-Grand

* *Length of street segments with rail in them, whether 1 or 2 way. Includes Transit Mall MAX.*

** *Through routes (i.e., 4 Division/St. Johns) counted as 2 routes. This affects total in River District and University District, where most of the changes occur.*

*** *Listed are streets with highest TSP freight classification.*

Lloyd District River-related Features

September 21, 2009 **City of Portland | Bureau of Planning and Sustainability | Geographic Information System**

However, notification of any errors will be appreciated.

Willamette Riverfront and Natural Resources

The Lloyd District riverfront is dominated by a railroad line and road that run the length of the district. Vacant land lies between the railroad line and the river. The bulk of the Lloyd District is upland and disconnected from the Willamette River. Just inland, the Rose Quarter bustles on event nights, but views of downtown are blocked by the Dreyfus facility. However, as one crosses the Steel Bridge there are many opportunities for views of the river, Downtown and the industrial waterfront.

The greenway trail is only partially developed along the Lloyd District waterfront. The trail south of the Steel Bridge is the start of the Eastbank Esplanade, an off-street partially floating path that parallels the river's edge for one and a half miles. Attached to this floating portion of the Esplanade is the Duckworth Dock, a public facility that provides a quiet place for people to get down to river level.

As in other portions of the Central City, parts of the riverfront provide important habitat for a wide variety of fish (including protected Chinook and Coho Salmon) and for resident and migratory birds. Water quality does not meet state standards.

Unlike most of the Central City waterfront, the Lloyd District has areas of steep slopes along the banks north of the Interstate 5 and Interstate 84 interchange. These are identified by the City as a landslide hazard and, where vegetated, are also vulnerable to wildfires.

Table 5.6: Lloyd District Characteristics 1997–2008

	Lloyd District	Central City
Residents (2008 estimate)	1,700	34,400
Median age (2000)	40	36
Education — bachelor's degree or higher (2000)	43%	38%
Average household income (2000)	$52,764	$35,624
Housing units (2008)	1,165	22,994
Affordable* housing units (2008)	0%	56%
Jobs (2006)	18,977	134,870
Jobs/residential population ratio (2008 estimate)	11:1	4:1
Change in crime rate between 1997–2007	–23%	–32%

** Affordable = units that are restricted by tenant or income*

Table 5.5: Lloyd District Residents Race and Gender (2000)

	Lloyd District	Central City
White	77%	79%
Black	13%	7%
Asian	3%	7%
Hispanic	4%	5%
Male	46%	60%
Female	54%	40%

People

Population information from the 2000 US Census (the most recently completed) showed that the typical Lloyd District resident to be four years older than the Central City median of 36 years old. More Lloyd residents had also received a higher level of education and their income was an average of $17,000 higher than the Central City average, at $52,764. Interestingly, in the Lloyd District between 1990 and 2000, the number of residents with a bachelor's degree doubled, and those with an advanced degree almost quadrupled. This signifies a change in the attractiveness of the subdistrict to a certain subset of educated people. It also points out how much the demographic data can change over the 10-year period between when the censuses are completed. The census is the most reliable population information available, and the next census will be conducted in 2010.

When it comes to race, the 2000 U.S. Census illustrates the Lloyd District population is similar to the Central City, but it encompasses a higher percentage of African Americans (13% vs. 7%),

57619

fewer Asians (3% vs. 7%), and a significantly smaller proportion of males, with (46% male and 54% female in the Lloyd District vs. 60% male and 40% female in the Central City overall).

It is important to note that the most recent data available on demographics is from the 2000 U.S. Census. As such, the information is dated and there is a recognized inaccuracy in information.

Housing

In terms of residential population, the Lloyd District is one of the smaller subdistricts in Central City. The 2000 Census recorded approximately 1,259 residents, making up five percent of all people who live in Central City. Based on a City housing inventory of 2008, the Lloyd District contained 1,165 housing units, which is roughly five percent of the units in the Central City, and which translates into a population of approximately 1,700 people (based on a typical household size of 1.5).

According to the 2008 City inventory, 87% of the housing in the Lloyd District was rental. Only 148 of the 1,165 total units were owner occupied. In 2008, the Lloyd District's average rent per square foot was $1.09, and the majority of its rental units fell within the 81–120 percent Median Family Income (MFI) bracket, meaning they are moderately affordable.

Table 5.7: Lloyd District Employees and Residents

	Lloyd District	Central City	Percent within Lloyd District
Total Employees (2006)	18,977	134,870	14%
Total Residential Population (2008 estimate)	1,700	34,400	5%
Employee/Residential Population Ratio	11:1	4:1	—

Jobs

Between 2000 and 2006, the Lloyd District had an annual job growth rate of 4.4%, gaining around 4,300 jobs, and bringing the total of jobs in the district to almost 19,000 in 2006. Lloyd District jobs accounted for approximately 14% of the total jobs in Central City. Some of the biggest employment sectors are:

- Services (30%),
- Retail, Arts, and Accommodation (30%), and
- Public Sector (12%).

Evidence of the district's office and retail focus is highlighted in the City's Economic Opportunities Analysis conducted in April 2009, which counted around 11 employees for every one resident, compared to the Central City's almost four employees for every resident.

Crime

Between 2005 and 2008, crime levels in both the Lloyd District and the Central City have been lower than in each of the eight years prior (1997–2004). In 2008, the crime rate was more than 23% less than 11 years earlier in 1997. Nearly 15% of the total crime in the Central City in 2008 occurred in the Lloyd District, most of which were crimes of larceny.

Public Facilities and Services

Schools

There are currently no public schools in the Lloyd District. However children in the area would attend: Abernethy Elementary School (K–5) or Buckman Elementary School (K–5), Hosford Middle School (6–8), and Cleveland High School (9–12). Alternative public schools include: Da Vinci Middle School (6–8), Benson Polytechnic High School (9–12), and Harriet Tubman Leadership Academy for Young Women (6–11). Parts of the Lloyd District are also within the Irvington School (K–8) boundaries. The 2000 U.S. Census estimated there were 106 residents under the age of 19 in the Lloyd District.

Parks and Open Space

Acquired in 1870, Holladay Park is the only public open space in the Lloyd District. Located at NE 11th Avenue and Holladay Street, this park is named after Benjamin Holladay (1819–1887.) In 1868, Holladay sold his stage coach business in California to Wells Fargo and moved to Portland to get involved in the railroad business. He also built two large hotels in the area where the park bearing his name is now located. He lost his railroad in 1876, and died in Portland in 1887. Today, Holladay Park is a grass-covered square block, symmetrically landscaped, and boasting a gracious fountain, paved paths, picnic tables, and public art.

Arts and Cultural Facilities

The arts and cultural facilities in the Lloyd District are mostly regional destinations used for major entertainment events. The Rose Quarter Entertainment District includes the Rose Garden and Memorial Coliseum. The Rose Garden is a flexible, multi-purpose facility hosting a variety of events including NBA and college basketball, professional hockey, indoor track and field, gymnastics, and major concerts. It opened in 1995 and since then has been the new home for the NBA basketball team the Trail Blazers, who previously had played in Memorial Coliseum. The earlier multi-use venue now hosts sporting events including hockey, basketball, rodeo, and ice skating, as well as concerts, and trade shows.

Community and Social Services

Neighborhood and Business Associations

The Lloyd District Community Association serves as both the Business District Association and the Neighborhood Association for the Lloyd District. Businesses and residents are allowed equal voting power on the Board. The purpose of the Association is to promote and enhance the Lloyd District Community as a desirable and livable place; organize and improve crime prevention and open up lines of communication among businesses, residents and the government.

Community and Other Organizations

The major community organization in the Lloyd District is the Lloyd District Transportation Management Agency (TMA). The Lloyd TMA is an action-oriented association working with businesses and public agencies in the Lloyd District to improve access and mobility for those who work, reside, shop and commute in and to the Lloyd District. The Lloyd TMA's focus includes programs for improved public transit, ride sharing, alternative work hour programs and programs promoting parking management, bicycle and pedestrian measures.

Social Services

Its central location and easy transit accessibility make the Lloyd District attractive for some social services, including Portland Rescue Mission's administrative office, Upstream Public Health, and Step It Up. Central City Concern, the affordable housing non-profit, is renovating a motel in the district as well, for lower-income residents.

FORECASTS AND GROWTH

Metro Forecast

Metro's most recent job and household growth forecast was prepared in 2008 for the year 2035. It projects continued rapid housing development in the Lloyd District and a total of more than 3,800 housing units in the subdistrict in 2035. According to Metro's projections, that would represent roughly seven percent of the total housing units in the Central City, which is still a somewhat small share but an increase over the 2005 share of four percent. Jobs are expected to grow by more than 150 percent by 2035.

To meet Metro's housing projections for 2035, the Lloyd District will need to see the development of just over 100 new units per year (on average) for the next 25 years. To meet Metro's employment projections for 2035, the district will need to create more than 1,300 new jobs per year (on average) for the next 25 years.

Note: Metro forecasts are done every five years. The most recent forecast was completed in 2008. Numbers differ from "actual" numbers for present and past dates because they are based on forecasts from an econometric model, not on census data. It is also important to note that the most recent census data is quite old at this point, dating from 2000.

Table 5.8:
Lloyd District Metro Forecast
Household Growth 2005–2035

	Lloyd District	Central City
2005	668	17,766
2035	3,817	51,794
Growth	471%	192%
Net Increase	3,149	34,028

Table 5.9:
Lloyd District Metro Forecast
Employment Growth 2005–2035

	Lloyd District	Central City
2005	17,123	150,479
2035	27,698	224,891
Growth	62%	49%
Net Increase	10,575	74,412

Redevelopment Capacity

In 2007, the City looked at vacant and underutilized land in the Central City to determine what sites were potentially available for redevelopment and what kinds of development could be built on the sites. The summary map and table from this development capacity study for the Lloyd District are shown on the next page.

The study showed that the Lloyd District has tremendous capacity to accommodate new development — compared to other parts of the Central City. The 70 acres of identified redevelopable land in the Lloyd District have enough development potential under current entitlements to nearly triple the amount of built space in the subdistrict. The identified redevelopment sites are comprised of both surface parking lots and significantly underdeveloped parcels. More than one-half of the sites are larger than the typical Central City city-block-size of 40,000 square feet, which again means significant development opportunity compared to other subdistricts of Central City, where sites tend to be much smaller.

Identified Potentially Redevelopable Sites (2007)

Table 5.10: Lloyd District Redevelopment Capacity Summary (2007)

Generalized Zone	Total Acres	Developed Building Area (million sq. ft.)	Redevelopable Acres	Potential Net Increase @ Base FAR (million sq. ft.)	Potential Net Increase with Maximum FAR Bonus (million sq. ft.)	Projected Net Increase (million sq. ft.)	Projected Commercial (million sq. ft.)	Projected Retail (million sq. ft.)	Projected Residential (million sq. ft.)	Projected New Residential Units
Commercial	205.6	13.4	66	21.2	29.9	24.6	10.6	1.2	9.1	9,984

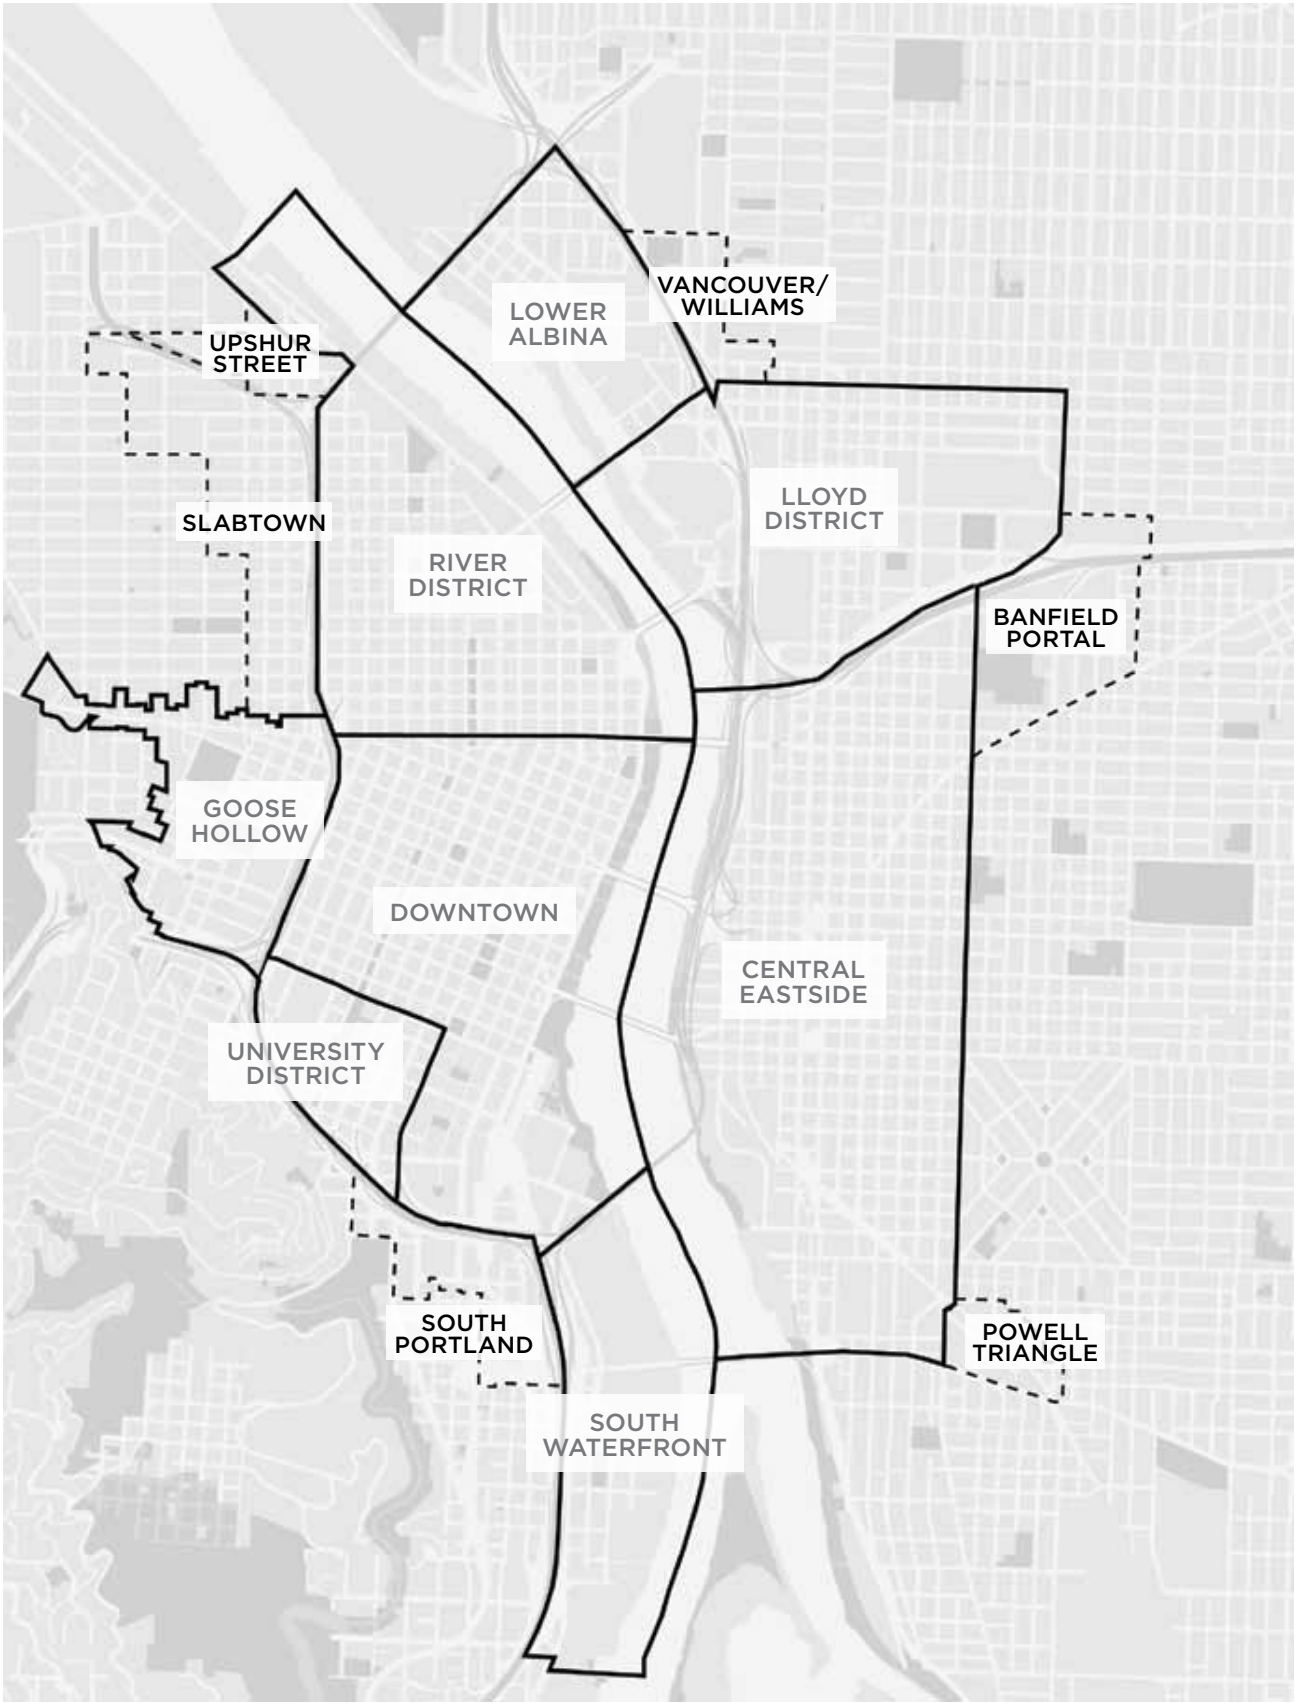
Right-of-way/River	170.9	0	0	0	0	0	0	0	0	0
Totals	407.3	14.4	70	22.6	31.8	25.9	10.6	1.3	10.3	11,365

STUDY AREAS

The 1988 Central City Plan District boundary was established largely based on the boundaries of existing neighborhood associations, previous planning studies, and the interstate highways (See map on page 17 of the *Central City Plan*). This district boundary has changed only slightly since the adoption of the 1988 Plan. The district has been extended at the western and northern edges of Goose Hollow and at the far northwest to include the redevelopment of Terminal 1 along the Willamette River.



The *Central City 2035* Plan process must look beyond the current boundaries to adequately relate and connect Central City to its surroundings and as such, there is a need for a larger study area. It has been suggested that *Central City 2035* may have a different boundary (project area) from the current one as outlined in the *Central City Plan*. Some areas along the boundaries could be included or excluded, following closer examination. Many of the boundaries are also formed by freeways, which may or may not be the best way to define areas that belong to the Central City.

The following section outlines six 'study areas' that possess certain characteristics that potentially make them appropriate for inclusion in the *Central City 2035* boundaries. The characteristics of the areas are:

- Areas adjacent to and within roughly 2,000 feet of the existing Central City Plan District boundary;
- Areas likely subject to significant change through redevelopment;
- Major commercial corridors/gateways to Central City; and,
- Areas that are within identifiable natural boundaries, such as topography.

57624

Subdistricts and Study Areas

SLABTOWN

Northwest District Eastern Edge and Transition Subareas

The Slabtown study area is south of Highway 30 and west of Interstate 405 and covers about 153 acres (including public right-of-way). The study area contains two subareas from the *Northwest District Plan*, the Eastern Edge and Transition Subareas. The *Northwest District Plan* adopted two policy directions for these subareas. For the Transition Subarea the adopted policy is as follows:

- Integrate the subarea into the pedestrian-oriented, architecturally diverse urban fabric to the south and west. Encourage a mix of housing, commercial, institutional, open space, and light industrial uses.

For the Eastern Edge Subarea the adopted policy is:

- Foster the development of the Eastern Edge as a transition between the more urban Central City and the Northwest District.

This study area contains a mix of residential uses with small-scale commercial office and some retail uses. The area also contains a number of underutilized properties, vacant lots, and old surface parking lots. One of the largest potential redevelopment sites in the vicinity of Central City, the Con-way properties, is also within this study area. This site and several smaller sites throughout the eastern edge present a significant opportunity for future redevelopment and creation of a mixed-use development pattern. This would protect the residential and historic fabric of the more densely developed portions of the Northwest District. Simultaneously, it would seek to make a stronger connection and more cohesive urban form that links the Northwest District to the Pearl, Upshur Warehouse District, and Willamette Waterfront.

Zoning

This area is currently zoned a mixture of Central Employment (EX), which comes with the design overlay zone (d), High Density Residential (RH), and General Industrial 1 (IG1). Most of the area (77%) is zoned Central Employment (EX), which generally allows a wide mix of uses including residential, commercial office and retail, light industrial, and other uses needing a more central location. However, the provisions of the Northwest Plan District limit Retail Sales and Services uses through most of the area to no more than 3,000 square feet in the EX zone, and to no more than 20 percent of net building area in the RH zone. The base maximum height limits in the study area range between 45 to 75 feet and the maximum floor area ratios (FAR) are 1:1 or 4:1 FAR depending upon location.

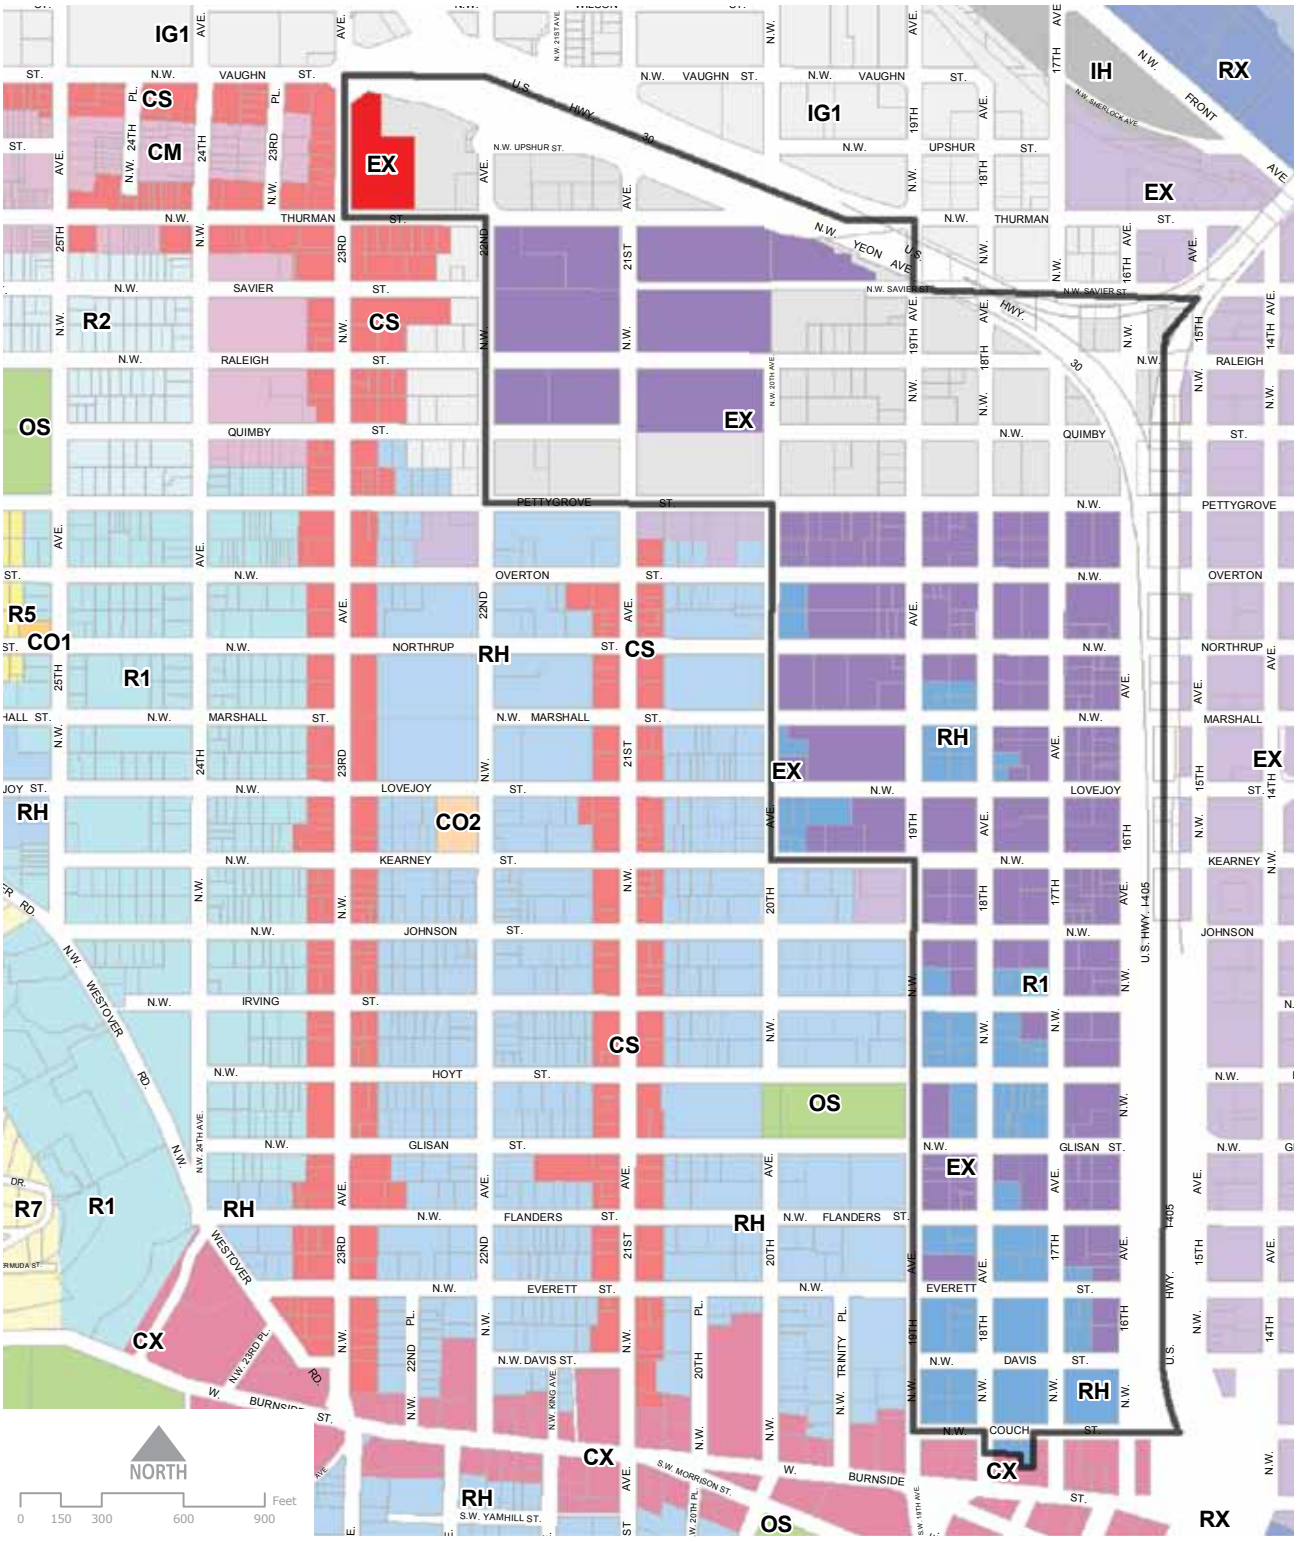


Table 10.1: Slabtown Zoning

Zone	Slabtown Acres	Percent of Slabtown	Study Areas Acres	Percent of that zone in Study Areas	Citywide Acres	Percent of that zone Citywide
Storefront Commercial (CS)	1.8	2.0%	8.8	20.3%	719.4	0.2%
Central Employment (EX)	48.3	55.6%	80.0	60.3%	722.7	6.7%
General Industrial 1 (IG1)	23.1	26.6%	44.5	52.0%	718.3	3.2%
Residential 1,000 (R1)	0.2	0.3%	0.4	53.5%	1,656.7	0.0%
High Density Residential (RH)	13.5	15.5%	39.5	34.0%	489.8	2.7%
	86.9	100.0%				

Note: River and right-of-way acres are not included.

57626

Slabtown Zoning

March 18, 2010 City of Portland | Bureau of Planning and Sustainability | Geographic Information System
The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

The Northwest Plan District also allows for bonus height and floor area to be earned. Within specific subareas, applicants may earn bonus height and floor area when residential uses are developed, with more height and floor area being earned for affordable housing. Bonuses may also be earned when underground parking is developed or when contributions to the Northwest Transportation Fund are made.

As noted, EX-zoned portions of the study area also come with the design overlay zone, subjecting development within this zone to the Community Design Standards. A limited portion of the study area also falls within the Historic Alphabet District, and development within those areas may also be subject to historic design review.

Existing Uses

In 2008, the Bureau of Planning inventoried land and building uses within the Central City. Staff conducted visual inspections of all buildings in the Slabtown area and estimated the proportions of different uses by floors of buildings. This database, when linked to the City's 3-D building model provides estimates of different types of uses. The results of this calculation are not precise, but do provide more up-to-date estimates of uses than previously available.

The three main uses in Slabtown are residential, office, and industrial. The residential in the area is mainly multi-family and accounts for almost 30 percent of the building uses in the area. Single-family residential uses only make-up less than five percent. Office uses in the area account for almost the same amount as residential, at about 33 percent each. Industrial users are also a major component of the area, making up 16% of developed building area use.

Discussion

Since the adoption of the *Northwest District Plan* in 2003, the *North Pearl District Plan* has been created. This plan established a framework for how the areas just to the east of this study area will be developed. It proposes a mix of uses similar to those suggested for the study area, but at higher densities and with an emphasis toward creating a more diverse, family-friendly, complete community.

At the same time, Con-way has begun to develop an ambitious master plan that proposes significant redevelopment of the numerous properties it owns in the north end of this area. Early concepts for the master plan embrace a mix of uses, including housing, employment, neighborhood-serving public amenities, but at higher densities than originally proposed by the *Northwest District Plan.* In the last few years, the *Portland Streetcar System Plan* also has been evolving and proposes to expand service in this portion of the Northwest District.

As the Central City 2035 process begins, it is wise to consider how the recently adopted *North Pearl District Plan,* the emerging master plan for Con-way, the *Portland Streetcar System Plan*, and the adopted policy direction for the Transition and Eastern Edge Subareas will form future public and private development decisions in this area. By including this as a study area of the *Central City 2035* plan, an analysis of the effectiveness of the *Northwest District Plan* can be done to determine if the zoning amendments are achieving their intended purposes, or if additional modifications are needed. This analysis also can help to determine how the implementation of the *Northwest District* and *North Pearl District Plans* and associated policies can be done in a mutually beneficial manner. The desired effect will be to strengthen the physical and social connections between these two unique districts.

UPSHUR STREET

Northwest District, Transition Subarea

The Upshur Street Warehouse District is located within the Northwest Plan District in an area the *Northwest District Plan* identifies as the Transition Subarea. It covers about 32 acres (including public right-of-way). This area is located north of the Highway 30 ramps and south of Vaughn Street (up to the boundary of the Guilds Lake Industrial Sanctuary Plan District, which is also the Regionally Significant Industrial Area boundary).

The Transition Subarea contains a variety of commercial, industrial, creative industries, and transportation-related businesses. The adopted policy for this subarea is:

- Integrate the subarea into the pedestrian-oriented, architecturally diverse urban fabric to the south and west. Encourage a mix of housing, commercial, institutional, open space, and light industrial uses.

The Upshur Street Warehouse District constitutes the northeast portion of this subarea and is unique in that the district is isolated from the rest of the Northwest District. It's in a pocket created by the Fremont Bridge ramps and its placement along a former rail spur.

Although not within the boundaries of this area, the intersection of NW 23rd Avenue and Vaughn Street and access to I-405 and Highway 30, is key to enter the area. It is congested, which affects the viability of freight and auto-dependent businesses in the area.

The area contains a well-preserved assortment of early 20th-century industrial buildings. Most are relatively small scale, with ample fenestration, brickwork, and covered loading platforms, that provide the area with a finely-textured and human-scale streetscape. In the last few years, this small geographic area has transitioned into a surprisingly vibrant and active district. Much private investment has occurred, resulting in the restoration of many of the buildings in the area which are being inhabited by emerging businesses, many associated with the jobs often related to the "creative class". Even some of the vacant lots in the district are now being used by local nurseries and garden furnishing businesses.

Zoning

This area is zoned a mixture of Central Employment (EX), which comes with the design overlay (d), and General Industrial 1 (IG1). Prior to the adoption of the Northwest District Plan District, the entire area was zoned as IG1, but limited portions were rezoned to EX as part of that planning effort. Generally the EX zone allows a multitude of different uses including residential, retail, offices, and manufacturing. However, in this area the zone has been modified such that only 20 percent of a building's net area may be used for residential uses, and Retail Sales and Service uses are not allowed to be larger than 20,000 square feet.

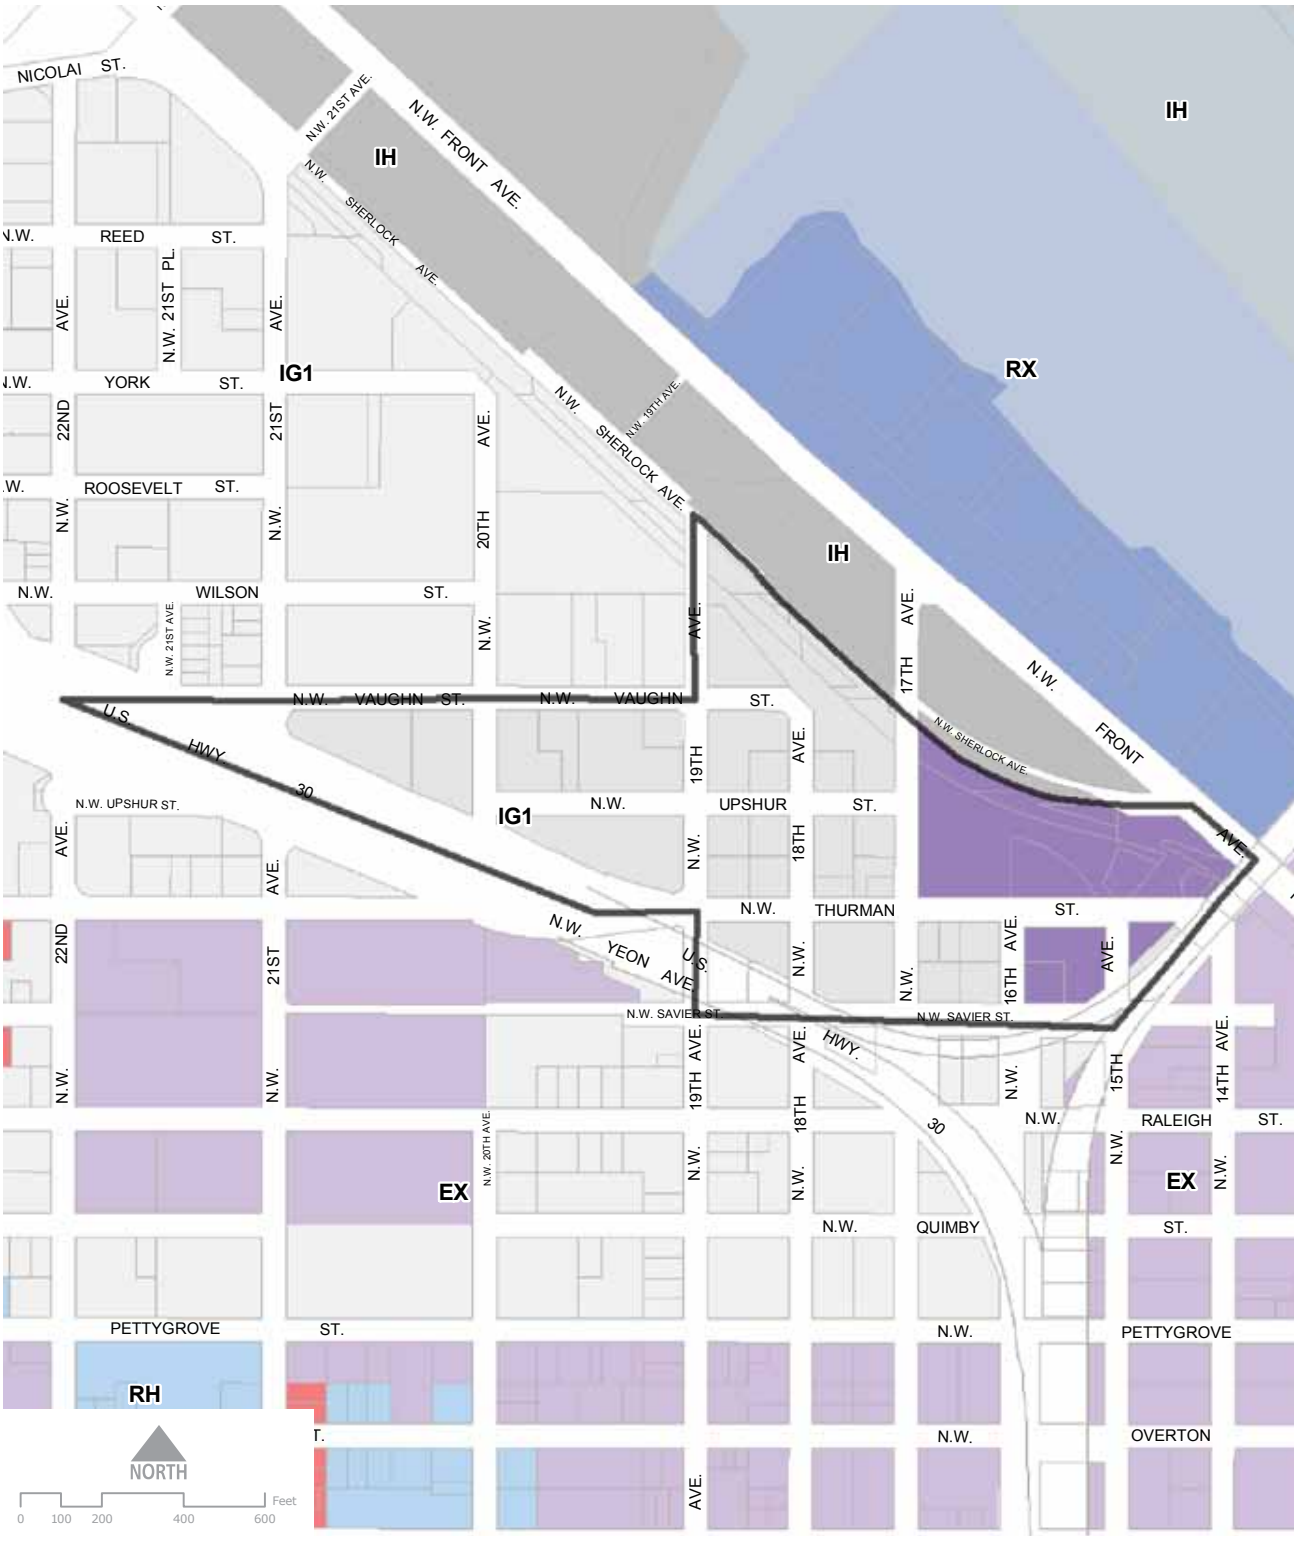

Table 10.3: Upshur Street Zoning

Zone	Upshur Street Acres	Percent of Upshur Street	Study Areas Acres	Percent of that zone in Study Areas	Citywide Acres	Percent of that zone Citywide
Central Employment (EX)	5.3	28.9%	80.0	6.7%	722.7	0.7%
General Industrial 1 (IG1)	13.2	71.1%	44.5	29.6%	718.3	1.8%
	18.5	100.0%				

Note: River and right-of-way acres are not included.

57630

Upshur Street Zoning

March 18, 2010 City of Portland | Bureau of Planning and Sustainability | Geographic Information System
The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

Most of the Upshur Street Warehouse District, approximately 62%, is zoned IG1. This zone is one of three used by the Zoning Code to implement the Industrial Sanctuary polices of the *Comprehensive Plan*, although it is notable that this district is not within the adjacent Guilds Lake Industrial Sanctuary, and is intended to allow many industrial uses outright while restricting other uses. Generally, the IG1 zoned areas are found to have smaller lots and a grid block pattern, with a dense development pattern and sites with a high building coverage.

The maximum height limits for this area regulated as part of the Northwest District Plan District allow buildings between 45 and 65 feet. Also, EX-zoned sites are subject to design review, and development on these sites need to be consistent with the City's adopted *Community Design Guidelines.*

Existing Uses

In 2008, the Bureau of Planning inventoried various land and building uses within the Central City. Staff conducted visual inspections of all buildings in the Upshur Street area and estimated the proportions of different uses by floors of buildings. This database, when linked to the City's 3-D building model provides estimates of different types of uses. The results of this calculation are not precise, but do provide more up-to-date estimates of uses than previously available.

The Upshur Street area is mostly zoned for industrial, and this is reflected in the current building uses. About 47% of the developed building area is used for industrial uses, with almost 29% of all uses for manufacturing. Besides industrial uses, there is also a large amount of office uses in the area. Approximately 42% of the developed building area is used for office. Outside of industrial and office uses in the area, 6% is retail uses and 4% of the developed building area is vacant.

Discussion

When the *Northwest District Plan* was adopted in 2003, about a third of this area was rezoned for a greater mix of uses. Specifically, the EX zone was applied to a number of properties; however a limitation was placed on the amount of housing that could be developed in this zone and to date no housing has been created. Conversely, the EX and IG1 zoned properties have experience a significant amount of reinvestment in this district that now houses a nursery, garden furnishing sales and manufacturing businesses, interior design-related businesses, design studios, offices for sports and recreation-related business and other smaller businesses. In many ways, this district reflects the mix of uses and character that was originally envisioned for parts of the Pearl District, especially NW 13th Avenue, but which was never fully realized.

This area is also unique in that is located between the waterfront and Slabtown, and between the North Pearl and a significant industrial area to the north. Yet Upshur is effectively isolated from these other areas by the ramps of the Fremont Bridge to the south and west and the rail road to the north. This limited isolation further contributes to the character of the district.

As the *Central City 2035* plan goes forward, the zoning and other regulations affecting this area will be analyzed to consider if any additional modifications are necessary or desired to protect the emerging character and success of this district in the long term.

VANCOUVER/WILLIAMS

The Vancouver/Williams area is east of I-5 and north of NE Broadway and extends to Russell Street. The area covers about 40 acres (including public right-of-way). The area is entirely within the Eliot Neighborhood Association.

Zoning

There are five zones in this area, but the dominant ones are Central Employment (EX), Open Space (OS), and High Density Residential (RH). Together these zones comprise 90% of the area. The other less prevalent zones are Storefront Commercial (CS) and Residential 2000 (R2).

The main commercial zone in the area is Storefront Commercial. It makes up 8% of the area and is found along N Russell Street from N Flint to N Williams Avenue. The CS zone is intended to preserve and enhance older commercial areas that have a storefront character and allows a full range of retail, service and business uses with a local and regional market area.

The Central Employment zone is by far the dominant zone, making up 42% of the area. The EX zone is intended for areas in the center of the City that have predominantly industrial development. Residential uses are allowed, but are not intended to be the main use.

Open Space is limited in this area and basically comprises the Lillis Albina Park site. Use at this site is limited during school hours. The OS zone is intended to preserve and enhance public and private open, natural, and improved park and recreational areas.

Twenty-eight percent of this area is High Density Residential. The RH zone is a high density multi-dwelling zone. Density is not regulated by a maximum number of units per acre, but rather by floor area ratio (FAR) limits and other site development standards. Allowed housing is characterized by medium to high height and a relatively high percentage of building coverage.

Existing Uses

In 2008, the Bureau of Planning inventoried land and building uses within the Central City. Staff conducted visual inspections of all buildings in the Vancouver/Williams area and estimated the proportions of different uses by floors of buildings. This database, when linked to the City's 3-D building model provides estimates of different types of uses. The results of this calculation are not precise, but do provide more up-to-date estimates of uses than previously available.

The area today includes a mix of commercial and residential uses as well as Harriet Tubman Leadership Academy for Young Women. Together, industrial and institutional uses comprise 57% of building uses in the area. Other main uses include residential (19%) and office (16%).

Table 10.5: Vancouver/Williams Zoning

Zone	Vancouver/ Williams Acres	Percent of Vancouver/ Williams	Study Areas Acres	Percent of that zone in Study Areas	Citywide Acres	Percent of that zone Citywide
Storefront Commercial (CS)	1.8	7.8%	8.8	20.5%	719.4	0.3%

Discussion

The Vancouver/Williams area has been shaped by several public policy decisions, which have left it in a state of uncertainty over its future. Historically it has a rich history as part of the City of Albina. As Albina grew in the 1880s, Russell Street became a prominent main street because of its proximity to the Willamette River and the rail yards. The streetcar system furthered commercial development on Russell Street, with the intersection of Russell and Williams becoming focal points because of the crossing of streetcar lines. Albina along with East Portland were consolidated in the City of Portland in 1891.

An important part of the historic context of this community to consider for future planning is the role of Albina as a gateway for the arrival of ethnic groups. Dating back to the 1880s, it attracted a larger number of immigrants compared to the rest of Portland. Lower Russell Street served as the main commercial area for the Scandinavian Community. Polish immigrants established the White Eagle Saloon on Russell Street in the early part of the 20th Century. The early 1900s also saw the beginnings of the second wave of ethnic migration as Portland's African-American population began moving to Albina from the area near Union Station. During and following World War II, new waves of African Americans moved to Portland, and most were accommodated in Vanport. The Vanport Flood displaced 5,000 African Americans, and most moved to Albina.

Albina by the 1950s was an economically depressed area, but it still remained a vibrant community. The stability of the Russell/Vancouver/Williams area was affected by several public and private projects. The construction of the Memorial Coliseum displaced a largely African-American community. This was followed by the construction of the I-5 Freeway (Minnesota Freeway) in the early 1960s. In 1969, the Model Cities Program concentrated on the Albina area and surrounding neighborhoods. It funded significant projects, including the Emanuel Urban Renewal Project and the School District Distribution Center. The urban renewal project involved the Emanuel Hospital proposal to build a 19-acre health campus. This resulted in clearing land for this project and displacing residents and businesses. The full campus was not built. The combined influences of these projects left this part of the Albina almost beyond recognition. At the time, the Portland City Planning Commission wrote off much of the area south of Fremont and west of MLK Blvd. as an area with no future as a residential area.

The Vancouver/Williams area is part of the *Albina Community Plan*. This plan was the first comprehensive planning effort for the Albina area since the Model City Program. The community plan was adopted in 1993. The plan focuses on stabilizing and revitalizing existing neighborhoods. This area is also included in the Oregon Convention Center Urban Renewal Area.

As part of the South/North Transit Corridor Project, light rail alignment options were evaluated to connect Downtown with the Rose Quarter and Emanuel Hospital. A ballot measure to provide the local funding to match federal funds was defeated in 1998. Subsequently, an alignment on N. Interstate Avenue was supported by the North Portland community and met approval for construction with local funding provided by the newly formed Interstate Urban Renewal Area. The Interstate MAX Project was completed in 2004.

One result of the Interstate MAX Project was the neighborhood interest in ensuring safe community connections to the Interstate MAX Station along Russell Street. The *Russell Street Improvement Plan* was completed by the Portland Office of Transportation in 2003. It identified streetscape and safety improvements to improve the east-west connection to Lower Albina and the MAX station with the community east of I-5. The project is currently under construction.

BANFIELD PORTAL

The Banfield Portal area is east of the current Central City Plan District boundary and contains two distinct areas covering about 108 acres (including public right-of-way). The first is the **North of Sandy** area, bounded by Sandy Boulevard to the south, the Banfield Freeway (I-84) to the north, and NE 12th and NE 20th Avenues on the west and east. The second area is the **NE Multnomah** area, bounded by the Banfield Freeway (I-84) to the south, NE Multnomah Street to the north, and NE 16th Drive and 21st Avenue to the west and east.

Zoning

The Banfield Portal study area contains a mixed-use area with many zones. The major zones are Central Commercial (CX), Central Employment (EX), and High-Density Residential (RH). Together these three zones comprise 75% of the area. The other zones in the area are Commercial Office 2 (CO2), Storefront Commercial (CS), and Open Space (OS). These three zones are very limited and together make up only 25% of the area.

Much (29%) of this area is Central Commercial, like much of the Central City. The CX zone is intended to provide for commercial development within Portland's most urban and intense areas. A broad range of uses are allowed, and development is intended to be very intense with high building coverage, large buildings, and buildings placed close together. Development is also intended to be pedestrian-oriented with a strong emphasis on a safe and attractive streetscape.

The EX zone makes up 24% of this study area, allows for mixed uses, and is intended for areas in the center of the City that have predominantly industrial development. Residential uses are allowed, but are not intended to be the main use.

The only residential zone in this area is High Density Residential, and it makes up 23% of this area. The RH zone is a high-density, multi-dwelling zone. Density is not regulated by a maximum number of units per acre, but rather by floor area ratio (FAR) limits and other site development standards. Allowed housing is characterized by medium- to high-height and a relatively high percentage of building coverage.

Existing Uses

In 2008, the Bureau of Planning inventoried land and building uses within the Central City. Staff conducted visual inspections of all buildings in the Banfield Portal area and estimated the proportions of different uses by floors of buildings. This database, when linked to the City's 3-D building model

Note: River and right-of-way acres are not included.

57638

Banfield Portal Zoning

September 18, 2009 City of Portland | Bureau of Planning and Sustainability | Geographic Information System
The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

provides estimates of different types of uses. The results of this calculation are not precise, but do provide more up-to-date estimates of uses than previously available.

This is a mixed-use district, including Benson High School and a number of residential, small office and light industrial uses. Benson High School makes up 19% of the building uses. Office is also a large use in the area, making up almost 23% of all building uses. Residential uses are also substantial, making up 18% of building use in the area.

Discussion

North of Sandy

The North of Sandy area is influenced by two plans. They are the *Kerns Neighborhood Action Plan* (1987) and the *Hollywood and Sandy Plan* (2000).

The *Kerns Neighborhood Action Plan* was developed in two phases, the first being with only neighborhood involvement, and the second being a joint effort with the Bureau of Planning. In the plan, the area was identified as having easy access, a community feel, good transportation, but also some challenges. These include, low home ownership rates, few families, traffic congestion, conversion of residences, and general disinvestment. For the area identified as the North of Sandy area there were also some specific policies and objectives. Policy 10 for the North of Sandy/Mixed Use Area is "Maintain a compatible mix of high-density residential and light manufacturing uses". Objectives address preserving existing residential, encouraging new higher density residential, reusing older buildings, encouraging business retention and expansion, encouraging campus-like environments for some businesses, and improving street improvements.

The discussion for the North of Sandy area in the *Kerns Neighborhood Action Plan* states: "This unique inner-city area is composed of both labor intensive industries and multi-family housing. It has many well-maintained historically significant residential and commercial structures, which were built in characteristic California stucco and Art Deco styles. Benson High School and Buckman Field anchor the western portion. Some of the major employers have indicated that they may be outgrowing their site and may be forced to move to larger facilities. The policy objectives aim at retaining these businesses and attracting new ones to occupy underutilized structures. It is felt that the special character and blend of uses in the area continue to make it also attractive for the development of high density housing."

Concerns and general policy directions that were prevalent in 1987, when the *Kerns Neighborhood Action Plan* was adopted are also relevant today. The location adjacent to the Central City has its advantages, and the area also has assets that should be protected and enhanced.

The *Hollywood and Sandy Plan* (2000) was the outcome of a comprehensive land use, transportation, and public services planning study for the Hollywood District and Sandy Boulevard areas of inner and central northeast Portland. The process started in November 1997. Sandy Boulevard and the Hollywood District have long served vital functions as centers of activity in Portland's inner and central northeast district.

Specific to this area, it was envisioned that focused and distinct mixed-use activity nodes at the main crossroads of 12th, 20th, 28th, and 33rd Avenues along Sandy Boulevard would be developed. Additionally, this area was identified as a medium-scale, mixed-use area — commercial, residential and light manufacturing with maximum building heights ranging from five to six stories.

NE Multnomah

The NE Multnomah area is mainly influenced by the *Sullivan's Gulch Neighborhood Action Plan* (1987). This plan was taken on in three phases. It started with a PSU study, later developed into a citizen-based effort, and lastly was a collaborative project with the City. The neighborhood does have assets and advantages, mainly based on location and proximity to close-in areas, but it does also have issues. In 1987 major concerns included noise pollution, density pressures, home maintenance and neighborhood investment. For the NE Multnomah area, the plan, in Policy 2: West End it states "Provide an improved transition between Lloyd Center and the Neighborhood and encourage development of high density housing which provides a smooth transition to the lower density of the neighborhood core."

Concerns and general policy directions that were prevalent in 1987 when the *Sullivan's Gulch Neighborhood Action Plan* was adopted are also relevant today. The location adjacent to the Central City has its advantages, and the area also has assets that should be protected and enhanced.

57641

POWELL TRIANGLE

The Powell Triangle area is roughly formed by SE Powell Boulevard, the Union Pacific Railroad and the existing Central City Plan District boundary at SE 11th Avenue. It covers approximately 30 acres (including public right-of-way). SE Powell and SE Milwaukie are major gateway corridors feeding into Central City. The Powell Triangle area is located entirely within the Hosford-Abernethy Neighborhood Association.

Zoning

The Powell Triangle area is largely industrial, with General Commercial (CG), General Employment 1 (EG1), and General Industrial 1 (IG1). EG1 and IG1 make up most of this area, with the CG being very limited and making up only 9% of the study area.

The EG1 zone is mostly industrial with industrial-related uses and comprises almost 49% of this area. EG1 areas generally have smaller lots, a grid block pattern, are mostly developed, with buildings which are close to the street and have a high building coverage.

The IG1 zone makes up almost 42% of this area and is where most industrial uses may locate, while other uses are restricted to prevent potential conflicts and to preserve land for industry. The development standards are intended to allow new development that is similar in character to existing development and promotes viable and attractive industrial areas. IG1 areas generally have smaller lots and a grid block pattern. IG1 areas tend to be the City's older industrial areas.

Existing Uses

In 2008, the Bureau of Planning inventoried land and building uses within the Central City. Staff conducted visual inspections of all buildings in the Powell Triangle area and estimated the proportions of different uses by floors of buildings. This database, when linked to the City's 3-D building model provides estimates of different types of uses. The results of this calculation are not precise, but do provide more up-to-date estimates of uses than previously available.

The uses in the Powell Triangle area mostly fit into three main categories, including industrial, office, and institutional. There is almost no residential, retail, or restaurant uses, with those categories only making up 7% of uses all together. Industrial uses are the major category in the area, making up 62% of all building uses. Office makes up 19% and institutional uses make up 12% of all uses.

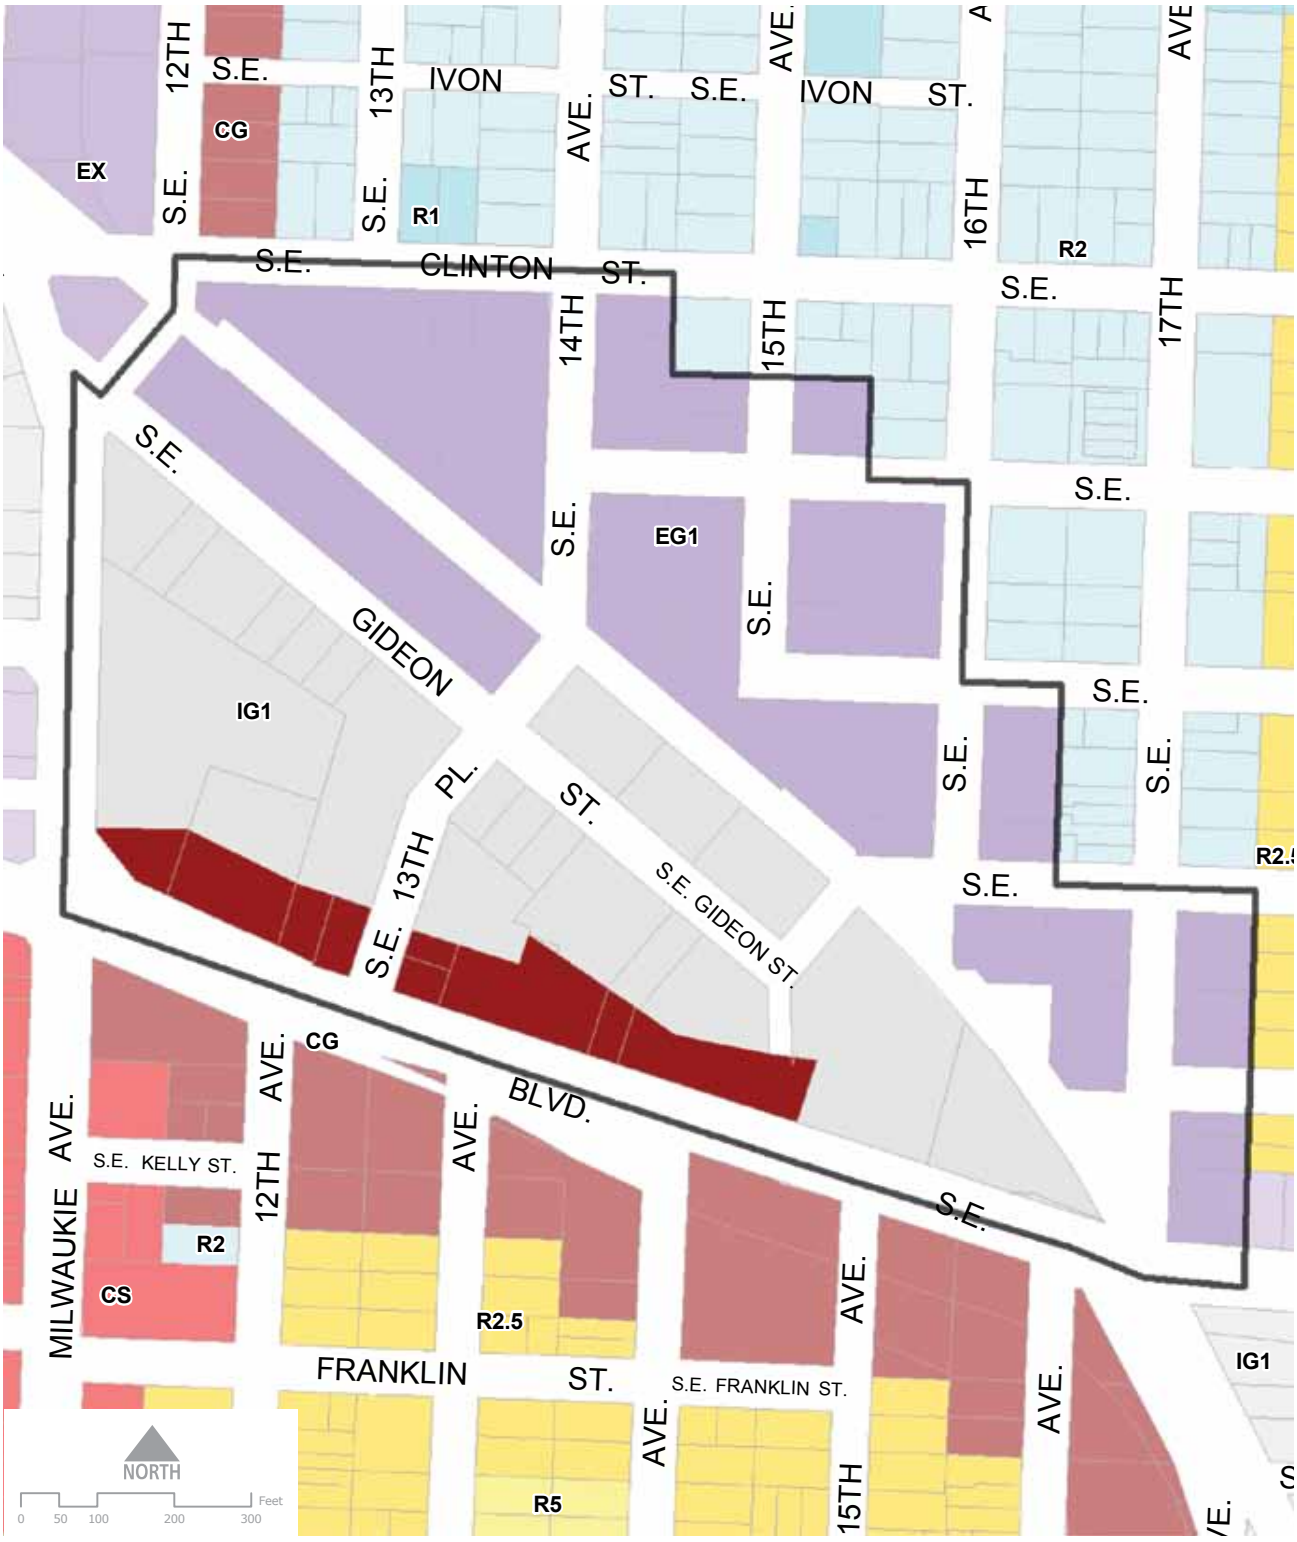

Table 10.9: Powell Triangle Zoning

Zone	Powell Triangle Acres	Percent of Powell Triangle	Study Areas Acres	Percent of that zone in Study Areas	Citywide Acres	Percent of that zone Citywide

Powell Triangle Zoning

June 30, 2009 City of Portland | Bureau of Planning and Sustainability | Geographic Information System
The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

Discussion

The Powell Triangle is one of the six study areas to be examined as part of *Central City 2035*. This area is included because of the potential for a light rail station at SE Clinton Street and SE 12th Avenue. The Portland City Council adopted the Locally Preferred Alternative for the Milwaukie Light Rail Project on July 17, 2008 (Resolution # 36625). This completed Metro's South Corridor Phase II: Portland-Milwaukie Light Rail Project. TriMet is currently in the process of completing technical analyses for Preliminary Engineering (PE) and the Final Environmental Impact Statement (FEIS). It is anticipated that Milwaukie light rail service could begin in 2015.

The Milwaukie LRT Project represents more than 40 years of public support for preserving neighborhood livability by promoting the use of transit. The southeast Portland community was instrumental in the defeat of the proposed Mount Hood Freeway in the late 1960s and early 1970s. The community replaced the regional transportation plan with a balanced transportation plan, which integrated land-use planning with major investments in transit. Light rail to southeast Portland, Milwaukie and Oregon City was one of the priority corridors identified in the revised *Regional Transportation Plan*.

In 1993, Metro initiated the light rail project development planning process, the first step in the federal requirements for transit system planning for a South/North Transit Corridor from Clackamas County to Portland and across the Columbia River to Vancouver and Clark County, Washington. A coalition of Southeast Portland community groups developed a light rail alignment option known as the Caruthers Alignment. This was developed to serve the Central Eastside, Hosford-Abernethy, Brooklyn, Reed and Sellwood/Moreland neighborhoods. This alignment included a station at the intersection of SE Clinton Street/12th Avenue. In 1998, the South/North Corridor Draft Environmental Impact Statement was completed and the Locally Preferred Alternative was adopted, including the Caruthers Alignment. Also in 1998, a ballot measure that would have provided funding for this project was defeated.

Metro, with the support of the City of Portland and other regional partners, pursued a public planning process to examine options for a shorter and more financially feasible light rail project. This resulted in the effort to proceed with the Interstate MAX Project and was followed by the South Corridor. The South Corridor was divided into two segments, Phase I: I-205 and the Portland Mall, which will start service in September 2009, and Phase II-Milwaukie.

The Clinton Station presents an opportunity to examine station area planning at an important intersection between the Hosford-Abernethy and Brooklyn Neighborhood and the Central Eastside. Situated in probably one of the most challenging street intersections that includes the Union Pacific mainline railroad tracks, combined with the proposed light rail crossing, and the combinations of intersections that include 11th/12th/Milwaukie/Clinton, and the SE Division/11th/12th and SE Powell/Milwaukie intersection. A comprehensive examination of land use, urban design, economic development, and transportation issues would be an opportunity to develop strategies to improve the access and light rail ridership with supporting transit-oriented land uses and development.

SOUTH PORTLAND

South Portland Neighborhood and South Auditorium District

The South Portland study area contains a mix of commercial, institutional, and residential uses located south of Interstate 405 along SW Kelly Avenue. It covers about 74 acres (including public right-of-way). The study area is entirely within the boundaries of the South Portland Neighborhood Association, and contains portions of the South Auditorium Plan District, which also extends north of Interstate 405 into the Central City Plan District. The study area's southern boundary is framed by the Lair Hill Conservation District, an area historically significant as it is Portland's oldest residential neighborhood and contains a well-established stock of historic, late 19th Century housing.

This study area is defined by the transportation infrastructure that borders and bisects it. Interstate 405 is located to the north and separates the area from the Central City Plan District, Interstate 5 is located to the east and separates the area from the South Waterfront subdistrict. Most development in the area fronts or can be accessed by SW Kelly Avenue, which operates as the US Route 26 connection between the Ross Island Bridge and Interstate 405. Improvements to much of this infrastructure have been studied as part of the *South Portland Circulation Study,* which proposes to reduce the affects of infrastructure on this area and the South Portland neighborhood.

Zoning

As noted this study area has a mix of land uses, which responds to the zoning pattern characterized by seven different land-use zones within a fairly small geographic area. These zones include Neighborhood Commercial 2 (CN2), Office Commercial 2 (CO2), Storefront Commercial (CS), Central Commercial (CX), with the design overlay (d), General Employment 1 (EG1), Residential 1000 (R1), and High Density Residential (RH). Breaking the general zoning pattern down we find that 80% of the area is zoned for commercial uses (although there is great variation between the four commercial zones applied to this area) and 14% of the area is zoned for residential land uses.

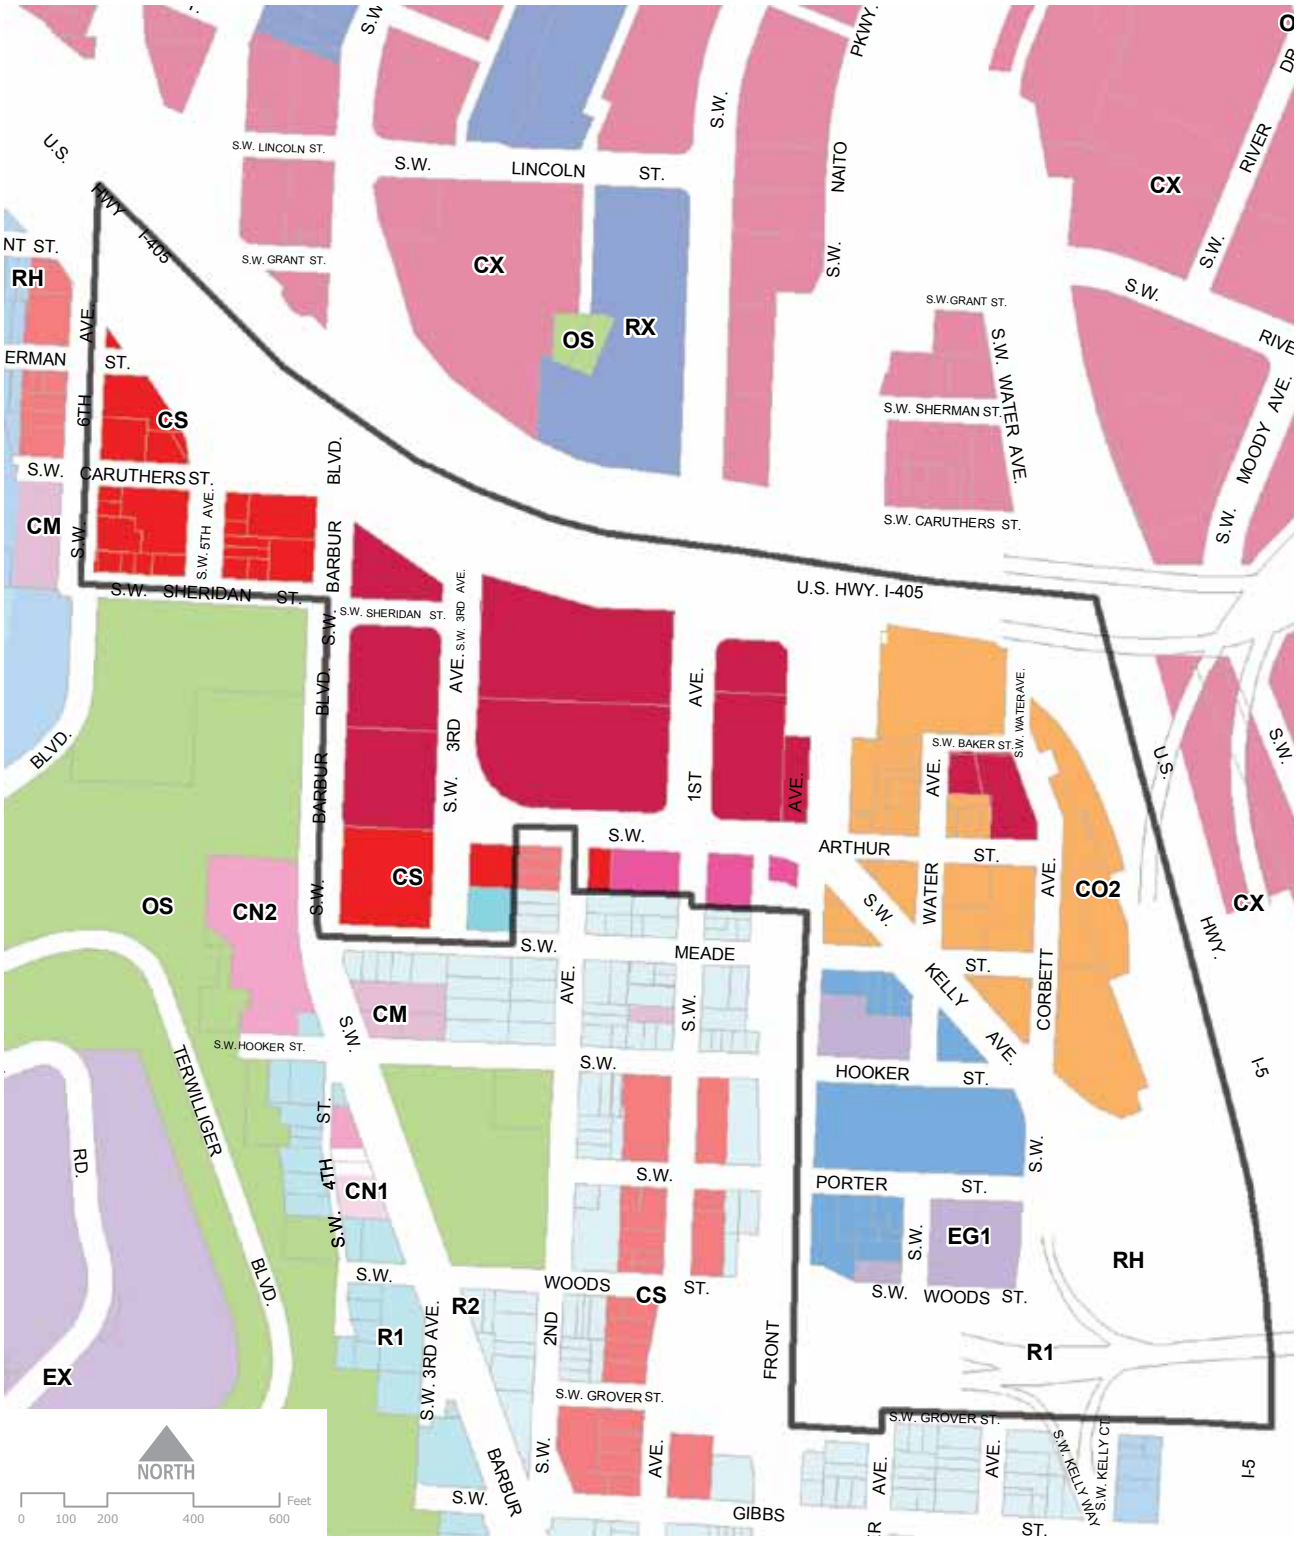

Table 10.11: South Portland Zoning

Zone	South Portland Acres	Percent of South Portland	Study Areas Acres	Percent of that zone in Study Areas	Citywide Acres	Percent of that zone Citywide
Neighborhood Commercial 2 (CN2)	0.8	2.9%	0.8	100.0%	268.6	0.3%
Office Commercial 2 (CO2)	7.2	25.8%	7.8	92.3%	109.5	6.6%
Storefront Commercial (CS)	4.2	15.1%	8.8	47.8%	719.4	0.6%
Central Commercial (CX)	10.2	36.6%	30.2	33.8%	1,036.3	1.0%
General Employment 1 (EG1)	1.7	6.1%	11.2	15.2%	64.8	2.6%
Residential 1,000 (R1)	0.2	0.7%	0.5	46.5%	1,656.7	0.0%
High Density Residential (RH)	3.6	12.9%	39.4	9.1%	489.8	0.7%
	27.9	100.0%				

Note: River and right-of-way acres are not included.

South Portland Zoning

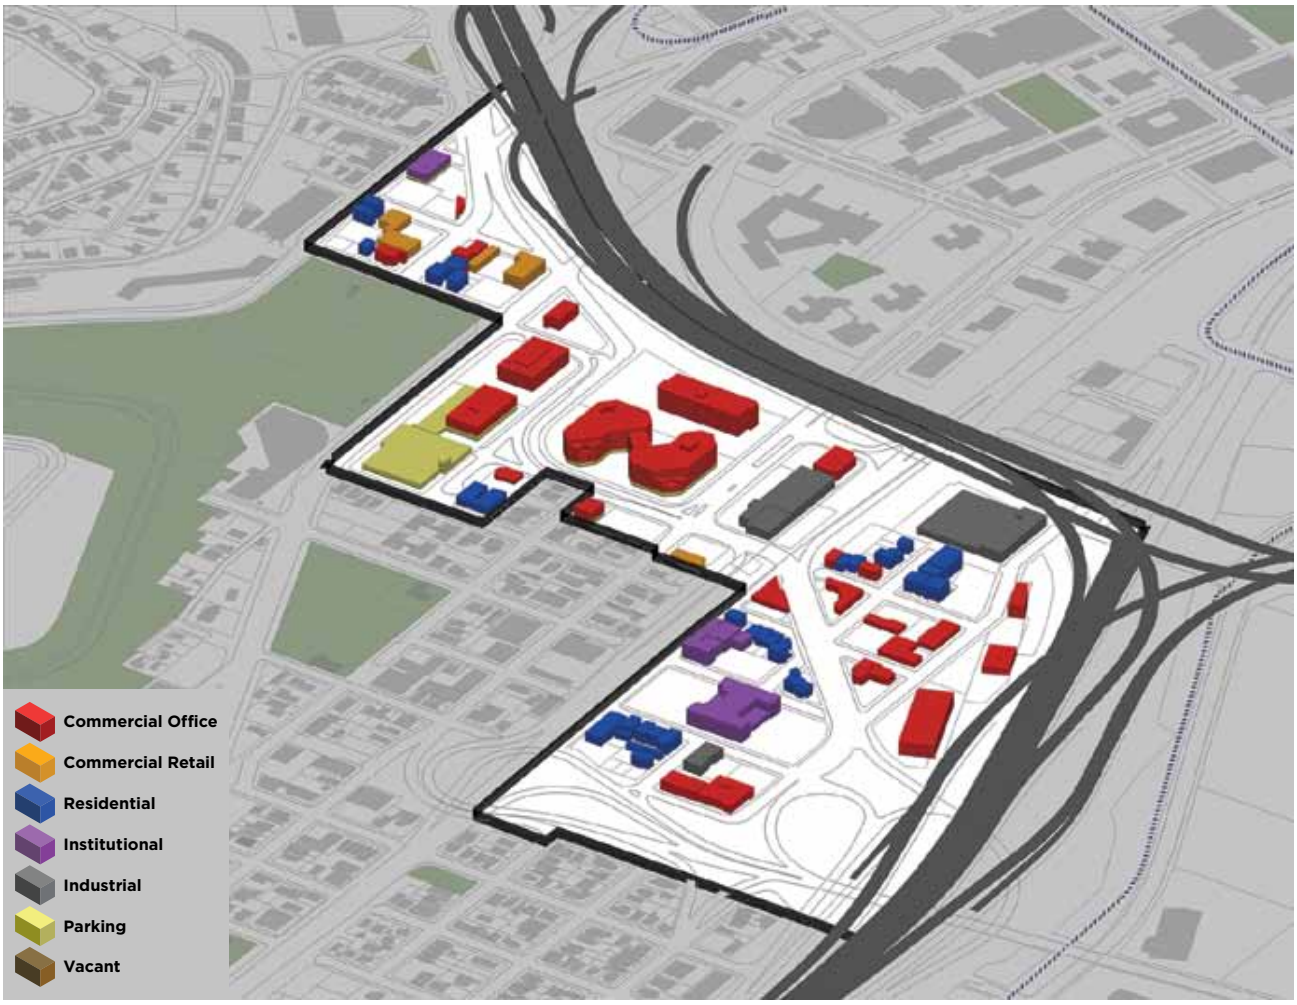
June 30, 2009 City of Portland | Bureau of Planning and Sustainability | Geographic Information System
The information on the map was derived from digital databases on the City of Portland, Bureau of Planning and Sustainability GIS. Care was taken in the creation of this map but it is provided "as is". The City of Portland cannot accept any responsibility for error, omissions, or positional accuracy, and therefore, there are no warranties which accompany this product. However, notification of any errors will be appreciated.

Existing Uses

In 2008, the Bureau of Planning inventoried land and building uses within the Central City. Staff conducted visual inspections of all buildings in the South Portland area and estimated the proportions of different uses by floors of buildings. This database, when linked to the City's 3-D building model, provides estimates of different types of uses. The results of this calculation are not precise, but do provide more up-to-date estimates of uses than previously available.

The South Portland area has a broad range of uses. The eastern portion of the area contains a growing mix of institutional uses, including properties owned by the International School, Portland State University, and the main campus of the National College of Natural Medicine. The northwest portion of the area is dominated by commercial office uses, and also contains a mix of different single- and multi-dwelling residential uses. Together, office and associated parking uses in the study area make up roughly 65% of the developed building area. Although 32% of the area is zoned for residential uses, only 13% of the built square footage of the area is built as housing with 65% of that being multi-family and 35% single-family.

Discussion



The zoning pattern affecting this district is unique and appears to have occurred over time as the result of various unrelated projects. For instance, the northwest section of the study area is dominated by commercial land uses and maintains an urban form, shaped by the development standards of the South Auditorium District. This area also has a scale of development that more closely relates to the denser mixed-use environment of the Central City than the residential neighborhood found in Lair Hill to the south. Once one leaves this portion of the study area the mix of land uses begins to become more diverse, and its character and urban form changes dramatically. In this area, the transportation infrastructure that bounds and bisects the district becomes the dominating character influence.

Combined, the transportation infrastructure and land-use pattern in this area acts as barrier or buffer between the Central City and the South Portland neighborhood. In some ways this is good as the area acts as a transition zone between the dense, mixed-use environment of the Central City and South Portland's slower paced residential neighborhoods. However, the character of the area and the negative effects of transportation infrastructure need to be addressed to allow better utilization of the land in this area and to improve transportation capacity and constraints.

The *South Portland Circulation Study* (2001) addressed many of these transportation issues. Its recommendations provide a long-term vision to guide transportation improvements that will reconnect the Lair Hill neighborhood and surrounding area. The plan's primary objective is to separate regional from local traffic by removing the Ross Island Bridgehead ramps. This can be achieved by streamlining the connections between the Bridge and its connections to I-5 and the I-405 freeways as well as changing the character of SW Naito Parkway to fit better with the surrounding neighborhood.

By including this area in the *Central City 2035* plan, it may be possible to identify ways to address these issues while also creating a district that continues to act as a buffer between uses in South Portland and the Central City. Additionally, including this area could help create an urban form that is more aesthetically pleasing and develops stronger physical connections.
