RESOLUTION No. 36972 As Amended

Adopt the N/NE Quadrant Plan and the I-5 Broadway-Weidler Facility Plan (Resolution)

WHEREAS, the Central City is the economic, cultural, and transportation hub of the Portland metropolitan region; and

WHEREAS, the Central City plays a critical role in fulfilling the vision of the Portland Plan for a prosperous, educated, healthy and equitable city; and

WHEREAS, the Central City Plan, adopted by City Council Ordinance No. 160606 and Resolution No. 34417 on March 24, 1988, is the guiding City policy document for the Central City; and

WHEREAS, the City of Portland is undertaking a needed update of the Central City Plan through a project called Central City 2035, part of the update of the City's Comprehensive Plan; and

WHEREAS, the Central City 2035 project includes the CC2035 Concept Plan and specific plans for the four quadrant of the Central City, and the N/NE Quadrant Plan is the first of these quadrant plans to be completed, and these integrated components will serve as the basis for updating the Central City Plan through future amendments to the City of Portland Comprehensive Plan and Map, and Zoning Code and zoning maps; and

WHEREAS, there is a history of gentrification and displacement in the N/NE Quadrant area; and

WHEREAS, Interstate 5 is a critical component of the Interstate Freeway System and plays a vital role in the local, regional, state and national economies; and

WHEREAS, the section of Interstate 5 in the N/NE Quadrant is a documented high-crash corridor, with the highest crash rate in the state, and the Broadway/Weidler interchange area has high pedestrian and bicycle utilization and is also a documented high-risk area for bicycle-car and pedestrian-car conflicts; and

WHEREAS, the I-5/405 Freeway Loop Advisory Group Final Report, accepted by City Council Resolution No. 36448 on October 19, 2006, with participation from the State of Oregon and the City of Portland, identified urgent long- and short-term capacity, operations and safety issues in the I-5/405 Freeway Loop and recognized the need to improve operations and safety on Interstate 5 between the Fremont Bridge and Interstate 84 as a short-term priority; and

WHEREAS, the N/NE Quadrant and I-5 Broadway/Weidler Plans project represents a unique collaboration between the State of Oregon and the City of Portland to integrate long-range land use, urban design and local transportation planning for the N/NE

Quadrant of the Central City with planning for freeway improvements that address safety and operational issues on Interstate 5; and

WHEREAS, the N/NE Quadrant and I-5 Broadway/Weidler Plans project included the development of the N/NE Quadrant Plan and the I-5 Broadway/Weidler Facility Plan as two integrated and mutually supportive plans that together provide a vision for the future of the N/NE Quadrant of the Central City; and

WHEREAS, the N/NE Quadrant Plan, attached as Exhibit A, contains specific goals, policies, urban design diagrams and implementation actions to guide future decision-making, physical development, and public and private investment within the Lloyd District and Lower Albina; and

WHEREAS, the I-5 Broadway/Weidler Facility Plan, attached as Appendix C to Exhibit A, contains a planning-level concept for improvements to Interstate 5 between the Fremont Bridge and Interstate 84, including the Broadway/Weidler interchange, which will improve freeway operations and safety while also improving safety and connectivity for all transportation modes, including bicycles and pedestrians, using the freeway over- and under-crossings and surface streets in the area; and

WHEREAS, land use and transportation analyses conducted jointly by the City of Portland and the Oregon Department of Transportation as part of the N/NE Quadrant and I-5 Broadway/Weidler Plans has produced sufficient technical information to determine whether the N/NE Quadrant area meets the characteristics of a Multimodal Mixed-Use Area (MMA) as defined in the State Transportation Planning Rule in OAR 660-012-0060; and

WHEREAS, the I-5 Broadway-Weidler Facility Plan identifies implementation actions for the next phase of project development, including a public process led by the City and State for addressing community design issues, phasing, construction, and financing; and

WHEREAS, the N/NE Quadrant and I-5 Broadway/Weidler Plans Stakeholder Advisory Committee, with representation from a diversity of neighborhood, citywide and regional interest groups, met on 19 occasions and held 14 subcommittee meetings to discuss planning issues, develop alternatives and make recommendations; and

WHEREAS, public involvement and outreach to residents, property owners, business owners, community organizations and concerned stakeholders included: public walks; workshops and charrettes; public surveys; open houses; community group and stakeholder meetings; public commission briefings and hearings; opportunities for public comment at Stakeholder Advisory Committee meetings; a project web site; postal and electronic mailings; and newsletters; and

WHEREAS, the N/NE Quadrant and I-5 Broadway/Weidler Plans Stakeholder Advisory Committee recommends the adoption of the N/NE Quadrant Plan and the I-5

Broadway/Weidler Facility Plan as an integrated package, as described in the Stakeholder Advisory Committee Recommendations, attached as Exhibit B; and

WHEREAS, the Portland Planning and Sustainability Commission held a public hearing on September 11, 2012 and recommended on September 25, 2012 that the City Council adopt the N/NE Quadrant Plan and that the Oregon Transportation Commission adopt the I-5 Broadway/Weidler Facility Plan;

NOW, THEREFORE, BE IT RESOLVED, that the City Council adopts the N/NE Quadrant Plan and its appendices, attached as Exhibit A, as Non-Binding City Policy; and

BE IT FURTHER RESOLVED, that the recommendations of the N/NE Quadrant Plan will be implemented following the completion of the additional quadrant planning work outlined in the Central City 2035 Concept Plan, as part of the final Central City 2035 Plan package, which is anticipated to be completed in 2015; and

BE IT FURTHER RESOLVED, that the Bureau of Planning and Sustainability will evaluate whether requirements as well as bonus incentives should be applied when intensification in zoning designations or height map changes are made, so that all new residential development will include a range of housing affordability; and

BE IT FURTHER RESOLVED, that the City Council supports the proposed improvements to Interstate 5 and related freeway crossings and surface streets in the vicinity of the Broadway/Weidler interchange described in the I-5 Broadway/Weidler Facility Plan, and recommends that the Oregon Transportation Commission adopt the facility plan; and

BE IT FURTHER RESOLVED, that the Bureau of Transportation is directed to work with the Oregon Department of Transportation to secure funding to implement the I-5 Broadway/Weidler Facility Plan and, as funds become available, to allocate resources between improvements to freeway operations and to local circulation projects, including bicycle and pedestrian improvements; and

BE IT FURTHER RESOLVED, that the Bureau of Transportation is directed to work with the Oregon Department of Transportation and with property owners and stakeholders to refine the freeway improvement concept through preliminary engineering and a mutually agreeable phasing strategy, and to address remaining issues and potential property impacts identified in the facility plan; and

BE IT FURTHER RESOLVED, that the Bureau of Transportation is directed to work with the Oregon Department of Transportation, property owners and the public to fund and implement, as a first phase, near-term safety-enhancing improvements to surface streets in the vicinity of the Broadway/Weidler interchange to improve safety and connectivity for all transportation modes, such as closing the off ramp slip lane onto N

Broadway, adding new traffic signals, closing N Flint Avenue at Broadway and adding a new connection across I-5 to N Dixon Street and a new pedestrian/bicycle path; and

BE IT FURTHER RESOLVED, that the Bureau of Transportation is directed to report to Council on progress toward near-term safety-enhancing improvements in the vicinity of the interchange and towards developing a phasing strategy and securing funding to implement the I-5 Broadway/Weidler Facility Plan; and

BE IT FURTHER RESOLVED, that the Bureau of Transportation and the Bureau of Planning and Sustainability are directed to prepare a report with required findings and recommended amendments to the Transportation System Plan (TSP) as part of the next TSP update process to designate the N/NE Quadrant as a Multimodal Mixed-Use Area (MMA) consistent with the State Transportation Planning Rule in OAR 660-012-0060; and

BE IT FURTHER RESOLVED, that the City Council gratefully acknowledges the dedication and hard work of the N/NE Quadrant and I-5 Broadway/Weidler Plans Stakeholder Advisory Committee and the many community organizations and members of the public who participated in the planning process.

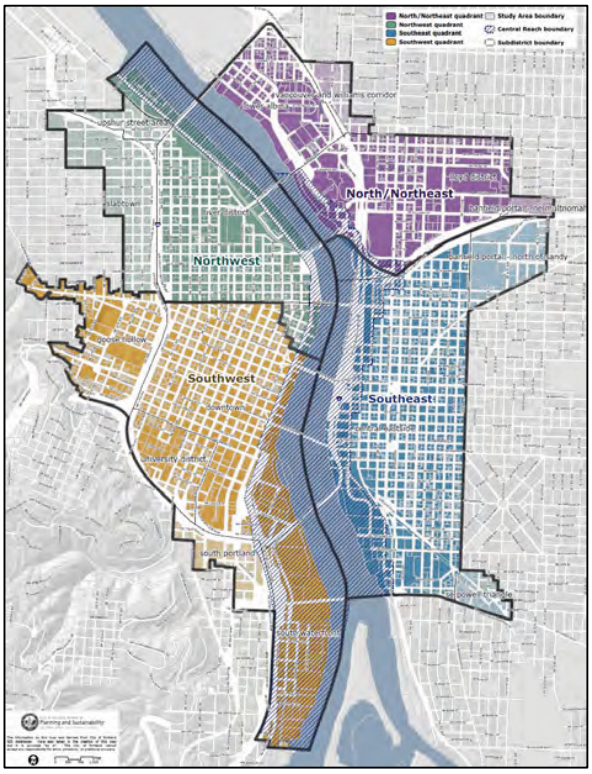
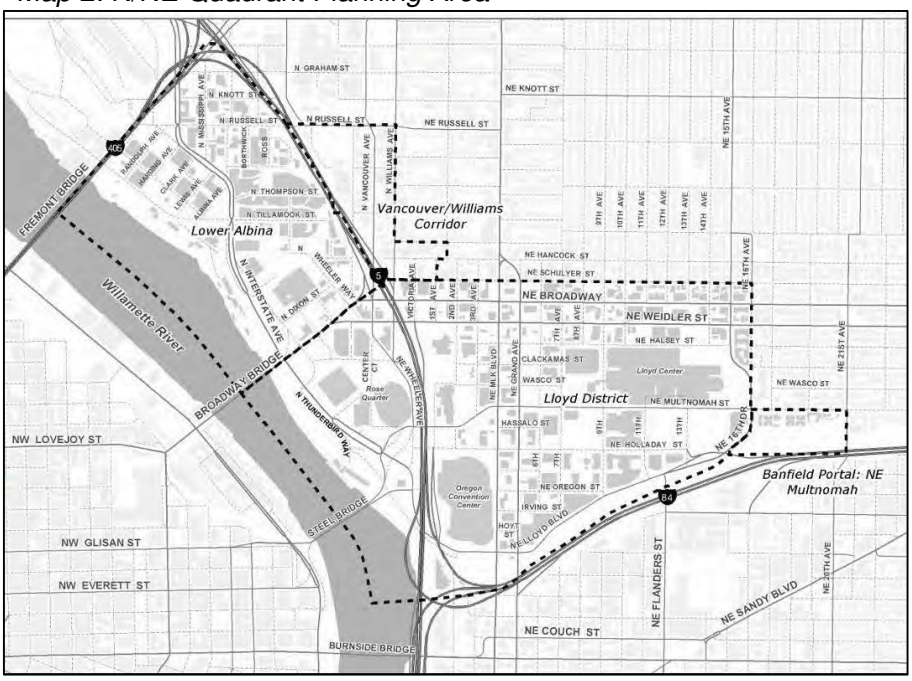
CHAPTER 1: INTRODUCTION



Purpose

The N/NE Quadrant Plan is one element of the Central City 2035 project (CC2035), an effort to update the 1988 Central City Plan. The vitality of the Central City is key to state, regional and City policies for growth management and economic development, and for addressing new issues and directives that have emerged since 1988, such as those related to sustainable development and climate change.

The CC2035 Plan will include new guiding policies, updated land use and urban design plans, and more detailed plans for specific Central City districts. The Plan will replace the 1988 Central City Plan as the primary guiding policy document for the Central City. The Central City 2035 plan will be part of the City's updated Comprehensive Plan and will implement the Portland Plan, the city's strategic plan, within the Central City.



The N/NE Quadrant Plan is the first of the more detailed district plans, addressing land use, urban design, transportation, public infrastructure and development entitlements in the Lloyd District and Lower Albina subdistricts of the Central City.

Map 1: Central City 2035 Plan Boundaries

The planning area also includes two study areas: the North Banfield Portland and the Vancouver Williams Corridor. These areas, which are outside of the Central City, were included in the plan boundary because of the potential for land use and transportation proposals in the quadrant to affect them and to address long-identified land use and zoning issues in these areas.

Map 2: N/NE Quadrant Planning Area

working waterfront in Lower Albina and major event, office and retail facilities in the Lloyd District. However, this area as a whole has not fully realized economic development goals and targets related to jobs and housing set in the Central City Plan. Both the Lloyd District and Lower Albina have the potential to continue to grow and evolve as unique elements of a vital Central City.

A major transportation facility in the N/NE Quadrant is the I-5 Freeway. While the freeway provides regional access to Lloyd and Lower Albina and serves industrial uses and regional attractions well, the history of the construction of the Interstate Freeway System in Portland has been controversial, including impacts to neighborhoods, families, and in particular to the African-American community in Portland. Today, the freeway and Broadway/Weidler interchange are congested, with the highest crash rates in Oregon on the freeway and a high number of crashes, particularly involving pedestrians and bicyclists on surrounding local streets. The freeway corridor running through the district also acts as a barrier disconnecting the land use and communities east and west of the freeway. To address these issues, the City of Portland and Oregon Department of Transportation (ODOT) engaged in a joint effort in the N/NE Quadrant planning process to develop an I-5 Broadway/Weidler Interchange Plan concurrently with the N/NE Quadrant Plan. This interchange plan was intended to establish a new type of framework that integrates the high-density, pedestrian emphasis for the Broadway/Weidler corridor with an urban freeway interchange.

Planning Process

The N/NE Quadrant Plan was developed through a unique collaborative partnership between the City of Portland and the Oregon Department of Transportation to address land use, urban design and local transportation issues for the quadrant at the same time as major transportation issues related to the I-5 freeway. Over a nearly two-year period, a diverse, 30-member Stakeholder Advisory Committee (SAC) worked with interested community members and staff to develop this plan and the recommended concept for I-5 Broadway/Weidler Interchange Improvements. The SAC met 19 times and held 13 subcommittee meetings. Several public events were held at key milestones in the process to encourage broad participation and input. The project team also attended regular meetings of community groups such as neighborhood and business associations, organized meetings with stakeholders and conducted an on-line survey to obtain feedback on plan proposals. The resulting products of this effort represent a careful balance between land use and transportation improvements and have received broad support from the SAC and community at large. Additional information about the planning process is contained in Chapter 2: *Developing the Plan* and Appendix F: *Public Involvement Summary*.

Background

The N/NE Quadrant is made-up of two Central City districts, Lower Albina and the Lloyd District. Each is a very distinct place, with different urban characters, development patterns, and land uses. Lower Albina is primarily an industrial district, with a working harbor area, an important living-wage job base and a small mixed-use historic area along N Russell Street. The Lloyd District is characterized by a number of large region-serving facilities, including the Rose Garden, Oregon Convention Center and the Lloyd Center shopping mall, as well as a concentration of large office buildings and neighborhood serving retail on the eastern portion of NE Broadway.

History

For centuries prior to first contact with Europeans and Americans, Chinookan-speaking peoples, including the Clackamas and the Multnomah, inhabited the lower Columbia basin in the vicinity of the area now known as Portland. Chinookan villages were located on both sides of the Columbia River near the mouth of the Willamette, with additional villages, resource areas, and trade routes located along the lower Willamette. By the time Portland was founded in the mid-1840s, disease had reduced the area's indigenous population by as much as 90 percent. By the 1850s, encroachment by white settlers and forced removal to reservations further devastated indigenous societies and few Native Americans remained in the Portland area.

The Lloyd District and Lower Albina share aspects of their histories as east side communities that grew-up near, but not in, the City of Portland. Growth on the east side was initially slower than on the west, as development was hampered by swamps and sloughs along the waterfront. Eventually, two communities with separate and distinct identities grew up, Albina and East Portland, each of which grew over time and became incorporated cities in their own right.

August Storz' Grocery, N Williams and Thompson, ca 1910

From the 1850s to the 1870s, East Portland, covering the southern portions of the Lloyd District, was largely rural, with timbered areas, giving way to small farms and residential growth over time. It was connected to Portland with several ferries. By the early 1880s it had a strong commercial spine running along Grand Avenue and a growing trade-oriented working waterfront.

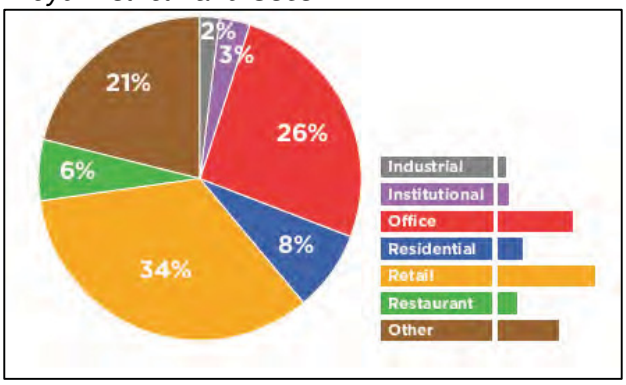
To the north of East Portland and covering a good part of the N/NE Quadrant was Albina. First platted in 1873, Albina grew up with two distinct sections, upper and lower. Lower Albina was a working industrial and waterfront area, which really took-off with the coming of the Union Pacific Railroad and the big terminal yards in the 1880s. In its early years Albina was populated by a large number of first and second generation European immigrants. The White Eagle Saloon, opened by Polish immigrants in 1905, is a reminder of the area's ethnic history. In 1891, the cities of Albina, East Portland and Portland consolidated into a new unified City of Portland.

By the turn of the century, most of the inner east side was platted, and rapidly growing in population and economic activity. In 1910, the total population on the eastside reached 120,000. Economic growth was fueled by maritime activity and the confluence of five rail lines. Residential development was aided by connections to the west side via multiple bridges and a growing streetcar network. The first bridge in the N/NE Quadrant itself was the first Steel Bridge in 1888, located about 3 blocks north of the current Steel Bridge, which was completed in 1912. Both carried freight rail and street cars that served East Portland and Albina. The Broadway Bridge was completed in 1912, it too carried a streetcar line.

The black population on the east side had steadily increased in the first part of the 20th century, especially after 1919 when organized residential segregation was instituted by Portland real estate agents, and Albina became one of the few areas in the city where African Americans could readily obtain housing. World War II drew thousands of African Americans to Portland to work in the ship yards. Following the war there was a large housing shortage, and the situation was much worse for African-Americans, whose housing options were limited. The situation reached crisis levels after the Vanport flood displaced 17,000 people in 1948. After the flood many African Americans moved to Albina.

The heart of mid-century African-American Albina stretched from the area where the Coliseum is now to north of Russell Street, with N Williams Avenue serving as a commercial, institutional and social spine for the community. One of Portland's hottest jazz clubs in the 1940s, the Dude Ranch, was located in the area. The building is the recently rehabilitated Leftbank Building, which is one of the few surviving buildings of the southern Albina African-American neighborhood. Another significant surviving structure is the Mount Olivet Baptist Church, located at 1st and Schuyler, which served as an important gathering place for the African-American community.

Mt Olivet Baptist Church, NE 1st Avenue



While the industrial character of Lower Albina has remained relatively stable, the Lloyd District area changed dramatically in the last half century, its form and character shaped by several major public infrastructure projects and large public and private developments. Beginning in the 1950s and continuing throughout the late twentieth century, major freeway projects, including I-84 (1965) and I-5 (1966), and large developments such as the Veterans Memorial Coliseum (1960) and the Lloyd Center (1960), resulting from Ralph Lloyd's grand vision for the area, re-made the fabric of the area. These and other projects entailed the demolition of large swaths of housing and small-scale commercial buildings, disproportionately impacting Portland's African-American community. The Coliseum project entailed the demolition of 476 housing units, half of which were inhabited by African-Americans, and dozens of businesses, essentially razing the southern anchor of a vital African-American neighborhood.

It should also be noted that, over time, development completely changed the physical landscape and hydrology of the area. The shoreline along the Willamette River was filled. Small streams were filled or put into pipes, and vegetation has been removed and replaced with buildings and paved surfaces. Additional information about the history of the N/NE Quadrant is contained in Appendix D: *History*.

Existing Conditions

Lloyd District

Lloyd District Land Uses

The Lloyd District today is predominantly a commercial area, with 26% of the area in office use, 16% in retail/major event entertainment and 14% in retail/shopping. Hotels make up about 10% and residential uses 8%. Another 10% is in parking structures (excluding surface parking). Retail activity is mainly focused around three areas, the Rose Quarter, the Lloyd Center area and the Broadway/Weidler couplet. Offices are concentrated in the southern and central portions of the Lloyd District. The most significant public open space is four-acre Holladay Park, south of the Lloyd Center.

The Lloyd District had 70 acres of redevelopable land identified in a 2007 study of vacant and underutilized land in the Central City. Those 70 acres have enough development potential under current entitlements to nearly triple the amount of built space in the district.

The district was estimated to have about 16,800 jobs in 2010, accounting for approximately 14% of the total in the Central City. Some of the biggest employment sectors in 2006 were: Services (30%); Retail, Arts, and Accommodation (30%); and Public Sector (12%).

In terms of residential population, the Lloyd District is one of the smaller districts in Central City. The 2010 Census recorded approximately 1,500 residents, making up less than five percent of the Central City's population. The district contains approximately 1,000 housing units. A 2008 housing inventory found that 87% of the housing in the Lloyd District was rental, with an average rent per square foot of $1.09, and a majority of rental units falling within the 81–120 percent Median Family Income (MFI) bracket, meaning they are moderately affordable.

Table 1: N/NE Quadrant Population, Housing and Employment, 2010

	Lloyd District	% of CC	Lower Albina	% of CC	Central City
Population	1,535	4.7%	139	0.4%	32,362
Housing Units	1,056	4.7%	88	0.4%	22,653
Jobs	16,799	13.6%	3,379	2.7%	123,565

Zoning is very flexible in most of the Lloyd District. The Central Commercial (CX) zone is a high-density, mixed use zone covering 87% of area. It allows a range of uses such as office, retail, institutional, and residential. Related development standards such as maximum height and floor area ratio (FAR) are generous, resulting in development entitlements comparable to those in the downtown core. Roughly five blocks of Central Residential (RX) zoning is located in the center of the district. An area of General Industrial 1 (IG1) is located near the river, at the site of the Louis Dreyfus grain elevators.

The Lloyd District has well-developed transportation infrastructure. It is served by two interstate freeways, four MAX light rail lines, the Portland Streetcar and eight bus lines. Some of the most heavily-trafficked auto streets include two major couplets: Broadway-Weidler and MLK-Grand. The abundant parking available in the Lloyd District is a highly visible characteristic. There are roughly 23,000 parking spaces, with roughly 21,000 spaces in surface lots or multi-story structures. The Lloyd District serves as a major conduit for bicycle routes to and from North and Northeast Portland, particularly the Broadway-Weidler and Vancouver-Williams couplets. The Eastbank Esplanade, a popular route for commuting and recreational cyclists, connects the District to Downtown and the Central Eastside.

Lower Albina

Lower Albina Land Uses

Today, Lower Albina remains primarily an industrial and employment district, with nearly half of its area devoted to industrial land uses and another 35% in office or institutional uses. In 2010 there were approximately 3,400 jobs in the district. Some of the biggest employment sectors in 2006 were: Education and Health (52%, primarily due to the Portland Public Schools Blanchard facility); Transportation, Warehousing, and Wholesale (14%); and Manufacturing (13%). Lower Albina has a very low resident population, with 139 residents in 2010, making up less than one percent of the Central City population. It contains 88 housing units, of which nearly all are rental units. Most of the housing is in the small mixed-use area in the vicinity of the historic Russell Street Conservation District, a concentration of historic structures, several of which have been rehabilitated in the last decade.

There is no public open space in the district, however Lillis Albina park is just outside of the district on the east side of the I-5 freeway.

The industrial character and low population of Lower Albina is a reflection of its zoning pattern; 76% of the district is zoned General Industrial 1 (IG1) and 16% is Heavy Industrial (IH). Both zones strictly limit non-industrial uses and generally prohibit residential development. Mixed-use zones total only a few acres each: Central Employment (EX) along Russell Street, accounts for 4% of the district, and Central Commercial (CX) makes up 3%, concentrated at the southern boundary of the subdistrict adjacent to the Rose Quarter.

Freight movement by trucks and trains is an important part of the economic well being of Lower Albina. The access route to I-5 North is N Interstate Avenue to the N Going Street interchange. The access to I-5 South and I-84 is NE Broadway to the Wheeler on-ramp. Interstate Avenue is the major north/south arterial in Lower Albina and is used for automobiles, trucks, light rail, transit, bicycles, and pedestrians. Russell Street is the main east-west connection. The nearby Union Pacific rail yard is classified as a Freight District.

Previous Planning

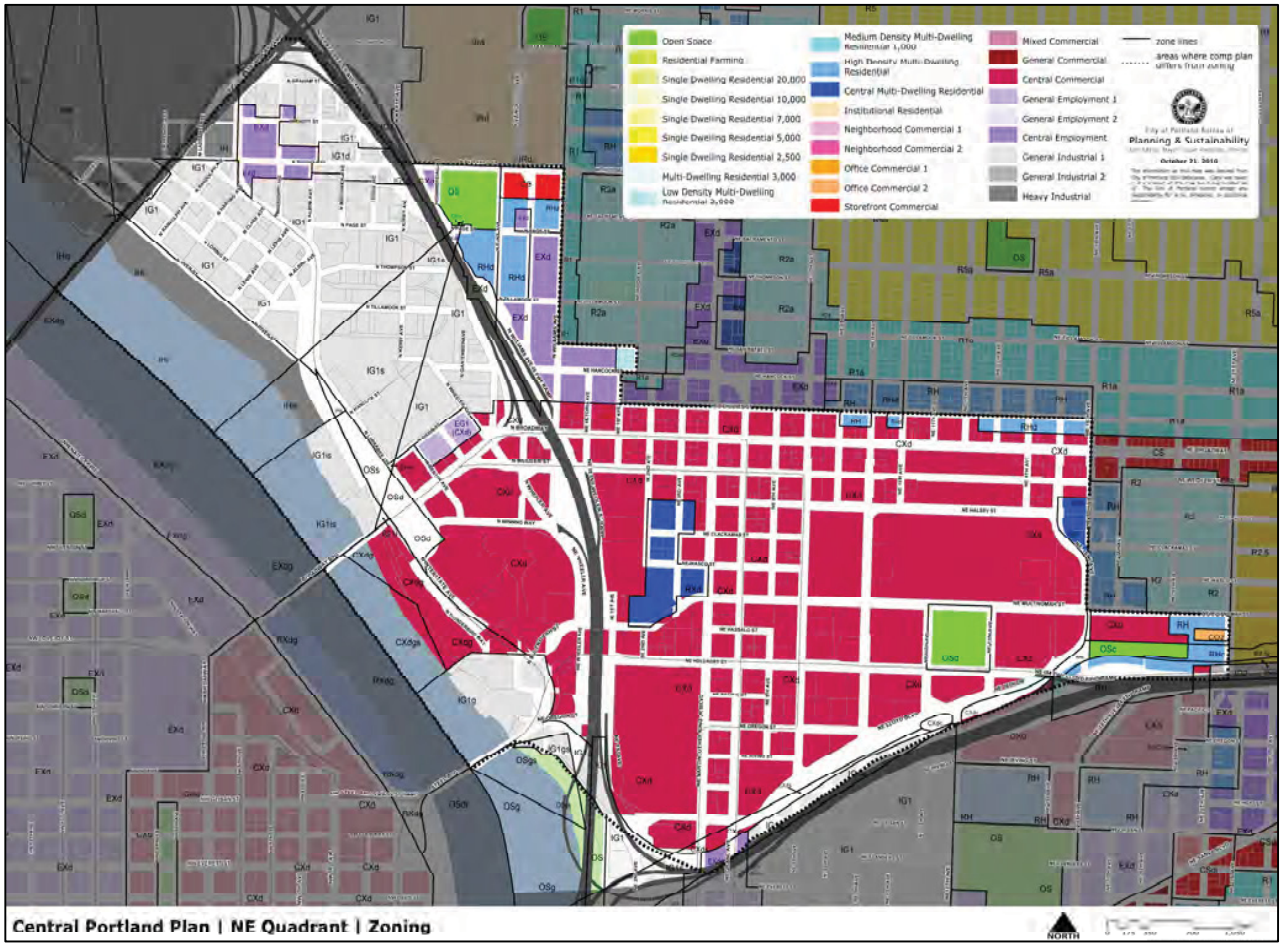
Lower Albina

Planning efforts from the last few decades in Lower Albina have focused on retaining and enhancing the industrial and employment functions of the district. Both the 1988 Central City Plan and the 1993 Albina Community and Eliot Neighborhood plans called for ongoing support of the district's industrial activities and freight movement, while preserving the mix of uses and historic character of the Russell Street area and seeking better connections to the Willamette River. More recently, the River Plan/North Reach planning process reconfirmed the value of the industrial development and operations in Lower Albina.

Lloyd District

The Lloyd District has been the focus of a number of planning efforts in the past few decades, many seeking to build on the district's existing assets, such as its regional transportation connections and concentration of regionally significant event facilities and services. One of the key intentions of the 1988 Central City Plan was to connect the Lloyd District with the Downtown core, creating a continuous swath of high-density commercial development and downtown activity. Other goals called for improving the pedestrian environment, reinforcing the Lloyd Center as the eastern anchor of Central City retail, and enhancing major focal points such as the Convention Center and the Memorial Coliseum.

More recent efforts such as the Portland Development Commission's Lloyd District Development Strategy (2001) and Lloyd District Housing Strategy (2002) focused on increasing the amount of high-density housing. The 2006 Development Vision for the Oregon Convention Center described an vibrant 24-hour entertainment district, with new hotels, housing developments, entertainment and retail venues in the sixteen block area adjacent to the Convention Center.



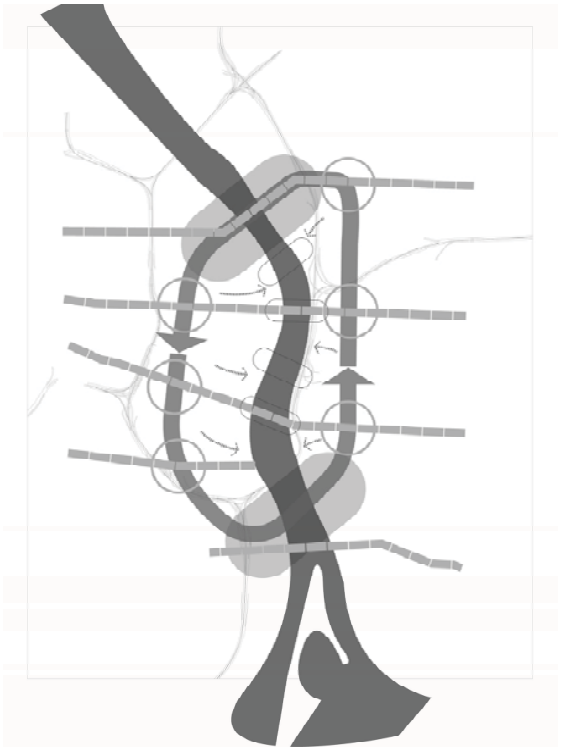
The Lloyd District has been identified as an "EcoDistrict", which is reflected in more recent planning efforts and this plan. It was first envisioned as a "green district" in the 2004 Lloyd Crossing study, that envisioned a new urban district that would maximize development potential while achieving environmental goals such as reducing carbon emissions through energy efficiency and the use of solar energy, habitat restoration and improving air and water quality. A formal Lloyd EcoDistrict partnership was initiated in 2011 to implement projects that accelerate sustainable development on a district-scale.

While some progress has been made towards achieving the goals of previous plans, the Lloyd District still contains an enormous amount of development potential and unique opportunities for place-

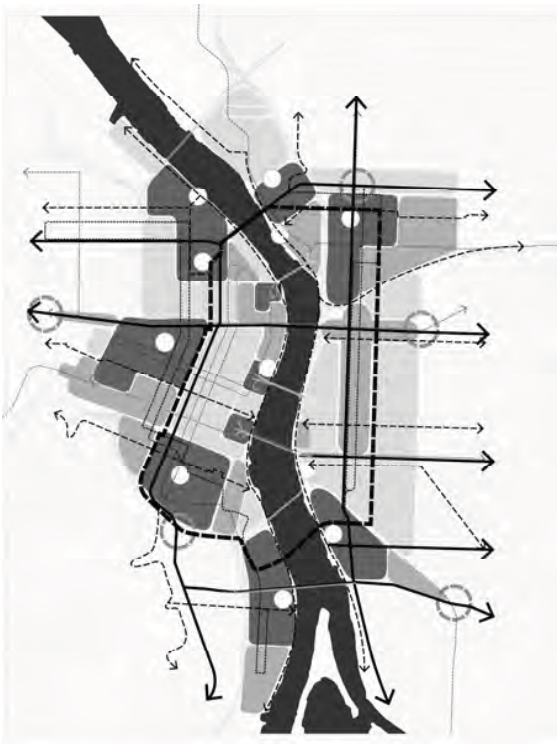
making. As the district redevelops, there will also be opportunities to integrate nature into a densely developed urban area and to become a model of urban sustainable development.

Additional information on existing conditions and previous planning, including information on the two study areas included the N/NE Quadrant planning area, is contained in the *Central City 2035 Subdistrict Profiles* report.

Map 3: N/NE Quadrant Zoning



Relationship to the Central City 2035 Concept Plan and Portland Plan



CC2035 Concept

The Central City 2035 Concept Plan is a 25-year concept plan that will guide the updates to the 1988 Central City Plan. It defines the overall direction for the Central City as a "Center for Innovation and Exchange" within the context of city-wide goals established through the Portland Plan and Comprehensive Plan. The Concept Plan recognizes the Central City as the center of the economy for the Portland metropolitan region and the Columbia River Basin. It is also the regional center for arts and cultural activities, retail, entertainment, tourism, higher education and lifelong learning, urban living and the region's multimodal transportation network.

The density of uses, activities and people has established an environment of excitement, interest, vibrancy and synergy. It encourages a level of interaction between people, businesses and institutions that can not be generated elsewhere in the state. The positive impact this environment has on economic development, creativity, civic engagement, and the livability of the region as a whole is significant.

Within the N/NE Quadrant, the Lloyd District and Lower Albina are important components of the Central City and will be critical to meeting the strategic directions set by the Concept Plan. To this end, the N/NE Quadrant Plan includes detailed goals, policies, and action item updates for these two districts. Key among these goals is to capitalize on the Lloyd District's development potential, transportation investments and EcoDistrict designation to create a vibrant, sustainable and mixed-use district that becomes an extension of downtown and strong eastside urban center. Lower Albina will continue to be home to an important close-in industrial job base and small business incubators, with an eclectic mix of uses that contributes to the diversity and character of the Central City. Future quadrant plans, for the SW, NW and Central Eastside, will similarly help implement the Central City 2035 Concept throughout the Central City.

Portland Plan and the Comprehensive Plan

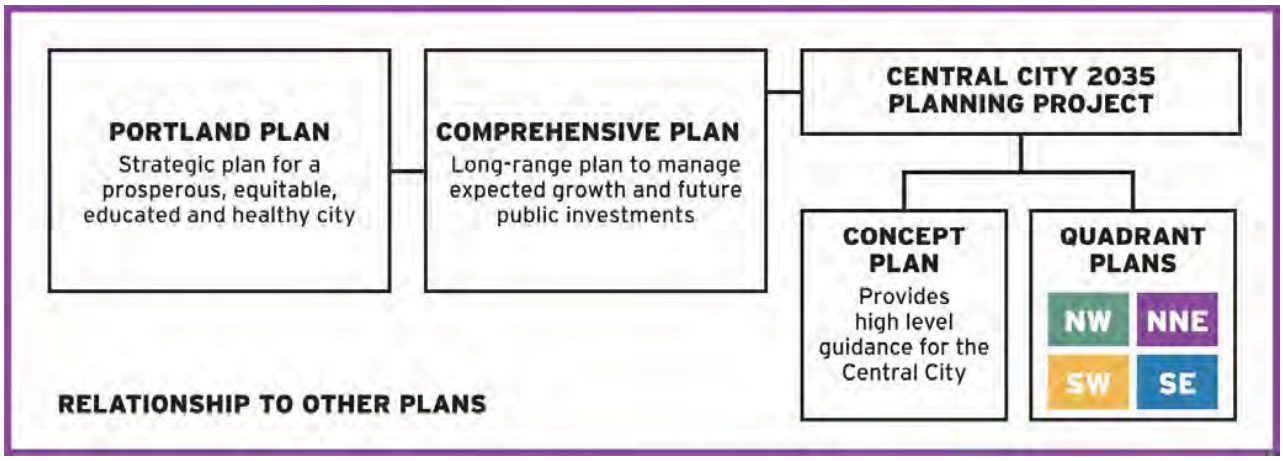
Portland's Comprehensive Plan is currently being updated based on the guidance provided by the Portland Plan, a strategic plan for the City of Portland adopted by Council in 2012. It sets broad goals for improving equity, prosperity, educational outcomes and human and environmental health in Portland. The Comprehensive Plan will implement the Portland Plan policies that relate to state-mandated long-range plan requirements that guide land use, transportation, conservation, and capital projects. The Portland Plan places key emphasis on achieving success citywide in four key areas: a framework for equity, thriving educated youth, economic prosperity and affordability, and a healthy connected city. While at its core it is a land use planning policy document, the N/NE Quadrant Plan is relevant to the Portland Plan's equity focus and integrated strategies in a variety of ways as outlined below.

Framework for Equity

Broad outreach and engagement has been a major focus of the N/NE Quadrant Plan process. A diverse 30-member Stakeholder Advisory Committee (SAC) advised staff throughout the development of both the Quadrant Plan and the I-5 Broadway/Weidler Interchange Improvement planning process. This committee included representatives from equity and health-oriented organizations, businesses, property owners, transportation advocates, adjacent neighborhood organizations and other perspectives. In addition, a range of public events and outreach activities including open houses, design charrettes, and surveys provided opportunities for input from a broad constituency. In addition to SAC meetings and larger public events, staff attended more than 75 individual meetings on the project with area groups and interested individuals.

The goals, policies and actions included in the N/NE Quadrant Plan are in many ways intended to help repair a neighborhood that has been done significant harm by large public projects of the past. Neighborhood connectivity, housing production and preservation of historic and cultural resources are key areas in which the plan attempts to correct damage done in the past. Policies are included that attempt to discourage displacement, while allowing for significant new development. Limited change is recommended in Lower Albina where business displacement risk is high. However, in the Lloyd District, which has few residents today and significant vacant and underutilized lands, the plan suggests a high level of change. This approach is intended to accommodate substantial new development with access to transit, jobs and other Central City amenities with very limited displacement. However, it will be important to monitor potential impacts on adjacent areas that could be at risk for displacement, such as the Eliot neighborhood.

Thriving Educated Youth



Centrally located and well-served by all transportation modes, the Central City and N/NE Quadrant are highly accessible to youth from around the region. The N/NE Quadrant Plan emphasizes job growth and residential development, both of which could increase youth access to these important opportunities. Further, in the Lloyd District the plan seeks to provide new open space and outdoor recreation opportunities that are important to support families and youth activities. The plan also recognizes and supports existing major regional facilities such as the Lloyd Center Mall and the Rose Quarter, which are important recreational and social facilities for youth providing critical opportunities for community interaction. The plan seeks to balance the episodic nature of these activity centers and improve neighborhood vitality, diversity and safety by encouraging mixed-use, urban development.

Economic Prosperity and Affordability

The N/NE Quadrant Plan places significant emphasis on capacity for job development – in both Lower Albina and the Lloyd District. Together the districts provide opportunities for business growth in a wide range of sectors from industrial and manufacturing to retail and professional services. In addition, the transportation policies and actions, including the recommended I-5 Broadway/Weidler Interchange Improvements developed in conjunction with this plan, recognize the importance of a robust and diverse transportation system to serve this crucial employment district in the future. The plan seeks to provide a full range of housing options and affordability levels in the Lloyd District and establishes ambitious goals for housing production, including affordable units. However, new resources and tools must be identified in order to achieve affordability goals.

Healthy Connected City

Few other areas in the region share the Lloyd District's combination of transportation system access and degree of development opportunity. The Quadrant Plan envisions a fully-developed, cutting-edge, sustainable, livable, mixed-use community of some 30,000 jobs and perhaps 10,000 residents in the Lloyd District. It lays out a concept for open space, local pedestrian connections and regional trails, as well as tree canopy and green infrastructure enhancements, to improve watershed function and habitat vitality and provide a healthier urban environment for people and wildlife.

CHAPTER 2: DEVELOPING THE PLAN

Community involvement was a critical part of the development of the N/NE Quadrant Plan. Extensive work was completed in 2010 and 2011, including SAC meetings, stakeholder meetings, community walks, charrettes and open houses resulting in four products that guided development of the district concept diagrams, goals, policies and implementation actions in Chapter 3 that will become part of the updated Central City Plan. This chapter describes these products, which include:

Project Goals: Overall project goals developed and adopted by the Stakeholder Advisory Committee to guide development of the plan. The project goals are outlined on page 12.

Urban Design Principles: Five organizing principles for quadrant-wide urban form that informed the development of concept alternatives and the eventual proposed concept for the N/NE Quadrant. These principles, listed below, are described in detail beginning on page 13.

- Two distinct places
- Fill in the central core
- Strengthen connectivity
- Take advantage of urban form
- Celebrate the crossroads

Proposed Concept: A series of five concept diagrams for the quadrant that illustrate the preferred future direction for land use, building height, street and development character, open space and green systems. The proposed concept formed the basis for the district concept diagrams and detailed policies and actions in Chapter 4. The proposed concept is described in detail with accompanying diagrams beginning on page 16.

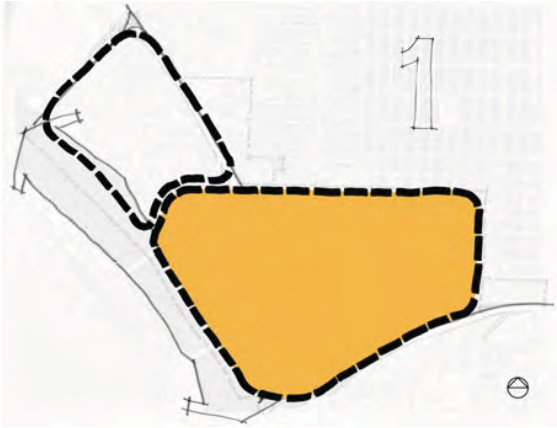
Integration with the I-5 Freeway Project: A description of how improvements proposed for the I-5 Broadway/Weidler Interchange can support the growth and development of the local area envisioned in the proposed concept. Integration with the freeway project is described in detail on page 23.

Project Goals

The following are the overall project goals that were developed and adopted by the Stakeholder Advisory Committee (SAC) in January 2011. The goals guided development of the plan and provided general criteria for periodic evaluation of draft concepts, policies and action items.

"This planning effort will result in integrated land use, urban design, and transportation strategies, policies and plans for the N/NE Quadrant and the I-5 Broadway/Weidler interchange that balance, complement, enhance, protect, respect, revitalize, support, and sustain economic, environmental, and social interests. The implementable plans will be consistent with the overall goals and policies of the city, region, and state.

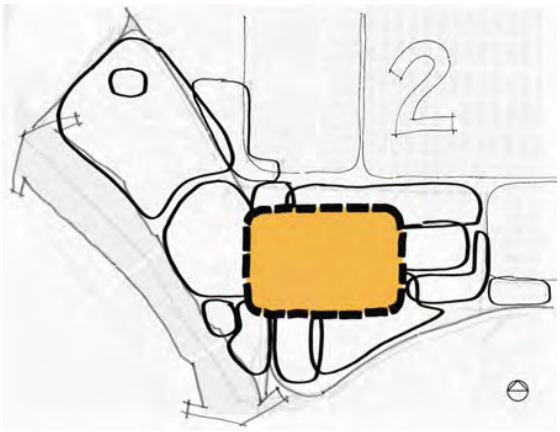
Our recommendations will be guided by our desire for:



- *A diverse mix of commercial, cultural, entertainment, industrial, recreational, and residential uses, including affordable housing;*
- *A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system;*
- *Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages;*
- *Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment;*
- *Equitable access to community amenities and economic opportunities;*
- *Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods;*
- *Protection and enhancement of the cultural heritage of the area and its sub-districts; and*
- *Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses."*

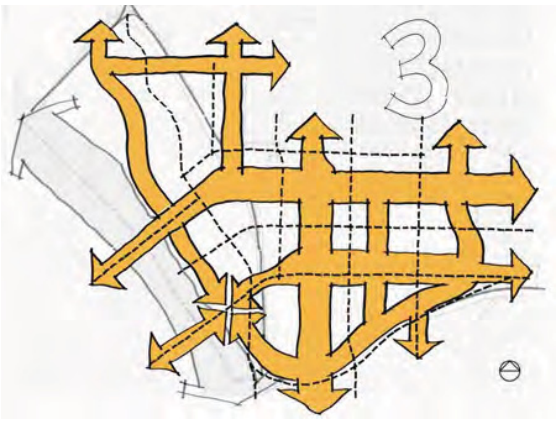
Urban Design Principles

In Spring 2011, the project team developed concept alternatives for the quadrant that were used to illustrate choices and solicit input from the SAC and public. One of the resulting products of this input were the urban design principles described below, which established organizing principles and big picture ideas regarding the quadrant-wide urban form.



Two Distinct Places: The N/NE Quadrant study area includes two distinctly different areas, headed in different directions.

Lower Albina is an active industrial and employment district not anticipated to dramatically change in its form, function or character between now and 2035. Incremental infill development in and around Russell Street is expected to continue along with gradual growth of the district's industrial and commercial businesses.



The second area is the Lloyd District, including the Rose Quarter, an area with long-held expectations for considerable redevelopment and change. Around its edges, the Lloyd District has seen slow-paced change over the past decades, including expansion of the Rose Quarter/Oregon Convention Center, new mixed use residential buildings along the eastern Broadway/Weidler corridor, and a steady increase in new office buildings in the office core area along NE Holladay. Notably still missing from the Lloyd is a critical mass of high-density residential development, while significant new residential communities rapidly emerged over the last two decades in other areas of the Central City.

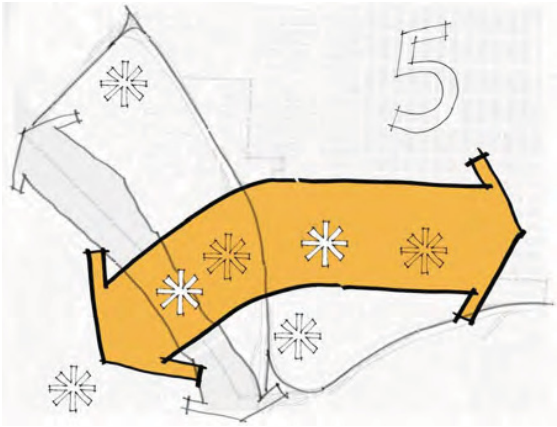
Fill in the Central Core: Physical transformation of the landscape is highest in this area.

For the success of the quadrant and specifically the Lloyd District, the "Central Core" area should transform into a high-density, high-amenity urban place that features a mix of residential and commercial/ employment uses organized around a new, signature public open space system. Currently this area is notable for its lack of a defined identity and sense of place, somewhat different from the other areas surrounding it. New development in the Central Core has the opportunity to help craft a new, marketable image or brand for the Lloyd District. The new streetcar alignment along 7th Avenue could represent a new, transit and pedestrian-oriented focal point, providing a human-scaled, storefront retail center for the Central Core area.

Strengthen Connectivity: Strengthen connectivity to and through the quadrant area.

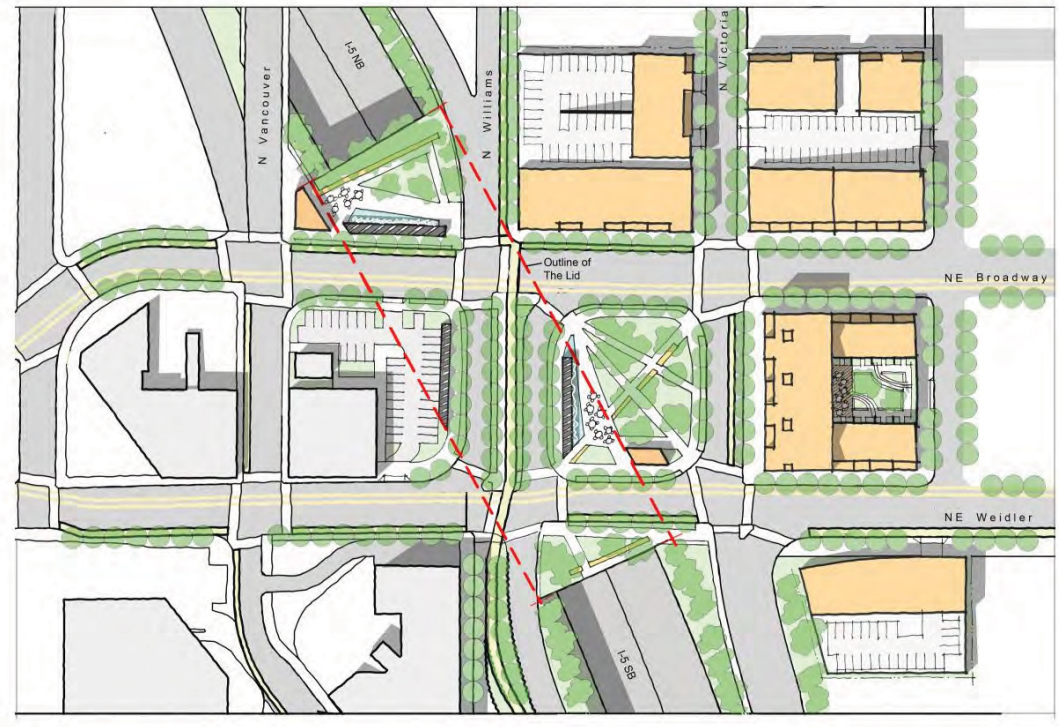
The N/NE Quadrant enjoys good regional auto and transit connections for its residents, workers and visitors. However, the two freeways – I-5 and 84 – while providing vital regional access to and from the quadrant, create challenges to local connectivity, both within the quadrant area and to adjacent districts. The Broadway/Weidler, MLK/Grand and Vancouver/Williams corridors all serve the quadrant area and offer access to different parts of the Central City and inner neighborhoods, but feature few distinguishing qualities, and in most cases act as boundaries or edges, rather than focal points or centers. The quadrant also features an expanding set of transit corridors, bicycle facilities and some discontinuous segments of a flexible pathway system through and among the larger blocks.

Some of the biggest streets or corridors will be enhanced and designed to reflect their "civic" roles, becoming focal points for development and urban, active places by both day and night. Other streets or corridors could take on more of a "boulevard" function, having less adjacent storefront retail activity but more landscape plantings and a much stronger tree canopy presence. In-between the Quadrant's busy streets, the large blocks and quiet street in the quadrant create the potential for a continuous system of quieter pedestrian and bicycle-oriented streets and sometimes public, sometimes private pathways that when completed could provide a unique district amenity in Portland.



Take Advantage of Urban Form: The different urban form, pattern and character of the area present a unique alternative for Central City redevelopment.

The larger scale of blocks and buildings in the quadrant, coupled with significant development entitlements present special opportunities not available everywhere in the Central City. The Lloyd District offers many large blocks that present an alternative development platform to the prevalent small block pattern of the rest of the Central City. Larger office/employment (or other) businesses and uses that require specialized connections between multiple buildings, need larger floorplates, or prefer campus-like arrangements could take advantage of large blocks in the district.

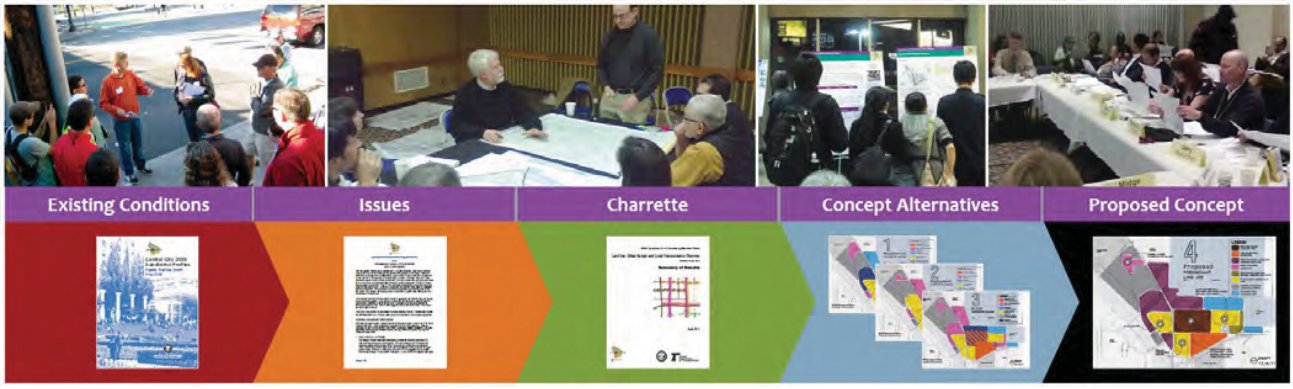


The larger block pattern also offers new options for public spaces and overall quadrant connectivity. Today, there are several pedestrian and bicycle-oriented pathway segments, and current regulations require new public connections through the larger blocks. New development, especially on the large blocks, could add new, similarly oriented links to these existing segments, turning the network into a viable pathway system, simultaneously increasing mobility choices for quadrant residents, workers and visitors and providing a major new development attracting amenity.

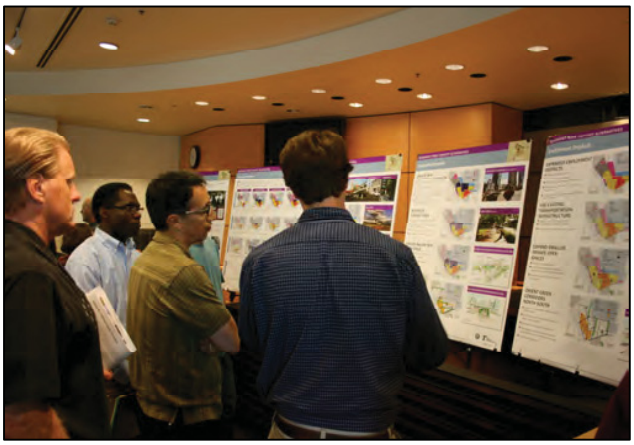
Celebrate the Crossroads: Connect the quadrant across barriers to the river, the rest of the Central City and adjacent neighborhoods along a signature system of public spaces.

Today, the quadrant features a series of regionally-scaled facilities. While serving important functions, these facilities present physical and psychological barriers between central parts of the quadrant and north/northeastern neighborhoods and the rest of the Central City and the Willamette River. A new, centrally-located east-west system of public spaces and improved multi-modal connections would help quadrant residents, workers and visitors reach destinations south and west of the freeways and large event facilities.

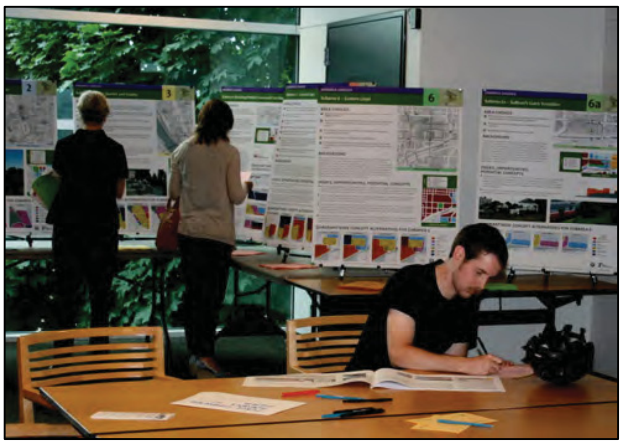
The open space system would also provide compelling amenities around which to organize new development. To date, the district has seen public event, some streetscape, transit and other transportation-related improvements, but few new public parks or open spaces to augment Holladay Park. New, high density employment, institutional and residential uses in the quadrant will need to be supported by new parks and open spaces offering opportunities for recreation, relaxation and respite. Linking new facilities to each other and existing open spaces like Holladay will increase the functionality of the overall system and its service to a variety of potential new users.



This conceptual rendering illustrates how the proposed I-5 Freeway lid at Broadway/Weidler could incorporate open space and help link the eastern and western portions of the district. Development on the lid is also a possibility.



Proposed Quadrant Concept for Land Use, Urban Design and Local Transportation



The project team developed quadrant-wide concept alternatives in spring 2011, intended to describe different future development scenarios and highlight key choices for this planning process. Ideas in the concept alternatives were drawn from a number of sources, including existing conditions, issues, opportunities and constraints, feedback from Stakeholder Advisory Committee (SAC) and subcommittee meetings and a charrette held in 2011.

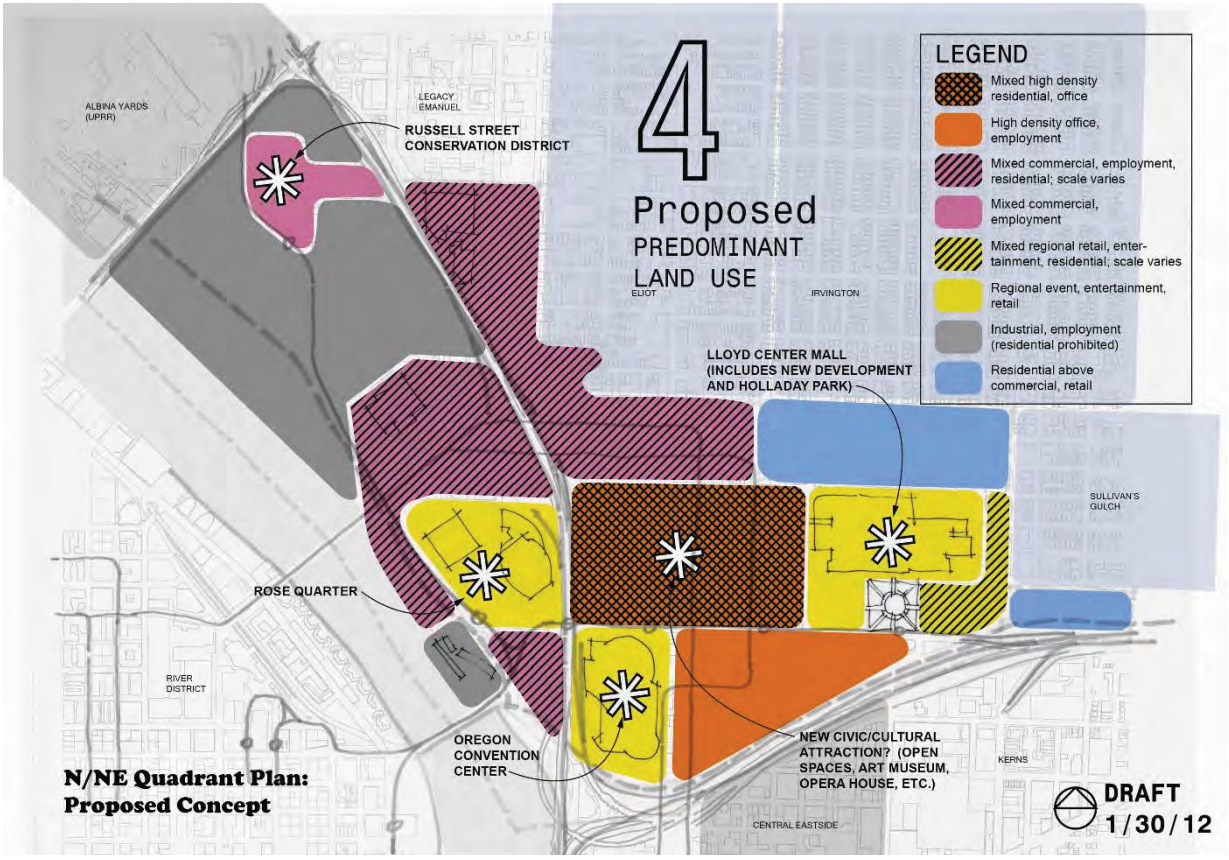
The ideas gathered from these sources were grouped into three quadrant-wide concepts based on broad land use options: residential, employment, and a residential/employment blend. The concept alternatives were illustrated by three related infrastructure systems: mobility, open space and green systems. Finer grained ideas and issues were grouped into eight geographic subareas, such as Historic Russell Street or the Rose Quarter.

Following extensive outreach to stakeholders and community groups, a draft proposed concept was developed and presented to the SAC in fall 2011. The SAC endorsed a revised concept in February 2012, which formed the basis for the district concept diagrams and detailed policies and actions in Chapter 3 of this plan. The proposed quadrant concept contains five layers: land use, building height, street and development character, open space and green systems.

Predominant Land Use and Building Height

Each “bubble” on the land use diagram below reflects the predominant land uses that would be encouraged under that development type. With the exception of industrial areas, other uses would generally continue to be allowed, and some mixing of uses would be expected in all areas.

The building height diagram on the next page indicates approximate maximum building height in different areas of the quadrant under the proposed concept.



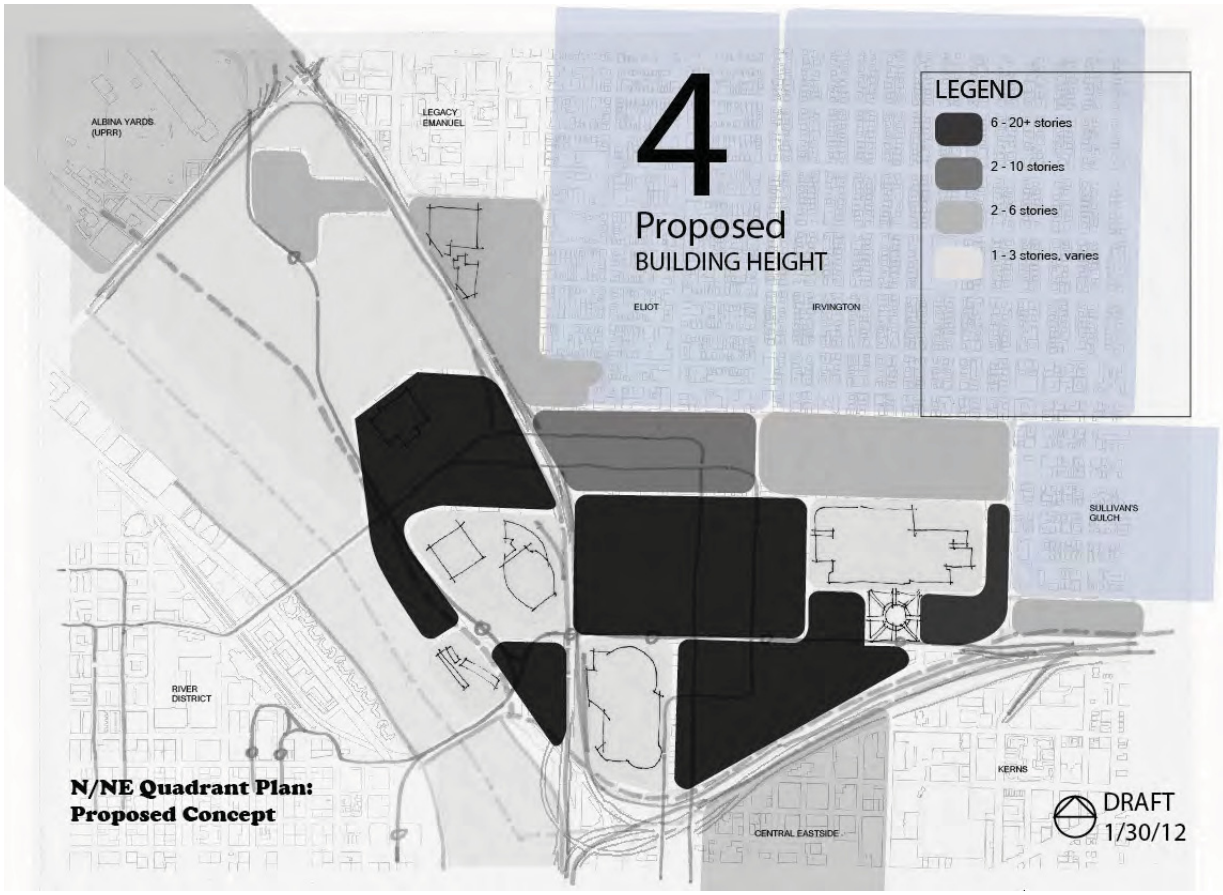
Key elements of land use concept in quadrant subareas include:

Lower Albina: Support the continued success of the industrial district, with additional flexibility for compatible employment uses, intended to gradually increase employment density and reuse of older structures, and an expanded mixed use area adjacent to historic Russell Street.

Central Lloyd: Significant redevelopment to achieve a vibrant, high-density mixed- use district, with an emphasis on new housing development.

Office Core and Regional Attractions: Reinforce existing employment centers and regional attractions, including the office core, Lloyd Center Mall, Convention Center and Rose Quarter, through continued employment growth and complimentary mixed-use development in adjacent areas including increased flexibility at the Public Portland Schools Blanchard site.

(cont. on next page)



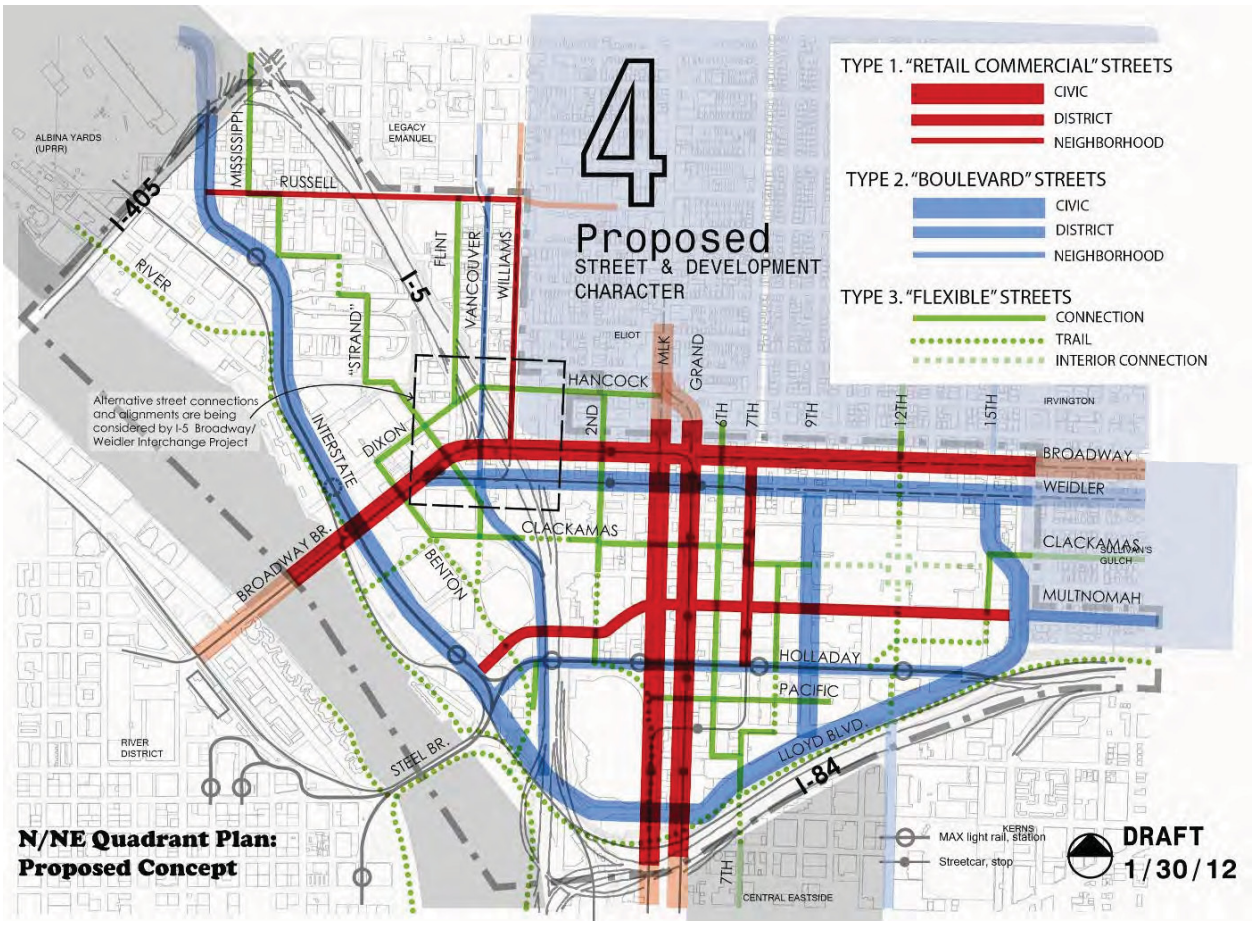
Predominant Land Use and Building Height (cont.)

Broadway/Weidler Corridor: Reinforce the existing main street character of NE Broadway and providing a sensitive transition to adjacent neighborhoods through lower scale development along the Central City edge. Emphasis on housing over retail east of NE 7th; mixed use west of NE 7th.

Vancouver/Williams Corridor: Increase flexibility to allow more commercial and employment uses to support existing uses and employment growth.

Eastern Edge/Multnomah: Focus on residential development around Lloyd Center mall, with a potential expansion of mall-related regional retail. Increase flexibility to allow mixed use development on NE Multnomah and 21st to encourage investment.

Street and Development Character Concept



The street and development character concept outlines a more intentional approach for the quadrant's street network, uniting streetscape design with adjacent land uses and building forms, and recognizing the different scale of streets. While the concept proposes a new way of envisioning the design character of these public streets and connections, it does not imply changes to the City's existing system of modal classifications that define the functional roles streets play in moving people and goods throughout the quadrant.

It is assumed that all streets would continue to have active adjacent ground floors, good sidewalks with safe crossings, attractive public amenities and furnishings and stormwater management functionality. It is also assumed that adjacent development, along with the street character, would respond to the local geography, surrounding context and envisioned character.

The proposed concept includes the following street types with three scales for each type:

Retail Commercial Streets: Busy, continuous streets with retail activity throughout the day, evenings and weekends that provide for multi-modal access for vehicles, transit, bicycles and pedestrians. Ground-floor retail uses are required or strongly encouraged. Multi-level or specialized retail is encouraged along with green features that support retail street visibility. The following are three tiers for the retail/commercial streets:

- Civic – Busy high-volume city streets with connections beyond the quadrant.
- District - Central to the quadrant with opportunities for new community activity centers.
- Neighborhood - Local focal points with infill and continuation of existing character and patterns.

Street and Development Character Concept (cont.)

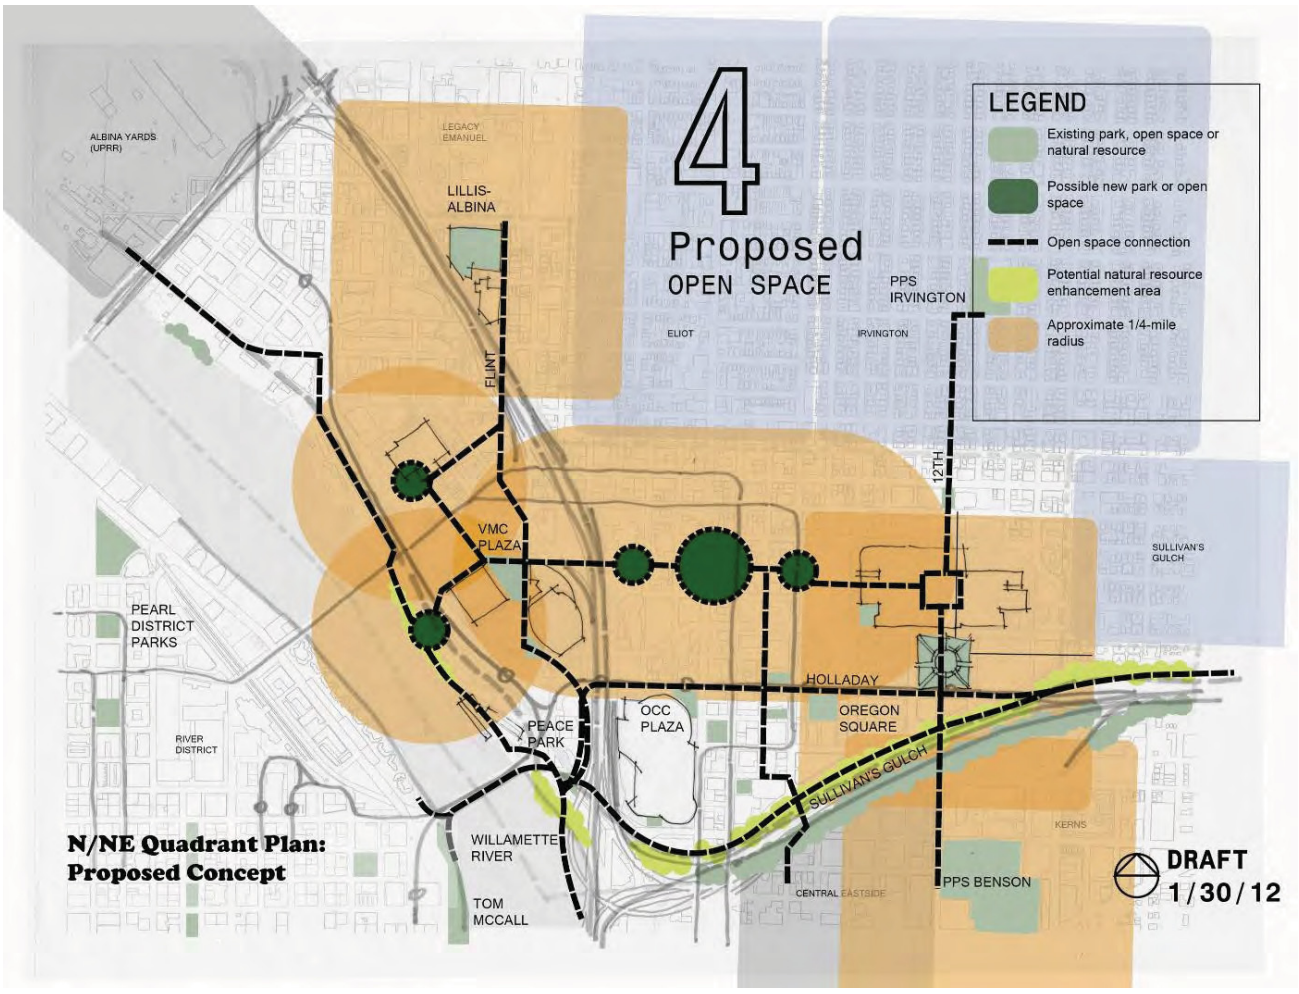
Boulevard Streets: Busy, continuous streets with emphasis on access and flow that provide multi-modal access and circulation for vehicles, transit, bicycles and pedestrians. The streetscape includes visible green features, encouraging large canopy trees, swales, and landscaping. Ground floor retail uses allowed, and encouraged at key locations. The following are the three tiers for boulevard streets:

- Civic – High volume city streets that could be part of a couplet corridor, and extend beyond the quadrant.
- District - Central to the quadrant with opportunities for distinctive corridors, some offering specialized transit or other mobility facilities.
- Neighborhood - Local streets with continuation of existing character and patterns.

Flexible Streets: Highly specialized localized street designs responsive to community needs and adjacent land uses and development that could be in public or private ownership. Key public features would include low-volume, low speed quiet streets that are part of a connected, primarily pedestrian and local bicycle network. Visible green features are encouraged. Three types of flexible streets include:

- Connection - Pedestrian and bicycle connections on existing public streets to open spaces, key destinations within and beyond the N/NE Quadrant.
- Trail - Off street paths contributing and connecting to the regional trail network.
- Interior Connection - Primarily pedestrian connections, including connections within buildings on private property, that facilitate movement within the district.

Conceptual rendering showing NE 7th Avenue as a district scale, retail/ commercial street.



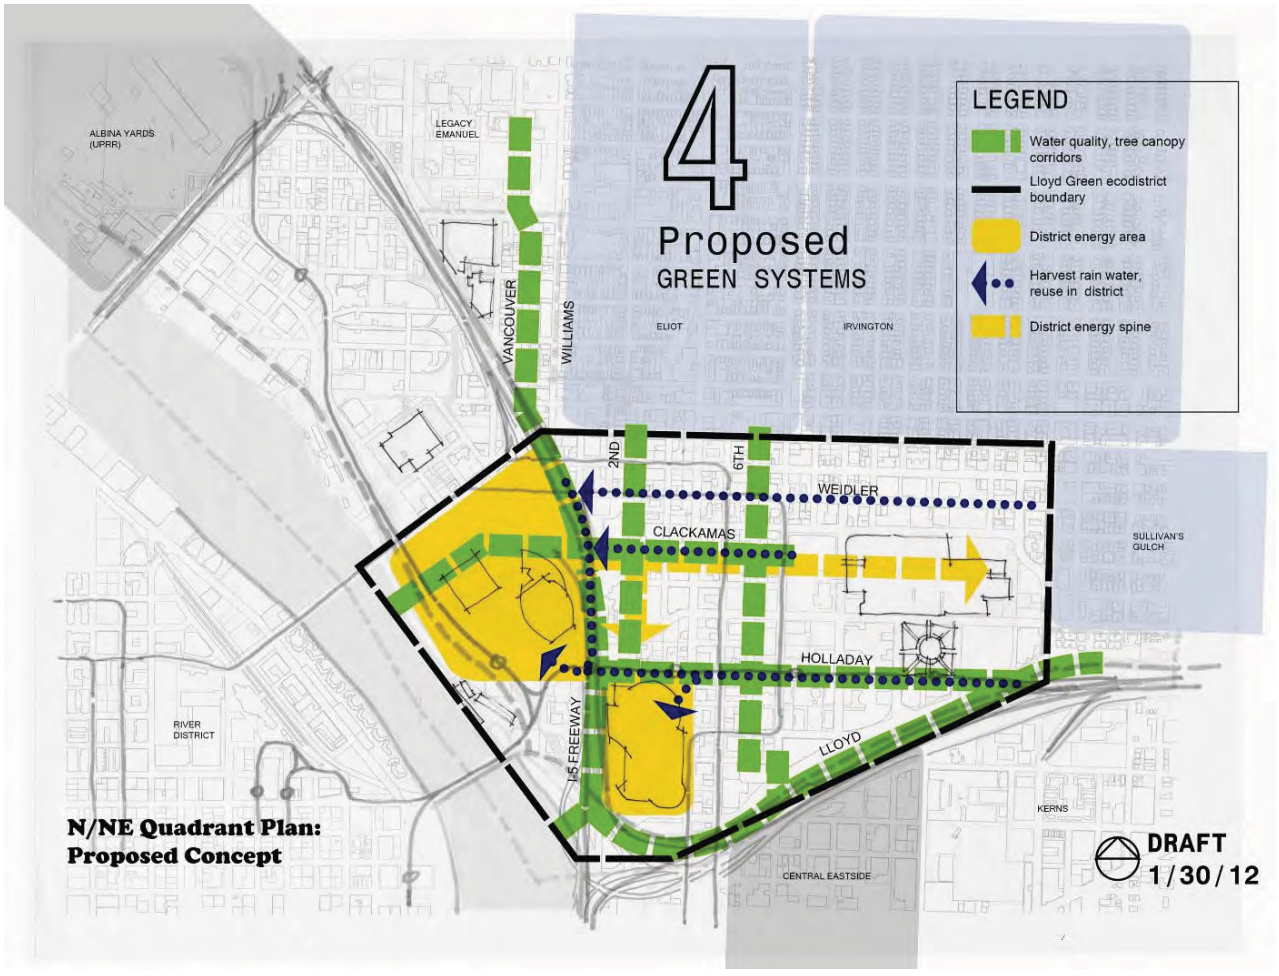
Open Space

The proposed open space concept illustrates a potential framework for parks and open space within the quadrant, an area that is currently park deficient. The only significant public open space in the Lloyd District today is Holladay Park, located in the eastern portion of the district. There are also a number of small public and privately owned plaza spaces primarily located in the office core area. Lillis Albina park is located just outside of the Central City in the Vancouver/Williams study area.

The concept envisions a series of new parks organized along an improved NE Clackamas Street linking to a new open space adjacent to the Willamette River. Clackamas would be a flexible street that prioritizes pedestrian access, creating a safe and inviting space for people to gather, play and socialize.

The proposed parks would likely range in size and function, and could be augmented by privately owned pocket parks and plazas. The open space concept also proposes enhancement to natural resources along the riverbank and within Sullivan's Gulch.

Green Systems



The Lloyd EcoDistrict is a public-private partnership designed to transform the Lloyd District into a showcase sustainable district that integrates nature into the built environment and uses restorative development approaches where new development enhances the environment and protects human health. Potential elements include improved energy performance, enhanced tree canopy, sustainable stormwater management strategies, and green building techniques. The green systems map illustrates how the following components could be integrated into the quadrant:

Tree Canopy/Water Quality Corridors: Corridors that provide enhanced tree canopy and stormwater management through large trees and vegetated stormwater facilities such as bioswales and planters. Streets not designated as a tree canopy/water quality corridors will still have these features, although they may not be as prominent.

District Energy: A system that could facilitate shared energy production and distribution between different businesses, residential uses and facilities.

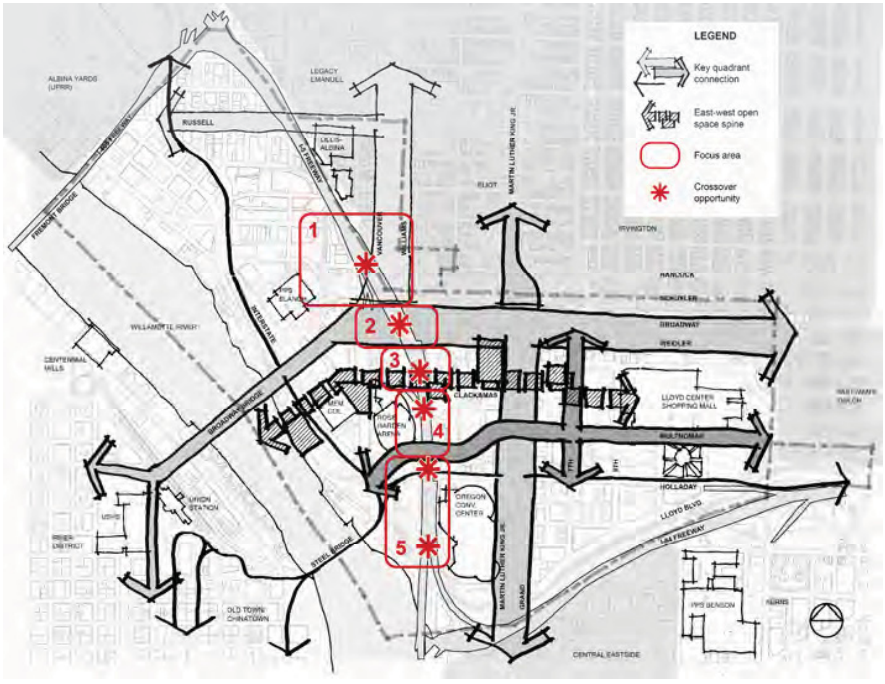
Rainwater Harvesting: A system that would facilitate capture and reuse of rainwater.

Other opportunities to support goals for sustainable development include the use of native vegetation, ecoroofs, vegetated walls, bird-friendly buildings and energy and water efficiency and other green building techniques.

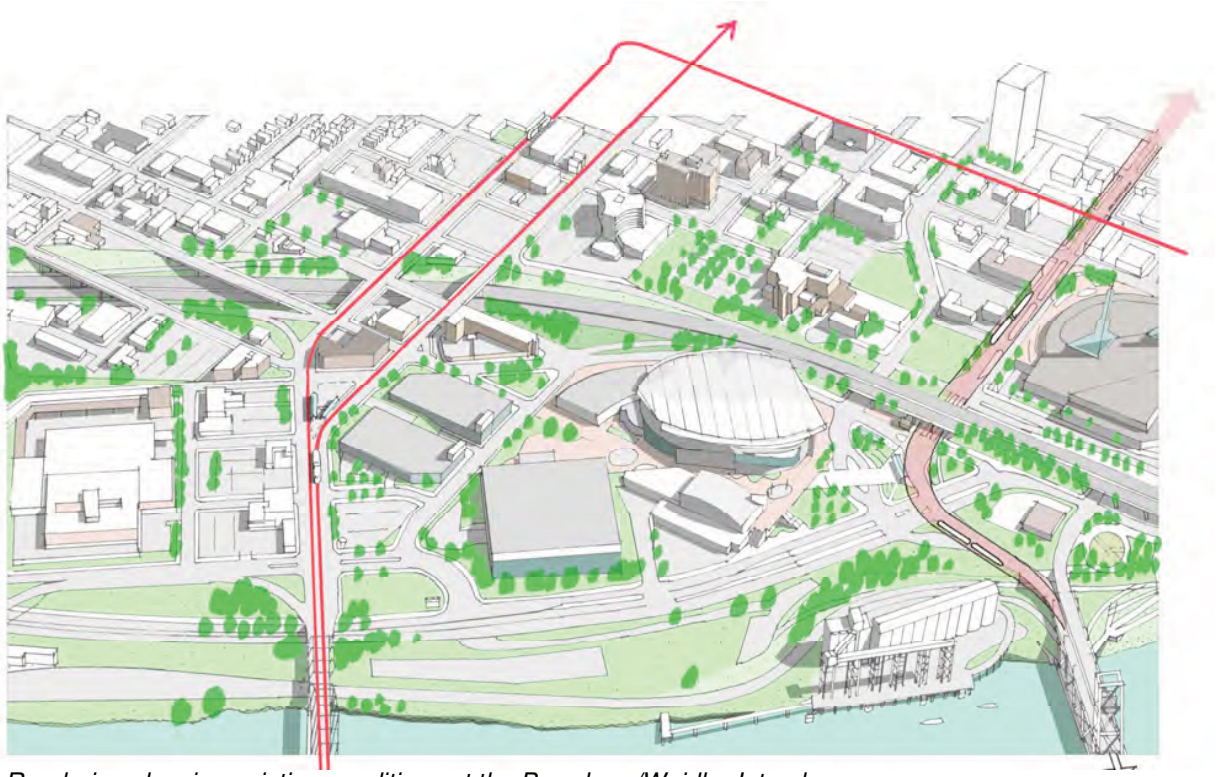
Integration with the I-5 Broadway/Weidler Interchange Project

The proposed concept for the N/NE Quadrant was developed concurrently with recommended improvements to the I-5 Freeway and Broadway/Weidler Interchange. The joint process ensured that the resulting plans are mutually supportive. The regional employment and housing growth since the completion of the Interstate System has dramatically increased the traffic volumes on the freeway. Both I-5 in the study area and the Broadway/Weidler corridor have high incidents of crashes. Additionally, the freeway is a barrier to connections between areas north and south of the interchange. This partnership established a framework that addresses both improved safety on I-5, while supporting high-density, mixed-use development with safer and greater pedestrian and bicycle connectivity. The framework also addressed previous freeway impacts to improve livability and vitality in the area.

The diagram below shows five geographic areas where the freeway project has the potential to directly support the proposed concept for the N/NE Quadrant.

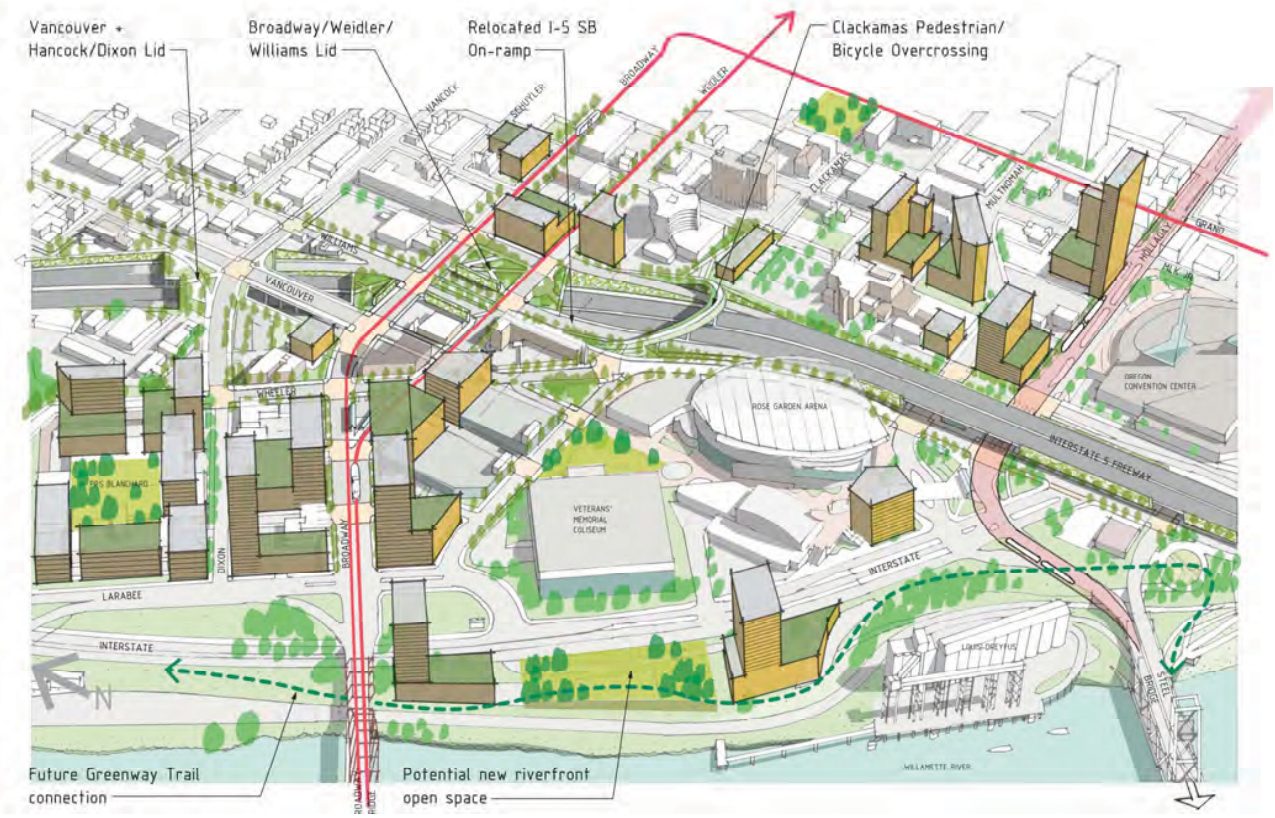


Area 1, North of Broadway: Rebuilding bridges over the freeway presents opportunities to improve existing pedestrian and bicycle conditions and create new connections between Vancouver/Williams and the Portland Public School's Blanchard site, a key redevelopment opportunity.



Area 2, Broadway/Weidler Lid: Rebuilding bridges provides opportunities to simplify traffic movements to and from the freeway, improve local access and safety for all modes and improve pedestrian and bicycle facilities. Creating a lid over the freeway could potentially be used for new open space, development and/or to reconfigure local multi-modal circulation.

Area 3, Clackamas Crossing: The proposed new pedestrian/bike connection over I-5 supports the creation of a flexible connection and open space system along Clackamas Street that would stretch from Lloyd Center to the Willamette River and could provide supporting infrastructure for a proposed district energy system linking facilities in the Rose Quarter with the remainder of the Lloyd District.



Area 4, Rose Quarter: Freeway improvements in this area could include improvements to bicycle routes between the Rose Quarter Transit Center and Broadway/Weidler, innovative stormwater management opportunities and improvements to the undercrossing at Multnomah.

Area 5, Rose Quarter Transit Center & Peace Memorial: Improvements could include innovative design treatments under the bridges to improve pedestrian connections between the Rose Quarter and Oregon Convention Center, and improvements to upgrade conditions and mitigate impacts to the MAX station and Peace Memorial.

CHAPTER 3: GOALS, POLICIES AND IMPLEMENTATION ACTIONS

This plan chapter is organized into sections addressing each Central City district (the Lloyd District and Lower Albina), as well as the two study areas included in the N/NE Quadrant planning boundary. A district goal and concept diagram convey the overarching vision for each district, followed by a series of policies, which provide more specific direction on issues associated with the larger goal. The district goals and policies reflect the project goals and objectives adopted by the Stakeholder Advisory Committee to guide the overall planning process. The district concept diagrams are based on the N/NE Quadrant Concept diagrams, which were developed through a planning process that included a stakeholder charrette, several public events and detailed review by the SAC. The SAC goals and the quadrant concept diagrams are described in Chapter 2: Developing the Plan.

The policies are organized into topic areas generally consistent with the planning framework developed for the Central City 2035 (CC2035) Concept Plan, which will establish the overall vision and direction for the Central City as a whole. Because issues that apply Central City-wide will be addressed in the CC2035 Concept Plan, the N/NE Quadrant Plan will focus on issues that are unique to the Lloyd District and Lower Albina. The policy topics are as follows:

- Regional Center
- Housing and Neighborhoods
- Transportation
- Urban Design
- Environment

All five policy topic areas are covered for the Lloyd District, however Lower Albina, a largely industrial area, does not have a “Housing and Neighborhoods” section.

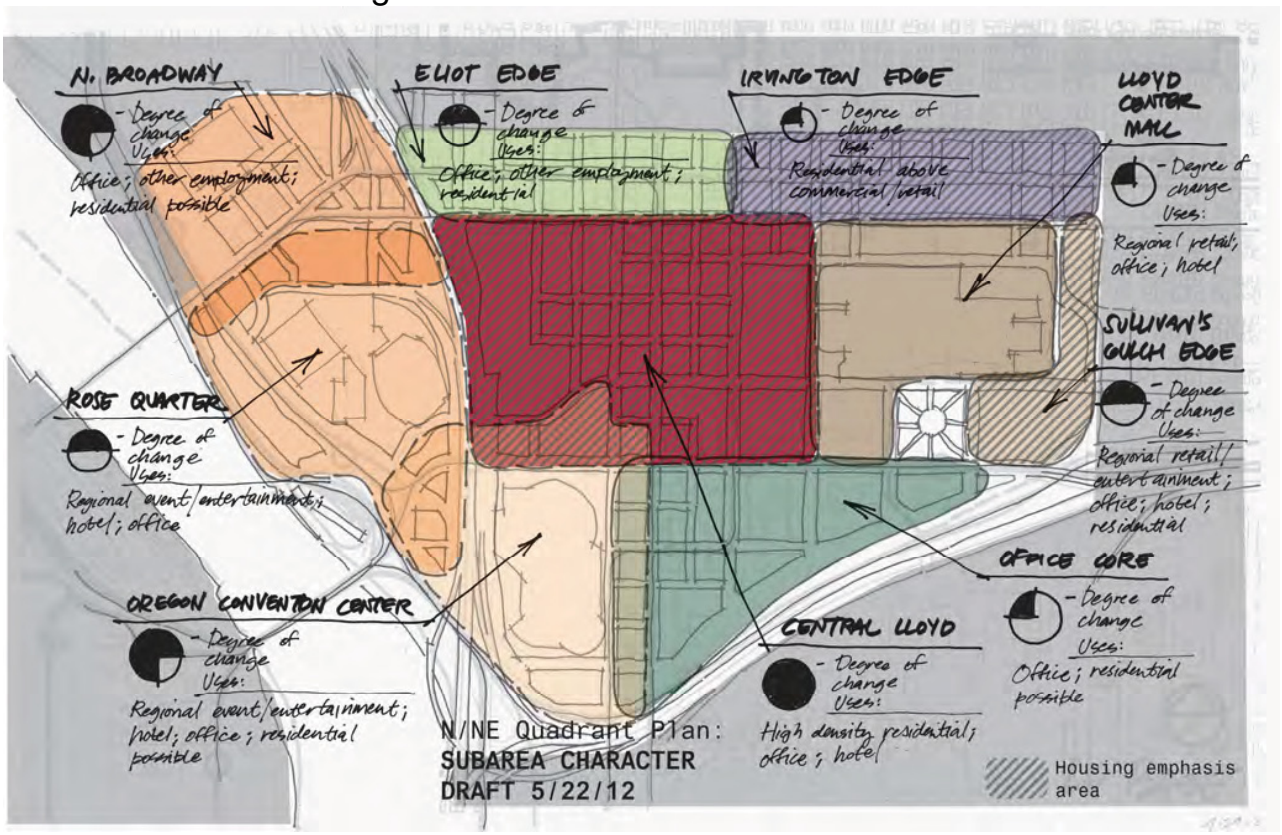
Performance targets are established for key measures as a means of tracking progress toward meeting goals and policies. They are based on a number a sources, including assumptions about future development, housing and employment forecasts, targets from other planning processes such as the Portland Plan and Climate Action Plan, and transportation modeling. The performance targets in this plan should be considered preliminary. They will need to be revisited, and potentially recalibrated for the full Central City, once all of the quadrant plans have been completed.

Implementation actions, such as changes to regulations, future work items, projects, programs or studies, are proposed for each district and for the two study areas: North Banfield Portal and Vancouver/Williams Corridor. Implementers are identified, including public agencies, private and non-profit entities and other community partners, with the lead implementing agency noted in **bold**. See Table 2 for a of implementers and abbreviations used in the action tables.

A timeline is provided, with some actions intended to be accomplished with the adoption of the full Central City 2035 plan package, anticipated in 2015. Other actions are intended to be completed 2 to 5 or 6 to 10 years beyond that, and some are ongoing.

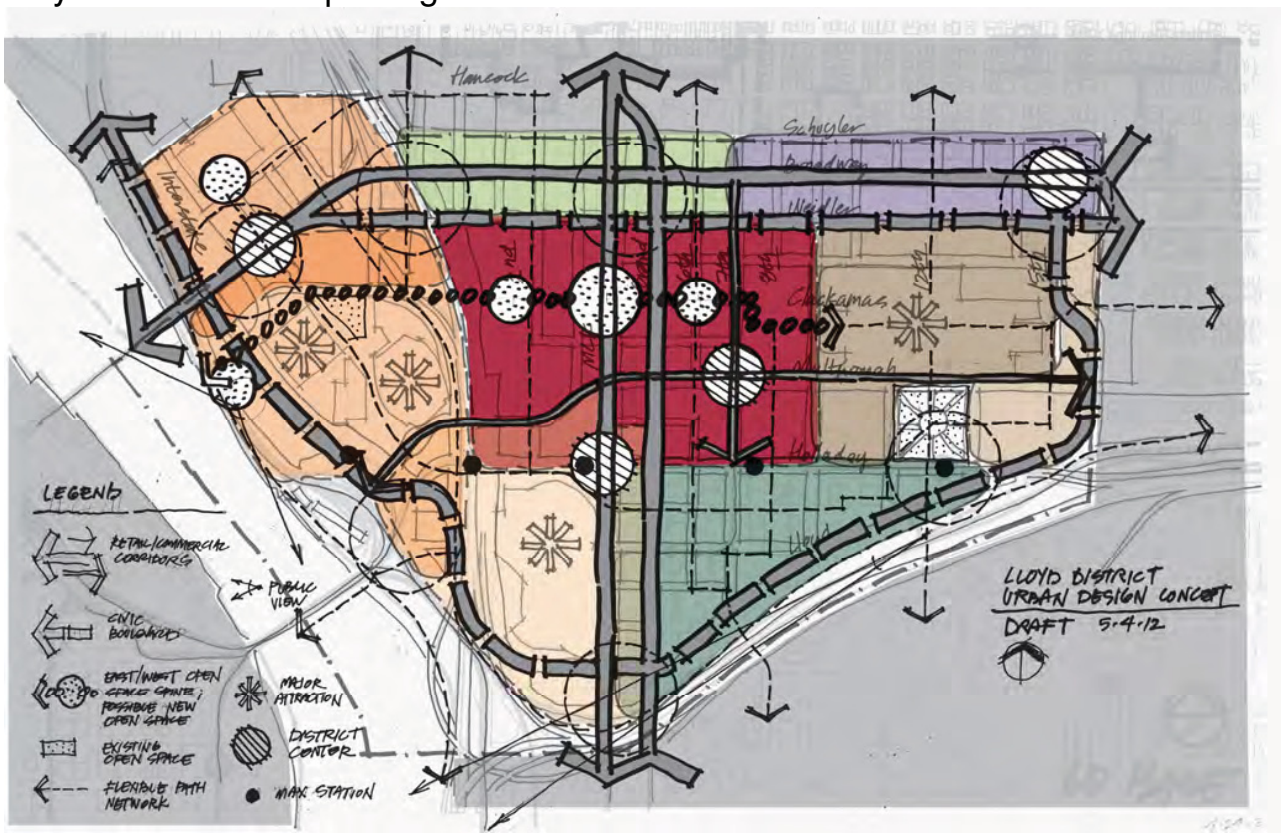
Table 2: List of Implementers

AHC	Architectural Heritage Center
BDS	Portland Bureau of Development Services
BES	Portland Bureau of Environmental Services
BID	Lloyd Business Improvement District
BPS	Portland Bureau of Planning and Sustainability
City	City of Portland
EcoDistrict	Lloyd EcoDistrict
Eliot NA	Eliot Neighborhood Association
LDCA	Lloyd District Community Association
Metro	Metro
POE	Portland Office of Equity
ODOT	Oregon Department of Transportation
OHWR	Portland Office of Healthy Working Rivers
PBOT	Portland Bureau of Transportation
PCC	Portland Community College
PDC	Portland Development Commission
PHB	Portland Housing Bureau
PPR	Portland Bureau of Parks and Recreation
PPR/UF	Portland Bureau of Parks and Recreation/Urban Forestry
PPS	Portland Public Schools
Private	Private property owners, businesses or non-profits
PWB	Portland Water Bureau
SHPO	State of Oregon Historic Preservation Office
TMA	Lloyd Transportation Management Association
TriMet	TriMet
UPRR	Union Pacific Railroad



Lloyd District

District Goal



Foster the growth of the Lloyd District into the intensely urban eastside center of the Central City. Capitalize on the district's regional attractions, high quality transit and connections to create one of the most vital and livable districts in the Central City, with a strong employment base, successful residential community and a variety of urban amenities. Develop the district as a complete and sustainable community with well-designed open space, streets, and high-performance green buildings and infrastructure.

Subarea Character Diagram

This diagram illustrates the types of uses planned for the different "subareas" of the Lloyd District, as well as the degree of change expected in those areas as the district develops. For example, major redevelopment with high-density, mixed-use development is envisioned within the Central Lloyd area, which is expected to have the highest degree of change. Other areas that are currently well established, such as the Office Core and Irvington edge, are expected to have a relatively low degree of change. This diagram also identifies "housing emphasis areas" where development of new housing is a priority.

Lloyd District Concept Diagram

Key Elements of the Concept

Street and Development Character: The character and function of three main street types shown in the concept diagram are described below. A more detailed description of the street types is provided in a separate report, N/NE Quadrant Plan: Street and Development Character Concept (2/1/12 Draft).

- **Retail/Commercial Corridors.** Busiest streets with high visibility by motor vehicles, transit, bikes and pedestrians and generally consistent ground level retail storefronts. These corridors are broken down in three scales: “civic,” which make connections to other parts of the city; “district,” which are important within the boundaries of the Lloyd District; and “neighborhood,” which are smaller and found usually outside the Central City. Off of retail/commercial corridors, retail would not be required or encouraged.

- **Boulevards.** These corridors can also be some of the busiest in the district – they can be the “second” street of a couplet or define a district edge -- but they offer a more landscaped, green character, with fewer retail storefronts than the retail/commercial type. These corridors are broken down in three scales: “civic,” which make connections far beyond the district; “district,” which are important within the boundaries of the district; and “neighborhood,” which are smaller and found usually outside the Central City.

- **Flexible Network.** These streets and spaces make up a system of local, pedestrian-friendly connections through the district that offer quieter, “low-stress” experiences distinctly different from the busier streets serving the area. The forms and characters of these connections can vary

considerably – some can be typical streets, some could be through open spaces or plazas, and others could be through building interiors. Visible green features are encouraged where appropriate to the setting. Local streets within the flexible network would continue to meet the access needs of adjacent residents and businesses.

East-West Open Space Spine: This is a series of connected open spaces offering different characters and functions, running from the Lloyd Center Shopping Mall west to the Willamette River. The connection could be obvious, such as the Park Blocks; it could be evident, like the boardwalk along NW 10th Avenue in the Pearl District; or it could be described by a subtler set of wayfinding clues. This signature series of parks and open spaces would become the organizing system for a new high-density, mixed-use community in the Central Lloyd area.

Major Attraction: Regional event, entertainment and/or retail facility that brings in thousands of people to the district annually. These currently include the Veteran's Memorial Coliseum, the Rose Garden Arena, the Oregon Convention Center and the Lloyd Center Shopping Mall.

District Center: High-visibility hubs of retail and commercial activity in the different areas of the district. Locations with concentrations of restaurants, hotels and other similar retail/commercial businesses, generating high levels of pedestrian movement and crossings.

Gateway: Point of transition into or out of the district. Specific experience determined by character of identified location, and could be enhanced by public sector improvements, private development design approaches or a combination of both.

Public View: Currently designated public viewpoint and view cone, as described in the *Scenic Resources and Protection Plan* of 1992.

Sustainable Development: While it does not specifically show up on the concept diagram, sustainable development, including green buildings, green infrastructure, habitat enhancement, and embracing the designation of the Lloyd EcoDistrict, is also a key element of the overall concept for the Lloyd District. See the Green Systems diagram in Chapter 2: Developing the Plan.

See Appendix A, Additional Urban Design Diagrams, for more details on the street and development character, gateways and building height elements of the concept.

District Policies and Implementation Actions

Regional Center: Economy and Innovation

As home to vital regionally-significant facilities, the Lloyd District is an integral part of the Central City today, and its tremendous growth potential means it will contribute to the regional center in a variety of new ways in the future.

These policies and actions will help maintain and grow existing assets in the district, including regional event attractions at the Rose Quarter and Oregon Convention Center, the main street small business and retail-oriented character along NE Broadway, regional retail uses at the Lloyd Center Mall and a well-established office cluster of professional, medical and government services.

New businesses that balance the episodic nature of the regional event centers and new high-density residential and commercial development in Central Lloyd and North Broadway will support job growth and enliven the district. The formation of the Lloyd EcoDistrict presents additional opportunities to create a district that is more attractive to new businesses, employees, residents and visitors due to its leadership in sustainability and the resulting improvements in the physical environment.

Policies

1. **Employment**. Support and retain existing businesses while encouraging significant new job growth. Develop the district to support a broad array of employment types that provide living-wage jobs and equitable access to employment opportunities.

2. **Redevelopment.** Encourage high density commercial and residential development and better utilize vacant and underutilized land.

3. **Core Employment Uses.**

    a. **Office Core.** Maintain and grow the Lloyd District as an employment center for headquarters office, institutions, professional services and the government sector.

    b. **Regional Attractions.** Support the continued success of the Rose Quarter and the Oregon Convention Center and encourage new development and businesses that support and balance the episodic nature of event activity.

    c. **Retail.** Support existing and new retail development including regionally focused uses in and around the Lloyd Center Mall and neighborhood-serving uses along the NE Broadway corridor. Encourage and support retail development on retail/commercial streets identified in the district concept diagram.

d. **Civic and Cultural Amenities.** Expand civic attractions in the Lloyd District to complement the district's tourism, regional attractions and growing residential character. Examples of attractions could include a convention hotel and centers for arts, culture, history or science.

4. **Innovation: Sustainable District.** Promote the Lloyd District as a center for innovation and application of sustainable business and development practices, foster job creation in sustainable industries and encourage the incorporation of green technology and practices into businesses and development.

2035 Performance Target: Jobs

Add 10,000 new jobs within the Lloyd District.

Current Conditions
Based on a 2010 estimate, there are approximately 18,000 existing jobs in the Lloyd District (with revised district boundary, see action RC1). The addition of 10,000 new jobs would result in a total of 28,000 jobs. This would require a 55 percent growth in jobs over 25 years.

Implementation Actions: Lloyd District – Regional Center: Economy and Innovation

#	Action	Timeline				Implementers (lead in **bold**
		CC2035 (2015)	2 - 5 Years	6 – 20 Years	Ongoing	
RC1*	Adjust the Lloyd District and Lower Albina boundaries to include the PPS Blanchard site and adjacent properties to the south and east within the Lloyd District.	X				**BPS**
RC2*	Rezone the PPS Blanchard site and adjacent properties to the east from IG1 to EXd and CXd to encourage future redevelopment. Require a master plan process as part of redevelopment to address street and pedestrian connectivity, open space, views, and the transition to adjacent industrial uses.	X				**BPS**
RC3*	Adjust and increase maximum allowed heights to support high density development and encourage the provision of public amenities, and desired uses in the following areas: ▪ N. Broadway near the Broadway Bridgehead ▪ Riverfront ("Thunderbird" site) ▪ Central Lloyd area	X				**BPS**

Implementation Actions: Lloyd District – Regional Center: Economy and Innovation						
#	Action	Timeline				Implementers (lead in **bold**
		CC2035 (2015)	2 - 5 Years	6 – 20 Years	Ongoing	
RC4*	Adjust regulations and incentives to encourage new development that supports the Convention Center such as new or expanded hotel development, retail and other services on adjacent blocks.	X				**BPS**, PDC
RC5	Develop a strategy to promote the development of new hotels and the improvement of existing hotels in the vicinity of the Oregon Convention Center.		X			**Metro**, PDC, City, Private
RC6	Pursue development on publically owned sites in and around the Rose Quarter through public-private partnerships.				X	**City**, Private
RC7	Market the Lloyd District as a leader in sustainable development and business practices.				X	**EcoDistrict**, PDC, BPS, Private
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Existing Development in the N/NE Quadrant

Housing and Neighborhoods

The N/NE Quadrant Plan envisions the Lloyd District as a high-density, high-amenity, mixed-use area, with a focus on increasing residential development for a more balanced jobs to housing ratio. Greater housing density will increase the vitality of the district and further citywide and regional goals that encourage housing in areas close to employment centers and well connected to alternative transportation networks.

Areas in which housing development should be emphasized are proposed in the Central Lloyd area, upper Broadway and the eastern edge. Policies and actions promoting a diverse housing mix that is attractive and affordable to a broad range of people will help implement equity and diversity goals put forth in the Portland Plan and the Central City 2035 Plan.

Increased residential density will require amenities and services necessary for residents to meet their daily needs. It is essential that the area develop as a complete neighborhood with convenient and safe access to neighborhood businesses, park and recreation facilities and schools in a clean and healthy environment. Development of new open spaces and creating an environment that is supportive of local, neighborhood serving businesses are high priorities. Safe and attractive regionally available alternative transportation options, such as walking, biking and taking transit, are also important for promoting healthy lifestyles and meeting climate action goals for reduced green house gas emissions. See the transportation section for policies and actions that support those elements.

Development of housing affordable to low and middle income households within the Lloyd District is a priority given that access to a complete neighborhood reduces household transportation costs and provides access to public and private amenities crucial to economic mobility.

Possible Future Development in the N/NE Quadrant

This rendering illustrates a possible development scenario meeting targets for 5,000 new housing units and 10,000 new jobs in the Lloyd District.

There are currently very limited public resources to fund housing projects. It will be necessary to develop new tools to meet goals for affordable housing in the Lloyd District and citywide. It is also important to provide a diverse range of housing types and sizes within the district, including housing suitable for workforce, seniors, special needs and families.

The Lloyd District has a diverse history and is well located to serve as eastside civic center for Portland. The design of public spaces, as well as programming within those spaces, should celebrate the history of the place and help build community among those that visit, work and live in the district.

The goal of increased growth and density brings concerns about the potential for displacement of current residents and businesses due to increasing costs – an issue that applies citywide in areas of growth and change. This plan identifies a need for citywide programs to address potential displacement, reinforcing the recommendations of the Portland Plan.

Policies

1. **Housing Development.** Encourage the development of new housing especially in "housing emphasis areas". Through greater concentration of housing the district can foster a sense of community and support efficient provision of residential amenities and services.

2. **Housing Diversity and Preservation.** Encourage the development and preservation of a housing supply of unit types and sizes that meets the needs of people of all incomes, ages, household sizes and special needs. Include development of affordable housing as a way to ensure income diversity, meet citywide housing needs and help mitigate the potential for displacement due to rising housing prices in the district and in adjacent neighborhoods.

3. **Complete Neighborhood.** Foster development of a complete neighborhood with amenities and services that residents need to meet their daily needs, including access to parks and open space, grocery stores, neighborhood businesses, daycare and schools.

4. **Successful Neighborhood Business Districts.** Support and expand local main street business areas within the Lloyd District and in adjacent neighborhoods. Cluster a diverse mix of neighborhood scale businesses within the NE Broadway Business District and on new district retail/commercial streets as a means of concentrating activity and promoting successful retail districts.

5. **Community Building.** Encourage public spaces, pubic art and activities that celebrate the history of the district and that help build a community in the Lloyd District and with surrounding neighborhoods.

6. **Historic and Cultural Resources.** Preserve, rehabilitate and celebrate historic and culturally significant structures and places in the Lloyd District.

7. **Displacement.** Support existing residents and businesses within the Lloyd District and in adjacent neighborhoods that are at risk for involuntary displacement.

2035 Performance Targets

Housing

Develop 5,000 new housing units and reduce the jobs to housing ratio to 5 to 1 within the Lloyd District. Seek to provide a full range of housing types and affordability options, including 50 percent of new units affordable to households with incomes below the median family income (MFI) of the city, distributed across affordability levels.

Current Conditions
Based on the 2010 Census, there are approximately 1,100 existing housing units in the Lloyd District and it has a jobs to housing ratio of 17 to 1. The addition of 5,000 units and 10,000 jobs would result in a total of 6,100 housing units and a jobs to housing ratio of 5 to 1.

Complete Neighborhood

At least 80 percent of Lloyd District residents live within ¼ mile of a public park and within ½ mile of a full service grocery store.

Current Conditions
As shown in Table 2 below, none of the existing population is within ¼ mile of public parks and 64 percent of the population is within a ½ mile of a grocery store. Because the existing population in the district is currently quite low, the amount of land area in proximity to parks and grocery stores is also provided.

Table 3: Lloyd District Proximity to Parks and Grocery Stores (2012 estimate based on GIS analysis)

	Within ¼ mile of parks	Within ½ mile of parks	Within ½ mile of grocery store
Population	0%	81%	64%
Land Area	30%	87%	41%

Implementation Actions: Lloyd District – Housing and Neighborhoods

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
HN1*	Develop regulatory tools to encourage housing development and the inclusion of affordable housing. Focus on housing emphasis areas (see subarea character diagram).	X				**BPS**, PHB, BDS

Implementation Actions: Lloyd District – Housing and Neighborhoods						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
HN2*	Rezone the area of RXd zoning in Central Lloyd to CXd to provide flexibility and encourage investment. Apply housing incentives described in HN1 to this area.	X				**BPS**
HN3	Develop affordable rental housing through investment of TIF Set Aside funds and other PHB programs. Possible tools include: Limited Tax Exemption program, System Development Charge Exemption Program.		X			**PHB**
HN4	Improve the function and safety of Holladay Park through programming that increases its use and CPTED (Crime Prevention Through Environmental Design) improvements.		X			**PPR**, BID, Private
HN5	Identify sites for community building activities and pursue projects and activities that support community building, such as weekend markets, cultural programming in parks and public art.		X			**LDCA**, TMA, EcoDistrict City
HN6	Support connections between district employers and employee housing within the district through employer-assisted housing programs and coordinated mixed-use development, particularly employer-assisted housing for service-level workers employed within the district.		X			**PHB**, Private
HN7	Monitor residential population growth and the related school needs of the district. Encourage space for early education programs in new development.				X	**PPS**, Private
HN8	Address potential displacement of residents and businesses in the Lloyd District and in adjacent at risk neighborhoods, such as Eliot, through citywide programs developed as part of the Comprehensive Plan. Potential programs include housing and small business assistance programs targeted for areas at risk for displacement.				X	**BPS,** PHB, PDC, POE
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Transportation

The Lloyd District is well served by a multi-modal transportation system that supports its role as a regional center for retail, business, entertainment, and government. The district has unique regional transportation advantages, including direct connections to the interstate freeway system via I-5 and I-84 and the regional light rail and bus network at the Rose Quarter Transit Center. With the addition of streetcar and continued investments in bicycle and pedestrian systems, the transportation network will provide a solid foundation to support goals for high-density development, greater use of active transportation (walking and biking) modes, and reduced greenhouse gas emissions.

The Lloyd District contains a number of major traffic corridors, including the MLK/Grand and Broadway/Weidler corridors, which carry large volumes of traffic into and through the district. These streets are important for supporting large and small businesses and regional attractions. However, because of the high volume of traffic and limited signalized crossing, these streets have also been identified as barriers to overall connectivity and to travel by walking and biking.

The N/NE Quadrant Plan calls for building upon and enhancing the Lloyd District's transportation assets by: improving the efficiency and safety of traffic operations; maintaining regional transit, auto and freight access; enhancing internal circulation and connectivity to adjacent areas, particularly for pedestrians and bicyclists; managing parking to support business and residential uses, incentivize development and encourage the use of non-auto transportation modes; leveraging street improvements with future development; and providing strong pedestrian and bicycle linkages between the district and the Willamette River. It is important to note that residents of Portland have transportation choices, and that active transportation may not be the solution for all. Therefore, providing optimum regional access for all modes will be key to realizing the goal of developing the Lloyd District as a high density Central City district and assuring its long-term success.

Policies

1. **Strategic Investments.** Invest in transportation infrastructure to improve safety, convenience and operational efficiency for all modes by strengthening connectivity and access for trips to, through and within the Lloyd District, and by creating special places for workers, residents, neighbors, shoppers and visitors.

2. **Active transportation.** Encourage walking, bicycling and using transit as a way to increase transportation access and choice, enhance livability and reduce the per capita carbon footprint in the district.

3. **Transportation Demand Management.** Foster the development of business and property owner-supported programs, incentives and activities that encourage employees and residents to use walking, cycling, car-sharing, carpool and transit.

4. **Transit**. Strengthen the role of transit in the Lloyd District by working with TriMet to increase the frequency, reliability and safety of the light rail, bus and streetcar services.

5. **Parking.**

   a. Off-Street. Strengthen the role of parking management to leverage high-density mixed-use development, enhance livability and reduce reliance on single occupancy automobile trips, while supporting development of more parking options for retail-focused streets.

   b. On-Street. Preserve and enhance on-street parking assets to support ground floor commercial, retail and service based business.

6. **Streetscape.** Improve the pedestrian experience by integrating high-density mixed uses, urban greenery, and pedestrian amenities into the Lloyd District's streetscape.

7. **Connectivity**. Increase the number of connections across barriers in the district, including major arterials, large blocks, freeways, rail lines, and natural features, and with adjacent neighborhoods.

8. **Transportation System Management.** Manage access and circulation to reduce traffic speeds and provide for safe crossings, while balancing the need for vehicle and freight access to and within the Lloyd District.

9. **Regional Attractions.** Provide access and circulation to and from the Lloyd District that attracts and supports regional development, shopping and tourism. Promote the use of transit to access the area, including light rail, streetcar, bus, and a potential water taxi service.

2035 Performance Target: Mode Split

At least 75 percent of commute trips to and from the district are by non-single occupancy vehicles (transit, walking, bicycling and carpooling).

Current Conditions
The current Lloyd District mode split is approximately 44 percent by non-single occupancy vehicle (SOV) for the district. Members of the Lloyd TMA have an improved mode split of 60 percent non-SOV.

Implementation Actions: Lloyd District – Transportation

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
TR1	Explore ways to adopt the Street and Development Character concept, including three street types: retail/commercial, boulevard and flexible/pathways. This may include updates to the Transportation System Plan Street Design Classifications.	X				**PBOT**
TR2*	Develop and revise parking management strategies.		X			**PBOT**, TMA, Private

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
TR3	Update the *Lloyd District Standard Plans and Details within the Right-of-Way* document to implement the Street and Development Character Concept for the district (see Appendix A, Map A3).		X			**PBOT**, BPS, BES, PPR/UF, PWB
TR4	Study and install additional signalized pedestrian crossings, on-street parking, and reduced speed traffic progression on Martin Luther King, Jr. Blvd. and Grand Avenue.		X			**PBOT**, TMA
TR5	Implement streetscape and circulation changes for Multnomah Street to facilitate a "retail/commercial street" environment.		X			**TMA**, PBOT
TR6	Review the 1996 *Broadway-Weidler Corridor Plan* to identify any needed updates to implement the N/NE Quadrant Plan, as well as the stretch of the corridor east of 16th to the Hollywood area. Implement the plan emphasizing pedestrian safety projects, installation of traffic signals and maintenance of parking supply.		X			**PBOT**
TR7	Install electric vehicle charging stations in the Lloyd District.		X			**PBOT**, PDC
TR8*	Implement the I-5 Broadway/Weidler Interchange Plan improvements.		X			**ODOT**, PBOT
TR9*	Implement a 7th Ave pedestrian/bike bridge over I-84 connecting to either 7th or 8th in the Central Eastside.			X		**PBOT**, ODOT
TR10*	Develop a strategy for the Clackamas Flexible Street and private development extending from the Rose Quarter to NE 9th Avenue via a new pedestrian/bicycle bridge over I-5.			X		**PBOT**, BPS, PDC, ODOT, EcoDistrict, Private
TR11	Implement the Sullivan's Gulch Trail Concept Plan per City Council Resolution No. 36947 (see also North Banfield Portal action NB3).			X		**PPR, PBOT**, ODOT, UPRR, Private
TR12	Study the feasibility of adding a new light rail station on the Yellow line near Dixon to serve the N Broadway area and PPS Blanchard site.			X		**TriMet**, PBOT, BPS

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
TR13*	Work with property owners to confirm the benefits and feasibility of straightening the "s-curve" in the Union Pacific rail tracks for freight and passenger rail operations. Options pursued should prioritize maintaining the development potential of the "Thunderbird" site. See action UD8.			X		**ODOT**, UPRR, Private, BPS
TR14*	Work with TriMet to improve the Steel Bridgehead and Rose Quarter Transit Center area to improve transit, local circulation, access to the Eastbank Esplande, and development opportunities			X		**TriMet**, TMA, PBOT, BPS, Private
TR15	Explore water transportation options, including a Willamette River water taxi, and investigate the feasibility of a landing in the Lloyd District. Such a landing should include a safe and direct pedestrian connection to the Convention Center and the Rose Quarter.			X		**OHWR**, PBOT, BPS, PPR, Private
TR16	Expand the Central City wayfinding system in the Lloyd District to include river destinations and other local and regional attractions, as opportunities arise to add or replace signage.				X	**OHWR**, PBOT, PPR, Private
TR17	Continue City of Portland partnership with the Lloyd Transportation Management Association (TMA) to encourage workers and residents to use transit and active transportation modes.				X	**PBOT**, TMA
TR18	Complete the North Portland Greenway Feasibility Study (see also EN2, Update of the Willamette Greenway Plan).	X				**PPR**, PBOT
TR19	Study and implement near term bicycle and pedestrian safety enhancements in the vicinity of the "box," especially along Broadway and Weidler, that address identified safety needs and advance the long range plan.	X				**PBOT,** ODOT
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Urban Design

These policies and actions will enable the Lloyd District to offer a set of unique, human-scaled urban experiences that are different compared to the west side of the Central City. The area features a series of existing places with established character that will be strengthened around a revitalized and redeveloped Central Lloyd area. The Central Lloyd area will include more high-rise office buildings and a new, high-density residential district, organized around a signature system of linked open spaces and supported by a network of diverse streets. The high-quality transit service in the area provides an opportunity to shift the Lloyd District from a focus on auto access and auto-oriented uses, to a more pedestrian-oriented development pattern and streetscape.

The large blocks in the Lloyd District are part of a distinctive urban pattern that allows for larger buildings and unique public spaces including courtyards, plazas and parks. These open spaces will be linked by a system of pathways, multi-use trails and quiet streets that are enhanced with vegetation and together create a set of lower stress and quieter routes, and an alternative to the busy arterials through the district. New low stress connections across freeways to the west and south will strengthen connections to the rejuvenated Rose Quarter, the PPS Blanchard site, the Willamette River and the Central Eastside.

A desire for better access and connections to the river were expressed throughout the planning process. Connections to the river can be achieved visually, through views or a trail along the river, or physically through direct access via a trail, steps or dock. Both types of access are desired, however direct access will be difficult due to limited availability of riverfront property and the location of the Union Pacific train tracks along the river bank. There are only two riverfront sites in the Lloyd District. The Dreyfus grain terminal is a long-established industrial business that is expected to continue operation for the foreseeable future. Opportunities for open space and potential river access may exist on the vacant “Thunderbird” site. See additional discussion of the Thunderbird site under Lloyd actions UD8 and TR13.

The Lloyd District includes a number of entry points or “gateway” locations, such as the Broadway and Steel Bridgeheads, the Lloyd Center station area and the crossroads intersection of MLK/Grand and Broadway/Weidler. An update to the Lloyd District’s design guidelines will describe more clearly the City’s intentions for the desired experience at each gateway, and how new development can support the targeted character. While many of the gateways will be reinforced by buildings that are taller than the surrounding context to emphasize the civic significance of these places, others may feature special landscaping or trees, unique works of public art, and/or combinations of the above (see Lloyd action UD6).

At its edges, the scale of new development in the Lloyd District will provide a transition to established lower density neighborhoods and historic districts by providing a “step down” to adjacent neighborhoods and by considering the form and pattern of existing development in the review of new development proposals.

Policies

1. **Diverse and Distinctive Urban Places**. Focus more intense development in the Central Lloyd area and Rose Quarter while enriching the entire district through strengthening the distinct character of the existing Lloyd District subareas.

2. **Better Connected District**

   a. **More Seamless Connections.** Improve the character of connections across transportation barriers in the district - freeways, major arterials and rail facilities.

   b. **Variety in Street Character.** Expand the diversity of street character in the Lloyd district, distinguishing three major types: retail/commercial, boulevard and flexible/pathways.

3. **Large Blocks.** Take advantage of the unique opportunity for dense, large site development made possible by the large blocks found in the Lloyd District. Integrate this development into the surrounding blocks through well designed internal green spaces and pedestrian connections.

4. **Open Space.** Develop a signature sequence of open spaces, linked through a pedestrian wayfinding system, that serves the Central Lloyd area, becomes a primary organizing structure for new development, and offers a diversity of character, experiences, and recreational functions for district residents, workers and visitors.

5. **Riverfront Development.** Encourage development along the Willamette River that activates the riverfront, better connects the riverfront to the rest of the district and surrounding neighborhoods, improves visual and physical access to the river, and enhances natural resources.

6. **Pedestrian-Oriented Development.** Discourage new automobile-oriented uses and encourage the eventual redevelopment of drive-throughs and large surface parking lots with development that is oriented to the street and enhances the pedestrian environment.

7. **Transition to Adjacent Neighborhoods.** Provide sensitive transitions in the scale and pattern of development between higher density development encouraged in the Lloyd District and adjacent lower density neighborhoods and historic districts.

2035 Performance Target: Active Street Edges

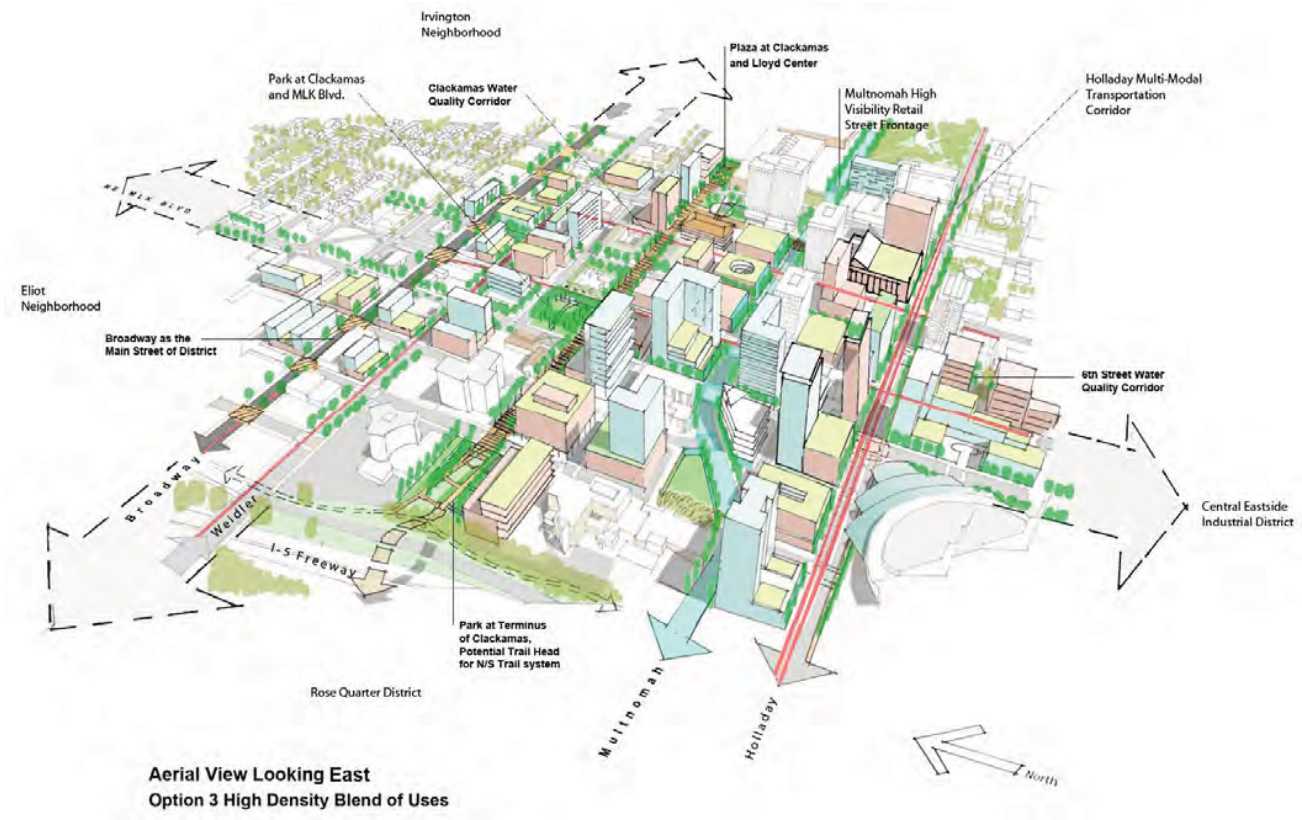
At least 40 percent of street frontages within the Lloyd District are occupied by buildings oriented to the street, measured by the amount of retail storefront and partial fenestration (windows and doors) facing the street.

Current Conditions

Table 4: Central City Groundfloor Edge Conditions (2011 estimate based on BPS inventory)

	Lloyd District	River District	Downtown
% of street frontage with buildings oriented to street*	22%	51%	55%

* Measured by linear feet of retail storefront and partial fenestration (windows and doors) facing the street.



Map 4: Ground Floor Street Edge Conditions

Implementation Actions: Lloyd District – Urban Design						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
UD1	Update Title 33 Zoning Code development regulations and maps to implement the district concept. Potential regulations to be amended include: heights, active ground floor building uses, required building lines, drive-through limitations, and auto access restrictions related to street car.	X				**BPS**
UD2*	Revise height regulations along Broadway on the Eliot and Irvington neighorhood edges to provide a step down from taller heights allowed in the rest of the Lloyd District.	X				**BPS**
UD3	Develop regulatory tools to encourage the provision of open space, including public open space, publicly-accessible private open space on large blocks, and multifunctional private courtyard spaces with new high density residential development. Possible tools include: height/FAR bonus incentives, superblock regulations, and master plan requirements.	X				**BPS**, BDS, PPR

Implementation Actions: Lloyd District – Urban Design						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
UD4	Evaluate existing view designations and potential new view designations in the Lloyd District as part of a Central City-wide analysis of scenic resources. Existing Lloyd District view corridors to be examined for potential changes include the views of downtown from the 12th Ave bridge and from Lillis Albina park.	X				**BPS**
UD5	Explore development of an implementation plan for establishing public parks, plazas and open spaces consistent with the district concept diagram and policies. Seek to time the development of the signature open space system on or near Clackamas concurrent with significant residential development in the district as they are proposed. If implementation of the parks plan will require new regulatory or incentive tools, BPS or another agency will lead the implementation plan process.		X			**PPR, BPS**, PDC
UD6*	Update the Lloyd District's 1991 design guidelines: *Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan* to reflect the district concept.		X			**BPS**, BDS, BES, PBOT, PDC
UD7	Create and promote a strategy to activate public open space, rights-of-way and surface parking lots during off hours to bring in new people, interests and energy to the district.		X			**LDCA**, EcoDistrict, TMA, Private, PPR, PBOT, BPS, PDC
UD8*	Work with the property owner/developer of the "Thunderbird" site to craft a development agreement that incorporates public open space and the greenway trail on the riverfront. See related action TR13.		X			**BPS,** PPR, BPS, OHWR, ODOT, Private
UD9	Enhance the pedestrian and cycling environment under the I-5 Freeway at NE Lloyd Blvd and Multnomah, Holladay and Oregon Streets.			X		**PBOT**, TriMet, ODOT, TMA

Implementation Actions: Lloyd District – Urban Design						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
UD10	Recommend that the existing 75' height limit between NE Schuyler and NE Hancock and NE 7th and NE 16th in the Irvington Historic District be reduced to 45' as part of the Comprehensive Plan update process. The height limit change is in response to the creation of the Irvington Historic District in 2010 and the policy need to retain multi-family housing potential in this corridor.		X			**BPS**
UD11	Work with property owners and developers to further the development of NE 7th and NE Multnomah as district retail/commercial streets.				X	**BPS**, PDC
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Conceptual rendering illustrating possible development, including high density development in Central Lloyd, green features and open space on the Clackamas flexible street and a better defined street hierarchy.

Environment

The combination of significant potential for new development, extensive transit, pedestrian and bicycle networks and the formation of the Lloyd EcoDistrict presents a unique opportunity to dramatically improve environmental conditions within the Lloyd District and help meet Portland's broader sustainability goals. This plan capitalizes on that potential by promoting district-wide sustainability strategies that result in significant improvements in the environmental performance of the district. The plan calls for green buildings, green infrastructure and sustainable design to be integrated with new development in order to improve air quality, water quality, watershed health, habitat, resource conservation and livability.

A key component to realizing the goals for improving environmental conditions in the district will be to better use space within public rights-of-way for sustainable stormwater strategies and increased tree canopy that absorb and clean water, provide habitat for birds and pollinators, and provide shade. Boulevards, flexible streets and water quality/tree canopy corridors have been identified to provide this function. Opportunities to enhance existing natural resources and improve habitat have also been identified within Sullivan's Gulch and along the Willamette River bank. Individual projects are also encouraged to incorporate green features, such as ecoroofs and energy efficiency. More detailed policies and implementation tools related to the Willamette River and Sullivan's Gulch will be developed in the next phase of CC2035 process that includes the update of the Willamette Greenway Plan and analysis of central city natural resource protection options (see Lloyd actions EN1 and EN2).

This plan embraces the formation of the Lloyd EcoDistrict and supports its goals for restorative development. To this end, the green systems concept developed as part of the planning process is considered a starting place that will be refined and added to as the EcoDistrict priorities are developed in the coming years.

While this policy area primarily focuses on integrating green features into development, it should be noted that the built form envisioned for the district—high density, mixed-use development that is well served by transit and facilities for biking and walking—will also make a significant contribution to sustainability goals. This will encourage the use of active transportation modes, thereby reducing emissions and energy use and increasing the efficiency of urban services.

Policies

1. **Sustainable District.** Promote innovation and leadership in the Lloyd District in the areas of sustainable and restorative development, energy efficiency, water conservation, waste reduction and climate adaptation. Support partnerships that facilitate district-wide strategies.

2. **Green Infrastructure and Tree Canopy**. Increase tree canopy and the use of vegetated stormwater facilities in Lloyd District rights-of-way particularly on designated "boulevards", "flexible streets" and "tree canopy/water quality corridors". Encourage the use of bird and habitat-friendly building design and green elements on development sites, including ecoroofs and other vegetated stormwater approaches, roof gardens, landscaped setbacks and courtyards, living walls, and native vegetation.

3. **Green Buildings and Energy**. Encourage the development of high performance buildings, renewable energy systems, district energy, and energy efficiency retrofits.

4. **Willamette River Resources.** Protect and enhance natural resources along the banks of the Willamette River to improve habitat and watershed health, while also meeting Citywide goals and policies regarding recreation, views, access to the river, and riverfront development.

5. **Sullivan's Gulch.** Protect and enhance natural resources within Sullivan's Gulch to improve its function as a habitat corridor, reduce the risk of wildfire and landslide, and maintain and enhance views, while providing flexibility to incorporate a recreation trail.

2035 Performance Target: Tree Canopy

Plant or preserve trees, where appropriate, within the Lloyd District sufficient to achieve 18 percent canopy coverage once the trees mature.

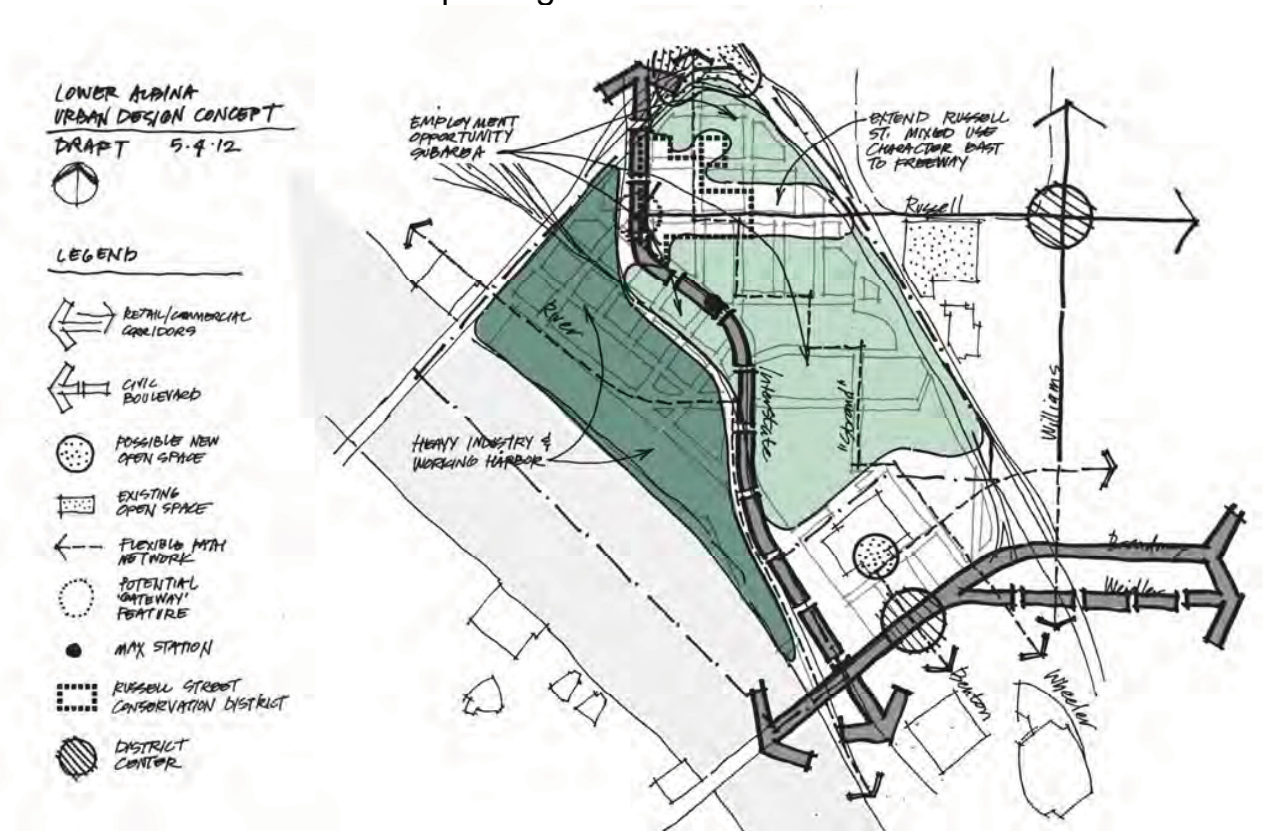
Current Conditions
The current tree canopy coverage in the Lloyd District is ten percent. To achieve 18 percent coverage, approximately 30 additional acres of canopy would need to be added through tree planting and growth of existing trees.

Implementation Actions: Lloyd District – Environment

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
EN1*	Evaluate natural resource protection and management options for Sullivan's Gulch and the Willamette River bank as part of the Central City-wide natural resource analysis.	X				**BPS**, BES, OHWR, PPR
EN2*	Update the Willamette Greenway Plan for the Lloyd District as part of the River Plan / Central Reach process, building on concepts outlined in the N/NE Quadrant Plan and the North Portland Greenway Feasibility Study.	X				**BPS**, BES, OHWR, PPR, PDC, Federal, State and Regional agencies, UPRR, Private

Implementation Actions: Lloyd District – Environment						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
EN3	Explore approaches to improve the environmental performance of the district. Possible tools include technical assistance and incentives for green infrastructure, energy retrofits, high performance new construction, renewable energy systems, connections to district energy, and reduced nighttime lighting. Seattle's "Green Factor" is an example of flexible regulations geared toward green infrastructure.		X			**BPS**, BDS, BES, EcoDistrict
EN4	Investigate opportunities for serving the PPS Blanchard site with district energy.		X			**PDC**, BPS, PPS
EN5	Design and implement a water quality/tree canopy corridor strategy for the Lloyd District. The strategy should evaluate streets initially identified in the concept for feasibility and potentially add additional streets where opportunities are identified.			X		**BES**, PBOT, BPS, PPR/UF, PDC, OHWR, PWB
EN6	Develop and implement a tree planting strategy for the Lloyd District. The strategy should identify available planting locations including streets and underutilized space within public rights-of-way and could result in fine tuning the tree canopy target for the district.			X		**BES, BPS**, PPR/UF, BES, BPS, PBOT, PWB, Private
EN7	[Action deleted: incorporated into EN5 and EN6.]					
EN8	Develop a management strategy addressing multiple objectives for the Sullivan's Gulch natural resource area, including re-vegetation, trail development, environmental education, special habitat area and maintenance.		X			**BES**, PBOT, PPR, OHWR, BPS, ODOT, Private
EN9	Continue to support the Lloyd EcoDistrict work program.				X	**EcoDistrict**, City
EN10	Coordinate capital improvements and "green systems" planning with the work of the Lloyd EcoDistrict.				X	**City**, EcoDistrict

Implementation Actions: Lloyd District – Environment						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
EN11*	Design infrastructure, such as the proposed Clackamas I-5 overcrossing and street improvements to accommodate district energy infrastructure where appropriate.				X	**PBOT**, ODOT, PDC
EN12	Use green infrastructure measures to improve the water quality of stormwater discharged to the Willamette River and to reduce the risk of sewer backups into basements.				X	**BES**, PBOT, Private
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						



Lower Albina

District Goal

Strengthen Lower Albina as an industrial and employment area by reinforcing the working harbor and providing for diverse employment and development opportunities. Enliven historic Russell Street with mixed-use and commercial activities that are compatible with industrial and employment uses.

Lower Albina District Concept Diagram

Key Elements of the Concept

Russell Street Mixed Use Area: This area includes the existing commercial node within the Russell Street Conservation District and suggests an expansion of retail and commercial uses to the east, reestablishing the historic connection between Lower Albina and the Vancouver/Williams corridor.

Employment Opportunity Subarea: This area remains industrial, but has additional flexibility for commercial uses as a means of increasing employment density. Commercial uses are restricted to those that are less service-oriented and therefore are more compatible with industrial businesses.

Heavy Industry and Working Harbor: This area is regionally significant industrial land and remains a heavy industrial area and working harbor.

Street and Development Character: The character and function of three main street types shown in the concept diagram are described below. A more detailed description of the street types is provided in a separate report, N/NE Quadrant Plan: Street and Development Character Concept (2/1/12 Draft).

- **Retail/Commercial Corridors**. These corridors are generally busy streets with high visibility for motor vehicles, transit, bikes and pedestrians. They should generally have consistent ground level retail storefronts. In Lower Albina, Russell Street is designated a "neighborhood" retail/commercial street because of its smaller scale. Russell Street connects with the Williams retail/commercial street at the historic neighborhood center at the intersection of Russell and Williams.

- **Boulevards**. These corridors are often busy streets that offer a more landscaped, green character, with fewer retail storefronts than the retail/commercial type. In Lower Albina, Interstate Avenue is designated as a "civic" boulevard because it makes connections to North Portland.

- **Flexible Network**. These streets and spaces make up a system of local, pedestrian-friendly connections through the district that offer quieter, "low-stress" experiences distinctly different from the busier streets serving the area. In Lower Albina, "the Strand" is designated as a flexible street connection that meanders through the district. The North Portland Greenway Trail would also pass through the district. Local streets within the flexible network would continue to meet the access needs of local residents, businesses and industry.

Gateway: These areas designate a point of transition into or out of the district. The specific experience is determined by the character of the location, and could be enhanced by public sector improvements, private development design approaches or a combination of both. In Lower Albina, a gateway is designated at the intersection of Interstate and Russell.

District Policies and Implementation Actions

Regional Center: Industrial and Employment Sanctuary

Lower Albina plays a key role in the Central City and the region as a center of industrial employment. It serves as a critical incubator for emerging and innovative businesses and provides an important living-wage job base near inner North and Northeast neighborhoods. The district's mix of industrial businesses, working waterfront and multimodal freight facilities are complemented by a small mixed-use commercial area along lower Russell Street, where retail activity is especially active at night.

The policies and action items in this plan are intended to build on the strength of the district's existing industrial fabric and provide additional flexibility for commercial uses that are compatible with industrial businesses and increase employment density. Housing is currently allowed within the Russell Street Conservation District, which is zoned for mixed use. The plan proposes to extend the mixed-use zoning east on Russell, however new housing will not be allowed in that area.

Policies

1. **Working Harbor.** Protect the Lower Albina working harbor and support river-dependant uses.

2. **Industry and Employment**. Increase economic opportunities, living-wage jobs and employment density by preserving existing industrial land uses and diversifying the range of employment activities allowed in the area east of the Union Pacific railroad and near the MAX station.

3. **Incubator**. Support existing businesses and foster the district as an industrial and employment incubator.

4. **District Vitality.** Support the urban vibrancy of Russell Street and its unique blend of working daytime industrial activity with compatible nighttime restaurant and entertainment activity.

2035 Performance Target: Jobs

Add 1,000 new jobs within Lower Albina.

Current Conditions
Based on a 2010 estimate, there are approximately 2,000 existing jobs in Lower Albina (with revised district boundary, see Action RC1). The addition of 1,000 new jobs would result in a total of 3,000 jobs. This would require a 50 percent growth in jobs over 25 years.

Implementation Actions: Lower Albina – Regional Center: Economy and Innovation						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
RC1*	Adjust the Lower Albina subdistrict boundary to exclude the PPS Blanchard site and adjacent properties to the south and east, placing them within the Lloyd District.	X				**BPS**
RC2*	Rezone properties east of the Russell St. Conservation District fronting Russell Street from IG1d to EXd. Set max FAR at 3:1 and maximum height at 50'. Prohibit housing in this area.	X				**BPS**
RC3*	Apply zoning provisions to IG1-zoned properties east of the Union Pacific railroad alignment that allow certain compatible office-like uses, similar to the Employment Opportunity Subarea regulations in the Central Eastside. Implementation of the Employment Opportunity Subarea regulations is contingent on developing a Lower Albina parking strategy that explores off-street parking facilities for workers and visitors and on-street parking strategies.	X				**BPS,** PDC, PBOT, Private
RC4	Identify potential brownfield sites and identify clean-up and redevelopment strategies to bring them back into economic use.		X			**BPS**, PDC, BES, Private
RC5	Assist small businesses and property owners through storefront grants, Development Opportunity Services grants, loans for tenant improvements, start-up and equipment, and other programs.				X	**PDC**
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Transportation

Lower Albina is located at the southern end of the North Willamette River working harbor area, the northern end of the Central City, and adjacent to historic streetcar neighborhoods. As a predominately industrial area, freight movement associated with the working harbor, freight railroad, and trucks are essential for the economic vitality of this district, City and region. Its location within the Central City also provides for transit, bicycle and walking facilities for workers, shoppers, and visitors to the district. To sustain the vitality of Lower Albina, maintenance and continued improvement of the multi-modal transportation system will be important.

Policies

1. **Freight System**. Prioritize freight movement and access while maintaining and improving the safety, efficiency and convenience of the transportation system for all modes.

2. **Multi-Modal Connectivity**. Improve connectivity through the district and strengthen connections to adjacent districts, including the Rose Quarter, the Vancouver/Williams Corridor and Mississippi Avenue. Improve pedestrian connections to Interstate MAX and bus service to enhance access to employment opportunities in the area.

3. **Rail and Marine**. Preserve rail and inter-modal access to the Albina Rail Yards, marine freight facilities and local industries.

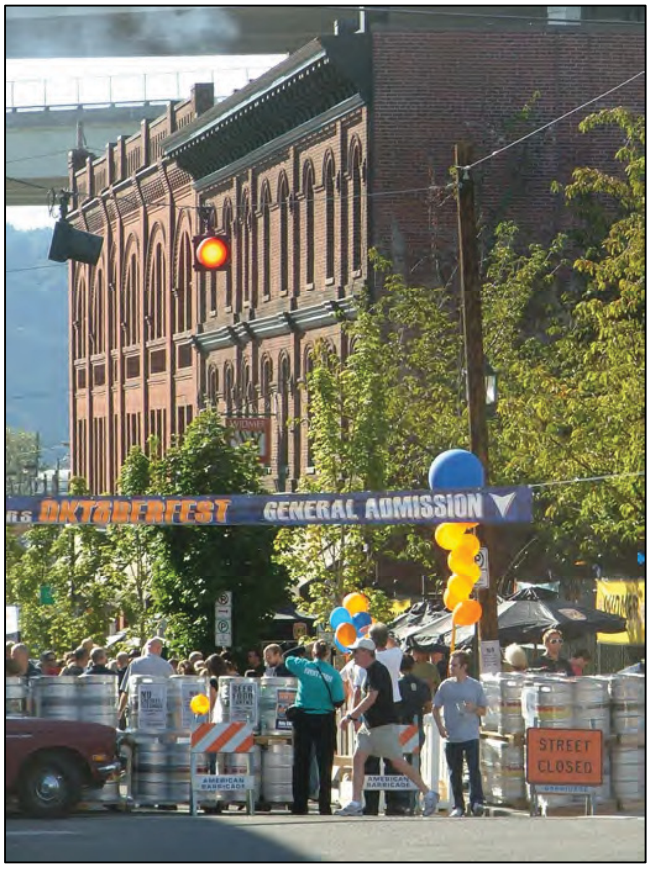
4. **Freeway Access**. Maintain or improve access from industrial areas to the regional freeway system.

5. **Strategic Investments.** Encourage business creation, growth, and innovation through strategic public and private partnership investments in multi-modal transportation and parking infrastructure.

2035 Performance Target: Mode Split

At least 40 percent of commute trips to and from Lower Albina are by non-single occupancy vehicles (transit, walking, bicycling and carpooling).

Current Conditions
The current Lower Albina mode split is approximately 18 percent by non-single occupancy vehicle (SOV) for the district.



Implementation Actions: Lower Albina – Transportation

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
TR1	Explore ways to adopt the Street and Development Character concept, including three street types: retail/commercial, boulevard and flexible/pathways. This may include updates to the Transportation System Plan Street Design Classifications.	X				**PBOT**, BPS
TR2	Complete the North Portland Greenway Feasibility Study.	X				**PPR**, PBOT,
TR3	Study options for the Larrabee Street ramp that would preserve auto, bicycle and freight access while accommodating the Greenway Trail and pedestrian and bicycle access to the district and river.		X			**PBOT**, PPR
TR4*	Develop a street design plan for the "the Strand" and alternative routes to provide a lower stress connection between N. Russell Street and the Rose Quarter.		X			**PBOT**, BPS
TR5	Rebuild N River Street from the Tillamook overpass to Essex Street.			X		**PBOT**
TR6	Study the need for pedestrian improvements to facilitate employee access to transit on Russell, Interstate and Broadway/Weidler.			X		**PBOT**, TriMet
TR7	Enhance and maintain streets in working condition to facilitate access and circulation in the district.				X	**PBOT**
TR8*	Implement the I-5 Broadway/Weidler Interchange Plan Improvements, including the proposed Hancock overcrossing, to improve regional and local freight access.			X		**ODOT**, PBOT

*Additional details for selected action items are included in Appendix B, Implementation Action Details.

Urban Design

Lower Albina has a rich and varied fabric of largely industrial and employment buildings, with the exception of retail and commercial uses largely clustered within the Russell Street Conservation District. As the character of Lower Albina is not expected to change dramatically, these policies and actions are intended to strengthen its existing urban forms and patterns and offer guidance for the integration of new development that is sensitive to this significant industrial area. To that end, policies focus on preserving the existing industrial character of the majority of Lower Albina, enhancing the unique character of the Russell Street area and preserving historic buildings in the district in general.

Actions also call for repurposing, reconfiguring and improving the appearance of spaces underneath and adjacent to freeways and ramps to the north and east. This would offer an expanded range of recreational opportunities and a more attractive set of connections between employment centers and mixed-use neighborhoods, in addition to enhancing the district's function as a "gateway" into the Central City from North Portland. Multi-modal connectivity would also be enhanced with "The Strand," a lower stress connection and way-finding system between the Russell Street commercial area and the Rose Quarter. See Transportation action TR4 for more information on the Strand.

Policies

1. **Historic and Cultural Resources**. Preserve, rehabilitate and celebrate historic structures in Lower Albina, including those in the Russell Street Conservation District and culturally significant African-American resources identified in the Cornerstones of Community inventory.

2. **Russell Street**. Strengthen the character of Russell Street and reestablish the historic connection between Lower Albina and the Vancouver/Williams Corridor by encouraging new mixed uses, rehabilitated buildings and a nighttime orientation.

3. **Industrial Character**. Preserve and enhance the industrial character and functionality of the Lower Albina industrial area.

Implementation Actions: Lower Albina – Urban Design						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
UD1*	Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.		X			**AHC**, BPS
UD2*	Improve the design review approval criteria used for development proposals within the Russell Street Conservation District and design overlay zone within Lower Albina.		X			**BPS**, BDS
UD3	Improve the character and activate the area under the Fremont Bridge ramps. Consider active recreation, public art, sustainable landscaping and stormwater management, and improved parking facilities.			X		**City**, ODOT
UD4	Improve the character of N Russell under the I-5 freeway. Consider lighting improvements, public art, sustainable landscaping and stormwater management, and screening of adjacent publically-owned storage yards.			X		**PBOT**, ODOT
UD5*	Encourage and assist Lower Albina property owners to nominate their historic properties for designation as landmarks.				X	**BPS**, AHC, SHPO, Eliot NA
UD6	Improve the appearance of publically-owned storage yards located under and adjacent to the I-5 and I-405 freeways.		X			**PBOT**, ODOT
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Environment

The Central City 2035 Concept Plan calls for increasing energy efficiency, enhancing natural resources and habitat, improving air and water quality and expanding the use of green infrastructure Central City-wide. While the Lower Albina area will continue to be a primarily industrial district, there are opportunities for achieving these goals through incremental improvements to the riverbank, adding green infrastructure to rights-of-way where they don't conflict with industrial operations, and encouraging the use of sustainable design in new development or remodels. Increasing green building and infrastructure could also contribute to business development by making the area more attractive to tenants and employees.

Policies

1. **Willamette River Resources.** Support the natural resource protection and enhancement objectives of the River Plan / North Reach, where they apply to Lower Albina.

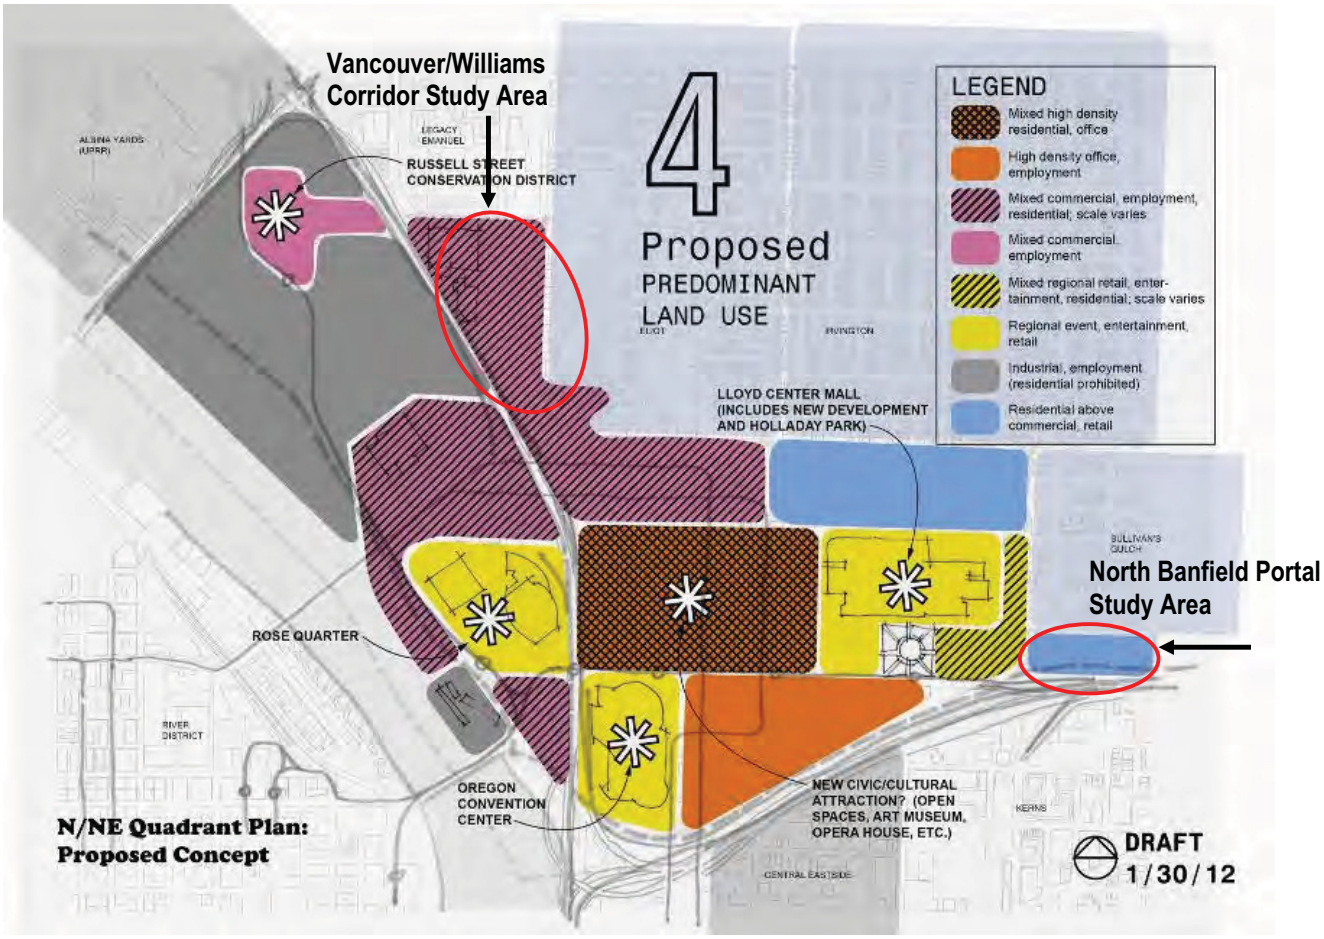
2. **Sustainable Design**. Encourage sustainable design in public infrastructure and industrial buildings, including green roofs, stormwater management strategies, tree canopy, habitat-friendly design, energy efficiency improvements, and alternative energy generation.

2035 Performance Target: Tree Canopy

Plant or preserve trees within Lower Albina sufficient to achieve ten percent canopy coverage once the trees mature.

Current Conditions
The current tree canopy coverage in Lower Albina is six percent. To achieve ten percent coverage, approximately seven additional acres of canopy would need to be added through tree planting and growth of existing trees.

Implementation Actions: Lower Albina – Environment						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
EN1	Update the Willamette Greenway Plan for Lower Albina, building on concepts from the North Portland Greenway Feasibility Study and provisions contained in the River Plan / North Reach, once a final court decision is made. The update will address habitat, mitigation sites, trails and access, and river dependent and river related development.	X				**BPS** BES, BDS, OHWR, PPR, PBOT, PDC, Federal, State and Regional agencies, Private



Implementation Actions: Lower Albina – Environment						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
EN2	Develop and implement a strategy to install trees and sustainable stormwater facilities to existing streets and underutilized space within rights-of-way (e.g. freeway ROW, Broadway bridgehead, west end of Russell Street). Ensure improvements do not compromise operations for industrial businesses.			X		**BES**, PPR/UF, PBOT, PWB, ODOT, Private
EN3	Explore approaches to improve the environmental performance of the industrial district. Possible tools include incentives for green infrastructure, energy retrofits, high performance new construction, renewable energy systems, and connections to district energy.			X		**BPS**, BDS, BES
EN4	Target outreach to industrial businesses regarding sustainable business practices.				X	**BPS**
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Study Areas

Two areas adjacent to the N/NE Quadrant are included in the plan's study area: the North Banfield Portal and the Vancouver/Williams Corridor. They are included because of the potential for land use and transportation proposals in the quadrant to affect them and because community members asked the Bureau of Planning and Sustainability to address long-identified land use and zoning issues in these areas.

Each study area has proposed action items intended to further objectives identified in the planning process, primarily zoning changes to encourage new development or support existing uses. However, these areas will remain outside of the Central City boundary and therefore no new policies are proposed.

North Banfield Portal

The North Banfield Portal is the eastern gateway to the Lloyd District, at the transition from the Central City's higher density commercial and residential development to lower density residential in the Sullivan's Gulch neighborhood.

Sullivan's Gulch provides valuable natural resources in central Portland where habitat areas are less common. Enhancement of the gulch resources and development of the Sullivan's Gulch Trail will increase connectivity for both wildlife and pedestrians and bikes, and connect the Willamette River with areas to the east. New redevelopment opportunities along Multnomah Street will bring additional residents and new neighborhood-oriented commercial services to the area. The Sullivan's Gulch Trail offers a unique opportunity to enhance and strengthen transportation options in the Lloyd District and Sullivan's Gulch neighborhood by incorporating bike and pedestrian linkage to existing MAX, auto, bus, and streetcar options in the area.

The N/NE Quadrant Plan will increase flexibility and encourage neighborhood-serving, mixed-use development, including housing, in this area by proposing a change in zoning. The current zoning is primarily residential (RH), with a small area of office zoning (CO1). The current zoning presents a potential obstacle to development because it is restrictive in use and it creates site planning challenges due to development standards that vary across the site.

Implementation Actions: North Banfield Portal

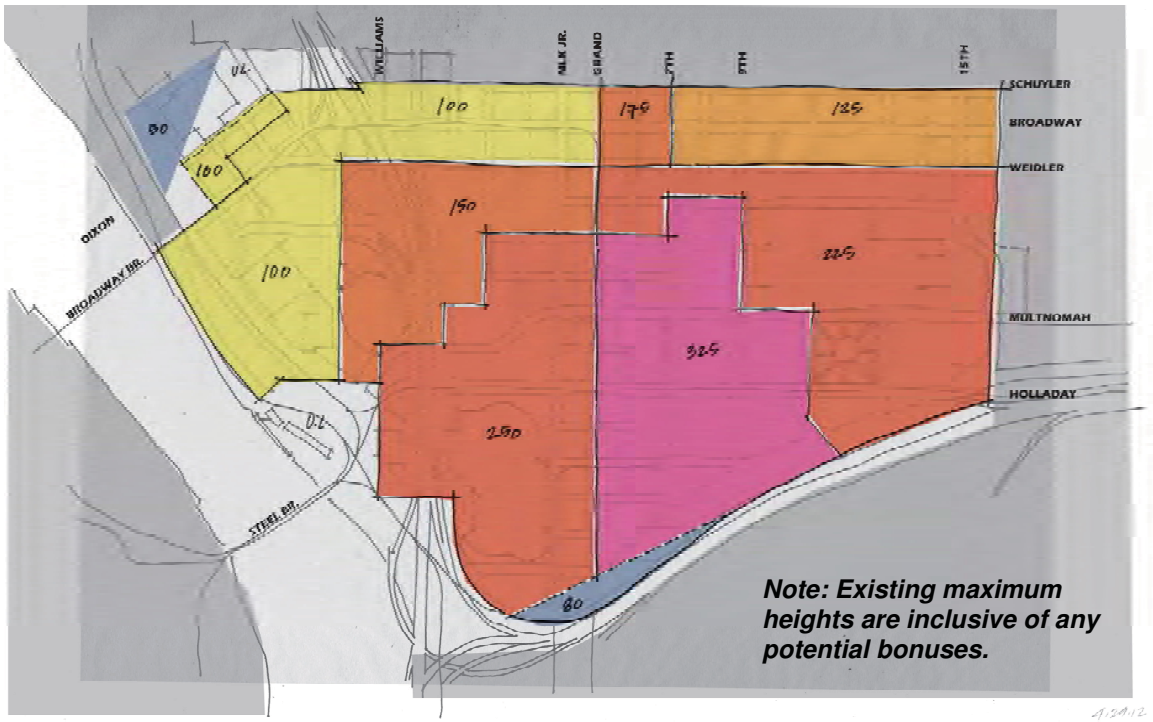
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 – 20 Years	Ongoing	
NB1*	Apply CXd zoning to the sites south of Multnomah St. and west of NE 21st Ave. Existing environmental conservation (c) overlay zoning will remain.	X				**BPS**
NB2*	Evaluate natural resource protection and management options for Sullivan's Gulch as part of the Central City-wide natural resource analysis.	X				**BPS**, BES
NB3	Implement the Sullivan's Gulch Trail Concept Plan per City Council Resolution No. 36947 (see also Lloyd action TR11).			X		**PPR, PBOT**, ODOT, UPRR, Private

*Additional details for selected action items are included in Appendix B, Implementation Action Details.

Vancouver/Williams Corridor

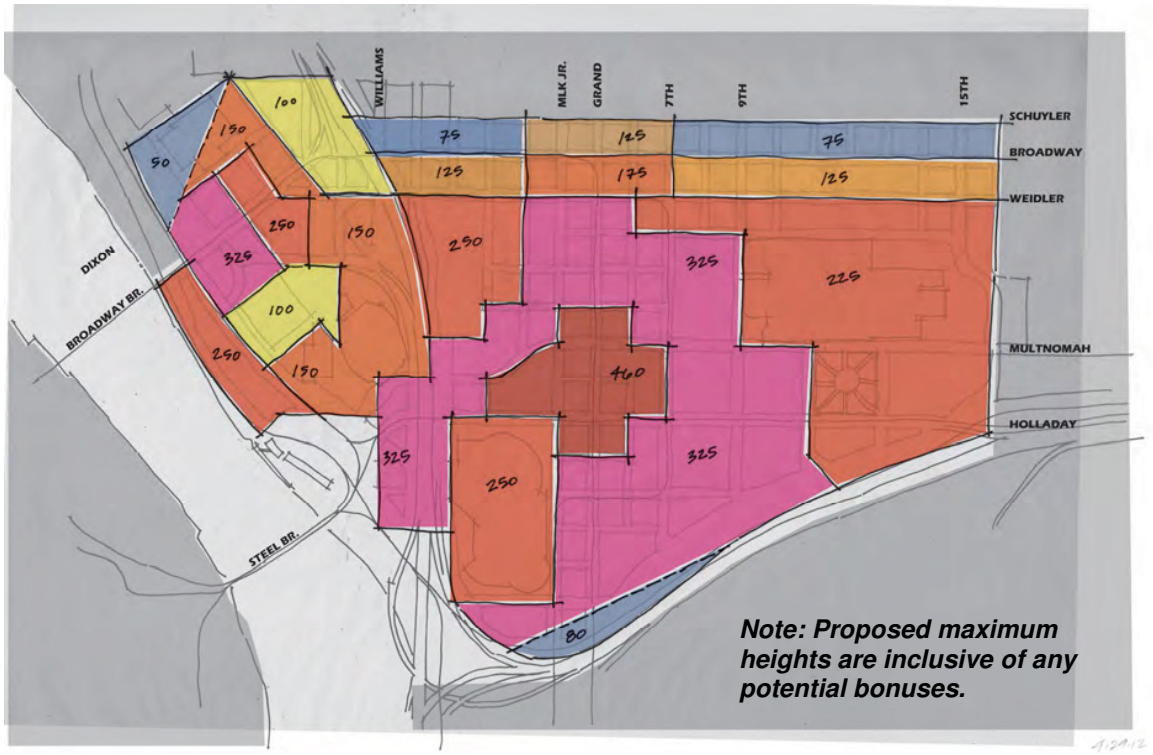
The Vancouver/Williams Corridor is in the Eliot neighborhood, a part of the Albina Community Plan area, adjacent to the Central City. This area is included in the N/NE Quadrant Plan study area because of its proximity to potential reconfigurations of nearby freeway over-crossings and long-standing concerns about an area of residential zoning, which contains non-conforming commercial uses and does not allow mixed-use development. It also contains a large concentration of significant buildings identified in the Bosco-Milligan Foundation's Cornerstones of Community inventory of African-American cultural resources.

This area will remain outside of the Central City and no changes to existing Albina Community Plan policies that govern it are proposed. The primary proposed action is to rezone an area of existing high-density residential zoning (RHd) to central employment (EXd). The EXd zoning allows a broad range of uses, including commercial, light industrial and residential uses, consistent with the mix of current land uses in the area. This additional land use flexibility will support reinvestment and expansion of existing employment uses in the area, which are currently nonconforming uses. It will also support the rehabilitation of cultural resources by providing a broader range of uses allowed within existing buildings.



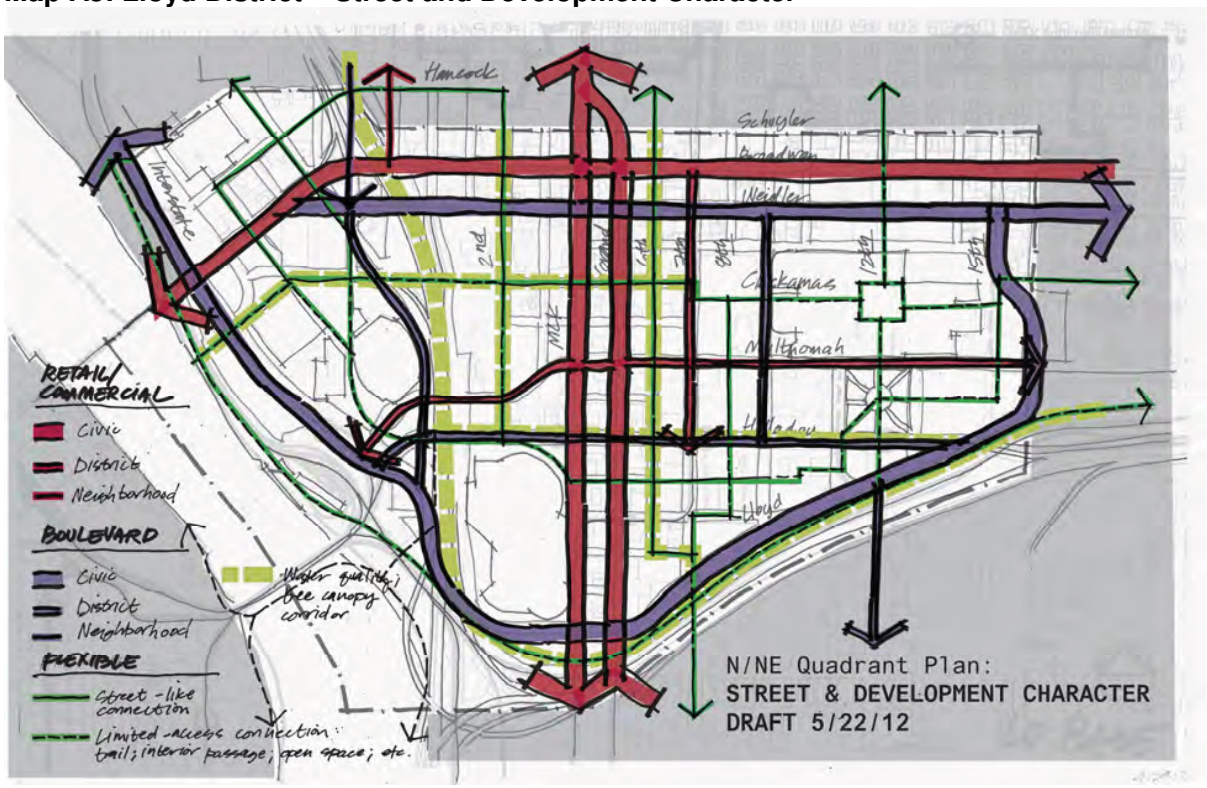
Implementation Actions: *Vancouver/Williams Corridor*

#	Action	Timeline				Implementer (lead in **bold)**
		CC2035 (2015)	2 - 5 Years	6 - 20 Years	Ongoing	
VW1*	Rezone portions of 4 blocks between I-5 and N Williams from RH to EXd.	X				**BPS**
VW2*	Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.		X			**AHC**, BPS
VW3	Ensure that any reconfiguration of surface streets in conjunction with I-5 freeway improvements maintain and enhance connectivity of the surface street system between and within the N/NE Quadrant and the Eliot neighborhood and prevents traffic impacts on the Eliot neighborhood.			X		**ODOT**, PBOT, BPS

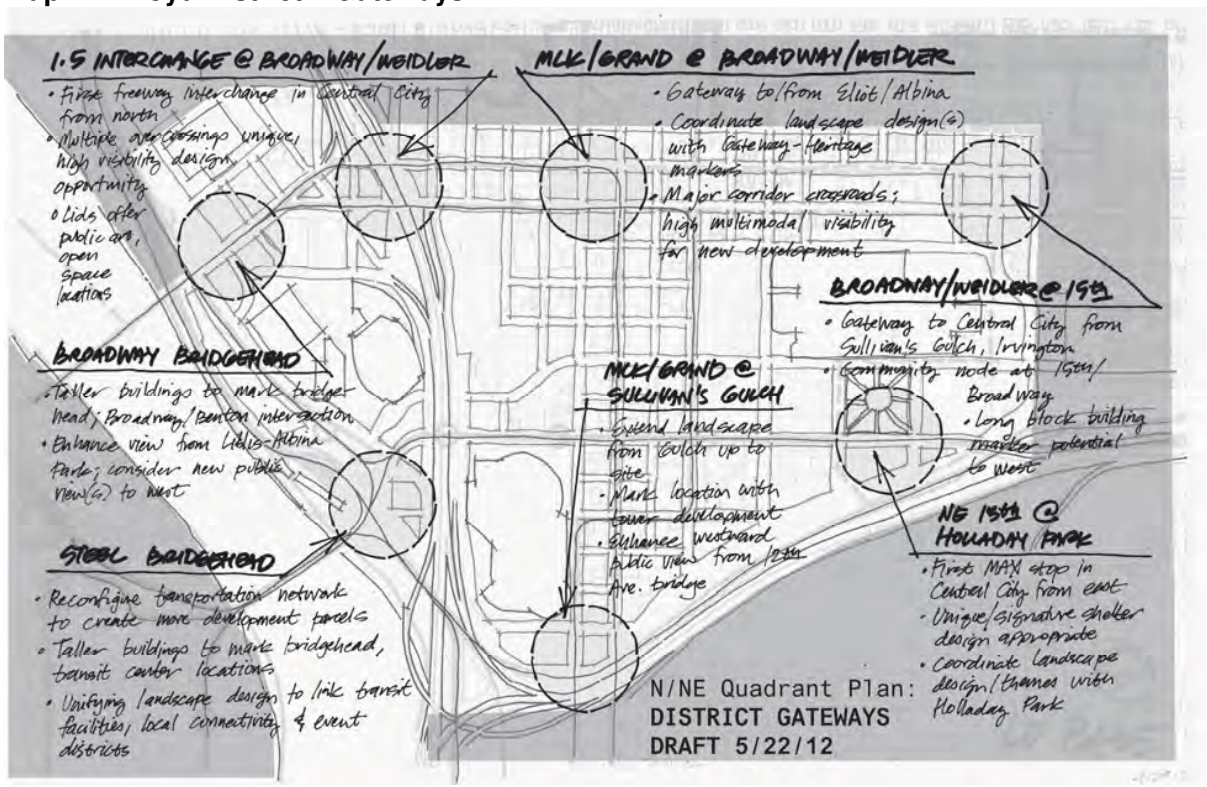


*Additional details for selected action items are included in Appendix B, Implementation Action Details.

APPENDIX A: ADDITIONAL URBAN DESIGN DIAGRAMS



Map A1: Lloyd District - Existing Maximum Heights

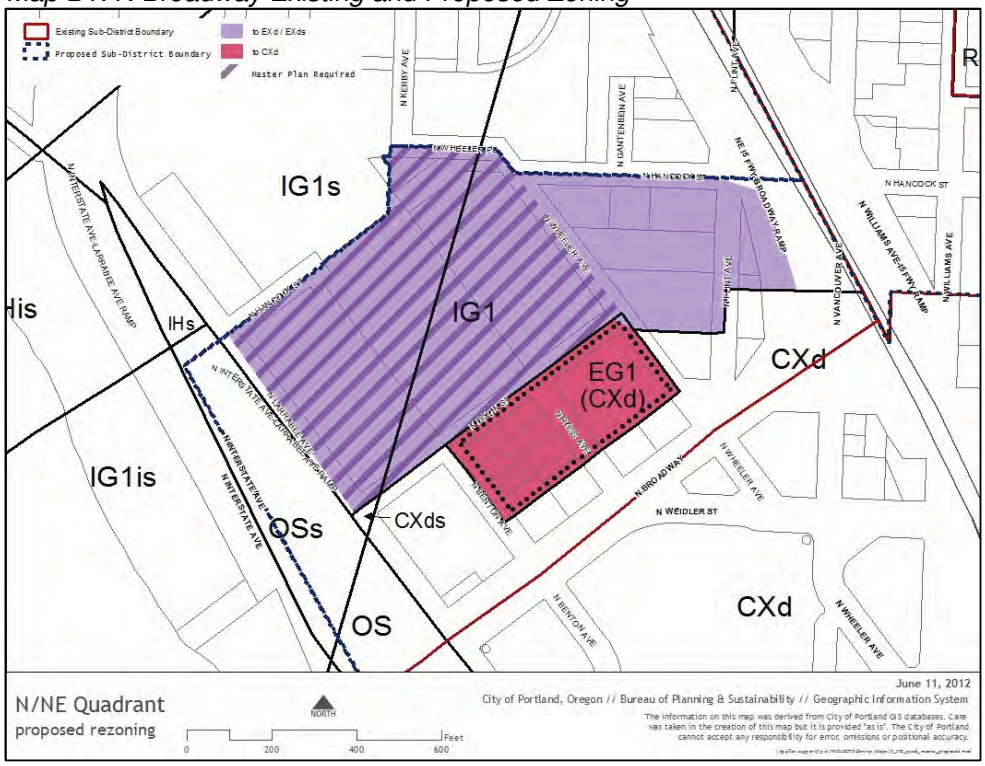


Map A2: Lloyd District - Proposed Maximum Heights

Map A3: Lloyd District – Street and Development Character

Map A4: Lloyd District – Gateways

APPENDIX B: IMPLEMENTATION ACTION DETAILS



This appendix provides additional information about selected action items listed in the implementation action tables in Chapter 3: *Goals, Policies and Implementation Actions*. The information provided varies depending on the action item and includes background information, more in-depth descriptions of actions and their purpose and direction about next steps.

Lloyd District

RC1 Adjust the Lloyd District and Lower Albina boundaries to include the PPS Blanchard site and adjacent properties to the south and east within the Lloyd District.

This action along with Lloyd action RC2, recognizes the overall vision for a vibrant N Broadway area, linking the River District on the west side of the Willamette River with the Lloyd District. This proposed action would create sufficient depth north and south of Broadway to promote the economic revitalization envisioned in the *Rose Quarter District Plan* (2012). The Portland Public Schools Blanchard site, currently located within the Lower Albina industrial district, presents a significant redevelopment opportunity for activating the north side of Broadway consistent with the Lloyd District's mixed use character. The current office use of the Blanchard Building and desired future uses for the site are non-industrial in nature, and because the natural topographical transition from the area around N Broadway and the Rose Quarter happens at a steep bluff north of the Blanchard site, the boundary between the Lloyd District and Lower Albina should be adjusted as shown in Map B1: *N Broadway Existing and Proposed Zoning*. See Lloyd action RC2 for detailed information on the proposed zone change.

Map B1: N Broadway Existing and Proposed Zoning

RC2 Rezone the PPS Blanchard site and adjacent properties to the east from IG1 to EXd and CXd to encourage future redevelopment.

Background: Although one of its primary uses is office space, Portland Public Schools' (PPS) headquarters building, the Blanchard Educational Service Center is currently zoned for industrial use. The building is oversized and inefficient for the services its provides and, given its age and state of repair, major future improvements may not be a good long-term investment. The school district has expressed interest in eventually moving to another location, which would open up the approximately 12 acre site for redevelopment. New development at the Blanchard site would complement proposed redevelopment in and adjacent to the Rose Quarter called for by the *Rose Quarter District Plan*. A zoning change for the Blanchard site and some adjacent parcels would be required to accommodate most redevelopment scenarios. Several development options for redevelopment of the area were explored in the *North of Broadway / Blanchard Site Development Study* (2010).

Existing Zoning: Map B2 shows the existing and proposed zoning for the site and Table B1 summarizes existing and proposed zoning provisions. The area contains 25 taxlots with approximately 12 acres.

Approximately 10 acres are zoned General Industrial (IG1). The IG1 zone is intended for industrial development, with sites that generally have smaller lots, a grid block pattern, high building coverages and buildings that are usually close to the street. The northwest portion of the site has a Scenic Resource (s) overlay accompanying a viewpoint from Lillis Albina Park, with a 50 foot height limit.

Approximately 2 acres are zoned General Employment 1 (EG1) with a comprehensive plan designation of CXd. This area has a 45 ft height limit and an FAR of 4:1. The EG zones allow a range of employment uses, emphasizing industrial uses and limiting office, retail and residential development. EG1 areas generally have smaller lots, a grid block pattern, high building coverages and buildings that are usually close to the street, similar to IG1.

The areas to the south and east of the Blanchard site have flexible commercial zoning (CXd) and are occupied by surface parking lots, a storage building and an apartment building. Areas to the north of the site are part of the Lower Albina subdistrict, and are zoned for industrial use with active industrial businesses in operation. A slope on the North side of the site helps form a natural transition between the Blanchard site and the industrial district to the North.

Proposed Zoning - Map B2 shows the existing and proposed zoning for the site and Table B2 summarizes existing and proposed zoning provisions. The area currently zoned General Industrial (IG1/IG1s) is proposed to change to Central Employment (EX), with a design overlay (d) and the continuation of the Scenic Resource overlay (s) on a portion of the area. The EXd zone is a flexible employment zone intended for mixed-use areas of the central city with industrial character. Light industrial, office, retail and residential uses are allowed. The proposed maximum height limit in the EXd area is 100' east of Wheeler and 150' west of Wheeler. The EXds area would continue to have a 50' maximum height to reflect the view of the west side from Lillis Albina Park.

Because of the large size and unique opportunity presented by redevelopment of the main Blanchard site, staff proposes to require a master plan process on the area shown on Map B1 as part of its redevelopment. This process will be developed prior to changing the zoning on the site. The master plan for this site will need to address the following issues:

a. public views over the site and from the site
b. future street network and traffic – for all modes
c. open space opportunities

d. sensitive transitions to industrial land uses to the north – particularly regarding siting of any residential uses to avoid nuisance issues
e. height, bulk and design of proposed structures

The master plan process would not be required for adjacent smaller parcels also included in this rezoning proposal as their small size limits the need to consider the issues above and beyond the normal land use and design review process.

Commercial zoning with a design overlay (CXd) and a height limit of 150' east of Ross and 250' west of Ross is proposed for the area currently zoned General Employment (EG1). The CXd zone is consistent with the city's existing Comprehensive Plan designation of this area and would allow a more flexible mix of uses than is currently allowed, including a wide variety of residential, commercial and institutional uses. The design overlay would require new development to go through a discretionary review process.

Table B1: Summary of N Broadway Existing and Recommended Zoning Provisions

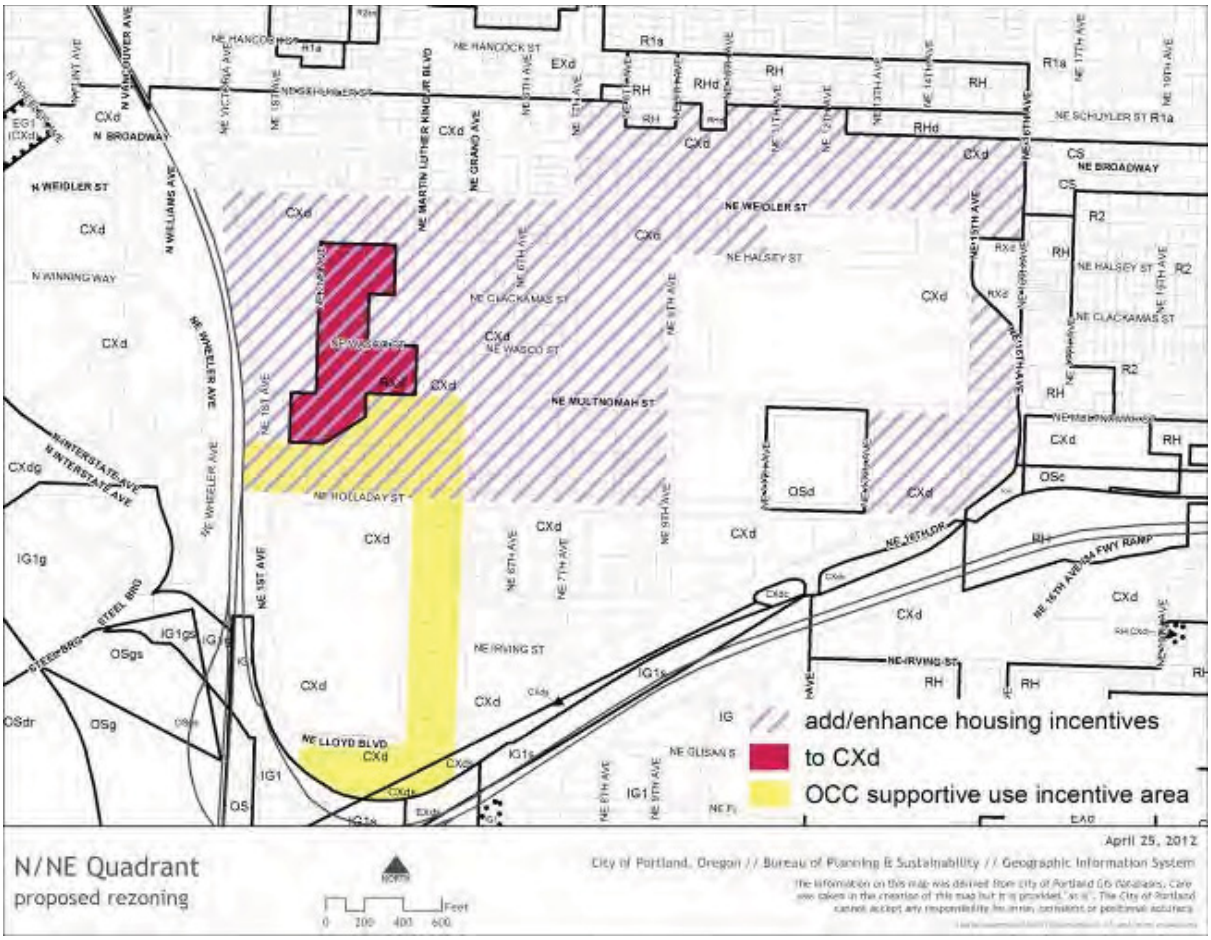
Provision	**Existing IG1**	**Existing EG1**	**Recommended CXd**	**Recommended EXd/EXds**
Land Uses	Primarily Industrial uses only.	Industrial, institutional and some commercial. Limitations on office, retail and residential.	Wide range of residential, office and retail allowed.	Wide range of residential, office, retail and industrial allowed.
Height limit	No limit	100'	100'-250'*	50'-150'*
FAR limit	No limit	4:1	4:1	3:1
Design overlay	No	No	Yes. Discretionary design review required.	Yes. Discretionary design review required.

* See proposed maximum height map in Appendix 1: *Additional Urban Design Diagrams*.

RC3 Adjust and increase maximum allowed heights to support high density development and encourage the provision of public amenities and desired uses in the following areas: Broadway Bridgehead, Riverfront ("Thunderbird" site) and Central Lloyd area.

Existing and proposed height maps are located in Appendix A: *Additional Urban Design Diagrams*. The heights shown on Map A2: *Proposed Maximum Heights* are maximums inclusive of any potential bonus height provisions. The specifics of the bonuses required to reach these maximums have not yet been developed but depending on location, they will emphasize providing housing, providing parks and open spaces, and providing Convention Center-supportive uses. Bonuses may also be developed for green buildings and the use of green infrastructure.

For related information see the following actions:



Central Lloyd – Lloyd actions RC4, HN1 and HN2
Riverfront – Lloyd action UD8

RC4 Adjust regulations and incentives to encourage new development that supports the Convention Center such as new or expanded hotel development, retail and other services on adjacent blocks.

There is a long-held desire to increase activity and vitality in the area surrounding the Oregon Convention Center. The *Lloyd District Development Strategy* (2001) and the *Development Vision for the Oregon Convention Center Blocks* (2006) both sought to create an exciting entertainment-oriented district on the blocks directly adjacent to the facility. This action calls for implementation of regulatory bonuses and incentives on these blocks that would encourage future development to incorporate entertainment-related uses to help realize this vision. See Map B2: *Central Lloyd Existing and Proposed Zoning* for the recommended area of implementation.

Desirable uses in this area include retail spaces (perhaps multi-story), restaurants and bars, entertainment and meeting venues, hotels and cultural facilities including galleries and museums. Prominent architecture, with significant night lighting and public art installations may also be encouraged in this area to enrich the pedestrian experience. Bonuses could be made available for additional building height (up to the proposed maximum heights) or additional floor area ratio (pending revision of the Central City's FAR bonus and transfer program). Other regulatory incentives should also be considered. See Appendix A: *Additional Urban Design Diagrams,* for existing and proposed maximum height maps.

Map B2: Central Lloyd Existing and Proposed Zoning

HN1 Develop regulatory tools to encourage housing development and the inclusion of affordable housing. Focus on housing emphasis areas.

The Lloyd District Goal includes an emphasis on developing a high-density mixed-use residential and employment district in the Central Lloyd, with sensitive transitions to the historic main street on NE Broadway and to the surrounding neighborhoods. To help achieve this goal, this action calls for refocusing available residential incentives (regulatory and financial) for both market rate and subsidized housing to apply in the areas shown on Map B2: *Central Lloyd Existing and Proposed Zoning*. Few, if any housing incentives or requirements would be provided outside the area illustrated on the map.

Potential incentives to encourage housing development include allowing additional building height (up to the maximums on the proposed height map) or additional floor area ratio (pending revision of the Central City's FAR bonus program). In certain areas where some housing is seen as essential, housing requirements may be applied – at least until a specified threshold of units have been built in the district. Changes to superblock regulations to encourage or require housing should also be explored.

HN2 Rezone the area of RXd zoning in Central Lloyd to CXd to provide flexibility and encourage investment. Apply housing incentives described in HN1 to this area.

This action implements the desire for a high-density mixed-use residential and employment district in the Central Lloyd by uniformly applying the flexible Central Commercial Zone with a Design Overlay (CXd) to the area show on Map B2: *Central Lloyd Existing and Proposed Zoning* and applying a variety of housing incentives as described in Lloyd action HN1. It is intended to increase land use flexibility and encourage investment in the district without losing sight of housing objectives. The majority of new housing development in the Central City since 1990 has been in CXd and EXd zoned-areas. For example, Pearl District is largely zoned EXd and Downtown and South Waterfront are largely CXd.

TR2 Develop and revise parking management strategies.

Parking policy is a key component of a successful high density urban area. In the Central City, parking policy serves many purposes. It includes managing the supply of parking to encourage non auto trips, managing congestion, supporting retail uses, protecting livability, addressing air quality issues, supporting growth in the Central City and protecting historic buildings from underuse and demolition. As the Central City parking policy is updated as part of Central City 2035, the City will address the following in relation (though not exclusively) to the Lloyd District:

- Incentivizing mixed use development through the provision of shared parking facilities.
- Promoting the use of transit and active transportation modes by reducing the amount of parking spaces per capita in the district over time.
- Maintaining and enhancing parking to serve retail focused areas and streets.
- Addressing event parking issues through flexible options such as the use of variable pricing and event parking management. An example of this is the current parking plan for Jeld-Wen Field during Portland Timbers games.

TR8 Implement the I-5 Broadway-Weidler Interchange Plan improvements.

See Appendix C: *I-5 Facility Plan*, for a complete description of anticipated interchange improvements and implementation issues to be addressed in the next steps of project design and engineering.

TR9 Implement a 7th Ave pedestrian/bike bridge over I-84 connecting to either 7th or 8th in the Central Eastside.

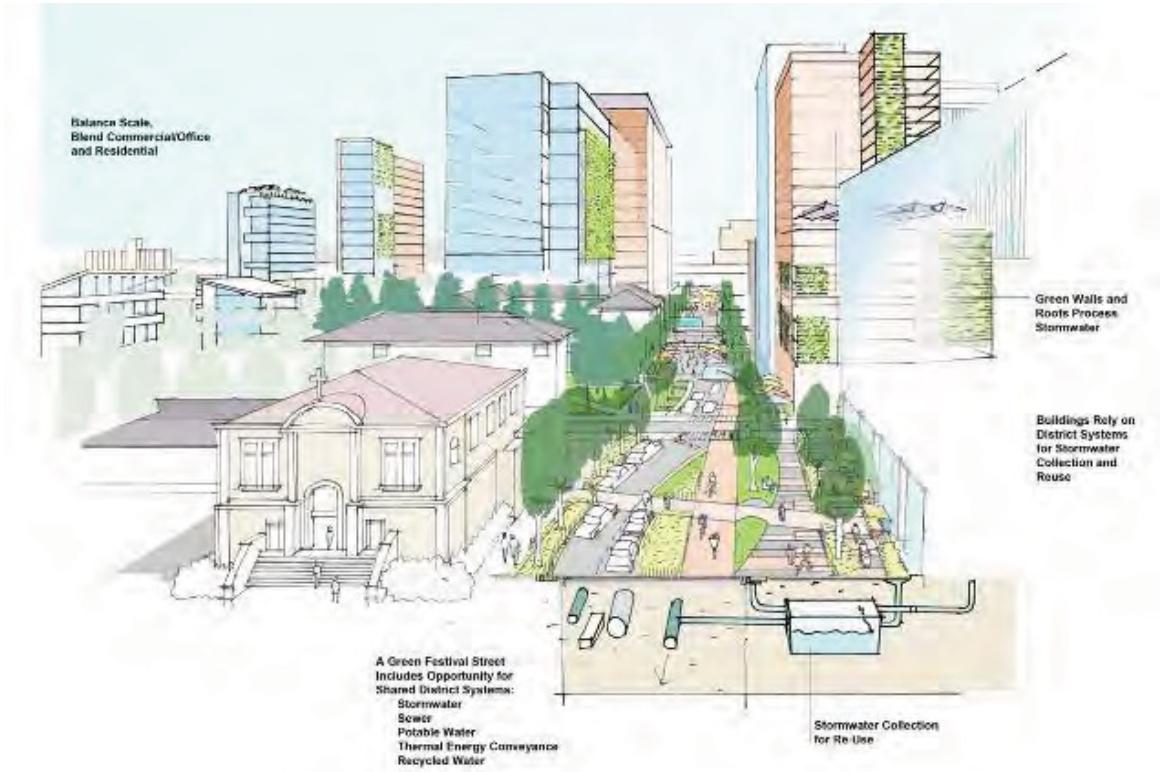
The Lloyd District is surrounded in the south and west by natural and man made barriers. To the south there is Sullivan's Gulch, the active Union Pacific line, the light rail line and the I-84 freeway separating Lloyd from the Central Eastside.

Three bridges connect these two areas: the overpasses at MLK and Grand and the 12th Avenue bridge. These bridges serve the needs of all modes, concentrating high numbers of vehicles with transit lines, trucks, pedestrians and cyclists. The Grand and MLK overpasses are loud and have substandard sidewalks and fast moving vehicles. Conflicts between vehicle and pedestrian needs are most present at Grand and Everett, where there is an on-ramp onto I-84 with a free right turn for vehicles. Pedestrian crossing is not allowed at this leg of the intersection.

There are no bicycle lanes on the MLK and Grand bridges. Streetcar tracks have been installed as part of the Streetcar Loop project, which precludes adding bike lanes adjacent to the curbs. The 12th avenue Bridge has recently received bicycle infrastructure improvements; however, the 12th Avenue bridge is located too far east to serve most travelers to and through the district.

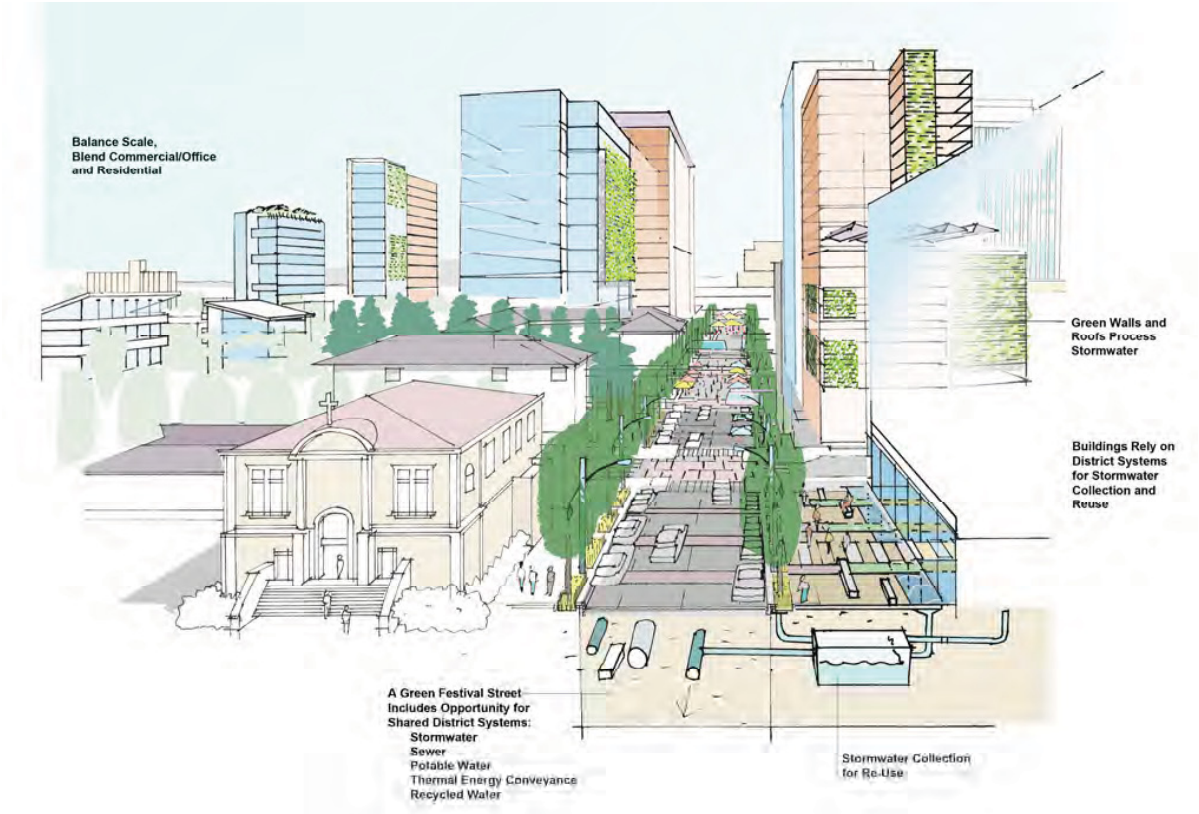
These factors support the need for an additional crossing to serve pedestrians and cyclists with a safe and convenient new connection with direct access to the heart of the Lloyd District. Given the presence of existing bicycle lanes on NE 7th in the Lloyd District and of a building in good condition at the end of NE 9th in the Central Eastside that would need to be demolished to provide a 9th Avenue to 9th Avenue connection, the best alternative routes are from NE 7th in the Lloyd District to either 7th or 8th (shortest distance) in the Central Eastside.

Conceptual rendering looking east from Lloyd Blvd showing a potential design option for the 7th Avenue pedestrian/bicycle bridge. This rendering shows existing bike lanes on Lloyd Blvd. It does not depict the proposed Sullivan's Gulch Trail.



TR10 Develop a strategy for the Clackamas Flexible Street and private development extending from the Rose Quarter to NE 9th Avenue via a new pedestrian/bicycle bridge over I-5.

The concept for a Clackamas Flexible Street would create an intimate urban street that provides for a safe and pleasant place for people to gather, play, and socialize. The street would provide for slow local vehicle access, bicycle access, and street amenities geared toward improving the pedestrian experience and creating a district amenity. This project should showcase the Lloyd EcoDistrict as a sustainable district that would include district energy infrastructure, enhanced tree canopy, improved stormwater strategies and green building technologies. The project should be a public-private partnership effort that leverages public infrastructure investments to obtain private investments in high-density, mixed-use development that contribute to the goal of creating an urban neighborhood in the Central Lloyd area.



Development agreements may be part of this project's implementation program and should address public investments, private development, and sustainable design elements.

Additional plan elements that would increase the positive impact of the Clackamas Flexible Street include the parks and open space strategy called for in action UD5 and the proposed Clackamas Pedestrian and Bicycle I-5 Overcrossing included in the I-5 Broadway/Weider Interchange Improvements Facility Plan (See Lloyd action TR8) that would link NE Clackamas Street with the Rose Quarter and potentially to the Willamette River. The Clackamas Flexible Street Project can occur separately from the bridge project.

The conceptual renderings below show two possible ways that Clackamas Street could be improved. There will be a future process to engage property owners and other stakeholders on design alternatives, access and parking needs.

Conceptual rendering of the Clackamas Flexible Street with a unique design and shared district systems.

Conceptual rendering of Clackamas Street as a festival street and with a decorative paving treatment.

TR13 Confirm the benefits and feasibility of straightening the "s-curve" in the Union Pacific rail tracks for freight and passenger rail operations. Options pursued should prioritize maintaining the development potential of the "Thunderbird" site.

Currently, the "Thunderbird" site is separated from the riverbank by the Union Pacific Railroad mainline tracks. The tracks currently have a series of sharp curves around the Louis Dreyfus grain elevators near the Steel Bridge that dramatically slow train traffic. There may be mutual gain in a scenario that straightens the curves by placing the tracks in a trench or tunnel closer to Interstate Avenue. This would speed train traffic, reducing rail system congestion around the Steel Bridge. Relocating the train tracks would also open up the opportunity for public access to the riverbank at the Thunderbird site while still preserving some development potential. See Lloyd action UD8 for a conceptual illustration of the site with trenched railroad tracks.

TR14 Work with TriMet to improve the Steel Bridgehead and Rose Quarter Transit Center area to improve transit, local circulation, access to the Eastbank Esplande, and development opportunities

The present configuration of the Rose Quarter Transit Center (RQTC) is an evolution from a simple bus transfer center recommended by the City of Portland's Industrial Access Study in the late 1970's to a major transit center for light rail and buses and a multi-modal hub to accommodate the spectators attending events at the Rose Quarter. The Interstate MAX Project was the most recent project to reconfigure the transit center.

With the construction of the Interstate MAX Project, City and TriMet staff acknowledged that the at-grade transit center was an interim solution and that a longer term solution would likely be needed in the future. In particular, as a transportation hub, the signal system would not have sufficient capacity to accommodate anticipated long-term growth in demand by any mode - light rail, bus and vehicle traffic, pedestrians, and bicyclists.

A key challenge for the RQTC also has been the need to better activate the center itself. This is particularly an issue as it relates to public safety. The current arrangement of the transit center and local streets inhibits development opportunities that would help activate the area.

The goals of this future work include exploring alternative configurations of street and rail infrastructure that:

- Improve the quality, safety and experience of the public realm, particularly for pedestrians, bicyclists and transit users.
- Improve transit capacity, readability, reliability and safety of the area – for MAX light rail and bus, as necessary.
- Improve development potential, creating developable parcels in the area of reasonable size and with good access and visibility.
- Increase access to and through the area – for vehicles, bikes and pedestrians.

In order to facilitate future reconfiguration of street and lot patterns near the transit center and improve the area's development potential, the plan recommends rezoning 3.3 acres of land west of the transit center from General Industrial 1 (IG1g) to Central Commercial (CXdg), as shown on the map below. The existing River General (g) overlay zone would remain. Approximately 93 percent of the area is in public rights-of-way. Most of the area is not currently developable but some of the land west of North Interstate could potentially be used for small or interim uses prior to a major reconfiguration of the area. Central Commercial zoning with the Design (d) overlay that matches the surrounding zoning will faciliate future development that takes advantage of regional transit access and supports the plan's vision of a highly urban and vital Lloyd District.

Map B3: Rose Quarter Transit Center Area Existing and Proposed Zoning

UD2 Revise height regulations along Broadway along the Eliot and Irvington neighborhood edges to provide a step down from taller heights allowed in the rest of the Lloyd District.

Existing and proposed maximum height maps are located in Appendix A*, Additional Urban Design Diagrams*. The N/NE Quadrant Plan recommends sensitive neighborhood transitions in building height between the Lloyd District and the Eliot and Irvington neighborhoods to the north. The proposed maximum heights map shows maximum heights of 75' north of Broadway with the exception of the area between NE 3rd and NE 7th where heights up to 125' are allowed to reflect the major crossroads intersection of Broadway and MLK and to acknowledge this important gateway between the Central City and NE Portland. Maximum heights are inclusive of any bonus provisions. A future update to the Lloyd District design guidelines (see Lloyd action UD6) will further describe the desired attributes of this gateway location, including strengthening the connection with the heritage markers to the north by using streetscape elements such as paving patterns, colors, and landscaping, among others. In addition, the guidelines will encourage designs that preserve views to and from the heritage markers, minimizing shadows on the heritage marker gateway.

This plan is also recommending that the existing 75' height limit between NE Schuyler and NE Hancock in the Irvington Historic District, an area that is outside the Central City Plan boundary, be

reduced to 45' as part of the update to the City's Comprehensive Plan. The height limit change is in response to the creation of the Irvington Historic District in 2010 and the policy need to retain multi-family housing potential in this corridor. See Lloyd action UD10 in the implementation action table.

Proposed changes to allowed heights along the Broadway/Weidler corridor within the N/NE Quadrant do not imply a precedent for revising height limits in the corridor between NE 15th and 33rd avenues, outside the Central City. Any such change would require further study and analysis as part of a future project.

UD6 Update the Lloyd District's 1991 design guidelines: *Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan* to reflect the district concept.

The *Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan* is recommended to be amended to reflect the design direction described in the district plan's urban design concept and supporting information. The existing document will be extensively revised and updated to feature new formatting, new illustrative examples of how to meet the guidelines and a new structure based on the Central City Fundamental Design Guidelines. New design issues to be addressed by the guidelines will include different street and development characters; providing design direction for gateways; incorporating/integrating green elements in site and building designs; and transitions to adjacent neighborhoods.

The "Street & Development Character" concept (see Appendix A*)* describes more intentional direction for the different streets in the Lloyd District. The concept proposes changes in both the street design standards as well as the adjacent building edges. The concept proposes three different types of street characters: retail/commercial, boulevard and flexible. New content in the design guidelines will address building edges of proposals along the different street types, illustrated with examples of desired building edge responses for each of the different street types. In addition, as some of the flexible network moves through private property, new design guidelines will speak to the character and orientation of new connections through these large blocks. More information is also available in a separate report: *N/NE Quadrant Plan: Street and Development Character Concept* (2012).

The Lloyd District includes a number of entry points or "gateway" locations, illustrated on Map A4 in Appendix A. The updated design guidelines will describe more clearly the City's intentions for the desired experience at each gateway, and how new development can support the targeted character. While many of the gateways will be reinforced by buildings that are taller than the surrounding context to emphasize the civic significance of these places, others may feature special landscaping or trees, unique works of public art, and/or combinations of the above. See also Lloyd action UD2 regarding the gateway at Broadway and MLK.

New design guidelines will address the incorporation of "green" site and/or building elements. These elements could include, but are not limited to, native vegetation, bird-friendly design approaches for larger buildings, providing setback space for trees, building orientation to maximize solar performance, energy production systems and stormwater management facilities. The content of these design guidelines would be developed in coordination with the Lloyd Ecodistrict planning and infrastructure implementation efforts.

In addition to maximum floor area ratio (FAR) and height regulations that limit building form(s), new design guideline content will address desired transitions from the Lloyd District to adjacent neighborhoods including Eliot and Irvington. The guidelines will be crafted to speak to the unique characteristics of the edges along each of these neighborhoods, and how new development proposals should respond accordingly. Design issues described by the guidelines, with narrative and illustrative

examples, will range from site/building patterns, façade articulation, attention to detail, quality of construction, and potential building step-downs to existing historically, culturally or architecturally significant resources. In addition, existing guidelines that address specific locations in the district, such as the Broadway/Weidler corridor, would be updated to reflect the Irvington Historic District designation and boundary change. Language in the guidelines would provide clearer direction for design compatibility with adjacent contributing properties.

UD8 Work with the property owner/developer of the "Thunderbird" site to craft a development agreement that incorporates public open space and the greenway trail on the riverfront.

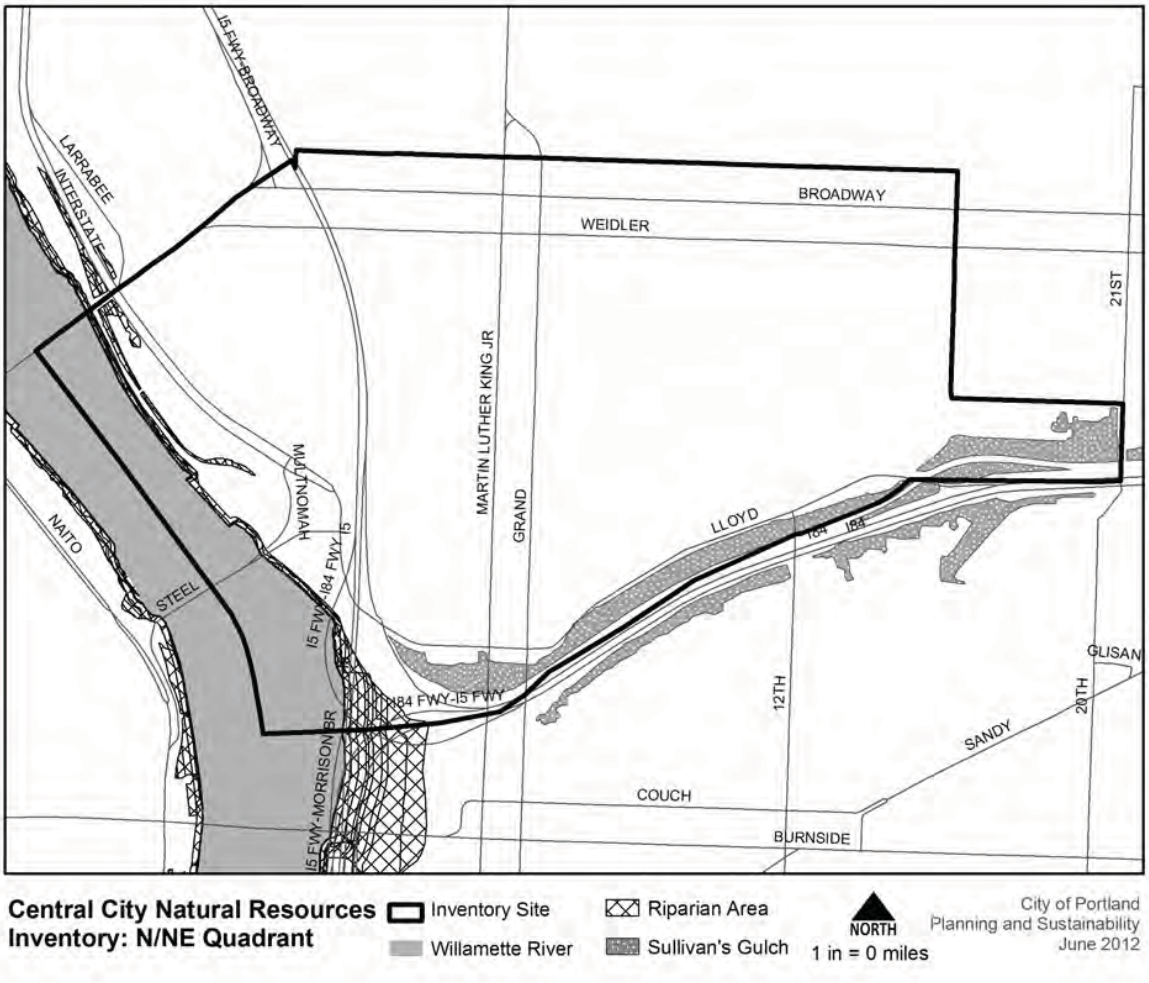
On the Thunderbird site located between the Veterans' Memorial Coliseum and the Willamette River additional height above the 100' current maximum would be allowed in exchange for providing public open space – preferably in front of the Coliseum. In exchange for providing significant public open space, buildings would be allowed to be up to 250'. The existing floor area ratio (FAR) would remain at 4:1, therefore the total amount of development potential on the site would remain the same.

As described in Lloyd action TR13, one option being considered in this area is the relocation of the Union Pacific railroad tracks to improve freight and passenger rail operations. It will be important to work with ODOT rail and Union Pacific to ensure that any plans developed for rail relocation maintain access, the development potential of the site and provide park and riverbank enhancement opportunities. Also see related Lloyd action RC3 regarding height changes proposed.

Thunderbird site with full build-out of existing current maximum height (100') and 4:1 FAR. Conceptual rendering only.

Thunderbird site with buildout to ~250' and 4:1 FAR, incorporating a new waterfront open space. The railroad tracks have been moved to accommodate riverfront access and increase rail efficiency in this conceptual rendering.

EN1 Evaluate natural resource protection and management options for Sullivan's Gulch and the Willamette River bank as part of the Central City-wide natural resource analysis.



As part of comprehensive planning projects, the City updates the existing Environmental Program. This update is needed to help protect and enhance natural resources, meet watershed health goals and advance the City's compliance with local, regional and state goals and regulations. The steps to update the Environmental Program include 1) inventory existing natural resources; 2) evaluate the

economic, social, environmental and energy trade-offs of different levels of resource protection; and 3) apply appropriate programmatic tools.

In 2011, staff updated the inventory of natural resources in the N/NE Quadrant. The inventory includes documentation regarding the location, extent and relative quality of the existing resources. The two primary natural resource features identified in the inventory are the Willamette River and its riparian area and Sullivan's Gulch (see Map B3: *Central City Natural Resources Inventory: N/NE Quadrant).* The river and riparian area are important to wildlife and fish, including ESA-listed species, and provide functions like flood storage and nutrient cycling. Sullivan's Gulch is a unique feature that is used by wildlife. It is also susceptible to slope failure due to its steep grade and risk of wildfire.

The next steps will be to complete the inventory for the other quadrants and release an updated Central City Natural Resources Inventory (NRI) for the entire Central City 2035 Plan area. Next, staff will perform the Economic, Social, Environmental and Energy (ESEE) Analysis for the entire Plan area to evaluate the trade-offs associated with different levels of environmental protection. The ESEE will consider development potential, housing goals, public health, commerce, recreation, watershed health and other topics. The result will be recommendations about when, where and how to protect and manage natural resources in the plan area. The City uses different tools to protect, enhance, and restore natural resources including environmental conservation and protection overlay zones, agreements with property owners, revegetation programs, education and best management practices.

Map B4: Central City Natural Resources Inventory: N/NE Quadrant

Existing overlay zones, such as the conservation overlay zone currently applied to parts of Sullivan's Gulch, will be reviewed and may be refined through the Central City project. The owners of potentially affected properties will be notified and invited to comment prior to the finalization of the Central City Natural Resource Inventory, the ESEE and program recommendations.

EN2 Update the Willamette Greenway Plan for the Lloyd District as part of the River Plan / Central Reach process, building on concepts outlined in the N/NE Quadrant Plan and the North Portland Greenway Feasibility Study.

The River Plan is a comprehensive, multi-objective plan for the land along the Willamette River. It involves the update of the 1987 Willamette Greenway Plan, greenway zoning code and greenway design guidelines. The River Plan is being completed in three phases with each phase focusing on a different "reach" of the Willamette River: North Reach, Central Reach and South Reach. The North Reach makes up Portland's working harbor, stretching from Willamette's confluence with the Columbia River to the Broadway Bridge on the east side to the river, including Lower Albina within the N/NE Quadrant Plan area. The River Plan / North Reach was completed in 2010, however subsequent appeals have not yet been resolved (see also Lower Albina action EN1).

Planning for the Central Reach, which stretches from the Broadway Bridge to Ross Island Bridge on the east side of the river, is being conducted as part of the Central City plan update. The Lloyd District riverfront is included in the Central Reach. The River Plan / Central Reach process will address habitat, restoration sites, design guidelines, trails and access, and river dependent and river related development. Enhancement and restoration sites within the Lloyd District could include the area of shallow water near the I-5/I-84 interchange and the riverbank below the "Thunderbird" site. Other potential opportunities to improve the riverbank include addition of large wood along the river margins to add complexity and cover for juvenile salmonids, bio-engineering of existing rip-rap and revetments to add native plantings for cover and food sources for aquatic and terrestrial wildlife.

EN11 Design infrastructure, such as the proposed Clackamas I-5 overcrossing and street improvements to accommodate district energy infrastructure where appropriate.

As of June 2012, the City of Portland, the Portland Development Commission, and the Portland Trailblazers are currently in the design process to develop an initial district energy node. Corix Utilities was selected to plan a phased Rose Quarter Shared Thermal Energy System (district energy). In its first phase, the system will provide heating and cooling services to the Rose Garden Arena and Veterans Memorial Coliseum. These services would be extended to the Oregon Convention Center in the second phase through underground piping. In the third phase, the system will expand east toward the Lloyd Center providing heating and cooling services through a network of pipe infrastructure. For this expansion to the greater Lloyd District, crossing I-5 poses a significant challenge that could be resolved by a Clackamas pedestrian/bike overcrossing. Connection to the Rose Quarter Shared Thermal Energy System would contribute to the redevelopment of Clackamas as a high performing green street. Additional district energy and water opportunities in the Lloyd District are also under consideration and could complement the Rose Quarter system.

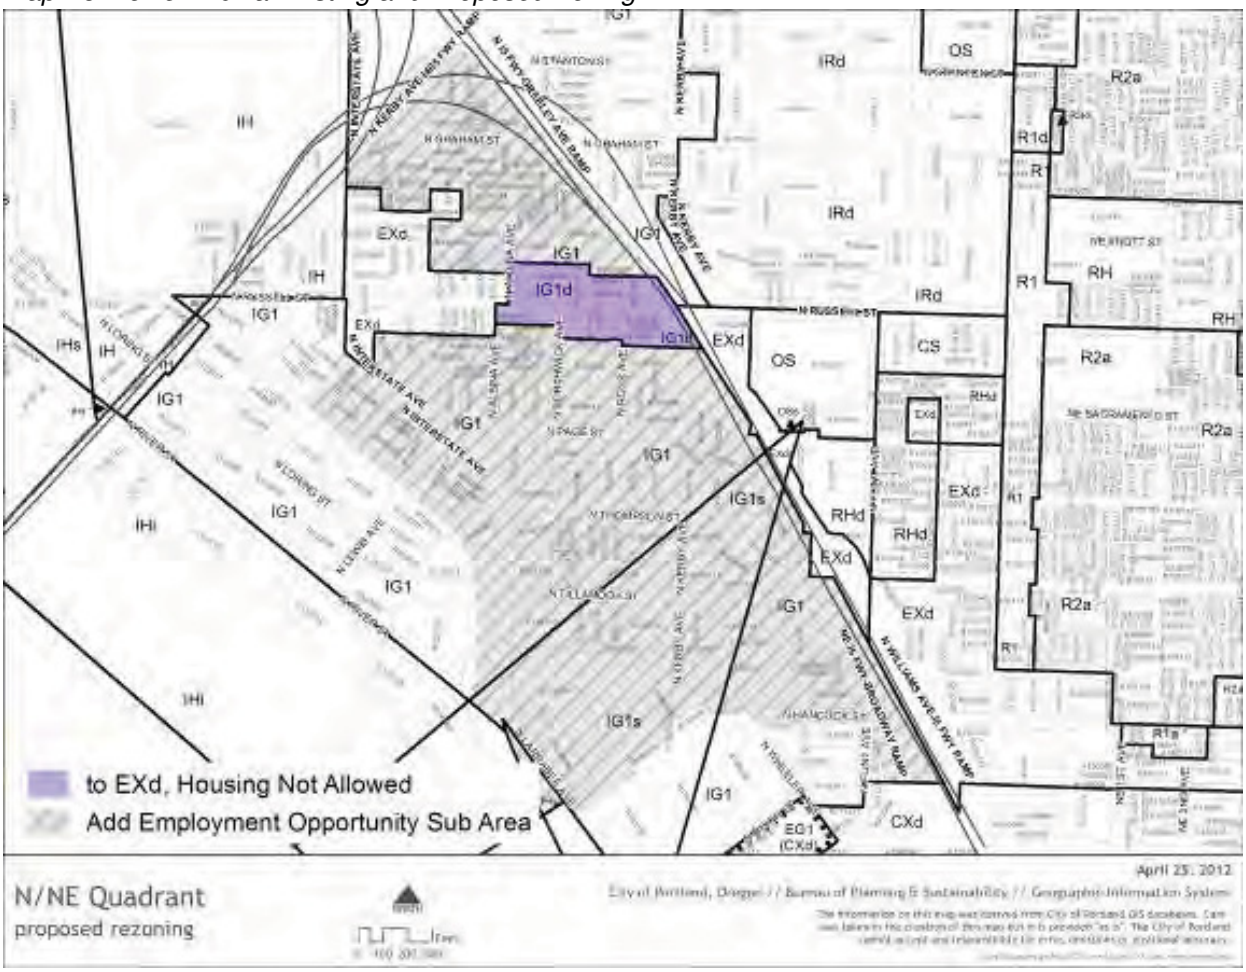
Lower Albina

RC1 Adjust the Lower Albina subdistrict boundary to exclude the PPS Blanchard site and adjacent properties to the south and east, placing them within the Lloyd District.

This action along with Lloyd District action RC2, recognizes the current major use (office) of the Portland Public Schools Blanchard Building and its desired future as a mixed-use, flexible urban redevelopment opportunity. Because the current office use and desired future uses for the site are non-industrial in nature, and because the natural topographical transition from the area around N Broadway and the Rose Quarter happens at a steep bluff north of the Blanchard site, the boundary between the Lloyd District and Lower Albina should be adjusted as shown in Map B1: *N Broadway Existing and Proposed Zoning.* Future redevelopment of the Blanchard site would complement proposed redevelopment in and adjacent to the Rose Quarter called for by the Rose Quarter District Plan. See Lloyd action RC2 for detailed information on the proposed zone change for the area.

RC2 Rezone properties east of the Russell St. Conservation District fronting Russell Street from IG1d to EXd. Set max FAR at 3:1 and maximum height at 50'. Prohibit housing in this area.

Background: The majority of the Lower Albina district is zoned for industrial uses. It serves as a critical incubator for emerging and innovative businesses and provides an important living-wage job base near inner North and Northeast neighborhoods. The district's mix of industrial businesses, working waterfront and multimodal freight facilities are complemented by a small mixed-use historic area along lower Russell Street, where retail activity is especially active in the evening.



Existing Zoning: Map B4 shows the existing and proposed zoning for the site and Table B2 summarizes existing and proposed zoning provisions. The area fronting NE Russell from N Albina to the I-5 overpass contains 17 tax lots covering approximately two acres. It is currently zoned General Industrial 1 (IG1) with a design (d) overlay zone and has several additional development standards, such as a 50 foot height limit, a maximum 3:1 FAR, and ground floor active use and residential bonus target designations. Many of these requirements are inconsistent with the underlying industrial zoning, make the economic use of these properties difficult, and complicate potential redevelopment. Immediately to the east of this area is the Russell Street Conservation District, which is zoned EXd, allowing a mix of industrial, commercial and residential uses. No zoning changes are proposed in the conservation district.

Proposed Zoning: Staff proposes rezoning the properties fronting N Russell between the Russell Street Conservation District and the I-5 overpass from IG1d to EXd, with a new provision that would prohibit residential development. This would continue to allow industrial uses, while also allowing office and retail uses. The existing 50 foot height limit and 3:1 maximum FAR would be retained. No changes are proposed in the existing EXd zoned area, where housing would continue to be allowed. Increasing zoning flexibility to allow a wider range of uses will support the existing retail node and encourage investment in existing buildings and help recreate the connection between Lower Albina and the Vancouver/Williams Corridor.

Table B2: Summary of Lower Albina Existing and Proposed Zoning Provisions (EXd)

Provision	Existing IG1	Proposed EXd (no residential)
Office: Allowed	1 Office (or Retail) use per site, up to 3,000 SF	Allowed, limited by FAR (3:1 proposed)
Office: Conditional Use	More than 3,000 SF, max of 60,000 SF or 1:1 FAR	NA
Retail: Allowed	1 Retail (or Office) use per site, up to 3,000 SF	Allowed, limited by FAR (3:1 proposed)
Retail: Conditional Use	More than 3,000 SF, max of 25,000 SF or 1:1 FAR	NA
Residential	Generally not allowed	Not allowed (proposed)

Map B5: Lower Albina Existing and Proposed Zoning

RC3 Apply zoning provisions to IG1-zoned properties east of the Union Pacific railroad alignment that allow certain compatible office-like uses, similar to the Employment Opportunity Subarea regulations in the Central Eastside. Implementation of the Employment Opportunity Subarea regulations is contingent on developing a Lower Albina parking strategy that explores off-street parking facilities for workers and visitors and on-street parking strategies.

Existing Zoning: Map B4 shows the existing and proposed zoning for the site and Table B3 summarizes existing and proposed zoning provisions. The area generally east of the Union Pacific railroad and west of I-5, where additional flexibility for employment uses is proposed (hatched area on Map B4), contains 136 tax lots, covering approximately 46 acres. It is currently zoned IG1, with a Scenic Resource (s) overlay on a portion of the area, which limits building heights to 50 feet. The area to the west is zoned IG1, with Heavy Industrial (IH) zoning along the waterfront. No zoning changes are proposed west of the Union Pacific rail line.

Proposed Zoning: Staff proposes applying Employment Opportunity Subarea (EOS) provisions to the IG1 area generally east of the Union Pacific rail line and west of the freeway (hatched area on map B4). This would allow some additional flexibility for commercial and employment uses that are compatible with industrial activities. The EOS provisions have the potential to increase job density, capture growing industry sectors, and foster the continued vitality of Lower Albina as an employment center and business incubator. Staff believes this targeted approach is less likely to result in land use conflicts with industrial activities than applying an employment base zone, which would have broader allowances for office and retail uses and the potential for residential development. The existing Scenic Resource (s) overlay would remain on a portion of the area.

Implementation of the EOS regulations is contingent on developing a Lower Albina parking strategy. Outcomes may include but not be limited to a parking inventory and strategies to provide additional parking or better manage existing supply to maximize its utility. Examples include employee permit programs, partnerships to create additional parking, time limitations/pricing, development of a Transportation Management Association/parking coordinator, enforcement strategy, and funding options, among others.

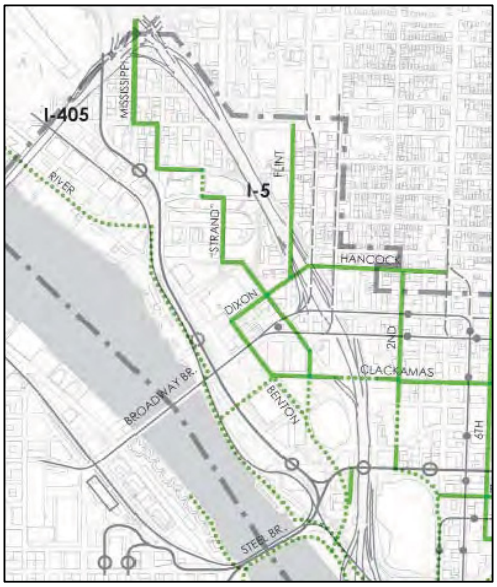
*Table B3: Summary of Lower Albina Existing and Proposed Zoning Provisions (EOS)**

Provision	Existing IG1	Proposed IG1 with Employment Opportunity Subarea (EOS)
Traditional Office: Allowed	1 Office (or Retail) use per site, up to 3,000 SF	5,000 SF per site
Traditional Office: Conditional Use	More than 3,000 SF, max of 60,000 SF or 1:1 FAR	More than 5,000 SF, max of 60,000 SF
Industrial Office: Allowed	NA	60,000 SF per site
Industrial Office: Conditional Use	NA	More than 60,000 SF
Retail: Allowed	1 Retail (or Office) use per site, up to 3,000 SF	5,000 SF per site
Retail: Conditional Use	More than 3,000 SF, max of 25,000 SF or 1:1 FAR	None
Residential	Generally not allowed	Generally not allowed

Traditional Office Designation:
- Focus on business, government, professional, medical, or financial services.

- Examples: Professional services, lawyers, accountants, real estate agents; financial, bank HQs, brokerage houses; sales offices; government offices; medical and dental clinics.

Industrial Office Designation:



- Conducted in an office-like setting but more compatible with industrial activities & districts. Less service-oriented with focus on development, production, processing of products, including digital products, e.g. internet & media content, designs & specifications, software, advertising materials. Primarily provide products to other businesses. Do not require customers or clients to visit the site.
- Examples: Software and internet content development & publishing; computer design & programming; graphic & industrial design; engineers & architects; telecommunication providers & data processing; TV, video, radio, internet studios & broadcasting; scientific & technical services; medical & dental labs.

** The specific EOS zoning proposal described above is consistent with the provision as applied in the Central Eastside Industrial District. The allowances above may be modified based on input from Lower Albina Stakeholders.*

TR4 Develop a street design plan for the "the Strand" and alternative routes to provide a lower-stress connection between N. Russell Street and the Rose Quarter.

The Lower Albina district concept calls for “the Strand”, which would provide a supplementary north-south, lower-stress connection between Lower Albina’s Russell Street commercial area and the Rose Quarter to the south and the Mississippi main street to the north. The Strand was developed as part of the Land Use Charrette for the N/NE Quadrant Plan held in February 2011.

Map B6: Proposed Strand Alignment

Today, N Interstate Avenue is the main connection, but it is a high volume traffic street and has narrow sidewalks and an unpleasant pedestrian environment. The Strand is envisioned as a wayfinding system that is compatible with the industrial activities that take place in the southern portion of the Lower Albina’s industrial district. Potential design features of the Strand could include pedestrian and bicycle enhancements, such as continuous sidewalks and/or pavement markings that do not conflict with industrial operations. It could also celebrate the industrial heritage of the district through public art, murals and historical markers along its path. Possible elements of the wayfinding system could include signage, special street paving and art.

The route identified for the Strand generally runs in the north-south direction and zig-zags through the district on existing streets (see map B5). The one exception is a segment between N Page and N Thompson Streets, where the route would need to cross private property via an easement or acquired right-of-way. This private segment presents an additional challenge due to the grade.

The Strand should be pursued as a preliminary streetscape project to determine its feasibility and cost. The study should consider non-traditional streetscape treatments that integrate with the industrial character of the area and examine other possible routes that would provide the same benefit of a lower-stress connection through the district.

Conceptual rendering of the Strand in Lower Albina. Art murals and special paving provide a wayfinding system through the district.

TR8 Implement the I-5 Broadway/Weidler Plan improvements, including the proposed Hancock overcrossing, to improve regional and local freight access.

See Appendix C: *I-5 Facility Plan*, for a complete description of anticipated interchange improvements and implementation issues to be addressed in the next steps of project design and engineering.

UD1 Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.

In 1998, the Bosco-Milligan Foundation (Architectural Heritage Center) completed "Cornerstones of Community," a historical context statement and inventory of over 3,000 properties associated with African-American history in Portland. In 2010, as part of the N/NE Quadrant Plan process, Bosco-Milligan updated the inventory, reflecting recent demolitions, correcting information, and converting the data so that it may be used in computer-based Geographic Information Systems. The context statement and updated inventory are powerful preservation planning tools that can assist in public education and historic preservation efforts in the N/NE Quadrant and through-out the city. They can serve as the basis for the development of a Multiple Property Documentation (MPD) form for African-American historic resources in Portland. Such an MPD would provide contextual information about the African-American community and evaluation criteria that would assist property owners who wish to list their historic properties in the National Register of Historic Places.

UD2 Improve the design review approval criteria used for development proposals within the Russell Street Conservation District and design overlay zone within Lower Albina.

The Community Design Guidelines are currently used as the approval criteria for historic design reviews in the Russell Street Conservation District. This is the only situation in the Central City where the Central City Fundamental Design Guidelines are not used as historic design review criteria (in some cases, other criteria are used in addition to the Central City Fundamentals). In addition, Lower Albina is the only Central City area outside of the downtown core that lacks a district-specific set of design guidelines. In the area east of the conservation district proposed for EXd zoning, the Central

City Fundamentals are the approval criteria. This results in a situation where different criteria are used in directly abutting areas that have similar characteristics

In general, the Community Design Guidelines were intended to be used in areas outside the Central City and may not be the most appropriate criteria in a Central City conservation district. Options to consider include: developing a new set of sub-district design guidelines for Lower Albina that would speak to the characteristics of the Russell Street area specifically; amending the Central City Fundamentals and applying them within the conservation district; or amending current language in the Community Design Guidelines to better address the character of the conservation district.

UD5 Encourage and assist Lower Albina property owners to nominate their historic properties for designation as landmarks.

Two sources of information can assist Lower Albina property owners to list their properties in the National Register of Historic Places. The existing Multiple Property Documentation (MPD) form "Historic and Architectural Properties in the Eliot Neighborhood" provides historical context and evaluation criteria for historic resources within the Eliot Neighborhood, including Lower Albina. The MPD reduces the National Register documentation requirements for properties that meet the criteria laid out in the MPD. This document is available from the Bureau of Planning and Sustainability.

Another helpful source is the historic resources inventory completed for the Albina Community Plan. This multi-volume set completed in the mid 1990s updated information in the City's 1984 adopted Historic Resources Inventory. It contains information on hundreds of historic properties in N and NE Portland, including the Lower Albina area. The inventory is housed at the Bureau of Planning and Sustainability.

Study Areas

North Banfield Portal

NB1 Apply CXd zoning to the sites south of Multnomah St. and west of NE 21st Avenue. Existing environmental conservation (c) overlay zoning will remain.

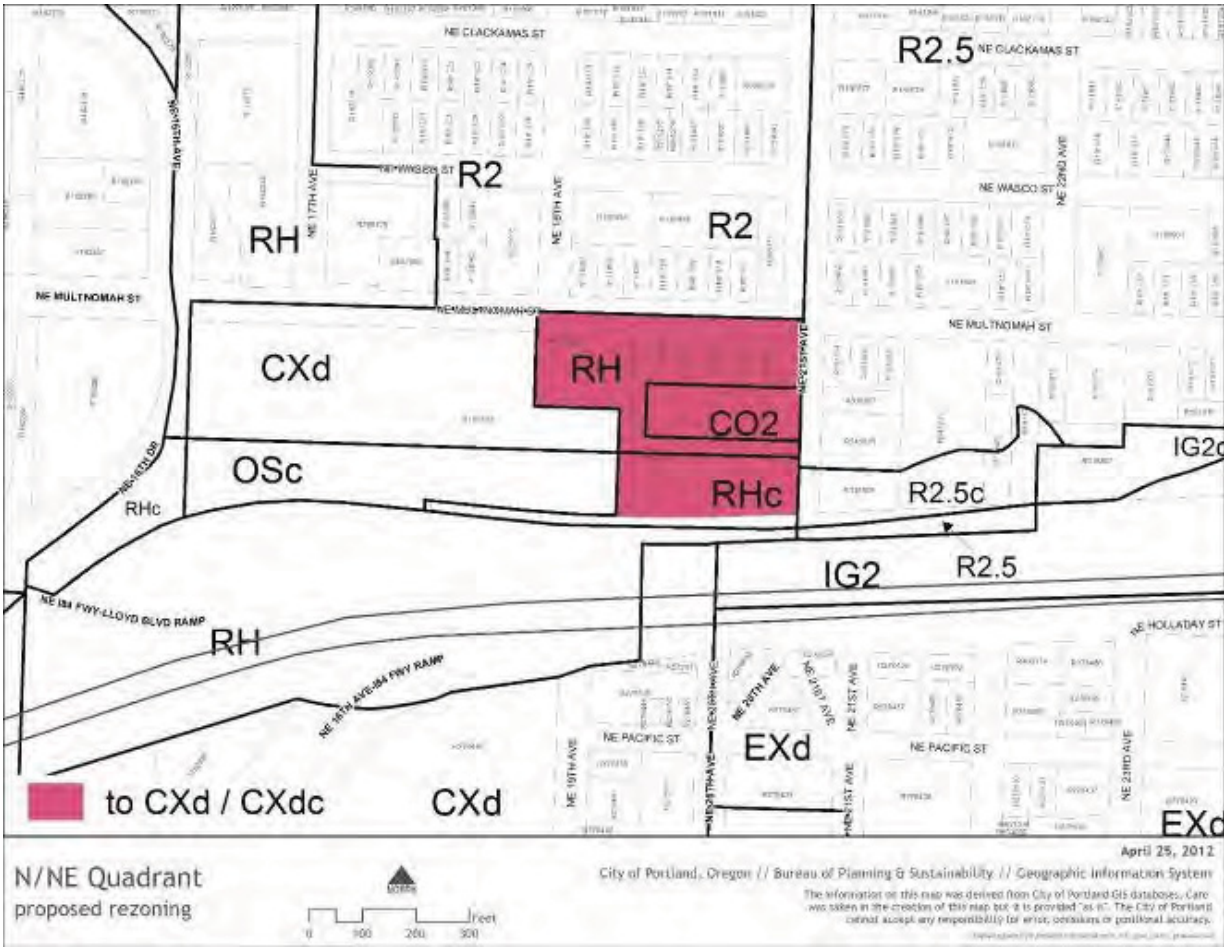
Background: Two sites at the corner of NE Multnomah and NE 21st Avenue are currently occupied by a courtyard apartment building and several older single-family homes. Stakeholders are interested in seeing redevelopment in the area with a mix of uses, but much of the area is zoned for residential and one of the sites is currently split-zoned with a mix of residential and commercial office zoning, complicating redevelopment. The staff proposal is to rezone the site to better meet future redevelopment desires.

Existing Zoning: Map B6 shows the existing and proposed zoning for the site and Table B4 summarizes existing and proposed zoning provisions. The sites contain nine tax lots totaling approximately 3 acres.

Approximately 1.6 acres is zoned High Density Residential (RH), with a 75 ft height limit and a floor area ratio (FAR) of 4:1. The RH zone is a high density, multi-dwelling zone. New housing in this zone is expected to be medium-rise apartments and condominiums.

Approximately .8 acres is zoned RH with an Environmental Conservation Overlay (RHc), with a 75 ft height limit and an FAR of 4:1. The 'c' overlay zone is intended to conserve important resources while allowing development that is environmentally sensitive. The 'c' overlay does not prohibit development.

Approximately .6 acres is zoned Commercial Office (CO2) with a 45 ft height limit. The CO2 zone is a low and medium intensity office zone that generally allows uses in the office and institutional categories, but not other commercial uses. Retail uses are limited to 10% of the total floor area.



The area to the west has flexible commercial zoning (CXd) and is occupied by the Marriott Residence Inn Hotel. Areas to the north and east are zoned for medium density residential development with a height limit of 35 (R2.5) or 40 (R2) feet; commercial uses are not allowed.

Proposed Zoning: Central Commercial zoning with a design overlay (CXd) with a height limit of 75 feet and an FAR limit of 4:1 is proposed for both sites. The CXd zone would allow a more flexible mix of uses than is currently allowed, including a wide variety of residential, commercial and institutional uses. The design (d) overlay would require new development to go through a discretionary review process or meet Community Design Standards. The environmental 'c' overlay zone would remain on the southerly portion of the site, however changes could be proposed through a separate analysis of natural resources in the Central City planning area. See Lloyd action EN1 for more information.

Table B4: Summary of N Banfield Portal Existing and Proposed Zoning Provisions

Provision	Existing RH	Existing CO2	Proposed CXd
Land Uses	Primarily residential only.	Office and residential allowed, retail limited.	Residential, office and retail allowed. Mixed uses allowed.
Height limit	75'	45'	75'
FAR limit	4:1	2:1	4:1
Design overlay	No	No	Yes. Discretionary design review or use of Community Design Standards required.

Map B7: N Banfield Portal Existing and Proposed Zoning

NB2 Evaluate natural resource protection and management options for Sullivan's Gulch as part of the Central City-wide natural resource analysis.

Sullivan's Gulch has been identified as a resource in the City's 2011 update of the Natural Resource Inventory for the Central City plan area. Evaluation of these resources will be addressed through a Central city-wide analysis. See Lloyd action EN1 for a more detailed description of this process.

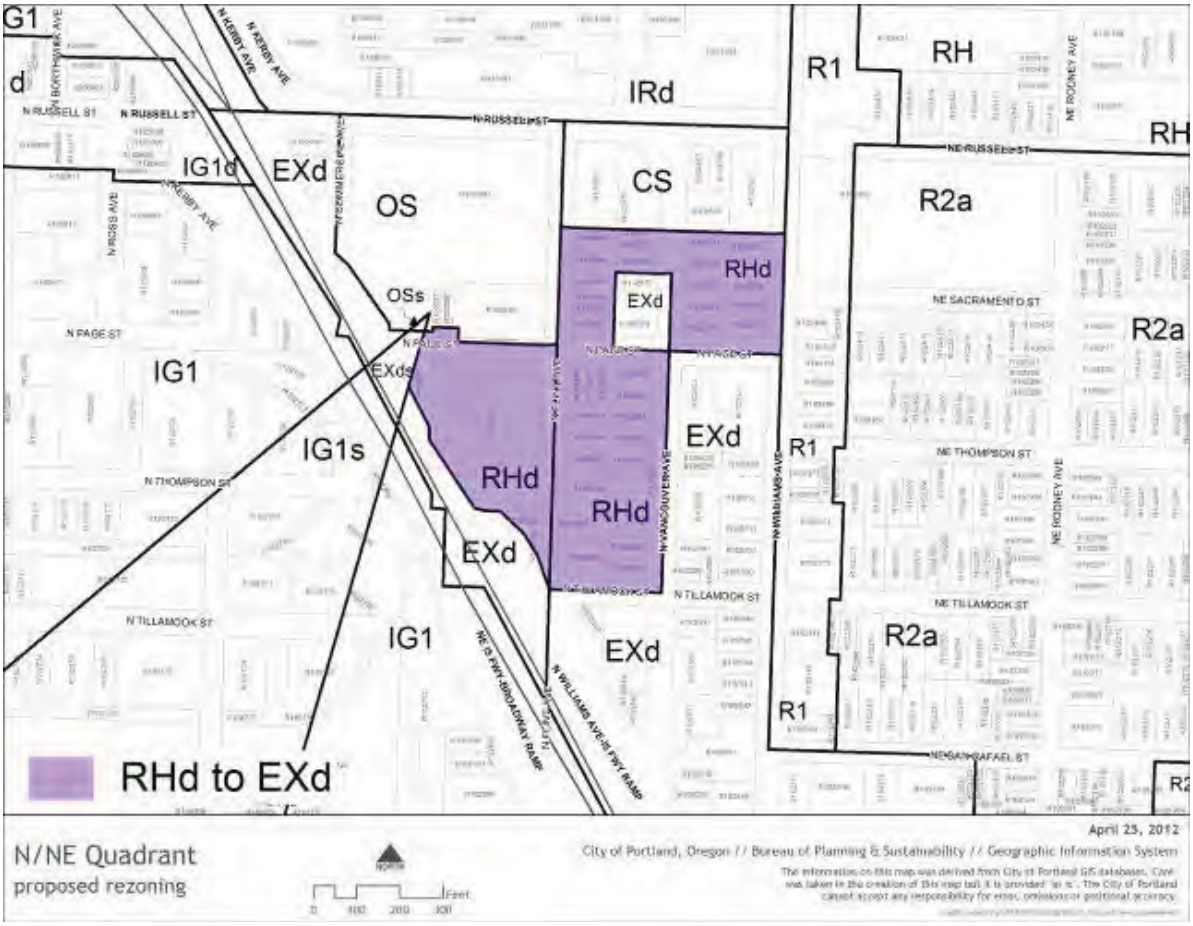
Vancouver/Williams Corridor

VW1 Rezone portions of 4 blocks between I-5 and N Williams from RH to EXd.

Background: This area is currently home to a diverse mix of uses, including light manufacturing, warehousing, retail, residential and institutional uses. Some of the area is zoned for high density housing that doesn't allow most other uses and can limit the ability of existing, commercial and light industrial uses to expand. The Harriet Tubman School comprises almost half of the developed square footage in the area; of the remaining area, approximately half of the developed square footage is in non-residential use. There is also a large concentration of structures with significant historical associations identified in the "Cornerstones of Community: Portland's African-American Heritage" inventory completed by the Bosco-Milligan Foundation (see Lower Albina action UD1 for more information). Staff is proposing to rezone the area to better meet neighborhood desires, eliminate the regulatory conflicts for existing businesses and reflect the historic mix of uses.

Existing Zoning: Map B7 shows the existing and proposed zoning for the site and Table B5 summarizes existing and proposed zoning provisions. The area contains thirty-eight tax lots totaling approximately 6.5 acres.

Approximately 6.5 acres is zoned High Density Residential with a design overlay (RHd), with a 75 ft height limit and an FAR of 4:1. The RH zone is a high density multi-dwelling zone. New housing in this zone is expected to be medium-rise apartments and condominiums. The design overlay requires new development to go through a discretionary review process or meet community design standards.



Most of the area between the I-5 freeway and N Williams Avenue has mixed employment zoning with a design overlay (EXd). Lillis Albina Park borders the area to the NW, a small area of storefront commercial (CS) zoning is located to the north along Russell St. and multi-dwelling residential (R1) zoning is across N Williams to the east.

Proposed Zoning: Staff proposes Central Employment zoning with a design overlay (EXd), which includes a height limit of 65 feet and a maximum FAR of 3:1. The EXd zone allows industrial and commercial uses suited for a central location, in addition to residential uses. This change would allow a more flexible mix of uses than is currently allowed and will support the maintenance and expansion of existing businesses. The design overlay would continue to require new development to go through a discretionary review process or meet Community Design Standards. The combination of increased zoning flexibility, reduced overall development potential (FAR), and no minimum residential density requirements will encourage reinvestment in culturally significant structures by providing a wider array of potential economic uses and development options.

Table B5: Summary of Vancouver/Williams Existing and Proposed Zoning Provisions

Provision	Existing RHd	Proposed EXd
Land Uses	Primarily residential only.	Residential, office and industrial allowed. Mixed uses allowed.
Height limit	75'	65'
FAR limit	4:1	3:1
Design overlay	Yes. Discretionary design review or use of Community Design Standards required.	Yes. Discretionary design review or use of Community Design Standards required.
Minimum Density	1 unit per 1,000 SF of site area	None

Map B8: Vancouver/Williams Existing and Proposed Zoning

VW2 Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.

A number of properties identified on the Bosco-Milligan Foundation's "Cornerstones of Community" inventory are located in the Vancouver/Williams Corridor study area. See the appendix entry for Lower Albina action UD1 for a more complete description of this action.

N/NE Quadrant and I-5 Broadway/Weidler Plans

Facility Plan

I-5 Broadway/Weidler Interchange Improvements

October 2012

Recommended Draft

CENTRAL CITY 2035

N/NE QUADRANT

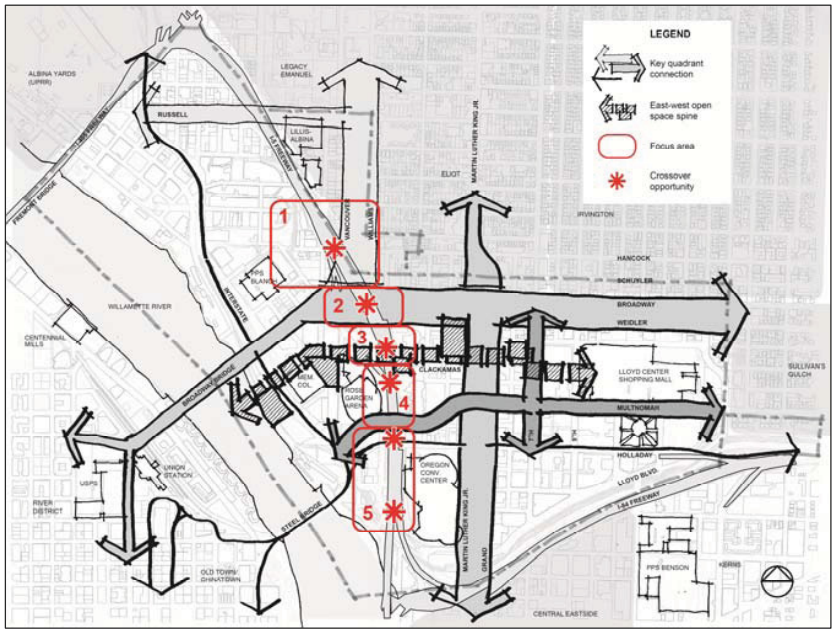
CITY OF PORTLAND, OREGON 1851

Oregon Department of Transportation

54778

Facility Plan:
I-5 Broadway/Weidler Interchange Improvements

The overall project purpose is to...
Improve safety and operations on I-5 in the vicinity of the Broadway/Weidler interchange.



OBJECTIVES:
ODOT and the City of Portland, through the Stakeholder Advisory Community (SAC) and extensive public outreach, explored and found solutions to meet the following objectives:

EASE CONGESTION LEVELS AND IMPROVE SAFETY

ENHANCE PEDESTRIAN AND BICYCLE ROUTES

IMPROVE FREIGHT MOVEMENT

Integration of Transportation and Land Use Concepts in the N/NE Quadrant Plan

TSM	Transportation System Management

The Facility Plan

Study Area

The project study area is at the crossroads of the Portland freeway system, as shown in Figure 1. I-5 is the north-south freeway facility and extends through the metropolitan area; in fact, it runs the full length of the west coast of the United States from Canada to Mexico. Within the project area, I-84 intersects I-5 and extends east across the U.S. A mile and a quarter north of I-84, I-405 connects to I-5 at the Fremont Bridge interchange. This interchange is the northerly connection of the I-405 loop around the west side of downtown Portland, with the southerly connection at the west end of the Marquam Bridge. Within the overlap section, I-5 serves through traffic as well as connecting traffic between I-84 and I-405.

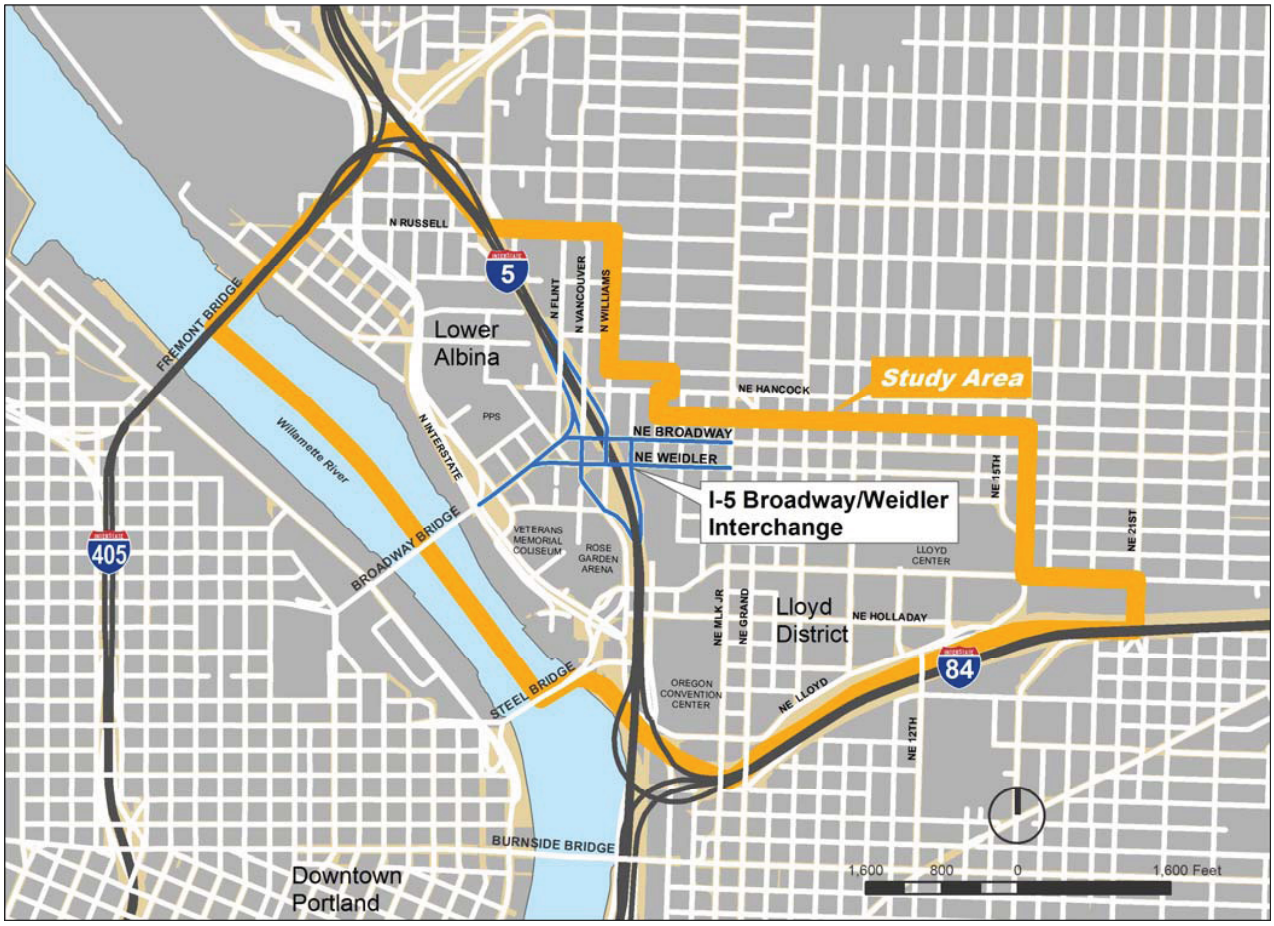

Figure 1: Study Area and Vicinity Map

Facility Function

- I-5 is classified as an Interstate facility and is both a Freight Route and a Truck Route.
- I-84 is classified as an Interstate facility and is both a Freight Route and a Truck Route.
- I-405 is classified as an Interstate facility and is both a Freight Route and a Truck Route.

Interchange Function

The I-5 Broadway/Weidler Interchange is located on I-5, in between I-405 to the north and I-84 to the south. The function of the I-5 Broadway/Weidler Interchange is to serve the Portland central city, which includes the industrial area of Lower Albina and the commercial activity along the Broadway/Weidler corridor, regional attractions such as the Rose Garden Arena and the Lloyd Center mall, and the surrounding community.

Purpose

The purpose of the I-5 Broadway/Weidler Interchange Improvement Plan is to improve the safety and operations on I-5 in the vicinity of the I-5 Broadway/Weidler Interchange.

Project Problem/Issues

Congestion and Bottleneck

In the context of the regional freeway network, the city's N/NE Quadrant sits at a crossroads of three regionally-significant freight and commuter routes. As a result, the freeway interchanges experience some of the highest traffic volumes in the state. Table 1 shows the average daily traffic volumes entering and exiting I-5 over the two-mile segment within the N/NE Quadrant.

Table 1: Average Daily Traffic Volumes Entering and Exiting I-5 in the Study Area

I-5 Direction	Total Ramp Volumes Entering I-5	Total Ramp Volumes Exiting I-5
Northbound	29,970	37,530
	Includes entrance ramps from: • I-84 • Broadway/Williams Avenue	Includes exit ramps to: • Weidler Street/Victoria Avenue • I-405 • Greeley Avenue
Southbound	34,020	47,200
	Includes entrance ramps from: • Greeley Avenue • I-405 • Wheeler/Winning/Williams	Includes exit ramps to: • Broadway/Vancouver Avenue • I-84 • Morrison Bridge/Hwy 99E

Highest Accident Rate in the State of Oregon

An analysis of the reported crashes on I-5 in the study area was performed for the five-year period from 2005 through 2009. Both frequency (number of crashes) and crash rate (number of crashes per million vehicle miles) were calculated per 1/10-mile segments.

- I-5 Southbound direction has more frequency of crashes than I-5 Northbound
- The top three locations with highest frequency of crashes and crash rates are:
    1) I-5 Southbound at Holladay Street (weave between the Winning/Wheeler On-ramp and the I-84 Eastbound Off-ramp)
    2) I-5 N at Multnomah (weave between the I-84 W On-ramp and the Weidler Off-ramp)
    3) I-5 S at Thompson Street (weave between the I-405 on-ramp and the Broadway Off-ramp)
- I-5 within the study area has the highest crash rate within the entire state
- Three times the crash rates at the I-5 Terwilliger curves
- The type of crashes in order of ranking from highest are: rear-end, sideswipe, fixed and other.

The attributing factors to the high number of crashes and safety problems in the study area are:

- Heavy congestion
- Short weaving distances
- Lack of shoulders for accident/incident recovery

Operational Friction and Congestion Caused by Heavy Weaving

Weaving analysis and field observations were performed for the four weaving sections on I-5 within the study area:

- I-5 Northbound between I-84 Westbound and Weidler Off-ramp
- I-5 Northbound between Broadway On-ramp and I-405 Off-ramp
- I-5 Southbound between I-405 On-ramp and Broadway Off-ramp
- I-5 Southbound between Winning/Wheeler On-ramp and I-84 Eastbound Off-ramp

I-5 Northbound Weaving Section between Broadway On-ramp and I-405 Off-ramp

Two weaving sections currently perform at failing level-of-service during the AM and PM Peak periods:

- I-5 Southbound between Winning/Wheeler On-ramp and I-84 Eastbound Off-ramp
- I-5 Northbound between I-84 Westbound and Weidler Off-ramp

I-5 Southbound Weaving Section between Winning/Wheeler On-ramp and I-84 Eastbound Off-ramp

The failing operations will be exacerbated in the future, with the most critical failure being the weave from I-5 Southbound from the Winning/Wheeler On-ramp to the I-84 Eastbound Off-ramp. This bottleneck will cause queuing that extends beyond the weaving section to the north and onto the Fremont Bridge.

The Land Use-Transportation Connection

The N/NE Quadrant of the central city includes considerable multimodal infrastructure to support all types of travelers on all modes. In addition to the I-5 freeway and the local street network, four light rail transit (LRT) lines run through the area, converging on the Rose Quarter Transit Center next to the Rose Garden Arena. The City of Portland is constructing streetcar lines on Broadway/Weidler to connect with the Pearl District and the central east side of Portland. Eight TriMet bus lines also connect at the transit center.

The I-5 Broadway/Weidler Interchange Improvements Facility Plan proposes many new crosswalks that will improve pedestrian safety and connections to and from these major transit amenities. Two major bicycle commute routes run through the area: 1) the major east-west route along Broadway and Weidler, and 2) the major north-south route along Williams and Vancouver. The plan proposes a new east-west pedestrian and bicycle overcrossing at Clackamas Street to connect the Lloyd District with the Rose Quarter. The plan also includes a new Hancock/Dixon overcrossing structure and freeway lid that will allow for effective construction staging, improve viability of the PPS Blanchard site and provide a supplementary crossing to the north of "the Box" near the I-5 Broadway/Weidler Interchange.

The Lloyd Transportation Management Area (TMA) is one of the most successful TMAs in the Portland metropolitan region. The area is currently predominantly commercial and industrial. However, the proposed changes to land use designations in the N/NE Quadrant Plan will encourage a much greater mix of uses, especially in the central Lloyd District where significant density and mix of uses are anticipated.

The City of Portland and ODOT have jointly developed this freeway and local transportation plan, and have integrated the transportation and land use components. The transportation components were developed assuming existing zoning, except for changes at the Portland Public Schools (PPS) Blanchard site and some changes to allow more diverse uses in the central Lloyd District. The overall trip vehicle trip generation for the district is expected to be the same or lower than under previous zoning entitlements. The changes related to land use and the transportation recommended by this plan have been analyzed, and queues are not anticipated on the I-5 exit ramp deceleration areas (see Table 2).

Table 2: Available Storage and Predicted Queues for Exit Ramps at I-5 Broadway/Weidler Interchange

Direction	Storage Available	Predicted Queue
Southbound	955 feet	500 feet
Northbound	1130 feet	350 feet

Multimodal Mixed-use Area

The I-5 Broadway/Weidler Interchange is within ¼-mile of an existing interchange. ODOT staff concurs that the Multimodal Mixed-use Area (MMA) designation is appropriate for the city's companion N/NE Quadrant Plan and ODOT must be consulted prior to any future plan amendments within the MMA boundary and will remain in effect as long as progress is being made towards the implementation of project elements.

Summary of the Recommended Concept and Elements

The Recommended Concept, supported by a majority of the Stakeholder Advisory Committee (SAC) via a consensus-driven process, and its elements are based on technical assessments of bicycle and pedestrian operations, urban design/land use potential, traffic operations and safety. Table 3 describes the Facility Plan elements and their outcomes and Figure 2 and Figure 3 illustrate the extent of improvements included in the Recommended Concept. Figure 4 shows aerial perspectives of the existing conditions in the Rose Quarter and how the area would look with the improvements included in the Recommended Concept.

The Facility Plan Element 1, **Transportation System Management (TSM)** and **Transportation Demand Management (TDM) Strategies,** is designed to optimize the overall performance of the transportation system and to reduce vehicle demand, especially for commuter trips in the peak periods.

TSM measures are designed to make maximum use of existing transportation facilities, and include:

- Traffic engineering measures (e.g., such as signal timing changes, provision of turn lanes, turn restrictions and restriction of on-street parking to increase the number of travel lanes without road widening) that improve the operations and efficiency of streets and intersections;
- System monitoring and traveler information systems (e.g., Intelligent Transportation Systems (ITS), variable message signs, etc.);
- Facility management systems (e.g., ramp meters, special use lanes, signal priority for special users such as transit); and
- Incident management systems (e.g., incident response and recovery teams).

TDM strategies are most effective in areas with high concentrations of employment and where a robust transit system exists. Generally, the strategies are easiest to implement where there are large employers or where a TMA has been established to pool the efforts of many smaller employers. TDM measures include strategies that: 1) shift modes like carpooling, vanpooling, transit, bicycling and walking programs; 2) shift trips to non-peak periods, such as flexible work schedules and off-peak shifts; and 3) include telecommuting, which eliminates trips.

Components of these TSM and TDM measures are in use today. The City of Portland and ODOT will continue to monitor, adjust and implement the strategies as needed.

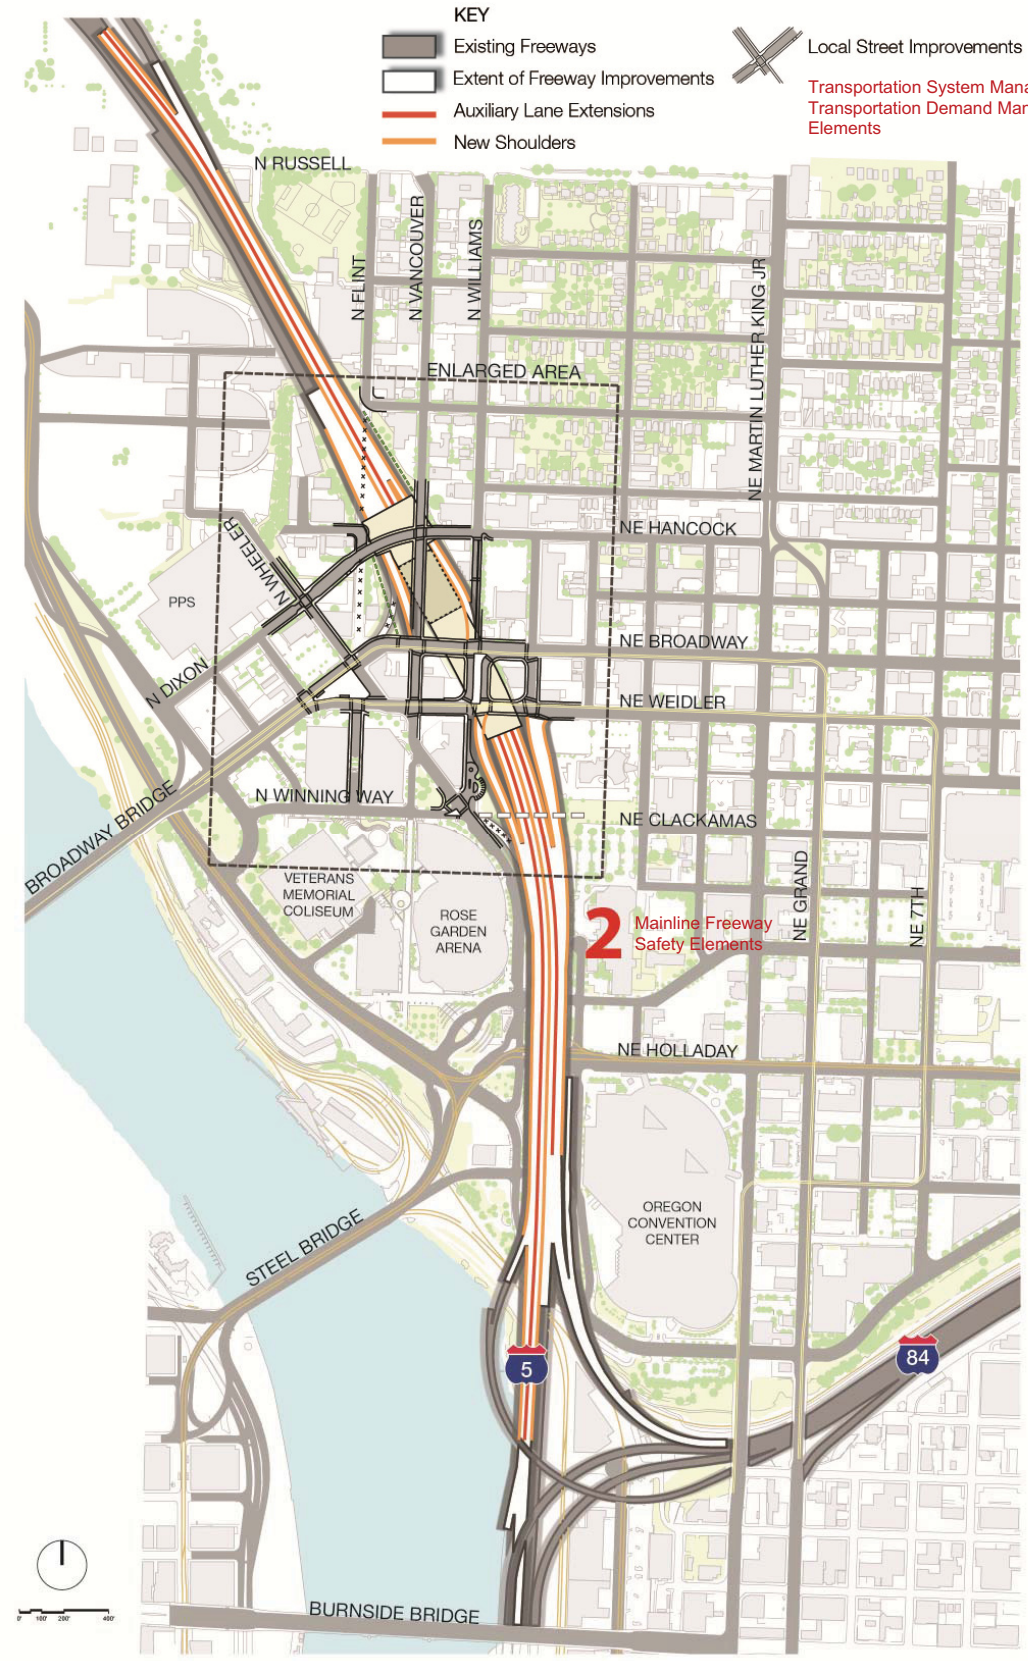

Figure 2: Overall Project Extent of the Recommended Concept

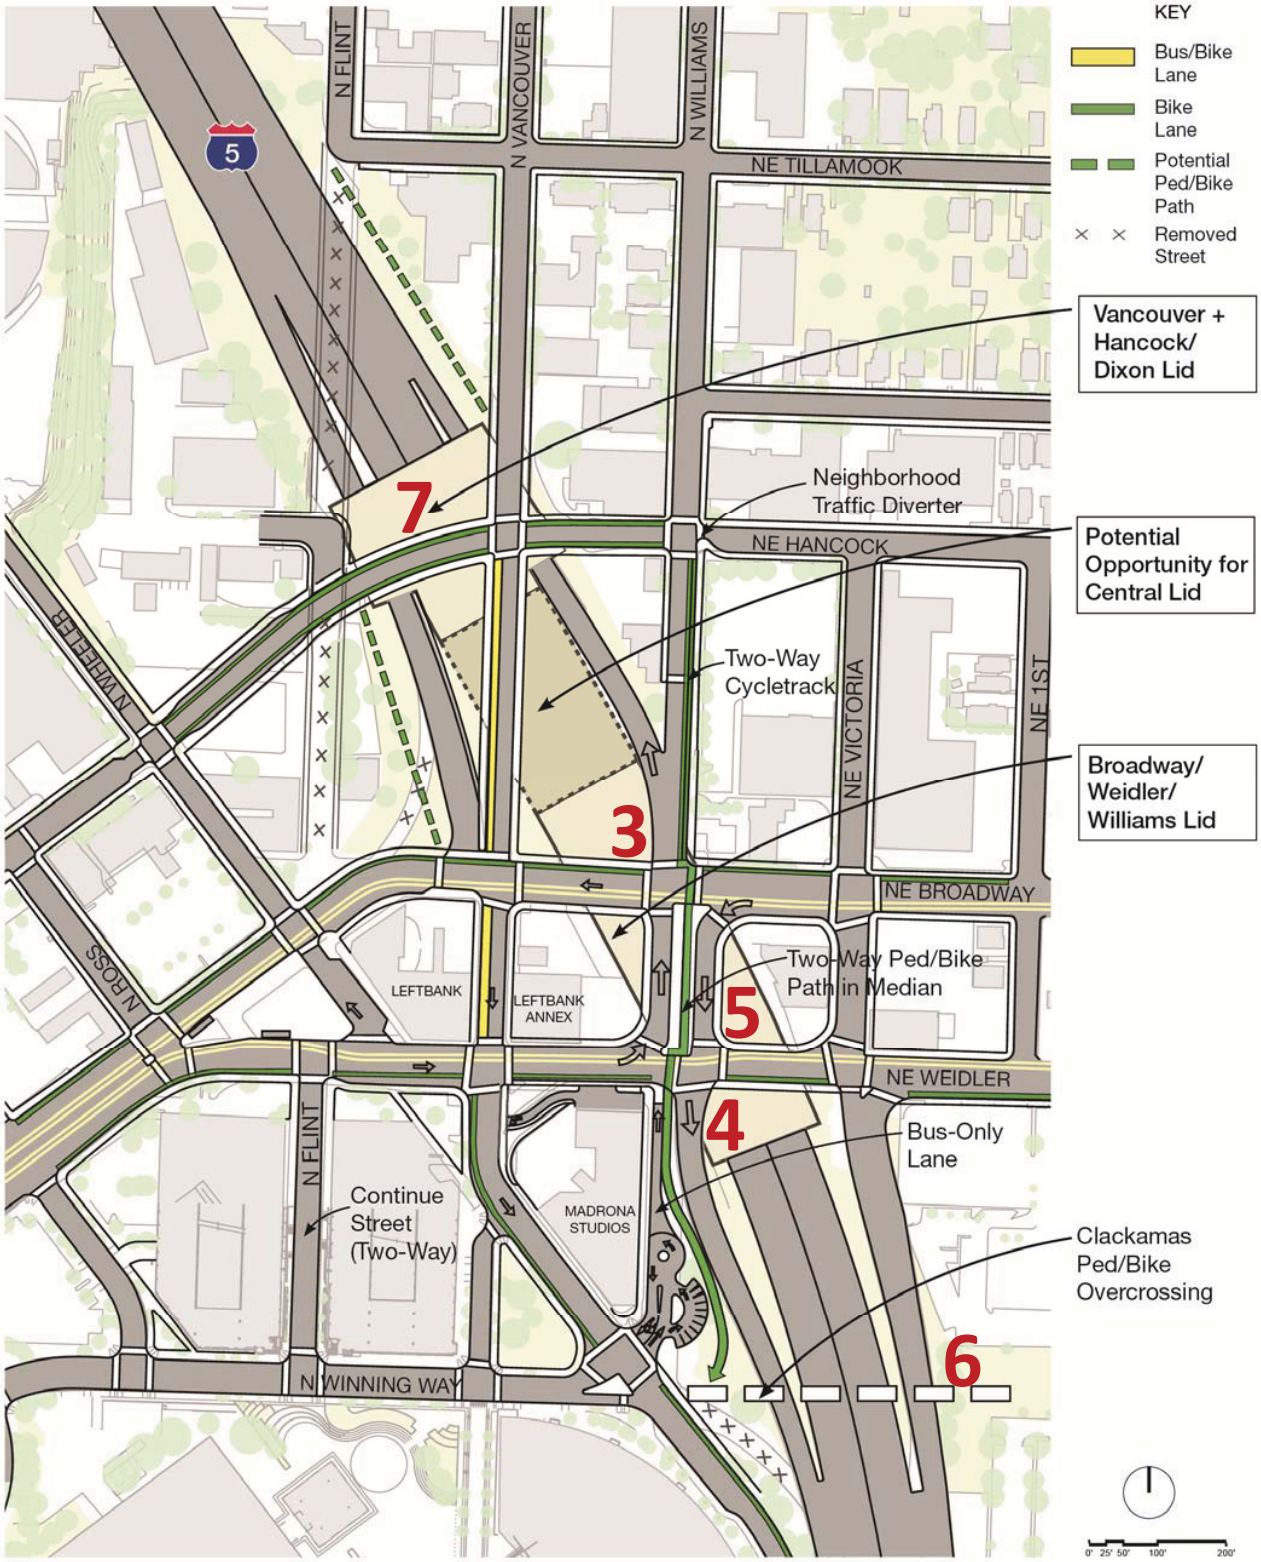
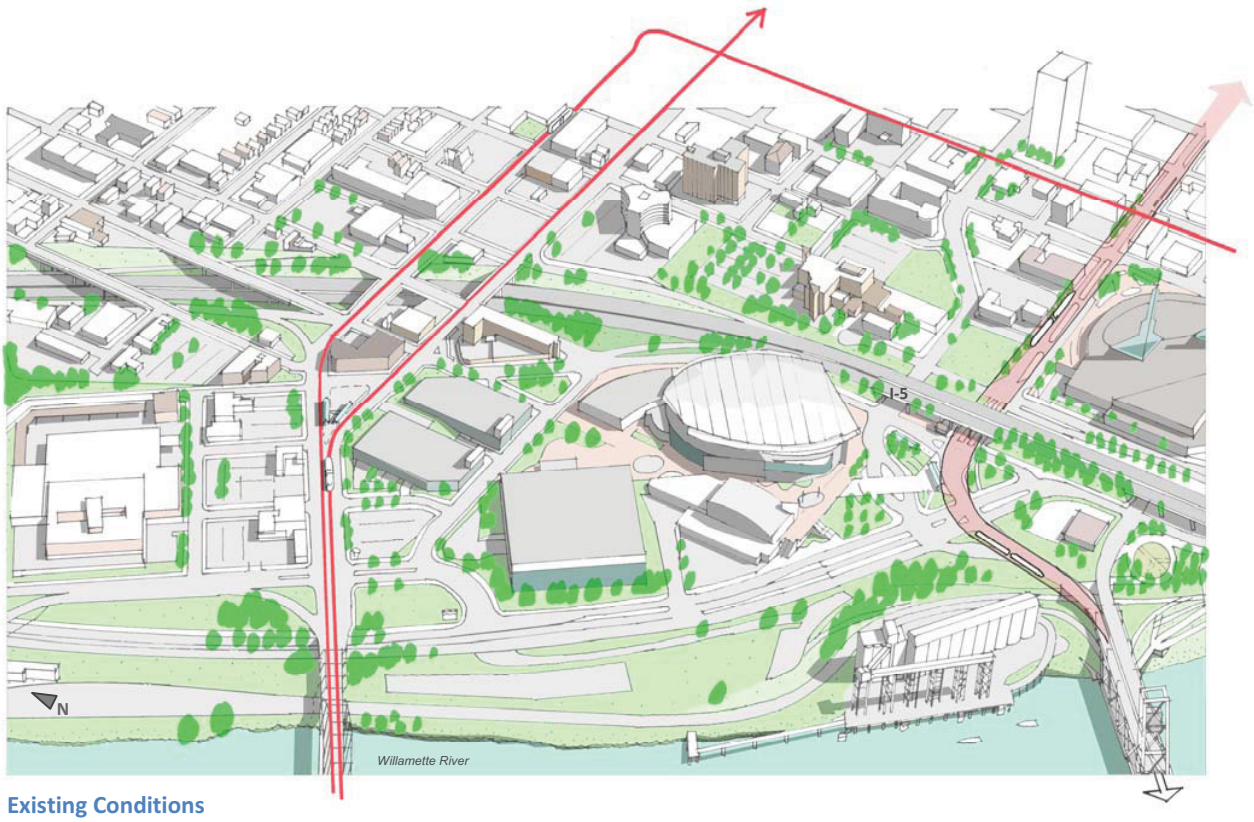
Table 3: I-5 Broadway/Weidler Interchange Recommended Concept Facility Plan Elements

Facility Plan Elements	Outcome
1. Implement Transportation System Management (TSM) and **Transportation Demand Management (TDM) Strategies**	Improve freeway operations and reduce automobile trips.
2. Construct Mainline Freeway Safety Elements	Improve freeway operations and reduce accidents 30-50 percent.
a. Extend auxiliary lanes in both directions.	
b. Add full-width shoulders in both directions.	
3. Re-construct Three Freeway Structures and Lid The Mainline Freeway Safety Elements require rebuilding the Weidler, Broadway and Williams structures over I-5; the new structures will be designed to meet seismic and clearance standards.	The new structures improve facilities for all modes; the lid allows for more effective construction staging, improves the urban design of the interchange area and improves the area's development potential.
4. Relocate I-5 Southbound On-Ramp to Weidler/Williams (from current location at Wheeler/Winning Way/Williams)	Increases weave distance, removes ramp traffic from local streets, Wheeler and Winning Way. Allows pedestrian/bicycle-only overcrossing at Clackamas.
5. Convert Williams to a Reverse Traffic-Flow Connection between Broadway and Weidler Includes a barrier-separated pedestrian/bicycle path in the middle.	Allows more efficient signal timing, improves bike and pedestrian connections through interchange and simplifies vehicular movements.
6. Construct Clackamas Pedestrian/Bicycle Overcrossing Establishes connection over I-5 from Winning Way to Clackamas.	Increases multimodal connectivity across I-5, links central Lloyd District to the Rose Quarter, provides supplementary crossing south of "the Box."
7. Re-construct the Vancouver Structure; **Remove the Flint Structure;** **Reconfigure streets North of Broadway to include Hancock/Dixon Structure and Lid**	The Vancouver structure must be replaced to accommodate mainline freeway improvements. The Hancock/Dixon structure and freeway lid allow for effective construction staging, improve viability of the PPS Blanchard site and provide a supplementary crossing to the north of "the Box."
North of Broadway elements include:	
1. Rebuild Vancouver Avenue structure	
2. Implement traffic calming at Williams/Hancock	
3. Remove Flint between Tillamook and Broadway	
4. Maintain Wheeler in front of the Leftbank as one-way	
5. Connect Flint as a two-way street south of Weidler	
6. Add signals at Broadway/Wheeler and Broadway/Ross	





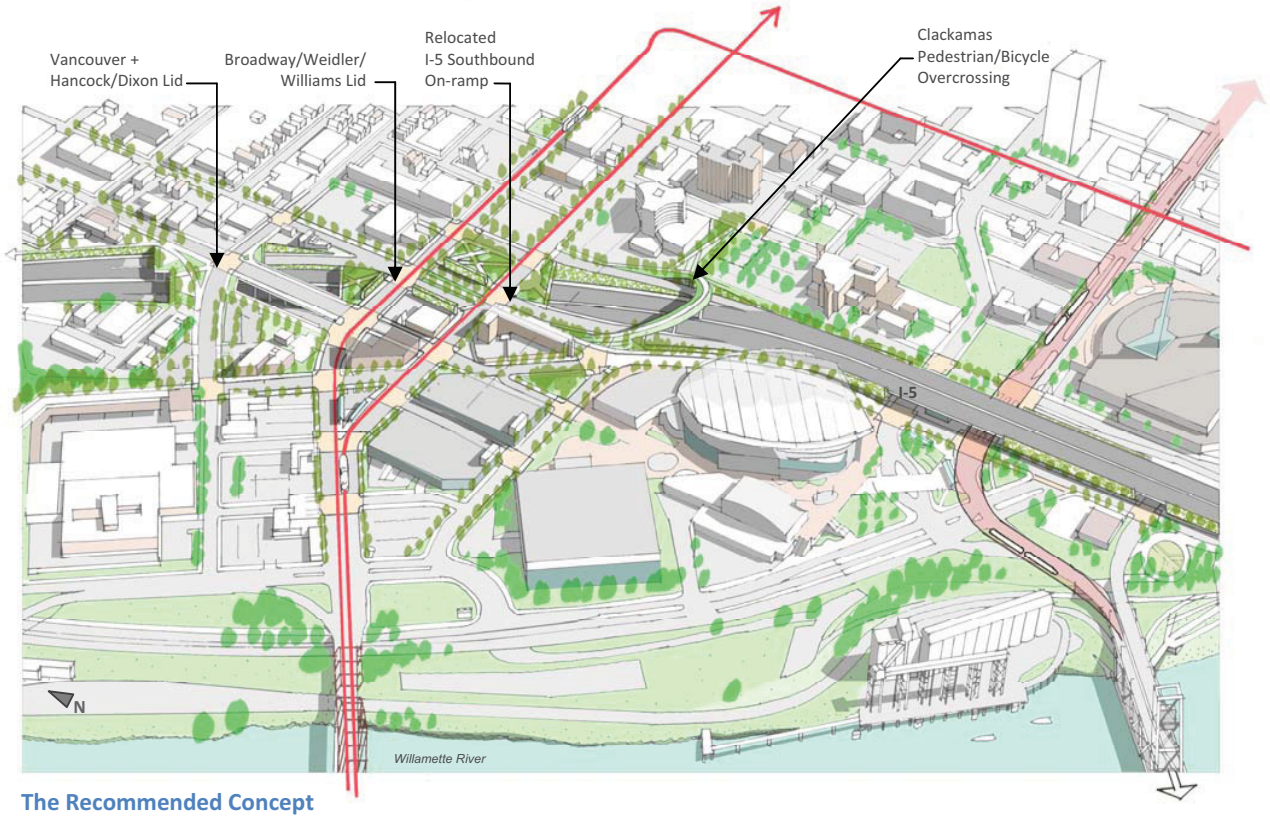


Figure 3: Enlarged "Box" Area of the Recommended Concept

Existing Conditions

The Recommended Concept

Figure 4: Aerial Perspectives of Existing Conditions and the Recommended Concept

Project Monitors and Future Project Development

The Facility Plan elements of the Recommended Concept (Table 3) are expected to significantly improve I-5 mainline operations and safety as well as improve interchange operations at the I-5 Broadway/Weidler Interchange. Once the Facility Plan elements are completed, ODOT and the City of Portland will continue to monitor the freeway operations in the I-5 Broadway/Weidler Interchange area (refer to Table 4).

Table 4: Project Monitors and Future Project Development

Project Monitors	Notes
1. Safety and Operational Performance **- Southbound Braided Ramp or other freeway safety improvements**	Upon completion of the Recommended Concept Facility Plan elements described above, ODOT and the City of Portland will monitor the performance of the completed project for achieving safety and operational goals. If safety and operational issues remain on the freeway after construction of the Recommended Concept Facility Plan elements, ODOT will work with the City of Portland to initiate a public process to consider additional measures such as a southbound braided ramp from Broadway to I-84 or other options developed through a public process. A southbound braided ramp should not be precluded by the construction of the Recommended Concept Facility Plan elements.

Implementation Actions

Project Development and Project Management

1. Proceed with next phase of project development and complete Preliminary Engineering (PE) and environmental phases for federal funding.
2. Continue project management partnership between the City of Portland and ODOT.
   - Develop work scope and schedule.
   - Define environmental process
   - Develop intergovernmental agreement for completion of PE/environmental studies.
3. Develop public involvement process for PE/environmental phase and actions to resolve issues identified in the I-5 Broadway/Weidler Interchange Improvement Plan.
4. Special considerations will be discussed and identified during Preliminary Engineering and recommended as part of the Final Design/Engineering. These include:
   - Construction management strategies that can provide incentives to minimize construction periods, impacts, and costs;
   - Incentives for minority hiring; and
   - Strategies to support local businesses.

Preliminary Engineering

The following are key products at the completion of Preliminary Engineering:

1. Complete PE level of engineering:
   - Develop project cost estimates.
   - Complete environmental documentation.
   - Identify potential construction phasing.
   - If phasing is required, the City of Portland and ODOT will work together to match phases to the funding sources available.

2. Project agreements at the completion of PE:
   - Signals will continue to be timed so as to avoid queues backing up into the deceleration area of the I-5 Southbound exit ramp at Broadway.
   - Crosswalks will be provided at all signalized locations and should be provided at all safe and feasible locations.
   - The Rose Quarter Traffic Management Plan (TMP) should be updated with the participation of ODOT, City of Portland and the Rose Garden Arena prior to construction.
   - A preliminary construction mitigation plan will be developed that would include efforts to minimize impacts, support local businesses and support minority hiring.

Specific Design Coordination

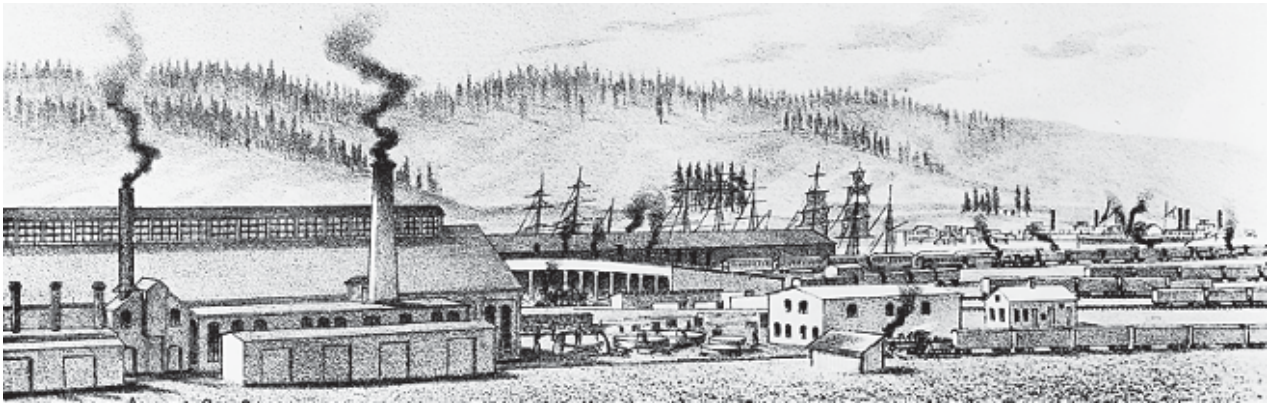
Property impacts are of great concern to the neighborhoods, businesses and agencies working in this area. The following are issues that will require further examination by ODOT and the City of Portland as part of Preliminary Engineering with community involvement:

1. Seek a viable single lid design solution over I-5 between Weidler and Hancock by exploring mitigation measures for freeway noise and vehicle emissions, and by addressing the need for open space and economic development.
2. Develop specific measures to address property and parking impacts to the Paramount Apartments, the Portland Public Schools Blanchard site and other sites related to the proposed Hancock/Dixon connection. The number of parking spaces should be the same or more than existing conditions at the Paramount Apartments, the Leftbank Building, the Leftbank Annex and the Madrona Studios.

3. Develop a network of alternative safe and convenient bicycle/pedestrian connections to include:
    a. Enhanced facilities (including bicycle lanes, two-way cycle track, sidewalks and protected marked crossings) along Broadway, Weidler Street, Vancouver Avenue and Williams Avenue to include a wide, grade-separated multi-use path for Williams Avenue between Broadway and Weidler.
    b. The development of a new pedestrian/bicycle connection between the Flint Avenue/Tillamook Street intersection to the proposed Hancock/Dixon overcrossing.
    c. The development of a new pedestrian/bicycle connection from Hancock Street to Broadway while providing for potential parking mitigation, open space and redevelopment opportunities.
4. Define appropriate Eliot neighborhood traffic mitigation measures for the recommended Hancock/Dixon connection between Vancouver Avenue and Dixon Street to discourage cut-through traffic.
5. Refine a street design and circulation plan for the area in the vicinity of the I-5 Broadway/Weidler Interchange. The refined street design and circulation plan should address the following issues:
    a. Develop design elements that provide for safe and convenient access to the Leftbank Building and the Leftbank Annex.
    b. Develop and evaluate circulation alternatives and design elements for the area north of Broadway, south of North Wheeler Place and west of I-5 to:
        1. Address the changes to access and circulation around the Paramount Apartments by Investigating treatments for Wheeler Avenue, between Broadway and Hancock Street, in order to minimize cut through traffic at the west side of the Paramount but maintain access to the Lower Albina industrial district.
        2. Enhance bicycle access and safety to the proposed Hancock/Dixon connection over I-5 to the Broadway Bridge.
        3. Determine appropriate multimodal access and circulation to this area and Lower Albina.
    c. Develop and evaluate circulation alternatives for Wheeler Avenue, Winning Way, Center Court, Flint Avenue and Williams Avenue to:
        1. Enhance circulation in the area for all modes.
        2. Provide flexibility to manage event ingress and egress.
        3. Open up opportunities for redevelopment and placemaking.
    d. Develop design elements that address the changes to access and circulation to the Madrona Studios:
        1. Refine street design for Williams Avenue between Weidler Street and Wheeler Avenue to address access and circulation and on-street parking needs for the Madrona while also providing for bus, bike and pedestrian circulation.
        2. Provide for sufficient pedestrian and vehicle access to the Williams Avenue entrance to the Madrona Studios.
        3. Prepare an appropriate design treatment for the Weidler Street/Williams Avenue intersection for safe pedestrian and bicycle crossing.
        4. Visual or acoustic screening will be examined, designed and implemented between the Madrona Studios and the relocated on-ramp to I-5 at Weidler/Williams.
6. Develop design plans with TriMet for safe transit operation through the I-5 Broadway/Weidler Interchange.
7. Refine and finalize design for the Clackamas Overcrossing structure.
    a. Coordinate design with future access connections east of I-5.
    b. Coordinate design with future changes to traffic circulation west of I-5 and the relocation of the I-5 southbound on-ramp to Weidler/Williams.
    c. Study and implement an event parking management plan for the Rose Quarter area, including the area adjacent to the future Clackamas Pedestrian/Bicycle Overcrossing on the east side of I-5. The exact boundaries and scope of the study will be determined at a later date.
8. Evaluate visual and environmental impacts of the proposed widening of the elevated segment of the I-5 freeway, including over the Rose Quarter Transit Center and near Peace Park, and identify mitigation measures as needed.

APPENDIX D: N/NE QUADRANT HISTORY

For centuries prior to first contact with Europeans and Americans, Chinookan-speaking peoples, including the Clackamas and the Multnomah, inhabited the lower Columbia basin in the vicinity of the area now known as Portland. Chinookan villages, made-up of multi-family cedar plankhouses, were located on both sides of the Columbia near the mouth of the Willamette, with additional villages, camps, resource areas, and trade routes located along the lower Willamette, making the Portland Basin one of the most densely populated areas in the American West prior to white settlement. Chinookan societies relied on the bounty of the region's temperate climate, rich forests and plains, and extensive river systems. Active social, familial and trade networks were maintained among the inland, valley and coastal cultures of the area.



By the time Asa Lovejoy and Francis Pettygrove founded Portland in the mid-1840s, diseases introduced by white settlers, such as small pox and malaria, had reduced the area's indigenous population by as much as 90 percent. In the 1850s, accelerating encroachment by white settlers on Indian lands and forced removal to reservations further devastated indigenous societies and few Native Americans remained in the Portland area.

Incorporated in 1851, the City of Portland was still limited to the west bank of the Willamette River in the 1850s and 1860s. The town grew rapidly, with multi-storied masonry buildings, an active trade-oriented waterfront, a growing street network and other aspects of urbanization. In contrast, the east side of the river and what was to become Lower Albina and the Lloyd District remained relatively rural. Extensive wetlands and sloughs made development along the east bank difficult and much of the area was still covered in forest. A few farms were in cultivation, notably those of the Loring, Shelton and Wheeler families, who had filed Donation Land Claims along the river in the 1850s.

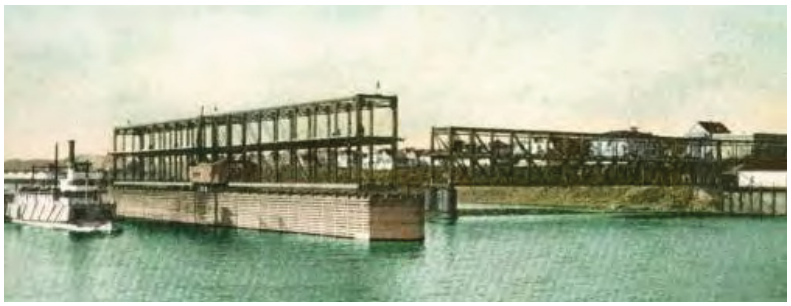
By the 1870s, residential development had begun to accelerate, aided by a growing network of roads and several ferries that linked the east side to Portland. Two distinct east side communities began to coalesce, East Portland and Albina. East Portland, the northern portions of which covered parts of the Lloyd District, was first platted in 1865 and was incorporated as an independent city in 1870. In 1871, early settler Jacob Wheeler sold several hundred acres to wealthy transportation magnate and developer Ben Holladay, who platted Holladay's Addition using a 200-foot by 200-foot grid, following the pattern established on Portland's west side. In 1868, Holladay had sold his stage coach business in California to Wells Fargo and moved to Portland to get involved in the railroad business. He lost his railroad in 1876, and died in Portland in 1887. Holladay included as part of his East Portland residential development two large hotels and more than four acres for Holladay Park, the first public park on the east side, which remains one of the Lloyd District's most important open spaces. By the early 1880s development was booming; East Portland had over 3,000 residents, a strong commercial spine running along Grand Avenue and an active working waterfront linked to regional and international markets by ocean-going ships and rail lines.

To the north of East Portland and covering a good part of the N/NE Quadrant was Albina, platted in 1873 by prominent Portland businessmen Edwin Russell, William W. Page and George H. Williams. It was sparsely populated in the early years and development along the waterfront was hampered by large swampy areas. Eventually incorporated in 1887, the City of Albina covered some 13 square miles. From the beginning it developed as two distinct sections, upper and lower, separated by steep geography. Lower Albina was the smaller area, covering 200 acres and including railroad yards and industry along the Willamette River. Lower Albina grew in the 1880s as a working-class neighborhood and industrial area, initially inhabited mainly by first- and second-generation Germans, Scandinavians, Poles and other Northern and Eastern Europeans.

A river ferry linked Lower Albina to Downtown, landing at the foot of Russell Street, which became the main street of the Lower Albina area. The east-west-oriented Russell Street which extended up the hill to upper Albina, and north-south-oriented Williams Avenue, were Albina's primary commercial corridors. Russell Street had a rough character, with some 30 saloons along its length from the ferry slip to what is now Martin Luther King Jr. Boulevard.

Lower Albina, 1887

Albina's development was closely tied to the Oregon Railroad and Navigation Company (OR&N), which owned the extensive Albina railroad yards. Directed by Henry Failing and William S. Ladd, the company was a dominant presence in Albina and one of the most powerful corporations in Oregon. In real estate alone, the OR&N owned nearly two miles of waterfront property and controlled nearly 40 city blocks of track and terminal operations along Albina's streets. As many as 900 rail cars passed through the area each day. The coming of the Union Pacific transcontinental railroad in 1883 further spurred commercial and industrial growth in both East Portland and Albina.



The year 1887 marked the opening of the Morrison Bridge, the first to cross the Willamette, linking Downtown to the east side. The bridge spurred further growth in both East Portland and Albina which were now linked to each other and Portland by streetcars. The same year, nearby Irvington was platted. Of a different character than more working- and middle-class Albina and East Portland, Irvington was intended to be an inward-looking, middle- to upper-class residential district and it came to have some of Portland's grandest homes.

Portland-Albina Streetcar

In 1891, East Portland, Albina and Portland residents voted to consolidate into a new unified and expanded City of Portland, with an area of 25 square miles and a population of more than 63,000. By the turn of century most of the inner east side was platted, and rapidly growing in population and economic activity. By 1910, the total population on the east side reached 120,000. Transportation networks and facilities have long been key aspects of east side history. Economic growth was fueled by maritime activity and the confluence of five rail lines. Residential development was aided by connections to the west side via multiple bridges and a growing streetcar network. The first bridge in the N/NE Quadrant itself was the first Steel Bridge in 1888, located about three blocks north of the current Steel Bridge, which was completed in 1912. Both were primarily intended as freight rail bridges but

also carried street cars that served East Portland and Albina. The Broadway Bridge was completed in 1912, and it too carried a streetcar line, as it will once again late in 2012. The streetcars linked residential areas to jobs and defined major commercial corridors, including Union Avenue (now Martin Luther King Jr. Blvd.) and Broadway.

First Steel Bridge, 1888

In 1910, California oilman Ralph Lloyd began acquiring property in the inner east side. Over the next four decades, he and his family continued to purchase property, including large tracts of single-family homes and undeveloped lots, eventually accumulating 100 city blocks. Lloyd had a grand vision for the east side, wanting to transform it into a self-sufficient civic, commercial and residential center to rival the west side. Although the Great Depression and sustained opposition from west side commercial interests thwarted his plans somewhat, Lloyd and his descendants built many multi-story apartments and new commercial buildings in the early and mid-twentieth century, eventually culminating in the Lloyd Center mall in 1960, one of the defining features of the Lloyd District today.

The Depression was hard on Portland, as in all American cities, and growth slowed on the east side in the 1930s. A sign of the times was the large "Hooverville" or shantytown built by unemployed workers in Sullivan's Gulch.

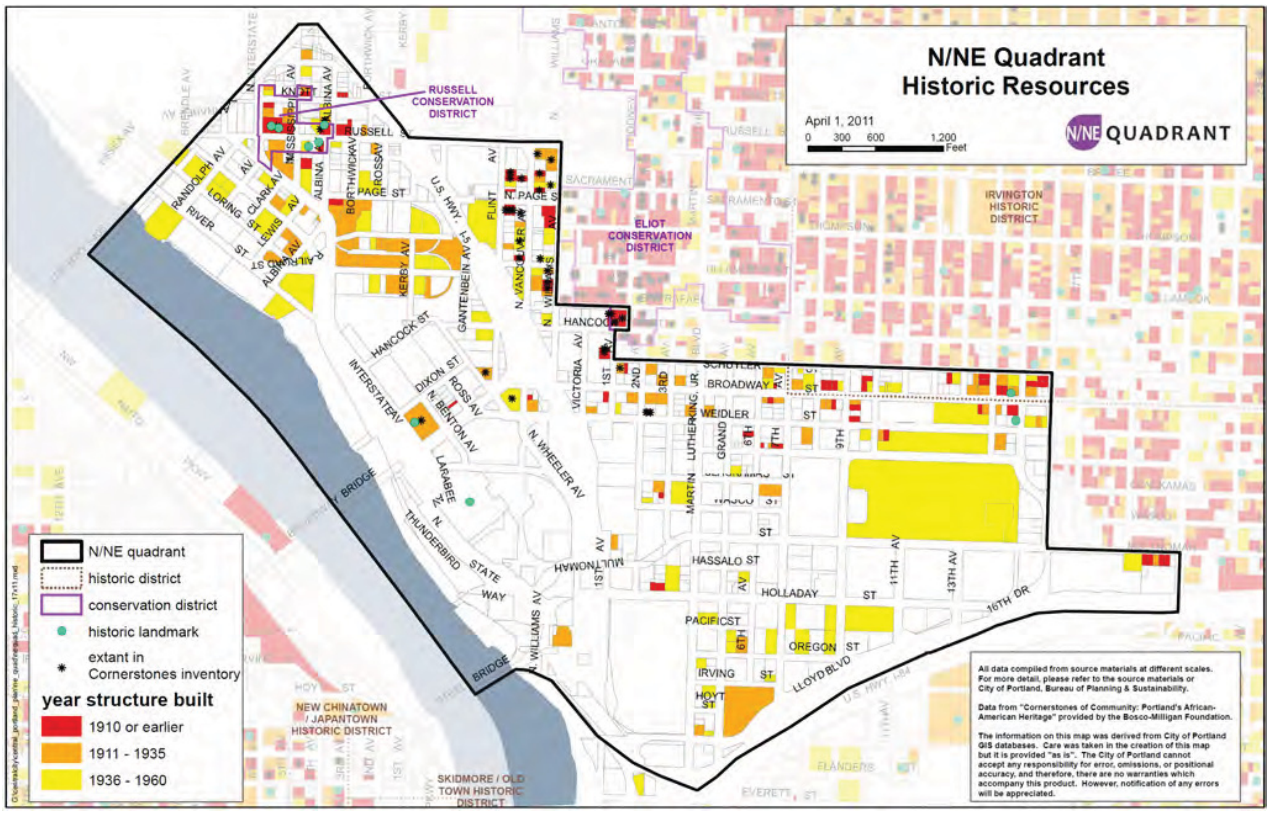
N Broadway at Larrabee Ave and Interstate looking east, 1930s

Hooverville in Sullivan's Gulch, late 1930s

The black lack population in Albina had steadily increased in the first part of the twentieth century, especially after 1919 when organized residential segregation was instituted by local real estate agents and "redlining" cut off bank loans for African Americans. Albina became one of the few areas in the city where African Americans could readily obtain housing. World War II drew thousands of African Americans to Portland to work in the ship yards. Many lived in Vanport, the massive war housing development near the ship yards. Following the war, there was a large housing shortage, and circumstances were much worse for African-Americans, whose housing options were limited. The situation reached crisis levels after the Vanport flood displaced 17,000 people in 1948. After the flood many African Americans moved to Albina.

The heart of mid-century African-American Albina stretched from the area where the Veterans Memorial Coliseum is now to north of Russell Street, with N Williams Avenue serving as the commercial, institutional and social spine for the community. Here were the social clubs, bars, barbecue joints, markets, theaters, businesses and institutions that supported and reflected African-American life in the city.

Albina had a vital music scene. One of Portland's hottest jazz clubs in the 1940s was the Dude Ranch on Broadway between Vancouver and Wheeler owned by Pat Patterson and Sherman Pickett. Local and national jazz talent performed here, including Coleman Hawkins, Thelonius Monk, and Louis Armstrong. Recently rehabilitated as the Leftbank Building, it is one of the few surviving buildings of



N Williams at the corner of Russell, looking north

the southern Albina African-American neighborhood which was largely razed by public improvement projects. This and other structures associated with Portland's African-American history are documented in *Cornerstones of Community*, a historic context statement and inventory prepared by the Bosco-Milligan Foundation in 1998 and recently updated as a part of the N/NE Quadrant Planning process.

Map D1: N/NE Quadrant Historic Resources

The existing character and form of the N/NE Quadrant has been shaped by a number of mid-twentieth century large-scale public infrastructure and urban renewal projects, including major auto and freight related transportation facilities. Among the first was the completion in 1955 of the Banfield Freeway (which eventually became Interstate 84) along Sullivan's Gulch. Also completed in the 1950's were improvements to Highway 99W, including new connections from the Steel Bridge to Interstate Avenue which necessitated several building demolitions. These disruptions were dwarfed by projects that soon followed.

The Veterans Memorial Coliseum, completed in 1960, was financed by an $8 million bond measure approved by voters in 1954. Land clearance started around the same time as the Lloyd Center was being constructed, in the mid-1950s. The project entailed the demolition of 476 housing units, half of which were inhabited by African-Americans, and dozens of businesses. Devastating for those directly affected, the dislocations of this project also had the effect of cutting-out the southern anchor of African-American Albina and shifting the social and commercial center of the community northward.

Veterans' Memorial Coliseum, ca. 1960s

The Coliseum is an icon of Portland modernist architecture, designed by internationally known architecture firm Skidmore, Owings and Merrill. It is monumentally sited on the bluff above the Willamette, a glass-curtain-walled box with a freestanding concrete seating bowl inside. It was listed in the National Register of Historic Places in 2009.

The Coliseum development was prototypical of urban renewal projects across the country in this era, with large land-clearances in older, often minority neighborhoods that were declared blighted or sub-standard. This mid-century urban renewal paradigm was optimistically (or perhaps cynically) envisioned as a solution to multiple urban problems, from crime and poverty to inner-city decline spurred by growing suburbanization. In the 50s and early 60's urban renewal was widely supported by community leaders and the general public, even to some extent by communities heavily impacted by the ground-scraping approach. These perceptions would change as the 1960s and 1970s unfolded.

Opening the same year as the Coliseum, the Lloyd Center was completed by Ralph Lloyd's daughters, finally implementing a somewhat different version of his long-held east side vision, seven years after his death. It covered 90 city blocks, 56 of which were occupied by shops and offices, including 200 tenants, 100 of which were in the open-air retail mall itself. Blocks not covered by buildings were used for parking, providing some 8,000 free parking spaces. Lloyd Center was one of the first large-scale, open-air shopping malls in the country, and was a regional market draw. Close to, but not in, the existing downtown retail core, the expected result (according to a Planning Commission report in the 1950s recommending approval of the project), would be that "Portland would in effect have a split central shopping core." At the juncture of two freeways and served by acres of free parking, Lloyd Center proved to be a serious challenge to traditional downtown retail establishments.

Ralph Lloyd's east side vision, ca 1930s

Lloyd Center, ca. 1960s

Major transportation projects were also completed in the 1960s. Following passage of the Interstate and Defense Highways Act in 1956, two big freeways were planned to converge in Portland, I-84, along the Banfield route and I-5 along the east bank and running through N/NE Portland. Improvements to the Banfield were largely completed by 1963. Interstate 5 was completed in 1966. The Minnesota Freeway, the part of I-5 through N/NE Portland removed about 125 residences and businesses in Albina. The Fremont Bridge opened in 1973, the final link of Portland's "Inner Loop."

I-5 construction near Broadway/Weidler, 1962. Paramount Apartments and Leftbank Building at center

In 1970 the Portland Development Commission and Emanuel Hospital initiated an urban renewal project to expand the hospital. About nine square blocks were cleared and 188 mostly black-occupied homes were demolished. The once vital Williams/Russell African-American commercial center was essentially razed. However, in a cruel irony, after 200 people and 20 businesses were removed, work on the project abruptly stopped in April 1973, as Congress failed to fund the planned new construction. The project had been heavily opposed by the African-American community. The scar of vacant, cleared land remained for decades as a potent reminder of successive postwar construction projects that ate away at the fabric of Albina and disproportionately impacted the African-American population.

Large-scale commercial buildings were constructed in the Lloyd District in the 1960s and into the next decades, sprinkling the area with an assortment of corporate office towers, medical buildings and hotels, each accompanied by surface parking lots or parking structures. The new construction greatly contributed to the amount of Class A office space available in the city, much of it comparable to parts of Downtown. In the early 1970s, the Lloyd Corporation built two prominent office towers on NE Multnomah, one at 5th Ave., the other at 7th Ave. The large hotel tower that stands prominently near the I-5 freeway and Holladay Park dates from 1970. The Holladay Park Medical Center (now part of the Legacy system) was built in 1981. Another large office tower rose in 1981 at Multnomah and 9th and the federal government built an office tower in 1985 at the southern edge of the district, on Lloyd Boulevard at 9th Ave. Other major buildings include the Bonneville Power Authority, State Office Building, and the Metro renovation of the Sears building.

In 1990 the Oregon Convention Center opened, a large, public facility drawing large numbers of people from outside the area. In 1995 the Rose Garden opened, the region's premier indoor sports and entertainment facility, a symbol of Portland's ambition to be a "Major League" city. The district's high-density development and region-serving facilities are supported by major transportation investments from the past few decades, including MAX light rail lines and the soon-to-open east side Portland Streetcar line.

Oregon Convention Center today

While the Lloyd District experienced tremendous changes in the twentieth century, the essentially industrial character of Lower Albina, first established in the nineteenth century, has remained relatively constant, a result in part from Portland's Industrial Sanctuary policies and zoning. The steep hill separating the industrial area and working waterfront from nearby residential neighborhoods also has helped maintain the stability of industrial uses. Lower Albina—with few housing units, greater proximity to industrial activity and the bisection of Interstate 5—has been little affected by the gentrification and transition caused by the 1990s-era economic boom in the nearby, more residential neighborhoods of North and Northeast Portland.

Today, Lower Albina includes a small mixed-use area that corresponds to the Russell Street Conservation District, a collection of historically and architecturally significant buildings that recalls the rough and tumble working-class history of the district. It includes several historic properties that have been rehabilitated in recent years including the Widmer Brothers Gasthaus (the historic Smithson & McKay Bros. Block) at the corner of Russell and Interstate. The White Eagle Saloon and Hotel, which was opened in 1905 by Polish immigrants Barney Soboleski and William Hryszko has been renovated and is now operated by the local McMenamin's chain of brewpubs. Opening in 2004, the MAX yellow line along Interstate Ave. serves the district.

APPENDIX E: ISSUES, OPPORTUNITIES AND CONSTRAINTS

This appendix section is the N/NE Quadrant *Issues, Opportunities and Constraints* report from February 2012. It summarizes a range of comments and ideas from a broad spectrum of stakeholders, including: the Stakeholder Advisory Committee; verbal and written comments collected at public events; comments submitted during the brainstorming sessions with the two project subcommittees, public agency partners; and individuals contacting the project staff through the project website and/or email.

The project goals and quadrant concept diagrams described in Chapter 3, and the goals, policies and actions contained in Chapter 4 were informed by the issues and ideas identified during this phase of the project

---

N/NE Quadrant and I-5 Broadway/Weidler Plans

DRAFT

PRELIMINARY ISSUES, OPPORTUNITIES AND CONSTRAINTS

Over the past few months, N/NE Quadrant and I-5 Broadway/Weidler Plans (N/NE Quadrant Project) staff from involved state and city agencies have gathered a wide range of issues and ideas from a broad spectrum of stakeholders. Major sources of input to date have included one-on-one interviews with members of the Stakeholder Advisory Committee, verbal and written comments collected at public events (community walks held in September and public open house held in November), comments submitted during the brainstorming session with the two project subcommittees on December 1st and 2nd, and individuals contacting the project staff through the project website and/or email. In addition, project staff has identified some issues for discussion that are included here. This compilation of comments represents a good starting place for the next phase of the process - developing options or alternatives to guide future development and investments in the study area.

This document sorts the comments received so far by geography (see attached map), and groups similar comments together. It also begins to differentiate between general issues and specific opportunities, constraints or ideas that may lead to proposals in the upcoming alternatives development phase of work. Several issues suggested that are beyond the scope of this project are briefly listed at the end.

This is not a final product, but summarizes the issues identified thus far. **It is intended to move the discussion forward.** Additional issues can still be considered in the process as appropriate.

GENERAL QUADRANT-WIDE ISSUES

Staff received a great number of general comments that seem to apply to most or all of the N/NE Quadrant study area. These can generally be grouped into five main categories. These are increasing the area's **urban vibrancy and vitality**, increasing **economic prosperity** in the area, **improving human and environmental health**, seeking **balance and equity**, and improved **access and connectivity**.

1. Urban Vibrancy and Vitality

This category includes statements encouraging increased development (particularly on current surface parking lots) including retail, office and housing to provide better/more interesting pedestrian experiences, and new amenities like pocket parks and pedestrian routes. Introducing a diverse range of new uses was suggested to help overcome the highly episodic nature of activity in many parts of the district. It was suggested that an updated urban design strategy will help achieve these goals. A more robust and integrated open space system is seen as needed in parts of the study area. Public safety is seen by some as a major issue threatening livability and investment.

2. Economic Prosperity

This category includes numerous references to increasing employment and business growth in the quadrant – particularly by supporting expansion of existing businesses and building on existing major attractors like the Oregon Convention Center, Rose Quarter, and Lloyd Center Mall. Several stakeholders voiced strong support for continuing efforts to locate a new major hotel near the convention center in the future. Several people suggested that districts within the study area would benefit from stronger identities – more "there there".

3. Human and Environmental Health

Topics related to human and environmental health include supporting the Lloyd Green pilot EcoDistrict concept currently under development, improving habitat conditions, continuing progress on stormwater management, expanding access to parks and natural areas, finding opportunities for urban gardens, improving air quality, reducing noise pollution, and pioneering green building technologies including measures to improve migratory bird-friendliness in new and existing buildings Specific opportunity sites mentioned for improving or creating new natural habitat areas include the banks of the Willamette River in the Rose Quarter and the northern slope of Sullivan's Gulch stretching the length of the study area's southern edge. However, the heavy rail lines and grain terminal along the Rose Quarter riverfront, and the heavy traffic on I-84 along Sullivan's Gulch do present challenges to these opportunities. Improving the jobs to housing ratio in the district by encouraging more housing at appropriate affordability levels along with job growth is also seen as a means to improve environmental performance in the study area through commute trip reduction.

4. Balance and Equity

Issues identified generally focused on finding room in the quadrant for new people, business, development, etc. while retaining the existing population, businesses and culturally/historically significant buildings, etc. at the same time. Minimizing or mitigating

negative impacts on surrounding areas and important local structures is a key goal. Specifically mentioned for preservation were buildings appearing in the *Bosco-Milligan Cornerstones of Community* inventory as well as the retention of existing affordable housing. Building new affordable and middle-income (often referred to as "workforce") housing is also seen as important to maintain a diverse and equitable community in the study area. A "concentric circles" model of economic development that prioritizes local sourcing of goods and talent was suggested. Finally, desire was expressed to see more multi-cultural gathering places in the study area - community centers and marketplaces were mentioned specifically.

5. Connectivity and Access

Issues applicable to the entire study area included maintaining and improving access to, within, and through the quadrant for all modes of transportation including pedestrian, bicycle, auto, transit (bus, light rail and streetcar), and truck/freight. I-5 and I-84 are seen as significant pedestrian/bike barriers. Current and future trails should be included as part of the future transportation network. Improving safety across all transportation modes and reducing conflict between different modes is highly desirable. Considering a variety of ways to safely improve connectivity for bicycles and pedestrians, including options that exceed anticipated funding, is also desired. There is a general desire to increase the overall efficiency of our transportation system while adequately serving current and future facilities, businesses and residents and reducing emissions and climate impact. Specific measures to improve efficiency mentioned include: increasing trips by bicycle and walking, increasing transit capacity and use, reducing single-occupant vehicle travel, eliminating vehicles from certain areas, promoting motor cycles and scooters, improving signage, and increasing the use of alternative fuel vehicles. Increasing housing in the quadrant was suggested as an important opportunity to increase bike and walk commute trips.

The general sentiment related to *parking* is that there are too many surface parking lots in the area, but there is acknowledgement that a constrained parking supply may be discouraging new development and business growth. Regional traffic access to and parking available for major regional event attractors in the quadrant (Rose Garden, convention center, etc.) remains extremely important both now and in the future. Addressing conflicts between local resident parking and event parking, considering new parking facilities for MAX riders and establishing minimum parking requirements for new development were also suggested topics.

SUBAREA ISSUES

1. Subarea 1 and 1a - Lower Albina and Russell Street

a. Most of the issues identified specific to this area focused on one of two themes: preserving and enhancing the viability of industrial nature of the district, and revitalizing and improving the historic Russell Street main street.

b. Key issues related to preserving and enhancing the **industrial viability of Lower Albina** included:
   - Improving **freight access** and parking;

- Continuing **industrial sanctuary** policies, though possibly with some increased flexibility with regards to allowed office uses

c. On **Russell Street**, numerous opportunities for renovation and preservation of historic structures exist. These projects could increase retail and restaurant activity on Russell. Several stakeholders have commented that more mixed use development (possibly including housing) would improve the vitality of the main street. Others have noted that there are several vacant parcels adjacent to the **MAX light rail station** and that mixed-use, transit-oriented development might be appropriate in a limited area around the station - targeted zoning changes may be needed to facilitate mixed use development. Improving connections from Russell Street up to N. Mississippi Street and up Russell to Emanuel Hospital also were suggested.

d. This being a predominantly industrial area, **freight capacity and movement** is extremely important including truck-friendly street/intersection design and freeway access.

e. Additional issues raised specific to this area were:
   - Poor access to the **Willamette River** and potential future greenway trails; and
   - A potential opportunity to do more with the lands under the elevated I-5/I-405 freeway interchange.
   - Improving pedestrian conditions, bicycle/pedestrian connectivity through the district and bicycle parking were also mentioned.
   - While a few people expressed interest in limiting industrial expansion along the riverfront, reexamining the industrial zoning between Interstate Avenue and I-5, and allowing wide-spread redevelopment including tall residential towers, those voices seem to be a minority opinion.

2. Subarea 2 -Vancouver/Williams Corridor

a. Most comments specific to this area supported efforts for **gradual redevelopment** of the area, while preserving important historic and culturally-significant buildings. Some blocks within this area currently have a residential zoning designation, complicating mixed use redevelopment that includes significant non-residential uses. It has been suggested that **zoning should be more flexible**, however preserving existing housing and encouraging new residential construction in this area continues to be important to the Eliot Neighborhood. Generally, lower scale development seems to be the desired urban form in this area. It should help transition from the single family character in Eliot to the taller buildings allowed in the Rose Quarter and Lloyd District.
   - Should **incentives** be developed to encourage, but not require, residential construction?
   - Should the current high density residential zoning in parts of this area be relaxed to allow more non-residential development?

b. **Access** is an important issue in this area – particularly as potential reconfigurations of I-5 and the over-crossings at Flint, Broadway, Vancouver, and Williams are considered. Multiple, pedestrian- and bike-friendly access options are desirable - including access from this area to the Eastbank Esplanade and future greenway trail.

- Could there be an additional bike/ped crossing at Hancock?

c. **Views** from the area across Lower Albina and the Rose Quarter to the west side were identified as a potential issue. In particular, the current public view mapped from the southwest corner of Lillis Albina Park is fully obstructed by trees and could be impacted by some development scenarios under consideration in the Rose Quarter / Blanchard Building area.
   - How important is this viewpoint?
   - Should it be improved or relocated?

3. Subarea 3 -Rose Quarter

a. The N/NE Quadrant Project will seek to support and coordinate with the results of the **Rose Quarter Development Project**. To this end, there appears to be substantial support for considering redevelopment at the **School District's Blanchard Building** site. This would likely require a zoning change from the site's current industrial zoning designation to commercial/mixed use zoning. Other changes to development regulations might also be recommended by the Rose Quarter work. Additionally, the theme emerged of supporting and strengthening the current role of the Veteran's Memorial Coliseum and Rose Garden arena while encouraging new uses. It was also suggested that public investment and/or disposition of publicly owned land could spur private redevelopment throughout the area.

b. The **Willamette riverfront** is seen as a key opportunity in the Rose Quarter. Suggestions emphasize a desire for:
   - Better access to and along the river (both physical and visual);
   - Increasing water recreation and transportation opportunities; and
   - Creating riverfront habitat, although this may prove challenging as the Rose Quarter riverfront now has heavy rail lines serving an active grain terminal located between two heavily trafficked bridges.

c. The CLD Pacific **Dreyfus grain terminal** is likely to remain in place during the foreseeable future and is seen as a challenge to redevelopment in the area. Some suggested that even if this facility were no longer in use as a grain terminal, it would be an interesting opportunity for historic preservation and repurposing.

d. **Safe, multi-modal access** to and through the Rose Quarter is an important issue – particularly to the riverbank and Eastbank Esplanade as well as across I-5. The current configuration of the I-5/Broadway/Weidler "Box" is viewed as dangerous and unpleasant for all modes (see also freeway/interchange-specific issues below). Specific transportation ideas to consider here include:
   - A new separate bike/ped bridge over I-5 (possibly at Clackamas);
   - Bringing N. Dixon Street across I-5 to connect to Flint; and
   - Reversing or decoupling the direction on N Vancouver and N Williams Avenues to improve the flow in the "Box".

- Improve pedestrian and bicycle connections under I-5 (with an emphasis on Holladay Street) between the Rose Quarter and Convention Center areas through streetscape and strategic development.
- Ensure that essential freight access to the Rose Garden and Memorial Coliseum is maintained.

e. Improvements or reconfigurations to the **Rose Quarter Transit Center** could be an opportunity to reduce the distance between the MAX platforms and create a safer environment for pedestrians, create new development areas and increase multi-modal access to the area. There is also some desire to consider eventual realignment of the **heavy rail line** along the riverbank inland to reduce the Steel Bridge bottleneck caused by the current s-curve and also allow public access to the river, habitat restoration, and future development along the river.

4. Subarea 4 - Broadway/Weidler Corridor and transition to Irvington and Eliot neighborhoods

a. Most comments received specific to this area relate to improving the **main street character** of the district and achieving a **respectful transition** from the Central City to the Irvington Historic District to the north. Specifically, it was suggested that the main street qualities present on the eastern portion of NE Broadway should continue through the entire study area to the Broadway Bridge.

b. Transportation issues have also been raised. Some stakeholders are interested in looking at changes to the current **one-way street traffic configuration on Broadway and Weidler**. Several stakeholders mentioned that there are several **difficult pedestrian crossings** (without signals) on NE Broadway and that improving bicycle safety along the length of the corridor is a priority. Providing controlled intersections for bikes and pedestrians every 2 blocks was one suggestion for resolving this issue. It was also suggested that benefits may arise from de-coupling Broadway and Weidler and creating a 2-way thoroughfare.

c. Other specific transportation issues mentioned for consideration include:
- Looking at ways to improve multi-modal safety at the intersections of Broadway/Weidler at MLK/Grand and Broadway/Weidler at 15^{th}/16^{th};
- Reducing the number of driveways on Weidler; and
- Untangling the situation at the "Box".

5. Subarea 5 -Central Lloyd

a. Many issues raised specific to this area focus on the opportunity to support both the development and continued success of the **Oregon Convention Center** and the established office district immediately to the east. Opportunities to help support the convention center include the headquarters hotel and entertainment-related development around the facility. **Opportunities in the office core** include unique potential for

development with distinctive amenities on the superblocks in the area. Holladay Park Medical Center was also seen as a potential opportunity for growth. The need for a stronger district identity and improved public safety were identified as crucial to supporting this sub-area.

b. **Residential development** – and the general lack thereof – is frequently cited as a major issue in this part of the study area. Streetcar construction is seen as a major opportunity to help encourage more residential construction here, but questions remain about the market-readiness of the area for housing. There is clear desire for new housing at a wide range of affordability levels – ideally to roughly match the employment profile of the study area. Some questions to think about include:
   - Are the **limited parks and open space amenities** in the area sufficient to support large-scale residential construction?
   - Is the current zoning working to encourage housing?
   - What parking strategies are appropriate? Currently, parking in the area is challenging, discourages residential development, and is a burden to existing residents as new development makes use of the already limited supply. Some residents would like a residential parking permit program in this area.

c. Other issues raised specific to this area include:
   - A lack of clear **urban form and street hierarchy** (i.e large blocks and buildings). Traversing the district does not provide enough clues as to which are of the streets serves the highest priority. A clear positive outcome for this sub-district is to determine ways to support a delineation of street hierarchy. The proposed Holladay green street improvements were cited as a successful attempt at creating hierarchy in one geographic location.
   - The many **large blocks** in the district are seen as a challenge to access and pedestrian connectivity, but are also seen as a unique opportunity in the Central City with typically much smaller blocks because they provide an opportunity for a different urban pattern for redevelopment. Including pocket parks in new development was suggested as a way to achieve new green/open space amenities incrementally.

d. Regarding transportation and access, **improved pedestrian and bike access** on MLK and Grand and across/under I-5 was frequently suggested as was the importance of maintaining efficient truck access to the Rose Quarter, Convention Center and surrounding office buildings. Specific ideas suggested included providing controlled intersections for bikes and pedestrians every 2 blocks along MLK/Grand, considering new pedestrian crossings to the Rose Quarter at Clackamas and to the Central Eastside at 7th Avenue (over I-84).

6. Subarea 6 and 6a -Lloyd Center Mall, Office Core, Holladay Park and Sullivan's Gulch transition

a. The poor quality of the **pedestrian experience** and limited street-level activity is cited as a challenge to be addressed in this plan. **Increasing vitality** through redevelopment and new development is a common desire. Some specific suggestions include:

- Improving the facade of the Lloyd Mall with aesthetic improvements would create a more inviting interface between the inside and outside of the structure and would serve to 'invite' people into the mall.
- Developing the **Lloyd Cinema parking lot** to potentially include a mix of residential, retail and other uses to help activate the space.

b. The predominance of **large property owners** and **large blocks** was noted as both a challenge and an opportunity in this area. Existing residential development in this area is limited and typically has little or no parking. Residents are interested in residential permit programs.

c. Public safety concerns in **Holladay Park** are widespread and a variety of measures to improve conditions there have been suggested. These range from near-term actions like increased tree trimming and more active programming of the park to longer-term ideas, such as improving surrounding development conditions with new buildings facing (embracing) the park and adding additional design features to the park to attract a wider variety of users.

d. Increasing **pedestrian connectivity and safety** both within this part of the study area and between this and adjacent areas was cited as an important issue. Suggestions for improvements include:
   - A new pedestrian bridge between this area (somewhere around NE 9th Ave) and the Central Eastside (across I-84),
   - Adding bicycle lanes to the 12th Avenue bridge; and
   - Continuing bike lanes on Multnomah all the way to NE 21st Ave.

e. The properties at the SW corner of **NE Multnomah and NE 21st** are seen as an interesting development opportunity. There are concerns about possible demolition of older homes on portions of the site, but generally there seems to be interest in looking at redevelopment scenarios for the corner. There appear to be differing opinions on what scale of building would be appropriate here. The site currently has split zoning, and may need to be rezoned to accommodate desired development. This area could also provide a convenient access point to the potential future Sullivan's Gulch Trail.
   - One opportunity that arises from the charrette process would include ideas for the type of design solutions and/or development that would be most appropriate and desirable?

7. The Freeway and Interchanges

a. Freeway related issues mentioned by study participants have focused on three themes: **safety**, **operational issues** as related to the freeway and overpasses, as well as **improved freight movement**.

b. Expressed **safety** related issues have included a desire to reduce weaving and improve merge lengths on I-5 as a way to help reduce the incidence of rear end and sideswipe collisions. On overpasses and interfaces with the local street network, there is a desire to improve safety especially by clarifying vehicular patterns and/or to separate vehicular, bikes and pedestrian traffic at identified conflict areas. The Broadway/Weidler box and

the intersection of Vancouver and Larrabee were singled out as particularly problematic areas, especially during major events in the Rose Quarter. Some stakeholders would like safety to be explicitly prioritized over capacity expansion when evaluating changes to I-5 and "the box".

c. Comments related to freeway **operational issues** generally focused on:
   - Improvements related to the reliability of traffic flow;
   - Reducing delay;
   - Increasing levels of service; and
   - A desire to increase average freeway speeds through the district.
   - A desire to reduce the impact of freeway traffic on the neighborhood

d. It was also suggested that the reconfiguration or removal of some or all of the **on and off ramps** to limit the number of intersections that feed onto the local street grid is desirable. Spreading the ramps and reducing the number of lights in specific locations to improve traffic flow was also mentioned, as was a desire to lengthen specific on ramps to minimize traffic bound for the freeway from backing up on local streets. Finally, a strong desire was expressed to **avoid impacts on key cultural sites** when looking at proposed freeway improvements.

e. **Freight movement** in support of local and regional economies was highlighted as a desired outcome of this process. Maintaining and improving freight movement and distribution on the freeways, as well as to locally designated freight routes, such as Lower Albina, are needed to ensure the reliable flow of goods. Freight movement improvements may take the form of reconfigured freight geometries on local streets and at on ramps, especially in areas like the Broadway/Weidler "box".

f. A desire to increase the **reliability of travel times** and to increase capacity for freight movements on the freeways was also expressed. It was suggested that this study should identify alternative freight access routes to and from Lower Albina, Swan Island and NW industrial areas.

ISSUES BEYOND THE SCOPE OF THIS PROJECT

Staff prepared a scope document to clarify the types of issues the N/NE Quadrant and I-5 Broadway/Weidler Plans will consider. The Stakeholder Advisory Committee reviewed the document at their December 9th meeting and is expected to approve a revised version at their meeting on January 20th. Using that document as guidance, a number of issues have been raised that are clearly not within the scope of this project. As a result they have not been included above in this document. Issues commonly raised in this category include but are not necessarily limited to:

- Questions about the future of the I-5 Eastbank Freeway in the Central Eastside and removing I-5 from the study area.
- Issues pertaining to possible future high speed rail system needs in the quadrant.
- Determining future streetcar system priorities or alignments.
- Decisions on current or future Urban Renewal Areas.

N/NE QUADRANT SUB AREAS MAP
(Freeway – not shown – is area 7)

APPENDIX F: PUBLIC INVOLVEMENT SUMMARY

Public Involvement Goals

There is a long history of large redevelopment and infrastructure project that have had adverse impacts on the communities in Lower Albina and the Lloyd District. The N/NE Quadrant Plan strives to repair the community fabric, and to this end the public involvement process was designed to be inclusive and responsive to public concerns, and allow for active participation and meaningful public input.

The public involvement efforts for the N/NE Quadrant Project were guided by the public involvement goals developed by the Community Involvement Committee (CIC) for the Portland Plan, the long-range planning effort for the City as a whole, which was taking place when the quadrant plan process began. Incorporating these public involvement goals provided for consistent public involvement efforts:

- Build on existing relationships
- Engage broader and diverse groups with education and information and provide all interested with enough education so they can meaningfully participate
- Provide multiple venues and means for community involvement and engagement
- Involve as many people as possible
- With feedback and continuous engagement throughout Portland Plan development and implementation, ensure community members are being heard

In addition, the N/NE Quadrant project strove to:

- Provide a process that is open and transparent, with a special emphasis on early involvement in providing policy-setting input
- Clearly define opportunities where the public can provide timely input so that there is an opportunity to inform policy-making and otherwise affect change
- Wherever possible, design interactive formats for meetings and ensure a balanced and fair discussion of issues

Key Stakeholders and Project Advisory Committees

The Bureau of Planning and Sustainability, working with the other project partners Oregon Department of Transportation and the Portland Bureau of Transportation, involved a variety of stakeholders and interested parties in the N/NE Quadrant planning process. These stakeholders had varying levels of interest in the planning process, ranging from property owners who will be directly impacted by the plan outcomes to members of the general public who wanted to stay informed about what is happening in the Central City.

Stakeholder Advisory Committee

A Stakeholder Advisory Committee (SAC) was one of the primary means of ensuring that the public had opportunities to provide meaningful input into the planning process. SAC members (see table F1) were selected to represent key stakeholder interests and to create a balanced committee to guide the planning effort. All SAC members were appointed by the directors of the Portland Bureau of Planning and Sustainability, the Portland Bureau of Transportation and the Oregon Department of

Transportation Region 1 Office. The SAC was made up of 30 voting members, representing area stakeholders, including business and neighborhood associations and property owners, as well as community interests such as affordable housing, cultural heritage, the environment, economic equity, labor, urban design and transportation. Local, regional and state public agencies were also represented on the committee as non-voting members.

The role of the SAC was to advise and direct project staff throughout the planning process and to make recommendations about the project to the Portland Planning and Sustainability Commission and the Oregon Transportation Commission. SAC members were expected to report back to and solicit input from their stakeholder groups and constituencies, represent the broader interests of those groups at meetings and promote public involvement in project events. Early in the process SAC members developed and adopted collaboration principles that governed decision making for the committee.

Subcommittees of the SAC met periodically to address specific issues, such as transportation, land use and urban design. Members of the public were invited to join the subcommittee to have more in-depth participation in the process.

In all, 19 full SAC meetings and 14 subcommittee meetings were held. All meetings were open to the public and included opportunities for public comment.

Table F1: N/NE Quadrant Project Stakeholder Advisory Committee Members (June, 2012)

Voting Members			
Representative	**Interest**	**Organization**	**Alternate**
Matt Arnold	Transportation-Bicycle	Bicycle Advisory Committee	Heather McCarey
Wynn Avocette	At-large		
Pauline Bradford	Cultural Heritage	Interstate URAC, NE Coalition of Neighborhoods	
Carol Gossett	Neighborhood Association	Sullivan's Gulch Neighborhood Association	Britt Brewer
Phil Selinger Carolyn Briggs (past)	Transportation-Pedestrian	Pedestrian Advisory Committee	Doug Klotz Erin L Kelley (past)
Daniel Deutsch	Small Developer	Alora Development	Joanna Agee
Malina Downey	Regional Access	UPS	
Debra Dunn	Transportation-Trucking	Oregon Trucking Association	Bob Russell
Gary Eichman/Tracy Whalen (co-chairs)	Transportation-Freight	Portland Freight Committee	
Dean Gisvold	Neighborhood Association	Irvington Neighborhood Association	Ed Abrahamson
Cynthia Gomez (past)	Environmental Justice / Economic Equity	Latino Network	Andrea Marquez-Horna

Heidi Guenin	Community Health	Upstream Public Health	Steve Bozzone
Damien Hall	At-large		
Sean Hubert	Affordable Housing	Central City Concern	Martin Soloway
Wayne Kingsley	Adjacent Businesses	Central Eastside Industrial Council	
Wade Lange	Property Owner/ Business- Lloyd District	Langley Investments	Mike Bernatz
Lloyd Lindley (co-chair)	Urban Design	AIA Portland / ASLA Portland	
Eric Lovell	Lower Albina Businesses	Uroboros Glass Studio	Kurt Widmer
Jenny Lyman	Transit Riders		
Gary Marschke	NNE business association	NNE Business Association	Joice Taylor
Brock A. Nelson	Transportation-Rail	Union Pacific Railroad	
Midge Purcell (past)	Community / Civic Org	Urban League	
Jodi Parker Paul Riggs (past)	Labor Organization	Building Trades/Columbia Pacific BCTC	
Owen Ronchelli	Transportation-Local TMA	Lloyd TMA	Lindsay Walker
Wanda Rosenbarger	Major Retailer	Lloyd Center Mall	Dennis Henderson
William Ruff	Architect/Developer	LRS Architects	
Bob Sallinger	Environment	Audubon Society	Kelly Rodgers
Gary Warren	Neighborhood Association	Lloyd District Community Association	
Mike Warwick	Neighborhood Association	Elliot Neighborhood Association	Laurie Simpson
Justin Zeulner J. Isaac (past)	Property Owner/Business- Rose Quarter	Portland Arena Management	Chris Oxley
Non-Voting Members			
John Williams		Metro	Chris Deffebach
Teri Dresler Jeff Blosser (past)		Oregon Convention Center	Karen Totaro
Rian Windsheimer		Oregon Department of Transportation	Andy Johnson
Susie Lahsene		Port of Portland	
Joe Zehnder		Portland Bureau of Planning and Sustainability	Steve Iwata
Paul Smith		Portland Bureau of Transportation	John Gillam
Lew Bowers/ Peter Englander		Portland Development Commission	Sara King
Alan Lehto		TriMet	Jessica Engelmann

Technical Advisory Committee

A Technical Advisory Committee (TAC) representing public agencies with specialized expertise related to the plan and implementation served as a resource for the planning process. TAC members were responsible for reviewing project proposals, providing comments to project staff and reporting back to their agencies throughout the planning process. The TAC met six times, in addition to individual coordination meetings with City bureaus and other public agencies that occurred during the process.

Table F2: N/NE Quadrant Project Technical Advisory Committee Members (June, 2012)

Organization	Representative(s)
Metro	Ted Reid
Multnomah County	Karen Schilling, Maya Bhat
Oregon Dept. of Transportation	Mark Johnson, Cahn Lam, Chi Mai, Simon Eng
Oregon Dept. of Environmental Quality	Cory Wind, Keith Johnson
Port of Portland	Susie Lahsene
Portland Bureau of Development Services	Kara Fioravanti, Tim Heron
Portland Bureau of Environmental Services	Amy Chomowicz, Rick Bastasch, Emily Hauth
Portland Bureau of Fire & Rescue	Erin Janssens
Portland Bureau of Planning & Sustainability	Lora Lillard, Leslie Lum, Sallie Edmunds, Shannon Buono, Vinh Mason
Portland Bureau of Transportation	John Gillam, Mauricio Leclerc, Grant Morehead, Roger Geller, April Bertelsen, Bob Hillier, Lewis Wardrip, Ellen Vanderslice
Portland Housing Bureau	Kim McCarty, David Sheern
Portland Office of Healthy Rivers	Ann Beier, Kevin Kilduff
Portland Office of Management and Finance	Claudio Campuzano
Portland Office of Neighborhood Involvement	Judith Mowry, Jeri Williams
Portland Bureau of Parks and Rec	Brett Horner, Kathleen Wadden, Sarah Coates Huggins
Portland Water Bureau	Stan VandeBergh, Cheri Warnke, Mike Saling, Tom Carter
Portland Public Schools	Paul Cathcart
Portland Development Commission	Kia Selley, Sara King, Kevin Brake, Irene Bowers, Denyse McGriff
Portland Streetcar	Vicky Diede
TriMet	Alan Lehto, Jessica Tump

Public Involvement Events and Tools

Events

SAC Meetings: SAC and its subcommittee meetings were held approximately monthly, and served as ongoing opportunities to share information and receive feedback from stakeholders and members of the general public. SAC meeting materials and minutes were posted on the project website.

Public Workshops/Charrettes: Two design charrettes were held during the concept development phase of the project focused on land use/urban design and the I-5 Freeway improvements. Charrette participants, including technical experts, SAC members and the general public, discussed issues and opportunities in the quadrant and explored possible solutions. Approximately 65 people attended the charrettes.

Open Houses: Four open houses were held at key points in the process to inform the public and get feedback. Staff presented recommendations, answered questions and took public comments. Approximately 450 people attended the open houses.

Community Walks: Community walks were conducted during the existing conditions phase of the planning process in September 2010 and before the SAC was asked to endorse the recommended I-5 freeway concept in April 2012. Staff and community members shared their knowledge of the N/NE quadrant with the SAC and other members of the public, and the groups discussed potential issues and opportunities related to the concept proposals. Approximately 40 people attended the walks.

Community Group Meetings: The project team attended meetings of existing community groups, such as neighborhood and business associations, advocacy groups and other organizations, to share information and get feedback throughout the process. In the summer of 2011, the project team made a significant effort to obtain feedback on plan proposals, attending 20 separate outreach meetings in less than 3 months.

Commission Briefings and Public Hearings: Project briefings were provided to the Portland Community Involvement Committee, Planning and Sustainability Commission, Historic Landmarks Commission and Design Commission during the process. The plan will undergo a formal public hearing process before the Portland Planning and Sustainability Commission and City Council prior to adoption.

In addition to the events outlined above, staff met with individual businesses, property owners and other interested stakeholders throughout the process. A complete list of events and meetings is outlined in Table F3: *N/NE Quadrant Project Outreach Log.*

Communication/Information Tools

Project Website: The project website served as the primary source of information for the public and as a means to solicit and receive public feedback. The website included project information and regular updates, documents, a calendar of events, meeting agendas and minutes, links to other related planning efforts and staff contact information.

Survey: In the summer of 2011, an on-line survey was developed to get feedback on three concept alternatives developed by staff in coordination with SAC members. Survey responses helped inform development of a proposed concept, which was eventually endorsed by the SAC, and formed the basis for the goals, policies and implementation actions included in the quadrant plan. Approximately 140 survey responses were received.

Mailings and Newsletters: An electronic mailing list was used to provide frequent updates to interested parties regarding meetings, events and new products. Occasional articles and notices were distributed through the BPS bimonthly e-newsletter. A hard copy notice announcing the project and the first open house was mailed to businesses and residents within the N/NE Quadrant planning area and other interested parties.

Media: Announcements for key events and document releases were distributed to local media outlets (Oregonian, Daily Journal of Commerce, neighborhood newspapers and other outlets).

Table F3: N/NE Quadrant Plan Outreach Log (Draft as of October, 2012. To be Updated)

Note. The project staff listed in the Outreach Log includes the following members from the three partner agencies. The attendance figures do not include project staff.

- *Portland Bureau of Planning and Sustainability: Susan Anderson, Stephanie Beckman, Shannon Buono, Debbie Bischoff, Mindy Brooks, Tyler Bump, Nick Byers, Troy Doss, Sallie Edmunds, Diane Hale, Kathryn Hartinger, Steve Iwata, Roberta Jortner, Karl Lisle, Lindsey Menard, Mark Raggett, Nicholas Starin, Nan Stark, Joel Stein, Michelle Van Tijen, Spencer Williams, Joe Zehnder*
- *Oregon Department of Transportation: Fred Eberle, Andy Johnson, Todd Juhasz, Tim Wilson*
- *Portland Bureau of Transportation: John Gillam, Mauricio Leclerc, Grant Morehead, Paul Smith*

Date	Organization/Event	Project Staff	Attendance (Approximate)

Greetings:

The North/Northeast Quadrant Stakeholder Advisory Committee (SAC) is pleased to present our final recommendations for the N/NE Quadrant Plan and the I-5 Broadway-Weidler Interchange Plan. These two documents provide an integrated vision for an intensely vibrant urban district in the Lloyd District, growing employment and economic activity in Lower Albina with a much safer, friendlier, and a more efficient I-5 freeway interchange at NE Broadway and NE Weidler Street that better meets both regional and local mobility needs.

From the fall of 2010 to the summer of 2012, we had the honor of chairing the diverse and inclusive 30-member SAC as it developed its recommendations. The process was a collaborative effort between the City of Portland, represented by the Bureau of Planning and Sustainability (BPS) and the Bureau of Transportation (PBOT), and the Oregon Department of Transportation (ODOT). As co-chairs, we would like to acknowledge this unique effort and that SAC members embraced this challenge and the opportunity to engage with the staff from BPS, PBOT and ODOT on this project to develop our recommendations.

When we started, we set out to do something that had not been done before in this region: integrating a major freeway project with a long-range land use and transportation plan. The working assumption for this effort arose from the history of developing land use and freeway plans independent of one another. Inevitably, the previous planning efforts resulted in plans that addressed particular issues related to agency priorities, but left many other complex issues in the area unresolved and lacking the necessary public and inter-agency support to be implemented. This process set out to concurrently develop two separate, but integrated plans that address the needs for livability and urban vitality of this quadrant of the Central City, as well as the regional safety and mobility needs of I-5 as a key facility for the region and state.

Doing this together was not always easy, but the rewards more than compensate for the hard work of SAC members, staff, and public at large. We believe by working together we have plans that are not only consistent but integrated, that support and reinforce each other in physical and symbolic ways we hope will facilitate implementation. Early on, the SAC developed a comprehensive list of project goals to guide the development of the plans. They are found on page 6.

After two years of education about issues in the quadrant from staff, expert consultants, stakeholders and the public, plus attending numerous meetings and participating in SAC discussions, the final votes of the process were taken on June 7, 2012 and August 2, 2012. The questions asked were:

1) Do you endorse the Joint Facility Plan, as revised?
2) Do you endorse the Draft N/NE Quadrant Plan, as revised?
3) Do you endorse the SAC Recommendations transmittal document?

A summary of the votes follows. Please see Section VI., Final Votes for details.

	"1" Full Support	"2" Support, but Prefer Modifications	"3" Do Not Support	Result
1) ODOT Facility Plan (6-7-12)	**12**	**4**	**3**	**Pass by Majority/Minority**
2) N/NE Quadrant Plan (8-2-12)	**17**	**4**	**0**	**Pass by Consensus**
3) SAC Recommendations Transmittal (8-2-12)	**21**	**0**	**0**	**Pass by Consensus**

We believe that these plans offer a comprehensive framework that will guide public and private investment in the next decades. By working together, we have accomplished a great deal more than had we done these plans independent of each other.

Following this letter is an overview of the process and key outcomes. We would like to call your attention to two items in particular: 1) Appendix B, which contains letters and minority reports from SAC members, and 2) Section VIII., Conclusion and SAC Recommendations, which contains additional an SAC recommendation encouraging the City of Portland and ODOT to act immediately to address high priority safety concerns.

We now have the blueprints for positive change. It is our next collective task and commitment led by the City and state, to continue the work to make the recommendations in these plans a reality.

Respectfully Submitted,

Lloyd D. Lindley, II
SAC Co-Chair

Tracy Ann Whalen

I. Introduction, Goals and Process Overview

A) Introduction

In the summer of 2010, ODOT, PBOT and BPS ("the Project Team") initiated a partnership to begin co-developing land use and transportation concepts for the North/Northeast quadrant of the central city (N/NE Quadrant) through an iterative process involving the public and area stakeholders. (See, Figure 1.)

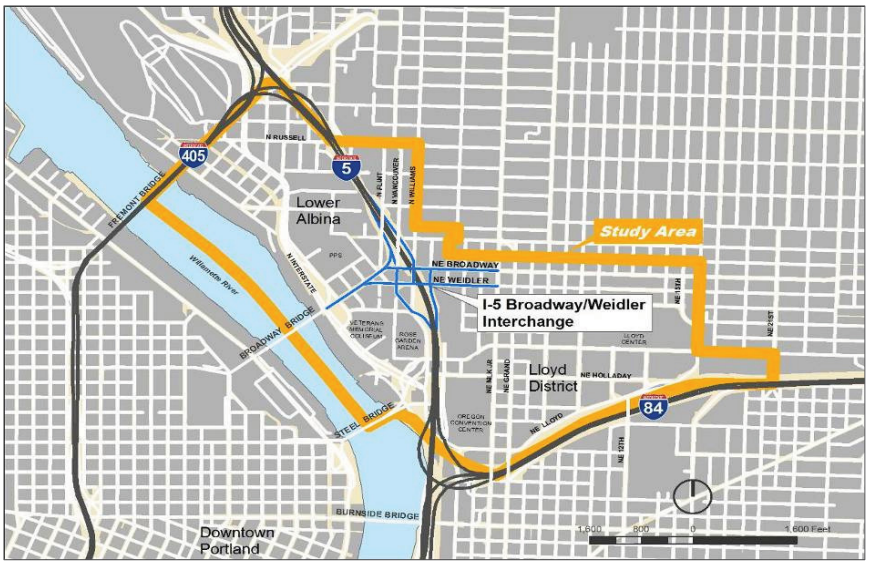

Figure 1: Study Area for the N/NE Quadrant and I-5 Broadway/Weidler Plans Project

This joint effort provides a new collaborative land use and transportation approach to integrate land use planning with urban freeway interchanges improvements. This approach combined the planning of local strategies for land use, urban design and local transportation improvements, typically a City responsibility, with the planning of interstate freeway improvements, which is an ODOT responsibility.

The N/NE Quadrant Plan is part of overall process to update the 1988 Central City Plan. The SAC identified the following key issues to be addressed: 1) the Lloyd District's lack of vibrant pedestrian activity, 2) support the industrial uses in the Lower Albina, 3) support the recent designation of the Lloyd EcoDistrict, and 4) acknowledge and develop strategies to address the impacts of past large scale public project.

The project's approach for freeway improvements was to address long-demonstrated safety and operational issues that, if scaled according to community aspirations, would contribute to the continued vitality of the Central City and the mobility needs of the region and state. Due to multiple constraints, freeway improvements were to focus on existing safety and efficiency scenarios instead of solutions that increase capacity to meet future travel demands.

The Stakeholder Advisory Committee (SAC) was established to provide feedback and direction to the Project Team. It and the SAC met regularly for over two years to discuss issues, brainstorm, develop draft concepts, and examine transportation and land use solutions concurrently through a five-phase process designed to explore multiple alternatives to address complex land use and transportation issues. For additional information, please see Appendix A for the Project Overview.

B) Goals

The following jointly developed project goals were approved by the SAC in January 2011.The goals state:

> This planning effort will result in integrated land use, urban design, and transportation strategies, policies and plans for the N/NE Quadrant and the I-5 Broadway/Weidler interchange that balance, complement, enhance, protect, respect, revitalize, support, and sustain economic, environmental, and social interests. The implementable plans will be consistent with the overall goals and policies of the city, region, and state.

Our recommendations will be guided by our desire for:

- A diverse mix of commercial, cultural, entertainment, industrial, recreational, and residential uses, including affordable housing;
- A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system;
- Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages;
- Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment;
- Equitable access to community amenities and economic opportunities;
- Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods;
- Protection and enhancement of the cultural heritage of the area and its sub-districts; and
- Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses.

C) Process Overview

The land use changes and urban design strategies for the City are documented in the North/Northeast Quadrant Plan (as part of the 2035 Central City Plan) and are interdependent and mutually supportive of the transportation changes documented ODOT's Facility Plan. Though developed within the same process, the land use and transportation improvements resulted in two different groups of documents for the two partnering agencies as shown in Figure 2.

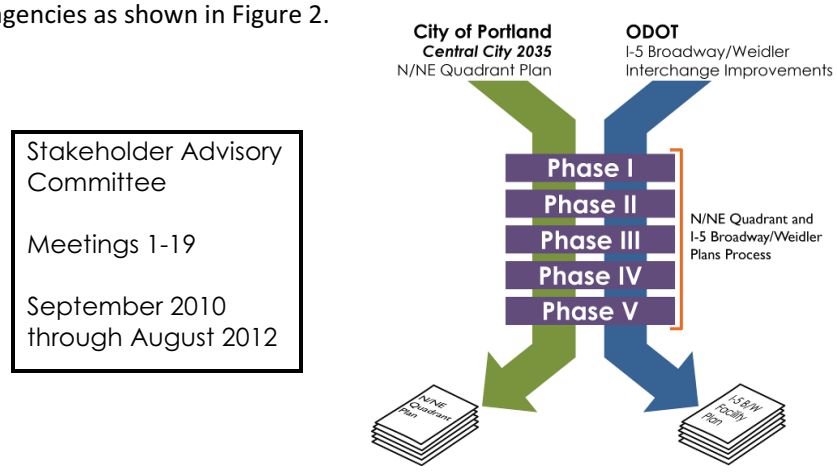

Figure 2: Joint Effort for the N/NE Quadrant and I-5 Broadway/Weidler Plans Project: Examining Land Use and Transportation Elements Concurrently

In the end, this process resulted in land use and transportation changes in the quadrant that are mutually agreeable to both the City of Portland and to ODOT. The voting members of the SAC largely endorsed the proposed plans, with some members submitting minority reports explaining why they oppose portions of the plans. See section VI, below for a summary of the votes and Appendix B for letters and minority reports.

II. Stakeholder Advisory Committee, Collaboration Principles, and Public Involvement Overview

A) Stakeholder Advisory Committee

The SAC was one of the primary means of ensuring that the public had opportunities to provide meaningful input into the planning process. SAC members (see, Table 1) were selected to represent key stakeholder interests and to create a balanced committee to guide the planning effort. All SAC members were appointed by the directors of the Portland Bureau of Planning and Sustainability, the Portland Bureau of Transportation and the Oregon Department of Transportation Region 1 Office. The SAC was made up of 30 voting and 8 non-voting members, representing area stakeholders, including business and neighborhood associations and property owners, as well as community interests such as affordable housing, cultural heritage, the environment, economic equity, labor, urban design, and multi-modal transportation. Local, regional and state public agencies were represented on the committee as non-voting members. The SAC also considered non-member testimony and correspondence submitted during each meeting.

Table 1: N/NE Quadrant Project Stakeholder Advisory Committee Members (June, 2012)

Voting Members			
Representative	**Interest**	**Organization**	**Alternate**
Matt Arnold	Transportation-Bicycle	Bicycle Advisory Committee	Heather McCarey
Wynn Avocette	At-large		
Pauline Bradford	Cultural Heritage	Interstate URAC, NE Coalition of Neighborhoods	
Carol Gossett	Neighborhood Association	Sullivan's Gulch Neighborhood Association	Britt Brewer
Phil Selinger Carolyn Briggs (past)	Transportation-Pedestrian	Pedestrian Advisory Committee	Doug Klotz Erin L Kelley (past)
Daniel Deutsch	Small Developer	Alora Development	Joanna Agee
Malina Downey	Regional Access	UPS	
Debra Dunn	Transportation-Trucking	Oregon Trucking Association	Bob Russell
Gary Eichman (co-chair) Tracy Whalen (co-chair)	Transportation-Freight	Portland Freight Committee	
Dean Gisvold	Neighborhood Association	Irvington Neighborhood Association	Ed Abrahamson
Cynthia Gomez (past)	Environmental Justice / Economic Equity	Latino Network	Andrea Marquez-Horna
Heidi Guenin	Community Health	Upstream Public Health	Steve Bozzone

Wanda Rosenbarger	Major Retailer	Lloyd Center Mall	Dennis Henderson
William Ruff	Architect/Developer	LRS Architects	
Bob Sallinger	Environment	Audubon Society	Kelly Rodgers
Gary Warren	Neighborhood Association	Lloyd District Community Association	
Mike Warwick	Neighborhood Association	Elliot Neighborhood Association	Laurie Simpson
Justin Zeulner J. Isaac (past)	Property Owner/Business- Rose Quarter	Portland Arena Management	Chris Oxley
Non-Voting Members			
John Williams		Metro	Chris Deffebach
Teri Dresler Jeff Blosser (past)		Oregon Convention Center	Karen Totaro
Rian Windsheimer		Oregon Department of Transportation	Andy Johnson
Susie Lahsene		Port of Portland	
Joe Zehnder		Portland Bureau of Planning and Sustainability	Steve Iwata
Paul Smith		Portland Bureau of Transportation	John Gillam
Lew Bowers/ Peter Englander		Portland Development Commission	Sara King
Alan Lehto		TriMet	Jessica Engelmann

The role of the SAC was to advise and direct project staff throughout the planning process and to make recommendations to the Portland City Council, the Portland Planning and Sustainability Commission and the Oregon Transportation Commission. SAC members were expected to solicit input from their stakeholder groups and constituencies, report back to the committee, represent the broader interests of those groups at meetings, and promote public involvement in project events.

Subcommittees of the SAC met periodically to address specific issues, such as transportation, land use and urban design. Members of the public were invited to join the subcommittees to have more in-depth participation in the process.

In all, 19 full SAC meetings and 13 subcommittee meetings were held. All meetings were open to the public and included opportunities for public comment. For additional information, please see Appendix C for the SAC Meeting Notes.

B) Collaboration Principles

Early in the process, SAC members developed and adopted collaboration principles that governed decision making for the committee. The document can be found in Appendix D. It contains the agreements of the participants in the North/Northeast Quadrant I-5 Broadway Weidler Plans process.

The SAC made decisions by "consensus." Consensus decision-making allows SAC members to distinguish underlying values, interests, and concerns with a goal of developing widely accepted solutions. Consensus does not mean 100% agreement on each part of every issue, but rather support for a decision, *"taken as a whole."* This means that a member, through straw polling, may vote to support a consensus proposal even though they would prefer to have it modified in some manner in order to give it their full support. Consensus is a process of *"give and take*," of finding common ground and developing creative solutions in a way that a strong majority of interests can support. Consensus is reached if members at the table support an idea or say, *"I can live with that."* If that did not happen, the result was a "Majority/Minority" vote.

C) Public Involvement

There is a long history of large redevelopment and infrastructure projects that have had adverse impacts on the communities in Lower Albina and the Lloyd District. The public involvement process was designed to be inclusive and responsive to public concerns, and allow for active participation and meaningful public input.

The public involvement efforts for the N/NE Quadrant Project were guided by the public involvement goals developed by the Community Involvement Committee (CIC) for the Portland Plan, the long-range planning effort for the City as a whole, which was taking place when the quadrant plan process began. Incorporating these public involvement goals provided for consistent public involvement efforts that:

- Build on existing relationships
- Engage broader and diverse groups with education and information and provide all interested with enough instruction that they can meaningfully participate
- Provide multiple venues and means for community involvement and engagement
- Involve as many people as possible
- With feedback and continuous engagement throughout Portland Plan development and ensure community members are being heard

In addition, the N/NE Quadrant project strove to:

- Provide a process that is open and transparent, with a special emphasis on early involvement in providing policy-setting input
- Clearly define opportunities where the public can provide timely input so that there is an opportunity to inform policy-making and otherwise affect change
- Wherever possible, design interactive meeting formats and ensure balanced and fair issue discussion

What follows is a summary of public involvement activities. For a complete overview, please see Appendix F: N/NE Quadrant Plan, Appendix F.

Public Events Hosted by N/NE Quadrant Team:

Event	Date
CC2035 & N/NE Quadrant Open House	Oct 2010
N/NE Quadrant & Rose Quarter Open House	Nov 2010
N/NE Quadrant Open House	Jun 2011
N/NE Quadrant Open House	Feb 2012
Land Use Charrette	Feb 2011
Transportation Charrette	April 2011
Lower Albina and Lloyd District Community Walks	Sep 2010
N/NE Quadrant Community Walk	April 2012
Development Forum	Feb 2012
Stakeholder Meetings with Project Staff Present	Throughout

Commission Briefings:

- Portland Design Commission (6/2012)
- Portland Historic Landmarks Commission (7/2012)
- Planning Commission (6/2012)

III. City of Portland Central City N/NE Quadrant Plan Highlights

The Central City 2035 project is a multi-phased, long-range comprehensive and district planning effort to update the 1988 Central City Plan and provide updated guidance on development, decision-making, and investment in the center of the Portland metropolitan region. Metro's regional employment and housing forecasts predict significant growth in the Central City. The Lloyd District has the highest development capacity in the Central City. It is expected that demand will drive significant new mixed use development. Collaboratively developed through a nearly two- year public process, the project includes the Central City 2035 Concept Plan, which provides a high-level framework of goals, policies, and an urban design diagram to guide the development of more detailed, quadrant-level plans.

The N/NE Quadrant Plan (Appendix F) is the first of the more detailed district plans, addressing land use, urban design, transportation, public infrastructure, and development entitlements in the Lloyd District and Lower Albina sub-districts of the Central City. It provides new goals, policies, urban design/land use diagrams, and implementation actions that will direct and manage change over the next 25 years.

Highlights of the Draft Plan include:

A) Preserving the industrial employment character of Lower Albina
B) Foster the growth of the Lloyd District into the intensely urban east side center of the Central City, with a focus on new residential development that will add activity and vibrancy to the district
C) Providing amenities, such as parks, street improvements and green infrastructure to support and encourage new development
D) Sensitive transitions to historic neighborhoods
E) Improving regional access and local street safety and connectivity for all modes

F) Continue public-private partnerships with the Lloyd TMA to increase use of alternative transportation modes
G) Encouraging sustainable development that supports the Lloyd EcoDistrict and goals for improved environmental performance
H) Incorporated the concerns of displacement, potential loss of historic and cultural resources

IV. ODOT I-5 Broadway/Weidler Interchange Improvements and Facility Plan Highlights

The Recommended Concept is the result of two years of work and discussions, refining what began as public process that developed over 70 concepts. Screening reduced the concepts to 5 fundamental alternatives the SAC narrowed down to one cohesive proposal to improve safety and operations on I-5. The Facility Plan for the I-5 Broadway/Weidler Interchange (Appendix G) is a technical and state-required document that specifically outlines ODOT's intentions relative to this segment of the I-5 facility and the interchange. The State of Oregon agencies are required to prepare facility plans for state-owned infrastructure so that they and decision-makers may effectively manage, maintain, and prioritize potential additions to, or expansion of, this infrastructure.

Highlights of the Recommended Concept, organized into four subsections of the study area, include:

A) The I-5 Broadway/Weidler Interchange Area

- Mainline Freeway Safety Elements
- Three Rebuilt Freeway Structures and the Broadway/Weidler/Williams Lid
- I-5 Broadway/Weidler Interchange Improvements
- Relocation of Southbound I-5 Entrance Ramp to Weidler/Williams
- Reverse Traffic Flow on Williams and improve bicycle access and safety
- Transportation System Management (TSM) and Transportation Demand Management (TDM) Strategies

B) North of Broadway Area - North of Broadway Option 3. Vancouver + Hancock/Dixon

- Rebuild Vancouver in current location
- Remove Flint south of Tillamook and replace with new pedestrian/bike paths
- Add Hancock/Dixon Overcrossing and Hancock/Vancouver Lid
- Actively pursue Freeway Lid Connecting Hancock Overcrossing to the Broadway/Weidler Structures

C) South of Weidler Street Area

- Clackamas Pedestrian/Bike Overcrossing
- Continue Flint between Parking Structures

D) Freeway Mainline Improvements Near the Rose Quarter Transit Center

- Add an auxiliary lane and full width shoulders to north-bound and south-bound I-5 within the boundaries of the study area
- Move the south-bound on-ramp to I-5 from Wheeler/Winning Way to Weidler

V. Integration of City of Portland and ODOT Plans

The N/NE Quadrant Plan and the I-5 Broadway-Weidler Interchange and Facility Plan were developed as a joint public planning effort to integrate the long range land use plans with current safety and operational problems on the freeway and at the interchange. The SAC participated in this unique effort to balance the economic vitality of N/NE Quadrant businesses and the livability of area residents with the larger regional travel needs for safe and efficient freeway movement. This joint partnership resulted in creative solutions that support high-density development, safer and convenient places for walking, bicycling, and access to transit that should help increase the use of these transportation modes while accommodating safer regional freeway operations.

The diagram below illustrates the opportunities to coordinate the two planning efforts, shown in five discrete areas. Accompanying the map is a summary of the complimentary relationships between the freeway improvements and the N/NE Quadrant land use-transportation-urban design elements

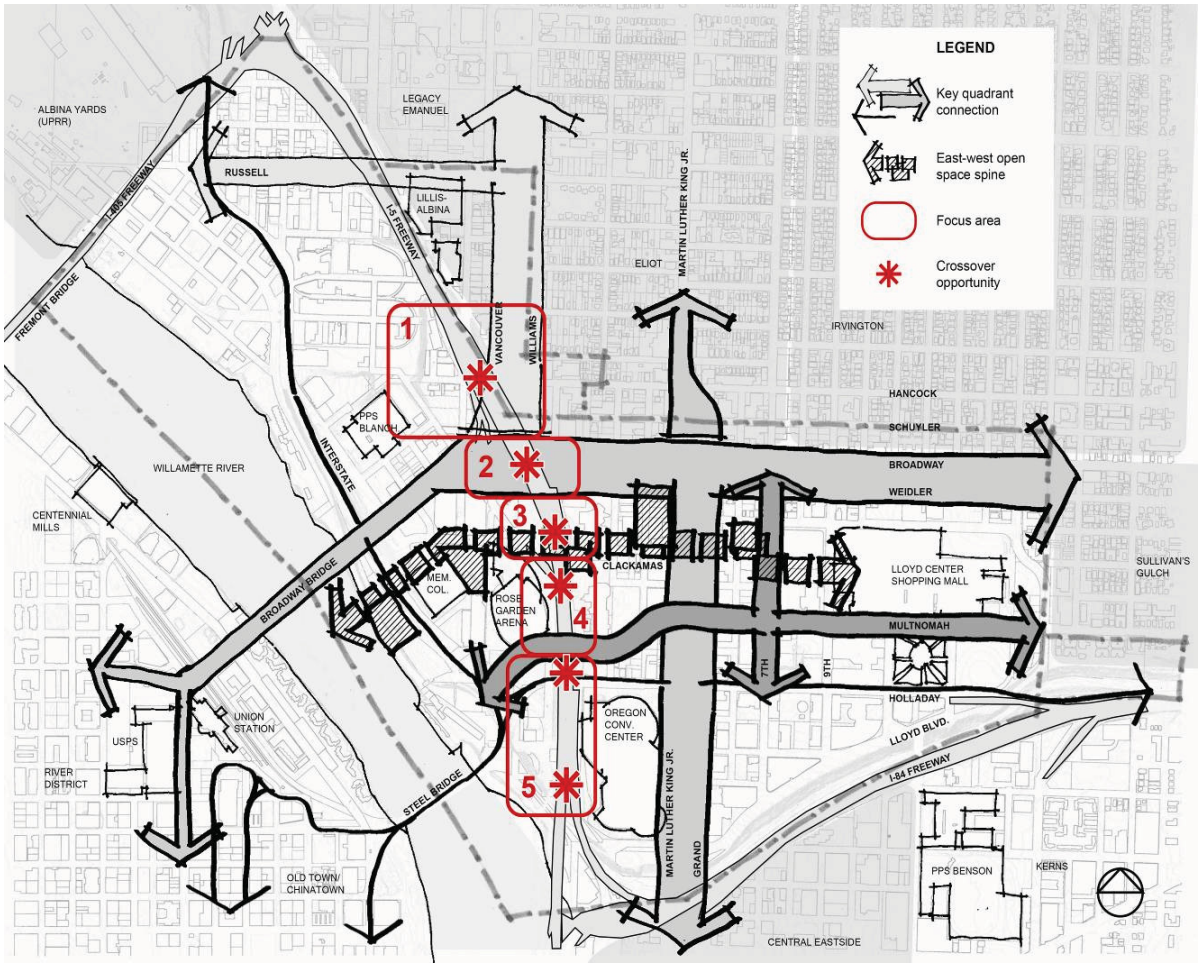

Figure 3: Coordinated Land Use and Transportation planning efforts, in five discrete areas

Area 1: North of Broadway

The Vancouver/Williams neighborhood collector couplet intersects the I-5 Broadway-Weidler Interchange at one of the highest crash locations in Portland. The proposed improvement would provide for safer interchange operations and provide alternative bicycle and pedestrian routes to avoid the freeway interchange and improve access to potential redevelopment area north of N. Broadway.

- New connection over I-5 at Hancock and a potential second lid over freeway: This new connection would provide greater connectivity and safer route for pedestrians and bicyclists from N and NE Portland to the Broadway Bridge and across the Willamette River. A lid would further enhance crossing of the freeway and provide space for community amenities. This Hancock connection would reinforce the N/NE Quadrant Plan calls for greater connectivity across I-5 and improved access, particularly to the Portland Public School's Blanchard site, which the plan calls to be rezoned to allow for higher density mixed use development.

- Recommendations include addressing Eliot Neighborhood concerns about potential traffic diversion with the proposed Hancock connection.

Area 2: Broadway-Weidler

The current interchange is a major problem for safe passage for pedestrians and cyclists, and highly congested for motor vehicles, including streetcar and bus. The improvements would strengthen east-west transportation and land use connectivity as well as strengthen the economic connectivity with the Vancouver/Williams corridor.

- Reconstruction of the Broadway, Weidler, Vancouver, and Williams overcrossings: The Facility Plan calls for these structures to have better bicycle and pedestrian facilities. Traffic flow is addressed on surface streets via better access to the freeway, clarification of vehicular patterns and additional signalization.

- Lid over I-5 at Broadway/Weidler/Williams: The Facility Plan identifies a lid as a cost effective way to stage, mobilize and manage traffic during the reconstruction of the Broadway/Weidler/Williams structures over I-5. After construction the lid could be used to permanently protect the area from noise and visual disruption by providing space for potential active community uses such as open space or public or private development.

- Relocating the I-5 on ramp from Winning Way to Weidler: The Facility Plan recommends that access to the freeway take place directly from Weidler to increase the distance between interchange ramps on I-5 and clarifying the vehicular pattern along Weidler. Traffic flow is also improved for bikes and pedestrians through the inclusion of a new "reverse traffic flow lane" design on Williams, between Broadway and Weidler

The NE Quadrant Plan encourages the development of this lid as a way to reinforce Broadway's role as a continuous commercial spine, while encouraging redevelopment along the Broadway/Weidler and Vancouver/Williams corridors. Accomplishing these tasks will better serve to integrate the two sides of the district over I-5.

Area 3: Clackamas Crossing

The improvements to Area 2, especially the relocation of the current I-5 southbound on-ramp at N. Wheeler would provide for greater place making, redevelopment opportunities with a new connection at Clackamas-Winning Way that would establish a new link between the Willamette River, Rose Quarter and Central Lloyd subarea.

- Clackamas Overcrossing: This pedestrian and cyclist connection over I-5 identified in the Facility Plan will connect the Rose Quarter area with the Lloyd District area to the east. In addition, the NE Quadrant Plan calls for Clackamas to be a "flexible street," which would emphasize pedestrian and cyclist travel from Lloyd District to the River, orient development toward the street and be an opportunity to extend district energy system from the Rose Quarter to future high-density mixed use development in the Central Lloyd area.

Area 4: Rose Quarter and Area 5: Rose Quarter Transit Center and Peace Memorial

The I-5 Freeway segment between the Rose Quarter and the Sullivan's Gulch is elevated and has had negative impacts to this area. The proposed freeway improvements will present an opportunity to explore innovative stormwater and urban design treatments under the freeway to strengthen the connections between the Rose Quarter and Oregon Convention Center.

Freeway Improvements

The Facility Plan calls for adding auxiliary lanes and shoulders to increase safety of existing traffic operations in this segment. All improvements occur within the existing freeway right-of-way.

VI. Final Votes

A) Voting Results

At the June 7, 2012 and August 2, 2012 SAC meetings, the voting members were polled on the Facilities Plan for the I-5 Interchange, the N/NE Quadrant Plan, and contents of this transmittal. The questions asked were:

1) Do you endorse the Joint Facility Plan as revised?
2) Do you endorse the Draft N/NE Quadrant Plan as revised?
3) Do you endorse the SAC Recommendations transmittal document?

The SAC's collaboration Principles defines the 1-2-3 voting protocol as follows:

- **"One"** indicates **full support** for the proposal as stated.
- **"Two"** indicates that the participant **agrees with the proposal as stated, but would prefer to have it modified in some manner in order to give it full support.** Nevertheless, the member will support the consensus even if his/her suggested modifications are not supported by the rest of the group because the proposal is worthy of general support, as written.
- **"Three"** indicates **refusal to support** the proposal as stated.

Please note, not all members who were seated on the SAC participated in the full process. The vote tally below contains the names of all voting members, whether they participated or not. Some members submitted formal resignations during the process, and their names have been removed.

		Final Votes		
Voting Members (Alternate)	**Interest Represented**	**1) ODOT Facility Plan 6-7-12**	**2) N/NE Quadrant Plan 8-2-12**	**3) SAC Recommendations Transmittal 8-2-12**

B) Summary of Final Votes

	"1" Full Support	"2" Support, but Prefer Modifications	"3" Do Not Support	Result
1) ODOT Facility Plan (6-7-12)	**12**	**4**	**3***	**Pass by Majority/Minority**
2) N/NE Quadrant Plan (8-2-12)	**17**	**4**	**0**	**Pass by Consensus**
3) Transmittal of SAC Recommendations (8-2-12)	**21**	**0**	**0**	**Pass by Consensus**

** Indicates support for the "No Build" option. A "1" vote rejected the "No Build" option.*

C) SAC Letters and Minority Reports

All members had the opportunity to submit letters of support or additional information if they voted "1" or "2," or a "minority report" if they voted a "3." Please see Appendix B for letters and minority reports. The letters discuss the following topics:

- Adverse impacts on African American communities and historical landmarks
- Bicycle and pedestrian safety improvements as part of an overall area bikeway network
- Bird friendly building design
- Building heights
- Expansion of I-5
- Lack of focus on public health
- Local transportation impacts on the Eliot and Irvington neighborhoods, including increased traffic on neighborhood streets
- Parks and natural areas
- Plans do not go far enough to improve safety and operations for trucks
- River restoration and eco-districts versus landscape scale restoration
- Timeline for implementation
- Tree canopy; other green infrastructure

VIII. Conclusion and SAC Recommendations

The SAC recommends to the Portland City Council, Planning and Sustainability Commission, and the Oregon Transportation Commission that they accept the ODOT Facility Plan and the City's Draft N/NE Quadrant Plan as a package.

In addition, the SAC strongly urges the City of Portland and ODOT to take immediate action to prioritize, seek funding for, and address the most pressing safety concerns that have been identified. These actions should be coordinated with the larger changes that will follow as the Facility Plan and N/NE Quadrant plans are adopted and implemented.

Thank you for the opportunity to serve.

Appendix B: Letters and Minority Reports

Included in this document are the letters and minority reports received from SAC Members at the conclusion of participating in the N/NEQ I-5 Broadway-Weidler Plans process.

The comments come from the following organizations:

- Audubon Society
- Bicycle Advisory Committee
- Eliot Neighborhood Association
- Irvington Neighborhood Association
- Oregon Trucking Association
- Upstream Public Health

Date: August 24, 2012
From: Bob Sallinger, Audubon Society of Portland
To: Bureau of Planning and Sustainability
Re: Final Comments on Central City NE Quadrant Plan Review Draft (July 2012)

Audubon Society of Portland appreciates the opportunity to serve in the Central City NE Quadrant Plan Citizen Advisory Committee. We were represented during this process by Bob Sallinger and Kelly Rogers. We support moving the plan forward to the Planning and Sustainability Commission and appreciate the extensive work by stakeholders and the city in developing this plan. There are some exciting ideas and opportunities contained within the plan.

Audubon's support however is qualified. There are several areas pertaining to natural resources, parks access and sustainable development where we believe the plan could be significantly strengthen and also brought into better alignment with already adopted plans such as the Watershed Management Plan, Climate Change Action Plan and the Urban Forest Action Plan. We hope as the plan proceeds through the adoption phase and is integrated with the overall Central City Plan that opportunities to strengthen these areas with be further examined.

Specifically we would highlight the following areas for further consideration:

1. **Tree Canopy**: We do not believe that the plan goes far enough to achieve the City's overall target of 33% tree canopy coverage. While we recognize that 33% coverage will not be evenly distributed across the entire landscape, we are concerned as new area plans emerge the City is setting low targets on an increasingly large percentage of the landscape. The overall target will not be attainable if we continue this pattern. More importantly, the city is setting low targets in areas that should be priority areas for significant improvement. Currently existing tree deficiencies should be viewed as opportunities for significant improvement rather than precedent to perpetuate deficiencies into the future. We view the NE Quadrant as one of the most important areas to make significant forward progress. Improving tree canopy with help address significant stormwater issues in this quadrant, reduce urban heat island effects, mitigate air pollution, improve neighborhood livability, and increase permeability for wildlife. It is exactly the neighborhoods that are most hard-scaped where we need to aggressively focus tree planting as these neighborhoods generate excessive stormwater and heat, are park and nature deficient and have high levels of air pollution. Trees often provide the most efficient and realistic approach to addressing these concerns in heavily developed areas. We would urge the city to aggressively

pursue 33% tree coverage within the NE Quadrant. To the degree that the city falls back on the argument that the Urban Forestry Plan anticipates uneven distribution of trees across the landscape, we would urge the City to apply that principle at a quadrant scale rather than Citywide scale---In other words while specific neighborhoods within the quadrant may have varying levels of coverage, the overall goal average within the quadrant should be 33%. As a matter of equity, livability, sustainability and ecological health it is critical that we restore the canopy within the NE Quadrant.

2. **Other Green Infrastructure (in addition to trees)**: In addition to the above comments regarding trees, we would strongly encourage the city to be much more explicit and specific regarding other green infrastructure objectives such as bioswales, green roofs and green streets within the NE Quadrant. While integration of green infrastructure is clearly a goal of the Plan, the actual strategies and objectives remain for the most part vague and aspirational. We believe that it is important to set specific and ambitious targets for green infrastructure, develop aggressive incentive-based and regulatory programs to achieve those objectives and monitor outcomes so that efforts can be adaptively managed to ensure success.

3. **Parks and Natural Areas**: The concept of a series of parks along NE Clackamas Street is a lovely aspirational goal and we support its inclusion in the plan. However, we would urge the city to prioritize ensuring that all residents within the district are within 1/4 mile of a park or natural area. We are concerned that the basic need for access seems to get lost in this plan relative to the more grandiose concept of a series of interconnected parks. We would recommend a much more substantive treatment of how access can be improved through smaller, more dispersed acquisitions as well the types of park amenities that are most needed within the quadrant. We would specifically encourage the city to explore nature themed parks---access to nature does not necessary require a Forest Park type experience; it can be achieved through amenities such as nature play areas, bird and butterfly gardens, and even art installations such as the Host Analog Tree at the Oregon Convention Center. Given the intensity of development in parts of the NE Quadrant, the City should also be looking at innovative strategies to find openspace such as publicly accessible ecoroofs. Audubon is strong supportive of developing incentive based programs such as exchanging increased FAR in return for making privately held lands accessible for openspace uses, provided that the openspace is truly publicly accessible.

4. **Bird Friendly Building Design**: Bird collisions with structures is the number one cause of bird deaths in the United States after habitat loss and fragmentation. City's across the United States and Canada have been adopting program to reduce unnecessary nighttime lighting and to promote bird friendly building design to reduce avian collisions. In 2012, the City working with Audubon and the US Fish and Wildlife Service developed a Resource Guide For Bird Friendly Building Design http://audubonportland.org/issues/metro/bsafe/bfbdd. We would encourage the City to adopt policies and objectives to specific promote bird-friendly building design and reduced nighttime lighting consistent with this guide. We would note that City staff

appear to have tried to achieve this objective in a few places with the inclusion of the term "habitat-friendly design." While we strongly support incorporating habitat features into the built environment, this is actually a very different concept from the one we are discussing when we talk about reducing collision hazards. It is important that both concepts be integrated throughout the plan and the "bird friendly building design" and "reduced nighttime lighting" be specifically referenced.

5. **River Restoration**: Audubon urges the City to be more aggressive and creative in terms of identifying opportunities to restore the riverbanks in the NE Quadrant. Juvenile salmon need healthy shallow water habitat (including gently sloping vegetated banks and adjacent uplands) approximately every quarter mile as they make their way to the ocean. While the NE Quadrant is heavily constrained, we would urge the City to use this criteria as a core objective along this stretch of river in terms of seeking restoration opportunities. We would also strongly encourage the city to look for opportunities to provide as much continuity in planting along the edge of the river to provide for migrating birds that follow the Willamette River.

6. **Ecodistricts versus landscape scale restoration**: Audubon supports the concept of Ecodistricts but we are concerned that too often an assumption is made that we can simply take care of the environment by concentrating green infrastructure and sustainable building within these very limited geographies. While it make sense to set up specific areas to explore cutting edge strategies such a co-generation of power, reuse of water, etc, it is also critical to recognize a per the 2005 Watershed Management Plan that trees other green infrastructure strategies such as trees, ecoroofs, green streets, bioswales, backyard habitat restoration, and establishment of parks and naturals areas have to be distributed across the entire landscape. This is necessary to achieve both our equity and ecological health objectives. This City long ago moved beyond "pilot" projects to achieve ecosystem health and sustainable stormwater management. Ecodistricts are great to begin implementing the next generation of cutting edge strategies, but they should not take us backwards from a landscape scale approach to existing and well tested green strategies.

We appreciate the opportunity to be involved in this process as well as your consideration of these comments.

Respectfully,

Bob Sallinger
Conservation Director
Audubon Society of Portland

Letter from Matt Arnold, Bicycle Advisory Committee

From: Matthew Arnold
Sent: Wednesday, August 22, 2012 6:03 PM
To: Melissa Egan
Cc: 'Leclerc, Mauricio'; 'JUHASZ Todd'; Heather McCarey
Subject: RE: NNEQ SAC - confirmation of your votes & comments

MELISSA:

My vote on the Facility Plan should be a "2" – with the understanding that it would be a "1" if there were some guarantee that *all* of the bike infrastructure would be built as part of an overall bikeway network for this area. Said differently, it is significant and of the utmost importance that the bike features be built as a redundant network that, together, appeals to all types of riders, especially the "interested but concerned." If key features – such as the bike/ped overcrossing -- were removed, thereby eliminating comfortable cycling options for our most concerned or vulnerable riders, then I would drop my support (as would the Portland Bicycle Advisory Committee).

As far as the language to insert, I'm going to leave it to the actual plan writers to massage this a bit (and to determine the best spot for it within the document), but here goes:

> *The bikeway infrastructure presented within this Facility Plan represents a networked solution for moving cyclists of all ages and abilities through this high-intensity area of our city. This bikeway network is redundant by design, and provides a variety of on-street and off-street options engineered to not only appeal to the strongest and most confident riders, but also to entice the "interested but concerned" who make up the largest portion of our populace. Any future refinement of this Plan should bear this fact in mind, and any resulting designs should be checked to ensure that they will provide safe and efficient bicycle access to and through the district for the largest possible range of cyclists.*

Thanks, and please let me know if you all have any further questions/concerns.

Eliot Neighborhood Comments on the Final NE Quadrant Plan

Plans are needed for planning, naturally, but also for agencies to program, budget, and coordinate actions. This plan fulfills that purpose well while presenting a broadly supported compromise among many interests. It is a good plan and given thought, analysis, and consensus behind it; maybe even a great plan. It is worth noting that several of the Plan's proposed street improvements to improve bike and pedestrian safety are already being studied for early implementation. This is indicative of the value of having a well-thought out plan that enjoys broad support. The final plan has two component plans; a Facility Plan for transportation and a Land Use plan for zoning and planning. Our position on each follows.

Eliot supports the proposed Land Use plan. We have some quibbles with specific zoning applied to specific lots and blocks, but we believe those are largely administrative matters that can be addressed with staff.

The Facility Plan enjoys Eliot's general support, however; as previously noted, this support is not without reservations. Our earlier reservations were regarding the proposed connection between Eliot's Historic core and the Rose Quarter/Blanchard areas and Lower Albina to the west via a new Hancock/Dixon overcrossing and the freeway expansion itself. The current plan retains the overcrossing Eliot opposed, however; our opposition was premised on a fear the City would not stand by the plan's proposed physical and other barriers to prevent by-pass around Broadway/Weidler feeding traffic directly onto Hancock, indirectly facilitating traffic on Tillamook, and forcing traffic that would back up at the signals on Russell to diffuse through local streets that are far too narrow to handle it. The language in the report now indicates the City is committed to "preventing" this, rather than simply "minimizing" it. This will require physical measures to divert and control traffic that are far more likely to be effective than signage that might have been allowed as a "minimization" measure.

As noted in the opening paragraph, recommendations for changes to surface streets to improve bike and pedestrian safety are already under consideration. Eliot fully supports not only the proposed changes, but an accelerated schedule for their implementation, including establishing a new east-west connection between Eliot's Historic core and the area west of I-5 from Flint to Dixon. Not only will this connection be less expensive to implement, it significantly reduces the risk that Hancock will become a by-pass. Threats to the use of Tillamook as a thoroughfare and overloading of Russell during the evening commute remain and will need to be addressed with traffic diversion and calming measures. Providing this connection will not only clean up the five-way intersection at Broadway to improve safety, it will also facilitate circulation between Eliot and the area to the west in a constructive way; one that facilitates bike and pedestrian access and access to and from the commercial enterprises west of Williams that will be allowed to expand with the proposed new zoning.

With respect to the significant investment in freeway expansion, Eliot continues to question the value of this investment compared to the stated objectives and estimated benefits. I see the trucking industry has already begun to attack the plan for just the opposite reason: *expanding the freeway enough*. Clearly there will be future opportunities to continue this debate, so Eliot's opposition at this point should not be seen as a condemnation of the final plan.

Minority Report -- Dean Gisvold, SAC member, Irvington neighborhood, August 13, 2012

N/NE Quadrant Plan

I. The I-5 Broadway Weidler Freeway Improvements Section of the Plan.

The freeway "improvements" should not go forward. **The best option is the no build option, and here's why.**

Let's start with a public comment from the process: "You can't build your way out of congestion," which is exactly what the City and ODOT propose.

Forty years ago, the City said no to the Mt. Hood freeway and the Rose City freeway, and instead invested in the first light rail line. Forty years ago, the City said no to more cars and parking downtown and invested in a pedestrian friendly, transit-oriented downtown. I was privileged to participate in those decisions, which have, in my opinion, served us well. For years, Portland has and continues to invest in transit, light rail and streetcars, investing in the future. Portland still has an in migration of folks who want to live here, and I am convinced that the quality of life we enjoy will continue to attract businesses with permanent jobs and new residents.

The freeway proposal turns back the clock and is inconsistent with forty years of progress toward a transit-oriented city with 20-minute neighborhoods. It favors cars and freight over people and small businesses, such as the Paramount Apartments, the Left Bank development, the Madrona, and the medical clinic, all located in the study area. These businesses and other businesses like them represent significant public and private investments, a real effort to make this part of town pedestrian friendly and transit oriented. These are the very businesses this proposal should assist, not isolate, by bringing more traffic to their very doorsteps.

This proposal has the potential to cause significant problems to the operation of the east side streetcar system. This proposal was adopted without any environmental impact review and without any study of alternative transit options.

This proposal will further divide the Rose Quarter area and its development from the Lloyd District and many people who will live and work in this area.

This proposal will further impact the African-American community remaining in the area.

Finally, the time period for planning and construction, a 5- to 10-year period, will cause uncertainty for businesses thinking about relocating and investing in the area, and major problems for those who live and work in the area.

Another public comment is relevant here**:"Doesn't serve neighbors well, just cars, don't build it." My feeling as well. Don’t build it.**

II. The land use part of the Quadrant Plan makes more sense with several exceptions. I include those exceptions here as part of my minority report.

Regarding the Goals, Policies, and Actions for the Lloyd District area, pages 25-46, as supplemented by Appendix A and Appendix B.

Lloyd RC 3, App A, Map A2, and App B, RC3. I do not support the additional height limits for the Broadway Bridgehead, the Steel Bridgehead, MLK/Union Avenue Gateway, and the Thunderbird site. The term "gateway" does not carry with it an automatic increase in height so tall buildings can frame the approach to the Broadway Bridge. This approach was not followed on the west side of the Broadway Bridge, nor does this approach further Broadway as a "main street" as contemplated by Policy 4 on page 32 of "Successful Neighborhood Business Districts," which I support. Can we create a main street NE Broadway, and a high density N. Broadway? What we do in one part of Broadway will affect other parts of Broadway. To the extent this increase in height is also an increase in overall density, I see greater demand on Broadway to carry even more traffic through the neighborhoods, which may also increase the barriers to overall connectivity and travel by bike and walking.

Lloyd Urban Design Goals, page 39. A gateway location (third paragraph) does not require tall buildings to "emphasize the civic significance of these places." I am opposed to this goal. See comments above on RC 3.

Map A 2, Alt B. I do not support the increases in the height limits as set forth in this map. The major justification put forward for such increases is that it should spur new development because the old limits did not. This argument is pure speculation, and way too simplistic.

Map A 3. I question whether the Civic designation for Broadway is consistent with the further development of Broadway as a "main street" and whether such designation meets the objectives of the NE Broadway Business group and the comments from Murray Koodish dated May 20, 2012.

Respectfully submitted:

Dean Gisvold

Dpg\n ne quad planning\minority report n ne quad plan aug 13 2012

June 27, 2012

Dear SAC Members,

On behalf of the Oregon Trucking Associations' members, I would like to provide the following comments regarding the N/NE Quadrant and I-5 Broadway Weilder Plan. The Oregon Trucking Associations, Inc (OTA)., the only association representing trucking in Oregon and has members with many different types of operations, including general commodities, sand and gravel, forest products, household goods, bulk, heavy haulers, warehouse, and local cartage. OTA members are part of a network of carriers that drive Oregon's highways to deliver freight and the project area is a critical corridor where the reliability has significantly deteriorated.

Over the last six months I have discussed with OTA members in every corner of the state that the end product of this two year process is the possibility of a future addition of a north and south bound auxiliary lane in this section of the corridor. A corridor that according to the American Transportation Research Institute Bottleneck Report is ranked 35th out of the top 250 bottlenecks in the country. They expressed the same fundamental concerns that OTA outlined in our comments on March 13, 2013. OTA members put safety first, investing in improved driver training programs and advanced safety technologies. They actively participate in industry safety initiatives at the local, state and national levels and the direction the committee has taken to address our mutual safety goals in the project area are disappointing.

Today I want to reiterate OTA's concerns by reminding the committee that the project team's research (presented on December 8, 2011) indicated that the crash rate in the project area is three times what it is in the Terwilliger curves. From 2005 - 2009, there were 472 crashes reported in the study area and the crashes are due to short weaving sections, conflicting movements and friction from through movements, problems which are only minimally being addressed through the current plan. On page 2 of the June 7, 2012 - Facility Plan the data presented describes the problems in the project area and again confirms our safety concerns. Unfortunately the safety and reliability needs of the freight community and the motorists that travel the corridor have been seriously discounted throughout this process.

OTA has long supported a balanced transportation system throughout Oregon and has been actively involved in discussions in the Portland region where significant investments have been made in alternative transportation. While we applaud these efforts, we believe it's time to balance the investments in our transportation system and invest in improving safety in the I-5 Broadway Weidler/N/NE Quadrant.

The trucking industry in Oregon plays a significant role in the economy. There are over 6,190 trucking companies based in Oregon, most of which are small and locally owned. These companies provide one out of 16 jobs (85,050) in Oregon, paying wages totaling over $3.8 billion. The trucking industry also 'invests' over $486 million in federal and state roadway taxes and fees each year. For OTA and its members, the facts are clear: We need to invest in the asset. It's time to relieve the pressure this quadrant is under by improving safety and reliability in the project area. This will ultimately enhance the economic strength of the region.

Sincerely,

Debra Dunn

Heidi Guenin
Transportation Policy Coordinator
Upstream Public Health

I wanted to share a few thoughts as part of the evaluation, with the recognition that I was less engaged toward the end of the process than I was towards the beginning. These only reflect my concerns. Steve Bozzone, who was designated my alternate a little late in the process, participated in different stages but will likely not be able to submit an evaluation within the prescribed deadline.

***

It's still unclear to me why I was asked to join the committee. When I recognized that the process wasn't open to examining health impacts in a way that would utilize my expertise, I removed myself from the committee with the understanding that I would return when the project had advanced enough for my time to be used effectively. When staff asked me to return, I found that the process still wasn't open to **really** examining health impacts, particularly the disparities that the proposed solutions might exacerbate. At the same time, however, Upstream organized meeting with project staff for those partner organizations represented on the SAC to help keep all of us on the same page. I stayed engaged largely in part to facilitate these meetings.

I do very much appreciate that staff (especially Andy Johnson and Todd Juhasz from ODOT and Mauricio Leclerc and Steve Iwata from the City of Portland) were willing to make time for small group meetings, which did end up being much more helpful for me and several of the partners who have not traditionally been at the table. Andy and Todd were very responsive to my need for clarification around the ODOT portions of the project.

On the other hand, the SAC meetings seemed to work well for the old-hand players but didn't feel productive for me and some of the partners from whom I suspect you might not receive an evaluation. Because I hadn't seen much willingness to expose the project to a meaningful health analysis, the only thing that was really keeping me engaged on the SAC was when I could be a support for our partners. Once they no longer felt the process could serve their constituents, I could not justify continuing to spend much time with the project, especially since my organization never did have any resources to dedicate to me participating.

To be honest, I remain unconvinced that expanding a freeway in the heart of our city can be justified at all. Local improvements are desperately needed, but this project seems like a poison pill. The inability to examine the serious upstream and downstream impacts and possible solutions was very frustrating. At a time when it's especially important that our limited transportation dollars are spent to support as many of our state and community goals as possible, we need to be able to approach problems in ways that might at first seem "radical" and put all of the options through their paces. That so many issues were off the table from the beginning made it hard to believe that the process wasn't mostly cooked from the get-go.

Fritz Amendment
10/25/12

36972

WHEREAS, there is a history of gentrification and displacement in the N/NE Quadrant Plan area;

BE IT RESOLVED, that the Bureau of Planning and Sustainability will evaluate whether requirements as well as bonus incentives should be applied when intensification in zoning designations or heights map changes are made, so that all new residential development will include a range of housing affordability; and

	Regular	Consent	4/5ths	
October 25, 2012	☒	☐	☐	October 12, 2012

6a. Financial Impact Section:	6b. Public Involvement Section:
☒ Financial impact section completed	☒ Public involvement section completed

1) Legislation Title: Adopt the N/NE Quadrant Plan and the I-5 Broadway-Weidler Facility Plan (Resolution)

2) Purpose of the Proposed Legislation: The proposed Resolution will adopt the N/NE Quadrant Plan as non-binding City policy for the Lloyd District and Lower Albina subdistricts of the Central City, recommend that the Oregon Transportation Commission adopt the related I-5 Broadway/Weidler Facility Plan, and direct the Bureau of Transportation to implement near-term safety-enhancing improvements to surface streets in the vicinity of the Broadway/Weidler freeway interchange.

3) Which area(s) of the city are affected by this Council item? (Check all that apply—areas are based on formal neighborhood coalition boundaries)?

- ☐ City-wide/Regional
- ☐ Northwest
- ☐ Central Northeast
- ☐ Southwest
- ☒ Central City
- ☐ Internal City Government Services
- ☒ Northeast
- ☐ North
- ☐ Southeast
- ☐ East

FINANCIAL IMPACT

4) Revenue: Will this legislation generate or reduce current or future revenue coming to the City? If so, by how much? If so, please identify the source.

The N/NE Quadrant Plan and the I-5 Broadway/Weidler Facility Plan will be adopted by resolution and thus do not formally commit the City to specific revenues or expenditures. However, many actions in the plans lead toward implementing measures that are binding (e.g. zone changes and amended Comprehensive Plan policies). The revenue impacts of plan implementation actions will be addressed when they are proposed to City Council through the annual budget process or through future implementing ordinances.

The N/NE Quadrant Plan is a blueprint for change over the next 25 years. Eventual implementation of Comprehensive Plan Map and zoning map changes, as well as identified transportation and other infrastructure improvements are anticipated to prompt earlier development in the plan area, with related increases in property values and property tax revenue.

5) Expense: What are the costs to the City related to this legislation? What is the source of funding for the expense? *(Please include costs in the current fiscal year as well as costs in future years. If the action is related to a grant or contract please include the local contribution or match required. If there is a project estimate, please identify the* ***level of confidence.****)*

The N/NE Quadrant Plan and the I-5 Broadway/Weidler Facility Plan will be adopted by resolution and thus do not formally commit the City to specific revenues or expenditures. However, many actions in the plans lead toward implementing measures that are binding (e.g. zone changes and amended Comprehensive Plan policies). The cost impacts of plan implementation actions will be addressed when they are proposed to City Council through the annual budget process or through future implementing ordinances.

6) Staffing Requirements:

- **Will any positions be created, eliminated or re-classified in the current year as a result of this legislation?** *(If new positions are created please include whether they will be part-time, full-time, limited term, or permanent positions. If the position is limited term please indicate the end of the term.)*

  No.

- **Will positions be created or eliminated in *future years* as a result of this legislation?**

  No.

(Complete the following section only if an amendment to the budget is proposed.)
7) Change in Appropriations *(If the accompanying ordinance amends the budget please reflect the dollar amount to be appropriated by this legislation. Include the appropriate cost elements that are to be loaded by accounting. Indicate "new" in Fund Center column if new center needs to be created. Use additional space if needed.)*

There is no funding appropriation related to this resolution.

Fund	Fund Center	Commitment Item	Functional Area	Funded Program	Grant	Sponsored Program	Amount

[Proceed to Public Involvement Section – REQUIRED as of July 1, 2011]

PUBLIC INVOLVEMENT

8) Was public involvement included in the development of this Council item (e.g. ordinance, resolution, or report)? Please check the appropriate box below:

☒ **YES**: Please proceed to Question #9.
☐ **NO**: Please, explain why below; and proceed to Question #10.

9) If "YES," please answer the following questions:

a) What impacts are anticipated in the community from this proposed Council item?

The N/NE Quadrant Plan's goals, policies and implementation actions are intended to foster the growth of the Lloyd District into the intensely urban, vital and livable eastside center of the Central City, with a strong employment base, successful residential community and a variety of urban amenities. They will also strengthen Lower Albina as an industrial and employment area, reinforce the working harbor and provide for diverse employment and development opportunities.

The I-5 Broadway/Weidler Facility Plan is intended to improve transportation safety for all modes on the I-5 freeway and on local streets in the vicinity of Broadway/Weidler Interchange. It will also improve connectivity and enhance the pedestrian environment through additional freeway crossings and lids. Potential traffic impacts on the Eliot Neighborhood will be addressed through traffic calming measures identified in the plan. There are expected to be some construction impacts related to the proposed freeway improvements. The plan calls for the City and ODOT to continue outreach and to develop a construction mitigation plan that minimizes impacts. The proposed freeway lids will help minimize construction impacts by providing flexibility for staging and circulation.

b) Which community and business groups, under-represented groups, organizations, external government entities, and other interested parties were involved in this effort, and when and how were they involved?

Public involvement and outreach to residents, property owners, business owners, community organizations and concerned stakeholders was extensive. The Stakeholder Advisory Committee included representation from a diversity of neighborhood, citywide and regional interest groups, including: the Bicycle Advisory Committee, NE Coalition of Neighborhoods, Sullivan's Gulch Neighborhood Association, Pedestrian Advisory Committee, Oregon Trucking Association, Portland Freight Committee, Irvington Neighborhood Association, Latino Network, Upstream Public Health, Central City Concern, Central Eastside Industrial Council, AIA Portland, NNE Business Association, Urban League, Lloyd TMA, Audubon Society, Lloyd District Community Association, Eliot Neighborhood Association, Metro, Oregon Department of Transportation, Port of Portland, Portland Development Commission and TriMet.

Outreach activities included: public walks; workshops and charrettes; public surveys; open houses; community group and stakeholder meetings; public commission briefings and hearings; opportunities for public comment at Stakeholder Advisory Committee meetings; a project web site; postal and electronic mailings; and newsletters. Additional details about public involvement activities is contained in the N/NE Quadrant Plan, Appendix F: Public Involvement Summary.

c) How did public involvement shape the outcome of this Council item?

Public input played a significant role in shaping each phase of the project. Input from public events, surveys, Stakeholder Advisory Committee and subcommittee meetings, stakeholder meetings and other outreach activities informed the identification of issues, opportunities and constraints and the development of evaluation criteria, planning alternatives and final recommendations.

d) Who designed and implemented the public involvement related to this Council item?

A number of staff members from the Bureau of Planning and Sustainability, the Bureau of Transportation and the Oregon Department of Transportation contributed to the design and implementation of the public involvement efforts, including Clay Neal (BPS), Karl Lisle (BPS), Stephanie Beckman (BPS), Diane Hale (BPS), Mauricio Leclerc (PBOT) and Todd Juhasz (ODOT). The project's facilitator Sam Imperati of the Institute for Conflict Management also contributed. In addition, the Stakeholder Advisory Committee reviewed the public involvement plan in draft form and helped inform public involvement activities.

e) Primary contact for more information on this public involvement process (name, title, phone, email): Stephanie Beckman, Senior Planner, 503-823-6042, Stephanie.beckman@portlandoregon.gov.

10) Is any future public involvement anticipated or necessary for this Council item? Please describe why or why not.

Future public involvement activities are anticipated as part of refining and implementing the N/NE Quadrant Plan's recommendations as part of the final Central City 2035 Plan package, anticipated for adoption in 2015. Additional public outreach will be ongoing as part of freeway interchange improvement concept refinement and preliminary engineering, as well as contemplated near-term safety improvements to surface streets near the interchange.

Council Transmittal Memo

DATE: October 12, 1012

TO: Mayor Sam Adams and Members of City Council

FROM: Susan Anderson, Director

1. **Resolution Title:** Adopt the N/NE Quadrant Plan and the I-5 Broadway-Weidler Facility Plan (Resolution)

2. **Contact:** Karl Lisle, Senior Planner, 503-823-4286

3. **Council Date:** October 25, 2012

4. ☐ **Consent Agenda Item** ☒ **Regular Agenda Item Time Certain 2:00 pm**

   ☐ **Emergency Item** (explain below) ☒ **Non-Emergency Item**

5. **Purpose of Agenda Item:** This Resolution adopts the Central City N/NE Quadrant Plan as non-binding city policy, recommends that the Oregon Transportation Commission adopt the concurrently developed I-5 Broadway/Weidler Facility Plan and directs the Bureau of Transportation to work with the Oregon Department of Transportation to refine the facility plan, seek funding to implement it, and work on near-term transportation improvements in the vicinity of the Broadway/Weidler interchange.

6. **History of Agenda Item/Background:** The N/NE Quadrant Plan is a part of the Central City 2035 project, an effort to update the 1988 Central City Plan. This project includes the Central City 2035 Concept Plan and more specific plans focusing on the several subdistricts of the Central City. The N/NE Quadrant Plan is the first of these more specific plans to be completed, covering the Lloyd District and Lower Albina. The need for an updated policy framework to guide investment and development in the Central City has long been identified by Central City stakeholders.

The I-5 Broadway/Weidler Facility Plan, developed collaboratively with the Oregon Department of Transportation, addresses safety and operations issues on I-5 within the N/NE Quadrant, a freeway corridor with the highest crash rate in the state, as well as surface streets near the Broadway/Weidler interchange, a documented high-risk area for bicycle-car and pedestrian-car conflicts.

7. **What individuals or groups are or would be supportive or opposed to this action?** The project included extensive public involvement, including a 30+ person Stakeholder Advisory Committee (SAC) with representation from a broad array of interest groups.

   The land use, urban design, and local transportation policies and actions proposed in the quadrant plan have generally received wide-spread support from members of the SAC and other stakeholders. The plan's recommendations, when implemented, will benefit the city generally, and the N/NE Quadrant specifically, by fostering the growth of the Lloyd District into the intensely urban, vital and livable eastside center of the Central City and strengthening Lower Albina as an important industrial and employment area.

   Most stakeholders have also expressed support for the safety and operations improvements to Interstate 5 proposed in the facility plan. The City and ODOT are committed to work with property owners and interested stakeholders to address remaining concerns in the next phase of refining the facility plan. Some members of the SAC do not support the facility plan, including representatives of the Eliot and Irvington neighborhood associations. Objections to the facility plan are outlined in the minority reports contained in the Stakeholder Advisory Committee Recommendations document.

8. **How does this relate to current City policies?** The N/NE Quadrant Plan builds upon the Central City 2035 Concept Plan and reflects the priorities, goals and policies of the Portland Plan to make Portland prosperous, educated, healthy and equitable. The quadrant plan also supports the policies of the Climate Action Plan by encouraging high-density mixed-use urban development in the Central City which is a highly efficient growth pattern and supports the use of alternative transportation modes. It also provides a long term framework for district energy, rainwater harvesting and reuse, and open space development within the Lloyd EcoDistrict.

   The quadrant plan will be incorporated into the City's updated Comprehensive Plan, following the completion of additional quadrant planning work outlined in the Central City 2035 Concept Plan, as part of the final Central City 2035 Plan package, anticipated in 2015.

   The I-5 Broadway/Weidler Facility Plan responds specifically to findings in the I-5/405 Freeway Loop Advisory Group Final Report, accepted by City Council Resolution No. 36448 on October 19, 2006, which identified the need to improve operations and safety on Interstate 5 between the Fremont Bridge and Interstate 84 as an urgent short-term priority.

October 5, 2012

Mayor Sam Adams and Portland City Council
Portland City Hall
1121 SW 4th Avenue
Portland, OR 97204

Dear Mayor Adams and City Commissioners,

At a public meeting held on September 25, 2012 the Planning and Sustainability Commission voted to forward the N/NE Quadrant Plan and I-5 Broadway/Weidler Facility Plan to City Council for adoption by resolution. The Commission took actions on two separate motions:

1. To recommend the City Council adopt the N/NE Quadrant Plan with several minor amendments. This motion passed unanimously.

2. To recommend the City Council ask the Oregon Transportation Commission to adopt the I-5 Broadway/Weidler Facility plan, and direct the Portland Bureau of Transportation to work with the Oregon Department of Transportation to develop a phasing strategy and seek funding to implement the facility plan and implement near-term safety-enhancing improvements to surface streets in the vicinity of the interchange. This motion passed by a 7-for to 1-opposed vote.

The Commission strongly supports the N/NE Quadrant Plan and the sustainable, vibrant, urban development vision it lays out for the Lloyd District and Lower Albina. This plan is supportive of and consistent with the Central City 2035 Concept Plan which the Commission is also forwarding to City Council for adoption as a separate agenda item.

At a September 11, 2012 public hearing on the two plans, the commission received a range of testimony generally supportive of the N/NE Quadrant Plan and both supportive and critical of the I-5 Broadway/Weidler Facility Plan. The opposing testimony centered on concerns about potential changes to neighborhood traffic patterns and on general opposition to any investment in freeway improvements within the urban core.

A majority of the commission supports the transportation improvements described in the I-5/Broadway Weidler Interchange Facility Plan and finds that the improvements are supportive of and well-integrated with the goals of the N/NE Quadrant Plan. In particular, the commission is highly supportive of the innovative City/State partnership that was used to develop the plans and the attempt to use freeway transportation investments to improve local neighborhood-serving connections and development conditions in the vicinity of the project. In addition, the commission is pleased that the recommended freeway improvements are compact and don't consume any additional land for freeway uses while still making significant safety and operational improvements on I-5.

As noted, the recommended I-5 Broadway/Weidler Interchange improvements suggest significant improvements to the local street system above the freeway. This is largely due to the incorporation of freeway "lids" that cap portions of the freeway trench. The space on these lids could be used for a variety of productive purposes including open space or development-related uses such as buildings or parking and access areas. The commission feels strongly that these lids and the proposed Clackamas bicycle/pedestrian bridge between the Lloyd District and the Rose Quarter must be included in the final project and cautions against the temptation to drop them or scale them back in the value engineering phases of work on the project.

The Commission engaged in a lengthy discussion about the Metro Regional Transportation Plan modeling assumptions used, which assume a higher VMT than does the Climate Action Plan. The Commission hopes Metro will review its modeling at a regional scale to address these inconsistencies before additional major projects are planned. A minority of Commissioners also raised concern about the high cost of the freeway project – a single transportation facility – in contrast to what could be achieved if funds were to be spent in smaller increments around the city to improve safety issues for all transportation modes and that could better address climate initiatives.

The Planning and Sustainability Commission recommends that Council adopt the Resolution which:

1. Adopts the N/NE Quadrant Plan as non-binding City policy (pending completion of CC2035 work);
2. Recommends that the Oregon Transportation Commission adopt the I-5 Broadway/Weidler Facility Plan; and
3. Directs the Bureau of Transportation to work with the Oregon Department of Transportation to:
    a. Develop a phasing strategy and secure funding to implement the I-5 Broadway/Weidler Facility Plan; and
    b. Implement near-term safety enhancing improvements to surface streets in the vicinity of the Broadway/Weidler interchange.

Thank you for the opportunity to participate in the review of these plans and for considering our recommendations.

Sincerely,

André Baugh
Chair

*1191	Accept a grant in the amount of $36,000 and appropriate $27,000 for FY 2012-13 from the Oregon Association Chiefs of Police 2013 Safety Belt Enforcement Program for sworn personnel overtime (Ordinance) (Y-5)	185696
	Commissioner Randy Leonard **Position No. 4** **Water Bureau**	

1192	Amend contract with Moore Excavation, Inc. to increase compensation and scope of work for the Westside Header Relocation Phase 2 project (Ordinance; amend Contract No. 30002064) 15 minutes requested	**PASSED TO SECOND READING OCTOBER 31, 2012 AT 9:30 AM**
1193	Authorize the Portland Water Bureau to purchase property located near the Bull Run Watershed to enhance protection of the Watershed, secure right of ways for the conduit routes, contribute to Endangered Species Act compliance and provide for payment (Second Reading Agenda 1171) (Y-5)	**185691**
1194	Assess benefited properties for water main improvements in the Deltawood Phase I Local Improvement District (Second Reading Agenda 1172; C-10031) (Y-5)	**185692**
	Commissioner Amanda Fritz **Position No. 1**	
1195	Establish independent City Budget Office (Ordinance; amend Code Sections 3.15.010 and 3.15.040; add Chapter 3.16) 40 minutes requested	**REFERRED TO COMMISSIONER OF PUBLIC UTILITIES**
	Commissioner Nick Fish **Position No. 2** **Portland Housing Bureau**	
***1196**	Authorize the purchase of property at 604 NE 99th Ave from Human Solutions, Inc. for $1 and authorize a ground lease with Glisan Commons Phase I Limited Partnership for portions of City-owned property at 9929-9999 NE Glisan St to facilitate the redevelopment of all properties at the site as Glisan Commons (Ordinance) 10 minutes requested (Y-4; Adams absent)	**185697**
	Commissioner Dan Saltzman **Position No. 3** **Bureau of Development Services**	
1197	Amend fee schedules for building and electrical construction permits (Ordinance) 10 minutes requested	**PASSED TO SECOND READING OCTOBER 31, 2012 AT 9:30 AM**
	Bureau of Environmental Services	
1198	Authorize Wholesale Sewer Services Agreement with Clean Water Services for conveyance and treatment of sewage (Ordinance)	**PASSED TO SECOND READING OCTOBER 31, 2012 AT 9:30 AM**
1199	Authorize Pretreatment Program Implementation Agreement with Clean Water Services for sewer services (Ordinance)	**PASSED TO SECOND READING OCTOBER 31, 2012 AT 9:30 AM**

1200	Assess benefited properties for sanitary sewer improvements in the Deltawood Phase II Local Improvement District (Second Reading Agenda 1132; C-10032) (Y-5)	**185693**
1201	Amend various sections of the Public Works Improvement Code and Plumbing Regulations to implement the new policies related to the City's Nonconforming Sewer Conversion Program (Second Reading Agenda 1173; amend Code Chapters 17.32, 17.33, 17.36 and Title 25) (Y-5)	**185694**

At 11:35 a.m., Council recessed.

A RECESSED MEETING OF THE COUNCIL OF THE CITY OF PORTLAND, OREGON WAS HELD THIS **24TH DAY OF OCTOBER, 2012** AT 2:00 P.M.

THOSE PRESENT WERE: Mayor Adams, Presiding; Commissioners Fish, Fritz, Leonard and Saltzman, 5. Commissioner Fish left at 3:30 p.m.

Commissioner Leonard arrived at 2:03 p.m.
Commissioner Saltzman arrived at 2:04 p.m.

OFFICERS IN ATTENDANCE: Karla Moore-Love, Clerk of the Council; Roland Iparraguirre, Deputy City Attorney; and Harry Jackson, Sergeant at Arms.

The meeting recessed at 3:00 p.m. and reconvened at 3:17 p.m.

		Disposition:
1202	**TIME CERTAIN: 2:00 PM –** Adopt the Central City 2035 Concept Plan (Resolution introduced by Mayor Adams) 75 minutes requested **Motion to include in the resolution reference to the urban design principle of stepping down building heights to the river and that it will remain in effect unless a city wide public involvement process occurs that calls out specific changes:** Moved by Mayor Adams and seconded by Commissioner Fish. (Y-5) (Y-5)	**36970** **AS AMENDED**
1203	**TIME CERTAIN: 3:15 PM –** Accept the I-5 Eastbank Freeway Tunnel Alternative Concept Diagram as a reference document in the Central City 2035 Concept Plan (Resolution introduced by Mayor Adams) 30 minutes requested (Y-4; Fish absent)	**36971**

At 3:41 p.m., Council recessed.

A RECESSED MEETING OF THE COUNCIL OF THE CITY OF PORTLAND, OREGON WAS HELD THIS **25TH DAY OF OCTOBER, 2012** AT 2:00 P.M.

THOSE PRESENT WERE: Mayor Adams, Presiding; Commissioners Fish, Fritz, Leonard and Saltzman, 5.

OFFICERS IN ATTENDANCE: Karla Moore-Love, Clerk of the Council; Ian Leitheiser, Deputy City Attorney; and Greg Goodwin and Wayne Dykes, Sergeants at Arms.

		Disposition:
1204	**TIME CERTAIN: 2:00 PM –** Adopt the N/NE Quadrant Plan and the I-5 Broadway-Weidler Facility Plan (Resolution introduced by Mayor Adams) 90 minutes requested **Motion to amend resolution due to a history of gentrification and displacement in the N/NE Quadrant Plan area, that the Bureau of Planning and Sustainability will evaluate whether requirements and bonus incentives should be applied when intensification in zoning designations or heights map changes are made, so that all new residential development will include a range of housing affordability:** Moved by Commissioner Fritz and seconded by Commissioner Fish. (Y-5) (Y-5)	**36972** **AS AMENDED**

At 4:00 p.m., Council adjourned.

LAVONNE GRIFFIN-VALADE
Auditor of the City of Portland

By Karla Moore-Love
Clerk of the Council

For a discussion of agenda items, please consult the following Closed Caption File.

This file was produced through the closed captioning process for the televised City Council broadcast and should not be considered a verbatim transcript.
Key: ***** means unidentified speaker.

OCTOBER 24, 2012 9:30 AM

Adams: Good morning everybody welcome to the chambers. Today is wednesday, october 24. 9:30 a.m., and the city council will come to order. Good morning, karla. How are you?
Moore: I am ok, thank you.
Adams: I like your new hairstyle.
Moore: Thanks.
Adams: Can you please call the roll. [roll taken]
Adams: A quorum is present, we shall proceed beginning with the communications. And let's see.
Fish: Proclamations first.
Adams: We do communications, we have a special proclamation. Today we're celebrating national food day. And recognizing the abundance of local activities as it relates to food security and healthy foods. Four months ago, the city council passed a zoning code revision to support the expansion of growing and distributing food within the city as well as setting measurable goals for our food security and healthy food program. We took steps, these steps to remove barriers, create opportunities. We have had much success in our food policy, and program work. But, we still have a long way to go to ensure an equitable food system for all of our citizens. Our climate action plan, the Portland plan, and the comprehensive plan recognize those inequities and provide the foundation for further work. I'm confident with all the great partnership that exists in this city that we'll continue to move forward with determination and be able to get more, give more residents the opportunity to share the bounty of our food system. So, I am pleased to read the following proclamation, and then we'll hear from a few representatives, and few special guests. Whereas every Portlander has the right to an adequate supply of nutritious, affordable, and culturally appropriate food and access to affordable healthy food as a key component of the Portland plan. And whereas, supporting local farmers creates a stable agricultural land base and contributes to our local economy. And whereas, the garden in the front yard of city hall is symbolic of our commitment to raising awareness of these issues, and whereas, curbing junk food in our schools, community centers and public spaces is part of our strategy to combat the rising incident of childhood obesity, and whereas partnering with hunger relief agencies through our free lunch program senior meal programs and after-school programs are ways in which the city works to improve food security and address hunger in our community. Whereas the city of Portland and Multnomah county's climate action plan seeks to reduce consumption of carbon intensive foods that increase the consumption of local foods. Whereas the city's revised zoning code supports and encourages local food production and distribution and the expansion of our network of community gardens and safe places to grow healthy food has been a key city initiative. Whereas our city is stronger because of the many Portlanders who work tirelessly to create a more equitable and sustainable food system. Now therefore, i, sam Adams, mayor of the city of Portland, Oregon, the city of roses to hereby proclaim wednesday, october 24th, 2012, to be food day in Portland and encourage all Portlanders to celebrate by taking part in the activities, planned throughout the week. [applause] I would like to thank everyone who has been part of the better together city hall garden, which is celebrating its fourth season, sergio garcia showcase for growing food in very small spaces and providing education and food donations to elm court loaves and Fishes. I would like to

recognize the master gardeners. They are the ones who get their hands dirty and connect with the public, who always have interesting questions for gardeners. And specifically, jen, who managed the garden for the first three years and was dedicated to the success, and now jillian, who took over for jen this summer, and doing a wonderful job continuing the tradition. I would like to recognize daniel bacca, a metal work artist, who was the sign-maker and also builds functional pieces for the beautiful signs for the garden's inauguration in 2009, and recognize our partners, the Oregon state university extension service, for providing the master gardeners and supporting the program. Thank you weston miller, and also recognize west Multnomah county soil and water conservation district for their financial support of the master gardener program. The executive director dick springer, and education coordinator erica stokes. Thank you very much. Appreciate it. [applause] with that we'll hear from a few people so if you would not mind reading the title for 1174, 1175, 1176, and 1177. And 1178. But we can only have three at a time, so the first three.

Item 1174, 1175, 1176.

Adams: Welcome. Please begin.

Nancy Becker: Thanks. Greetings, city council members. I am nancy becker, a registered dietitian with Oregon public health institute, and thank you for your interest in healthy eating. As you know, we have a crisis of obesity in our country. Two-thirds of the adults in our city are at risk if diseases of overconsumption. High blood pressure. Heart disease and diabetes. Much of the problem can be attributed to our sedentary lifestyle, and much of it is related to the food we eat. These diseases are not only driving up the cost of health care, but causing untold pain and suffering. Most of us know that eating too much sugar, fat, and salt can lead to obesity and disease. Yet, it can be very hard to choose a way of eating that is healthier. Since I am a nutritionist I wish that I could have confidence that nutrition education is the answer. Instead, I believe that we must think creatively about the ways our system leads to overconsumption. We don't have the capability to address the regional food system in the city, per se, but we can look at the food environment. Our city is well-known for being a green city, and for being a foody city. It is not known no being a healthy city. I believe we can seize the intersection between greenness and foodiness, and become a healthy city. And you have done a great job of putting food and health agenda for the city, but we can do more. Everywhere we go there is food, and not only food but large portion sizes of unhealthy. There is several strategies to help Portlanders make healthy choices. While we cannot change the whole food system, we can focus on a few things to make a difference in Portlanders' lives. Smaller portions. Less sugary drinks. And more fruits and veggies. Changes like this make a huge difference. We have already taken the junk food and sugary drinks out of schools and parks and recreation centers, thank you very much. We have passed menu labeling in chain restaurants in Oregon, as well as workplace accommodation for breastfeeding. At the blues' festival this year, you piloted a program to incentivize half portions and drinks with no sugar. By all reports it was a great success. Some vendors reported non sugary drinks sold like hot cakes. That was a joke. So, while you really have moved the agenda, there is more work to be done. We could establish nutrition standards for all city buildings similar to what we have, in schools and parks and recreation centers. We could set more incentives for festival and food carts to offer smaller portions, drinks that do not have added sugar and more fruits and vegetables. I dream about mobile green grocery stores for under-served neighborhoods, and lastly, I hope that the city can set guidelines for food served internally at meetings, and events that the taxpayers pay for. These are only some of the strategies that we can use to make headway and confront this thorny issue. Portland can be famous for being a healthy city as well as a green city and foody city. Thank you.

Adams: Thank you very much. Hi. Can you please read the title -- did you read all three? Ok. Please continue.

Amy Gilroy: I am amy gilroy, and I also work for Oregon public health institute, and I am going to talk a bit today about how we've been working with the city to promote healthy policy and some of

the city policies passed recently. Planning for access to healthy food is important to our city. Healthy food is something that we all care about. As you know not all Portlanders have access. It is unavailable, selections are of poor quality, and some, in some communities, or too expensive. Bps estimates a third of Portlanders live within a half mile of a market that sells healthy food. This explains, in part, why so many do not meet recommendations for fruit and vegetable consumption and have a higher risk for diet related disease. Planning our communities for access to healthy food goes a long way towards protecting the health of our families and future generations. Over the past few years we have been working to set policies, and nancy mentioned a few of those. Most recently, bps and obmi worked to promote health and actress into the zoning code, which was adopted this past summer. They worked together to determine how planning address gaps in access to healthy food among specific communities in Portland. We found that the zoning code was not precise enough to help healthy foods in communities that lacked community gardens. While the revision will protect farmers markets and expand opportunities to grow food for many Portlanders, there are many families who live in housing with little open space for gardening, and their neighborhood market offers only junk food. These families are the most at risk for developing poor health outcomes and stand to benefit if policies are in place to support healthy eating. Ophi is providing guidance for the comprehensive plan update. We support the 2035 Portland plan objective to see 90% of Portlanders service by healthy food within a half mile of their home. And we feel that full service grocery stores are not the only solution to reaching this objective. There are strategies that help to bring healthy food to economically depressed neighborhoods. For instance, the city can work with existing retail businesses to offer healthy packages, and design to improve access and profitability, by providing financial incentives, permit fee reductions and technical assistance. The city could promote healthy retail and limit access to fast food and other unhealthy food options as nancy just mentioned. It is debatable which is more effective, limiting access to unhealthy foods or increasing access to healthy foods. Reasonable people differ on the emphasis but we know that a combination of both is important and vital to the health of our community. It's up to all of us to protect and improve access to healthy food for all Portlanders. Thank you.

Jill Kuehler: Good morning, mayor and commissioners, I am jill kuehler, the director of zinger farm. 12 years ago, thank you, to commissioner Saltzman, who had the great foresight of seeing what an urban educational farm could be. We were granted long-term lease on the property in southeast Portland, and I think that no one who was a part of that process 12 years ago had any idea that 12 years later, over 5,000 youth would be coming to the farm for field fingertips and summer camps. 1,000 families each year would be participating in workshops on gardening and healthy eating on budget, and or that a farmers market were start up in low income neighborhood, the lents international market that serves immigrant farmers and, and low income shoppers at the market. Last year, we extended that lease onto the ferry property, which is providing two more acres of space going to low income members of our csa, that is one of the first in the state to accept snacks for our payment for csa shares. It also allowed us to build a community garden. The community garden has over 30 plots. We worked closely with Portland community gardens to translate the outreach materials and the rules of community gardens into russian, and now of those plots, ten are filled with russian-speaking gardeners, and next year, looking forward, we are working to build the urban grange. It will not be a casino. [laughter] It will be what a grange is supposed to be, a gathering place for community members and where agricultural economics can thrive. We will be able to double the number of people served by zinger farm programming. It will also provide launch pad for new food business. We look to your support to help us build the urban grange. Now, changing hats quickly, I am also on the board of the east Multnomah county soil and water conservation district, and we've been very proud to provide several grants to new gardens to help them get built. We are very proud to partner with you all in that capacity.

Fish: Before you wrap up, I know you have a special guest from the great state of texas. Would you like to introduce your mother?
Kuehler: My mother had no idea that she would be introduced at city hall.
Fish: Let's give her a Portland welcome. [applause]
Kuehler: Thank you all for recognizing the national food day and to letting us update you on, all on the amazing work that's happening throughout the city.
Fish: Thank you all.
Adams: Thank you very much. The next two.
Item 1177 and 1178.
Adams: Welcome.
Susan Navrotsky: Thank you. Good morning, mayor Adams and city council members. I'm susan navrotsky and I have been coordinating food day Oregon on a volunteer basis. We are celebrating for a day, a celebration towards healthy, sustainable, and affordable food. The ultimate goal of food day is to strengthen and unify the food movement in order to improve our nation's food policies. It's chance to celebrate what our food system does right, and take action to bring us closer to food system that promotes real food. The food day priorities are to promote safer, healthy diets. Support sustainable and organic farms. Reduce hunger. Reform factory farms to protect the environment. And support fair working conditions for food and farm workers. This year there are about 3,000 events posted on the national food day website. Oregon is well represented at the national level with both representative blumenauer and senator wyden serving on the advisory board. We can be proud in Portland that the northwest institute, a Portland-based organization, developed two excellent discussion guides that are posted at the national food day website this year. The discussion guide's menu for the future and hungry for change are being used in classrooms, work settings and community events to celebrate food day. This year Oregon is hosting 100 events that will highlight the sustainability, locally grown, and produced foods, food justice, and hunger issues. Many of these events are scheduled in the Portland region. On saturday, Portland farmers market invited local food justice nonprofits to share their message about nutrition, health, animal welfare and sustainability. On monday, psu hosted a food and equity symposium open to the public. Today, Portland public school students will be offered a special lunch menu that includes chicken, green beans and fresh fruit all grown in Oregon. Madison high recruited volunteers for a garden work party, and a food day dinner that will be prepared in the school's cafeteria kitchen by students in their cooking class. Sisters of the road kicking off a food-based film series that will continue monthly through march. In my neighborhood, there is a soup social and food drive. Inviting neighbors to enjoy free soup, made with farmers markets ingredients, and to contribute healthy food items for the Oregon food bank. And tonight Oregon culinary institute is hosting a benefit dinner to help open the Portland kitchen, which will be a culinary afterschool program that will provide business skills and nutritional education for high school youth. All this besides the city's 1,000 garden celebration scheduled for later today. I thank you for the leadership and support you have provided to strengthen Portland's food system. I invite you to continue to collaborate with events like food day to build the momentum needed to change our food system. Thank you.
Adams: Thank you very much. Hi.
Robert Bradley: I am robert bradley. I am the manager of cherry blossom meals on wheels. As many of you know. What was for 40 years loaves and Fishes. The meals on wheels people is now meals on wheels people, loaves and Fishes. So, having said all of that, I want to thank you very much. I started with a meals on wheels four years ago, first thing I wanted to do was put up a community garden. For the people in downtown Portland. I was looking and looking and I got a telephone call, and I was asked, would you be interested in city hall? It seemed like an ideal location. I really want to thank you very much. It made a real difference to the people, both at elm court and to all of us at meals on wheels. I remember fondly a guy picked up a zucchini. There was

one zucchini plant that he liked. And he brought that zucchini up to elm court and raised it above his head. It said I grow the vegetables for this place. I was very, very pleased. You know, I got a telephone call when I was at elm court, out of the blue. A man called me up, and he said, I have a restaurant in the pearl district. I have had it for ten years. Business is down 40%. The only way that, the only way that I can endure this is by concentrating on the suffering of others, and to do that, I will provide a meal for 30 one day a week for you folks. He's been doing it for four years. That's the kind of community that we have. So, it's wonderful.
Fritz: Which restaurant?
Bradley: It's called series on the corner of 11th and lovejoy. Food is great. Go there often. Having said that, I want to mention, as well, that, thanks to the Portland parks department and commissioner Fish, we were able to put a garden in a cherry blossom when I moved out there, started the same process, looking for a place. We have five elevated beds. They are all 27 inches high, so seniors, work in the garden without bending over long handle hoe. We planted in january, or rather, in july. And we have pulled over 600 portions of food out of those beds. It is remarkable. A remarkable achievement of accommodation of people coming together, and it's working very well for us. One last thing, we now have a harvest to home. And that is one day a month, we are sending fresh fruits and vegetables to all the meals on wheels recipients. Started this program at cherry blossom as a pilot. I expect to move to two more locations in the next 60 days, and look forward to this growing. I really appreciate your help and interest on what is truly a wonderful day. Thank you.
Adams: Thank you very much. Thank you all. We really appreciate all the work that you have done. [applause] And you are welcome to stay and see democracy happen, or we will not consider it rude if you want to get up and go on with your day. So, we will continue. Does anyone have any items to pull from the consent agenda? Hearing none, karla, call the vote on the consent agenda.
Leonard: Aye. **Fritz:** Aye. **Fish:** Aye. **Saltzman:** Aye.
Adams: Aye. Consent agenda is approved. Karla, please -- well, we are ahead of schedule. So --
Fish: We have a time certain at 9:30.
Adams: Can you please read the title for presentation item no. 1179.
Item 1179.
Adams: Nick Fish.
Fish: I would like to invite emily york and laura nimi forward. We're going to do brief power point, and then we have invited guest, and I will make a brief introduction. Mayor and colleagues, about 3.5 years ago when the climate action plan was being pulled together, mayor Adams came to me and said, let's plug in an audacious goal for community gardens in this plan. And so, at page 53 of the 2009 climate action plan, there is a specific goal that was established that we were challenged to meet. I was relatively new at the job. And it turns out the mayor was taking advantage of me a bit. Because what I did not know at the time was that it had taken the city 35 years to build 1,000 gardens. And the mayor had said why don't we build another 1,000 in the next three years. So he was essentially saying, let's double our capacity in one-tenth of the time. Now, I guess there are advantages to being new on the council because I didn't know enough to say no. Today we're going to make a report to council, and I am very proud to tell you, that we have not only met that goal, but we have exceeded it. And today, we're going to say thank you to the community partners who made this possible, and celebrate what I think is a wonderful win for our community. So it's my pleasure to begin by introducing emily york from my office who is going to walk us through a power point.
Emily York: Thanks, nick, good morning mayor, commissioners. I am emily york, policy coordinator in nick Fish's office. I have had the privilege leading the 1,000 gardens initiative for the past three years. For Portland, community gardens, are nothing new. We built our first community garden in 1975. A parks and rec employee by the name of lesley managed that first garden, and I was just looking up to see if she is here. I don't see her but she will be joining us for

our celebration later today. Leslie steadily built the community gardens program for the next 35 years. And in that time, she built 35 gardens averaging one a year. With this strong foundation, that Leslie provided, we knew that we had a good chance of reaching our goal of 1,000 gardens. So, why 1,000 gardens? Nick mentioned it already with the, the 2009 Portland Multnomah county climate action plan, there was a specific goal in our food and farms chapter that committed us to developing or facilitating the development of 1,000 new community garden plots by 2012. And building gardens not only helps us to address climate change, but also, helps us to make progress on our immunity health goals, food security, and our other sustainability goals. As the commissioner in charge of parks, and the community gardens program, commissioner Fish saw the opportunity to launch a community-wide effort that he called the 1,000 gardens initiative, and from the beginning, we knew that we were not going to be able to do this alone. So, we started by using the Oregon solution's model to build our team. Governor kulongoski designated the initiative as an Oregon solutions project helping us to bring together dozens of partners from public, private, and nonprofit organizations. Many of our city bureaus participated, along with several other public agencies from the Portland region. You could see some of the logos here. Of course, nonprofit partners and even more nonprofit partners, and in fact, over the course of the initiative, new nonprofits were developing, and started, the gardens started sprouting up. We could hardly keep track of the activity that was part of the movement. We also worked with many businesses and corporate partners, only some of them listed here. In addition to building gardens on the ground, we also continued to build the program. We conducted focus groups, we developed a new tool kit with a step-by-step instructions and list of resources for neighbors interested in starting a garden in their neighborhood. And we developed a new 1,000 gardens blog where we highlighted our progress. And the work of partners. And we had a very committed volunteer in our office, abbey warren, who is here today. Abbey, you wave just so we can acknowledge you? She's been working on this initiative with us for the past two years. And she was the one behind the gardens blog, as well as a lot of other pieces of the project, so I wanted to make sure to thank you for your time and energy you put into this. We also had a lot of parks employees who stepped up and went above and beyond to support us in reaching our goal. It included our parks planners, folks in our customer service center, and our maintenance crews. They came together to help us reach this goal. We also had representatives from several other bureaus, including the water bureau, bes and bds, and we worked closely with our volunteer friends group, the friends of Portland community gardens. Throughout the process we kept the focus on underserved communities. We did this by targeting areas where our waiting lists were the longest. We identified locations for new gardens and neighborhoods that we knew lacked access. And we developed a new outreach strategies, some of the, some of those include putting fires in emergency food boxes, and in coordination with Oregon food bank, and we piloted some new partnership models. Some of those include working with the new park now coalition that's connected with veriday and working with the grant high school environmental club, which laura will share a bit more about in a second. So, this puts the landscape of the city's community garden program at the beginning of our initiative. This is 2009. And you could see it's pretty impressive when you compare it to other cities of our size. As we moved to 2010, that our carrot thermometer to the side there, rises up to 200 plots created in just the one year alone. Last year, we added close to 300 more. Bringing us halfway to our goal. And this year, we are proud to announce that we have met our goal of 1,000 new plots within the city's program, and that means that we have 1,000 new gardeners growing food on public spaces. This is tremendous accomplishment, and could not have been possible without a committed staff of partners and especially, our community gardens program coordinator, lauren nimi. Thank you very much for just hitting the ground running, and she is going to now share a few more stories about how all these gardens came into being.

Laura Niemi: Thank you. So, as emily said I am laura niemi, I am the program coordinator for the community gardens program in Portland parks and rec. And I want to talk a bit about the projects themselves. Over course of the initiative we built 17 new gardens throughout the city of Portland, and each time we approach building a garden we really look at using a community development model. And so that means that each garden has a community champion who really stewards the process and partners with parks and recreation to build the garden. And each garden is unique, but I have chosen a couple of stories to tell you to illustrate that process. The first garden our grant community garden. This is located on the grounds of grant high school. And the students at grant high were interested in working on a project that would increase the sustainability at their school, so they looked at a couple of options and decided to build a community garden and a school garden. They worked directly with Portland public schools to get permission to use the land to develop a garden, and also, worked with Portland public schools project manager throughout the process. They did all aspects of project management, including getting a pro bono design, developing a project budget, procuring donations, and they wrote a successful grant for $50,000 from state farm. Which is pretty impressive. They also did all of the community outreach, and organized a great grand opening event. Today, we have over 43 families who are gardening in plots in this garden. Several of whom are parents of students at grant high school, and this garden is in a very high demand area for Portland parks and recs. We don't have any other community gardens within a two-mile radius so we're really excited to have this new project. One of the other gardens that we opened this past year was the frazier community garden. And back in 2009, both served by the community gardens initiative the rose city park neighborhood association began conducting outreach and exploring the options to build a community garden in their neighborhood. The first of its kind. They identified couple of potential locations, but ultimately, settled on frazier park. And in order to preserve the green space in frazier park, they utilized an asphalt area and brought in project partners to help remove the asphalt. You could see above the before picture. That's what it used to look like, and on the right, that's today. Now, this project was not without some pitfalls, and the initial soil tests showed very high lead levels underneath the pad so we brought in bes, brownfield's program to help do a phase one and two analysis to see if there was a way that we could build a garden here safely. And what they found through that process, is that, that the, the lead levels were lower than our original results, and they suggest ways that we could mitt gate the existing led by removing native soil and bringing in clean fill. Another, another major partner in this project was our nonprofit friends of Portland community gardens. They helped to conduct outreach. They wrote three successful grants, and they provided garden design services. So today it serves 0 families, including a plot designated for the adjacent head-start program. Third garden is our ed benedict community garden, and the ed benedict park is located in east Portland, at about 104th and powell. And the master plan for the ed benedict park included a community garden, but for years we could not complete that piece because we lacked resources and funding. So, in 2011, the friends of the memory garden led the charge to fundraisers and install the garden. Entirely with volunteers and contractors. This garden serves a very diverse and low income population. The garden has over 40 plots, and nearly half of those people gardening in, and the plots received scholarship assistance. In addition, any day in the garden you might hear the following languages being spoken by the gardeners. We have russian, romanian, spanish, mien, tongan and english languages spoken there. So it's a very diverse garden. And beautiful, too, as you could see. I mentioned resources, and resources were a big part in being able to complete this initiative and achieve our goals. We have a pie chart that shows the various funding sources. But one-third of those city funds came from city council appropriations. You all allowed us to have $225,000 and that was one-third of the funding that it took to build all these gardens. And another third came from two major local grantors. East Multnomah soil and water conservation district and the Portland development commission. They contribute another third between the two them. And the

last third comes from many, many different sources. One major source was the water bureau, who through our Oregon solutions process committed two free water meter installations to build, for community gardens each year. Which is a really significant contribution, and we really appreciate it. And in addition, the friends of Portland community gardens wrote many grants to help fund the process, and they also did fundraising and contribute cash to the process. We also received funding from the bureau planning and sustainability, deep have, west Multnomah and soil water conservation district and many other organizations. So, you have heard today, when we started, we knew that we had a big challenge on our hands, and even at a certain point last year, we wondered if we were going to be able to achieve this goal, and we knew that we could not do it alone, and so we were so excited to know that our project partners also were building gardens while we were. And we really looked at the 1,000 plot goal as a collaborative goal, and so in the end, we, actually, did end up adding 1,000 new plots within the city of Portland program. Which were immensely something to be proud of. It was a major accomplishment and it took a lot of work. During the same time our project partners and other groups were building gardens and adding plots. So, together we have added nearly 2,000 plots in the past three years. That Portlanders are growing food in today. So we have invited a few more of those project partners to talk a bit about their projects. That's what's coming up next.

Fish: Thank you both very much and congratulations. Mayor, we have two invited panels that, that -- they have been given a limited amount of time to come up and give us a snapshot of their work. The first is judy sergeant from Portland public schools and Kassandra griffin from deep have and scott somohano from the sumner association of neighbors. If the three of you could come forward. We are running bit late today. So, we welcome you and glad you could join us, and judy, why don't you kick it off.

Trudy Sargent: Good morning. I am Trudy sargent, member of the board of education at Portland public schools, and I am here on behalf of my colleagues and superintendent carole smith to congratulate the city and particularly, commissioner Fish's office on achieving this goal of 1,000 new garden plots in our community gardens. As you know, we have an active partnership on many levels with the city. And particular with Portland parks and rec, but a key part of that is a partnership around community gardens at our school sites, so in addition to the garden that was highlighted today, at grant high school, we have nine other sites where we have community gardens. And so, those provide opportunities for community members to garden, and they used underutilized space on our school sites for community purpose. And also provide opportunities for students and teachers and families to work together. To learn about, about growing food. And there are dozens and dozens of other gardens in our school. Some of them grow food, and some of them are focus on native plants, or other themes. But, there is a real commitment to gardens as a really important educational element of our program. And one of the key pieces of the community gardens program is opening up our school sites to community members. And that's a part of our broader goal as a school district to welcome community members and have our schools be community centers in each of the neighborhoods. So, congratulations on the achievement 1,000 new community garden plots.

Fish: Thank you for your support. We are very proud, particularly of the new gardens at madison high school, vestal elementary and grant high school, and they could not have happened without strong support from the district, from the, from the teachers, and the parents, and most importantly from the students. So thank you.

Sargent: You are welcome, thank you.

Kasandra Griffin: Hi mayor, I am cassandra griffin, I am proud to be I am a founder and continuing board member of depave, which is a unique portion that has been a big part of this project and, and other city initiatives to remove asphalt and increase permeability of storm water and overall, improve our landscape for our humans, for wildlife, and for the watersheds. We have

worked with the city since the very beginning, the bureau of environmental services, provided the initial funding for our initial project. And which commissioner Fritz was at in 2008. I think all the rest you have been at other projects.
Fish: Some of us are still recovering.
Griffin: Yeah, it's fun, hard work, community building, it's great. We, so far, have depaved over 20 major sites, nearly 100,000 square feet of asphalt has been removed. And I think that means that over 2 million gallons a year of storm water are no longer hitting the sewer system. And for the 1,000 gardens projects we specifically worked with vestal elementary, vermont hills and frazier park, and we're excited to continue to work with the city in all different capacities, all bureaus to keep making the city greener and better for everyone.
Scott Somohano: Good morning. I am scott somohano, I am the chair of the sumner neighborhood association in northeast Portland. I am here to talk a bit about the helens view community garden. It's locate at 87th and sumner street. The property is about 11 acres owned by parkrose school district but leased and run by the Multnomah esd. There is two school districts that we had to negotiate with to get the garden in. The school is an interesting thing because they serve students from all over the county. It's not just a neighborhood school. But it used to be a neighborhood school. And so when it closed about 20 years ago, the neighborhood kind of lost its heart. It was the focal point of the neighborhood. This garden project is allowing us to get back in there and reclaim some of the, some of the heart and identity of the neighborhood. The other thing to mention about it is, is the sumner Neighborhood is designated as a food desert according to the department of agriculture. Meaning that we're below average income and we don't have very good access to, to the supermarkets or large grocery stores. So, not only is this a great way for us to reconnect with the new students that are in there, that are not from the neighborhood, but also, it's a good way to, to improve social health and nutritional benefits to the neighborhood. Our neighborhood wrote the, the concept plan for the garden. It's going to be about 10,000 square feet. It's in progress right now. And under construction. And we have a work party on november 3rd if any of you are interested. And, and basically, there is a lot of partners that we worked with to get it done even though our neighborhood wrote the concept plan. Sandra in the back of the room with central northeast neighbors, chris persons the principal at the high school, it could have been, you know, game over, if she said no. And, and the, the park school district and the superintendent dr. Fisher gray, susan navrotsky, i'm going to destroy your name, susan, who let us borrow a lot from her grant proposal. The soil district, east Multnomah county soil district, $17,000. Laura, who you just heard from, gave us a lot of technical expertise. We had a lot of partners, and we are very grateful for this opportunity to have this neighborhood, or to have this, garden in our neighborhood because we're high bound by very busy arterial streets, we don't have a lot that's walkable and having like this will be a big benefit so thank you very much.
Fritz: Could you sent me information about the work party on november 3rd?
Somohano: Ok, I will.
Fish: Thank you very much. Our final panel is deb lippoldt from growing gardens, jenny holmes from ecumenical ministries, and midge purcell from the urban league. Deb, do you want to kick us off?
Deborah Lippoldt: I am Deborah lippoldt, and I have the privilege of representing our gardeners of growing gardens. We're a nonprofit that's been in Portland for, for about 14, 15 years, and we support individual low income families to grow food right at their doorstep. We support them for three years, we work with hundreds of volunteers. Build the gardens, provides the seeds, plants, tools, and mentoring and help people grow food that they will then be able to enjoy those skills and eat healthier for a lifetime. We've been -- it's a real thrill to be here today with all these great super rock stars and, and food system, and particularly, in growing food. And we really appreciate all the partnerships, and we have loved being part of the, collaborative process of the Oregon solutions,

and the 1,000 gardens goal. One thing that, that we have tried to support, in particular, is doing educational opportunities through our workshop systems, and we also do afterschool and summer garden camps for low income elementary age children so we partner with some of those community garden sites, and all the school garden sites, as well. The last thing that I want to emphasize is that we're totally onboard with the 1,000 garden plot goal, and mayor, I don't know if you remember very early in your term, but you came out and helped us to celebrate by digging our 400th garden, well, next year we will be putting in our 1,000th garden, so we really appreciate all the support and the partnerships. Thank you.
Adams: Good work.
Jenny Holmes: I am jenny holmes with ecumenical ministries and the food and farms partnership. I want to congratulate commissioner Fish in the, and the council for their work in making this 1,000 garden initiative a reality. And thank you for inviting the community into be in dialogue with each other, and to find new pathways for collaborations on making more gardens, and especially, gardens that are accessible to those who either haven't known about the community gardens and don't know about the opportunities so therefore, are not asking for them, and those whose areas haven't had gardens, community gardens. In many states, gardens are important places where the spirit, human and the earth interact. It's where humankind might learn its role in creation, such as to 'til and keep the gardens. And, we are all here because we believe many important things happen in gardens. For health. For community. For environmental stewardship, for education, for spiritual wellbeing, and many more attributes. And, our hope and continuing to work with faith congregation and is encouraging them to do community gardens, food bank gardens, teaching gardens, that the new gardens and plots developed will involve the community, especially those that have been less involved historically and maybe have had less access to land for economic and social reasons. We hope that in the future more garden managers and owners will reflect the growing diversity of our city. Thank you very much.
Fish: Thank you. Welcome, mitch.
*******:** Good morning. Mayor Adams.
Saltzman: Push the button. There you go.
Midge Purcell: Oh, ok. Mayor Adams. Commissioner Fish. Commissioners, on behalf of the urban league and the african women's coalition, which was our partners in the urban gardens harvest garden project, I want to congratulate the city on this, for reaching this impressive milestone. And for making Portland a healthier and more sustainable city. I want to thank you in particular, for this support that you have given to the urban leagues, and african women's coalition, urban harvest garden, this was a plot on, in northeast Portland, on beach and albina, which was an eyesore for the community for many, many years. And the community came together, and turned that eyesore into a productive community garden in the middle of a food desert. And we would not have been able to do that if it wasn't for the support of the community. Young people in the community. Elders in the community. Who came down and lent their labor and their support, including commissioner Fritz, which we appreciate. She welds a mean hoe and was very supportive of that project. With the help of this program, we were able to install a water meter, to ensure a water supply to sustain the garden for years to come. So, I want to thank you. It was a particularly productive garden. We were able to grow bags of vegetables. Which we distribute to seniors in the senior program, and elders in the neighborhood. People in the community who have very, very little access to affordable, healthy food. We believe this is what the city of Portland should be doing and we are glad to be a part of it. And thank you very much.
Fritz: Commissioner Fish, I have to mention on that last note that this particular garden should get a hero's award when they started the day, they started when it was 24 degrees. People showed up. And they worked the entire morning. It was amazing.

Purcell: And I forgot to mention the Oregon tradeswomen. They really also contributed to this, to this transformation of this plot. And the beautiful structures on it so I would like to shout out to them as well. Thank you very much.
Adams: Thank you all appreciate it. Commissioner Fish.
Fish: So that conclude our presentation this morning, mayor and colleagues. And if i, if I could, I would like to close with some thank you's. The first thank you goes to mayor Adams, who pushed us to set the bar very high, who encourage us at every step of the way, and who, with my colleagues on council, gave us a special appropriations that we needed to accomplish this goal. My only hope is that the next mayor shares the same passion for this work and allows us to set the bar even higher, so to mayor Adams and my colleagues, a heartfelt thank you. To all of our partners, many of whom here this morning, and who testified, from government, nonprofit, faith, and business, a heartfelt thank you for everything that you have done. Through the Oregon solutions process, we brought a lot of new people together. And that coalition has done something remarkable as and as evidence today, and I am confident that we can continue to work to address our shared values, so thank you all for your passion and your time and your commitment. I really want to do a shout out to my parks team. It started with leslie paul cowsbow, and so appropriately this afternoon, at our celebration, we're going to give the first leslee paul award to someone in the community that has made a big difference, but I want to, especially, note, laura nieme, who we stole from seattle, and kathi deng, neil, and gary, our stellar team from parks and rec that work on community gardens. Thank you very much for all your great work, and deb lev, city nature manager, jen cairo, city nature supervisor of community gardens, and tracey manning from Portland housing bureau, who is a foody and a food advocate. Thank you for your great work. This afternoon we're going to thank governor kulongoski, and I think it's fair to say had he not designated this an Oregon solutions project, we would not have been discovered all of the connections that have sustained us throughout this process. So we look forward to that celebration. I also want to give a special shout out to emily york. This would not have happened without emily's drive and passion, love of gardening and hard work. I am proud of everyone I get a privilege of working with but today i'm especially proud of emily, so I want to single you out and thank you, let's give her a round of applause. And abbey warren, our super intern and everybody that made a difference, and I know I have left off some names, but we'll capture those names this afternoon at meriwethers, and on day like this where we celebrate what we have accomplish, let's look forward to what still is ahead of us, and let's recommit to continue to build out our system so I will make couple because you are stuck with me for another two more years. Number one, in the next parks bond measure let's put some money so that we can end the bond measure so that we can continue to make sure that every neighborhood, every school, and every place of worship that wants a garden has one has one, and that should be our goal. [applause] let's continue to expand the farm to school program and work tirelessly with Portland public schools this fall and spring to bring an, to bring urban agriculture to the former whitaker middle school site. Let's, let's expand our program to serve hungry children throughout our system. This past year parks served 100,000 healthy meals to hungry children through the summer free for all, let's set a goal over the next five years of doubling that. And finally, as we talk about making Portland a food city, and as we talk about maybe bringing a james beard public market to downtown, let's make sure that we bring something great to east Portland, let's build the urban grange. Thank you all for your great work. It's an honor to have been a part of this effort, and I look forward to all the many opportunities that we have to work together going forward. Thank you. [applause]
Adams: I want to thank you, commissioner Fish. When I laid out the friendly challenge of 1,000 gardens I didn't expect you to reach it. So this is, this is a congratulations. The city is much better for it, and thank you for your leadership and thank you all for your great partnership. We

appreciate it very much. Emily, great work. You are welcome to stay, or must have on with your day. Karla, can you please read ordinance, non emergency ordinance item no. 1180.
Item 1180.
Adams: Today we are hearing details of a land transaction between the city of Portland and legacy emanuel hospital. Bryant Enge, director of the bureau of internal business services will walk through the details. We also have several guests from legacy, who will explain the significance of the project. It has taken us many months to work through this project. Because the details were important to the city operations, and also, to the great hospital that is our partner in this deal. I am pleased to report this we have got a very fair deal for the city and for legacy, one that will allow the city to continue our fleet and transportation functions, in the kirby yard and will clear the way for legacy to pursue a world class expansion, further expansion of their medical facility. Bryant.
Bryant Enge: Thank you, mayor. Again, thank you, mayor and good morning mayor and commissioners. I am Bryant enge, the director of the internal business services here for the city of Portland. The ordinance that you have in front of you today, for your consideration would declare the property at the north kirby lot to be surplus, and to sell it to legacy for the development and expansion of the operating rooms there at the emanuel hospital. I, along with dr. Lori morgan, who is the chief administrative officer for legacy, will describe the project for you, and I will give you the background and the business points, and dr. Morgan will provide you why this project is important to legacy, and also, why it is important to, in terms of community benefits. Over two years ago, as the mayor has indicated, legacy approached the city in terms of developing larger state of the art operating rooms there at the emanuel hospital. Their idea was to build the facility that is next to the operating rooms and to the day surgery facility. The new facility would be adjacent to the east facility but right now, I want to move on and show you that I have not been moving this thing through. If you can take a look at this screen in front of you, you could see that the kerby lot is adjacent to both the day surgery and the operating facilities. The legacy property, are the properties in the yellow. And the kerby lot is, is identified in red. And, and it's the kerby lot. So, the hospital approached the city about the city's interests and possibly selling the kerby lot to them in order to build the state of the art facilities in terms operating rooms. Due to the community benefits and to the city, the city met with legacy to start discussing opportunities in terms of relocating the kerby lot operations to another site. We looked at various different scenarios in terms of where we could move those, move the operations, including developing a parking garage somewhere in the vicinity, as you take a look at the facilities. And we looked at closing kerby street, and the kerby street is the street in between the kerby garage, and the kerby lot. And we also talked about taking the kerby garage, itself, along with the kerby lot operations and relocating that to another site. After considerations in terms of the cost, the location, and the access, we decided that it was in the best interests to use available parcels and existing lots that the city has under management, and redevelop those lots to provide a replacement lot for the kerby lot. So, we hired otek architects, and I said we, the city of Portland and legacy is, we jointly engage them to take a look at different scenarios to replace the kerby lot. There was, again, like I said, we looked at various alternatives, and the preferred one at the end of the day was to develop a 24,000 square foot lot. Directly across the street, and if you could see that, you could see the existing lot. And, the facility directly across the street from the existing lot is the garage. And so, if you were to look at the south lot, you could see that's across the street south of the kerby garage. That there will handle the majority of the parking spaces that is we need in order to continue to have the kerby lot operations so it's roughly 24,000 square feet. And in addition to supplementing the Kerby lot operations we identified lot 17 and 9 to accommodate some additional parking needs as part of the kerby lot operations.
Saltzman: Who owns the lots, 17 and 19?
Enge: Right now the city manages those lots. If their leased with odot. So we have them under current arrangement, currently, with odot, and commissioner Saltzman, we have had these

arrangements with odot for quite some time. So, there is three agreements, and that's part of this consideration. The first one is the real estate agreement and exchange agreement. The kerby lot is valued at approximately $530,000, in exchange for the, for the kerby lot the city will receive in consideration roughly bout $1.6 million. The one, well, the city will receive a cash payment of $1.1 million. And then also receive a legacy parcel, a value of $90,000. And in addition to that, the city will receive over $530,000 over the next ten years. Legacy will also provide some additional consideration, which includes an emergency parking easement, that will provide access to a parking lot, for, in the event of an emergency, that will provide the city a place to stage its fleet, and provide place for materials and supplies in the event of an emergency. In addition to that, the city will also enter into a commercial lease agreement that will provide the city the opportunity to continue to use the kerby lot for the next two years. Now, I would like to turn us over to, to dr. Morgan, who will provide bit more information about the project.

Dr. Lori Morgan, Chief Administrative Officer, Legacy Emanuel: Good morning. I am lori morgan the chief administrative officer at legacy emanuel. Thank you for the privilege of presenting this project. One of the questions that come up is really what are the driving factors for the project. There are, I think, we all know that there is an aging population with kind of increased medical needs. Emanuel just celebrated our 100th anniversary, which we are very proud of, but, with that, comes some aging facilities, or operate, our operating rooms are almost 40 years old and the technology explosion in the last 40 years has been huge. Frankly, our rooms are small. There is one particular piece of equipment that we would like to have that we cannot buy. They literally will not fit into our operating rooms, and that's going to continue to happen. With increases in technology. One of the other things that we're also finding is the fluctuating demands requiring more architectural flexibility than we were building for, 40 years ago. It used to be, you would have a floor room and a step-down room and an icu room, and when we build rooms now we build them to be used for anything, whether it's day-to-day patient care, icu patient or frankly, to be able to expand for any emergency crisis that we need to. Our capital investment strategy at legacy is really based off of campus master facility plan. Which really includes new maintenance and infrastructure, but does take into account medical equipment, simulation and education research, information technology and physician alignment, and this project, actually, has components of all of those things. Why is this good for Portland? It will help to maintain emanuel in Portland as a center for health care in the region. It's $150 million construction project that we're estimating will bring 250 to 300 construction jobs. And additionally, once the building is complete, we think that we'll need to add probably 75 to 100ftes to that. With an estimated $9 million, and family wages that we would bring. There will also be additional supplies and services for operations and those are not really yet quantified. It allows emanuel to continue to serve as the regional and state resource that it is for high end critical care with our trauma and burn unit, as well as pediatrics. We did just proudly build the randall children's hospital but the operating rooms are housed at emanuel, not in that building. So, this will also allow us to provide some extra pediatric specialization in our ors. Why is it good for the community? Actually, in the mission statement that I am given by my agency, is that we are to be a regional resource for quaternary medical care, as well as an economic driver for north Portland, and that's a very specific mission that we have. We've been deeply --

Saltzman: What does quaternary mean?

Morgan: More advance than tertiary. Does that help? What we would call very high end medical care that you cannot get and usually only one or two hospitals in a state.

Saltzman: Ok, thanks.

Morgan: So, we've been deeply involved in our community, some of the programs that we've been involved in for the home ownership program, where for ten years over 100 employees purchased homes within two miles of emanuel with assistance, and we have participated in the dawson park revitalization, and there is a long list of community organizations that we participate with, and

frankly, we proudly have one of the community gardens that you were just talking about on our campus. And work with many agencies. One of the other things that's part of the mission is education, and not only of professionals but within the community. This is something that is personally very near and dear to my heart. We have participated fully with the yes program. Which has affect college scholarships for a number of agencies and students, , including sei and reed. We have job shadow opportunities for all of our high school, also have invested in scholarship programs with hispanic chamber, ppc cascade, and the skanner scholarship program. We do a number of community prevention education, frankly. There are some listed here, I won't read them to all of you, but they are more than that. I think that another reason why this is good for the community is that our success allows us to continue to support a large amount of charity care currently, for fiscal year 11, and our charity care was 6.4% of my overall budget, which was $36 million. And total unreimburse cost of clinical care for this community was 15.9% or $89.3 million. We have a large community health fund that further assist other community organizations, which has total over $6 million in the last, ten years. And our total community benefit and fiscal year 11 alone was really over on her $91 million. Which is a higher percentage than any other hospital in the metro area. It's something that we're very proud of, and I think that, and again, our health allows us to continue to do this, and these new operating rooms are really essential for that. Another long list of our community partners, and I won't read them to you, why is it good for legacy? Well, the new Ors will allow us to utilize the new technology, new facilities, allow us to bring our buildings up and our high areas up to current code. Part of the issue is the location, it's very critical to be next to our current ors, and I will show you map in a second. But, it allows us to, continue to use our current space, as well as maintain efficiencies, trying to build a separate set of, and we have we have looked at this originally, a separate set of ors across campus divides kind of our personnel in two locations, which makes it very difficult it manage operationally. And we also are planning to add some additional icu space that will help to prevent us from going on for lack of bad space, and the new construction will increase the flexibility, and better facilities attract really more in top-notch physicians who want to work in facilities that are commensurate with their skills. So, this is a picture of our current campus, randall has pointed out for you because everyone knows where, where that is. The planned structure is, what is colored, the operating rooms would be on the bottom floors. The top floors would be additional icu space, and off to the left, you could see was there the helicopter pad, that's another orienting spot. And frankly, this parking lot that we're talking about, most people think that we own. Everyone is always really stunned when they are like, well, what's the problem? Like, well, it's right next to our building, and it would seem like we do own it, but, the reality is, that we don't. Some of our previous community collaborations with construction, we are very engaged with the building of randall children's hospital. And with namco, as well as other agencies. One of the things that we worked very hard on in the last year is our emanuel reconciliation project, which is an opportunity to work with our neighbors better in terms of what we are planning on our campus, and we have ongoing dialogue and community engagement with our master facility plan on the campus for what we want, for what we want to do. So, that is my presentation of why I think that this is a great project, and I know that you do, too.

Enge: Based on the benefits to the community and also to the city, and based on the terms of the agreement, the office of management and finance is recommending that this ordinance would be approved. We have also would like to invite members of the community and business representatives to speak on behalf of this particular project.

Saltzman: Can I ask some questions of dr. Morgan?

Enge: Sure.

Saltzman: Dr. morgan this all sounds great. I just want some assurance, that emanuel is going to actually break ground on this project soon. And this is a certainty, not a, idea subject to a capital campaign. The may or may not be, that may not be successful, so we are selling you the property,

actually, but, leasing it back for two years, so presumably, within that two years, emanuel will break ground on this?
Morgan: We cannot break ground until you move out.
Saltzman: It's a parking lot. Not much to move.
Morgan: And no. It is, as I mentioned, in one of the slides, we, actually, legacy has a multi-campus master facility plan in terms of what we need to do on all of our campuses. And when we reviewed that plan with our board in the spring, this project was number one on that list. So, as far as the formal approval through our board, we've been struggling with the chicken or the egg thing. I didn't, I don't really have a project until I have a parking lot. And so, i'm just being honest with you, our board hasn't formally approved it. But they absolutely know that we're here and, and as we speak, we're formalizing what we would call our pro-forma to take it to our board for approval. So, I think that, that you have our assurances that this is a project we're going to build.
Saltzman: When?
Morgan: Well, we think it will take probably the next 18 months to plan. And so, I think that as soon as you guys are ready to turn it over, then we'll be ready to put a shovel in the ground.
Saltzman: So --
Morgan: I would have done it four years ago if it were up to me. I can hear my colleagues in the back snickering. I'm ready to go. We are very anxious to have this project done.
Saltzman: And the commitment is to build exactly what you showed us operating rooms, and intensive care unit. Pediatric trauma expansion.
Morgan: Pediatric operating rooms will be a part of that, and that certainly is a piece of all of the trauma care that we that, we do, do. Our trauma ors are actually upstairs, in our emergency room. These are kind of our regular ors and day surgery but there will be dedicated pediatric ors that are a component.
Saltzman: So the component of icu, operating rooms for critical care, because I know there is a trend, hospitals to sort of go to day surgery, elective surgery, which brings in money, popular with baby boomers. That's not the intent here.
Morgan: It's a combination of, really, all of our ors need to be done. We have a day surgery component. So, there will be some of these rooms that we will utilize as part of our day surgery. The very bottom floor will be run of the mill, high acuity ors. This expands our capacity.
Saltzman: And in the ordinance before us, there is nothing that specifically speaks to what has been presented to us in terms of what legacy emanuel will do with this property. So, I guess, with you --
Adams: This is real estate transaction, this is not -- they are paying for this. And so this is not charity on our part. So I'm curious to your line of question.
Saltzman: If you will let me speak I will continue. Do you have any objection to adding language in here that is in your power point that says, legacy will, with this property, develop larger, state of the art operating rooms, including outpatient, minimally invasive and robotic surgery at emanuel, additionally, configure part of the operating room with a pediatric focus to address the specific needs of children? If we were to add that in here?
Morgan: I have the ordinance in front of me, and i'm trying to read through it. I'm pretty sure it says for an operating room expansion. But certainly, the components.
Adams: What is the purpose your questioning?
Saltzman: My questioning is, as you mentioned, you are going to sort of a reconciliation project, a lot of sensitivity. And about emanuel under, you know, from dark days of urban renewal where land was condemn and the african-american community between williams and vancouver was in essence, relocated. Or otherwise, vanished. So I guess I have a sensitivity about selling this property to them with an understanding that this is going to happen. And then if nothing happens. If this remains a vacant parcel, like the vacant parcels between williams and vancouver today. So

that's the purpose my line of questioning. I want some assurance that if we sell this and declare this property surplus, that, in fact, the intended purpose is going to occur, which sounds great. And that's why I was asking when it's going to started but I would feel disappointed, and I think a lot of community would be disappointed if this were just to remain, to go from a city parking lot to a legacy parking lot. So that's why I would ask if we could have language in here.
Leonard: The point on the piece property between vancouver I raised in my private meeting. I grew up in that neighborhood so I don't know how familiar you are with what was raised from there.
Fish: Is your mic on?
Leonard: Yes. Characteristically speaking very low. But what was raised there, I raised in my own briefing, not so much what was lost because for those of you who might have some emotional tie to what was there. I don't. It was a center of crime and disfunction. But, it should have been replaced when it was raised and, and I said so, and I asked and pushed, even, at what point are you going to do something with that piece of property to reinvigorate the community. This is not such that piece of property. It is an isolated in terms of its connection to the community. Isolated piece of property that I also thought was part of emanuel. I would also add that I have since and before my presentation visited the operating rooms once to get better sense because of this proposal, and a couple other times for personal reasons. It is obsolete. It is outdated. I have no doubt that emanuel intends to do what they have represented. They are going to do, and I would be concerned about the condition on the sale only because, in the because I think that emanuel will, will, is misrepresenting what they are doing today and intend to do something different but as you well know, development occurs, different ideas could bubble to the surface, and I would not want to constrain their ability to do that. Having said that, I would say, I was not going to say this publicly but I would echo commissioner Saltzman's concerns about that parcel between williams and vancouver and russell and i'm not -- I really, and I know your response of the time was in the construction stage but I would encourage you to look for another place to do that and, and as we discussed at minimum, make a playground or, or some, community amenity. It would do a lot to heal bad feelings about what's been left there.
Saltzman: If I could speak, i'm not asking this to be put in as a condition, sale. If we declare this surplus and sell it to you, it's your property. But I think it should reflect in the record that in the ordinance this is our understanding of what's going to happen with this parcel, and it says it very well here in the power point, but I would like to transfer that paragraph in the power point into the ordinance. So, everybody knows what we're operating under.
Adams: I move we attach the power point as exhibit a.
Fish: Second.
Adams: moved and second.
Saltzman: Ok.
Adams: Karla, can you please call the vote?
Leonard: Aye. **Fritz:** Aye. **Fish:** Aye. **Saltzman:** Aye.
Adams: Aye. All right. Any additional discussion? We have some folks that want to testify. Could president gatewood, sam brooks, and dr. John hill come forward. You can take your seat.
Morgan: Dr. Hill is stuck in the operating room so I will extend his apologies, but --
Adams: Ok. Anyone else signed up to testify?
Moore: No one else.
Adams: All right.
Algie Gatewood, President, Portland Community College Cascade: Mr. Brooks has given me the honor of going first. Mr. Mayor, members of the council, thank you very much for the opportunity to address you this morning. I am very happy to speak with you in support, of legacy emanuel hospital. During my ten years at the cascade campus I found legacy to be a good neighbor

and a friend to the north Portland community. And let me say that cascade campus, enrolls about, in fact, we enrolled more than 24,000 students last academic year. And we have 61 different curriculum programs from which students can obtain a major. And those programs range from, from fire protection technology to criminal justice, medical technology. To many other health related careers. And I mention that to you so you will be remind of the magnitude of cascade campus in the community. Emanuel hospital, legacy emanuel and cascade are two major entities in very encloses proximity to each other. In terms of the relationship between cascade campus and emanuel hospital, as I said earlier, they have done a lot of things to indicate to support us in the warning that we do. Most notably, legacy emanuel has made what I consider to be the long-term commitment to ensure that we have a very prosperous community. And what they have done is stepped up to a call from me, to participate in the middle college program scholarship bank. Dr. Morgan mentioned that in her comment. But you know, it's really much more significant than just a scholarship. When we invest in the students at jefferson high school, we are investing in the future of Portland. Not only the future of north Portland, but the future of this entire metro area. And this particular scholarship in which legacy will award one per year, is targeting young people from jefferson, who want to, have careers in the medical profession. Health care careers. And these types of careers will provide what we have a tendency to call living wage jobs. These are the people that won't be on relief programs. They will be providing assistance to the us in the community. They will not be tax takers, they will be taxpayers. I am really proud of that. But it goes farther than that. Each year the scholarship, recipient will also be entitled to a summer job. Working at legacy hospital. Getting a feel for the medical profession. Hands-on feel. And that's going to, certainly enhance the success of this program. Legacy emanuel hospital works to facilitate the clinical rotation of medical laboratory technology students. We have about 160 on average students enrolled at the campus each year. And legacy provides an opportunity for us to have an office on-site at the hospital, where one of our staff people are there to work with the students to help them acclimate to what's going on there and coordinate with legacy staff. My sense is that a collaboration such as this, a public community college, campus, and a private hospital working together is truly a win-win situation. Legacy wins. The campus wins. The students win. And the city wins. And my hope is, and my expectation is, that if legacy moves forward with the project that is proposed to you, that this will provide yet another opportunity for students in the cascade campus as well as people in our community to have jobs, and I am thinking mostly in terms of our trade students, we have a large trades program, and this will be an ideal opportunity for them to get hands-on experience, and to have a living wage job following the completion of the training. So, in closing, let me say again, that cascade campus, legacy emanuel hospital are valuable entities to this community, and we truly support the work that legacy is doing. Thank you.

Adams: Thank you, mr. President. Hi, mr. Brooks.

Sam Brooks: Good morning. Mayor Adams, members of the commission, sam brooks, i'm a 44-year northeast, inner northeast resident. I run company in northeast that has 200 employees. I run an organization that is ten blocks down from legacy emanuel hospital. The Oregon association of minority entrepreneur, that has grown to over 850 companies. I could have stole the virtues legacy and take up way too much time. I do have a written document that I brought, but most important thing, is that particularly, as, as dan Saltzman, as you indicated earlier, the community that I had an opportunity to meet with legacy, and particular people from the african-american community, a few weeks ago. To talk about history, and it was interesting that as we went through that discussion approximate history, and I came here in the 60s from the military. And what we have done, you cannot do very much about history except make it better moving forward. And as a partner with legacy, creating opportunities, there are three things, do you have partnerships with the community? Absolutely. Are you creating jobs? Yes, they have. And proposing to create more jobs. Are you working with people in the community that will create wealth, ownership, and jobs? They are in

participation with us at the Oregon association of minority entrepreneurs, as they build the randall center. Absolutely created jobs, they used minority, women, and emerging small businesses. So anybody that knows me, i've been working on that for over 30 years. Those are the things that I look for, not whether you are talking the talk but are you walking the walk. Dr. Brown gave an amazing, in my opinion, presentation at that gathering people from the 1960s that were part of all of that. And for the businesses that were there. Looking as we move forward. This is an opportunity to move past some of the history that you cannot change, someone once said, that if you live your life, looking in the rear-view mirror, you are inclined to head for wreck. So we don't want to spend too much time looking in the rear-view mirror. We have an opportunity to move forward and provide opportunities for the north, northeast community. And this is something that I think that we should move forward with. So, anything that you can do to help change that community, and I might add, the person that's been there since the 1960s, commissioner Leonard, you have a lot of history. That community is changing. Dramatically so. And if you can do something to help the folks that remain in the community, and certainly, that is the plan. I think that that's an excellent thing to do. Thank you very much.
Adams: Thank you mr. brooks, thank you president gatewood. Any comments from council? Unless there's anyone else that wishes to testify, comments from council.
Satlzman: I guess I hate to be a stickler on this but I would like to insert in the ordinance the paragraph on the project concept. I know attaching powerpoints to the record is good but I would feel better if we --
Leonard: Where's that found at?
Satlzman: its on page 3 of the powerpoint, new paragraph 3 right after paragraph 2 that's says legacy emanuel intent is to develop larger state of the art operating rooms, including out patient, minimally invasive and robotic surgery at emanual. Additional reconfigure part of the operating room with a pediatric focus to address the specific needs of children. I would move that as paragraph 3.
Leonard: So that I understand your taking the first bullet point and just --
Saltzman: and putting it in as a, under our findings.
Leonard: and did you say your adding the words it is their intent?
Saltzman: I'm going to believe --
Leonard: If you add the words it is the intent and take the first bullet point I will second it.
Saltzman: Ok.
Fish: I have a question, if I could, of dr. Morgan. Dr. Morgan, commissioner Leonard is referring to the project concept language.
Morgan: Right.
Fish: Does the -- is the language broad enough to allow you to adapt to whatever your funding challenges are or whatever sequencing that the board chooses, putting this in the ordinance, you have the flexibility to deliver a world class health facility that you deem appropriate?
Morgan: Right. I think as long as it does say this is our intent, because it is our intent. It might be the case, for example, we decide not to include the outpatient part because we already have outpatient ors. I think if its our intent I'm comfortable with that.
Fish: I move the amendment.
Leonard: It's been moved and seconded.
Adams: Any additional discussion? Karla can you call the vote on the motion?
Leonard: Aye. **Fritz:** Aye. **Fish:** Aye. **Saltzman:** Aye.
Adams: Aye. Commissioner Fish.
Fish: Thank you mayor. We may have concluded the formal presentation, we may not, its is possible a number of you may not be here next week when we vote on this. I would like to say in advance of the vote that i'm reminded that legacy emanuel is one of two level one trauma centers in

the state. And in our city, you have one at legacy emanuel and one at ohsu. I have personal experience with that, because my son in his first year of life had significant surgery at ohsu. Now, it wasn't -- i'm not sure if it was surgery that he couldn't have had at legacy emanuel -- my wife did deliver our son at legacy emanuel but the surgery was at ohsu. We have two level one centers and that is vitally important for our state and city. What has excited me about this prospect, the opportunity for you to expand on your existing capacity and put an a state of the art or in your campus. And that is good news for people who live on the east side of Portland. So I want to thank you, dr. Morgan, for your tireless perseverance on that project. I know it goes back many years that you have been working to this date. I also want to say about a year ago when I had a chance to tour the randall children's hospital and first learned of how urgent this concept was for the hospital, it was at that time or shortly there after that jack rand rolls up his sleeves with his team and took this on as sort of a mission. And I can't -- I have lost count of how many briefings we have had, council has had with jack and his team and bryant about this. And I just would say with all of the moving pieces and complexity, this one was incredibly complicated. If someone thinks this happened miraculously -- assuming that we vote next week to approve this, and I think you have the votes, mostly this is good news for young people in our city, and particularly on the east side. I thank you for your perseverance.
Adams: This moves to further consideration next week. I want to thank you and the entire team at emanuel and legacy and I want to thank bryant, you and jack, thank you very much for your work on this. Moved for further consideration next week. I will run through and do the seconds just to have folks be able -- and some house keeping stuff before we go through the regular agenda. Karla please read item 1193 and call the vote.
Item 1193.
Leonard: Aye. **Fritz:** Aye. **Fish:** Aye. **Saltzman:** Aye.
Adams: Aye. 1193 approved. Read the title and call the vote for 1194.
Item 1194.
Leonard: Aye.
Adams: Wait, I normally don't take testimony, did someone have testimony on this? I will extend that to you as a courtesy, ma'am. Please come forward. Sorry Karla. Hi, welcome. Just give us your name and you will have three minutes there.
Kay Williford: My name is kay, I live in snoozy hollow neighborhood. I tried speaking to you before all of this happened and it didn't help. We're having problems where -- you put in new water and sewer lines in our neighborhood. And our community has a homeowners association, and a vote was not ever allowed or permitted. And new homeowners as well as old homeowners are basically strapped for money. I'm disabled. There is three others that are disabled. One third of the neighborhood is empty right now. And we understand that liens will be put on our homes or loans. Most people are just getting up leaving, seeing the banks don't want the homes because they're so old. They're renting them out to make money until the banks finally come and take the homes. And the banks don't want them back because they're so old. And it is stressing a lot of us out. The equity in the homes are gone because of this. And we're asking that this be stopped. We're also being forced to pay for $60,000 water and sewage from people that lived there from 20 years ago that we were not even owners then and we move in and the next thing we know all of these liens and loans are on our homes, and it is -- it's stressing people out to where they won't buy the homes. We can't sell them. The neighborhood is going to waste. And we're asking for help. We can't handle -- we cannot handle. I am on disability. Not expecting any increase in income. I can't afford to pay 20, $25,000 on top of what I already owe.
Adams: Thank you. Appreciate your testimony. Can you please call the vote.
Leonard: Aye.

Fritz: I -- I believe that the city has worked really hard to try to make this the best deal possible for the residents and eventually the improvements will add to the value of the homes and I appreciate the fact that there is a deferral program to assist folks who are struggling with that. Aye.

Fish: Aye.
Saltzman: Well, I just want to say that I appreciate the residents coming today but also two weeks ago. I'm familiar with your neighborhood and it is an extremely low-income area, but I do believe that ultimately the improvements that were made, state of the art sewer connection, sewer service and the first place improved water connections, really are the pathway for this neighborhood to become more attractive for homeowners to invest in their homes and that -- and to have a higher resale value when you do sell your homes. These types of services are indispensable towards that. The Bureau of environmental services has reduced its portion to be collected from the lid. I'm not sure if water has also. But the point is I feel we have done something here that is fair and consistent with the value of these improvements that we have made and a consistent trade-off between the interest of rate payers and interest of homeowners and as commissioner Fritz says, there is a deferral program so that current owners do not have to pay these liens or assessments, if they so choose. With that I vote aye.
Adams: Aye. Can you please read the title for item number 1195?
Item 1195.
Adams: Based on community interest in this topic, the sponsor has asked that this ordinance be returned to her office. Commissioner Fritz to provide more time for input from the chief administrative officers and members of the community. The proposal is posted on the web site and comments are encouraged. It is referred back. Can you please read the title and call the vote for 1200?
Item 1200.
Leonard: Aye. **Fritz:** Aye. **Fish:** Aye. **Saltzman:** Aye.
Adams: Aye. 1200 is approved. Call the title and call the votes for 1201.
Item 1201.
Leonard: Aye. **Fritz:** Aye. **Fish:** Aye.
Saltzman: Thank you to everybody in the bureau of environmental services and amy trieu in my office for this. Aye.
Adams: Aye. 1201 is approved. Back to the regular agenda, regular work. Please read the ordinance for -- read the item emergency ordinance 1190.
Item 1190.
Adams: 1190 and 1191 we inadvertently put on the regular agenda normally their on the consent agenda. These are good things we have smart people here to answer any questions anyone has. Does anyone wish to testify on 1190? Would you please call the vote, emergency ordinance, item 1190.
Leonard: Aye. **Fritz:** Aye. **Fish:** Aye. **Saltzman:** Aye.
Adams: Aye. Can you please read the title emergency ordinance 1191?
Item 1191:
Adams: Does anyone wish to testify on this matter? Does council have any comments on this matter? Karla please call the vote for emergency ordinance 1191.
Leonard: Aye. **Fritz:** Aye. **Fish:** Aye. **Saltzman:** Aye.
Adams: Thank you for your great work, aye. 1191 approved. Please read the title for 1192.
Item 1192.
Mike Stuhr, Water Bureau : Good morning, mr. Mayor and commissioners. We have to play with the electronics for a minute. What we're here to talk about today is west side header, a very important job for us that is underway. I'm sure you have all been tangled up in traffic due to the

west side header job at one time or another. On the screen, momentarily, you should have a map showing where the project is and the bulk of the project is the big black line. We have had one change -- two change orders previously on this job. The first change order was to, if you can work the map to add sheridan to the job -- the reason that was done is that down there in this area, there is a whole lot of work going on from trimet, ourselves, and others that are involved in the public improvements associated with the light rail project. We decided it would be a wise thing to do to -- since the streets are torn up anyway to finish the piping work that is necessary down there rather than wait a year and a half after everybody puts it back together and tear it up again.
Saltzman: Mike could you briefly say what is west side header?
Stuhr: West side header is a -- the actual diameter varies from place to place, but basically a 36-inch diameter pipeline that runs north/south that allows us to move water on the west side of the river north and south that we didn't have before. It's both a practical necessity and I think it will serve us well in a seismic event to move water around the city. Sorry, I should have done that first. The change order at hand today, a lot of this area is fill. And back before my particular profession was invented, geotechnical engineering, the way they did fill -- it's hard to believe -- but my profession is pretty new. 1930s. The way they did fill was just like it sounds like. People bulldozed stuff, bulldozer over it a couple of times and put dirt on top of it. Now we compact it and we use soil. But working down there -- if you are working underground is a challenge. Basically any of the places in the city that have been repurposed from the former river front industrial area, like the waterfront park, for example, basically all they did was knock down the buildings and maybe about three feet of the foundation below and put fill back in and build. So, if you go any depth at all in these areas, you are liable to run into all kinds of debris and rubble and it is very difficult to tell where it is going to be until you actually run into it. One might think that we should go out and pothole for that. It is so variable that we want pothole for it. You would be forced to basically dig up the alignment and take a look at see what it was and then you have driven everybody nuts twice to get the job done. We just be prepared, have a contingency in the project to do that. What change order number 3 is going to add, and I want to show you some pictures of this when I get done talking about it. Because it is kind of interesting, I think. You guys get to approve all of this work that we do and never see very much of it. What specifically covered in change order number 3 is unforeseen obstructions. That is a nice word for all of this rubble. 430 feet of 12 to 18-inch thick eight foot deep concrete walls and floors that were the foundations for old buildings down there. We had to redesign one of the connections because when we do locate, we can locate lateral, left and right, very well, but depth we don't locate very accurately and then if you do, you only know exactly that spot. So, if the pipe varies, you get surprised. We got surprised. And taking out what is called a thrust block. When pipe goes around a corner, particularly large pipe, we put a thrust block in there to keep it from moving. It is like if you imagine a train going around the corner, water does the same thing. It has momentum. When it bends around the corner, it pushes out. You put a big pile of concrete there. It is called a thrust block. When we were trying to remove the pipe, the contractors demo tool slipped and put a hole in the pipe and we flooded some stuff and we have to pay for that. There is also some cost increases from large pipe signals. We made a deal with the natural pathic medical college down there to block their parking lot for half a day. They decided later that they would rather we didn't do that so we are also accommodating that. This will bring the project total up to around $5 million, underneath the engineer's estimate. Once again, we are still benefiting from a bad economy. We get very good prices on our bids. Now what i'd like to do is show you some pictures of what this work really looks like. Nancy, you can feel free to kibitz, if you want. But what you are looking at there is a 48-inch diameter piece of steel pipe, and this is kind of like lacing your shoes with steel pipe. We have to slide it down in there through the shoring that is in there. That hunk of pipe probably weighs about 5,000 pounds. If any of you

drive a subaru, that is two subarus worth of pipe in this one piece. It seems to be a popular car in Portland. Go ahead. You can see we put in extensive shoring under there so that the guys can work in there. You have to wiggle lace this pipe down through it and that is one of the things that nancy keeps an eye on that we get this all done correctly. Go ahead.
Nanci Snyder: 40-foot length of pipe, too.
Stuhr There is an old bypass tunnel that we had to go through. That is what you can see.
*****:** Shoring for the tunnel.
Stuhr: Shoring for the tunnel, the sheet the guy is holding his ears because that is a vibrating pile driver driving the pile in --
*****:** Where does that tunnel exit in the previous picture?
Snyder: It crosses naito parkway on a diagonal. It used to go down to the waterfront.
Stuhr: There is many interesting things underneath the city.
Saltzman: And you are using that underpass or not?
Stuhr: We will show you. We had to go through it.
Saltzman: Okay.
Fritz: But did that make it easy or more difficult? Did that make it easier or more difficult?
Snyder: Much more difficult.
Stuhr: You have to poke holes in the walls and you are lacing the shoe lace and trying to make everything line up. If you look at the picture here, this is that tunnel. We are running our big fat piece of pipe through there through holes we had to pound in the wall. It is quite challenging. This is a pipe we removed. Cast iron is great stuff as long as you don't jiggle it but it is terrible stuff in an earthquake. Even moderate shaking, the old joints are led and oak and they were pounded in and when you pound them in they leak. That's replaced by another -- I love the subaru measure. 36 inch diameter piece of ductal iron pipe 18 feet long weighs 3,100 pounds which is the weight of a subaru. So, keep going. There is a lot of night work on this. I don't know how many times I have sat at this intersection and wished I was not the one who caused the jam up at the intersections, but we have done a great deal of night work to try to reduce impacts on the traffic. And that's what it looks like. It is dangerous to work at night but we're all very careful. Another night work picture. Just more of the same. Very difficult challenge staging pipe for this. It is not like building at powell butte where we can haul everything out there and pile it up and use it as you need it. It becomes a logistics enterprise for the contractor to manage bringing this stuff in on an as you need it basis. Go ahead.
*****:** That's it.
Stuhr: That's it?
*****:** One more.
Stuhr: So that would be the project. We are available to answer any questions that you might have.
Saltzman: I just had -- I think you said this in the beginning, so, I guess -- I assumed all of the work going on there was utility relocation due to light rail. It is really you are taking advantage -- or is a part of that -- also you are saying this is the time since its all being torn up to do the work?

Stuhr: It is partly timed to do the work. That is particularly true on Sheridan. That wasn't -- the Sheridan work that was the first add wasn't in the project in the first place. We looked down and decided that all of that area is going to be torn up and we knew we were going to have to do it. We decided to basically reorganize the distribution mains program and decided to fund it and add to this particular project. Naito parkway, essentially -- there isn't any way to get around this. We don't mind crossing the light rail lines. That is pretty easy to do. But sometimes you are stuck being under them. When we do that we put pipe in and leave it so that if something happens to it,

we can haul it out without shutting down the rail line. Kind of a complicated explanation, but it is not easy. Other questions?
Fritz: I just really appreciate you taking the time to give us the visuals and explain the projects. Sometimes when citizens see a number in an increase in a contract you wonder why. This is very, very helpful. Thank you.
Stuhr: Thank you you're welcome. We think this stuff is cool. Other people think it is a traffic disruption.
Fritz: It's very helpful for that purpose to have people understand to make sure that our water supply will be safe in the event of an earthquake. Thank you.
Saltzman: Thank you. Anybody that wishes to testify on item 1192? Okay. This is a nonemergency and it moves to a second reading. Thank you. And our next item -- if we could go to 1197, since we're waiting for somebody to come here on 1196, is that correct?
*******:** Yes.
Saltzman: We will come back. Let's go to 1197.
Item 1197.
Saltzman: This is the first reading of the bureau of development services amended fee schedule for the fiscal year 2012-2013. Though the fee schedule was last changed in july, two additional minor changes are necessary at this time. First in response to direct input from roofing contractors, a change is made to the reroofing fee. And the second change is the creation of new fees for solar and wind generation. These fees are required in order for bds to comply with the requirements of the Oregon administrative rule regarding renewable electrical energy permits. Staff is here to answer any questions if members of council have any. Okay. Is there anybody that wishes to testify? Okay. This will move to second reading next week. And keep going, I guess, 1198.
Item 1198.
Saltzman: This item is a wholesale sewer services agreement between the city of Portland and clean water services. One of our many regional partners. This ordinance updates our 1998 agreement and includes new mutually agreed upon rates and methodologies. This new agreement is fair to Portland rate payers and it is fair to clean water services rate payers. I want to thank clean water services as well as city staff for updating the new agreement and I look forward to our continued work with it. If anybody has questions, we have people here. Okay. Seeing no questions, does anybody wish to testify? Okay. Seeing none, this moves to a second reading next week. 1199.
Item 1199.
Saltzman: This is 1199? This is related to 1198, if there is any questions. Anybody wishes to testify. Okay. 1198 moves to second reading next week.
Fish: We are ready to proceed with 1196.
Saltzman: Let's go back to 1196.
Fritz: 1199 is --
Item 1196.
Saltzman: Commissioner Fish.
Fish: Thank you. We are going to need commissioner Leonard for the vote. If randy hears me, we will need him back in a minute or two. Thank you, president Saltzman. Today we're here to tell you about an exciting partnership with two nonprofit partners and we're going to ask the council to approve two separate actions. The first is the purchase for $1 of a parcel owned by local nonprofit human solutions. The second is a 99-year lease with human solutions for the same property for $1 a year. Through this partnership, nearly 70 people and families will be connected with new homes, affordable to households at or below 50% of our area's median family income. That is roughly $25,000 a year for a family of one. Or $36,000 a year for a family of four. These families will leave close to multiple transit options that will connect them with greater Portland and

they will not be rent burdened, which means they will have the freedom to connect with local businesses and the community in a meaningful way. Ride connection will connect with the gateway community and the people they serve in a more direct way, including offering new jobs to the community. Up to 50 construction jobs at any one time and 40 permanent jobs in their office. A cornerstone parcel in the gateway district will become home to a beautiful new building connecting the fabric of great -- gateway. I'm pleased to introduce the director, tracei manning, director of the Portland housing bureau who will walk us through the details.
Traci Manning, Director, Portland Housing Bureau: Thank you. Real quickly, this is another great example of the work that we're able to do with our partners. So, we're going to be working on this part of the transaction with long-term partner that you are all familiar with, human solutions. Huge thanks go out to the executive director, jean demaster, as well as the housing director, sara zahn. A new partner for the Portland housing bureau, ride connection. Thanks to their executive director elaine wells. This project will have affordable housing up above phase one will be 67 units. And then down below, ride connections new offices. Bringing the transit oriented business next to the gateway transit center, and bringing jobs, not just construction jobs, 250 to 275 construction jobs during construction and then 40 new permanent jobs in the neighborhood. All of this is consistent with the great partners in the east Portland action plan. We will work with their strategies and goals to improve the design and quality of new homes, provide commercial mixed use development opportunities and promote key opportunities for economic development. So, this is phase one. Phase two will include additional affordable housing on the site. And will be making the land available on a 99-year lease for $1 a year. That is a portion of the subsidy of the project. In addition, tax increment funds from our 30% set aside will help to make this project a reality and leverage another $14 million in additional public and private investment. Bank of america is a big key partner in this project as well. And just in closing, would love to give special thanks to our always hard working city employees. The phb team was led by jacob fox, our assistant director, and included carl who is with us here today. Underwriter john marshall, construction coordinator nate mccoy, kathy ramiro, and the attorney from the attorney's office, trin tran.
Fish: Thank you. If I could underscore one thing that traci said because we -- I think we don't focus enough on the extent to which public dollars leverage private dollars. Phase one, $17 million project. The city is committing $2.7 million in tax increment financing dollars and that comes out of the 30% set-aside. Bank of America is putting $8.3 million in low income housing tax credit equity into the project, that private finance. Additional $700,000 in system development charge waivers that this project is eligible for. $3.5 million in state transportation funding. Our piece is relatively small, but it is leveraging a lot of public and private investment. It will be an attractive building in a developing area that meets a number of our core goals. Thank you.
Saltzman: Any questions from council? Anybody that wishes to testify?
Moore: No one signed up.
Leonard: Aye.
Fritz: Good work, aye.
Fish: Thank you, traci, Jacob fox, carl dinkelspiel, john marshall, nate mccoy, kathy romero and trin tran. Thank you sonia Schmanski in my office. And special thanks to jean demaster and sara zahn, director of development for that organization and has been enormously helpful to us on the Portland housing advisory commission. Aye
Saltzman: I'm very pleased. I met with jean demister and somebody from ride connection. Seems like it was a couple of years ago so I'm glad that this concept has come to fruition. It seems like a great idea. Affordable housing, ground space retail in a great location. 99th and Glisan. So I'm pleased to support this. Aye. Ok the ordinance is passed. I think the only item we have left is 1201? I know the mayor is jumping around so much.

Moore: I show we took care of that.
Saltzman: Oh we took care of it, we took care of everything?
Fritz: Did you do 1199?
Fish: Yes.
Saltzman: Yeah, we did that.
Fish: We paired it up with 1198.
Saltzman: We are adjourned until 2:00 p.m.

At 11:35 a.m., Council recessed.

This file was produced through the closed captioning process for the televised City Council broadcast and should not be considered a verbatim transcript.
Key: ***** means unidentified speaker.

OCTOBER 24, 2012 2:00 PM

Adams: We have two time certains to deal with today. Karla, please call the roll. Roll call. [roll taken] A quorum is present. Let's proceed. Could I please have staff come up and Karla, would you please read item 1202.
Item 1202.
Adams: A two-year planning effort for the central city 2035 concept plan. This plan succeeds the land mark 1988 central city plan. The success of that plan was to create a creative and vibrant place for people. But we can't rest on past accomplishments alone, and the central city cc2035 concept plan establishes the framework to continue this role for the next 25 years. The plan is first -- is the first plan developed with the Portland plan as use guiding framework. Planners and citizens, residents were challenged to apply the direction of the Portland plan equity prosperity, education, and health to a district. The key strategic direction for the central city plan is set out in the -- set out the central city as a center for innovation and exchange and strengthen the central city as a living laboratory. The concept plan is the first step in an evolving process. The concept plan provides an Overall framework for the four quadrant plans. The north-northeast quadrant plan, which we will consider tomorrow, is the first of these plans to develop specific strategies for the smaller geographies within the central city. Central city establishes the overarching policies and reactions to achieve aspirations of the Portland plan, susan anderson and troy doss will now present the central city 2035 concept plan, thanks to susan and troy, and to the central city committee, chaired by chet orloff and michelle root, we appreciate all your work.
Susan Anderson, Director, Bureau of Planning and Sustainability: Susan anderson, director of the bureau of planning and sustainability. With me is troy doss, the project manager for the central city. As the mayor indicated the purpose of today's meeting is to present a new Portland central city plan. The plan set before you has been about two plus years in the making and it's Portland's third central city plan. As you all know, we did the 1st downtown plan, we didn't, but someone did bark in 1972. And at that time the plan sort of laid the ground work for reviving downtown. It led to the development of waterfront park, light rail, the transit mall, making streets more walkable and safe, and encouraging ground floor retail and restaurants, things we take for granted now. We have to remember that this was really unusual at this time. If you think back to 1972, most Of the country was turning their backs on their downtown. We were expanding freeways, we were moving through the suburbs, me personally my parents, we were living in detroit and they decided we should all move to the suburbs of los angeles. Because living in the central city for them was not an option. Things have changed. So Portland in 1972 was way ahead of its time. It looked ahead and embraced the potential of what the central city could be. The second central city plan was completed in 1988. It extended the concept from just the downtown over -- on the west side to thinking of the central city as being on both sides of the river there. Were nearly 500 specific action items in that plan. 90% of those have been completed over the past couple decades. Many of them succeeded because we targeted public dollars to leverage significant private investments. Everything -- things we take for granted again, south park, the pearl, the rose garden, convention center, esplanade, all of those things were part of the 1988 plan. So now 2012, from 1988 the world has changed. We've come full circle. Many people want to live and work downtown, young and

old. They want to live in a more walkable urban environment. So the plan was presenting today is for the next 20-plus years, until 2035. Metro estimates by then we will have 37,000 new households. And 42,000 more jobs in the Central city. The one thing we know for sure is we don't want to be san francisco, a place where josh growth has been pretty stagnant for 20 years. We want to abplace that has more housing and jobs in the central city. To wrap up, the central city plan will provide a good framework for a public and private investment. It will help guide and build healthy walkable neighborhoods in the central city, and help ensure that specific areas stay focused on employment. So what dots plan look like? You've heard a lot for the past three years now about the Portland plan. That was the big picture. This takes it down several steps and gets us down into the details. It will ultimately include the four quadrant plans the mayor mentioned -- north-northeast, northwest, southwest, and the sen central east side. We did the north-northeast plan concurrently. The result is you have a package, today you will consider the concept plan and the central city plan and tomorrow we'll present the north-northeast plan. And we did this four years ago now with the new bureau, we did this because in part for really a decade or, so often we would hear planning was moving too slow. And we really wanted to show we could pull all the pieces together, quality data, business participation, broad community involvement, and get it done in A timely way. So i'm going to turn it over to troy, but before that I want to thank several people. The co-chairs, michelle rudd and chet orloff, the advisory committee. They did amazing work. A lot of hours and gave us incredible guidance. And also my staff, joe zehnder, troy doss, melissa hamblin, mark nicholas, stephanie, diane, karl, and jona from the mayor's office. Each of you played a part in developing the plan. So thank you.

Troy Doss: Good afternoon, mayor, council. I'm going to give you a quick overview. I think we've heard it, so i'll do it briefly. Central city 2035 concept plan is part of a larger effort. So it's really to update the 1988 plan. So we're going to be replacing the policies, the urban design direction that originated from that plan, update the district plans that have come along since then and start to develop new implementation strategies -- zoning tools, it could even go into things like urban renewal plans or other capital projects. It's a plan that is hopefully going to help guide us for the next 20-plus years in making -- in terms of making decision making and investments. It's an outgrowth of the comprehensive plan, so it will be adopted as part of the comprehensive plan's overall strategy policies and will lead again implementation efforts. But it's an outgrowth of the strategic level planning that came out of the Portland plan and as you can see below it's an effort that started about two years ago and will continue for about another two years, maybe three, as we go through the subsequent quadrant plans here. So in terms of how we develop the plan, we really did this in two phases. First we had a goal setting and issue identification phase where we had an advisory group, met for about a year, 13 different symposiums on very specific issues. Housing, transportation, willamette river, urban design, historic preservation. And really dug in with a group of experts on each issue. Tried to identify the full range of things we wanted, at least to consider addressing as we developed the new plan. Next phase came is concept plan development. That's where we engaged the steering committee, took all that raw material from the prior phase and started to distill that down into the concept you have before you as well as the policy framework. The starting point for this conversation was the 1972 plan. It served us well, it continues to serve us. What came out of this plan is a big move such as the transit mall, implementation of things not yet named, but places that became pioneer courthouse square, tom mccall waterfront park, a look at restoring the retail corridor, brought in ample parking, ensuring there was good accessibility coming Into the city and looking at preservation of affordable housing that was starting to bleed away from the central city, and increasing that supply as well as the overall supply of market rate housing in the central city. In '88 they come back and look at how does this translate to areas beyond that core. So the areas north of burnside, looking at places we refer to as old town, chinatown and the pearl. And looking at how those functions that felt like the central city on the east side of the river started

to become incorporated into the downtown, the center of the region. So looking at central east side, the role of mlk grand corridor, lloyd center, the rose garden, and the lower albina industrial area. Lots of big moves also coming from that, the emphasis on livability as an economic development strategy, which has been pretty beneficial through the flows we've had over the years in the economy in Portland. We haven't gained as much jobs as we wanted to, but we've been able to maintain and create a resilient environment. Housing was a big move, originally 5,000 housing units, we've accomplished development of over 15,000 in that period. And over 50% of that in the rental market is actually affordable, people making less than 60% of median family income. So there's been big moves that have occurred. And this was really all became a Response from a time when -- which is worth remembering, in the 1950s just after the war, downtown was still a pretty vibrant center. Ground floor retail, a lot of people living here. And then as -- which happened in most other american cities. You started seeing this flight from the urban center for the dream of the suburbs. With that came housing, with that went jobs and retail vitality. And some of the urban form of the city, was being demolished so we could make room for the automobile and the downtown was transitioning to a daytime-only employment center. The '72 plan and '88 plan were trying to bring back people into the urban core, preserve the fabric we had and rebuild. Retool. So as a result of that today we have about 35,000 people living downtown, about 23,000 housing units. So the policy direction that the steering committee and advisory group started was, how do we look at enhancing the urban development of the central city, its role in providing housing, and as well as community development, how do we broaden our transportation system, enhance public safety and enhance the role of the river and other key functions for the central city. That translated over to this new policy framework. The first identifier of the whole framework for the steering committee was to establish a strategic direction that really built on what is the role of the Central city as a center for innovation and exchange? And what the steering committee had to say about that, I think you'll hear more about that later in testimony, this is a very unique place in the fabric of the region. It is the only place where you have the zone capacity, the density of uses, the mix of uses, where you start to see the ability for businesses and higher education and people in general to meet, exchange ideas, and to really create something special here that really can't be created in any other town center around the area. That does set us uniquely aside as a place we can do significant job and housing growth. So we do have the ability to accommodate about 32% of the city's growth of our next 25 years in terms of johns and about 20% of the housing. Out of that thinking emerged the five areas of policy development. First one is regional center and innovation. And it looks at what's the city's role of -- central city's role as a unique center for accommodating this growth and density of uses, and synergy. How do we connect with the universities, the universities with businesses, how do we connect that with our citizenry. How do we take all of those advantages and make it a more competitive city center as compared to other west coast markets. One of the big keys here, livability, people come here all the time to look at how we've done it. That is what sets us unique from other city centers around the west coast. Very highly attractive place for businesses to want to locate because the amenities are there are attractive to the employee and people who might want to live there. So livability is a key function, and multimodal transportation system is highly valued by others. You look at the -- beyond rail connection was light rail, you have streetcar, bike-ped connection and automobile capacity. Next, the policy area looks at housing and neighborhoods. The '88 plan looked at housing and trying to people to live in the central city but didn't look at community development. A new approach is a series of goals and policies that talk about how do we bring in broader diversity of housing supply, right now about 80% of the housing downtown consists of one bedroom and studio apartments. That's not a good long-term solution when we start seeing the growth of families with student. A growing student and senior population. We need to diversify the housing stock, bring in central services that are important to people who want to live here. Access to schools, parks with playgrounds, community centers. Other services

and amenities that serve people of all ages, abilities, and incomes. Also continuing our efforts, working on human services, and people at risk populations. Next is taking a slightly Different approach to the willamette river than in '88. I think this is the -- this is an outgrowth of the river renaissance practice says, but the '88 plan looked at the receiver front as an urban design amenity. However, it could be used better to improve the environmental health. Looking for opportunities for habitat restoration along the bank of the willamette, look nothing areas where we can start to bring in commercial uses that maybe aren't there that might help to activate it. Just looking at how we can generally start to turn the form towards the river. The other is continuing our efforts towards human health -- river health and habitat. And one thing we heard a lot through this process is the ability to actually start to use the willamette as a recreational resource. How do I get my feet into the water, how do I get down to the water to observe or row, or to do anything. Right now it's kind of a barrier to a lot of people. We don't have a good area for people to access it by docks or beach or any other type of common function. Next is looking at the urban design component to it. This is built on what we've done in the past, but looks at the river as primary form giving element of the central city. How do we turn the urban form towards, not away from the river. How do we start to enhance the Districts we've seen emerge as well as consider that are due to emerge here. Lloyd district, old town-china town, goose hollow. And how do we use the public realm to provide a broad arrange of use and -- to the citizens of Portland. Right now about 45% of the landscape of the central city is actually in public right of way. There's certainly can be other ways to use it beyond transportation alone, and a way to accommodate both transportation and mix of uses as it creates a more vibrant area. Lastly, our last policy looked at health in the environment in a different way. Historically it's been more about storm water and shed management. They looked at the central city as living laboratory, demonstrating how an urban center could be created to accommodate both watershed health but also human health, beyond just green buildings looking at development of green districts, even beyond the concepts of ecodistricts program, looking at how you can transform the entire central city into a connected system if you will. Next, supporting this is the urban design concept that emerged. What you see here is again looking at the river as a central city, this first diagram here on the right-hand side is more of a system diagram. It looks at the main components. A major river running through it, two sides of the city facing It, at least intending to face it, then you have the system that's emerged over the last 25 years, before you really came to the central city through an east-west orientation, but now beyond the freeway loop we have improvements such as the east bank esplanade and the river loop around tom mccall. A considerable amount of new bike and pedestrian infrastructure that's emerged, as well as the new streetcar loop that will be closing soon when the new light rail bridge is completed in south waterfront. So you have a new way the central city starts to sick late. And off that we expect to see growth, because we have tremendous areas of potential growth as demonstrated on the diagram to the left. Areas in the north pearl, the rose quarter, lloyd district, goose hollow, the university district, and areas in south waterfront and south end -- great. South end of the central east side. And these are as we think, really have a tremendous ability for future growth and probably areas you'll see the most growth in the next 25 years. In part because of the new infrastructure being developed and part because of the -- this full potential hasn't been realized. Here we go again. So just to walk you through this real quickly, this diagram illustrates where we -- how we see the city starting to transform over the next 25 plus Years. And most of these buildings in yellow would be new development or some development that's currently exists. Mostly new development. And so what you start to see is the concept of creating a central river, trying to turn the city more towards the river as opposed to away from it. We don't really turn our back on the river, but what we do is tend to face the other direction. Most of our orientation is north-south, it's not east-west. So one of the next steps you would want to pursue is how do you orient people closer to the river itself. And to the region beyond. So we

would look at how do you use unique districts outside the city center and connect with districts inside the city center as well as the river itself.
Adams: Is that a new canal around the river or is that a boundary?
Doss: I'm going to come to that.
Adams: Ok. That snuck by me.
Doss: You'll see it in a minute. Then the next move is establishing an eastside center and a new hub on the -- for the central city on the east side. We've had the potential there, we've put a lot of investment into the lloyd area for a long time. Its best years are ahead of it but now we have a plan that establishes that area as mixed use neighborhood, characterized by residential as well as commercial development, vibrant retail, and a higher -- hierarchy of streets That better move you through and to the district. Building on that loop concept, take a look at the southern book end, an area that is commonly referred to as the innovation district. How do we start to make the connections with the light rail bridge that really unites the growth of south waterfront with the growth of psu and the entrepreneurial strength that's starting to emerge in the central east side. On the north end, we're starting to see there's another similar book end, potential for one, with the growth of development along the broadway corridor, and the rose quarter, as well as properties on the west side of the river, the properties in the pearl district and hoyt street properties, the riverfront or the post office itself. Lastly is this concept of a new loop that would actually be a loop designed to build and complement the existing infrastructure that is there. It's -- the idea for this is to create a more safe and the calm way for pedestrian and cyclists to get around, trying to attract that cyclist right now that we haven't been able to capture in terms of concerns but caution, they want to be able to share in this infrastructure as well, but currently they're a little afraid to be in traffic. Maybe we can find some ways to connect to the larger rail and bike-ped system. All of these moves are intended in the end to really start to create the center that we've talked about. The center of innovation and Exchange, a place where the universities are connected with the other institutions in the city, and broader business growth. And really something that we think will benefit the region as a whole. So the requested action here is to have council adopt by resolution the concept plan and direct staff to proceed with the remaining phases of central city 2035. The next of which would be the west side quadrant plan, proposed to start in january.
Anderson: The way this works is that we'll adopt -- you'll adopt each one of the concept plan, each one of the quadrants, and then we'll come back with an ordinance at the end to adopt the whole package at once. And that will be about two years from now.
Adams: Why don't we go ahead and do the next resolution and then have testimony i'm sorry, that's a time certain. Do we have folks --
Anderson: We have two people invited here to provide --
Adams: How many people have signed up --
Saltzman: Quick question, troy. So was it a misquote when "the Oregonian" said beaverton has a higher population density than Portland?
Doss: It's not. I guess it's not.
Adams: It’s not a misquote? It is true?
Saltzman: It's true.
Anderson: We'll get back to you --
Saltzman: It sounds like some of our testifiers can answer that question.
*****: [inaudible]
Adams: Oh so forest park would count against --
Saltzman: So forest park counts. Ok.
*****: [inaudible]
Saltzman: So is beaverton. I was scratching my head when I saw that. I figured i'd have my chance -- .

Adams: Could we have our esteemed guest come up.
Fritz: Could I just ask a question first? We got a letter from wendy rohm and her -- with a couple of suggestions. One of which was to keep the name of the district the west end. In the central city concept plan.
Doss: I don't believe we have changed the names of any districts at this point. And actually the currently to be technical it is a subarea of the downtown districts --
Fritz: She says it's not referenced in the document and I just read this so I haven't double-checked.

Doss: We haven't referenced the pearl or anything like that either. We left it at its very most generic state looking at the entire central city as opposed to the individual district. We do intend to do that on the quadrant plan, and that might be a good point, to identify the west end as its own unique district.
Adams: The fact it's not mentioned does not mean it's no longer --
Doss: It does not mean that. It's still a regulatory district today and will continue to be. So until some change might be made.
Fritz: That brings me to my question, which is what about plans like the west end plan and others? What's the relationship between those already adopted plans and this concept plan, and what Would be adopted moving forward?
Doss: The quadrant plan -- the quadrant plan, we'll have to readdress those issues, is that still the directions we want to go, are there things we could do to make those better? So I don't think there's any -- look at any broad changes, the west end is pretty successful district. There might be some complexity in terms of how it's implemented right now. There could be ways to retool that. I wouldn't say it goes away. And maybe it becomes identified as its own district, because it's really a regulatory subarea of the downtown district. Or the -- so a better example might be if you look at the river district, we really have a distinct pearl district and a district old town. Maybe those should be two different districts that emerge out of their current river district. Because people don't recognize the river district other than I think us wonks, quite honestly.
Fritz: Usually when we've done in the past, whenever we've adopted something like the west end plan or something else, it's been added to the comprehensive plan that was adopted in 1980.
Doss: That would happen at the quadrant level plan and subsequent amendments to the comp plan.
Fritz: May I finish my question?
Doss: Yeah.
Fritz: Thank you. So is the intent of this to be a complete rewrite, so that anything that's not in the new comprehensive plan will not then be the adopted -- will not be considered as part of the comprehensive plan of the city?
Joe Zehnder: If I could answer that, Commissioner. The intent, what we're doing in the comprehensive plan is to create a new comprehensive plan. But bringing in all of those pieces that we've adopted in the past through various sort of subarea plans, but looking at them more generally about how they apply to the whole city. In the central city, for instance. When you look at our subdistrict plans, there really kind of were in part local planning, but part just because this was the time when there were growth pressures or issues over there that we had to deal with, so you drew a boundary around it and created new regulations or a plan. One of the issues with the plan today in the central city is that we've done that so many times, the districts are inconsistent, and it's not getting us the best result. So what we would do in the central city plan, what we've been doing in the quadrant plans is pulling up, pulling into the new work the good ideas that were in that plant, the community is with us in developing them, so what they wanted to accomplish will be reasserted in this new plan, and if any evolution in that thinking would be reflected in it. Whether or not we still need to draw a boundary, have special rules for it will determine once we get a plan and know what

the best way to put that plan into effect is. We may not need a separate district, we may just have rules that take care of it independent of that.
Fritz: Thank you. So citizens who participated in the adoption of those other plans that were then incorporated into the comprehensive plan, should be monitoring this process and making sure the essential elements they feel are still pertinent get into the new plan.
Zehnder: Absolutely. And the way we set up the process will bring those folks in as well.
Fritz: Thank you.
Adams: At the very end after you lack at each quadrant, there will be the council in the future will have the opportunity for fit and finish. They'll come in by resolution then at the end they're not adopted by ordinance.
Anderson: Until it's all done. I'm sure we'll learn something when we get down to central eastside that's going to affect what we did in northeast, a year and a half earlier. So we want to be able to come back around.
Fritz: Thank you. I just wanted to be clear on the big framework of the whole process. Even though were starting in on this one. I think it's a very good way to figure out and illustrate how we're going to go about it. But I wanted to make sure everybody watching at home understands the long haul we're in for. Thank you.
Adams: Now our special guests. Anyone else wish to testify on this? Welcome. Thank you for your service, your leadership.
Michele Rudd, Vice Chair, Portland Planning and Sustainability Commission: Thank you. I'm michelle rudd, vice chair of the planning and sustainability commission and one of the cochairs for the central city 2035 effort.
Ethan Seltzer: Ethan seltzer, I was a member of the committee here representing chet orloff who couldn't be here this afternoon.
Rudd: I guess I will start out then. From the perspective of someone who's been on the planning sustainability commission and having just gone through the Portland plan process, it was key to me going through the 2035 process, and as a commissioner later reviewing it, that the plan actually get incorporated into the effort that we're doing here. It's sort of our first ability to see how do we actually implement those objects in a specific geography. One of the things I think worked well with the committee was the community's commitment to locking at what the unique assets are of the central city and how we can leverage off of those to serve the city as a whole. So we recognize this is an economic engine for the region, for the city, it's a resource that there are investments we can make here that will assist the city as a whole. In terms of trying to promote healthy educated use we've got great resources with psu, omsi, ohsu, and we're making investment and we'll continue to make investments that link those more effectively. And encouraging things like incubators and the economic development, that comes from that. One of the things i've noticed as i've started the touring new business and general operating spaces is this move toward more collaborations, more spaces that are open, less walls. And I think part of what this plan is trying to do is do that on a city level, which is exciting. The idea you've got a situation where people will come together, where they will exchange ideas, and promote in the city as a whole what we're seeing happening within companies themselves as people try and bring down the silos and work together more effectively. That's my initial comments on it.
Seltzer: I would add that Portland's got an international reputation as being a great place for people. And I think in every way we are striving to be a better place for people. I think a lot of our efforts, our directive that way, people come here to see how we're doing, that what we've accomplished. The 1972 downtown plan was an incredible statement on behalf of creating a human scale people center downtown at a time when downtowns across the country were abandoning that and trying to compete with the suburbs by being automobile scaled, kind of replicas of the environments that were appearing on the margins of cities all over the country. Today we're in a

really wonderful position in a sense in that we have a great downtown, but at the same time we've got more work to do to try and see what we can do to advance that Notion that this really is a place for people. As jan Jacobs said "a good city is place where people feel safe among strangers" because in cities often you don't know all the people around you, but if you feel safe, you'll interact, if you'll interact you'll engage and come up with the next generation of ideas that will make this place even better. What we've tried in central city 2035 is really keep the focus on that notion of engagement and innovation, and exchange. And downtown is being a very unique environment in the entire region, if not the entire pacific northwest for that to happen. So it's a very exciting moment for us I think, because these are powerful ideas. And Portland's got a track record of being able to make good on them.
Adams: Thank you both very much for your service. Appreciate it.
Rudd: I will put into the record planning commission's letter of recommendation in support for the plan.
Adams: Great.
*****: Thanks.
Adams: Thank you very much. No other discussion or council --
Moore: The amendment?
Adams: I would like to --
*****: [inaudible]
Adams: I keep asking does anyone want to testify.
Moore: We have two people signed up. Did you want to do the amendment first?
Adams: I'd like to move the amendment.
Fritz: Second.
Adams: Everyone has seen the amendment I believe. Moved and seconded. Discussion on council? Please call the vote.
Leonard: Aye.
Fritz: This amendment is at my request and I greatly appreciate it being added. It states that the proposed framework includes the principle of stepping down building heights to the river originally stated in the central city plan. And that it was resolved at the urban design principle, that calls for stepping down heights of the river will remain in effect unless a citywide public involvement process occurs. That calls out specific changes to address how and why exceptions to this rule should occur. I know that professor seltzer will remember a vigorous discussion about this on the planning commission when he and I were both serving, so I appreciate this amendment being made. Aye.
Fish: Aye. **Saltzman:** Aye.
Adams: Aye. Hi. Welcome. Michael. Welcome back. Go ahead.
Michael Zckoych: I would first -- I am michael, I have been a businessman in Portland for 36 years, and in the central east side for 30 years. And I serve on the board of the central east side industrial council as well as delegate to venture Portland organization. I also am a realtor and a contractor in the state of Oregon. I have come to ask you to adopt or to include our central eastside industrial council's letter to the council to the mayor, and including the council on october 24th, 2012, where we outlined our support and our particular interest in certain areas of the plan, which include policy five, the maintaining of industrial sanctuaries in the central city industrial districts, as an employment district, and as well as the willamette river piece, which became a very prominent part of the development in the concept plan by allowing commercial and tourist access to the river. And I would just like to stress the importance of the manufacturing and the industrial arts jobs that have been overlooked over the last couple decades in terms of not realizing their importance and sending them overseas. What we found is that the engineering jobs that we thought would stay here are following them overseas as well. And the reinstitution of an importance being placed on

these manufacturing and industrial arts jobs and the inclusion of them into the central east side and the other areas of the central city, were appropriate. So that we may build a home for the artists in industry and manufacturing, amongst the population that we have already been focusing on bringing into the downtown area. It's important to create family housing in the city, and to support the recognition of that end because of the scarcity of industrial land in the city, multilevel industrial manufacturing use is a perfect theme for the central east side, and we believe that the people who are involved in the manufacturing and industrial arts and we have always held this vision, held on to it tightly and kept it alive in the city, so that we can now illustrate the importance of these jobs and this type of culture being included into the inner city culture ask making manufacturing and industrial arts a part of an urban fabric. So that we attain a balanced view of life and the inner workings of the importance of these facets of our intelligence. Also i'd like to thank you for including a business representative into the steering committee. If you look at the people on the page, you'll see that there are very few of us there, and it's good to see you including us in the process. And we are very much in favor of adopting the central city plan, and looking forward to moving on to the southeast quadrant planning process.
Adams: Thank you, sir. Thanks for your service. Go ahead, ma'am.
Crystal Elinski: Hello, my name is crystal, and I represent 1000 people. I am -- 10,000 people. I am glad to be here with my representatives and follow this plan. I would like to say first that I am disappointed about the lack of diversity and inclusion. Not so much in the natural processes that i've seen, i've been living 22 years in Portland, and a lot of those years in the inner city. Also as a homeless person, gave me a very interesting perspective. And so as far as diversity inclusion is concerned, I think that we -- that the focus that I see being talked about for services, housing, the it's gone by the wayside. Even sustainability seems more like a catch phrase than anything. I've also heard this is about innovation, and it's comprehensive. But for me it seems like it's more of the same of Portland's history. There is a focus on real estate wheeling and dealing, Portland's business alliance, pdc, a lot of concentration on who's got control of what areas, and that tends when you're talking about collaboration, it tends to become one in the same. Whereas we forget about the history and the people that live here, and many of my friends that live here in last generations, and when I lived in north Portland, in elliot neighborhood, they're gone. Their businesses are gone, the people are gone. They've been pushed out by these great plans of Portland, with freeways and entertainment centers that I think that we're not the remembering what's important about this city. Not to forget the people that need help, we continue to ignore example the homeless situation. I also wanted to -- I wanted to discuss if lloyd center and the central east side. I think as far as feeling safe around here, a lot of people would say they don't come to Downtown anymore because they don't feel safe. And that's mostly because of the police presence and the private security presence. It's very harrowing. Another issue is transportation. I think we should remember, focus on transportation, we continue to lose more and more buses to the detriment of other parts of the city that maybe people do want to come here but they don't have access. Less and less access. People that would like to bypass this whole area in general to get to work or home, they actually have to go through downtown more and more. And it's a cluster [bleep] even with for people like me on bikes.
Adams: You're not allowed to use that language.
Elinski: I thought I was because of the military, world war ii phrases, I thought it was a common phrase. Ok. It's a boondangle, it's very difficult even on a bike to get through downtown. And so transportation also needs to be a focus as we continue on. Most people I talked to don't even know that these processes are happening, so if we --
Adams: Your time is up.
Elinski: -- the word out more, we might be able to remember these essential issues.
Adams: Thank you very much. Karla, please call the vote.

Leonard: It's just always very interesting to me to having lived here 60 years, listening to people who lament about what Portland was like 20, 30, or 40 years ago. I remember about 10 years ago I Was running for the council, and I went down to fund-raiser, dinner on, I think it was an aids -- a fund-raiser for raising aids awareness. And vera was there, and a number of other people. And I had never been to wieden & kennedy's new office, and I went to Portland state and I worked at blitz weinhard when I went to Portland state in the early '70s right where the spot where wieden & kennedy was. And I sat and unscrewed the bottle caps off beer bottles and -- for eight hours in the evening after attending classes during the day, left at night with a lot of other young men who were there, felt pretty secure, pretty dangerous area. We went to the place we lived downtown, not because it was a cool place to live, because downtown was the cheapest place to live. And as I was standing on this balcony remembering all of that and taking all that in, somebody who was from another place approached me and said, isn't this beautiful? And I said you have no idea. [laughter] where I do start? To explain the contrast in what was then 2002 and back to the '60s and the '70s and what downtown was like. And I won't bore you all with a boring history of what Portland was like other than to say it wouldn't be what it is like today without what was done under then mayor terry schrunk and the vision he had, and carried on by mayor goldschmidt and others to develop a downtown that you don't appreciate unless One of two things occurred. You were here during that era and have been able to be as fortunate as I am to see the great transformation the city has undertaken, or two, come from another place that lacks the kind of planning that Portland has, or have the ability to look at other places and then do a compare and contrast with Portland. Both of those strategies I have been fortunate enough to experience. So it's indeed a pleasure that -- and an honor I get to in one of my final acts update this plan I have come to admire so much in my adult life, and appreciate because it really does involve a lot more than planning, it involves hard decision making along the way, implements the plan that creates animosity, misunderstanding, confusion, and frustration and anger with people who live here. But that is part and parcel of why these kinds of plans are so hard to adopt, and then to implement, which in the long run makes people such as myself appreciate so much what they are and why they are. Aye.
Fritz: Thank you to all the community members who participated in this, and indeed to the planning staff who have led it. Susan Anders, Joe Zehnder and Terry doss, troy doss sorry. Thank you for your work on this. It's really important, and it's a delight to have this come right at this time, reminds me why I love being on the council, why I so much enjoy being on the planning commission. It's hard to explain to folks How people on the planning and sustainability commission spend so much time and why they spend so much time taking public input, and incorporating it into a document like this. And we need to do the study, we need to do the outreach, and we need to get the plans adopted and put in implementation strategies. And you have to do each step at a time. We spent a lot of time on the Portland plan and got that adopted, and it's something we can all be proud of. This is the next step, and I understand the final product won't be adopted until 2015, and I look forward to being on this dais at that time. It seems like a long time away, but it really isn't when you're looking at planning for the whole city for 20, 30, 40 years to come. Particularly want to recognize Kevin Kilduff in the office of healthy working rivers and recognize the partnership between the bureau of planning and sustainability and all of the other bureaus in putting this plan together. Very proud of the work that we are continually referring to looking to the river as our front yard rather than our back yard, and looking at how do we enhance views and enhance the use of the river for pedestrians, bicyclists, for all modes of travel, and create the built environment that encourages that feeling of safety by the river and the encouraging of people to get to the river now that it's clean and will become even cleaner. I thank tom bizeau and my staff, my chief of staff. Its truly delightful for tom and me to have a planning project coming at this particular time to focus our attention on and to be able to support and then again I appreciate the willingness to accept the amendment and the mayor's leadership on this, that this is how a citizen process

should work. That you do a huge amount of work in the community, you listen, you incorporate the feedback, the planning commission then takes a lot of testimony and gets it to 90 or 95% or in this case it seems like 99.9% and there should always be an opportunity for tweaks at the end or indeed for complete revisions if that's called for. It's good to hear both in testimony today and in the input that I got from citizens that indeed we're at the tweak stage rather than the go back to square one. Thank you so much for everybody for participating in this plan. I'm very proud to vote aye.
Fish: First I want to say I appreciated commissioner Leonard's comments. He has 44 years on me in terms of continuous living in this great region. But reminds me of I spent too much of my adult life in airports like newark and kennedy and other places. It's like when people tell me, I wish the Portland airport was better. It's like, well, compared to what? [laughter] maybe you don't travel, but if you travel, you say thank god for the Portland international airport. I had lunch the other day with dean nohad toulan. We were catching up, and I was reminded that so much of what we celebrate in this community is a result of people that had a vision and stuck to it. And I mean, he was -- he was regaling me with a story when he used to have a little office off broadway, in a three-story building, but he came here from another city with a vision for how to create something special at Portland state. And it took him almost 30 years. But today we have the urban center. And the new building to the south, and we have a Portland state that's on the rise. So we celebrate that vision, and then the tenacity to make it happen. You think about the people that said we're not going to settle for a surface parking lot and created Portland's living room. Or folks who said tear down that drive and put a park in. I'm delighted tom mccall waterfront park was named one of the great public spaces in america. People that said, yes, there's a question of a barrier to i-5, but we can work around that and create a great park and call it -- name it after vera katz. Folks that did look at the industrial district to our north and say it's a wasteland, we can't transform it, but said let's have a vision and now it's the river district and the pearl district. On and on. And as someone who has lived in a good number of cities, what I have come to appreciate about Portland is that -- is the number of citizens that had Clear visions and then had the fortitude to stick with their gut opinion and carry it forward. Frankly, one of the things I think we have to resist going forward is the temptation as lot of other cities have had, which is let's see what other cities have take it off the shelf and replicate it. And I for one would hate to see us become like every other it is the. But there are lots of voices in our community saying every other city has abcde so should we. What I think is special about Portland is we resisted that. And we said, what's special and unique and organic to our community not what is expected in cities across the country. And I think that has made us unique. I appreciate all the work that's gone into this plan, and I appreciate the concept plan, and as I have the good fortune of continuing on council, and I hope to continue to lead the parks and housing bureaus will be at the table with everyone actually implementing the concept plan. And i'm very excited about that. I want to thank mayor Adams who has been passionate about this work for his entire four years, and susan and joe, and steve, and sally, troy, carl, and the whole project team. I want to think andre and all of the planning sustainability commission members who worked so hard, and I also want to thank the steering committee and advisory group in particular chet and michelle for your great service to our community. And i'm very pleased to vote aye.
Saltzman: I'm very proud to be on this council when we adopt an updated -- the new vision for central city. And I just want to say that I appreciate all the work the planning commission, our planning and sustainability staff, mayor Adams, for his leadership on this. And I think there's a lot of good stuff in here. I guess -- I too grew up in the Portland -- commissioner Leonard speaks of, and I know the central city is a more vibrant and exciting area and people come from all over the country to live here now, but I am still concerned that maybe our concept plan isn't planful enough about employment opportunities. We're not doing good enough in that regard. And we need to continue to figure out ways -- maybe it's not stuff you can really address in the concept plan like it

is easy to address stepping down to the river, visions for pedestrian, bicycle plans, loops and things like that. Those are the visionary stuff, but if we don't maintain a strong cornerstone, or regain a strong cornerstone of jobs in our central city, it's fundamental to the billions of dollars we've invested in transit, it's fundamental to sort of a life form of this urban area. But I still feel that there's got to be a way we can be more planful about good job growth. Not only in the central city, but really throughout the city, because maybe it's just the Perspective i'm sitting from through my own family experiences and all that, but I see too many people unable to find work in Portland. And they're going elsewhere. San francisco may be stagnant job growth, but there's more job growth going on there than there is in Portland right now. Ditto for seattle. Ditto for denver. So we've got to figure out -- we've got to figure that out too. It's so important, you can't enjoy the quality of life unless you have a good paying job, and I hate to -- i'm hoping i'm not sounding like a presidential campaign, but we've got to be more planful about employment growth in the central city, and in this region. And this is a good start, but I want to see more. So i'm pleased to support this and laud everybody for their work and i'm pleased to vote aye.
Adams: I want to thank the planning and sustainability commission, the planning and sustainability -- bureau of planning and sustainability staff, the project team, the steering committee, the advisory group, everyone who participated in the process for bringing this before us. The fact is that the challenges that we face as a city are too tough to rest on our laurels, and that's why I like the approach to simultaneously work on the 25-year strategy plan for the city, the Portland plan as we're also working on the concept plan for the central city and then also the quadrant Plan. And I think that doing those three overlapping has helped us to keep -- make sure they're integrated and what we've learned in one we've been able to apply during these overlapping time lines to another. The measures that the city operates under are tough. 12 measures. And one of them more than a third of them are about economic security, and they should be. And we get there by the prosperity, our four goals of prosperity, education, health, and equity. So you've done a great job, I think the process that's been set up doing quadrants by resolution and coming back and looking at the whole thing is the opportunity to -- for everyone in the city to participate, and I think it's a smart way to do it. I also want to thank lisa libby on my staff, ray, and jonah, for her work on -- their work on all this. I'm really pleased to vote aye. [gavel pounded] so approved. We have a 15-minute break.

At 3:00 p.m., Council recessed.
At 3:17 p.m., Council reconvened.

Adams: City Council will come back from recess. Karla, please read our 3:15 resolution time certain. Item number 1203.
Item 1203.
Adams: So we are not adopting this concept as an official concept of the city. We are not. We are not saying this is -- we're not opining on the priority of this effort one way or another. That is not the purpose of the resolution before us. The resolution before us is quite simple, as noted, lace out the history of this challenge, the east bank freeway, and the challenges that it poses for the central east side success in terms of lack of access and the barrier that the freeway acts as on the river. But what this does do is learn important lessons. One of which having sat on the advisory committee for the sellwood bridge now for years, if there had been a reference document, which is what we're proposing this to be for decision makers who in the past permitted the condominiums from being built so close to the bridge you can almost reach out and touch them, and now we're paying a high price and disrupting people's lives to shave off some of those condos so that we can rebuild the bridge there. That's a negative reference that I want to avoid in the -- for the stu inman in the future. A positive reference of thinking ahead is really what -- when the county did the permitting work for i-205, and it was the county and odot that put in a series of tunnels and set aside land on i-205

for what they envisioned in the future would be bus rapid transit to go to the airport. The fact they did that is the only reason we could afford to do the light rail to the airport. As if we had to go back and dig things or bridge over i-205 on the way to the airport, it would have -- having work order that project it never would have -- this is is a reference document. The resolution today arc Knowledge it and simply asks staff into the future that as things come in for development, requested development, that they reference back to this and just provide council with their opinion whether or not a particular development might make this harder or easier or have no impact on it at all. The other reason this is before us is because I made a promise as a candidate for council. When I was in front of the central east side industrial council, and I was in front of hosford abernathy, brooklyn, and other neighborhoods that said the uncertainty of where a freeway might go through the central eastside really puts off some people from making investments in their buildings. You're going to invest in your building and it will be ripped down in the next 20 years to make way for a big dig or something, but that uncertainty in the central eastside is something they asked me as a candidate to simply choose a path so we know where there is disruption, where the path will go, and where there's not and let us get on with our lives of building and rebuilding our part of town. So i'm -- having said all that, i'm very impressed with what staff came up with. This is -- it's had really positive reviews by folks that have looked at it. In the central eastside, i've been to their meetings twice to talk about it. And as you will -- as joe and steve and the team, susan and the team, claudio, walked through it, you'll see how this Really does connect the rose quarter to the central east side. The reason we're doing it now is we're moving from consideration of the noter- the northeast quadrant, we're now going to be going to the southeast quadrant. So this is part of that. It was before the steering committee for the concept plan, we got very good feedback there. Thank you for giving me the chance for a little introduction, and i'll turn it over to our planning director, joe.
Joe Zehnder: Thank you, mayor. Commissioners. I'm just briefly going to explain what's in the concept plan. You all have copies of it. It's also posted on our website, so given it's a long, big document, people can zoom in and take a closer look at home. But the gist of the project is that we use the engineering studies that were planning level engineering studies completed in the previous work done on the freeway loop, most recently 2003 with the freeway loop study formed by mayor katz and chaired by dean, and --
Adams: Whose letter is in your document.
Zehnder: Right. And did a quick analysis with an engineering team of ch2m hill, some of -- just to explore what it would take to do an alignment like this where the freeway is replaced along roughly where the freeway is now. And what we came up with looked at the grades, it looked at maintaining access from the i-5 and 84 to the central city, it looked at trying time prove access to the freeway from the central east side, it looked at finding ways to reclaim waterfront land for future purposes, be they development or open space. So its design parameters were that. What we came up with is an approach that replaces the full length of the freeway from the marquam bridge to just roughly north of broadway in the northeast quadrant, in a tunnel, a cut and fill tunnel for most of it where it's just a trench where you've capped it. And couple that with an extended and improved water avenue that runs not just through the central east side like it does today, but we believe that there is the ability to extend it all the way over into the northeast squad rant as well. So you get a surface street connection and the freeway connection. So let me drill down into more detail. Starting on the south, so marquam bridge is connected to the replacement east bank freeway with a new sort of ramp down to water avenue. And this is planning level preconceptual is what the designers called it. But it shows that schematically how a connection works. You can see right he hawthorne bridge is the idea that the load has come down enough off the bridge that it's starting to go into the cut and fill tunnel. As you move south, you are in the tunnel, all along that section between hawthorne and morrison, and here with the odot Lots, with the replacement, with the land that would be created underneath the freeway and with the existing esplanade, is the big opportunity

of the central eastside to reclaim land for public and development purposes and I believe it's 550,000 square feet, if i'm reading this off the slide correctly. It's a big new piece of downtown central city Portland that could be created.
Fritz: Could you just stop there and tell me where the southbound -- you're to be eliminating getting onto the morrison bridge?
Zehnder: I'll do that next commissioner.
Fritz: I'm sorry.
Zehnder: That's a good question. What we've done here is taken the ramps -- if we were to leave the morrison bridge ramps that the -- the way they are now, the net impact of that would be to eat up a lot of the area that we'd have to replace them in a way that would eat up a lot of this area we're trying to reclaim. So access to the morrison bridge was replaced off -- with access directly down to this new water avenue. If see those streets and connections there. And we replace connection on to the freeway by extending the new the ramp connection into the tunnel off southeast stark, so from the central east side you have direct sort of southern heading south access into the replacement freeway. And them between the morrison and burnside bridge, once again, the freeway is in the cut and fill tunnel, you have the new sort of connection into the Freeway from stark, another area where open space at least along the waterfront is reclaimed, it's not such a big piece of land because of the freeway eats up so much of the alignment anyway. And then between the burnside bridge and getting over into northeast quadrant, basically the freeway itself remains a tunnel, however the technology to create the tunnel here, the engineers felt would probably be a bored tunnel for that section to get under the freight lines, and because of the grades, rather than a cut and fill tunnel that needs to go a little deeper here, you can see the i-84 ramps are still there, and connecting coming out, we've created a new direct connection heading northbound t. Westbound off i-84 on this new water avenue, so there's a new way to access the central eastside. And then heading to the north again, basically the freeway up to about where flint avenue is today, stays in the tunnel and comes out of just north of broadway, and what you're going to see tomorrow in the discussion of the northeast quadrant improvements, basically this alignment at least, this notion about the ramps on and off are the same ones that are showing up in that plan for the safety improvements for the freeway through the rose quarter. So that's the approach. What we think we've shown is that conceptually there may be a way to do this, and that at least the grade and sort of some of the bigger barriers seem addressable. However there's a long list of questions here that engineers have identified that further study of this would require examination of.
Fish: If I could, one question. I see in the -- to the south you've created -- you've put purple lines to show redevelopment sites, and that's clear. How did you determine the redevelopment site in the rose quarter?
Zehnder: What you'll see tomorrow on the northeast quadrant plan, the net effect of this in the rose quarter there would be that you'd have a surface street. So that you're basically capping over what's the trench today for the i-5 freeway, commissioner, and so the notion is, ok, if you capped over it, can you develop on top of the cap? And you'll see actually some initial thinking on that tomorrow with the northeast quadrant plan.
Fish: For example, is that -- to the west -- western most parcel in the rose quarter looks to be the madrona --
Zehnder: That's not intended. That's -- that should not be a redevelopment site. That's the madrona. No absolutely. The only sites -- you'll see this tomorrow, commissioner, the only sites that are even being discussed are the ones that sort of gain some land because they're on the freeway.
Fish: That makes sense.
Zehnder: We've been very protective of matrona in the northeast quadrant plan.
Fish: Ok. Thank you.

Adams: Let's get -- anyone Want to testify on this matter and then we'll have more council discussion.
Moore: We have two people.
Adams: That sir is a very historic architectural jewel sir. He's giving me a bad time. Hi welcome. Go ahead michale.
Peter Finley Fry: My name is peter finley fry. I am on the board central eastside industrial council and I'm vice chair of the land use committee. I'm here on my own behalf. I have lived with the freeway since I first came to portland. As the mayor will know and I wanted to come down here to say that I think it's a very intelligent idea to do this now. And I think that its intelligent to do it for two basic reasons. One is the freeway is like the third rail in portland, it ends up always distracting us from other critical issues. And we have some huge ones now like cleaning the river, environmental restoration, building our transit, dressing the economic challenges and homelessness. And so by putting this to bed so to speak, we can focus on things that I consider more real and more relevant right now. The second is I have slightly disagree with my colleague. The technology around boring is rapidly evolving and in fact portland is one of the pioneers of this with a big dig. And seattle is now going to bore the alaska way, and in l.a., I believe they bored a railroad line, so engineers and contractors, as evidence by this week's daily journal of commerce, believe that kind of this is the path for everything from sewer lines to freeways to rail lines. And actually, the cost is dropping rapidly, plus the other benefit of boring is that it does not disrupt the service use, so you can go through and under. And that's evidenced by the big dig on the east side, which caused virtually no damage to the activities of the central east side. Thank you.
Adams: Thank you very much. It's good to see you. Michael, welcome back.
Michael Zckoych: Michael, from the beef and sausage company and the central east side industrial council. I am here to speak up for the council, in that we haven't had a meeting or a chance to formulate a board position on this matter. And that as a member of the board, and hearing many of the discussions around this, this plan, I would, at least, ask the council and the bps to keep us in the loop, and well, more than that, to make us an active part of the development of this freeway section. And so that we can, we can put our two cents in about access and, and the particularities that we are involved with. Every day of the week down on the central east side. I think that we can be a great partner in this, in this process. And so, my understanding is that you are voting on whether or not to proceed with the planning process, or let me get this clear about the resolution.
Adams: The resolution is, it's a new approach. So the resolution just acknowledges the existence of this concept. And, and that when the development comes in, or other plans are made, that this is simply referenced. It's not -- it does not have standing as the official priority. It does not make it a priority for the city. It does not say it's -- we're going to do it. It just says, because we learned the lesson on some other projects, like the sellwood bridge, that planning when individual projects come in or big projects come in it has to look at this.
Zckoych: So that any, any development of the odot blocks along water avenue would have to take into consideration the future, potential of this freeway section going in, and in other words, in terms of driving, pilings into the ground, and so forth.
Adams: And again for folks on the central eastside, they want to know that the city is looking at this, even if it's not official. But the city is looking at this for the alignment, and not, and that the, discussions won't wander through the east side of where it could go in the future.
Zckoych: But I also understand from the document that you are putting the actual moving forward on this development back after the 2035 plan time line. Which means --
Adams: Future decision makers will decide what, whether this becomes a priority or not, as we move from the northeast quadrant to the southeast quadrant. Your part of town. It's important to me that we get this out there now so that you can plan the rest of the district with some security, that the city is either going to, in my opinion, is, the city chooses this alignment to take of the freeway,

and all the access issues, the rest of the district doesn't have to worry about the freeway marching through the middle of it.
Zckoych: Ok. I see, so we're localizing the area, and not saying it's going to go down 7th or to go down 12th. Other areas, so at least we have that certainty.
Adams: Exactly.
Zckoych: But in terms of this area we still remain uncertain, correct? It may not move forward in the future, or it may.
Adams: Absolutely, you are right. This is, the council is not passing judgment on -- I will tell you this, in the next 50 years odot will have to do something about the marquam bridge. It's getting to that age. It has a similar design of a bridge that collapsed in minneapolis. It's just -- they are going to have to do something about it.
Zckoych: And as a council I can tell you that we at least appreciate the minimizing of the effect of the uncertainty.
Adams: High praise indeed. Thank you both very much.
Zckoych: Thank you.
Fritz: I am concerned, though, that there hasn't been any public outreach on this concept.
Adams: There has been. I've been to the central east side twice. Personally. So.
Fritz: So the public involvement statement needs to be amended. But if the central east side industrial council as a whole hasn't had a chance to sign up on this --
Zckoych We haven't had any input into it. Although you have exposed to us, on a couple of occasions, we've been made aware of the plan, but we have not sat down and actually gone into work session with you on this.
Adams: And it's not that, again, this is to narrow the uncertainty.
Zckoych: Correct.
Adams: That's what this does. It shows you can narrow the uncertainty, and from a conceptual level, it could work.
Zckoych: Right.
Adams: That's where we're at. So I have done the personal outreach on this.
Fritz: Right.
Fry: Mr. Mayor, could I just add, those were general membership meetings. I think, there was one board meeting, and we have four general membership meetings where the public is involved, so it wasn't just a group of people. An open meeting to a wide crowd.
Adams: Yep.
Fritz: So I'm just echoing michael's question. If I vote for this, am I saying, for example, that yes, if this ever happens, that stark street is the best place for the on-ramp?
Adams: You are not voting on that.
Fritz: No. why am I not voting on that? In what way am I not voting on that?
Adams: Because this says, this just acknowledges that this concept on this piece of paper dated today exists. And that if someone wanted to vacate stark street and create a super block on either side, there would be a discussion about, well, that is one of the options for providing southbound access to the freeway from the central east side should it ever be buried. And that does not tie anybody's hands for future councils or the central east side from saying great. We're going to vacate stark street, but we have done it at least knowing that it would not be freeway access there. That's what this -- that's, this is, this is new type of document. It just requires conversations, exactly what you are calling for. My impression only talking to folks at the central east side, they are fine with this, and they are fine with not having taken a position on this, they know i'm here, and they are fine with it because they know that it's a reference document.

Fritz: So to establish your legislative intent, which I think is specified in the resolution, it says it illustrates an approach, and then it says, asks future planning processes to consider but doesn't say that they actually have to do it.
Adams: Right, and it only acknowledges we're not even accepting.
Fritz: Right, thank you. That makes more understandable to me.
Adams: So there is one -- thank you both. There is one other document before I end my time on the city that will be like this, the 50-100 year out stuff, and that's the high speed rail options within the city, and that will be in december. Call the vote.
Leonard: Thank you. Aye.
Fritz: I am one who believes that having the freeway on the surface on the east side is worth billions of dollars to us in terms of tourism attraction. People driving through and thinking, wow. What a wonderful city, I would like to get off here on the water avenue exit. I'd like to go and see what, what, Portland has to offer. So, i'm understanding that this concept diagram doesn't, in any way, say that we are going to move forward on doing this. But, and I think that it is good thing to have had the conversation, and to look at this might be how it could be done should a future council wish to move forward on it. So, I also particularly respect elected officials who do what they say they were going to do during their election campaign. And so, I appreciate the mayor's office work on this and the understanding of what we're doing here. Aye.
Saltzman: Well, it's interesting. In many respects I think that we lost our opportunity. We are doing big pipe, and, I was thinking why can't we do big pipe on one level and the freeway on the other level. Sounds like technology and cities and the engineering is catching up with that, but, people just laughed at me at the time. But, we finished the big pipe and it's good. I like what peter finley fry said it's nice to have some, you know, idea of where the alignment would go if the resources and the public wheels were marshaled to do that so that we can sort of lay that issue to bed for a while because we have a lot of other things we need to focus on, as well. So, I appreciate the leadership, mayor Adams, and everybody doing this. Pleased to vote aye.
Adams: Well, I just dedicate this to my former boss, vera katz, and the chair of the committee, nohad toulan. And everyone from the central east side and all the neighborhoods over the years. And it's been a couple of decades that this has been part of the discussion over the years that, on whose shoulders this reference document sits and stands. Thank you all. Aye. We are adjourned.

At 3:41 p.m., Council recessed.

This file was produced through the closed captioning process for the televised City Council broadcast and should not be considered a verbatim transcript.
Key: ***** means unidentified speaker.

OCTOBER 25, 2012 2:00 PM

Adams: Good afternoon. Before we begin, just a few talking points. If you're here under local law, if you're here representing an organization, a for-profit or nonprofit, then you need to disclose that under Oregon -- under Portland's lobbying disclosure ordinance. When you come to testify, I will be calling people up in the order that -- after invited testimony in the order people signed up. You'll have two or three minutes to make your statement. We only want your first and last name, and again, your disclosure as a lobbyist. Karla, how was your lunch?
Moore: Good.
Adams: What did you have?
Moore: I had pazole soup.
Adams: That sounds good. Can you please call the roll? [Roll call] please read the time certain.
Item 1204.
Adams: Staff, come forward and have a seat. This sets out goals, policy, and implementation actions to direct the growth over the next 25 years in the lloyd district and lower albina. It is the first quadrant plan for the central city concept plan which we adopted yesterday here at city council chambers. The plan calls for preserving the industrial employment character in lower albina, concentrating higher density -- focused on new residential development that will make it a more lively, full-service neighborhood. Making sensitive transitions to other surrounding historic neighborhoods, improving regional access and local safety, street safety for all modes. We need this plan because -- we need this plan because we believe there will be significant growth in the central city in employment over the next 20 years. That in turn is consistent with our economic development strategies and the Portland plan. The lloyd district has the highest development capacity in the central city. We must use that potential to meet our goals for our city and our region. There are real signs of strength in the lloyd district right now. The langley aat super block proposal will add nearly 800 units of housing, exactly the kind of development this plan will foster and encouraging. Through a unique city pap with odot this project also addresses long-standing issues around the i-5 freeway. This partnership also coordinates land use planning with the major freeway interchange improvement project. This is the way the city wants to work with odot on into the future. Such as previous freeway projects focused only on highway issues, and did not consider the land use community and urban design impacts, that is different on this proposal. We still have issues related with the daily safety problems on the freeway on broadway weidler, and we are working to do interim improvements on a regular basis. This project proposes new east-west connections over the freeway, including a freeway lid, and new pedestrian bicycle bridge at the clackamas street crossing. And a new connection at hancock that will provide access to north broadway from the elliot neighborhood. This will greatly improve the quality of urban space around the freeway. The city and odot together had to address livability issues to the satisfaction of all neighborhoods. That's why, for instance, the proposed zoning changes generally provide more flexibility, but there are some areas north of northeast broadway where maximum allowable heights are proposed to be -- to be reduced. So with that I will turn it over to the city's chief planner. Joe zehnder.

Joe Zehnder: Good afternoon. As the mayor just said, we're here to look at the first of the quadrant plans in the central city 2035 project. This is the northeast quadrant. What you'll see in the presentation, it will be very important for the future of the central city. There's lots of room for growth and development, there are strong neighborhoods, strong communities it's adjacent to, strong infrastructure in the district, we've had positive signs from the market already. The plan as a whole is to implement the Portland plan's goal for Portland to be prosperous, educated, healthy and equitable, and we've had this big opportunity in this -- to work with odot to link taking a look at a freeway, but also have that be responsive to the goals for neighborhood development. As we did yesterday with the central city 2035 framework, this is a phased adoption process. Today we're just considering a resolution to accept the proposed plan, and the whole package will be brought back to city council at a later date for legislative adoption. Just quickly some thank yous. The project, the two years or so of this project was overseen by a 30-member plus stakeholder advisory committee and other interested people who tracked the progress of that committee at every meeting, and they gave a huge amount of time to the project, and I think you'll see that reflected in the results. In terms of project staff, I wanted to thank our colleagues at odot, andy johnson, todd, fred, and others at odot, and from the city, the staff that worked on it most, were paul smith and mauricio, steve, carl, stephanie beckman, nicholas starr, and diane hail, mark and the rest of the central city team, and jonna from the mayor's office. I just wanted to try to say that. Also the team -- the project was assisted by a great consultant team that included urs, dks, bgf and alta planning and the meetings were facilitated by sam.
Andrew Johnson: Hello, mr. Mayor, members of council. Thank you very much for having us here today. I can say i'm very proud and happy to be here today. The partnership between the city and state --
Adams: Your name for the record?
Johnson: Thank you. My name is andrew johnson. I'm the major projects manager for region one at odot. So this two plus year partnership has been long difficult at times, but the results of the partnership is a safer and smarter transportation system, and also a land use vision that seems more achievable. In these times of fiscal challenges, partnerships are not only something we try to do, but something we must do in order to see things happen. And there's just three brief themes that i'll point out that you'll hear in the presentations. You'll probably hear in the testimony and also see in the plan documents themselves. Somebody that focuses on transportation, on safety is increasingly becoming a focus. Addressing freeway safety in a longstanding area where we have not yet been able to agree is not only important, but also addressing the issues that are related to the local street system above the freeway. This plan results in a safer transportation system in the future, and that's the most important thing. Secondly, economic development. This is an area that is ripe for development. You mentioned the exciting news about the development coming in. Hopefully that's just the fist of many. I think the transportation and the land use both work in concert with one another will lead to that. Finally, the partnership, you've heard a lot of partnership already, you'll probably hear a lot more. Not only is this kind of a new way that the agencies work together, but it was also an interesting partnership between the land use and transportation aspects that the plans were seeking to address. And the way we ultimately landed on that is using urban design as a lens to connect the two. This is something that's new and exciting way to approach these type of projects, and while the partnership is strong, we still got ways to go. The plan will result in more partnerships between the city and odot into the future. So I look forward to continuing to work with folks here to make that vision a reality. So with that i'll turn it over to carl to start the presentation.
Karl Lisle: Thank you. We just had a little introduction. My name is karl lisle. Bureau of planning and sustainability. Project manager. Thanks, joe and andy. Introduction, we did that. We're going to -- todd and I are going to give you a very abbreviated highlights from the two plans that are before us today. Then we'll do a little testimony from the stakeholder advisory committee

members. There's a number of them who would like to speak briefly about their experience on the plan. Public testimony, and then we'll ask for your action on the resolution. So again, purpose from the planning bureau's -- bureau of planning and sustainability side of things, we're trying to update the 1988 central city plan. While we've done a lot of planning since 1988 in parts of the central city, we really haven't touched these plans at all in that time. So there's a lot of things to address there. Of course the other side of the purpose was to address the long-standing issues on i-5 at the broadway-weidler interchange. And todd will give us a run-down on how that looks. So what we're asking for is adoption of the north-northeast quadrant plan by nonbinding resolution. As part of that phase process joe talked about, we'll be back with other parts of the central city. To recommend that the Oregon transportation commission adopt the facility plan, they're meeting in december to take it up. To direct p dot bought and odot to work together to seek funding for the facility plan, and to continue to implement near-term safety improvements in the vicinity of the interchange. And thanks to the leadership of mayor Adams we've already seen a little bit of that happen. But there's more that can be done. To direct pbot and bps to work with odot to designate the north-northeast quadrant a multimodal mixed use area. Todd is going to explain that and it's actually very beneficial from a land use planning and development perspective in the central city. So we're excited about that piece of this too. So the study area we're talking about, two subdistricts, lower albina was russell street, historic russell street, coming down to broadway and surrounded by i-405 and i-5 on the north and northwest sides. And the lloyd district, from the river one block north of broadway, skyler street is our northern boundary to 16th. We also have added two study areas that are not part of the central city. And we're not recommending they become part of the central city, but there are a few zoning changes proposed in the plan for those areas. One is this area bounded by north russell street and williams, the vancouver-williams corridor, and one is an area south of Multnomah street out to northeast 21st. Particularly to look at some properties owned there by mr. John rabakas. So the process, we had about a two-year process. Concept alternatives, developing a plan, building plan around that, and then approval process which is where we are now. We had the stake holder advisory committee meeting which met 19 times, 30 plus people meeting 19 times and a whole series of subcommittee meetings as well. It's a lot of stuff, a lot of input, a lot of people care deeply about this. So I think it's a pretty good process. Although perhaps a little long at times. So north-northeast quadrant. What i'm going to do is give you an overview of a few of the key actions and the concept, what the plan is about. But before we do that, I think we need to take a second and look at the quadrant and what this place is, and recognize and realize how much change it experienced, this part of town experienced in the last 50 years or so. In 1950 you can see the area, you can see the tight-knit typical old Portland neighborhoods along the bluff where the rose quarter, you can see the commercial, main streets along mlk and grand, the large undeveloped land holdings assembled by ralph lloyd, and completely wooded and really pretty wild sullivan's gulch with nothing more than a railroad in it. By 2009, that had changed really dramatically through of course large transportation projects like two interstate freeways, but also through really large public and private development projects, including the Portland public schools blanchard site, arenas at the rose garden and rose quarter, memorial coliseum, the Oregon convention center, lloyd mall. Huge changes, really lost a lot of the sort of urban fabric and vitality that was once present in that part of time. Flip side, it presents a lot of opportunity for additional growth, and redevelopment, and sort of rebuilding and creating new communities there. So there's a lot of opportunity there, but we just need to go into this realizing the area's experienced an inordinary at amount of change. You can see some of that stuff under construction from 1962. This would be the site of the convention center. And the brand-new shiny beautiful memorial coliseum. Just right after it had opened. So with that in mind we went into this as part of the existing conditions work we were able to partner up with -- and look at -- they had a database that needed to be digitized so we could map it like this. Of significant structures from an african-american community

perspective. So we're able to map those, those have the asterisks, and really figure out where the few bits and pieces of what was once a vibrant community the remained. And we wanted to be really sure that we were not causing any further damage with either of these plans to the bit and pieces that remain that are really quite significant. Especially to the northeast of the interchange. So four layers, we developed the concept using the system of layers, and i'll go through those briefly. One about land use, street character, one about open space and one on green systems. So it says four because this is the preferred concept that came out of an exercise of having three alternatives where we had different bubbles and different maps. I worked with open houses and the stakeholder advisory committee looking at different ways to organize things. Really this is the one that stuck and the plan is now built around. You can see really in lower albina, the gray indicates really staying the course. Continuing to respect and enhance the employment industrial nature of that district. Looking at ways to perhaps allow a little more flexibility in parts of that district, somewhat like we've done in the central east side, but to continue that employment focused direction in that area. There is an action to perhaps expand the russell street main street a couple blocks up russell. But for the most part there's relatively little change in that part of the town. The really big move, the big opportunity is the central lloyd district. This crosshatched red area. That is a huge opportunity for really a new, the next generation of new urban community. The notion is that can have awe intensity of land use development, and -- but it also needs a significant residential come opponent and that really is the opportunity to sort of link together these important regional facilities and really make the whole place a lot stronger. So you have an office core to the south and smaller sort of more mixed and smaller scale uses as you move toward the neighborhoods to the north. So the street and development character layer is where we -- what this was about is trying to be more deliberate about different types of streets in the district, rather than just treating all streets the same because they're in an urban area, we wanted to spend time on thinking about which streets should be in the future of the main civic corridors. The retail streets, the places where the most pedestrian activity is likely to be in shopping activity. So these are the red streets. A different type of streets are the blue streets, boulevard streets. Streets that can be great streets but maybe they don't have to rely on our traditional approach to great streets, which is requiring lots of retail and ground floor retail spaces and things like that. So the notion here is to make these great streets by relying on -- maybe have larger trees and maybe there's setbacks and landscaping. Different approaches to urban design, but reduce the burden on the desire to have retail everywhere, because we've learned from experience and other parts of the city that's really difficult to achieve. And finally the third type are these green connections which are especially in the lloyd district with all the large blocks that are redevelopment opportunities in that area, over time if we, make sure the pedestrian connections, they might be local streets and path and there might be different things, pedestrian bridges, if we can get those to line up, as the district develops, so by the end of the plan, you would be able to travel throughout district on these pedestrian friendly connections, without being on really major streets, if that could be a real amenity, a character, form giving amenity, something unique to the lloyd district's compared to most of Portland, which are small blocks. Open space, suffice to say the level of intensity and development that's envisioned will require a significant improvements in open space amenity and public right of way improvements to provide the amenity that people will want to live by and work by and invest by. So the strategy is to seek both public and private, open spaces through the core of that central lloyd district, and then the idea was to line them up along perhaps the clackamas alignment which would also benefit from a pedestrian connection over the freeway down throughout rose quarter to new public spaces at the riverfront and the north broadway area. The final layer we developed was this green systems. This is really reflecting the lloyd ecodistrict effort and the things they're concerned with and trying to work o you have issues like district energy, rain water corridors, water quality corridors, green streets, things like that. And it was helpful for us in the process to continue to work at this layer

along with the other three because there are a lot of synergy and relationships between some of these systems and desired systems and where they might be in the other layers. So by putting both storm water quality corridors and district energy spine infrastructure in a redeveloped and reorganized clackamas street, there's some synergy there's. What could that look like? A lot of nice mixed use good development in the center of the lloyd district. This is roughly over the memorial coliseum towards the east. Streets of different -- a major transit corridor, a green amenity corridor, broadway and weidler with different characters, broadway as a main street, weidler as more of a boulevard, a landscaped beautiful street. But perhaps not a contiguous retail environment. So there you can see how they might come together. Chapter three is the meat and potatoes of the plan. This is what will become the goals and policies of the updated central city plan, central city 2035. There's a goal diagram, set of policies for each subdistrict, lloyd district and low you're albina there. Are a few key performance targets as well, and i'm not going to go through those in a lot of detail either. And a whole series of implementation actions. Over 80. Some about -- and there were a wide range of different things. Some about further work and study and things that need to happen, others are more specific like recommendations to change zoning or height limits. I'll touch on the zoning and height limits briefly. And I wanted to show you the lloyd district concept, that reflects the greatest hits from the layers that come together. This would be in the plan as the lloyd district urban design concept. You can see the emphasis on the central lloyd area in red. Lower albina, you can see the row flexion of preserving the industrial heritage and employment uses, a little expansion perhaps along russell street. You inc. See the school district site coming into being more related to development opportunities around north broadway. Rather than being connected to the industrial lands to the north. That's a move. Briefly on zoning, really there aren't any huge changes, sweeping changes for the whole district. The places we are recommending zoning changes are proposed zoning changes in the plan are illustrated by these bubbles. They're really all as joe said, about increasing flexibility in those areas, about moving from something that's more restricted to something that's more flexible. There is one letter that you would just received that we also just received. I want to pause here and turn to it, it's the strimer letterhead, it's from steven l strimer. This is a specifically about the proposed change from ig 1b to exd. It's very technical. They're saying that's ok, but they would rather have it be a comprehensive plan zone change rather than a current zoning change. So they're ok with that in the long-term future, but they're not ready to give up the ig1 zoning yet and we're fine with that at a staff level. So that is ok with us.
Fritz: We're not changing zoning at all right now, right?
Lisle: We're recommending that we would make these changes at the end of the process.
Fritz: In three years' time.
Lisle: Yeah. We're ok with the proposed changes on the second page of that letter. So those are the changes. Height limits is another place. This is existing height limit arrangement. And these include all bonuses. Including the maximum you could get to today, if you used whatever bonuses there were, and the proposed height limits which is this map, is also including all -- we haven't written the bonus structure yet. That's part of the work program for the next couple years. So -- but the assumption is you would need to go through bonusing programs to provide different amenities. So the main places we're making changes to the recommended height limits are circled here. So really going from a somewhat arbitrary height limit of higher east of grand, lower west of grand, really trying to be a little more deliberate and allow the tallest buildings to be as tall as the buildings on the west side and clustered around the front door of the convention center. And step down from there as you move away from that focal point. To be somewhat lower north of broadway, the to reflect the historic neighborhoods of irvington and elliot, to be down to 75 feet north of broadway. To allow a little more flexibility to try and create that urban place along north broadway, to help be part of the rose quarter district plan strategy of trying to balance out that very episodic nature of the activity with an urban placed oriented toward north broadway. And finally down here at the

riverfront, what's commonly called the thunderbird site, to allow more flexibility and height, but in that particular case, and it's described in appendix b in the plan, to really only allow the tall buildings in exchange for significant open space directly in front of the memorial coliseum on the bank there. Because currently the entire site is developable at about 100 feet which would wall off the rose quarter and memorial coliseum from the views of the west side, and the river. So it was seen as a good idea to try and -- more flexible there, but only in exchange for moving things out of the way of the memorial coliseum and providing open space. Could we do all that, 5,000 new jobs -- 5,000 new housing units and 10,000 new jobs? What what could that look like? Lloyd district has plenty of room, so we did this model of buildings of different use types and there's room to spare honestly in the lloyd district to accommodate that kind of growth and development over the next 25 years. I'm about to hand it to todd to talk about the freeway improvements, but essentially just -- we want to point out there's a huge opportunity from our perspective in the doing the facility plan at the same time as land use plan, because there's a lot of potential in helping to implement some of those big ideas in the land use plan through the freeway project. So this is how the connections are organized and work today across the freeway. This is looking east over the river, you can see the rose quarter here. This is the current configuration of streets. They all feed into broadway and weidler. And the proposed improvements, but they not only make significant improvements in the core of that area, what we commonly call the box, the broadway weidler box, they also create these new local connections to the north and south, and greatly increase the local connectivity between the neighborhoods on the river side and on the lloyd district and elliot side of the freeway. So we think that's very exciting for helping to implement those connectivity goals we had in the plan. And then we also think that could in the future greatly help with redevelopment efforts and make the whole place much more redevelopable. So this version has some buildings in it. And with that i'll hand it to todd to give you a rundown of the freeway project.

Todd Juhasz: Great. I'm todd with the Oregon department of transportation. I think one of the things that was alluded to frankly by everybody that has spoken so far is the reason we're working on this -- these projects together is that what hatches on the freeway affects what happens on local streets, and affects local development and the same is true in reverse. But more specifically there's some issues we want to address, one of them is that this section of i-5 has the highest crash rate in the state. There are short weaving section between closely spaced interchanges which means there's a very short amount of space where people can get on to the freeway or get off the freeway, and what happens is we end up with the preponderance of rear-end and sideswipe collisions. As part of this process we want to improve the interface of local streets, and we want to improve bike safety, bike and pedestrian safety mobility and connectivity. So I don't want to go into all these pieces, but as was mentioned, this is a more than two-year process, and one of the real milestones in my mind was when we held a freeway charrette open to the public in april of last year, in which we had 70 plus concepts generated out of this process. And through sac meeting, subcommittee meetings and other public events we have narrowed it down to the plan we're going to introduce to you today. So the study area you're looking at is, here's i-5 between i-84 and to the north is 405. And what we would do is we would introduce transportation demand measurement measures and system management measures. Transportation demand management measures are ways to convince people to get out of their single occupancy vehicles and use other modes. And transportation system management measures would include things like variable ramp meters and those types of things. In addition, all within the existing odot right of way we would include -- we would build full shoulders through the study area as well as auxiliary lanes. The full shoulders would allow us to remove disabled vehicles out of the flow of traffic quickly, the auxiliary lanes would allow more space for those people trying to get on to or off of i-5 time to do that so there would be less friction and less likelihood of accidents. So here's a blow-up of where the majority of improvements take place starting with number three. We would rebuild the broadway weidler bridges to accommodate the

auxiliary lanes and full shoulders, and with the rebuild of these structures would come enhanced bicycle and pedestrian facilities and seismic upgrades, but most importantly the bridge would be rebuilt on a cap or lid over the freeway that would create an urban design opportunities, and would act -- connect the east side of the freeway with the west side of the freeway. Looking at number four, we would take the wheeler winning way onramp, we would move that north to weidler, what that does is it provides more space between this interchange and the interchange i-84, looking at the section number five, this is williams between broadway and weidler, essentially this would become a reverse traffic flow street for northbound traffic would flow north on the left, southbound on the right, and up the middle would be a raised and protected bicycle and pedestrian multiuse path. Moving to the south, number 6, this large dotted white line is a future clackamas bicycle and pedestrian overcrossing. And as you move north, we would rebuild the vancouver structure in its existing location to accommodate the auxiliary lanes, full shoulders, and with that rebuild, we would have enhanced bicycle and pedestrian facilities new seismic upgrades, but one of the things that wouldn't happen we would actually take down the flint structure and build a new east-west crossing at hancock. So that new east-west crossing would create a better street grid, connecting the east side to the west side, and would provide opportunities for new development with, for instance, the Portland public school site on the west side of the freeway. What this would also do, it would alleviate pressure off the broadway weidler box area in the mornings, people could take this route across during peak periods. In addition, this area or this crossing could provide another bike and pedestrian route other than going through this very heavily congested broadway weidler corridor. So here is one artist representation of what a lid can look like. This is just looking at what we would consider a park like focus. You can see in this gray area this is i-5 northbound. This is i-5 southbound. All running under this area in red, which the cap over the freeway at the surface level, and in this plan it presupposes this parcel, adjacent to williams street, which is right here, would be developed as park space that would be partially on top of that lid, there would be park space north much broadway and a little bit of park space south on weidler, and this is the left bank annex, this would in this configuration a little bit of parking for the left bank annex, partially on top of that lid as well. But again, it could look a variety of different ways. The main line, there would be better reliability, especially important to freight, better reliability in that would be able to remove disabled vehicles out of the flow of traffic, but by moving them over to full shoulders. There would be more liability in that with the auxiliary lane this would be less friction, thereby causing less accidents, less rear-end and sideswipe collisions, keeping traffic moving. With all the structures I mentioned before, there would be seismic upgrades to all the affected bridges and most importantly and the reason odot is part of this process is safety. We took a look at crash rates at areas that had similar improvements proposed, and we looked at the improvements to crashes after these improvement were put in place. And we looked at what's going to happen, we'd like to see happen here in the rose garden area, rose quarter area, and woe expect 30 to 50% reduction in crashes. Which is significant. So benefits to the project related to the interface, we'd have improved bicycle and pedestrian facilities we would provide additional the route choices north, south, east, and west, and the type of route choice was change. So right now we have a preponderance of route choices for those that are deemed the fearless rider that is not worried about a lot of traffic, a lot of noise, riding down, say, broadway to the broadway bridge in the morning with the addition of hancock overcrossing, there's an easier route to work which would get at the target group, which is the interested but concerned group which we have heard that these folks would be willing to ride to work but don't feel particularly safe. This provides an additional route for those people. So with the hancock overcrossing I mentioned before, there would be better connectivity to the west side, especially to the Portland public school site potential development there. There would be better local street connections and the lid, better urban -- besides urban design opportunities, what the two lids do, it acts to knit the west and east sides of the freeway together. The next multimodal area

designation, what this means is we would work with the city, there needs to be certain conditions in place which we have a perfect storm of, nits this location. We have mixed mode of transit, we've got the freeway and local street network, the streetcar, the light rail lines, the bus routes, and all the myriad of bike routes. What happens here, when this designation is granted, when local land use actions are taken, there's one level of bureaucracy that's removed on the state level, where there would not be -- no need for state mobility standards review. So one less thing to slow progress down. So next steps. We're here seeking city council endorsement of the facility plan. Next we would take the facility plan to the Oregon transportation commission for their adoption, we are looking at near-term improvements near and short-term improvements, one of which carl already alluded to. And we would proceed with preliminary engineering and we would work out issues that still remain, such as with the rose garden arena, where we need to work out an egress and ingress plan for -- during peak event periods, and the team, the odot and city, would continue to do outreach through preliminary engineering and especially as we move towards construction. We would also work on traffic calming measures for the elliot neighborhood in line with what we promised them through this process, as there were concerns that with the hancock overcrossing there would be vehicular intrusions into that neighborhood, so we're going to put traffic calming measures in place to alleviate some of their concerns. So this is just a quick graphic showing the short-term improvements we've mentioned. Already the -- on broadway right turns are prohibited onto weidler to cut down on right-hook accidents. And odot will be looking at this i-5 southbound ramp at broadway, and this slip ramp over the next year to see what we dock about closing this, because this has been identified as another conflict point with bicycles and pedestrians. That is it.
Fish: Thank you. Can I jump in with two questions?
*******:** Yes.
Fish: So I just want to make sure I understand how this proposal would impact the two problem areas that probably I and my colleagues encounter the most, which is when you're on i-5 heading south, and you're approaching the broadway exit and the funnel effect of people losing a lane and the funnel that occurs, followed by for me what is probably the most dangerous part of that trip is if you want to get off at the banfield, and you want -- you have to merge right, you're merging into a lane that has exiting traffic from the rose quarter with people needing to merge left. So you've got traffic that is working across purposes, and if you add rain or darkness to me it's the most challenging part of i-5 locally. How would any of these changes impact those two problems?
Juhasz: Do you want to jump in on this?
Johnson: Yeah. The short answer is it would eliminate the need for you to get over and then get back against traffic. There's kind of two parts. Where traffic is mixing like this, that key point, it's what happens now is you're only moving in one direction. And the reason is there's a lot of people that get on and off i-5 in this area, and that -- in that stretch between 405 and I84. This would allow someone to come from 405 and stay in one lane to get over to i-84, they'll only have to make one maneuver instead of two, which today they have to get in a lane, get over a lane, and then get back again in a short period of time.
Fish: Compete with traffic at each juncture.
Johnson: Exactly. And you're always competing -- it's a heavily used stretch of road, so this essentially eliminates half of that problem.
Fish: Remind me, so I get the fact if you come off of 405 with the extra lane, with the reconfiguration, you would have that benefit. But how does that -- what are you doing at the other end that avoids the conflict with folks exiting the rose garden, trying to merge onto i-5 as you're trying to exit onto the banfield?
Johnson: That still is going to be an issue. However, the ramp is going to be longer, you're going to be able to see better, and so when you're mixing hopefully people will be getting up to a comfortable speed to make the transition -- .

Saltzman: When you say the ramp is going to get better -- longer, which --
Johnson: The ramp that currently starts at winning way, carl, if you could pull up one of those, that would be great. That is going to be moving to weidler. What that will allow is people from broadway and weidler to get on the rather than having to wind around and hit that very short ramp right by the rose garden. So that's going get longer. That will help. Right now --
Fish: It gives them more visibility.
Johnson: Exactly. You can see better. But there's still going to be a lot of people getting on there. This does not eliminate that problem. It just relieves it.
Zehnder: You'll be parallel to the traffic you're trying to merge with rather than a very short lane trying to get right over. So it lengthens the room you have to make that maneuver.
Fish: So you have a little more room for error. What percentage of the cars entering i-5 there do we estimate takes the banfield exit versus merge onto i-5? The people merging onto i-5 are the ones that often don't know the rules of the road with those of us merging --
Zehnder: I know we've looked at that, I don't know what it is.
Johnson: I'm not sure what it is either. But it's not a majority. I don't know what the exact number is, but it's not a majority of the traffic getting on.
Fish: Dan Saltzman is the exception, but --
Saltzman: I'm going down I-5, he's going to right way.
Fish: What happens is people slow down because they're not sure who has the right of way. And what it creates is another bottleneck, and for me, the most dangerous maneuver because no one is quite sure who has the right of way, and cars have their left blinker on, and their merging into your lane, you want to get to their lane, there's often very tight space. It's a brief window or you miss the Banfield exit.
Zehnder: From using the ramp all the time, that's one of the reasons I was excited about the idea that you get more room to maneuver over, commissioner. And imagine this, you've got more choices about -- you would be in the auxiliary lane if you're making the i-84 move. And so when you first move, you do have to cross that, but then you have two other choices for traffic going through, if you want to avoid that all together, if you're staying on i-5, you have a choice to get over there earlier and stay out of this mess. And it's clearer, and then that middle lane will still be full of this kind of people making last-minute choices. But stretching it out, more visibility, earlier decisions, like you could be deciding what you're going to do if you're on the freeway, way north of broadway. We think -- the statistics say it helps.
Fish: Thank you.
Adams: Other initial discussion?
Saltzman: So tell me about the the -- a lid. Is a lid what it sounds like? You put some big steel plates over the freeway? More or less? And put soil on top or whatever?
Johnson: What would happen, say with the broadway-weidler bridge, if we were going to rebuild that to keep traffic flowing, we'd have to build a temporary bridge next to this to keep traffic flowing. In this case, it's cost effective for us to rebuild all of this on a lid and stage our construction from that lid. And what it really is, a set of girders and a steel cap over that freeway.
Saltzman: Does it make broadway and weidler street level on the lid?
Zehnder: What it does is it opens up room for wider sidewalks, it really adds some grace to a street right now that's pretty constricted, especially if you're a pedestrian or biker. And it's a little bit of the geometry because the freeway cuts underneath our gridded system kind of at a angle. So if your crossing the trench perpendicularly you're using shorter spanning members, its just economically the engineers tell us it's about a wash, and it has these other advantages for constructability, and what we can do with the cap and the land on the cap after.
Saltzman: So the lid would go from weidler to hancock?

Zehnder: It would go just north of broadway, and there would be a gap and then another similar lid that would be the way you get across hancock. In the plan, the committee talked about this quite a bit, about the desire to go big with the cap and extend it all the way north to north of the new hancock connection, and so that notion is in there, and it is something we would look at in the next preliminary engineering, look at the cost, look at the potential, what it really gets you.
Saltzman: So the hancock-dixon connector, hancock would be a through street to dixon? Would it be a -- an arterial? Or a neighborhood residential? You're talking about people maybe the -- people feeling more comfortable --
Zehnder: It's a local street. So imagine this. This is what we tried to do.
Saltzman: Would that be two lanes of traffic?
Johnson: It would be two lanes of traffic, lower volumes obviously than broadway-weidler.
Saltzman: The school district sent a letter expressing -- more or less supporting all this, but they did express concerns about -- if you're going to do the broadway -- the hancock-dixon connector, you need more parking along the street? I wasn't sure --
Zehnder: I think it's, like any property owner where a major improvement is being proposed, they're saying we use loading there, we have parking on the street. The connector, the way it's designed would come across the surface lot that belongs to the school district. So it's just putting on notice as we do preliminary engineers, there's issues to be figured out. In the long run, for the blanchard building, it kind of puts this potential redevelopment site, even for the school district, on the map. It connects it in a way where you're not just dependent on the signal off of broadway to get in and out of there. We have the immediate needs of the school districts' headquarter to address, that will be done in preliminary engineering. Then in the longer run, I think it enhances the real estate value of this asset for pps, so it's part of why they're supportive of it.
Fritz: I want to make everybody aware, first of all, thank you, this is an amazing piece of work. And a great presentation, and thanks to all -- everybody who's been involved in bringing it to this point. It's delightful to read through such a thorough document. Yesterday in the central city plan hearing we added language specifying that any change from the current comprehensive plan policy requiring a step down to the river will require a citywide public process moving forward, and i'm assuming this is a component of the central city plan that would apply to this.
Zehnder: What we will do, this plan that you're looking at today reflects the thinking on northeast quadrant, and it does have moves that raise height on the river end. As we go through the quadrants, if there's other opportunities where that comes up we need to, as the resolution said yesterday, not just do those in the quadrant plan, but raise it as an issue for citywide consideration. And that's part of what we can do in the process for the rest of the central city 2035 plan.
Fritz: Thank you. So before moving to implement this, there will be more discussion about the specific book ends and other places where there's a proposal to step up to the river.
Zehnder: Absolutely.
Fritz: And my other question is about the housing target of 5,000 units. Putting you on the spot, what's the metro target for the city as a whole that we're currently being asked to do?
Zehnder: 132,000 in 2035, and it's approximately 37,000 in the central city, I think 32-37. So -- and we have a lot of land for housing in the central city, and so carl can explain how we got to the 5,000 number for the lloyd.
Fritz: It's fine.
Zehnder: It's big.
Fritz: I'm glad I was confident in you having those numbers at the back of your mind.
Adams: It's impressive.
Zehnder: 15,000 capped property --
Fritz: That will keep them busy. 5,000 units in this area does seem like a good place to put 5,000 units, especially because we want people to be living there 24/7 activity. And the places that

you've proposed it I think do make sense. My question is about the certainty of having a mix of housing there in the future, and I know you've got references to changing -- looking at the bonuses and such. My suggestion, and I may ask my colleagues for an amendment is that we actually reflect in this resolution a desire for the council to move forward -- for the planning to move forward, that you only get the height if you're going to do some measure of voluntary inclusionary zoning or construct for each project, construct multifamily units, for example, which have a range of income levels that can live in them.
Zehnder: The way we would describe that, commissioner, is an affordable housing heights bonus, and as carl said, we got to recalibrate all our bonuses in the central city to go after the few things we really want to get. So that would be perfect part of that discussion. We've done height bonuses, or far, floor area ratio bonuses related to affordable housing in the northwest district plan, I don't know that we've ever done it with height, but we can explore it.
Fritz: What i'm proposing more is that it's mandatory, it's not a bonus, that we're going to set the -- when we increase the zone capacity, we're giving to the property owner a -- an enhanced development capacity, so at that point we should make it mandatory that there is a level of -- a mix of incomes in any apartments that are -- or condos that are built.
Zehnder: So two things. One in this northeast quadrant plan, we're not increasing floor area ratio, we're just increasing heights. And the other angle, we're glad to explore it, is coming up in the comp plan and the number of comprehensive plan in a number of different ways, today inclusionary zoning itself is not a permitted by state law, but you're proposing a kind of different way of looking at that kind of requirement, and we're glad to look at it.
Fritz: It would be that you only get to do that -- it's not like you can choose between community space or affordable housing.
Zehnder: That's part of what I mean by recalibrating. Today you can get a bonus for bikes and --.
Lisle: One of the things we've learned by looking at the bonus system we built incrementally over 20 years, just adding one, adding another one, because of the conversation of the day, was that a lot of the things were not tuned up to the market realities at all. So many of them have never been used, a lot are used all the time because they're too easy, so as we go into recalibrating the bonus system we need to make sure that whatever we do come up with is going to be useful to the development community. We should look at what you're talking about, absolutely. But we don't want to come up with something just because we want it that won't be used or feasible to the folks developing it. We've taken a little bit of time and done research on trying to look at all the programs we have and trying to monetize what the value of -- on a square foot basis any bonus is and whether that's helpful or developmental -- detrimental. So we need to take that same look again with a whole bunch of different priorities, and affordable housing is obviously one of them. In this particular area, the other really big one is parks and open space which we just don't have and don't have a way to pay for it. So trying to figure out how to make meaningful, usable market reality based bonuses that help achieve those public goals in that restructured bonus system is what we --
Fritz: I'm looking more for requirements. We won't have tax increment financing to help incent affordable housing in the area, so we need to learn from the mistakes of the past and look at what's worked in the pearl, what's not worked. In terms of mixed income. So i'm going to ask my staff to bring back an amendment before the end of the hearing on this issue.
Adams: Commissioner?
Fish: Since you mentioned the pearl, that's a good starting point. The pearl has been a success in terms of the amount of affordable housing as a percentage of the whole. We can debate exact number, but it's understood that it's somewhere between 20-25% of the units are affordable. So there's been intentionality there. I'm very pleased commissioner Fritz has raised this issue, because we just spent two years fine tuning our tax abatement policies to make sure they were in sync with city policy, got us the public benefit, narrowly tailored and we made it a competitive process so it

was no longer just an entitlement. I think this is the time for us to look at the bonus scheme again, find out which of those carrots and sticks if you will that are built in, are no longer relevant. We may be giving people we may be requiring things as a condition of the bonus that someone would already do or we may be creating distortions in the market by asking someone to do something -- encouraging something we no longer need. I think the sweet spot for me as the housing commissioner is in lieu of tax abatements what other programs can we develop linked to bonuses, where it's a discretionary act and that gets around the state law bar, where we actually get a tangible benefit for the district, which in this case would be a range of housing choices for people consistent with our fair housing obligations. That would be interesting.
Zehnder: We've talked with the housing bureau about this, because in 5,000 units what is the mix that you might want to try to accomplish? How do we get there financially? So all tools are on the table.
Adams: I like that approach. I also think looking at it for submarket areas or quadrants, in this case, or parts of town or parts of quadrants, or corridors within the central city is also something that we could look at. Before we can get to something affordable -- if we're going to -- if this proves to have some the merit in terms of in the marketplace, they'll want to take us up on it, we also have to make sure that the nonmandates from the city are profitable enough for them that they'll actually do it. And that might vary by time -- the phase within the plan, is it the first five years, and it might vary street to street. Some streets are harder to get the development we want than other corridors.
Fish: Can I pose a question? What you're asking us to do today is sort of beginning of a process that goes on for some time. So if it's the desire of the council to have more thought given to a bonus system and an affordable housing component, how much time would you need to evaluate that and when would that -- when would the council be asked to implement it?
Zehnder: You know, we would probably bring the bonus package forward at the end of this central city planning phase. So that's 2015. After we do this next quadrant, the west side, commissioner, which is where most of the housing is, we're going to have to have progressed in our thoughts about the bonus system as a package. So conceivably by the end of next year we would be talking to you about what we've -- how we might reorganize.
Fish: Is it enough for our purposes today to frame the concern for you to then evaluate it, come back with recommendations?
Zehnder: Absolutely. We welcome it. It's an issue we've had our eye on since we started this thing.
Fish: Thank you.
Saltzman: Do we have any other panels? Are we ready to go to testimony?
Zehnder: We have a set of invited testimony to start with. Ok. We're starting testimony with members of the advisory panel.
Saltzman: Tracy, greg, wade lang, and matt arnold. Welcome.
*****: Excuse me, would I like to defer to the end of testimony if that would be all right.
Saltzman: Oh, sure. Great. So who wishes to start?
Tracy Ann Whalen: Good afternoon. My name is tracy ann Whalen, and i'm the global logistics processing compliance manager for esco corporation in northwest Portland. And along with lloyd, I was one of the cochairs for this process. And good afternoon, commissioners. Before I present my remarks, there are a long list of people that need to be thanked for this process. And a number of them were already previously alluded to that were city and state staff, facilitators and consultants. Personally, though, I feel the most thanks should be -- should go to the sitting members of the sac. It is not their job to come to these meetings every month. And wade through all the information. They do it as voluntary effort and because they like this city and they want to see their communities grow. So as you have heard, we began this process in september of 2010. It was proposed as a

unique process, one that combined a state highway project with a land use and planning project. The area of study of transportation was between -- on i-5 just south of the fremont bridge to the i-84 interchange. Which also included the box area which is the broadway weidler interchange. We first learned about the issues in what we were trying to solve. A number of the ideas were explored and there were over 70 as you heard that were originally arrived at at the charrette. There was a lot of discussion amongst committee members and also other public testimony. Not every idea was feasible and there was also discussion of no build. We did not restrict the topic to just the roadway. The impacts that were discussed also include the surface mobility. Bike and pedestrian movement, urban design and freeway crossings. Of concern to eric lovel, was -- and other businesses is maintaining freight access to the lower albina industrial area as well as servicing businesses within the lloyd district. From strictly a safety and freight mobility perspective, the plan does not go far enough. As was pointed out, there's a lot of weaving. Ramps could have supplied or provided the gravest solution, but quite frankly it's very expensive and we never could get that funded. We looked at what the best solution was with what we had. The choice that was approved was adding auxiliary lanes in each direction and moving the on-ramp from winning way to the weidler overpass. The addition of these lanes required rebuild of the flint, vancouver, and williams overpasses. In actuality, the removal of the flint overcrossing. As well as the broadway and weidler overcrossings. A lot of effort went into exploring these structures and what the possibilities were first to improve safety and multimodal movements as well as what could be done with the possibility of a lid. I think we have successfully agreed upon the best affordable solution. I urge that the commission adopt this plan and more, I hope that you support funding when that comes up. Thank you.

Saltzman: Thank you.

Gary Warren: Good afternoon, commissioners. I am gary warren, i'm executive director of calaroga terrace a 17 story senior community located in the Lloyd district. I'm also president of the lloyd district community association, which is a unique blend of business and neighborhood representation. The lbca is responsible for looking out for the best interests of both of these constituency groups. The lbca is excited about the potential of the north-northeast quadrant plan and what the future holds for the lloyd district. We see the lloyd district poised to be the next growth area of the city of Portland, with huge potential for businesses and residential development. The north-northeast quadrant plan has made great strides to ensure the livability of the district. Studied and planned for our elements from open space, building heights, commercial, and residential mixed use, green space, pedestrian, bicycle, and vehicular access. Mistakes from the past have been looked at and a great vision for the future created. I personally represent 25% of the residential population of the lloyd district, all who live at calaroga terrace. This puts me in the unique position of not only being a business operator but also looking out for the needs of a large number of the residents of the lloyd district. I believe that this plan will create a great balance between economic development, businesses, and residential livability. This has been a long two-year process to get this plan to the point where it's being presented to the city council. This was through the hard work of many groups who have contributed to this plan and many compromises that we have all made. As an example, many of the sac members and planning staff know I have been a major opponent for the clackamas overcrossing. It was a source of brevity as promises were made to expand the size, height, length or purpose of the overcrossing whenever discussions became tense. Like a majority of the members, I recognize the wisdom of the group and I am taking on good faith the overcrossing will bring attributes that will far outweigh any concerns I might have. Implementation, action, tr2, develop and revise parking management strategies, specifically addresses my concerns. This is particularly through event parking issues and flexible options that are being studied. I want to thank the staff, odot, and the city of Portland for the

opportunity to participate in this process, and we look forward to the positive results that the north-northeast quadrant plan will bring to the lloyd district. Thank you.
Saltzman: Thank you. Sir?
Wade Lange: I'm wade lange, vice-president at lange investment properties formerly asforth pacific. Commissioners, as long -- as a long-time employee within the lloyd district and a native Portlander, I want to first thank you for the opportunity to have a voice in the future growth and development of our city. The citizen involvement has been stated already, was truly key -- a key component to the successful outcome of the north-northeast plan. The lloyd district was correctly identified as having the greatest potential for future development within the central city. Even before the north-northeast plan is adopted, plans for higher density residential growth in the heart of the district moves forward. As does the convention center hotel and the opening of the streetcar on the east side. The plan created by the stakeholders advisory committee truly fits with these new developments. The north-northeast plan lays out a vision and a road map for the future growth of the east side. This growth will bring jobs and economic vitality to the east side while simultaneously creating vibrant community full of opportunities for both residents and businesses. The plan recognizes the critical importance transportation plays in our future growth. And it has brought together all the elements of a full service transportation network that has identified both the business and residential needs of the district. Finally, as a board member of the lloyd eco district the plan has identified unique opportunity of future development which is in lock step with the creation of highly sustainable community that will enhance the vitality and livability of business and residents within the heart of the city. And I look forward to participating in making the vision a reality. Thank you.
Matthew Arnold: Commissioners, matthew arnold, still a member and until terminated a few weeks ago the chair of the city's bicycle advisory committee. As you know, designing a local street network in the context of an urban freeway interchange is incredibly challenging, but thanks for the efforts of your city staff, of odot, all the members of the stakeholder advisory committee and the general public, in a well-designed and inclusive process, we have here two plans before you that our committee supports. What we like best about the plan and its associated facility plan is they will enable a redundant bikeway network that will embody the goals of the recently adopted bicycle plan for 2030. Not only will these bikeway network improvements benefit strong and fearless and probably in my case insane riders, they'll also provide safe, comfortable and appealing bike connections for those interested, concerned and vulnerable riders like my mother and my daughter. The one caveat bike advisory committee has is that in order to make these promises valid for bike safety and to attract increased ridership, the bikeway network must be built out in its entirety, and to that end the committee looks very forward to working with you all, with city staff, with odot, on the careful implementation of these plans, as well as any near-term safety improvements that can be adopted. Since I have just another moment, it's probably my last time testifying before this council, mayor Adams, i'm glad you came back, because on behalf of the bike advisory committee, we'd like to thank you for your leadership these last several years, as mayor and as transportation commissioner, I am forwarding not only the bike plan for 2030 but larger bike movement here in Portland. Thank you.
Adams: Thank you very much. Thank you all very much. I'll look on the replay for what you had to say. Mr. Linly is going to go last-last, right? Ok. Then we move to the sign-up sheet.
*******:** [inaudible]
Adams: Please come forward then. Welcome back.
Justin Zeulner: Thank you mayor Adams and commissioners. My name is Justin zeulner, i'm the senior director of sustainability and public affairs for the rose quarter and the Portland trail blazers. And I served on the strategic advisory committee of the north northeast quadrant plan. It is with great pleasure I come here today not only as an official representative of the rose quarter and the

Portland trail blazers, but as a proud member of a group of stakeholders that was convened to help steer the future of our quadrant and our great city. When we first started I assumed I wasn't the only one that worried a group of stakeholders, transit authorities, diversity and ecology experts, residents, neighbors, and many others, might have a difficult time finding mutual ground or even moderate consensus when discussing long-term vision, land use, zoning, transportation, greenways, and freeways. However, not only did we accomplish these goals, the process resulted in spirited collaboration. Not only should the members be thanked for their dedication and determination, we should recognize this collaboration would not have been possible without the willingness of our public partners to embrace a different approach. In fact, groundbreaking and historic. For the first time the city of Portland and odot working together to define visions and set goals. This alone deserves recognition. But they did go one step further and they sought the input and direction from our stakeholder group prior to making any plans. We hope this is an indication of how the process for a smart planning will be in the future. I want to take a moment to reflect the plan on how it connects with the rose quarter and adjacent properties around our sports and entertainment campus. From the beginning of this process it was made clear tone sure that any future planning efforts would not only protect and enable current business activities in the lloyd district and the quadrant, but set the stage for businesses to thrive in the future. This included and specifically listed the large episodic attractors of our quadrant that helped drive and support our local economy. To meet long-term, this plan enables the rose quarter to meet long-term goals while ensuring current business operations are preserved. This plan furthers our connection to the rest of the lloyd district, the willamette river, albina and to our vital neighborhoods, elliot, irvington and sullivan's gulch. An enhanced freeway could easily divide our community, but this plan mitigates these impacts and enhances our connections with additional bikeways, improved pedestrian environments, nonmotorized crossings, such as clackakmas head bike bridge and adds more green spaces. Furthermore, the plan embraces the earlier rose quarter master planning work that had been put together. Which includes a focus in and around the broadway corridor adjacent to our campus. Along with the rest of the rose quarter, this will become an important future urban destination, economic driver, and gateway to east Portland. This committee spent a fair amount of time discussing the area, specifically related to the proposed building height allowances. Staff worked closely with our committee to ensure while the plan allows for maximizing the potential development for this area, it also balances the future development with open spaces enhancing community activation. As a member of the advisory committee and stakeholder for the rose quarter and lloyd district, i'm proud of these compromises and the ensuing result of these discussions. In summary this plan enables the vision of the rose quarter and the surrounding area to become a reality. Lastly I want to comment on the inclusion of environmental settlements to the quadrant and Portland plan. While the plan ensures we secure a thriving business climate and enhanced neighborhoods, we also call for aggressive sustainability goals related to environmental stewardship. We all want our community to be a place where we are proud to work and live. During this process I recall hearing similar statements like that made during the meetings and by several stakeholders. And we made sure that this plan incorporates these visions. As this plan becomes adopted and enrolled into the larger plan we look forward to continuing work with the city odot and the rest of our community stakeholders to activate our shared vision. Additionally, I would I like to note that the recommendation in front of you is from sac. The strategic advisory council and committee were the ones that authorized this to be brought to your attention. One of the things we talked about, and this is something I cited, was that if substantive changes were to be asked by council today, with you commissioner Fritz, your request, is that we take an opportunity to reengage the sac to have a conversation about what that means. Because I do want you to recognize that while staff presented this plan, it's the sac that actually put that together. So appreciate your time today.

Fritz: Did the sac have any discussions about making sure we don't displace a way of -- as part of this plan?
Zeulner: Yeah. We went through a lot of discussion about both the historical diversity of this area and what sort of transpired over the last several decades. But we also took a lot of time and -- it's easy to start talking about freeway impacts, because it's something we can all relate to. These things are a little more difficult, and in this committee spent many of those 38 plus meetings that I went to talking about that very thing and housing is a big concern for all of us.
Fritz: Thank you.
Mike Warwick: Hi. Mike warwick, I was a representative from the elliot neighborhood association on the sac. I'm also the land use chair, so I was also a representative of elliot as well as being from elliot. And I came here I guess to paraphrase, to praise caesar but caesar has been praised enough I think, so i'm going to point out some of the concerns elliot raised in its support of the plan. One of which goes to the point you just raised, amanda, which is our concern about the elliot overcross -- the hancock over crossing. Those of you who have been through the elliot neighborhood know the historic core is very small and fragile, turning hancock into essentially a bypass for broadway would basically aim a fire hose of traffic through that neighborhood, which would basically destroy it. It is the last remnant of the albina community, and we would like to see it protected. There are words in the plan that do so, and i'd like to reinforce that those be acknowledged as best we can. We say in the plan, and the city adopted that at our suggestion that the hancock overcrossing traffic be absolutely mitigated to protect the neighborhood, which you couldn't see it in the plans you had up there, had physical barriers to prevent through traffic, so it will allow some circulation, but it will not allow it to become a throughway, and that's probably about as good as we can expect. We like the idea of having connection to the other side of the freeway, we are also supportive of a potentially looking at other options. And that goes to a second concern we had, which is a pretty major concern, and that does have to do with the cost and disruption associated with the improvements that are proposed in the duration it will take to get from here to there. If the freeway improvements could be done instantly I think there would be a lot of support for this plan, but we're looking at a process of probably 10 years to complete. That's a long time. It will require the demolition of the traffic routes on vancouver, williams, broadway, and weidler, as well as flint, which will be hugely disruptive of the connectivity of north-northeast Portland to the rest of downtown. The construction process is expected to take three-five years, during which the development we would be hoping to have in the rose quarter and blanchard block will probably be a delayed, while this construction gets completed. Postponing redevelopment in that area for 10 years seems like an awful high price to pay for the prevention of some fender benders on the freeway in our opinion. Another issue is associated with that is the sense of priority of the streetscape improvements versus the freeway improvements. The plans assumes these will be coupled because the funding is tied to federal funding for the freeways. Right now the lives and limbs of Portland citizens are being threatened daily as they try to bike and cross the streets on broadway in the vicinity of wheeler and flint. Thankfully as mr. Mayor you intervened to prevent some of that by putting up a temporary barriers at wheeler to prevent a right turn off wheeler, that has been the cause of a great number of pedestrian and bike accidents. What we would like to see, we have been working closely with the city and odot, which is one reason we're in strong support, is to give them additional resources to implement some of the suggestions that are in the this plan sooner rather than later. Specifically connecting diverting flint so it connects to dixon in the near term, which would allow us to abandon flint in that intersection at broadway which would clean that area up, cleaning up the sweep off the exit off i-5, southbound in potentially signalizing wheeler for pedestrians. So people who are now risking life and limb to run across the street between the paramount apartment building and the left bank have at least some modicum of protection from

traffic. That is pretty much concludes my comments. If you have any questions, i'd be happy to answer them.
Adams: Thank you. Appreciate it. Thank you both very much. I'd like to call planning commissioners smith and hanson. Welcome back. How many more people are signed up?
Moore: Seven.
Don Hanson: I'm don hanson, volunteer on the Portland planning and sustainability commission. I'm here on behalf of our chair, andre baugh, who is on the beach somewhere. Since he's on the beach, he doesn't know what i'm going to say, which is interesting. No, he sent a letter to council October 5th that summarized the hearing we had on september 25th. Rather than read that all paraphrase a few points. At our meeting we voted to support quadrant plan, 80. We voted to support the odot facility plan 7to 1. So we really had strong support for this. We heard from the sac, we heard from the public, we heard from the staff during briefings on the public hearing. Everybody was pretty complimentary of the effort. The process was good, and I think the plan itself, the product is very good. The urban design component is creative, linking across i-5 is a great idea. I wish we could have done it long ago when we were building the rose garden. It's time to do it to really unify that neighborhood. Besides being creative, the plan is is very pragmatic. When I look at the staff did with odot, i'm impressed, its clever. They've taken an urban interchange and proved the safety factors, improved the circulation, without broadening the land take. Usually in the old days when you want time prove an interchange, you bought more land. But they've made this fit on the surface streets and fit in the envelope they have right now. And I think the improvements proposed are significant. So I think that's another positive aspect of this effort. The last thing i'll mention is the collaboration that people have already talked about. I'll just say how -- reinforce how important that is between the city and odot. As we intensify and get more density in our city, and all the inner city neighborhoods this, collaboration is going to be even more important. We've got a whole bunch of these situations. Not just Portland, a lot of other cities and towns have them too. So i'm very encouraged by the collaboration they came to our hearing together, they presented together, a good dialogue. That's all I wanted to relay. Thank you, mayor.

Adams: Thank you, commissioner. I appreciate your service.
Chris Smith: Chris smith, I was the lone dissenting vote and while I am a team player and i'm going to support the recommendation --
Hanson: I've come up here with hip, by the way.
Adams: Close within reach.
Smith: I do support a recommendation. I want to explain the reason for my dissent because I think it may influence how this project plays out, certainly how we think about future projects. First I was happy to join the unanimous commission in supporting the quadrant plan. I believe very much in the urban design and land use vision. It's the freeway facility plan I have some trouble with. And I have two points that cause me to vote against it, but I want to say there's a lot to like here. The fact the land use and transportation planning were done together, the fact the focus was on safety, as the driving criterion, and the attention to safety on the surface streets are things I support very deeply. My problem was in the choice of how safety was addressed. My first problem was with that. The question was, could we do this strictly with pdm and tsm measures or did we have to go to adding lanes. The conclusion by the project team was that there's enough lane demand in this area that if you simply do tdm, any traffic you move off the freeway will be replaced from demand. The challenge I had is that is based on the assumptions and the regional transportation plan which is the only detailed model we have. But our climate action plan assumes a level of vehicle miles traveled substantially lower than the rtp model does. Unfortunately, we don't have a detailed model yet we have a citywide goal for vehicle miles traveled in the climate action plan. We cant tell you on this freeway segment that translates to this much reduction. So the planners don't have a tool to

evaluate against our aspirations but my concern is were going to invest $400 million and not know if its in conformance with our climate aspirations. That's a problem for me. The second point was really on costs benefit in general and the idea that the portland plan has an aligning spending across all the jurisdictions that provide services in the City of Portland. $400 million dollars for one mile of freeway is an extraordinary amount of money. If I try and compare that against other needs of the city our pavement backlog not stands at 600 miles and there was not a dollar value in the last pbot -- its not an infrastructure plan for pbot in the last budget document. Mayor maybe you have a number. But I suspect that $400 million would probably wipe it out. I know --
Adams: Next time the federal government gives money for maintenance, you -- until then, you are limited to federal dollars and limited to capital. You know that.
Smith: I understand that. But my point is that we have lots of needs around the city and I don't think there is good policy alignment if we're funding something of this magnitude in one place before we can organize the funding for the various needs around the city. Secondary point. Primary one alignment with the climate action plan. That is the reason why I voted no and I wanted you to understand the logic. Thank you.
Moore: The first four people would you please come up.
Adams: Hi, welcome.
Lee Perlman: My name is lee perlman, active member of the elliott neighborhood association. I'm speaking for myself. Largely here to re-enforce one point that he made. In this and other recent projects we have seen some acknowledgment and apologies about things that have been done in that neighborhood in the past. It is a little bit annoying to see that and then say and then we have one more for you to absorb. In this case the hancock overcrossing, which has a strong potential to have a really negative impact on what is left of our residential area. There has been talk of traffic calming. That assumes that it can be done effectively. It assumes it can be done without shifting the problem to other streets. It assumes that in the past, past history includes promises broken, and things that fell off projects because of value engineering. It is a little insulting to have it implied that this is being done for our benefit frankly. And I will give you a sense of my own values. In people who live on a street, people who do business there, people who own property, people who work there, people who do charity there, I think their needs come before those who spend a few seconds a day by any mode of transportation passing through.
Adams: Thank you very much for testifying. Mr. Bottomly.
Bernie Bottomly, Portland Business Alliance: Bernie Bottomly, Portland business alliance. Lee, if you are misquoted in the paper, you know who to blame. I just want to echo the comments of a lot of the folks that have spoken before. This is an incredibly complicated and difficult area of city from a transportation land use perspective. There is a tremendous amount of opportunity here. I think the staff did a -- city staff did a terrific job of working with a very large and very engaged group of stakeholders. I think we ought to compliment odot in particular for their approach to this project. I have been around the city for 30 plus years working on transportation issues. I can't remember an example of when odot has taken such an integrated approach to looking at one of their facilities, you know, a state facility that is really designed for through traffic. And analyzing that project in terms of its setting and the roads and streets around it that feed into it that go over it that come off of it. I think it is a great model. And one that we should really encourage odot to continue to pursue as we move forward. The alliance is very supportive of the land use strategy. We think that area holds great potential. The cities and the regions most powerful environmental tool is densifying the central city. I think this is a pragmatic plan and one that not everybody is going to be happy with every element of it but it is an incredibly complicated set of streets and landscape that will be hard to find an example of a solution that would solve every problem short of, you know, spending billions and billions of dollars. We do support the expansion of the freeway in that location, not only because it helps the flow of traffic in that area,

but also through that area. That is one of the feed in corridors to the port of Portland, which handles the vast amount of exports out of this region and as a trade-dependent state, that is incredibly important to us. We look forward to carrying this process on as we move to the west side and we think that model of consensus that we were able to build in the north, northeast quadrant will serve us well for the rest of the city.
Adams: Thank you very much. Welcome.
Betsy Reese: betsy reese, co-owner of the paramount apartments. Located at broadway flint wheeler. Please accept this plan. The rose quarter area has been held hostage in more than the last two decades due to the lack of agreement on a plan for the ever-looming possible expansion of i-5. Having this plan in place will finally free the city to begin making local improvements to vitalize this area. Of top priority should be the pressing traffic safety fixes. Several block broadway-weildler area near i-5 is notoriously dangerous for bicyclists and pedestrians. I have been watching traffic mayhem at the intersection of broadway flint and wheeler from our front step at the paramount apartments and pressing pbot for traffic engineering changes for the last 14 years. Out of 22,000 Intersections in the city of Portland, it ranks in the top five each year for bicycle motor vehicle collisions and this past summer, four bicyclists injured seriously enough to be transported to the hospital. On June 26th all of the key bicycle and pedestrian advocacy groups came together with city and state transportation representatives to ask for the safety changes now. Odot immediately stepped up and began work in august to do the one part that is under their jurisdiction, the removal of the i-5 slip ramp. Special thank you to andy johnson and others for that. On august 2nd, the stakeholder advisory committee added their collective voice by unanimously voting to include in this plan the recommendation that safety-related surface street improvements be done now and irregardless of freeway work or funding. Thank you to the sac members and especially phil sellinger of the Willamette pedestrian coalition who introduced the resolution. On august 22nd, the city of Portland made the controversial and brave move to close wheeler to right turns from broadway. Special thank you to Mauricio Leclerc and greg raisman of pbot, steve iwata of bps, members of the sac, jonathan moss of bike Portland.org who kept the pressure on. The four injured cyclists who did their part. All of the others who got this done, and especially thank you mayor Adams, not just for the decisive move but baring the brunt of the blame for this. We support this emergency measure as a quick fix that without exaggeration may be saving a life there today, but it does not come close to addressing all of the bicycle and pedestrian safety issues here, and unfortunately it just adds to the confusion, chaos, and road rage and blame that results. Additionally, it closes off important access for certain businesses and residences, and it is not a part of this plan. It is directly counter to this plan, which was so extensively publicly vetted. This plan fixes our intersection. We cannot wait five, 10, or more years or until never for the freeway work to make these changes. And we cannot wait for a fatality. Please, fix our intersection now, and as a first step, please signalize broadway, flint, wheeler. Thank you.
Adams: Thank you very much. Karla, if you could. Welcome.
Mike Dowd: Hi. I'm mike dowd of dowd architecture, speaking on behalf of my clients, sheet metal works. Carl lyle took the wind out of my sails by agreeing with me before I had a chance to talk, but I can live with that.
Adams: There are worse things that could happen to you, right?
Dowd: I will -- I will summarize the main issues from steve streimer's letter. Streimer sheet metal was founded in 1946. and moved to their current location on north knott in 1958. 280 employees, including 90 on their full block on north russell plus other properties on three adjacent blocks. We were extremely concerned about the proposed rezoning of streimer's properties from ig-1 to ex. I don't think anybody realized the problems involved until recently. Ex does allow industrial use so it was a logical zone to propose to change to. But that is where the -- that's where the similarities between ex and ig 1 end. Ex zoning would prohibit two activities most

important to streimer sheet metal. Outdoor work activities and outdoor storage. The -- it would also instantly make half of the -- more than a half block of their property nonconforming, meaning any new development would trigger mandatory nonconforming upgrades which means an instant 10% increase to the cost of every project that they do there. The -- the development standards of ex also dramatically different than in ig zoning. In streimer's case, that would make the plan actually backfire and create impacts that are the exact opposite of the goals of the plan. I could give you lots of examples, if you wanted them. Fortunately, there is great solution which carl mentioned of leaving the ig-1 zoning but changing the comprehensive plan to ex. We really appreciate him being flexible when we brought up the issues. Doing that would be a win win solution for everybody. So I ask you to alter the plan to allow the changes that carl suggested. Thank you.
Adams: Thank you. Thank you all very much.
Moore: The next three.
Adams: Anybody else wish to testify? We have one more seat in testimony will be closed after this. Would you like to begin?
Boris Kaganovich: Sure. hank you, mayor and commissioners. I bring words of caution when it comes to the pedestrian improvements coming to the lloyd district. Many of -- what we're trying to create in the lloyd district is a reason for pedestrians to linger and that is really the vitality of the district. Sure, the improvements for transportation safety and surrounding it can be judged on their own merits. But as a pedestrian district, what one needs for vitality is short blocks, short store frontages, and realistically slow-moving traffic that accommodates -- particularly in off peak hours when you have not too much in the way of bottle-necking, you want traffic to move slowly so that pedestrians feel cozy and comfortable. In no way did we see that in the zoning overlay for the rose quarter. How you would create the assured store frontages, short city blocks, and potentially two-way traffic on broadway-weildler that would encourage this slow moving traffic in off-peak hours. Right now, even if you get the light across the street, it is not a cozy experience as a pedestrian. You wait, wait, wait, eventually the one-way traffic yields and you are able to cross the street. The proposal for weidler is a street that to pedestrians is not particularly interesting. You have the building setbacks, you have -- you need the ability to meet the street and sidewalk and we didn't see that. It is just a concern of mine I wanted to bring up before we spend all of this money to change our city. We should spend it in a way that will actually be successful. I come here merely as a concerned citizen. This is a lot of money to spend without an expected result.
Adams: Are you an architect or planner?
Kaganovich: I'm an engineer.
Adams: I figured. Thank you for your testimony. We really appreciate it.
Emma Colburn: My names emma colburn. Thank you for the opportunity to speak before you. I was born and raised in Portland since moving back here in 2009. I have tracked and testified this process and i'm happy to see that the plan does not -- well, okay. I think I finally waded through all of the like uracs, the sacs -- what is this all about?
Adams: Acronyms. We could put in just a few more.
Colburn: I dredged through and I think i'm starting to get it. I'm pleased to see that the broadway-weildler doesn't include further demolition, at least as far as I can tell from the plan. It doesn't include further demolition of the historic buildings in the region. However, the history of eminent domain and displacement that color this neighborhood is -- that history is still not erased and inequities that still affect our community as far as education and health care and specifically looking at african-american community, compared to standards and demographics in the white community still affect us, and that is something that we really, I think, have to come to the table with. So, we talk a lot, mentioned today, we talk a lot about environmental stewardship. Green biking. I ride my bike. That's great. We talk less about historical stewardship. Maybe that's

because it's a fragile topic especially when racial conventions that might wish are not part of our history are still part of the conversation. They are part of our history and they should be part of our conversation directly. And I know that race is a super touchy topic, but I think we need to talk about it directly. I wanted to thank mike warwick for his testimony about the efforts to preserve the elliott neighborhood. And I would -- I want to further those a little bit. I notice that the language to me is not quite specific enough. It says encourage preservation of remaining culturally significant structures rather than like something like preserve culturally -- remaining culturally significant structures. Not -- i'm not an urban planner. I work for the school district. I'm an artist. So i'm not an urban planner but I do know enough about 2010 census statistics to know that the urban renewal corridors create displacement. 2000 and 2010 property values in the interstate urban renewal are -- does that mean I'm almost done?
Adams: You have 26 seconds.
Colburn: Between 2000 and 2010, property values in the interstate urban renewal corridor rose by $100,000. In the same decade, one in five african-americans moved out of that neighborhood. This is one of the highest rates of displacement in the country second to seattle. Basically there are no anti-displacement strategies in this plan that I have seen and I think that is a huge problem. I don't like to name a problem without giving a solution. Talk it me about historical -- heritage tourism maps on the region which dovetails on what you just said you were talking about how the neighborhood is not welcome friendly --
Adams: Have you got in touch with the dill club?
Colburn: Yes.
Adams: they're doing exactly that. They would love your interest and enthusiasm.
Fritz: Before we close testimony, maybe now would be the time to introduce my amendment.
Adams: Appreciate your testimony.
Fritz: I passed out an amendment which I believe it is entirely in the spirit of discussion --
Adams: Come on up.
Saltzman: Saved the best for the last.
Adams: Go ahead and introduce your amendment. I recognize you. Lloyd will come up.
Fritz: Thank you. This is in the spirit of what the discussions have been and would be a direction to the bureau of planning consistent with what is in the plan. And the -- the amendment is to introduce an additional whereas, whereas there is a history of gentrification and displacement in the north/northeast quadrant plan area, also to introduce another be it resolved that the bureau of planning and sustainability will evaluate whether requirements as well as bonus incentives should be applied when intensification in zoning designations or heights map changes are made so that all new residential development will include a range of housing affordability.
Fish: Second.
Adams: Just so I know the legislative intent is to look at bonuses and affordable housing, could be other things than heightened.
Fritz: Right. But also to look at requirements as well as bonuses.
Adams: Moved and seconded. Any discussion on council? Hearing none. Call the vote on the motion to amend.
Leonard: Aye. **Fritz:** Aye.
Fish: Thank you for bringing this forward Amanda. Aye.
Saltzman: Aye.
Adams: Appreciate it. Aye. Mr. Linly, you get the final testimonial word.
Lloyd Linly: Thank you, mayor, commissioners. As you can see, it was not a walk in the park. It was not a simple process. But we have consensus. Everyone gave to this process. And I think it was one of the best processes in my 30 plus years of public work that I have ever been involved in. So, kudos to everyone that made that happen. It's the first step in the central city plan. So

we're kind of the guinea pig or first process that others will be judged by. And its on the way to a new central city plan, this central city 2035. We are looking to create livability, robust district, that reflect the values and aspirations of the neighborhood and citizens. There are two -- three items, three achievements that I want to call attention to. The first is clear recommendations for balancing urban design land use and regional local transportation throughout the -- throughout the quadrant. The second is a productive and fruitful partnership between the city and odot. I can't emphasize what others have talked about bringing odot together and focusing on urban design, and the urban aspects of the project. And then the creation of a planning and public involvement model that can be replicated with contextual adjustments for the next three quadrants. I would like to thank the participants, staff, and the design teams, bureau of planning sustainability, pbot, odot -- instead of going into a lot of detail, this is a great model for the future and other quadrants. I think we've broken new ground in bringing odot in as a partner, in that the entire city has federal highways within it, adjacent interchanges. I would like to recognize sam imperatti for his creative public involvement. We could not have gotten where we are without his work. The consultant team. And our stakeholders advisory committee. The process was new to me in a way in that it was consensus driven and straw polling to manage the debates. And the focus of the conversation, it created time management, clear consensus and enabled minority reports which you will find in the back of our recommendations. The stakeholder advisory committee recommendations memorandum provides an overview and key outcomes with sac conclusions and recommendations. I would like to talk about three items of emphasis or three achievements that I think it is going to require city council support for. First has to do with the edges that pose the special challenges between the central city and surrounding neighborhoods. And it was not easy, but we found amicable and designed-based solutions that will help the design commission and landmarks commission, who will both be involved in decisions around those edges to maintain the livability and the character of those neighborhoods. The second is perhaps the toughest, and that is implementation of the east/west open space spine. Open space, as we know, is very difficult. We saw what it took in the pearl district for jameson square and north park square and the fields. Also the park blocks in south waterfront, and it will be critical to the identity, liveability, and envisioned residential neighborhood of the lloyd district to have those in place and be sure that we can get those developed. And lastly, while preserving transit, automobile freight, circulation, pedestrian, bicycle connections, will provide greater access between lower albina and Mississippi and the rose quarter. And with the city and odot collaboration, we will see a lid on i-5 from weidler to hancock. This provides a way to knit the community back together. We have heard that a lot from the african american community, we have heard that culturally, and from a historic perspective and by placing a lid over i-5 creating the clackamas connection, we will begin to enable these neighborhoods to knit themselves back together and get to the willamette river, enjoy the asset that the rest of central city has. There are minority reports at the end of our recommendations, and at this time, I would like to read our -- the sac final recommendations to the council. The sac recommends to the city council that they accept the odot facility plan and cities draft north, northeast quadrant plan package. The sac also strongly urges council to support the city of Portland and odot to take immediate action to prioritize, seek funding for and address the most pressing safety concerns that have been identified. Both odot and the city staff and city staff have begun implementing safety measures for bicyclists, and pedestrians, at the broadway-weidler interchange. They need your support to seek sufficient funding to continue this work. I think you have today from other testimony how important this is. I would like to thank you for the opportunity to serve the city, and to help shape the future of this district in Portland. One other thing, erik lovell, who can't be here today, as an active member and represents the industrial user, and lower abina provided a letter -- he has some concerns on follow through and I would like to call that to your attention as well.

Adams: Thank you. And thank are you for the great work on this.
Linly: Thank you.
Adams: Karla call the vote.
Leonard: Clearly this is a thoughtful process, a lot of cooperation, and multi-agencies, different jurisdictions and various interests in the community. Happy to vote aye.
Fritz: I appreciate the very thoughtful process and particularly combining transportation and land use planning in one project. Citizens stakeholder advisory committee has done amazing work as has the staff on this project. And the community stepping up and embracing yet more changes in this area and looking always hopeful for the future, aye.
Fish: Special thank you to everybody who came it testify. To city staff, to odot's team, our consultant team, and advisory committee in particular. This is an organic document, so we're embracing it as something more than a concept, but less than something locked into concrete. But if it -- its great value will be an able to guide a number of critical action over the next five to 10 years. I was struck by not only the -- just the incredible breadth and depth of the report but the quality of testimony that came before us. Both in favor and including concerns. Thanks again for all of the feedback, and joe in particular to your team congratulations. Aye.
Saltzman: Thank you to everybody that has been involved. Mayor adams for your leadership. I think this was -- sounds like a great process. A lot of people have agreed on much of this plan. I do share some of the concerns expressed about the hancock dixon overpass, or through area, whatever you call it, in terms of bringing increased congestion. I would want to see how we're going to make that an appropriate type of street that will speak to the needs of the near end neighbors. I can only imagine if hancock street would to be a through street east of 16th, of the same magnitude -- that would cause a lot of people to be very concerned about it. I think we need to be sure that we have traffic circles, other calming devices on the western portions of hancock as -- if we go through with the Dixon overpass. We do on eastern portions of northeast hancock. I think that -- I appreciate odot's really working with our people. This is a really sorts of a new chapter of I think of collaboration and it is great. It is nice to see improvements without taking up more land, which has always been sort of the historical axiom of how improvements get made in freeways. And finally, I should have picked up on this sooner, I was just thumbing through the minority opinions, since I was not aware they were there until lloyd mentioned them and I saw bob salinger's concerns from the audubon society. I want to echo something I think similar to where we just passed an amendment speaking to having affordable housing integration being part of maybe a density bonus. I think we ought to take a good look at bird friendly building designs and make that some sort of a bonus. We are talking about a lot of height under our fondest aspirations and I know that I have learned over the last several years, buildings kill birds, reflections in windows. Birds are near and dear to a lot of us. I would like to see, and I will revisit this in the quadrant plans but in future quadrant plans to make sure that we take an a closer look at that issue and how we might weave that into our sort of height bonus strategy. Otherwise good work to everybody. Pleased to vote aye.
Adams: In the course of seven months, city council has adopted new strategic plan for the city, Portland plan, completed the basis of the comp plan that will implement that. The concept -- the east side reference document, the central city concept plan and now the north, northeast concept plan. If they look tired, it is because they are. That's a lot of work. And I want to thank you joe zehnder our chief planner and your entire team for making this happen. We have a great local odot crew and I want to underscore the thanks to you all as well and all of the work and concern on safety all over the system that we share here in the united states -- here in Portland, I wish you were in charge of the united states freeway system, but, no, here in Portland. I would like to thank my staff, lisa libby, her team and the mayor's office for their work on this. I am very pleased to vote aye. So approved. We are adjourned.

At 4:00 p.m., Council adjourned.

N/NE QUADRANT & I-5 BROADWAY/WEIDLER PLANS

City Council Hearing

October 25, 2012

CENTRAL CITY 2035

N/NE QUADRANT

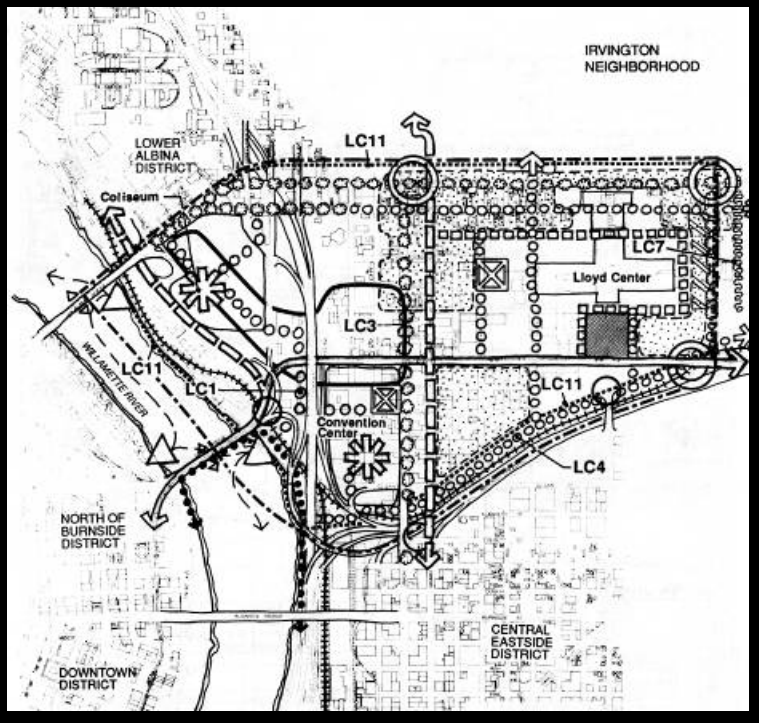
CITY OF PORTLAND OREGON 1851

Oregon Department of Transportation

AGENDA

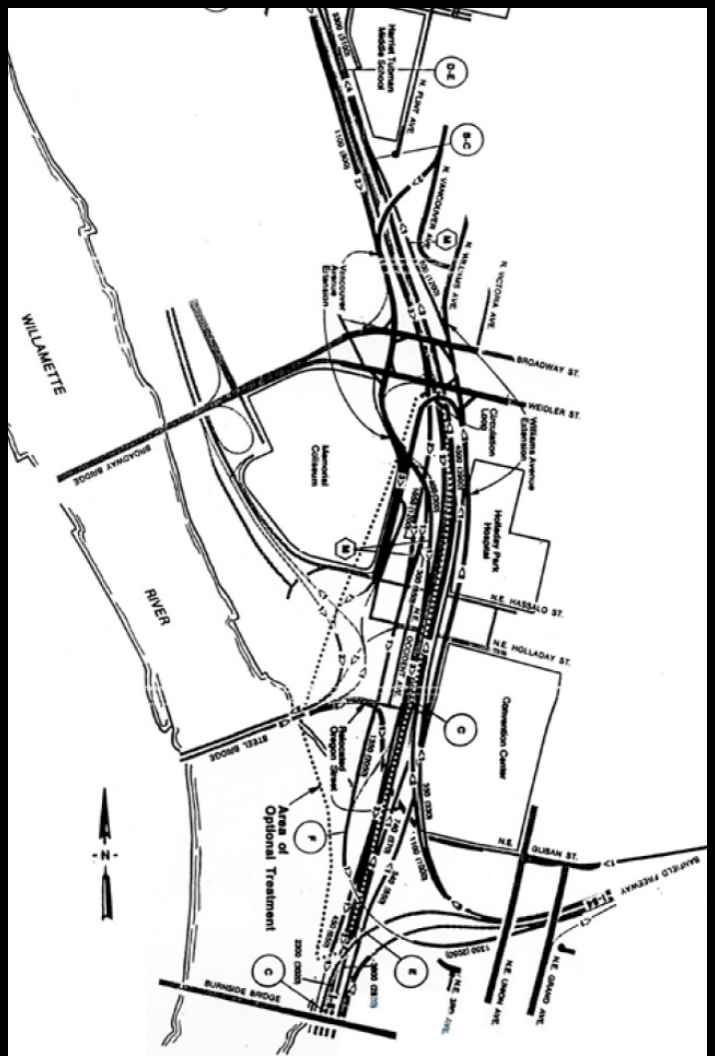
1. Project Introduction
2. N/NE Quadrant Plan Highlights
3. I-5 Broadway/Weidler Facility Plan Highlights
4. Stakeholder Advisory Committee Testimony
5. Public Testimony
6. Council Action on Resolution

PURPOSE: UPDATE 1988 CENTRAL CITY PLAN



LOWER ALBINA

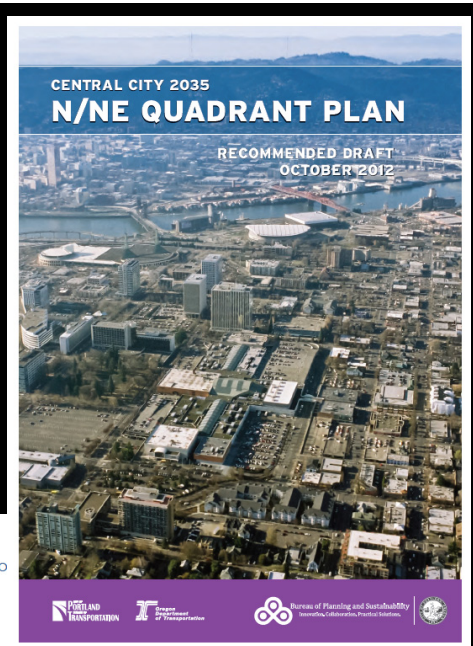
"strengthen the economic development of the area as an industrial employment area"



LLOYD DISTRICT

"eastern anchor of Central City retailing and locate highest density new development in areas served by light rail"

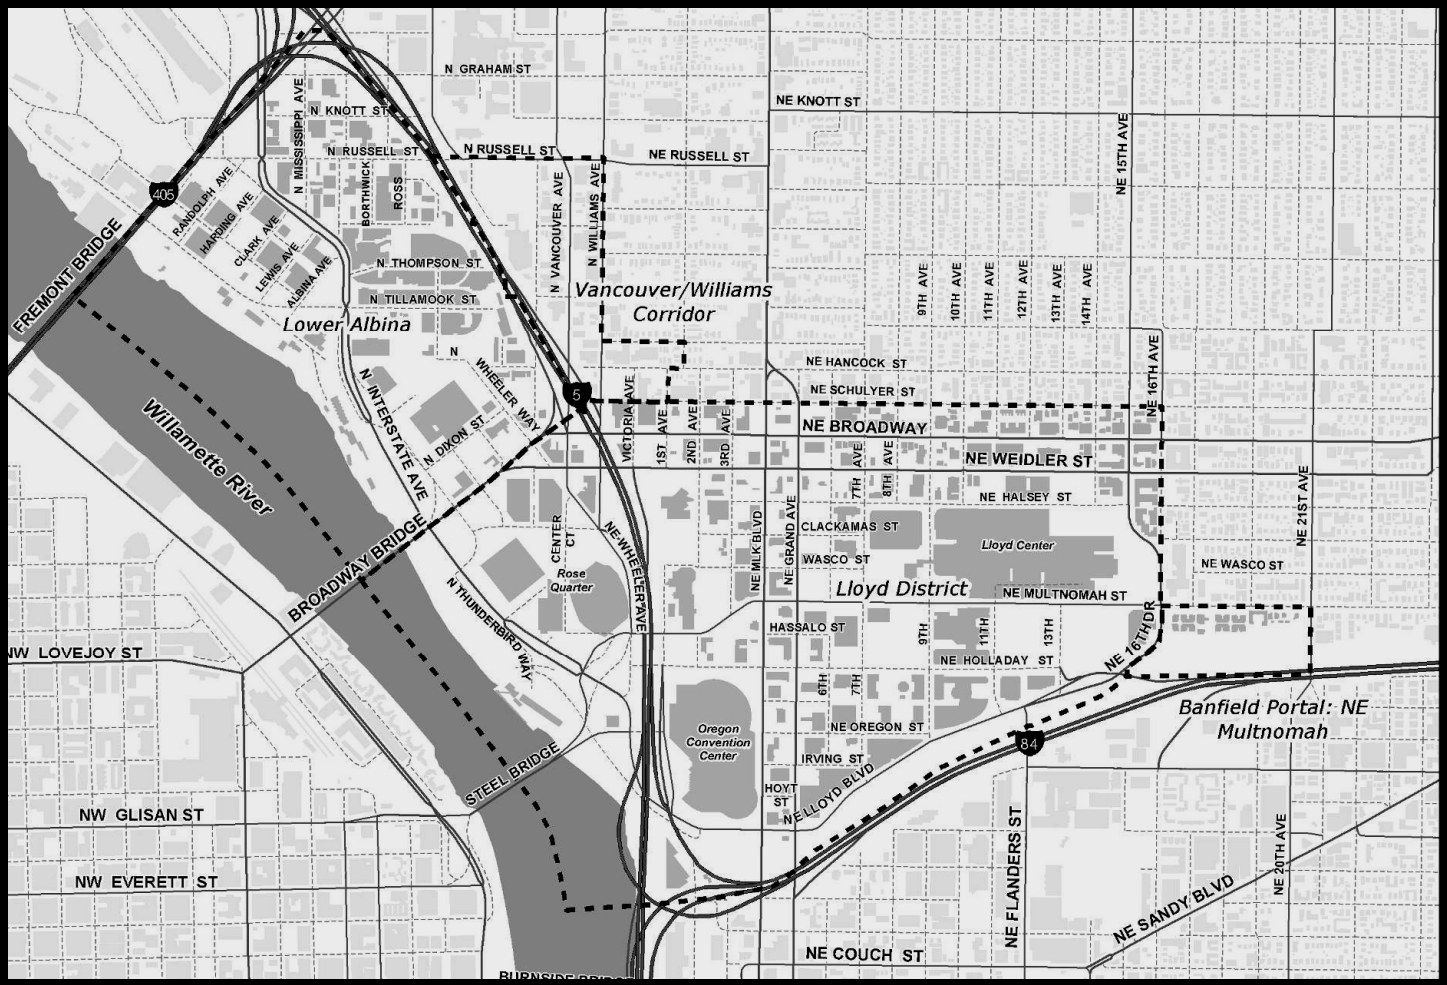
PURPOSE: ADDRESS I-5 BROADWAY/WEIDLER INTERCHANGE



REQUEST OF CITY COUNCIL:

a) Adopt the N/NE Quadrant Plan (by non-binding resolution)

b) Recommend that the OTC adopt the I-5 Broadway/Weidler Facility Plan



c) Direct PBOT to work with ODOT to:
   a) seek funding to implement the Facility Plan and
   b) implement near-term safety improvements in the vicinity of the interchange.

d) Direct PBOT and BPS to work with ODOT to designate the N/NE Quadrant a Multimodal Mixed-Use Area (MMA).

N/NE QUADRANT STUDY AREA

PROCESS

PROJECT TIMELINE

September 2010	Fall 2010	Winter 2010	Spring/Summer 2011	Fall/Winter 2011/2012	Spring/Summer 2012	Fall 2012

BENEFITS OF PROJECT

MAINLINE:

- More reliability (important to freight)
- Shoulders allow disabled vehicles to be moved out of mainline traffic
- Seismic upgrades to affected bridges
- Projected 30-50% reduction in crashes

BENEFITS OF PROJECT (CONTINUED)

IMPROVED INTERFACE BETWEEN FREEWAY AND LOCAL STREETS:

- Improved bike and ped. Facilities
- Provides additional bike and ped. route choices for different types of riders
- More connectivity – better for good development
- Creates better local street connections
- Lid creates urban design opportunities

THE LAND USE-TRANSPORTATION CONNECTION

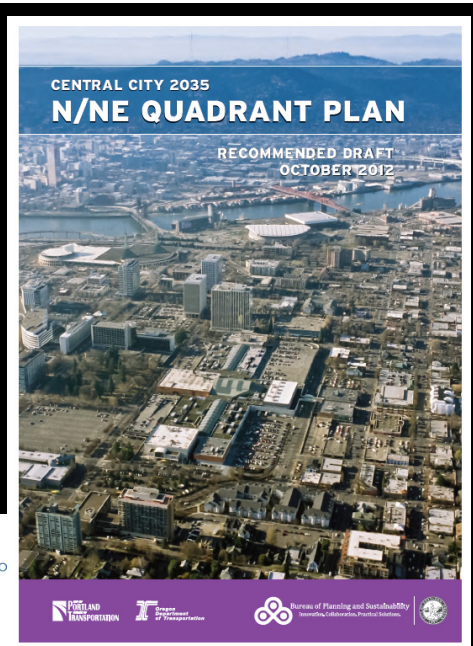
MMA DESIGNATION:

- **Multimodal Infrastructure**
  - I-5 Freeway and Local Street Network
  - Four LRT Lines
  - Streetcar: Pearl to CES
  - Eight Tri-Met Bus Lines
  - Major North/South and East/West Bike Routes

NEXT STEPS

- City/OTC adopt plan
- Near term safety improvements
- Proceed w/preliminary engineering and design coordination issues
    - Egress plan to be refined with Rose Garden and City
    - ODOT/City to do additional outreach
    - Traffic calming for Eliot Neighborhood

SHORT AND NEAR TERM IMPROVEMENTS



REQUEST OF CITY COUNCIL:

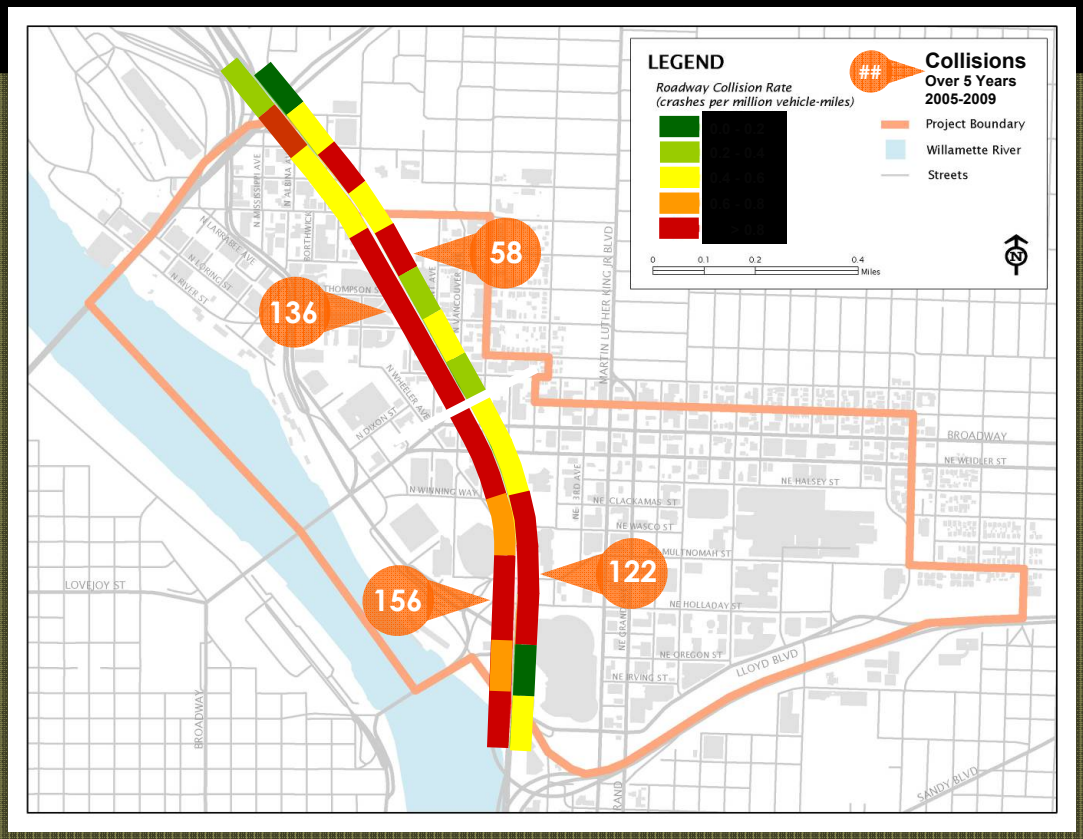
a) Adopt the N/NE Quadrant Plan (by non-binding resolution)

b) Recommend that the OTC adopt the I-5 Broadway/Weidler Facility Plan

c) Direct PBOT to work with ODOT to:
   a) seek funding to implement the Facility Plan and
   b) implement near-term safety improvements in the vicinity of the interchange.

d) Direct PBOT and BPS to work with ODOT to designate the N/NE Quadrant a Multimodal Mixed-Use Area (MMA).

EXTRA SLIDES



PROJECT COSTS

• Auxiliary Lanes/Shoulders:	$140-$150m
• Broadway/Weidler Lid:	$100-$110m
• Vancouver/Hancock w/Lid	$70-$80
• Clackamas Bike/Ped Bridge	$15-20m
Total:	$325-$360m

APPROVALS

- SAC 17: June 16, 2012
  - Extended Public Comment
  - SAC Approval of Facility Plan
- SAC 20: Approval of Overall Plan: Aug 2012
- City of Portland PSC: September 2012

Re: N/NE Quadrant Plan Testimony
Streimer Sheet Metal Works, Inc.
740 N. Knott St.
Portland, Oregon 97227

Dear Mayor and Council Members:

Streimer Sheet Metal Works, Inc. is one of the Northwest's premier providers of sheet metal construction, fabrication and HVAC services to the area's commercial, institutional and industrial-based businesses. We were founded in 1946 and moved to our current location in 1958 on N. Knott Street. Over the last half-century-plus, **we have expanded to over 280 employees, including 90 employed on our full block** on N. Russell between N. Albina and N. Borthwick, plus other properties on three adjacent blocks. Over the years, we have invested millions of dollars expanding and upgrading our facilities in our neighborhood and consider this location to be a part of our future.

We are extremely concerned about the proposed rezoning of our properties along Russell from IG1 to EX. We have been following this project from the beginning, but had been reassured that the rezoning would not impact us. It was only recently that we learned that this is not at all true.

EX zoning prohibits two of the activities most important to our business--outdoor work activities, and outdoor storage. While we understand that our current activities may continue, the prohibition destroys our flexibility for using our site in the future.

Changing to EX zoning would also instantly make over an entire half-block of our property nonconforming. Any future development we do would then trigger a slew of expensive, mandatory nonconforming upgrades, such as pedestrian connections between our several buildings--upgrades which would be worthless and in fact detrimental to us as an industrial use, and of absolutely no benefit to the public. Because the development standards of the EX zone are drastically different than those of our current IG zoning, we would certainly have to spend the code-mandated upgrade maximum each time we alter our property. **So, right off the bat, the EX rezone would increase the costs of any new development we do by 10%.** On a $2,000,000 building, that's $200,000--hardly something that's supportive of our business, and enough to stop us from being able to expand or upgrade our facilities.

EX also has drastically different standards than IG zoning for pedestrian standards, maximum setbacks, and many other things. Ironically, these would backfire in terms of making Russell more pedestrian-friendly. For instance, now, under our current zoning, we can expand towards--but not all the way up to--Russell Street, leaving open the possibility of doing non-industrial, pedestrian-friendly development there in the future. But under EX zoning, we'd be required to bring that industrial development right up to the street. **That's only one of several examples of the EX rezoning forcing us to do *exactly the opposite* type of development that EX is intended to encourage.**

We were **heavily involved in the Albina Community Plan**, which recognized the value of our industrial business and kept our zoning industrial. **We were promised that it was a long-term plan, and we have invested millions of dollars since that time in the neighborhood based on that promise.**

We already have huge constraints on us imposed by grade changes and functional requirements such as delivery and movement of materials that can weigh several tons each. **Those are difficult enough to manage without imposing zoning that was never intended to support our type of industrial use.**

We do understand the goals of the N/NE Quadrant Plan for Russell Street, and don't want to stand in the way of other people who need EX zoning to develop their own properties as they desire. But EX zoning--or any change that takes away our IG1 zoning--will be a disaster for us, and that will hurt our neighborhood.

Karl Lisle, the Plan's manager, suggested to us that a solution to our issues would be to keep our zoning IG1, but change the Comprehensive Plan designation to EX. That sounds like a good solution--preventing the harm that EX zoning would cause us, but reducing the difficulty of transitioning to EX zoning in the future, in the event that that made sense for future development.

We ask that you alter the plan to allow this change on our properties, so we maintain our IG1 zoning. Thank you for the opportunity to express our concerns.

Sincerely,

Streimer Sheet Metal Works, Inc.

Steven L. Streimer, President

CC: 1) F.L. Streimer, Secretary-Treasurer, Streimer Sheet Metal Works, Inc.

Attn: Council Clerk

Re: Written Testimony on N/NE Quadrant Plan Public Hearing at City Council

To the Council:

My name is James S. Heuer, and I'm a resident of the Irvington neighborhood and an active member of the Irvington Community Association's Historic Preservation Committee and its Land Use Committee. However, this communication is on my own behalf, although I believe that the commentary contained herein reflects the views of a majority of members of both of those committees.

Much has been made of the collaborative effort which has culminated in the N/NE Quadrant Plan being voted upon by City Council. While there is much truth in that, one key set of decisions was not made in a collaborative way, and the stakeholders directly involved in that area did NOT acquiesce quietly in the proposals ultimately being presented today – namely the proposed building height zoning treatment for that portion of the N/NE Quadrant Plan study area included in the Irvington National Register Historic District.

When the N/NE Plan study team presented their treatment of that area to the Portland Historic Landmarks Commission, they represented their decision to adopt a 75' high limit on buildings in the subject area as the result of negotiation with the ICA and its representatives. My understanding is that the discussion was far from a simple negotiation – the ICA was presented with the decision of the study team and told that no lower height limit would be agreed to. The consequence was that the ICA representative on the Stakeholder Advisory Committee submitted a minority opinion as part of the report addressing both traffic concerns relevant to the neighborhood and making clear that the proposed zoning height limits were unacceptable to the ICA.

It should be pointed out that in a 2007 land use case before the Historic Landmarks Commission regarding the proposed Irvington Squire Condominium building, the HLC Chair obtained an opinion from the City Attorney that the code standards which define the parameters of Historic Design Review supersede zoning limits on building height and FAR. In that decision, the LHC found that a building proposed at a height of 75 feet was not compatible with the then-effective standards for the Irvington Historic Conservation District. The standards which came into play in November, 2010, under which Irvington became a National Register Historic District are even more stringent that those under the Conservation District standards.

Zoning standards which are more relaxed than those imposed by Historic Design Review set up an inherent conflict and subject the Historic Districts to unwarranted pressures to subvert the Historic protections provided under the City's Design Review protections to exploit specific areas of potentially high value land.

In that context, the State of Oregon Certified Local Government Statute, which defines Portland's responsibilities relative to its historic properties and districts states clearly that the City must: "support historic preservation programs with adequate funding, staff, and access, and ensure that ordinances and other legislation designed to protect historic and prehistoric cultural resources are enforced."

Zoning which is in conflict with that expectation is, we believe, a prima facie violation of the State of Oregon Certified Local Government statute. Further, we believe that the process by which the N/NE Quadrant Plan team arrived at its arbitrary and unsupportable proposal for zoning heights in the Irvington Historic District was also a bald violation of the statute – as it constituted at best informal "horse trading" to arrive at new proposed zoning standards rather than the required formal review rooted in the protected historic characteristics of the Historic District.

The Plan team properly should have at minimum had hearings at which experts in Portland and Irvington history reviewed the basis for the Irvington District nomination to determine how the character of the district would be affected by potential zoning changes. And then should have provided analytical justification for its proposed height limit changes rooted in the historic character of the neighborhood as protected by the City's codes. The burden of proof would be on the N/NE Quadrant team to justify why the blocks fronting Broadway in the N/NE Quadrant planning area should have a 75 foot height limit when those blocks between 15th Avenue and 27TH Avenue are currently limited to 45 feet in height and share all the same historic characteristics as those in the planning area.

We respectfully request that in voting for approval of the N/NE Quadrant Plan, the City Council adopt an amendment excepting from its approval that part of the Plan which deals specifically with the proposed zoning for that part of the Plan area contained in the Irvington Historic District.

Very Truly Yours,

James S. Heuer

Subject: Written testimony from PPS for Item 1204 on 10/25 Council agenda
Attachments: Letter_to Portland City Council_N-NE Testimony.pdf

Good afternoon Ms. Moore-Love,

Attached is written testimony from Portland Public School Chief Operating Officer on the North/Northeast Quadrant Plan that will be before Council on October 25th at 2 pm (Item 1204). Please let me know if you need further information and whether this submittal is sufficient to get the testimony into the record for the Plan.

Thank you.

Mayor Adams and Portland City Council members
1221 SW Fourth Avenue, Room 140
Portland, OR 97204
Attn: Council Clerk

Dear Mayor Adams and Portland City Council members,

Thank you for the opportunity to comment on the N/NE Quadrant Project (N/NE Quadrant Plan and I-5 Broadway/Weidler Plans) and congratulate you on the completion of one of the elements of the Central City 2035 Plan update. You should be proud of the project's Stakeholder Advisory Committee (SAC) and project staff in the completion of this significant piece of work and its reflection of the high level interest the community has in this part of Portland.

Portland Public Schools (PPS) is generally in support of this project and its implications for the PPS properties located in the project planning area (Blanchard Education Services Center and the Harriet Tubman School). We have previously provided testimony to the project SAC and Planning and Sustainability Commission regarding the plan. We support the Plan's proposal to include the Blanchard site in the Lloyd District and the rezoning of the Blanchard site and Harriet Tubman School.

PPS is also supportive of investments in state and local transportation improvements identified in the I-5 Broadway/Weidler Plan. The function and operation of local streets in the vicinity of the I-5 interchange with NE Broadway/Weidler have needed attention for a number of years.

We are concerned, however, about the Plan's specific recommendations for future local street improvements to be made in conjunction with I-5 interchange improvements identified in the Plan. One of the Recommended Concept Facility Plan Elements (page 7) is the reconfiguration of streets north of Broadway to include the Hancock/Dixon Structure and freeway lid and the connection of N. Dixon Street with NE Hancock Street (page 8). While the N. Dixon Street connection with NE Hancock Street would provide an east-west, non-arterial street connection that avoids the I-5 interchange area, **making such a street connection without corresponding street and streetscape improvements to N. Dixon Street through the intersection with N. Larabee Avenue to accommodate the additional traffic volume and transportation modes will significantly impact operations at the Blanchard site.**

We recognize that the level of detail in a central city quadrant plan will be subject to a great deal of further refinement and detail after the plan is adopted. The

Portland Public Schools is an equal opportunity educator and employer.

Plan's begins to address this need through project development and management, preliminary engineering and specific design coordination implementation actions. These actions begin to speak to the concerns we noted above (page 11, Specific Design Coordination, item 2) by addressing property and parking impacts to properties affected by the proposed connection of Hancock/Dixon streets. However these actions need to be expanded to require the number of on-site and on-street parking spaces be the same or more than existing conditions for properties impacted by the proposed connection of these two streets.

These actions should also inform local property owners of any other plans PBOT might have for changes or impacts to local street operations that might affect local property owners in this area that would be out of sync with timing of improvements in the I-5 Broadway/Weidler Interchange Improvement Plan.

Again, thank you for the opportunity comment on the plan and congratulations on the completion of this significant planning effort.

Very Truly Yours,

C.J. Sylvester
Chief Operating Officer
Portland Public Schools

To: Moore-Love, Karla

Subject: N/NE Quadrant Plan Public Hearing Testimony for October 25, 2012

TO: Portland City Council

SUBJECT: N/NE Quadrant Plan -- Testimony for Hearing -- October 25, 2012

Mayor and Commissioners:

This is a fatally flawed project. It assumes, contrary to Portland's Climate Action Plan, continuing growth in freeway volumes based on unsupportable predictions and the assumption that we will not provide alternatives. Our planet cannot survive this kind of thinking much longer.

If Portlanders have already figured out that "we can't build our way out of congestion," then what are we doing here?

The "N/NE Quadrant Plan" is an anti-planet highway expansion project with window dressing designed to appeal to the "stakeholders." You can call an additional lane an auxiliary lane, but it is still an additional lane, and still is a huge increase in freeway capacity. As Planning and Sustainability Commissioner Chris Smith points out, alternatives to expanding highway capacity should be considered first, and in this case they were not.

Likewise, if safety is the problem, and we have $400 million to spend on safety, is this really the place to spend it? Where is the analysis of alternatives? The public knows that local governments have no printing press for money, so projects that provide a poor rate of return end up discrediting all government actions.

If the surface amenities in the N/NE Quadrant Plan are worth doing, let's spend just a fraction of this total project cost on those amenities, and forget the freeway expansion. I remember when the "Water Avenue Ramp" project was being promoted by parks advocates, who said that it was the only way to fund the East Bank Esplanade. I fought that ramp, it was killed, and somehow we managed to build an Esplanade that isn't under the shadow of a freeway ramp swooping out over the river! Let's be similarly creative here.

ODOT and Metro do not have a psychic ability to predict the future. I recall that back in the early 1980's, ODOT and the City of Portland were promoting an expansion of McLoughlin Blvd from two to three lanes in the stretch south of SE Harold St. The increase in traffic was going to be so big, that the City told the neighborhoods that the City would not do traffic calming on SE 17th, because 17th would be needed for the excess traffic that wouldn't fit on McLoughlin in the future unless it was widened. Of course McLoghlin wasn't widened, the City put in traffic calming on 17th, and the latest traffic counts on McLoughlin show traffic volumes back to the level of when that project was being promoted. And, we are finally putting light rail in that corridor.

We can do a lot about our own use of fossil fuels for transportation in Portland. We need to improve mass transit in the I-5 corridor, and permanently shut down this proposal for expanding capacity and traffic volume on I-5.

Sincerely,

Douglas R. Allen

Subject: I-5 > Broadway-Weidler Facility Plan

I may have already sent you a communication regarding this. I tried yesterday, but it didn't show up in my "sent " file so I am sending you another one so you are assured your project has support from the Clark county end at least at the hoi pol-oi level. I heard about this project from Debbie Peterson. This idea is actually well overdue and should have been handled years ago. When such projects are delayed they only get more costly as labor costs only go up. Adding the third lane in Delta Park has helped that area considerably and would definitely aid congestion there as well.

It isn't always the case but in this one, if some is good more would be betterso why stop at one new lane? I am aware that Multnoma county has had a statutory strangle hold here as there is a statutory limit of 3 thru-lanes, which blocks this kind of reasonable city planning. As long as this mentality holds the prevailing position, traffic will always be a problem in the Portland / Vancouver areachoking down trafic for thew entire west coast. I wonder if the powers that be would feel more motivated if they knew they were lagging behind cities in the Deep South such as Atlanta and Birmingham. I've seen both and can tell you their freeways get widened when they need it. They realize it is necessary to keep their economies vital . This is also true in our area as well. Hopefully, new blood in the City council and Mayor's office will shake things up.by the way, New Orleans had the good sense not to buck the system when I 10 was built there. They had proper Interstate highrise bridges built back in the 60's when they were a lot cheaper than they are today. Keep on pushing. We need thinkers like you.

Re: N/NE Quadrant Plan

Dear Mayor and City Council,

npGreenway is a local organization advocating for the adoption and construction of a multi-use trail between the Eastbank Esplanade and the Columbia River. We have briefly reviewed the proposed N/NE Quadrant Recommended Draft that is to be heard by you on October 25, 2012. We ask that this letter be included in the public record.

The plan illustrates (page 25) the proposed Willamette River Greenway Trail on the westerly side of Interstate Avenue between the Eastbank Esplanade and the Broadway Bridge. We SUPPORT this recommendation and urge the Council to adopt this location and we request that the North Portland Trail Alignment Plan, currently in process at Parks and Recreation, follow the same route.

Thank you for this opportunity to comment.

Commissioner Randy Leonard
Commissioner Amanda Fritz
Commissioner Nick Fish

Dear Mayor Sam Adams and the Portland City Council,

I am writing on behalf of myself and my neighbors in the Eliot neighborhood.

The I-5 Broadway/Weidler Facility Plan should be amended.

The study that I watched and participated in made a faulty assumption: we need to add lanes to I-5. This is not technically required to create the local street improvements that are proposed, and those local streets should be the motivation for this project. The area around the interchange is choked with traffic and some minor tweaks can make it a much more pleasant place to live. We can choose to save $300M and lose the lid over I-5, and connect N Flint to Dixon connection, building this project on the existing structures is physically possible. Creating the 4-lane English-style onramps onto I-5 on N Williams might require removing the sidewalks from the N Williams overcrossing bridge, but other than that, the structures are physically capable of being reconfigured with a bit of paint and concrete.

Removing the lid and reusing bridges we already have, we can create the plan above for less than ¼ the cost of the proposed plan

There are 2 reasons not to do this:
a) It isn't shiny
b) It doesn't widen I-5

Everyone in the room knows that you will be approving the plan, so I would encourage you to push this amendment forward:
Do a 'phase 1' project to solve the mess at Flint, Wheeler & Broadway.
Do a 'phase 2' project to convert N Williams as shown above. Build the Clackamas Overcrossing to help reconnect the urban fabric across I-5.

If we do this, we can evaluate the project and decide to pay for it later. It may not be needed and the savings of roughly $300 Million could be applied to other safety projects around the city.

The only things you lose from this plan are 'nice to have' not requirements for life:
a) The Lid- possible developable land on top of I-5
b) Full width sidewalks on a few block faces that serve as interstate onramps
c)

Please push this forward before the highway lobby funds this project and commits us to unneeded spending.

Thank you for amending what is nearly a very good plan,
Allan Rudwick

Subject: Oct 25 meeting on I-5 Broadway-Wediler Faility Plan

Dear Council Members,

I think the I-5 Broadway Facility Plan should be built as per ODOT's plan which includes building a new lane both north and south on I-5 in the Rose Quarter. The surface improvements are good, also, in that they will facilitate improvements to nearby property. This is a much more important project than the Columbia River Crossing. I would like to see ODOT go ahead with this Facility Plan and table the CRC. Please vote in favor of the I-5 Broadway -Weidler Facility Plan.

RE: October 25th, 2012 hearing on the N/NE Quadrant Plan and I-5 Broadway/Wielder Facility Plan

October 15, 2012

To the City Council,

I am the owner of a glass manufacturing business employing some 50 people located (since 1984) in the N. Albina area, and previously in the CEID. I have lived and/or worked in Portland's inner city since 1964, and have personally seen and been affected by all of the issues and developments here over these many years.

Representing L. Albina businesses, I was a member of the N/NE Quadrant Plan SAC from start to finish, and participated in almost every subcommittee meeting during the 2 year stint. I would have liked to present this message in support live, but am currently overseas on a business trip.

My experience in this planning process was very satisfying. The group heard from, and was therefore able to consider, what surely must have been every possible point of view on each topic. Fortunately, we were also provided a tremendous amount of professional input from City and ODOT staff and their consultants, so that we could make fully informed decisions.

Down to the smallest detail, the resultant product is a balanced and worthy plan, and I urge you to adopt it without casually considered '11th hour' amendments. We considered the messages brought by those inside and outside the SAC that advocated 'fringy' ideas, and occasionally these influenced our direction. We considered both larger and lesser options for transportation at length, and chose this balanced plan with a strong majority.

This process and the resulting product was a great example of democracy at work: messy at times, but respecting input from all sources. As a small business owner I shudder to think of the cost of all the staff and consultant involvement in this process, but no planning effort is going to improve on this one, and the City should pay careful attention its recommendations.

Sincerely,

Eric Lovell, President

Subject: Yes, add 2 lanes to I-5 in the Rose Quarter

I support the I-5 Broadway Weidler Facility Plan of adding lanes to I-5 that are now a bottleneck.

If this were improved, more WA residents could use I-5 more.
Rather than crowding I-84 in Portland, WA residents could travel on SR 14 on the WA side, use the I-5 bridge,
and get to destinations south.

Regional medical specialties are housed at OHSU on the waterfront and on the hill, and these lanes would
improve accessibility to these.
All of the destinations south of the improvements would be more accessible including Portland attractions like OMSI.

Freight from the ports of Portland and Vancouver could reach destinations sooner if the roads were better
suited to the traffic demand.

The state of WA has worked to make I-5 north wide enough for the traffic.

If OR would do their share, then commuters, freight, and visitors could better travel in our region.

Thank you for your consideration.

Portland Bicycle Advisory Committee

Working to Make Bicycling a Part of Daily Life in Portland

1120 SW 5th Avenue, Room 800
Portland OR 97204

9 October 2012

Portland City Council
Portland City Hall
1221 SW Fourth Avenue
Portland, OR 97204

Dear Commissioners:

On behalf of the Portland Bicycle Advisory Committee (BAC), I respectfully submit the following letter of support for the process that led to the creation of the **N/NE Quadrant Plan** (Proposed Draft, August 2012). I (or, when necessary, my alternate, Heather McCarey) represented the BAC on the project's Stakeholder Advisory Committee (SAC) throughout the process at the invitation of the Portland Bureau of Transportation (PBOT).

As a BAC member, I was given ample opportunity to share my committee's thoughts and concerns at each of the meetings of the SAC and its various sub-committees. The BAC, and the cycling community as a whole, also benefited by having project team members from PBOT and the Oregon Department of Transportation (ODOT) attend our regular committee meetings at Portland City Hall on multiple occasions; project team members also met with a BAC task force to review key plan elements at our request.

The resulting plan – when taken as a whole – contains several positive improvements for cyclists, especially for those in the "interested but concerned" category at whom the Portland Bicycle Plan for 2030 is squarely aimed. Perhaps more importantly, the N/NE Quadrant Plan clearly reflects a process designed to gather, consider, and incorporate the ideas and opinions of a broad range of stakeholders and advisors. We trust that you will recognize the extraordinary efforts ODOT, PBOT, the Bureau of Planning and Sustainability (BPS), and their consultants took to craft, execute, and regularly adapt a committee process so as to not only garner input, but also to responsively alter plan elements and language appropriately. We ask that you adopt the plan in this spirit, and that you work hard in the coming months and years to ensure that its inherently 'balanced' elements survive the plan's implementation.

As always, we look forward to working with you and City Staff as this work is refined. Thank you very much for your consideration.

Sincerely,

Matthew Arnold

INFORMAL DISCUSSION AND MEAL

WELCOME, MEETING PURPOSE, APPROVAL OF MINUTES, AND STANDING BUSINESS

Co-Chair Lloyd Lindley welcomed the group and reviewed the agenda.

Approval of Notes

The N/NEQ SAC 17 Meeting Notes were approved as written.

Announcements

Todd Juhasz, ODOT, reviewed the proposed language changes to the Facility Plan, included in the meeting packet.

Gary Warren: clarified that his request was specific to events.

ODOT: language will be amended to incorporate.

Owen Ronchelli: they suggest adding "event based pricing."

Lloyd Lindley: comment about making the language more specific.

Steve Iwata: noted they wanted to leave it flexible so the boundaries can be changed if needed.

ODOT: boundaries are subject to change depending upon what we learn through the process.

Dean Gisvold: the "or" between visual and acoustic should be changed to "and." (Re: Sean Hubert comment from SAC 17). You agreed to this at the last meeting.

ODOT: we can accommodate and change to "and."

Wayne Kingsley: we have a TMA, why wouldn't the parking issue go to the TMA?

Owen Ronchelli: we are actually working on parking this summer.

Wayne Kingsley: does not understand why it is here.

ODOT: it comes down to who actually pays for it.

Owen Ronchelli: to make Gary more comfortable with pedestrian bridge. He does not want the area to fill up with event goers. By using event based pricing, you are allowing better access to this building.

Wayne Kingsley: ok.

Process Overview/Timeline Reminder

Lloyd said that tonight is the second to last meeting. Staff has done a great job of preparing materials.

Alan Lehto: apologized that he will have to step out early.

DRAFT N/NE QUADRANT PLAN OVERVIEW

Karl Lisle, BPS, provided a quick overview of the draft N/NE Quadrant plan, reviewing the PowerPoint presentation, explaining how this N/NE Quadrant plan is part of the Central City Plan update. He reviewed some of the history of the area, noting it has undergone an enormous amount of change. There have been major impacts to Portland's African American community, with development since the 1950s largely dismantling the community and many culturally and historically significant buildings. The project team has been trying to be especially sensitive to this issue in this process.

Slide 5: End Products

City:

- Central City 2035 Plan with Updated Lloyd and Lower Albina Subdistrict Plans (N/NE Quadrant)
    - Urban Design Concept Diagram
    - Land Use Plan with Goals, Policies & Actions

ODOT:

- I-5 Improvements Project Agreement
- I-5 Facility Plan for project area

Slide 14: Key Existing Conditions

LOWER ALBINA

- Successful employment district with growth potential
- Mixed-use historic main street on N Russell Street with very limited housing.

LLOYD

- Regionally important facilities
- Significant jobs and potential for growth
- Limited housing
- Limited street-level activity / gobs of development potential
- Significant infrastructure in place

Slide 20: Key Issues and Challenges

- Urban vibrancy and vitality
    - Desire for more housing, improved amenities like open space and pedestrian friendly urban form
- Economic prosperity
    - Employment and business growth
- Human and Environmental Health
    - Air quality, green infrastructure, opportunities to improve habitat
- Balance and Equity
    - Respect cultural heritage; grow while retaining existing residents and businesses and culturally significant buildings
- Connectivity and access
    - Address transportation barriers
    - Freeway safety and operational issues

Slide 21: Project Goals

1. A diverse mix of land uses and development types
2. Economic development that supports existing and new business
3. Enhanced habitat, access to nature, and a sustainable built environment
4. Infrastructure for healthy, livable, safe and vibrant communities that respects adjacent neighborhoods
5. A full multimodal transportation system
6. Improve the local circulation system
7. Equitable access to amenities and economic opportunities
8. Protection and enhancement of cultural heritage

Karl continued the presentation, reviewing significant areas, the issues the project is trying to address, and the solutions proposed in the Quadrant Plan.

Stephanie Beckman, BPS, discussed Chapter 3 of the Plan, Goals, Policies, and Implementation Actions. The SAC received the updated version along with the track change version, so folks could easily identify what has changed.

Slide 49: N/NE Quadrant Plan Table of Contents

1. Introduction
2. Developing the Plan
3. Goals, Policies, Implementation Actions

Appendices
A. Additional Urban Design Diagrams
B. Implementation Action Details
C. I-5 Facility Plan
D. History
E. Issues, Opportunities and Constraints
F. Public Involvement Summary
G. Bibliography (pending)
H. Resolution (pending)

Noted the Resolution, Appendix H of the draft plan, as a reminder that this plan will be adopted by the City Council as a Resolution, as part of the Central City plan update.

Slide 50: Chapter 3: Goals, Policies & Actions (pg. 25)

Lloyd District
- District Goal
- Concept Diagram
- Policies
  - Regional Center: Economy & Innovation
  - Housing and Neighborhoods
  - Transportation
  - Urban Design
  - Environment
- Performance Targets
- Implementation Actions

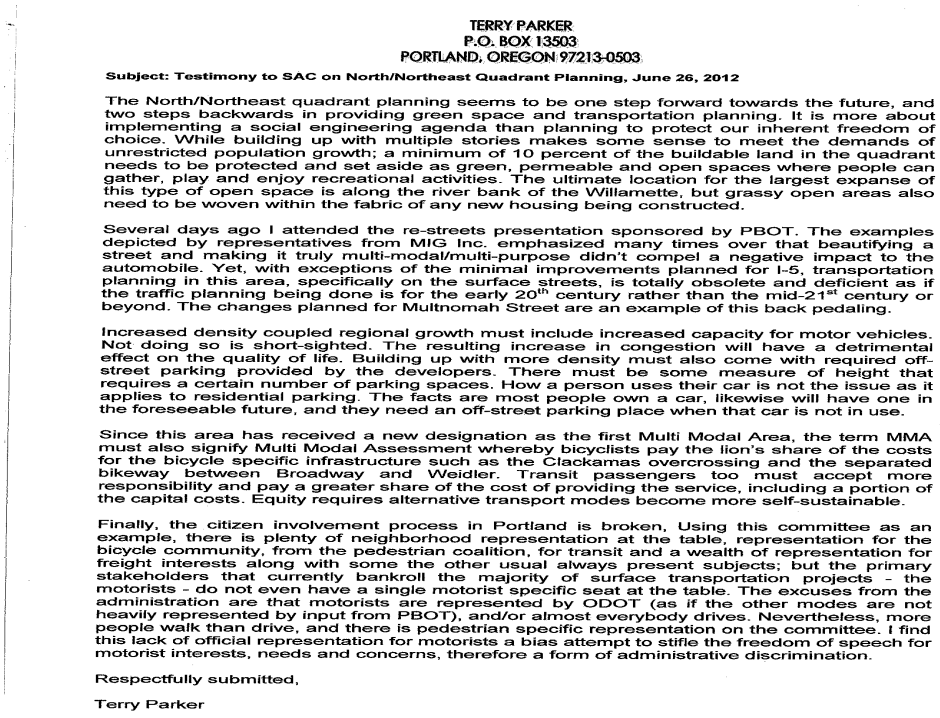
Lower Albina
- District Goal
- Concept Diagram
- Policies
  - Regional Center: Industrial and Employment Sanctuary
  - Transportation
  - Urban Design
  - Environment
- Performance Targets
- Implementation Actions

Stephanie explained that "Performance targets" should be considered preliminary; all targets will have to be revisited as planning for the rest of the Central City proceeds. "Implementation Actions" can include specific regulatory changes, proposed projects, on-going efforts or further studies.

Stephanie continued the presentation, guiding the SAC through Chapter 3. She noted that the Blanchard site is proposed to be added into the Lloyd District (thus being removed from the Lower Albina District), with an accompanying zoning change.

Stephanie provided examples of proposed policies and actions pertaining to regional center, housing and neighborhoods, transportation, urban design, and the environment. It was not an exhaustive list; for the full list of policies and actions in the N/NE Quadrant Plan, please see this link: www.portlandoregon.gov/bps/cc2035/nneq

Karl provided a re-cap of the height proposals and proposed changes in base zoning. In Lower Albina, the concerns boil down to parking. Also, there has been significant discussion about heights on Broadway, and the proposal includes some reduction in heights for the Irvington Edge transition into the neighborhood.



PUBLIC COMMENT

Sam Imperati, ICM, arrived late, but in time to facilitate the public comment. He said there are ten people signed up, and written comments are always welcome.

Ray Paulani, lives in SE Portland, represents Citizens for Better Transit, has been a public transportation activist for 40 years. His friend Jim Howell told him about this project. He felt he should say something. To set the tone, there was an article published in the Portland Tribune in June 2007, titled "Cars Should Be Our Servant, Not Our Masters." He read some parts of the article, the gist of which is that cities have been shaped by the car at the expense of public transportation. He believes we should fit the auto to the city, not the city to the auto. In today's Portland Tribune, he had an article published titled "MAX spurns East Side." There is only one way to go, and that is no build. The freeway portion of this project very seriously messes up this project. We need as soon as possible to consider a subway for MAX. It slows too much in downtown Portland. He expressed some additional issues related to TriMet he and his group are concerned about.

Paul Cathcart, Portland Public Schools, thanked the SAC members and the Calaroga Terrace for hosting the meetings. Diane distributed his comments in the meeting packet. PPS is very supportive of the plan and particularly supportive of the zoning changes for the Blanchard site and Harriet Tubman school. His major concern is in the transportation area, which he knows was addressed last meeting. He does not feel the plan addresses the safety and operations issues for the school district site related to proposed Hancock overcrossing. The proposed designation of Dixon Street is problematic for parking. He would like language to address this. Thank you for your time.

PORTLAND, OREGON 97213-0503

Subject: Testimony to SAC on North/Northeast Quadrant Planning, June 26, 2012

The North/Northeast quadrant planning seems to be one step forward towards the future, and two steps backwards in providing green space and transportation planning. It is more about implementing a social engineering agenda than planning to protect our inherent freedom of choice. While building up with multiple stories makes some sense to meet the demands of unrestricted population growth; a minimum of 10 percent of the buildable land in the quadrant needs to be protected and set aside as green, permeable and open spaces where people can gather, play and enjoy recreational activities. The ultimate location for the largest expanse of this type of open space is along the river bank of the Willamette, but grassy open areas also need to be woven within the fabric of any new housing being constructed.

Several days ago I attended the re-streets presentation sponsored by PBOT. The examples depicted by representatives from MIG Inc. emphasized many times over that beautifying a street and making it truly multi-modal/multi-purpose didn't compel a negative impact to the automobile. Yet, with exceptions of the minimal improvements planned for I-5, transportation planning in this area, specifically on the surface streets, is totally obsolete and deficient as if the traffic planning being done is for the early 20th century rather than the mid-21st century or beyond. The changes planned for Multnomah Street are an example of this back pedaling.

Increased density coupled regional growth must include increased capacity for motor vehicles. Not doing so is short-sighted. The resulting increase in congestion will have a detrimental effect on the quality of life. Building up with more density must also come with required off-street parking provided by the developers. There must be some measure of height that requires a certain number of parking spaces. How a person uses their car is not the issue as it applies to residential parking. The facts are most people own a car, likewise will have one in the foreseeable future, and they need an off-street parking place when that car is not in use.

Since this area has received a new designation as the first Multi Modal Area, the term MMA must also signify Multi Modal Assessment whereby bicyclists pay the lion's share of the costs for the bicycle specific infrastructure such as the Clackamas overcrossing and the separated bikeway between Broadway and Weidler. Transit passengers too must accept more responsibility and pay a greater share of the cost of providing the service, including a portion of the capital costs. Equity requires alternative transport modes become more self-sustainable.

Finally, the citizen involvement process in Portland is broken, Using this committee as an example, there is plenty of neighborhood representation at the table, representation for the bicycle community, from the pedestrian coalition, for transit and a wealth of representation for freight interests along with some the other usual always present subjects; but the primary stakeholders that currently bankroll the majority of surface transportation projects - the motorists - do not even have a single motorist specific seat at the table. The excuses from the administration are that motorists are represented by ODOT (as if the other modes are not heavily represented by input from PBOT), and/or almost everybody drives. Nevertheless, more people walk than drive, and there is pedestrian specific representation on the committee. I find this lack of official representation for motorists a bias attempt to stifle the freedom of speech for motorist interests, needs and concerns, therefore a form of administrative discrimination.

Respectfully submitted,

Terry Parker

Mary Vogel, representing herself and her small business PlanGreen. She supports the written comments of Bob Sallinger, especially "strong language to protect ….riparian buffers and restore developed banks as redevelopment occurs." When she was writing for Urban Land about Portland, she noted the fabulous Riverbank design. Protecting habitat is incredibly important. Also, specific targets for green roofs, not just any ecoroofs, but quality ones, with native plants not invasives, which are planted in many bioswails, such as the new ones on MLK. Also bird-friendly building design; also tree targets. And thank you. Walks and bikes wherever she goes, disagrees with the last speaker.

Murray Koodish, President, N/NE Business Association; read the following comments:

June 28, 2012

To the N/NE Quadrant/I-5 Broadway-Weidler Plan Staff and SAC,

The Northeast Broadway Business Association fully approves of policy goal #4 under Housing and Neighborhoods, which supports the success of neighborhood business districts. The concept of concentrating retail and neighborhood-type businesses should help foster successful retail and service-focused businesses in business districts throughout the N/NE Quadrant.

We are also pleased to see attention paid to the maintenance and development of parking options that support retail businesses on NE Broadway, as well as on NE Weidler and other retail-focused streets such as Martin Luther King Jr. Blvd. and Grand Ave.

A major issue, mostly unaddressed here, is the lack of signals and crosswalks east of 16th Ave. along NE Broadway and NE Weidler that would support a pedestrian and bike-friendly environment that improves connections across traffic barriers. That single improvement is crucial to developing and maintaining a diverse, healthy business district and neighborhood hub. Even though this plan doesn't directly address that area, we would like to see a mention to provide a starting point for further study and improvements as part of the Central City update or other initiatives. A good template is Dean Gisvold's suggestion for item TR6.

Good work has been produced in this draft examining the development of new parking options – and the maintenance of existing parking – that supports retail and service businesses on the NE Broadway Main Street and other retail-heavy streets. That will remain critical to healthy businesses, even as other transportation options evolve.

Looking to the future, we are concerned that a large increase in density and corresponding traffic in the N/NE Quadrant may put pressure on the character of NE Broadway in coming years. The Civic Street designation in the Plan attempts to balance the recognition of higher traffic volume with the retail/main street character. Attention will need to be paid to keeping a smaller-scaled neighborhood hub "feel" intact as areas such as the Lloyd District core grow around us.

This is paralleled by a related topic: the building height reduction in item UD10, dropping the height from 75 feet to 45 feet on the Irvington Edge. We support that, since it will help maintain a neighborhood feel, even as we see increased growth along NE Broadway over the years.

Thank you.

Murray Koodish
President, Northeast Broadway Business Association

Betsy Reese, Paramount Apartments, projected a slide for her comments. She and her husband own Paramount Apartments and she has been advocating for the Paramount, their tenants, and their investment. Also, she has been advocating for bicycle safety. She has been involved in this cause for 14 years. There have been some promises, not all have come to fruition, but appreciates this opportunity again. The bike - motor vehicle crashes in front of their building rank 1st, 2nd or 3rd every year. In June, they had two collisions serious enough to send cyclist to hospital. There has been some work to address this, and she described some work done by Portland Water Bureau. What she heard from them was, hang in there, it will all be fixed when the Streetcar goes in. However, it was not in their purview and they did not know much about it, and did not do anything. They whole area has been up in the air for years. Now we have all these changes, everyone likes them, they are approved, and the only thing wrong is it is not going to happen for 5 or 10 years. Some of the safety improvements need to be fast-tracked. They had a meeting with numerous transit organizations, bike activists, lots of people who

really care and are done being patient. Andy, Todd, Mauricio, and Steve were there, too. She has a 1-page handout which describes what she has been experiencing, their observations, and common traffic infractions. She provided her contact info, and asked folks to please email her.

Brad Perkins said it's good to be here. He missed the last meeting, and will prepare written statement of his remarks tonight. It's a good group, and you have had a lot of responsibility, because you are planning for the next 100 years. He is not sure what Terry's talking about – there is plenty of car representation. He feels land use has been shortchanged. High-speed rail has not been mentioned at any point. At some point this community will be presented with a high-speed rail proposal, on the same tracks. He stressed the importance of including the "Big Boys" in this discussion. We have had Justin/Trailblazers, but in order for these things to happen, we are going to have to develop a feasibility plan. Comments about the interconnectedness of housing and green trails. New lifestyle change? Portland's ready for it. We want to get on our bike and not be on the street. Comment on the importance of Broadway, it is the artery. He seconds Murray's comments. It needs to be pedestrian-oriented, more amenable for business and walking, and driving a car. Lastly, the importance of continuing on with leaders in the community, build mainstreet Broadway, implement what we have been working on with public and private partners.

Alan Rudwick, Eliot Neighborhood Association LU Committee, said that Eliot wants the same deal that Irvington it getting regarding height. It is really important to have jobs in this area. Out in Hillsboro they are trying to get the most suburban auto oriented area. Jobs in this area are more sustainable. It would be good to reduce commute distance.

Jim Howell, AORTA, at last meeting he recommended you all vote No Build on freeway, and hopes you do so. It will be another CRC, wasted money. He commented that in the policies and action plans, on page 23, the text that say "…..*ensures resulting plans are mutually supportive."* He disputes that claim. The freeway expansion will bring in more single occupancy vehicles, so, your policies are in contradiction. There is nothing in any proposal about how to reduce traffic. This was a typical ODOT project, to build more and wider freeways. No build! Otherwise we will end up spending millions on studies that will end up on the floor.

Gil Fry, a veteran, is here to speak in support of a convention center hotel, and has devoted time to save Memorial Coliseum in Portland. When the Rose Garden was going to be built, he thought we would be moving toward building a quality hotel. Twelve years ago, the mayor had a committee, who advised that Portland does not need a convention style hotel. He thinks we need one. If you think we need jobs and housing, this would help. There has been conversation with hotels, and it is possible to be built without public financing. Thank you.

Gwen Baldwin, Lloyd Executive Partnership, and has been on the Land Use Committee. She sees familiar faces, who she has worked with for a long time. She expressed thanks for the passion and candor about things that matter. Nothing is perfect, but that should not be a barrier to good results. She is more optimistic than she has ever been about the Lloyd District and sees both the public and private sectors moving forward, living up to everything we are talking about here. Have to be mindful about the very serious crash data. Has to be addressed, we need and want safe traffic. Thanks staff for creating good outcomes, especially given how many times it could have derailed.

BREAK

Sam reviewed the correspondence received from SAC members who could not be here tonight, most of which are in the meeting packet. He read Mike Warwick's comments, sent by email on 6/28.

"Eliot agrees in concept on the height along the Eliot edge, however, we understand Staff is concerned about "downzoning" in light of Measure 49/50. Our Plan B is to retain the existing height limit (100 feet) NOT increase it as proposed AND to limit bonuses that would allow taller buildings without being subject to FAR limits that restrict tall buildings (over 3-4 stories) to "Point" towers so they don't overshadow the adjacent residential area. We also want the "step down" height buffer included and

applied to 1st Avenue and the residences at the intersection of Rodney and Hancock, some of which is outside the Conservation District, but still contains historic and potentially historic buildings. We are open to "height swaps" along this strip that would allow property owners to grant "height rights" to other developers in exchange for restrictions on the heights they could build."

Sam said we will first have questions for clarification, and then discussion.

Owen Ronchelli: regarding the goals in chapter 3, the way it reads, the nomenclature, it seems aspirational and ambiguous by design. Thus, he feels it is a "District Vision;" same for Albina. And thus, what you refer to as a "target" is actually the "goal." A goals needs to be an achievable metric; that's how he sees it.

Lloyd Lindley: under the flexible network, flexible streets in Lower Albina page 27, page 47 and 48. His comments have to do with the designation of flexible streets and "low stress" experiences. He would like to add a sentence regarding working streets (trucks, staging, etc), but still wants employees commuting to have low stress experiences; so, going forward talk about nature of streets as relates to adjacent industrial employment uses.

Dean Gisvold: page 32; first paragraph; under performance targets, housing; his experience with affordable housing is that targets are generally set by affordability category. He suggests a clarification here. 50% is fine, perhaps aggressive, but he can live with it. Housing should be spread across various affordability categories. He is not asking to specify what portion of 50% goes into 0-30, but is asking to have them spread fairly.

Joe Zehnder: described where the 50% came from; the detail is available, rapidly becomes too much detail for this plan.

Dean Gisvold: as long as it is somewhere – it is oversimplified; would be happy to provide language.

Justin Zeulner: listening to public testimony, it occurred to him that once we had a preliminary report, we discussed getting an opinion from the development community on the "excitement level" of what they think. Did we do that?

Karl Lisle: yes; we held two Developers' Forums with several big property owners in February. At that point we had a concept and the general feedback was positive, particularly from Scott Langley's group, who is currently pursuing development.

Justin Zeulner: thinking about zoning and height, no fatal flaws?

Staff: none.

Gwenn Baldwin: correct; there are individual things that give more comfort and more heartburn, but no fatal flaws - except we want to see crash stats improve. In terms of land use side, there is a lot of excitement.

Wayne Kingsley: is concerned that the language is too aspirational, and dreaming. The targets seem out of whack with reality. He is not sure he is comfortable, and this goes to what Owen and Justin were saying. When you talk about dollar amounts for affordable housing, what people can pay is a lot different than what it costs to build. (E.g., the Bud Clark Building for homeless people was one of the most expensive buildings ever built in Portland.) He described the scenario in Portland with housing and affordable housing; he just hates things that don't make sense. Question regarding the 70% mode split target - where did that come from?

Joe Zehnder: housing: part of dilemma is the ratios that Dean referred to, creating targets for the mix. It is a necessary number to have in mind so you can begin to think though the financial side of what it takes to get there. We need an order of magnitude number so when City Council adopts it, they have

some idea of costs. With today's expectations for resources, I do not think the Housing Bureau could tell you how to do it. So it is aspirational in terms of numbers, and now we will set about getting there.

Mauricio Leclerc: to determine the mode split, we relied on Metro's numbers from the regional travel demand model. The factors are high density, mixed use development, parking costs, availability to transit, and street connectivity; these were adjusted based on survey data from the TMA and the proposed actions in the plan. He described the vision for the plan, new and better connections, more housing, etc.

Karl Lisle: For comparison, the commute mode split today in Downtown is around 50%.

Mauricio Leclerc: provided an example of mode split in the Pearl District.

Steve Iwata: there is substantial history in relationship to transportation behavior; they made adjustments based on what we know about the Lloyd District.

Joe Zehnder: this number for Lloyd is because it is a special district with lots of transit and shopping; we do not expect it everywhere. It is not just planners thinking everyone won't have cars. He described process of determining the rate. This is a place where we think we can do it.

Dean Gisvold: comment regarding housing. His experience with Central City Concern is it is all concentrated in the 0-30% MFI; tools have changed over time. It has always been aspirational and a challenge, but unless you put in some aspirations, you are never going to get there. The City and County have always tried to provide affordable housing.

Tracy Whelan: this region has a shopping center that serves the region, thus drawing from outside the area, along with the Rose Garden and Convention Center.

Steve Iwata: agree; we recognize that, and the regional nature of the mall. The mode split target is for commute trips only – for employees within the Lloyd District.

Mauricio Leclerc: As a regional center, the Central City does attract trips from all over the region; about 70% is what we could aim for, and it is different from other areas.

Gary Warren: he is hung up on the low income requirement. He does not want to get in trouble making it restrictive for development. To Dean, is it feasible to put low income housing in a tower? He does not think so. He appreciates it is aspirational but does not want it to be restrictive.

Joe Zehnder: feels there are enough options; at some point you start to mix these up, in terms of housing. It is a target for investment tools. There is no specific requirement for affordable housing – though there are some incentives.

Sam said it is time to move on to the Action Items. The voting process will be the same as the last meeting; Sam will take a quick pulse then real vote.

Action 1: Recommendation on Lower Albina zoning proposals

Vote: all voting members present voted 1

Cate Millar abstained because she did not speak with Daniel Deutsch about Actions 1 and 2.

Alan Rudwick, from the audience, voted 1 for Mike Warwick.

Action 2: Recommendation on Irvington Edge height proposals

Vote: all voting members present voted 1, except those noted below.

The 2's:

Britt Brewer: has no objection on this alone; his concerns are about page 71, regarding height limitations and transitions to neighborhoods, page 61 a2, the eastern edge of boundary. He has no issue with that line or height transitions, but is concerned about UD10. He does not want UD10 to become a precedent east of 15th.

Joe Zehnder: Agree. We have not looked at Broadway east of 15th, though it could be considered in the future.

Britt Brewer: vote changes to 1

Alan Rudwick: voted 2 for Mike Warwick, but wants Eliot to be receive the same treatment as Irvington; that would change him to a 1.

Karl responded with explanatory comments about height, noting it is complicated and nuanced because the areas have different zoning and a different mix of existing uses, but thinks they are being treated pretty much the same.

Joe Zehnder: agrees.

Alan Rudwick: we can talk more later.

Dean Gisvold: in his comments, he also felt the two neighborhoods should be treated the same.

Action 3: Do you endorse the draft N/NEQ Quadrant Plan as written? (and amended through tonight's discussion)

Sam said we voted last time on Facility Plan, and described the changes that Todd reviewed earlier. This is all to let folks know that if you vote tonight on this, the Facility Plan is an appendix to this plan.

Karl Lisle: we are still taking comments through July 9th. It is not the end of the road, but this will help us figure out the remaining issues. We'll come back in August with a revised draft and list of changes.

Vote: all members voted 1 or 2

Alan Rudwick: vote 1 on everything except the freeway.

Phil Sellinger: clarifying that this vote is on land use?

Sam Imperati: yes.

Karl Lisle: to be clear, there is also an action item that says "implement the facility plan."

Sam Imperati: yes, and we will be back in August to consider the entire package.

The 2s:

Eric Lovell: is supportive of everything we have been talking about, but concerned about parking options in light of increasing density. We have heard from citizens and members, and everyone is just worried. We want to know more about some of the ideas and have options detailed in this plan. We will

have increasing parking problems with increasing density, and wants to know about tools to address this.

Owen Ronchelli: great plan, but he has not had a chance to fully comb through it. He will submit comments. No fatal flaws.

Gary Warren: appreciates the SAC covering for him in May, concerns about RX zone; does not want what is going on in the Pearl to happen here, with the first floor void. That is his big concern about going away from the RX. Also, agree with Eric on parking. Also flexible streets, wants to ensure they are not detrimental to current uses. Statement regarding pedestrian uses, he wonders how we would get in this building. He needs good access to Calaroga.

Cate Millar, for Daniel Deutsch: Daniel would vote two; he is opposed to increasing height toward the river, he thinks it should be graded back toward the Lloyd District; he sees the Broadway Bridge as the gateway to the quadrant, connector to east and west side. This pertains to the bigger conversation about the Willamette River; he feels there is an inherent conflict with building tall buildings along the river.

Dean Gisvold: spelled out his concerns in his earlier comments; he is about 85% in support; the height increases are not ok, also concerns about aspirations for Broadway as a mainstreet vis a vis the amount of traffic.

Justin Zeulner: needs to read it; comment about page 61, max heights. He met with City staff this week, and feels the 150 foot heights should be included and expanded, which he has proposed as a friendly amendment. He is sorry to have missed previous meetings, he would have brought this before.

Matt Arnold: tree canopy targets are inadequate, the 2004 Urban Forestry Plan had more ambitious targets. He described the current targets and encourages this aspect of the plan be revisited. If uncomfortable with this, also look at establishing impervious surface targets. . Mode-split conversation; know that the Climate Action plan specified 70% for the entire city. It seems like we are letting a major employment area off the hook, with 40% for Lower Albina.

Phil Sellinger: following on Betsy, as the land use plan is not all or nothing, the transportation should also not have to be all or nothing. Include some language in plan to address near term needs.

Wayne Kingsley: reminded about the “and” instead of “or,” as mentioned earlier. And he still has problems with metrics, needs to review to see if it is too much dreaming or if there is enough reality. Also, for parking – we used to have minimum parking ratios.

Mauricio Leclerc: there is no minimum parking required in Central City.

Wayne Kingsley: that is incredibly stupid.

Lloyd Lindley: for everyone’s benefit we should expedite the I-5 interchange plans; implementation starts with environmental assessment and that should start right away. The other issue, describe flexible streets as working streets, this will provide balance. Again, should provide for low stress experiences for industries and users. He understands these are mixed use streets, and as it is written

now, it looks like it is just for bike-pedestrian streets. Also recommends staff add a parking analysis to Lower Albina. Finally, wants to add "pedestrian" to page 41, in reference to the "wayfinding" system.

Tracy Whelan: concerned about tree canopy target for Lower Albina, it is 6% currently – how could you fit more trees in there to get to the 10% target? Maybe there is room, but not sure.

MEETING WRAP UP AND NEXT STEPS

In closing, Sam passed out a draft SAC Report just as a template. He noted in particular the opportunity to issue a Minority Report. All SAC members are welcome to submit comments to be included for decision-makers to review. There will be a tight turn around after our August 2nd meeting.

Additional comments on the Quadrant Plan are due to staff on July 9.

Sam asked everyone to fill out the meeting evaluation form. He thanked everyone for a good meeting.

Upcoming meetings:

- SAC Meeting #19 on 8/2 – Final SAC recommendations
- September 11 – Planning Commission (tentative date)
- October/November – City Council
- December – Oregon Transportation Commission (Facility Plan)

The meeting was adjourned at 8:45 p.m.

The meeting notes are respectfully submitted by the Institute for Conflict Management, Inc. facilitation team.

N/NEQ SAC #18 MEETING EVALUATION SUMMARY
JUNE 28, 2012

10 Evaluation Forms

	Poor	Fair	Good	Very Good	Excellent
1) OVERALL MTG QUALITY			2	7	1
2) PACING	Too Slow	3	Just right 7		Too Fast
3) CLARITY PRESENTATIONS			4	5	1
4) DOCUMENTS				7	2
5) DISCUSSION			3	5	2

6. MOST USEFUL?

- Sam's facilitation
- BPS and ODOT staff work and dedication
- Advocacy and effort of SAC members

7. LEAST USEFUL?

- Hard to think of a negative
- Review in the beginning
- Seems we get a lot of recap at each meeting; that takes up to half of the meeting. It is a l-o-n-g meeting

8. COMMENTS, SUGGESTIONS, OR QUESTIONS?

- If this is an example of what we can accomplish w/entire city plan, we are well served.

MEMO

Date: July 27, 2012

To: N/NE Quadrant and I-5 Broadway/Weidler Stakeholder Advisory Committee

From: Project Staff

Subject: Proposed changes to the Facility Plan

Based on comments made at the SAC meeting #17, the following changes have been made to the Facility Plan. For tracking, a clean copy with edits has been provided as part of the SAC #19 meeting materials.

Page 12 under Specific Design Coordination, number 5 d., add sub-bullet 4. that states: "visual and acoustic screening will be examined, designed and implemented between the Madrona Studios and the relocated on ramp to I-5 at Weidler."

Page 12 under Specific Design Coordination, number 7., add sub-bullet c. "Study and implement an event parking management plan for the Rose Quarter area, including the area adjacent to the future Clackamas Pedestrian Bridge on the east side of I-5. The exact boundaries and scope of the study will be determined at a later date."

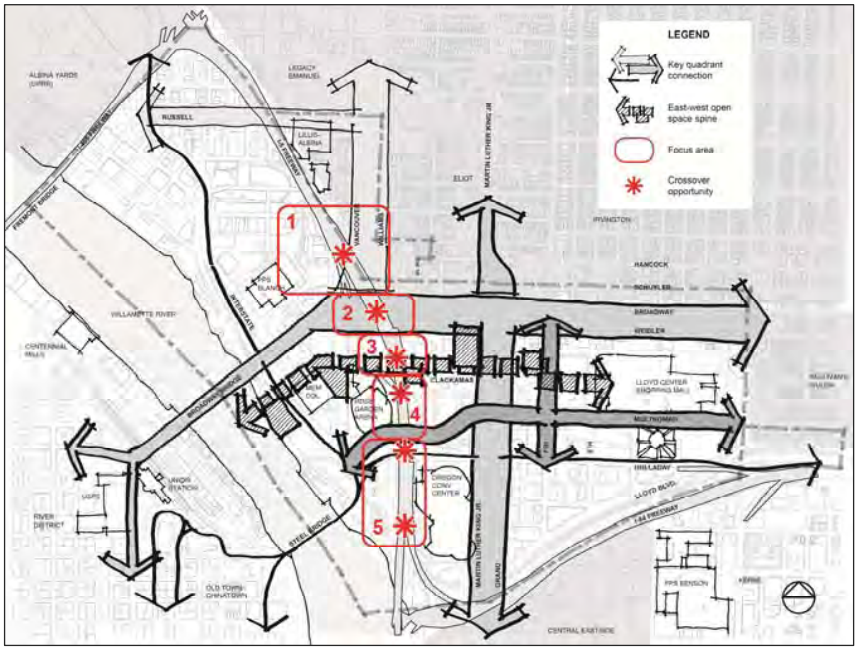
Facility Plan:
I-5 Broadway/Weidler Interchange Improvements

The overall project purpose is to...
Improve safety and operations on I-5 in the vicinity of the Broadway/Weidler interchange.

OBJECTIVES:



ODOT and the city through the Stakeholder Advisory Community (SAC) and extensive public outreach, explored and found solutions to meet the following objectives

EASE CONGESTION LEVELS AND IMPROVE SAFETY

ENHANCE PEDESTRIAN AND BICYCLE ROUTES

IMPROVE FREIGHT MOVEMENT

Integration of Transportation and Land Use Concepts in the N/NE Quadrant Plan

The Facility Plan

Study Area

The project study area is at the crossroads of the Portland freeway system, as shown in Figure 1. I-5 is the north-south freeway facility and extends through the metropolitan area; in fact, it runs the full length of the west coast of the United States from Canada to Mexico. Within the project area, I-84 intersects I-5 and extends east across the U.S. A mile and a quarter north of I-84, I-405 connects to I-5 at the Fremont Bridge interchange. This interchange is the northerly connection of the I-405 loop around the west side of downtown Portland, with the southerly connection at the west end of the Marquam Bridge. Within the overlap section, I-5 serves through traffic as well as connecting traffic between I-84 and I-405.

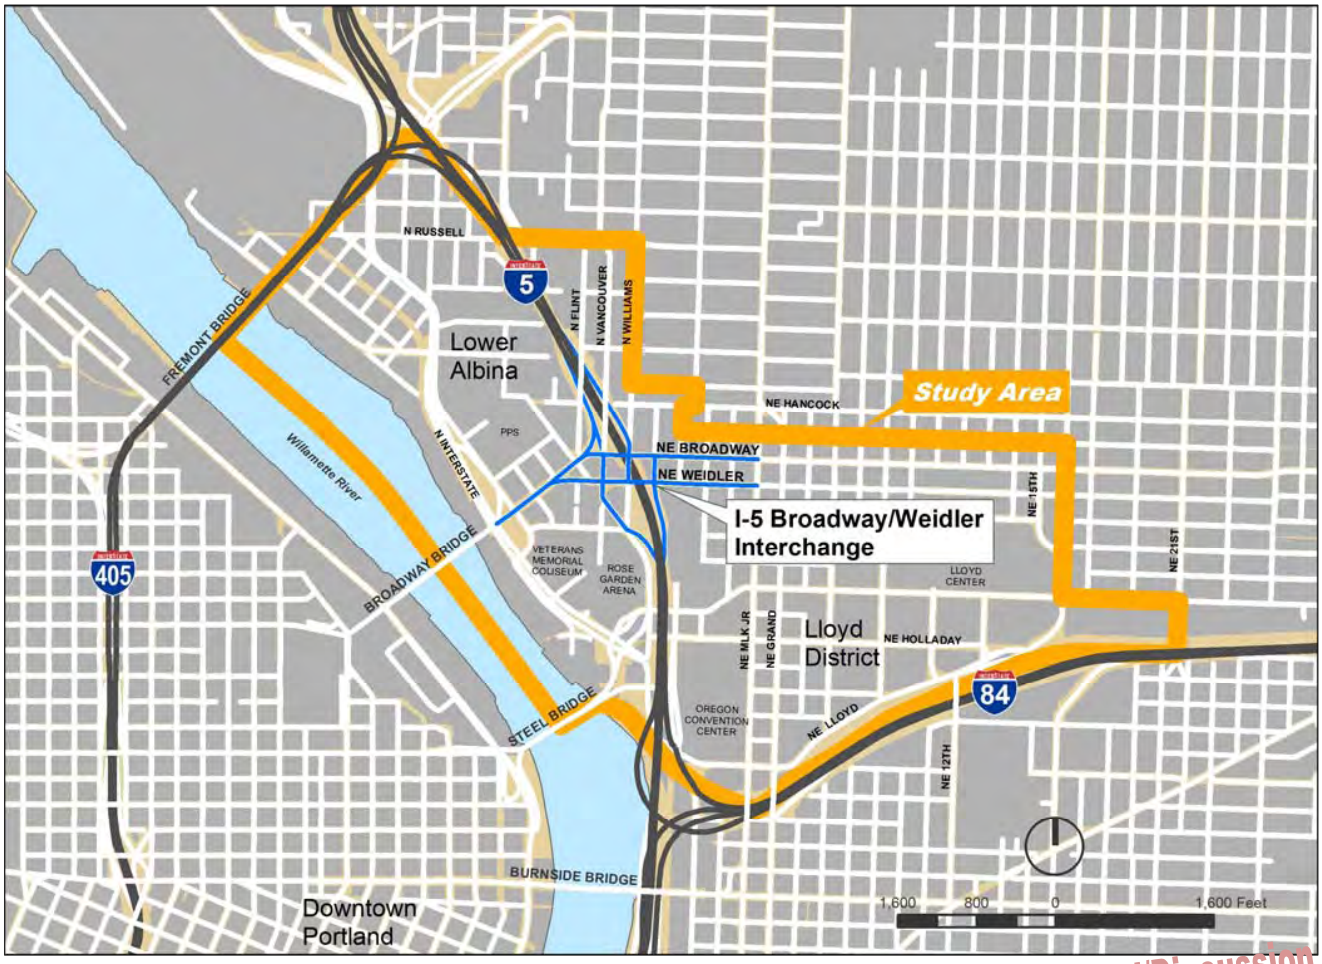

Figure 1: Study Area and Vicinity Map

Informational/Discussion DRAFT

Facility Function

- I-5 is classified as an Interstate facility and is both a Freight Route and a Truck Route.
- I-84 is classified as an Interstate facility and is both a Freight Route and a Truck Route.
- I-405 is classified as an Interstate facility and is both a Freight Route and a Truck Route.

Interchange Function

The I-5 Broadway/Weidler Interchange is located on I-5, in between I-405 to the north and I-84 to the south. The function of the I-5 Broadway/Weidler Interchange is to serve the Portland central city, which includes the industrial area of Lower Albina and the commercial activity along the Broadway/Weidler corridor, regional attractions such as the Rose Garden Arena and the Lloyd Center mall, and the surrounding community.

Purpose

The purpose of the I-5 Broadway/Weidler Interchange Improvement Plan is to improve the safety and operations on I-5 in the vicinity of the I-5 Broadway/Weidler Interchange.

Project Problem/Issues

Congestion and Bottleneck

In the context of the regional freeway network, the city's N/NE Quadrant sits at a crossroads of three regionally-significant freight and commuter routes. As a result, the freeway interchanges experience some of the highest traffic volumes in the state. Table 1 shows the average daily traffic volumes entering and exiting I-5 over the two-mile segment within the N/NE Quadrant.

Table 1: Average Daily Traffic Volumes Entering and Exiting I-5 in the Study Area

I-5 Direction	Total Ramp Volumes Entering I-5	Total Ramp Volumes Exiting I-5
Northbound	29,970	37,530
	Includes entrance ramps from: • I-84 • Broadway/Williams Avenue	Includes exit ramps to: • Weidler Street/Victoria Avenue • I-405 • Greeley Avenue
Southbound	34,020	47,200
	Includes entrance ramps from: • Greeley Avenue • I-405 • Wheeler/Winning/Williams	Includes exit ramps to: • Broadway/Vancouver Avenue • I-84 • Morrison Bridge/Hwy 99E

Highest Accident Rate in the State of Oregon

An analysis of the reported crashes on I-5 in the study area was performed for the five-year period from 2005 through 2009. Both frequency (number of crashes) and crash rate (number of crashes per million vehicle miles) were calculated per 1/10-mile segments.

- I-5 Southbound direction has more frequency of crashes than I-5 Northbound
- The top three locations with highest frequency of crashes and crash rates are:
    1) I-5 Southbound at Holladay Street (weave between the Winning/Wheeler On-ramp and the I-84 Eastbound Off-ramp)
    2) I-5 N at Multnomah (weave between the I-84 W On-ramp and the Weidler Off-ramp)
    3) I-5 S at Thompson Street (weave between the I-405 on-ramp and the Broadway Off-ramp)
- I-5 within the study area has the highest crash rate within the entire state
- Three times the crash rates at the I-5 Terwilliger curves
- The type of crashes in order of ranking from highest are: rear-end, sideswipe, fixed and other.

The attributing factors to the high number of crashes and safety problems in the study area are:

- Heavy congestion
- Short weaving distances
- Lack of shoulders for accident/incident recovery

Operational Friction and Congestion Caused by Heavy Weaving

Weaving analysis and field observations were performed for the four weaving sections on I-5 within the study area:

- I-5 Northbound between I-84 Westbound and Weidler Off-ramp
- I-5 Northbound between Broadway On-ramp and I-405 Off-ramp
- I-5 Southbound between I-405 On-ramp and Broadway Off-ramp
- I-5 Southbound between Winning/Wheeler On-ramp and I-84 Eastbound Off-ramp

I-5 Northbound Weaving Section between Broadway On-ramp and I-405 Off-ramp

Two weaving sections currently perform at failing level-of-service during the AM and PM Peak periods:

- I-5 Southbound between Winning/Wheeler On-ramp and I-84 Eastbound Off-ramp
- I-5 Northbound between I-84 Westbound and Weidler Off-ramp

I-5 Southbound Weaving Section between Winning/Wheeler On-ramp and I-84 Eastbound Off-ramp

The failing operations will be exacerbated in the future, with the most critical failure being the weave from I-5 Southbound from the Winning/Wheeler On-ramp to the I-84 Eastbound Off-ramp. This bottleneck will cause queuing that extends beyond the weaving section to the north and onto the Fremont Bridge.

The Land Use-Transportation Connection

The N/NE Quadrant of the central city includes considerable multimodal infrastructure to support all types of travelers on all modes. In addition to the I-5 freeway and the local street network, four light rail transit (LRT) lines run through the area, converging on the Rose Quarter Transit Center next to the Rose Garden Arena. The City of Portland is constructing streetcar lines on Broadway/Weidler to connect with the Pearl District and the central east side of Portland. Eight TriMet bus lines also connect at the transit center.

The I-5 Broadway/Weidler Interchange Improvements Facility Plan proposes many new crosswalks that will improve pedestrian safety and connections to and from these major transit amenities. Two major bicycle commute routes run through the area: 1) the major east-west route along Broadway and Weidler, and 2) the major north-south route along Williams and Vancouver. The plan proposes a new east-west pedestrian and bicycle overcrossing at Clackamas Street to connect the Lloyd District with the Rose Quarter. The plan also includes a new Hancock/Dixon overcrossing structure and freeway lid that will allow for effective construction staging, improve viability of the PPS Blanchard site and provide a supplementary crossing to the north of "the Box" near the I-5 Broadway/Weidler Interchange.

The Lloyd Transportation Management Area (TMA) is one of the most successful TMAs in the Portland metropolitan region. The area is currently predominantly commercial and industrial. However, the proposed changes to land use designations in the N/NE Quadrant Plan will encourage a much greater mix of uses, especially in the central Lloyd District where significant density and mix of uses are anticipated.

The City of Portland and ODOT have jointly developed this freeway and local transportation plan, and have integrated the transportation and land use components. The transportation components were developed assuming existing zoning, except for changes at the Portland Public Schools (PPS) Blanchard site and some changes to allow more diverse uses in the central Lloyd District. The overall trip vehicle trip generation for the district is expected to be the same or lower than under previous zoning entitlements. The changes related to land use and the transportation recommended by this plan have been analyzed, and queues are not anticipated on the I-5 exit ramp deceleration areas (see Table 2).

Table 2: Available Storage and Predicted Queues for Exit Ramps at I-5 Broadway/Weidler Interchange

Direction	Storage Available	Predicted Queue
Southbound	955 feet	500 feet
Northbound	1130 feet	350 feet

Multimodal Mixed-use Area

The I-5 Broadway/Weidler Interchange is within ¼-mile of an existing interchange. ODOT staff concurs that the Multimodal Mixed-use Area (MMA) designation is appropriate for the city's companion N/NE Quadrant Plan and ODOT must be consulted prior to any future plan amendments within the MMA boundary and will remain in effect as long as progress is being made towards the implementation of project elements.

Summary of the Recommended Concept and Elements

The Recommended Concept, supported by a majority of the Stakeholder Advisory Committee (SAC) via a consensus-driven process, and its elements are based on technical assessments of bicycle and pedestrian operations, urban design/land use potential, traffic operations and safety. Table 3 describes the Facility Plan elements and their outcomes and Figure 2 and Figure 3 illustrate the extent of improvements included in the Recommended Concept. Figure 4 shows aerial perspectives of the existing conditions in the Rose Quarter and how the area would look with the improvements included in the Recommended Concept.

The Facility Plan Element 1, **Transportation System Management (TSM)** and **Transportation Demand Management (TDM) Strategies,** is designed to optimize the overall performance of the transportation system and to reduce vehicle demand, especially for commuter trips in the peak periods.

TSM measures are designed to make maximum use of existing transportation facilities, and include:

- Traffic engineering measures (e.g., such as signal timing changes, provision of turn lanes, turn restrictions and restriction of on-street parking to increase the number of travel lanes without road widening) that improve the operations and efficiency of streets and intersections;
- System monitoring and traveler information systems (e.g., Intelligent Transportation Systems (ITS), variable message signs, etc.);
- Facility management systems (e.g., ramp meters, special use lanes, signal priority for special users such as transit); and
- Incident management systems (e.g., incident response and recovery teams).

TDM strategies are most effective in areas with high concentrations of employment and where a robust transit system exists. Generally, the strategies are easiest to implement where there are large employers or where a TMA has been established to pool the efforts of many smaller employers. TDM measures include strategies that: 1) shift modes like carpooling, vanpooling, transit, bicycling and walking programs; 2) shift trips to non-peak periods, such as flexible work schedules and off-peak shifts; and 3) include telecommuting, which eliminates trips.

Components of these TSM and TDM measures are in use today. The City of Portland and ODOT will continue to monitor, adjust and implement the strategies as needed.

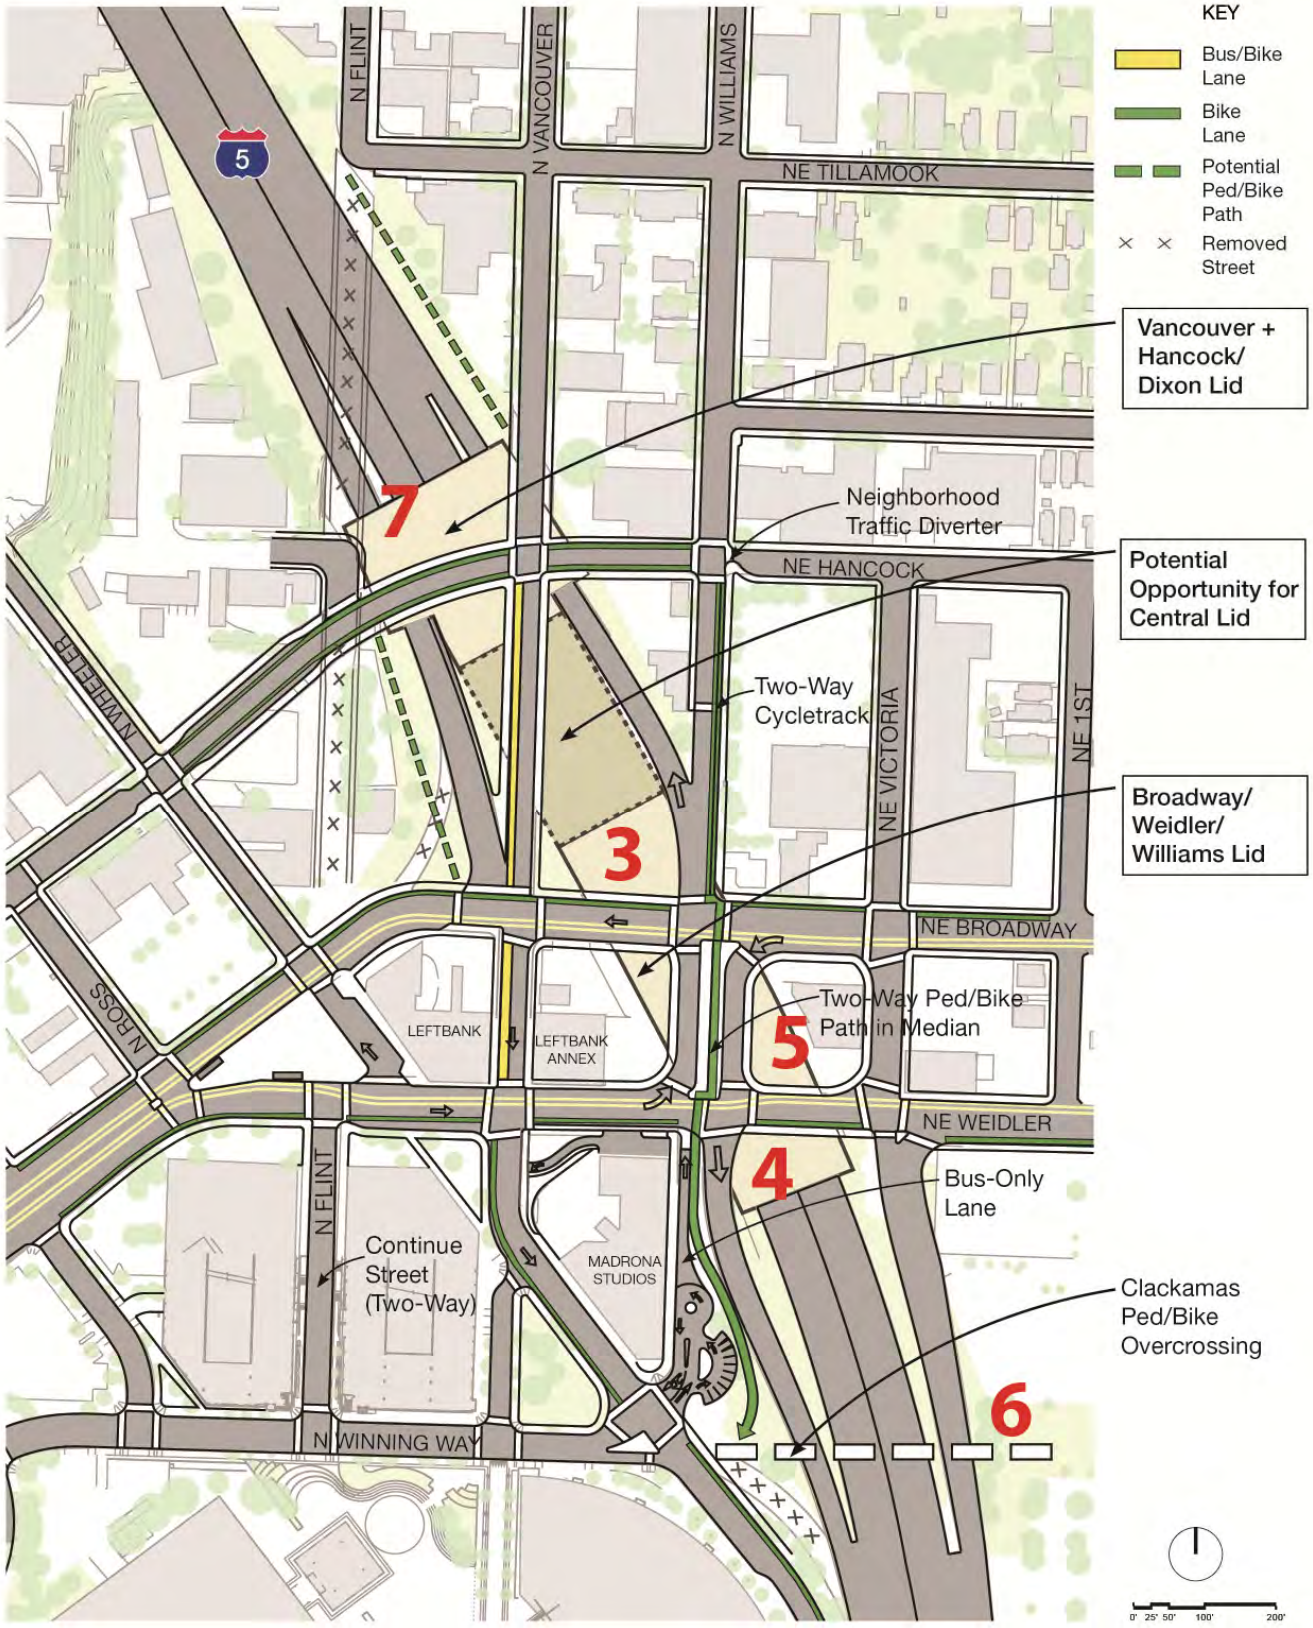
Informational/Discussion
DRAFT

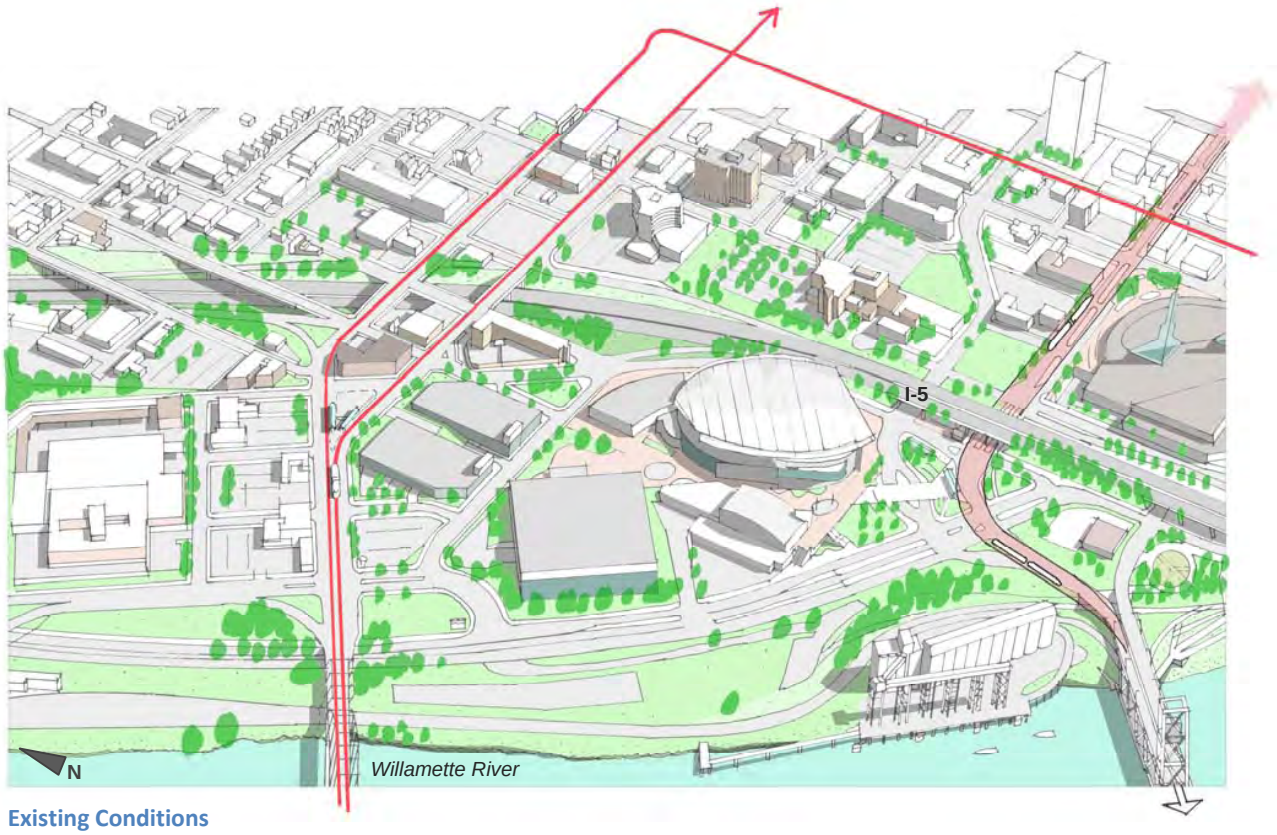
Figure 2: Overall Project Extent of the Recommended Concept

Table 3: I-5 Broadway/Weidler Interchange Recommended Concept Facility Plan Elements

Facility Plan Elements	Outcome
1. Implement Transportation System Management (TSM) and **Transportation Demand Management (TDM) Strategies**	Improve freeway operations and reduce automobile trips.
2. Construct Mainline Freeway Safety Elements	Improve freeway operations and reduce accidents 30-50 percent.
a. Extend auxiliary lanes in both directions.	
b. Add full-width shoulders in both directions.	
3. Re-construct Three Freeway Structures and Lid The Mainline Freeway Safety Elements require rebuilding the Weidler, Broadway and Williams structures over I-5; the new structures will be designed to meet seismic and clearance standards.	The new structures improve facilities for all modes; the lid allows for more effective construction staging, improves the urban design of the interchange area and improves the area's development potential.
4. Relocate I-5 Southbound On-Ramp to Weidler/Williams (from current location at Wheeler/Winning Way/Williams)	Increases weave distance, removes ramp traffic from local streets, Wheeler and Winning Way. Allows pedestrian/bicycle-only overcrossing at Clackamas.
5. Convert Williams to a Reverse Traffic-Flow Connection between Broadway and Weidler Includes a barrier-separated pedestrian/bicycle path in the middle.	Allows more efficient signal timing, improves bike and pedestrian connections through interchange and simplifies vehicular movements.
6. Construct Clackamas Pedestrian/Bicycle Overcrossing Establishes connection over I-5 from Winning Way to Clackamas.	Increases multimodal connectivity across I-5, links central Lloyd District to the Rose Quarter, provides supplementary crossing south of "the Box."
7. Re-construct the Vancouver Structure; Remove the Flint Structure; Reconfigure streets North of Broadway to include Hancock/Dixon Structure and Lid	The Vancouver structure must be replaced to accommodate mainline freeway improvements. The Hancock/Dixon structure and freeway lid allow for effective construction staging, improve viability of the PPS Blanchard site and provide a supplementary crossing to the north of "the Box."
North of Broadway elements include:	
1. Rebuild Vancouver Avenue structure	
2. Implement traffic calming at Williams/Hancock	
3. Remove Flint between Tillamook and Broadway	
4. Maintain Wheeler as a two-way street north of Broadway	
5. Maintain Wheeler in front of the Leftbank as one-way	
6. Connect Flint as a two-way street south of Weidler	
7. Add signals at Broadway/Wheeler and Broadway/Ross	

Informational/Discussion DRAFT





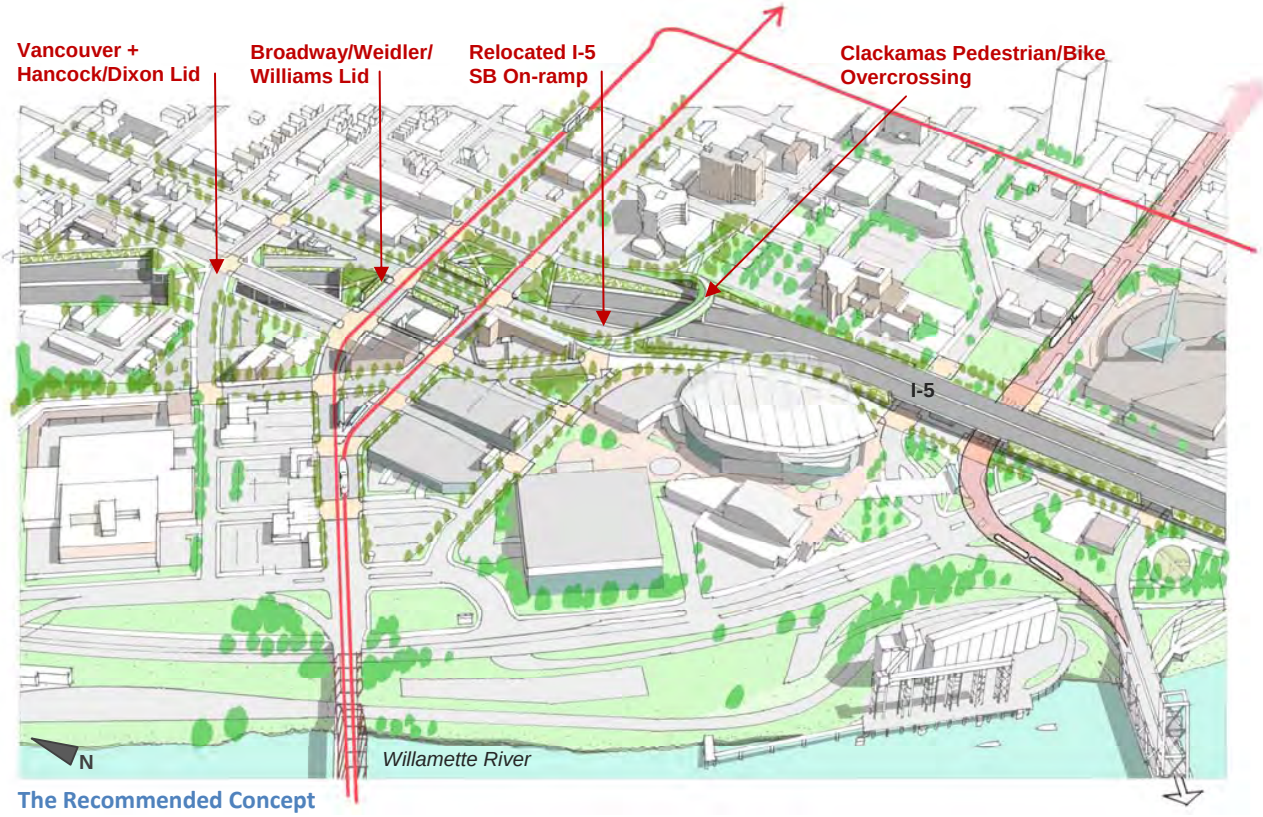


Figure 3: Enlarged "Box" Area of the Recommended Concept

Existing Conditions

The Recommended Concept

Figure 4: Aerial Perspectives of Existing Conditions and the Recommended Concept

Project Monitors and Future Project Development

The Facility Plan elements of the Recommended Concept (Table 3) are expected to significantly improve I-5 mainline operations and safety as well as improve interchange operations at the I-5 Broadway/Weidler Interchange. Once the Facility Plan elements are completed, ODOT and the City of Portland will continue to monitor the freeway operations in the I-5 Broadway/Weidler Interchange area (refer to Table 4).

Table 4: Project Monitors and Future Project Development

Project Monitors	Notes
1. Safety and Operational Performance **- Southbound Braided Ramp or other freeway safety improvements**	Upon completion of the Recommended Concept Facility Plan elements described above, ODOT and the City of Portland will monitor the performance of the completed project for achieving safety and operational goals. If safety and operational issues remain on the freeway after construction of the Recommended Concept Facility Plan elements, ODOT will work with the City of Portland to initiate a public process to consider additional measures such as a southbound braided ramp from Broadway to I-84 or other options developed through a public process. A southbound braided ramp should not be precluded by the construction of the Recommended Concept Facility Plan elements.

Informational/Discussion DRAFT

Implementation Actions

Project Development and Project Management

1. Proceed with next phase of project development and complete Preliminary Engineering (PE) and environmental phases for federal funding.
2. Continue project management partnership between the City of Portland and ODOT.
   - Develop work scope and schedule.
   - Define environmental process
   - Develop intergovernmental agreement for completion of PE/environmental studies.
3. Develop public involvement process for PE/environmental phase and actions to resolve issues identified in the I-5 Broadway/Weidler Interchange Improvement Plan.
4. Special considerations will be discussed and identified during Preliminary Engineering and recommended as part of the Final Design/Engineering. These include:
   - Construction management strategies that can provide incentives to minimize construction periods, impacts, and costs;
   - Incentives for minority hiring; and
   - Strategies to support local businesses.

Preliminary Engineering

The following are key products at the completion of Preliminary Engineering:

1. Complete PE level of engineering:
   - Develop project cost estimates.
   - Complete environmental documentation.
   - Identify potential construction phasing.
   - If phasing is required, the City of Portland and ODOT will work together to match phases to the funding sources available.

2. Project agreements at the completion of PE:
   - Signals will continue to be timed so as to avoid queues backing up into the deceleration area of the I-5 Southbound exit ramp at Broadway.
   - Crosswalks will be provided at all signalized locations and should be provided at all safe and feasible locations.
   - The Rose Quarter Traffic Management Plan (TMP) should be updated with the participation of ODOT, City of Portland and the Rose Garden Arena prior to construction.
   - A preliminary construction mitigation plan will be developed that would include efforts to minimize impacts, support local businesses and support minority hiring.

Specific Design Coordination

Property impacts are of great concern to the neighborhoods, businesses and agencies working in this area. The following are issues that will require further examination by ODOT and the City of Portland as part of Preliminary Engineering with community involvement:

1. Seek a viable single lid design solution over I-5 between Weidler and Hancock by exploring mitigation measures for freeway noise and vehicle emissions, and by addressing the need for open space and economic development.
2. Develop specific measures to address property and parking impacts to the Paramount Apartments, the Portland Public Schools Blanchard site and other sites related to the proposed Hancock/Dixon connection. The number of parking spaces should be the same or more than existing conditions at the Paramount Apartments, the Leftbank Building, the Leftbank Annex and the Madrona Studios.
3. Develop alternative safe and convenient bicycle/pedestrian connections to include:

a. Enhanced facilities (including bicycle lanes, two-way cycle track, sidewalks and protected marked crossings) along Broadway, Weidler Street, Vancouver Avenue and Williams Avenue to include a wide, grade-separated multi-use path for Williams Avenue between Broadway and Weidler.
b. The development of a new pedestrian/bicycle connection between the Flint Avenue/Tillamook Street intersection to the proposed Hancock/Dixon overcrossing.
c. The development of a new pedestrian/bicycle connection from Hancock Street to Broadway while providing for potential parking mitigation, open space and redevelopment opportunities.

4. Define appropriate Eliot neighborhood traffic mitigation measures for the recommended Hancock/Dixon connection between Vancouver Avenue and Dixon Street to discourage cut-through traffic.
5. Refine a street design and circulation plan for the area in the vicinity of the I-5 Broadway/Weidler Interchange. The refined street design and circulation plan should address the following issues:
   a. Develop design elements that provide for safe and convenient access to the Leftbank Building and the Leftbank Annex.
   b. Develop and evaluate circulation alternatives and design elements for the area north of Broadway, south of North Wheeler Place and west of I-5 to:
      1. Address the changes to access and circulation around the Paramount Apartments by Investigating treatments for Wheeler Avenue, between Broadway and Hancock Street, in order to minimize cut through traffic at the west side of the Paramount but maintain access to the Lower Albina industrial district.
      2. Enhance bicycle access and safety to the proposed Hancock/Dixon connection over I-5 to the Broadway Bridge.
      3. Determine appropriate multimodal access and circulation to this area and Lower Albina.
   c. Develop and evaluate circulation alternatives for Wheeler Avenue, Winning Way, Center Court, Flint Avenue and Williams Avenue to:
      1. Enhance circulation in the area for all modes.
      2. Provide flexibility to manage event ingress and egress.
      3. Open up opportunities for redevelopment and placemaking.
   d. Develop design elements that address the changes to access and circulation to the Madrona Studios:
      1. Refine street design for Williams Avenue between Weidler Street and Wheeler Avenue to address access and circulation and on-street parking needs for the Madrona while also providing for bus, bike and pedestrian circulation.
      2. Provide for sufficient pedestrian and vehicle access to the Williams Avenue entrance to the Madrona Studios.
      3. Prepare an appropriate design treatment for the Weidler Street/Williams Avenue intersection for safe pedestrian and bicycle crossing.
      4. Visual or acoustic screening will be examined, designed and implemented between the Madrona Studios and the relocated on-ramp to I-5 at Weidler/Williams.
6. Develop design plans with TriMet for safe transit operation through the I-5 Broadway/Weidler Interchange.
7. Refine and finalize design for the Clackamas Overcrossing structure.
   a. Coordinate design with future access connections east of I-5.
   b. Coordinate design with future changes to traffic circulation west of I-5 and the relocation of the I-5 southbound on-ramp to Weidler/Williams.
   c. Study and implement an event parking management plan for the Rose Quarter area, including the area adjacent to the future Clackamas Pedestrian/Bicycle Overcrossing on the east side of I-5. The exact boundaries and scope of the study will be determined at a later date.
8. Evaluate visual and environmental impacts of the proposed widening of the elevated segment of the I-5 freeway, including over the Rose Quarter Transit Center and near Peace Park, and identify mitigation measures as needed.

MEMO

Date: July 25, 2012

To: N/NE Quadrant and I-5 Broadway/Weidler Stakeholder Advisory Committee

From: Project Staff

Subject: Revisions to the Draft N/NE Quadrant Plan

The last meeting the N/NE Quadrant Stakeholder Advisory Committee (SAC) is on August 2, 2012. At that meeting the SAC will review revisions to the draft N/NE Quadrant Plan and make final recommendations on the Quadrant Plan, as well as the I-5 Facility Plan.

In the meeting packet you will find a table of comments received on the June 18 review draft of the N/NE Quadrant Plan, with staff responses and proposed revisions. Also included is a revised plan reflecting the revisions included in the table.

The table contains 173 comments received between June 28 and July 17 from members of the SAC (including comments from the June 28 SAC meeting), public agencies, community organizations and members of the public. They are organized by general topic area and section of the plan. The staff response column indicates whether project staff agrees or disagrees with any suggested changes and indicates the substance of proposed revisions. The location of proposed changes within the revised plan document is indicated in the reference column and/or the staff response column.

Summary of Revisions
All proposed changes described in the table are included in the draft plan. Below are highlights of the revisions:

1. Fine tune performance targets, including:
   - Add language about distribution across affordability levels to housing unit target (p.32)
   - Increase Lloyd District mode split from 70 to 75% non-SOV (p.36)
   - Delete active street edge target related to retail/commercial streets (p.40)
   - Increase Lloyd District tree canopy target from 15 to 18% (p.44)

2. Clarify role of different street types, including:
   - Retail storefronts encouraged on retail/commercial streets, not on other street types (p.27)
   - Flexible street will continue to meet access needs of adjacent properties (p.27-28, 47)

3. Revise action regarding transportation needs on Broadway/Weidler to look at full corridor out to Hollywood (TR6, p.37).

4. Recognize importance of recommended improvements in the I-5 Facility Plan, including:
   - Move the implementation timeframe from 6-20 years to 2-5 years (TR8, p.37)
   - Add a new action for near-term pedestrian and bike safety improvements in the box (TR19, p.38)

5. Address parking concerns, including:
   - Make applying Employment Opportunity Subarea provisions in Lower Albina contingent on a parking management strategy (RC3, p.48)
   - Add more detail regarding potential parking management strategies for Lower Albina and clarify those for the Lloyd District (p.65, 76)

6. Increase maximum heights in portion of Rose Quarter area from 100 to 150' (p.59).

7. Update gateway diagram showing NE Broadway and 15th and clarify that not all gateways are intended to have tall buildings (p.39, 60).

8. Clarify and add emphasis on environmental health and sustainable development goals (throughout).

9. Clarify scope of actions and adjust lead and supporting implementers (throughout).

N/NE Quadrant Plan SAC Review Draft: Stakeholder Comments and Staff Responses (7/25/12)

The following table includes all comments received from members of the Stakeholder Advisory Committee and the public between June 28th through July 17th. References to specific locations in the N/NE Quadrant Plan refer to the Revised SAC Draft dated 7/24/12.

#	Source	Date	Comment	Topic	Reference	Staff Response
1	Amy Chomowicz, BES	7/17 memo	Add: "Development completely changed the physical landscape and hydrology of the area. The shoreline along the Willamette River was filled. Small streams were filled or put into pipes, and vegetation has been removed and replaced with buildings and paved surfaces."	Introduction	Page 3-4, Background	Agree. **PROPOSED CHANGE: Text added as suggested. See p.4.**
2	Amy Chomowicz, BES	7/17 memo	While some progress has ... for placemaking. In particular, as the district redevelops, it provides opportunities to integrate nature in a densely developed urban area and become a model of urban sustainable development.	Introduction	Page 7, second paragraph	Agree. **PROPOSED CHANGE: Add text: "As the district redevelops, there will also be opportunities to integrate nature in a densely developed urban area and to become a model of urban sustainable development." See p.7.**
3	Amy Chomowicz, BES	7/17 memo	It lays out ... infrastructure enhancements, ~~to help create one of the healthiest and best connected districts in the city~~ to improve watershed function and habitat vitality that provides a healthier urban environment for people and wildlife.	Introduction	Page 9, Healthy Connected Cities	Agree. **PROPOSED CHANGE: Text revised as suggested.**
4	Brad Perkins	7/17 letter	...Freight movement by trucks “and trains” is an…	Introduction	Page 6, paragraph 4	Agreed. **PROPOSED CHANGE: Text revised as suggested.**
5	Joe Angel	Mtg. 7/9	Would like to specifically see the PDC document Development Vision for the Oregon Convention Center Blocks (2006) referenced in the Lloyd Previous Planning section on Page 6.	Introduction	p. 6	Agree. **PROPOSED CHANGE: Text revised as suggested.**
6	Amy Chomowicz, BES	7/17 memo	Retail Commercial Streets: Last sentence is confusing, implies green features do not support retail street visibility. Delete or edit: Multi-level or specialized retail is encouraged along with ~~limited or less~~ “green features” that support ~~to~~ retail ~~street~~ visibility and activity. Also, clarify green features will still be present along these streets.	Proposed Concept	Page 19	Agree. **PROPOSED CHANGE: Text revised as suggested.**
7	Amy Chomowicz, BES	7/17 memo	...The streetscape includes visible “green” features, encouraging larger ~~r~~ tree canopy, ~~swales~~ green curb extensions and planters, and landscaping.	Proposed Concept	Page 20, Boulevard Streets, first paragraph	Disagree. The current language provides a general description of the elements that would be included in boulevard streets. Decisions about specific elements will be made as streets are improved.
8	Amy Chomowicz, BES	7/17 memo	Map displays all parks, open space, and natural resource areas the same; they are not the same. Plaza in front of Nordstrom not equal to Holladay Park. New park on MLK across from OCC should be represented differently to show it is a temporary park. Show the plazas in a different color or add “plaza” to the legend and explain the differences among the sites labeled “open space” in the document.	Proposed Concept	Page 21, map	Disagree. At this stage, the Quadrant Concept diagrams are not being updated.They were developed earlier in the planning process to illustrate the broad vision for the quadrant that has now been reflected in district goals, policies, actions and concept diagrams. These latter pieces will become part of the updated Central City Plan. In addition, these are concept maps which are not intended to provide alot of detail about the different types of open spaces in the district. However, we agree that it would be helpful to provide more information in the text about the existing parks to give more context. PROPOSED CHANGE: Add the following "The only significant public open space in the Lloyd District today is Holladay Park, located in the eastern portion of the district. There are also a number of small public and privately owned plaza spaces primarily located in the office core area. Lillis Albina park is located just outside of the Central City in the Vancouver/Williams study area." (p.21)

#	Source	Date	Comment	Topic	Reference	Staff Response
9	Amy Chomowicz, BES	7/17 memo	There could be more open space connections within the district, possibly these connections could be shown following flexible streets. The map on page 19 shows interior connections, and I recommend incorporating some of these as open space connections.	Proposed Concept	Page 21, map	Disagree. The connections shown on the open space diagram are generally limited to the most direct connections between open spaces. We agree that there will be many additonal routes to access open spaces, key among them is the proposed flexible network. However, all of these possible connections do not need to be shown on the open space map.
10	Amy Chomowicz, BES	7/17 memo	The Lloyd Eco~~d~~District is a public-private partnership designed to transform the Lloyd District into a showcase sustainable district that integrates nature into the built environment and uses restorative development approaches where new development enhances the environment and protects human health. Elements include~~s~~ district energy infrastructure, enhanced tree canopy, ~~improved~~ sustainable stormwater management strategies, and green building techniques. The green systems map illustrates how green infrastructure could be integrated into the quadrant to improve long-term resiliency. In addition to green building techniques, t~~T~~he concept includes the following green systems components: Tree Canopy/Water Quality Corridors: Corridors that provide enhanced tree canopy and stormwater management through large trees and vegetated stormwater facilities such bioswales and planters. Streets not designated as a Tree Canopy/Water Quality Corridor will still have these features, although they may not be as prominent.	Proposed Concept	Page 22, first paragraph	Agree. **PROPOSED CHANGE: Text revised as suggested.**
11	Amy Chomowicz, BES	7/17 memo	Recommend adding the following streets to this map: NE 9th, NE 12th, NE 15th, and NE Interstate	Proposed Concept	Page 22, Green Systems map	Disagree. See response to comment #8 regarding changes to the quadrant concept maps. However, we acknowledge that there may be reasons to change and/or add to the streets designated as tree canopy/water quality corridors. This can be achieved as this concept is futher developed under Lloyd action EN5 (previously GC5). See response to comment #149 for proposed changes.
12	Brad Perkins	7/17 letter	Connect dots between Katz Promenade and Sullivan's Gulch Trail at Peace Memorial	Proposed Concept	Page 19, map	Comment noted. See response to #8 regarding changes to quadrant concept maps.
13	Brad Perkins	7/17 letter	City attorney has not allowed us to call it "Peace Park"…"Peace Memorial" is OK	Proposed Concept	Page 23, Area 5	Agree. **PROPOSED CHANGE: Revise text references in the document to "Peace Memorial".** See comment #8 regarding changes to the quadrant concept map. We will use the correct name in the future.
14	Paul Cathcart, PPS	6/28 letter	Support action to investigate district energy options for serving PPS Blanchard. Can Blanchard be added to Green Systems Map?	Proposed Concept	GC4, Green Systems Map p. 22	Comment noted. Agree with potential inclusion of PPS Blanchard in future planning for green systems in Lloyd District as part of Lloyd EcoDistrict or other similar and/or related efforts. Proposed new Lloyd District boundary includes PPS Blanchard site.
15	Alan Rudwick	6/28 SAC	Jobs in this area are more sustainable than suburban areas. Good to reduce commute distance.	Regional Center		Comment noted.
16	Amy Chomowicz, BES	7/17 memo	Description states that achieving increased building height will include bonuses that emphasize housing, parks and open spaces, and Convention Center-supportive uses. When bonuses are developed, I suggest incorporating "biophilic" and restorative development including natural area parks and open space, native vegetation, ecoroofs, etc.	Regional Center	Page 63, RC3	Agree. **PROPOSED CHANGE: Add "Bonuses may also be developed for green buildings and the use of green infrastructure." to the description of RC3 on p.63.**

#	Source	Date	Comment	Topic	Reference	Staff Response
17	Dean Gisvold, Irvington Community Assoc.	6/28 email	Opposed to certain height limits in Lloyd and Lower Albina, see annotated map.	Regional Center	App B, RC3 Map A2, Alt B	See response to #20 and 21.
18	Paul Cathcart, PPS	6/28 letter	Support moving Blanchard from Lower Albina to Lloyd District.	Regional Center	RC1	Comment noted.
19	Amy Chomowicz, BES	7/17 memo	Add a description of how this area can be a showcase for integrating nature into the built environment and attracting more business and visitors.	Regional Center - Lloyd	Page 28, 29, Regional Center	Agree. However, there is currently language in this section that addresses this: "The formation of the Lloyd EcoDistrict presents additional opportunities to create a district that is more attractive to new businesses, employees, residents and visitors due to its leadership in sustainability and the resulting improvements in the physical environment." (p.29)
20	Cate Millar (for Daniel Deutsch)	6/28 SAC	Opposed to tall buildings along the river and at the Broadway Bridgehead.	Regional Center - Lloyd		Disagree. Proposed heights at the Broadway Bridgehead are consistent with Rose Quarter District Plan (2012) gateway concepts and recent redevelopment interests. On the Thunderbird site (none of which is currently in public ownership) proposed increased height limits would only be available in return for new public open space, offering expanded visibility to and from Veteran's Memorial Coliseum, a recently designated historic landmark.
21	Dean Gisvold, Irvington Community Assoc.	6/28 email	Do not support additional height limits for Broadway Bridgehead and Thunderbird site. Gateways do not have to have tall buildings. Taller heights do not support Broadway "main street" in Policy 4 Successful Neighborhood Districts (p. 32). Can we have a mainstreet NE Broadway with a high-density N Broadway? Policy 4 and Lloyd are not compatible. Increased heigh/density will create more demand on Broadway and increase barriers to ped/bike connectivity. See annotations on Map A2 for his specific proposed changes to staff height proposals	Regional Center - Lloyd	Lloyd RC3, App A, Map A2 and App B, RC3	Disagree. See response to #20 regarding heights on N. Broadway and riverfront. Other development regulations, including updated district design guidelines, could help sculpt taller building forms to "step down" to NE Broadway, new open space(s), etc., as desired. Broadway is proposed to be developed at different scales: the eastern portion with lower heights will have more of a "main street" character and the western portion where heights are increased will be more urban. You should also note that there are no proposed increases in FAR in the Lloyd District, and therefore no increases in overall development potential, with the exception of the PPS Blanchard site. The high density development envisioned for the district will support the use of alternative modes, balancing the demand on Broadway and other arterials.
22	Gary Warren, LDCA	6/28 SAC	Concerned about possible new retail spaces in area around Calaroga Terrace – concerned that they won't succeed. Would like to see them limited in that area.	Regional Center - Lloyd		Agree. Ground floor retail should not be required off of Retail/commercial streets as designated by Map A3 of the draft and on the Lloyd District Concept Diagram on page 27. **PROPOSED CHANGE: Add language to page 27 1st bullet to clarify: "Off of Retail/Commercial Corridors, retail would not be required or encouraged."**
23	Gil Frey	6/28 SAC	Need Convention Center Hotel project.	Regional Center - Lloyd		Agree. The plan addresses this issue. See Lloyd Policy 3D on p.29 and Action Items RC4 and RC5 on p.30.
24	Justin Zeulner, Portland Trail Blazers	6/28 SAC	Would like to see the existing 2-story Rose Quarter building and parking lot immediately to the west of the Rose Garden arena included in the area mapped with a 150-foot height limit.	Regional Center - Lloyd	Map A2	Agree. **PROPOSED CHANGE: Amend Map A2 on page 59 to show area above commercial office building and parking lot southeast of Memorial Coliseum eligible for up to 150 feet in height.**
25	Katy Langstaff and Michael Mehaffy, Sustasis Foundation	6/22 letter	Nine Bridges make Portland Unique. Building height limits should be graduated away from these Willamette River bridgeheads so that pedestrians, bicycles and cars are able to view and to access them.	Regional Center - Lloyd		Comment noted. New urban design objectives that are part of the Central City 2035 Concept Plan emphasize celebrating the Central City's diverse (and expanding) collection of Willamette River bridges. Disagree that building heights should be graduated away from them. Proposed maximum heights on page 61 do not increase maximum floor area ratios (FAR,) requiring that taller building proposals must become thinner to approach the limits. Thinner buildings increase opportunities for more views through and around them, in contrast to shorter squatter buildings built to the 100-foot limit that exists today. Public views down NE Broadway to the Broadway Bridge would not be affected by height proposal as no buildings will be built in the public ROW of NE Broadway Street.
26	Paul Cathcart, PPS	6/28 letter	Support proposed zone changes for Blanchard site and required future master plan.	Regional Center - Lloyd	Map B1	Comment noted.

#	Source	Date	Comment	Topic	Reference	Staff Response
27	Paul Cathcart, PPS	6/28 letter	Not aware of any finding that Blanchard is structurally challenged due to deferred maintenance. Also, operations in Blanchard are not obsolete, but rather can function without being in same building.	Regional Center - Lloyd	App B, RC2, p. 62	Agree. **PROPOSED CHANGE: Revised text: "The building is oversized and inefficient for the services its provides and, given its age and state of repair, major future improvements may not be a good long-term investment."**
28	Carol Gosset, Sullivan's Gulch NA	7/9 letter	Target not based on a thorough study of market conditions. We recommend against the use of percentage based goals to determine the composition of housing. Recommend a statement be inserted into Chapter 3 goal stating that, "housing investment be based on sound market driven and financeable conditions".	Housing and Neighborhoods - Lloyd	Performance Targets, Housing, page 32	Disagree. The affordability target, which is based on the current income distribution of the city, is intended to provide for a diverse supply of housing that meets the needs of all Portlanders. Housing that is affordable to lower income people is typically not market driven, unless there are subsidies or other incentives that make the project pencil out. The target will help the city plan for the type and scope of tools needed to encourage the development of affordable housing.
29	Cathy Galbraith, Bosco-Milligan Foundation	6/28 email	Question what measures and steps will be taken to minimize and avoid gentrification. Comes up in document but no substance to discussion	Housing and Neighborhoods - Lloyd		Agree. The N/NE Quadrant Plan recognizes the issues of possible displacement due to gentrification, particularly in the adjacent Eliot neighborhood, but also for existing residents and small businesses within the district. The plan includes a policy addressing this issue (Lloyd Housing and Neighborhoods policy #7, p.32) and includes an action that calls for additional tools to be developed to address this issue (Lloyd action HN8, p.34). Gentrification and displacement is a citywide issue that was identified for further work in the recently adopted Portland Plan and is on the work program for the Comprehensive Plan Update process. There is currently a project underway that will develop a tool to identify "at-risk" areas, provide a preliminary policy framework, and develop a toolkit from national sources. This topic will also be part of the work program for the Comprehensive Plan's Policy Expert Group on "Centers". **PROPOSED CHANGE: Revise lead implementing agency for HN8 (p.34) to BPS to reflect work underway to address this issue.**
30	Dean Gisvold, Irvington Community Assoc.	6/28 email	Priority is given to low and middle income housing but is then nullified by saying it will be hard. Don't give up from the get go.	Housing and Neighborhoods - Lloyd	4th paragraph, p.31	Agree. **PROPOSED CHANGE: revise language to be more positive, stating there is a need to develop additional tools to meet goals for affordable housing (see p.31).**
31	Dean Gisvold, Irvington Community Assoc.	6/28 email	If they recognize the neighborhood transitions, consider applying housing incentives to any RH zones in Eliot and Irvington areas.	Housing and Neighborhoods - Lloyd	App B, RC4 and HN1	Comment noted. RH Zoning requires housing. Where used, housing incentives are typically applied to commercial and employment zones.
32	Dean Gisvold, Irvington Community Assoc.	6/28 email	Support for housing aspiration and targets. Need language added to the target on distributing housing affordability levels fairly.	Housing and Neighborhoods - Lloyd	p. 32	Agree: **PROPOSED CHANGE: add language to p. 32 housing target: "…of the city, distributed across affordability levels."**
33	Gwenn Baldwin	7/8 email	Language about possible required housing too prescriptive, will continue the historical land banking. Incentives always work better: fast track the process, facilitate SDCs being used to improve the immediate area if housing is included, etc. Any regulations requiring housing would be strongly opposed at Council.	Housing and Neighborhoods - Lloyd	App B, page 65 HN1	Comment noted. The description includes a list of potential tools to encourage housing development. Required residential development areas have been successfully designated in the Central City in the past and therefore area listed as a potential tool, along with other tools such as height and FAR bonuses. Specific proposals will be developed as part of Zoning Code amendments to implement the Central City Plan update.
34	Murray Koodish, NE Broadway BA	6/28 letter	Support policy 4 under Housing and Neighborhoods, concentrating retail and neighborhood-type business will help.	Housing and Neighborhoods - Lloyd	p. 32	Comment noted.
35	Owen Ronchelli, Lloyd TMA	7/9 email	HN4 should include Lloyd BID as an implementer	Housing and Neighborhoods - Lloyd	HN4	Agree. **PROPOSED CHANGE: Text revised as suggested (p.33)**
36	Owen Ronchelli, Lloyd TMA	7/9 email	HN5 should include Lloyd TMA as an implementer	Housing and Neighborhoods - Lloyd	HN5	Agree. **PROPOSED CHANGE: Text revised as suggested (p.33).**

#	Source	Date	Comment	Topic	Reference	Staff Response
37	Paul Cathcart, PPS	6/28 letter	Support action for PPS to monitor population growth and school needs. Working with BPS on this.	Housing and Neighborhoods - Lloyd	Lloyd HN7	Comment noted.
38	BPS River Team	7/6 email	These actions should be separated into two, with different leads; revise as follows: (for Lloyd) TR 18: Complete the N Portland Greenway Feasibility Study. **PPR** should be the lead implementer. TR 19 (separate action item): Use the information from the completed N Portland Greenway Feasibility Study to inform the River Plan/North Reach (the update of the Willamette Greenway Plan). **BPS** should be the lead implementer. (for Albina) Page 51, TR 2: Complete the N Portland Greenway Feasibility Study. **PPR** should be the lead implementer. New/separate action item: Use the information from the completed N Portland Greenway Feasibility Study to inform the River Plan/Central Reach (the update of the Willamette Greenway Plan). ~~Implementation of the trail in some areas will rely on the ability to acquire agreements by private property owners~~. **BPS** should be the lead implementer.	Transportation	Page 38, TR18 and page 50, TR2	Agree. **PROPOSED CHANGE: Revise Lloyd action TR18 and Lower Albina action TR2 to separate the action of completing the North Portland Greenway Feasiblity Study (PPR lead) from the update of the Willamette Greenway Plan in Lloyd action EN2 and Lower Albina action EN1 (BPS lead). See p.38 and p.50.**
39	Brad Perkins	6/28 SAC	Feels land use has been short-changed in process. Should be more emphasis on off-street bikeways and high speed rail is not mentioned in plan.	Transportation		Disagree. The plan integrates the North Portland Greenway and the Sullivan's Gulch Trail, as well as pedestrian/bicycle overcrossings at Clackamas and 7th Avenues. High speed rail alignment is being addressed by the Governor's Passenger Rail Leadership Council, on which the City is represented by the Mayor.
40	Brad Perkins	6/28 SAC	Likes main street plans. Broadway is very important and serves as an artery. It needs to have a pedestrian orientation.	Transportation		Agree. Plan calls for Broadway as a key retail spine with good pedestrian connectivity.
41	Brad Perkins	7/17 letter	New networks of off street trail and high speed/commuter rapid transit corridors could be added and bring thousands of daily riders to help spur demand for mixed use development and affordable housing. N/NE Quadrant staff has deferred all opportunities for passenger rail discussion and planning.	Transportation		See response to comment #39. Also, Comprehensive Plan Goal 6-Transportation currently supports commuter rail and expansion of Northwest Corridor passenger rail services and reinforcing the role of Union Station as multimodal hub for intercity passenger rail and buses, and city transit, taxis and airport shuttles.
42	Cathy Galbraith, Bosco-Milligan Foundation	6/28 email	Share concerns of Paramount Apts. and Leftbank. Not enough consideration of likely unintended consequences of transportation plans.	Transportation		Comment noted. The Facility Plan for the I-5 Broadway-Weidler interchange improvement acknowledges that several issues need to be resolved, including the area north of Broadway that would impact Left Bank Building, Paramount Apartments and others. The current phase was a planning-level of design and engineering, while the next phase will prepare engineering-level studies and plans that will address parking, access, property impacts, and funding issues in greater detail. This will include significant outreach to property owners and other stakeholders.
43	Dean Gisvold, Irvington Community Assoc.	6/28 email	Opposed to freeway project.	Transportation	App B, TR8, p. 65	Comment noted.
44	Dean Gisvold, Irvington Community Assoc.	6/28 email	Oppose for same reason as 3 vote on freeway improvements.	Transportation	Lloyd TR8	Comment noted.

#	Source	Date	Comment	Topic	Reference	Staff Response
45	Debra Dunn, Oregon Trucking Associations	6/27 letter	"I have discussed with OTA members … that the end product of this two year process is the possibility of a future addition of a north and south bound auxiliary lane in this section of the corridor." Short weaving sections, conflicting movements and friction problems are only minimally addressed by plan. Need to improve safety and reliability in the project area.	Transportation		Comment noted.
46	Eric Lovell	6/28 SAC	Parking is a significant concern for stakeholders. Need more detail on parking options.	Transportation		Agree. See response to comment #75 regarding Lloyd District parking issues. See response to comment #94 regarding additional detail on Lower Albina parking issues.
47	Garlynn Woodsong	7/3 email	Drop the I-5 Rose Quarter widening project, instead focus on closing I-5 on the east bank. I-405 should be re-branded as I-5, and the Rose Quarter stretch should be re-branded I-84.	Transportation		Disagree. City Resolution No. 36448 accepted the Freeway Loop Advisory Group report that examined several options regarding the I-5 Freeway on the eastbank, and concluded that I-5 should remain and improving the I-5/I-84 interchange is an important priority.
48	Gary Warren, LDCA	6/28 SAC	Would like to see parking minimums required for new development.	Transportation		Comment noted. Parking ratios in all Central City districts will be considered as part of review and update of the CCTMP parking regulations in the zoning code, which will occur in a later phase of the Central City 2035 process.
49	Gary Warren, LDCA	6/28 SAC	Wants to make sure streets in the flexible network will continue to meet the needs of existing users. Plans says they are primarily pedestrian.	Transportation		Agree. The intent of the flexible network is to provide a continuous pedestrian-friendly system of connections through the district while meeting the needs of local businesses and residents along the network. **PROPOSED CHANGE: Add language to last bullet on page 27: replace "...primarily pedestrian..." with "pedestrian-friendly". Add sentence to end, "Local streets within the flexible network would continue to meet the access needs of adjacent local residents and businesses." Make similar edits to Lower Albina section on p. 47, adding "industry."**
50	Gwen Baldwin	6/28 SAC	Support for plan on balance and thanks to committee members. Need to be mindful of serious crash issue - want to ensure there are safe traffic outcomes.	Transportation		Comment noted.
51	Jim Howell	6/28 SAC	Recommends you vote for no build on the freeway project. Disputes claim on page 23 that "the joint process ensured that the resulting plans are mutually supportive". Targets for non-SOV travel are contradictory to the freeway project. There is nothing in the proposal about how to reduce traffic.	Transportation	p. 23	Disagree. A major accomplishment for both the NNEQ Plan and the I-5 Broadway-Weidler Plan was to integrate the land use concepts with the recommended I-5 Interchange improvements. The proposed interchange improvements are intended to improve safety for pedestrians and bicyclists, which is expected to result in increased bicycling and walking trips in the Lloyd District. This will in turn support increased mixed use and transit-oriented development.
52	Lloyd Lindley	6/28 SAC	Would like to see language added to the description of the flexible network about working streets and the need to respect the needs of existing businesses and residents on local streets identified as part of the flexible network.	Transportation	pages 27, 48	Agree. See response to comment #49.
53	Mary Vogel, PlanGreen	6/29 email	Disagree with comments calling for increasing auto capacity as density increases—that would be counterproductive.	Transportation		Comment noted.
54	Matt Arnold, BTA	6/28 SAC	Mode split targets are too low. Climate Action Plan targets much more aggressive.	Transportation		Agree. **PROPOSED CHANGE: Increase mode split target for Lloyd District from 70 to 75% (p.36).** Mode split performance measure will be reevaluated and readjusted as part of the Central City Plan. Lloyd District mode split may change from what's proposed but not by much. Staff poposes increasing target from 70 to 75%. Lower Albina is an area that is not foreseen to dramatically change, so a doubling of the percentage of non auto trips, as proposed, is aggressive given its present and future land uses.

#	Source	Date	Comment	Topic	Reference	Staff Response
55	Paul Cathcart, PPS	6/28 letter	Keep property owners informed of ROW implications and impacts as the interchange plans develop.	Transportation		Agree. The Facility Plan contains language calling for continued public involvement as part of implementation.
56	Phil Sellinger	6/28 SAC	The freeway plan should not be all or nothing. Would like to see some local transportation system improvements to address near term needs.	Transportation		Agree. **PROPOSED CHANGE: New action item TR19 (p.38): "Study and implement near term bicycle and pedestrian safety enhancements in the "box", especially along N Broadway, that address major safety needs and advance the long range plan. CC2014 timeframe.**
57	Ray Polani	6/28 SAC	Change Portland with people, not autos. Opposed to any freeway projects - it is expensive and will mess up the future of the area. MAX should be in a subway.	Transportation		Disagree. See response to comment #51. Also, previous studies by TriMet indicate that the current capacity of the light rail system in Central City is sufficient to meet 2035 ridership demands.
58	Sarah Huggins, PP&R	7/2 letter	TR11: PPR is lead; NB3: PBOT is lead (same action). Have agencies share lead role.	Transportation	TR11 p. 37 NB3 p. 56	Agree. **PROPOSED CHANGE: Revise actions regarding the Sullivan's Gulch trail to indicate that PPR and PBOT are joint lead agencies for implementation (p. 37 and 56).**
59	Terry Parker	6/28 SAC testimony	Surface street plans (e.g. changes proposed for Multnomah) are deficient. Increased density and regional growth must include increased capacity for motor vehicles and required off-street parking.	Transportation		Disagree. Surface streets in the plan address all modes, including on-street parking, with the long term goal of encouraging non auto trips as the area develops. This is consistent with the goals of the Central City, the TSP and the 2040 Growth Concept Plan. Off street parking requirements will be dealt with as part of the Central City Plan in 2014.
60	Terry Parker	6/28 SAC testimony	Bicyclists should pay lion's share of bicycle-specific infrastructure (e.g. Clackamas overcrossing and Broadway/Weidler separated bikeway). Transit riders should also pay greater share for service and capital costs.	Transportation		Comment noted. These are regional issues, best dealt in other public processes.
61	Tracy Whalen	6/28 SAC	The mode split targets seem too high.	Transportation		Disagree. See response to comment #54. Also, mode split targets were derived via a combination of Metro's region travel model, which anticipate a significant shift in proportion of trips towards non auto trips, and professional judgment regarding what is reasonably ambitious given the objectives and changes proposed in the plan, such as parking policy, greater street connectivity and more balanced mix of housing and jobs.
62	Wayne Kingsley	6/28 SAC	Need parking minimums.	Transportation		Comment noted. See response to comment #48.
63	Betsy Reese	6/28 SAC	Support for transportation improvements on Broadway for bicycle safety. The area in front of her building has a high incidence of bike/vehicle accidents. Shouldn't wait 5-10 years to make changes. The bicycle safety improvements should be fast-tracked.	Transportation - Lloyd		See response to comment #56.
64	Brad Perkins	7/17 letter	Next phase of the N/NE Quadrant Plan should focus on developing a master plan for the Rose Quarter Transportation Center, with a detailed study of bike/pedestrian corridors along the east bank, moving rail tracks eastward and planning a new HSR Commuter/Rapid Transit Rail Station between Interstate and the River between the Steel and Broadway bridges.	Transportation - Lloyd		Comment noted. The plan does call for making improvements to the Rose Quarter Transit Center and taking the next step to confirm the feasibility of straightening the s-curve in the UP rail tracks. See Lloyd actions TR13 and TR14 on p.38. Also, see response to comments #39 and #41 on high speed rail.
65	Brad Perkins	7/17 letter	…development; and providing strong "bicycle and pedestrian" linkages…	Transportation - Lloyd	Page 35, 3rd paragraph	Agree. **PROPOSED CHANGE: Text revised as suggested.**
66	Brad Perkins	7/17 letter	to use "and safe" active transportation "versus" non-single occupant vehicle modes.	Transportation - Lloyd	Page 35, Policies #3	Disagree. Language keeps carpooling as an non-auto option. Safety is best addressed elsewhere.
67	Brad Perkins	7/17 letter	...streetcar, bus, "potential high speed/commuter rapid transit rail" and a potential water taxi service.	Transportation - Lloyd	Page 36 #9	Disagree. See response to comments #39 and #41.
68	Brad Perkins	7/17 letter	...connecting to either 7th, 8th "or 9th" in the Central Eastside. (X in 2-5 years)	Transportation - Lloyd	Page 37, TR9	Disagree. There is an existing building preventing a connection at 9th in CES.

#	Source	Date	Comment	Topic	Reference	Staff Response
69	Brad Perkins	7/17 letter	...and implement its recommendations “and development” (X in cc2035 2014)	Transportation - Lloyd	Page 37, TR11	Disagree. Concept plan to be adopted in 2014 but implementation will take longer.
70	Brad Perkins	7/17 letter	”Work with property owners “ in straightening the S-curve” in the Union Pacific rail tracks “to improve” freight and passenger….potential of the “Thunderbird” site “for a high speed/commuter rapid transit rail station”. (“X” in CC2035 (2014)	Transportation - Lloyd	Page 38, TR13	Comment noted. The benefits and feasibility of straightening the rail line has not yet been confirmed. This action calls for the issue to be studied further. We are not aware of the site being identified as a future site for a high speed rail station. **PROPOSED CHANGE: Add text to TR13: "Work with property owners to confirm..."**
71	Brad Perkins	7/17 letter	Change the wording: 8th avenue on the south side could connect the 9th Avenue on the east side.	Transportation - Lloyd	Page 66, last paragraph	Disagree. 9th in Lloyd to 8th in CES is impractical as the distance is much longer. Same objective can be achieved with a shorter, more direct connection.
72	Brad Perkins	7/17 letter	Remove picture, not a fair representation of Sullivan’s Gulch Trail Concept Plan.	Transportation - Lloyd	Page 66, last paragraph	Disagree. Photo is not showing the trail, but existing bike lanes on Lloyd Blvd. **PROPOSED CHANGE: Add text to caption to clarify: "This rendering shows existing bike lanes on Lloyd Blvd. It does not depict the Sullivan's Gulch Trail. (p.66)**
73	Dean Gisvold, Irvington Community Assoc.	6/28 email	Rewrite TR6 to include: "Review the 1996 Broadway-Weidler Corridor Plan to identify any needed updates to implement the N/NE Quadrant planning process, while also paying particular attention to the Broadway-Weidler Corridor all the way to the Hollywood area, especially east of NE 16th. Implement the plan emphasizing pedestrian safety projects, installation of traffic signals, and maintenance of parking supply.”	Transportation - Lloyd	Lloyd TR6 (p. 37) or App B	Agree. **PROPOSED CHANGE: TR6 text revised: "Review the 1996 Broadway-Weidler Corridor Plan to identify any needed updates to implement the N/NE Quadrant planning process, as well as the stretch of the corridor east of 16th to the Hollywood area. Implement the plan emphasizing pedestrian safety projects, installation of traffic signals, and maintenance of parking supply.”**
74	Dean Gisvold, Irvington Community Assoc.	6/28 email	Question whether Civic designation for Broadway is consistent with development as a “main street” or meets objectives of NE Broadway Business group and Koodish letter of May 20.	Transportation - Lloyd	Map A3	Disagree. NE Broadway Street has been designated a “civic” retail/commercial design type as the street makes regional connections beyond the Lloyd District, east to Hollywood Town Center and southwest into Downtown Portland and further south to Portland State University. The “civic” designation is not inconsistent with the development of a “main street” character, it is more a reminder that the street is an important place in the city, offering higher levels of activity, visibility and opportunity for businesses, residents and visitors.
75	Gwenn Baldwin	7/8 email	Re: reducing amount of parking per capita. Will be very hard to manage and achieve adequate residential parking. Doesn’t specify what the per capita includes, or what type of parking. Resident only or resident and employee/business? Reducing off-street parking per capita if there is large residential growth may be a valid future conversation, but didn’t hear SAC concern that there were too many parking spaces. Language should be re-written to charge the TMA with increasing mode split and let them determine the best way to balance all the needs to get there.	Transportation - Lloyd	App B, page 65 TR2	Comment noted. Appendix B-TR2 recognizes that parking policies established in the CCTMP need to be updated to address a number of parking issues in the Central City, including the Lloyd District. It is the intent of the next phase of CC2035 Plan to address these issues. The Lloyd Transportation Policies and Implementation Actions recognizes the importance of managing on-street parking and off-street parking and to continue the public-private partnerships with the Lloyd stakeholders and the Lloyd TMA. Lloyd is the only area of the Central City with more parking stalls than residents and employees.

#	Source	Date	Comment	Topic	Reference	Staff Response
76	Janet Freiling, Holy Rosary Church	7/5 email	Concern about rendering showing widened Clackamas St. and loss of parking where church's Ambridge Center currently is. What is City intent here?	Transportation - Lloyd	Appendix B, p. 67, 68	Comment noted. This is a conceptual rendering showing one idea of how the street could be redesigned as a "flexible street", serving as a neighborhood amenity running from the Lloyd Center mall to the Rose Quarter. The rendering was intended to show improvements within the same 60-foot right-of-way. No taking of private property is implied. There is no specific improvement plan for Clackamas Street at this time. The draft plan recommends that future work be done to develop a strategy for improving Clackamas Street (see Lloyd action TR10, p.37 and p.67). **PROPOSED CHANGE: Revise the description on p.67 to to make it clear that there will be a future process to engage property owners in the design work and that access and parking needs of adjacent property owners will be addressed as part of that process. Add a second rendering (p.67, 68) of Clackamas in this location to provide more balance in terms of possible street design.**
77	Janet Freiling, Holy Rosary Church	7/5 email	Intersection of Clackamas and 3rd should be made 4-way stop. Existing safety problem.	Transportation - Lloyd		Comment noted. This issue has been referred to the PBOT Traffic Division for follow-up. A 4-way stop was analyzed by the City in the past and recommended against this due to lack or traffic warrants, meaning not enough traffic/pedestrians on Clackamas Street. Instead the City relocated the stop signs to face 3rd Ave.
78	Joe Angel	Mtg. 7/9	Would like to see more public participation in providing off-street short-term parking options to support retail activity - specifically, publicly owned or managed surface parking options within a block of retail districts/streets. Eventually, these could be replaced with structured parking facilities	Transportation - Lloyd		Comment noted. See response to comment #75.
79	Lloyd Lindley	6/28 SAC	Suggests moving the I-5 Broadway/Weider implementation action item to the 2-5 yr category.	Transportation - Lloyd	Lloyd, TR8 page 37	Agree. **PROPOSED CHANGE: move Lloyd action TR8 to the 2-5 year timeframe**.
80	Murray Koodish, NE Broadway BA	6/28 letter	Development of new parking options and preservation of existing parking to support retail and services on Broadway and retail streets will be critical to business health.	Transportation - Lloyd		Comment noted.
81	Murray Koodish, NE Broadway BA	6/28 letter	Add mention of need for more signals and crosswalks on Broadway and Weidler east of 16th Ave.all the way out to Hollywood, see Dean Gisvold suggestion for TR6.	Transportation - Lloyd	p. 37	Agree. See response to comment #73.
82	Owen Ronchelli, Lloyd TMA	7/9 email	Re: "...managing parking to support business and residential uses, incentivize development and encourage the use of non-auto transportation modes..." In what way does the City 'manage' parking for residential uses in the Lloyd District other than not enforcing past 6:00 PM (in most locations)?	Transportation - Lloyd	page 35. P 3	Comment noted. City "manages" parking in the Central City primarily via parking ratios--including residential units, parking demand analysis for visitor parking, as well as on street parking tools such as time restrictions, permits and meters.
83	Owen Ronchelli, Lloyd TMA	7/9 email	TR4 should include TMA as an implementer	Transportation - Lloyd	TR4	Agree. **PROPOSED CHANGE: TR4 (p. 37) revised as suggested.**

#	Source	Date	Comment	Topic	Reference	Staff Response
84	Owen Ronchelli, Lloyd TMA	7/9 email	TR2 appendix entry on parking management: 1) "... It includes managing the supply of parking to encourage non-auto commute trips, managing congestion, supporting retail uses, protecting livability…" 2) "Incentivizing mixed use development through the provision of shared parking facilities." [Does this include relaxing the parking code to allow residential parking to be shared with other commercial (non-residential) uses during the workday? This would promote the notion of 'right-sized parking' and would result in far less parking being built, particularly in larger mixed use developments.] 3) "Maintaining and enhancing parking to serve retail focused areas and streets." 4) Addressing event parking issues through flexible options such as the use of variable pricing and event parking management.	Transportation - Lloyd	App B, TR2, p.65	Responses to suggested changes: 1) Disagree with request to add "commute". The goal is to increase non-auto use for all trip types. Agree with request to add "support retail uses". **PROPOSED CHANGE: Add "support retail uses".** 2) Comment noted. Shared parking will be an item to consider as part of updating the CCTMP parking regulations. 3) Agree. **PROPOSED CHANGE: Add "and enhancing"** 4) Agree. **PROPOSED CHANGE: Add "event"**
85	Owen Ronchelli, Lloyd TMA	7/9 email	TR9 should also explore the idea of the NE 7th Avenue bridge being used for motor vehicles (could prohibit larger freight traffic). This could relieve traffic congestion on MLK and Grand particularly for non-through traffic movements, provide another point of north and south access on the east side of the river, and help reinforce NE 7th Avenue as a retail/commercial main street (as called out in the Street and Development Character concept – TR1)	Transportation - Lloyd	TR9	Disagree. The bridge would at least double in cost, and the complexity of analysis and related issues would significantly add to the timeline for implementation. Furthermore, the CEIS area just south of I-84 is presently a contiguous industrial/employment zone that would be affected with a major street running thorugh it. Additional infrastructure upgrades are likely to be needed in the area for traffic and to bring streets up to collector standard. We can revisit if as part of SE Quadrant the need for a multimodal connection across I-84 finds merit.
86	Paul Cathcart, PPS	6/28 letter	Concern about operations and safety impacts to N Dixon from connection of Dixon with Hancock. This connection without corresponding improvements to streets receiving more traffic is unacceptable.	Transportation - Lloyd		Comment noted. The NNEQ Plan Implementation Action TR8 calls for the implementation of the I-5 Broadway-Weidler Interchange Plan, which will be included in the Appendix. The Facility Plan for the I-5 Broadway-Weidler interchange improvement acknowledges that several issues need to be resolved, including the area north of Broadway that would impact Left Bank Building, Paramount Apartments and others. The current phase was a planning-level of design and engineering, while the next phase will prepare engineering-level studies and plans that will address parking, access, property impacts, and funding issues in greater detail. This will include significant outreach to property owners and other stakeholders.
87	Paul Cathcart, PPS	6/28 letter	Blanchard facility users need the existing on-street parking on Dixon—reports do not show how additional traffic can be accommodated in existing ROW.	Transportation - Lloyd		See response to comment #86. Also, we are not anticipating removal of parking on Dixon. The Facility plan contains language calling for additional technical analysis and public outreach and review in this area as part of implementation.
88	Paul Cathcart, PPS	6/28 letter	Dixon/Hancock shown as flexible street connection. Expected additional bike traffic could create conflicts with vehicular traffic on Dixon and local street connections. Vehicles bypassing Broadway to access Interstate could also be a problem.	Transportation - Lloyd	Street & Dev Character map, p. 19	See response to comment #86. Also, the Facility plan contains language calling for additional technical analysis and public outreach and review in this area as part of implementation.

#	Source	Date	Comment	Topic	Reference	Staff Response
89	Paul Cathcart, PPS	6/28 letter	No immediate plans to leave Blanchard. Blanchard may continue to function after the North of Broadway options have been implemented. Option 4. Flint would better support short and long term operation of PPS Blanchard. Dixon to Vancouver connection would occur through a couple of intersections with slower traffic and greater sight distance to traffic southbound on Wheeler.	Transportation - Lloyd	I-5 B/W Improvements Report, p.47, fig 28	See response to comment #86.
90	Paul Cathcart, PPS	6/28 letter	Who would be responsible for local street improvements to complement the interchange improvements? How will the improvements impact the development potential of properties proposed for rezoning?	Transportation - Lloyd		Comment noted. ODOT and the City will be implementing agencies. It is expected that these improvements will increase/enhace development potential in the area as multimodal access to them will be enhanced.
91	Brad Perkins	7/17 letter	"The North Portland Greenway Trail" would also…	Transportation - Lower Albina	Page 47, Flexible Network	Agreed. **PROPOSED CHANGE: Text revised as suggested.**
92	Cherri Warnke, PWB	7/9 email	The section of the Strand that crosses north on N Kerby Ave from N Wheeler Pl, will traverse past the driveway entrances for PWB's Interstate facility where trucks enter and exit throughout the day. WB has some major reservations with focusing bike and pedestrian traffic along this section of N Kerby Ave given the likelihood for truck/bike/ped accidents due to line of site issues that come with operating large trucks and construction equipment.	Transportation - Lower Albina	Lower Albina TR4	Comment noted. Appendix B includes additional explanation for the "the Strand". Additional study is needed to determine the feasibility and cost of this concept, including the need to address issues with potnetial conflicts with industrial operations in this area with pedestrians and bicyclist. See p.77.
93	Dean Gisvold, Irvington Community Assoc.	6/28 email	Opposed to TR8 for reasons voted 3 on freeway improvements. Would change vote if way to make only surface improvements.	Transportation - Lower Albina	Albina TR8	Comment noted.
94	Lloyd Lindley	6/28 SAC	Would like more detail on potential parking strategies for Lower Albina.	Transportation - Lower Albina		Agree. As part of applying the Employment Opportunity Subarea provisions in Lower Albina, the City would undertake a parking management study that may result, depending on existing needs and future aspirations, in a more comprehensive management of parking in the area. **PROPOSED CHANGE: Add a description to the appendix entry for Lower Albina action RC3 "Outcomes may include but not be limited to: parking inventory, and strategies to provide additional parking or better manage existing supply to maximize its utility. Examples include employee permit programs, partnerships to create additional parking, time limitations/pricing, development of a Transportation Management Association/parking coordinator, enforcement strategy, and funding options, among others." (p.76-77)**
95	Paul Cathcart, PPS	6/28 letter	Support feasibility study for a new yellow line station near Dixon.	Transportation - Lower Albina	TR12	Comment noted.
96	Carol Gosset, Sullivan's Gulch NA	7/9 letter	Strike the words ("...and Sullivan's Gulch.")	Urban Design	App B: Action Details UD6, p. 70, four para	Agree. **PROPOSED CHANGE: Text revised as suggested.**

#	Source	Date	Comment	Topic	Reference	Staff Response
97	Katy Langstaff and Michael Mehaffy, Sustasis Foundation	6/22 letter	Tall buildings can degrade livability and quality of life. Control viewshed impacts, shading effects, wind effects, economic constraints, and other negative factors, by limiting number, location and height of tall buildings. Focus more on raising FAR and developing pedestrian-friendly buildings with a fine grain of diversity and walkability.	Urban Design		Disagree. (with raising FAR instead of height). With the goal of encouraging the densest development in the Central City and languishing portions of the Lloyd District – helping to relieve redevelopment pressure on surrounding lower density neighborhoods and communities – allowing more flexibility in building heights could make the area more attractive to redevelopment interests. Current FARs in the Lloyd District are adequate. Increasing FAR would encourage larger and blockier building forms that could have greater impacts on public views.
98	Terry Parker	6/28 SAC testimony	Building up makes sense but need a minimum of 10% of buildable land to be set aside as green, permeable and open spaces. Best place is along the river, but also woven into fabric of new housing.	Urban Design		Comment noted. The Open Space Concept and several policies and actions call for development of significant new public parks and open space, including the possibility of open space along the river near the VMC. Superblock regulations will help ensure that new open space and pedestrian connections will be developed on sites that include vacated ROW. A new master plan tool will likely include provision of open space as one element.
99	Alan Rudwick	6/28 SAC	Satisfied, just wants to make sure Eliot gets the same treatment as Irvington.	Urban Design - Lloyd		Agree. The N/NE Quadrant Plan recognizes the importance of sensitive transitions in building height from NE Broadway to historic single-family neighborhoods in Eliot and Irvington to the north. The plan proposes reducing maximum building heights within the Central City Plan District north of Broadway to 75 feet except between NE 3rd and NE 7th where little historic single-family fabric remains and buildings up to potentially 125 feet would be allowed.
100	Amy Chomowicz, BES	7/17 memo	This section lacks a description of how this is a sustainable district. Add a bullet to this section that describes the environmental characteristics of the plan	Urban Design - Lloyd	Page 27-28, key elements concept	Agree. **PROPOSED CHANGE: Add the following to the description of key elements of the concept: "Sustainable Development: While it does not specifically show up on the concept diagram, sustainable development, including green buildings, green infrastructure, habitat enhancement, and embracing the designation of the Lloyd EcoDistrict, is also a key element of the overall concept for the Lloyd District." (p.28)**
101	Amy Chomowicz, BES	7/17 memo	...considerably – some can be typical streets, some could be through open spaces or plazas, and others could be through building interiors. Green features are encouraged and are highly visible.	Urban Design - Lloyd	Top of 28	Agree. **PROPOSED CHANGE: Add "Visible green features are encouraged where appropriate to the setting." to the description of flexible streets on p.28.**
102	Amy Chomowicz, BES	7/17 memo	... a more pedestrian-oriented development pattern and streetscape. Integrating nature into the built environment improves the overall livability of the district.	Urban Design - Lloyd	Page 39, first paragraph	Agree. This is an important idea, however it is more appropriate in the Environment section. **PROPOSED CHANGE: Add text as suggested on p.43.**
103	BPS River Team	7/6 email	Change the sentence structure, as follows: Work with the property owner/developer of the "Thunderbird" site to craft a development agreement. The agreement should include public open space and the greenway trail. **BPS** should be designated as the lead in implementing the Development Agreement for the Thunderbird site.	Urban Design - Lloyd	Page 42, UD8	Agree. **PROPOSED CHANGE: Text revised as suggested.**
104	Brad Perkins	7/17 letter	...Opportunities for open space and "potential" river access…	Urban Design - Lloyd	Page 39, 2nd paragraph	Agree: **PROPOSED CHANGE: text revised as suggested.**
105	Brad Perkins	7/17 letter	...freeways major arterials, rail, bike and pedestrian corridors.	Urban Design - Lloyd	Page 40, 2a	Disagree. Statement already accounts for increased connectivity to ped/bike connections.
106	Brad Perkins	7/17 letter	...12th Avenue Bridge and from Lillis Albina Bank and the "Peace Memorial."	Urban Design - Lloyd	Page 41, UD4	Comment noted. The action language proposed for revision lists views that stakeholders have identified for possible changes. However, to-date, staff has not heard of any desired changes to the existing designated view from the Peace Memorial.
107	Brad Perkins	7/17 letter	...I-5 Freeway at NE Multnomah, Holladay, "Oregon Streets and Lloyd Boulevard."	Urban Design - Lloyd	Page 42, UD9	Agree. **PROPOSED CHANGE: Text revised as suggested.**

#	Source	Date	Comment	Topic	Reference	Staff Response
108	Brad Perkins	7/17 letter	...the development of Ne 7th, "NE 9th" and NE Multnomah…	Urban Design - Lloyd	Page 42, UD11	Disagree. NE 9th is not a designated retail/commercial street in the plan. However, retail/commercial could occur here, it would just not be the primary emphasis.
109	Britt Brewer, Sullivan's Gulch NA	6/28 SAC	Does not want transition to Irvington neighborhood in this plan to set a precedent for the corridor east of 15th. For consistency, remove Sullivan's Gulch from the list of neighborhoods where a transition is scale will be provided.	Urban Design - Lloyd	p. 70, UD6 appendix entry	Agree. See responses to comment #110 and 111.
110	Carol Gosset, Sullivan's Gulch NA	7/9 letter	Intersection of NE 15th Street and Broadway indicated as a "Gateway". It is recommended here that this designation be consistent with all relevant graphic illustrations related to gateway designations.	Urban Design - Lloyd	Lloyd District Concept Diagram, page 27	Agree. **PROPOSED CHANGE: The Gateway diagram in Appendix A (p.60) has been updated to include the gateway at 15th and Broadway.**
111	Carol Gosset, Sullivan's Gulch NA	7/9 letter	Insert clause to UD 10: "Policy related to height designations along the NE Broadway/Weidler corridor will not become a precedent for that section of said corridor east of the established boundary of the N/NE Quadrant Project from NE 15th Street to 33rd Avenue. It is further recommended that policy related to height east of 15th Street along said corridor be determined by further study and analysis of existing physical and market conditions."	Urban Design - Lloyd	Urb Des, p. 39 Actions: Lloyd District - Urb Des, p. 42, UD10, & App A, Map A2: Max Heights, p. 59	Agree. **PROPOSED CHANGE: Add text to appendix description for Lloyd action UD2 (p.69): "Proposed changes to allowed heights along the Broadway/Weidler corridor within the N/NE Quadrant do not imply a precedent for revising height limits in the corridor between NE 15th and 33rd avenues, outside the Central City. Any such change would require further study and analysis as part of a future project."**
112	Cathy Galbraith, Bosco-Milligan Foundation	6/28 email	Heights for Eliot and Irvington edges should be the same, for better transitions.	Urban Design - Lloyd		Agree. The height proposals now reflect similar approach to Eliot and Irvington within plan boundary. See also response to comment #99.
113	Dean Gisvold, Irvington Community Assoc.	6/28 email	Gateway location (third paragraph) does not require tall buildings to emphasize civic importance. Oppose this goal (see comment on RC3 above).	Urban Design - Lloyd	Lloyd urban design goals, p. 39	Agree. **PROPOSED CHANGE: Add text to p.39 to make it clear that each gateway experience will be described in more detail, and that one size will not fit all: "An update to the Lloyd District's design guidelines will describe more clearly the City's intentions for the desired experience at each gateway, and how new development can support the targeted character. While many of the gateways will be reinforced by buildings that are taller than the surrounding context, others may feature special landscaping or trees, unique works of public art, and/or combinations of the above…"**
114	Dean Gisvold, Irvington Community Assoc.	6/28 email	Re: "Irvington compromise." Support compromise by this action and concept map A2 that the bonus be removed from Irvington strip, Broadway to Schuyler, 7th to 16th, but that height limit be limited to 75 feet. As part of Comp Plan, Irvington will advocate for rezoning area from RH to R1 or R2	Urban Design - Lloyd	Lloyd UD10 p. 42	Comment noted.
115	Dean Gisvold, Irvington Community Assoc.	6/28 email	Support similar step-down for Eliot sections of Broadway.	Urban Design - Lloyd		Comment noted. See response to comment #99.
116	Dean Gisvold, Irvington Community Assoc.	6/28 email	Concerns about gateway designations and desire for tall buildings.	Urban Design - Lloyd	Map A4	Comment noted. See response to comment #113.

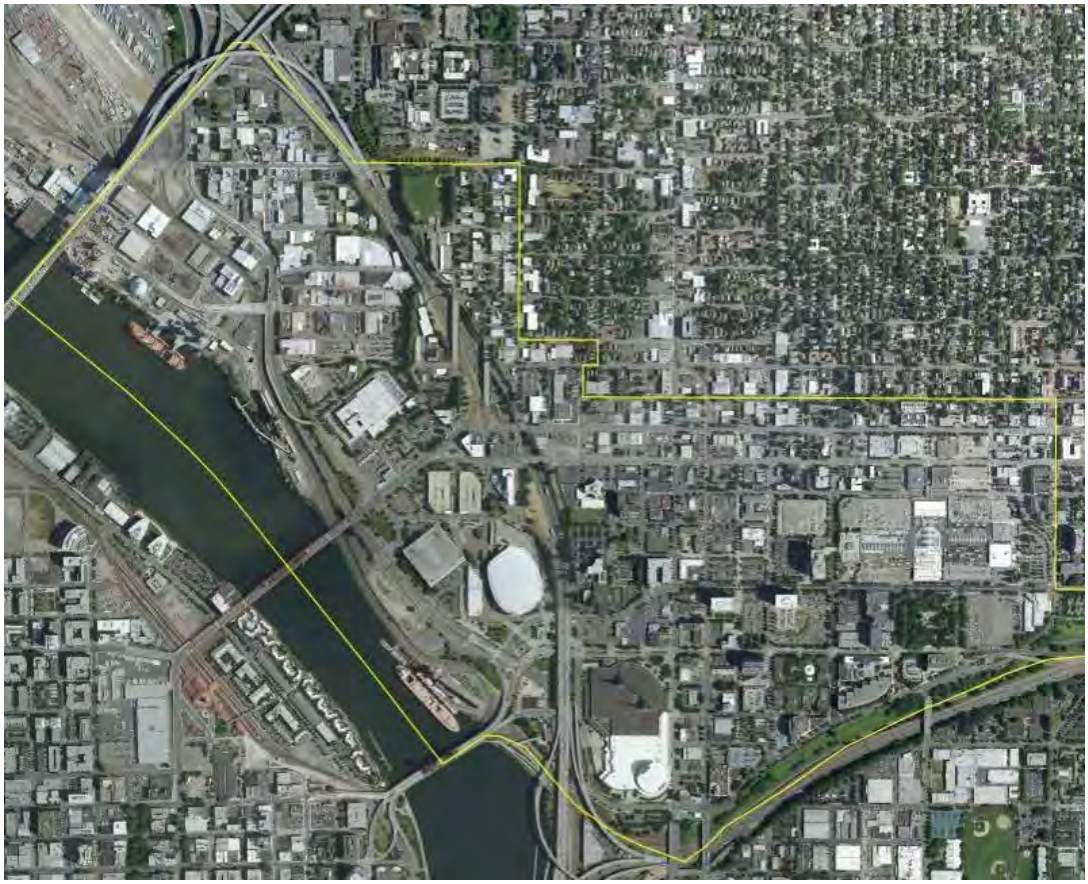
#	Source	Date	Comment	Topic	Reference	Staff Response
117	Dean Gisvold, Irvington Community Assoc.	6/28 email	"The reason I can support the 75 foot limit on map A2, page 61, is that UD10 unconditionally recommended reduction of 75 to 45 feet on the next block. This second paragraph merely indicates that such change should be reexamined as part of the comp plan, which is not acceptable. UD2 should be rewritten to be consistent with UD10."	Urban Design - Lloyd	App B, UD2, second paragraph, p. 71	Agree. **PROPOSED CHANGE: Revise text to be consistent with UD10.**
118	Dean Gisvold, Irvington Community Assoc.	6/28 email	Excellent recommendation, esp. last paragraph on FAR and height transitions.	Urban Design - Lloyd	App B, UD6, p 70	Comment noted.
119	Joe Angel	Mtg. 7/9	Would like the view corridor from the NE 12 Avenue Bridge that currently restricts building height on part of his property south of Lloyd Blvd. between NE MLK and NE Grand (on the edge of Sullivan's Gulch) modified, relocated, or eliminated to permit greater building height on more of this "gateway" parcel. Would like to see it modified as part of this process, not in a future process.	Urban Design - Lloyd	p. 41	Comment noted. We are recommending that this corridor be addressed in a process in the next 2 years along with other view corridor issues in the Central City (see Lloyd action UD4, p.41).
120	Katy Langstaff and Michael Mehaffy, Sustasis Foundation	6/22 letter	Views of the river and trees add to livability and quality of life. Preserve the pedestrian sightlines to the tree lines surrounding Portland. Every planning decision should be made to preserve the sight lines from the perspective of a pedestrian standing at the location and maintain the ability to look up and out of the city to see the ring of trees. This allows citizens and visitors to geo-locate and know where they are.	Urban Design - Lloyd		Comment noted. An assessment of key public views from the Central City to nearby landscape, topographic, other natural features and/or identifying features will be undertaken as a part of the Central City 2035 planning process over the next 2-3 years. This project will update and/or amend resources first identified in the Scenic Resources Protection Plan from 1992.
121	Lloyd Lindley	6/28 SAC	Add the word "pedestrian" to Open Space policy in Lloyd District UD section, "…pedestrian wayfinding system…"	Urban Design - Lloyd	page 40	Agree. **PROPOSED CHANGE: add "pedestrian"...**
122	Lloyd Lindley	Phone 6/18	Confused by the incomplete table in the UD performance target on p 40. Wants to see the data or maybe delete the second of the two measures	Urban Design - Lloyd	p. 40	Agree. **PROPOSED CHANGE: remove the target related to retail/commercial streets.** We had proposed two measures for the active street edge target, one for all streets and one for retail/commercial streets only. Because this is the first quadrant plan we haven't designated retail/commercial streets in other districts. Therefore, there is no data to compare the Lloyd District to at this stage. We will reevaluate whether it is needed once we get further into planning for other quadrants.
123	Mike Warwick, Eliot NA	6/28 email	Agree in concept with Eliot edge height and understand concern about downzoning. Plan B is to "retain the existing height limit (100 feet) NOT increase it as proposed AND to limit bonuses that would allow taller buildings without being subject to FAR limits that restrict tall buildings (over 2-4 stories) to 'point' towers so they won't overshadow adjacent residential area."	Urban Design - Lloyd		Comment noted.
124	Mike Warwick, Eliot NA	6/28 email	Want step-down height buffer applied to 1st Ave and residences at intersection of Rodney and Hancock (outside conservation district but with historic bldgs).	Urban Design - Lloyd		Comment noted. The N/NEQ Plan proposes reducing building heights from 100 to 75 feet north of Broadway to Schuyler in the vicinity of NE 1st. Rodney and Hancock streets are outside the study area, but zoning regulations could potentially be considered in the Comprehensive Plan process.
125	Mike Warwick, Eliot NA	6/28 email	Open to "height swaps" along Irvington strip to allow owners to grant "height rights" to developers in exchange for restrictions on the heights they could build.	Urban Design - Lloyd		Comment noted. The mechanics of the how height and FAR bonuses and transfers work in the Central City need to be addressed for the entire Central City. Transfers of height potential are not currently allowed, but could be considered.

#	Source	Date	Comment	Topic	Reference	Staff Response
126	Murray Koodish, NE Broadway BA	6/28 letter	Increase in density and traffic will put pressure on character of Broadway, need to keep neighborhood hub "feel" as Lloyd grows.	Urban Design - Lloyd		Comment noted. See responses to #56 and #63. Plan does not propose increasing density in the Lloyd area, which is determined largely by existing floor area ratio regulations. The plan does call for a different, more balanced mix of housing and jobs, which we expect may lower the amount of traffic compared to "no change."
127	Murray Koodish, NE Broadway BA	6/28 letter	Support height reduction from 75 to 45 feet on Irvington edge.	Urban Design - Lloyd	Lloyd UD10	Comment noted.
128	Paul Cathcart, PPS	6/28 letter	Support future evaluation of view corridors in light of redevelopment opportunities and height restrictions. This should occur concurrently with rezoning identified in RC2. Master plan process should allow heights greater than proposed 100 foot limit, especially if scenic overlay restriction remain.	Urban Design - Lloyd	UD4	Comment noted. A 150 foot maximum height is proposed for the main PPS Blanchard site, with 100 feet east of Wheeler. The Master Plan process has not been developed, however there is a description of what would be addressed for this site in Appendix B on p. 62 and 63 (RC2). Public views and height of proposed structures is included.
129	Sarah Huggins, PP&R	7/2 letter	Typo second line, "serve."	Urban Design - Lloyd	p. 40, 2nd para	Agree. **PROPOSED CHANGE: Typo corrected.**
130	Sarah Huggins, PP&R	7/2 letter	The strategy is for PP&R to develop a strategy/concept for open space and also implement and build it. Change timeline from 2-5 to 6-20.	Urban Design - Lloyd	UD5 p. 41	Comment noted. The action calls for developing a strategy to acquire, masterplan and improve open spaces within the district. It is assumed that the strategy would lay out a path for implementation, which would have its own timeline. The appropriate scope and timeline for this action continues to be under discussion with implementing bureaus.
131	Sarah Huggins, PP&R	7/2 letter	Change timeline for development/open space agreement on Thunderbird site from 2-5 to 6-20, should be same timeline as TR13 related to the feasibility of straightening the s-curve in the railline.	Urban Design - Lloyd	UD8 p. 42	Disagree. It is important not to miss an opportunity to acquire open space on this vacant riverfront site. Therefore, the timeframe to work with the property owner should remain in the near-term, recognizing that any agreement will require cooperation by the property owner. The timeline on TR13 related to straightening the s-curve recognizes that such a project, if feasible, would likely occur on a longer timeframe. **PROPOSED CHANGE: Revise implementing agencies for UD8 to BPS as lead and PPR as support (p.42), recognizing that there are multiple objectives for this site.**
132	Brad Perkins	7/17 letter	..."Consider rezoning and relocating the City maintenance yard along North Mississippi to Freemont."	Urban Design - Lower Albina	Page 53, UD6	Comment noted. There are no current plans to relocate City maintenance yards to another location.
133	Bob Sallinger, Audubon Society of Portland	6/28 email	Tree targets are too low. Plan should reference targets in the urban forestry plan for certain land uses as ultimate objectives for landscape in question and set interim targets for period covered by plan. Numbers in plan are too low, even for interim targets.	Environment		Agree. The tree target for the Lloyd District, where there is opportunity to add trees in streets, new parks, Sullivan's Gulch and in setback and plazas on private property, should be increased. **PROPOSED CHANGE: The Lloyd District target (p.44) is increased from 15% to 18%, consistent with the current canopy of Downtown.** No change is proposed for Lower Albina, where there are constraints related to industrial operations.The 2004 Urban Forestry Management Plan (UFMP) established citywide tree targets, including 15% on commercial/industrial land, 35% in ROWs and 33% citywide. These targets are citywide averages. The UFMP recognized there are some areas, such as the Central City, where this level of coverage may not be possible, and others may be able to achieve a higher coverage. The targets in the plan are consistent with those in the Portland Plan, which reaffirmed the citywide target of 33% and states that Central City and industrial areas will have between 10 and 15% canopy. These are preliminary targets and will be reviewed and possibly revised once all of the quadrant plans are complete. It may be possible to set interim targets as part of that process.

#	Source	Date	Comment	Topic	Reference	Staff Response
134	Bob Sallinger, Audubon Society of Portland	6/28 email	Document should encourage bird-friendly design, see new Bird Friendly Building Design Guidelines—reduce strikes and light pollution.	Environment		Agree. Incorporating bird-friendly building design will best be approached at a central city-wide scale through an update to the Central City Fundamental Design Guidelines, which will be a follow-up work program item to the Central City Plan update. However, the N/NE Quadrant Plan does address this issue as well. Encouraging habitat-friendly design, which incorporates bird-friendly design, is stated in the environment policies (see Lloyd Environment policy #2, p.43 and Lower Albina Environment policy #2, p.53). The description of what will be addressed as part of the update to the Lloyd District design guidelines also includes bird-friendly design, along with other "green" site and/or building elements (see appendix entry for Lloyd action UD6, p.70).
135	Bob Sallinger, Audubon Society of Portland	6/28 email	Include specific targets for ecoroofs and other green infrastructure from the watershed plan.	Environment		Agree. Tracking green infrastructure and impervious surface area is an important part of measuring overall watershed health. Tree canopy targets have been included in this plan to implement established citywide goals. Other targets related to impervious surface coverage and green infrastructure will be explored in the next phases of Central City 2035 and River Plan/Central Reach. The performance targets included in this plan are preliminary and will be reevaluated in the context of the whole Central City once additional quadrant plans have been completed. This will provide an opportunity to include additional targets that could apply to the whole Central City or at the district level.
136	Bob Sallinger, Audubon Society of Portland	6/28 email	Add strong language to protect undeveloped river banks and riparian buffers (although little here) and to restore developed banks during redevelopment, regardless of rank high, medium or low.	Environment		Comment noted. There are policies and actions included in the draft plan that speak to natural resource restoration along the riverbank, balanced with other objectives (see Environment policies and actions on p.43-45 for Lloyd and on p.53-54 for Lower Albina). These issues will be further addressed through the River Plan / Central Reach planning process.
137	BPS River Team	7/6 email	Environment is a good title for this section, encompassing a variety of issues.	Environment	Pages 43 and 53	Agree. N**ote: Environment actions in previous draft were numbered GC1, GC2 … They are now numbered EN1, EN2 …**
138	BPS River Team	7/6 email	a. Correct the spelling of Inventory in the map title. b. The NRI map is not readable in black & white. Taking out the aerial layer and increasing the resolution may help.	Environment	Page 72	Agree. **PROPOSED CHANGE: A revised map that is clear in grayscale inserted p.72.**
139	Cherri Warnke, PWB	7/9 email	Re: visible "green" features by encouraging larger tree canopy, not clear if this means encouraging planting of larger trees, or increasing the number of trees. PWB has been working with the City Forster to develop a workable guideline for planting trees adjacent to water mains, water services, fire hydrants and other water system facilities. The root system of larger trees will require them to be planted with a 10' setback from any water system facility. When developing implementation actions for the Lloyd District GC5, GC6, and GC7, and Lower Albina GC2, it would be beneficial to include PWB in the discussions	Environment		Agree. **PROPOSED CHANGE: Add The Portland Water Bureau (PWB) to list of implementers for actions involving street trees (Lloyd District EN5, EN6, and EN7, and Lower Albina EN2).**
140	Mary Vogel, PlanGreen	6/29 email	Support and expand on Bob Sallinger's comments. Add strong language to protect undeveloped river banks and restore developed banks—reference and utilize Willamette Riverbank Design Notebook.	Environment		Comment noted. See response to #136 regarding riverbank restoration. As part of the River Plan / Central Reach planning process design guidelines will be revised that will likely incorporate some of the ideas from the Willamette Riverbank Design Notebook.
141	Mary Vogel, PlanGreen	6/29 email	Include targets for ecoroofs and other green infrastructure. Ecoroofs, bioswales, green walls, etc. need to use native plant communities instead of invasives, which are still overused. Native species provide the base of the food chain.	Environment		Comment noted. See response to #135 regarding targets for green infrastructure. Also, the draft plan includes references in policies and actions that encourage the use of native vegetation (see Lloyd Environment policy #2, p.43 and appendix entry for Lloyd action UD6, p.70).

#	Source	Date	Comment	Topic	Reference	Staff Response
142	Mary Vogel, PlanGreen	6/29 email	Reference tree targets in the Urban Forestry Plan. More effort needed in planting native trees. Use technology to help with sidewalk uplift.	Environment		Comment noted. See responses to #133 and 141 regarding tree targets and native vegetation. Appropriate street tree species and opportunities to increase the use of native species is a technical issue that will need to be addressed by Urban Forestry.
143	Mary Vogel, PlanGreen	6/29 email	Encourage bird-friendly design utilizing Resource Guide for Bird-Friendly Building Design.	Environment		See response to comment #134.
144	Matt Arnold, BTA	6/28 SAC	The tree canopy target is too low; would like to see it increased. Those proposed don't line up with the 2004 Urban Forestry Plan.	Environment		See response to comment #133.
145	Matt Arnold, BTA	6/28 SAC	Would like to see impervious surface targets added.	Environment		See response to comment #135.
146	Amy Chomowicz, BES	7/17 memo	… Develop the district as a complete and sustainable community, that integrates nature into the built environment, and has ~~with~~ well-designed open space, streets...	Environment - Lloyd	Page 26, first paragraph	Disagree. The goal incorporates this idea through references to a complete and sustainable community, livable district, open space and green infrastructure.
147	Amy Chomowicz, BES	7/17 memo	4. Willamette River Resources. Protect and ... improve habitat functions and connectivity to meet Portland Watershed Management Plan goals and ESA requirements, while …	Environment - Lloyd	Page 44	Agree. There should be a general reference to watershed health goals. There are no applicable ESA requirements in this area. **PROPOSED CHANGE: Revise Policy 4 Willamette River Resources as follows: "Protect and enhance natural resources along the banks of the Willamette River to ~~prevent erosion and~~ improve habitat and watershed health ~~functions and connectivity~~, while also meeting Citywide goals..." (p.44)**
148	Amy Chomowicz, BES	7/17 memo	Fifteen percent seems low for a district that is embracing green features, tree canopy cover etc. Instead of, or in addition to, one overall canopy target I recommend including the following targets from the UFMP: 35% street tree canopy cover; 30% developed parks. Although the UFMP gives a citywide target of 15% for commercial, industrial, and institutional land uses, specific areas can have more canopy cover. Given the overall livability goals of the Lloyd District coupled with the potential for redevelopment, I recommend a higher canopy target.	Environment - Lloyd	Page 44, targets	See response to comment #133.
149	Amy Chomowicz, BES	7/17 memo	GC5: Design and implement a water quality/tree canopy corridor ~~project~~ strategy within the Lloyd District.	Environment - Lloyd	Lloyd (GC5) EN5, p. 45	Agree. Also, see response to comment #11 regarding possibly designating additional streets. **PROPOSED CHANGE: Revise action EN5 (previously GC5) as follows: "Design and implement a water quality/tree canopy corridor ~~project within~~ strategy for the Lloyd District. The strategy should evaluate streets initially identified in the concept for feasibility and potentially add additional streets where opportunities are identified." (p.45)**
150	Amy Chomowicz, BES	7/17 memo	GC6: Develop and implement a ~~street~~ tree planting strategy for the Lloyd District which includes identifying potential plantable spaces and could result in an increase in the overall canopy target. Recommend this action be more broad than street trees...could result in canopy cover greater than 15%.	Environment - Lloyd	Lloyd (GC6) EN6, p. 45	Agree. **PROPOSED CHANGE: Revise action EN6 (previously GC6) as follows: "Develop and implement a ~~street~~ tree planting strategy for the Lloyd District. The strategy should identify available planting locations including streets and underutilized space within public right-of-way and could result in finetuning the tree canopy target for the district." Delete action EN7 which will be addressed by expanding EN6 to address tree planting in general. Adding sustainable stormwater facilities will be addressed through EN5. (p.45)**
151	Amy Chomowicz, BES	7/17 memo	GC8: Develop a management strategy addressing ... environmental education, special habitat area, and maintenance.	Environment - Lloyd	Lloyd (GC8) EN8, p. 45	Agree. **PROPOSED CHANGE: Text added as suggested.**

#	Source	Date	Comment	Topic	Reference	Staff Response
152	Amy Chomowicz, BES	7/17 memo	Add new action: GC 13: Scope a pilot project to develop and evaluate regulatory tools that provide incentives for green infrastructure deep energy retrofits of existing buildings, high performance new construction, and connections to district heating and cooling systems. Seattle's "Green Factor" is an example of regulations geared toward green infrastructure.	Environment - Lloyd	Lloyd Env Actions	Agree. The requested action is already included as EN3 (previously GC3). It will be modified to refer to the Seattle example as requested. **PROPOSED CHANGE: Add "Seattle's "Green Factor" is an example of flexible regulations geared toward green infrastructure." to EN3 on p.45.**
153	Amy Chomowicz, BES	7/17 memo	Revise Lloyd action GC2 regarding the update to the Willamette Greenway Plan as follows: "Enhancement and restoration opportunities could include creation of shallow water areas near the I-5/I-84 interchange and the riverbank below the "Thunderbird" site, addition of large wood along the river margins to add complexity and cover for juvenile salmonids, bio-engineering of existing rip-rap and revetments to add native plantings for cover and food sources for aquatic and terrestrial wildlife."	Environment - Lloyd	Lloyd Env Actions	Agree. However, this is too much detail for the action table. **PROPOSED CHANGE: A new appendix entry describing the River Plan process and possible riverbank restoration opportunities has been added for Lloyd action EN2 (previously GC2), see p.73.**
154	Amy Chomowicz, BES	7/17 memo	Why is the canopy target 10% for Albina? According to the UFMP, the industrial canopy target is 15%	Environment - Lloyd	Page 54 Tree Canopy	See response to comment #133.
155	Brad Perkins	7/17 letter	...to incorporate a recreation trail "and mixed use development at the bridgeheads."	Environment - Lloyd	Page 44, #5 Sullivan's Gulch	Disagree. Ploicy #5 is to recognize the natural resources within Sullivan's Gulch. Additional evaluation will be conducted as part of the Central City wide process to determine the level of protection needed for those resources (see Lloyd action EN1, previously GC1). Existing and proposed mixed use zoning within the area provides direction about the type of development that is intended. In particular, North Banfield action NB1 recommends a change to mixed use zoning with a design overlay. The enivornmental conservation (c) overlay zone is retained on the site, but could be modified as part of the future process to evaluate natural resources.
156	Owen Ronchelli, Lloyd TMA	7/9 email	Plant or preserve trees, where appropriate, within the Lloyd District sufficient to achieve 15 percent canopy coverage once the trees mature.	Environment - Lloyd	Tree target, p.44	Agree. **PROPOSED CHANGE: Text revised as suggested.**
157	Sarah Huggins, PP&R	7/2 letter	BPS a better lead for the Lloyd District street tree planting strategy, with PP&R UF assistance.	Environment - Lloyd	(GC6) EN6, p. 45	Agree. Based on other comments this action is being revised to be a broader tree planting strategy with BES and BPS as joint lead. See response to comment #150.
158	Cherri Warnke, PWB	7/9 email	PWB's Resource Protection has the BIG program (Business, Industry and Government) which provides "Water Efficiency" information and evaluation services to both commercial and residential customers. I'm not sure if BPS currently links up industrial businesses with the BIG program, but PWB's BIG program can be a resource to BPS in carrying out this action item.	Environment - Lower Albina	Lower Albina (GC4) EN4, p.54	Comment noted. We will provide this information to the BPS Sustainability at Work team.
159	Tracy Whalen	6/28 SAC	The Lower Albina tree canopy target seems too high.	Environment - Lower Albina		Disagree. See response to comment #133 regarding tree canopy targets. All part of the City can and should play a role in providing tree canopy. The lower target for Lower Albina recognizes that it is an urban industrial area and has contraints related to that. The City's Grey to Green program has had recent successful tree planting efforts in other industrial areas, including the Central Eastside and Northwest, where they teamed up with property owners to identify locations where trees could be planted that don't conflict with industrial businesses.



#	Source	Date	Comment	Topic	Reference	Staff Response
160	Brad Perkins	7/17 letter	Complete the Sullivan's Gulch Trail Plan (Remove "Concept" ("X"in CC2035 2014)	Study Areas	Page 56, NB3	Disagree. Concept plan to be adopted in 2014, but implementation will take longer.
161	Cathy Galbraith, Bosco-Milligan Foundation	6/28 email	References to "several" and "a number of" structures in the Vancouver/Williams rezone area that are in the Cornerstones inventory should be amended to reflect that "every house on N Williams, Vancouver and Flint Avenues and N Page Street within the boundary … have significant associations."	Study Areas	pages 56, 82	Agree. **PROPOSED CHANGE: the language on page 56 and 82 has been revised to better reflect the strong concentration of culturally significant structures in the area.**
162	Paul Cathcart, PPS	6/28 letter	Support rezone from RH to EXd in Vancouver/Williams corridor, including Tubman School site.	Study Areas	VW1	Comment noted.
163	Brad Perkins	6/28 SAC	Needs to be more on implementation - what is going to make the vision happen. Important to have the "big boys" involved and continue to work on public-private partnerships.	General		Agree. New public-private partnerships will be critical for achieving many of the plan's elements. Key implementers and timelines are identified in the action charts.
164	Brad Perkins	6/28 SAC	Think about connecting housing with green corridors. Portland is ready for a new lifestyle that is more focused on bikes and less on cars.	General		Agree. The plan's concept for a residential emphasis in the Central Lloyd area will be organized around new parks and green connections. Many of the new flexible streets will have green elements and will connect new and existing housing.
165	Katy Langstaff and Michael Mehaffy, Sustasis Foundation	6/22 letter	The Willamette River is Portland's greatest asset. Future planning decisions must work to increase the pedestrian access to the river and to bring lively commerce and play to this valuable resource.	General		Comment noted. The "Celebrate the Crossroads" urban design principle on page 15 targets improving east-west connections from the heart of the Lloyd District, across the barrier(s) presented by the freeways to the Willamette River, the adjacent bridges and the Westside of the Central City.
166	Owen Ronchelli, Lloyd TMA	7/9 email	'District Goals' (both Lloyd and Lower Albina) read like vision statement (aspirational in nature) rather than goals. In my mind goals are reached by attaining specified metrics or thresholds. The stated 'Target' under each list of policy statements are measurable 'Goals' and should be stated as such.	General		Comment noted. We have modeled the plan structure similar to that of the Central City Concept Plan policy framework that uses goals and policies. This is a valid point, but it would be difficult to change the overall plan structure at this stage.
167	Sarah Huggins, PP&R	7/2 letter	Highlight regional trails (Esplanade/Willamette Greenway, N Portland Greenway and Sullivan's Gulch) on all maps. They are shown on p. 21 but should differentiate between off-street trails and on-street open space connections	General	Maps, including page 21.	Comment noted. Future work will highlight distinctions between different connections. Implementation of quadrant concepts shown on pages 17 – 22 could require specific future updates and/or amendments to multiple existing sets of regulations, maps and guidelines described in district design guidelines, the Portland Zoning Code, or the Transportation System Plan, among others. (See action TR1 on page 50.)
168	Sarah Huggins, PP&R	7/2 letter	Its confusing when same action is listed multiple times in different areas with different numbers, e.g Sullivan's Gulch concept and NP Greenway study. Reference earlier action, not assign new number to same action.	General	Action charts	Comment noted. Because future readers may focus only on specific sections of the plan, staff believes that actions should be included wherever they are relevant, which may require some repetition, but will allow the sections to be complete when "standing alone."
169	Susan X	6/25 VM	Use empty buildings downtown so don't need to build-out elsewhere, like the Lloyd District proposal. New buildings should have thicker walls to protect from noise and smoke.	General		Comment noted. Growth projections indicate that significant new development will occur in the Central City by 2035 - far more than could be accommodated in existing buildings. Further development of the Central City will help reduce pressure on urban expansion on the fringes of the region, reducing the overall urban footprint and helping preserve rural and natural areas. Construction requirements are governed by building codes and are outside the scope of this project.
170	Terry Parker	6/28 SAC testimony	Citizen process is broken. Motorists do not have representation on the SAC.	General		Comment noted. Several unsuccessful attempts were made to have a representative from AAA participate on the SAC. Freight interests were well represented on the SAC.

#	Source	Date	Comment	Topic	Reference	Staff Response
171	Wayne Kingsley	6/28 SAC	Many of the targets seem too aggressive and unrealistic.	General		Disagree. This is a long range plan that will direct growth for the next 25 years. While they may seen unrealistic under todays conditions, they provide a goal to work toward. The targets were developed using a number of sources including development capacity analysis, forecasts, other city adopted targets and modeling. It should also be noted that N/NE Quadrant targets are preliminary, pending completion of the rest of the quadrant plans. At that time, targets for the full Central City will be revisited and potentially recalibrated.
172	Brad Perkins	7/17 letter	...access and needs both locally and “regionally”. (instead of on the freeway system)	Other	Page 12, bullet two	Disagree. The project goals were adopted by the SAC in January 2011. They are no longer being revised.
173	Brad Perkins	7/17 letter	...for historic preservation and repurposing. “This idea should be weighed against the gained view opportunities if it was removed for a park.”	Other	Page 102, c	Disagree. Appendix E is a record of comments received by February 2011; it is no longer being revised.

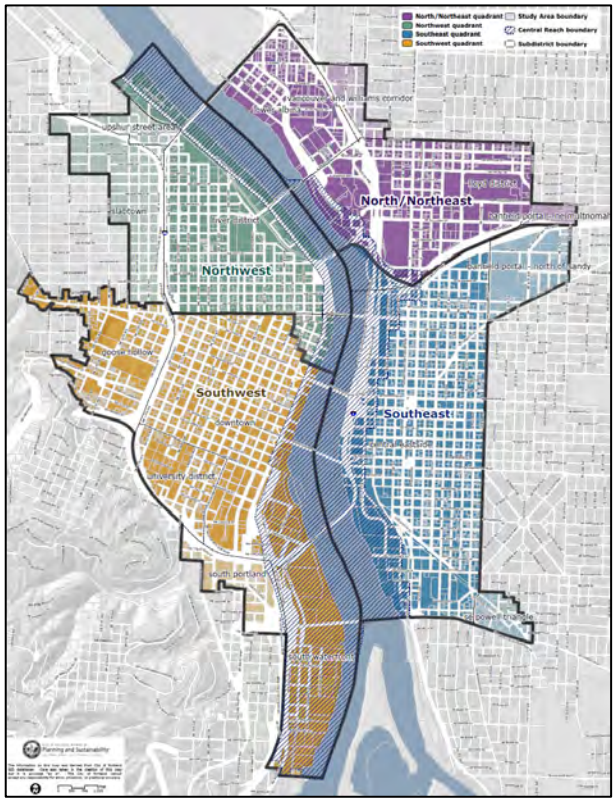
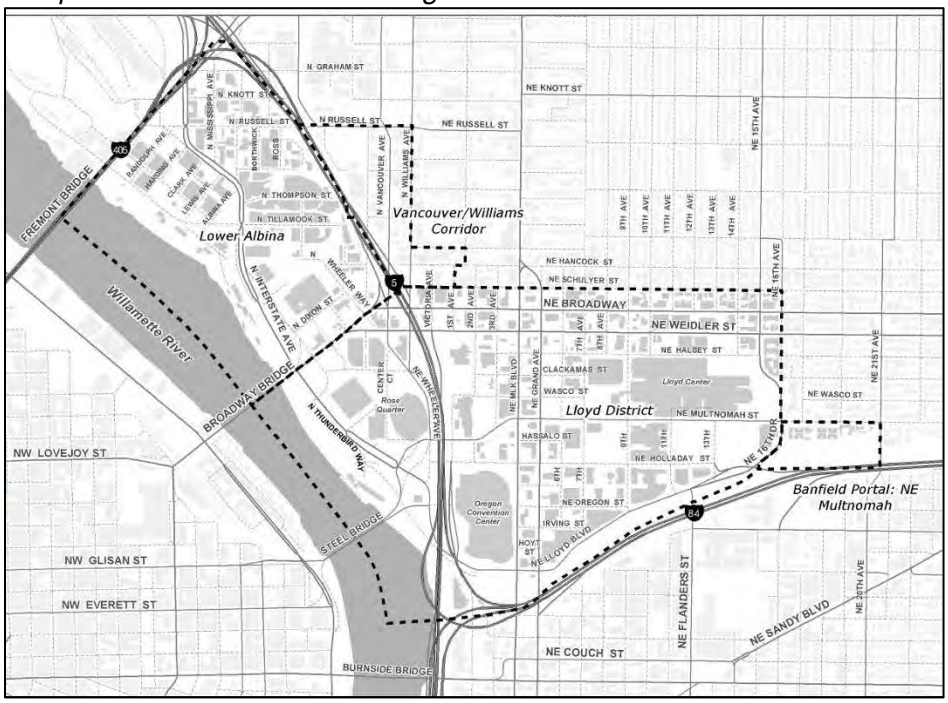
CHAPTER 1: INTRODUCTION



Purpose

The N/NE Quadrant Plan is one element of the Central City 2035 project (CC2035), an effort to update the 1988 Central City Plan. The vitality of the Central City is key to state, regional and City policies for growth management and economic development, and for addressing new issues and directives that have emerged since 1988, such as those related to sustainable development and climate change.

The CC2035 Plan will include new guiding policies, updated land use and urban design plans, and more detailed plans for specific Central City districts. The Plan will replace the 1988 Central City Plan as the primary guiding policy document for the Central City. The Central City 2035 plan will be part of the City's updated Comprehensive Plan and will implement the Portland Plan, the city's strategic plan, within the Central City.



The N/NE Quadrant Plan is the first of the more detailed district plans, addressing land use, urban design, transportation, public infrastructure and development entitlements in the Lloyd District and Lower Albina subdistricts of the Central City.

Map 1: Central City 2035 Plan Boundaries

The planning area also includes two study areas: the North Banfield Portland and the Vancouver Williams Corridor. These areas, which are outside of the Central City, were included in the plan boundary because of the potential for land use and transportation proposals in the quadrant to affect them and to address long-identified land use and zoning issues in these areas.

Map 2: N/NE Quadrant Planning Area

The N/NE Quadrant contains significant facilities and functions of state-wide and regional significance, including the industrial

working waterfront in Lower Albina and major event, office and retail facilities in the Lloyd District. However, this area as a whole has not fully realized economic development goals and targets related to jobs and housing set in the Central City Plan. Both the Lloyd District and Lower Albina have the potential to continue to grow and evolve as unique elements of a vital Central City.

A major transportation facility in the N/NE Quadrant is the I-5 Freeway. While the freeway provides regional access to Lloyd and Lower Albina and serves industrial uses and regional attractions well, the history of the construction of the Interstate Freeway System in Portland has been controversial, including impacts to neighborhoods, families, and in particular to the African-American community in Portland. Today, the freeway and Broadway/Weidler interchange are congested, with the highest crash rates in Oregon on the freeway and a high number of crashes, particularly involving pedestrians and bicyclists on surrounding local streets. The freeway corridor running through the district also acts as a barrier disconnecting the land use and communities east and west of the freeway. To address these issues, the City of Portland and Oregon Department of Transportation (ODOT) engaged in a joint effort in the N/NE Quadrant planning process to develop an I-5 Broadway/Weidler Interchange Plan concurrently with the N/NE Quadrant Plan. This interchange plan was intended to establish a new type of framework that integrates the high-density, pedestrian emphasis for the Broadway/Weidler corridor with an urban freeway interchange.

Planning Process

The N/NE Quadrant Plan was developed through a unique collaborative partnership between the City of Portland and the Oregon Department of Transportation to address land use, urban design and local transportation issues for the quadrant at the same time as major transportation issues related to the I-5 freeway. Over a nearly two-year period, a diverse, 30-member Stakeholder Advisory Committee (SAC) worked with interested community members and staff to develop this plan and the recommended concept for I-5 Broadway/Weidler Interchange Improvements. The SAC met 19 times and held 13 subcommittee meetings. Several public events were held at key milestones in the process to encourage broad participation and input. The project team also attended regular meetings of community groups such as neighborhood and business associations, organized meetings with stakeholders and conducted an on-line survey to obtain feedback on plan proposals. The resulting products of this effort represent a careful balance between land use and transportation improvements and have received broad support from the SAC and community at large.

Additional information about the planning process is contained in Chapter 2: *Developing the Plan* and Appendix F: *Public Involvement Summary*.

Background

The N/NE Quadrant is made-up of two Central City districts, Lower Albina and the Lloyd District. Each is a very distinct place, with different urban characters, development patterns, and land uses. Lower Albina is primarily an industrial district, with a working harbor area, an important living-wage job base and a small mixed-use historic area along N Russell Street. The Lloyd District is characterized by a number of large region-serving facilities, including the Rose Garden, Oregon Convention Center and the Lloyd Center shopping mall, as well as a concentration of large office buildings and neighborhood serving retail on the eastern portion of NE Broadway.

History

For centuries prior to first contact with Europeans and Americans, Chinookan-speaking peoples, including the Clackamas and the Multnomah, inhabited the lower Columbia basin in the vicinity of the area now known as Portland. Chinookan villages were located on both sides of the Columbia River near the mouth of the Willamette, with additional villages, resource areas, and trade routes located along the lower Willamette. By the time Portland was founded in the mid-1840s, disease had reduced the area's indigenous population by as much as 90 percent. By the 1850s, encroachment by white settlers and forced removal to reservations further devastated indigenous societies and few Native Americans remained in the Portland area.

The Lloyd District and Lower Albina share aspects of their histories as east side communities that grew-up near, but not in, the City of Portland. Growth on the east side was initially slower than on the west, as development was hampered by swamps and sloughs along the waterfront. Eventually, two communities with separate and distinct identities grew up, Albina and East Portland, each of which grew over time and became incorporated cities in their own right.

From the 1850s to the 1870s, East Portland, covering the southern portions of the Lloyd District, was largely rural, with timbered areas, giving way to small farms and residential growth over time. It was connected to Portland with several ferries. By the early 1880s it had a strong commercial spine running along Grand Avenue and a growing trade-oriented working waterfront.

To the north of East Portland and covering a good part of the N/NE Quadrant was Albina. First platted in 1873, Albina grew up with two distinct sections, upper and lower. Lower Albina was a working industrial and waterfront area, which really took-off with the coming of the Union Pacific Railroad and the big terminal yards in the 1880s. In its early years Albina was populated by a large number of first and second generation European immigrants. The White Eagle Saloon, opened by Polish immigrants in 1905, is a reminder of the area's ethnic history. In 1891, the cities of Albina, East Portland and Portland consolidated into a new unified City of Portland.

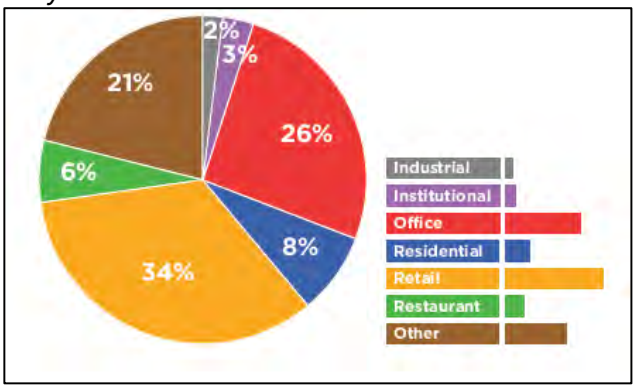
By the turn of the century, most of the inner east side was platted, and rapidly growing in population and economic activity. In 1910, the total population on the eastside reached 120,000. Economic growth was fueled by maritime activity and the confluence of five rail lines. Residential development was aided by connections to the west side via multiple bridges and a growing streetcar network. The first bridge in the N/NE Quadrant itself was the first Steel Bridge in 1888, located about 3 blocks north of the current Steel Bridge, which was completed in 1912. Both carried freight rail and street cars that served East Portland and Albina. The Broadway Bridge was completed in 1912, it too carried a streetcar line.

The black population on the east side had steadily increased in the first part of the 20th century, especially after 1919 when organized residential segregation was instituted by Portland real estate

agents, and Albina became one of the few areas in the city where African Americans could readily obtain housing. World War II drew thousands of African Americans to Portland to work in the ship yards. Following the war there was a large housing shortage, and the situation was much worse for African-Americans, whose housing options were limited. The situation reached crisis levels after the Vanport flood displaced 17,000 people in 1948. After the flood many African Americans moved to Albina.

The heart of mid-century African-American Albina stretched from the area where the Coliseum is now to north of Russell Street, with N Williams Avenue serving as a commercial, institutional and social spine for the community. One of Portland's hottest jazz clubs in the 1940s, the Dude Ranch, was located in the area. The building is the recently rehabilitated Leftbank Building, which is one of the few surviving buildings of the southern Albina African-American neighborhood. Another significant surviving structure is the Mount Olivet Baptist Church, located at 1st and Schuyler, which served as an important gathering place for the African-American community.

While the industrial character of Lower Albina has remained relatively stable, the Lloyd District area changed dramatically in the last half century, its form and character shaped by several major public infrastructure projects and large public and private developments. Beginning in the 1950s and continuing throughout the late twentieth century, major freeway projects, including I-84 (1965) and I-5 (1966), and large developments such as the Veterans Memorial Coliseum (1960) and the Lloyd Center (1960), resulting from Ralph Lloyd's grand vision for the area, re-made the fabric of the area. These and other projects entailed the demolition of large swaths of housing and small-scale commercial buildings, disproportionately impacting Portland's African-American community. The Coliseum project entailed the demolition of 476 housing units, half of which were inhabited by African-Americans, and dozens of businesses, essentially razing the southern anchor of a vital African-American neighborhood.



It should also be noted that, over time, development completely changed the physical landscape and hydrology of the area. The shoreline along the Willamette River was filled. Small streams were filled or put into pipes, and vegetation has been removed and replaced with buildings and paved surfaces.

Additional information about the history of the N/NE Quadrant is contained in Appendix D: *History*.

Existing Conditions

Lloyd District

Lloyd District Land Uses

The Lloyd District today is predominantly a commercial area, with 26% of the area in office use, 16% in retail/major event entertainment and 14% in retail/shopping. Hotels make up about 10% and residential uses 8%. Another 10% is in parking structures (excluding surface parking). Retail activity is mainly focused around three areas, the Rose Quarter, the Lloyd Center area and the Broadway/Weidler couplet. Offices are concentrated in the southern and central portions of the Lloyd District. The most significant public open space is four-acre Holladay Park, south of the Lloyd Center.

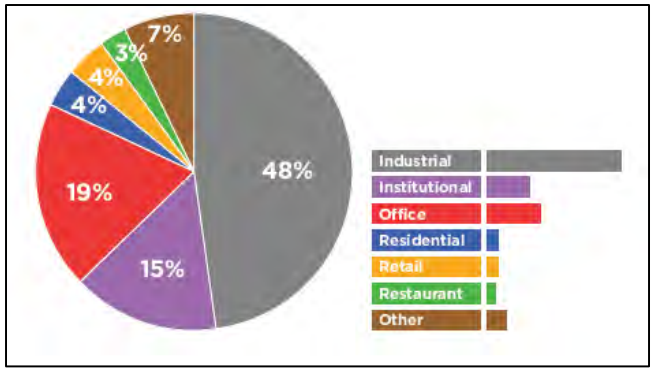
The Lloyd District had 70 acres of redevelopable land identified in a 2007 study of vacant and underutilized land in the Central City. Those 70 acres have enough development potential under current entitlements to nearly triple the amount of built space in the district.

The district was estimated to have about 16,800 jobs in 2010, accounting for approximately 14% of the total in the Central City. Some of the biggest employment sectors in 2006 were: Services (30%); Retail, Arts, and Accommodation (30%); and Public Sector (12%).

In terms of residential population, the Lloyd District is one of the smaller districts in Central City. The 2010 Census recorded approximately 1,500 residents, making up less than five percent of the Central City's population. The district contains approximately 1,000 housing units. A 2008 housing inventory found that 87% of the housing in the Lloyd District was rental, with an average rent per square foot of $1.09, and a majority of rental units falling within the 81–120 percent Median Family Income (MFI) bracket, meaning they are moderately affordable.

Table 1: N/NE Quadrant Population, Housing and Employment, 2010

	Lloyd District	% of CC	Lower Albina	% of CC	Central City
Population	1,535	4.7%	139	0.4%	32,362
Housing Units	1,056	4.7%	88	0.4%	22,653
Jobs	16,799	13.6%	3,379	2.7%	123,565



Zoning is very flexible in most of the Lloyd District. The Central Commercial (CX) zone is a high-density, mixed use zone covering 87% of area. It allows a range of uses such as office, retail, institutional, and residential. Related development standards such as maximum height and floor area ratio (FAR) are generous, resulting in development entitlements comparable to those in the downtown core. Roughly five blocks of Central Residential (RX) zoning is located in the center of the district. An area of General Industrial 1 (IG1) is located near the river, at the site of the Louis Dreyfus grain elevators.

The Lloyd District has well-developed transportation infrastructure. It is served by two interstate freeways, four MAX light rail lines, the Portland Streetcar and eight bus lines. Some of the most heavily-trafficked auto streets include two major couplets: Broadway-Weidler and MLK-Grand. The abundant parking available in the Lloyd District is a highly visible characteristic. There are roughly 23,000 parking spaces, with roughly 21,000 spaces in surface lots or multi-story structures. The Lloyd District serves as a major conduit for bicycle routes to and from North and Northeast Portland, particularly the Broadway-Weidler and Vancouver-Williams couplets. The Eastbank Esplanade, a popular route for commuting and recreational cyclists, connects the District to Downtown and the Central Eastside.

Lower Albina

Today, Lower Albina remains primarily an industrial and employment district, with nearly half of its area devoted to industrial land uses and another 35% in office or institutional uses. In 2010 there were approximately 3,400 jobs in the district. Some of the biggest employment sectors in 2006 were: Education and Health (52%, primarily due to the Portland Public Schools Blanchard facility); Transportation, Warehousing, and Wholesale (14%); and Manufacturing (13%).

Lower Albina Land Uses

Lower Albina has a very low resident population, with 139 residents in 2010, making up less than one percent of the Central City population. It contains 88 housing units, of which nearly all are rental units. Most of the housing is in the small mixed-use area in the vicinity of the historic Russell Street Conservation District, a concentration of historic structures, several of which have been rehabilitated in the last decade.

There is no public open space in the district, however Lillis Albina park is just outside of the district on the east side of the I-5 freeway.

The industrial character and low population of Lower Albina is a reflection of its zoning pattern; 76% of the district is zoned General Industrial 1 (IG1) and 16% is Heavy Industrial (IH). Both zones strictly limit non-industrial uses and generally prohibit residential development. Mixed-use zones total only a few acres each: Central Employment (EX) along Russell Street, accounts for 4% of the district, and Central Commercial (CX) makes up 3%, concentrated at the southern boundary of the subdistrict adjacent to the Rose Quarter.

Freight movement by trucks and trains is an important part of the economic well being of Lower Albina. The access route to I-5 North is N Interstate Avenue to the N Going Street interchange. The access to I-5 South and I-84 is NE Broadway to the Wheeler on-ramp. Interstate Avenue is the major north/south arterial in Lower Albina and is used for automobiles, trucks, light rail, transit, bicycles, and pedestrians. Russell Street is the main east-west connection. The nearby Union Pacific rail yard is classified as a Freight District.

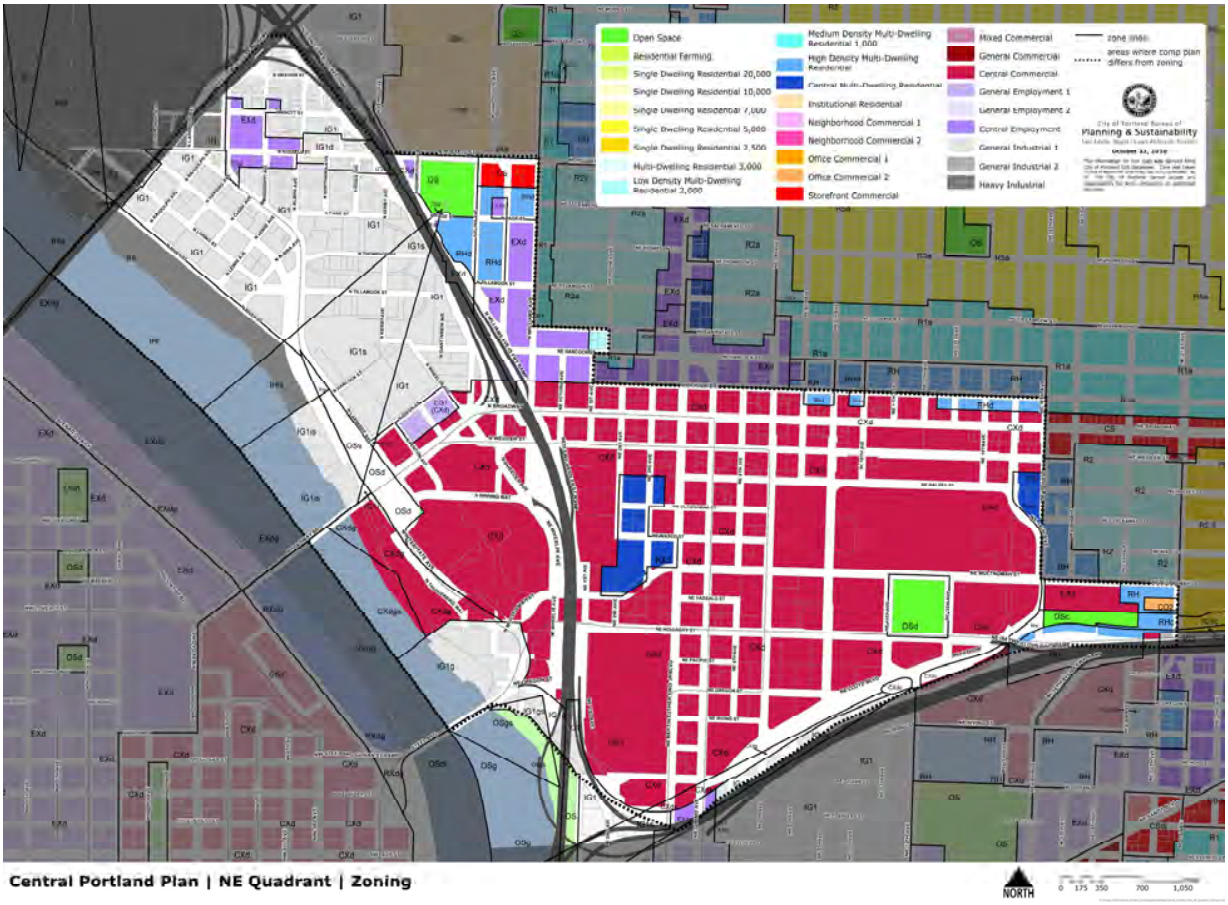
Previous Planning

Lower Albina

Planning efforts from the last few decades in Lower Albina have focused on retaining and enhancing the industrial and employment functions of the district. Both the 1988 Central City Plan and the 1993 Albina Community and Eliot Neighborhood plans called for ongoing support of the district's industrial activities and freight movement, while preserving the mix of uses and historic character of the Russell Street area and seeking better connections to the Willamette River. More recently, the River Plan/North Reach planning process reconfirmed the value of the industrial development and operations in Lower Albina.

Lloyd District

The Lloyd District has been the focus of a number of planning efforts in the past few decades, many seeking to build on the district's existing assets, such as its regional transportation connections and concentration of regionally significant event facilities and services. One of the key intentions of the 1988 Central City Plan was to connect the Lloyd District with the Downtown core, creating a continuous swath of high-density commercial development and downtown activity. Other goals called for improving the pedestrian environment, reinforcing the Lloyd Center as the eastern anchor of Central City retail, and enhancing major focal points such as the Convention Center and the Memorial Coliseum.



More recent efforts such as the Portland Development Commission's Lloyd District Development Strategy (2001) and Lloyd District Housing Strategy (2002) focused on increasing the amount of high-density housing. The 2006 Development Vision for the Oregon Convention Center described an vibrant 24-hour entertainment district, with new hotels, housing developments, entertainment and retail venues in the sixteen block area adjacent to the Convention Center.

The Lloyd District has been identified as an “EcoDistrict”, which is reflected in more recent planning efforts and this plan. It was first envisioned as a “green district” in the 2004 Lloyd Crossing study, that envisioned a new urban district that would maximize development potential while achieving environmental goals such as carbon neutrality, habitat restoration and reliance on solar energy. A formal Lloyd EcoDistrict partnership was initiated in 2011 to implement projects that accelerate sustainable development on a district-scale.

While some progress has been made towards achieving the goals of previous plans, the Lloyd District still contains an enormous amount of development potential and unique opportunities for place-making. As the district redevelops, there will also be opportunities to integrate nature into a densely developed urban area and to become a model of urban sustainable development.

Additional information on existing conditions and previous planning, including information on the two study areas included the N/NE Quadrant planning area, is contained in the *Central City 2035 Subdistrict Profiles* report.

Map 3: N/NE Quadrant Zoning

Relationship to the Central City 2035 Concept Plan and Portland Plan

CC2035 Concept

The Central City 2035 Concept is a 25-year concept plan that will guide the updates to the 1988 Central City Plan. It defines the overall direction for the Central City as a "Center for Innovation and Exchange" within the context of city-wide goals established through the Portland Plan and Comprehensive Plan. The Concept recognizes the Central City as the center of the economy for the Portland metropolitan region and the Columbia River Basin. It is also the regional center for arts and cultural activities, retail, entertainment, tourism, higher education and lifelong learning, urban living and the region's multimodal transportation network.

The density of uses, activities and people has established an environment of excitement, interest, vibrancy and synergy. It encourages a level of interaction between people, businesses and institutions that can not be generated elsewhere in the state. The positive impact this environment has on economic development, creativity, civic engagement, and the livability of the region as a whole is significant.
Within the N/NE Quadrant, the Lloyd District and Lower Albina are important components of the Central City and will be critical to meeting the strategic directions set by the Concept. To this end, the N/NE Quadrant Plan includes detailed goals, policies, and action item updates for these two districts. Key among these goals is to capitalize on the Lloyd District's development potential, transportation investments and EcoDistrict designation to create a vibrant, sustainable and mixed-use district that becomes an extension of downtown and strong eastside urban center. Lower Albina will continue to be home to an important close-in industrial job base and small business incubators, with an eclectic mix of uses that contributes to the diversity and character of the Central City. Future quadrant plans, for the SW, NW and Central Eastside, will similarly help implement the Central City 2035 Concept throughout the Central City.

Portland Plan and the Comprehensive Plan

Portland's Comprehensive Plan is currently being updated based on the guidance provided by the Portland Plan, a strategic plan for the City of Portland adopted by Council in 2012. It sets broad goals for improving equity, prosperity, educational outcomes and human and environmental health in Portland. The Comprehensive Plan will implement the Portland Plan policies that relate to state-mandated long-range plan requirements that guide land use, transportation, conservation, and capital projects. The Portland Plan places key emphasis on achieving success citywide in four key areas: a framework for equity, thriving educated youth, economic prosperity and affordability, and a healthy connected city. While at its core it is a land use planning policy document, the N/NE Quadrant Plan is relevant to the Portland Plan's equity focus and integrated strategies in a variety of ways as outlined below.

Framework for Equity

Broad outreach and engagement has been a major focus of the N/NE Quadrant Plan process. A diverse 30-member Stakeholder Advisory Committee (SAC) advised staff throughout the development of both the Quadrant Plan and the I-5 Broadway/Weidler Interchange Improvement planning process. This committee included representatives from equity and health-oriented organizations, businesses, property owners, transportation advocates, adjacent neighborhood organizations and other perspectives. In addition, a range of public events and outreach activities including open houses, design charrettes, and surveys provided opportunities for input from a broad constituency. In addition

to SAC meetings and larger public events, staff attended more than 75 individual meetings on the project with area groups and interested individuals.

The goals, policies and actions included in the N/NE Quadrant Plan are in many ways intended to help repair a neighborhood that has been done significant harm by large public projects of the past. Neighborhood connectivity, housing production and preservation of historic and cultural resources are key areas in which the plan attempts to correct damage done in the past. Policies are included that attempt to discourage displacement, while allowing for significant new development. Limited change is recommended in Lower Albina where business displacement risk is high. However, in the Lloyd District, which has few residents today and significant vacant and underutilized lands, the plan suggests a high level of change. This approach is intended to accommodate substantial new development will access to transit, jobs and other Central City amenities with very limited displacement. However, it will be important to monitor potential impacts on adjacent areas that could be at risk for displacement, such as the Eliot neighborhood.

Thriving Educated Youth

Centrally located and well-served by all transportation modes, the Central City and N/NE Quadrant are highly accessible to youth from around the region. The N/NE Quadrant Plan emphasizes job growth and residential development, both of which could increase youth access to these important opportunities. Further, in the Lloyd District the plan seeks to provide new open space and outdoor recreation opportunities that are important to support families and youth activities. The plan also recognizes and supports existing major regional facilities such as the Lloyd Center Mall and the Rose Quarter, which are important recreational and social facilities for youth providing critical opportunities for community interaction. The plan seeks to balance the episodic nature of these activity centers and improve neighborhood vitality, diversity and safety through encouraging mixed-use, urban development.

Economic Prosperity and Affordability

The N/NE Quadrant Plan places significant emphasis on capacity for job development – in both Lower Albina and the Lloyd District. Together the districts provide opportunities for business growth in a wide range of sectors from industrial and manufacturing to retail and professional services. In addition, the transportation policies and actions, including the recommended I-5 Broadway/Weidler Interchange Improvements developed in conjunction with this plan, recognize the importance of a robust and diverse transportation system to serve this crucial employment district in the future. The plan seeks to provide a full range of housing options and affordability levels in the Lloyd District and establishes ambitious goals for housing production, including affordable units. However, new resources and tools will need to be identified in order to achieve affordability goals.

Healthy Connected City

Few other areas in the region share the Lloyd District's combination of transportation system access and degree of development opportunity. The Quadrant Plan envisions a fully-developed, cutting-edge, sustainable, livable, mixed-use community of some 30,000 jobs and perhaps 10,000 residents in the Lloyd District. It lays out a concept for open space, local pedestrian connections and regional trails, as well as tree canopy and green infrastructure enhancements, to improve watershed function and habitat vitality and provide a healthier urban environment for people and wildlife.

CHAPTER 2: DEVELOPING THE PLAN

Community involvement was a critical part of the development of the N/NE Quadrant Plan. Extensive work was completed in 2010 and 2011, including SAC meetings, stakeholder meetings, community walks, charrettes and open houses resulting in four products that guided development of the district concept diagrams, goals, policies and implementation actions in Chapter 3 that will become part of the updated Central City Plan. This chapter describes these products, which include:

Project Goals: Overall project goals developed and adopted by the Stakeholder Advisory Committee to guide development of the plan. The project goals are outlined on page 12.

Urban Design Principles: Five organizing principles for quadrant-wide urban form that informed the development of concept alternatives and the eventual proposed concept for the N/NE Quadrant. These principles, listed below, are described in detail beginning on page 13.

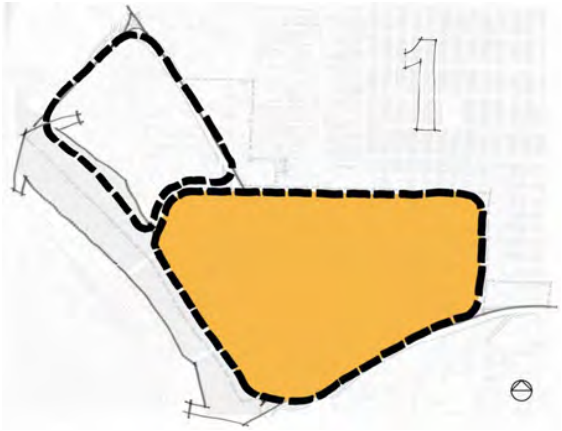
- Two distinct places
- Fill in the central core
- Strengthen connectivity
- Take advantage of urban form
- Celebrate the crossroads

Proposed Concept: A series of five concept diagrams for the quadrant that illustrate the preferred future direction for land use, building height, street and development character, open space and green systems. The proposed concept formed the basis for the district concept diagrams and detailed policies and actions in Chapter 4. The proposed concept is described in detail with accompanying diagrams beginning on page 16.

Integration with the I-5 Freeway Project: A description of how improvements proposed for the I-5 Broadway/Weidler Interchange can support the growth and development of the local area envisioned in the proposed concept. Integration with the freeway project is described in detail on page 23.

Project Goals

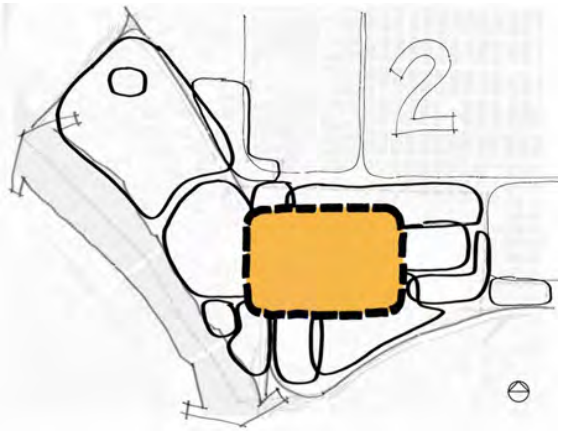
The following are the overall project goals were developed and adopted by the Stakeholder Advisory Committee (SAC) in January 2011. The goals guided development of the plan and provided general criteria for periodic evaluation of draft concepts, policies and action items.



> *"This planning effort will result in integrated land use, urban design, and transportation strategies, policies and plans for the N/NE Quadrant and the I-5 Broadway/Weidler interchange that balance, complement, enhance, protect, respect, revitalize, support, and sustain economic, environmental, and social interests. The implementable plans will be consistent with the overall goals and policies of the city, region, and state.*
>
> *Our recommendations will be guided by our desire for:*
>
> - *A diverse mix of commercial, cultural, entertainment, industrial, recreational, and residential uses, including affordable housing;*
> - *A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system;*
> - *Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages;*
> - *Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment;*
> - *Equitable access to community amenities and economic opportunities;*
> - *Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods;*
> - *Protection and enhancement of the cultural heritage of the area and its sub-districts; and*
> - *Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses."*

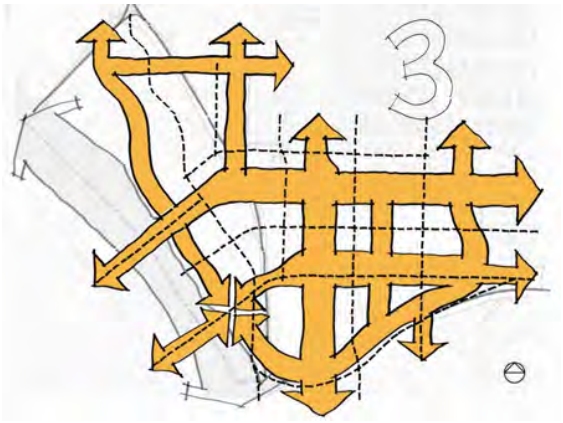
Urban Design Principles

In Spring 2011, the project team developed concept alternatives for the quadrant that were used to illustrate choices and solicit input from the SAC and public. One of the resulting products of this input were the urban design principles described below, which established organizing principles and big picture ideas regarding the quadrant-wide urban form.



Two Distinct Places: The N/NE Quadrant study area includes two distinctly different areas, headed in different directions.

Lower Albina is an active industrial and employment district not anticipated to dramatically change in its form, function or character between now and 2035. Incremental infill development in and around Russell Street is expected to continue along with gradual growth of the district's industrial and commercial businesses.



The second area is the Lloyd District, including the Rose Quarter, an area with long-held expectations for considerable redevelopment and change. Around its edges, the Lloyd District has seen slow-paced change over the past decades, including expansion of the Rose Quarter/Oregon Convention Center, new mixed use residential buildings along the eastern Broadway/Weidler corridor, and a steady increase in new office buildings in the office core area along NE Holladay. Notably still missing from the Lloyd is a critical mass of high-density residential development, while significant new residential communities rapidly emerged over the last two decades in other areas of the Central City.

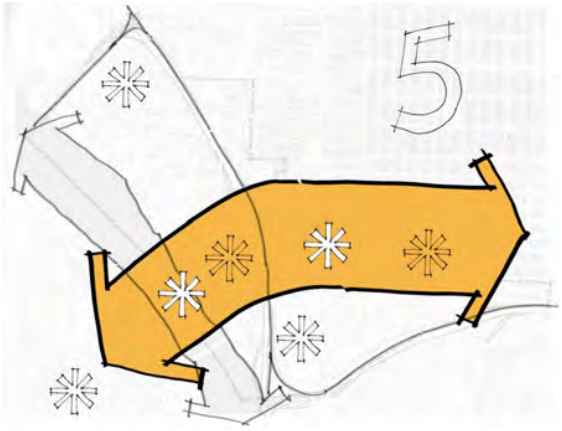
Fill in the Central Core: Physical transformation of the landscape is highest in this area.

For the success of the quadrant and specifically the Lloyd District, the "Central Core" area should transform into a high-density, high-amenity urban place that features a mix of residential and commercial/ employment uses organized around a new, signature public open space system. Currently this area is notable for its lack of a defined identity and sense of place, somewhat different from the other areas surrounding it. New development in the Central Core has the opportunity to help craft a new, marketable image or brand for the Lloyd District. The new streetcar alignment along 7th Avenue could represent a new, transit and pedestrian-oriented focal point, providing a human-scaled, storefront retail center for the Central Core area.

Strengthen Connectivity: Strengthen connectivity to and through the quadrant area.

The N/NE Quadrant enjoys good regional auto and transit connections for its residents, workers and visitors. However, the two freeways – I-5 and 84 – while providing vital regional access to and from the quadrant, create challenges to local connectivity, both within the quadrant area and to adjacent districts. The Broadway/Weidler, MLK/Grand and Vancouver/Williams corridors all serve the quadrant area and offer access to different parts of the Central City and inner neighborhoods, but feature few distinguishing qualities, and in most cases act as boundaries or edges, rather than focal points or centers. The quadrant also features an expanding set of transit corridors, bicycle facilities and some discontinuous segments of a flexible pathway system through and among the larger blocks.

Some of the biggest streets or corridors will be enhanced and designed to reflect their "civic" roles, becoming focal points for development and urban, active places by both day and night. Other streets or corridors could take on more of a "boulevard" function, having less adjacent storefront retail activity but more landscape plantings and a much stronger tree canopy presence. In-between the Quadrant's busy streets, the large blocks and quiet street in the quadrant create the potential for a continuous system of quieter pedestrian and bicycle-oriented streets and sometimes public, sometimes private pathways that when completed could provide a unique district amenity in Portland.



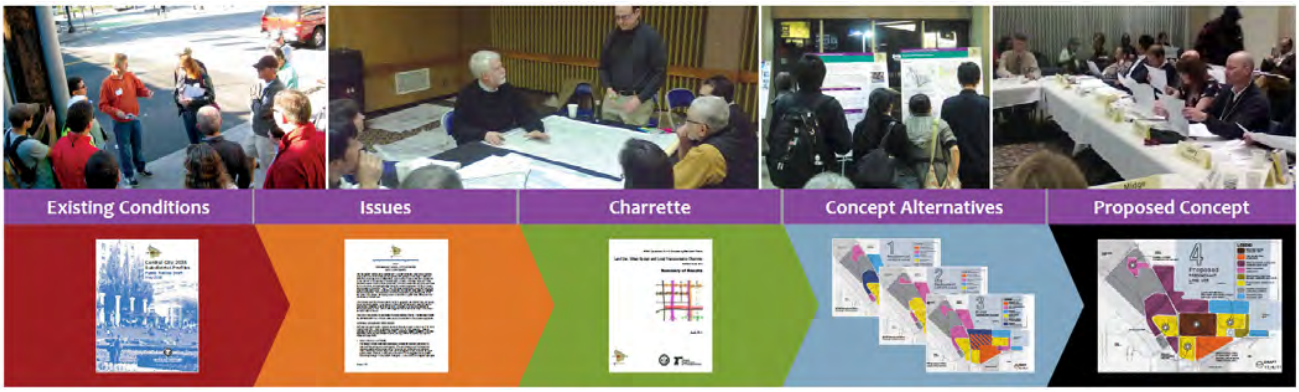
Take Advantage of Urban Form: The different urban form, pattern and character of the area present a unique alternative for Central City redevelopment.

The larger scale of blocks and buildings in the quadrant, coupled with significant development entitlements present special opportunities not available everywhere in the Central City. The Lloyd District offers many large blocks that present an alternative development platform to the prevalent small block pattern of the rest of the Central City. Larger office/employment (or other) businesses and uses that require specialized connections between multiple buildings, need larger floorplates, or prefer campus-like arrangements could take advantage of large blocks in the district.

The larger block pattern also offers new options for public spaces and overall quadrant connectivity. Today, there are several pedestrian and bicycle-oriented pathway segments, and current regulations require new public connections through the larger blocks. New development, especially on the large blocks, could add new, similarly oriented links to these existing segments, turning the network into a viable pathway system, simultaneously increasing mobility choices for quadrant residents, workers and visitors and providing a major new development attracting amenity.

Celebrate the Crossroads: Connect the quadrant across barriers to the river, the rest of the Central City and adjacent neighborhoods along a signature system of public spaces.

Today, the quadrant features a series of regionally-scaled facilities. While serving important functions, these facilities present physical and psychological barriers between central parts of the quadrant and north/northeastern neighborhoods and the rest of the Central City and the Willamette River. A new, centrally-located east-west system of public spaces and improved multi-modal connections would help quadrant residents, workers and visitors reach destinations south and west of the freeways and large event facilities.



The open space system would also provide compelling amenities around which to organize new development. To date, the district has seen public event, some streetscape, transit and other transportation-related improvements, but few new public parks or open spaces to augment Holladay Park. New, high density employment, institutional and residential uses in the quadrant will need to be supported by new parks and open spaces offering opportunities for recreation, relaxation and respite. Linking new facilities to each other and existing open spaces like Holladay will increase the functionality of the overall system and its service to a variety of potential new users.

Proposed Quadrant Concept for Land Use, Urban Design and Local Transportation

The project team developed quadrant-wide concept alternatives in spring 2011, intended to describe different future development scenarios and highlight key choices for this planning process. Ideas in the concept alternatives were drawn from a number of sources, including existing conditions, issues, opportunities and constraints, feedback from Stakeholder Advisory Committee (SAC) and subcommittee meetings and a charrette held in 2011.

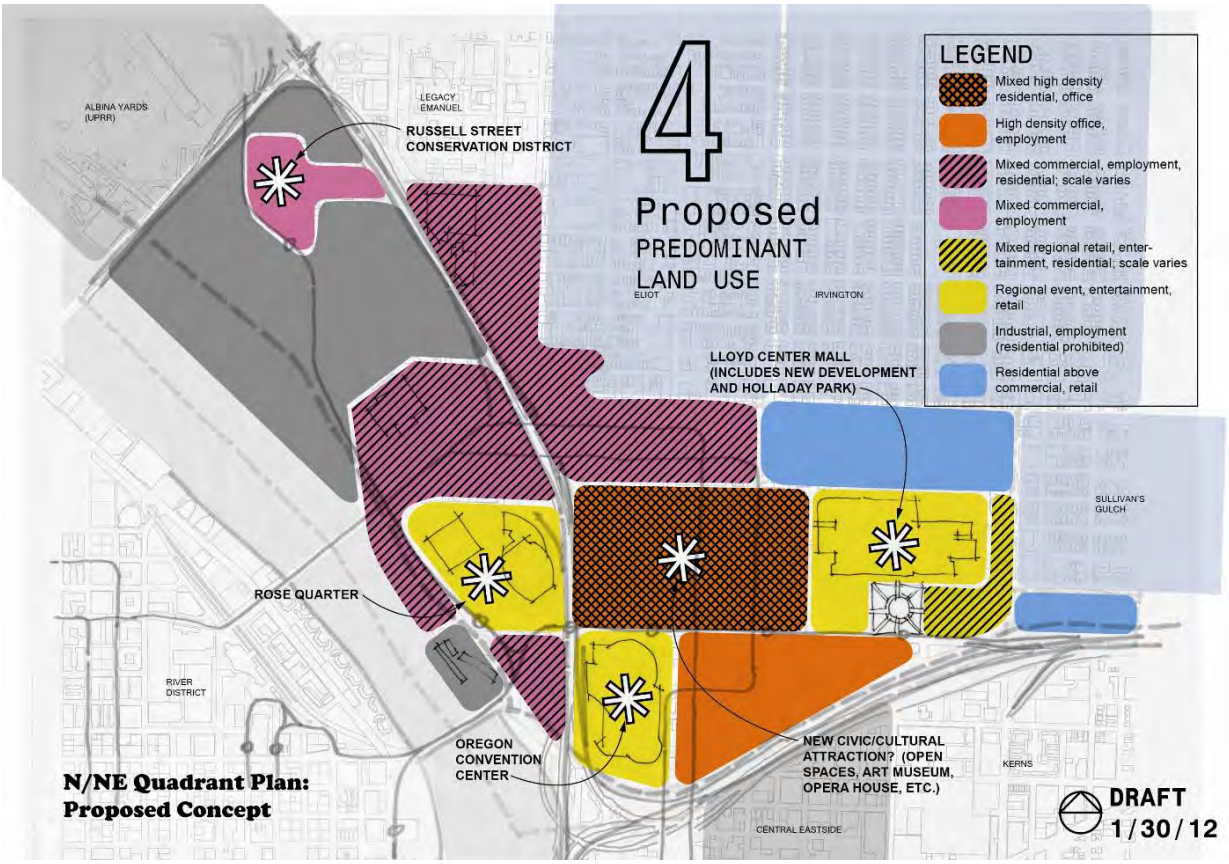
The ideas gathered from these sources were grouped into three quadrant-wide concepts based on broad land use options: residential, employment, and a residential/employment blend. The concept alternatives were illustrated by three related infrastructure systems: mobility, open space and green systems. Finer grained ideas and issues were grouped into eight geographic subareas, such as Historic Russell Street or the Rose Quarter.

Following extensive outreach to stakeholders and community groups, a draft proposed concept was developed and presented to the Stakeholder Advisory Committee (SAC) in fall 2011. The SAC endorsed a revised concept in February 2012, which formed the basis for the district concept diagrams and detailed policies and actions in Chapter 3 of this plan. The proposed quadrant concept contains five layers: land use, building height, street and development character, open space and green systems.

Predominant Land Use and Building Height

Each "bubble" on the land use diagram below reflects the predominant land uses that would be encouraged under that development type. With the exception of industrial areas, other uses would generally continue to be allowed, and some mixing of uses would be expected in all areas.

The building height diagram on the next page indicates approximate maximum building height in different areas of the quadrant under the proposed concept.



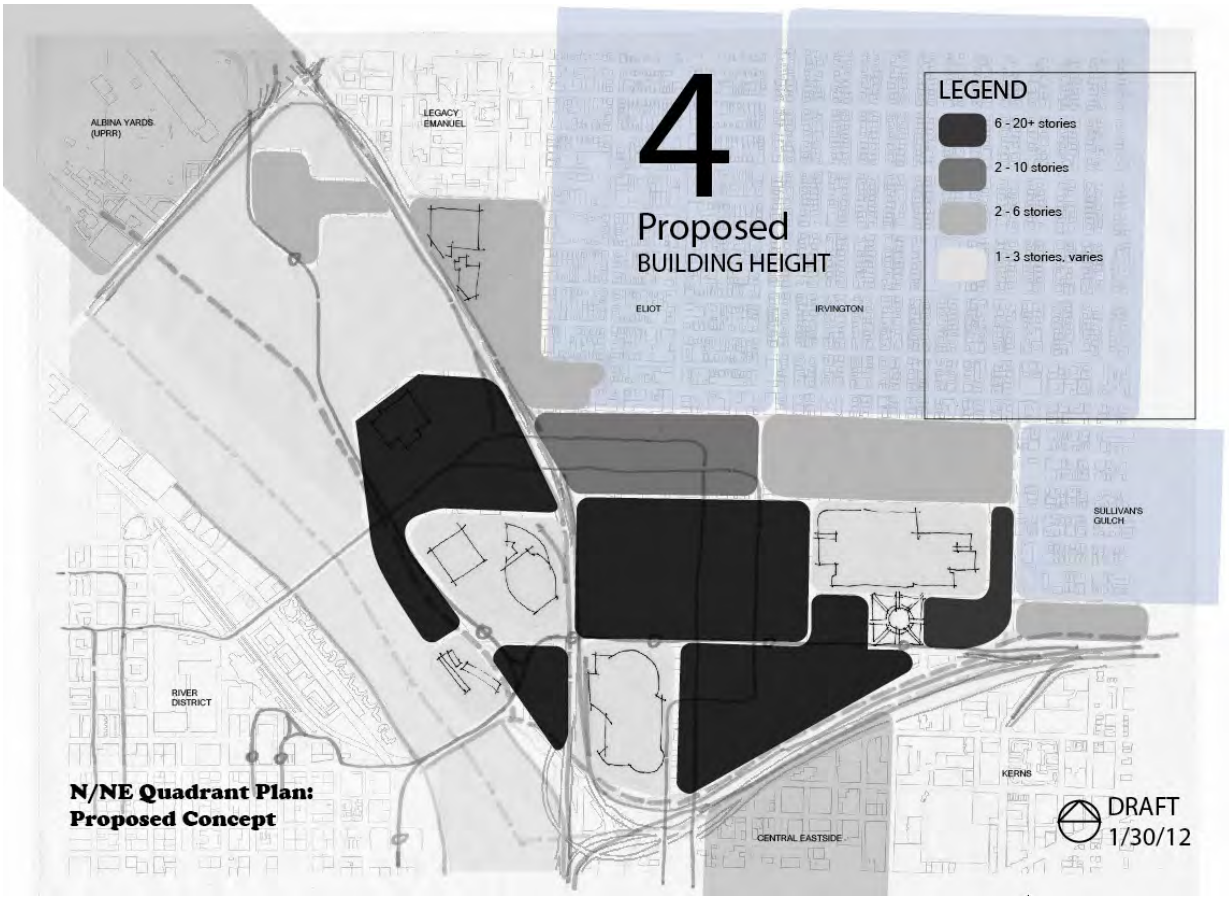
Key elements of land use concept in quadrant subareas include:

Lower Albina: Support the continued success of the industrial district, with additional flexibility for compatible employment uses, intended to gradually increase employment density and reuse of older structures, and an expanded mixed use area adjacent to historic Russell Street.

Central Lloyd: Significant redevelopment to achieve a vibrant, high-density mixed- use district, with an emphasis on new housing development.

Office Core and Regional Attractions: Reinforce existing employment centers and regional attractions, including the office core, Lloyd Center Mall, Convention Center and Rose Quarter, through continued employment growth and complimentary mixed-use development in adjacent areas including increased flexibility at the Public Portland Schools Blanchard site.

(cont. on next page)



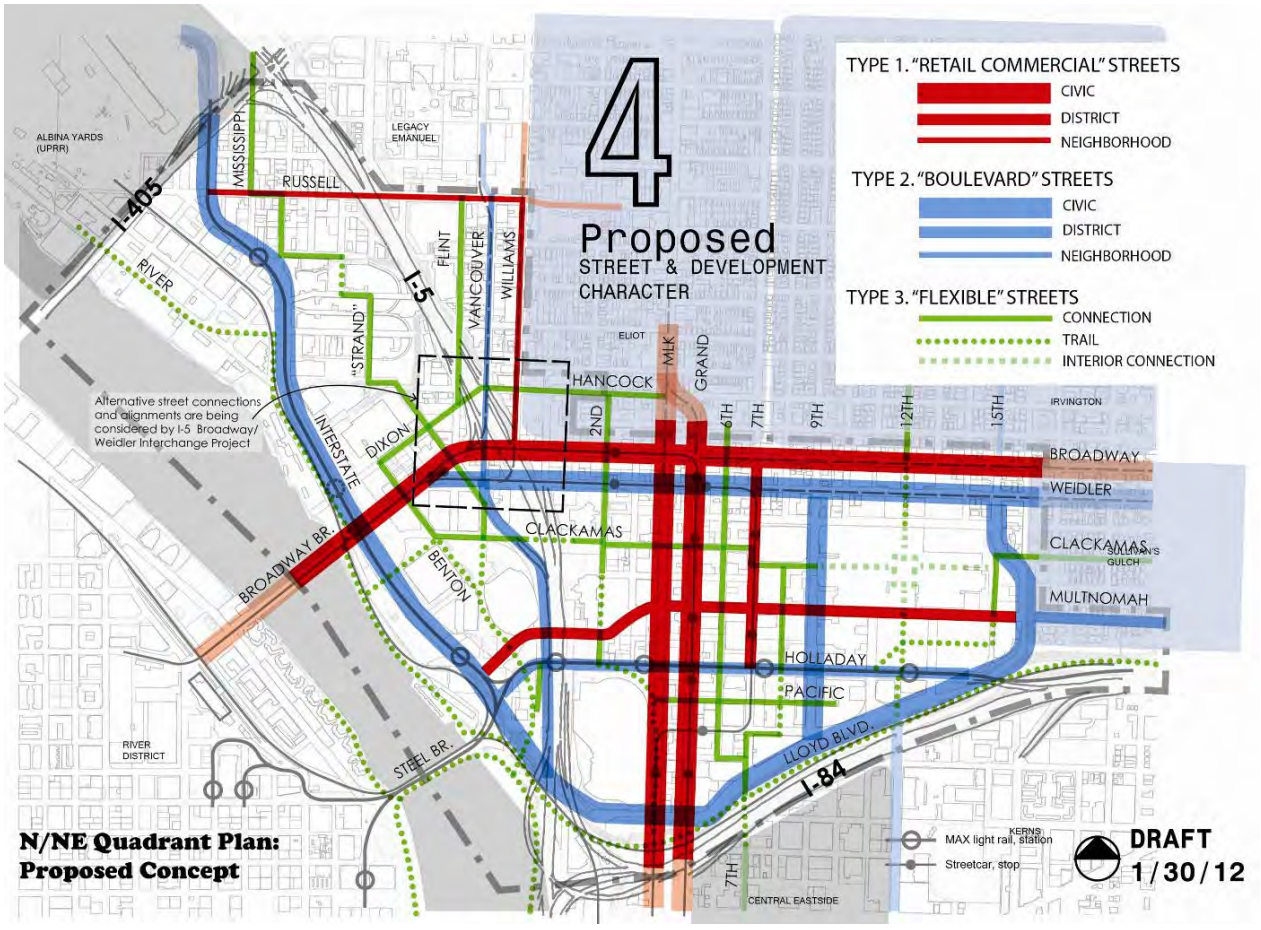
Predominant Land Use and Building Height (cont.)

Broadway/Weidler Corridor: Reinforce the existing main street character of NE Broadway and providing a sensitive transition to adjacent neighborhoods through lower scale development along the Central City edge. Emphasis on housing over retail east of NE 7th; mixed use west of NE 7th.

Vancouver/Williams Corridor: Increase flexibility to allow more commercial and employment uses to support existing uses and employment growth.

Eastern Edge/Multnomah: Focus on residential development around Lloyd Center mall, with a potential expansion of mall-related regional retail. Increase flexibility to allow mixed use development on NE Multnomah and 21st to encourage investment.

Street and Development Character Concept



The street and development character concept outlines a more intentional approach for the quadrant's street network, uniting streetscape design with adjacent land uses and building forms, and recognizing the different scale of streets. While the concept proposes a new way of envisioning the design character of these public streets and connections, it does not imply changes to the City's existing system of modal classifications that define the functional roles streets play in moving people and goods throughout the quadrant.

It is assumed that all streets would continue to have active adjacent ground floors, good sidewalks with safe crossings, attractive public amenities and furnishings and stormwater management functionality. It is also assumed that adjacent development, along with the street character, would respond to the local geography, surrounding context and envisioned character.

The proposed concept includes the following street types with three scales for each type:

Retail Commercial Streets: Busy, continuous streets with retail activity throughout the day, evenings and weekends that provide for multi-modal access for vehicles, transit, bicycles and pedestrians. Ground-floor retail uses are required or strongly encouraged. Multi-level or specialized retail is encouraged along with "green features" that support retail street visibility. The following are three tiers for the retail/commercial streets:

- Civic – Busy high-volume city streets with connections beyond the quadrant.
- District - Central to the quadrant with opportunities for new community activity centers.
- Neighborhood - Local focal points with infill and continuation of existing character and patterns.

Street and Development Character Concept (cont.)

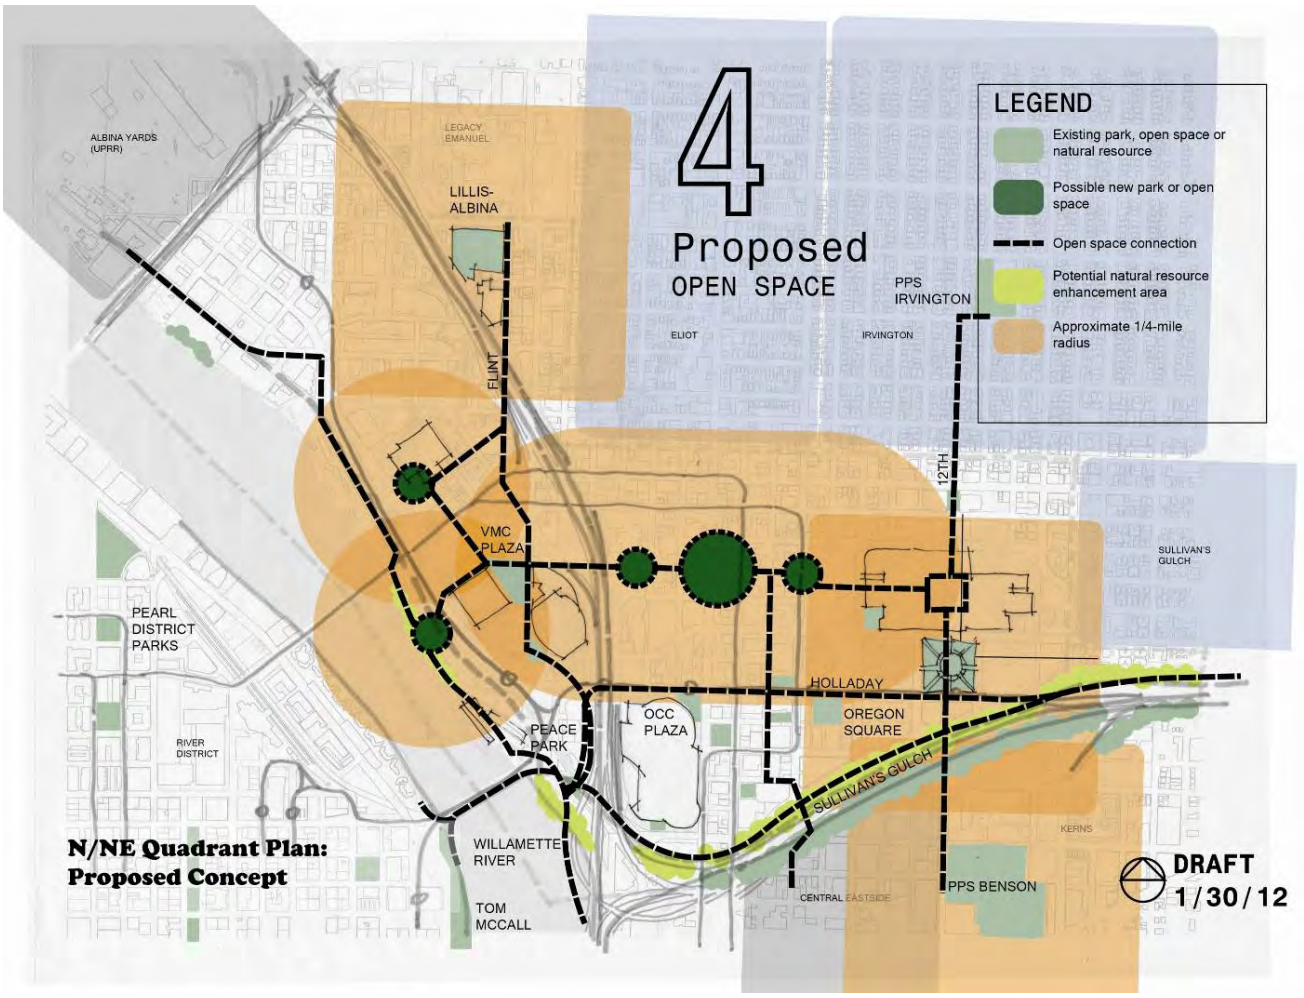
Boulevard Streets: Busy, continuous streets with emphasis on access and flow that provide multi-modal access and circulation for vehicles, transit, bicycles and pedestrians. The streetscape includes visible "green" features, encouraging large canopy trees, swales, and landscaping. Ground floor retail uses allowed, and encouraged at key locations. The following are the three tiers for boulevard streets:

- Civic – High volume city streets that could be part of a couplet corridor, and extend beyond the quadrant.
- District - Central to the quadrant with opportunities for distinctive corridors, some offering specialized transit or other mobility facilities.
- Neighborhood - Local streets with continuation of existing character and patterns.

Flexible Streets: Highly specialized localized street designs responsive to community needs and adjacent land uses and development that could be in public or private ownership. Key public features would include low-volume, low speed quiet streets that are part of a connected, primarily pedestrian and local bicycle network. Visible "green" features are encouraged. Three types of flexible streets include:

- Connection - Pedestrian and bicycle connections on existing public streets to open spaces, key destinations within and beyond the N/NE Quadrant.
- Trail - Off street paths connecting to the regional trail network.
- Interior Connection - Primarily pedestrian connections, including connections within buildings on private property, that facilitate movement within the district.

Conceptual rendering showing NE 7th Avenue as a district scale, retail/ commercial street.



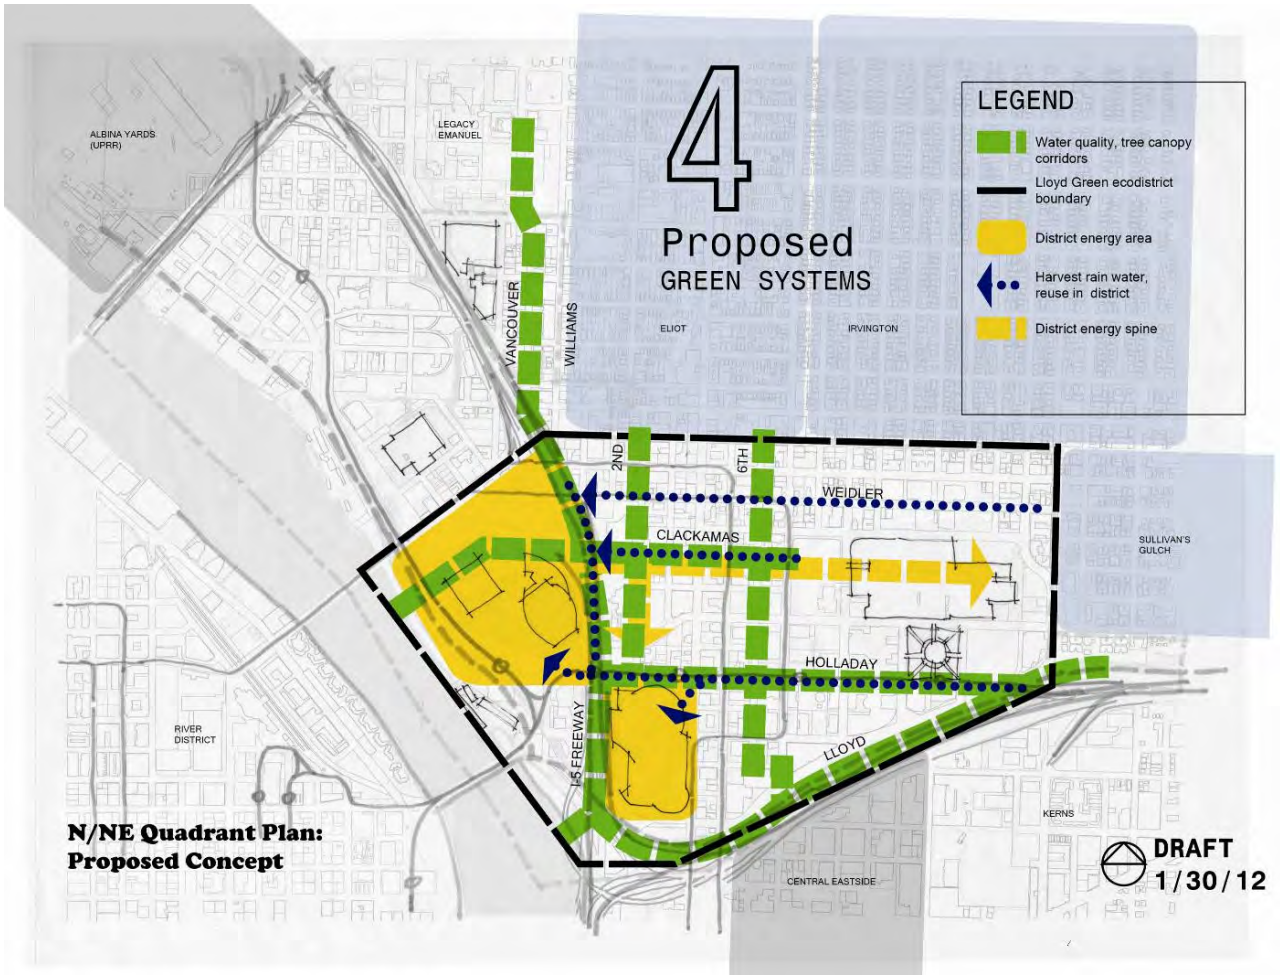
Open Space

The proposed open space concept illustrates a potential framework for parks and open space within the quadrant, an area that is currently park deficient. The only significant public open space in the Lloyd District today is Holladay Park, located in the eastern portion of the district. There are also a number of small public and privately owned plaza spaces primarily located in the office core area. Lillis Albina park is located just outside of the Central City in the Vancouver/Williams study area.

The concept envisions a series of new parks organized along an improved NE Clackamas Street linking to a new open space adjacent to the Willamette River. Clackamas would be a flexible street that prioritizes pedestrian access, creating a safe and inviting space for people to gather, play and socialize.

The proposed parks would likely range in size and function, and could be augmented by privately owned pocket parks and plazas. The open space concept also proposes enhancement to natural resources along the riverbank and within Sullivan's Gulch.

Green Systems



The Lloyd EcoDistrict is a public-private partnership designed to transform the Lloyd District into a showcase sustainable district that integrates nature into the built environment and uses restorative development approaches where new development enhances the environment and protects human health. Potential elements include improved energy performance, enhanced tree canopy, sustainable stormwater management strategies, and green building techniques. The green systems map illustrates how the following components could be integrated into the quadrant:

Tree Canopy/Water Quality Corridors: Corridors that provide enhanced tree canopy and stormwater management through large trees and vegetated stormwater facilities such as bioswales and planters. Streets not designated as a tree canopy/water quality corridors will still have these features, although they may not be as prominent.

District Energy: A system that could facilitate shared energy production and distribution between different businesses, residential uses and facilities.

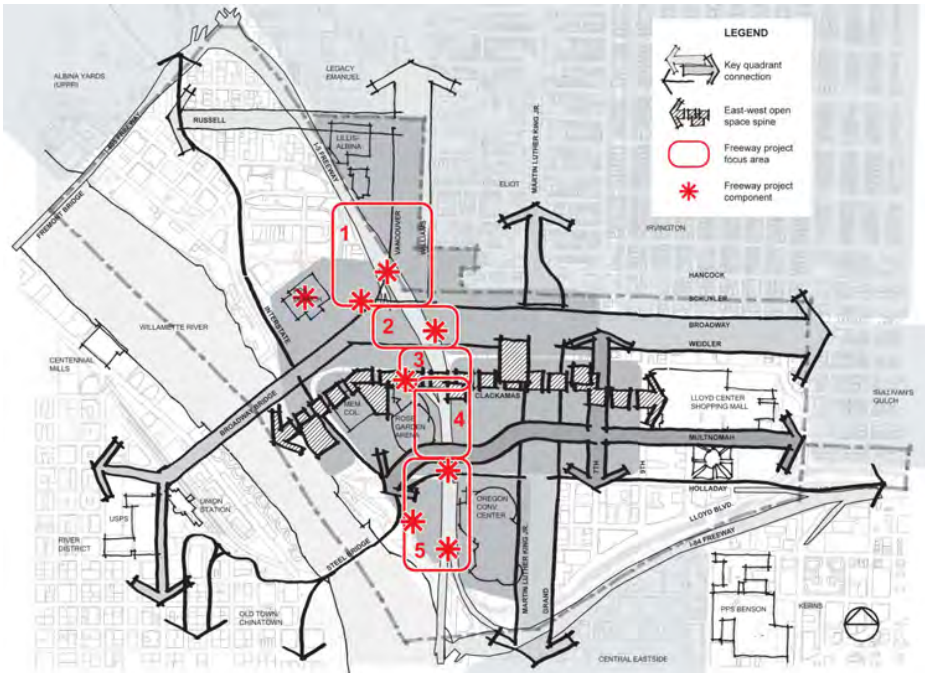
Rainwater Harvesting: A system that would facilitate capture and reuse of rainwater.

Other opportunities to support goals for sustainable development include the use of native vegetation, ecoroofs, vegetated walls, bird-friendly buildings and other green building techniques.

Integration with the I-5 Broadway/Weidler Interchange Project

The proposed concept for the N/NE Quadrant was developed concurrently with recommended improvements to the I-5 Freeway and Broadway/Weidler Interchange. The joint process ensured that the resulting plans are mutually supportive. The regional employment and housing growth since the completion of the Interstate System has dramatically increased the traffic volumes on the freeway. Both I-5 in the study area and the Broadway/Weidler corridor have high incidents of crashes. Additionally, the freeway is a barrier to connections between areas north and south of the interchange. This partnership established a framework that addresses both improved safety on I-5, while supporting high-density, mixed-use development with safer and greater pedestrian and bicycle connectivity. The framework also addressed previous freeway impacts to improve livability and vitality in the area.

The diagram below shows five geographic areas where the freeway project has the potential to directly support the proposed concept for the N/NE Quadrant.



Area 1, North of Broadway: Rebuilding bridges over the freeway presents opportunities to improve existing pedestrian and bicycle conditions and create new connections between Vancouver/Williams and the Portland Public School's Blanchard site, a key redevelopment opportunity.

Area 2, Broadway/Weidler Lid: Rebuilding bridges provides opportunities to simplify traffic movements to and from the freeway, improve local access and safety for all modes and improve pedestrian and bicycle facilities. Creating a lid over the freeway could potentially be used for new open space, development and/or to reconfigure local multi-modal circulation.

Area 3, Clackamas Crossing: The proposed new pedestrian/bike connection over I-5 supports the creation of a flexible connection and open space system along Clackamas Street that would stretch from Lloyd Center to the Willamette River and could provide supporting infrastructure for a proposed district energy system linking facilities in the Rose Quarter with the remainder of the Lloyd District.

Area 4, Rose Garden: Freeway improvements in this area could include improvements to bicycle routes between the Rose Quarter Transit Center and Broadway/Weidler, innovative stormwater management opportunities and improvements to the undercrossing at Multnomah.

Area 5, Rose Quarter Transit Center & Peace Memorial: Improvements could include innovative design treatments under the bridges to improve pedestrian connections between the Rose Quarter and the Convention Center, and improvements to upgrade conditions and mitigate impacts to the MAX station and Peace Memorial.

CHAPTER 3: GOALS, POLICIES AND IMPLEMENTATION ACTIONS

This plan chapter is organized into sections addressing each Central City district (the Lloyd District and Lower Albina), as well as the two study areas included in the N/NE Quadrant planning boundary. A district goal and concept diagram convey the overarching vision for each district, followed by a series of policies, which provide more specific direction on issues associated with the larger goal. The district goals and policies reflect the project goals and objectives adopted by the Stakeholder Advisory Committee to guide the overall planning process. The district concept diagrams are based on the N/NE Quadrant Concept diagrams, which were developed through a planning process that included a stakeholder charrette, several public events and detailed review by the SAC. The SAC goals and the quadrant concept diagrams are described in Chapter 2: Developing the Plan.

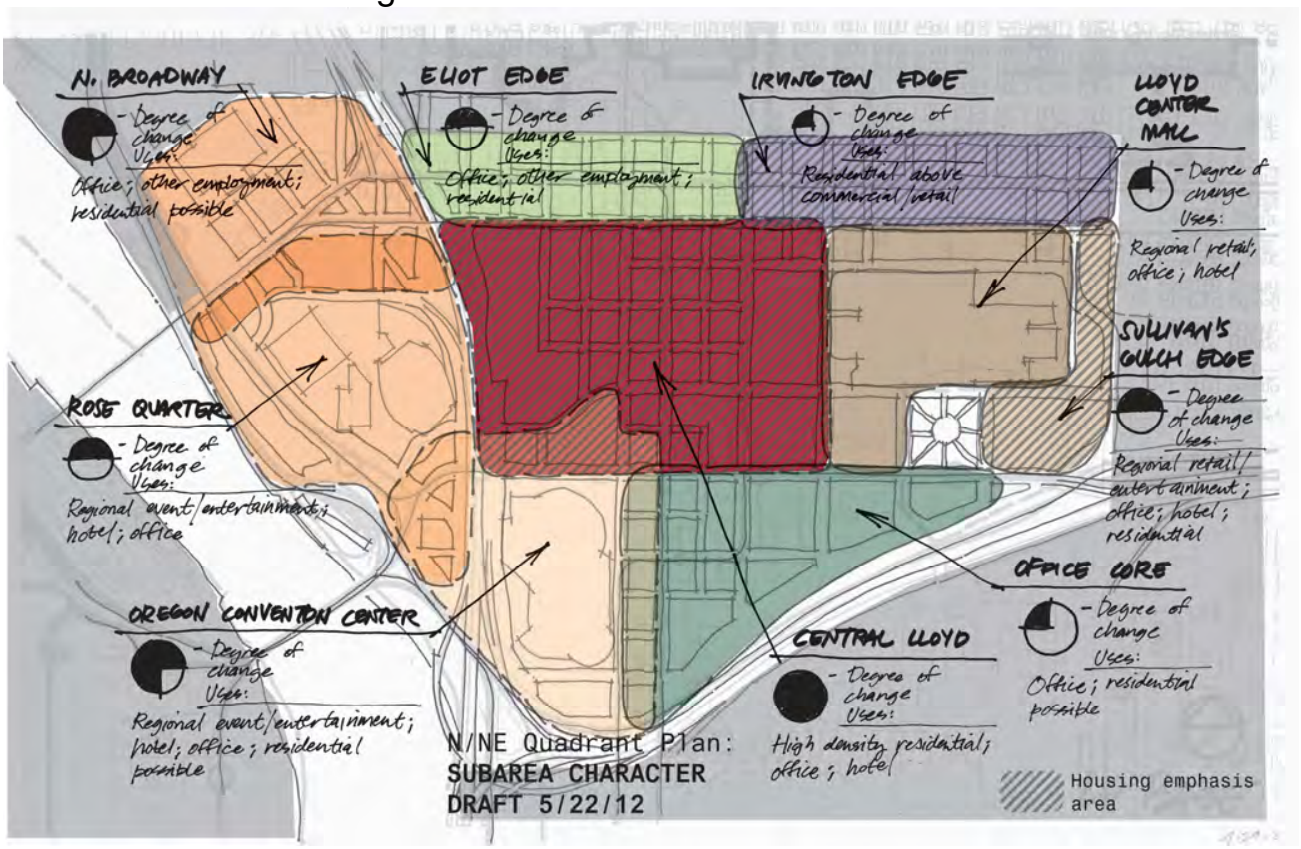
The policies are organized into topic areas generally consistent with the planning framework developed for the Central City 2035 (CC2035) Concept Plan, which will establish the overall vision and direction for the Central City as a whole. Because issues that apply Central City-wide will be addressed in the CC2035 Concept Plan, the N/NE Quadrant Plan will focus on issues that are unique to the Lloyd District and Lower Albina. The policy topics are as follows:

- Regional Center
- Housing and Neighborhoods
- Transportation
- Urban Design
- Environment

All five policy topic areas are covered for the Lloyd District, however Lower Albina, a largely industrial area, does not have a “Housing and Neighborhoods” section.

Performance targets are established for key measures as a means of tracking progress toward meeting goals and policies. They are based on a number a sources, including assumptions about future development, housing and employment forecasts, targets from other planning processes such as the Portland Plan and Climate Action Plan, and transportation modeling. The performance targets in this plan should be considered preliminary. They will need to be revisited, and potentially recalibrated for the full Central City, once all of the quadrant plans have been completed.

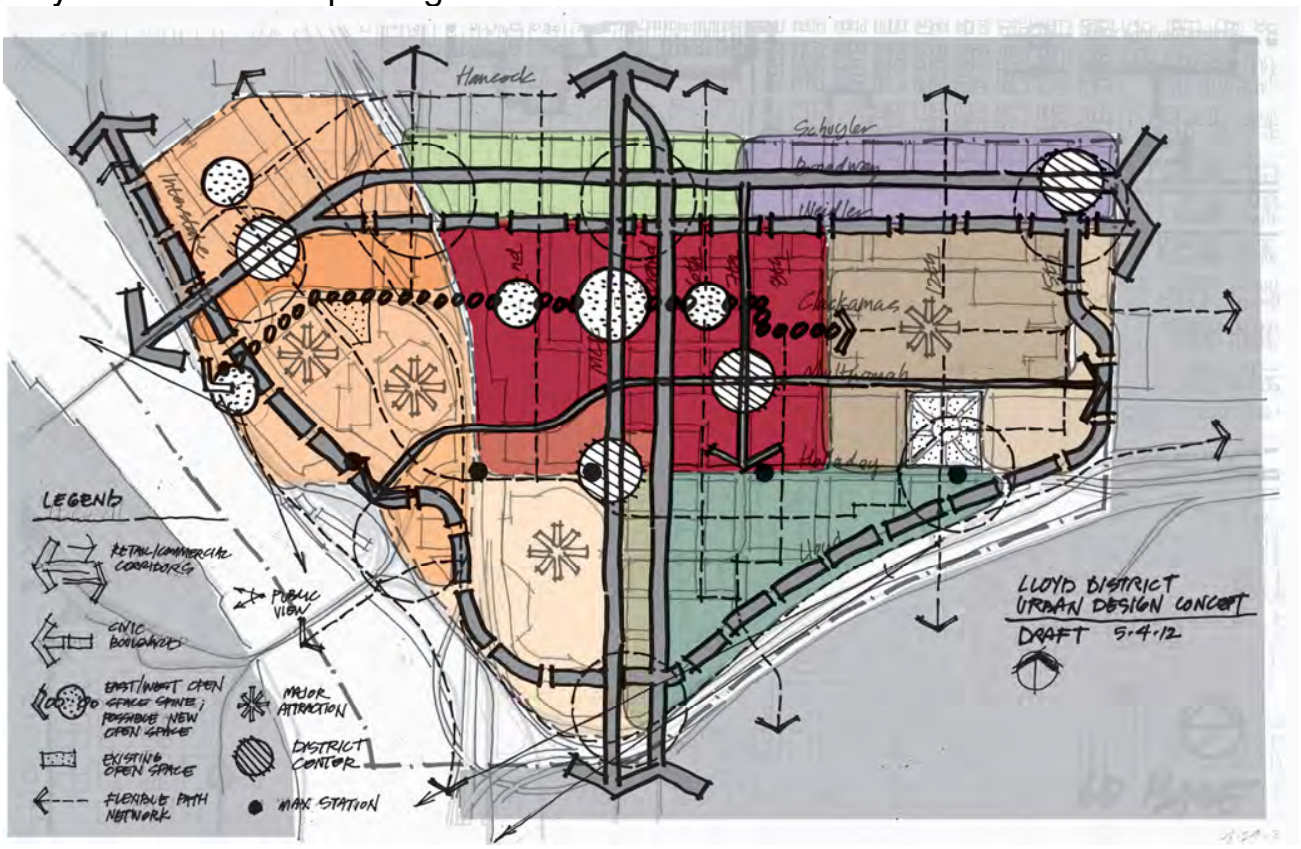
Implementation actions, such as changes to regulations, future work items, projects, programs or studies, are proposed for each district and for the two study areas: North Banfield Portal and Vancouver/Williams Corridor. Implementers are identified, including public agencies, private and non-profit entities and other community partners, with the lead implementing agency noted in **bold**. A list of implementers and abbreviations used in the action tables is provided at the end of this document.



A timeline is provided, with some actions intended to be accomplished with the adoption of the full Central City 2035 plan package, anticipated in 2014. Other actions are intended to be completed 2 to 5 or 6 to 10 years beyond that, and some are ongoing.

Lloyd District

District Goal



Foster the growth of the Lloyd District into the intensely urban eastside center of the Central City. Capitalize on the district's regional attractions, high quality transit and connections to create one of the most vital and livable districts in the Central City, with a strong employment base, successful residential community and a variety of urban amenities. Develop the district as a complete and sustainable community with well-designed open space, streets, and high-performance green buildings and infrastructure.

Subarea Character Diagram

This diagram illustrates the types of uses planned for the different "subareas" of the Lloyd District, as well as the degree of change expected in those areas as the district develops. For example, major redevelopment with high-density, mixed-use development is envisioned within the Central Lloyd area, which is expected to have the highest degree of change. Other areas that are currently well established, such as the Office Core and Irvington edge, are expected to have a relatively low degree of change. This diagram also identifies "housing emphasis areas" where development of new housing is a priority.

Lloyd District Concept Diagram

Key Elements of the Concept

Street and Development Character: The character and function of three main street types shown in the concept diagram are described below. A more detailed description of the street types is provided in a separate report, N/NE Quadrant Plan: Street and Development Character Concept (2/1/12 Draft).

- **Retail/Commercial Corridors.** Busiest streets with high visibility by motor vehicles, transit, bikes and pedestrians and generally consistent ground level retail storefronts. These corridors are broken down in three scales: “civic,” which make connections to other parts of the city; “district,” which are important within the boundaries of the Lloyd District; and “neighborhood,” which are smaller and found usually outside the Central City. Off of retail/commercial corridors, retail would not be required or encouraged.

- **Boulevards.** These corridors can also be some of the busiest in the district – they can be the “second” street of a couplet or define a district edge -- but they offer a more landscaped, green character, with fewer retail storefronts than the retail/commercial type. These corridors are broken down in three scales: “civic,” which make connections far beyond the district; “district,” which are important within the boundaries of the district; and “neighborhood,” which are smaller and found usually outside the Central City.

- **Flexible Network.** These streets and spaces make up a system of local, pedestrian-friendly connections through the district that offer quieter, “low-stress” experiences distinctly different from the busier streets serving the area. The forms and characters of these connections can vary

considerably – some can be typical streets, some could be through open spaces or plazas, and others could be through building interiors. Visible green features are encouraged where appropriate to the setting. Local streets within the flexible network would continue to meet the access needs of adjacent residents and businesses.

East-West Open Space Spine: This is a series of connected open spaces offering different characters and functions, running from the Lloyd Center Shopping Mall west to the Willamette River. The connection could be obvious, such as the Park Blocks; it could be evident, like the boardwalk along NW 10th Avenue in the Pearl District; or it could be described by a subtler set of wayfinding clues. This signature series of parks and open spaces would become the organizing system for a new high-density, mixed-use community in the Central Lloyd area.

Major Attraction: Regional event, entertainment and/or retail facility that brings in thousands of people to the district annually. These currently include the Veteran's Memorial Coliseum, the Rose Garden Arena, the Oregon Convention Center and the Lloyd Center Shopping Mall.

District Center: High-visibility hubs of retail and commercial activity in the different areas of the district. Locations with concentrations of restaurants, hotels and other similar retail/commercial businesses, generating high levels of pedestrian movement and crossings.

Gateway: Point of transition into or out of the district. Specific experience determined by character of identified location, and could be enhanced by public sector improvements, private development design approaches or a combination of both.

Public View: Currently designated public viewpoint and view cone, as described in the *Scenic Resources and Protection Plan* of 1992.

Sustainable Development: While it does not specifically show up on the concept diagram, sustainable development, including green buildings, green infrastructure, habitat enhancement, and embracing the designation of the Lloyd EcoDistrict, is also a key element of the overall concept for the Lloyd District. See the Green Systems diagram in Chapter 2: Developing the Plan.

See Appendix A, Additional Urban Design Diagrams, for more details on the street and development character, gateways and building height elements of the concept.

District Policies and Implementation Actions

Regional Center: Economy and Innovation

As home to vital regionally-significant facilities, the Lloyd District is an integral part of the Central City today, and its tremendous growth potential means it will contribute to the regional center in a variety of new ways in the future.

These policies and actions will help maintain and grow existing assets in the district, including regional event attractions at the Rose Quarter and Oregon Convention Center, the main street small business and retail-oriented character along NE Broadway, regional retail uses at the Lloyd Center Mall and a well-established office cluster of professional, medical and government services.

New businesses that balance the episodic nature of the regional event centers and new high-density residential and commercial development in Central Lloyd and North Broadway will support job growth and enliven the district. The formation of the Lloyd EcoDistrict presents additional opportunities to create a district that is more attractive to new businesses, employees, residents and visitors due to its leadership in sustainability and the resulting improvements in the physical environment.

Policies

1. **Employment**. Support and retain existing businesses while encouraging significant new job growth. Develop the district to support a broad array of employment types that provide living-wage jobs and equitable access to employment opportunities.

2. **Redevelopment.** Encourage high density commercial and residential development and better utilize vacant and underutilized land.

3. **Core Employment Uses.**

    a. **Office Core.** Maintain and grow the Lloyd District as an employment center for headquarters office, institutions, professional services and the government sector.

    b. **Regional Attractions.** Support the continued success of the Rose Quarter and the Oregon Convention Center and encourage new development and businesses that support and balance the episodic nature of event activity.

    c. **Retail.** Support existing and new retail development including regionally focused uses in and around the Lloyd Center Mall and neighborhood-serving uses along the NE Broadway corridor. Encourage and support retail development on retail/commercial streets identified in the district concept diagram.

    d. **Civic and Cultural Amenities.** Expand civic attractions in the Lloyd District to complement the district's tourism, regional attractions and growing residential character. Examples of attractions could include a convention hotel and centers for arts, culture, history or science.

4. **Innovation: Sustainable District.** Promote the Lloyd District as a center for innovation and application of sustainable business and development practices, foster job creation in sustainable industries and encourage the incorporation of green technology into businesses and development.

2035 Performance Target: Jobs

Add 10,000 new jobs within the Lloyd District.

Current Conditions
Based on a 2010 estimate, there are approximately 18,000 existing jobs in the Lloyd District (with revised district boundary, see action RC1). The addition of 10,000 new jobs would result in a total of 28,000 jobs. This would require a 55 percent growth in jobs over 25 years.

Implementation Actions: Lloyd District – Regional Center: Economy and Innovation						
#	Action	Timeline				Implementers (lead in **bold**
		CC2035 (2014)	2 - 5 Years	6 – 20 Years	Ongoing	
RC1*	Adjust the Lloyd District and Lower Albina boundaries to include the PPS Blanchard site and adjacent properties to the south and east within the Lloyd District.	X				**BPS**
RC2*	Rezone the PPS Blanchard site and adjacent properties to the east from IG1 to EXd and CXd to encourage future redevelopment. Require a master plan process as part of redevelopment to address street and pedestrian connectivity, open space, views, and the transition to adjacent industrial uses.	X				**BPS**
RC3*	Adjust and increase maximum allowed heights to support high density development and encourage the provision of public amenities, and desired uses in the following areas: ▪ N. Broadway near the Broadway Bridgehead ▪ Riverfront ("Thunderbird" site) ▪ Central Lloyd area	X				**BPS**
RC4*	Adjust regulations and incentives to encourage new development that supports the Convention Center such as new or expanded hotel development, retail and other services on adjacent blocks.	X				**BPS**, PDC
RC5	Develop a strategy to promote the development of new hotels and the improvement of existing hotels in the vicinity of the Oregon Convention Center.		X			**Metro**, PDC, City, Private
RC6	Pursue development on publically owned sites in and around the Rose Quarter through public-private partnerships.				X	**City**, Private
RC7	Market the Lloyd District as a leader in sustainable development and business practices.				X	**EcoDistrict**, PDC, Private
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Housing and Neighborhoods

The N/NE Quadrant Plan envisions the Lloyd District as a high-density, high-amenity, mixed-use area, with a focus on increasing residential development for a more balanced jobs to housing ratio. Greater housing density will increase the vitality of the district and further citywide and regional goals that encourage housing in areas close to employment centers and well connected to alternative transportation networks.

Areas in which housing development should be emphasized are proposed in the Central Lloyd area, upper Broadway and the eastern edge. Policies and actions promoting a diverse housing mix that is attractive and affordable to a broad range of people will help implement equity and diversity goals put forth in the Portland Plan and the Central City 2035 Plan.

Increased residential density will require amenities and services necessary for residents to meet their daily needs. It is essential that the area develop as a complete neighborhood with convenient and safe access to neighborhood businesses, park and recreation facilities and schools in a clean and healthy environment. Development of new open spaces and creating an environment that is supportive of local, neighborhood serving businesses are high priorities. Safe and attractive regionally available alternative transportation options, such as walking, biking and taking transit, are also important for promoting healthy lifestyles and meeting climate action goals for reduced green house gas emissions. See the transportation section for policies and actions that support those elements.

Development of housing affordable to low and middle income households within the Lloyd District is a priority given that access to a complete neighborhood reduces household transportation costs and provides access to public and private amenities crucial to economic mobility. There are currently very limited public resources to fund housing projects. It will be necessary to develop new tools to meet goals for affordable housing in the Lloyd District and citywide. It is also important to provide a diverse range of housing types and sizes within the district, including housing suitable for workforce, seniors, special needs and families.

The Lloyd District has a diverse history and is well located to serve as eastside civic center for Portland. The design of public spaces, as well as programming within those spaces, should celebrate the history of the place and help build community among those that visit, work and live in the district.

The goal of increased growth and density brings concerns about the potential for displacement of current residents and businesses due to increasing costs – an issue that applies citywide in areas of growth and change. This plan identifies a need for citywide programs to address potential displacement, reinforcing the recommendations of the Portland Plan.

Policies

1. **Housing Development.** Encourage the development of new housing especially in “housing emphasis areas”. Through greater concentration of housing the district can foster a sense of community and support efficient provision of residential amenities and services.

2. **Housing Diversity and Preservation.** Encourage the development and preservation of a housing supply of unit types and sizes that meets the needs of people of all incomes, ages, household sizes and special needs. Include development of affordable housing as a way to ensure income diversity, meet citywide housing needs and help mitigate the potential for displacement due to rising housing prices in the district and in adjacent neighborhoods.

3. **Complete Neighborhood.** Foster development of a complete neighborhood with amenities and services that residents need to meet their daily needs, including access to parks and open space, grocery stores, neighborhood businesses and schools.

4. **Successful Neighborhood Business Districts.** Support and expand local main street business areas within the Lloyd District and in adjacent neighborhoods. Cluster a diverse mix of neighborhood scale businesses within the NE Broadway Business District and on new district retail/commercial streets as a means of concentrating activity and promoting successful retail districts.

5. **Community Building.** Encourage public spaces, pubic art and activities that celebrate the history of the district and that help build a community in the Lloyd District and with surrounding neighborhoods.

6. **Historic and Cultural Resources.** Preserve, rehabilitate and celebrate historic and culturally significant structures and places in the Lloyd District.

7. **Displacement.** Support existing residents and businesses within the Lloyd District and in adjacent neighborhoods that are at risk for involuntary displacement.

2035 Performance Targets

Housing

Develop 5,000 new housing units and reduce the jobs to housing ratio to 5 to 1 within the Lloyd District. Seek to provide a full range of housing types and affordability options, including 50 percent of new units affordable to households with incomes below the median family income (MFI) of the city, distributed across affordability levels.

Current Conditions
Based on the 2010 Census, there are approximately 1,100 existing housing units in the Lloyd District and it has a jobs to housing ratio of 17 to 1. The addition of 5,000 units and 10,000 jobs would result in a total of 6,100 housing units and a jobs to housing ratio of 5 to 1.

Complete Neighborhood

At least 80 percent of Lloyd District residents live within ¼ mile of a public park and within ½ mile of a full service grocery store.

Current Conditions
As shown in Table 2 below, none of the existing population is within ¼ mile of public parks and 64 percent of the population is within a ½ mile of a grocery store. Because the existing population in the district is currently quite low, the amount of land area in proximity to parks and grocery stores is also provided.

Table 2: Lloyd District Proximity to Parks and Grocery Stores (2012 estimate based on GIS analysis)

	Within ¼ mile of parks	Within ½ mile of parks	Within ½ mile of grocery store
Population	0%	81%	64%
Land Area	30%	87%	41%

Implementation Actions: Lloyd District – Housing and Neighborhoods						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
HN1*	Develop regulatory tools to encourage housing development and the inclusion of affordable housing. Focus on housing emphasis areas (see subarea character diagram).	X				**BPS**, PHB, BDS
HN2*	Rezone the area of RXd zoning in Central Lloyd to CXd to provide flexibility and encourage investment. Apply housing incentives described in HN1 to this area.	X				**BPS**
HN3	Develop affordable rental housing through investment of TIF Set Aside funds and other PHB programs. Possible tools include: Limited Tax Exemption program, System Development Charge Exemption Program.		X			**PHB**
HN4	Improve the function and safety of Holladay Park through programming that increases its use and CPTED (Crime Prevention Through Environmental Design) improvements.		X			**PPR**, BID, Private
HN5	Identify sites for community building activities and pursue projects and activities that support community building, such as weekend markets, cultural programming in parks and public art.		X			**LDCA**, TMA, EcoDistrict City
HN6	Support connections between district employers and employee housing within the district through employer-assisted housing programs and coordinated mixed-use development, particularly employer-assisted housing for service-level workers employed within the district.		X			**PHB**, Private
HN7	Monitor residential population growth and the related school needs of the district. Encourage space for early education programs in new development.				X	**PPS**, Private

HN8	Address potential displacement of residents and businesses in the Lloyd District and in adjacent at risk neighborhoods, such as Eliot, through citywide programs developed as part of the Comprehensive Plan. Potential programs include housing and small business assistance programs targeted for areas at risk for displacement.				X	**BPS,** PHB, PDC, POE
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Transportation

The Lloyd District is well served by a multi-modal transportation system that supports its role as a regional center for retail, business, entertainment, and government. The district has unique regional transportation advantages, including direct connections to the interstate freeway system via I-5 and I-84 and the regional light rail and bus network at the Rose Quarter Transit Center. With the addition of streetcar and continued investments in bicycle and pedestrian systems, the transportation network will provide a solid foundation to support goals for high-density development, greater use of active transportation (walking and biking) modes, and reduced greenhouse gas emissions.

The Lloyd District contains a number of major traffic corridors, including the MLK/Grand and Broadway/Weidler corridors, which carry large volumes of traffic into and through the district. These streets are important for supporting large and small businesses and regional attractions. However, because of the high volume of traffic and limited signalized crossing, these streets have also been identified as barriers to overall connectivity and to travel by walking and biking.

The N/NE Quadrant Plan calls for building upon and enhancing the Lloyd District's transportation assets by: improving the efficiency and safety of traffic operations; maintaining regional transit, auto and freight access; enhancing internal circulation and connectivity to adjacent areas, particularly for pedestrians and bicyclists; managing parking to support business and residential uses, incentivize development and encourage the use of non-auto transportation modes; leveraging street improvements with future development; and providing strong pedestrian and bicycle linkages between the district and the Willamette River. It is important to note that residents of Portland have transportation choices, and that active transportation may not be the solution for all. Therefore, providing optimum regional access for all modes will be key to realizing the goal of developing the Lloyd District as a high density Central City district and assuring its long-term success.

Policies

1. **Strategic Investments.** Invest in transportation infrastructure to improve safety, convenience and operational efficiency for all modes by strengthening connectivity and access for trips to, through and within the Lloyd District, and by creating special places for workers, residents, neighbors, shoppers and visitors.

2. **Active transportation.** Encourage walking, bicycling and using transit as a way to increase transportation access and choice, enhance livability and reduce the per capita carbon footprint in the district.

3. **Transportation Demand Management.** Foster the development of business and property owner-supported programs, incentives and activities that encourage employees and residents to use active transportation and non-single occupant vehicle modes.

4. **Transit**. Strengthen the role of transit in the Lloyd District by working with TriMet to increase the frequency, reliability and safety of the light rail, bus and streetcar services.

5. **Parking.**

    a. **Off-Street.** Strengthen the role of parking management to leverage high-density mixed-use development, enhance livability and reduce reliance on single occupancy automobile trips, while supporting development of more parking options for retail-focused streets.

b. On-Street. Preserve and enhance on-street parking assets to support ground floor commercial, retail and service based business.

6. **Streetscape.** Improve the pedestrian experience by integrating high-density mixed uses, urban greenery, and pedestrian amenities into the Lloyd District's streetscape.

7. **Connectivity**. Increase the number of connections across barriers in the district, including major arterials, large blocks, freeways, rail lines, and natural features, and with adjacent neighborhoods.

8. Transportation System Management. Manage access and circulation to reduce traffic speeds and provide for safe crossings, while balancing the need for vehicle and freight access to and within the Lloyd District.

9. **Regional Attractions.** Provide access and circulation to and from the Lloyd District that attracts and supports regional development, shopping and tourism. Promote the use of transit to access the area, including light rail, streetcar, bus, and a potential water taxi service.

2035 Performance Target: Mode Split

At least 75 percent of commute trips to and from the district are by non-single occupancy vehicles (transit, walking, bicycling and carpooling).

Current Conditions
The current Lloyd District mode split is approximately 44 percent by non-single occupancy vehicle (SOV) for the district. Members of the Lloyd TMA have an improved mode split of 60 percent non-SOV.

Implementation Actions: Lloyd District – Transportation

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR1	Explore ways to adopt the Street and Development Character concept, including three street types: retail/commercial, boulevard and flexible/pathways. This may include updates to the Transportation System Plan Street Design Classifications.	X				**PBOT**
TR2*	Develop and revise parking management strategies.		X			**PBOT**, TMA, Private
TR3	Update the *Lloyd District Standard Plans and Details within the Right-of-Way* document to implement the Street and Development Character Concept for the district (see Appendix A, Map A3).		X			**PBOT**, BPS, BES, PPR/UF, PWB

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR4	Study and install additional signalized pedestrian crossings, on-street parking, and reduced speed traffic progression on Martin Luther King, Jr. Blvd. and Grand Avenue.		X			**PBOT, TMA**
TR5	Implement streetscape and circulation changes for Multnomah Street to facilitate a "retail/commercial street" environment.		X			**TMA**, PBOT
TR6	Review the 1996 *Broadway-Weidler Corridor Plan* to identify any needed updates to implement the N/NE Quadrant Plan, as well as the stretch of the corridor east of 16th to the Hollywood area. Implement the plan emphasizing pedestrian safety projects, installation of traffic signals and maintenance of parking supply.		X			**PBOT**
TR7	Install electric vehicle charging stations in the Lloyd District.		X			**PBOT**, PDC
TR8*	Implement the I-5 Broadway/Weidler Interchange Plan improvements.		X			**ODOT**, PBOT
TR9*	Implement a 7th Ave pedestrian/bike bridge over I-84 connecting to either 7th or 8th in the Central Eastside.			X		**PBOT**, ODOT
TR10*	Develop a strategy for the Clackamas Flexible Street and private development extending from the Rose Quarter to NE 9th Avenue via a new pedestrian/bicycle bridge over I-5.			X		**PBOT**, BPS, PDC, ODOT, EcoDistrict, Private
TR11	Complete the Sullivan's Gulch Trail Concept Plan and implement its recommendations.			X		**PPR, PBOT**, ODOT, UPRR, Private
TR12	Study the feasibility of adding a new light rail station on the Yellow line near Dixon to serve the N Broadway area and PPS Blanchard site.			X		**TriMet**, PBOT, BPS

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR13*	Work with property owners to confirm the benefits and feasibility of straightening the "s-curve" in the Union Pacific rail tracks for freight and passenger rail operations. Options pursued should prioritize maintaining the development potential of the "Thunderbird" site. See related action UD8.			X		**ODOT**, UPRR, Private, BPS
TR14*	Work with TriMet to improve the Steel Bridgehead and Rose Quarter Transit Center area to improve transit, local circulation, access to the Eastbank Esplande, and development opportunities			X		**TriMet**, TMA, PBOT, BPS, Private
TR15	Explore water transportation options, including a Willamette River water taxi, and investigate the feasibility of a landing in the Lloyd District. Such a landing should include a safe and direct pedestrian connection to the Convention Center and the Rose Quarter.			X		**OHWR**, PBOT, BPS, PPR, Private
TR16	Expand the Central City wayfinding system in the Lloyd District to include river destinations and other local and regional attractions, as opportunities arise to add or replace signage.				X	**OHWR**, PBOT, PPR, Private
TR17	Continue City of Portland partnership with the Lloyd Transportation Management Association (TMA) to encourage workers and residents to use transit and active transportation modes.				X	**PBOT**, TMA
TR18	Complete the North Portland Greenway Feasibility Study (see also EN2, Update of the Willamette Greenway Plan).	X				**PPR**, PBOT
TR19	Study and implement near term bicycle and pedestrian safety enhancements in the "box," especially along N Broadway, that address major safety needs and advance the long range plan.	X				**PBOT**
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Urban Design

These policies and actions will enable the Lloyd District to offer a set of unique, human-scaled urban experiences different compared to the west side of the Central City. The area features a series of existing places with established character that will be strengthened around a revitalized and redeveloped Central Lloyd area. The Central Lloyd area will include more high-rise office buildings and a new, high-density residential district, organized around a signature system of linked open spaces and supported by a network of diverse streets. The high-quality transit service in the area provides an opportunity to shift the Lloyd District from a focus on auto access and auto-oriented uses, to a more pedestrian-oriented development pattern and streetscape.

The large blocks in the Lloyd District are part of a distinctive urban pattern that allows for larger buildings and unique public spaces including courtyards, plazas and parks. These open spaces will be linked by a system of pathways, multi-use trails and quiet streets that are enhanced with vegetation and together create a set of lower stress and quieter routes, and an alternative to the busy arterials through the district. New low stress connections across freeways to the west and south will strengthen connections to the rejuvenated Rose Quarter, the PPS Blanchard site, the Willamette River and the Central Eastside. A desire for better access and connections to the river were expressed throughout the planning process. Connections to the river can be achieved visually, through views or a trail along the river, or physically through direct access via a trail, steps or dock. Both types of access are desired, however direct access will be difficult due to limited availability of riverfront property and the location of the Union Pacific train tracks along the river bank. There are only two riverfront sites in the Lloyd District. The Dreyfus grain terminal is a long-established industrial business that is expected to continue operation for the foreseeable future. Opportunities for open space and potential river access may exist on the vacant “Thunderbird” site. See additional discussion of the Thunderbird site under Lloyd actions UD8 and TR13.

The Lloyd District includes a number of entry points or “gateway” locations, such as the Broadway and Steel Bridgeheads, the Lloyd Center station area and the crossroads intersection of MLK/Grand and Broadway/Weidler. An update to the Lloyd District’s design guidelines will describe more clearly the City’s intentions for the desired experience at each gateway, and how new development can support the targeted character. While many of the gateways will be reinforced by buildings that are taller than the surrounding context to emphasize the civic significance of these places, others may feature special landscaping or trees, unique works of public art, and/or combinations of the above (see Lloyd action UD6).

At its edges, the scale of new development in the Lloyd District will provide a transition to established lower density neighborhoods and historic districts by providing a “step down” to adjacent neighborhoods and by considering the form and pattern of existing development in the review of new development proposals.

Policies

1. **Diverse and Distinctive Urban Places**. Focus more intense development in the Central Lloyd area and Rose Quarter while enriching the entire district through strengthening the distinct character of the existing Lloyd District subareas.

2. **Better Connected District**

   a. **More Seamless Connections.** Improve the character of connections across transportation barriers in the district - freeways, major arterials and rail facilities.

   b. **Variety in Street Character.** Expand the diversity of street character in the Lloyd district, distinguishing three major types: retail/commercial, boulevard and flexible/pathways.

3. **Large Blocks.** Take advantage of the unique opportunity for dense, large site development made possible by the large blocks found in the Lloyd District. Integrate this development into the surrounding blocks through well designed internal green spaces and pedestrian connections.

4. **Open Space.** Develop a signature sequence of open spaces, linked through a pedestrian wayfinding system, that serves the Central Lloyd area, becomes a primary organizing structure for new development, and offers a diversity of character, experiences, and recreational functions for district residents, workers and visitors.

5. **Riverfront Development.** Encourage development along the Willamette River that activates the riverfront, better connects the riverfront to the rest of the district and surrounding neighborhoods, improves visual and physical access to the river, and enhances natural resources.

6. **Pedestrian-Oriented Development.** Discourage new automobile-oriented uses and encourage the eventual redevelopment of drive-throughs and large surface parking lots with development that is oriented to the street and enhances the pedestrian environment.

7. **Transition to Adjacent Neighborhoods.** Provide sensitive transitions in the scale and pattern of development between higher density development encouraged in the Lloyd District and adjacent lower density neighborhoods and historic districts.

2035 Performance Target: Active Street Edges

At least 40 percent of street frontages within the Lloyd District are occupied by buildings oriented to the street, measured by the amount of retail storefront and partial fenestration (windows and doors) facing the street.

Current Conditions

Table 3: Central City Groundfloor Edge Conditions (2011 estimate based on BPS inventory)

	Lloyd District	River District	Downtown
% of street frontage with buildings oriented to street*	22%	51%	55%

* Measured by linear feet of retail storefront and partial fenestration (windows and doors) facing the street.

Map 4: Ground Floor Street Edge Conditions

Implementation Actions: Lloyd District – Urban Design						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD1	Update Title 33 Zoning Code development regulations and maps to implement the district concept. Potential regulations to be amended include: heights, active ground floor building uses, required building lines, drive-through limitations, and auto access restrictions related to street car.	X				**BPS**
UD2*	Revise height regulations along Broadway on the Eliot and Irvington neighorhood edges to provide a step down from taller heights allowed in the rest of the Lloyd District.	X				**BPS**
UD3	Develop regulatory tools to encourage the provision of open space, including public open space, publicly-accessible private open space on large blocks, and multifunctional private courtyard spaces with new high density residential development. Possible tools include: height/FAR bonus incentives, superblock regulations, and master plan requirements.	X				**BPS**, BDS, PPR
UD4	Evaluate existing view designations and potential new view designations in the Lloyd District as part of a Central City-wide analysis of scenic resources. Existing Lloyd District view corridors to be examined for potential changes include the views of downtown from the 12th Ave bridge and from Lillis Albina park.	X				**BPS**
UD5	Develop a strategy to acquire, masterplan, build and improve public parks, plazas and open spaces consistent with the district concept diagram and policies. Seek to time the development of the signature open space system on or near Clackamas concurrent with significant residential development in the district. **[Note: the scope and timeline of this action is under discussion with City bureaus]**		X			**PPR**, BPS, PDC

Implementation Actions: Lloyd District – Urban Design						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD6*	Update the Lloyd District's 1991 design guidelines: *Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan* to reflect the district concept.		X			**BPS**, BDS, BES, PBOT, PDC
UD7	Create and promote a strategy to activate public open space, rights-of-way and surface parking lots during off hours to bring in new people, interests and energy to the district.		X			**LDCA**, EcoDistrict, TMA, Private, PPR, PBOT, BPS, PDC
UD8*	Work with the property owner/developer of the "Thunderbird" site to craft a development agreement that incorporates public open space and the greenway trail on the riverfront. See related action TR13.		X			**BPS,** PPR, BPS, OHWR, ODOT, Private
UD9	Enhance the pedestrian and cycling environment under the I-5 Freeway at NE Lloyd Blvd and Multnomah, Holladay and Oregon Streets.			X		**PBOT**, TriMet, ODOT, TMA
UD10	Recommend that the existing 75' height limit between NE Schuyler and NE Hancock and NE 7th and NE 16th in the Irvington Historic District be reduced to 45' as part of the Comprehensive Plan update process. The height limit change is in response to the creation of the Irvington Historic District in 2010 and the policy need to retain multi-family housing potential in this corridor.		X			**BPS**
UD11	Work with property owners and developers to further the development of NE 7th and NE Multnomah as district retail/commercial streets.				X	**BPS**, PDC
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Environment

The combination of significant potential for new development, extensive transit, pedestrian and bicycle networks and the formation of the Lloyd EcoDistrict presents a unique opportunity to dramatically improve environmental conditions within the Lloyd District and help meet Portland's broader sustainability goals. This plan capitalizes on that potential by promoting district-wide sustainability strategies that result in significant improvements in the environmental performance of the district. The plan calls for green buildings, green infrastructure and sustainable design to be integrated with new development in order to improve air quality, water quality, watershed health, habitat, resource conservation, climate and livability.

A key component to realizing the goals for improving environmental conditions in the district will be to better use space within public rights-of-way for sustainable stormwater strategies and increased tree canopy that absorb and clean water, provide habitat for birds and pollinators, and provide shade. Boulevards, flexible streets and water quality/tree canopy corridors have been identified to provide this function. Opportunities to enhance existing natural resources and improve habitat have also been identified within Sullivan's Gulch and along the Willamette River bank. Individual projects are also encouraged to incorporate green features, such as ecoroofs and energy efficiency. More detailed policies and implementation tools related to the Willamette River and Sullivan's Gulch will be developed in the next phase of CC2035 process that includes the update of the Willamette Greenway Plan and analysis of central city natural resource protection options (see Lloyd actions EN1 and EN2).

This plan embraces the formation of the Lloyd EcoDistrict and supports its goals for restorative development that improves environmental conditions, a connected district, and to be climate positive. To this end, the green systems concept developed as part of the planning process is considered a starting place that will be refined and added to as the EcoDistrict priorities are developed in the coming years.

While this policy area primarily focuses on integrating green features into development, it should be noted that the built form envisioned for the district—high density, mixed-use development that is well served by transit and facilities for biking and walking--will also make a significant contribution to sustainability goals. This will encourage the use of active transportation modes, thereby reducing emissions and energy use and increasing the efficiency of urban services.

Policies

1. **Sustainable District.** Promote innovation and leadership in the Lloyd District in the areas of sustainable and restorative development, energy efficiency, water conservation, waste reduction and climate change resiliency. Support partnerships that facilitate district-wide strategies.

2. **Green Infrastructure and Tree Canopy**. Increase tree canopy and the use of vegetated stormwater facilities in Lloyd District rights-of-way particularly on designated "boulevards", "flexible streets" and "tree canopy/water quality corridors". Encourage the use of green elements and habitat-friendly design on development sites, including ecoroofs and other vegetated stormwater approaches, roof gardens, landscaped setbacks and courtyards, living walls, and native vegetation.

3. **Green Buildings and Energy**. Encourage the development of high performance buildings, renewable energy systems, district energy, and energy retrofits that reduce greenhouse gas emissions.

4. **Willamette River Resources.** Protect and enhance natural resources along the banks of the Willamette River to improve habitat and watershed health, while also meeting Citywide goals and policies regarding recreation, views, access to the river, and riverfront development.

5. **Sullivan's Gulch.** Protect and enhance natural resources within Sullivan's Gulch to improve its function as a habitat corridor, reduce the risk of wildfire and landslide, and maintain and enhance views, while providing flexibility to incorporate a recreation trail.

2035 Performance Target: Tree Canopy

Plant or preserve trees, where appropriate, within the Lloyd District sufficient to achieve 18 percent canopy coverage once the trees mature.

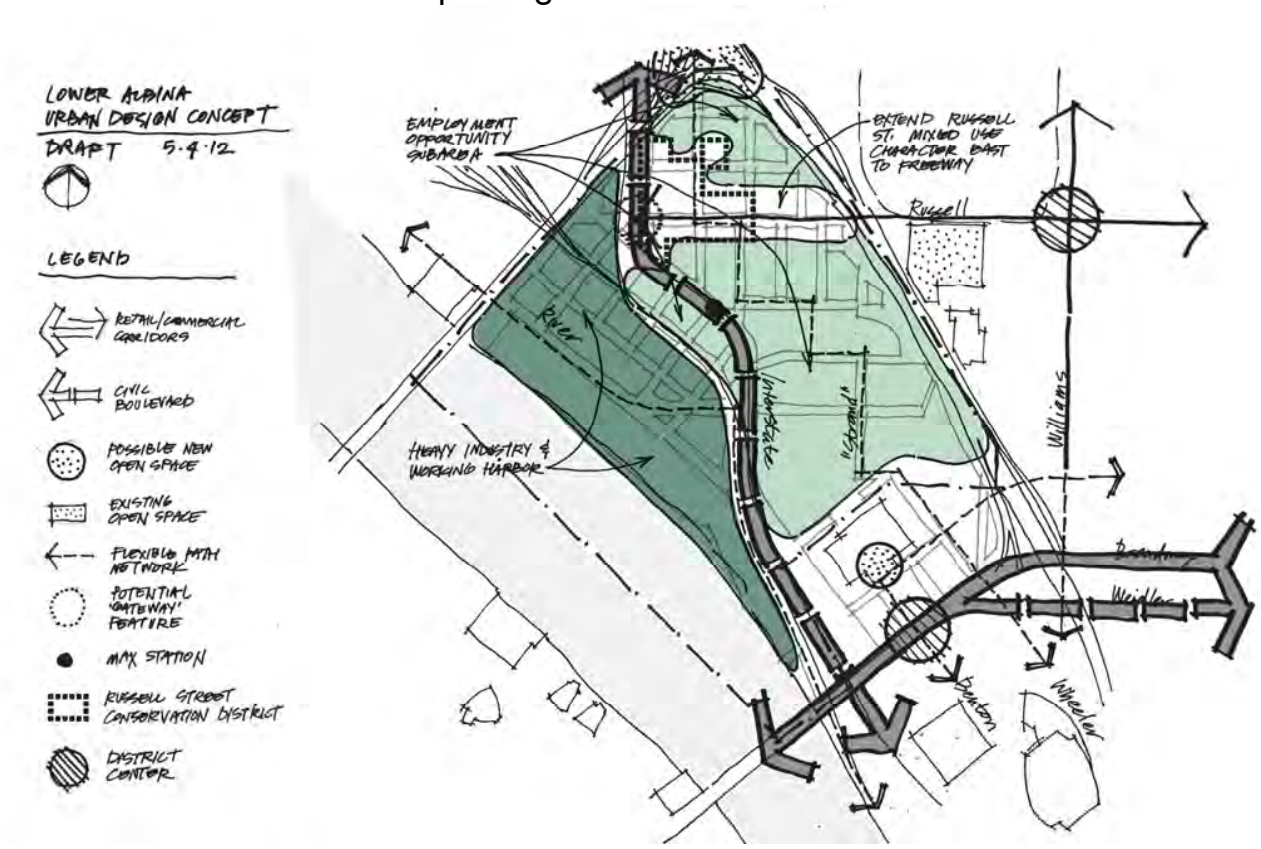
Current Conditions
The current tree canopy coverage in the Lloyd District is ten percent. To achieve 18 percent coverage, approximately 30 additional acres of canopy would need to be added through tree planting and growth of existing trees.

Implementation Actions: Lloyd District – Environment

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
EN1*	Evaluate natural resource protection and management options for Sullivan's Gulch and the Willamette River bank as part of the Central City-wide natural resource analysis.	X				**BPS**, BES, OHWR
EN2*	Update the Willamette Greenway Plan for the Lloyd District as part of the River Plan / Central Reach process, building on concepts outlined in the N/NE Quadrant Plan and the North Portland Greenway Feasibility Study.	X				**BPS**, BES, OHWR, PPR, PDC, Federal, State and Regional agencies, UPRR, Private
EN3	Explore approaches to improve the environmental performance of the district. Possible tools include incentives for green infrastructure, energy retrofits, high performance new construction, renewable energy systems, and connections to district energy. Seattle's "Green Factor" is an example of flexible regulations geared toward green infrastructure.		X			**BPS**, BDS, BES, EcoDistrict

Implementation Actions: Lloyd District – Environment

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
EN4	Investigate opportunities for serving the PPS Blanchard site with district energy.		X			**PDC**, BPS, PPS
EN5	Design and implement a water quality/tree canopy corridor strategy for the Lloyd District. The strategy should evaluate streets initially identified in the concept for feasibility and potentially add additional streets where opportunities are identified.			X		**BES**, PBOT, BPS, PPR/UF, PDC, OHWR, PWB
EN6	Develop and implement a tree planting strategy for the Lloyd District. The strategy should identify available planting locations including streets and underutilized space within public rights-of-way and could result in fine tuning the tree canopy target for the district.			X		**BES, BPS**, PPR/UF, BES, BPS, PBOT, PWB, Private
EN7	[Action deleted: tree planting addressed under EN6. Stormwater facilities addressed under EN5.]					
EN8	Develop a management strategy addressing multiple objectives for the Sullivan's Gulch natural resource area, including re-vegetation, trail development, environmental education, special habitat area and maintenance.		X			**BES**, PBOT, PPR, OHWR, BPS, ODOT, Private
EN9	Continue to support the Lloyd EcoDistrict work program.				X	**EcoDistrict**, City
EN10	Coordinate capital improvements and "green systems" planning with the work of the Lloyd EcoDistrict.				X	**City**, EcoDistrict
EN11*	Design infrastructure, such as the proposed Clackamas I-5 overcrossing and street improvements to accommodate district energy infrastructure where appropriate.				X	**PBOT**, ODOT, PDC
EN12	Use green infrastructure measures to improve the water quality of stormwater discharged to the Willamette River and to reduce the risk of sewer backups into basements.				X	**BES**, PBOT, Private



*Additional details for selected action items are included in Appendix B, Implementation Action Details.

Lower Albina

District Goal

Strengthen Lower Albina as an industrial and employment area by reinforcing the working harbor and providing for diverse employment and development opportunities. Enliven historic Russell Street with mixed-use and commercial activities that are compatible with industrial and employment uses.

Lower Albina District Concept Diagram

Key Elements of the Concept

Russell Street Mixed Use Area: This area includes the existing commercial node within the Russell Street Conservation District and suggests an expansion of retail and commercial uses to the east, reestablishing the historic connection between Lower Albina and the Vancouver/Williams corridor.

Employment Opportunity Subarea: This area remains industrial, but has additional flexibility for commercial uses as a means of increasing employment density. Commercial uses are restricted to those that are less service-oriented and therefore are more compatible with industrial businesses.

Heavy Industry and Working Harbor: This area is regionally significant industrial land and remains a heavy industrial area and working harbor.

Street and Development Character: The character and function of three main street types shown in the concept diagram are described below. A more detailed description of the street types is provided

in a separate report, N/NE Quadrant Plan: Street and Development Character Concept (2/1/12 Draft).

- **Retail/Commercial Corridors**. These corridors are generally busy streets with high visibility for motor vehicles, transit, bikes and pedestrians. They should generally have consistent ground level retail storefronts. In Lower Albina, Russell Street is designated a “neighborhood” retail/commercial street because of its smaller scale. Russell Street connects with the Williams retail/commercial street at the historic neighborhood center at the intersection of Russell and Williams.

- **Boulevards**. These corridors are often busy streets that offer a more landscaped, green character, with fewer retail storefronts than the retail/commercial type. In Lower Albina, Interstate Avenue is designated as a “civic” boulevard because it makes connections to North Portland.

- **Flexible Network**. These streets and spaces make up a system of local, pedestrian-friendly connections through the district that offer quieter, “low-stress” experiences distinctly different from the busier streets serving the area. In Lower Albina, “the Strand” is designated as a flexible street connection that meanders through the district. The North Portland Greenway Trail would also pass through the district. Local streets within the flexible network would continue to meet the access needs of local residents, businesses and industry.

Gateway: These areas designate a point of transition into or out of the district. The specific experience is determined by the character of the location, and could be enhanced by public sector improvements, private development design approaches or a combination of both. In Lower Albina, a gateway is designated at the intersection of Interstate and Russell.

District Policies and Implementation Actions

Regional Center: Industrial and Employment Sanctuary

Lower Albina plays a key role in the Central City and the region as a center of industrial employment. It serves as a critical incubator for emerging and innovative businesses and provides an important living-wage job base near inner North and Northeast neighborhoods. The district’s mix of industrial businesses, working waterfront and multimodal freight facilities are complemented by a small mixed-use commercial area along lower Russell Street, where retail activity is especially active at night.

The policies and action items in this plan are intended to build on the strength of the district’s existing industrial fabric and provide additional flexibility for commercial uses that are compatible with industrial businesses and increase employment density. Housing is currently allowed within the Russell Street Conservation District, which is zoned for mixed use. The plan proposes to extend the mixed-use zoning east on Russell, however new housing will not be allowed in that area.

Policies

1. **Working Harbor.** Protect the Lower Albina working harbor and support river-dependant uses.

2. **Industry and Employment**. Increase economic opportunities, living-wage jobs and employment density by preserving existing industrial land uses and diversifying the range of employment activities allowed in the area east of the Union Pacific railroad and near the MAX station.

3. **Incubator**. Support existing businesses and foster the district as an industrial and employment incubator.

4. **District Vitality.** Support the urban vibrancy of Russell Street and its unique blend of working daytime industrial activity with compatible nighttime restaurant and entertainment activity.

2035 Performance Target: Jobs

Add 1,000 new jobs within Lower Albina.

Current Conditions
Based on a 2010 estimate, there are approximately 2,000 existing jobs in Lower Albina (with revised district boundary, see Action RC1). The addition of 1,000 new jobs would result in a total of 3,000 jobs. This would require a 50 percent growth in jobs over 25 years.

Implementation Actions: Lower Albina – Regional Center: Economy and Innovation

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
RC1*	Adjust the Lower Albina subdistrict boundary to exclude the PPS Blanchard site and adjacent properties to the south and east, placing them within the Lloyd District.	X				**BPS**
RC2*	Rezone properties east of the Russell St. Conservation District fronting Russell Street from IG1d to EXd. Set max FAR at 3:1 and maximum height at 50'. Prohibit housing in this area.	X				**BPS**
RC3*	Apply zoning provisions to IG1-zoned properties east of the Union Pacific railroad alignment that allow certain compatible office-like uses, similar to the Employment Opportunity Subarea regulations in the Central Eastside. Implementation of the Employment Opportunity Subarea regulations is contingent on developing a Lower Albina parking strategy that explores off-street parking facilities for workers and visitors and on-street parking strategies.	X				**BPS,** PDC, PBOT, Private
RC4	Identify potential brownfield sites and identify clean-up and redevelopment strategies to bring them back into economic use.		X			**BPS**, PDC, BES, Private
RC5	Assist small businesses and property owners through storefront grants, Development Opportunity Services grants, loans for tenant improvements, start-up and equipment, and other programs.				X	**PDC**

*Additional details for selected action items are included in Appendix B, Implementation Action Details.

Transportation

Lower Albina is located at the southern end of the North Willamette River working harbor area, the northern end of the Central City, and adjacent to historic streetcar neighborhoods. As a predominately industrial area, freight movement associated with the working harbor, freight railroad, and trucks are essential for the economic vitality of this district, City and region. Its location within the Central City also provides for transit, bicycle and walking facilities for workers, shoppers, and visitors to the district. To sustain the vitality of Lower Albina, maintenance and continued improvement of the multi-modal transportation system will be important.

Policies

1. **Freight System**. Prioritize freight movement and access while maintaining and improving the safety, efficiency and convenience of the transportation system for all modes.

2. **Multi-Modal Connectivity**. Improve connectivity through the district and strengthen connections to adjacent districts, including the Rose Quarter, the Vancouver/Williams Corridor and Mississippi Avenue. Improve pedestrian connections to Interstate MAX and bus service to enhance access to employment opportunities in the area.

3. **Rail and Marine**. Preserve rail and inter-modal access to the Albina Rail Yards, marine freight facilities and local industries.

4. **Freeway Access**. Maintain or improve access from industrial areas to the regional freeway system.

5. **Strategic Investments.** Encourage business creation, growth, and innovation through strategic public and private partnership investments in multi-modal transportation and parking infrastructure.

2035 Performance Target: Mode Split

At least 40 percent of commute trips to and from Lower Albina are by non-single occupancy vehicles (transit, walking, bicycling and carpooling).

Current Conditions
The current Lower Albina mode split is approximately 18 percent by non-single occupancy vehicle (SOV) for the district.

Implementation Actions: Lower Albina – Transportation

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR1	Explore ways to adopt the Street and Development Character concept, including three street types: retail/commercial, boulevard and flexible/pathways. This may include updates to the Transportation System Plan Street Design Classifications.	X				**PBOT**, BPS

Implementation Actions: Lower Albina – Transportation						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR2	Complete the North Portland Greenway Feasibility Study.	X				**PPR**, PBOT,
TR3	Study options for the Larrabee Street ramp that would preserve auto, bicycle and freight access while accommodating the Greenway Trail and pedestrian and bicycle access to the district and river.		X			**PBOT**, PPR
TR4*	Develop a street design plan for the "the Strand" and alternative routes to provide a lower stress connection between N. Russell Street and the Rose Quarter.		X			**PBOT**, BPS
TR5	Rebuild N River Street from the Tillamook overpass to Essex Street.			X		**PBOT**
TR6	Study the need for pedestrian improvements to facilitate employee access to transit on Russell, Interstate and Broadway/Weidler.			X		**PBOT**, TriMet
TR7	Enhance and maintain streets in working condition to facilitate access and circulation in the district.				X	**PBOT**
TR8*	Implement the I-5 Broadway/Weidler Interchange Plan Improvements, including the proposed Hancock overcrossing, to improve regional and local freight access.			X		**ODOT**, PBOT
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Urban Design

Lower Albina has a rich and varied fabric of largely industrial and employment buildings, with the exception of retail and commercial uses largely clustered within the Russell Street Conservation District. As the character of Lower Albina is not expected to change dramatically, these policies and actions are intended to strengthen its existing urban forms and patterns and offer guidance for the integration of new development that is sensitive to this significant industrial area. To that end, policies focus on preserving the existing industrial character of the majority of Lower Albina, enhancing the unique character of the Russell Street area and preserving historic buildings in the district in general.

Actions also call for repurposing, reconfiguring and improving the appearance of spaces underneath and adjacent to freeways and ramps to the north and east. This would offer an expanded range of recreational opportunities and a more attractive set of connections between employment centers and mixed-use neighborhoods, in addition to enhancing the district's function as a "gateway" into the Central City from North Portland. Multi-modal connectivity would also be enhanced with "The Strand," a lower stress connection and way-finding system between the Russell Street commercial area and the Rose Quarter. See Transportation action TR4 for more information on the Strand.

Policies

1. **Historic and Cultural Resources**. Preserve, rehabilitate and celebrate historic structures in Lower Albina, including those in the Russell Street Conservation District and culturally significant African-American resources identified in the Cornerstones of Community inventory.

2. **Russell Street**. Strengthen the character of Russell Street and reestablish the historic connection between Lower Albina and the Vancouver/Williams Corridor by encouraging new mixed uses, rehabilitated buildings and a nighttime orientation.

3. **Industrial Character**. Preserve and enhance the industrial character and functionality of the Lower Albina industrial area.

Implementation Actions: Lower Albina – Urban Design

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD1*	Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.		X			**AHC**, BPS
UD2*	Improve the design review approval criteria used for development proposals within the Russell Street Conservation District and design overlay zone within Lower Albina.		X			**BPS**, BDS

Implementation Actions: Lower Albina – Urban Design						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD3	Improve the character and activate the area under the Fremont Bridge ramps. Consider active recreation, public art, sustainable landscaping and stormwater management, and improved parking facilities.			X		**City**, ODOT
UD4	Improve the character of N Russell under the I-5 freeway. Consider lighting improvements, public art, sustainable landscaping and stormwater management, and screening of adjacent publically-owned storage yards.			X		**PBOT**, ODOT
UD5*	Encourage and assist Lower Albina property owners to nominate their historic properties for designation as landmarks.				X	**BPS**, AHC, SHPO, Eliot NA
UD6	Improve the appearance of publically-owned storage yards located under and adjacent to the I-5 and I-405 freeways.		X			**PBOT**, ODOT
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Environment

The Central City 2035 Concept Plan calls for increasing energy efficiency, enhancing natural resources and habitat, improving air and water quality and expanding the use of green infrastructure Central City-wide. While the Lower Albina area will continue to be a primarily industrial district, there are opportunities for achieving these goals through incremental improvements to the riverbank, adding green infrastructure to rights-of-way where they don't conflict with industrial operations, and encouraging the use of sustainable design in new development or remodels. Increasing green building and infrastructure could also contribute to business development by making the area more attractive to tenants and employees.

Policies

1. **Willamette River Resources.** Support the natural resource protection and enhancement objectives of the River Plan / North Reach, where they apply to Lower Albina.

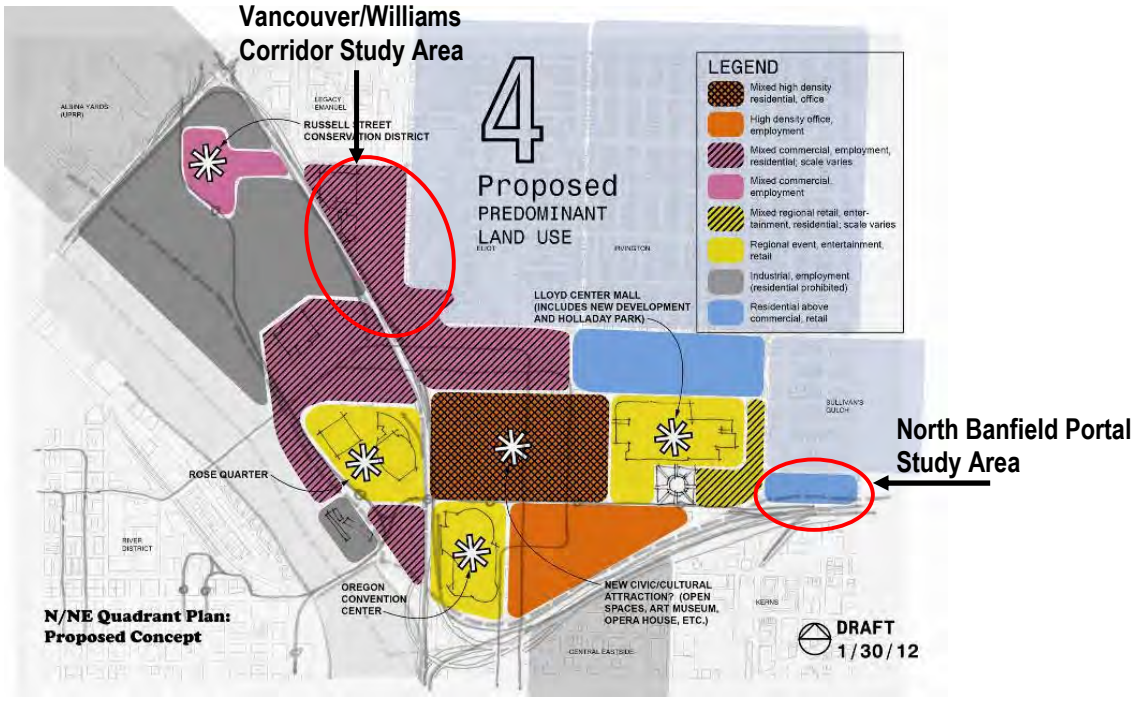
2. **Sustainable Design**. Encourage sustainable design in public infrastructure and industrial buildings, including green roofs, stormwater management strategies, tree canopy, habitat-friendly design, energy efficiency improvements, and alternative energy generation.

2035 Performance Target: Tree Canopy

Plant or preserve trees within Lower Albina sufficient to achieve ten percent canopy coverage once the trees mature.

Current Conditions
The current tree canopy coverage in Lower Albina is six percent. To achieve ten percent coverage, approximately seven additional acres of canopy would need to be added through tree planting and growth of existing trees.

Implementation Actions: Lower Albina – Environment



#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
EN1	Update the Willamette Greenway Plan for Lower Albina, building on concepts from the North Portland Greenway Feasibility Study and provisions contained in the River Plan / North Reach, once a final court decision is made. The update will address habitat, mitigation sites, trails and access, and river dependent and river related development.	X				**BPS** BES, BDS, OHWR, PPR, PBOT, PDC, Federal, State and Regional agencies, Private

Implementation Actions: Lower Albina – Environment						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
EN2	Develop and implement a strategy to install trees and sustainable stormwater facilities to existing streets and underutilized space within rights-of-way (e.g. freeway ROW, Broadway bridgehead, west end of Russell Street). Ensure improvements do not compromise operations for industrial businesses.			X		**BES**, PPR/UF, PBOT, PWB, ODOT, Private
EN3	Explore approaches to improve the environmental performance of the industrial district. Possible tools include incentives for green infrastructure, energy retrofits, high performance new construction, renewable energy systems, and connections to district energy.			X		**BPS**, BDS, BES
EN4	Target outreach to industrial businesses regarding sustainable business practices.				X	**BPS**
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Study Areas

Two areas adjacent to the N/NE Quadrant are included in the plan's study area: the North Banfield Portal and the Vancouver/Williams Corridor. They are included because of the potential for land use and transportation proposals in the quadrant to affect them and because community members asked the Bureau of Planning and Sustainability to address long-identified land use and zoning issues in these areas.

Each study area has proposed action items intended to further objectives identified in the planning process, primarily zoning changes to encourage new development or support existing uses. However, these areas will remain outside of the Central City boundary and therefore no new policies are proposed.

North Banfield Portal

The North Banfield Portal is the eastern gateway to the Lloyd District, at the transition from the Central City's higher density commercial and residential development to lower density residential in the Sullivan's Gulch neighborhood.

Sullivan's Gulch provides valuable natural resources in central Portland where habitat areas are less common. Enhancement of the gulch resources and development of the Sullivan's Gulch Trail will increase connectivity for both wildlife and pedestrians and bikes, and connect the Willamette River with areas to the east. New redevelopment opportunities along Multnomah Street will bring additional residents and new neighborhood-oriented commercial services to the area. The Sullivan's Gulch Trail offers a unique opportunity to enhance and strengthen transportation options in the Lloyd District and Sullivan's Gulch neighborhood by incorporating bike and pedestrian linkage to existing MAX, auto, bus, and streetcar options in the area.

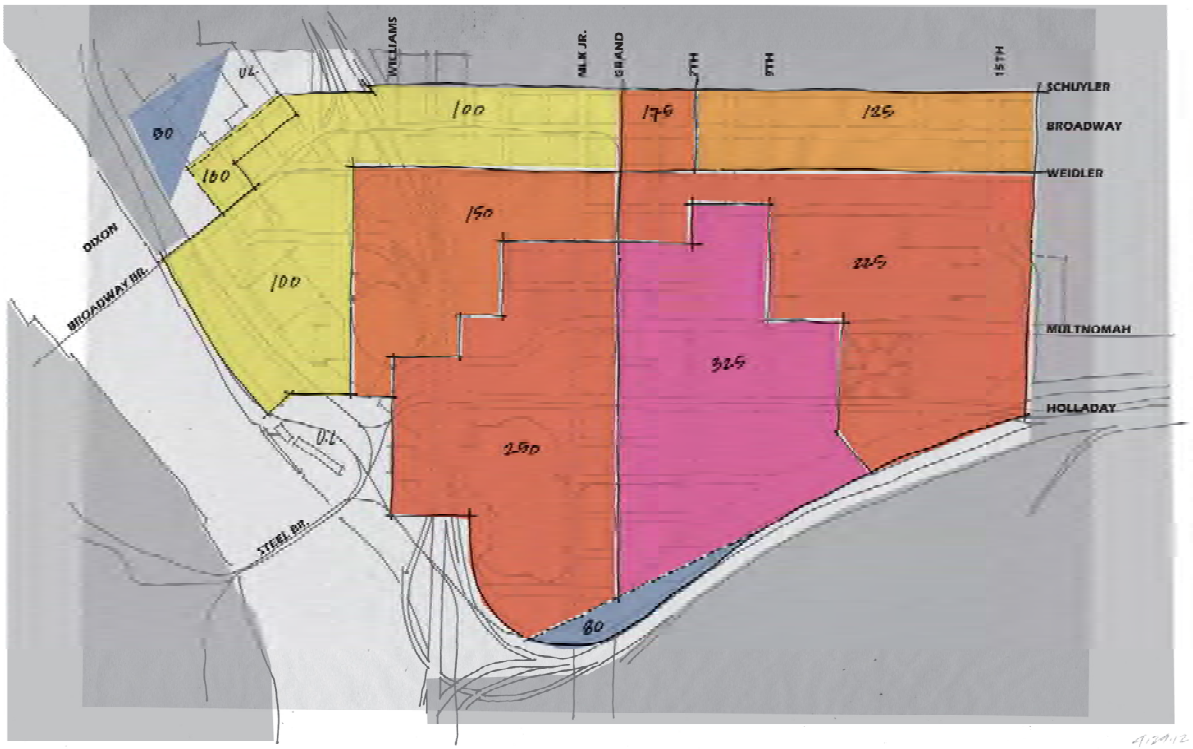
The N/NE Quadrant Plan will increase flexibility and encourage neighborhood-serving, mixed-use development, including housing, in this area by proposing a change in zoning. The current zoning is primarily residential (RH), with a small area of office zoning (CO1). The current zoning presents a potential obstacle to development because it is restrictive in use and it creates site planning challenges due to development standards that vary across the site.

Implementation Actions: North Banfield Portal						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 – 20 Years	Ongoing	
NB1*	Apply CXd zoning to the sites south of Multnomah St. and west of NE 21st Ave. Existing environmental conservation (c) overlay zoning will remain.	X				**BPS**
NB2*	Evaluate natural resource protection and management options for Sullivan's Gulch as part of the Central City-wide natural resource analysis.	X				**BPS**, BES
NB3	Complete the Sullivan's Gulch Trail Concept Plan and implement the trail connection through the area.			X		**PPR, PBOT**, ODOT, UPRR, Private
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Vancouver/Williams Corridor

The Vancouver/Williams Corridor is in the Eliot neighborhood, a part of the Albina Community Plan area, adjacent to the Central City. This area is included in the N/NE Quadrant Plan study area because of its proximity to potential reconfigurations of nearby freeway over-crossings and long-standing concerns about an area of residential zoning, which contains non-conforming commercial uses and does not allow mixed-use development. It also contains a large concentration of significant buildings identified in the Bosco-Milligan Foundation's Cornerstones of Community inventory of African-American cultural resources.

This area will remain outside of the Central City and no changes to existing Albina Community Plan policies that govern it are proposed. The primary proposed action is to rezone an area of existing high-density residential zoning (RHd) to central employment (EXd). The EXd zoning allows a broad range of uses, including commercial, light industrial and residential uses, consistent with the mix of current land uses in the area. This additional land use flexibility will support reinvestment and expansion of existing employment uses in the area, which are currently nonconforming uses. It will also support the rehabilitation of cultural resources by providing a broader range of uses allowed within existing buildings.



Implementation Actions: *Vancouver/Williams Corridor*						
#	Action	Timeline				Implementer (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
VW1*	Rezone portions of 4 blocks between I-5 and N Williams from RH to EXd.	X				**BPS**
VW2*	Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.		X			**AHC**, BPS
VW3	Ensure that any reconfiguration of surface streets in conjunction with I-5 freeway improvements maintain and enhance connectivity of the surface street system between and within the N/NE Quadrant and the Eliot neighborhood and minimizes traffic impacts on the Eliot neighborhood.			X		**ODOT**, PBOT, BPS
*Additional details for selected action items are included in Appendix B, Implementation Action Details.

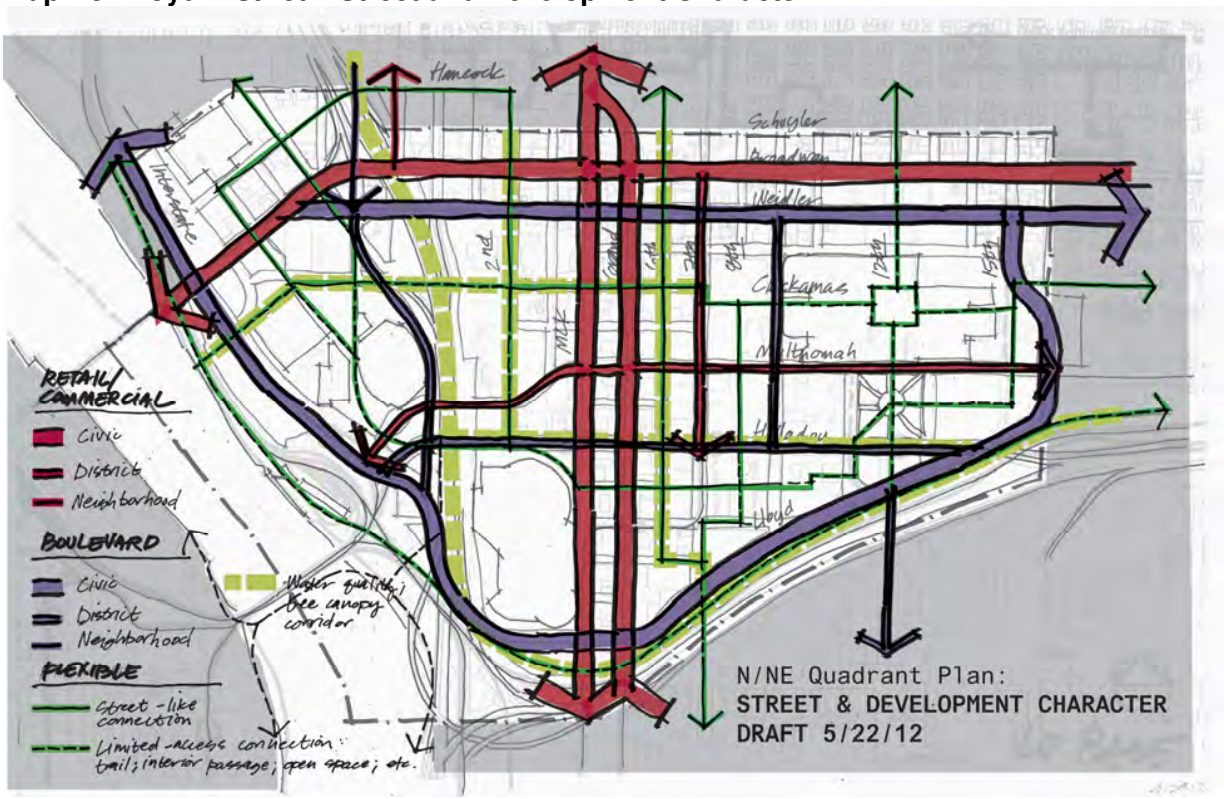
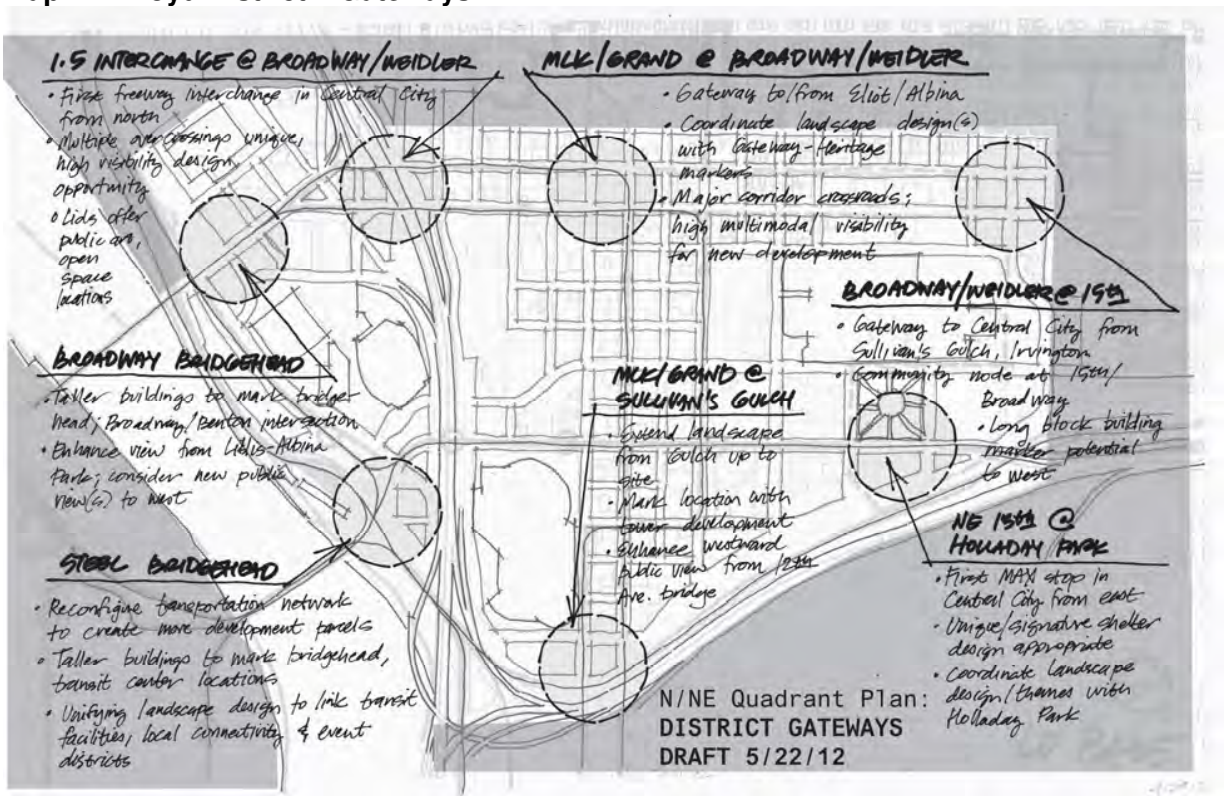


Map A2: Lloyd District - Proposed Maximum Heights

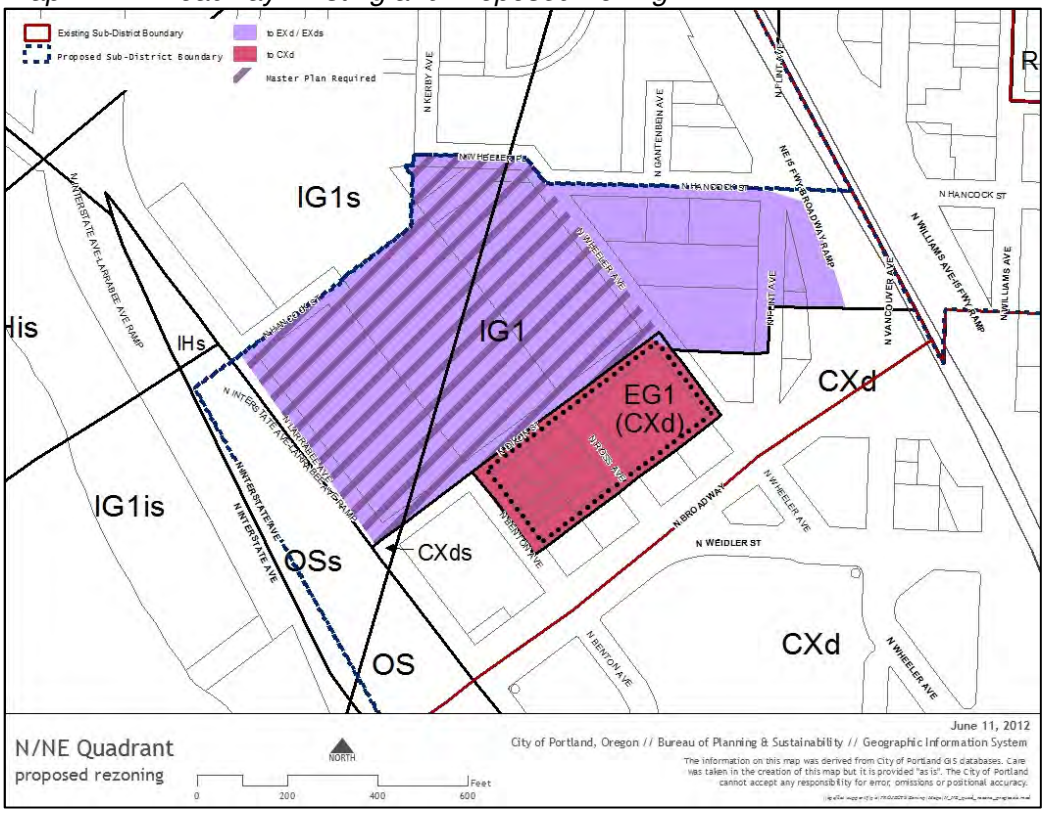


Note: Proposed maximum heights are inclusive of any potential bonuses.

Map A3: Lloyd District – Street and Development Character

Map A4: Lloyd District – Gateways

APPENDIX B: IMPLEMENTATION ACTION DETAILS



This appendix provides additional information about selected action items listed in the implementation action tables in Chapter 3: *Goals, Policies and Implementation Actions*. The information provided varies depending on the action item and includes background information, more in-depth descriptions of actions and their purpose and direction about next steps.

Lloyd District

RC1 Adjust the Lloyd District and Lower Albina boundaries to include the PPS Blanchard site and adjacent properties to the south and east within the Lloyd District.

This action along with Lloyd action RC2, recognizes the overall vision for a vibrant N Broadway area, linking the River District on the west side of the Willamette River with the Lloyd District. This proposed action would create sufficient depth north and south of Broadway to promote the economic revitalization envisioned in the *Rose Quarter District Plan* (2012). The Portland Public Schools Blanchard site, currently located within the Lower Albina industrial district, presents a significant redevelopment opportunity for activating the north side of Broadway consistent with the Lloyd District's mixed use character. The current office use of the Blanchard Building and desired future uses for the site are non-industrial in nature, and because the natural topographical transition from the area around N Broadway and the Rose Quarter happens at a steep bluff north of the Blanchard site, the boundary between the Lloyd District and Lower Albina should be adjusted as shown in Map B1: *N Broadway Existing and Proposed Zoning*. See Lloyd action RC2 for detailed information on the proposed zone change.

Map B1: N Broadway Existing and Proposed Zoning

RC2 Rezone the PPS Blanchard site and adjacent properties to the east from IG1 to EXd and CXd to encourage future redevelopment.

Background: Although one of its primary uses is office space, Portland Public Schools' (PPS) headquarters building, the Blanchard Educational Service Center is currently zoned for industrial use. The building is oversized and inefficient for the services its provides and, given its age and state of repair, major future improvements may not be a good long-term investment. The school district has expressed interest in eventually moving to another location, which would open up the approximately 12 acre site for redevelopment. New development at the Blanchard site would complement proposed redevelopment in and adjacent to the Rose Quarter called for by the *Rose Quarter District Plan*. A zoning change for the Blanchard site and some adjacent parcels would be required to accommodate most redevelopment scenarios. Several development options for redevelopment of the area were explored in the *North of Broadway / Blanchard Site Development Study* (2010).

Existing Zoning: Map B2 shows the existing and proposed zoning for the site and Table B1 summarizes existing and proposed zoning provisions. The area contains 25 taxlots with approximately 12 acres.

Approximately 10 acres are zoned General Industrial (IG1). The IG1 zone is intended for industrial development, with sites that generally have smaller lots, a grid block pattern, high building coverages and buildings that are usually close to the street. The northwest portion of the site has a Scenic Resource (s) overlay accompanying a viewpoint from Lillis Albina Park, with a 50 foot height limit.

Approximately 2 acres are zoned General Employment 1 (EG1) with a comprehensive plan designation of CXd. This area has a 45 ft height limit and an FAR of 4:1. The EG zones allow a range of employment uses, emphasizing industrial uses and limiting office, retail and residential development. EG1 areas generally have smaller lots, a grid block pattern, high building coverages and buildings that are usually close to the street, similar to IG1.

The areas to the south and east of the Blanchard site have flexible commercial zoning (CXd) and are occupied by surface parking lots, a storage building and an apartment building. Areas to the north of the site are part of the Lower Albina subdistrict, and are zoned for industrial use with active industrial businesses in operation. A slope on the North side of the site helps form a natural transition between the Blanchard site and the industrial district to the North.

Proposed Zoning - Map B2 shows the existing and proposed zoning for the site and Table B2 summarizes existing and proposed zoning provisions. The area currently zoned General Industrial (IG1/IG1s) is proposed to change to Central Employment (EX), with a design overlay (d) and the continuation of the Scenic Resource overlay (s) on a portion of the area. The EXd zone is a flexible employment zone intended for mixed-use areas of the central city with industrial character. Light industrial, office, retail and residential uses are allowed. The proposed maximum height limit in the EXd area is 100' east of Wheeler and 150' west of Wheeler. The EXds area would continue to have a 50' maximum height to reflect the view of the west side from Lillis Albina Park.

Because of the large size and unique opportunity presented by redevelopment of the main Blanchard site, staff proposes to require a master plan process on the area shown on Map B1 as part of its redevelopment. This process will be developed prior to changing the zoning on the site. The master plan for this site will need to address the following issues:

a. public views over the site and from the site
b. future street network and traffic – for all modes
c. open space opportunities

d. sensitive transitions to industrial land uses to the north – particularly regarding siting of any residential uses to avoid nuisance issues
e. height, bulk and design of proposed structures

The master plan process would not be required for adjacent smaller parcels also included in this rezoning proposal as their small size limits the need to consider the issues above and beyond the normal land use and design review process.

Commercial zoning with a design overlay (CXd) and a height limit of 150' east of Ross and 250' west of Ross is proposed for the area currently zoned General Employment (EG1). The CXd zone is consistent with the city's existing Comprehensive Plan designation of this area and would allow a more flexible mix of uses than is currently allowed, including a wide variety of residential, commercial and institutional uses. The design overlay would require new development to go through a discretionary review process.

Table B1: Summary of N Broadway Existing and Recommended Zoning Provisions

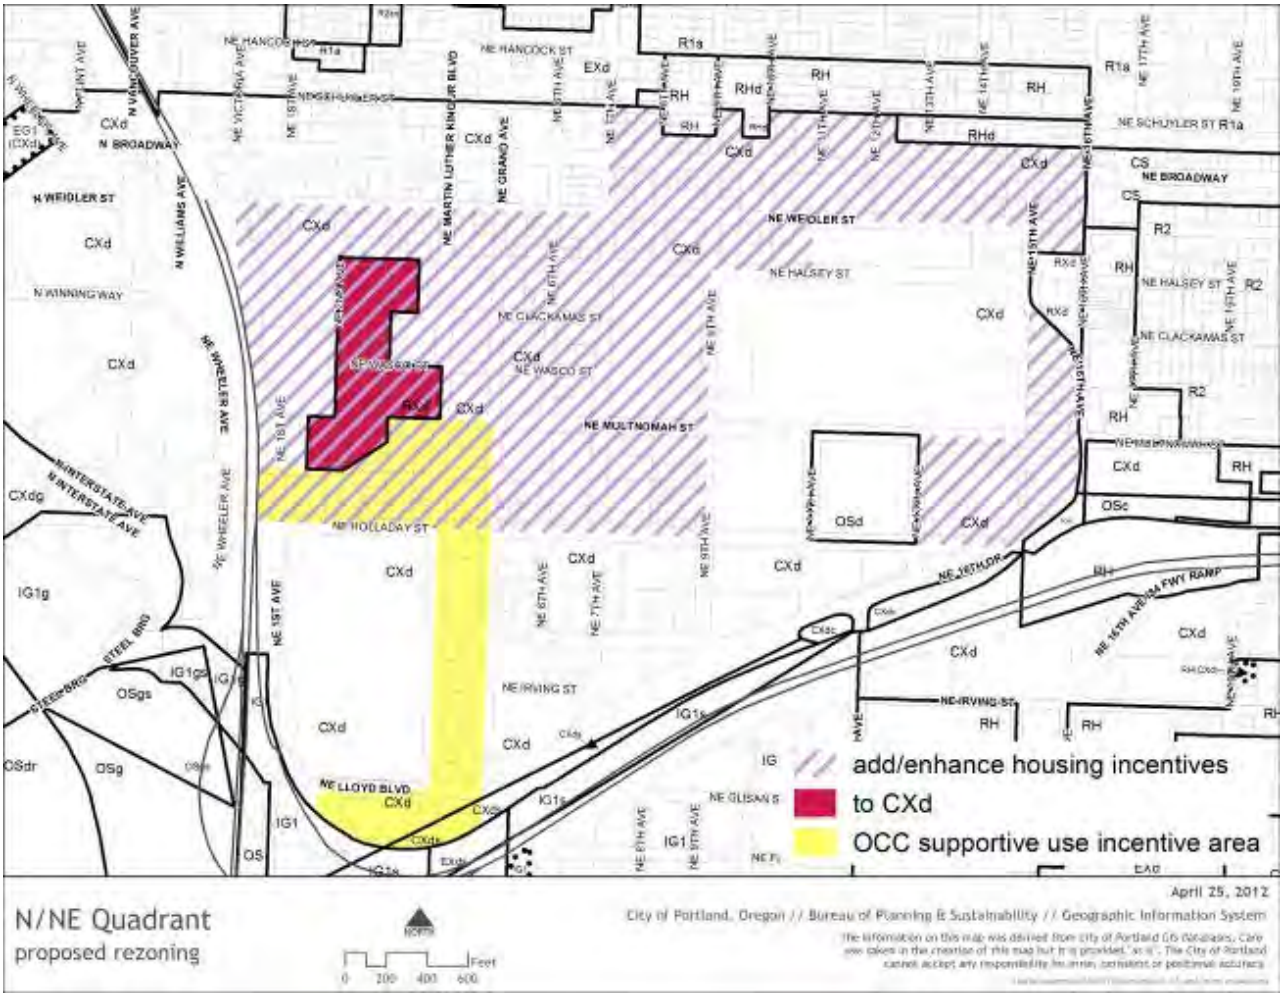
Provision	**Existing IG1**	**Existing EG1**	**Recommended CXd**	**Recommended EXd/EXds**
Land Uses	Primarily Industrial uses only.	Industrial, institutional and some commercial. Limitations on office, retail and residential.	Wide range of residential, office and retail allowed.	Wide range of residential, office, retail and industrial allowed.
Height limit	No limit	100'	100'-250'*	50'-150'*
FAR limit	No limit	4:1	4:1	3:1
Design overlay	No	No	Yes. Discretionary design review required.	Yes. Discretionary design review required.

* See proposed maximum height map in Appendix 1: *Additional Urban Design Diagrams*.

RC3 Adjust and increase maximum allowed heights to support high density development and encourage the provision of public amenities and desired uses in the following areas: Broadway Bridgehead, Riverfront ("Thunderbird" site) and Central Lloyd area.

Existing and proposed height maps are located in Appendix A: *Additional Urban Design Diagrams*. The heights shown on Map A2: *Proposed Maximum Heights* are maximums inclusive of any potential bonus height provisions. The specifics of the bonuses required to reach these maximums have not yet been developed but depending on location, they will emphasize providing housing, providing parks and open spaces, and providing Convention Center-supportive uses. Bonuses may also be developed for green buildings and the use of green infrastructure.

For related information see the following actions:



Central Lloyd – Lloyd actions RC4, HN1 and HN2
Riverfront – Lloyd action UD8

RC4 Adjust regulations and incentives to encourage new development that supports the Convention Center such as new or expanded hotel development, retail and other services on adjacent blocks.

There is a long-held desire to increase activity and vitality in the area surrounding the Oregon Convention Center. The *Lloyd District Development Strategy* (2001) and the *Development Vision for the Oregon Convention Center Blocks* (2006) both sought to create an exciting entertainment-oriented district on the blocks directly adjacent to the facility. This action calls for implementation of regulatory bonuses and incentives on these blocks that would encourage future development to incorporate entertainment-related uses to help realize this vision. See Map B2: *Central Lloyd Existing and Proposed Zoning* for the recommended area of implementation.

Desirable uses in this area include retail spaces (perhaps multi-story), restaurants and bars, entertainment and meeting venues, hotels and cultural facilities including galleries and museums. Prominent architecture, with significant night lighting and public art installations may also be encouraged in this area to enrich the pedestrian experience. Bonuses could be made available for additional building height (up to the proposed maximum heights) or additional floor area ratio (pending revision of the Central City's FAR bonus and transfer program). Other regulatory incentives should also be considered. See Appendix A: *Additional Urban Design Diagrams,* for existing and proposed maximum height maps.

Map B2: Central Lloyd Existing and Proposed Zoning

HN1 Develop regulatory tools to encourage housing development and the inclusion of affordable housing. Focus on housing emphasis areas.

The Lloyd District Goal includes an emphasis on developing a high-density mixed-use residential and employment district in the Central Lloyd, with sensitive transitions to the historic main street on NE Broadway and to the surrounding neighborhoods. To help achieve this goal, this action calls for refocusing available residential incentives (regulatory and financial) for both market rate and subsidized housing to apply in the areas shown on Map B2: *Central Lloyd Existing and Proposed Zoning*. Few, if any housing incentives or requirements would be provided outside the area illustrated on the map.

Potential incentives to encourage housing development include allowing additional building height (up to the maximums on the proposed height map) or additional floor area ratio (pending revision of the Central City's FAR bonus program). In certain areas where some housing is seen as essential, housing requirements may be applied – at least until a specified threshold of units have been built in the district. Changes to superblock regulations to encourage or require housing should also be explored.

HN2 Rezone the area of RXd zoning in Central Lloyd to CXd to provide flexibility and encourage investment. Apply housing incentives described in HN1 to this area.

This action implements the desire for a high-density mixed-use residential and employment district in the Central Lloyd by uniformly applying the flexible Central Commercial Zone with a Design Overlay (CXd) to the area show on Map B2: *Central Lloyd Existing and Proposed Zoning* and applying a variety of housing incentives as described in Lloyd action HN1. It is intended to increase land use flexibility and encourage investment in the district without losing sight of housing objectives. The majority of new housing development in the Central City since 1990 has been in CXd and EXd zoned-areas. For example, Pearl District is largely zoned EXd and Downtown and South Waterfront are largely CXd.

TR2 Develop and revise parking management strategies.

Parking policy is a key component of a successful high density urban area. In the Central City, parking policy serves many purposes. It includes managing the supply of parking to encourage non auto trips, managing congestion, supporting retail uses, protecting livability, addressing air quality issues, supporting growth in the Central City and protecting historic buildings from underuse and demolition. As the Central City parking policy is updated as part of Central City 2035, the City will address the following in relation (though not exclusively) to the Lloyd District:

- Incentivizing mixed use development through the provision of shared parking facilities.
- Promoting the use of transit and active transportation modes by reducing the amount of parking spaces per capita in the district over time.
- Maintaining and enhancing parking to serve retail focused areas and streets.
- Addressing event parking issues through flexible options such as the use of variable pricing and event parking management. An example of this is the current parking plan for Jeld-Wen Field during Portland Timbers games.

TR8 Implement the I-5 Broadway-Weidler Interchange Plan improvements.

See Appendix C: *I-5 Facility Plan*, for a complete description of anticipated interchange improvements and implementation issues to be addressed in the next steps of project design and engineering.

TR9 Implement a 7th Ave pedestrian/bike bridge over I-84 connecting to either 7th or 8th in the Central Eastside.

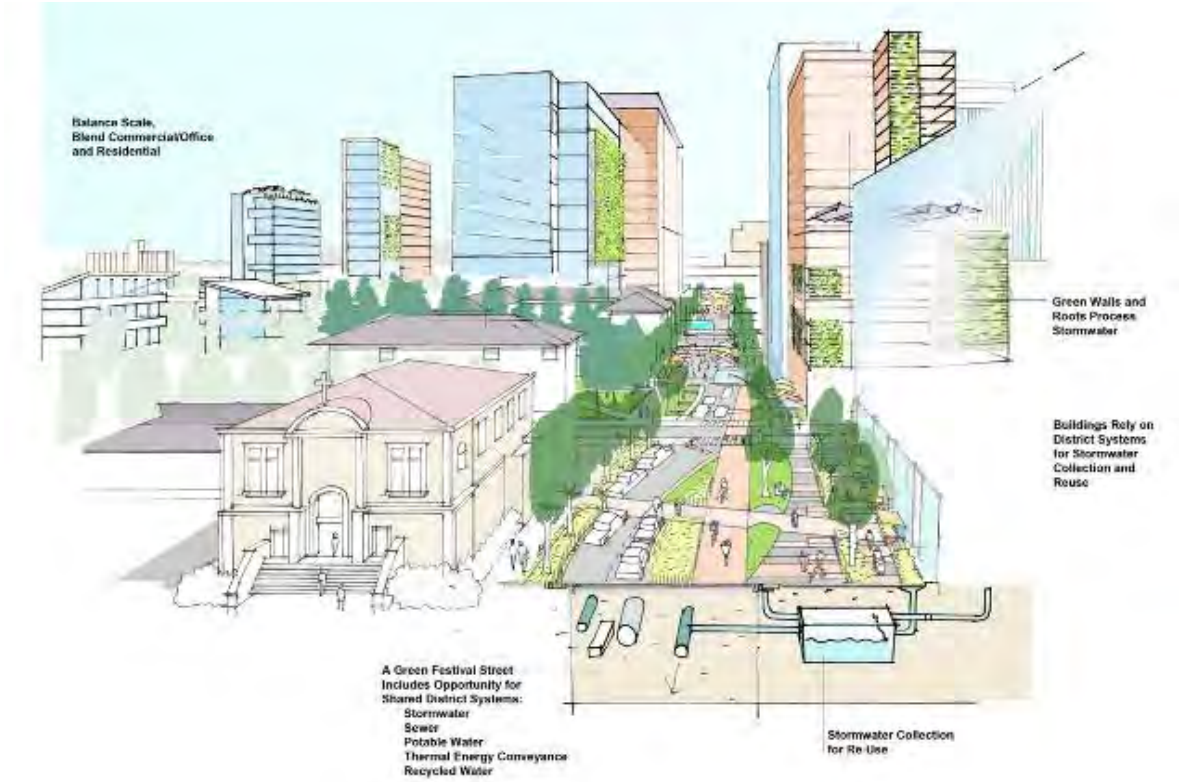
The Lloyd District is surrounded in the south and west by natural and man made barriers. To the south there is Sullivan's Gulch, the active Union Pacific line, the light rail line and the I-84 freeway separating Lloyd from the Central Eastside.

Three bridges connect these two areas: the overpasses at MLK and Grand and the 12th Avenue bridge. These bridges serve the needs of all modes, concentrating high numbers of vehicles with transit lines, trucks, pedestrians and cyclists. The Grand and MLK overpasses are loud and have substandard sidewalks and fast moving vehicles. Conflicts between vehicle and pedestrian needs are most present at Grand and Everett, where there is an on-ramp onto I-84 with a free right turn for vehicles. Pedestrian crossing is not allowed at this leg of the intersection.

There are no bicycle lanes on the MLK and Grand bridges. Streetcar tracks have been installed as part of the Streetcar Loop project, which precludes adding bike lanes adjacent to the curbs. The 12th avenue Bridge has recently received bicycle infrastructure improvements; however, the 12th Avenue bridge is located too far east to serve most travelers to and through the district.

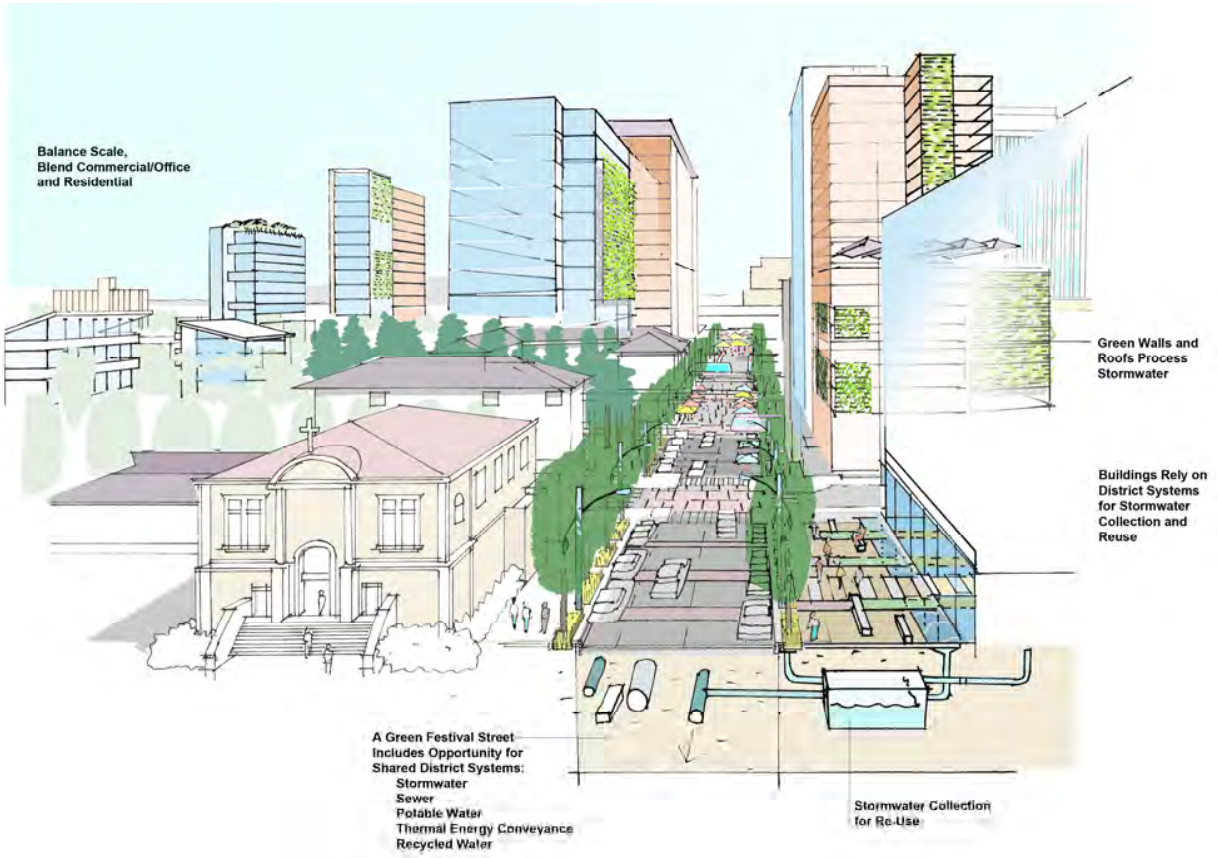
These factors support the need for an additional crossing to serve pedestrians and cyclists with a safe and convenient new connection with direct access to the heart of the Lloyd District. Given the presence of existing bicycle lanes on NE 7th in the Lloyd District and of a building in good condition at the end of NE 9th in the Central Eastside that would need to be demolished to provide a 9th Avenue to 9th Avenue connection, the best alternative routes are from NE 7th in the Lloyd District to either 7th or 8th (shortest distance) in the Central Eastside.

Conceptual rendering looking east from Lloyd Blvd showing a potential design option for the 7th Avenue pedestrian/bicycle bridge. This rendering shows existing bike lanes on Lloyd Blvd. It does not depict the proposed Sullivan's Gulch Trail.



TR10 Develop a strategy for the Clackamas Flexible Street and private development extending from the Rose Quarter to NE 9th Avenue via a new pedestrian/bicycle bridge over I-5.

The concept for a Clackamas Flexible Street would create an intimate urban street that provides for a safe and pleasant place for people to gather, play, and socialize. The street would provide for slow local vehicle access, bicycle access, and street amenities geared toward improving the pedestrian experience and creating a district amenity. This project should showcase the Lloyd EcoDistrict as a sustainable district that would include district energy infrastructure, enhanced tree canopy, improved stormwater strategies and green building technologies. The project should be a public-private partnership effort that leverages public infrastructure investments to obtain private investments in high-density, mixed-use development that contribute to the goal of creating an urban neighborhood in the Central Lloyd area.



Development agreements may be part of this project's implementation program and should address public investments, private development, and sustainable design elements.

Additional plan elements that would increase the positive impact of the Clackamas Flexible Street include the parks and open space strategy called for in action UD5 and the proposed Clackamas Pedestrian and Bicycle I-5 Overcrossing included in the I-5 Broadway/Weider Interchange Improvements Facility Plan (See Lloyd action TR8) that would link NE Clackamas Street with the Rose Quarter and potentially to the Willamette River. The Clackamas Flexible Street Project can occur separately from the bridge project.

The conceptual renderings below show two possible ways that Clackamas Street could be improved. There will be a future process to engage property owners and other stakeholders on design alternatives, access and parking needs.

Conceptual rendering of the Clackamas Flexible Street with a unique design and shared district systems.

Conceptual rendering of Clackamas Street as a festival street and with a decorative paving treatment.

TR13 Confirm the benefits and feasibility of straightening the "s-curve" in the Union Pacific rail tracks for freight and passenger rail operations. Options pursued should prioritize maintaining the development potential of the "Thunderbird" site.

Currently, the "Thunderbird" site is separated from the riverbank by the Union Pacific Railroad mainline tracks. The tracks currently have a series of sharp curves around the Louis Dreyfus grain elevators near the Steel Bridge that dramatically slow train traffic. There may be mutual gain in a scenario that straightens the curves by placing the tracks in a trench or tunnel closer to Interstate Avenue. This would speed train traffic, reducing rail system congestion around the Steel Bridge. Relocating the train tracks would also open up the opportunity for public access to the riverbank at the Thunderbird site while still preserving some development potential. See Lloyd action UD8 for a conceptual illustration of the site with trenched railroad tracks.

TR14 Work with TriMet to improve the Steel Bridgehead and Rose Quarter Transit Center area to improve transit, local circulation, access to the Eastbank Esplande, and development opportunities

The present configuration of the Rose Quarter Transit Center (RQTC) is an evolution from a simple bus transfer center recommended by the City of Portland's Industrial Access Study in the late 1970's to a major transit center for light rail and buses and a multi-modal hub to accommodate the spectators attending events at the Rose Quarter. The Interstate MAX Project was the most recent project to reconfigure the transit center.

With the construction of the Interstate MAX Project, City and TriMet staff acknowledged that the at-grade transit center was an interim solution and that a longer term solution would likely be needed in the future. In particular, as a transportation hub, the signal system would not have sufficient capacity to accommodate anticipated long-term growth in demand by any mode - light rail, bus and vehicle traffic, pedestrians, and bicyclists.

A key challenge for the RQTC also has been the need to better activate the center itself. This is particularly an issue as it relates to public safety. The current arrangement of the transit center and local streets inhibits development opportunities that would help activate the area.

The goals of this future work include exploring alternative configurations of street and rail infrastructure that:

- Improve the quality, safety and experience of the public realm, particularly for pedestrians, bicyclists and transit users.
- Improve transit capacity, readability, reliability and safety of the area – for MAX light rail and bus, as necessary.
- Improve development potential, creating developable parcels in the area of reasonable size and with good access and visibility.
- Increase access to and through the area – for vehicles, bikes and pedestrians.

UD2 Revise height regulations along Broadway along the Eliot and Irvington neighborhood edges to provide a step down from taller heights allowed in the rest of the Lloyd District.

Existing and proposed maximum height maps are located in Appendix A*, Additional Urban Design Diagrams*. The N/NE Quadrant recommends sensitive neighborhood transitions in building height between the Lloyd District and the Eliot and Irvington neighborhoods to the north. The proposed maximum heights map shows maximum heights of 75’ north of Broadway with the exception of between NE 3rd and NE 7th where heights up to 125’ are allowed to reflect the commercial nature of the area around the Broadway and MLK intersection and to acknowledge it as an important gateway into the Central City. Maximum heights are inclusive of any bonus provisions. Proposed changes to allowed heights along the Broadway/Weidler corridor within the N/NE Quadrant do not imply a precedent for revising height limits in the corridor between NE 15th and 33rd avenues, outside the Central City. Any such change would require further study and analysis as part of a future project.

This plan is also recommending that the existing 75’ height limit between NE Schuyler and NE Hancock in the Irvington Historic District, an area that is outside the Central City Plan boundary, be reduced to 45’ as part of the update to the City’s Comprehensive Plan. The height limit change is in response to the creation of the Irvington Historic District in 2010 and the policy need to retain multi-family housing potential in this corridor. See Lloyd action UD10 in the implementation action table.

UD6 Update the Lloyd District's 1991 design guidelines: *Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan* to reflect the district concept.

The *Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan* is recommended to be amended to reflect the design direction described in the district plan's urban design concept and supporting information. The existing document will be extensively revised and updated to feature new formatting, new illustrative examples of how to meet the guidelines and a new structure based on the Central City Fundamental Design Guidelines. New design issues to be addressed by the guidelines will include different street and development characters; incorporating/integrating green elements in site and building designs; and transitions to adjacent neighborhoods.

The "Street & Development Character" concept (see Appendix A*)* describes more intentional direction for the different streets in the Lloyd District. The concept proposes changes in both the street design standards as well as the adjacent building edges. The concept proposes three different types of street characters: retail/commercial, boulevard and flexible. New content in the design guidelines will address building edges of proposals along the different street types, illustrated with examples of desired building edge responses for each of the different street types. In addition, as some of the flexible network moves through private property, new design guidelines will speak to the character and orientation of new connections through these large blocks. More information is also available in a separate report: *N/NE Quadrant Plan: Street and Development Character Concept* (2012).

New design guidelines will address the incorporation of "green" site and/or building elements. These elements could include, but are not limited to, native vegetation, bird-friendly design approaches for larger buildings, building orientation to maximize solar performance, energy production systems and stormwater management facilities. The content of these design guidelines would be developed in coordination with the Lloyd Ecodistrict planning and infrastructure implementation efforts.

In addition to maximum floor area ratio (FAR) and height regulations that limit building form(s), new design guideline content will address desired transitions from the Lloyd District to adjacent neighborhoods including Eliot and Irvington. The guidelines will be crafted to speak to the unique characteristics of the edges along each of these neighborhoods, and how new development proposals should respond accordingly. Design issues described by the guidelines, with narrative and illustrative examples, will range from site/building patterns, façade articulation, attention to detail, quality of construction, and potential building step-downs to existing historically, culturally or architecturally significant resources. In addition, existing guidelines that address specific locations in the district, such as the Broadway/Weidler corridor, would be updated to reflect the Irvington Historic District designation and boundary change. Language in the guidelines would provide clearer direction for design compatibility with adjacent contributing properties.

UD8 Work with the property owner/developer of the "Thunderbird" site to craft a development agreement that incorporates public open space and the greenway trail on the riverfront.

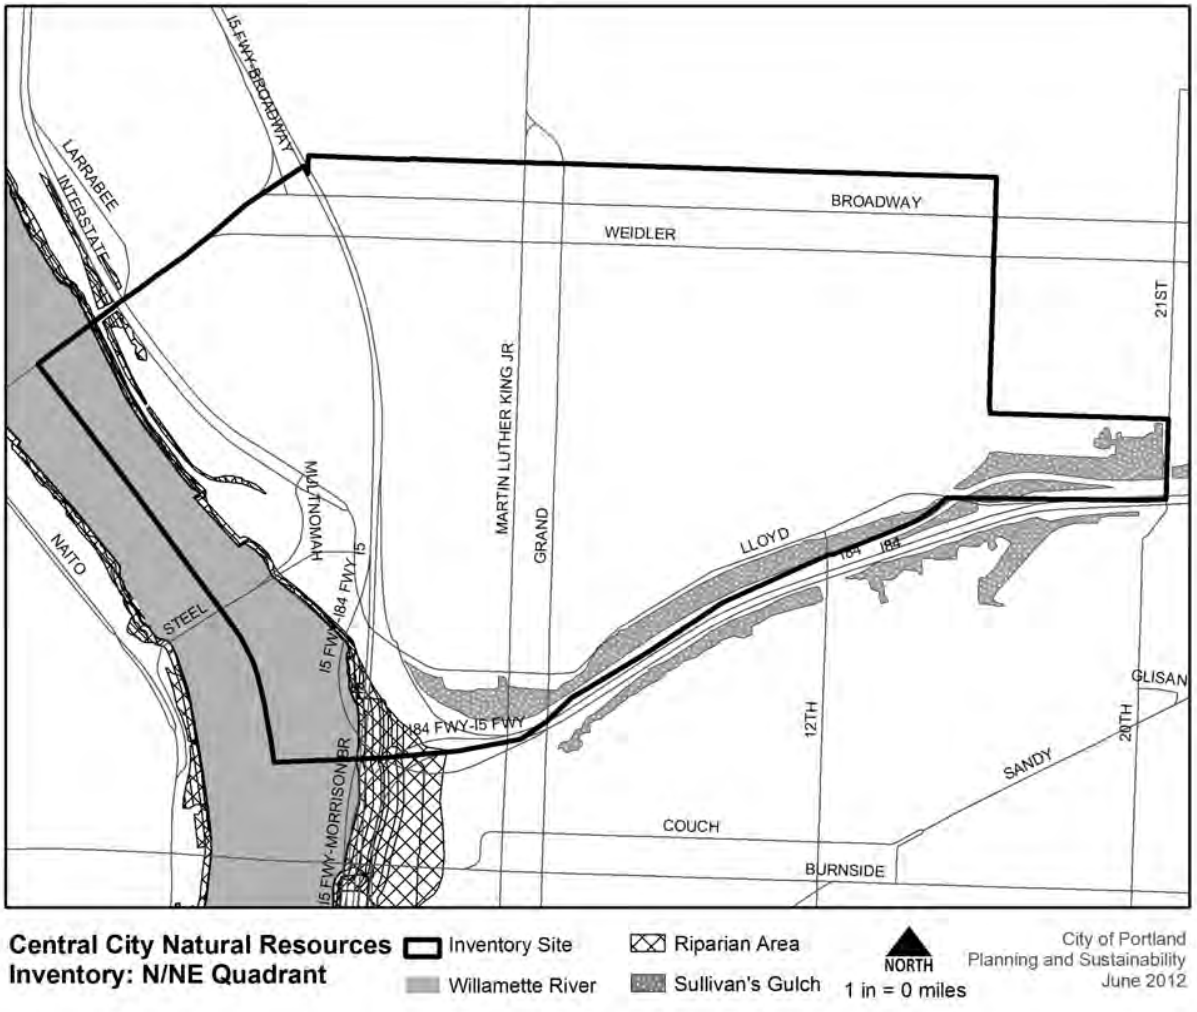
On the Thunderbird site located between the Veterans' Memorial Coliseum and the Willamette River additional height above the 100' current maximum would be allowed in exchange for providing public open space – preferably in front of the Coliseum. In exchange for providing significant public open space, buildings would be allowed to be up to 250'. The existing floor area ratio (FAR) would remain at 4:1, therefore the total amount of development potential on the site would remain the same.

As described in Lloyd action TR13, one option being considered in this area is the relocation of the Union Pacific railroad tracks to improve freight and passenger rail operations. It will be important to work with ODOT rail and Union Pacific to ensure that any plans developed for rail relocation maintain access, the development potential of the site and provide park and riverbank enhancement opportunities. Also see related Lloyd action RC3 regarding height changes proposed.

Thunderbird site with full build-out of existing current maximum height (100') and 4:1 FAR. Conceptual rendering only.

Thunderbird site with buildout to ~250' and 4:1 FAR, incorporating a new waterfront open space. The railroad tracks have been moved to accommodate riverfront access and increase rail efficiency in this conceptual rendering.

EN1 Evaluate natural resource protection and management options for Sullivan's Gulch and the Willamette River bank as part of the Central City-wide natural resource analysis.



As part of comprehensive planning projects, the City updates the existing Environmental Program. This update is needed to help protect and enhance natural resources, meet watershed health goals and advance the City's compliance with local, regional and state goals and regulations. The steps to update the Environmental Program include 1) inventory existing natural resources; 2) evaluate the economic, social, environmental and energy trade-offs of different levels of resource protection; and 3) apply appropriate programmatic tools.

In 2011, staff updated the inventory of natural resources in the N/NE Quadrant. The inventory includes documentation regarding the location, extent and relative quality of the existing resources. The two primary natural resource features identified in the inventory are the Willamette River and its riparian area and Sullivan's Gulch (see Map B3: *Central City Natural Resources Inventory: N/NE Quadrant).* The river and riparian area are important to wildlife and fish, including ESA-listed species, and provide functions like flood storage and nutrient cycling. Sullivan's Gulch is a unique feature that is used by wildlife. It is also susceptible to slope failure due to its steep grade and risk of wildfire.

The next steps will be to complete the inventory for the other quadrants and release an updated Central City Natural Resources Inventory (NRI) for the entire Central City 2035 Plan area. Next, staff will perform the Economic, Social, Environmental and Energy (ESEE) Analysis for the entire Plan area to evaluate the trade-offs associated with different levels of environmental protection. The ESEE will consider development potential, housing goals, public health, commerce, recreation, watershed health and other topics. The result will be recommendations about when, where and how to protect and manage natural resources in the plan area. The City uses different tools to protect, enhance, and

restore natural resources including environmental conservation and protection overlay zones, agreements with property owners, revegetation programs, education and best management practices. Existing overlay zones, such as the conservation overlay zone currently applied to parts of Sullivan's Gulch, will be reviewed and may be refined through the Central City project. The owners of potentially affected properties will be notified and invited to comment prior to the finalization of the Central City Natural Resource Inventory, the ESEE and program recommendations.

Map B3: Central City Natural Resources Inventory: N/NE Quadrant

EN2 Update the Willamette Greenway Plan for the Lloyd District as part of the River Plan / Central Reach process, building on concepts outlined in the N/NE Quadrant Plan and the North Portland Greenway Feasibility Study.

The River Plan is a comprehensive, multi-objective plan for the land along the Willamette River. It involves the update of the 1987 Willamette Greenway Plan, greenway zoning code and greenway design guidelines. The River Plan is being completed in three phases with each phase focusing on a different “reach” of the Willamette River: North Reach, Central Reach and South Reach. The North Reach makes up Portland's working harbor, stretching from Willamette's confluence with the Columbia River to the Broadway Bridge on the east side to the river, including Lower Albina within the N/NE Quadrant Plan area. The River Plan / North Reach was completed in 2010, however subsequent appeals have not yet been resolved (see also Lower Albina action EN1).

Planning for the Central Reach, which stretches from the Broadway Bridge to Ross Island Bridge on the east side of the river, is being conducted as part of the Central City plan update. The Lloyd District riverfront is included in the Central Reach. The River Plan / Central Reach process will address habitat, restoration sites, design guidelines, trails and access, and river dependent and river related development. Enhancement and restoration sites within the Lloyd District could include the area of shallow water near the I-5/I-84 interchange and the riverbank below the “Thunderbird” site. Other potential opportunities to improve the riverbank include addition of large wood along the river margins to add complexity and cover for juvenile salmonids, bio-engineering of existing rip-rap and revetments to add native plantings for cover and food sources for aquatic and terrestrial wildlife.

EN11 Design infrastructure, such as the proposed Clackamas I-5 overcrossing and street improvements to accommodate district energy infrastructure where appropriate.

As of June 2012, the City of Portland, the Portland Development Commission, and the Portland Trailblazers are currently in the design process to develop an initial district energy node. Corix Utilities was selected to plan a phased Rose Quarter Shared Thermal Energy System (district energy). In its first phase, the system will provide heating and cooling services to the Rose Garden Arena and Veterans Memorial Coliseum. These services would be extended to the Oregon Convention Center in the second phase through underground piping. In the third phase, the system will expand east toward the Lloyd Center providing heating and cooling services through a network of pipe infrastructure. For this expansion to the greater Lloyd District, crossing I-5 poses a significant challenge that could be resolved by a Clackamas pedestrian/bike overcrossing. Connection to the Rose Quarter Shared Thermal Energy System would contribute to the redevelopment of Clackamas as a high performing green street. Additional district energy and water opportunities in the Lloyd District are also under consideration and could complement the Rose Quarter system.

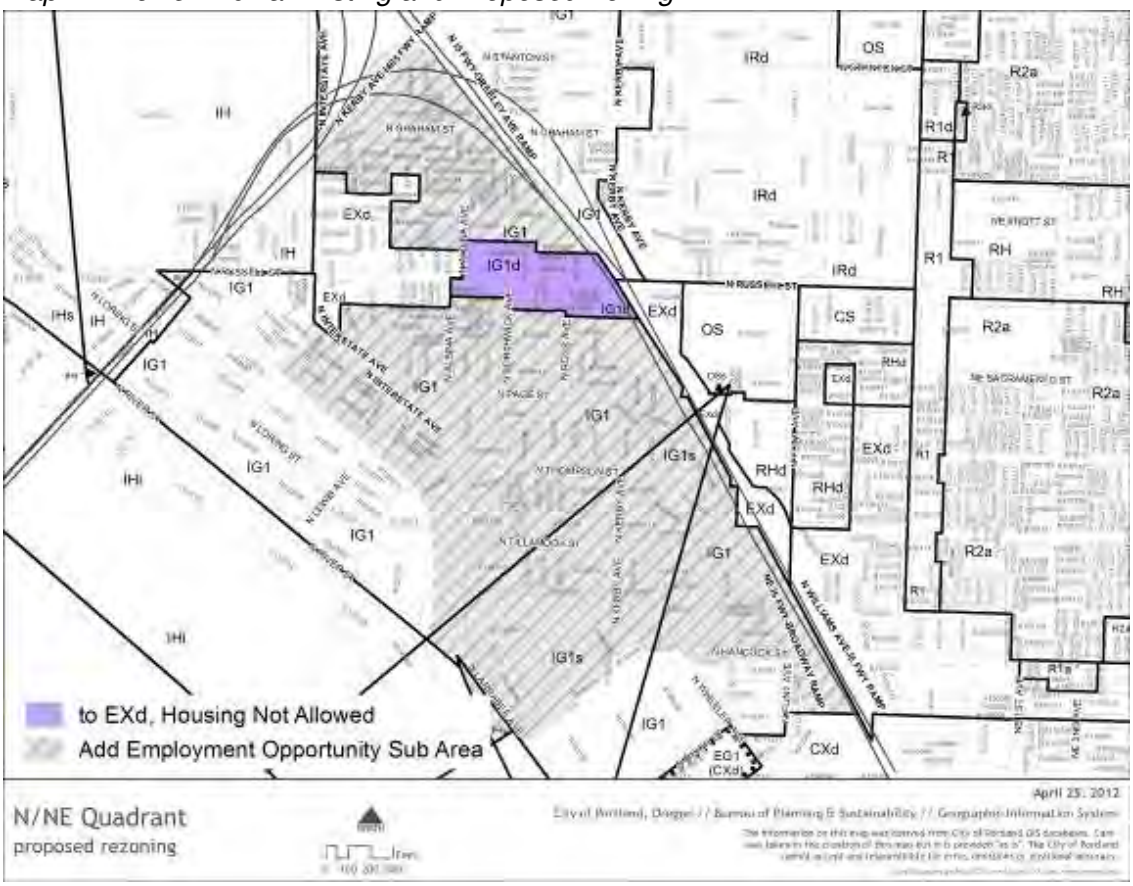
Lower Albina

RC1 Adjust the Lower Albina subdistrict boundary to exclude the PPS Blanchard site and adjacent properties to the south and east, placing them within the Lloyd District.

This action along with Lloyd District action RC2, recognizes the current major use (office) of the Portland Public Schools Blanchard Building and its desired future as a mixed-use, flexible urban redevelopment opportunity. Because the current office use and desired future uses for the site are non-industrial in nature, and because the natural topographical transition from the area around N Broadway and the Rose Quarter happens at a steep bluff north of the Blanchard site, the boundary between the Lloyd District and Lower Albina should be adjusted as shown in Map B1: *N Broadway Existing and Proposed Zoning.* Future redevelopment of the Blanchard site would complement proposed redevelopment in and adjacent to the Rose Quarter called for by the Rose Quarter District Plan. See Lloyd action RC2 for detailed information on the proposed zone change for the area.

RC2 Rezone properties east of the Russell St. Conservation District fronting Russell Street from IG1d to EXd. Set max FAR at 3:1 and maximum height at 50'. Prohibit housing in this area.

Background: The majority of the Lower Albina district is zoned for industrial uses. It serves as a critical incubator for emerging and innovative businesses and provides an important living-wage job base near inner North and Northeast neighborhoods. The district's mix of industrial businesses, working waterfront and multimodal freight facilities are complemented by a small mixed-use historic area along lower Russell Street, where retail activity is especially active in the evening.



Existing Zoning: Map B4 shows the existing and proposed zoning for the site and Table B2 summarizes existing and proposed zoning provisions. The area fronting NE Russell from N Albina to the I-5 overpass contains 17 tax lots covering approximately two acres. It is currently zoned General Industrial 1 (IG1) with a design (d) overlay zone and has several additional development standards, such as a 50 foot height limit, a maximum 3:1 FAR, and ground floor active use and residential bonus target designations. Many of these requirements are inconsistent with the underlying industrial zoning, make the economic use of these properties difficult, and complicate potential redevelopment. Immediately to the east of this area is the Russell Street Conservation District, which is zoned EXd, allowing a mix of industrial, commercial and residential uses. No zoning changes are proposed in the conservation district.

Proposed Zoning: Staff proposes rezoning the properties fronting N Russell between the Russell Street Conservation District and the I-5 overpass from IG1d to EXd, with a new provision that would prohibit residential development. This would continue to allow industrial uses, while also allowing office and retail uses. The existing 50 foot height limit and 3:1 maximum FAR would be retained. No changes are proposed in the existing EXd zoned area, where housing would continue to be allowed. Increasing zoning flexibility to allow a wider range of uses will support the existing retail node and encourage investment in existing buildings and help recreate the connection between Lower Albina and the Vancouver/Williams Corridor.

Table B2: Summary of Lower Albina Existing and Proposed Zoning Provisions (EXd)

Provision	Existing IG1	Proposed EXd (no residential)
Office: Allowed	1 Office (or Retail) use per site, up to 3,000 SF	Allowed, limited by FAR (3:1 proposed)
Office: Conditional Use	More than 3,000 SF, max of 60,000 SF or 1:1 FAR	NA
Retail: Allowed	1 Retail (or Office) use per site, up to 3,000 SF	Allowed, limited by FAR (3:1 proposed)
Retail: Conditional Use	More than 3,000 SF, max of 25,000 SF or 1:1 FAR	NA
Residential	Generally not allowed	Not allowed (proposed)

Map B4: Lower Albina Existing and Proposed Zoning

RC3 Apply zoning provisions to IG1-zoned properties east of the Union Pacific railroad alignment that allow certain compatible office-like uses, similar to the Employment Opportunity Subarea regulations in the Central Eastside. Implementation of the Employment Opportunity Subarea regulations is contingent on developing a Lower Albina parking strategy that explores off-street parking facilities for workers and visitors and on-street parking strategies.

Existing Zoning: Map B4 shows the existing and proposed zoning for the site and Table B3 summarizes existing and proposed zoning provisions. The area generally east of the Union Pacific railroad and west of I-5, where additional flexibility for employment uses is proposed (hatched area on Map B4), contains 136 tax lots, covering approximately 46 acres. It is currently zoned IG1, with a Scenic Resource (s) overlay on a portion of the area, which limits building heights to 50 feet. The area to the west is zoned IG1, with Heavy Industrial (IH) zoning along the waterfront. No zoning changes are proposed west of the Union Pacific rail line.

Proposed Zoning: Staff proposes applying Employment Opportunity Subarea (EOS) provisions to the IG1 area generally east of the Union Pacific rail line and west of the freeway (hatched area on map B4). This would allow some additional flexibility for commercial and employment uses that are compatible with industrial activities. The EOS provisions have the potential to increase job density, capture growing industry sectors, and foster the continued vitality of Lower Albina as an employment center and business incubator. Staff believes this targeted approach is less likely to result in land use conflicts with industrial activities than applying an employment base zone, which would have broader allowances for office and retail uses and the potential for residential development. The existing Scenic Resource (s) overlay would remain on a portion of the area.

Implementation of the EOS regulations is contingent on developing a Lower Albina parking strategy. Outcomes may include but not be limited to a parking inventory and strategies to provide additional parking or better manage existing supply to maximize its utility. Examples include employee permit programs, partnerships to create additional parking, time limitations/pricing, development of a Transportation Management Association/parking coordinator, enforcement strategy, and funding options, among others.

*Table B3: Summary of Lower Albina Existing and Proposed Zoning Provisions (EOS)**

Provision	Existing IG1	Proposed IG1 with Employment Opportunity Subarea (EOS)
Traditional Office: Allowed	1 Office (or Retail) use per site, up to 3,000 SF	5,000 SF per site
Traditional Office: Conditional Use	More than 3,000 SF, max of 60,000 SF or 1:1 FAR	More than 5,000 SF, max of 60,000 SF
Industrial Office: Allowed	NA	60,000 SF per site
Industrial Office: Conditional Use	NA	More than 60,000 SF
Retail: Allowed	1 Retail (or Office) use per site, up to 3,000 SF	5,000 SF per site
Retail: Conditional Use	More than 3,000 SF, max of 25,000 SF or 1:1 FAR	None
Residential	Generally not allowed	Generally not allowed

Traditional Office Designation:
- Focus on business, government, professional, medical, or financial services.

- Examples: Professional services, lawyers, accountants, real estate agents; financial, bank HQs, brokerage houses; sales offices; government offices; medical and dental clinics.

Industrial Office Designation:

- Conducted in an office-like setting but more compatible with industrial activities & districts. Less service-oriented with focus on development, production, processing of products, including digital products, e.g. internet & media content, designs & specifications, software, advertising materials. Primarily provide products to other businesses. Do not require customers or clients to visit the site.
- Examples: Software and internet content development & publishing; computer design & programming; graphic & industrial design; engineers & architects; telecommunication providers & data processing; TV, video, radio, internet studios & broadcasting; scientific & technical services; medical & dental labs.

** The specific EOS zoning proposal described above is consistent with the provision as applied in the Central Eastside Industrial District. The allowances above may be modified based on input from Lower Albina Stakeholders.*

TR4 Develop a street design plan for the "the Strand" and alternative routes to provide a lower-stress connection between N. Russell Street and the Rose Quarter.

The Lower Albina district concept calls for "the Strand", which would provide a supplementary north-south, lower-stress connection between Lower Albina's Russell Street commercial area and the Rose Quarter to the south and the Mississippi main street to the north. The Strand was developed as part of the Land Use Charrette for the N/NE Quadrant Plan held in February 2011.

Map B5: Proposed Strand Alignment

Today, N Interstate Avenue is the main connection, but it is a high volume traffic street and has narrow sidewalks and an unpleasant pedestrian environment. The Strand is envisioned as a wayfinding system that is compatible with the industrial activities that take place in the southern portion of the Lower Albina's industrial district. Potential design features of the Strand could include pedestrian and bicycle enhancements, such as continuous sidewalks and/or pavement markings that do not conflict with industrial operations. It could also celebrate the industrial heritage of the district through public art, murals and historical markers along its path. Possible elements of the wayfinding system could include signage, special street paving and art.

The route identified for the Strand generally runs in the north-south direction and zig-zags through the district on existing streets (see map B5). The one exception is a segment between N Page and N Thompson Streets, where the route would need to cross private property via an easement or acquired right-of-way. This private segment presents an additional challenge due to the grade.

The Strand should be pursued as a preliminary streetscape project to determine its feasibility and cost. The study should consider non-traditional streetscape treatments that integrate with the industrial character of the area and examine other possible routes that would provide the same benefit of a lower-stress connection through the district.

Conceptual rendering of the Strand in Lower Albina. Art murals and special paving provide a wayfinding system through the district.

TR8 Implement the I-5 Broadway/Weidler Plan improvements, including the proposed Hancock overcrossing, to improve regional and local freight access.

See Appendix C: *I-5 Facility Plan*, for a complete description of anticipated interchange improvements and implementation issues to be addressed in the next steps of project design and engineering.

UD1 Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.

In 1998, the Bosco-Milligan Foundation (Architectural Heritage Center) completed "Cornerstones of Community," a historical context statement and inventory of over 3,000 properties associated with African-American history in Portland. In 2010, as part of the N/NE Quadrant Plan process, Bosco-Milligan updated the inventory, reflecting recent demolitions, correcting information, and converting the data so that it may be used in computer-based Geographic Information Systems. The context statement and updated inventory are powerful preservation planning tools that can assist in public education and historic preservation efforts in the N/NE Quadrant and through-out the city. They can serve as the basis for the development of a Multiple Property Documentation (MPD) form for African-American historic resources in Portland. Such an MPD would provide contextual information about the African-American community and evaluation criteria that would assist property owners who wish to list their historic properties in the National Register of Historic Places.

UD2 Improve the design review approval criteria used for development proposals within the Russell Street Conservation District and design overlay zone within Lower Albina.

The Community Design Guidelines are currently used as the approval criteria for historic design reviews in the Russell Street Conservation District. This is the only situation in the Central City where the Central City Fundamental Design Guidelines are not used as historic design review criteria (in some cases, other criteria are used in addition to the Central City Fundamentals). In addition, Lower Albina is the only Central City area outside of the downtown core that lacks a district-specific set of design guidelines. In the area east of the conservation district proposed for EXd zoning, the Central

City Fundamentals are the approval criteria. This results in a situation where different criteria are used in directly abutting areas that have similar characteristics

In general, the Community Design Guidelines were intended to be used in areas outside the Central City and may not be the most appropriate criteria in a Central City conservation district. Options to consider include: developing a new set of sub-district design guidelines for Lower Albina that would speak to the characteristics of the Russell Street area specifically; amending the Central City Fundamentals and applying them within the conservation district; or amending current language in the Community Design Guidelines to better address the character of the conservation district.

UD5 Encourage and assist Lower Albina property owners to nominate their historic properties for designation as landmarks.

Two sources of information can assist Lower Albina property owners to list their properties in the National Register of Historic Places. The existing Multiple Property Documentation (MPD) form "Historic and Architectural Properties in the Eliot Neighborhood" provides historical context and evaluation criteria for historic resources within the Eliot Neighborhood, including Lower Albina. The MPD reduces the National Register documentation requirements for properties that meet the criteria laid out in the MPD. This document is available from the Bureau of Planning and Sustainability.

Another helpful source is the historic resources inventory completed for the Albina Community Plan. This multi-volume set completed in the mid 1990s updated information in the City's 1984 adopted Historic Resources Inventory. It contains information on hundreds of historic properties in N and NE Portland, including the Lower Albina area. The inventory is housed at the Bureau of Planning and Sustainability.

Study Areas

North Banfield Portal

NB1 Apply CXd zoning to the sites south of Multnomah St. and west of NE 21st Avenue. Existing environmental conservation (c) overlay zoning will remain.

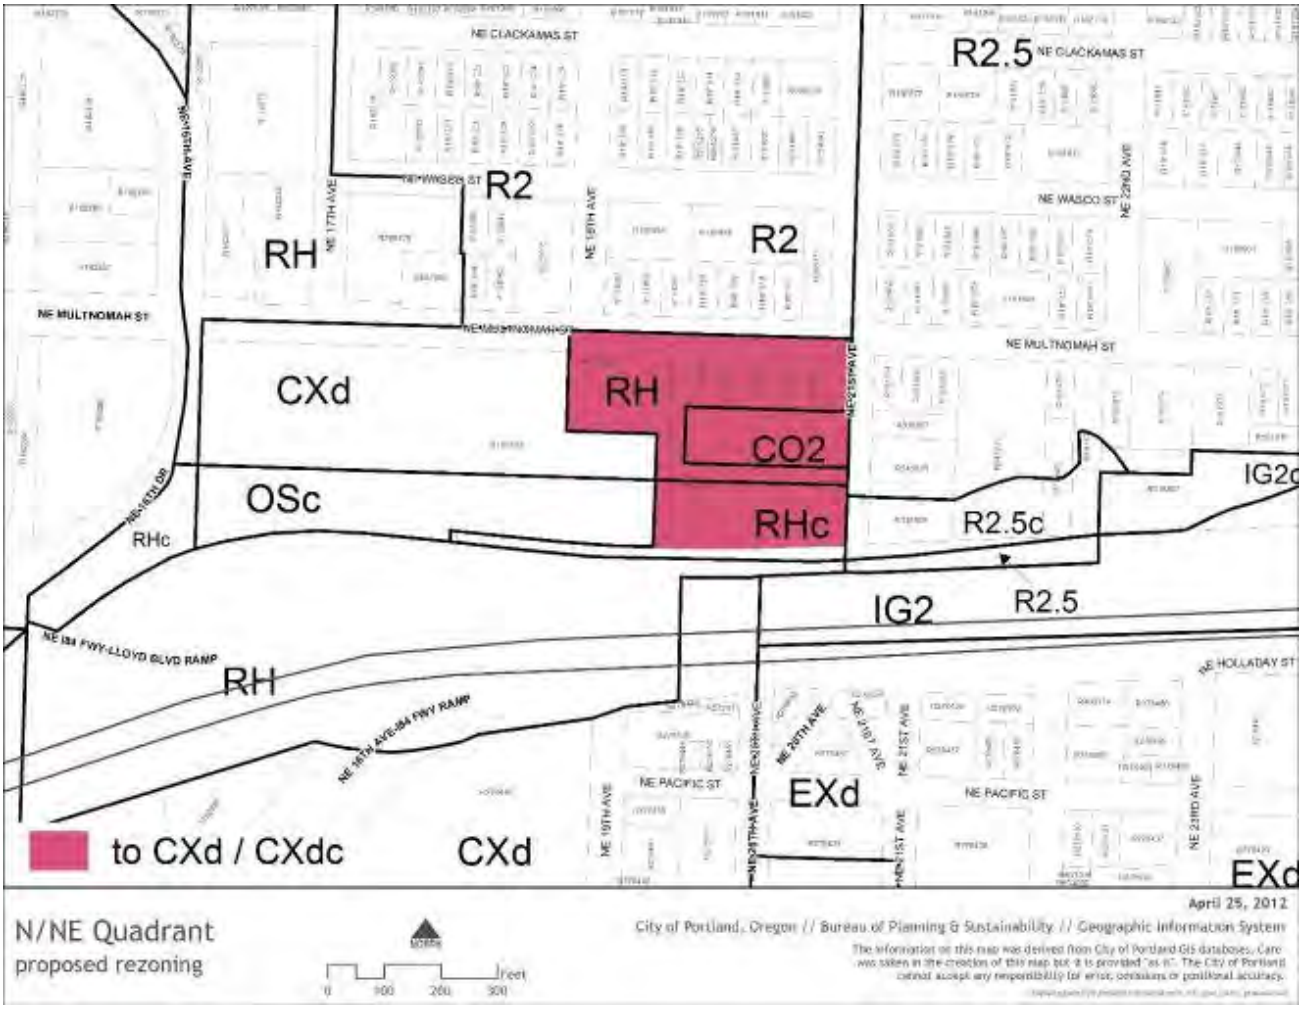
Background: Two sites at the corner of NE Multnomah and NE 21st Avenue are currently occupied by a courtyard apartment building and several older single-family homes. Stakeholders are interested in seeing redevelopment in the area with a mix of uses, but much of the area is zoned for residential and one of the sites is currently split-zoned with a mix of residential and commercial office zoning, complicating redevelopment. The staff proposal is to rezone the site to better meet future redevelopment desires.

Existing Zoning: Map B6 shows the existing and proposed zoning for the site and Table B4 summarizes existing and proposed zoning provisions. The sites contain nine tax lots totaling approximately 3 acres.

Approximately 1.6 acres is zoned High Density Residential (RH), with a 75 ft height limit and a floor area ratio (FAR) of 4:1. The RH zone is a high density, multi-dwelling zone. New housing in this zone is expected to be medium-rise apartments and condominiums.

Approximately .8 acres is zoned RH with an Environmental Conservation Overlay (RHc), with a 75 ft height limit and an FAR of 4:1. The 'c' overlay zone is intended to conserve important resources while allowing development that is environmentally sensitive. The 'c' overlay does not prohibit development.

Approximately .6 acres is zoned Commercial Office (CO2) with a 45 ft height limit. The CO2 zone is a low and medium intensity office zone that generally allows uses in the office and institutional categories, but not other commercial uses. Retail uses are limited to 10% of the total floor area.



The area to the west has flexible commercial zoning (CXd) and is occupied by the Marriott Residence Inn Hotel. Areas to the north and east are zoned for medium density residential development with a height limit of 35 (R2.5) or 40 (R2) feet; commercial uses are not allowed.

Proposed Zoning: Central Commercial zoning with a design overlay (CXd) with a height limit of 75 feet and an FAR limit of 4:1 is proposed for both sites. The CXd zone would allow a more flexible mix of uses than is currently allowed, including a wide variety of residential, commercial and institutional uses. The design (d) overlay would require new development to go through a discretionary review process or meet Community Design Standards. The environmental 'c' overlay zone would remain on the southerly portion of the site, however changes could be proposed through a separate analysis of natural resources in the Central City planning area. See Lloyd action EN1 for more information.

Table B4: Summary of N Banfield Portal Existing and Proposed Zoning Provisions

Provision	Existing RH	Existing CO2	Proposed CXd
Land Uses	Primarily residential only.	Office and residential allowed, retail limited.	Residential, office and retail allowed. Mixed uses allowed.
Height limit	75'	45'	75'
FAR limit	4:1	2:1	4:1
Design overlay	No	No	Yes. Discretionary design review or use of Community Design Standards required.

Map B6: N Banfield Portal Existing and Proposed Zoning

NB2 Evaluate natural resource protection and management options for Sullivan's Gulch as part of the Central City-wide natural resource analysis.

Sullivan's Gulch has been identified as a resource in the City's 2011 update of the Natural Resource Inventory for the Central City plan area. Evaluation of these resources will be addressed through a Central city-wide analysis. See Lloyd action EN1 for a more detailed description of this process.

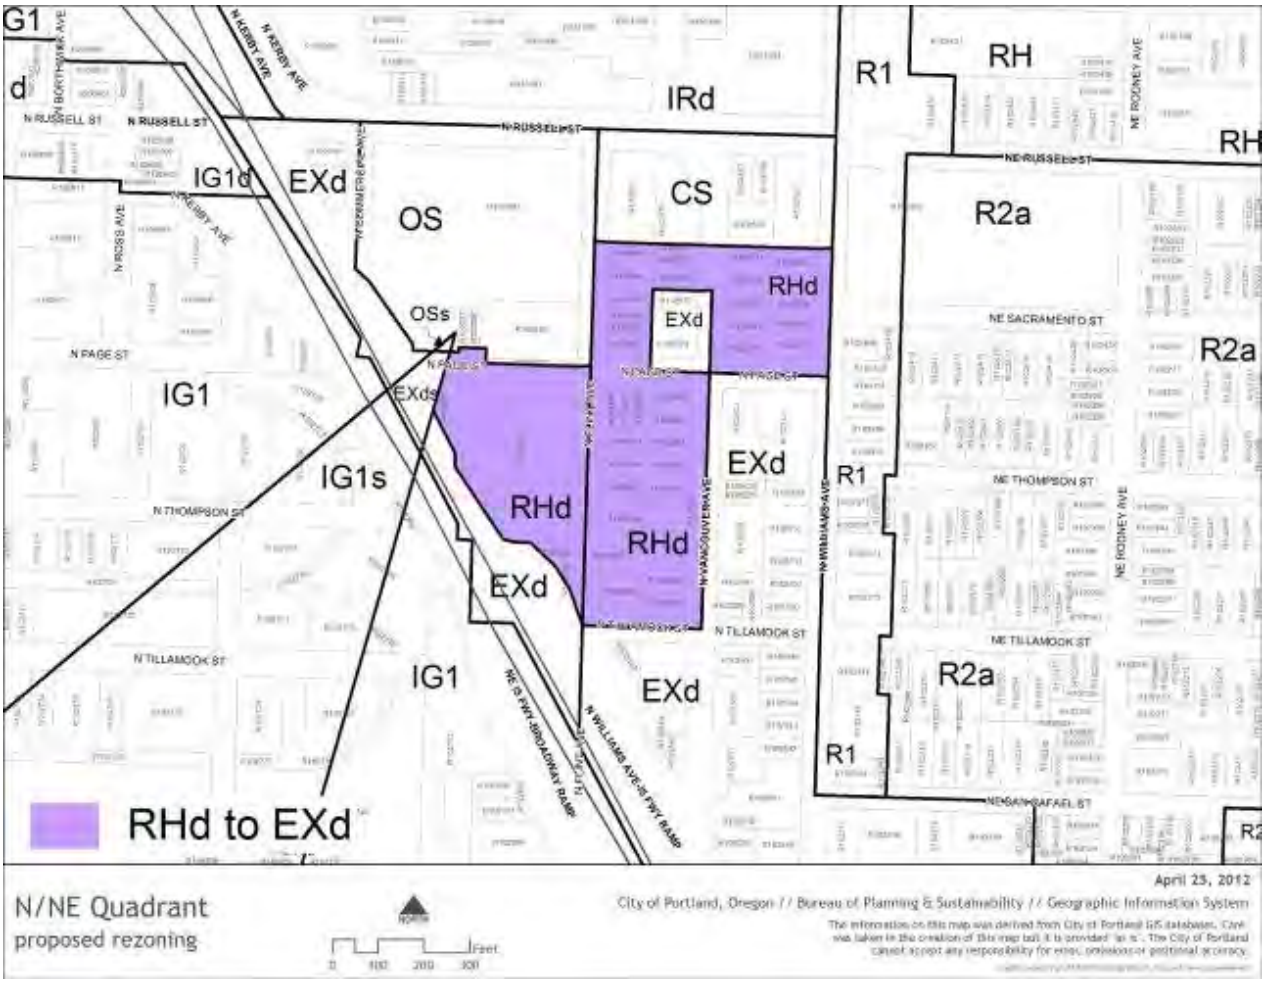
Vancouver/Williams Corridor

VW1 Rezone portions of 4 blocks between I-5 and N Williams from RH to EXd.

Background: This area is currently home to a diverse mix of uses, including light manufacturing, warehousing, retail, residential and institutional uses. Some of the area is zoned for high density housing that doesn't allow most other uses and can limit the ability of existing, commercial and light industrial uses to expand. The Harriet Tubman School comprises almost half of the developed square footage in the area; of the remaining area, approximately half of the developed square footage is in non-residential use. There is also a large concentration of structures with significant historical associations identified in the "Cornerstones of Community: Portland's African-American Heritage" inventory completed by the Bosco-Milligan Foundation (see Lower Albina action UD1 for more information). Staff is proposing to rezone the area to better meet neighborhood desires, eliminate the regulatory conflicts for existing businesses and reflect the historic mix of uses.

Existing Zoning: Map B7 shows the existing and proposed zoning for the site and Table B5 summarizes existing and proposed zoning provisions. The area contains thirty-eight tax lots totaling approximately 6.5 acres.

Approximately 6.5 acres is zoned High Density Residential with a design overlay (RHd), with a 75 ft height limit and an FAR of 4:1. The RH zone is a high density multi-dwelling zone. New housing in this zone is expected to be medium-rise apartments and condominiums. The design overlay requires new development to go through a discretionary review process or meet community design standards.



Most of the area between the I-5 freeway and N Williams Avenue has mixed employment zoning with a design overlay (EXd). Lillis Albina Park borders the area to the NW, a small area of storefront commercial (CS) zoning is located to the north along Russell St. and multi-dwelling residential (R1) zoning is across N Williams to the east.

Proposed Zoning: Staff proposes Central Employment zoning with a design overlay (EXd), which includes a height limit of 65 feet and a maximum FAR of 3:1. The EXd zone allows industrial and commercial uses suited for a central location, in addition to residential uses. This change would allow a more flexible mix of uses than is currently allowed and will support the maintenance and expansion of existing businesses. The design overlay would continue to require new development to go through a discretionary review process or meet Community Design Standards. The combination of increased zoning flexibility, reduced overall development potential (FAR), and no minimum residential density requirements will encourage reinvestment in culturally significant structures by providing a wider array of potential economic uses and development options.

Table B5: Summary of Vancouver/Williams Existing and Proposed Zoning Provisions

Provision	Existing RHd	Proposed EXd
Land Uses	Primarily residential only.	Residential, office and industrial allowed. Mixed uses allowed.
Height limit	75'	65'
FAR limit	4:1	3:1
Design overlay	Yes. Discretionary design review or use of Community Design Standards required.	Yes. Discretionary design review or use of Community Design Standards required.
Minimum Density	1 unit per 1,000 SF of site area	None

Map B7: Vancouver/Williams Existing and Proposed Zoning

VW2 Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.

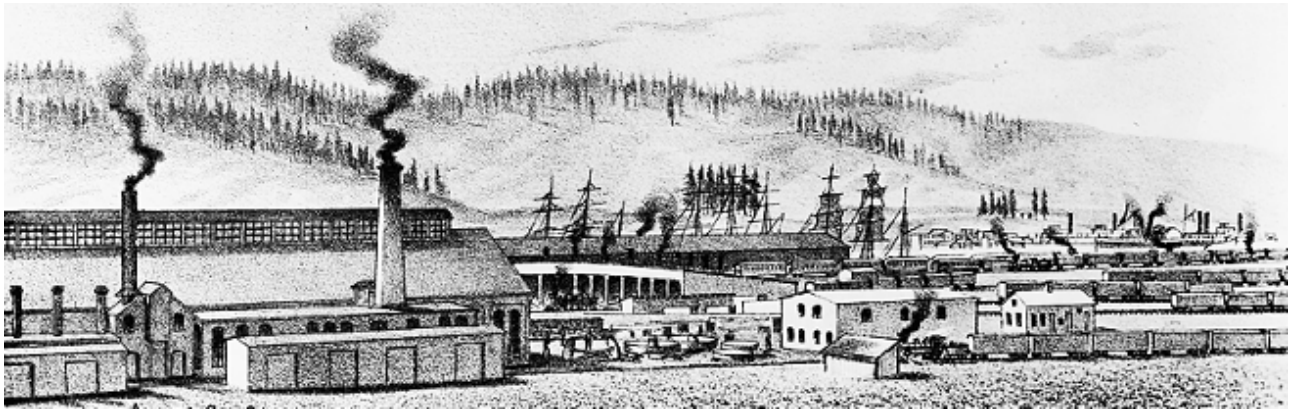
A number of properties identified on the Bosco-Milligan Foundation's "Cornerstones of Community" inventory are located in the Vancouver/Williams Corridor study area. See the appendix entry for Lower Albina action UD1 for a more complete description of this action.

APPENDIX C: I-5 FACILITY PLAN

The Facility Plan is under development. Please see the project website, www.portlandonline.com/bps/cc2035/nneq, for the latest draft of the plan. It is anticipated that the final draft version of the Facility Plan will be included the Proposed Draft of the N/NE Quadrant Plan (anticipated August, 2012).

APPENDIX D: N/NE QUADRANT HISTORY

For centuries prior to first contact with Europeans and Americans, Chinookan-speaking peoples, including the Clackamas and the Multnomah, inhabited the lower Columbia basin in the vicinity of the area now known as Portland. Chinookan villages, made-up of multi-family cedar plankhouses, were located on both sides of the Columbia near the mouth of the Willamette, with additional villages, camps, resource areas, and trade routes located along the lower Willamette, making the Portland Basin one of the most densely populated areas in the American West prior to white settlement. Chinookan societies relied on the bounty of the region's temperate climate, rich forests and plains, and extensive river systems. Active social, familial and trade networks were maintained among the inland, valley and coastal cultures of the area.



By the time Asa Lovejoy and Francis Pettygrove founded Portland in the mid-1840s, introduced diseases such as small pox and malaria had reduced the area's indigenous population by as much as 90 percent. In the 1850s, accelerating encroachment by white settlers on Indian lands and forced removal to reservations further devastated indigenous societies and few Native Americans remained in the Portland area.

Incorporated in 1851, the City of Portland was still limited to the west bank of the Willamette River in the 1850s and 1860s. The town grew rapidly, with multi-storied masonry buildings, an active trade-oriented waterfront, a growing street network and other aspects of urbanization. In contrast, the east side of the river and what was to become Lower Albina and the Lloyd District remained relatively rural. Extensive wetlands and sloughs made development along the east bank difficult and much of the area was still covered in forest. A few farms were in cultivation, notably those of the Loring, Shelton and Wheeler families, who had filed Donation Land Claims along the river in the 1850s.

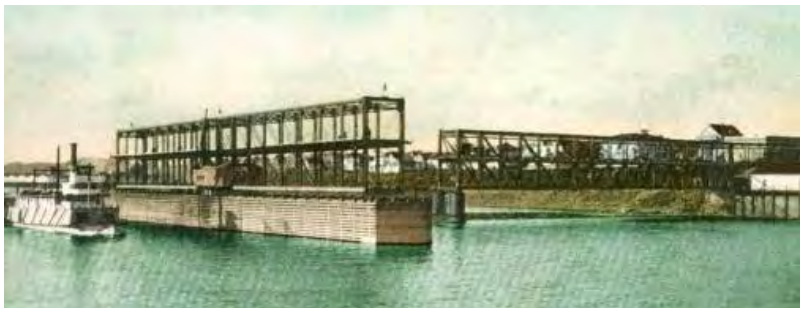
By the 1870s, residential development had begun to accelerate, aided by a growing network of roads and several ferries that linked the east side to Portland. Two distinct east side communities began to coalesce, East Portland and Albina. East Portland, the northern portions of which covered parts of the Lloyd District, was first platted in 1865 and was incorporated as an independent city in 1870. In 1871, early settler Jacob Wheeler sold several hundred acres to wealthy transportation magnate and developer Ben Holladay, who platted Holladay's Addition using a 200-foot by 200-foot grid, following the pattern established on Portland's west side. In 1868, Holladay had sold his stage coach business in California to Wells Fargo and moved to Portland to get involved in the railroad business. He lost his railroad in 1876, and died in Portland in 1887. Holladay included as part of his East Portland residential development two large hotels and more than four acres for Holladay Park, the first public park on the east side, which remains one of the Lloyd District's most important open spaces. By the early 1880s development was booming; East Portland had over 3,000 residents, a strong commercial spine running along Grand Avenue and an active working waterfront linked to regional and international markets by ocean-going ships and rail lines.

To the north of East Portland and covering a good part of the N/NE Quadrant was Albina, platted in 1873 by prominent Portland businessmen Edwin Russell, William W. Page and George H. Williams. It was sparsely populated in the early years and development along the waterfront was hampered by large swampy areas. Eventually incorporated in 1887, the City of Albina covered some 13 square miles. From the beginning it developed as two distinct sections, upper and lower, separated by steep geography. Lower Albina was the smaller area, covering 200 acres and including railroad yards and industry along the Willamette River. Lower Albina grew in the 1880s as a working-class neighborhood and industrial area, initially inhabited mainly by first- and second-generation Germans, Scandinavians, Poles and other Northern and Eastern Europeans.

A river ferry linked Lower Albina to Downtown, landing at the foot of Russell Street, which became the main street of the Lower Albina area. The east-west-oriented Russell Street which extended up the hill to upper Albina, and north-south-oriented Williams Avenue, were Albina's primary commercial corridors. Russell Street had a rough character, with some 30 saloons along its length from the ferry slip to what is now Martin Luther King Jr. Boulevard.

Lower Albina, 1887

Albina's development was closely tied to the Oregon Railroad and Navigation Company (OR&N), which owned the extensive Albina railroad yards. Directed by Henry Failing and William S. Ladd, the company was a dominant presence in Albina and one of the most powerful corporations in Oregon. In real estate alone, the OR&N owned nearly two miles of waterfront property and controlled nearly 40 city blocks of track and terminal operations along Albina's streets. As many as 900 rail cars passed through the area each day. The coming of the Union Pacific transcontinental railroad in 1883 further spurred commercial and industrial growth in both East Portland and Albina.



The year 1887 marked the opening of the Morrison Bridge, the first to cross the Willamette, linking Downtown to the east side. The bridge spurred further growth in both East Portland and Albina which were now linked to each other and Portland by streetcars. The same year, nearby Irvington was platted. Of a different character than more working- and middle-class Albina and East Portland, Irvington was intended to be an inward-looking, middle- to upper-class residential district and it came to have some of Portland's grandest homes.

Portland-Albina Streetcar

In 1891, East Portland, Albina and Portland residents voted to consolidate into a new unified and expanded City of Portland, with an area of 25 square miles and a population of more than 63,000. By the turn of century most of the inner east side was platted, and rapidly growing in population and economic activity. By 1910, the total population on the east side reached 120,000. Transportation networks and facilities have long been key aspects of east side history. Economic growth was fueled by maritime activity and the confluence of five rail lines. Residential development was aided by connections to the west side via multiple bridges and a growing streetcar network. The first bridge in the N/NE Quadrant itself was the first Steel Bridge in 1888, located about three blocks north of the current Steel Bridge, which was completed in 1912. Both were primarily intended as freight rail bridges but

also carried street cars that served East Portland and Albina. The Broadway Bridge was completed in 1912, and it too carried a streetcar line, as it will once again late in 2012. The streetcars linked residential areas to jobs and defined major commercial corridors, including Union Avenue (now Martin Luther King Jr. Blvd.) and Broadway.

First Steel Bridge, 1888

In 1910, California oilman Ralph Lloyd began acquiring property in the inner east side. Over the next four decades, he and his family continued to purchase property, including large tracts of single-family homes and undeveloped lots, eventually accumulating 100 city blocks. Lloyd had a grand vision for the east side, wanting to transform it into a self-sufficient civic, commercial and residential center to rival the west side. Although the Great Depression and sustained opposition from west side commercial interests thwarted his plans somewhat, Lloyd and his descendants built many multi-story apartments and new commercial buildings in the early and mid-twentieth century, eventually culminating in the Lloyd Center mall in 1960, one of the defining features of the Lloyd District today.

N Broadway at Larrabee Ave and Interstate looking east, 1930s

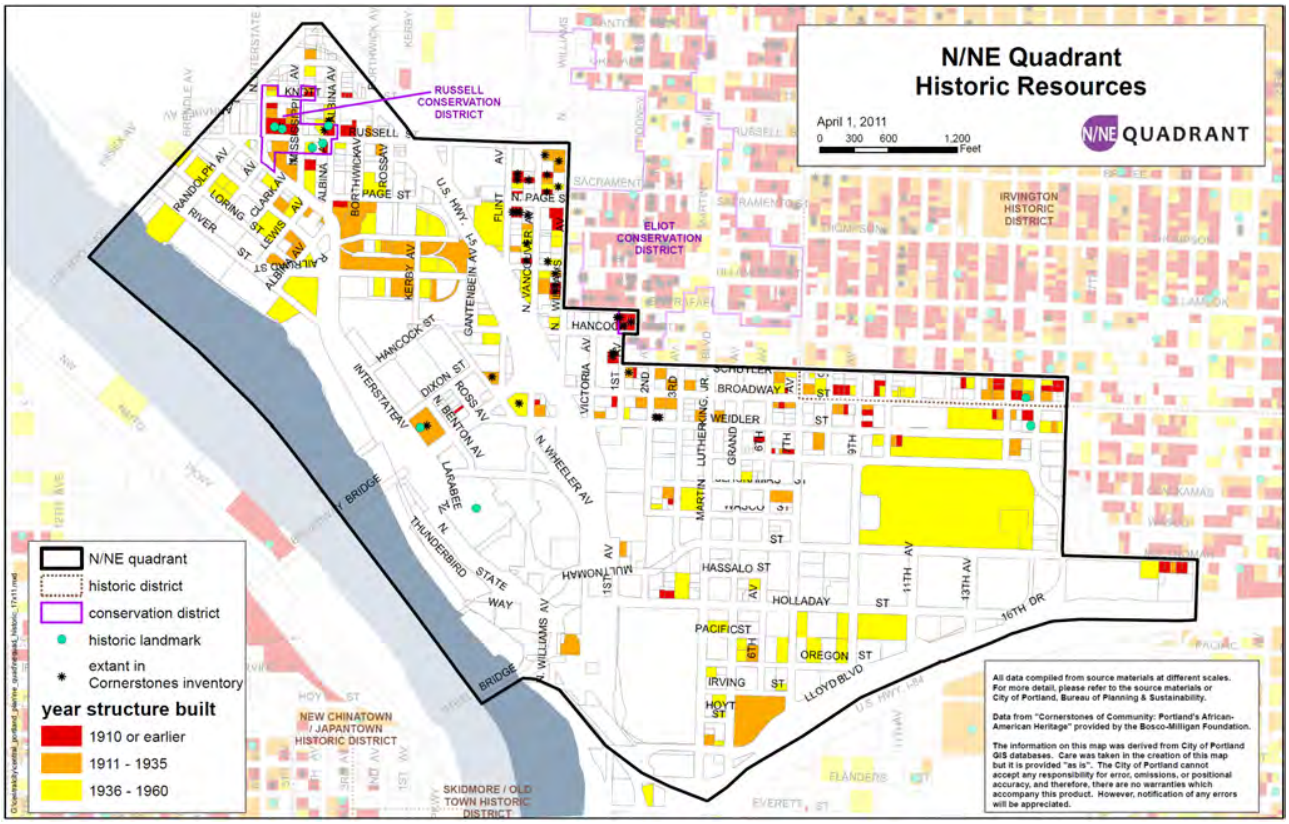
The Depression was hard on Portland, as in all American cities, and growth slowed on the east side in the 1930s. A sign of the times was the large "Hooverville" or shantytown built by unemployed workers in Sullivan's Gulch.

Hooverville in Sullivan's Gulch, late 1930s

The black lack population in Albina had steadily increased in the first part of the twentieth century, especially after 1919 when organized residential segregation was instituted by local real estate agents and "redlining" cut off bank loans for African Americans. Albina became one of the few areas in the city where African Americans could readily obtain housing. World War II drew thousands of African Americans to Portland to work in the ship yards. Many lived in Vanport, the massive war housing development near the ship yards. Following the war, there was a large housing shortage, and circumstances were much worse for African-Americans, whose housing options were limited. The situation reached crisis levels after the Vanport flood displaced 17,000 people in 1948. After the flood many African Americans moved to Albina.

The heart of mid-century African-American Albina stretched from the area where the Veterans Memorial Coliseum is now to north of Russell Street, with N Williams Avenue serving as the commercial, institutional and social spine for the community. Here were the social clubs, bars, barbecue joints, markets, theaters, businesses and institutions that supported and reflected African-American life in the city.

Albina had a vital music scene. One of Portland's hottest jazz clubs in the 1940s was the Dude Ranch on Broadway between Vancouver and Wheeler owned by Pat Patterson and Sherman Pickett. Local and national jazz talent performed here, including Coleman Hawkins, Thelonius Monk, and Louis Armstrong. Recently rehabilitated as the Leftbank Building, it is one of the few surviving buildings of



N Williams at the corner of Russell, looking north

Louis Armstrong at the Dude Ranch with club owners Pat Patterson and Sherman Pickett.

the southern Albina African-American neighborhood which was largely razed by public improvement projects. This and other structures associated with Portland's African-American history are documented in *Cornerstones of Community*, a historic context statement and inventory prepared by the Bosco-Milligan Foundation in 1998 and recently updated as a part of the N/NE Quadrant Planning process.

Map H1: N/NE Quadrant Historic Resources

The existing character and form of the N/NE Quadrant has been shaped by a number of mid-twentieth century large-scale public infrastructure and urban renewal projects, including major auto and freight related transportation facilities. Among the first was the completion in 1955 of the Banfield Freeway (which eventually became Interstate 84) along Sullivan's Gulch. Also completed in the 1950's were improvements to Highway 99W, including new connections from the Steel Bridge to Interstate Avenue which necessitated several building demolitions. These disruptions were dwarfed by projects that soon followed.

The Veterans Memorial Coliseum, completed in 1960, was financed by an $8 million bond measure approved by voters in 1954. Land clearance started around the same time as the Lloyd Center was being constructed, in the mid-1950s. The project entailed the demolition of 476 housing units, half of which were inhabited by African-Americans, and dozens of businesses. Devastating for those directly affected, the dislocations of this project also had the effect of cutting-out the southern anchor of African-American Albina and shifting the social and commercial center of the community northward.

Veterans' Memorial Coliseum, ca. 1960s

The Coliseum is an icon of Portland modernist architecture, designed by internationally known architecture firm Skidmore, Owings and Merrill. It is monumentally sited on the bluff above the Willamette, a glass-curtain-walled box with a freestanding concrete seating bowl inside. It was listed in the National Register of Historic Places in 2009.

The Coliseum development was prototypical of urban renewal projects across the country in this era, with large land-clearances in older, often minority neighborhoods that were declared blighted or sub-standard. This mid-century urban renewal paradigm was optimistically (or perhaps cynically) envisioned as a solution to multiple urban problems, from crime and poverty to inner-city decline spurred by growing suburbanization. In the 50s and early 60's urban renewal was widely supported by community leaders and the general public, even to some extent by communities heavily impacted by the ground-scraping approach. These perceptions would change as the 1960s and 1970s unfolded.

Opening the same year as the Coliseum, the Lloyd Center was completed by Ralph Lloyd's daughters, finally implementing a somewhat different version of his long-held east side vision, seven years after his death. It covered 90 city blocks, 56 of which were occupied by shops and offices, including 200 tenants, 100 of which were in the open-air retail mall itself. Blocks not covered by buildings were used for parking, providing some 8,000 free parking spaces. Lloyd Center was one of the first large-scale, open-air shopping malls in the country, and was a regional market draw. Close to, but not in, the existing downtown retail core, the expected result (according to a Planning Commission report in the 1950s recommending approval of the project), would be that "Portland would in effect have a split central shopping core." At the juncture of two freeways and served by acres of free parking, Lloyd Center proved to be a serious challenge to traditional downtown retail establishments.

Ralph Lloyd's east side vision, ca 1930s

Lloyd Center, ca. 1960s

Major transportation projects were also completed in the 1960s. Following passage of the Interstate and Defense Highways Act in 1956, two big freeways were planned to converge in Portland, I-84, along the Banfield route and I-5 along the east bank and running through N/NE Portland. Improvements to the Banfield were largely completed by 1963. Interstate 5 was completed in 1966. The Minnesota Freeway, the part of I-5 through N/NE Portland removed about 125 residences and businesses in Albina. The Fremont Bridge opened in 1973, the final link of Portland's "Inner Loop."

I-5 construction near Broadway/Weidler, 1962. Paramount Apartments and Leftbank Building at center

In 1970 the Portland Development Commission and Emanuel Hospital initiated an urban renewal project to expand the hospital. About nine square blocks were cleared and 188 mostly black-occupied homes were demolished. The once vital Williams/Russell African-American commercial center was essentially razed. However, in a cruel irony, after 200 people and 20 businesses were removed, work on the project abruptly stopped in April 1973, as Congress failed to fund the planned new construction. The project had been heavily opposed by the African-American community. The scar of vacant, cleared land remained for decades as a potent reminder of successive postwar construction projects that ate away at the fabric of Albina and disproportionately impacted the African-American population.

Large-scale commercial buildings were constructed in the Lloyd District in the 1960s and into the next decades, sprinkling the area with an assortment of corporate office towers, medical buildings and hotels, each accompanied by surface parking lots or parking structures. The new construction greatly contributed to the amount of Class A office space available in the city, much of it comparable to parts of Downtown. In the early 1970s, the Lloyd Corporation built two prominent office towers on NE Multnomah, one at 5th Ave., the other at 7th Ave. The large hotel tower that stands prominently near the I-5 freeway and Holladay Park dates from 1970. The Holladay Park Medical Center (now part of the Legacy system) was built in 1981. Another large office tower rose in 1981 at Multnomah and 9th and the federal government built an office tower in 1985 at the southern edge of the district, on Lloyd Boulevard at 9th Ave. Other major buildings include the Bonneville Power Authority, State Office Building, and the Metro renovation of the Sears building.

In 1990 the Oregon Convention Center opened, a large, public facility drawing large numbers of people from outside the area. In 1995 the Rose Garden opened, the region's premier indoor sports and entertainment facility, a symbol of Portland's ambition to be a "Major League" city. The district's high-density development and region-serving facilities are supported by major transportation investments from the past few decades, including MAX light rail lines and the soon-to-open east side Portland Streetcar line.

Oregon Convention Center today

While the Lloyd District experienced tremendous changes in the twentieth century, the essentially industrial character of Lower Albina, first established in the nineteenth century, has remained relatively constant, a result in part from Portland's Industrial Sanctuary policies and zoning. The steep hill separating the industrial area and working waterfront from nearby residential neighborhoods also has helped maintain the stability of industrial uses. Lower Albina—with few housing units, greater proximity to industrial activity and the bisection of Interstate 5—has been little affected by the gentrification and transition caused by the 1990s-era economic boom in the nearby, more residential neighborhoods of North and Northeast Portland.

Today, Lower Albina includes a small mixed-use area that corresponds to the Russell Street Conservation District, a collection of historically and architecturally significant buildings that recalls the rough and tumble working-class history of the district. It includes several historic properties that have been rehabilitated in recent years including the Widmer Brothers Gasthaus (the historic Smithson & McKay Bros. Block) at the corner of Russell and Interstate. The White Eagle Saloon and Hotel, which was opened in 1905 by Polish immigrants Barney Soboleski and William Hryszko has been renovated and is now operated by the local McMenamin's chain of brewpubs. Opening in 2004, the MAX yellow line along Interstate Ave. serves the district.

APPENDIX E: ISSUES, OPPORTUNITIES AND CONSTRAINTS

This appendix section is the N/NE Quadrant *Issues, Opportunities and Constraints* report from February 2012. It summarizes a range of comments and ideas from a broad spectrum of stakeholders, including: the Stakeholder Advisory Committee; verbal and written comments collected at public events; comments submitted during the brainstorming sessions with the two project subcommittees, public agency partners; and individuals contacting the project staff through the project website and/or email.

The project goals and quadrant concept diagrams described in Chapter 3, and the goals, policies and actions contained in Chapter 4 were informed by the issues and ideas identified during this phase of the project.

N/NE Quadrant and I-5 Broadway/Weidler Plans

DRAFT

PRELIMINARY ISSUES, OPPORTUNITIES AND CONSTRAINTS

Over the past few months, N/NE Quadrant and I-5 Broadway/Weidler Plans (N/NE Quadrant Project) staff from involved state and city agencies have gathered a wide range of issues and ideas from a broad spectrum of stakeholders. Major sources of input to date have included one-on-one interviews with members of the Stakeholder Advisory Committee, verbal and written comments collected at public events (community walks held in September and public open house held in November), comments submitted during the brainstorming session with the two project subcommittees on December 1st and 2nd, and individuals contacting the project staff through the project website and/or email. In addition, project staff has identified some issues for discussion that are included here. This compilation of comments represents a good starting place for the next phase of the process - developing options or alternatives to guide future development and investments in the study area.

This document sorts the comments received so far by geography (see attached map), and groups similar comments together. It also begins to differentiate between general issues and specific opportunities, constraints or ideas that may lead to proposals in the upcoming alternatives development phase of work. Several issues suggested that are beyond the scope of this project are briefly listed at the end.

This is not a final product, but summarizes the issues identified thus far. **It is intended to move the discussion forward.** Additional issues can still be considered in the process as appropriate.

GENERAL QUADRANT-WIDE ISSUES

Staff received a great number of general comments that seem to apply to most or all of the N/NE Quadrant study area. These can generally be grouped into five main categories. These are increasing the area's **urban vibrancy and vitality**, increasing **economic prosperity** in the area, **improving human and environmental health**, seeking **balance and equity**, and improved **access and connectivity**.

1. Urban Vibrancy and Vitality

This category includes statements encouraging increased development (particularly on current surface parking lots) including retail, office and housing to provide better/more interesting pedestrian experiences, and new amenities like pocket parks and pedestrian routes. Introducing a diverse range of new uses was suggested to help overcome the highly episodic nature of activity in many parts of the district. It was suggested that an updated urban design strategy will help achieve these goals. A more robust and integrated open space

system is seen as needed in parts of the study area. Public safety is seen by some as a major issue threatening livability and investment.

2. Economic Prosperity

This category includes numerous references to increasing employment and business growth in the quadrant – particularly by supporting expansion of existing businesses and building on existing major attractors like the Oregon Convention Center, Rose Quarter, and Lloyd Center Mall. Several stakeholders voiced strong support for continuing efforts to locate a new major hotel near the convention center in the future. Several people suggested that districts within the study area would benefit from stronger identities – more "there there".

3. Human and Environmental Health

Topics related to human and environmental health include supporting the Lloyd Green pilot EcoDistrict concept currently under development, improving habitat conditions, continuing progress on stormwater management, expanding access to parks and natural areas, finding opportunities for urban gardens, improving air quality, reducing noise pollution, and pioneering green building technologies including measures to improve migratory bird-friendliness in new and existing buildings Specific opportunity sites mentioned for improving or creating new natural habitat areas include the banks of the Willamette River in the Rose Quarter and the northern slope of Sullivan's Gulch stretching the length of the study area's southern edge. However, the heavy rail lines and grain terminal along the Rose Quarter riverfront, and the heavy traffic on I-84 along Sullivan's Gulch do present challenges to these opportunities. Improving the jobs to housing ratio in the district by encouraging more housing at appropriate affordability levels along with job growth is also seen as a means to improve environmental performance in the study area through commute trip reduction.

4. Balance and Equity

Issues identified generally focused on finding room in the quadrant for new people, business, development, etc. while retaining the existing population, businesses and culturally/historically significant buildings, etc. at the same time. Minimizing or mitigating negative impacts on surrounding areas and important local structures is a key goal. Specifically mentioned for preservation were buildings appearing in the *Bosco-Milligan Cornerstones of Community* inventory as well as the retention of existing affordable housing. Building new affordable and middle-income (often referred to as "workforce") housing is also seen as important to maintain a diverse and equitable community in the study area. A "concentric circles" model of economic development that prioritizes local sourcing of goods and talent was suggested. Finally, desire was expressed to see more multi-cultural gathering places in the study area - community centers and marketplaces were mentioned specifically.

5. Connectivity and Access

Issues applicable to the entire study area included maintaining and improving access to, within, and through the quadrant for all modes of transportation including pedestrian, bicycle, auto, transit (bus, light rail and streetcar), and truck/freight. I-5 and I-84 are seen as significant pedestrian/bike barriers. Current and future trails should be included as part of the

future transportation network. Improving safety across all transportation modes and reducing conflict between different modes is highly desirable. Considering a variety of ways to safely improve connectivity for bicycles and pedestrians, including options that exceed anticipated funding, is also desired. There is a general desire to increase the overall efficiency of our transportation system while adequately serving current and future facilities, businesses and residents and reducing emissions and climate impact. Specific measures to improve efficiency mentioned include: increasing trips by bicycle and walking, increasing transit capacity and use, reducing single-occupant vehicle travel, eliminating vehicles from certain areas, promoting motor cycles and scooters, improving signage, and increasing the use of alternative fuel vehicles. Increasing housing in the quadrant was suggested as an important opportunity to increase bike and walk commute trips.

The general sentiment related to *parking* is that there are too many surface parking lots in the area, but there is acknowledgement that a constrained parking supply may be discouraging new development and business growth. Regional traffic access to and parking available for major regional event attractors in the quadrant (Rose Garden, convention center, etc.) remains extremely important both now and in the future. Addressing conflicts between local resident parking and event parking, considering new parking facilities for MAX riders and establishing minimum parking requirements for new development were also suggested topics.

SUBAREA ISSUES

1. Subarea 1 and 1a - Lower Albina and Russell Street

a. Most of the issues identified specific to this area focused on one of two themes: preserving and enhancing the viability of industrial nature of the district, and revitalizing and improving the historic Russell Street main street.

b. Key issues related to preserving and enhancing the **industrial viability of Lower Albina** included:
   - Improving **freight access** and parking;
   - Continuing **industrial sanctuary** policies, though possibly with some increased flexibility with regards to allowed office uses

c. On **Russell Street**, numerous opportunities for renovation and preservation of historic structures exist. These projects could increase retail and restaurant activity on Russell. Several stakeholders have commented that more mixed use development (possibly including housing) would improve the vitality of the main street. Others have noted that there are several vacant parcels adjacent to the **MAX light rail station** and that mixed-use, transit-oriented development might be appropriate in a limited area around the station - targeted zoning changes may be needed to facilitate mixed use development. Improving connections from Russell Street up to N. Mississippi Street and up Russell to Emanuel Hospital also were suggested.

d. This being a predominantly industrial area, **freight capacity and movement** is extremely important including truck-friendly street/intersection design and freeway access.

e. Additional issues raised specific to this area were:
   - Poor access to the **Willamette River** and potential future greenway trails; and
   - A potential opportunity to do more with the lands under the elevated I-5/I-405 freeway interchange.
   - Improving pedestrian conditions, bicycle/pedestrian connectivity through the district and bicycle parking were also mentioned.
   - While a few people expressed interest in limiting industrial expansion along the riverfront, reexamining the industrial zoning between Interstate Avenue and I-5, and allowing wide-spread redevelopment including tall residential towers, those voices seem to be a minority opinion.

2. Subarea 2 -Vancouver/Williams Corridor

a. Most comments specific to this area supported efforts for **gradual redevelopment** of the area, while preserving important historic and culturally-significant buildings. Some blocks within this area currently have a residential zoning designation, complicating mixed use redevelopment that includes significant non-residential uses. It has been suggested that **zoning should be more flexible**, however preserving existing housing and encouraging new residential construction in this area continues to be important to the Eliot Neighborhood. Generally, lower scale development seems to be the desired urban form in this area. It should help transition from the single family character in Eliot to the taller buildings allowed in the Rose Quarter and Lloyd District.
   - Should **incentives** be developed to encourage, but not require, residential construction?
   - Should the current high density residential zoning in parts of this area be relaxed to allow more non-residential development?

b. **Access** is an important issue in this area – particularly as potential reconfigurations of I-5 and the over-crossings at Flint, Broadway, Vancouver, and Williams are considered. Multiple, pedestrian- and bike-friendly access options are desirable - including access from this area to the Eastbank Esplanade and future greenway trail.
   - Could there be an additional bike/ped crossing at Hancock?

c. **Views** from the area across Lower Albina and the Rose Quarter to the west side were identified as a potential issue. In particular, the current public view mapped from the southwest corner of Lillis Albina Park is fully obstructed by trees and could be impacted by some development scenarios under consideration in the Rose Quarter / Blanchard Building area.
   - How important is this viewpoint?
   - Should it be improved or relocated?

3. Subarea 3 -Rose Quarter

a. The N/NE Quadrant Project will seek to support and coordinate with the results of the **Rose Quarter Development Project**. To this end, there appears to be substantial support for considering redevelopment at the **School District's Blanchard Building** site. This would likely require a zoning change from the site's current industrial zoning

designation to commercial/mixed use zoning. Other changes to development regulations might also be recommended by the Rose Quarter work. Additionally, the theme emerged of supporting and strengthening the current role of the Veteran's Memorial Coliseum and Rose Garden arena while encouraging new uses. It was also suggested that public investment and/or disposition of publicly owned land could spur private redevelopment throughout the area.

b. The **Willamette riverfront** is seen as a key opportunity in the Rose Quarter. Suggestions emphasize a desire for:
   - Better access to and along the river (both physical and visual);
   - Increasing water recreation and transportation opportunities; and
   - Creating riverfront habitat, although this may prove challenging as the Rose Quarter riverfront now has heavy rail lines serving an active grain terminal located between two heavily trafficked bridges.

c. The CLD Pacific **Dreyfus grain terminal** is likely to remain in place during the foreseeable future and is seen as a challenge to redevelopment in the area. Some suggested that even if this facility were no longer in use as a grain terminal, it would be an interesting opportunity for historic preservation and repurposing.

d. **Safe, multi-modal access** to and through the Rose Quarter is an important issue – particularly to the riverbank and Eastbank Esplanade as well as across I-5. The current configuration of the I-5/Broadway/Weidler "Box" is viewed as dangerous and unpleasant for all modes (see also freeway/interchange-specific issues below). Specific transportation ideas to consider here include:
   - A new separate bike/ped bridge over I-5 (possibly at Clackamas);
   - Bringing N. Dixon Street across I-5 to connect to Flint; and
   - Reversing or decoupling the direction on N Vancouver and N Williams Avenues to improve the flow in the "Box".
   - Improve pedestrian and bicycle connections under I-5 (with an emphasis on Holladay Street) between the Rose Quarter and Convention Center areas through streetscape and strategic development.
   - Ensure that essential freight access to the Rose Garden and Memorial Coliseum is maintained.

e. Improvements or reconfigurations to the **Rose Quarter Transit Center** could be an opportunity to reduce the distance between the MAX platforms and create a safer environment for pedestrians, create new development areas and increase multi-modal access to the area. There is also some desire to consider eventual realignment of the **heavy rail line** along the riverbank inland to reduce the Steel Bridge bottleneck caused by the current s-curve and also allow public access to the river, habitat restoration, and future development along the river.

4. Subarea 4 - Broadway/Weidler Corridor and transition to Irvington and Eliot neighborhoods

a. Most comments received specific to this area relate to improving the **main street character** of the district and achieving a **respectful transition** from the Central City to the Irvington Historic District to the north. Specifically, it was suggested that the main street qualities present on the eastern portion of NE Broadway should continue through the entire study area to the Broadway Bridge.

b. Transportation issues have also been raised. Some stakeholders are interested in looking at changes to the current **one-way street traffic configuration on Broadway and Weidler**. Several stakeholders mentioned that there are several **difficult pedestrian crossings** (without signals) on NE Broadway and that improving bicycle safety along the length of the corridor is a priority. Providing controlled intersections for bikes and pedestrians every 2 blocks was one suggestion for resolving this issue. It was also suggested that benefits may arise from de-coupling Broadway and Weidler and creating a 2-way thoroughfare.

c. Other specific transportation issues mentioned for consideration include:
   - Looking at ways to improve multi-modal safety at the intersections of Broadway/Weidler at MLK/Grand and Broadway/Weidler at 15th/16th;
   - Reducing the number of driveways on Weidler; and
   - Untangling the situation at the "Box".

5. Subarea 5 -Central Lloyd

a. Many issues raised specific to this area focus on the opportunity to support both the development and continued success of the **Oregon Convention Center** and the established office district immediately to the east. Opportunities to help support the convention center include the headquarters hotel and entertainment-related development around the facility. **Opportunities in the office core** include unique potential for development with distinctive amenities on the superblocks in the area. Holladay Park Medical Center was also seen as a potential opportunity for growth. The need for a stronger district identity and improved public safety were identified as crucial to supporting this sub-area.

b. **Residential development** – and the general lack thereof – is frequently cited as a major issue in this part of the study area. Streetcar construction is seen as a major opportunity to help encourage more residential construction here, but questions remain about the market-readiness of the area for housing. There is clear desire for new housing at a wide range of affordability levels – ideally to roughly match the employment profile of the study area. Some questions to think about include:
   - Are the **limited parks and open space amenities** in the area sufficient to support large-scale residential construction?
   - Is the current zoning working to encourage housing?
   - What parking strategies are appropriate? Currently, parking in the area is challenging, discourages residential development, and is a burden to existing

residents as new development makes use of the already limited supply. Some residents would like a residential parking permit program in this area.

c. Other issues raised specific to this area include:
   - A lack of clear **urban form and street hierarchy** (i.e large blocks and buildings). Traversing the district does not provide enough clues as to which are of the streets serves the highest priority. A clear positive outcome for this sub-district is to determine ways to support a delineation of street hierarchy. The proposed Holladay green street improvements were cited as a successful attempt at creating hierarchy in one geographic location.
   - The many **large blocks** in the district are seen as a challenge to access and pedestrian connectivity, but are also seen as a unique opportunity in the Central City with typically much smaller blocks because they provide an opportunity for a different urban pattern for redevelopment. Including pocket parks in new development was suggested as a way to achieve new green/open space amenities incrementally.

d. Regarding transportation and access, **improved pedestrian and bike access** on MLK and Grand and across/under I-5 was frequently suggested as was the importance of maintaining efficient truck access to the Rose Quarter, Convention Center and surrounding office buildings. Specific ideas suggested included providing controlled intersections for bikes and pedestrians every 2 blocks along MLK/Grand, considering new pedestrian crossings to the Rose Quarter at Clackamas and to the Central Eastside at 7th Avenue (over I-84).

6. Subarea 6 and 6a -Lloyd Center Mall, Office Core, Holladay Park and Sullivan's Gulch transition

a. The poor quality of the **pedestrian experience** and limited street-level activity is cited as a challenge to be addressed in this plan. **Increasing vitality** through redevelopment and new development is a common desire. Some specific suggestions include:
   - Improving the facade of the Lloyd Mall with aesthetic improvements would create a more inviting interface between the inside and outside of the structure and would serve to 'invite' people into the mall.
   - Developing the **Lloyd Cinema parking lot** to potentially include a mix of residential, retail and other uses to help activate the space.

b. The predominance of **large property owners** and **large blocks** was noted as both a challenge and an opportunity in this area. Existing residential development in this area is limited and typically has little or no parking. Residents are interested in residential permit programs.

c. Public safety concerns in **Holladay Park** are widespread and a variety of measures to improve conditions there have been suggested. These range from near-term actions like increased tree trimming and more active programming of the park to longer-term ideas, such as improving surrounding development conditions with new buildings facing (embracing) the park and adding additional design features to the park to attract a wider variety of users.

d. Increasing **pedestrian connectivity and safety** both within this part of the study area and between this and adjacent areas was cited as an important issue. Suggestions for improvements include:
   - A new pedestrian bridge between this area (somewhere around NE 9th Ave) and the Central Eastside (across I-84),
   - Adding bicycle lanes to the 12th Avenue bridge; and
   - Continuing bike lanes on Multnomah all the way to NE 21st Ave.

e. The properties at the SW corner of **NE Multnomah and NE 21st** are seen as an interesting development opportunity. There are concerns about possible demolition of older homes on portions of the site, but generally there seems to be interest in looking at redevelopment scenarios for the corner. There appear to be differing opinions on what scale of building would be appropriate here. The site currently has split zoning, and may need to be rezoned to accommodate desired development. This area could also provide a convenient access point to the potential future Sullivan's Gulch Trail.
   - One opportunity that arises from the charrette process would include ideas for the type of design solutions and/or development that would be most appropriate and desirable?

7. The Freeway and Interchanges

a. Freeway related issues mentioned by study participants have focused on three themes: **safety**, **operational issues** as related to the freeway and overpasses, as well as **improved freight movement**.

b. Expressed **safety** related issues have included a desire to reduce weaving and improve merge lengths on I-5 as a way to help reduce the incidence of rear end and sideswipe collisions. On overpasses and interfaces with the local street network, there is a desire to improve safety especially by clarifying vehicular patterns and/or to separate vehicular, bikes and pedestrian traffic at identified conflict areas. The Broadway/Weidler box and the intersection of Vancouver and Larrabee were singled out as particularly problematic areas, especially during major events in the Rose Quarter. Some stakeholders would like safety to be explicitly prioritized over capacity expansion when evaluating changes to I-5 and "the box".

c. Comments related to freeway **operational issues** generally focused on:
   - Improvements related to the reliability of traffic flow;
   - Reducing delay;
   - Increasing levels of service; and
   - A desire to increase average freeway speeds through the district.
   - A desire to reduce the impact of freeway traffic on the neighborhood

d. It was also suggested that the reconfiguration or removal of some or all of the **on and off ramps** to limit the number of intersections that feed onto the local street grid is desirable. Spreading the ramps and reducing the number of lights in specific locations to improve traffic flow was also mentioned, as was a desire to lengthen specific on ramps to

minimize traffic bound for the freeway from backing up on local streets. Finally, a strong desire was expressed to **avoid impacts on key cultural sites** when looking at proposed freeway improvements.

e. **Freight movement** in support of local and regional economies was highlighted as a desired outcome of this process. Maintaining and improving freight movement and distribution on the freeways, as well as to locally designated freight routes, such as Lower Albina, are needed to ensure the reliable flow of goods. Freight movement improvements may take the form of reconfigured freight geometries on local streets and at on ramps, especially in areas like the Broadway/Weidler "box".

f. A desire to increase the **reliability of travel times** and to increase capacity for freight movements on the freeways was also expressed. It was suggested that this study should identify alternative freight access routes to and from Lower Albina, Swan Island and NW industrial areas.

ISSUES BEYOND THE SCOPE OF THIS PROJECT

Staff prepared a scope document to clarify the types of issues the N/NE Quadrant and I-5 Broadway/Weidler Plans will consider. The Stakeholder Advisory Committee reviewed the document at their December 9th meeting and is expected to approve a revised version at their meeting on January 20th. Using that document as guidance, a number of issues have been raised that are clearly not within the scope of this project. As a result they have not been included above in this document. Issues commonly raised in this category include but are not necessarily limited to:

- Questions about the future of the I-5 Eastbank Freeway in the Central Eastside and removing I-5 from the study area.
- Issues pertaining to possible future high speed rail system needs in the quadrant.
- Determining future streetcar system priorities or alignments.
- Decisions on current or future Urban Renewal Areas.

N/NE QUADRANT SUB AREAS MAP
(Freeway – not shown – is area 7)

APPENDIX F: PUBLIC INVOLVEMENT SUMMARY

Public Involvement Goals

There is a long history of large redevelopment and infrastructure project that have had adverse impacts on the communities in Lower Albina and the Lloyd District. The N/NE Quadrant Plan strives to repair the community fabric, and to this end the public involvement process was designed to be inclusive and responsive to public concerns, and allow for active participation and meaningful public input.

The public involvement efforts for the N/NE Quadrant Project were guided by the public involvement goals developed by the Community Involvement Committee (CIC) for the Portland Plan, the long-range planning effort for the City as a whole, which was taking place when the quadrant plan process began. Incorporating these public involvement goals provided for consistent public involvement efforts:

- Build on existing relationships
- Engage broader and diverse groups with education and information and provide all interested with enough education so they can meaningfully participate
- Provide multiple venues and means for community involvement and engagement
- Involve as many people as possible
- With feedback and continuous engagement throughout Portland Plan development and implementation, ensure community members are being heard

In addition, the N/NE Quadrant project strove to:

- Provide a process that is open and transparent, with a special emphasis on early involvement in providing policy-setting input
- Clearly define opportunities where the public can provide timely input so that there is an opportunity to inform policy-making and otherwise affect change
- Wherever possible, design interactive formats for meetings and ensure a balanced and fair discussion of issues

Key Stakeholders and Project Advisory Committees

The Bureau of Planning and Sustainability, working with the other project partners Oregon Department of Transportation and the Portland Bureau of Transportation, involved a variety of stakeholders and interested parties in the N/NE Quadrant planning process. These stakeholders had varying levels of interest in the planning process, ranging from property owners who will be directly impacted by the plan outcomes to members of the general public who wanted to stay informed about what is happening in the Central City.

Stakeholder Advisory Committee

A Stakeholder Advisory Committee (SAC) was one of the primary means of ensuring that the public had opportunities to provide meaningful input into the planning process. SAC members (see table F1) were selected to represent key stakeholder interests and to create a balanced committee to guide the planning effort. All SAC members were appointed by the directors of the Portland Bureau of Planning and Sustainability, the Portland Bureau of Transportation and the Oregon Department of

Transportation Region 1 Office. The SAC was made up of 30 voting members, representing area stakeholders, including business and neighborhood associations and property owners, as well as community interests such as affordable housing, cultural heritage, the environment, economic equity, labor, urban design and transportation. Local, regional and state public agencies were also represented on the committee as non-voting members.

The role of the SAC was to advise and direct project staff throughout the planning process and to make recommendations about the project to the Portland Planning and Sustainability Commission and the Oregon Transportation Commission. SAC members were expected to report back to and solicit input from their stakeholder groups and constituencies, represent the broader interests of those groups at meetings and promote public involvement in project events. Early in the process SAC members developed and adopted collaboration principles that governed decision making for the committee.

Subcommittees of the SAC met periodically to address specific issues, such as transportation, land use and urban design. Members of the public were invited to join the subcommittee to have more in-depth participation in the process.

In all, 19 full SAC meetings and 13 subcommittee meetings were held. All meetings were open to the public and included opportunities for public comment.

Table F1: N/NE Quadrant Project Stakeholder Advisory Committee Members (June, 2012)

Voting Members			
Representative	**Interest**	**Organization**	**Alternate**
Matt Arnold	Transportation-Bicycle	Bicycle Advisory Committee	Heather McCarey
Wynn Avocette	At-large		
Pauline Bradford	Cultural Heritage	Interstate URAC, NE Coalition of Neighborhoods	
Carol Gossett	Neighborhood Association	Sullivan's Gulch Neighborhood Association	Britt Brewer
Phil Selinger Carolyn Briggs (past)	Transportation-Pedestrian	Pedestrian Advisory Committee	Doug Klotz Erin L Kelley (past)
Daniel Deutsch	Small Developer	Alora Development	Joanna Agee
Malina Downey	Regional Access	UPS	
Debra Dunn	Transportation-Trucking	Oregon Trucking Association	Bob Russell
Gary Eichman/Tracy Whalen (co-chairs)	Transportation-Freight	Portland Freight Committee	
Dean Gisvold	Neighborhood Association	Irvington Neighborhood Association	Ed Abrahamson
Cynthia Gomez (past)	Environmental Justice / Economic Equity	Latino Network	Andrea Marquez-Horna
Heidi Guenin	Community Health	Upstream Public Health	Steve Bozzone
Damien Hall	At-large		
Sean Hubert	Affordable Housing	Central City Concern	Martin Soloway

Wayne Kingsley	Adjacent Businesses	Central Eastside Industrial Council	
Wade Lange	Property Owner/Business- Lloyd District	Ashforth-Pacific	Mike Bernatz
Lloyd Lindley (co-chair)	Urban Design	AIA Portland / ASLA Portland	
Eric Lovell	Lower Albina Businesses	Uroboros Glass Studio	Kurt Widmer
Jenny Lyman	Transit Riders		
Gary Marschke	NNE business association	NNE Business Association	Joice Taylor
Brock A. Nelson	Transportation-Rail	Union Pacific Railroad	
Midge Purcell (past)	Community / Civic Org	Urban League	
Jodi Parker Paul Riggs (past)	Labor Organization	Building Trades/Columbia Pacific BCTC	
Owen Ronchelli	Transportation-Local TMA	Lloyd TMA	Lindsay Walker
Wanda Rosenbarger	Major Retailer	Lloyd Center Mall	Dennis Henderson
William Ruff	Architect/Developer	LRS Architects	
Bob Sallinger	Environment	Audubon Society	Kelly Rodgers
Gary Warren	Neighborhood Association	Lloyd District Community Association	
Mike Warwick	Neighborhood Association	Elliot Neighborhood Association	Laurie Simpson
Justin Zeulner J. Isaac (past)	Property Owner/Business- Rose Quarter	Portland Arena Management	Chris Oxley
Non-Voting Members			
John Williams		Metro	Chris Deffebach
Teri Dresler Jeff Blosser (past)		Oregon Convention Center	Karen Totaro
Rian Windsheimer		Oregon Department of Transportation	Andy Johnson
Susie Lahsene		Port of Portland	
Joe Zehnder		Portland Bureau of Planning and Sustainability	Steve Iwata
Paul Smith		Portland Bureau of Transportation	John Gillam
Lew Bowers/ Peter Englander		Portland Development Commission	Sara King
Alan Lehto		TriMet	Jessica Engelmann

Technical Advisory Committee

A Technical Advisory Committee (TAC) representing public agencies with specialized expertise related to the plan and implementation served as a resource for the planning process. TAC members were responsible for reviewing project proposals, providing comments to project staff and reporting back to their agencies throughout the planning process. The TAC met six times, in addition to individual coordination meetings with City bureaus and other public agencies that occurred during the process.

Table F2: N/NE Quadrant Project Technical Advisory Committee Members (June, 2012)

Organization	Representative(s)
Metro	Ted Reid
Multnomah County	Karen Schilling, Maya Bhat
Oregon Dept. of Transportation	Mark Johnson, Cahn Lam, Chi Mai, Simon Eng
Oregon Dept. of Environmental Quality	Cory Wind, Keith Johnson
Port of Portland	Susie Lahsene
Portland Bureau of Development Services	Kara Fioravanti, Tim Heron
Portland Bureau of Environmental Services	Amy Chomowicz, Rick Bastasch, Emily Hauth
Portland Bureau of Fire & Rescue	Erin Janssens
Portland Bureau of Planning & Sustainability	Lora Lillard, Leslie Lum, Sallie Edmunds, Shannon Buono, Vinh Mason
Portland Bureau of Transportation	John Gillam, Mauricio Leclerc, Grant Morehead, Roger Geller, April Bertelsen, Bob Hillier, Lewis Wardrip, Ellen Vanderslice
Portland Housing Bureau	Kim McCarty, David Sheern
Portland Office of Healthy Rivers	Ann Beier, Kevin Kilduff
Portland Office of Management and Finance	Claudio Campuzano
Portland Office of Neighborhood Involvement	Judith Mowry, Jeri Williams
Portland Bureau of Parks and Rec	Brett Horner, Kathleen Wadden, Sarah Coates Huggins
Portland Water Bureau	Stan VandeBergh, Cheri Warnke, Mike Saling, Tom Carter
Portland Public Schools	Paul Cathcart
Portland Development Commission	Kia Selley, Sara King, Kevin Brake, Irene Bowers, Denyse McGriff
Portland Streetcar	Vicky Diede
TriMet	Alan Lehto, Jessica Tump

Public Involvement Events and Tools

Events

SAC Meetings: SAC and its subcommittee meetings were held approximately monthly, and served as ongoing opportunities to share information and receive feedback from stakeholders and members of the general public. SAC meeting materials and minutes were posted on the project website.

Public Workshops/Charrettes: Two design charrettes were held during the concept development phase of the project focused on land use/urban design and the I-5 Freeway improvements. Charrette participants, including technical experts, SAC members and the general public, discussed issues and opportunities in the quadrant and explored possible solutions. Approximately 65 people attended the charrettes.

Open Houses: Four open houses were held at key points in the process to inform the public and get feedback. Staff presented recommendations, answered questions and took public comments. Approximately 450 people attended the open houses.

Community Walks: Community walks were conducted during the existing conditions phase of the planning process in September 2010 and before the SAC was asked to endorse the recommended I-5 freeway concept in April 2012. Staff and community members shared their knowledge of the N/NE quadrant with the SAC and other members of the public, and the groups discussed potential issues and opportunities related to the concept proposals. Approximately 40 people attended the walks.

Community Group Meetings: The project team attended meetings of existing community groups, such as neighborhood and business associations, advocacy groups and other organizations, to share information and get feedback throughout the process. In the summer of 2011, the project team made a significant effort to obtain feedback on plan proposals, attending 20 separate outreach meetings in less than 3 months.

Commission Briefings and Public Hearings: Project briefings were provided to the Portland Community Involvement Committee, Planning and Sustainability Commission, Historic Landmarks Commission and Design Commission during the process. The plan will undergo a formal public hearing process before the Portland Planning and Sustainability Commission and City Council prior to adoption.

In addition to the events outlined above, staff met with individual businesses, property owners and other interested stakeholders throughout the process. A complete list of events and meetings is outlined in Table F3: *N/NE Quadrant Project Outreach Log.*

Communication/Information Tools

Project Website: The project website served as the primary source of information for the public and as a means to solicit and receive public feedback. The website included project information and regular updates, documents, a calendar of events, meeting agendas and minutes, links to other related planning efforts and staff contact information.

Survey: In the summer of 2011, an on-line survey was developed to get feedback on three concept alternatives developed by staff in coordination with SAC members. Survey responses helped inform development of a proposed concept, which was eventually endorsed by the SAC, and formed the

basis for the goals, policies and implementation actions included in the quadrant plan. Approximately 140 survey responses were received.

Mailings and Newsletters: An electronic mailing list was used to provide frequent updates to interested parties regarding meetings, events and new products. Occasional articles and notices were distributed through the BPS bimonthly e-newsletter. A hard copy notice announcing the project and the first open house was mailed to businesses and residents within the N/NE Quadrant planning area and other interested parties.

Media: Announcements for key events and document releases were distributed to local media outlets (Oregonian, Daily Journal of Commerce, neighborhood newspapers and other outlets).

Table F3: N/NE Quadrant Plan Outreach Log (Draft as of July, 2012. To be Updated)

Note. The project staff listed in the Outreach Log includes the following members from the three partner agencies. The attendance figures do not include project staff.

- *Portland Bureau of Planning and Sustainability: Susan Anderson, Stephanie Beckman, Shannon Buono, Debbie Bischoff, Mindy Brooks, Tyler Bump, Nick Byers, Troy Doss, Sallie Edmunds, Diane Hale, Kathryn Hartinger, Steve Iwata, Roberta Jortner, Karl Lisle, Lindsey Menard, Mark Raggett, Nicholas Starin, Nan Stark, Joel Stein, Michelle Van Tijen, Spencer Williams, Joe Zehnder*
- *Oregon Department of Transportation: Fred Eberle, Andy Johnson, Todd Juhasz, Tim Wilson*
- *Portland Bureau of Transportation: John Gillam, Mauricio Leclerc, Grant Morehead, Paul Smith*

Date	Organization/Event	Project Staff	Attendance (Approximate)

STAKEHOLDER ADVISORY COMMITTEE RECOMMENDATIONS

7-27-12 Draft

Text highlighted in yellow is for facilitator/staff follow-up

This is a working draft based upon the assumption that the SAC will make recommendations in the future. It is a work in progress. The SAC has not yet voted on all of the issues. As a result, the contents are subject to change between now and the end of the process. Ultimately, the contents will conform to the SAC's recommendations, whatever they may be.

We are committed to providing equal access to information and hearings. If you need special accommodation, call the Bureau of Planning and Sustainability at 503-823-7700 (TTY 503-823-6868).

DRAFT

August X, 2012

Portland City Council Oregon Transportation Commission Planning and Sustainability Commission
Add Names and Addresses

Greetings:

The North/Northeast Quadrant Stakeholder Advisory Committee (SAC) is pleased to present our final recommendations for the N/NE Quadrant Plan and the I-5 Broadway-Weidler Interchange Plan. From the fall of 2010 to the summer of 2012, we had the honor of chairing the diverse and inclusive 30-member Stakeholder Advisory Committee (SAC) as it developed its recommendations. The process for was a collaborative effort between the City of Portland, represented by the Bureau of Planning and Sustainability and the Bureau of Transportation, and the Oregon Department of Transportation. As co-chairs, we would like to acknowledge this unique effort and that SAC members embraced this challenge and appreciated the opportunity to be involved and engage with the staff from BPS, PBOT and ODOT on this project to develop our recommendations.

When we started, we set out to do something that had not been done before in this region: integrating a major freeway project with a long-range land use and transportation plan. The working assumption for doing this arose from the history of developing land use and freeway plans independent of one another. Inevitably, the end result were plans that addressed particular issues related to agency needs, but left many others as being "outside of our scope," and thus unresolved. As a result, past plans failed to address the multiple and complex issues in this area, some going back many decades, and lacked the necessary public and agency support to be implemented.

As the interstate system grew, the Lloyd District segment remained unchanged. This stretch of the freeway became an urban barrier and an unsafe and congested bottle neck. The freeway and its footprint continued to be an impediment to necessary regional access to and from the Lloyd District, Rose Quarter and Lower Albina areas. This process set out to concurrently develop two separate, but integrated plans that address the needs for livability and urban vitality of this quadrant of the Central City and the regional safety and mobility needs of I-5 as a key facility for the region and state.

Doing this together was not always easy, but the rewards more than compensate for the hard work of SAC members, staff, and public at large. We believe by working together we have plans that are not only consistent but integrated, that support and reinforce each other in physical and symbolic ways that we hope will facilitate implementation. Early on the SAC developed a comprehensive list of project goals to guide the development of the plans. They are found on page 4.

Insert summary of 1) votes and 2) any additional SAC recommendations

We believe that these plans implement the adopted goals and offer a comprehensive framework that will guide public and private investment in the next decades. By working together, we have accomplished a great deal more than had we done these plans independent of each other. Following this letter is a summary of the process and key outcomes.

We now have the blueprints for positive change. It is our next collective task and commitment led by the City and state, to continue the work to make the recommendations in these plans a reality.

Respectfully Submitted,

DRAFT

I. Introduction, Background and Process Overview

In the summer of 2010, ODOT, PBOT and BPS ("the Project Team") initiated a partnership to begin co-developing land use and transportation concepts for the North/Northeast quadrant of the central city (N/NE Quadrant) through an iterative process involving the public and area stakeholders. (See, Figure 1.)

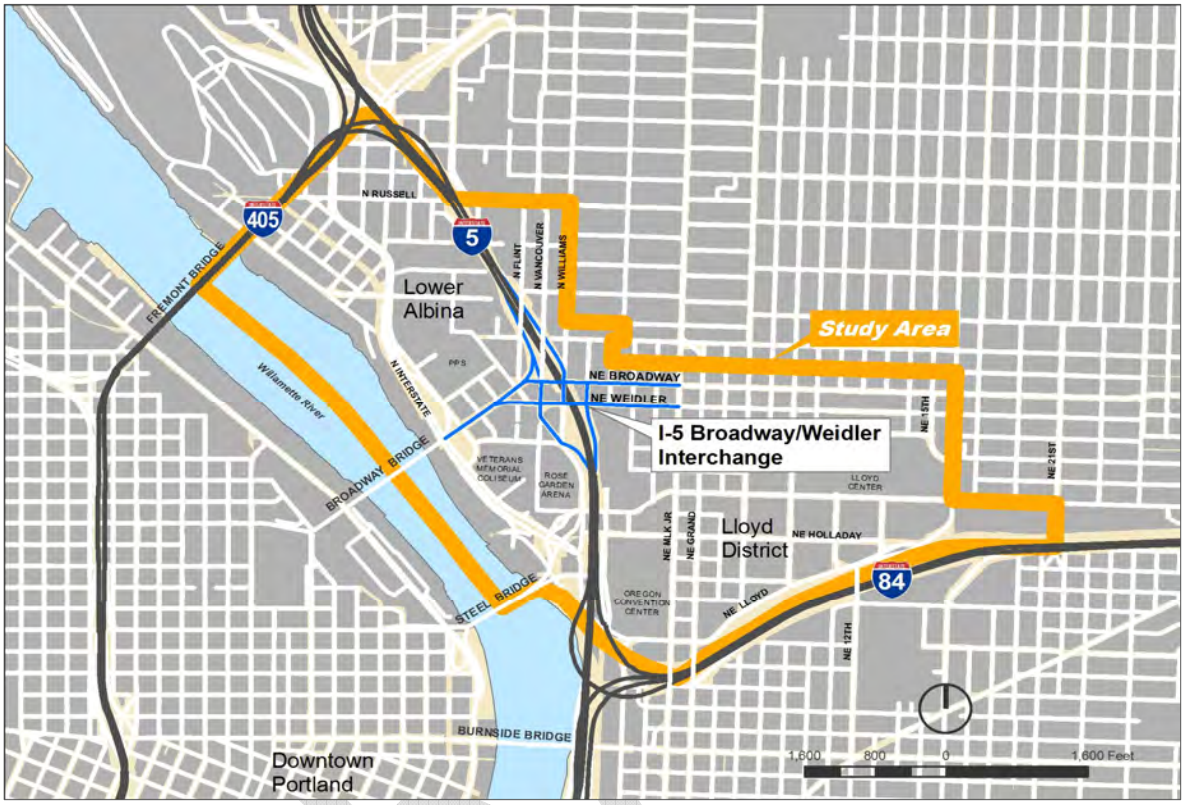

Figure 1: Study Area for the N/NE Quadrant and I-5 Broadway/Weidler Plans Project

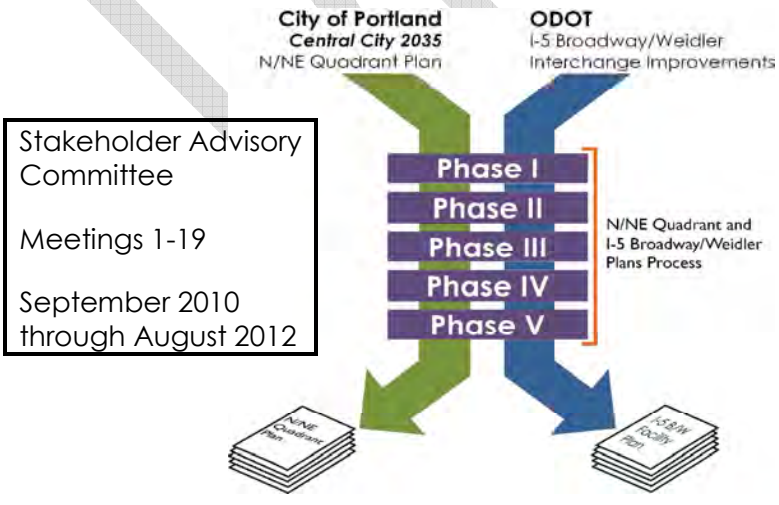

This joint effort provides a new collaborative land use and transportation approach to integrate land use planning with urban freeway interchanges improvements. This approach combined the planning of local strategies for land use, urban design and local transportation improvements, typically a City responsibility, with the planning of interstate freeway improvements, which is an ODOT responsibility. The N/NE Quadrant Plan is part of overall process to update the 1988 Central City Plan. The SAC identified the following key issue to be addressed: the Lloyd District's lack of vibrant pedestrian activity, support the industrial uses in the Lower Albina, support the recent designation of the Lloyd EcoDistrict, and acknowledge and develop strategies to address the impacts of past large scale public project. The project's approach for freeway improvements was to address long-demonstrated safety and operational issues that, if scaled according to community aspirations, would contribute to the continued vitality of the Central City and the mobility needs of the region and state. Due to multiple constraints, freeway improvements were to focus on existing safety and efficiency scenarios instead of solutions that increase capacity to meet future travel demands.

The Stakeholder Advisory Committee (SAC) was established to provide feedback and direction to the Project Team. It and the SAC met regularly for approximately two years to discuss issues, brainstorm, develop draft concepts, and examine transportation and land use solutions concurrently over the course of a five-phase process. They were created to explore multiple alternatives to address complex urban and

transportation issues and implement the following jointly developed project goals that the SAC approved in January 2011.
The goals state:

> This planning effort will result in integrated land use, urban design, and transportation strategies, policies and plans for the N/NE Quadrant and the I-5 Broadway/Weidler interchange that balance, complement, enhance, protect, respect, revitalize, support, and sustain economic, environmental, and social interests. The implementable plans will be consistent with the overall goals and policies of the city, region, and state.
>
> Our recommendations will be guided by our desire for:
>
> - A diverse mix of commercial, cultural, entertainment, industrial, recreational, and residential uses, including affordable housing;
> - A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system;
> - Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages;
> - Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment;
> - Equitable access to community amenities and economic opportunities;
> - Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods;
> - Protection and enhancement of the cultural heritage of the area and its sub-districts; and
> - Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses.

The land use changes and urban design strategies for the City are documented in the North/Northeast Quadrant Plan (as part of the 2035 Central City Plan) and the transportation changes are documented ODOT's Facility Plan. Though developed within the same process, the land use and transportation improvements resulted in two different groups of documents for the two partnering agencies as shown in Figure 2.

55222

Figure 2: Joint Effort for the N/NE Quadrant and I-5 Broadway/Weidler Plans Project: Examining Land Use and Transportation Elements Concurrently

In the end, this process resulted in land use and transportation changes in the quadrant that are mutually agreeable to both the City of Portland and to ODOT. The voting members of the SAC largely endorsed the proposed plans, with some members submitting Minority Reports explaining why they oppose the plans. See section VI, below for a summary of the voting.

II. Stakeholder Advisory Committee, Collaboration Principles and Public Involvement Overview

Stakeholder Advisory Committee

The SAC was one of the primary means of ensuring that the public had opportunities to provide meaningful input into the planning process. SAC members (see, Table 1) were selected to represent key stakeholder interests and to create a balanced committee to guide the planning effort. All SAC members were appointed by the directors of the Portland Bureau of Planning and Sustainability, the Portland Bureau of Transportation and the Oregon Department of Transportation Region 1 Office. The SAC was made up of 30 voting and non-voting members, representing area stakeholders, including business and neighborhood associations and property owners, as well as community interests such as affordable housing, cultural heritage, the environment, economic equity, labor, urban design, and transportation. Local, regional and state public agencies were represented on the committee as non-voting members. The SAC also considered non-member testimony and correspondence submitted during each meeting.

Joe Zehnder		Portland Bureau of Planning and Sustainability	Steve Iwata
Paul Smith		Portland Bureau of Transportation	John Gillam
Lew Bowers/ Peter Englander		Portland Development Commission	Sara King
Alan Lehto		TriMet	Jessica Engelmann

The role of the SAC was to advise and direct project staff throughout the planning process and to make recommendations about the project to the Portland Planning and Sustainability Commission and the Oregon Transportation Commission. SAC members were expected to solicit input from their stakeholder groups and constituencies, report back to the committee, represent the broader interests of those groups at meetings and promote public involvement in project events.

Subcommittees of the SAC met periodically to address specific issues, such as transportation, land use and urban design. Members of the public were invited to join the subcommittee to have more in-depth participation in the process.

In all, 19 full SAC meetings and 13 subcommittee meetings were held. All meetings were open to the public and included opportunities for public comment.

Collaboration Principles

Early in the process, SAC members developed and adopted collaboration principles that governed decision making for the committee. The document can be found in Appendix X. It contains the agreements of the participants in the North/Northeast Quadrant I-5 Broadway Weidler Plans process.

The SAC made decisions by "consensus." Consensus decision-making allows SAC members to distinguish underlying values, interests, and concerns with a goal of developing widely accepted solutions. Consensus does not mean 100% agreement on each part of every issue, but rather support for a decision, *"taken as a whole."* This means that a member, through straw polling, may vote to support a consensus proposal even though they would prefer to have it modified in some manner in order to give it their full support. Consensus is a process of *"give and take*," of finding common ground and developing creative solutions in a way that a strong majority of interests can support. Consensus is reached if a strong majority of members at the table support an idea or say, *"I can live with that."*

Public Involvement

There is a long history of large redevelopment and infrastructure projects that have had adverse impacts on the communities in Lower Albina and the Lloyd District. The public involvement process was designed to be inclusive and responsive to public concerns, and allow for active participation and meaningful public input.

The public involvement efforts for the N/NE Quadrant Project were guided by the public involvement goals developed by the Community Involvement Committee (CIC) for the Portland Plan, the long-range planning effort for the City as a whole, which was taking place when the quadrant plan process began. Incorporating these public involvement goals provided for consistent public involvement efforts that:

- Build on existing relationships
- Engage broader and diverse groups with education and information and provide all interested with enough instruction that they can meaningfully participate
- Provide multiple venues and means for community involvement and engagement
- Involve as many people as possible
- With feedback and continuous engagement throughout Portland Plan development and ensure community members are being heard

In addition, the N/NE Quadrant project strove to:

- Provide a process that is open and transparent, with a special emphasis on early involvement in providing policy-setting input
- Clearly define opportunities where the public can provide timely input so that there is an opportunity to inform policy-making and otherwise affect change
- Wherever possible, design interactive meeting formats and ensure balanced and fair issue discussion

The Project Team estimates 2,600 people have attended meetings and events.

Commission Briefings:

- Portland Design Commission (6/2012)
- Portland Historic Landmarks Commission (7/2012)
- Planning Commission (6/2012)

Public Events Hosted by N/NE Quadrant Team:

III. City of Portland Central City N/NE Quadrant Plan Highlights

The N/NE Quadrant Plan is the first of the more detailed district plans, addressing land use, urban design, transportation, public infrastructure, and development entitlements in the Lloyd District and Lower Albina sub-districts of the Central City. It is part of the Central City 2035 Project, the City of Portland's effort to update the 1988 Central City Plan. It provides detailed planning for the Lloyd District and Lower Albina, including goals, policies and implementation actions that will direct and manage growth over the next 25 years.

Highlights of the Draft Plan include:

- Preserving the industrial employment character of Lower Albina
- Concentrating high density development in the Lloyd District, with a focus on new residential development that will add activity and vibrancy to the district
- Providing amenities, such as parks, street improvements and green infrastructure to support and encourage new development
- Sensitive transitions to historic neighborhoods
- Improving regional access and local street safety and connectivity for all modes
- Continue public-private partnerships with the Lloyd TMA to increase use of alternative transportation modes
- Encouraging sustainable development that supports the Lloyd EcoDistrict and goals for improved environmental performance
- Incorporated the concerns of displacement, potential loss of historic and cultural resources

Metro's regional employment and housing forecasts predict significant growth in the Central City. The Lloyd District has the highest development capacity in the Central City. It is expected that demand will drive significant new mixed use development. This process represents a collaborative approach to the overall growth management strategy for Portland and the region.

IV. I-5 Broadway/Weidler Interchange Improvements and Facility Plan Highlights

The Recommended Concept is the result of over two years of work and discussions, refining what began as public process that developed over 70 concepts. Screening reduced the concepts to 5 fundamental alternatives the SAC narrowed down to one cohesive proposal to improve safety and operations on I-5. The Facility Plan for the I-5 Broadway/Weidler Interchange is a technical and state-required document that specifically outlines ODOT's intentions relative to this segment of the I-5 facility and the interchange. The State of Oregon agencies are required to prepare facility plans for state-owned infrastructure so that they and decision-makers may effectively manage, maintain and prioritize potential additions to or expansion of this infrastructure.

Highlights of the Recommended Concept, organized into four subsections of the study area, include:

1) **The I-5 Broadway/Weidler Interchange Area** refers to project elements related to the freeway mainline, exit and entrance ramps and other traffic operations elements in the vicinity of the freeway ramps.

   - Mainline Freeway Safety Elements
   - Three Rebuilt Freeway Structures and the Broadway/Weidler/Williams Lid
   - I-5 Broadway/Weidler Interchange Improvements
   - Relocation of Southbound I-5 Entrance Ramp to Weidler/Williams
   - Reverse Traffic Flow on Williams and improve bicycle access and safety
   - Transportation System Management (TSM) and Transportation Demand Management (TDM) Strategies

2) **North of Broadway Area - North of Broadway Option 3. Vancouver + Hancock/Dixon**

Major elements in the north of Broadway area include:

   - Rebuild Vancouver in current location
   - Remove Flint south of Tillamook and replace with new pedestrian/bike paths
   - Add Hancock/Dixon Overcrossing and Hancock/Vancouver Lid
   - Actively pursue Freeway Lid Connecting Hancock Overcrossing to the Broadway/Weidler Structures

3) **South of Weidler Street Area**

   - Clackamas Pedestrian/Bike Overcrossing
   - Continue Flint between Parking Structures

4) **Freeway Mainline Improvements near the Rose Quarter TC**

55227

V. Integration of City of Portland and ODOT Plans

The N/NE Quadrant Plan and the I-5 Broadway-Weidler Interchange and Facility Plan were developed as a joint public planning effort to integrate the long range land use plans with current safety and operational problems on the freeway and at the interchange. The SAC participated in this unique effort to balance the needs to support the economic vitality of N/NE Quadrant businesses and the livability of area residents with the larger regional travel needs for safe and efficient freeway movement. This joint partnership resulted in creative solutions that support high-density development, safer and convenient places for walking, bicycling, and access to transit that should help increase the use of these transportation modes while accommodating safer regional freeway operations. The diagram below illustrates the opportunities to coordinate the two planning efforts, shown in five discrete areas. Accompanying the map is a summary of the complimentary relationships between the freeway improvements and the N/NE Quadrant land use-transportation-urban design elements.

Area 1: North of Broadway

The Vancouver/Williams neighborhood collector couplet intersects the I-5 Broadway-Weidler Interchange at one of the highest crash locations in Portland. The proposed improvement would provide for safer interchange operations and provide alternative bicycle and pedestrian routes to avoid the freeway interchange and improve access to potential redevelopment area north of N. Broadway.

- New connection over I-5 at Hancock and a potential second lid over freeway: This new connection would provide greater connectivity and safer route for pedestrians and bicyclists from N and NE Portland to the Broadway Bridge and across the Willamette River. A lid would further enhance crossing of the freeway and provide space for community amenities. This Hancock connection would reinforce the N/NE Quadrant Plan calls for greater connectivity across I-5 and improved

access, particularly to the Portland Public School's Blanchard site, which the plan calls to be rezoned to allow for higher density mixed use development.

- Recommendations include addressing Eliot Neighborhood concerns about potential traffic diversion with the proposed Hancock connection.

Area 2: Broadway-Weidler:

The current interchange is a major problem for safe passage for pedestrians and cyclists, and highly congested for motor vehicles, including streetcar and bus. The improvements would strengthen east-west transportation and land use connectivity as well as strengthen the economic connectivity with the Vancouver/Williams corridor.

- Reconstruction of the Broadway, Weidler, Vancouver, and Williams overcrossings: The Facility Plan calls for these structures to have better bicycle and pedestrian facilities. Traffic flow is addressed on surface streets via better access to the freeway, clarification of vehicular patterns and additional signalization.

- Lid over I-5 at Broadway/Weidler/Williams: The Facility Plan identifies a lid as a cost effective way to stage, mobilize and manage traffic during the reconstruction of the Broadway/Weidler/Williams structures over I-5. After construction the lid could be used to permanently protect the area from noise and visual disruption by providing space for potential active community uses such as open space or public or private development.

- Relocating the I-5 on ramp from Winning Way to Weidler: The Facility Plan recommends that access to the freeway take place directly from Weidler to increase the distance between interchange ramps on I-5 and clarifying the vehicular pattern along Weidler. Traffic flow is also improved for bikes and pedestrians through the inclusion of a new "reverse traffic flow lane" design on Williams, between Broadway and Weidler

The NE Quadrant Plan encourages the development of this lid as a way to reinforce Broadway's role as a continuous commercial spine, while encouraging redevelopment along the Broadway/Weidler and Vancouver/Williams corridors. Accomplishing these tasks will better serve to integrate the two sides of the district over I-5.

Area 3: Clackamas Crossing

The improvements to Area 2, especially the relocation of the current I-5 southbound on-ramp at N. Wheeler would provide for greater place making, redevelopment opportunities with a new connection at Clackamas-Winning Way connection that would establish a new link between the Willamette River, Rose Quarter and Central Lloyd subarea.

- Clackamas overcrossing: This pedestrian and cyclist connection over I-5 identified in the Facility Plan will connect the Rose Quarter area with the Lloyd District area to the east. In addition, the NE Quadrant Plan calls for Clackamas to be a "flexible street," which would emphasize pedestrian and cyclist travel from Lloyd District to the River, orient development toward the street and be an opportunity to extend district energy system from the Rose Quarter to future high-density mixed use development in the Central Lloyd area.

Areas 4: Rose Quarter and Area 5: Rose Quarter Transit Center and Peace Memorial

The I-5 Freeway segment between the Rose Quarter and the Sullivan's Gulch is elevated and has had negative impacts to this area. The proposed freeway improvements will present an opportunity to explore innovative stormwater and urban design treatments under the freeway to strengthen the connections between the Rose Quarter and Oregon Convention Center.

Freeway improvements: The Facility Plan calls for adding auxiliary lanes and shoulders to increase safety of existing traffic operations in this segment. All improvements occur within the existing freeway right-of-way.

VI. Final Votes

At the June 7, 2012 and August 2, 2012 SAC meetings, the members were polled as to their opinions on the Facilities Plan for the I-5 Interchange, the N/NE Quadrant Plan, and contents of this transmittal. The questions asked were:

- Do you endorse the Joint Facility Plan as written?
- Do you endorse the Draft N/NE Quadrant Plan as revised?
- Do you endorse the SAC Recommendations transmittal document?

The SAC's collaboration Principles defines the 1-2-3 voting protocol as follows:

- **"One"** indicates **full support** for the proposal as stated.
- **"Two"** indicates that the participant **agrees with the proposal as stated, but would prefer to have it modified in some manner in order to give it full support.** Nevertheless, the member will support the consensus even if his/her suggested modifications are not supported by the rest of the group because the proposal is worthy of general support, as written.
- **"Three"** indicates **refusal to support** the proposal as stated.

The results follow:		**Final Votes**		
Voting Members (Alternate)	**Interest**	**ODOT Facility Plan 6-7-12**	**Draft N/NE Quadrant Plan 8-2-12**	**Transmittal of SAC Recommendations 8-2-12**

Comment 1 - received via email 7/20/12
I have worked and lived in the Lloyd Center area for over twenty years, and I definitely have an interest in how the N/NE Quadrant is developed. I really love this part of Portland. The main focus of my comments is simple. I disagree with the desire of residents and other parties who keep bringing up the same old tired line of "it is too big to fit into the area." I strongly disagree with those who want to impose very low height limits to new buildings along main boulevards such as NE Broadway, NE Weidler, or Williams. And in the Lloyd Center proper area, I think new construction should be allowed to go as high as downtown buildings (400 to 500+ feet). I think it is unfortunate that South Waterfront buildings were limited to 325 feet (and if I remember correctly, I think the few that were built to that height had to get special permission). In my opinion, it is the taller buildings around Portland that draw our attention and provide character to the skyline. What right do the residents along the hills west of South Waterfront have to a completely unobstructed view of the Cascade peaks or whatever else they want to look at? I think we will look back on that construction and wish we had let them build taller. And back to NE Portland, I think we should allow buildings to rival the height of "Big Pink" and the Wells Fargo building. Having a second downtown would be great for this city. And like I said, tall buildings can be very attractive and visually appealing. Furthermore, we should be encouraging high urban density this close in to the city.

It seems like it generally comes down to the vocal minority from neighborhood associations that speak out against change to their neighborhood. And it frustrates me. Unfortunately, those that are fine with a developer's plans for a new and different project (and usually one that is taller or larger) usually don't feel the need to chime in. I am guilty of that at times. "It doesn't fit in with the other structures in our neighborhood" or "it is too big" are often stated. I think it is those exact new, bigger structures that add positively to an existing neighborhood. And especially along busy, main streets, why can't new construction exceed 5 to 6 floors? Makes no sense to me!

Anyway, that is my main comment. In the main part of inner NE and Lloyd Center area, allow new buildings to exceed 400 and even 500 feet. And along some of the other main corridors, I think construction should not be limited to 5 or 6 floors just because somebody says it doesn't fit in with the neighborhood. I can easily envision buildings along main streets like Broadway, Weidler, MLK, Grand, Williams, Burnside, Sandy, and even Fremont that exceed 100 feet.

Thanks for considering any of these comments.

Michael Cocks
NE Portland

Comment 2 - received via email 7/25/12
I have looked at this plan for some time. It seems like a really terrible idea. Those bridges that will be torn down are not perfect but I don't think we should be mucking with a system that works on the hope we can make it better, which I am not convinced this will do, even if it works perfectly, which, as models go rarely happens.

Please do not build this. It will cost money we do not need to spend and all impacted neighborhoods agree, we don’t want it!

Thank you for your time,

reverend phil
NE PDX

Comment 3 - received via email 7/26/12
I applaud your efforts to improve the exit #302A from the north and the subsequent throughway to Weidler. "Going right and keeping left" is both confusing and unsafe. A correction is long overdue.

I am greatly concerned about the proposal the loosen height limits on new buildings. Construction higher than existing buildings would be out of place in the Lloyd District, and would compromise views for many of us who live in the area. Please reconsider this part of your proposal.

Thank you for your attention to this important matter.

Ross Robson

Comment 4 - received via email 7/26/12
To: Members of this Stakeholder Advisory Committee

Please reconsider your recommendation to endorse the planning of the Quadrant Advisory Committee. The work of the Portland Planning and Sustainability Commission if approved by the Portland City Council and the Oregon Transportation Commission would adversely affect the livability of the N/NE Quadrant. I am a resident of the Holiday Park Plaza and if the planning is approved and the work goes forward, the west view of the Plaza would be obstructed by buildings 8 to 30 floors tall. When I moved to the Plaza I paid a premium on my apartment so I could have a splendid view of the west hills. I continue to pay extra monthly rates that insure the west view will be unobstructed. There are other parcels of land on the east side of the river where tall buildings may be built and the beauty of the west hills can be preserved.

I hope the council will continue to examine the work of the Quadrant Advisory Committee and then reverse its approval so that the beauty of this city will not be destroyed.

Carlos Taylor

August 2, 2012

Sam,

I am not going to be able to attend the NE Quadrant meeting tonight. Unfortunately I am quadruple booked with a California condor meeting, Superfund Meeting and Parks Board Event. I appreciate the work of the committee and regret that Audubon was unable to be a more regular participant, due to the expansion/ extension of other City of Portland public processes. Overall we believe the committee did a good job on this document and we support many of its elements. However as per our prior comments, as well as multiple conversations with city staff, we continue to believe that the plan does not set adequate targets for green infrastructure and in particular urban tree canopy. While the city's tree goals do not anticipate a even distribution across the entire landscape, it is critical that we make significant forward progress in opportunity areas such as the NE Quadrant.

Please record that Audubon would vote 2 in terms of moving this plan forward and will submit individual comments outlining our concerns. Again we appreciate the work that went into this plan.

Feel free to share this with the rest of the committee.

Thanks,

Bob

Bob Sallinger
Conservation Director
Audubon Society of Portland
5151 NW Cornell Road
Portland, OR 97210

August 2, 2012

Dear Members of the SAC,

Please pass a resolution advocating that the portions of the now approved N/NE Quadrant and I-5 Broadway/Weidler Plans that affect the safety and traffic flow through the Flint/Broadway/Wheeler intersection be programmed and funded as soon as possible. This notoriously dangerous intersection is ranked among the top three in the city every year in reported bicycle/motor vehicle collisions. Many more go unreported. On any given day and at almost any hour it doesn't take long standing on the corner to observe frequent near misses. During rush hour or when there is a Rose Quarter event, it is extremely crowded and chaotic.

The traffic engineering design of this intersection cluster leads to conflict, collisions, and confusion for drivers, pedestrians and bicyclists. This chronic tinderbox of danger, delays, and anger is becoming increasingly volatile. Traffic of all kinds continues to increase now that the Leftbank Project and Annex are fully up and running, the Eastside Streetcar is about to become operational, and Rose Quarter events are picking up. In just the last two months three bicyclists were struck and injured seriously enough to be transported by ambulance to the hospital (see http://bikeportland.org/tag/broadway-flint-wheeler). We cannot risk further injuries or a fatality while these fixes continue to be put on hold until the freeway expansion project is funded.

All modes of travel - bikes, pedestrians, public transportation, cars and freight need this fix. These changes would improve the situation at this intersection for everyone moving through the area, regardless of their travel mode. Everyone wants to travel safely and efficiently, without confusion about appropriate behavior or fear of injuring someone or being injured. Better traffic engineering and intersection controls would reduce confusion about the right-of-way for different modes at this very busy, multi-cornered, multi-legged intersection.

On June 26th a meeting was attended by a broad group of persons representing adjacent and nearby property owners Paramount Apartments, Leftbank Project, and Portland Water Bureau, government agencies Portland Bureau of Transportation, Oregon Department of Transportation, and Portland Bureau of Planning and Sustainability, Eliot and Irvington Neighborhood Associations, Lloyd Transit Management Association, Bicycle Transportation Alliance, and BikePortland.org. Voicing support via e-mail, telephone or in person were representatives from the Bicycle Advisory Committee, Willamette Pedestrian Coalition, Portland Afoot, Lower Albina Industrial neighbors, Central City Concern, Bricker Consulting, and Active Right-of-Way. Many attendees and supporters represented multiple groups, as well as being personally concerned about their own daily encounters on foot, bicycle or behind the wheel at this intersection.

In spite of previous promises, lack of effective action has been due to the limbo this area has been in for the last 20 years. City and state transportation planners confirmed the reason the Rose Quarter area has been moribund: An agreement could not be reached over what to do with the freeway.

Now, after almost two years of hard work by this SAC and Project Staff, one plan has been settled on for the freeway and surrounding surface streets. The changes that fix our intersection are a subset of, not counter to or redundant with, the future plans for N/NE Quadrant and I-5 Broadway/Weidler. The majority of the SAC have voted for this plan without reservation. Three members voted in dissent. We should be able to get a unanimous vote on this resolution because all three of those members who voted "no" on the broader plan support the specific changes that fix this intersection independent of the freeway project.

While a resolution passed by the SAC may not be binding, it would present a collective voice calling for action now. We cannot continue to wait another 5, 10 or more years for the freeway project to fix Broadway/Flint/Wheeler. And we cannot wait for a fatality.

Sincerely,

Betsy and Rich Reese, Paramount Apartments

INFORMAL DISCUSSION AND MEAL

WELCOME, MEETING PURPOSE, APPROVAL OF MINUTES, AND STANDING BUSINESS

Co-Chair Lloyd Lindley welcomed the group and Andy Johnson, ODOT, reviewed the agenda.

Approval of Notes

Phil Selinger and Damien Hall will provide ICM with edits to their statements in the draft May notes. The May N/NEQ SAC Meeting Notes were approved as amended.

Announcements

None.

Process Overview/Timeline Reminder

Andy noted that this is the last transportation focused meeting. SAC Meeting #18 on 6/28 is on the land use. Staff will be looking for SAC direction on the complete Draft Quadrant Plan. There will be one final meeting on August 2, during which the SAC will make their final recommendations. On behalf of the entire project team, Andy thanked the SAC members who have given so much time to this process.

FACILITY PLAN REPORT - I-5 BROADWAY-WEIDLER INTERCHANGE IMPROVEMENTS

Todd Juhasz, ODOT, provided a presentation on the Facility Plan which covered the history and purpose of the project, land use and transportation connections, the recommended concepts and elements and the implementation actions. He noted that for many, this presentation addresses some materials the SAC has already seen.

ODOT has engaged in this historic partnership with the City of Portland Bureau of Planning and Sustainability and Portland Bureau of Transportation to coordinate planning efforts. Todd reviewed the steps in the process that got us to where we are today. When completed, staff hopes the project will earn a Multimodal Mixed-use Area (MMA) designation.

Slide 8: The Land Use-Transportation Connection

MMA Designation:

- Multimodal Infrastructure
  - I-5 Freeway and Local Street Network
  - Four LRT Lines
  - Streetcar: Pearl to CES
  - Eight Tri-Met Bus Lines
  - Major north/south and east/west bike routes
- City/State Jointly Developed Plan
  - Integrating Transportation and Land Use Components
  - Overall Vehicle Trip Generation Expected to be Same/Lower

Slide 9: Facility Plan Elements

1. Implement TDM/TSM Measures
2. Construct Mainline Safety Elements
3. Reconstruct Broadway/Weidler/Williams
4. Relocate SB On-Ramp
5. Reverse Traffic Flow on Williams
6. Clackamas Bike/Ped Overcrossing
7. North of Broadway Improvements

Slides 12 and 13: Benefits of Project

Mainline:
- Improves length of weave between interchanges
- Aux Lane provides more time for drivers to get on/off freeway
- Full shoulders allow disabled vehicles to be moved out of mainline traffic
- Seismic Upgrades to Affected Bridges
- Projected 30-50% reduction in crashes

Improved Interface between Freeway/Local Streets:
- Improved bike and ped facilities
- Provides additional bike/ped route choices
- Creates better local street connections
- Lid creates urban design opportunities

Todd reviewed the proposal map, area by area, describing the characteristics of the facilities, proposed changes, and the improvements in connectivity.

Slide 14 and 15: Implementation Actions

Project Development/ Project Management:
- Crosswalks at all signalized intersections
- Egress Plan to Be Refined with Rose Garden and City
- Signals to be Timed to Avoid Queues Backing up Onto I-5
- ODOT/City to do Additional Outreach

Specific Design Coordination:
- Parking to Remain the Same or More
- Traffic Calming for Eliot Neighborhood
- Refine Designs for Changes to Streets and Properties Near the Box
- Refine Plans for Transit Operations

Carol Gossett: clarifying that all improvements for the freeway are happening within the existing right-of-way (ROW)?

Andy Johnson: yes.

Justin Zeulner: welcomed the group to the Rose Garden. Comment: in this facility plan, there are still some outstanding concerns about what the future looks like with the proposed ramp changes, etc. He appreciates ODOT and the City working with him. For the record, we do not have resolution and there are some pretty significant changes that will need to take place to effectively manage an event and sports arena. We have some ideas, suggestions, and he is looking forward to future conversations to work this out.

Mike Warwick: there is another letter from him in the meeting packet, which represents a significant shift from the Elliot Neighborhood Association. They see negatives in the freeway proposal. They also see some positives, but their position has shifted because they are concerned about the Hancock Overpass. They are no longer supporting that option. Another issue is that he is concerned about the City coming through, as they often do not.

Phil Selinger: thinks what we are doing here will be a much better environment for bikes and pedestrians. He is looking forward to the land use, to see how the lids are going to be handled. He wants them to be durable and useful for the entire year.

Justin Zeulner: stated the Rose Quarter is absolutely committed to traffic calming in the Elliot neighborhood. We are also going to be working to add language to the package to make this as firmly as possible an essential part of the project.

Lloyd Lindley: thanks staff for language about the Hancock Overcrossing. He hopes you will actively pursue it, not just study.

Justin Zeulner: comment regarding Clackamas Overcrossing: there are some outstanding questions. The reality is that we have a huge divide in this district. I-5 had divided the Westside from the Eastside. The I-5 divide makes it difficult for those on eastside of the freeway to move easily to the Rose Quarter area, hindering economic development and the creation of a more vibrant area. The addition of the Clackamas pedestrian bridge will be is essential to creating more access to the Rose Quarter area.

Steve Bozzone: from AROW, is here tonight as Heidi Guenin's alternate. He is concerned about community and public health. He appreciates everyone's hard work and the process thus far, and would like to see surface improvements separated from the highway. Investing in our highways does nothing for our health. He is concerned about safety, but feels we are ignoring the beast of the CRC and what it is going to do. He wants to support surface improvements but not highway, and again, wants them to be considered separately.

Wayne Kingsley: to Mike Warwick's comment about the City, he can tell you that the one ODOT project he has worked on, they did everything they said they were doing to do and more. And he has also done some good projects with the City. To Steve Bozzone's comments, his understanding is that in terms of where the money is coming from, if you do not do freeway improvements, there is no funding for surface improvements. So, considering them separately would not work.

Todd Juhasz: that is correct. To do surface improvements, we have to make safety and operations improvements to the freeway. With this particular funding stream, they go together as a package.

Steve Bozzone: but there are other funding mechanisms for surface improvements?

Todd Juhasz: yes, but it would be a lot tougher if freeway was not part of it. Without the freeway, it's less likely that we would have access to federal dollars. We would have to rely on some combination of limited state and local funding for surface improvements. It is unlikely that we could fund the proposed surface improvements with state and local funds alone.

Paul Smith: the pretext of work is that there are safety issues to address by adding auxiliary lanes to the freeway. With that assumption, there is a need to tear down existing overpasses. Then the street improvements will occur after you rebuild the freeway. We cannot do all the surface improvements without a combined project. There has long been a recognized need to address safety and mobility issues. This is considered an important step for the City and State. There is no alternative finance plan on the table. This is one project and it will need to be funded through a single package, not necessarily a single source. The City and State have made a great commitment to working together.

Steve Bozzone: he wants an opportunity to choose, if we are advising the City and the State.

Paul Smith: if there was no freeway project, there would be very little opportunity to make surface improvements.

Gary Warren: thanks, Justin. He is not opposed to any connections to the river and not opposed to the connections to the Lloyd Center. His question is it is the right use of funds to build the bike/pedestrian overcrossing? Is it addressing the parking issues? That's where his questions are. He is looking forward to further discussions. He wants to limit and mitigate the parking issues.

Sam Imperati, ICM, introduced himself to the audience as the facilitator of this process. He apologized for being late, he was at another meeting.

PUBLIC COMMENT

Jim Howell, AORTA, read a prepared statement, as follows: We sincerely urge you and our local political leaders to choose "No Build" as the preferred alternative for this extremely flawed Facility Plan for "I-5 Broadway/Weidler Interchange Improvements." As it stands, the project smacks of the outrageously defective Columba River Crossing – badly envisioned and highly overpriced.

While local, state and federal policy all promote the highest environmental values –reduction of greenhouse gases, vehicle miles traveled, fuel consumption, air pollution, urban sprawl, and global warming – it is inconceivable that ODOT and PBOT would promote a billion-dollar freeway-widening project in the middle of Portland at the Rose Quarter.

Let's be honest. The N/NE Quadrant Project has been promoted as a local street and neighborhood improvement plan when in fact it has actually been an excuse to promote a freeway-widening venture. It will require massive demolition and reconstruction of major arterial overpasses with huge disruptions to neighborhoods and local traffic patterns while providing practically no benefits. It's CRC Lite by any serious analysis.

Where is the wisdom in spending hundreds of millions of dollars to demolish, then replace, perfectly good infrastructure in order to temporarily relieve some local traffic congestion when the same money could repair miles of crumbling city streets?

The City of Portland has meekly accepted Metro's and ODOT's flawed traffic demand- forecasts, which are the reason this unsustainable project has progressed so far. Now is the time to reevaluate these forecasts as well as the bigger regional transportation picture that should include a more robust public transportation component.

So far Metro has not proposed a viable public transportation alterative to I-5 through the metropolitan area. MAX provides this alternative in the east-west plane between Gresham and Hillsboro, despite the significant bottleneck in downtown Portland. On the other hand, the north-south I-5 corridor has only the Yellow Line providing efficient high-capacity transit service north of the Rose Quarter – currently to the Expo Center and eventually to Clark County. But there is no plan to extend it southward to the edge of the metro area.

Whenever the concept of extending MAX south from the Rose Quarter has been raised at public meetings, members of the project team dismiss such comments as not germane to the prevailing local planning study. Yet widening I-5 at the Rose Quarter is being undertaken – not to fix a local traffic problem – but primarily to correct a bottleneck in an interstate freeway.

The message here flies in the face of agency environmental values, raising the idea that freeways are more important than public transport, a clear double standard.

Please put this flawed I-5 Broadway/Weidler Interchange Improvements Project on the shelf and quit spending limited public funds for expensive consultants until Metro and TriMet get their acts together and develop a regional public transportation system with an effective north-south light rail corridor that will actually reduce traffic demand, specifically on these interchanges and systemically on all the region's freeways.

Alan Rudwick, Eliot Neighborhood Association LU Committee, this is the biggest thing that has happened to Eliot since I-5 has gone through. He referred the SAC to his handout in the meeting packet, which describes his ideas for numerous surface improvements without tearing down the bridges. It is a huge waste of money to tear down perfectly good bridges. It will delay development throughout the entire area. He sees little benefit other than moving people through the area faster. He does not see any safety improvements, and the weaves will be pretty much the same as they are

today. He wonders what we are getting through this project. He thanked the SAC for spending the last two years on this project and asked them to please vote no on ODOT's project.

Betsy Reese, Paramount Apartments, is in good communication with staff; she will pass on making comments.

Doug Allen, SE Portland, has been attending various public meetings for 40 years or so. He gave an example from 1980 of a proposed project to widen McLoughlin Boulevard, which never happened. He described traffic examples from the 1970s, and traffic examples today. His point is that basically the prediction from then upon which the road widening project was based did not come true. He gave another example of the Water Avenue ramp. It also did not happen and it turns out we did not need them. The idea that we have to take on enormous highway projects to make improvements is just wrong. It is not worth the price. He has two children, and they will be living in a future world impacted by climate change. That this project will somehow improve pedestrian and bicycle facilities is ludicrous and criminal. Jim Howell said it well: this needs to be put on the shelf. Do not widen the freeway.

Doug Klotz, SAC alternate, wants to reinforce the need to make sure the Broadway-Weidler, where it crosses the lid, looks like an urban environment. We need to activate the space, like Phil mentions. He thinks that one or two story buildings which continue on across the lid, so you will not even know there is a freeway under there. He especially wants to be sure there are no visible ventilation ducts, per his previous comments. Also, the west sidewalk on Vancouver from Hancock down to Broadway continues as it does today, all the way to Broadway. Our charge it to make the best plan as we can for our constituencies; if it is to go through, it is the best effort.

These comments were received by staff after the meeting.

Subject: Re: N/NE BW SAC Member Attendance and Process Check-In

Great - thanks for the clarification, Diane. I'm cc'ing Steve here so he can see what I'm submitting to you and Sam for the meeting tonight.

I understand that, since I have not been able to attend the last several meetings, I might be a little behind in understanding some of what's spelled out in the Draft Facility Plan, but I do have some concerns that I'd like to submit. Right off the bat, the first "objective" listed on (the first) page 2 is to "ease congestion levels and improve safety," and "congestion and bottleneck" are listed before the safety concerns on (the second) p.2. Since September of 2010, it's been my experience that ODOT staff have discussed the need for this project *primarily* in terms of safety needs on I-5, and the safety concerns were framed primarily around the short weaving distances and the emergency response and *not* the congestion in and of itself. Looking back through our older materials, there are many goals listed, and I don't see the word "congestion" in there (unless it made it to later versions that I missed in my notebook perusing). I do remember seeing references to increasing freeway speeds and LOS early in the process, but I don't remember the SAC uniting around these as priorities. Is that what happened in the last few months?

The bicycle and pedestrian improvements proposed throughout the project area seem poised to make a significant difference in the safety and accessibility of these modes of travel. So while I'm still not convinced that expanding a freeway in the heart of the city is the best long-term solution & I'm concerned about what seems a recent privileging of "congestion" as an issue, if the auxiliary lanes *are* to be extended, I appreciate the work that went into talking through the bicycle and pedestrian improvements with stakeholders.

In Table 4, I would like to see a reference to the fact that these issues were considered by the current SAC and were rejected, if that's the case, as I believe it is. I'd also like to see more language in the "PE" section about the priorities for phasing. As we saw with the streetcar construction in this area, bicycle and pedestrian safety

improvements and amenities were not given priority, which left us with quite a mess for pedestrian and people on bikes to navigate.

Sam described the 1-2-3 voting method in preparation for voting on the Facility Plan. To address Steve's issue, we will also need to agree on how to go about it. Setting the context in terms of what the next part of the process looks like is the following: today's major action is the facility plan. On June 28, the focus will be on land use. Finally, on August 2, it will all come back together for final review and discussion. It is an iterative process, and we can only talk about one issue at a time, but we are looking at the package as a whole.

Lloyd Lindley: to ODOT, in the next phase, will the process of refinements be public?

ODOT: yes.

Andy Johnson: we do not know exactly what it will look like; a group similar to this, maybe more technically focused and, of course we will continue to work directly with property owners. He hopes it will continue to be a joint process with the City.

Mike Warwick: anything further on splitting the vote?

Sam Imperati: described the process, asking if there were any further amendments? He clarified to the SAC if you want to say, "I don't support the ODOT portion," then you vote 3. If we have a majority of the committee voting 3, then that is the vote.

Joe Zehnder: on the 3 votes, we will forward the committee's recommendation, and note where there is consensus and where there was a minority-majority, including why folks voted 3.

Steve Bozzone: can you ask 3 questions instead of 1?

Carol Gossett: to Steve, she does not understand. If the freeway facilitates the surface improvements, and you want surface improvements, then she does not understand your philosophy.

Sam Imperati: if you vote 3 on transportation, that is essentially a vote for "no build," which comes in 2 flavors, the mainline/trench and the surface.

Joe Zehnder: it is cleaner and does get to the same place. If you are voting 3, we want to know why. It will all be transmitted to the City Council. He prefers we just vote on the package and to hear the reasoning behind your vote.

Damien Hall: we have already done that at previous meetings, we are now on the third vote. He is not sure why we would need to vote three times again.

Lloyd Lindley: seconds what Damien said. The urban design and transportation proposals are connected in this process. It would be best to know where we fail and were we succeed, as a package.

Steve Bozzone: would like to know, if this package has been presented, did we vote once? He does not think they are the same thing. He proposes one vote on one question. He is an optimist. We are going to have a change of who is in power in the City. Our priorities are changing, that's clear. He prefers to vote on land use and the freeway separately.

Ed Abrahamson: appreciates this opportunity. We have coupled the freeway process with all the other process in the N/NE quadrant. If we do not move the package forward, there are still improvements that need to be done.

Sam said we will vote on the process question with 1-2-3 voting. A vote of "1" means you support voting on the entire package. A vote of "3" means you would like to do it piece by piece.

Vote on Voting Process

1 - All Voting Members except Mike Warwick and Steve Bozzone
3 - Mike Warwick and Steve Bozzone

Action: Do you endorse the joint facility plan as written?

Straw poll to get a sense of where the group is, to tee up discussion:

1 – Tracy, Wayne, Brock, Carol, Jody, Matt, Phil, Eric, Wanda, Owen
2 – Lloyd, Damien, Gary, Justin, Sean
3 – Mike, Dean, Steve

Sam asked those who voted 3, what, if anything, would change your vote to a 2?

Mike Warwick: cannot change his vote, he is bound by the Eliot LU Committee.

Dean Gisvold: there is no way to move to 2. He has outlined his reasons about two months ago. Also, he agrees with Mike Warwick, and 4 out of the 5 public speakers are opposed. This is CRC lite, there is no justification for spending the money for the nominal benefits. He is not supportive of this plan.

Steve Bozzone: it is a false choice; we only get one without looking at this a little more pragmatically. He would call it CRC Phase 2.

Sam asked those who voted 2, what, if anything, would change your vote to a 1?

Justin Zeulner: 1) cannot move to a 1 tonight, he needs more information to further validate the safety improvements, and 2) confirmation that congestion will be eased. Is the bottleneck truly the Rose Quarter or I-84? And finally, 3) needs further work on Rose Quarter event operations as previously stated.

Gary Warren: as a Lloyd District representative, he is in total support of expansion of the freeway, and feels what is being proposed does address safety and getting folks in and out of Rose Quarter, Lloyd Mall, and the Convention Center. The reason he is a 2 is the Clackamas Overcrossing. He is opposed to it. He will change to a 1 if something is in there saying we will do a parking plan like Geld Wen. With that, he would change to a 1.

Sean Hubert: Andy and he conferred on his issue, which can be found on page 11 of the Facility Plan. He requested adding text, something to the effect of, "the new ramp moving adjacent to the Madrona will be visually and aurally screened." He would change to a 1 with that addition.

Damien Hall: on just the freeway, he would vote 1. In his view, the local street plan came up short. The main issue is looking at the project as a whole, recommending more facilities be built, without taking into account what will come out to build those. There is a set amount of money, which he understands is not enough for the lid and that is the major opportunity to improve the area. The circulation from the proposed local street plan is not optimal.

Lloyd Lindley: his reservation comes from page 53, regarding the freeway lid; he could get to a 1 if the text were changed to, “actively seek” instead of “study.”

Andy Johnson: in the short facility plan, it is on the bottom of page 10, the 4th bullet; that change has been made.

Lloyd Lindley: changes his vote to a 1.

Paul Smith: to Gary, and speaking for PBOT, he supports a parking plan being part of the recommendation. There is a lot to be worked out and he supports that.

Sam asked the SAC if anyone was opposed to this friendly amendment? No one was opposed, thus a request to create a parking plan will be part of the final recommendation.

Justin Zeulner: would pose the parking question to our TMA; the Rose Quarter cannot comment.

Owen Ronchelli: supports it and he would make a request to be part of the planning effort, especially west of MLK.

Sam re-stated that the final vote will include this concept.

Mike Warwick: Eliot is in discussion with Rose Quarter on this topic, as well.

Todd Juhasz: to Sean, we will add language to the final report stating that noise attenuation and/or a vegetative barrier will be built adjacent to the Madrona.

Sean Hubert: great, I would move from a 2 to 1 with that commitment.

Andy Johnson: wants to be sure he understands, to Justin, you want more information on the safety improvements and confirmation that congestion will be eased. And, to Damien, you are pushing us to do better in future on the local streets.

Damien Hall: yes.

Justin Zeulner: if this does not address safety and congestion, he cannot fully support it.

Sam to a vote on the Facility Plan, as amended by the above discussion:

Action: Do you endorse the joint facility plan as written?

3 – Steve, Mike, Dean
2 – Justin, Damien
1 – Tracy, Wayne, Brock, Carol, Jody, Matt, Phil, Eric, Wanda, Owen, Lloyd, Gary, Sean

The Facility Plan was endorsed by a majority – minority vote.

BREAK

N/NE QUADRANT PLAN DRAFT

Subcommittee Update: Plan Development and Review of Draft Goals, Implementation Actions, and Urban Design Diagrams

Stephanie Beckman, PBS, provided a brief overview of the progress made at the two land use subcommittee meetings held on May 23rd and 29th. We had planned a couple times to have the discussion at full SAC meetings, but twice did not have time, so staff decided to have subcommittees. A revised Draft Quadrant Plan will be available for SAC and public review on June 18th. Staff provided a comment summary in tonight's packet. We want to ask you tonight if there are any other comments or anything you see missing from the Draft. Comments welcome. We have a PDF version of the plan document if folks need to see it or refer to it.

Stephanie opened up the floor for comments.

Carol Gossett: Sullivan Gulch's asked for a district "gateway/portal" to be added to the Lloyd District Urban Design Concept at NE Broadway/Weidler and NE15th.

Karl Lisle: we have not had time to update it, but it will be added. Revised maps will be included in draft plan out on 6/18 and will be discussed at the SAC meeting on June 28th.

Gary Warren: thanks to many of the SAC members who noted their concern about his feedback on the zoning. He was not at the last meeting and he appreciates the effort and consideration. He is concerned about elimination of the RXd zone. Residential is very important in this area. He is concerned about CXd zone going in there. We all know what has happened in the Pearl. It is likely to have a detrimental impact on the neighborhood, as well as a lot of other implications, especially parking. Appreciates Karl and Joe reaching out; he will share his concerns at their upcoming meeting.

Karl referred to the map and explained the sections of zoning that Gary was referring to.

Eric Lovell: the previous map has the dashed line for the pedestrian passage way for the future river park, on this version it it ends in an arrow.

Staff: we will fix that.

Lower Albina Zoning Proposals - Subcommittee Update

Karl provided an update on the Lower Albina Zoning Proposals, which incorporate feedback from the subcommittee. We won't take a formal vote tonight, but staff wants to at least get a sense if we are heading in the right direction.

Karl reviewed the proposal map of lower Albina, nothing they are mostly leaving as it, recognizing the area as important industrial land, but proposing two changes, as explained in Slide 8, below.

Slide 8: Lower Albina – Proposed Changes to Zoning

RC2) Change IG1d on Russell east of existing conservation district to EXd (with housing prohibited).

Based on subcommittee feedback, staff recommends keeping this in the proposal.

RC3) Apply Employment Opportunity Subarea (EOS) provisions east of Union Pacific rail line.

Conversations continue with Lower Albina stakeholders regarding this proposal. Options under consideration are:

a. *Proceed with (EOS) as proposed.*

b. *Reduce area to which EOS is applied.*
c. *Reduce EOS allowances for non-industrial uses.*
d. *Do not apply EOS in Lower Albina.*

NE Broadway Transition Heights – Revised Proposal

Karl reviewed the NE Broadway Transition Heights proposal and revisions made since the subcommittee meetings. He said staff got support at the subcommittee for a revised Proposal (aka subcommittee Alternative B). They discussed it with Pauline Bradford, who could not be here tonight, and she is more supportive of this than the previous proposal. There are some outstanding issues, one of which is the Irvington Edge. He showed some options for how you could do a step-down. He showed a diagram of Dean Gisvold's proposal, which staff is not entirely comfortable with. They are having a meeting with Dean next week to discuss.

Dean Gisvold: the block between Broadway and Schuyler is consistent with what is on the ground now. There is no building on the south side of Schuyler higher than 45 feet. His proposed step-down is consistent with a recently constructed condo project. Irvington is the largest historic district in the state and needs protection. He described his proposal and the reasons for it, and the relationship to the Portland Comprehensive Plan. There is still some residential zoning we want to change. We want this historic district to work and, in order for it to work, we need these changes. What we are asking for is what we believe is consistent with the goals and objectives of this historic district. This is what the LU committee and the ICA wants as part of protecting the historic district.

Gary Warren: what is height of condo project?

Karl Lisle: four stories over retail.

Dean Gisvold: retail on the ground floor, and four stories on top of that - 55, 60 feet.

Alan Lehto: comments for clarification of height issues.

Karl showed area, gave examples of heights. There was continued discussion about heights and the character of an historic district.

Dean Gisvold: those buildings are affordable housing, and it is not the character we are going for. Not the "affordable" part, but that type of building. Housing authority projects are something we can talk about.

Karl Lisle: for an historic district, a developer has to go through historic design review.

Joe Zehnder: this is the discussion we will be having next week. Across the city, we are struggling with this. The character of the historic district has to be balanced with how good a location is this area for multi-family units. We are looking, city-wide, with the Housing Bureau. We are looking for places that already have the amenities to make for successful multi-family developments. The five-over-one that Alan referred to is what we are looking at. The Broadway-Weidler corridor is an inherently good area for multifamily because of transit access.

Karl Lisle: we do not need to vote on the whole thing, but would like direction on the Eliot edge.

Mike Warwick: the step-down to historic district boundaries and historic property boundaries, he likes that idea. He described his ideas of how to handle the step down. It is a small area, but critical. Comment on 175 foot heights and putting 175 building on the area between Broadway and Weidler there would defeat purpose. It might be nicer to have a plaza instead of tall building. This was Pauline's point at the last meeting.

Tracy Whalen: likes the comments, she understands better what you have been trying to get at. Depending upon what discussions come out with, will we be able to vote on proposals that have some separate block step-downs?

Karl Lisle: within reason and with sensitivity to property values, law suit potential, etc., but we are not going to look at property by property height zoning.

Joe Zehnder: agrees; we would prefer to keep it not that fine a scale. It is hard to justify. They are looking for a solution that meets the broadest needs.

Tracy Whalen: thanks, just looking to clarify.

Mike Warwick: to Joe, is that something you can do?

Joe Zehnder: with a bonus, perhaps.

Dean Gisvold: he differs with Joe and Karl that the design review process is how to deal with these issues. The design standards process is not discretionary; if the developer meets design standards, then they get the permit. The question is what is in those design standards? The current zoning is has mid-block adjustments both north and south and east and west. So, does not buy the arguments staff is making. It is not impossible to do step-downs property-by-property; nothing is illegal about that.

Karl Lisle: in a historic district, you have to go through the historic design review.

Dean Gisvold: yes; those trump state law. That option of what process is followed is up to the developer not the neighborhood. That is they we went to a historic district.

Joe Zehnder: you are right, when you get into the conservation district.

Justin Zeulner: question about Rose Quarter: what is the max height for the Clackamas Overcrossing? Wonders what was the rationale?

Karl Lisle: there is a lot of available height potential in that area.

Justin Zeulner: what about the grain elevator?

Karl Lisle: it is in industrial zoning, which has no height limit.

There was continued discussion on the height issues.

PUBLIC COMMENT

None.

MEETING WRAP UP AND NEXT STEPS

In closing, Sam asked everyone to fill out the meeting evaluation form. He said there will be several off-line meetings to move some issues forward; He thanked everyone for a good meeting.

Upcoming meetings:

- SAC Meeting #18 on 6/28 – SAC direction on complete draft Quadrant Plan
- SAC Meeting #19 on 8/2 – Final SAC recommendations
- September 11 – Planning Commission (tentative date)
- October/November – City Council
- December – Oregon Transportation Commission (Facility Plan)

The meeting was adjourned at 8:15 p.m.

The meeting notes are respectfully submitted by the Institute for Conflict Management, Inc. facilitation team.

N/NEQ SAC #17 MEETING EVALUATION SUMMARY
JUNE 7, 2012

10 Evaluation Forms

	Poor	Fair	Good	Very Good	Excellent
1) OVERALL MTG QUALITY			1	6	2
2) PACING	Too Slow		Just right		Too Fast
		1	9		
3) CLARITY PRESENTATIONS			3	6	1
4) DOCUMENTS		1	1	6	2
5) DISCUSSION		1	2	5	2

6. MOST USEFUL?

- Facilitator being late
- Voting process discussion and vote itself. Well done.

7. LEAST USEFUL?

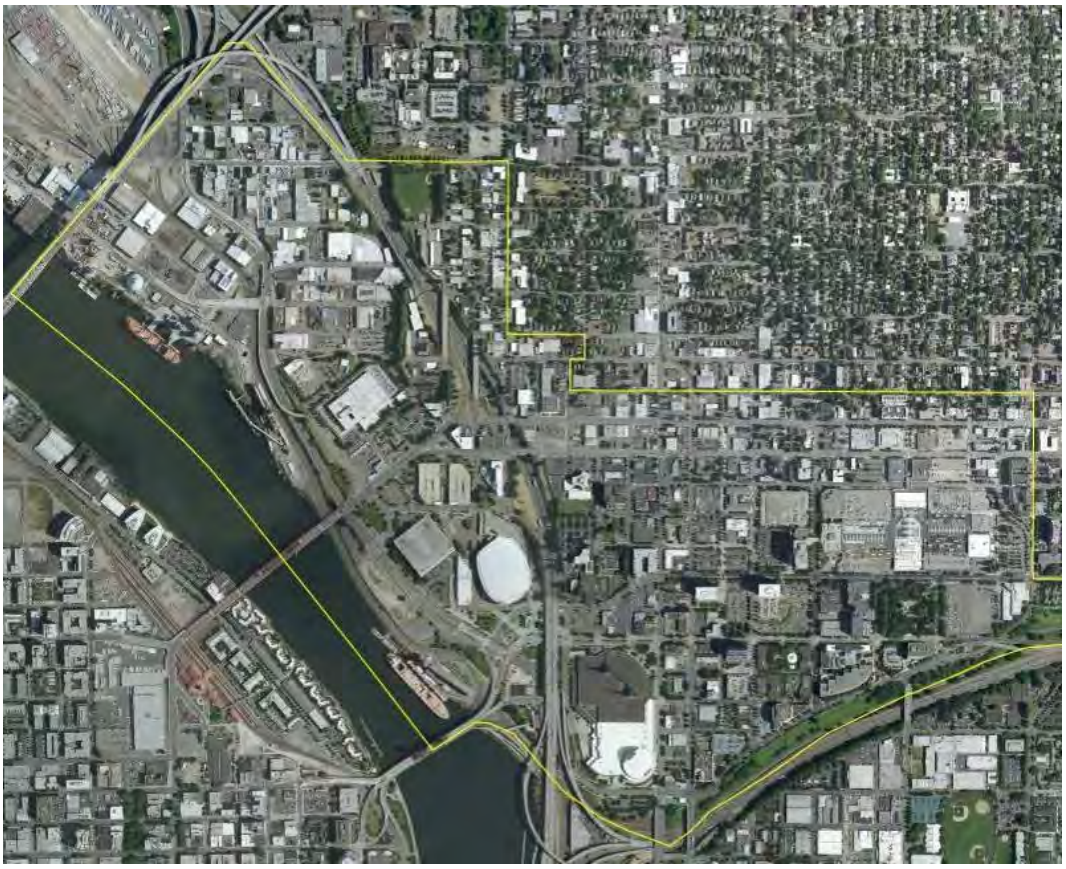
- Facilitator arriving
- Public comment (just kidding)

8. COMMENTS, SUGGESTIONS, OR QUESTIONS?

- A little hard to hear sometimes; tell Lloyd to speak up!
- Discussions as project has progress have gotten less substantive – dealing with minutiae
- Room too big, poor acoustics
- Sound problems

Eratta

Proposed changes to the Facility Plan based on comments from the June 7th, 2012 SAC meeting. (Refer to notes from SAC #17 for specific comments.)



Page 11 under Specific Design Coordination, number 7., add sub-bullet c. "Study and implement a parking plan for the area adjacent to the Clackamas Pedestrian Bridge on the east side of I-5."

Page 11 under Specific Design Coordination, number 5 d., add sub-bullet 4. that states: "visual or acoustic screening will be examined, designed and implemented between the Madrona Studios and the relocated on ramp to I-5 at Wiedler."

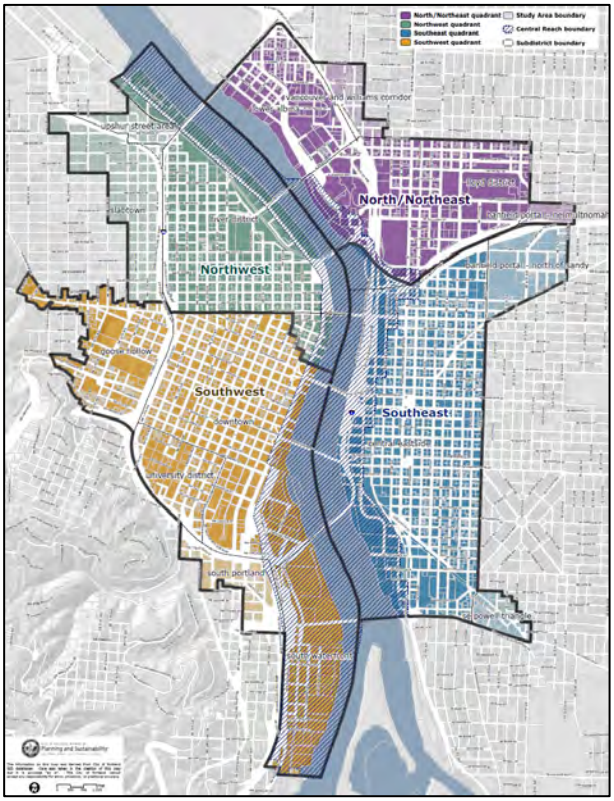
CHAPTER 1: INTRODUCTION

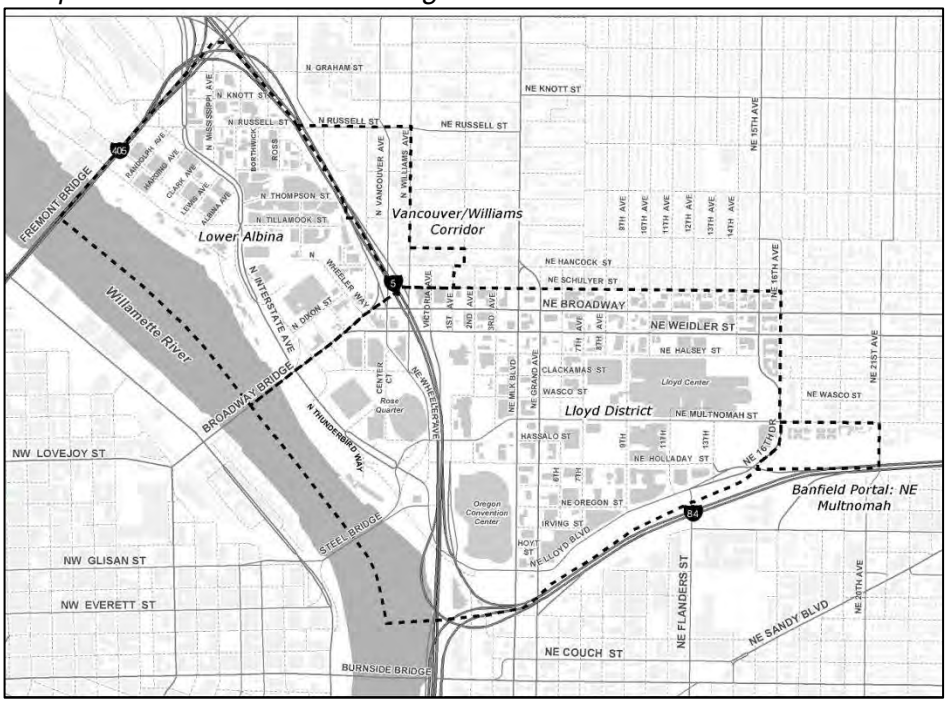
Purpose

The N/NE Quadrant Plan is one element of the Central City 2035 project (CC2035), an effort to update the 1988 Central City Plan. The vitality of the Central City is key to state, regional and City policies for growth management and economic development, and for addressing new issues and directives that have emerged since 1988, such as those related to sustainable development and climate change.



The CC2035 Plan will include new guiding policies, updated land use and urban design plans, and more detailed plans for specific Central City districts. The Plan will replace the 1988 Central City Plan as the primary guiding policy document for the Central City. The Central City 2035 plan will be part of the City's updated Comprehensive Plan and will implement the Portland Plan, the city's strategic plan, within the Central City.

The N/NE Quadrant Plan is the first of the more detailed district plans, addressing land use, urban design, transportation, public infrastructure and development entitlements in the Lloyd District and Lower Albina subdistricts of the Central City.



The planning area also includes two study areas: the North Banfield Portland and the Vancouver Williams Corridor. These areas, which are outside of the Central City, were included in the plan boundary because of the potential for land use and transportation proposals in the quadrant to affect them and to address long-identified land use and zoning issues in these areas.

The N/NE Quadrant contains significant facilities and functions of state-wide and regional significance, including the industrial

Map 1: Central City 2035 Plan Boundaries

Map 2: N/NE Quadrant Planning Area

working waterfront in Lower Albina and major event, office and retail facilities in the Lloyd District. However, this area as a whole has not fully realized economic development goals and targets related to jobs and housing set in the Central City Plan. Both the Lloyd District and Lower Albina have the potential to continue to grow and evolve as unique elements of a vital Central City.

A major transportation facility in the N/NE Quadrant is the I-5 Freeway. While the freeway provides regional access to Lloyd and Lower Albina and serves industrial uses and regional attractions well, the history of the construction of the Interstate Freeway System in Portland has been controversial, including impacts to neighborhoods, families, and in particular to the African-American community in Portland. Today, the freeway and Broadway/Weidler interchange are congested, with the highest crash rates in Oregon on the freeway and a high number of crashes, particularly involving pedestrians and bicyclists on surrounding local streets. The freeway corridor running through the district also acts as a barrier disconnecting the land use and communities east and west of the freeway. To address these issues, the City of Portland and Oregon Department of Transportation (ODOT) engaged in a joint effort in the N/NE Quadrant planning process to develop an I-5 Broadway/Weidler Interchange Plan concurrently with the N/NE Quadrant Plan. This interchange plan was intended to establish a new type of framework that integrates the high-density, pedestrian emphasis for the Broadway/Weidler corridor with an urban freeway interchange.

Planning Process

The N/NE Quadrant Plan was developed through a unique collaborative partnership between the City of Portland and the Oregon Department of Transportation to address land use, urban design and local transportation issues for the quadrant at the same time as major transportation issues related to the I-5 freeway. Over a nearly two-year period, a diverse, 30-member Stakeholder Advisory Committee (SAC) worked with interested community members and staff to develop this plan and the recommended concept for I-5 Broadway/Weidler Interchange Improvements. The SAC met 19 times and held 13 subcommittee meetings. Several public events were held at key milestones in the process to encourage broad participation and input. The project team also attended regular meetings of community groups such as neighborhood and business associations, organized meetings with stakeholders and conducted an on-line survey to obtain feedback on plan proposals. The resulting products of this effort represent a careful balance between land use and transportation improvements and have received broad support from the SAC and community at large.

Additional information about the planning process is contained in Chapter 2: *Developing the Plan* and Appendix F: *Public Involvement Summary*.

Background

The N/NE Quadrant is made-up of two Central City districts, Lower Albina and the Lloyd District. Each is a very distinct place, with different urban characters, development patterns, and land uses. Lower Albina is primarily an industrial district, with a working harbor area, an important living-wage job base and a small mixed-use historic area along N Russell Street. The Lloyd District is characterized by a number of large region-serving facilities, including the Rose Garden, Oregon Convention Center and the Lloyd Center shopping mall, as well as a concentration of large office buildings and neighborhood serving retail on the eastern portion of NE Broadway.

History

For centuries prior to first contact with Europeans and Americans, Chinookan-speaking peoples, including the Clackamas and the Multnomah, inhabited the lower Columbia basin in the vicinity of the area now known as Portland. Villages and trade routes were located along portions of the lower Willamette River. By the time Portland was founded in the mid-1840s, disease had reduced the area's indigenous population by as much as 90 percent. By the 1850s, encroachment by white settlers and forced removal to reservations further devastated indigenous societies and few Native Americans remained in the Portland area.

The Lloyd District and Lower Albina share aspects of their histories as east side communities that grew-up near, but not in, the City of Portland. Growth on the east side was initially slower than on the west, as development was hampered by swamps and sloughs along the waterfront. Eventually, two communities with separate and distinct identities grew up, Albina and East Portland, each of which grew over time and became incorporated cities in their own right.

From the 1850s to the 1870s, East Portland, covering the southern portions of the Lloyd District, was largely rural, with timbered areas, giving way to small farms and residential growth over time. It was connected to Portland with several ferries. By the early 1880s it had a strong commercial spine running along Grand Avenue and a growing trade-oriented working waterfront.

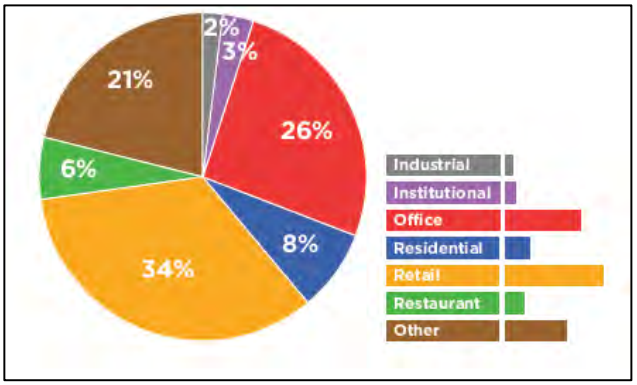
To the north of East Portland and covering a good part of the N/NE Quadrant was Albina. First platted in 1873, Albina grew up with two distinct sections, upper and lower. Lower Albina was a working industrial and waterfront area, which really took-off with the coming of the Union Pacific Railroad and the big terminal yards in the 1880s. In its early years Albina was populated by a large number of first and second generation European immigrants. The White Eagle Saloon and Hotel, which was opened by Polish immigrants, is an example of the development that was occurring at the time. In 1891, the cities of Albina, East Portland and Portland consolidated into a new unified City of Portland.

By the turn of the century, most of the inner east side was platted, and rapidly growing in population and economic activity. In 1910, the total population on the eastside reached 120,000. Economic growth was fueled by maritime activity and the confluence of five rail lines. Residential development was aided by connections to the west side via multiple bridges and a growing streetcar network. The first bridge in the N/NE Quadrant itself was the first Steel Bridge in 1888, located about 3 blocks north of the current Steel Bridge, which was completed in 1912. Both carried freight rail and street cars that served East Portland and Albina. The Broadway Bridge was completed in 1912, it too carried a streetcar line.

The black population on the east side had steadily increased in the first part of the 20th century, especially after 1919 when organized residential segregation was instituted by Portland real estate

agents, and Albina became one of the few areas in the city where African Americans could readily obtain housing. World War II drew thousands of African Americans to Portland to work in the ship yards. Following the war there was a large housing shortage, and the situation was much worse for African-Americans, whose housing options were limited. The situation reached crisis levels after the Vanport flood displaced 17,000 people in 1948. After the flood many African Americans moved to Albina.

The heart of mid-century African-American Albina stretched from the area where the Coliseum is now to north of Russell Street, with N Williams Avenue serving as a commercial, institutional and social spine for the community. One of Portland's hottest jazz clubs in the 1940s, the Dude Ranch, was located in the area. The building is the recently rehabilitated Leftbank Building, which is one of the few surviving buildings of the southern Albina African-American neighborhood. Another significant surviving structure is the Mount Olivet Baptist Church, located at 1st and Schuyler, which served as an important gathering place for the African-American community.



While the industrial character of Lower Albina has remained relatively stable, the Lloyd District area changed dramatically in the last half century, its form and character shaped by several major public infrastructure projects and large public and private developments. Beginning in the 1950s and continuing throughout the late twentieth century, major freeway projects, including I-84 (1965) and I-5 (1966), and large developments such as the Veterans Memorial Coliseum (1960) and the Lloyd Center (1960), resulting from Ralph Lloyd's grand vision for the area, re-made the fabric of the area. These and other projects entailed the demolition of large swaths of housing and small-scale commercial buildings, disproportionately impacting Portland's African-American community. The Coliseum project entailed the demolition of 476 housing units, half of which were inhabited by African-Americans, and dozens of businesses, essentially razing the southern anchor of a vital African-American neighborhood.

Additional information about the history of the N/NE Quadrant is contained in Appendix D: History.

Existing Conditions

Lloyd District

Lloyd District Land Uses

The Lloyd District today is predominantly a commercial area, with 26% of the area in office use, 16% in retail/major event entertainment and 14% in retail/shopping. Hotels make up about 10% and residential uses 8%. Another 10% is in parking structures (excluding surface parking). Retail activity is mainly focused around three areas, the Rose Quarter, the Lloyd Center area and the Broadway/Weidler couplet. Offices are concentrated in the southern and central portions of the Lloyd District. The most significant public open space is four-acre Holladay Park, south of the Lloyd Center.

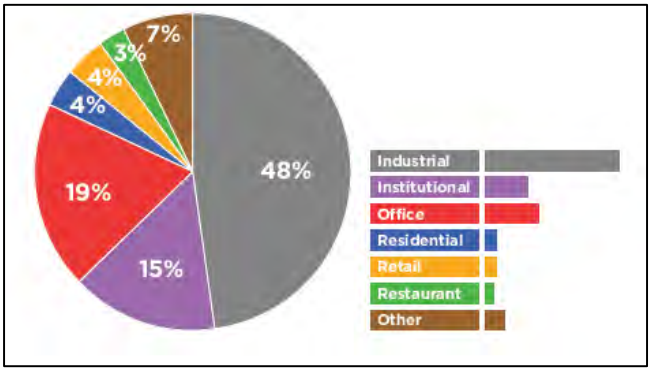
The Lloyd District had 70 acres of redevelopable land identified in a 2007 study of vacant and underutilized land in the Central City. Those 70 acres have enough development potential under current entitlements to nearly triple the amount of built space in the district.

The district was estimated to have about 16,800 jobs in 2010, accounting for approximately 14% of the total in the Central City. Some of the biggest employment sectors in 2006 were: Services (30%); Retail, Arts, and Accommodation (30%); and Public Sector (12%).

In terms of residential population, the Lloyd District is one of the smaller districts in Central City. The 2010 Census recorded approximately 1,500 residents, making up less than five percent of the Central City's population. The district contains approximately 1,000 housing units. A 2008 housing inventory found that 87% of the housing in the Lloyd District was rental, with an average rent per square foot of $1.09, and a majority of rental units falling within the 81–120 percent Median Family Income (MFI) bracket, meaning they are moderately affordable.

Table 1: N/NE Quadrant Population, Housing and Employment, 2010

	Lloyd District	% of CC	Lower Albina	% of CC	Central City
Population	1,535	4.7%	139	0.4%	32,362
Housing Units	1,056	4.7%	88	0.4%	22,653
Jobs	16,799	13.6%	3,379	2.7%	123,565



Zoning is very flexible in most of the Lloyd District. The Central Commercial (CX) zone is a high-density, mixed use zone covering 87% of area. It allows a range of uses such as office, retail, institutional, and residential. Related development standards such as maximum height and floor area atio (FAR) are generous, resulting in development entitlements comparable to those in the downtown core. Roughly five blocks of Central Residential (RX) zoning is located in the center of the district. An area of General Industrial 1 (IG1) is located near the river, at the site of the Louis Dreyfus grain elevators.

The Lloyd District has well-developed transportation infrastructure. It is served by two interstate freeways, four MAX light rail lines, the Portland Streetcar and eight bus lines. Some of the most heavily-trafficked auto streets include two major couplets: Broadway-Weidler and MLK-Grand. The abundant parking available in the Lloyd District is a highly visible characteristic. There are roughly 23,000 parking spaces, with roughly 21,000 spaces in surface lots or multi-story structures. The Lloyd District serves as a major conduit for bicycle routes to and from North and Northeast Portland, particularly the Broadway-Weidler and Vancouver-Williams couplets. The Eastbank Esplanade, a popular route for commuting and recreational cyclists, connects the District to Downtown and the Central Eastside.

Lower Albina

Today, Lower Albina remains primarily an industrial and employment district, with nearly half of its area devoted to industrial land uses and another 35% in office or institutional uses. In 2010 there were approximately 3,400 jobs in the district. Some of the biggest employment sectors in 2006 were: Education and Health (52%, primarily due to the Portland Public Schools Blanchard facility); Transportation, Warehousing, and Wholesale (14%); and Manufacturing (13%).

Lower Albina Land Uses

Lower Albina has a very low resident population, with 139 residents in 2010, making up less than one percent of the Central City population. It contains 88 housing units, of which nearly all are rental units. Most of the housing is in the small mixed-use area in the vicinity of the historic Russell Street Conservation District, a concentration of historic structures, several of which have been rehabilitated in the last decade.

There is no public open space in the district, however Lillis Albina park is just outside of the district on the east side of the I-5 freeway.

The industrial character and low population of Lower Albina is a reflection of its zoning pattern; 76% of the district is zoned General Industrial 1 (IG1) and 16% is Heavy Industrial (IH). Both zones strictly limit non-industrial uses and generally prohibit residential development. Mixed-use zones total only a few acres each: Central Employment (EX) along Russell Street, accounts for 4% of the district, and Central Commercial (CX) makes up 3%, concentrated at the southern boundary of the subdistrict adjacent to the Rose Quarter.

Freight movement by trucks is an important part of the economic well being of Lower Albina. The access route to I-5 North is N Interstate Avenue to the N Going Street interchange. The access to I-5 South and I-84 is NE Broadway to the Wheeler on-ramp. Interstate Avenue is the major north/south arterial in Lower Albina and is used for automobiles, trucks, light rail, transit, bicycles, and pedestrians. Russell Street is the main east-west connection. The nearby Union Pacific rail yard is classified as a Freight District.

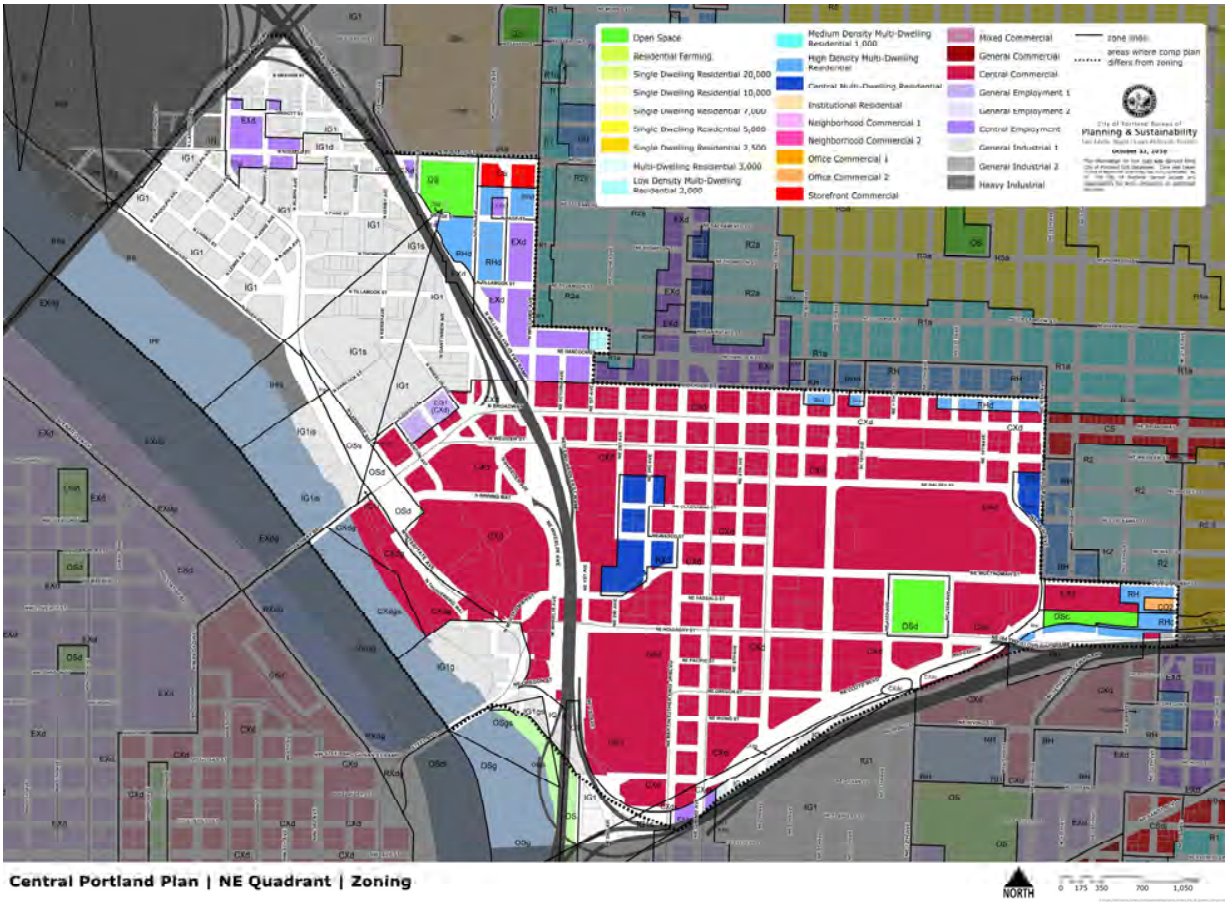
Previous Planning

Lower Albina

Planning efforts from the last few decades in Lower Albina have focused on retaining and enhancing the industrial and employment functions of the district. Both the 1988 Central City Plan and the 1993 Albina Community and Eliot Neighborhood plans called for ongoing support of the district's industrial activities and freight movement, while preserving the mix of uses and historic character of the Russell Street area and seeking better connections to the Willamette River. More recently, the River Plan/North Reach planning process reconfirmed the value of the industrial development and operations in Lower Albina.

Lloyd District

The Lloyd District has been the focus of a number of planning efforts in the past few decades, many seeking to build on the district's existing assets, such as its regional transportation connections and concentration of regionally significant event facilities and services. One of the key intentions of the 1988 Central City Plan was to connect the Lloyd District with the Downtown core, creating a continuous swath of high-density commercial development and downtown activity. Other goals called for improving the pedestrian environment, reinforcing the Lloyd Center as the eastern anchor of Central City retail, and enhancing major focal points such as the Convention Center and the Memorial Coliseum. More recent efforts such as the Portland Development Commission's Lloyd District Development Strategy (2001) and Lloyd District Housing Strategy (2002) focused on increasing the amount of high-density housing.



The Lloyd District has been identified as an "EcoDistrict", which is reflected in more recent planning efforts and this plan. It was first envisioned as a "green district" in the 2004 Lloyd Crossing study, that envisioned a new urban district that would maximize development potential while achieving

environmental goals such as carbon neutrality, habitat restoration and reliance on solar energy. A formal Lloyd EcoDistrict partnership was initiated in 2011 to implement projects that accelerate sustainable development on a district-scale.

While some progress has been made towards achieving the goals of previous plans, the Lloyd District still contains an enormous amount of development potential and unique opportunities for place-making.

Additional information on existing conditions and previous planning, including information on the two study areas included the N/NE Quadrant planning area, is contained in the *Central City 2035 Subdistrict Profiles* report.

Map 3: N/NE Quadrant Zoning

Relationship to the Central City 2035 Concept Plan and Portland Plan

CC2035 Concept

The Central City 2035 Concept is a 25-year concept plan that will guide the updates to the 1988 Central City Plan. It defines the overall direction for the Central City as a "Center for Innovation and Exchange" within the context of city-wide goals established through the Portland Plan and Comprehensive Plan. The Concept recognizes the Central City as the center of the economy for the Portland metropolitan region and the Columbia River Basin. It is also the regional center for arts and cultural activities, retail, entertainment, tourism, higher education and lifelong learning, urban living and the region's multimodal transportation network.

The density of uses, activities and people has established an environment of excitement, interest, vibrancy and synergy. It encourages a level of interaction between people, businesses and institutions that can not be generated elsewhere in the state. The positive impact this environment has on economic development, creativity, civic engagement, and the livability of the region as a whole is significant.
Within the N/NE Quadrant, the Lloyd District and Lower Albina are important components of the Central City and will be critical to meeting the strategic directions set by the Concept. To this end, the N/NE Quadrant Plan includes detailed goals, policies, and action item updates for these two districts. Key among these goals is to capitalize on the Lloyd District's development potential, transportation investments and EcoDistrict designation to create a vibrant, sustainable and mixed-use district that becomes an extension of downtown and strong eastside urban center. Lower Albina will continue to be home to an important close-in industrial job base and small business incubators, with an eclectic mix of uses that contributes to the diversity and character of the Central City. Future quadrant plans, for the SW, NW and Central Eastside, will similarly help implement the Central City 2035 Concept throughout the Central City.

Portland Plan and the Comprehensive Plan

Portland's Comprehensive Plan is currently being updated based on the guidance provided by the Portland Plan, a strategic plan for the City of Portland adopted by Council in 2012. It sets broad goals for improving equity, prosperity, educational outcomes and human and environmental health in Portland. The Comprehensive Plan will implement the Portland Plan policies that relate to state-mandated long-range plan requirements that guide land use, transportation, conservation, and capital projects. The Portland Plan places key emphasis on achieving success citywide in four key areas: a framework for equity, thriving educated youth, economic prosperity and affordability, and a healthy connected city. While at its core it is a land use planning policy document, the N/NE Quadrant Plan is relevant to the Portland Plan's equity focus and integrated strategies in a variety of ways as outlined below.

Framework for Equity

Broad outreach and engagement has been a major focus of the N/NE Quadrant Plan process. A diverse 30-member Stakeholder Advisory Committee (SAC) advised staff throughout the development of both the Quadrant Plan and the I-5 Broadway/Weidler Interchange Improvement planning process. This committee included representatives from equity and health-oriented organizations, businesses, property owners, transportation advocates, adjacent neighborhood organizations and other perspectives. In addition, a range of public events and outreach activities including open houses, design charrettes, and surveys provided opportunities for input from a broad constituency. In addition

to SAC meetings and larger public events, staff attended more than 75 individual meetings on the project with area groups and interested individuals.

The goals, policies and actions included in the N/NE Quadrant Plan are in many ways intended to help repair a neighborhood that has been done significant harm by large public projects of the past. Neighborhood connectivity, housing production and preservation of historic and cultural resources are key areas in which the plan attempts to correct damage done in the past. Policies are included that attempt to discourage displacement, while allowing for significant new development. Limited change is recommended in Lower Albina where business displacement risk is high. However, in the Lloyd District, which has few residents today and significant vacant and underutilized lands, the plan suggests a high level of change. This approach is intended to accommodate substantial new development will access to transit, jobs and other Central City amenities with very limited displacement. However, it will be important to monitor potential impacts on adjacent areas that could be at risk for displacement, such as the Eliot neighborhood.

Thriving Educated Youth

Centrally located and well-served by all transportation modes, the Central City and N/NE Quadrant are highly accessible to youth from around the region. The N/NE Quadrant Plan emphasizes job growth and residential development, both of which could increase youth access to these important opportunities. Further, in the Lloyd District the plan seeks to provide new open space and outdoor recreation opportunities that are important to support families and youth activities. The plan also recognizes and supports existing major regional facilities such as the Lloyd Center Mall and the Rose Quarter, which are important recreational and social facilities for youth providing critical opportunities for community interaction. The plan seeks to balance the episodic nature of these activity centers and improve neighborhood vitality, diversity and safety through encouraging mixed-use, urban development.

Economic Prosperity and Affordability

The N/NE Quadrant Plan places significant emphasis on capacity for job development – in both Lower Albina and the Lloyd District. Together the districts provide opportunities for business growth in a wide range of sectors from industrial and manufacturing to retail and professional services. In addition, the transportation policies and actions, including the recommended I-5 Broadway/Weidler Interchange Improvements developed in conjunction with this plan, recognize the importance of a robust and diverse transportation system to serve this crucial employment district in the future. The plan seeks to provide a full range of housing options and affordability levels in the Lloyd District and establishes ambitious goals for housing production, including affordable units. However, new resources and tools will need to be identified in order to achieve affordability goals.

Healthy Connected City

Few other areas in the region share the Lloyd District's combination of transportation system access and degree of development opportunity. The Quadrant Plan envisions a fully-developed, cutting-edge, sustainable, livable, mixed-use community of some 30,000 jobs and perhaps 10,000 residents in the Lloyd District. It lays out a concept for open space, local pedestrian connections and regional trails, as well as tree canopy and green infrastructure enhancements, to help create one of the healthiest and best connected districts in the city.

CHAPTER 2: DEVELOPING THE PLAN

Community involvement was a critical part of the development of the N/NE Quadrant Plan. Extensive work was completed in 2010 and 2011, including SAC meetings, stakeholder meetings, community walks, charrettes and open houses resulting in four products that guided development of the district concept diagrams, goals, policies and implementation actions in Chapter 3 that will become part of the updated Central City Plan. This chapter describes these products, which include:

Project Goals: Overall project goals developed and adopted by the Stakeholder Advisory Committee to guide development of the plan. The project goals are outlined on page 12.

Urban Design Principles: Five organizing principles for quadrant-wide urban form that informed the development of concept alternatives and the eventual proposed concept for the N/NE Quadrant. These principles, listed below, are described in detail beginning on page 13.

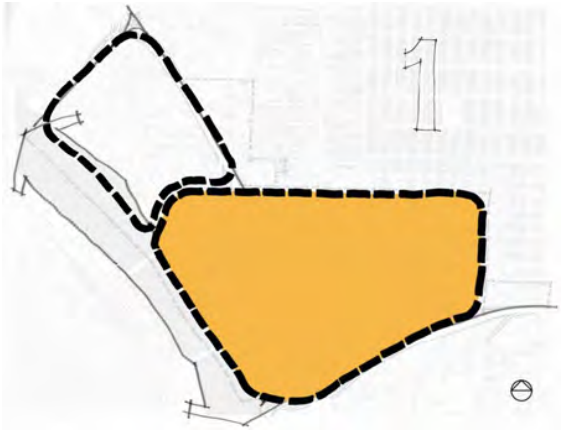
- Two distinct places
- Fill in the central core
- Strengthen connectivity
- Take advantage of urban form
- Celebrate the crossroads

Proposed Concept: A series of five concept diagrams for the quadrant that illustrate the preferred future direction for land use, building height, street and development character, open space and green systems. The proposed concept formed the basis for the district concept diagrams and detailed policies and actions in Chapter 4. The proposed concept is described in detail with accompanying diagrams beginning on page 16.

Integration with the I-5 Freeway Project: A description of how improvements proposed for the I-5 Broadway/Weidler Interchange can support the growth and development of the local area envisioned in the proposed concept. Integration with the freeway project is described in detail on page 23.

Project Goals

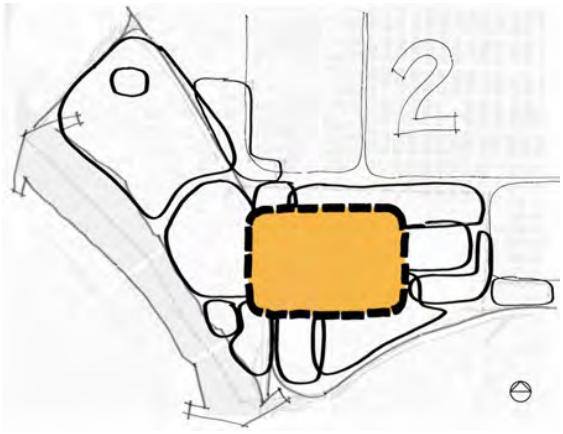
The following are the overall project goals were developed and adopted by the Stakeholder Advisory Committee (SAC) in January 2011. The goals guided development of the plan and provided general criteria for periodic evaluation of draft concepts, policies and action items.



> *"This planning effort will result in integrated land use, urban design, and transportation strategies, policies and plans for the N/NE Quadrant and the I-5 Broadway/Weidler interchange that balance, complement, enhance, protect, respect, revitalize, support, and sustain economic, environmental, and social interests. The implementable plans will be consistent with the overall goals and policies of the city, region, and state.*
>
> *Our recommendations will be guided by our desire for:*
>
> - *A diverse mix of commercial, cultural, entertainment, industrial, recreational, and residential uses, including affordable housing;*
> - *A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system;*
> - *Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages;*
> - *Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment;*
> - *Equitable access to community amenities and economic opportunities;*
> - *Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods;*
> - *Protection and enhancement of the cultural heritage of the area and its sub-districts; and*
> - *Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses."*

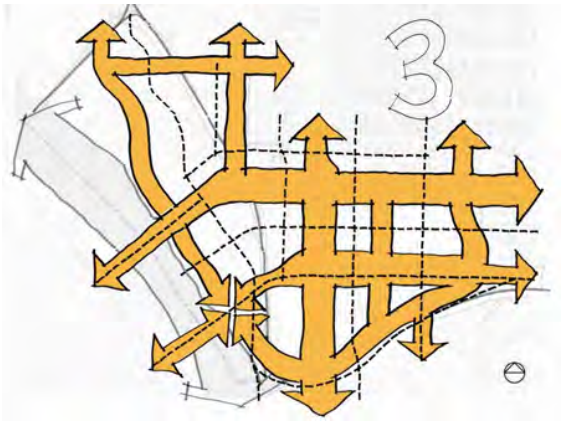
Urban Design Principles

In Spring 2011, the project team developed concept alternatives for the quadrant that were used to illustrate choices and solicit input from the SAC and public. One of the resulting products of this input were the urban design principles described below, which established organizing principles and big picture ideas regarding the quadrant-wide urban form.



Two Distinct Places: The N/NE Quadrant study area includes two distinctly different areas, headed in different directions.

Lower Albina is an active industrial and employment district not anticipated to dramatically change in its form, function or character between now and 2035. Incremental infill development in and around Russell Street is expected to continue along with gradual growth of the district's industrial and commercial businesses.



The second area is the Lloyd District, including the Rose Quarter, an area with long-held expectations for considerable redevelopment and change. Around its edges, the Lloyd District has seen slow-paced change over the past decades, including expansion of the Rose Quarter/Oregon Convention Center, new mixed use residential buildings along the eastern Broadway/Weidler corridor, and a steady increase in new office buildings in the office core area along NE Holladay. Notably still missing from the Lloyd is a critical mass of high-density residential development, while significant new residential communities rapidly emerged over the last two decades in other areas of the Central City.

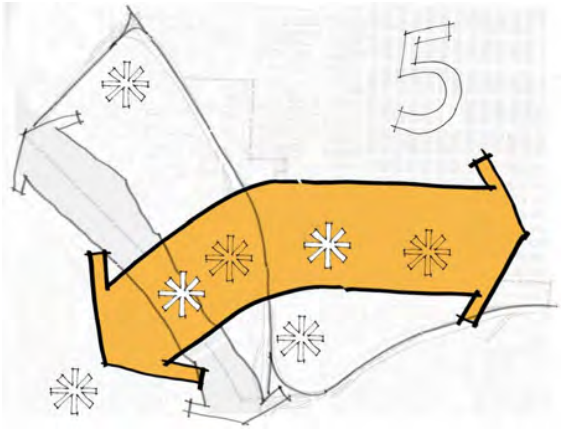
Fill in the Central Core: Physical transformation of the landscape is highest in this area.

For the success of the quadrant and specifically the Lloyd District, the "Central Core" area should transform into a high-density, high-amenity urban place that features a mix of residential and commercial/ employment uses organized around a new, signature public open space system. Currently this area is notable for its lack of a defined identity and sense of place, somewhat different from the other areas surrounding it. New development in the Central Core has the opportunity to help craft a new, marketable image or brand for the Lloyd District. The new streetcar alignment along 7th Avenue could represent a new, transit and pedestrian-oriented focal point, providing a human-scaled, storefront retail center for the Central Core area.

Strengthen Connectivity: Strengthen connectivity to and through the quadrant area.

The N/NE Quadrant enjoys good regional auto and transit connections for its residents, workers and visitors. However, the two freeways – I-5 and 84 – while providing vital regional access to and from the quadrant, create challenges to local connectivity, both within the quadrant area and to adjacent districts. The Broadway/Weidler, MLK/Grand and Vancouver/Williams corridors all serve the quadrant area and offer access to different parts of the Central City and inner neighborhoods, but feature few distinguishing qualities, and in most cases act as boundaries or edges, rather than focal points or centers. The quadrant also features an expanding set of transit corridors, bicycle facilities and some discontinuous segments of a flexible pathway system through and among the larger blocks.

Some of the biggest streets or corridors will be enhanced and designed to reflect their "civic" roles, becoming focal points for development and urban, active places by both day and night. Other streets or corridors could take on more of a "boulevard" function, having less adjacent storefront retail activity but more landscape plantings and a much stronger tree canopy presence. In-between the Quadrant's busy streets, the large blocks and quiet street in the quadrant create the potential for a continuous system of quieter pedestrian and bicycle-oriented streets and sometimes public, sometimes private pathways that when completed could provide a unique district amenity in Portland.



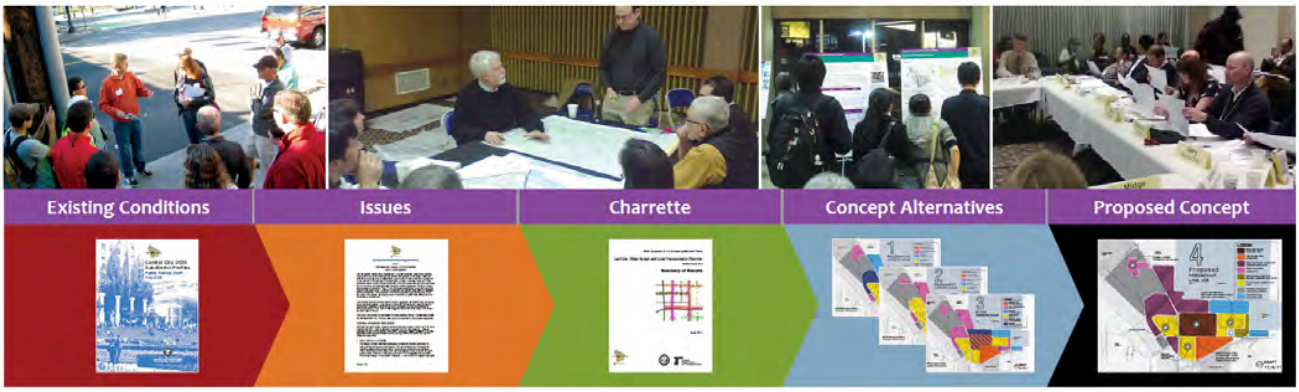
Take Advantage of Urban Form: The different urban form, pattern and character of the area present a unique alternative for Central City redevelopment.

The larger scale of blocks and buildings in the quadrant, coupled with significant development entitlements present special opportunities not available everywhere in the Central City. The Lloyd District offers many large blocks that present an alternative development platform to the prevalent small block pattern of the rest of the Central City. Larger office/employment (or other) businesses and uses that require specialized connections between multiple buildings, need larger floorplates, or prefer campus-like arrangements could take advantage of large blocks in the district.

The larger block pattern also offers new options for public spaces and overall quadrant connectivity. Today, there are several pedestrian and bicycle-oriented pathway segments, and current regulations require new public connections through the larger blocks. New development, especially on the large blocks, could add new, similarly oriented links to these existing segments, turning the network into a viable pathway system, simultaneously increasing mobility choices for quadrant residents, workers and visitors and providing a major new development attracting amenity.

Celebrate the Crossroads: Connect the quadrant across barriers to the river, the rest of the Central City and adjacent neighborhoods along a signature system of public spaces.

Today, the quadrant features a series of regionally-scaled facilities. While serving important functions, these facilities present physical and psychological barriers between central parts of the quadrant and north/northeastern neighborhoods and the rest of the Central City and the Willamette River. A new, centrally-located east-west system of public spaces and improved multi-modal connections would help quadrant residents, workers and visitors reach destinations south and west of the freeways and large event facilities.



The open space system would also provide compelling amenities around which to organize new development. To date, the district has seen public event, some streetscape, transit and other transportation-related improvements, but few new public parks or open spaces to augment Holladay Park. New, high density employment, institutional and residential uses in the quadrant will need to be supported by new parks and open spaces offering opportunities for recreation, relaxation and respite. Linking new facilities to each other and existing open spaces like Holladay will increase the functionality of the overall system and its service to a variety of potential new users.

Proposed Quadrant Concept for Land Use, Urban Design and Local Transportation

The project team developed quadrant-wide concept alternatives in spring 2011, intended to describe different future development scenarios and highlight key choices for this planning process. Ideas in the concept alternatives were drawn from a number of sources, including existing conditions, issues, opportunities and constraints, feedback from Stakeholder Advisory Committee (SAC) and subcommittee meetings and a charrette held in 2011.

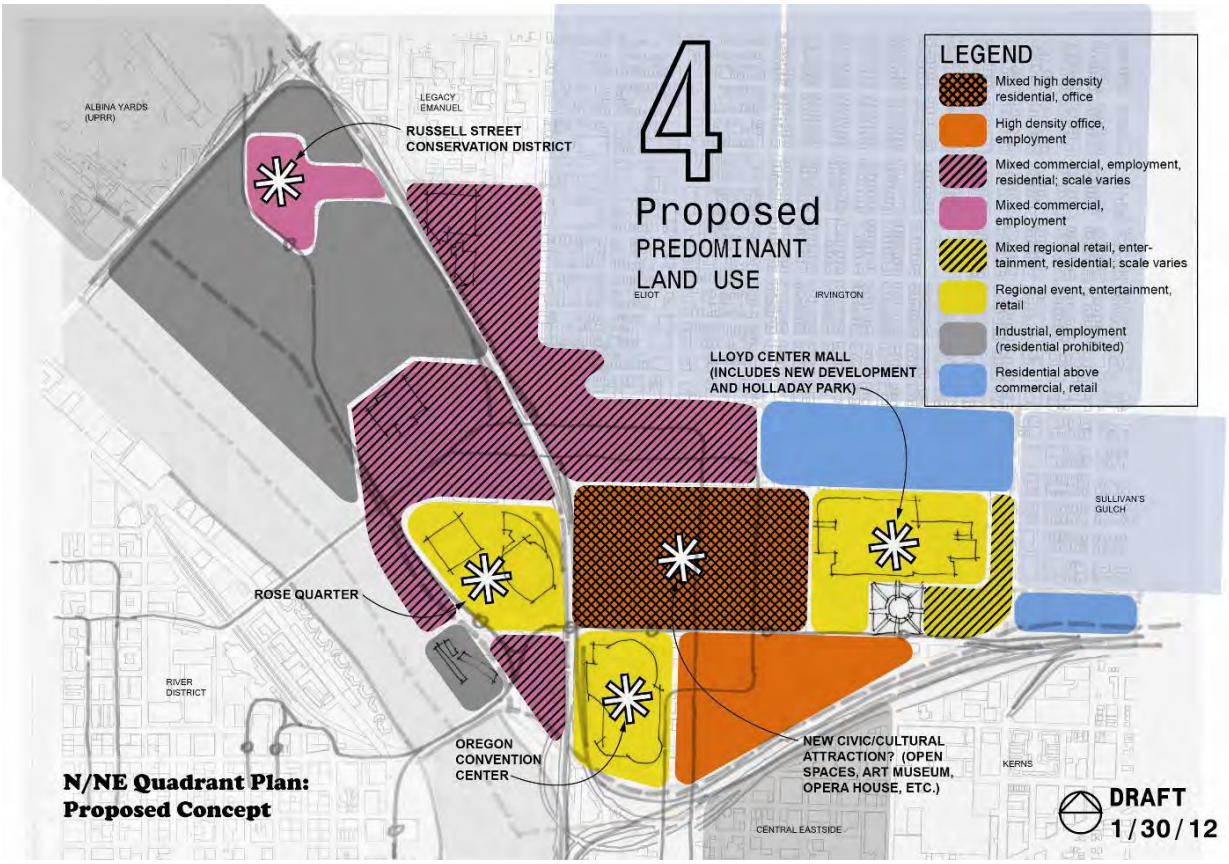
The ideas gathered from these sources were grouped into three quadrant-wide concepts based on broad land use options: residential, employment, and a residential/employment blend. The concept alternatives were illustrated by three related infrastructure systems: mobility, open space and green systems. Finer grained ideas and issues were grouped into eight geographic subareas, such as Historic Russell Street or the Rose Quarter.

Following extensive outreach to stakeholders and community groups, a draft proposed concept was developed and presented to the Stakeholder Advisory Committee (SAC) in fall 2011. The SAC endorsed a revised concept in February 2012, which formed the basis for the district concept diagrams and detailed policies and actions in Chapter 3 of this plan. The proposed quadrant concept contains five layers: land use, building height, street and development character, open space and green systems.

Predominant Land Use and Building Height

Each “bubble” on the land use diagram below reflects the predominant land uses that would be encouraged under that development type. With the exception of industrial areas, other uses would generally continue to be allowed, and some mixing of uses would be expected in all areas.

The building height diagram on the next page indicates approximate maximum building height in different areas of the quadrant under the proposed concept.



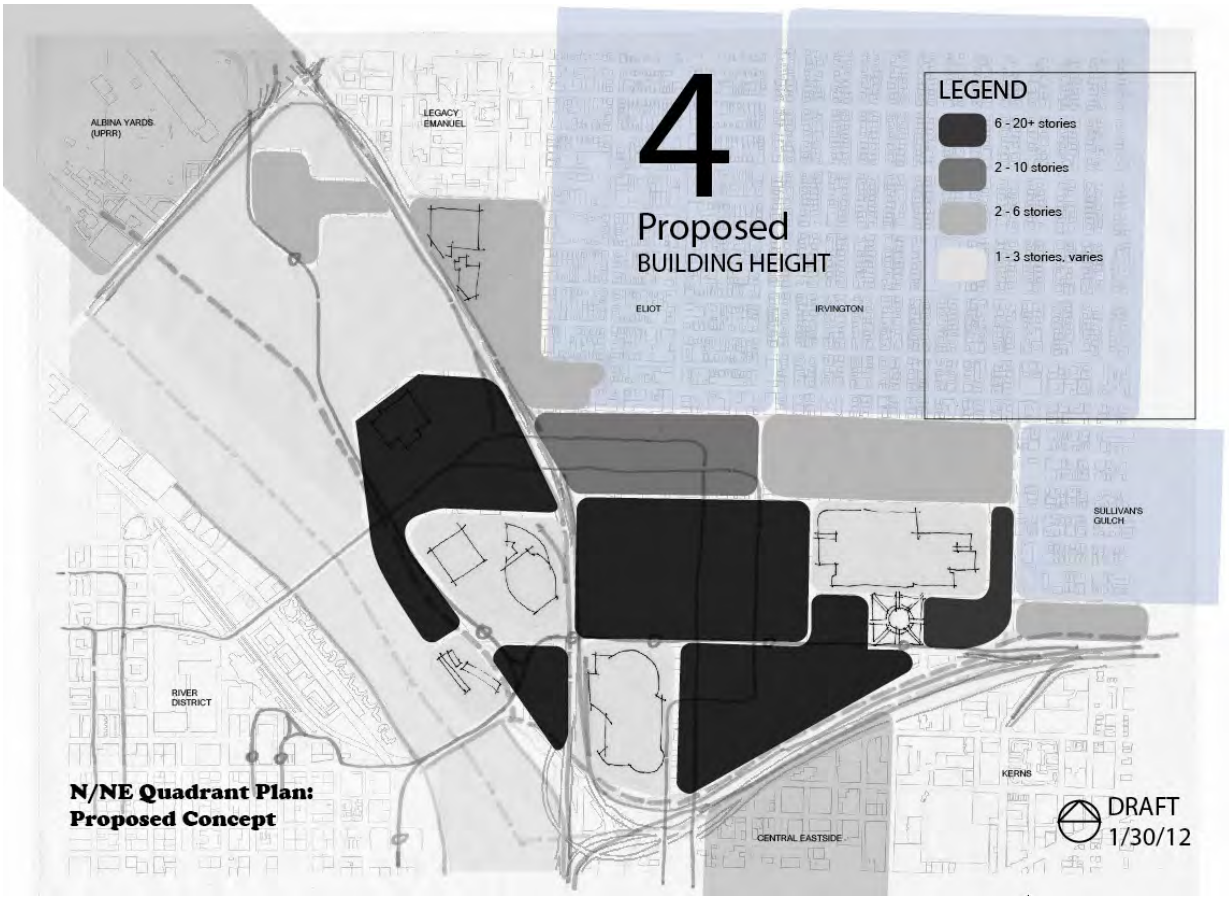
Key elements of land use concept in quadrant subareas include:

Lower Albina: Support the continued success of the industrial district, with additional flexibility for compatible employment uses, intended to gradually increase employment density and reuse of older structures, and an expanded mixed use area adjacent to historic Russell Street.

Central Lloyd: Significant redevelopment to achieve a vibrant, high-density mixed- use district, with an emphasis on new housing development.

Office Core and Regional Attractions: Reinforce existing employment centers and regional attractions, including the office core, Lloyd Center Mall, Convention Center and Rose Quarter, through continued employment growth and complimentary mixed-use development in adjacent areas including increased flexibility at the Public Portland Schools Blanchard site.

(cont. on next page)



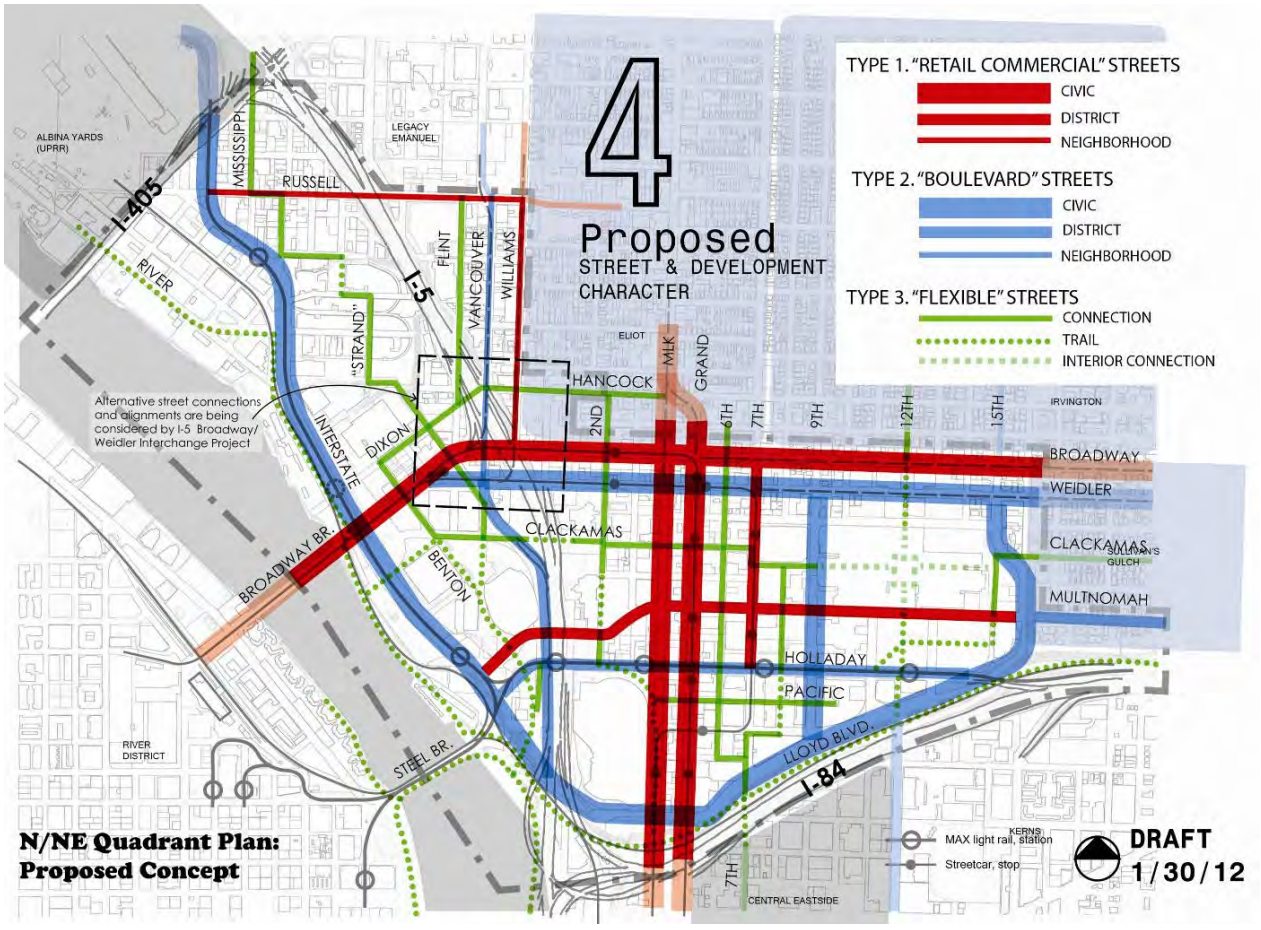
Predominant Land Use and Building Height (cont.)

Broadway/Weidler Corridor: Reinforce the existing main street character of NE Broadway and providing a sensitive transition to adjacent neighborhoods through lower scale development along the Central City edge. Emphasis on housing over retail east of NE 7th; mixed use west of NE 7th.

Vancouver/Williams Corridor: Increase flexibility to allow more commercial and employment uses to support existing uses and employment growth.

Eastern Edge/Multnomah: Focus on residential development around Lloyd Center mall, with a potential expansion of mall-related regional retail. Increase flexibility to allow mixed use development on NE Multnomah and 21st to encourage investment.

Street and Development Character Concept



The street and development character concept outlines a more intentional approach for the quadrant's street network, uniting streetscape design with adjacent land uses and building forms, and recognizing the different scale of streets. While the concept proposes a new way of envisioning the design character of these public streets and connections, it does not imply changes to the City's existing system of modal classifications that define the functional roles streets play in moving people and goods throughout the quadrant.

It is assumed that all streets would continue to have active adjacent ground floors, good sidewalks with safe crossings, attractive public amenities and furnishings and stormwater management functionality. It is also assumed that adjacent development, along with the street character, would respond to the local geography, surrounding context and envisioned character.

The proposed concept includes the following street types with three scales for each type:

Retail Commercial Streets: Busy, continuous streets with retail activity throughout the day, evenings and weekends that provide for multi-modal access for vehicles, transit, bicycles and pedestrians. Ground-floor retail uses are required or strongly encouraged. Multi-level or specialized retail is encouraged with limited or less "green features" to support retail street visibility. The following are three tiers for the retail/commercial streets:

- Civic – Busy high-volume city streets with connections beyond the quadrant.
- District - Central to the quadrant with opportunities for new community activity centers.
- Neighborhood - Local focal points with infill and continuation of existing character and patterns.

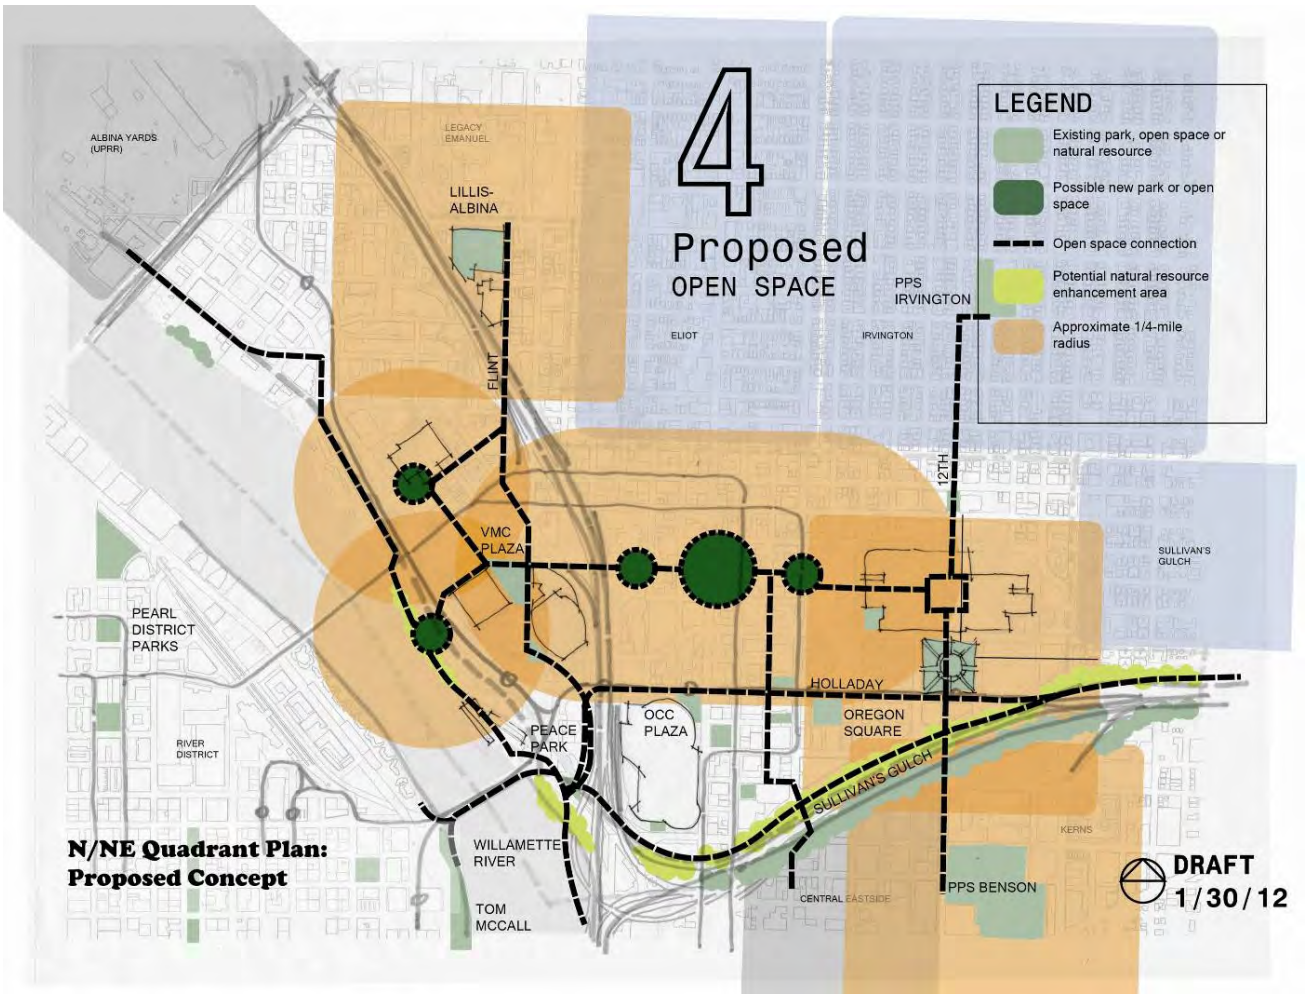
Street and Development Character Concept (cont.)

Boulevard Streets: Busy, continuous streets with emphasis on access and flow that provide multi-modal access and circulation for vehicles, transit, bicycles and pedestrians. The streetscape includes visible "green" features, encouraging larger tree canopy, swales, and landscaping. Ground floor retail uses allowed, and encouraged at key locations. The following are the three tiers for boulevard streets:

- Civic – High volume city streets that could be part of a couplet corridor, and extend beyond the quadrant.
- District - Central to the quadrant with opportunities for distinctive corridors, some offering specialized transit or other mobility facilities.
- Neighborhood - Local streets with continuation of existing character and patterns.

Flexible Streets: Highly specialized localized street designs responsive to community needs and adjacent land uses and development that could be in public or private ownership. Key public features would include low-volume, low speed quiet streets that are part of a connected, primarily pedestrian and local bicycle network. Visible "green" features are encouraged. Three types of flexible streets include:

- Connection - Pedestrian and bicyle connections on existing public streets to open spaces, key destinations within and beyond the N/NE Quadrant.
- Trail - Off street paths connecting to the regional trail network.
- Interior Connection - Primarily pedestrian connections, including connections within buildings on private property, that facilitate movement within the district.



Conceptual rendering showing NE 7th Avenue as a district scale, retail/ commercial street.

Open Space

The proposed open space concept illustrates a potential framework for parks and open space within the quadrant, an area that is currently park deficient. The concept envisions a series of new parks organized along an improved NE Clackamas Street linking to a new open space adjacent to the Willamette River. Clackamas would be a flexible street that prioritizes pedestrian access, creating a safe and inviting space for people to gather, play and socialize.

The proposed parks would likely range in size and function, and could be augmented by privately owned pocket parks and plazas. The open space concept also proposes enhancement to natural resources along the riverbank and within Sullivan's Gulch.

Green Systems

The Lloyd Ecodistrict is a public-private partnership designed to transform the Lloyd District into a showcase sustainable district that includes district energy infrastructure, enhanced tree canopy, improved stormwater strategies and green building techniques. The green systems map illustrates how green infrastructure could be integrated into the quadrant to improve long-term resiliency. The concept includes the following green systems components:

Tree Canopy/Water Quality Corridors: Corridors that provide enhanced tree canopy and stormwater management through large trees and vegetated stormwater facilities such bioswales and planters.

District Energy: A system that could facilitate shared energy production and distribution between different businesses, residential uses and facilities.

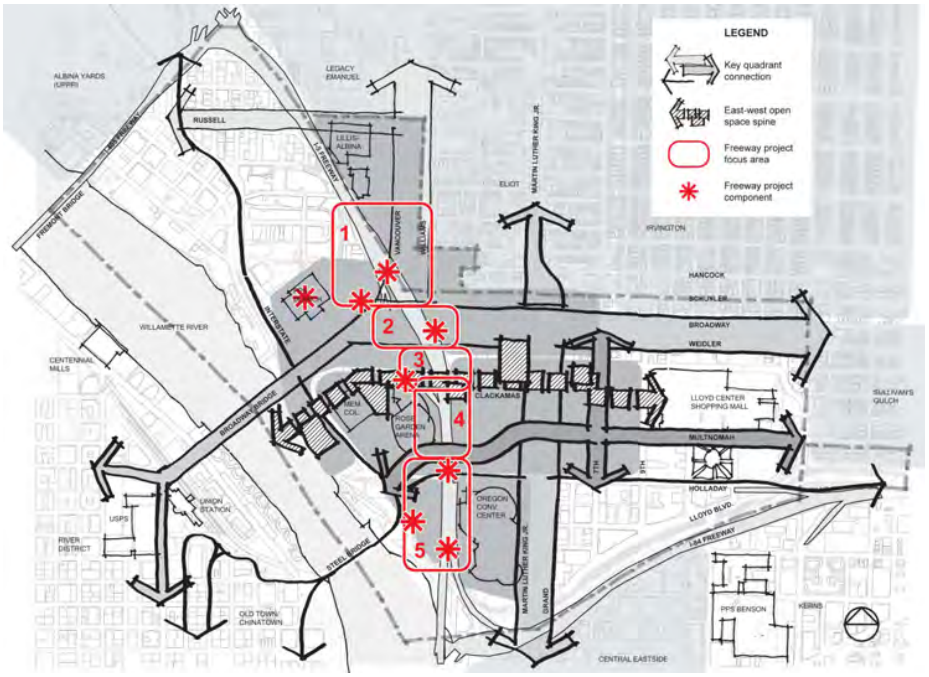
Rainwater Harvesting: A system that would facilitate capture and reuse of rainwater.

Other opportunities to support goals for sustainable development in improvements to the natural environment include the use of native vegetation, eco-roofs, vegetated walls, bird-friendly buildings and other green building techniques.

Integration with the I-5 Broadway/Weidler Interchange Project

The proposed concept for the N/NE Quadrant was developed concurrently with recommended improvements to the I-5 Freeway and Broadway/Weidler Interchange. The joint process ensured that the resulting plans are mutually supportive. The regional employment and housing growth since the completion of the Interstate System has dramatically increased the traffic volumes on the freeway. Both I-5 in the study area and the Broadway/Weidler corridor have high incidents of crashes. Additionally, the freeway is a barrier to connections between areas north and south of the interchange. This partnership established a framework that addresses both improved safety on I-5, while supporting high-density mixed-use development with safer and greater pedestrian and bicycle connectivity. The framework also addressed previous freeway impacts to improve livability and vitality in the area.

The diagram below shows five geographic areas where the freeway project has the potential to directly support the proposed concept for the N/NE Quadrant.



Area 1, North of Broadway: Rebuilding bridges over the freeway presents opportunities to improve existing pedestrian and bicycle conditions and create new connections between Vancouver/Williams and the Portland Public School's Blanchard site, a key redevelopment opportunity.

Area 2, Broadway/Weidler Lid: Rebuilding bridges provides opportunities to simplify traffic movements to and from the freeway, improve local access and safety for all modes and improve pedestrian and bicycle facilities. Creating a lid over the freeway could potentially be used for new open space, development and/or to reconfigure local multi-modal circulation.

Area 3, Clackamas Crossing: The proposed new pedestrian/bike connection over I-5 supports the creation of a flexible connection and open space system along Clackamas Street that would stretch from Lloyd Center to the Willamette River and could provide supporting infrastructure for a proposed district energy system linking facilities in the Rose Quarter with the remainder of the Lloyd District.

Area 4, Rose Garden: Freeway improvements in this area could include improvements to bicycle routes between the Rose Quarter Transit Center and Broadway/Weidler, innovative stormwater management opportunities and improvements to the undercrossing at Multnomah.

Area 5, Rose Quarter Transit Center & Peace Park: Improvements could include innovative design treatments under the bridges to improve pedestrian connections between the Rose Quarter and the Convention Center, and improvements to upgrade conditions and mitigate impacts to the MAX station and Peace Park.

CHAPTER 3: GOALS, POLICIES AND IMPLEMENTATION ACTIONS

This plan chapter is organized into sections addressing each Central City district (the Lloyd District and Lower Albina), as well as the two study areas included in the N/NE Quadrant planning boundary. A district goal and concept diagram convey the overarching vision for each district, followed by a series of policies, which provide more specific direction on issues associated with the larger goal. The district goals and policies reflect the project goals and objectives adopted by the Stakeholder Advisory Committee to guide the overall planning process. The district concept diagrams are based on the N/NE Quadrant Concept diagrams, which were developed through a planning process that included a stakeholder charrette, several public events and detailed review by the SAC. The SAC goals and the quadrant concept diagrams are described in Chapter 2: Developing the Plan.

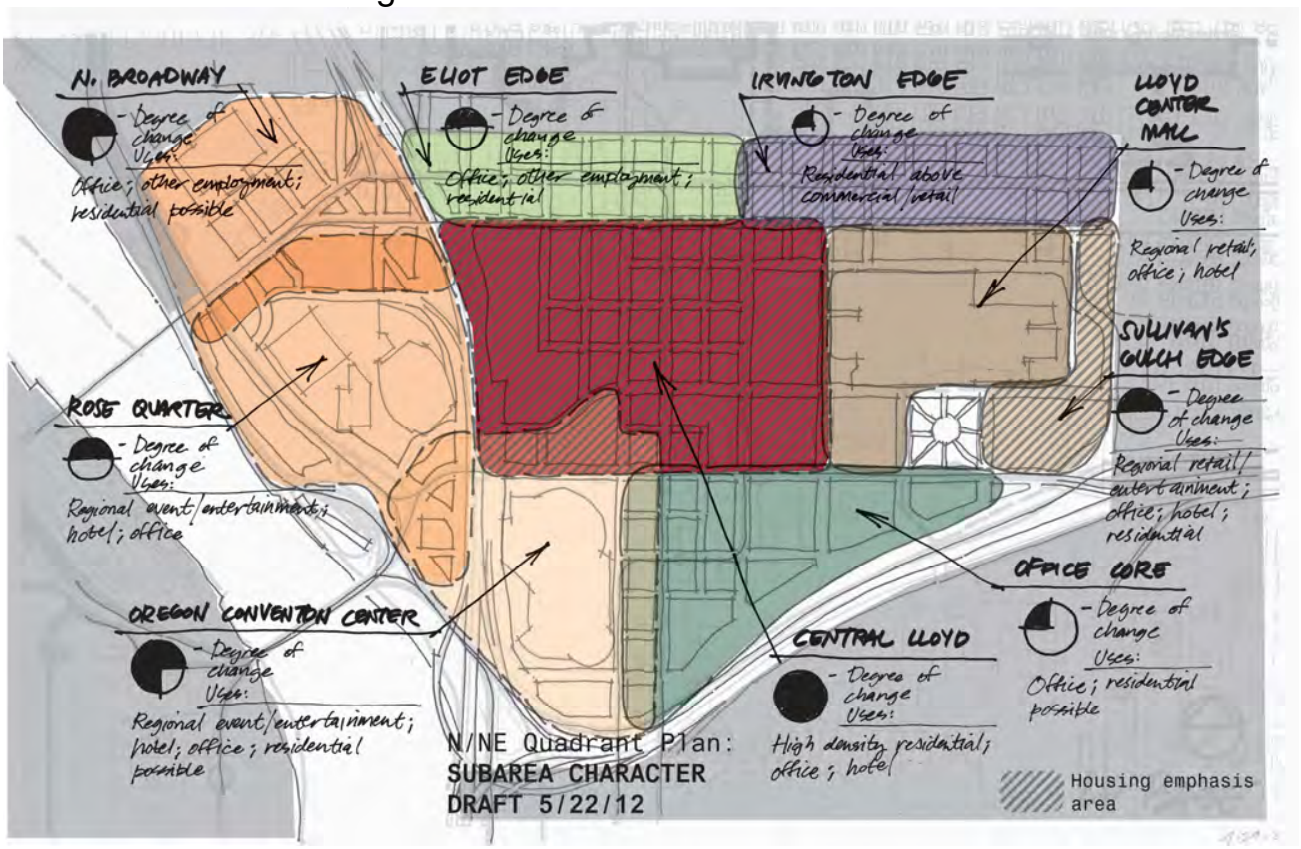
The policies are organized into topic areas generally consistent with the planning framework developed for the Central City 2035 (CC2035) Concept Plan, which will establish the overall vision and direction for the Central City as a whole. Because issues that apply Central City-wide will be addressed in the CC2035 Concept Plan, the N/NE Quadrant Plan will focus on issues that are unique to its planning area within the Lloyd District and Lower Albina. The policy topics are as follows:

- Regional Center
- Housing and Neighborhoods
- Transportation
- Urban Design
- Environment (title under discussion)

All five policy topic areas are covered for the Lloyd District, however Lower Albina, a largely industrial area, does not have a “Housing and Neighborhoods” section.

Performance targets are established for key measures as a means of tracking progress toward meeting goals and policies. They are based on a number a sources, including assumptions about future development, housing and employment forecasts, targets from other planning processes such as the Portland Plan and Climate Action Plan, and transportation modeling. The performance targets in this plan should be considered preliminary. They will need to be revisited, and potentially recalibrated for the full Central City, once all of the quadrant plans have been completed.

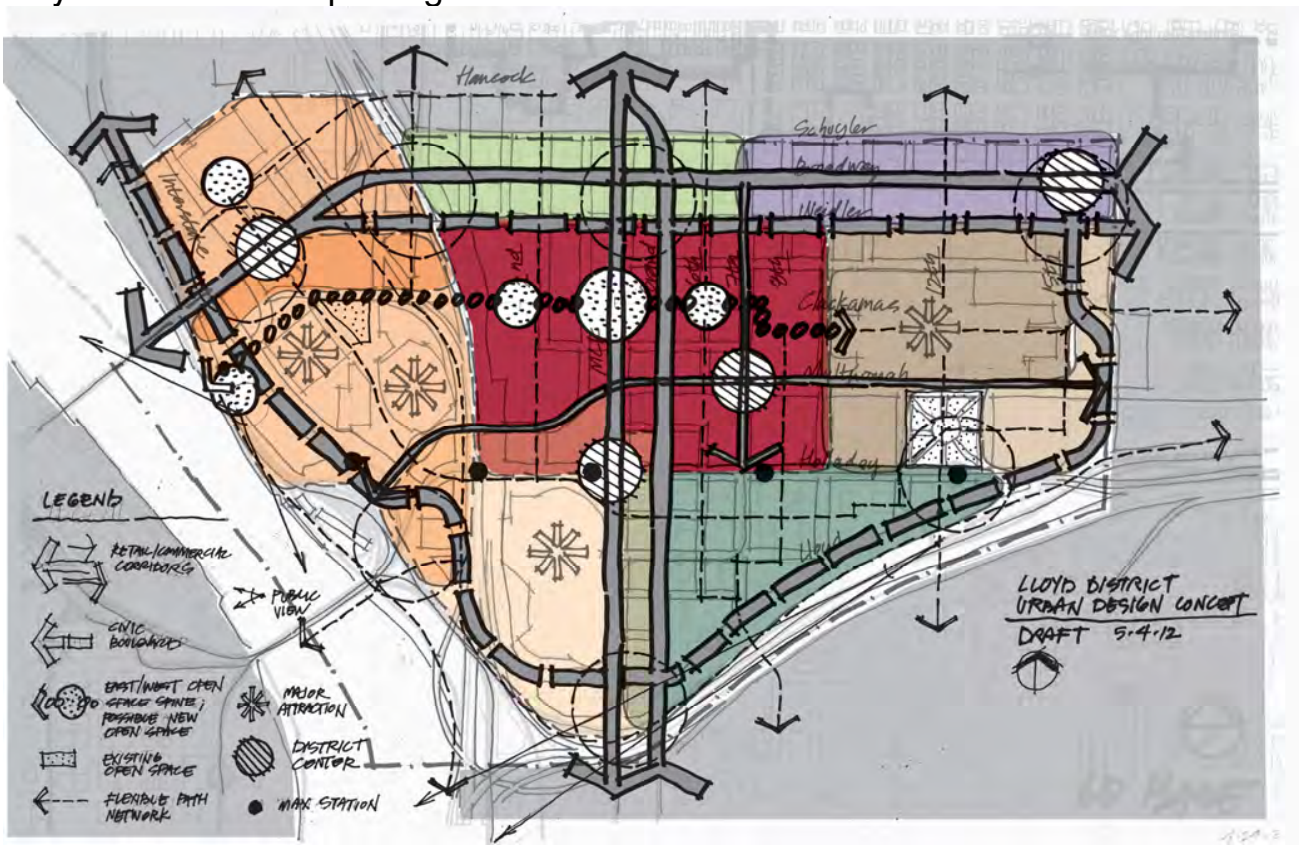
Implementation actions, such as changes to regulations, future work items, projects, programs or studies, are proposed for each district and for the two study areas: North Banfield Portal and Vancouver/Williams Corridor. Implementers are identified, including public agencies, private and non-profit entities and other community partners, with the lead implementing agency noted in **bold**. A list of implementers and abbreviations used in the action tables is provided at the end of this document.



A timeline is provided, with some actions intended to be accomplished with the adoption of the full Central City 2035 plan package, anticipated in 2014. Other actions are intended to be completed 2 to 5 or 6 to 10 years beyond that, and some are ongoing.

Lloyd District

District Goal



Foster the growth of the Lloyd District into the intensely urban eastside center of the Central City. Capitalize on the district's regional attractions, high quality transit and connections to create one of the most vital and livable districts in the Central City, with a strong employment base, successful residential community and a variety of urban amenities. Develop the district as a complete and sustainable community with well-designed open space, streets, and high-performance green buildings and infrastructure.

Subarea Character Diagram

This diagram illustrates the types of uses planned for the different "subareas" of the Lloyd District, as well as the degree of change expected in those areas as the district develops. For example, major redevelopment with high-density mixed use development is envisioned within the Central Lloyd area, which is expected to have the highest degree of change. Other areas that are currently well established, such as the Office Core and Irvington edge, are expected to have a relatively low degree of change. This diagram also identifies "housing emphasis areas" where development of new housing is a priority.

Lloyd District Concept Diagram

Key Elements of the Concept

Street and Development Character: The character and function of three main street types shown in the concept diagram are described below. A more detailed description of the street types is provided in a separate report, N/NE Quadrant Plan: Street and Development Character Concept (2/1/12 Draft).

- **Retail/Commercial Corridors.** Busiest streets with high visibility by motor vehicles, transit, bikes and pedestrians and generally consistent ground level retail storefronts. These corridors are broken down in three scales: “civic,” which make connections to other parts of the city; “district,” which are important within the boundaries of the Lloyd District; and “neighborhood,” which are smaller and found usually outside the Central City.

- **Boulevards.** These corridors can also be some of the busiest in the district – they can be the “second” street of a couplet or define a district edge -- but they offer a more landscaped, green character, with fewer retail storefronts than the retail/commercial type. These corridors are broken down in three scales: “civic,” which make connections far beyond the district; “district,” which are important within the boundaries of the district; and “neighborhood,” which are smaller and found usually outside the Central City.

- **Flexible Network.** These streets and spaces make up a system of local, primarily pedestrian connections through the district that offer quieter, “low-stress” experiences distinctly different from the busier streets serving the area. The forms and characters of these connections can vary

considerably – some can be typical streets, some could be through open spaces or plazas, and others could be through building interiors.

East-West Open Space Spine: This is a series of connected open spaces offering different characters and functions, running from the Lloyd Center Shopping Mall west to the Willamette River. The connection could be obvious, such as the Park Blocks; it could be evident, like the boardwalk along NW 10th Avenue in the Pearl District; or it could be described by a subtler set of wayfinding clues. This signature series of parks and open spaces would become the organizing system for a new high density mixed use community in the Central Lloyd area.

Major Attraction: Regional event, entertainment and/or retail facility that brings in thousands of people annually district. These currently include the Veteran's Memorial Coliseum, the Rose Garden Arena, the Oregon Convention Center and the Lloyd Center Shopping Mall.

District Center: High-visibility hubs of retail and commercial activity in the different areas of the district. Locations with concentrations of restaurants, hotels and other similar retail/commercial businesses, generating high levels of pedestrian movement and crossings.

Gateway: Point of transition into or out of the district. Specific experience determined by character of identified location, and could be enhanced by public sector improvements, private development design approaches and/or a combination of both..

Public View: Currently designated public viewpoint and view cone, as described in the *Scenic Resources and Protection Plan* of 1992.

See Appendix A, Additional Urban Design Diagrams, for more details on the street and development character, gateways and building height elements of the concept.

District Policies and Implementation Actions

Regional Center: Economy and Innovation

As home to vital regionally-significant facilities, the Lloyd District is an integral part of the Central City today, and its tremendous growth potential means it will contribute to the regional center in a variety of new ways in the future.

These policies and actions will help maintain and grow existing assets in the district, including regional event attractions at the Rose Quarter and Oregon Convention Center, the main street small business and retail-oriented character along NE Broadway, regional retail uses at the Lloyd Center Mall and a well-established office cluster of professional, medical and government services.

New businesses that balance the episodic nature of the regional event centers and new high-density residential and commercial development in Central Lloyd and North Broadway will support job growth and enliven the district. The formation of the Lloyd EcoDistrict presents additional opportunities to create a district that is more attractive to new businesses, employees, residents and visitors due to its leadership in sustainability and the resulting improvements in the physical environment.

Policies

1. **Employment**. Support and retain existing businesses while encouraging significant new job growth. Develop the district to support a broad array of employment types that provide living-wage jobs and equitable access to employment opportunities.

2. **Redevelopment.** Encourage high density commercial and residential development and better utilize vacant and underutilized land.

3. **Core Employment Uses.**

    a. **Office Core.** Maintain and grow the Lloyd District as an employment center for headquarters office, institutions, professional services and the government sector.

    b. **Regional Attractions.** Support the continued success of the Rose Quarter and the Oregon Convention Center and encourage new development and businesses that support and balance the episodic nature of event activity.

    c. **Retail.** Support existing and new retail development including regionally focused uses in and around the Lloyd Center Mall and neighborhood-serving uses along the NE Broadway corridor. Encourage and support retail development on retail/commercial streets identified in the district concept diagram.

    d. **Civic and Cultural Amenities.** Expand civic attractions in the Lloyd District to complement the district's tourism, regional attractions and growing residential character. Examples of attractions could include a convention hotel and centers for arts, culture, history or science.

4. **Innovation: Sustainable District.** Promote the Lloyd District as a center for innovation and application of sustainable business and development practices, foster job creation in sustainable industries and encourage the incorporation of green technology into businesses and development.

2035 Performance Target: Jobs

By 2035, add 10,000 new jobs within the Lloyd District.

Current Conditions
Based on a 2010 estimate, there are approximately 18,000 existing jobs in the Lloyd District (with revised district boundary, see action RC1). The addition of 10,000 new jobs would result in a total of 28,000 jobs. This would require a 55% growth in jobs over 25 years.

Implementation Actions: Lloyd District – Regional Center: Economy and Innovation						
#	Action	Timeline				Implementers (lead in **bold**
		CC2035 (2014)	2 - 5 Years	6 – 20 Years	Ongoing	
RC1*	Adjust the Lloyd District and Lower Albina boundaries to include the PPS Blanchard site and adjacent properties to the south and east within the Lloyd District.	X				**BPS**
RC2*	Rezone the PPS Blanchard site and adjacent properties to the east from IG1 to EXd and CXd to encourage future redevelopment. Require a master plan process as part of redevelopment to address street and pedestrian connectivity, open space, views, and the transition to adjacent industrial uses.	X				**BPS**
RC3*	Adjust and increase maximum allowed heights to support high density development and encourage the provision of public amenities, and desired uses in the following areas: ▪ N. Broadway near the Broadway Bridgehead ▪ Riverfront ("Thunderbird" site) ▪ Central Lloyd area	X				**BPS**
RC4*	Adjust regulations and incentives to encourage new development that supports the Convention Center such as new or expanded hotel development, retail and other services on adjacent blocks.	X				**BPS**, PDC
RC5	Develop a strategy to promote the development of new hotels and the improvement of existing hotels in the vicinity of the Oregon Convention Center.		X			**Metro**, PDC, City, Private
RC6	Pursue development on publically owned sites in and around the Rose Quarter through public-private partnerships.				X	**City**, Private
RC7	Market the Lloyd District as a leader in sustainable development and business practices.				X	**EcoDistrict**, PDC, Private
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Housing and Neighborhoods

The N/NE Quadrant Plan envisions the Lloyd District as a high-density, high-amenity, mixed-use area, with a focus on increasing residential development for a more balanced jobs to housing ratio. Greater housing density will increase the vitality of the district and further citywide and regional goals that encourage housing in areas close to employment centers and well connected to alternative transportation networks.

Areas in which housing development should be emphasized are proposed in the Central Lloyd area, upper Broadway and the eastern edge. Policies and actions promoting a diverse housing mix that is attractive and affordable to a broad range of people will help implement equity and diversity goals put forth in the Portland Plan and the Central City 2035 Plan.

Increased residential density will require amenities and services necessary for residents to meet their daily needs. It is essential that the area develop as a complete neighborhood with convenient and safe access to neighborhood businesses, park and recreation facilities and schools in a clean and healthy environment. Development of new open spaces and creating an environment that is supportive of local, neighborhood serving businesses are high priorities. Safe and attractive regionally available alternative transportation options, such as walking, biking and taking transit, are also important for promoting healthy lifestyles and meeting climate action goals for reduced green house gas emissions. See the transportation section for policies and actions that support those elements.

Development of housing affordable to low and middle income households within the Lloyd District is a priority given that access to a complete neighborhood reduces household transportation costs and provides access to public and private amenities crucial to economic mobility. However, it is recognized the development of affordable housing will be a challenge because there are currently very limited public resources to fund housing projects. It is also important to provide a diverse range of housing types and sizes within the district, including housing suitable for workforce, seniors, special needs and families.

The Lloyd District has a diverse history and is well located to serve as eastside civic center for Portland. The design of public spaces, as well as programming within those spaces, should celebrate the history of the place and help build community among those that visit, work and live in the district.

The goal of increased growth and density brings concerns about the potential for displacement of current residents and businesses due to increasing costs – an issue that applies citywide in areas of growth and change. This plan identifies a need for citywide programs to address potential displacement, reinforcing the recommendations of the Portland Plan.

Policies

1. **Housing Development.** Encourage the development of new housing especially in “housing emphasis areas”. Through greater concentration of housing the district can foster a sense of community and support efficient provision of residential amenities and services.

2. **Housing Diversity and Preservation.** Encourage the development and preservation of a housing supply of unit types and sizes that meets the needs of people of all incomes, ages, household sizes and special needs. Include development of affordable housing as a way to ensure income diversity, meet citywide housing needs and help mitigate the potential for displacement due to rising housing prices in the district and in adjacent neighborhoods.

3. **Complete Neighborhood.** Foster development of a complete neighborhood with amenities and services that residents need to meet their daily needs, including access to parks and open space, grocery stores, neighborhood businesses and schools.

4. **Successful Neighborhood Business Districts.** Support and expand local main street business areas within the Lloyd District and in adjacent neighborhoods. Cluster a diverse mix of neighborhood scale businesses within the NE Broadway Business District and on new district retail/commercial streets as a means of concentrating activity and promoting successful retail districts.

5. **Community Building.** Encourage public spaces, pubic art and activities that celebrate the history of the district and that help build a community in the Lloyd District and with surrounding neighborhoods.

6. **Historic and Cultural Resources.** Preserve, rehabilitate and celebrate historic and culturally significant structures and places in the Lloyd District.

7. **Displacement.** Support existing residents and businesses within the Lloyd District and in adjacent neighborhoods that are at risk for involuntary displacement.

2035 Performance Targets

Housing

Develop 5000 new housing units and reduce the jobs to housing ratio to 5 to 1 within the Lloyd District. Seek to provide a full range of housing types and affordability options, including 50% of new units affordable to households with incomes below the median family income (MFI) of the city.

Current Conditions
Based on the 2010 Census, there are approximately 1,100 existing housing units in the Lloyd District and it has a jobs to housing ratio of 17 to 1. The addition of 5,000 units and 10,000 jobs would result in a total of 6,100 housing units and a jobs to housing ratio of 5 to1.

Complete Neighborhood

80% of Lloyd District residents live within ¼ mile of a public park and within ½ mile of a full service grocery store.

Current Conditions
As shown in Table 2 below, none of the existing population is within ¼ mile of public parks and 64% of the population is within a ½ mile of a grocery store. Because the existing population in the district is currently quite low, the amount of land area in proximity to parks and grocery stores is also provided.

Table 2: Lloyd District Proximity to Parks and Grocery Stores (2012 estimate based on GIS analysis)

	Within ¼ mile of parks	Within ½ mile of parks	Within ½ mile of grocery store
Population	0%	81%	64%
Land Area	30%	87%	41%

Implementation Actions: Lloyd District – Housing and Neighborhoods						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
HN1*	Develop regulatory tools to encourage housing development and the inclusion of affordable housing. Focus on housing emphasis areas (see subarea character diagram).	X				**BPS**, PHB, BDS
HN2*	Rezone the area of RXd zoning in Central Lloyd to CXd to provide flexibility and encourage investment. Apply housing incentives described in HN1 to this area.	X				**BPS**
HN3	Develop affordable rental housing through investment of TIF Set Aside funds and other PHB programs. Possible tools include: Limited Tax Exemption program, System Development Charge Exemption Program.		X			**PHB**
HN4	Improve the function and safety of Holladay Park through programming that increases its use and CPTED (Crime Prevention Through Environmental Design) improvements.		X			**PPR**, Private
HN5	Identify sites for community building activities and pursue projects and activities that support community building, such as weekend markets, cultural programming in parks and public art.		X			**LDCA**, EcoDistrict City
HN6	Support connections between district employers and employee housing within the district through employer-assisted housing programs and coordinated mixed-use development, particularly employer-assisted housing for service-level workers employed within the district.		X			**PHB**, Private
HN7	Monitor residential population growth and the related school needs of the district. Encourage space for early education programs in new development.				X	**PPS**, Private

HN8	Address potential displacement of residents and businesses in the Lloyd District and in adjacent at risk neighborhoods, such as Eliot, through citywide programs developed as part of the Comprehensive Plan. Potential programs include housing and small business assistance programs targeted for areas at risk for displacement.				X	**PHB** (housing), **PDC** (business) Office of Equity, BPS
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Transportation

The Lloyd District is well served by a multi-modal transportation system that supports its role as a regional center for retail, business, entertainment, and government. The district has unique regional transportation advantages, including direct connections to the interstate freeway system via I-5 and I-84 and the regional light rail and bus network at the Rose Quarter Transit Center. With the addition of streetcar and continued investments in bicycle and pedestrian systems, the transportation network will provide a solid foundation to support goals for high-density development, greater use of active transportation (walking and biking) modes, and reduced greenhouse gas emissions.

The Lloyd District contains a number of major traffic corridors, including the MLK/Grand and Broadway/Weidler corridors, which carry large volumes of traffic into and through the district. These streets are important for supporting large and small businesses and regional attractions. However, because of the high volume of traffic and limited signalized crossing, these streets have also been identified as barriers to overall connectivity and to travel by walking and biking.

The N/NE Quadrant Plan calls for building upon and enhancing the Lloyd District's transportation assets by: improving the efficiency and safety of traffic operations; maintaining regional transit, auto and freight access; enhancing internal circulation and connectivity to adjacent areas, particularly for pedestrians and bicyclists; managing parking to support business and residential uses, incentivize development and encourage the use of non-auto transportation modes; leveraging street improvements with future development; and providing strong linkages between the district and the Willamette River. It is important to note that residents of Portland have transportation choices, and that active transportation may not be the solution for all. Therefore, providing optimum regional access for all modes will be key to realizing the goal of developing the Lloyd District as a high density Central City district and assuring its long-term success.

Policies

1. **Strategic Investments.** Invest in transportation infrastructure to improve safety, convenience and operational efficiency for all modes by strengthening connectivity and access for trips to, through and within the Lloyd District, and by creating special places for workers, residents, neighbors, shoppers and visitors.

2. **Active transportation.** Encourage walking, bicycling and using transit as a way to increase transportation access and choice, enhance livability and reduce the per capita carbon footprint in the district.

3. **Transportation Demand Management.** Foster the development of business and property owner-supported programs, incentives and activities that encourage employees and residents to use active transportation and non-single occupant vehicle modes.

4. **Transit**. Strengthen the role of transit in the Lloyd District by working with TriMet to increase the frequency, reliability and safety of the light rail, bus and streetcar services.

5. **Parking.**

    a. **Off-Street.** Strengthen the role of parking management to leverage high-density mixed-use development, enhance livability and reduce reliance on single occupancy automobile trips, while supporting development of more parking options for retail-focused streets.

b. On-Street. Preserve and enhance on-street parking assets to support ground floor commercial, retail and service based business.

6. **Streetscape.** Improve the pedestrian experience by integrating high-density mixed uses, urban greenery, and pedestrian amenities into the Lloyd District's streetscape.

7. **Connectivity**. Increase the number of connections across barriers in the district, including major arterials, large blocks, freeways, rail lines, and natural features, and with adjacent neighborhoods.

8. Transportation System Management. Manage access and circulation to reduce traffic speeds and provide for safe crossings, while balancing the need for vehicle and freight access to and within the Lloyd District.

9. **Regional Attractions.** Provide access and circulation to and from the Lloyd District that attracts and supports regional development, shopping and tourism. Promote the use of transit to access the area, including light rail, streetcar, bus, and a potential water taxi service.

2035 Performance Target: Mode Split

70 percent of commute trips to and from the district are by non-single occupancy vehicles (transit, walking, bicycling and carpooling).

Current Conditions
The current Lloyd District mode split is approximately 44 percent by non-single occupancy vehicle (SOV) for the district. Members of the Lloyd TMA have an improved mode split of 60% non-SOV.

Implementation Actions: Lloyd District – Transportation

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR1	Explore ways to adopt the Street and Development Character concept, including three street types: retail/commercial, boulevard and flexible/pathways. This may include updates to the Transportation System Plan Street Design Classifications.	X				**PBOT**
TR2*	Develop and revise parking management strategies.		X			**PBOT**, TMA, Private
TR3	Update the *Lloyd District Standard Plans and Details within the Right-of-Way* document to implement the Street and Development Character and Green Systems concepts for the district.		X			**PBOT**, BPS, BES, PPR/UF

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR4	Study and install additional signalized pedestrian crossings, on-street parking, and reduced speed traffic progression on Martin Luther King, Jr. Blvd. and Grand Avenue.		X			**PBOT**
TR5	Implement streetscape and circulation changes for Multnomah Street to facilitate a "retail/commercial street" environment.		X			**TMA**, PBOT
TR6	Review the 1996 *Broadway-Weidler Corridor Plan* to identify any needed updates to implement the N/NE Quadrant planning process. Implement the plan emphasizing pedestrian safety projects, installation of traffic signals and maintenance of parking supply.		X			**PBOT**
TR7	Install electric vehicle charging stations in the Lloyd District.		X			**PBOT**, PDC
TR8*	Implement the I-5 Broadway/Weidler Interchange Plan improvements.			X		**ODOT**, PBOT
TR9*	Implement a 7th Ave pedestrian/bike bridge over I-84 connecting to either 7th or 8th in the Central Eastside.			X		**PBOT**, ODOT
TR10*	Develop a strategy for the Clackamas Flexible Street and private development extending from the Rose Quarter to NE 9th Avenue via a new pedestrian/bicycle bridge over I-5.			X		**PBOT**, BPS, PDC, ODOT, EcoDistrict, Private
TR11	Complete the Sullivan's Gulch Trail Concept Plan and implement its recommendations.			X		**PPR**, PBOT, ODOT, UPRR, Private
TR12	Study the feasibility of adding a new light rail station on the Yellow line near Dixon to serve the N Broadway area and PPS Blanchard site.			X		**TriMet**, PBOT, BPS

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR13*	Confirm the benefits and feasibility of straightening the "s-curve" in the Union Pacific rail tracks for freight and passenger rail operations. Options pursued should prioritize maintaining the development potential of the "Thunderbird" site. See related action UD8.			X		**ODOT**, UPRR, Private, BPS
TR14*	Work with TriMet to improve the Steel Bridgehead and Rose Quarter Transit Center area to improve transit, local circulation, access to the Eastbank Esplande, and development opportunities			X		**TriMet**, TMA, PBOT, BPS, , Private
TR15	Explore water transportation options, including a Willamette River water taxi, and investigate the feasibility of a landing in the Lloyd District. Such a landing should include a safe and direct pedestrian connection to the Convention Center and the Rose Quarter.			X		**OHWR**, PBOT, BPS, PPR, Private
TR16	Expand the Central City wayfinding system in the Lloyd District to include river destinations and other local and regional attractions, as opportunities arise to add or replace signage.				X	**OHWR**, PBOT, PPR, Private
TR17	Continue City of Portland partnership with the Lloyd Transportation Management Association (TMA) to encourage workers and residents to use transit and active transportation modes.				X	**PBOT**, TMA
TR18	Complete the North Portland Greenway Feasibility Study and use the information to inform the River Plan / Central Reach (the update of the Willamette Greenway Plan).	X				**PPR**, PBOT, BPS, Private
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Urban Design

These policies and actions will enable the Lloyd District to offer a set of unique, human-scaled urban experiences different compared to the west side of the Central City. The area features a series of existing places with established character that will be strengthened around a revitalized and redeveloped Central Lloyd area. The Central Lloyd area will include more high-rise office buildings and a new, high-density residential district, organized around a signature system of linked open spaces and supported by a network of diverse streets. The high-quality transit service in the area provides an opportunity to shift the Lloyd District from a focus on auto access and auto-oriented uses, to a more pedestrian-oriented development pattern and streetscape.

The large blocks in the Lloyd District are part of a distinctive urban pattern that allows for larger buildings and unique public spaces including courtyards, plazas and parks. These open spaces will be linked by a system of pathways, multi-use trails and quiet streets that are enhanced with vegetation and together create a set of lower stress and quieter routes, and an alternative to the busy arterials through the district. New low stress connections across freeways to the west and south will strengthen connections to the rejuvenated Rose Quarter, the PPS Blanchard site, the Willamette River and the Central Eastside. A desire for better access and connections to the river were expressed throughout the planning process. Connections to the river can be achieved visually, through views or a trail along the river, or physically through direct access via a trail, steps or dock. Both types of access are desired, however direct access will be difficult due to limited availability of riverfront property and the location of the Union Pacific train tracks along the river bank. There are only two riverfront sites in the Lloyd District. The Dreyfus grain terminal is a long-established industrial business that is expected to continue operation for the foreseeable future. Opportunities for open space and potentially river access may exist on the vacant “Thunderbird” site. See additional discussion of the Thunderbird site under Lloyd actions UD8 and TR13.

The Lloyd District includes a number of entry points or “gateway” locations, such as the Broadway and Steel Bridgeheads, the Lloyd Center station area and the crossroads intersection of MLK/Grand and Broadway/Weidler. These gateways will be reinforced by buildings that are taller than the surrounding context, emphasizing the civic significance of these places. At its edges, the scale of new development in the Lloyd District will provide a transition to established lower density neighborhoods and historic districts by providing a “step down” to adjacent neighborhoods and by considering the form and pattern of existing development in the review of new development proposals.

Policies

1. **Diverse and Distinctive Urban Places**. Focus more intense development in the Central Lloyd area and Rose Quarter while enriching the entire district through strengthening the distinct character of the existing Lloyd District subareas.

2. **Better Connected District**

    a. **More Seamless Connections.** Improve the character of connections across transportation barriers in the district - freeways, major arterials and *rail* facilities.

    b. **Variety in Street Character.** Expand the diversity of street character in the Lloyd district, distinguishing three major types: retail/commercial, boulevard and flexible/pathways.

3. **Large Blocks.** Take advantage of the unique opportunity for dense, large site development made possible by the large blocks found in the Lloyd District. Integrate this development into the surrounding blocks through well designed internal green spaces and pedestrian connections.

4. **Open Space.** Develop a signature sequence of open spaces, linked through a wayfinding system, that serve the Central Lloyd area, becomes a primary organizing structure for new development, and offers a diversity of character, experiences, and recreational functions for district residents, workers and visitors.

5. **Riverfront Development.** Encourage development along the Willamette River that activates the riverfront, better connects the riverfront to the rest of the district and surrounding neighborhoods, improves visual and physical access to the river, and enhances natural resources.

6. **Pedestrian-Oriented Development.** Discourage new automobile-oriented uses and encourage the eventual redevelopment of drive-throughs and large surface parking lots with development that is oriented to the street and enhances the pedestrian environment.

7. **Transition to Adjacent Neighborhoods.** Provide sensitive transitions in the scale and pattern of development between higher density development encouraged in the Lloyd District and adjacent lower density neighborhoods and historic districts.

2035 Performance Target: Active Street Edges

40% of all street frontages within the Lloyd District are occupied by buildings oriented to the street, measured by the amount of retail storefront and partial fenestration (windows and doors) facing the street.

One-third (33%) of the retail/commercial street frontages are occupied by retail storefronts.

Current Conditions

Table 3: Central City Groundfloor Edge Conditions (2011 estimate based on BPS inventory)

	Lloyd District	River District	Downtown
% all street frontage with buildings oriented to street*	22%	51%	55%
% retail/commercial street frontage with retail storefront	Average: 18% Range: 8%-30%	Data not available	Data not available

* Measured by linear feet of retail storefront and partial fenestration (windows and doors) facing the street.

Map 4: Ground Floor Street Edge Conditions

Implementation Actions: Lloyd District – Urban Design						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD1	Update Title 33 Zoning Code development regulations and maps to implement the district concept. Potential regulations to be amended include: heights, active ground floor building uses, required building lines, drive-through limitations, and auto access restrictions related to street car.	X				**BPS**
UD2*	Revise height regulations along Broadway on the Eliot and Irvington neighorhood edges to provide a step down from taller heights allowed in the rest of the Lloyd District.	X				**BPS**
UD3	Develop regulatory tools to encourage the provision of open space, including public open space, publicly-accessible private open space on large blocks, and multifunctional private courtyard spaces with new high density residential development. Possible tools include: height/FAR bonus incentives, superblock regulations, and master plan requirements.	X				**BPS**, BDS, PPR
UD4	Evaluate existing view designations and potential new view designations in the Lloyd District as part of a Central City-wide analysis of scenic resources. Existing Lloyd District view corridors to be examined for potential changes include the views of downtown from the 12th Ave bridge and from Lillis Albina park.	X				**BPS**
UD5	Develop a strategy to acquire, masterplan, build and improve public parks, plazas and open spaces consistent with the district concept diagram and policies. Seek to time the development of the signature open space system on or near Clackamas concurrent with significant residential development in the district.		X			**PPR**, BPS, PDC

Implementation Actions: Lloyd District – Urban Design						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD6*	Update the Lloyd District's 1991 design guidelines: *Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan* to reflect the district concept.		X			**BPS**, BDS, BES, PBOT, PDC
UD7	Create and promote a strategy to activate public open space, rights-of-way and surface parking lots during off hours to bring in new people, interests and energy to the district.		X			**LDCA**, EcoDistrict, TMA, Private, PPR, PBOT, BPS, PDC
UD8*	Work with the property owner/developer of the "Thunderbird" site to craft a development agreement that incorporates public open space and the greenway trail on the riverfront. See related action TR13.		X			**PPR**,, BPS, OHWR, ODOT, Private
UD9	Enhance the pedestrian and cycling environment under the I-5 Freeway at NE Multnomah and Holladay Streets.			X		**PBOT**, TriMet, ODOT, TMA
UD10	Recommend that the existing 75' height limit between NE Schuyler and NE Hancock and NE 7th and NE 16th in the Irvington Historic District be reduced to 45' as part of the Comprehensive Plan update process. The height limit change is in response to the creation of the Irvington Historic District in 2010 and the policy need to retain multi-family housing potential in this corridor.		X			**BPS**
UD11	Work with property owners and developers to further the development of NE 7th and NE Multnomah as district retail/commercial streets.				X	**BPS**, PDC
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Environment (title under discussion)

The combination of significant potential for new development, extensive transit, pedestrian and bicycle networks and the formation of the Lloyd EcoDistrict presents a unique opportunity to dramatically improve environmental conditions within the Lloyd District and help meet Portland's broader sustainability goals. This plan capitalizes on that potential by promoting district-wide sustainability strategies that result in significant improvements in the environmental performance of the district. The plan calls for green buildings, green infrastructure and sustainable design to be integrated with new development in order to improve air quality, water quality, watershed health, habitat, resource conservation, climate and livability.

A key component to realizing the goals for improving environmental conditions in the district will be to better use space within public rights-of-way for sustainable stormwater strategies and increased tree canopy that absorb and clean water, provide habitat for birds and pollinators, and provide shade. Boulevards, flexible streets and water quality/tree canopy corridors have been identified to provide this function. Opportunities to enhance existing natural resources and improve habitat have also been identified within Sullivan's Gulch and along the Willamette River bank. Individual projects are also encouraged to incorporate green features, such as ecoroofs and energy efficiency. More detailed policies and implementation tools related to the Willamette River and Sullivan's Gulch will be developed in the next phase of CC2035 process that includes the update of the Willamette Greenway Plan and analysis of central city natural resource protection options (see Lloyd actions GC1 and GC2).

This plan embraces the formation of the Lloyd Eco-District and supports its goals for restorative development that improves environmental conditions, a connected district, and to be climate positive. To this end, the district concept is considered a starting place that will be refined and added to as the EcoDistrict priorities are developed in the coming years.

While this policy area primarily focuses on integrating green features into development, it should be noted that the built form envisioned for the district - high density, mixed-use development that is well served by transit and facilities for biking and walking - will also make a significant contribution to sustainability goals. This will encourage the use of active transportation modes, thereby reducing emissions and energy use and increasing the efficiency of urban services.

Policies

1. **Sustainable District.** Promote innovation and leadership in the Lloyd District in the areas of sustainable and restorative development, energy efficiency, water conservation, waste reduction and climate change resiliency. Support partnerships that facilitate district-wide strategies.

2. **Green Infrastructure and Tree Canopy**. Increase tree canopy and the use of vegetated stormwater facilities in Lloyd District rights-of-way particularly on designated "boulevards", "flexible streets" and "tree canopy/water quality corridors". Encourage the use of green elements and habitat-friendly design on development sites, including ecoroofs and other vegetated stormwater approaches, roof gardens, landscaped setbacks and courtyards, living walls, and native vegetation.

3. **Green Buildings and Energy**. Encourage the development of high performance buildings, renewable energy systems, district energy, and energy retrofits that reduce greenhouse gas emissions.

4. **Willamette River Resources.** Protect and enhance natural resources along the banks of the Willamette River to prevent erosion and improve habitat functions and connectivity, while also meeting Citywide goals and policies regarding recreation, views, access to the river, and riverfront development.

5. **Sullivan's Gulch.** Protect and enhance natural resources within Sullivan's Gulch to improve its function as a habitat corridor, reduce the risk of wildfire and landslide, and maintain and enhance views, while providing flexibility to incorporate a recreation trail.

2035 Performance Target: Tree Canopy

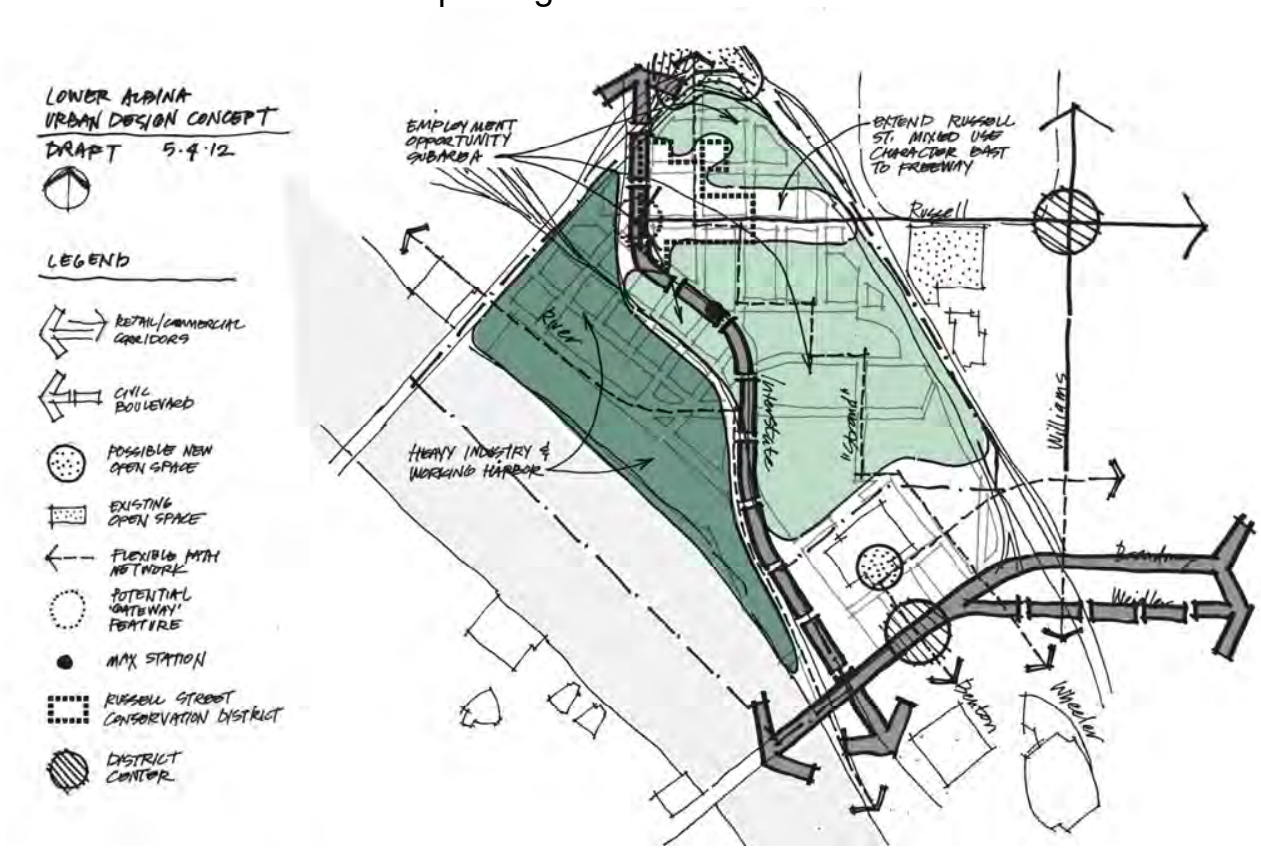
Plant or preserve trees within the Lloyd District sufficient to achieve 15 percent canopy coverage once the trees mature.

Current Conditions
The current tree canopy coverage in the Lloyd District is 10 percent. To achieve 15 percent coverage, approximately 19 additional acres of canopy would need to be added through tree planting and growth of existing trees.

Implementation Actions: Lloyd District – Environment

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC1*	Evaluate natural resource protection and management options for Sullivan's Gulch and the Willamette River bank as part of the Central City-wide natural resource analysis.	X				**BPS**, BES, OHWR
GC2	Update the Willamette Greenway Plan for the Lloyd District as part of the River Plan / Central Reach process, building on concepts outlined in the N/NE Quadrant Plan and the North Portland Greenway Feasibility Study. The update will address habitat, restoration sites, design guidelines, trails and access, and river dependent and river related development. Restoration sites could include the area of shallow water near the I-5/I-84 interchange and the riverbank below the "Thunderbird" site.	X				**BPS**, BES, OHWR, PPR, PDC, Federal, State and Regional agencies, UPRR, Private

Implementation Actions: Lloyd District – Environment						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC3	Explore approaches to improve the environmental performance of the district. Possible tools include incentives for green infrastructure, energy retrofits, high performance new construction, renewable energy systems, and connections to district energy.		X			**BPS**, BDS, BES, EcoDistrict
GC4	Investigate opportunities for serving the PPS Blanchard site with district energy.		X			**PDC**, BPS, PPS
GC5	Design and implement a water quality/tree canopy corridor project within the Lloyd District.			X		**BES**, PBOT, BPS, PPR/UF, PDC, OHWR
GC6	Develop and implement a street tree planting strategy for the Lloyd District.			X		**PPR/UF**, BES, BPS, PBOT, Private
GC7	Identify and improve underutilized space within public rights-of-way (e.g. along I-5, I-84, Interstate Ave) to increase tree canopy, habitat value and stormwater function.			X		**BES**, PBOT, PPR/UF, ODOT
GC8	Develop a management strategy addressing multiple objectives for the Sullivan's Gulch natural resource area, including re-vegetation, trail development, environmental education, and maintenance.		X			**BES**, PBOT, PPR, OHWR, BPS, ODOT, Private
GC9	Continue to support the Lloyd EcoDistrict work program.				X	**EcoDistrict**, City
GC10	Coordinate capital improvements and "green systems" planning with the work of the Lloyd EcoDistrict.				X	**City**, EcoDistrict
GC11*	Design infrastructure, such as the proposed Clackamas I-5 overcrossing and street improvements to accommodate district energy infrastructure where appropriate.				X	**PBOT**, ODOT, PDC



Implementation Actions: Lloyd District – Environment						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC12	Use green infrastructure measures to improve the water quality of stormwater discharged to the Willamette River and to reduce the risk of sewer backups into basements.				X	**BES**, PBOT, Private
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Lower Albina

District Goal

Strengthen Lower Albina as an industrial and employment area by reinforcing the working harbor and providing for diverse employment and development opportunities. Enliven historic Russell Street with mixed-use and commercial activities that are compatible with industrial and employment uses.

Lower Albina District Concept Diagram

Key Elements of the Concept

Russell Street Mixed Use Area: This area includes the existing commercial node within the Russell Street Conservation District and suggests an expansion of retail and commercial uses to the east, reestablishing the historic connection between Lower Albina and the Vancouver/Williams corridor.

Employment Opportunity Subarea: This area remains industrial, but has additional flexibility for commercial uses as a means of increasing employment density. Commercial uses are restricted to those that are less service oriented and therefore are compatible with industrial businesses.

Heavy Industry and Working Harbor: This area is regionally significant industrial land and remains a heavy industrial area and working harbor.

Street and Development Character: The character and function of three main street types shown in the concept diagram are described below. A more detailed description of the street types is provided

in a separate report, N/NE Quadrant Plan: Street and Development Character Concept (2/1/12 Draft).

- **Retail/Commercial Corridors**. These corridors are generally busy streets with high visibility for motor vehicles, transit, bikes and pedestrians. They should generally have consistent ground level retail storefronts. In Lower Albina, Russell Street is designated a "neighborhood" retail/commercial street because of its smaller scale. Russell Street connects with the Williams retail/commercial street at the historic neighborhood center at the intersection of Russell and Williams.

- **Boulevards**. These corridors are often busy streets that offer a more landscaped, green character, with fewer retail storefronts than the retail/commercial type. In Lower Albina, Interstate Avenue is designated as a "civic" boulevard because it makes connections to North Portland.

- **Flexible Network**. These streets and spaces make up a system of local, primarily pedestrian connections through the district that offer quieter, "low-stress" experiences distinctly different from the busier streets serving the area. In Lower Albina, "the Strand" is designated as a flexible street connection that meanders through the district. The greenway trail would also path through the district.

Gateway: These areas designate a point of transition into or out of the district. The specific experience is determined by the character of the location, and could be enhanced by public sector improvements, private development design approaches and/or a combination of both. In Lower Albina, a gateway is designated at the intersection of Interstate and Russell.

District Policies and Implementation Actions

Regional Center: Industrial and Employment Sanctuary

Lower Albina plays a key role in the Central City and the region as a center of industrial employment. It serves as a critical incubator for emerging and innovative businesses and provides an important living-wage job base near inner North and Northeast neighborhoods. The district's mix of industrial businesses, working waterfront and multimodal freight facilities are complemented by a small mixed-use commercial area along lower Russell Street, where retail activity is especially active at night.

The policies and action items in this plan are intended to build on the strength of the district's existing industrial fabric and provide additional flexibility for commercial uses that are compatible with industrial businesses and increase employment density. Housing is currently allowed within the Russell Street Conservation District, which is zoned for mixed use. The plan proposes to extend the mixed use zoning east on Russell, however new housing will not be allowed in that area.

Policies

1. **Working Harbor.** Protect the Lower Albina working harbor and support river-dependant uses.

2. **Industry and Employment**. Increase economic opportunities, living-wage jobs and employment density by preserving existing industrial land uses and diversifying the range of employment activities allowed in the area east of the Union Pacific railroad and near the MAX station.

3. **Incubator**. Support existing businesses and foster the district as an industrial and employment incubator.

4. **District Vitality.** Support the urban vibrancy of Russell Street and its unique blend of working daytime industrial activity with compatible nighttime restaurant and entertainment activity.

2035 Performance Target: Jobs

Add 1,000 new jobs within Lower Albina.

Current Conditions
Based on a 2010 estimate, there are approximately 2,000 existing jobs in Lower Albina (with revised district boundary, see Action RC1). The addition of 1,000 new jobs would result in a total of 3,000 jobs. This would require a 50% growth in jobs over 25 years.

Implementation Actions: Lower Albina – Regional Center: Economy and Innovation

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
RC1*	Adjust the Lower Albina subdistrict boundary to exclude the PPS Blanchard site and adjacent properties to the south and east, placing them within the Lloyd District.	X				**BPS**
RC2*	Rezone properties east of the Russell St. Conservation District fronting Russell Street from IG1d to EXd. Set max FAR at 3:1 and maximum height at 50'. Prohibit housing in this area.	X				**BPS**
RC3*	Apply zoning provisions to IG1-zoned properties east of the Union Pacific railroad alignment that allow certain compatible office-like uses, similar to the Employment Opportunity Subarea regulations in the Central Eastside. [Note: this action is still under discussion with stakeholders.]	X				**BPS**
RC4	Identify potential brownfield sites and identify clean-up and redevelopment strategies to bring them back into economic use.		X			**BPS**, PDC, BES, Private
RC5	Assist small businesses and property owners through storefront grants, Development Opportunity Services grants, loans for tenant improvements, start-up and equipment, and other programs.				X	**PDC**

*Additional details for selected action items are included in Appendix B, Implementation Action Details.

Transportation

Lower Albina is located at the southern end of the North Willamette River working harbor area, the northern end of the Central City, and adjacent to historic streetcar neighborhoods. As a predominately industrial area, freight movement associated with the working harbor, freight railroad, and trucks are essential for the economic vitality of this district, City and region. Its location within the Central City also provides for transit, bicycle and walking facilities for workers, shoppers, and visitors to the district. To sustain the vitality of Lower Albina, maintenance and continued improvement of the multi-modal transportation system will be important.

Policies

1. **Freight System**. Prioritize freight movement and access while maintaining and improving the safety, efficiency and convenience of the transportation system for all modes.

2. **Multi-Modal Connectivity**. Improve connectivity through the district and strengthen connections to adjacent districts, including the Rose Quarter, the Vancouver/Williams Corridor and Mississippi Avenue. Improve pedestrian connections to Interstate MAX and bus service to enhance access to employment opportunities in the area.

3. **Rail and Marine**. Preserve rail and inter-modal access to the Albina Rail Yards, marine freight facilities and local industries.

4. **Freeway Access**. Maintain or improve access from industrial areas to the regional freeway system.

5. **Strategic Investments.** Encourage business creation, growth, and innovation through strategic public and private partnership investments in multi-modal transportation and parking infrastructure.

2035 Performance Target: Mode Split

40 percent of commute trips to and from Lower Albina are by non-single occupancy vehicles (transit, walking, bicycling and carpooling).

Current Conditions
The current Lower Albina mode split is approximately 18 percent by non-single occupancy vehicle (SOV) for the district.

Implementation Actions: Lower Albina – Transportation

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR1	Explore ways to adopt the Street and Development Character concept, including three street types: retail/commercial, boulevard and flexible/pathways. This may include updates to the Transportation System Plan Street Design Classifications.	X				**PBOT**, BPS

Implementation Actions: Lower Albina – Transportation						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR2	Complete the North Portland Greenway Feasibility Study and use the information to inform the revision of the River Plan North Reach (the update of the Willamette Greenway Plan). Implementation of the trail in some areas will rely on the ability to acquire agreements by private property owners.			X		**PPR**, PBOT, BPS
TR3	Study options for the Larrabee Street ramp that would preserve auto, bicycle and freight access while accommodating the Greenway Trail and pedestrian and bicycle access to the district and river.		X			**PBOT**, PPR
TR4*	Develop a street design plan for the "the Strand" and alternative routes to provide a lower stress connection between N. Russell Street and the Rose Quarter.		X			**PBOT**, BPS
TR5	Rebuild N River Street from the Tillamook overpass to Essex Street.			X		**PBOT**
TR6	Study the need for pedestrian improvements to facilitate employee access to transit on Russell, Interstate and Broadway/Weidler.			X		**PBOT**, TriMet
TR7	Enhance and maintain streets in working condition to facilitate access and circulation in the district.				X	**PBOT**
TR8*	Implement the I-5 Broadway/Weidler Interchange Plan Improvements, including the proposed Hancock overcrossing, to improve regional and local freight access.			X		**ODOT**, PBOT
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Urban Design

Lower Albina has a rich and varied fabric of largely industrial and employment buildings, with the exception of retail and commercial uses largely clustered within the Russell Street Conservation District. As the character of Lower Albina is not expected to change dramatically, these policies and actions are intended to strengthen its existing urban forms and patterns and offer guidance for the integration of new development that is sensitive to this significant industrial area. To that end, policies focus on preserving the existing industrial character of the majority of the Lower Albina area, enhancing the unique character of the Russell Street area and preserving historic buildings in the district in general.

Actions also call for repurposing, reconfiguring and improving the appearance of spaces underneath and adjacent to freeways and ramps to the north and east to offer an expanded range of recreational opportunities and a more attractive set of connections between employment centers and mixed use neighborhoods, in addition to enhancing the district's function as a "gateway" into the Central City from North Portland. Multi-modal connectivity would also be enhanced with "the Strand", a lower stress connection and wayfinding system between the Russell Street commercial area and the Rose Quarter. See Transportation action TR4 for more information on the Strand.

Policies

1. **Historic and Cultural Resources**. Preserve, rehabilitate and celebrate historic structures in Lower Albina, including those in the Russell Street Conservation District and culturally significant African-American resources identified in the Cornerstones of Community inventory.

2. **Russell Street**. Strengthen the character of Russell Street and reestablish the historic connection between Lower Albina and the Vancouver/Williams Corridor by encouraging new mixed uses, rehabilitated buildings and a nighttime orientation.

3. **Industrial Character**. Preserve and enhance the industrial character and functionality of the Lower Albina industrial area.

Implementation Actions: Lower Albina – Urban Design

#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD1*	Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.		X			**AHC**, BPS
UD2*	Improve the design review approval criteria used for development proposals within the Russell Street Conservation District and design overlay zone within Lower Albina.		X			**BPS**, BDS

Implementation Actions: Lower Albina – Urban Design						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD3	Improve the character and activate the area under the Fremont Bridge ramps. Consider active recreation, public art, sustainable landscaping and stormwater management, and improved parking facilities.			X		**City**, ODOT
UD4	Improve the character of N Russell under the I-5 freeway. Consider lighting improvements, public art, sustainable landscaping and stormwater management, and screening of adjacent publically-owned storage yards.			X		**PBOT**, , ODOT
UD5*	Encourage and assist Lower Albina property owners to nominate their historic properties for designation as landmarks.				X	**BPS**, AHC, SHPO, Eliot NA
UD6	Improve the appearance of publically-owned storage yards located under and adjacent to the I-5 and I-405 freeways.		X			**PBOT**, ODOT
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Environment (title under discussion)

The Central City 2035 Concept Plan calls for increasing energy efficiency, enhancing natural resources and habitat, improving air and water quality and expanding the use of green infrastructure central-city wide. While the Lower Albina area will continue to be a primarily industrial district, there are opportunities for achieving these goals through incremental improvements to the riverbank, adding green infrastructure to rights-of-way where they don't conflict with industrial operations, and encouraging the use of sustainable design in new development or remodels. Increasing green building and infrastructure could also contribute to business development by making the area more attractive to tenants and employees.

Policies

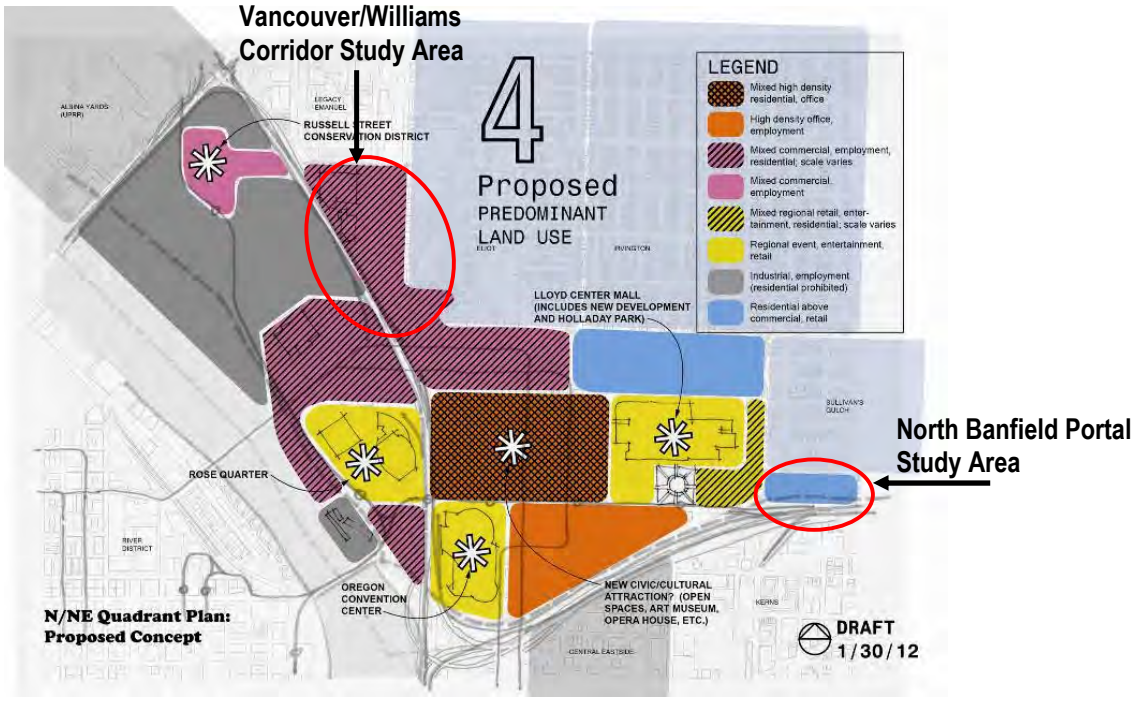
1. **Willamette River *Resources*.** Support the natural resource protection and enhancement objectives of the River Plan / North Reach, where they apply to Lower Albina.

2. **Sustainable Design**. Encourage sustainable design in public infrastructure and industrial buildings, including green roofs, stormwater management strategies, tree canopy, habitat-friendly design, energy efficiency improvements, and alternative energy generation.

2035 Performance Target: Tree Canopy

Plant or preserve trees within Lower Albina sufficient to achieve 10 percent canopy coverage once the trees mature.

Current Conditions
The current tree canopy coverage in Lower Albina is 6 percent. To achieve 10 percent coverage, approximately 7 additional acres of canopy would need to be added through tree planting and growth of existing trees.



Implementation Actions: Lower Albina – Environment						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC1	Update the Willamette Greenway Plan for Lower Albina, building on concepts from the North Portland Greenway Feasibility Study and provisions contained in the River Plan / North Reach, once a final court decision is made. The update will address habitat, mitigation sites, trails and access, and river dependent and river related development.	X				**BPS** BES, BDS, OHWR, PPR, PBOT, PDC, Federal, State and Regional agencies, Private

Implementation Actions: Lower Albina – Environment						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC2	Develop and implement a strategy to install trees and sustainable stormwater facilities to existing streets and underutilized space within rights-of-way (e.g. freeway ROW, Broadway bridgehead, west end of Russell Street). Ensure improvements do not compromise operations for industrial businesses.			X		**BES**, PPR/UF, PBOT, ODOT, Private
GC3	Explore approaches to improve the environmental performance of the industrial district. Possible tools include incentives for green infrastructure, energy retrofits, high performance new construction, renewable energy systems, and connections to district energy.			X		**BPS**, BDS, BES
GC4	Target outreach to industrial businesses regarding sustainable business practices.				X	**BPS**
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Study Areas

Two areas adjacent to the N/NE Quadrant are included in the plan's study area: the North Banfield Portal and the Vancouver/Williams Corridor. They are included because of the potential for land use and transportation proposals in the quadrant to affect them and because community members asked the Bureau of Planning and Sustainability to address long-identified land use and zoning issues in these areas.

Each study area has proposed action items intended to further objectives identified in the planning process, primarily zoning changes to encourage new development or support existing uses. However, these areas will remain outside of the Central City boundary and therefore no new policies are proposed.

North Banfield Portal

The North Banfield Portal is the eastern gateway to the Lloyd District, at the transition from the Central City's higher density commercial and residential development to lower density residential in the Sullivan's Gulch neighborhood.

Sullivan's Gulch provides valuable natural resources in central Portland where habitat areas are less common. Enhancement of the Gulch resources and development of the Sullivan's Gulch Trail will increase connectivity for both wildlife and pedestrians and bikes, connecting the Willamette River with areas to the east. New redevelopment opportunities along Multnomah will bring additional residents and new neighborhood-oriented commercial services to the area. The Sullivan's Gulch Trail offers a unique opportunity to enhance and strengthen transportation options in the Lloyd District and Sullivan's Gulch neighborhood by incorporating bike and pedestrian linkage to existing MAX, auto, bus, and streetcar options in the area.

The N/NE Quadrant Plan will increase flexibility and encourage neighborhood-serving mixed-use development, including housing, in this area by proposing a change in zoning. The current zoning is primarily residential (RH), with a small area of office zoning (CO1). The current zoning presents a potential obstacle to development because it is restrictive in use and it creates site planning challenges due to development standards that vary across the site.

Implementation Actions: North Banfield Portal

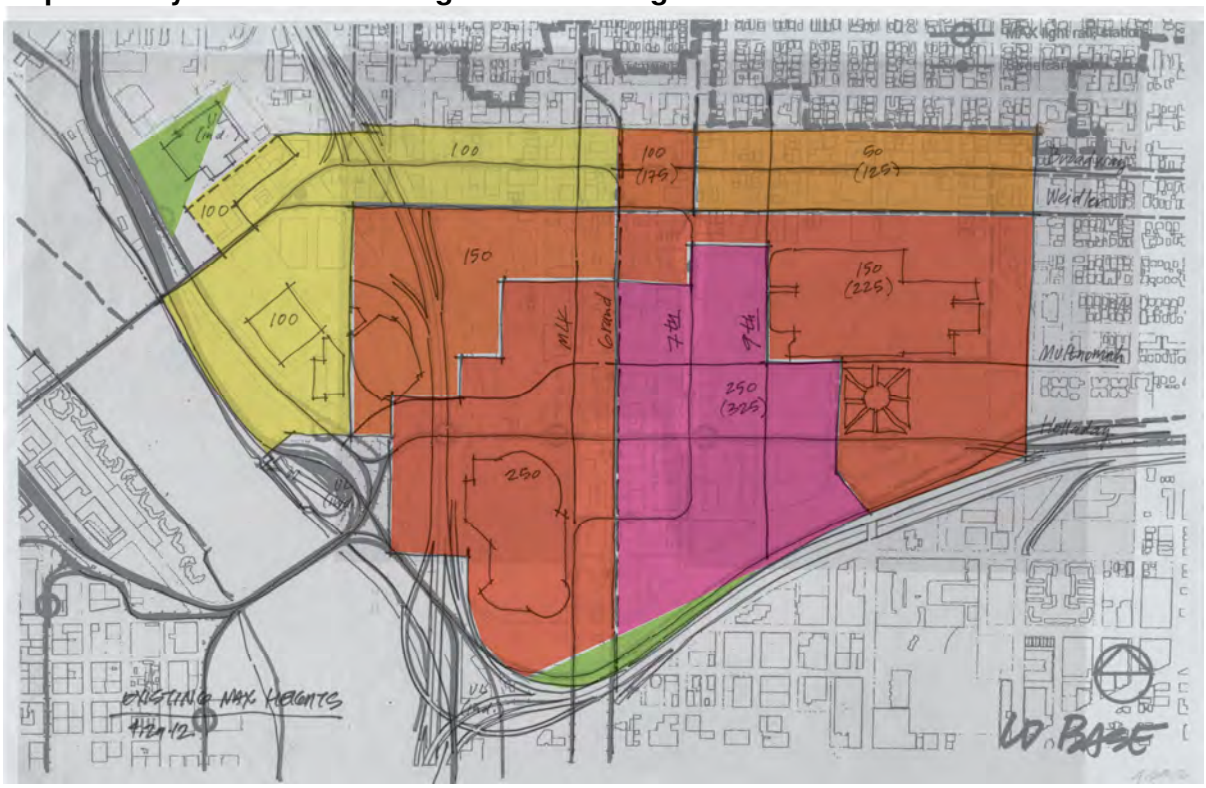
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 – 20 Years	Ongoing	
NB1*	Apply CXd zoning to the sites south of Multnomah St. and west of NE 21st Ave. Existing environmental conservation (c) overlay zoning will remain.	X				**BPS**
NB2*	Evaluate natural resource protection and management options for Sullivan's Gulch as part of the Central City-wide natural resource analysis.	X				**BPS**, BES
NB3	Complete the Sullivan's Gulch Trail Concept Plan and implement the trail connection through the area.			X		**PBOT**, PPR, , Private

*Additional details for selected action items are included in Appendix B, Implementation Action Details.

Vancouver/Williams Corridor

The Vancouver/Williams Corridor is in the Eliot neighborhood, a part of the Albina Community Plan area, adjacent to the Central City. This area is included in the N/NE Quadrant Plan study area because of its proximity to potential reconfigurations of nearby freeway over-crossings and long-standing concerns about an area of residential zoning, which contains non-conforming commercial uses and does not allow mixed-use development. It also contains a number of buildings identified in the Bosco-Milligan Foundation's Cornerstones of Community inventory of African-American cultural resources.

This area will remain outside of the Central City and no changes to existing Albina Community Plan policies that govern it are proposed. The primary proposed action is to rezone an area of existing high density residential zoning (RHd) to central employment (EXd). The EXd zoning allows a broad range of uses, including commercial, light industrial and residential uses, consistent with the current land uses in the area. This additional land use flexibility will support reinvestment and expansion of existing employment uses in the area, which are currently nonconforming uses. It will also support the rehabilitation of cultural resources by providing a broader range of uses allowed within existing buildings.



Implementation Actions: *Vancouver/Williams Corridor*						
#	Action	Timeline				Implementer (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
VW1*	Rezone portions of 4 blocks between I-5 and N Williams from RH to EXd.	X				**BPS**
VW2*	Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.		X			**AHC**, BPS,
VW3	Ensure that any reconfiguration of surface streets in conjunction with I-5 freeway improvements maintain and enhance connectivity of the surface street system between and within the N/NE Quadrant and the Eliot neighborhood and minimizes traffic impacts on the Eliot neighborhood.			X		**ODOT**, PBOT, BPS
*Additional details for selected action items are included in Appendix B, Implementation Action Details.

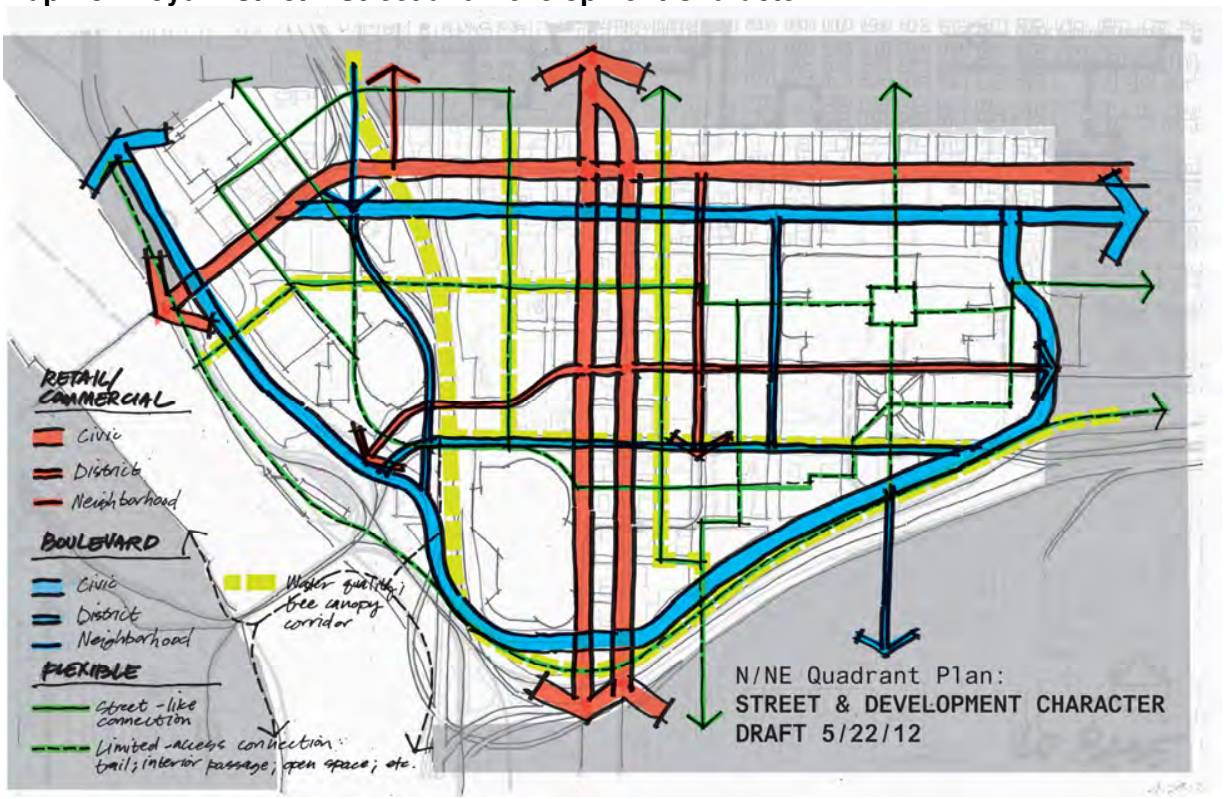
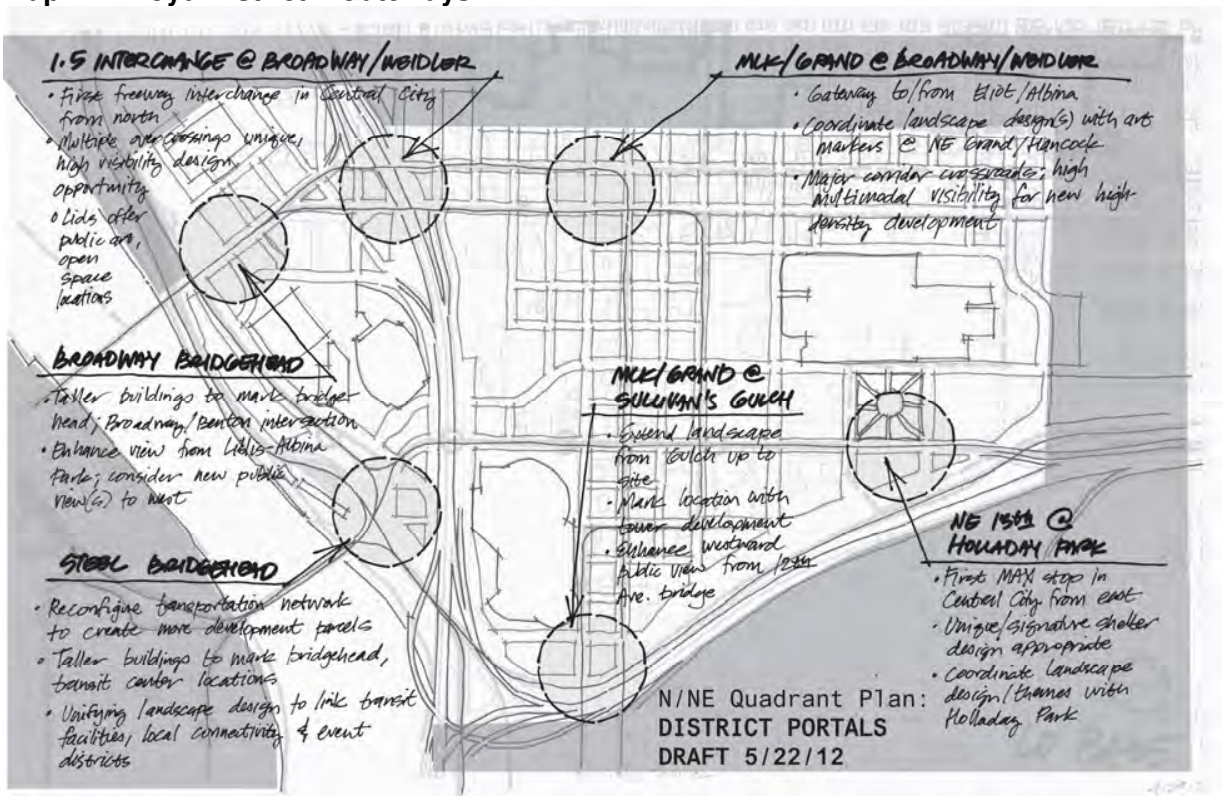


Map A2: Lloyd District - Proposed Maximum Heights

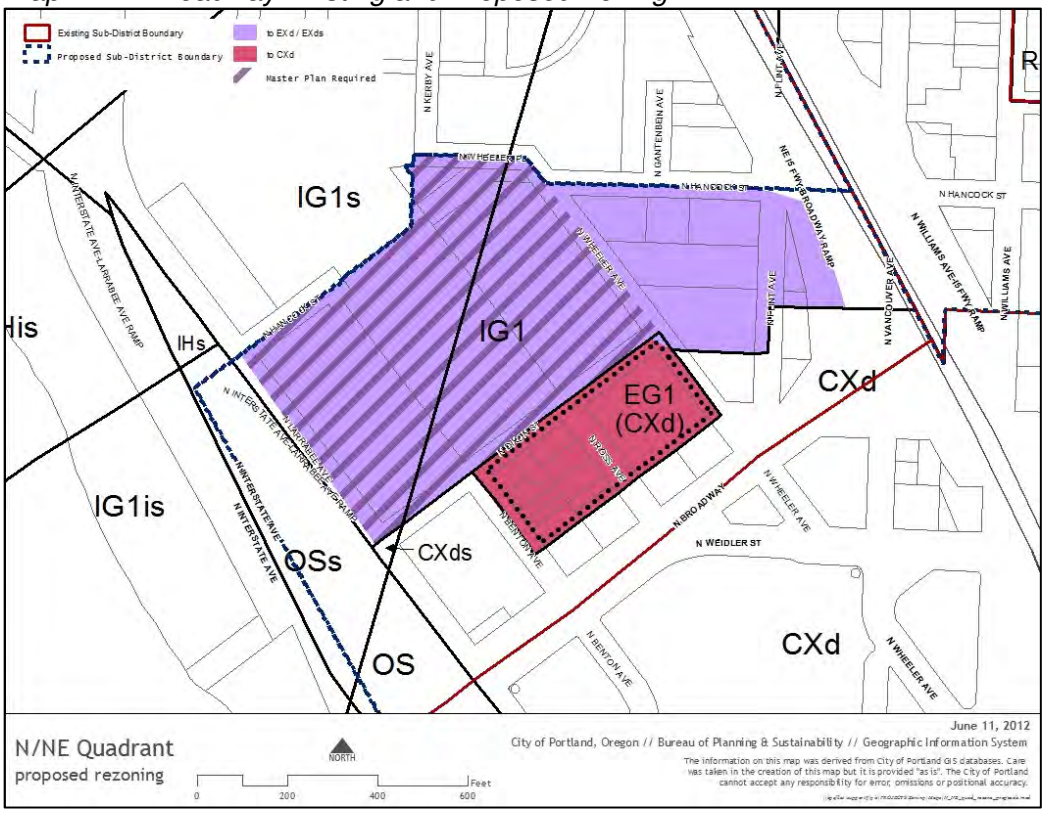


Note: Proposed maximum heights are inclusive of any potential bonuses.

Map A3: Lloyd District – Street and Development Character

Map A4: Lloyd District – Gateways

APPENDIX B: IMPLEMENTATION ACTION DETAILS



This appendix provides additional information about selected action items listed in the implementation action tables in Chapter 3, Goals, Policies and Implementation Actions. The information provided varies depending on the action item and includes background information, more in-depth descriptions of actions and their purpose and direction about next steps.

Lloyd District

RC1 Adjust the Lloyd District and Lower Albina boundaries to include the PPS Blanchard site and adjacent properties to the south and east within the Lloyd District.

This action along with Lloyd action RC2, recognizes the overall vision for a vibrant N Broadway area, linking the River District on the west side of the Willamette River with the Lloyd District. This proposed action would create sufficient depth north and south of Broadway to promote the economic revitalization envisioned in the *Rose Quarter District Plan* (2012). The Portland Public Schools Blanchard site, currently located within the Lower Albina industrial district, presents a significant redevelopment opportunity for activating the north side of Broadway consistent with the Lloyd District's mixed use character. The current office use of the Blanchard Building and desired future uses for the site are non-industrial in nature, and because the natural topographical transition from the area around N Broadway and the Rose Quarter happens at a steep bluff north of the Blanchard site, the boundary between the Lloyd District and Lower Albina should be adjusted as shown in Map B1: *N Broadway Existing and Proposed Zoning*. See Lloyd action RC2 for detailed information on the proposed zone change.

Map B1: N Broadway Existing and Proposed Zoning

RC2 Rezone the PPS Blanchard site and adjacent properties to the east from IG1 to EXd and CXd to encourage future redevelopment.

Background: Although one of its primary uses is office space, Portland Public Schools' (PPS) headquarters building, the Blanchard Educational Service Center is currently zoned for industrial use. The building is both structurally challenged due to deferred maintenance and functionally obsolete due to downsizing of headquarter functions by PPS. The school district has expressed interest in eventually moving to another location, which would open up the approximately 12 acre site for redevelopment. New development at the Blanchard site would complement proposed redevelopment in and adjacent to the Rose Quarter called for by the *Rose Quarter District Plan*. A zoning change for the Blanchard site and some adjacent parcels would be required to accommodate most redevelopment scenarios. Several development options for redevelopment of the area was explored in the *North of Broadway / Blanchard Site Development Study* (2010).

Existing Zoning: Map B2 shows the existing and proposed zoning for the site and Table B1 summarizes existing and proposed zoning provisions. The area contains 25 taxlots with approximately 12 acres.

Approximately 10 acres are zoned General Industrial (IG1). The IG1 zone is intended for industrial development, with sites that generally have smaller lots, a grid block pattern, high building coverages and buildings that are usually close to the street. The northwest portion of the site has a Scenic Resource (s) overlay accompanying a viewpoint from Lillis Albina Park, with a 50 foot height limit.

Approximately 2 acres are zoned General Employment 1 (EG1) with a comprehensive plan designation of CXd. This area has a 45 ft height limit and an FAR of 4:1. The EG zones allow a range of employment uses, emphasizing industrial uses and limiting office, retail and residential development. EG1 areas generally have smaller lots, a grid block pattern, high building coverages and buildings that are usually close to the street, similar to IG1.

The areas to the south and east of the Blanchard site have flexible commercial zoning (CXd) and are occupied by surface parking lots, a storage building and an apartment building. Areas to the north of the site are part of the Lower Albina subdistrict, and are zoned for industrial use with active industrial businesses in operation. A slope on the North side of the site helps form a natural transition between the Blanchard site and the industrial district to the North.

Proposed Zoning - Map B2 shows the existing and proposed zoning for the site and Table B2 summarizes existing and proposed zoning provisions. The area currently zoned General Industrial (IG1/IG1s) is proposed to change to Central Employment (EX), with a design overlay (d) and the continuation of the Scenic Resource overlay (s) on a portion of the area. The EXd zone is a flexible employment zone intended for mixed-use areas of the central city with industrial character. Light industrial, office, retail and residential uses are allowed. The proposed maximum height limit in the EXd area is 100' east of Wheeler and 150' west of Wheeler. The EXds area would continue to have a 50' maximum height to reflect the view of the west side from Lillis Albina Park.

Because of the large size and unique opportunity presented by redevelopment of the main Blanchard site, staff proposes to require a master plan process on the area shown on Map B1 as part of its redevelopment. This process will be developed prior to changing the zoning on the site. The master plan for this site will need to address the following issues:

a. public views over the site and from the site
b. future street network and traffic – for all modes
c. open space opportunities

d. sensitive transitions to industrial land uses to the north – particularly regarding siting of any residential uses to avoid nuisance issues
e. height, bulk and design of proposed structures

The master plan process would not be required for adjacent smaller parcels also included in this rezoning proposal as their small size limits the need to consider the issues above and beyond the normal land use and design review process.

Commercial zoning with a design overlay (CXd) and a height limit of 150' east of Ross and 250' west of Ross is proposed for the area currently zoned General Employment (EG1). The CXd zone is consistent with the city's existing Comprehensive Plan designation of this area and would allow a more flexible mix of uses than is currently allowed, including a wide variety of residential, commercial and institutional uses. The design overlay would require new development to go through a discretionary review process.

Table B1: Summary of N Broadway Existing and Recommended Zoning Provisions

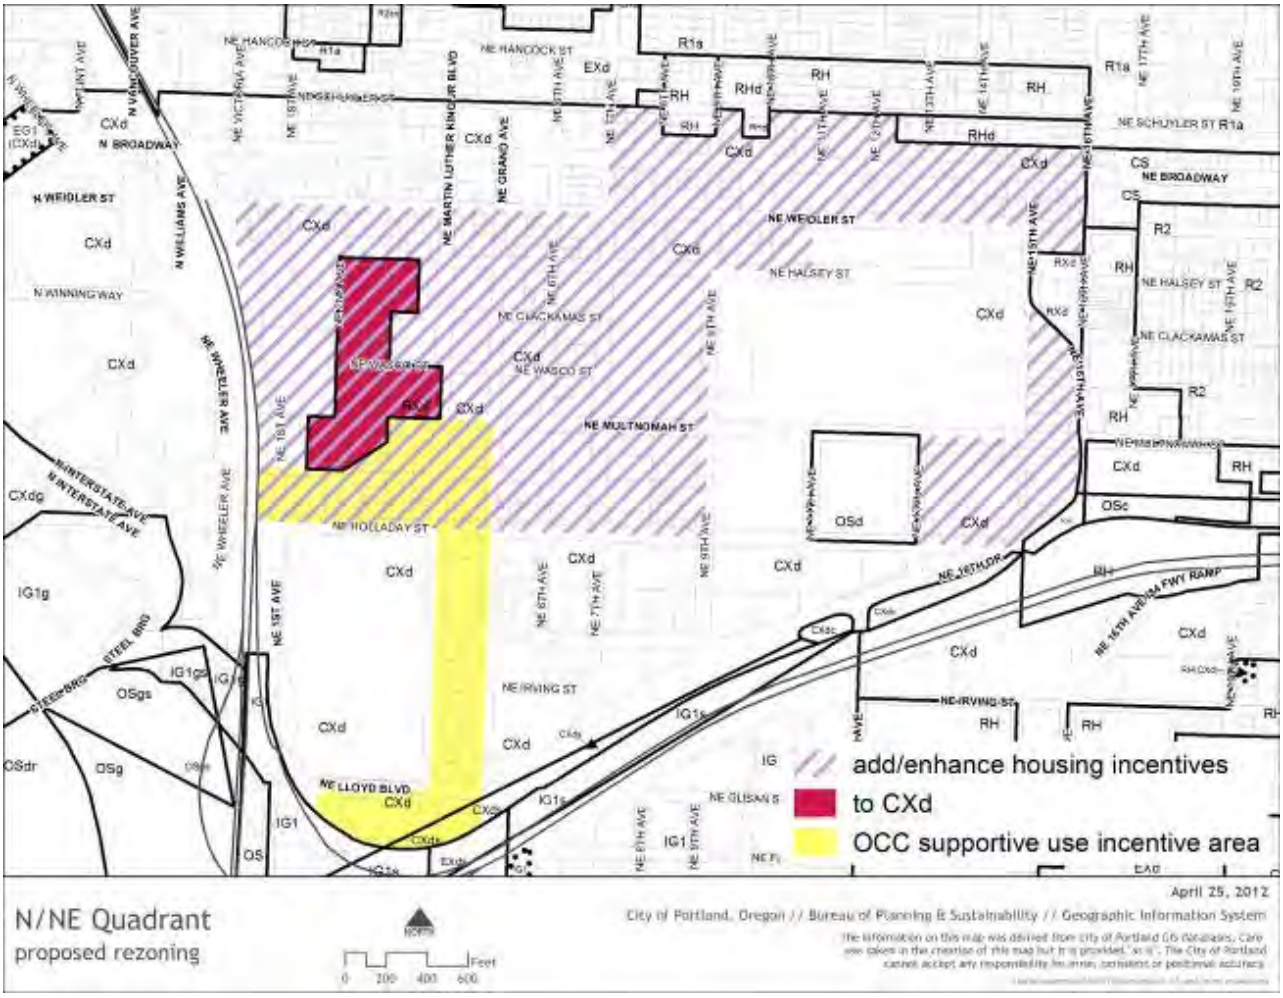
Provision	**Existing IG1**	**Existing EG1**	**Recommended CXd**	**Recommended EXd/EXds**
Land Uses	Primarily Industrial uses only.	Industrial, institutional and some commercial. Limitations on office, retail and residential.	Wide range of residential, office and retail allowed.	Wide range of residential, office, retail and industrial allowed.
Height limit	No limit	100'	100'-250'*	50'-150'*
FAR limit	No limit	4:1	4:1	3:1
Design overlay	No	No	Yes. Discretionary design review required.	Yes. Discretionary design review required.

* See proposed maximum height map in Appendix 1: *Additional Urban Design Diagrams*.

RC3 Adjust and increase maximum allowed heights to support high density development and encourage the provision of public amenities and desired uses in the following areas: Broadway Bridgehead, Riverfront ("Thunderbird" site) and Central Lloyd area.

Existing and proposed height maps are located in Appendix A: *Additional Urban Design Diagrams*. The heights shown on Map A2: *Proposed Maximum Heights* are maximums inclusive of any potential bonus height provisions. The specifics of the bonuses required to reach these maximums have not yet been developed but depending on location, they will emphasize providing housing, providing parks and open spaces, and providing Convention Center-supportive uses.

For related information see the following actions:



Central Lloyd – Lloyd actions RC4, HN1 and HN2
Riverfront – Lloyd action UD8

RC4 Adjust regulations and incentives to encourage new development that supports the Convention Center such as new or expanded hotel development, retail and other services on adjacent blocks.

There is a long-held desire to increase activity and vitality in the area surrounding the Oregon Convention Center. The *Lloyd District Development Strategy* (2001) and the *Development Vision for the Oregon Convention Center Blocks* (2006) both sought to create an exciting entertainment-oriented district on the blocks directly adjacent to the facility. This action calls for implementation of regulatory bonuses and incentives on these blocks that would encourage future development to incorporate entertainment-related uses to help realize this vision. See Map B2: *Central Lloyd Existing and Proposed Zoning* for the recommended area of implementation.

Desirable uses in this area include retail spaces (perhaps multi-story), restaurants and bars, entertainment and meeting venues, hotels and cultural facilities including galleries and museums. Prominent architecture, with significant night lighting and public art installations may also be encouraged in this area to enrich the pedestrian experience. Bonuses could be made available for additional building height (up to the proposed maximum heights) or additional floor area ratio (pending revision of the Central City's FAR bonus and transfer program). Other regulatory incentives should also be considered. See Appendix A: *Additional Urban Design Diagrams,* for existing and proposed maximum height maps.

Map B2: Central Lloyd Existing and Proposed Zoning

HN1 Develop regulatory tools to encourage housing development and the inclusion of affordable housing. Focus on housing emphasis areas.

The Lloyd District Goal includes an emphasis on developing a high-density mixed-use residential and employment district in the Central Lloyd, with sensitive transitions to the historic main street on NE Broadway and to the surrounding neighborhoods. To help achieve this goal, this action calls for refocusing available residential incentives (regulatory and financial) for both market rate and subsidized housing to apply in the areas shown on Map B2: *Central Lloyd Existing and Proposed Zoning*. Few, if any housing incentives or requirements would be provided outside the area illustrated on the map.

Potential incentives to encourage housing development include allowing additional building height (up to the maximums on the proposed height map) or additional floor area ratio (pending revision of the Central City's FAR bonus program). In certain areas where some housing is seen as essential, housing requirements may be applied – at least until a specified threshold of units have been built in the district. Changes to superblock regulations to encourage or require housing should also be explored.

HN2 Rezone the area of RXd zoning in Central Lloyd to CXd to provide flexibility and encourage investment. Apply housing incentives described in HN1 to this area.

This action implements the desire for a high-density mixed-use residential and employment district in the Central Lloyd by uniformly applying the flexible Central Commercial Zone with a Design Overlay (CXd) to the area show on Map B2: *Central Lloyd Existing and Proposed Zoning* and applying a variety of housing incentives as described in Lloyd action HN1. It is intended to increase land use flexibility and encourage investment in the district without losing sight of housing objectives. The majority of new housing development in the Central City since 1990 has been in CXd and EXd zoned-areas. For example, Pearl District is largely zoned EXd and Downtown and South Waterfront are largely CXd.

TR2 Develop and revise parking management strategies.

Parking policy is a key component of a successful high density urban area. In the Central City, parking policy serves many purposes. It includes managing the supply of parking to encourage non auto trips, managing congestion, protecting livability, addressing air quality issues, supporting growth in the Central City and protecting historic buildings from underuse and demolition. As the Central City parking policy is updated as part of Central City 2035, the City will address the following in relation (though not exclusively) to the Lloyd District:

- Incentivizing mixed use development through the provision of shared parking facilities.
- Promoting the use of transit and active transportation modes by reducing the amount of parking spaces per capita in the district over time.
- Maintaining parking to serve retail focused areas and streets.
- Addressing event parking issues through flexible options such as the use of variable pricing and parking management. An example of this is the current parking plan for Jeld-Wen Field during Portland Timbers games.

TR8 Implement the I-5 Broadway-Weidler Interchange Plan improvements.

See Appendix C: *I-5 Facility Plan*, for a complete description of anticipated interchange improvements and implementation issues to be addressed in the next steps of project design and engineering.

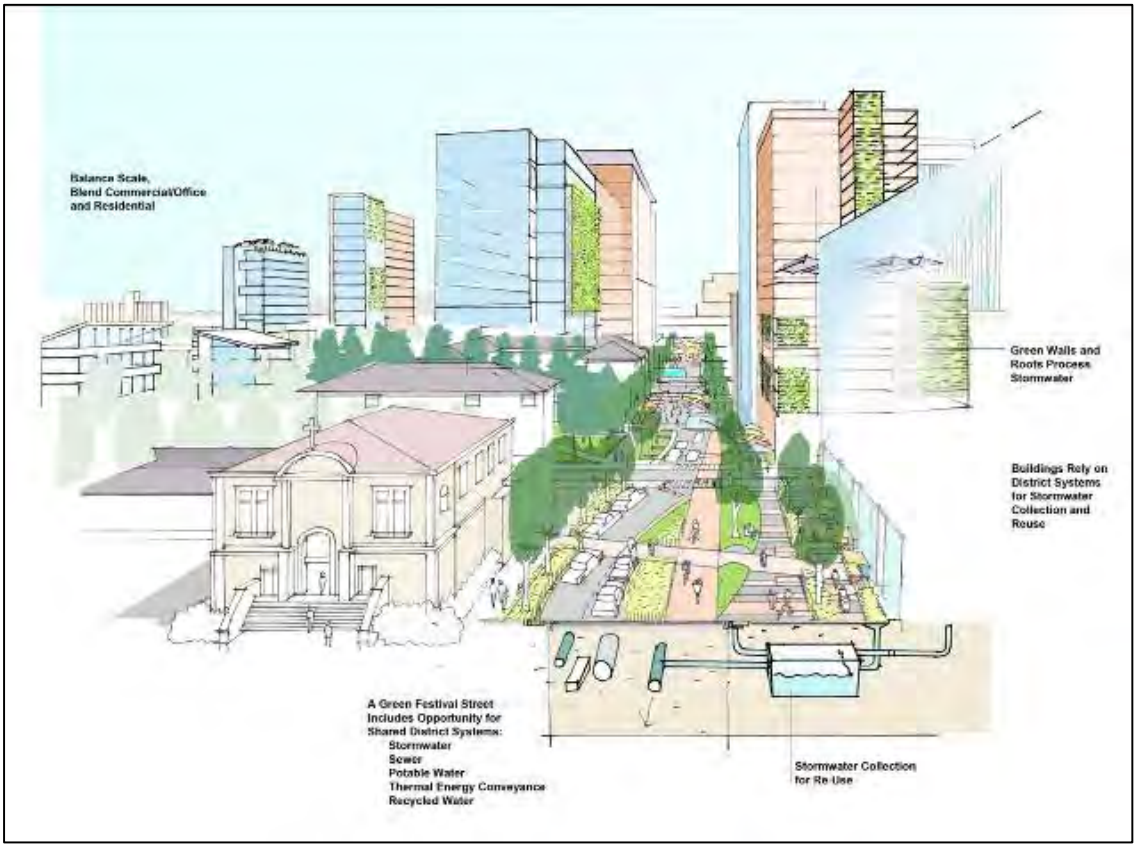
TR9 Implement a 7th Ave pedestrian/bike bridge over I-84 connecting to either 7th or 8th in the Central Eastside.

The Lloyd District is surrounded in the south and west by natural and man made barriers. To the south there is Sullivan's Gulch, the active Union Pacific line, the light rail line and the I-84 freeway separating Lloyd from the Central Eastside.

Three bridges connect these two areas: the overpasses at MLK and Grand and the 12th Avenue bridge. These bridges serve the needs of all modes, concentrating high numbers of vehicles with transit lines, trucks, pedestrians and cyclists. The Grand and MLK overpasses are loud and have substandard sidewalks and fast moving vehicles. Conflicts between vehicle and pedestrian needs are most present at Grand and Everett, where there is an on-ramp onto I-84 with a free right turn for vehicles. Pedestrian crossing is not allowed at this leg of the intersection.

There are no bicycle lanes on the MLK and Grand bridges. Streetcar tracks have been installed as part of the Streetcar Loop project, which precludes adding bike lanes adjacent to the curbs. The 12th avenue Bridge has recently received bicycle infrastructure improvements; however, the 12th Avenue bridge is located too far east to serve most travelers to and through the district.

These factors support the need for an additional crossing to serve pedestrians and cyclists with a safe and convenient new connection with direct access to the heart of the Lloyd District. Given the presence of existing bicycle lanes on NE 7th in the Lloyd District and of a building in good condition at the end of NE 9th in the Central Eastside that would need to be demolished to provide a 9th Avenue to 9th Avenue connection, the best alternative routes are from NE 7th in the Lloyd District to either 7th or 8th (shortest distance) in the Central Eastside.



Conceptual rendering looking east from Lloyd Blvd showing a potential design option for the 7th Avenue pedestrian/bicycle bridge.

TR10 Develop a strategy for the Clackamas Flexible Street and private development extending from the Rose Quarter to NE 9th Avenue via a new pedestrian/bicycle bridge over I-5.

The concept for a Clackamas Flexible Street would create an intimate urban street that provides for a safe and pleasant place for people to gather, play, and socialize. The street would provide for slow local vehicle access, bicycle access, and street amenities geared toward improving the pedestrian experience and creating a district amenity. This project should showcase the Lloyd EcoDistrict as a sustainable district that would include district energy infrastructure, enhanced tree canopy, improved stormwater strategies and green building technologies. The project should be a public-private partnership effort that leverages public infrastructure investments to obtain private investments in high-density, mixed-use development that contribute the goal of creating an urban neighborhood in the Central Lloyd area.

Development agreements may be part of this project's implementation program and should address public investments, private development, and sustainable design elements.

Additional plan elements that would increase the positive impact of the Clackamas Flexible Street include the parks and open space strategy called for in action UD5 and the proposed Clackamas Pedestrian and Bicycle I-5 Overcrossing included in the I-5 Broadway/Weider Interchange Improvements Facility Plan (See Lloyd action TR8) that would link NE Clackamas Street with the Rose Quarter and potentially to the Willamette River. The Clackamas Flexible Street Project can occur separately from this project.

Conceptual rendering of the Clackamas Flexible Street with a unique design and shared district systems.

TR13 Confirm the benefits and feasibility of straightening the "s-curve" in the Union Pacific rail tracks for freight and passenger rail operations. Options pursued should prioritize maintaining the development potential of the "Thunderbird" site.

Currently, the "Thunderbird" site is separated from the riverbank by the Union Pacific Railroad mainline tracks. The tracks currently have a series of sharp curves around the Louis Dreyfus grain elevators near the Steel Bridge that dramatically slow train traffic. There may be mutual gain in a scenario that straightens the curves by placing the tracks in a trench or tunnel closer to Interstate Avenue. This would speed train traffic, reducing rail system congestion around the Steel Bridge. Relocating the train tracks would also open up the opportunity for public access to the riverbank at the Thunderbird site while still preserving some development potential. See Lloyd action UD8 for a conceptual illustration of the site with trenched railroad tracks.

TR14 Work with TriMet to improve the Steel Bridgehead and Rose Quarter Transit Center area to improve transit, local circulation, access to the Eastbank Esplande, and development opportunities

The present configuration of the Rose Quarter Transit Center (RQTC) is an evolution from a simple bus transfer center recommended by the City of Portland's Industrial Access Study in the late 1970's to a major transit center for light rail and buses and a multi-modal hub to accommodate the spectators attending events at the Rose Quarter. The Interstate MAX Project was the most recent project to reconfigure the transit center.

With the construction of the Interstate MAX Project, City and TriMet staff acknowledged that the at-grade transit center was an interim solution and that a longer term solution would likely be needed in the future. In particular, as a transportation hub, the signal system would not have sufficient capacity to accommodate anticipated long-term growth in demand by any mode - light rail, bus and vehicle traffic, pedestrians, and bicyclists.

A key challenge for the RQTC also has been the need to better activate the center itself. This is particularly an issue as it relates to public safety. The current arrangement of the transit center and local streets inhibits development opportunities that would help activate the area.

The goals of this future work include exploring alternative configurations of street and rail infrastructure that:

- Improve the quality, safety and experience of the public realm, particularly for pedestrians, bicyclists and transit users.
- Improve transit capacity, readability, reliability and safety of the area – for MAX light rail and bus, as necessary.
- Improve development potential, creating developable parcels in the area of reasonable size and with good access and visibility.
- Increase access to and through the area – for vehicles, bikes and pedestrians.

UD2 Revise height regulations along Broadway along the Eliot and Irvington neighborhood edges to provide a step down from taller heights allowed in the rest of the Lloyd District.

Existing and proposed maximum height maps are located in Appendix A*, Additional Urban Design Diagrams*. The N/NE Quadrant recommends sensitive neighborhood transitions in building height between the Lloyd District and the Eliot and Irvington neighborhoods to the north. The proposed maximum heights map shows maximum heights of 75' north of Broadway with the exception of between NE 3rd and NE 7th where heights up to 125' are allowed to reflect the commercial nature of

the area around the Broadway and MLK intersection and to acknowledge it as an important gateway into the Central City. Maximum heights are inclusive of any bonus provisions.

This plan is also recommending that the existing 75' height limit between NE Schuyler and NE Hancock in the Irvington Historic District, an area that is outside the Central City Plan boundary, be reexamined as part of the update to the City's Comprehensive Plan. See Lloyd action UD10 in the implementation action table.

UD6 Update the Lloyd District's 1991 design guidelines: *Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan* to reflect the district concept.

The *Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan* is recommended to be amended to reflect the design direction described in the district plan's urban design concept and supporting information. The existing document will be extensively revised and updated to feature new formatting, new illustrative examples of how to meet the guidelines and a new structure based on the Central City Fundamental Design Guidelines. New design issues to be addressed by the guidelines will include different street and development characters; incorporating/integrating green elements in site and building designs; and transitions to adjacent neighborhoods.

The "Street & Development Character" concept (see Appendix A*)* describes more intentional direction for the different streets in the Lloyd District. The concept proposes changes in both the street design standards as well as the adjacent building edges. The concept proposes three different types of street characters: retail/commercial, boulevard and flexible. New content in the design guidelines will address building edges of proposals along the different street types, illustrated with examples of desired building edge responses for each of the different street types. In addition, as some of the flexible network moves through private property, new design guidelines will speak to the character and orientation of new connections through these large blocks. More information is also available in a separate report: *N/NE Quadrant Plan: Street and Development Character Concept* (2012).

New design guidelines will address the incorporation of "green" site and/or building elements. These elements could include, but are not limited to, native vegetation, bird-friendly design approaches for larger buildings, building orientation to maximize solar performance, energy production systems and stormwater management facilities. The content of these design guidelines would be developed in coordination with the Lloyd Ecodistrict planning and infrastructure implementation efforts.

In addition to maximum floor area ratio (FAR) and height regulations that limit building form(s), new design guideline content will address desired transitions from the Lloyd District to adjacent neighborhoods that include Eliot, Irvington and Sullivan's Gulch. The guidelines will be crafted to speak to the unique characteristics of the edges along each of these neighborhoods, and how new development proposals should respond accordingly. Design issues described by the guidelines, with narrative and illustrative examples, will range from site/building patterns, façade articulation, attention to detail, quality of construction, and potential building step-downs to existing historically, culturally or architecturally significant resources. In addition, existing guidelines that address specific locations in the district, such as the Broadway/Weidler corridor, would be updated to reflect the Irvington Historic District designation and boundary change. Language in the guidelines would provide clearer direction for design compatibility with adjacent contributing properties.

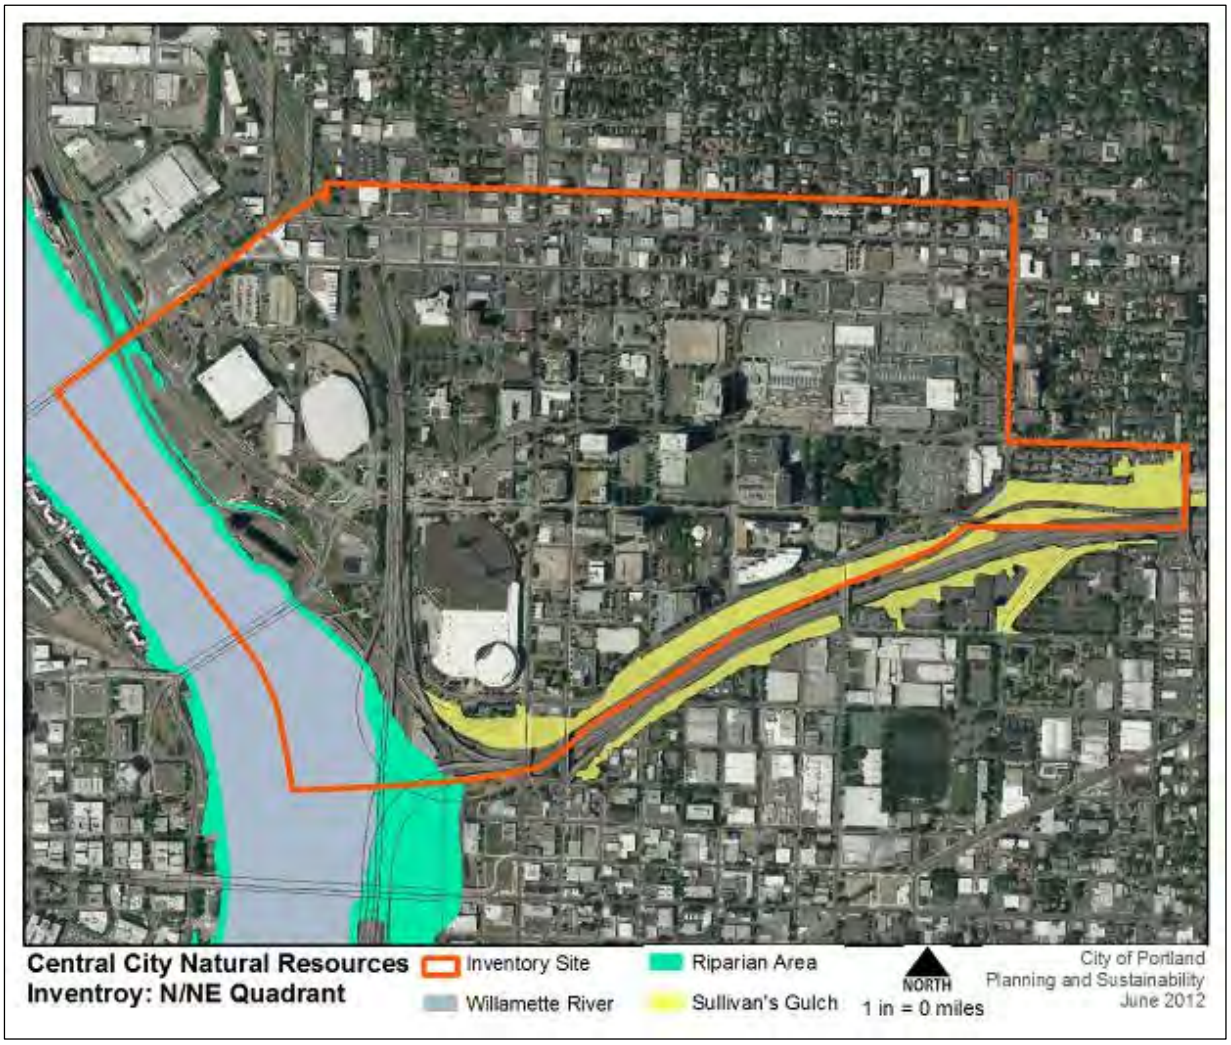
UD8 Work with the property owner/developer of the "Thunderbird" site to craft a development agreement that incorporates public open space and the greenway trail on the riverfront.

On the Thunderbird site located between the Veterans' Memorial Coliseum and the Willamette River additional height above the 100' current maximum would be allowed in exchange for providing public open space – preferably in front of the Coliseum. In exchange for providing significant public open space, buildings would be allowed to be up to 250'. The existing floor area ratio (FAR) would remain at 4:1, therefore the total amount of development potential on the site would remain the same.

As described in Lloyd action TR13, one option being considered in this area is the relocation of the Union Pacific railroad tracks to improve freight and passenger rail operations. It will be important to work with ODOT rail and Union Pacific to ensure that any plans developed for rail relocation maintain access, the development potential of the site and provide park and riverbank enhancement opportunities. Also see related Lloyd action RC3 regarding height changes proposed.

Thunderbird site with full buildout of existing current maximum height (100') and 4:1 FAR. Conceptual rendering only.

Thunderbird site with buildout to ~250' and 4:1 FAR, incorporating a new waterfront open space. The railroad tracks have been moved to accommodate riverfront access and increase rail efficiency in this conceptual rendering.



GC1 Evaluate natural resource protection and management options for Sullivan's Gulch and the Willamette River bank as part of the Central City-wide natural resource analysis.

As part of comprehensive planning projects, the City updates the existing Environmental Program. This update is needed to help protect and enhance natural resources, meet watershed health goals and advance the City's compliance with local, regional and state goals and regulations. The steps to update the Environmental Program include 1) inventory existing natural resources; 2) evaluate the economic, social, environmental and energy trade-offs of different levels of resource protection; and 3) apply appropriate programmatic tools.

In 2011, staff updated the inventory of natural resources in the N/NE Quadrant. The inventory includes documentation regarding the location, extent and relative quality of the existing resources. The two primary natural resource features identified in the inventory are the Willamette River and its riparian area and Sullivan's Gulch (see Map B3: *Central City Natural Resources Inventory: N/NE Quadrant).* The river and riparian area are important to wildlife and fish, including ESA-listed species,

and provide functions like flood storage and nutrient cycling. Sullivan's Gulch is a unique feature that is used by wildlife. It is also susceptible to slope failure due to its steep grade and risk of wildfire.

Map B3: Central City Natural Resources Inventory: N/NE Quadrant

The next steps will be to complete the inventory for the other quadrants and release an updated Central City Natural Resources Inventory (NRI) for the entire Central City 2035 Plan area. Next, staff will perform the Economic, Social, Environmental and Energy (ESEE) Analysis for the entire Plan area to evaluate the trade-offs associated with different levels of environmental protection. The ESEE will consider development potential, housing goals, public health, commerce, recreation, watershed health and other topics. The result will be recommendations about when, where and how to protect and manage natural resources in the plan area. The City uses different tools to protect, enhance, and restore natural resources including environmental conservation and protection overlay zones, agreements with property owners, revegetation programs, education and best management practices. Existing overlay zones, such as the conservation overlay zone currently applied to parts of Sullivan's Gulch, will be reviewed and may be refined through the Central City project. The owners of potentially affected properties will be notified and invited to comment prior to the finalization of the Central City Natural Resource Inventory, the ESEE and program recommendations.

GC11 Design infrastructure, such as the proposed Clackamas I-5 overcrossing and street improvements to accommodate district energy infrastructure where appropriate.

As of June 2012, the City of Portland, the Portland Development Commission, and the Portland Trailblazers are currently in the design process to develop an initial district energy node. Corix Utilities was selected to plan a phased Rose Quarter Shared Thermal Energy System (district energy). In its first phase, the system will provide heating and cooling services to the Rose Garden Arena and Veterans Memorial Coliseum. These services would be extended to the Oregon Convention Center in the second phase through underground piping. In the third phase, the system will expand east toward the Lloyd Center providing heating and cooling services through a network of pipe infrastructure. For this expansion to the greater Lloyd District, crossing I-5 poses a significant challenge that could be resolved by a Clackamas pedestrian/bike overcrossing. Connection to the Rose Quarter Shared Thermal Energy System would contribute to the redevelopment of Clackamas as a high performing green street. Additional district energy and water opportunities in the Lloyd District are also under consideration and could complement the Rose Quarter system.

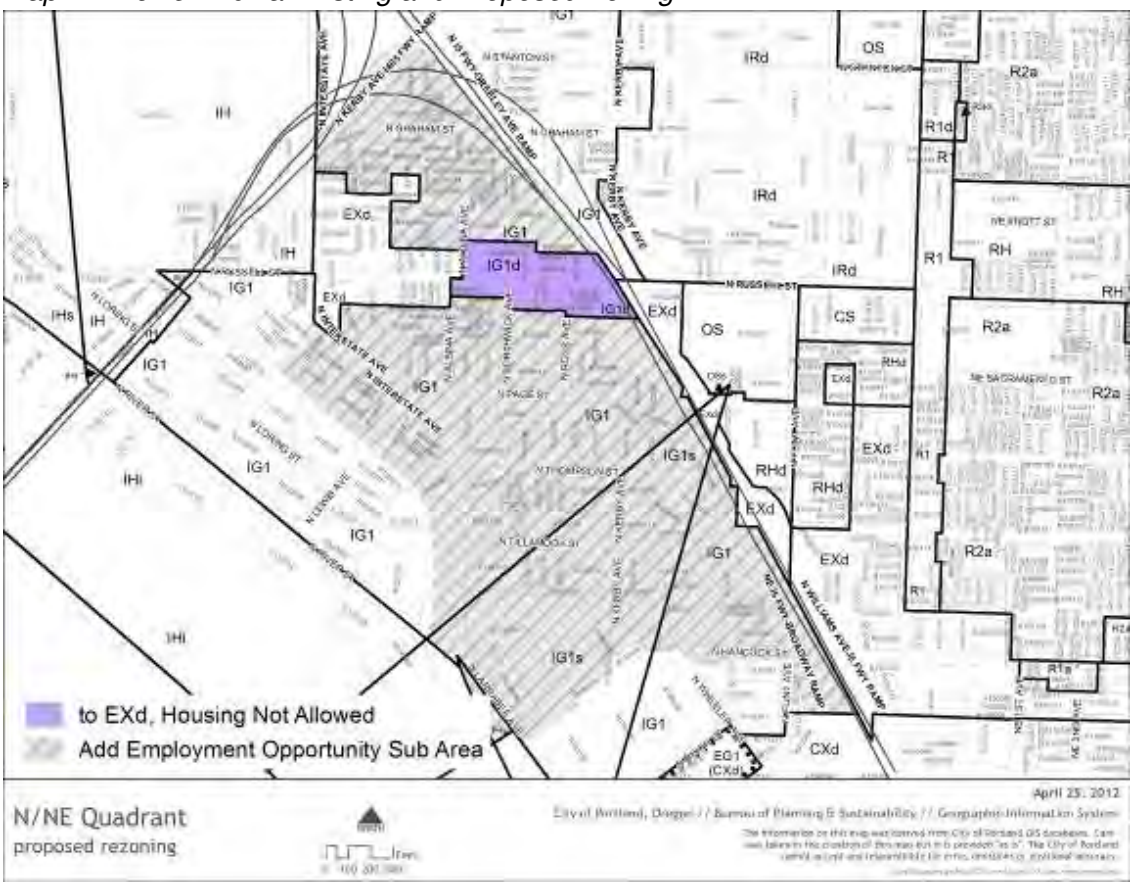
Lower Albina

RC1 Adjust the Lower Albina subdistrict boundary to exclude the PPS Blanchard site and adjacent properties to the south and east, placing them within the Lloyd District.

This action along with Lloyd District action RC2, recognizes the current major use (office) of the Portland Public Schools Blanchard Building and its desired future as a mixed-use, flexible urban redevelopment opportunity. Because the current office use and desired future uses for the site are non-industrial in nature, and because the natural topographical transition from the area around N Broadway and the Rose Quarter happens at a steep bluff north of the Blanchard site, the boundary between the Lloyd District and Lower Albina should be adjusted as shown in Map B1: *N Broadway Existing and Proposed Zoning.* Future redevelopment of the Blanchard site would complement proposed redevelopment in and adjacent to the Rose Quarter called for by the Rose Quarter District Plan. See Lloyd action RC2 for detailed information on the proposed zone change for the area.

RC2 Rezone properties east of the Russell St. Conservation District fronting Russell Street from IG1d to EXd. Set max FAR at 3:1 and maximum height at 50'. Prohibit housing in this area.

Background: The majority of the Lower Albina district is zoned for industrial uses. It serves as a critical incubator for emerging and innovative businesses and provides an important living-wage job base near inner North and Northeast neighborhoods. The district's mix of industrial businesses, working waterfront and multimodal freight facilities are complemented by a small mixed-use historic area along lower Russell Street, where retail activity is especially active in the evening.



Existing Zoning: Map B4 shows the existing and proposed zoning for the site and Table B2 summarizes existing and proposed zoning provisions. The area fronting NE Russell from N Albina to the I-5 overpass contains 17 tax lots covering approximately two acres. It is currently zoned General Industrial 1 (IG1) with a design (d) overlay zone and has several additional development standards, such as a 50 foot height limit, a maximum 3:1 FAR, and ground floor active use and residential bonus target designations. Many of these requirements are inconsistent with the underlying industrial zoning, make the economic use of these properties difficult, and complicate potential redevelopment. Immediately to the east of this area is the Russell Street Conservation District, which is zoned EXd, allowing a mix of industrial, commercial and residential uses. No zoning changes are proposed in the conservation district.

Proposed Zoning: Staff proposes rezoning the properties fronting N Russell between the Russell Street Conservation District and the I-5 overpass from IG1d to EXd, with a new provision that would prohibit residential development. This would continue to allow industrial uses, while also allowing office and retail uses. The existing 50 foot height limit and 3:1 maximum FAR would be retained. No changes are proposed in the existing EXd zoned area, where housing would continue to be allowed. Increasing zoning flexibility to allow a wider range of uses will support the existing retail node and encourage investment in existing buildings and help recreate the connection between Lower Albina and the Vancouver/Williams Corridor.

Table B2: Summary of Lower Albina Existing and Proposed Zoning Provisions (EXd)

Provision	Existing IG1	Proposed EXd (no residential)
Office: Allowed	1 Office (or Retail) use per site, up to 3,000 SF	Allowed, limited by FAR (3:1 proposed)
Office: Conditional Use	More than 3,000 SF, max of 60,000 SF or 1:1 FAR	NA
Retail: Allowed	1 Retail (or Office) use per site, up to 3,000 SF	Allowed, limited by FAR (3:1 proposed)
Retail: Conditional Use	More than 3,000 SF, max of 25,000 SF or 1:1 FAR	NA
Residential	Generally not allowed	Not allowed (proposed)

Map B4: Lower Albina Existing and Proposed Zoning

RC3 Apply zoning provisions to IG1-zoned properties east of the Union Pacific railroad alignment that allow certain compatible office-like uses, similar to the Employment Opportunity Subarea regulations in the Central Eastside.

Existing Zoning: Map B4 shows the existing and proposed zoning for the site and Table B3 summarizes existing and proposed zoning provisions. The area generally east of the Union Pacific

railroad and west of I-5, where additional flexibility for employment uses is proposed (hatched area on Map B4), contains 136 tax lots, covering approximately 46 acres. It is currently zoned IG1, with a Scenic Resource (s) overlay on a portion of the area, which limits building heights to 50 feet. The area to the west is zoned IG1, with Heavy Industrial (IH) zoning along the waterfront. No zoning changes are proposed west of the Union Pacific rail line.

Proposed Zoning: Staff proposes applying Employment Opportunity Subarea (EOS) provisions to the IG1 area generally east of the Union Pacific rail line and west of the freeway (hatched area on map B4). This would allow some additional flexibility for commercial and employment uses that are compatible with industrial activities. The EOS provisions have the potential to increase job density, capture growing industry sectors, and foster the continued vitality of Lower Albina as an employment center and business incubator. Staff believes this targeted approach is less likely to result in land use conflicts with industrial activities than applying an employment base zone, which would have broader allowances for office and retail uses and the potential for residential development. The existing Scenic Resource (s) overlay would remain on a portion of the area.

*Table B3: Summary of Lower Albina Existing and Proposed Zoning Provisions (EOS)**

Provision	Existing IG1	Proposed IG1 with Employment Opportunity Subarea (EOS)
Traditional Office: Allowed	1 Office (or Retail) use per site, up to 3,000 SF	5,000 SF per site
Traditional Office: Conditional Use	More than 3,000 SF, max of 60,000 SF or 1:1 FAR	More than 5,000 SF, max of 60,000 SF
Industrial Office: Allowed	NA	60,000 SF per site
Industrial Office: Conditional Use	NA	More than 60,000 SF
Retail: Allowed	1 Retail (or Office) use per site, up to 3,000 SF	5,000 SF per site
Retail: Conditional Use	More than 3,000 SF, max of 25,000 SF or 1:1 FAR	None
Residential	Generally not allowed	Generally not allowed

Traditional Office Designation:
- Focus on business, government, professional, medical, or financial services.
- Examples: Professional services, lawyers, accountants, real estate agents; financial, bank HQs, brokerage houses; sales offices; government offices; medical and dental clinics.

Industrial Office Designation:
- Conducted in an office-like setting but more compatible with industrial activities & districts. Less service-oriented with focus on development, production, processing of products, including digital products, e.g. internet & media content, designs & specifications, software, advertising materials. Primarily provide products to other businesses. Do not require customers or clients to visit the site.
- Examples: Software and internet content development & publishing; computer design & programming; graphic & industrial design; engineers & architects; telecommunication providers & data processing; TV, video, radio, internet studios & broadcasting; scientific & technical services; medical & dental labs.

** The specific EOS zoning proposal described above is consistent with the provision as applied in the Central Eastside Industrial District. The allowances above may be modified based on input from Lower Albina Stakeholders.*

TR4 Develop a street design plan for the "the Strand" and alternative routes to provide a lower-stress connection between N. Russell Street and the Rose Quarter.

The Lower Albina district concept calls for “the Strand”, which would provide a supplementary north-south, lower-stress connection between Lower Albina’s Russell Street commercial area and the Rose Quarter to the south and the Mississippi main street to the north. The Strand was developed as part of the Land Use Charrette for the N/NE Quadrant Plan held in February 2011

Map B5: Proposed Strand Alignment

Today, N Interstate Avenue is the main connection, but it is a high volume traffic street and has narrow sidewalks and an unpleasant pedestrian environment. The Strand is envisioned as a wayfinding system that is compatible with the industrial activities that take place in the southern portion of the Lower Albina’s industrial district. Potential design features of the Strand could include pedestrian and bicycle enhancements, such as continuous sidewalks and/or pavement markings that do not conflict with industrial operations. It could also celebrate the industrial heritage of the district through public art, murals and historical markers along its path. Possible elements of the wayfinding system could include signage, special street paving and art.

The route identified for the Strand generally runs in the north-south direction and zig-zags through the district on existing streets (see map B5). The one exception is a segment between N Page and N Thompson Streets, where the route would need to cross private property via an easement or acquired right-of-way. This private segment presents an additional challenge due to the grade.

The Strand should be pursued as a preliminary streetscape project to determine its feasibility and cost. The study should consider non-traditional streetscape treatments that integrate with the industrial character of the area and examine other possible routes that would provide the same benefit of a lower-stress connection through the district.

Conceptual rendering of the Strand in Lower Albina. Art murals and special paving provide a wayfinding system through the district.

TR8 Implement the I-5 Broadway/Weidler Plan improvements, including the proposed Hancock overcrossing, to improve regional and local freight access.

See Appendix C: *I-5 Facility Plan*, for a complete description of anticipated interchange improvements and implementation issues to be addressed in the next steps of project design and engineering.

UD1 Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.

In 1998, the Bosco-Milligan Foundation (Architectural Heritage Center) completed "Cornerstones of Community," a historical context statement and inventory of over 3,000 properties associated with African-American history in Portland. In 2010, as part of the N/NE Quadrant Plan process, Bosco-Milligan updated the inventory, reflecting recent demolitions, correcting information, and converting the data so that it may be used in computer-based Geographic Information Systems. The context statement and updated inventory are powerful preservation planning tools that can assist in public education and historic preservation efforts in the N/NE Quadrant and through-out the city. They can serve as the basis for the development of a Multiple Property Documentation (MPD) form for African-American historic resources in Portland. Such an MPD would provide contextual information about the African-American community and evaluation criteria that would assist property owners who wish to list their historic properties in the National Register of Historic Places.

UD2 Improve the design review approval criteria used for development proposals within the Russell Street Conservation District and design overlay zone within Lower Albina.

The Community Design Guidelines are currently used as the approval criteria for historic design reviews in the Russell Street Conservation District. This is the only situation in the Central City where the Central City Fundamental Design Guidelines are not used as historic design review criteria (in some cases, other criteria are used in addition to the Central City Fundamentals). In addition, Lower Albina is the only Central City area outside of the downtown core that lacks a district-specific set of design guidelines. In the area east of the conservation district proposed for EXd zoning, the Central City Fundamentals are the approval criteria. This results in a situation where different criteria are used in directly abutting areas that have similar characteristics

In general, the Community Design Guidelines were intended to be used in areas outside the Central City and may not be the most appropriate criteria in a Central City conservation district. Options to consider include: developing a new set of sub-district design guidelines for Lower Albina that would speak to the characteristics of the Russell Street area specifically; amending the Central City Fundamentals and applying them within the conservation district; or amending current language in the Community Design Guidelines to better address the character of the conservation district.

UD5 Encourage and assist Lower Albina property owners to nominate their historic properties for designation as landmarks.

Two sources of information can assist Lower Albina property owners to list their properties in the National Register of Historic Places. The existing Multiple Property Documentation (MPD) form "Historic and Architectural Properties in the Eliot Neighborhood" provides historical context and evaluation criteria for historic resources within the Eliot Neighborhood, including Lower Albina. The MPD reduces the National Register documentation requirements for properties that meet the criteria laid out in the MPD. This document is available from the Oregon State Historic Preservation Office.

Another helpful source is the historic resources inventory completed for the Albina Community Plan. This multi-volume set completed in the mid 1990s updated information in the City's 1984 adopted Historic Resources Inventory. It contains information on hundreds of historic properties in N and NE Portland, including the Lower Albina area. The inventory is housed in the City of Portland Archives and Records Center.

Study Areas

North Banfield Portal

NB1 Apply CXd zoning to the sites south of Multnomah St. and west of NE 21st Avenue. Existing environmental conservation (c) overlay zoning will remain.

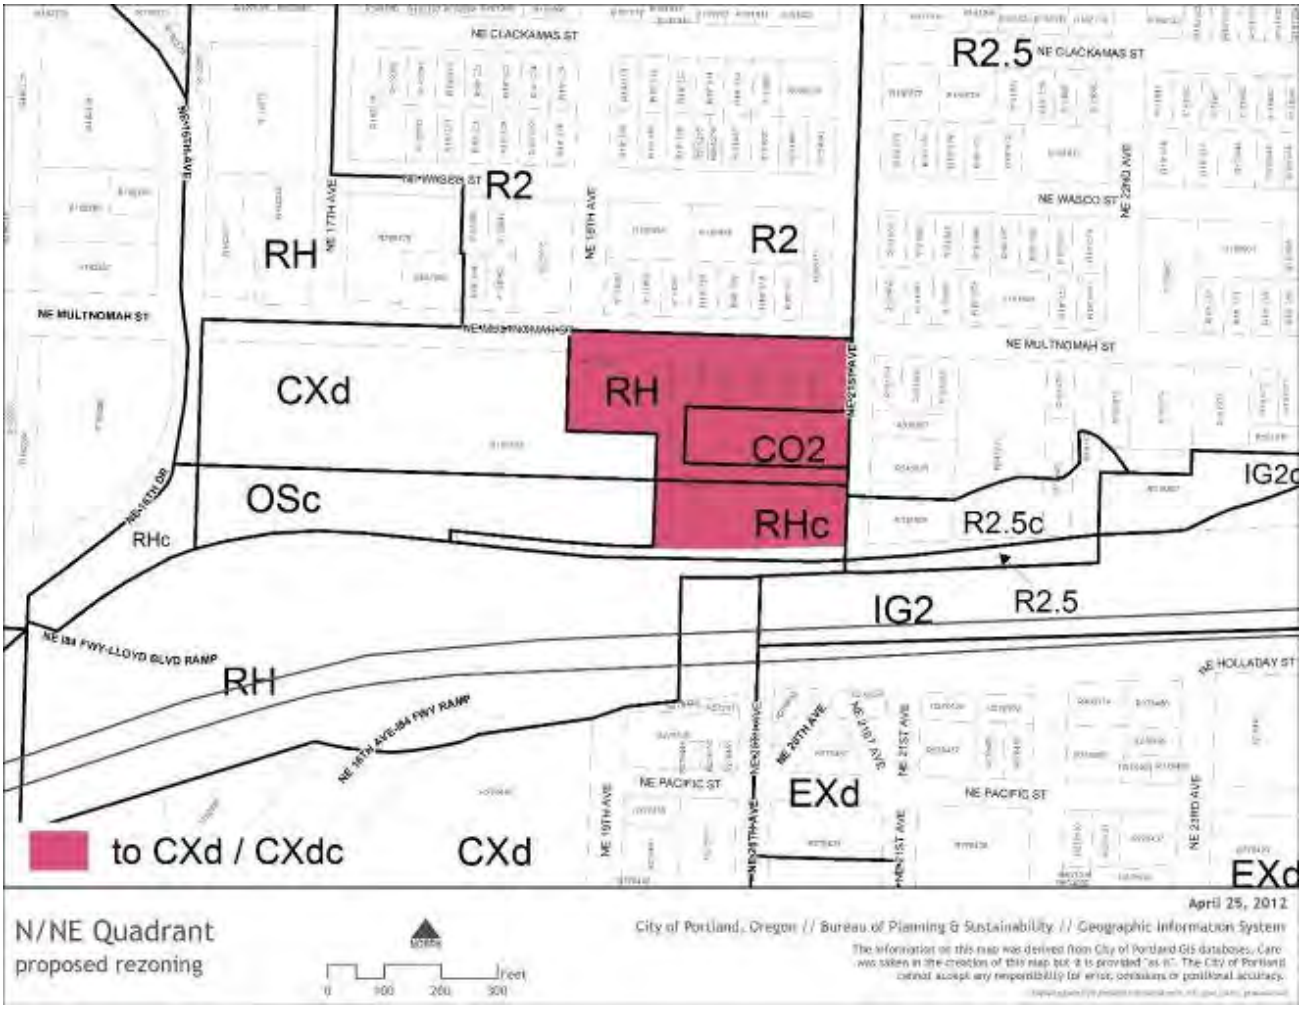
Background: Two sites at the corner of NE Multnomah and NE 21st Avenue are currently occupied by a courtyard apartment building and several older single-family homes. Stakeholders are interested in seeing redevelopment in the area with a mix of uses, but much of the area is zoned for residential and one of the sites is currently split-zoned with a mix of residential and commercial office zoning, complicating redevelopment. The staff proposal is to rezone the site to better meet future redevelopment desires.

Existing Zoning: Map B6 shows the existing and proposed zoning for the site and Table B4 summarizes existing and proposed zoning provisions. The sites contain nine tax lots totaling approximately 3 acres.

Approximately 1.6 acres is zoned High Density Residential (RH), with a 75 ft height limit and a floor area ratio (FAR) of 4:1. The RH zone is a high density, multi-dwelling zone. New housing in this zone is expected to be medium-rise apartments and condominiums.

Approximately .8 acres is zoned RH with an Environmental Conservation Overlay (RHc), with a 75 ft height limit and an FAR of 4:1. The 'c' overlay zone is intended to conserve important resources while allowing development that is environmentally sensitive. The 'c' overlay does not prohibit development.

Approximately .6 acres is zoned Commercial Office (CO2) with a 45 ft height limit. The CO2 zone is a low and medium intensity office zone that generally allows uses in the office and institutional categories, but not other commercial uses. Retail uses are limited to 10% of the total floor area.



The area to the west has flexible commercial zoning (CXd) and is occupied by the Marriott Residence Inn Hotel. Areas to the north and east are zoned for medium density residential development with a height limit of 35 (R2.5) or 40 (R2) feet; commercial uses are not allowed.

Proposed Zoning: Central Commercial zoning with a design overlay (CXd) with a height limit of 75 feet and an FAR limit of 4:1 is proposed for both sites. The CXd zone would allow a more flexible mix of uses than is currently allowed, including a wide variety of residential, commercial and institutional uses. The design (d) overlay would require new development to go through a discretionary review process or meet Community Design Standards. The environmental 'c' overlay zone would remain on the southerly portion of the site, however changes could be proposed through a separate analysis of natural resources in the Central City planning area. See Lloyd action GC1 for more information.

Table B4: Summary of N Banfield Portal Existing and Proposed Zoning Provisions

Provision	Existing RH	Existing CO2	Proposed CXd
Land Uses	Primarily residential only.	Office and residential allowed, retail limited.	Residential, office and retail allowed. Mixed uses allowed.
Height limit	75'	45'	75'
FAR limit	4:1	2:1	4:1
Design overlay	No	No	Yes. Discretionary design review or use of Community Design Standards required.

Map B6: N Banfield Portal Existing and Proposed Zoning

NB2 Evaluate natural resource protection and management options for Sullivan's Gulch as part of the Central City-wide natural resource analysis.

Sullivan's Gulch has been identified as a resource in the City's 2011 update of the Natural Resource Inventory for the Central City plan area. Evaluation of these resources will be addressed through a Central city-wide analysis. See Lloyd action GC1 for a more detailed description of this process.

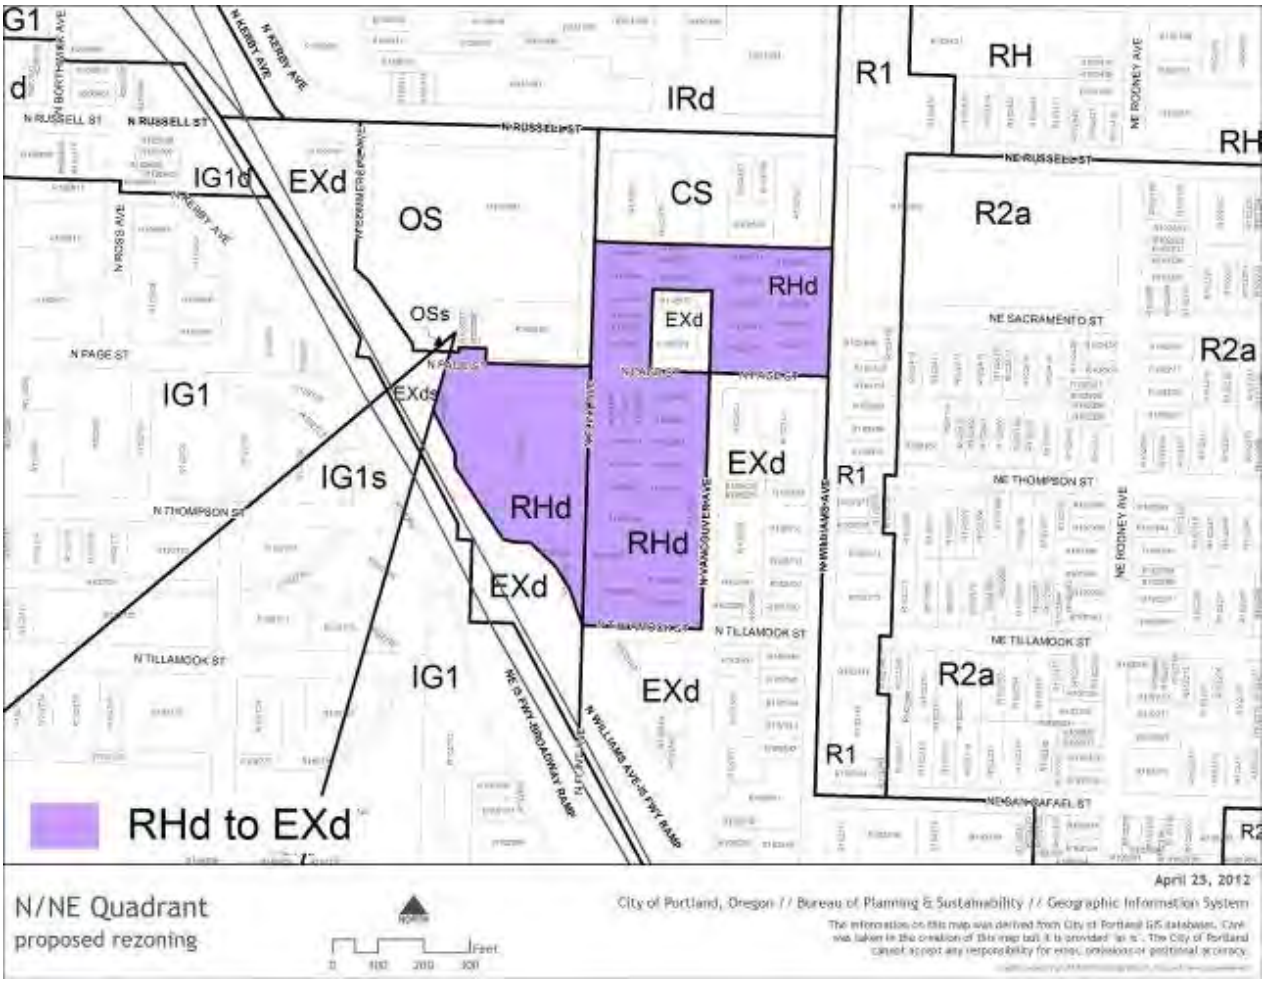
Vancouver/Williams Corridor

VW1 Rezone portions of 4 blocks between I-5 and N Williams from RH to EXd.

Background: This area is currently home to a diverse mix of uses, including light manufacturing, warehousing, retail, residential and institutional uses. Some of the area is zoned for high density housing that doesn't allow most other uses and can limit the ability of existing, commercial and light industrial uses to expand. The Harriet Tubman School comprises almost half of the developed square footage in the area; of the remaining area, approximately half of the developed square footage is in non-residential use. There are also several structures in the area that are part of the "Cornerstones of Community: Portland's African-American Heritage" inventory completed by the Bosco-Milligan Foundation (see Lower Albina action UD1 for more information). Staff is proposing to rezone the area to better meet neighborhood desires, eliminate the regulatory conflicts for existing businesses and reflect the historic mix of uses.

Existing Zoning: Map B7 shows the existing and proposed zoning for the site and Table B5 summarizes existing and proposed zoning provisions. The area contains thirty-eight tax lots totaling approximately 6.5 acres.

Approximately 6.5 acres is zoned High Density Residential with a design overlay (RHd), with a 75 ft height limit and an FAR of 4:1. The RH zone is a high density multi-dwelling zone. New housing in this zone is expected to be medium-rise apartments and condominiums. The design overlay requires new development to go through a discretionary review process or meet community design standards.



Most of the area between the I-5 freeway and N Williams Avenue has mixed employment zoning with a design overlay (EXd). Lillis Albina Park borders the area to the NW, a small area of storefront commercial (CS) zoning is located to the north along Russell St. and multi-dwelling residential (R1) zoning is across N Williams to the east.

Proposed Zoning: Staff proposes Central Employment zoning with a design overlay (EXd), which includes a height limit of 65 feet and a maximum FAR of 3:1. The EXd zone allows industrial and commercial uses suited for a central location, in addition to residential uses. This change would allow a more flexible mix of uses than is currently allowed and will support the maintenance and expansion of existing businesses. The design overlay would continue to require new development to go through a discretionary review process or meet Community Design Standards. The combination of increased zoning flexibility, reduced overall development potential (FAR), and no minimum residential density requirements will encourage reinvestment in culturally significant structures by providing a wider array of potential economic uses and development options.

Table B5: Summary of Vancouver/Williams Existing and Proposed Zoning Provisions

Provision	Existing RHd	Proposed EXd
Land Uses	Primarily residential only.	Residential, office and industrial allowed. Mixed uses allowed.
Height limit	75'	65'
FAR limit	4:1	3:1
Design overlay	Yes. Discretionary design review or use of Community Design Standards required.	Yes. Discretionary design review or use of Community Design Standards required.
Minimum Density	1 unit per 1,000 SF of site area	None

Map B7: Vancouver/Williams Existing and Proposed Zoning

VW2 Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.

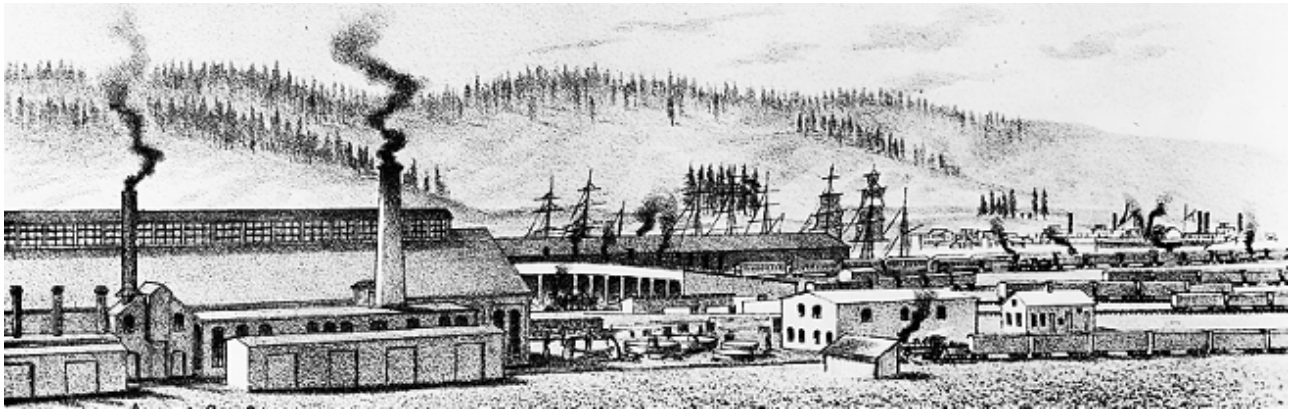
A number of properties identified on the Bosco-Milligan Foundation's "Cornerstones of Community" inventory are located in the Vancouver/Williams Corridor study area. See the appendix entry for Lower Albina action UD1 for a more complete description of this action.

APPENDIX C: I-5 FACILITY PLAN

The Facility Plan is under development. Please see the project website, www.portlandonline.com/bps/cc2035/nneq, for the latest draft of the plan. It is anticipated that the final draft version of the Facility Plan will be included the Public Review Draft of the N/NE Quadrant Plan (anticipated August, 2012).

N/NE QUADRANT HISTORY

For centuries prior to first contact with Europeans and Americans, Chinookan-speaking peoples, including the Clackamas and the Multnomah, inhabited the lower Columbia basin in the vicinity of the area now known as Portland. Chinookans villages, made-up of multi-family cedar plankhouses, were located on both sides of the Columbia near the mouth of the Willamette, with additional villages, camps, resource areas, and trade routes located along the lower Willamette, making the Portland Basin one of the most densely populated areas in the American West prior to white settlement. Chinookan societies relied on the bounty of the region's temperate climate, rich forests and plains, and extensive river systems. Active social, familial and trade networks were maintained among the inland, valley and coastal cultures of the area.



By the time Asa Lovejoy and Francis Pettygrove founded Portland in the mid-1840s, introduced diseases such as small pox and malaria had reduced the area's indigenous population by as much as 90 percent. In the 1850s, accelerating encroachment by white settlers on Indian lands and forced removal to reservations further devastated indigenous societies and few Native Americans remained in the Portland area.

Incorporated in 1851, the City of Portland was still limited to the west bank of the Willamette River in the 1850s and 1860s. The town grew rapidly, with multi-storied masonry buildings, an active trade-oriented waterfront, a growing street network and other aspects of urbanization. In contrast, the east side of the river and what was to become Lower Albina and the Lloyd District remained relatively rural. Extensive wetlands and sloughs made development along the east bank difficult and much of the area was still covered in forest. A few farms were in cultivation notably those of the Loring, Shelton and Wheeler families, who had filed Donation Land Claims along the river in the 1850s.

By the 1870s, residential development had begun to accelerate, aided by a growing network of roads and several ferries that linked the east side to Portland. Two distinct east side communities began to coalesce, East Portland and Albina. East Portland, the northern portions of which covered parts of the Lloyd District, was first platted in 1865 and was incorporated as an independent city in 1870. In 1871, early settler Jacob Wheeler sold several hundred acres to wealthy transportation magnate and developer Ben Holladay, who platted Holladay's Addition using a 200-foot x 200-foot grid, following the pattern established on Portland's west side. In 1868, Holladay had sold his stage coach business in California to Wells Fargo and moved to Portland to get involved in the railroad business. He lost his railroad in 1876, and died in Portland in 1887. Holladay included as part of his East Portland residential development two large hotels and more than four acres for Holladay Park, the first public park on the east side, which remains one of the Lloyd District's most important open spaces. By the early 1880s development was booming; East Portland had over 3,000 residents, a strong commercial spine running along Grand Avenue and an active working waterfront linked to regional and international markets by ocean-going ships and rail lines.

To the north of East Portland and covering a good part of the N/NE Quadrant was Albina, platted in 1873 by prominent Portland businessmen Edwin Russell, William W. Page and George H. Williams. It was sparsely populated in the early years and development along the waterfront was hampered by large swampy areas. Eventually incorporated in 1887, the City of Albina covered some 13 square miles. From the beginning it developed as two distinct sections, upper and lower, separated by steep geography. Lower Albina was the smaller area, covering 200 acres adjacent to railroad yards and industry along the Willamette River. Lower Albina grew in the 1880s as a working-class neighborhood and industrial area, initially inhabited mainly by first- and second-generation Germans, Scandinavians, Poles and other Northern and Eastern Europeans.

A river ferry linked Lower Albina to Downtown, landing at the foot of Russell Street, which became the main street of the Lower Albina area. The east-west-oriented Russell Street which extended up the hill to upper Albina, and north-south-oriented Williams Avenue, were Albina's primary commercial corridors. Russell Street had a rough character, with some 30 saloons along its length from the ferry slip to what is now Martin Luther King Jr. Boulevard.

Lower Albina, 1887

Albina's development was closely tied to the Oregon Railroad and Navigation Company (OR&N), which owned the extensive Albina railroad yards. Directed by Henry Failing and William S. Ladd, the company was a dominant presence in Albina and one of the most powerful corporations in Oregon. In real estate alone, the OR&N owned nearly two miles of waterfront property and controlled nearly 40 city blocks of track and terminal operations along Albina's streets. As many as 900 rail cars passed through the area each day. The coming of the Union Pacific transcontinental railroad in 1883 further spurred commercial and industrial growth in both East Portland and Albina.

The year 1887 marked the opening of the Morrison Bridge, the first to cross the Willamette, linking Downtown to the east side. The bridge spurred further growth in both East Portland and Albina which were now linked to each other and Portland by streetcars. The same year, nearby Irvington was platted. Of a different character than more working- and middle-class Albina and East Portland, Irvington was intended to be an inward-looking, middle- to upper-class residential district and it came to have some of Portland's grandest homes.

Portland-Albina Streetcar

In 1891, East Portland, Albina and Portland residents voted to consolidate into a new unified and expanded City of Portland, with an area of 25 square miles and a population of more than 63,000. By the turn of century most of the inner east side was platted, and rapidly growing in population and economic activity. By 1910, the total population on the east side reached 120,000. Transportation networks and facilities have long been key aspects of east side history. Economic growth was fueled by maritime activity and the confluence of five rail lines. Residential development was aided by connections to the west side via multiple bridges and a growing streetcar network. The first bridge in the N/NE Quadrant itself was the first Steel Bridge in

1888, located about three blocks north of the current Steel Bridge, which was completed in 1912. Both were primarily intended as freight rail bridges but also carried street cars that served East Portland and Albina. The Broadway Bridge was completed in 1912, and it too carried a streetcar line, as it will once again late in 2012. The streetcars linked residential areas to jobs and defined major commercial corridors, including Union Avenue (now Martin Luther King Jr. Blvd.) and Broadway.

First Steel Bridge, 1888

In 1910, California oilman Ralph Lloyd began acquiring property in the inner east side. Over the next four decades, he and his family continued to purchase property, including large tracts of single-family homes and undeveloped lots, eventually accumulating 100 city blocks. Lloyd had a grand vision for the east side, wanting to transform it into a self-sufficient civic, commercial and residential center to rival the west side. Although the Great Depression and sustained opposition from west side commercial interests thwarted his plans somewhat, Lloyd and his descendants built many multi-story apartments and new commercial buildings in the early and mid-twentieth century, eventually culminating in the Lloyd Center mall in 1960, one of the defining features of the Lloyd District today.

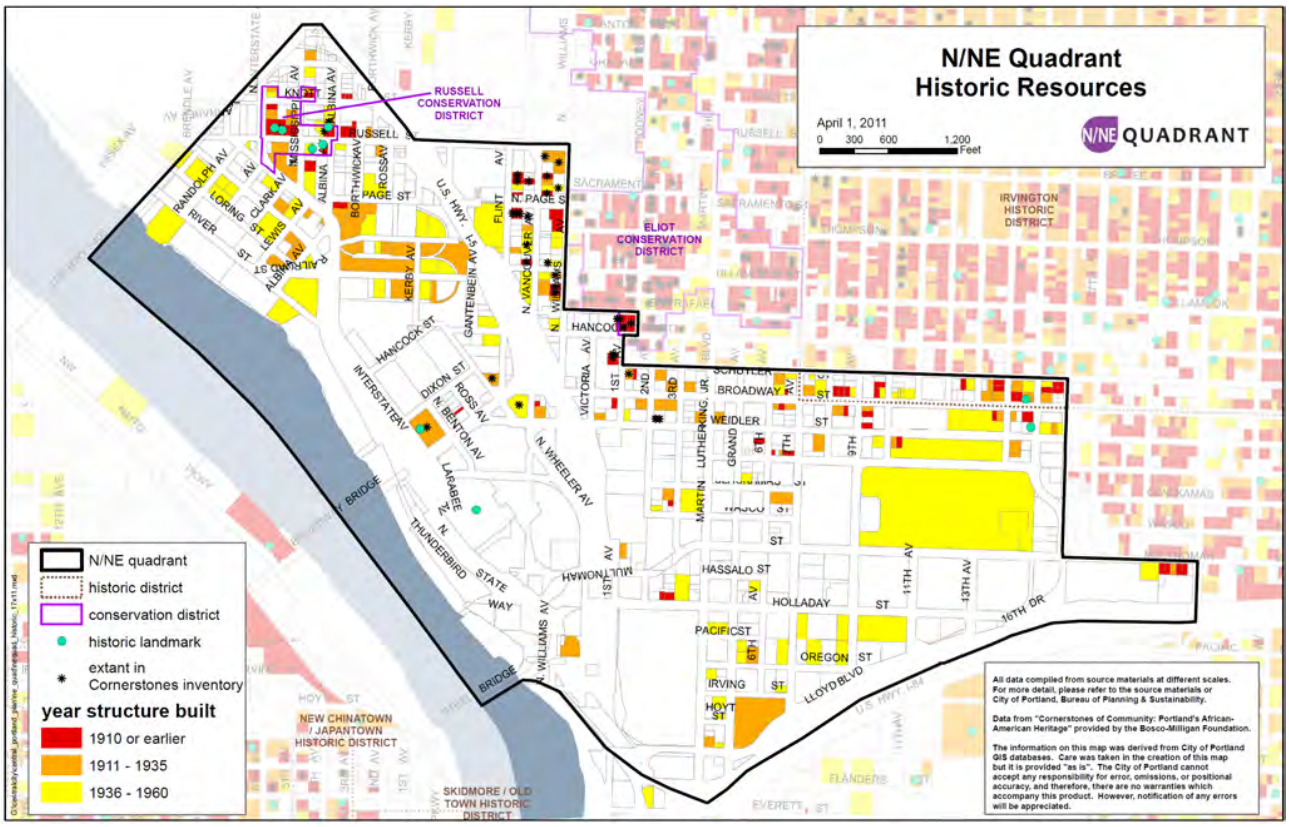
The Depression was hard on Portland, as in all American cities, and growth slowed on the east side in the 1930s. A sign of the times was the large “Hooverville” or shantytown built by unemployed workers in Sullivan’s Gulch.

N Broadway at Larrabee Ave & Interstate looking east, 1930s

Hooverville in Sullivan's Gulch, late 1930s

The black population in Albina had steadily increased in the first part of the twentieth century, especially after 1919 when organized residential segregation was instituted by local real estate agents and "redlining" cut off bank loans for African Americans. Albina became one of the few areas in the city where African Americans could readily obtain housing. World War II drew thousands of African Americans to Portland to work in the ship yards. Many lived in Vanport, the massive war housing development near the ship yards. Following the war, there was a large housing shortage, and circumstances were much worse for African-Americans, whose housing options were limited. The situation reached crisis levels after the Vanport flood displaced 17,000 people in 1948. After the flood many African Americans moved to Albina.

The heart of mid-century African-American Albina stretched from the area where the Veterans Memorial Coliseum is now to north of Russell Street, with North Williams Avenue serving as the commercial, institutional and social spine for the community. Here were the social clubs, bars, barbecue joints, markets, theaters, businesses and institutions that supported and reflected African-American life in the city.



N Williams at the corner of Russell, looking north

Albina had a vital music scene. One of Portland's hottest jazz clubs in the 1940s was the Dude Ranch on Broadway between Vancouver and Wheeler owned by Pat Patterson and Sherman Pickett. Local and national jazz talent performed here, including Coleman Hawkins, Thelonius Monk, and Louis Armstrong. Recently rehabilitated as the Leftbank Building, it is one of the few surviving buildings of the southern Albina African-American neighborhood which was largely razed by public improvement projects. This and other structures associated with Portland's African-American history are documented in *Cornerstones of Community*, a historic context statement and inventory prepared by the Bosco-Milligan Foundation in 1998 and recently updated as a part of the N/NE Quadrant Planning process.

Louis Armstrong at the Dude Ranch with club owners Pat Patterson & Sherman Pickett

Map H1: N/NE Quadrant Historic Resources

The existing character and form of the N/NE Quadrant has been shaped by a number of mid-twentieth century large-scale public infrastructure and urban renewal projects, including major auto and freight related transportation facilities. Among the first was the completion in 1955 of the Banfield Freeway (which eventually became Interstate 84) along Sullivan's Gulch. Also completed in the 1950's were improvements to Highway 99W, including new connections from the Steel Bridge to Interstate Avenue which necessitated several building demolitions. These disruptions were dwarfed by projects that soon followed.

The Veterans Memorial Coliseum, completed in 1960, was financed by an $8 million bond measure approved by voters in 1954. Land clearance started around the same time as the Lloyd Center was being constructed, in the mid-1950s. The project entailed the demolition of 476 housing units, half of which were inhabited by African-Americans, and dozens of businesses. Devastating for those directly affected, the dislocations of this project also had the effect of cutting-out the southern anchor of African-American Albina and shifting the social and commercial center of the community northward.

Completed in 1960, the Coliseum is an icon of Portland modernist architecture, designed by internationally known architecture firm Skidmore, Owings and Merrill. It is monumentally sited on the bluff above the Willamette, a glass-curtain-walled box with a freestanding concrete seating bowl inside. It was listed in the National Register of Historic Places in 2009.

Veterans' Memorial Coliseum, ca. 1960s

The Coliseum development was prototypical of urban renewal projects across the country in this era, with large land-clearances in older, often minority neighborhoods that were declared blighted or sub-standard. This mid-century urban renewal paradigm was optimistically (or perhaps cynically) envisioned as a solution to multiple urban problems, from crime and poverty to inner-city decline spurred by growing suburbanization. In the 50s and early 60's urban renewal was widely supported by community leaders and the general public, even to some extent by communities heavily impacted by the ground-scraping approach. These perceptions would change as the 1960s and 1970s unfolded.

Opening the same year as the Coliseum, the Lloyd Center was completed by Ralph Lloyd's daughters, finally implementing a somewhat different version of his long-held east side vision, seven years after his death. It covered 90 city blocks, 56 of which were occupied by shops and offices,

including 200 tenants, 100 of which were in the open-air retail mall itself. Blocks not covered by buildings were used for parking, providing some 8,000 free parking spaces. Lloyd Center was one of the first large-scale, open-air shopping malls in the country, and was a regional market draw. Close to, but not in, the existing downtown retail core, the expected result (according to a Planning Commission report in the 1950s recommending approval of the project), would be that "Portland would in effect have a split central shopping core." At the juncture of two freeways and served by acres of free parking, Lloyd Center proved to be a serious challenge to traditional downtown retail establishments.

Ralph Lloyd's east side vision, ca. 1930s

Lloyd Center, ca. 1960s

Major transportation projects were also completed in the 1960s. Following passage of the Interstate and Defense Highways Act in 1956, two big freeways were planned to converge in Portland, I-84, along the Banfield route and I-5 along the east bank and running through N/NE Portland. Improvements to the Banfield were largely completed by 1963. Interstate 5 was completed in 1966. The Minnesota Freeway, the part of I-5 through N/NE Portland removed about 125 residences and businesses in Albina. The Fremont Bridge opened in 1973, the final link of Portland's "Inner Loop."

I-5 Construction near Broadway-Weidler, 1962, Paramount Apts. & Leftbank bldg. at center

In 1970 the Portland Development Commission and Emanuel Hospital initiated an urban renewal project to expand the hospital. About nine square blocks were cleared and 188 mostly black-occupied homes were demolished. The once vital Williams/Russell African-American commercial center was essentially razed. However, in a cruel irony, after 200 people and 20 businesses were removed, work on the project abruptly stopped in April 1973, as Congress failed to fund the planned new construction. The project had been heavily opposed by the African-American community. The scar of vacant, cleared land remained for decades as a potent reminder of successive postwar construction projects that ate away at the fabric of Albina and disproportionately impacted the African-American population.

Large-scale commercial buildings were constructed in the Lloyd District in the 1960s and into the next decades, sprinkling the area with an assortment of corporate office towers, medical buildings and hotels, each accompanied by surface parking lots or parking structures. The new construction greatly contributed to the amount of Class A office space available in the city, much of it comparable to parts of Downtown. In the early 1970s, the Lloyd Corporation built two prominent office towers on NE Multnomah, one at 5th Ave., the other at 7th Ave. The large hotel tower that stands prominently near the I-5 freeway and Holladay Park dates from 1970. The Holladay Park Medical Center (now part of the Legacy system) was built in 1981. Another large office tower rose in 1981 at Multnomah and 9th and the federal government built an office tower in 1985 at the southern edge of the district, on Lloyd Boulevard at 9th Ave. Other major buildings include the Bonneville Power Authority, State Office Building, and the Metro renovation of the Sears building.

In 1990 the Oregon Convention Center opened, a large, public facility drawing large numbers of people from outside the area. In 1995 the Rose Garden opened, the region's premier indoor sports and entertainment facility, a symbol of Portland's ambition to be a "Major League" city. The district's high-density development and region-serving facilities are supported by major transportation investments from the past few decades, including MAX light rail lines and the soon-to-open east side Portland Streetcar line.

Oregon Convention Center

While the Lloyd District experienced tremendous changes in the twentieth century, the essentially industrial character of Lower Albina, first established in the nineteenth century, has remained relatively constant, a result in part from Portland's Industrial Sanctuary policies and zoning. The steep hill separating the industrial area and working waterfront from nearby residential neighborhoods also has helped maintain the stability of industrial uses. Lower Albina—with few housing units, greater proximity to industrial activity and the bisection of Interstate 5—has been little affected by the gentrification and transition caused by the 1990s-era economic boom in the nearby, more residential neighborhoods of North and Northeast Portland.

Today, Lower Albina includes a small mixed-use area that corresponds to the Russell Street Conservation District, a collection of historically and architecturally significant buildings that recalls the rough and tumble working-class history of the district. It includes several historic properties that have been rehabilitated in recent years including the Widmer Brothers Gasthaus (the historic Smithson & McKay Bros. Block) at the corner of Russell and Interstate. The White Eagle Saloon and Hotel, which was opened in 1905 by Polish immigrants Barney Soboleski and William Hryszko has been renovated and is now operated by the local McMenamin's chain of brewpubs. Opening in 2004, the MAX yellow line along Interstate Ave. serves the district.

APPENDIX E: ISSUES, OPPORTUNITIES AND CONSTRAINTS

This appendix section is the N/NE Quadrant *Issues, Opportunities and Constraints* report from February 2012. It summarizes a range of comments and ideas from a broad spectrum of stakeholders, including: the Stakeholder Advisory Committee; verbal and written comments collected at public events; comments submitted during the brainstorming sessions with the two project subcommittees, public agency partners; and individuals contacting the project staff through the project website and/or email.

The project goals and quadrant concept diagrams described in Chapter 3, and the goals, policies and actions contained in Chapter 4 were informed by the issues and ideas identified during this phase of the project.

N/NE Quadrant and I-5 Broadway/Weidler Plans

DRAFT

PRELIMINARY ISSUES, OPPORTUNITIES AND CONSTRAINTS

Over the past few months, N/NE Quadrant and I-5 Broadway/Weidler Plans (N/NE Quadrant Project) staff from involved state and city agencies have gathered a wide range of issues and ideas from a broad spectrum of stakeholders. Major sources of input to date have included one-on-one interviews with members of the Stakeholder Advisory Committee, verbal and written comments collected at public events (community walks held in September and public open house held in November), comments submitted during the brainstorming session with the two project subcommittees on December 1st and 2nd, and individuals contacting the project staff through the project website and/or email. In addition, project staff has identified some issues for discussion that are included here. This compilation of comments represents a good starting place for the next phase of the process - developing options or alternatives to guide future development and investments in the study area.

This document sorts the comments received so far by geography (see attached map), and groups similar comments together. It also begins to differentiate between general issues and specific opportunities, constraints or ideas that may lead to proposals in the upcoming alternatives development phase of work. Several issues suggested that are beyond the scope of this project are briefly listed at the end.

This is not a final product, but summarizes the issues identified thus far. **It is intended to move the discussion forward.** Additional issues can still be considered in the process as appropriate.

GENERAL QUADRANT-WIDE ISSUES

Staff received a great number of general comments that seem to apply to most or all of the N/NE Quadrant study area. These can generally be grouped into five main categories. These are increasing the area's **urban vibrancy and vitality**, increasing **economic prosperity** in the area, **improving human and environmental health**, seeking **balance and equity**, and improved **access and connectivity**.

1. Urban Vibrancy and Vitality

This category includes statements encouraging increased development (particularly on current surface parking lots) including retail, office and housing to provide better/more interesting pedestrian experiences, and new amenities like pocket parks and pedestrian routes. Introducing a diverse range of new uses was suggested to help overcome the highly episodic nature of activity in many parts of the district. It was suggested that an updated urban design strategy will help achieve these goals. A more robust and integrated open space

system is seen as needed in parts of the study area. Public safety is seen by some as a major issue threatening livability and investment.

2. Economic Prosperity

This category includes numerous references to increasing employment and business growth in the quadrant – particularly by supporting expansion of existing businesses and building on existing major attractors like the Oregon Convention Center, Rose Quarter, and Lloyd Center Mall. Several stakeholders voiced strong support for continuing efforts to locate a new major hotel near the convention center in the future. Several people suggested that districts within the study area would benefit from stronger identities – more "there there".

3. Human and Environmental Health

Topics related to human and environmental health include supporting the Lloyd Green pilot EcoDistrict concept currently under development, improving habitat conditions, continuing progress on stormwater management, expanding access to parks and natural areas, finding opportunities for urban gardens, improving air quality, reducing noise pollution, and pioneering green building technologies including measures to improve migratory bird-friendliness in new and existing buildings Specific opportunity sites mentioned for improving or creating new natural habitat areas include the banks of the Willamette River in the Rose Quarter and the northern slope of Sullivan's Gulch stretching the length of the study area's southern edge. However, the heavy rail lines and grain terminal along the Rose Quarter riverfront, and the heavy traffic on I-84 along Sullivan's Gulch do present challenges to these opportunities. Improving the jobs to housing ratio in the district by encouraging more housing at appropriate affordability levels along with job growth is also seen as a means to improve environmental performance in the study area through commute trip reduction.

4. Balance and Equity

Issues identified generally focused on finding room in the quadrant for new people, business, development, etc. while retaining the existing population, businesses and culturally/historically significant buildings, etc. at the same time. Minimizing or mitigating negative impacts on surrounding areas and important local structures is a key goal. Specifically mentioned for preservation were buildings appearing in the *Bosco-Milligan Cornerstones of Community* inventory as well as the retention of existing affordable housing. Building new affordable and middle-income (often referred to as "workforce") housing is also seen as important to maintain a diverse and equitable community in the study area. A "concentric circles" model of economic development that prioritizes local sourcing of goods and talent was suggested. Finally, desire was expressed to see more multi-cultural gathering places in the study area - community centers and marketplaces were mentioned specifically.

5. Connectivity and Access

Issues applicable to the entire study area included maintaining and improving access to, within, and through the quadrant for all modes of transportation including pedestrian, bicycle, auto, transit (bus, light rail and streetcar), and truck/freight. I-5 and I-84 are seen as significant pedestrian/bike barriers. Current and future trails should be included as part of the

future transportation network. Improving safety across all transportation modes and reducing conflict between different modes is highly desirable. Considering a variety of ways to safely improve connectivity for bicycles and pedestrians, including options that exceed anticipated funding, is also desired. There is a general desire to increase the overall efficiency of our transportation system while adequately serving current and future facilities, businesses and residents and reducing emissions and climate impact. Specific measures to improve efficiency mentioned include: increasing trips by bicycle and walking, increasing transit capacity and use, reducing single-occupant vehicle travel, eliminating vehicles from certain areas, promoting motor cycles and scooters, improving signage, and increasing the use of alternative fuel vehicles. Increasing housing in the quadrant was suggested as an important opportunity to increase bike and walk commute trips.

The general sentiment related to *parking* is that there are too many surface parking lots in the area, but there is acknowledgement that a constrained parking supply may be discouraging new development and business growth. Regional traffic access to and parking available for major regional event attractors in the quadrant (Rose Garden, convention center, etc.) remains extremely important both now and in the future. Addressing conflicts between local resident parking and event parking, considering new parking facilities for MAX riders and establishing minimum parking requirements for new development were also suggested topics.

SUBAREA ISSUES

1. Subarea 1 and 1a - Lower Albina and Russell Street

a. Most of the issues identified specific to this area focused on one of two themes: preserving and enhancing the viability of industrial nature of the district, and revitalizing and improving the historic Russell Street main street.

b. Key issues related to preserving and enhancing the **industrial viability of Lower Albina** included:
   - Improving **freight access** and parking;
   - Continuing **industrial sanctuary** policies, though possibly with some increased flexibility with regards to allowed office uses

c. On **Russell Street**, numerous opportunities for renovation and preservation of historic structures exist. These projects could increase retail and restaurant activity on Russell. Several stakeholders have commented that more mixed use development (possibly including housing) would improve the vitality of the main street. Others have noted that there are several vacant parcels adjacent to the **MAX light rail station** and that mixed-use, transit-oriented development might be appropriate in a limited area around the station - targeted zoning changes may be needed to facilitate mixed use development. Improving connections from Russell Street up to N. Mississippi Street and up Russell to Emanuel Hospital also were suggested.

d. This being a predominantly industrial area, **freight capacity and movement** is extremely important including truck-friendly street/intersection design and freeway access.

e. Additional issues raised specific to this area were:
   - Poor access to the **Willamette River** and potential future greenway trails; and
   - A potential opportunity to do more with the lands under the elevated I-5/I-405 freeway interchange.
   - Improving pedestrian conditions, bicycle/pedestrian connectivity through the district and bicycle parking were also mentioned.
   - While a few people expressed interest in limiting industrial expansion along the riverfront, reexamining the industrial zoning between Interstate Avenue and I-5, and allowing wide-spread redevelopment including tall residential towers, those voices seem to be a minority opinion.

2. Subarea 2 -Vancouver/Williams Corridor

a. Most comments specific to this area supported efforts for **gradual redevelopment** of the area, while preserving important historic and culturally-significant buildings. Some blocks within this area currently have a residential zoning designation, complicating mixed use redevelopment that includes significant non-residential uses. It has been suggested that **zoning should be more flexible**, however preserving existing housing and encouraging new residential construction in this area continues to be important to the Eliot Neighborhood. Generally, lower scale development seems to be the desired urban form in this area. It should help transition from the single family character in Eliot to the taller buildings allowed in the Rose Quarter and Lloyd District.
   - Should **incentives** be developed to encourage, but not require, residential construction?
   - Should the current high density residential zoning in parts of this area be relaxed to allow more non-residential development?

b. **Access** is an important issue in this area – particularly as potential reconfigurations of I-5 and the over-crossings at Flint, Broadway, Vancouver, and Williams are considered. Multiple, pedestrian- and bike-friendly access options are desirable - including access from this area to the Eastbank Esplanade and future greenway trail.
   - Could there be an additional bike/ped crossing at Hancock?

c. **Views** from the area across Lower Albina and the Rose Quarter to the west side were identified as a potential issue. In particular, the current public view mapped from the southwest corner of Lillis Albina Park is fully obstructed by trees and could be impacted by some development scenarios under consideration in the Rose Quarter / Blanchard Building area.
   - How important is this viewpoint?
   - Should it be improved or relocated?

3. Subarea 3 -Rose Quarter

a. The N/NE Quadrant Project will seek to support and coordinate with the results of the **Rose Quarter Development Project**. To this end, there appears to be substantial support for considering redevelopment at the **School District's Blanchard Building** site. This would likely require a zoning change from the site's current industrial zoning

designation to commercial/mixed use zoning. Other changes to development regulations might also be recommended by the Rose Quarter work. Additionally, the theme emerged of supporting and strengthening the current role of the Veteran's Memorial Coliseum and Rose Garden arena while encouraging new uses. It was also suggested that public investment and/or disposition of publicly owned land could spur private redevelopment throughout the area.

b. The **Willamette riverfront** is seen as a key opportunity in the Rose Quarter. Suggestions emphasize a desire for:
   - Better access to and along the river (both physical and visual);
   - Increasing water recreation and transportation opportunities; and
   - Creating riverfront habitat, although this may prove challenging as the Rose Quarter riverfront now has heavy rail lines serving an active grain terminal located between two heavily trafficked bridges.

c. The CLD Pacific **Dreyfus grain terminal** is likely to remain in place during the foreseeable future and is seen as a challenge to redevelopment in the area. Some suggested that even if this facility were no longer in use as a grain terminal, it would be an interesting opportunity for historic preservation and repurposing.

d. **Safe, multi-modal access** to and through the Rose Quarter is an important issue – particularly to the riverbank and Eastbank Esplanade as well as across I-5. The current configuration of the I-5/Broadway/Weidler "Box" is viewed as dangerous and unpleasant for all modes (see also freeway/interchange-specific issues below). Specific transportation ideas to consider here include:
   - A new separate bike/ped bridge over I-5 (possibly at Clackamas);
   - Bringing N. Dixon Street across I-5 to connect to Flint; and
   - Reversing or decoupling the direction on N Vancouver and N Williams Avenues to improve the flow in the "Box".
   - Improve pedestrian and bicycle connections under I-5 (with an emphasis on Holladay Street) between the Rose Quarter and Convention Center areas through streetscape and strategic development.
   - Ensure that essential freight access to the Rose Garden and Memorial Coliseum is maintained.

e. Improvements or reconfigurations to the **Rose Quarter Transit Center** could be an opportunity to reduce the distance between the MAX platforms and create a safer environment for pedestrians, create new development areas and increase multi-modal access to the area. There is also some desire to consider eventual realignment of the **heavy rail line** along the riverbank inland to reduce the Steel Bridge bottleneck caused by the current s-curve and also allow public access to the river, habitat restoration, and future development along the river.

4. Subarea 4 - Broadway/Weidler Corridor and transition to Irvington and Eliot neighborhoods

a. Most comments received specific to this area relate to improving the **main street character** of the district and achieving a **respectful transition** from the Central City to the Irvington Historic District to the north. Specifically, it was suggested that the main street qualities present on the eastern portion of NE Broadway should continue through the entire study area to the Broadway Bridge.

b. Transportation issues have also been raised. Some stakeholders are interested in looking at changes to the current **one-way street traffic configuration on Broadway and Weidler**. Several stakeholders mentioned that there are several **difficult pedestrian crossings** (without signals) on NE Broadway and that improving bicycle safety along the length of the corridor is a priority. Providing controlled intersections for bikes and pedestrians every 2 blocks was one suggestion for resolving this issue. It was also suggested that benefits may arise from de-coupling Broadway and Weidler and creating a 2-way thoroughfare.

c. Other specific transportation issues mentioned for consideration include:
   - Looking at ways to improve multi-modal safety at the intersections of Broadway/Weidler at MLK/Grand and Broadway/Weidler at 15th/16th;
   - Reducing the number of driveways on Weidler; and
   - Untangling the situation at the "Box".

5. Subarea 5 -Central Lloyd

a. Many issues raised specific to this area focus on the opportunity to support both the development and continued success of the **Oregon Convention Center** and the established office district immediately to the east. Opportunities to help support the convention center include the headquarters hotel and entertainment-related development around the facility. **Opportunities in the office core** include unique potential for development with distinctive amenities on the superblocks in the area. Holladay Park Medical Center was also seen as a potential opportunity for growth. The need for a stronger district identity and improved public safety were identified as crucial to supporting this sub-area.

b. **Residential development** – and the general lack thereof – is frequently cited as a major issue in this part of the study area. Streetcar construction is seen as a major opportunity to help encourage more residential construction here, but questions remain about the market-readiness of the area for housing. There is clear desire for new housing at a wide range of affordability levels – ideally to roughly match the employment profile of the study area. Some questions to think about include:
   - Are the **limited parks and open space amenities** in the area sufficient to support large-scale residential construction?
   - Is the current zoning working to encourage housing?
   - What parking strategies are appropriate? Currently, parking in the area is challenging, discourages residential development, and is a burden to existing

residents as new development makes use of the already limited supply. Some residents would like a residential parking permit program in this area.

c. Other issues raised specific to this area include:
   - A lack of clear **urban form and street hierarchy** (i.e large blocks and buildings). Traversing the district does not provide enough clues as to which are of the streets serves the highest priority. A clear positive outcome for this sub-district is to determine ways to support a delineation of street hierarchy. The proposed Holladay green street improvements were cited as a successful attempt at creating hierarchy in one geographic location.
   - The many **large blocks** in the district are seen as a challenge to access and pedestrian connectivity, but are also seen as a unique opportunity in the Central City with typically much smaller blocks because they provide an opportunity for a different urban pattern for redevelopment. Including pocket parks in new development was suggested as a way to achieve new green/open space amenities incrementally.

d. Regarding transportation and access, **improved pedestrian and bike access** on MLK and Grand and across/under I-5 was frequently suggested as was the importance of maintaining efficient truck access to the Rose Quarter, Convention Center and surrounding office buildings. Specific ideas suggested included providing controlled intersections for bikes and pedestrians every 2 blocks along MLK/Grand, considering new pedestrian crossings to the Rose Quarter at Clackamas and to the Central Eastside at 7th Avenue (over I-84).

6. Subarea 6 and 6a -Lloyd Center Mall, Office Core, Holladay Park and Sullivan's Gulch transition

a. The poor quality of the **pedestrian experience** and limited street-level activity is cited as a challenge to be addressed in this plan. **Increasing vitality** through redevelopment and new development is a common desire. Some specific suggestions include:
   - Improving the facade of the Lloyd Mall with aesthetic improvements would create a more inviting interface between the inside and outside of the structure and would serve to 'invite' people into the mall.
   - Developing the **Lloyd Cinema parking lot** to potentially include a mix of residential, retail and other uses to help activate the space.

b. The predominance of **large property owners** and **large blocks** was noted as both a challenge and an opportunity in this area. Existing residential development in this area is limited and typically has little or no parking. Residents are interested in residential permit programs.

c. Public safety concerns in **Holladay Park** are widespread and a variety of measures to improve conditions there have been suggested. These range from near-term actions like increased tree trimming and more active programming of the park to longer-term ideas, such as improving surrounding development conditions with new buildings facing (embracing) the park and adding additional design features to the park to attract a wider variety of users.

d. Increasing **pedestrian connectivity and safety** both within this part of the study area and between this and adjacent areas was cited as an important issue. Suggestions for improvements include:
   - A new pedestrian bridge between this area (somewhere around NE 9th Ave) and the Central Eastside (across I-84),
   - Adding bicycle lanes to the 12th Avenue bridge; and
   - Continuing bike lanes on Multnomah all the way to NE 21st Ave.

e. The properties at the SW corner of **NE Multnomah and NE 21st** are seen as an interesting development opportunity. There are concerns about possible demolition of older homes on portions of the site, but generally there seems to be interest in looking at redevelopment scenarios for the corner. There appear to be differing opinions on what scale of building would be appropriate here. The site currently has split zoning, and may need to be rezoned to accommodate desired development. This area could also provide a convenient access point to the potential future Sullivan's Gulch Trail.
   - One opportunity that arises from the charrette process would include ideas for the type of design solutions and/or development that would be most appropriate and desirable?

7. The Freeway and Interchanges

a. Freeway related issues mentioned by study participants have focused on three themes: **safety**, **operational issues** as related to the freeway and overpasses, as well as **improved freight movement**.

b. Expressed **safety** related issues have included a desire to reduce weaving and improve merge lengths on I-5 as a way to help reduce the incidence of rear end and sideswipe collisions. On overpasses and interfaces with the local street network, there is a desire to improve safety especially by clarifying vehicular patterns and/or to separate vehicular, bikes and pedestrian traffic at identified conflict areas. The Broadway/Weidler box and the intersection of Vancouver and Larrabee were singled out as particularly problematic areas, especially during major events in the Rose Quarter. Some stakeholders would like safety to be explicitly prioritized over capacity expansion when evaluating changes to I-5 and "the box".

c. Comments related to freeway **operational issues** generally focused on:
   - Improvements related to the reliability of traffic flow;
   - Reducing delay;
   - Increasing levels of service; and
   - A desire to increase average freeway speeds through the district.
   - A desire to reduce the impact of freeway traffic on the neighborhood

d. It was also suggested that the reconfiguration or removal of some or all of the **on and off ramps** to limit the number of intersections that feed onto the local street grid is desirable. Spreading the ramps and reducing the number of lights in specific locations to improve traffic flow was also mentioned, as was a desire to lengthen specific on ramps to

minimize traffic bound for the freeway from backing up on local streets. Finally, a strong desire was expressed to **avoid impacts on key cultural sites** when looking at proposed freeway improvements.

e. **Freight movement** in support of local and regional economies was highlighted as a desired outcome of this process. Maintaining and improving freight movement and distribution on the freeways, as well as to locally designated freight routes, such as Lower Albina, are needed to ensure the reliable flow of goods. Freight movement improvements may take the form of reconfigured freight geometries on local streets and at on ramps, especially in areas like the Broadway/Weidler "box".

f. A desire to increase the **reliability of travel times** and to increase capacity for freight movements on the freeways was also expressed. It was suggested that this study should identify alternative freight access routes to and from Lower Albina, Swan Island and NW industrial areas.

ISSUES BEYOND THE SCOPE OF THIS PROJECT

Staff prepared a scope document to clarify the types of issues the N/NE Quadrant and I-5 Broadway/Weidler Plans will consider. The Stakeholder Advisory Committee reviewed the document at their December 9th meeting and is expected to approve a revised version at their meeting on January 20th. Using that document as guidance, a number of issues have been raised that are clearly not within the scope of this project. As a result they have not been included above in this document. Issues commonly raised in this category include but are not necessarily limited to:

- Questions about the future of the I-5 Eastbank Freeway in the Central Eastside and removing I-5 from the study area.
- Issues pertaining to possible future high speed rail system needs in the quadrant.
- Determining future streetcar system priorities or alignments.
- Decisions on current or future Urban Renewal Areas.

APPENDIX F: PUBLIC INVOLVEMENT SUMMARY

Public Involvement Goals

There is a long history of large redevelopment and infrastructure project that have had adverse impacts on the communities in Lower Albina and the Lloyd District. The N/NE Quadrant Plan strives to repair the community fabric, and to this end the public involvement process was designed to be inclusive and responsive to public concerns, and allow for active participation and meaningful public input.

The public involvement efforts for the N/NE Quadrant Project were guided by the public involvement goals developed by the Community Involvement Committee (CIC) for the Portland Plan, the long-range planning effort for the City as a whole, which was taking place when the quadrant plan process began. Incorporating these public involvement goals provided for consistent public involvement efforts:

- Build on existing relationships
- Engage broader and diverse groups with education and information and provide all interested with enough education so they can meaningfully participate
- Provide multiple venues and means for community involvement and engagement
- Involve as many people as possible
- With feedback and continuous engagement throughout Portland Plan development and implementation, ensure community members are being heard

In addition, the N/NE Quadrant project strove to:

- Provide a process that is open and transparent, with a special emphasis on early involvement in providing policy-setting input
- Clearly define opportunities where the public can provide timely input so that there is an opportunity to inform policy-making and otherwise affect change
- Wherever possible, design interactive formats for meetings and ensure a balanced and fair discussion of issues

Key Stakeholders and Project Advisory Committees

The Bureau of Planning and Sustainability, working with the other project partners Oregon Department of Transportation and the Portland Bureau of Transportation, involved a variety of stakeholders and interested parties in the N/NE Quadrant planning process. These stakeholders had varying levels of interest in the planning process, ranging from property owners who will be directly impacted by the plan outcomes to members of the general public who wanted to stay informed about what is happening in the Central City.

Stakeholder Advisory Committee

A Stakeholder Advisory Committee (SAC) was one of the primary means of ensuring that the public had opportunities to provide meaningful input into the planning process. SAC members (see table F1) were selected to represent key stakeholder interests and to create a balanced committee to guide the planning effort. All SAC members were appointed by the directors of the Portland Bureau of Planning and Sustainability, the Portland Bureau of Transportation and the Oregon Department of

Transportation Region 1 Office. The SAC was made up of 30 voting members, representing area stakeholders, including business and neighborhood associations and property owners, as well as community interests such as affordable housing, cultural heritage, the environment, economic equity, labor, urban design and transportation. Local, regional and state public agencies were also represented on the committee as non-voting members.

The role of the SAC was to advise and direct project staff throughout the planning process and to make recommendations about the project to the Portland Planning and Sustainability Commission and the Oregon Transportation Commission. SAC members were expected to report back to and solicit input from their stakeholder groups and constituencies, represent the broader interests of those groups at meetings and promote public involvement in project events. Early in the process SAC members developed and adopted collaboration principles that governed decision making for the committee.

Subcommittees of the SAC met periodically to address specific issues, such as transportation, land use and urban design. Members of the public were invited to join the subcommittee to have more in-depth participation in the process.

In all, 19 full SAC meetings and 13 subcommittee meetings were held. All meetings were open to the public and included opportunities for public comment.

Table F1: N/NE Quadrant Project Stakeholder Advisory Committee Members (June, 2012)

Voting Members			
Representative	**Interest**	**Organization**	**Alternate**
Matt Arnold	Transportation-Bicycle	Bicycle Advisory Committee	Heather McCarey
Wynn Avocette	At-large		
Pauline Bradford	Cultural Heritage	Interstate URAC, NE Coalition of Neighborhoods	
Carol Gossett	Neighborhood Association	Sullivan's Gulch Neighborhood Association	Britt Brewer
Phil Selinger Carolyn Briggs (past)	Transportation-Pedestrian	Willamette Pedestrian Coalition	Doug Klotz Erin L Kelley (past)
Daniel Deutsch	Small Developer	Alora Development	Joanna Agee
Malina Downey	Regional Access	UPS	
Debra Dunn	Transportation-Trucking	Oregon Trucking Association	Bob Russell
Gary Eichman (co-chair)	Transportation-Freight	Portland Freight Committee	Tracy Whalen (co-chair)
Dean Gisvold	Neighborhood Association	Irvington Neighborhood Association	Ed Abrahamson
Cynthia Gomez (past)	Environmental Justice / Economic Equity	Latino Network	Andrea Marquez-Horna
Heidi Guenin	Community Health	Upstream Public Health	Steve Bozzone
Damien Hall	At-large		
Sean Hubert	Affordable Housing	Central City Concern	Martin Soloway
Wayne Kingsley	Adjacent Businesses	Central Eastside Industrial Council	

Wade Lange	Property Owner/Business- Lloyd District	Langley Investments	Mike Bernatz
Lloyd Lindley (co-chair)	Urban Design	AIA Portland / ASLA Portland	
Eric Lovell	Lower Albina Businesses	Uroboros Glass Studio	Kurt Widmer
Jenny Lyman	Transit Riders		
Gary Marschke	NNE business association	NNE Business Association	Joice Taylor
Brock A. Nelson	Transportation-Rail	Union Pacific Railroad	
Midge Purcell	Community / Civic Org	Urban League	
Jodi Parker Paul Riggs (past)	Labor Organization	Building Trades/Columbia Pacific BCTC	
Owen Ronchelli	Transportation-Local TMA	Lloyd TMA	
Wanda Rosenbarger	Major Retailer	Lloyd Center Mall	Dennis Henderson
William Ruff	Architect/Developer	LRS Architects	
Bob Sallinger	Environment	Audubon Society	Kelly Rodgers
Gary Warren	Neighborhood Association	Lloyd District Community Association	
Mike Warwick	Neighborhood Association	Elliot Neighborhood Association	Laurie Simpson
Justin Zeulner J. Isaac (past)	Property Owner/Business- Rose Quarter	Portland Arena Management	Chris Oxley
Non-Voting Members			
John Williams		Metro	Chris Deffebach
Teri Dresler Jeff Blosser (past)		Oregon Convention Center	
Rian Windsheimer		Oregon Department of Transportation	Andy Johnson

Technical Advisory Committee

A Technical Advisory Committee (TAC) representing public agencies with specialized expertise related to the plan and implementation served as a resource for the planning process. TAC members were responsible for reviewing project proposals, providing comments to project staff and reporting back to their agencies throughout the planning process. The TAC met six times, in addition to individual coordination meetings with City bureaus and other public agencies that occurred during the process.

Table F2: N/NE Quadrant Project Technical Advisory Committee Members (June, 2012)

Organization	Representative(s)
Metro	Ted Reid
Multnomah County	Karen Schilling, Maya Bhat
Oregon Dept. of Transportation	Andy Johnson, Todd Juhasz, Tim Wilson, Fred Eberle, Mark Johnson, Cahn Lam, Chi Mai, Simon Eng
Oregon Dept. of Environmental Quality	Cory Wind, Keith Johnson
Port of Portland	Susie Lahsene
Portland Bureau of Development Services	Kara Fioravanti, Tim Heron
Portland Bureau of Environmental Services	Amy Chomowicz, Rick Bastasch, Kevin Kilduff, Emily Hauth, Marie Johnson
Portland Bureau of Fire & Rescue	Erin Janssens
Portland Bureau of Planning & Sustainability	Mark Raggett, Lora Lillard, Leslie Lum, Sallie Edmunds, Shannon Buono
Portland Bureau of Transportation	John Gillam, Mauricio Leclerc, Grant Morehead, Roger Geller, April Bertelsen, Bob Hillier, Lewis Wardrip, Ellen Vanderslice
Portland Housing Bureau	Kim McCarty, David Sheern
Portland Office of Healthy Rivers	Ann Beier, Kevin Kilduff
Portland Office of Management and Finance	Claudio Campuzano
Portland Office of Neighborhood Involvement	Judith Mowry, Jeri Williams
Portland Bureau of Parks and Rec	Brett Horner, Kathleen Wadden, Sarah Coates Huggins
Portland Water Bureau	Stan VandeBergh, Cheri Warnke, Mike Saling, Tom Carter
Portland Public Schools	Paul Cathcart
Portland Development Commission	Kia Selley, Sara King, Kevin Brake, Irene Bowers, Denyse McGriff
Portland Streetcar	Vicky Diede
TriMet	Alan Lehto, Jessica Tump

Public Involvement Events and Tools

Events

SAC Meetings: SAC and its subcommittee meetings were held approximately monthly, and served as ongoing opportunities to share information and receive feedback from stakeholders and members of the general public. SAC meeting materials and minutes were posted on the project website.

Public Workshops/Charrettes: Two design charrettes were held during the concept development phase of the project focused on land use/urban design and the I-5 Freeway improvements. Charrette participants, including technical experts, SAC members and the general public, discussed issues and opportunities in the quadrant and explored possible solutions. Approximately 65 people attended the charrettes.

Open Houses: Four open houses were held at key points in the process to inform the public and get feedback. Staff presented recommendations, answered questions and took public comments. Approximately 450 people attended the open houses.

Community Walks: Community walks were conducted during the existing conditions phase of the planning process in September 2010 and before the SAC was asked to endorse the recommended I-5 freeway concept in April 2012. Staff and community members shared their knowledge of the N/NE quadrant with the SAC and other members of the public, and the groups discussed potential issues and opportunities related to the concept proposals. Approximately 40 people attended the walks.

Community Group Meetings: The project team attended meetings of existing community groups, such as neighborhood and business associations, advocacy groups and other organizations, to share information and get feedback throughout the process. In the summer of 2011, the project team made a significant effort to obtain feedback on plan proposals, attending 20 separate outreach meetings in less than 3 months.

Commission Briefings and Public Hearings: Project briefings were provided to the Portland Community Involvement Committee, Planning and Sustainability Commission, Historic Landmarks Commission and Design Commission during the process. The plan will undergo a formal public hearing process before the Portland Planning and Sustainability Commission and City Council prior to adoption.

In addition to the events outlined above, staff met with individual businesses, property owners and other interested stakeholders throughout the process. A complete list of events and meetings is outlined in Table F3: *N/NE Quadrant Project Outreach Log.*

Communication/Information Tools

Project Website: The project website served as the primary source of information for the public and as a means to solicit and receive public feedback. The website included project information and regular updates, documents, a calendar of events, meeting agendas and minutes, links to other related planning efforts and staff contact information.

Survey: In the summer of 2011, an on-line survey was developed to get feedback on three concept alternatives developed by staff in coordination with SAC members. Survey responses helped inform development of a proposed concept, which was eventually endorsed by the SAC, and formed the

basis for the goals, policies and implementation actions included in the quadrant plan. Approximately 140 survey responses were received.

Mailings and Newsletters: An electronic mailing list was used to provide frequent updates to interested parties regarding meetings, events and new products. Occasional articles and notices were distributed through the BPS bimonthly e-newsletter. A hard copy notice announcing the project and the first open house was mailed to businesses and residents within the N/NE Quadrant planning area and other interested parties.

Media: Announcements for key events and document releases were distributed to local media outlets (Oregonian, Daily Journal of Commerce, neighborhood newspapers and other outlets).

Table F3: N/NE Quadrant Plan Outreach Log (Draft as of May, 2012. To be Updated)

Date	Organization/Event	Project Staff	Attendance (Approximate)
9/16/10	N/NE Quadrant Stakeholder Advisory Committee	Stephanie Beckman, Fred Eberle, John Gillam, Hale, Iwata, Andy Johnson, Todd Juhasz, Leclerc, Lisle, Starin, Tim Wilson	36

This document shows changes from the 5/4/12 version of the draft Goals, Policies and Implementation Actions, based on comments from the SAC and Subcommittee. This track change version is provided to facilitate review of the complete draft N/NE Quadrant Plan, provided under separte cover.

~~N/NE Quadrant Plan~~

Chapter 3: ~~Draft~~ Goals, Policies and Implementation Actions

This plan chapter~~, the heart of the N/NE Quadrant Plan, will be~~ is organized into sections addressing each Central City district (the Lloyd District and Lower Albina), as well as the two study areas included in the N/NE Quadrant planning boundary. A district goal and concept diagram ~~will~~ convey the overarching vision for each district, followed by a series of policies, which provide more specific direction on issues associated with the larger goal. The district goals and policies reflect the project goals and objectives adopted by the Stakeholder Advisory Committee to guide the overall planning process. The district concept diagrams are ~~currently being developed, therefore are not available with this draft. However, they will be~~ based on the N/NE Quadrant Concept diagrams~~ described in Chapter 3~~, which were developed as part of the planning process that included a stakeholder charrette, several public events and detailed review by the SAC. ~~the SAC has reviewed several times.~~ The SAC goals and the quadrant concept diagrams are described in Chapter 2: Developing the Plan.

The policies are organized into topic areas generally consistent with the planning framework developed for the Central City 2035 (CC2035) Concept Plan, which will establish the overall vision and direction for the Central City as a whole. Because issues that apply Central City-wide will be addressed in the CC2035 Concept Plan, the N/NE Quadrant Plan will focus on issues that are unique to its planning area within the Lloyd District and Lower Albina. The policy topics are as follows:

1. Regional Center~~: Economy and Innovation~~
2. Housing and Neighborhoods
3. Transportation
4. Urban Design
5. ~~Green Central City~~ Environment (title under discussion)

All five policy topic areas are covered for the Lloyd District, however Lower Albina, a largely industrial area, does not have a “Housing and Neighborhoods” section.

Performance targets are established for key measures as a means of tracking progress toward meeting goals and policies. They are based on a number a sources, including assumptions about future development, housing and employment forecasts, targets from other planning processes such as the Portland Plan and Climate Action Plan, and transportation modeling. The performance targets in this plan should be considered preliminary. They will need to be revisited, and potentially recalibrated for the full Central City, once all of the quadrant plans have been completed.

Implementation actions, such as changes to regulations~~ory changes~~, future work items, projects, programs or studies, are proposed for each district and for the two study areas: North Banfield Portal and Vancouver/Williams Corridor. ~~Potential i~~Implementers are identified, including public agencies, private and non-profit entities and other community partners, with the ~~. It is anticipated that a~~ lead implementing agency noted in **bold**. ~~will be identified in the next draft of this document, after additional consultation with the implementing agencies.~~ A list of implementers and abbreviations used in the action tables is provided at the end of this document.

A timeline is provided, with some actions intended to be accomplished with the adoption of the full Central City 2035 plan package, anticipated in 2014. Other actions are intended to be completed 2 to

5 or 6 to 10 years beyond that, and some are ongoing. ~~These timelines are preliminary pending review by bureau managers to ensure they align with their anticipated budget and workload constraints.~~

~~Relationship to SAC Goals~~ (this section deleted from full plan version, SAC goals are included in Chapter 2 of the plan)

~~As noted above, the draft goals and policies are organized consistent with the CC2035 framework. They were also crafted with the original SAC goals and objectives, developed at the beginning of this process, in mind. Below is a summary of how the SAC goals and objectives have been incorporated into the draft plan policies:~~

~~SAC Goals~~	~~Draft Plan Policy Areas~~
~~Goal 1: A diverse mix of commercial, cultural, entertainment, industrial, recreational and residential uses, including affordable housing.~~	~~*Lloyd:* Regional Center: Economy & Innovation, Housing and Neighborhoods~~ ~~*Lower Albina:* Regional Center: Economy & Innovation~~
~~Goal 2: Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages~~	~~*Lloyd:* Regional Center: Economy & Innovation, Housing and Neighborhoods~~ ~~*Lower Albina:* Regional Center: Economy & Innovation~~
~~Goal 3: Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment.~~	~~*Lloyd:* Housing and Neighborhoods, Urban Design, Green Central City~~ ~~*Lower Albina*: Green Central City~~
~~Goal 4: Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods.~~	~~*Lloyd:* Housing and Neighborhoods, Urban Design~~
~~Goal 5: A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system.~~	~~*Lloyd:* Transportation, Urban Design~~ ~~*Lower Albina*: Transportation~~
~~Goal 6: Improve the local circulation system for safe access for all transportation modes within the quadrant and at freeway interchanges.~~	~~*Lloyd:* Transportation, Urban Design~~ ~~*Lower Albina*: Transportation~~
~~Goal 7: Equitable access to community amenities and economic opportunities.~~	~~*Lloyd:* Regional Center: Economy & Innovation, Housing and Neighborhoods~~ ~~*Lower Albina:* Regional Center: Economy & Innovation~~
~~Goal 8: Protection and enhancement of the cultural heritage of the area and its sub-districts.~~	~~*Lloyd:* Housing and Neighborhoods~~ ~~*Lower Albina:* Urban Design~~

Lloyd District

District Goal

Foster the growth of the Lloyd District into the intensely urban eastside center of the Central City. Capitalize on the district's regional attractions, high quality transit and connections to create one of the most vital and livable districts in the Central City, with a strong employment base, successful residential community and a variety of urban amenities. Develop the district as a complete and ~~green~~ sustainable community with well-designed open space, streets, and high-performance green buildings and infrastructure.

Subarea Character

[insert subarea character diagram]

This diagram illustrates the types of uses planned for the different "subareas" of the Lloyd District, as well as the degree of change expected in those areas as the district develops. For example, major redevelopment with high-density mixed use development is envisioned within the Central Lloyd area, which is expected to have the highest degree of change. Other areas that are currently well established, such as the Office Core and Irvington edge, are expected to have a relatively low degree of change. This diagram also identifies "housing emphasis areas" where development of new housing is a priority.

Lloyd District Concept Diagram

[insert Lloyd District concept diagram]

Key Elements of the Concept

Street and Development Character: The character and function of three main street types shown in the concept diagram are described below. A more detailed description of the street types is provided in a separate report, N/NE Quadrant Plan: Street and Development Character Concept (2/1/12 Draft).

- **Retail/Commercial Corridors.** Busiest streets with high visibility by motor vehicles, transit, bikes and pedestrians and generally consistent ground level retail storefronts. These corridors are broken down in three scales: "civic," which make connections to other parts of the city; "district," which are important within the boundaries of the Lloyd District; and "neighborhood," which are smaller and found usually outside the Central City.

- **Boulevards.** These corridors can also be some of the busiest in the district – they can be the "second" street of a couplet or define a district edge -- but they offer a more landscaped, green character, with fewer retail storefronts than the retail/commercial type. These corridors are broken down in three scales: "civic," which make connections far beyond the district; "district," which are important within the boundaries of the district; and "neighborhood," which are smaller and found usually outside the Central City.

- **Flexible Network.** These streets and spaces make up a system of local, primarily pedestrian connections through the district that offer quieter, "low-stress" experiences distinctly different from the busier streets serving the area. The forms and characters of these connections can vary

considerably – some can be typical streets, some could be through open spaces or plazas, and others could be through building interiors.

East-West Open Space Spine: This is a series of connected open spaces offering different characters and functions, running from the Lloyd Center Shopping Mall west to the Willamette River. The connection could be obvious, such as the Park Blocks; it could be evident, like the boardwalk along NW 10th Avenue in the Pearl District; or it could be described by a subtler set of wayfinding clues. This signature series of parks and open spaces would become the organizing system for a new high density mixed use community in the Central Lloyd area.

Major Attraction: Regional event, entertainment and/or retail facility that brings in thousands of people annually district. These currently include the Veteran's Memorial Coliseum, the Rose Garden Arena, the Oregon Convention Center and the Lloyd Center Shopping Mall.

District Center: High-visibility hubs of retail and commercial activity in the different areas of the district. Locations with concentrations of restaurants, hotels and other similar retail/commercial businesses, generating high levels of pedestrian movement and crossings.

Gateway: Point of transition into or out of the district. Specific experience determined by character of identified location, and could be enhanced by public sector improvements, private development design approaches and/or a combination of both..

Public View: Currently designated public viewpoint and view cone, as described in the *Scenic Resources and Protection Plan* of 1992.

See Appendix A, Additional Urban Design Diagrams, for more details on the street and development character, gateways and building height elements of the concept.

District Policies and Implementation Actions

Regional Center: Economy and Innovation

As home to vital regionally-significant facilities, the Lloyd District is an integral part of the Central City today, and its tremendous growth potential means it will contribute to the regional center in a variety of new ways in the future.

These policies and actions will help maintain and grow existing assets in the district, including regional event attractions at the Rose Quarter and Oregon Convention Center, the main street small business and retail-oriented character along NE Broadway, regional retail uses at the Lloyd Center Mall and a well-established office cluster of professional, medical and government services.

New businesses that balance the episodic nature of the regional event centers and new high-density residential and commercial development in Central Lloyd and North Broadway will support job growth and enliven the district. The formation of the Lloyd EcoDistrict presents additional opportunities to create a district that is more attractive to new businesses, employees, residents and visitors due to its leadership in sustainability and the resulting improvements in the physical environment.

Policies

1. **Employment**. Support and retain existing businesses while encouraging significant new job growth. Develop the district to support a broad array of employment types that provide living-wage jobs and equitable access to employment opportunities.

2. **Redevelopment.** Encourage high density commercial and residential development and better utilize vacant and underutilized land.

3. **Core Employment Uses.**

    a. **Office Core.** Maintain and grow the Lloyd District as an employment center for headquarters office, institutions, professional services and the government sector.

    b. **Regional Attractions.** Support the continued success of the Rose Quarter and the Oregon Convention Center and encourage new development and businesses that support and balance the episodic nature of event activity.

    c. **Retail.** Support existing and new retail development including regionally focused uses in and around the Lloyd Center Mall and neighborhood-serving uses along the NE Broadway corridor. Encourage and support retail development on "retail/~~Retail and C~~commercial s~~S~~treets~~"~~ identified in the district concept diagram.

    d. **Civic and Cultural Amenities.** Expand civic attractions in the Lloyd District to complement the district's tourism, regional attractions and growing residential character. Examples of attractions could include a convention hotel and centers for arts, culture, history or science.

4. **Innovation: ~~High Performance Green~~Sustainable District.** Promote the Lloyd District as a center for ~~green~~ innovation and application of sustainable business and development practices, foster job creation in sustainable industries and encourage the incorporation of green technology into businesses and development.

~~Placeholder~~ 2035 Performance Target: Jobs

By 2035, add 10,000 new jobs within the Lloyd District.

Current Conditions
Based on a 201~~0~~06 estimate, there are approximately ~~18,977~~18,000 existing jobs in the Lloyd District (with revised district boundary, see action RC1). The addition of 10,000 new jobs would result in a total of ~~28,977~~28,000 jobs. This would require a 5~~3~~% growth in jobs over 2~~0~~50 years.

Implementation Actions: Lloyd District – Regional Center: Economy and Innovation						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 – 20 Years	Ongoing	
RC1*	Adjust the Lloyd District and Lower Albina boundaries to include the PPS Blanchard site and adjacent properties to the south and east within the Lloyd District.	X				**BPS**
RC2*	Rezone the PPS Blanchard site and adjacent properties to the east from IG1 to EXd and CXd to encourage future redevelopment. Require a master plan process as part of redevelopment to address street and pedestrian connectivity, open space, views, and the transition to adjacent industrial uses. ~~See zoning map.~~	X				**BPS**
RC3*	Adjust and increase maximum allowed heights to support high density development and encourage the provision of ~~, provide~~ public amenities, and ~~encourage~~ desired uses in the following areas ~~(see height map)~~: ▪ N. Broadway near the Broadway Bridgehead ▪ Riverfront ("Thunderbird" site) ▪ Central Lloyd area	X				**BPS**
RC4*	Adjust regulations and incentives to encourage new development that supports the Convention Center such as new or expanded hotel development, retail and other services on adjacent blocks ~~(see zoning map)~~.	X				**BPS**, PDC
RC5	Develop a strategy to promote the development of new hotels and the improvement of existing hotels in the vicinity of the Oregon Convention Center. ~~Placeholder for Convention Center hotel strategy.~~		X			**Metro**, PDC, City, Private
RC6	Pursue development on publically owned sites in and around the Rose Quarter through public-private partnerships.				X	**City**, Private
RC7	Market the Lloyd District as a leader in sustainable development and business practices.				X	**EcoDistrict**, PDC, Private
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Housing and Neighborhoods

The N/NE Quadrant Plan envisions the Lloyd District as a high-density, high-amenity, mixed-use area, with a focus on increasing residential development for a more balanced jobs to housing ratio. Greater housing density will increase the vitality of the district and further citywide and regional goals that encourage housing in areas close to employment centers and well connected to alternative transportation networks.

Areas in which housing development should be emphasized are proposed in the Central Lloyd area, upper Broadway and the eastern edge. Policies and actions promoting a diverse housing mix that is attractive and affordable to a broad range of people will help implement equity and diversity goals put forth in the Portland Plan and the Central City 2035 Plan.

Increased residential density will require amenities and services necessary for residents to meet their daily needs. It is essential that the area develop as a complete neighborhood with convenient and safe access to neighborhood businesses, park and recreation facilities and schools in a clean and healthy environment. Development of new open spaces and creating an environment that is supportive of local, neighborhood serving businesses are high priorities. Safe and attractive regionally available alternative transportation options, such as walking, biking and taking transit, are also important for promoting healthy lifestyles and meeting climate action goals for reduced green house gas emissions. See the transportation section for policies and actions that support those elements.

Development of housing affordable to low and middle income households within the Lloyd Dedistrict is a priority given that access to a complete neighborhood reduces household transportation costs and provides access to public and private amenities crucial to economic mobility. However, it is recognized the development of affordable housing will be a challenge because there are currently very limited public resources to fund housing projects. It is also important to provide a diverse range of housing types and sizes within the district, including housing suitable for workforce, seniors, special needs and families.

The Lloyd District has a diverse history and is well located to serve as eastside civic center for Portland. The design of public spaces, as well as programming within those spaces, should celebrate the history of the place and help build community among those that visit, work and live in the district.

The goal of increased growth and density brings concerns about the potential for displacement of current residents and businesses due to increasing costs – an issue that , which is a concern that applies citywide in areas of growth and change. This plan identifies a need for citywide programs to address potential displacement, reinforcing the recommendations of the Portland Plan.

Policies

1. **Housing Development.** Encourage the development of new housing especially in “housing emphasis areas”. Through greater concentration of housing the district can foster a sense of community and support efficient provision of residential amenities and services.

2. **Housing Diversity and Preservation.** Encourage the development and preservation of a housing supply of unit types and sizes that meets the needs of people of all incomes, ages, household sizes and special needs. Include development of affordable housing as a way to ensure income diversity, meet citywide housing needs and help mitigate the potential for displacement due to rising housing prices in the district and in adjacent neighborhoods.

3. **Complete Neighborhood.** Foster development of a complete neighborhood with amenities and services that residents need to meet their daily needs, including access to parks and open space, grocery stores, neighborhood businesses and schools.

4. **Successful Neighborhood Business Districts.** Support and expand local main street business areas within the Lloyd District and in adjacent neighborhoods. Cluster a diverse mix of neighborhood scale businesses ~~on the~~within the ~~existing~~ NE Broadway Business District ~~retail corridor~~ and on new district retail/~~-~~commercial streets as a means of concentrating activity and promoting successful retail districts.

5. **Community Building.** Encourage public spaces, pubic art and activities that celebrate the history of the district and that help build a community in the Lloyd District and with surrounding neighborhoods.

6. **Historic and Cultural Resources.** Preserve, rehabilitate and celebrate historic and culturally significant structures and places in the Lloyd District.

7. **Displacement.** Support existing residents and businesses within the Lloyd District and in adjacent neighborhoods that are at risk for involuntary displacement.

~~Placeholder~~ 2035 Performance Target~~s:~~

Housing

~~By 2035, d~~Develop 5000 new housing units and reduce the jobs to housing ratio to 5 to 1 within the Lloyd District. Seek to provide a full range of housing types and affordability options, including 50% of new units affordable to households with incomes below the median family income (MFI) of the city.

Current Conditions
Based on ~~a 2008 estimate~~the 2010 Census, there are approximately ~~1,165~~ 1,100 existing housing units in the Lloyd District and it has a jobs to housing ratio of 17 to 1. The addition of 5,000 units and 10,000 jobs would result in a total of 6,100 ~~6,165~~ housing units and a jobs to housing ratio of 5 to~~:~~1.

Complete Neighborhood

80% of Lloyd District residents live within ¼ mile of a public park and within ½ mile of a full service grocery store.

Current Conditions:
As shown in Table 2 below, none of the existing population is within ¼ mile of public parks and 64% of the population is within a ½ mile of a grocery store. Because the existing population in the district is currently quite low, the amount of land area in proximity to parks and grocery stores is also provided.

Table 2: Lloyd District Proximity to Parks and Grocery Stores (2012 estimate based on GIS analysis)

	Within ¼ mile of parks	Within ½ mile of parks	Within ½ mile of grocery store
Population	0%	81%	64%
Land Area	30%	87%	41%

Implementation Actions: Lloyd District – Housing and Neighborhoods						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
HN1*	Develop regulatory tools to encourage housing development and the inclusion of affordable housing. Focus on housing emphasis areas (see subarea character diagram). [Note: detail listed below are moved to Appendix B] ~~(see zoning map).~~ ~~Regulatory options to encourage housing include:~~ ~~•Restructuring the FAR/Height base and bonus system~~ ~~•Apply existing tools such as required residential area and residential bonus target area~~ ~~•Changes to superblock regulations~~ ~~Removing existing housing incentives from the Office Core area~~	X				**BPS**, PHB, BDS
HN2*	Rezone the area of RXd zoning in Central Lloyd to CXd to provide flexibility and encourage investment. Apply housing incentives described in HN1 to this area ~~(see zoning map)~~.	X				**BPS**
HN3	Develop affordable rental housing through investment of TIF Set Aside funds and other PHB programs. Possible tools include: Limited Tax Exemption program, System Development Charge Exemption Program.		X			**PHB** ~~PDC~~
HN4	Improve the function and safety of Holladay Park through programming that increases its use and CPTED (Crime Prevention Through Environmental Design) improvements.		X			**PPR**, Private
HN5	Identify sites for community building activities and pursue projects and activities that support community building, such as weekend markets, cultural programming in parks and public art.		X			**LDCA**, EcoDistrict City

HN6	Support connections between district employers and employee housing within the district through employer-assisted housing programs and coordinated mixed-use development, particularly employer-assisted housing for service-level workers employed within the district.		X			**PHB**, Private~~, PHB, PDC~~
HN7	Monitor residential population growth and the related school needs of the district. Encourage space for early education programs in new development.				X	**PPS**, Private
HN8	Address potential displacement of residents and businesses in the Lloyd District and in adjacent at risk neighborhoods, such as Eliot, through citywide programs developed as part of the Comprehensive Plan. Potential programs include housing and small business assistance programs targeted for areas at risk for displacement. ~~Possible housing tools include: Limited Tax Exemption program, System Development Charge Exemption program, school family housing, and employer assisted housing.~~				X	~~PDC~~**PHB** (housing), **PDC** (business) Office of Equity, BPS
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Transportation

The Lloyd District is well served by a multi-modal transportation system that supports its role as a regional center for retail, business, entertainment, and government. The district has unique regional transportation advantages, including direct connections to the interstate freeway system via I-5 and I-84 and the regional light rail and bus network at the Rose Quarter Transit Center. With the addition of streetcar and continued investments in bicycle and pedestrian systems, the transportation network will provide a solid foundation to support goals for high-density development, greater use of active transportation (walking and biking) modes, and reduced greenhouse gas emissions.

The Lloyd District contains a number of major traffic corridors, including the MLK/Grand and Broadway/Weidler corridors, which carry large volumes of traffic into and through the district. These streets are important for supporting large and small businesses and regional attractions. However, because of the high volume of traffic and limited signalized crossing, these streets have also been identified as barriers to overall connectivity and to travel by walking and biking.

The N/NE Quadrant Plan calls for building upon and enhancing the Lloyd District's transportation assets by: improving the efficiency and safety of traffic operations; maintaining regional transit, auto and freight access; enhancing internal circulation and connectivity to adjacent areas, particularly for pedestrians and bicyclists; managing parking to support business and residential uses, incentivize development and encourage the use of non-auto transportation modes; leveraging street improvements with future development; and providing strong linkages between the district and the Willamette River. It is important to note that residents of Portland have transportation choices, and that active transportation may not be the solution for all. Therefore, ~~P~~providing optimum regional access for all modes will be key to realizing the goal of developing the Lloyd District as a high density Central City district and assuring its long-term success.

Policies

1. **Strategic Investments.** Invest in transportation infrastructure to improve safety, convenience and operational efficiency for all modes by strengthening connectivity and access for trips to, through and within the Lloyd District, and by creating special places for workers, residents, neighbors, shoppers and visitors.

2. **Active transportation.** Encourage walking, bicycling and using transit as a way to increase transportation access and choice, enhance livability and reduce the per capita carbon footprint in the district.

3. **Transportation Demand Management.** Foster the development of business and property owner-supported programs, incentives and activities that encourage employees and residents to use active transportation and non-single occupant vehicle modes.

4. **Transit**. Strengthen the role of transit in the Lloyd District by working with TriMet to increase the frequency, reliability and safety of the light rail, bus and streetcar services.

5. **Parking.**

    a. **Off-Street.** Strengthen the role of parking management to leverage high-density mixed-use development, enhance livability and reduce reliance on single occupancy automobile trips, while supporting development of more parking options for retail-focused streets.

b. On-Street. Preserve and enhance on-street parking assets to support ground floor commercial, retail and service based business.

6. **Streetscape.** Improve the pedestrian experience by integrating high-density mixed uses, urban greenery, and pedestrian amenities into the Lloyd District's streetscape.

7. **Connectivity**. Increase the number of connections across barriers in the district, including major arterials, large blocks, freeways, rail lines, and natural features, and with adjacent neighborhoods.

8. Transportation System Management. Manage access and circulation to reduce traffic speeds and provide for safe crossings, while balancing the need for vehicle and freight access to and within the Lloyd District.

9. **Regional Attractions.** Provide access and circulation to and from the Lloyd District that attracts and supports regional development, shopping and tourism. Promote the use of transit to access the area, including light rail, streetcar, bus, and a potential water taxi service.

~~Placeholder~~ 2035 Performance Target: Mode Split

~~By 2035,~~ 70 percent of commute trips to and from the district are by non-single occupancy vehicles (transit, walking, bicycling and carpooling).

Current Conditions
The current Lloyd District mode split is approximately 44 percent by non-single occupancy vehicle (SOV) for the district. Members of the Lloyd TMA have an improved mode split of 60% non-SOV.

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR1	Explore ways to adopt the Street and Development Character concept, including three street types: retail/commercial, boulevard and flexible/pathways. This may include updates to the Transportation System Plan Street Design Classifications.	X				**PBOT**

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR2*	Develop and revise parking management strategies. [Note: details below moved to Appendix B] ~~to:~~ ~~• Incentivize mixed use development through the provision of shared parking facilities.~~ ~~• Address event parking issues through flexible options such as the use of variable pricing and parking management.~~ ~~▪ Promote use of transit and active transportation modes by reducing the amount of parking spaces per capita in the district over time.~~	~~X~~	X			**PBOT**, TMA, Private
TR3	Update the *Lloyd District Standard Plans and Details within the Right-of-Way* document to implement the Street and Development Character and Green Systems concepts for the district.		X			**PBOT**, BPS, BES, PPR/UF
TR4	Study and install additional signalized pedestrian crossings, on-street parking, and reduced speed traffic progression on Martin Luther King, Jr. Blvd. and Grand Avenue.		X			**PBOT**
TR5	Implement streetscape and circulation changes for Multnomah Street to facilitate a "retail/commercial street" environment.		X			**TMA**, PBOT
TR6	Review ~~Implement the final phases of~~ the 1996 *Broadway-Weidler Corridor Plan* to identify any needed updates to implement the N/NE Quadrant planning process.~~,~~ Implement the plan emphasizing pedestrian safety projects, ~~and~~ installation of traffic signals and maintenance of parking supply. ~~at intersections identified in the Plan that are not yet signalized.~~		X			**PBOT**
TR7	Install electric vehicle charging stations in the Lloyd District.		X			**PBOT**, PDC~~, PBOT~~
TR8*	Implement the I-5 Broadway/Weidler Interchange Plan improvements.			X		**ODOT**, PBOT

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR9*	Implement a 7th Ave pedestrian/bike bridge over I-84 connecting to either 7th or 8th in the Central Eastside.			X		**PBOT**, ODOT
TR10*	Develop a strategy for the Clackamas Flexible Street and private development extending from the Rose Quarter to NE 9th Avenue via a new pedestrian/bicycle bridge over I-5.			X		**PBOT**, BPS, PDC, ODOT, EcoDistrict, Private
TR11	Complete the ~~North Portland Greenway Feasibility Study and~~ Sullivan's Gulch Trail Concept Plan and implement its ~~their~~ recommendations.			X		**PPR**, PBOT, ODOT, UPRR, Private
TR12	Study the feasibility of adding a new light rail station on the Yellow line near Dixon to serve the N Broadway area and PPS Blanchard site.			X		**TriMet**, PBOT, BPS
TR13*	Confirm the benefits and feasibility of straightening the "s-curve" in the Union Pacific rail tracks for freight and passenger rail operations. Options pursued should prioritize maintaining the development potential of the "Thunderbird" site. See related action UD8.			X		**ODOT**, UPRR, Private, BPS~~, PDC~~
TR14*	Work with TriMet to improve the Steel Bridgehead and Rose Quarter Transit Center area to improve transit, local circulation, ~~and river~~ access to the Eastbank Esplande, ~~movement~~ and development opportunities			X		**TriMet**, TMA, PBOT, BPS, ~~PDC~~, Private
TR15	Explore water transportation options, including a Willamette River water taxi, and investigate the feasibility of a landing in the Lloyd District. Such a landing should include a safe and direct pedestrian connection to the Convention Center and the Rose Quarter.			X		**OHWR**, PBOT, BPS, PPR, Private
TR16	Expand the Central City wayfinding system in the Lloyd District to include river destinations and other local and regional attractions, as opportunities arise to add or replace signage.~~.~~			~~X~~	X	**OHWR**, PBOT, PPR, Private

Implementation Actions: Lloyd District – Transportation						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR17	Continue City of Portland partnership with the Lloyd Transportation Management Association (TMA) to encourage workers and residents to use transit and active transportation modes.				X	**PBOT**, TMA
TR18	Complete the North Portland Greenway Feasibility Study and use the information to inform the River Plan / Central Reach (the update of the Willamette Greenway Plan).	X				**PPR**, PBOT, BPS, Private
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Urban Design

These policies and actions will enable the Lloyd District to offer a set of unique, human-scaled urban experiences different compared to the west side of the Central City. The area features a series of existing places with established character that will be strengthened around a revitalized and redeveloped Central Lloyd area. The Central Lloyd area will include more high-rise office buildings and a new, high-density residential district, organized around a signature system of linked open spaces and supported by a network of diverse streets. The high-quality transit service in the area provides an opportunity to shift the Lloyd District from a focus on auto access and auto-oriented uses, to a more pedestrian-oriented development pattern and streetscape.

The large blocks in the Lloyd District are part of a distinctive urban pattern that allows for larger buildings and unique public spaces including courtyards, plazas and parks. These open spaces will be linked by a system of pathways, multi-use trails and quiet streets that are enhanced with vegetation and together create a set of lower stress and quieter routes, and an alternative to the busy arterials through the district. New low stress connections across freeways to the west and south will strengthen connections to the rejuvenated Rose Quarter, the PPS Blanchard site, the Willamette River and the Central Eastside. A desire for better access or connections to the river were expressed throughout the planning process. Connections to the river can be achieved visually, through views or a trail along the river, or physically through direct access via a trail, steps or dock. Both types of access are desired, however direct access will be difficult due to limited availability of riverfront property and the location of the Union Pacific train tracks along the river bank. There are only two riverfront sites in the Lloyd District. The Dreyfus grain terminal is a long-established industrial business that is expected to continue operation for the foreseeable future. Opportunities for open space and potentially river access may exist on the vacant “Thunderbird” site. See additional discussion of the Thunderbird site under Lloyd actions UD8 and TR13.

The Lloyd District includes a number of entry points or “gateway” locations, such as the Broadway and Steel Bridgeheads, the Lloyd Center station area and the crossroads intersection of MLK/Grand and Broadway/Weidler. These gateways will be reinforced by buildings that are taller than the surrounding context, ~~that~~ emphasizinge~~e~~ the civic significance of these places. At its edges, the scale of new development in the Lloyd District will provide a transition to established lower density neighborhoods and historic districts by providing a “step down” to adjacent neighborhoods and by considering the form and pattern of existing development in the review of new development proposals.

Policies

1. **Diverse and Distinctive Urban Places**. Focus more intense development in the Central Lloyd area and Rose Quarter while enriching the entire district through strengthening the distinct character of the existing Lloyd District subareas.

2. **Better Connected District**

   a. **More Seamless Connections.** Improve the character of connections across transportation barriers in the district - freeways, major arterials and *rail* facilities.

   b. **Variety in Street Character.** Expand the diversity of street character in the Lloyd district, distinguishing three major types: retail/commercial, boulevard and flexible/pathways.

3. **Large Blocks.** Take advantage of the unique opportunity for dense, large site development made possible by the large blocks found in the Lloyd District. Integrate this development into the surrounding blocks through well designed internal green spaces and pedestrian connections.

4. **Open Space.** Develop a signature ~~system~~ sequence of ~~linked~~ open spaces, linked through a wayfinding system, that serve~~s~~ the Central Lloyd area, becomes a primary organizing structure for new development, and offers a diversity of character, experiences, and recreational functions for district residents, workers and visitors.

5. **Riverfront Development.** Encourage development along the Willamette River that activates the riverfront, better connects the riverfront to the rest of the district and surrounding neighborhoods, improves visual and physical access to the river, and enhances natural resources.

6. **Pedestrian-Oriented Development.** Discourage new automobile-oriented uses and encourage the eventual redevelopment of drive-throughs and large surface parking lots ~~and drive-throughs~~ with ~~pedestrian-oriented~~ development that is oriented to the street and enhances the pedestrian environment.

7. **Transition to Adjacent Neighborhoods.** Provide sensitive transitions in the scale and pattern of development between higher density development encouraged in the Lloyd District and adjacent lower density neighborhoods and historic districts.

2035 Performance Target: Active Street Edges

40% of all street frontages within the Lloyd District are occupied by buildings oriented to the street, measured by the amount of retail storefront and partial fenestration (windows and doors) facing the street.

One-third (33%) of the retail/commercial street frontages are occupied by retail storefronts.

Current Conditions

Table 3: Central City Groundfloor Edge Conditions (2011 estimate based on BPS inventory)

	Lloyd District	River District	Downtown
% all street frontage with buildings oriented to street*	22%	51%	55%
% retail/commercial street frontage with retail storefront	Average: 18% Range: 8%-30%	Data not available	Data not available

* Measured by linear feet of retail storefront and partial fenestration (windows and doors) facing the street.

[insert ground floor edge maps]

Implementation Actions: Lloyd District – Urban Design						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD1	Update Title 33 Zoning Code development regulations and maps to implement the district concept. Potential regulations to be amended include: heights, active ground floor building uses, required building lines, drive-through limitations, and auto access restrictions related to street car.	X				**BPS**
UD2*	Revise height regulations along Broadway on the Eliot and ~~within the~~ Irvington neighorhood edges ~~Historic District~~ to provide a step down from taller heights allowed in the rest of the Lloyd District. ~~allow a maximum height of 75 feet on the north side of Broadway (between Broadway and Schuyler). No height bonuses will be available in this area.~~ [Note: details moved to Appendix B]	X				**BPS**
UD3	Develop regulatory tools to encourage the provision of open space, including public open space, publicly-accessible private open space on large blocks, and multifunctional private courtyard spaces with new high density residential development. Possible tools include: height/FAR bonus incentives, superblock regulations, and master plan requirements.	X				**BPS**, BDS, PPR
UD4	Evaluate existing view designations and potential new view designations in the Lloyd District as part of a Central City-wide analysis of scenic resources. Existing Lloyd District view corridors to be examined for potential changes include the views of downtown from the 12th Ave bridge and from Lillis Albina park.	X				**BPS**

Implementation Actions: Lloyd District – Urban Design						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD5	Develop a strategy to acquire, masterplan, build and improve public parks, plazas and open spaces consistent with the district concept diagram and policies. Seek to time the development of the signature open space system on or near Clackamas concurrent with significant residential development in the district.		X			**PPR**, BPS, PDC
UD6*	Update the Lloyd District's 1991 design guidelines: *Special Design Guidelines for the Design Zone of the Lloyd District of the Central City Plan* to reflect the district concept. [Note: details below moved to Appendix B] ~~including:~~ ~~•Street character and relationship of development to streets and transit~~ ~~•Connections through development sites~~ ~~•Relationship of development to private and public open spaces~~ ~~•Building orientation~~ ~~•Incorporating green elements, native vegetation, bird-friendly design and green infrastructure in development~~ • ~~Transitions to adjacent neighborhoods~~		X			**BPS**, BDS, BES, PBOT, PDC
UD7	Create and promote a strategy to activate public open space, rights-of-way and surface parking lots during off hours to bring in new people, interests and energy to the district.		X			**LDCA**, EcoDistrict, TMA, Private, PPR, PBOT, BPS, PDC
UD8*	Work with the property owner/developer of the "Thunderbird" site to craft a development agreement that incorporates public open space and the greenway trail on the riverfront. [Note: details below moved to Appendix B] ~~Continue to work with ODOT rail and Union Pacific to ensure that any plans to relocate the rail tracks in the area maintain access, the development potential of the site and provide park and riverbank enhancement opportunities.~~ See related action TR13.		X			**PPR**, ~~PDC~~, BPS, OHWR, ODOT, Private

Implementation Actions: Lloyd District – Urban Design						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD9	Enhance the pedestrian and cycling environment under the I-5 Freeway at NE Multnomah and Holladay Streets.			X		**PBOT**, TriMet, ODOT, TMA
UD10	Recommend that the existing 75' height limit between NE Schuyler and NE Hancock and NE 7th and NE 16th in the Irvington Historic District be reduced to 45' as part of the Comprehensive Plan update process. The height limit change is in response to the creation of the Irvington Historic District in 2010 and the policy need to retain multi-family housing potential in this corridor.		X			**BPS**
UD11	Work with property owners and developers to further the development of NE 7th and NE Multnomah as district retail/commercial streets.				X	**BPS**, PDC
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

~~Green Central City~~ Environment (title under discussion)

The combination of significant potential for new development, extensive transit, pedestrian and bicycle networks and the formation of the Lloyd EcoDistrict presents a unique opportunity to dramatically improve environmental conditions within the Lloyd District and help meet Portland's broader sustainability goals. This plan capitalizes on that potential by promoting district-wide sustainability strategies that result in ~~a "high-performance" green district that has~~ significant~~ly~~ improvements ind ~~the~~ environmental performance of the district. The plan calls for green buildings, green infrastructure and sustainable design to be integrated with new development in order to improve air quality, water quality, watershed health, habitat, resource conservation, climate and livability.

A key component to realizing the goals for ~~green development~~ improving environmental conditions in the district will be to better use ~~of~~ space within public rights-of-way for sustainable stormwater strategies and increased tree canopy that absorb and clean water, provide habitat for birds and pollinators, and provide shade. Boulevards, flexible streets and water quality/tree canopy corridors have been identified to provide this function. Opportunities to enhance existing natural resources and improve habitat have also been identified within Sullivan's Gulch and along the Willamette River bank. Individual projects are also encouraged to incorporate green features, such as ecoroofs and energy efficiency. More detailed policies and implementation tools related to the Willamette River and Sullivan's Gulch will be developed in the next phase of CC2035 process that includes the update of the Willamette Greenway Plan and analysis of central city natural resource protection options (see Actions GC1 and GC2).

This plan embraces the formation of the Lloyd Eco-District and supports its goals for restorative development that improves environmental conditions, a connected district, and to be climate positive. To this end, the district concept is considered a starting place that will be refined and added to as the EcoDistrict priorities are developed in the coming years.

While this policy area primarily focuses on integrating green features into development, it should be noted that the built form envisioned for the district—high density, mixed-use development that is well served by transit and facilities for biking and walking—will also make a significant contribution to sustainability goals. This will encourage the use of active transportation modes, thereby reducing emissions and energy use and increasing the efficiency of urban services.

Policies

1. ~~**High-Performance Green**~~**Sustainable District.** Promote innovation and leadership in the Lloyd District in the areas of sustainable and restorative development, energy efficiency, water conservation, waste reduction and climate change resiliency. Support partnerships that facilitate district-wide strategies.

2. **Green Infrastructure and Tree Canopy**. Increase tree canopy and the use of vegetated stormwater facilities in Lloyd District rights-of-way particularly on designated "boulevards", "flexible streets" and "tree canopy/water quality corridors". Encourage the use of green elements and habitat-friendly design on development sites, including ecoroofs and other vegetated stormwater approaches, roof gardens, landscaped setbacks and courtyards, living walls, and native vegetation.

3. **Green Buildings and Energy**. Encourage the development of high performance buildings, renewable energy systems, district energy, and energy retrofits that reduce greenhouse gas emissions.

4. **Willamette River Resources.** Protect and enhance natural resources along the banks of the Willamette River to prevent erosion and improve habitat functions and connectivity, while also meeting Citywide goals and policies regarding recreation, views, access to the river, and riverfront development.

5. **Sullivan's Gulch.** Protect and enhance natural resources within Sullivan's Gulch to improve its function as a habitat corridor, reduce the risk of wildfire and landslide, and maintain and enhance views, while providing flexibility to incorporate a recreation trail.

~~Placeholder~~ 2035 Performance Target: Tree Canopy

~~By 2035,~~Plant or preserve trees ~~are planted~~ within the Lloyd District sufficient to achieve 15 percent canopy coverage once the trees mature.

Current Conditions
The current tree canopy coverage in the Lloyd District is 10 percent. To achieve 15 percent coverage, approximately 19 additional acres of canopy would need to be added through tree planting and growth of existing trees.

Implementation Actions: Lloyd District – ~~Green Central City~~ Environment						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC1*	Evaluate natural resource protection and management options for Sullivan's Gulch and the Willamette River bank as part of the Central City-wide natural resource analysis ~~(Goal 5 ESEE analysis). Possible tools include regulations, incentives, agreements, partnerships and acquisition~~. [Note: details moved to Appendix B]	X				**BPS**, BES, OHWR

Implementation Actions: Lloyd District – ~~Green Central City~~ Environment						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC2	Update the Willamette Greenway Plan for the Lloyd District as part of the River Plan / Central Reach process, building on concepts outlined in the N/NE Quadrant Plan and the North Portland Greenway Feasibility Study. The update will address habitat, restoration sites, design guidelines, trails and access, and river dependent and river related development. Restoration ~~Identify sites for restoration as part of the River Plan/Central Reach process. Potential~~ sites could include the area of shallow water near the I-5/I-84 interchange and the riverbank below ~~adjacent to~~ the "Thunderbird" site.	X				**BPS**, BES, OHWR, PPR, PDC, Federal, State and Regional agencies, UPRR, Private
GC3	Explore approaches to improve the environmental performance of the district. Possible tools include incentives for green infrastructure, energy retrofits, high performance new construction, renewable energy systems, and connections to district energy.		X			**BPS**, BDS, BES, EcoDistrict
GC4	Investigate opportunities for serving the PPS Blanchard site with district energy.		X			**PDC**, BPS, PPS
GC5	Design and implement a water quality/tree canopy corridor project within the Lloyd District.			X		**BES**, PBOT, BPS, PPR/UF, PDC, OHWR
GC6	Develop and implement a street tree planting strategy for the Lloyd District.			X		**PPR/UF**, BES, BPS, PBOT, Private
GC7	Identify and improve underutilized space within public rights-of-way (e.g. along I-5, I-84, Interstate Ave) to increase tree canopy, habitat value and stormwater function.			X		**BES**, PBOT, PPR/UF, ODOT

Implementation Actions: Lloyd District – ~~Green Central City~~ Environment						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC8	Develop a management strategy addressing multiple objectives for the Sullivan's Gulch natural resource area, including~~and the Willamette River shallow water habitat area. Incorporate~~ re-vegetation, trail development, environmental education, and maintenance.		X	~~X~~		**BES**, PBOT, PPR, OHWR, BPS, ODOT, Private
GC9	Continue to support the Lloyd EcoDistrict work program.				X	**EcoDistrict**, City
GC10	Coordinate capital improvements and "green systems" planning with the work of the Lloyd EcoDistrict.				X	**City**, EcoDistrict
GC11*	Design infrastructure, such as the proposed Clackamas I-5 overcrossing and street improvements to accommodate district energy infrastructure where appropriate.				X	**PBOT**, ODOT, PDC
GC12	Use green infrastructure measures to improve the water quality of stormwater discharged to the Willamette River and to reduce the risk of sewer backups into basements.				X	**BES**, PBOT, Private
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Lower Albina

District Goal

Strengthen Lower Albina as an industrial and employment area by reinforcing the working harbor and providing for diverse employment and development opportunities. Enliven ~~the~~ historic Russell Street ~~Conservation District and the adjacent MAX station area~~ with mixed-use and commercial activities that are compatible with industrial and employment uses.

Lower Albina District Concept Diagram

[insert concept diagram]

Key Elements of the Concept

Russell Street Mixed Use Area: This area includes the existing commercial node within the Russell Street Conservation District and suggests an expansion of retail and commercial uses to the east, reestablishing the historic connection between Lower Albina and the Vancouver/Williams corridor.

Employment Opportunity Subarea: This area remains industrial, but has additional flexibility for commercial uses as a means of increasing employment density. Commercial uses are restricted to those that are less service oriented and therefore are compatible with industrial businesses.

Heavy Industry and Working Harbor: This area is regionally significant industrial land and remains a heavy industrial area and working harbor.

Street and Development Character: The character and function of three main street types shown in the concept diagram are described below. A more detailed description of the street types is provided in a separate report, N/NE Quadrant Plan: Street and Development Character Concept (2/1/12 Draft).

- **Retail/Commercial Corridors**. These corridors are generally busy streets with high visibility for motor vehicles, transit, bikes and pedestrians. They should generally have consistent ground level retail storefronts. In Lower Albina, Russell Street is designated a "neighborhood" retail/commercial street because of its smaller scale. Russell Street connects with the Williams retail/commercial street at the historic neighborhood center at the intersection of Russell and Williams.

- **Boulevards**. These corridors are often busy streets that offer a more landscaped, green character, with fewer retail storefronts than the retail/commercial type. In Lower Albina, Interstate Avenue is designated as a "civic" boulevard because it makes connections to North Portland.

- **Flexible Network**. These streets and spaces make up a system of local, primarily pedestrian connections through the district that offer quieter, "low-stress" experiences distinctly different from the busier streets serving the area. In Lower Albina, "the Strand" is designated as a flexible street connection that meanders through the district. The greenway trail would also path through the district.

Gateway: These areas designate a point of transition into or out of the district. The specific experience is determined by the character of the location, and could be enhanced by public sector

improvements, private development design approaches and/or a combination of both. In Lower Albina, a gateway is designated at the intersection of Interstate and Russell.

District Policies and Implementation Actions

Regional Center: ~~Economy and Innovation~~Industrial and Employment Sanctuary

Lower Albina plays a key role in the Central City and the region as a center of industrial employment. It serves as a critical incubator for emerging and innovative businesses and provides an important living-wage job base near inner North and Northeast neighborhoods. The district's mix of industrial businesses, working waterfront and multimodal freight facilities are complemented by a small mixed-use commercial area along lower Russell Street, where retail activity is especially active at night.

The policies and action items in this plan are intended to build on the strength of the district's existing industrial fabric and provide additional flexibility for commercial uses that are compatible with industrial businesses and increase employment density. Housing is currently allowed within the Russell Street Conservation District, which is zoned for mixed use. The plan proposes to extend the mixed use zoning east on Russell, however new housing will not be allowed in that area.

Policies

1. **Working Harbor.** Protect the Lower Albina working harbor and support river-dependant uses.

2. **Industry and Employment**. Increase economic opportunities, living-wage jobs and employment density by preserving existing industrial land uses and diversifying the range of employment activities allowed in the area east of the Union Pacific railroad and near the MAX station.

3. **Incubator**. Support existing businesses and foster the district as an industrial and employment incubator.

4. **District Vitality.** Support the urban vibrancy of Russell Street and its unique blend of working daytime industrial activity with compatible nighttime restaurant and entertainment activity.

~~Placeholder~~ 2035 Performance Target: Jobs

~~A~~By ~~2035, a~~Add ~~x~~ 1,000~~x~~ new jobs within Lower Albina.

Current Conditions
Based on a 2010~~2006~~ estimate, there are approximately ~~2,712~~ 2,000 existing jobs in Lower Albina (with revised district boundary, see Action RC1). The addition of 1,000~~xx~~ new jobs would result in a total of 3,000 ~~xx~~ jobs. This would require a 50~~xx~~% growth in jobs over 25~~0~~ years.

Implementation Actions: Lower Albina – Regional Center: Economy and Innovation						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
RC1*	Adjust the Lower Albina subdistrict boundary to exclude the PPS Blanchard site and adjacent properties to the south and east, placing them within the Lloyd District.	X				**BPS**
RC2*	Rezone properties east of the Russell St. Conservation District fronting Russell Street from IG1d to EXd. Set max FAR at 3:1 and maximum height at 50'. Prohibit housing in this area.	X				**BPS**
RC3*	Apply zoning provisions to IG1-zoned properties east of the Union Pacific railroad alignment that allow certain compatible office-like uses, similar to the Employment Opportunity Subarea regulations in the Central Eastside. [Note: this action is still under discussion with stakeholders.]	X				**BPS**
RC4	Identify potential brownfield sites and identify clean-up and redevelopment strategies to bring them back into economic use.		X			**BPS**, PDC, BES, Private
RC5	Assist small businesses and property owners through storefront grants, Development Opportunity Services grants, loans for tenant improvements, start-up and equipment, and other programs~~Placeholder for small business assistance, such as storefront grants, Development Opportunity Services grants, and loans for tenant improvements, start-up and equipment~~.				X	**PDC**
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Transportation

Lower Albina is located at the southern end of the North Willamette River working harbor area, the northern end of the Central City, and adjacent to historic streetcar neighborhoods. As a predominately industrial area, freight movement associated with the working harbor, freight railroad, and trucks are essential for the economic vitality of this district, City and region. Its location within the Central City also provides for transit, bicycle and walking facilities for workers, shoppers, and visitors to the district. To sustain the vitality of Lower Albina, maintenance and continued improvement of the multi-modal transportation system will be important.

Policies

1. **Freight System**. Prioritize freight movement and access while maintaining and improving the safety, efficiency and convenience of the transportation system for all modes.

2. **Multi-Modal Connectivity**. Improve connectivity through the district and strengthen connections to adjacent districts, including the Rose Quarter, the Vancouver/Williams Corridor and Mississippi Avenue. Improve pedestrian connections to Interstate MAX and bus service to enhance access to employment opportunities in the area.

3. **Rail and Marine**. Preserve rail and inter-modal access to the Albina Rail Yards, marine freight facilities and local industries.

4. **Freeway Access**. Maintain or improve access from industrial areas to the regional freeway system.

5. **Strategic Investments.** Encourage business creation, growth, and innovation through strategic public and private partnership investments in multi-modal transportation and parking infrastructure.

~~Placeholder~~ 2035 Performance Target: Mode Split

~~By 2035,~~ 40 percent of commute trips to and from ~~in~~ Lower Albina are by non-single occupancy vehicles (transit, walking, bicycling and carpooling).

Current Conditions
The current Lower Albina mode split is approximately 18 percent by non-single occupancy vehicle (SOV) for the district.

Implementation Actions: Lower Albina – Transportation

#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR1	Explore ways to adopt the Street and Development Character concept, including three street types: retail/commercial, boulevard and flexible/pathways. This may include updates to the Transportation System Plan Street Design Classifications.	X				**PBOT**, BPS

Implementation Actions: Lower Albina – Transportation						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
TR2	Complete the North Portland Greenway Feasibility Study and use the information to inform the revision of the River Plan North Reach (the update of the Willamette Greenway Plan). ~~I~~implementation of ~~its recommendations in Lower Albina,~~ the trail in some areas will rely ~~based~~ on the ability to acquire agreements by private property owners.			X		**PPR**, PBOT, BPS
TR3	Study options for the Larrabee Street ramp that would preserve auto, bicycle and freight access while accommodating the Greenway Trail and pedestrian and bicycle access to the district and river.		X	~~X~~		**PBOT**, PPR
TR4*	Develop a street design plan for the "the Strand" and alternative routes to provide a lower stress connection between N. Russell Street and the Rose Quarter.~~,~~ ~~including alternative approaches for the privately owned block in a way that maintains freight access.~~		X	~~X~~		**PBOT**, BPS
TR5	Rebuild N River Street from the Tillamook overpass to Essex Street.			X		**PBOT**
TR6	Study the need for pedestrian improvements to facilitate employee access to transit on Russell, Interstate and Broadway/Weidler.			X		**PBOT**, TriMet
TR7	Enhance and maintain streets in working condition to facilitate access and circulation in the district.				X	**PBOT**
TR8*	Implement the I-5 Broadway/Weidler Interchange Plan Improvements, including the proposed Hancock overcrossing, to improve regional and local freight access.			X		**ODOT**, PBOT
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Urban Design

Lower Albina has a rich and varied fabric of largely industrial and employment buildings, with the exception of retail and commercial uses largely clustered ~~especially~~ within the Russell Street Conservation District. As the character of Lower Albina is not expected to change dramatically, these policies and actions are intended to strengthen its existing urban forms and patterns and offer guidance for the integration of new development that is sensitive to this significant industrial area. To that end, policies focus on preserving the existing industrial character of the majority of the Lower Albina area, enhancing the unique character of the Russell Street area and preserving historic buildings in the district in general.

Actions also call for r~~R~~epurposing, ~~and~~ reconfiguring and improving the appearance of spaces underneath and adjacent to freeways and ramps to the north and east ~~will~~ to offer an expanded range of recreational opportunities and a more attractive set of connections between employment centers and mixed use neighborhoods, in addition to enhancing the district's function as a "gateway" into the Central City from North Portland. Multi-modal connectivity would also be enhanced with ~~The plan calls for a~~ "the Strand" ~~that would~~ , a ~~provide an additional~~ lower stress ~~north/south~~ connection and wayfinding system ~~to provide for a lower stress connection~~ between the Russell Street commercial area and the Rose Quarter. ~~The Strand is envisioned as a wayfinding system, coupled with pedestrian and bicycle enhancements that are compatible with industrial operations. It could also celebrate the industrial heritage of the district through public art, murals and historical markers along its path (also~~ (see Transportation Action TR4 for more information on the Strand)~~related Transportation policies and actions)~~.

Policies

1. **Historic and Cultural Resources**. Preserve, rehabilitate and celebrate historic structures in Lower Albina, including those in the Russell Street Conservation District and culturally significant African-American resources identified in the Cornerstones of Community inventory.

2. **Russell Street**. Strengthen the character of Russell Street and reestablish the historic connection between Lower Albina and the Vancouver/Williams Corridor by encouraging~~with~~ new mixed uses, rehabilitated buildings and a nighttime orientation.

3. **Industrial Character**. Preserve and enhance the industrial character and functionality of the Lower Albina industrial area.

Implementation Actions: Lower Albina – Urban Design						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD1*	Prepare a National Register of Historic Places Multiple Property Documentation form for African-American historic resources based on the Cornerstones of Community inventory.		X			**AHC**, BPS

Implementation Actions: Lower Albina – Urban Design						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
UD2*	Improve the design review approval criteria used for development proposals within the Russell Street Conservation District and design overlay zone within Lower Albina.		X			**BPS**, BDS
UD3	Improve the character and activate the area under the Fremont Bridge ramps. Consider active recreation, public art, sustainable landscaping and stormwater management, and improved parking facilities.			X		**City**, ODOT
UD4	Improve the character of N Russell under the I-5 freeway. Consider lighting improvements, public art, sustainable landscaping and stormwater management, and screening of adjacent ~~City~~publically-owned storage yards.			X		**PBOT**, ~~City~~, ODOT
UD5*	Encourage and assist Lower Albina property owners to nominate their historic properties for designation as landmarks.				X	**BPS**, AHC, SHPO, Eliot NA
UD6	Improve the appearance of publically-owned storage yards located under and adjacent to the I-5 and I-405 freeways.		X			**PBOT**, ODOT
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

~~Green Central City~~Environment (title under discussion)

The Central City 2035 Concept Plan calls for increasing energy efficiency, enhancing natural resources and habitat, improving air and water quality and expanding the use of green infrastructure central-city wide. While the Lower Albina area will continue to be a primarily industrial district, there are opportunities for achieving these goals through incremental improvements to the riverbank, adding green infrastructure to rights-of-way where they don't conflict with industrial operations, and encouraging the use of sustainable design in new development or remodels. Increasing green building and infrastructure ~~within the district will~~ could also contribute to business development by making the area more attractive to tenants and employees.

Policies

1. **Willamette River *Resources*.** Support the natural resource protection and enhancement objectives of the River Plan / North Reach, where they apply to Lower Albina.

2. **Sustainable Design**. Encourage sustainable design in public infrastructure and industrial buildings, including green roofs, stormwater management strategies, tree canopy, habitat-friendly design, energy efficiency improvements, and alternative energy generation.

~~Placeholder~~ 2035 Performance Target: Tree Canopy

~~By 2035,~~ Plant or preserve trees ~~are planted~~ within Lower Albina sufficient to achieve 10 percent canopy coverage once the trees mature.

Current Conditions
The current tree canopy coverage in Lower Albina is 6 percent. To achieve 10 percent coverage, approximately 7 additional acres of canopy would need to be added through tree planting and growth of existing trees.

Implementation Actions: Lower Albina – ~~Green Central City~~Environment						
#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC1	Update the Willamette Greenway Plan for Lower Albina, building on concepts from the North Portland Greenway Feasibility Study and provisions contained in the ~~Revise, adopt and implement the~~ River Plan / North Reach, once a final court decision is made. The update will address habitat, mitigation sites, trails and access, and river dependent and river related development.~~to provide more specific river-related policy guidance and regulations within the North Reach, which includes Lower Albina~~.	X	~~X~~			**BPS** BES, BDS, OHWR, PPR, PBOT, PDC, Federal, State and Regional agencies, Private

Implementation Actions: Lower Albina – ~~Green Central City~~Environment						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing	
GC2	Develop and implement a strategy to install trees and sustainable stormwater facilities to existing streets and underutilized space within rights-of-way (e.g. freeway ROW, Broadway bridgehead, west end of Russell Street). Ensure improvements do not compromise operations for industrial businesses.			X		**BES**, PPR/UF, PBOT, ODOT, Private
GC3	Explore approaches to improve the environmental performance of the industrial district. Possible tools include incentives for green infrastructure, energy retrofits, high performance new construction, renewable energy systems, and connections to district energy.			X		**BPS**, BDS, BES
GC4	Target outreach to industrial businesses regarding sustainable business practices.				X	**BPS**
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Study Areas

Two areas adjacent to the N/NE Quadrant are included in the plan's study area: the North Banfield Portal and the Vancouver/Williams Corridor. They are included because of the potential for land use and transportation proposals in the quadrant to affect them and because community members asked the Bureau of Planning and Sustainability to address long-identified land use and zoning issues in these areas.

Each study area has proposed action items intended to further objectives identified in the planning process, primarily zoning changes to encourage new development or support existing uses. However, these areas will remain outside of the Central City boundary and therefore no new policies are proposed.

[insert diagram showing study areas]

North Banfield Portal

The North Banfield Portal is the eastern gateway to the Lloyd District, at the transition from the Central City's higher density commercial and residential development to lower density residential in the Sullivan's Gulch neighborhood.

Sullivan's Gulch provides valuable natural resources in central Portland where habitat areas are less common. Enhancement of the Gulch resources and development of the Sullivan's Gulch Trail will increase connectivity for both wildlife and pedestrians and bikes, connecting the Willamette River with areas to the east. New redevelopment opportunities along Multnomah will bring additional residents and new neighborhood-oriented commercial services to the area. The Sullivan's Gulch Trail offers a unique opportunity to enhance and strengthen transportation options in the Lloyd District and Sullivan's Gulch neighborhood by incorporating bike and pedestrian linkage to existing MAX, auto, bus, and streetcar options in the area.

The N/NE Quadrant Plan will increase flexibility and encourage neighborhood-serving mixed-use development, including housing, in this area by proposing a change in zoning. The current zoning is primarily residential (RH), with a small area of office zoning (CO1). The current zoning presents a potential obstacle to development because it is restrictive in use and it creates site planning challenges due to development standards that vary across the site.

Implementation Actions: North Banfield Portal

#	Action	Timeline				Implementers (lead in **bold**)
		CC2035 (2014)	2 - 5 Years	6 – 20 Years	Ongoing	
NB1*	Apply CXd zoning to the sites south of Multnomah St. and west of NE 21st Ave. Existing environmental conservation (c) overlay zoning will remain.	X				**BPS**

Implementation Actions: North Banfield Portal						
#	Action	Timeline				Implementers (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 – 20 Years	Ongoing	
NB2*	Evaluate natural resource protection and management options for Sullivan's Gulch as part of the Central City-wide natural resource analysis ~~(Goal 5 ESEE analysis). Possible tools include regulations, incentives, agreements, partnerships and acquisition~~. [Note: details moved to Appendix B]	X				**BPS**, BES
NB3	Complete the Sullivan's Gulch Trail Concept Plan and implement the trail connection through the area.			X		**PBOT**, PPR, ~~PBOT~~, Private
*Additional details for selected action items are included in Appendix B, Implementation Action Details.						

Vancouver/Williams Corridor

The Vancouver/Williams Corridor is in the Eliot neighborhood, a part of the Albina Community Plan area, adjacent to the Central City. This area is included in the N/NE Quadrant Plan study area because of its proximity to potential reconfigurations of nearby freeway over-crossings and long-standing concerns about an area of residential zoning, which contains non-conforming commercial uses and does not allow mixed-use ~~re~~development. It also contains a number of buildings identified in the Bosco-Milligan Foundation's Cornerstones of Community inventory of African-American cultural resources.

This area will remain outside of the Central City and no changes to existing Albina Community Plan policies that govern it are proposed. The primary proposed action is to rezone an area of existing high density residential zoning (RHd) ~~zoning~~ to central employment (EXd). The EXd zoning allows a broad range of uses, including commercial, light industrial and residential uses, consistent with the current land uses in the area. This additional land use flexibility will support ~~mixed-use development,~~ reinvestment and expansion of ~~in~~ existing ~~non-conforming~~ employment uses in the area, which are currently nonconforming uses. It will also support~~, and~~ the rehabilitation of cultural resources by providing a broader range of uses allowed within existing buildings.

Implementation Actions: *Vancouver/Williams Corridor*						
#	Action	Timeline				Implementer (lead in **bold)**
		CC2035 (2014)	2 - 5 Years	6 - 20 Years	Ongoing

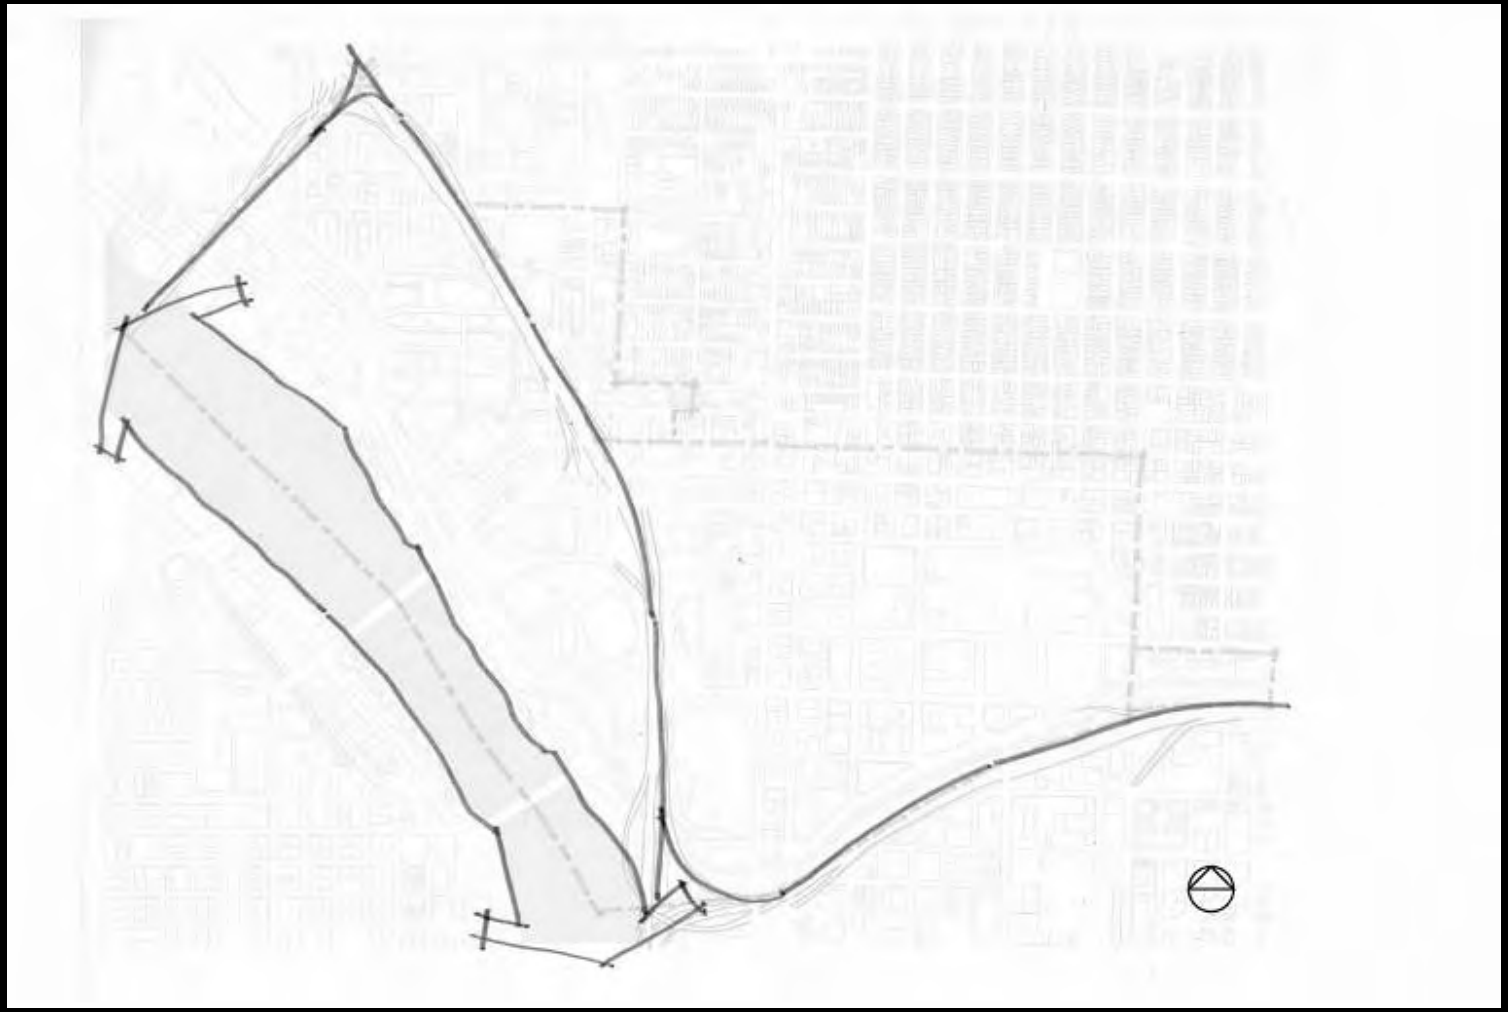
OVER 20M FT² OF NEW DEVELOPMENT POTENTIAL

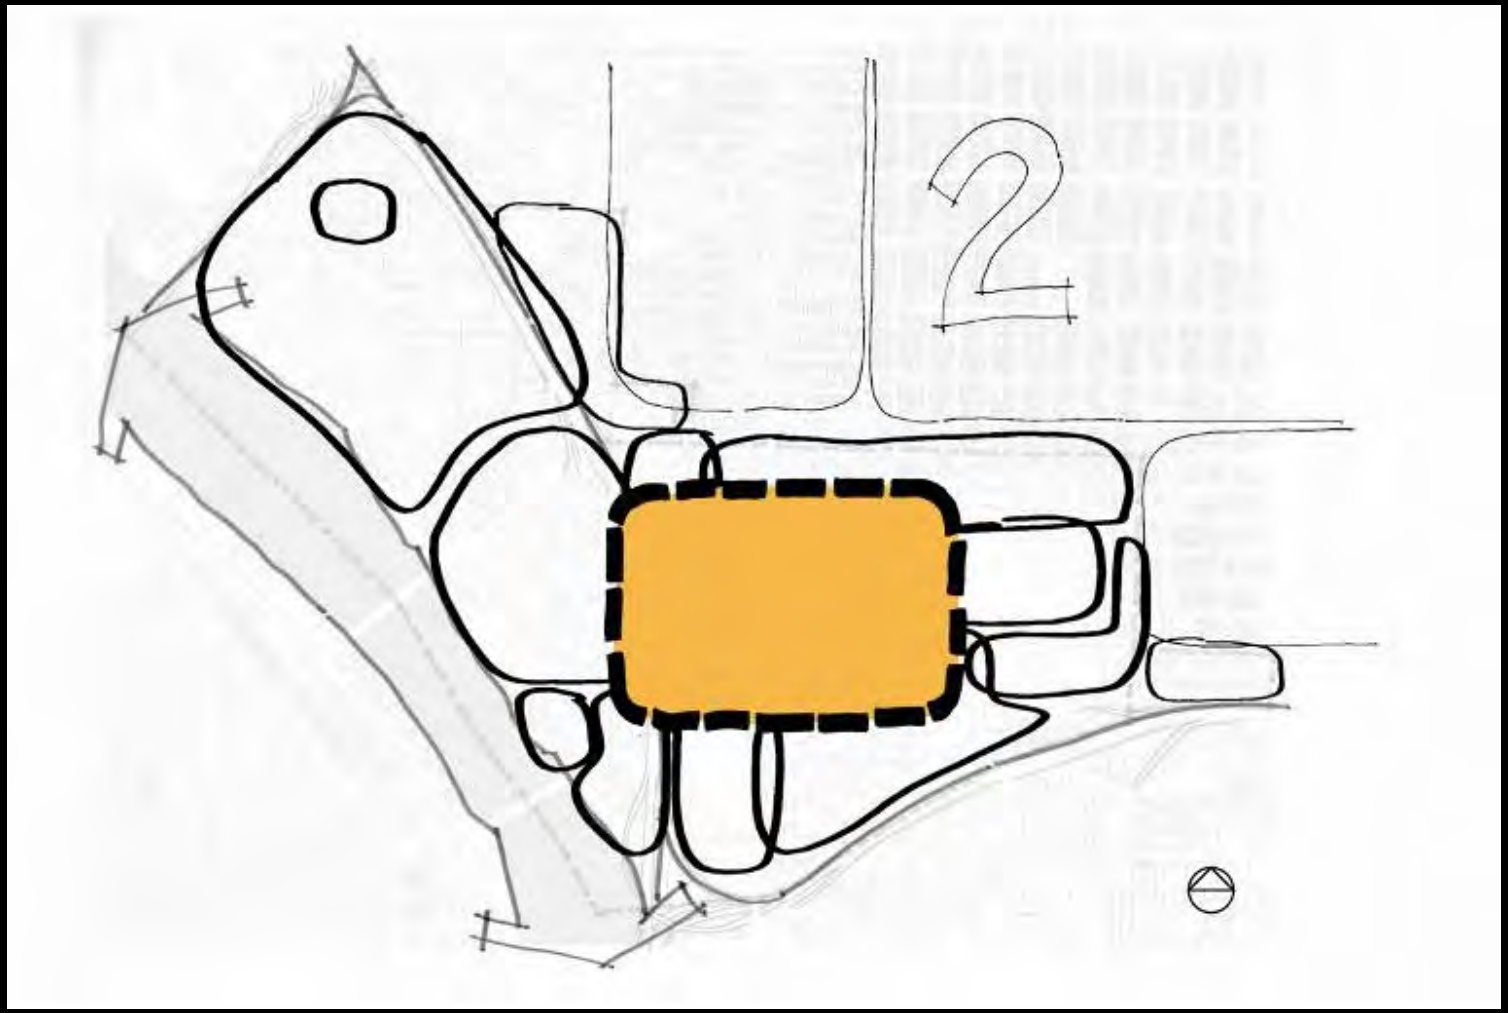


KEY ISSUES AND CHALLENGES

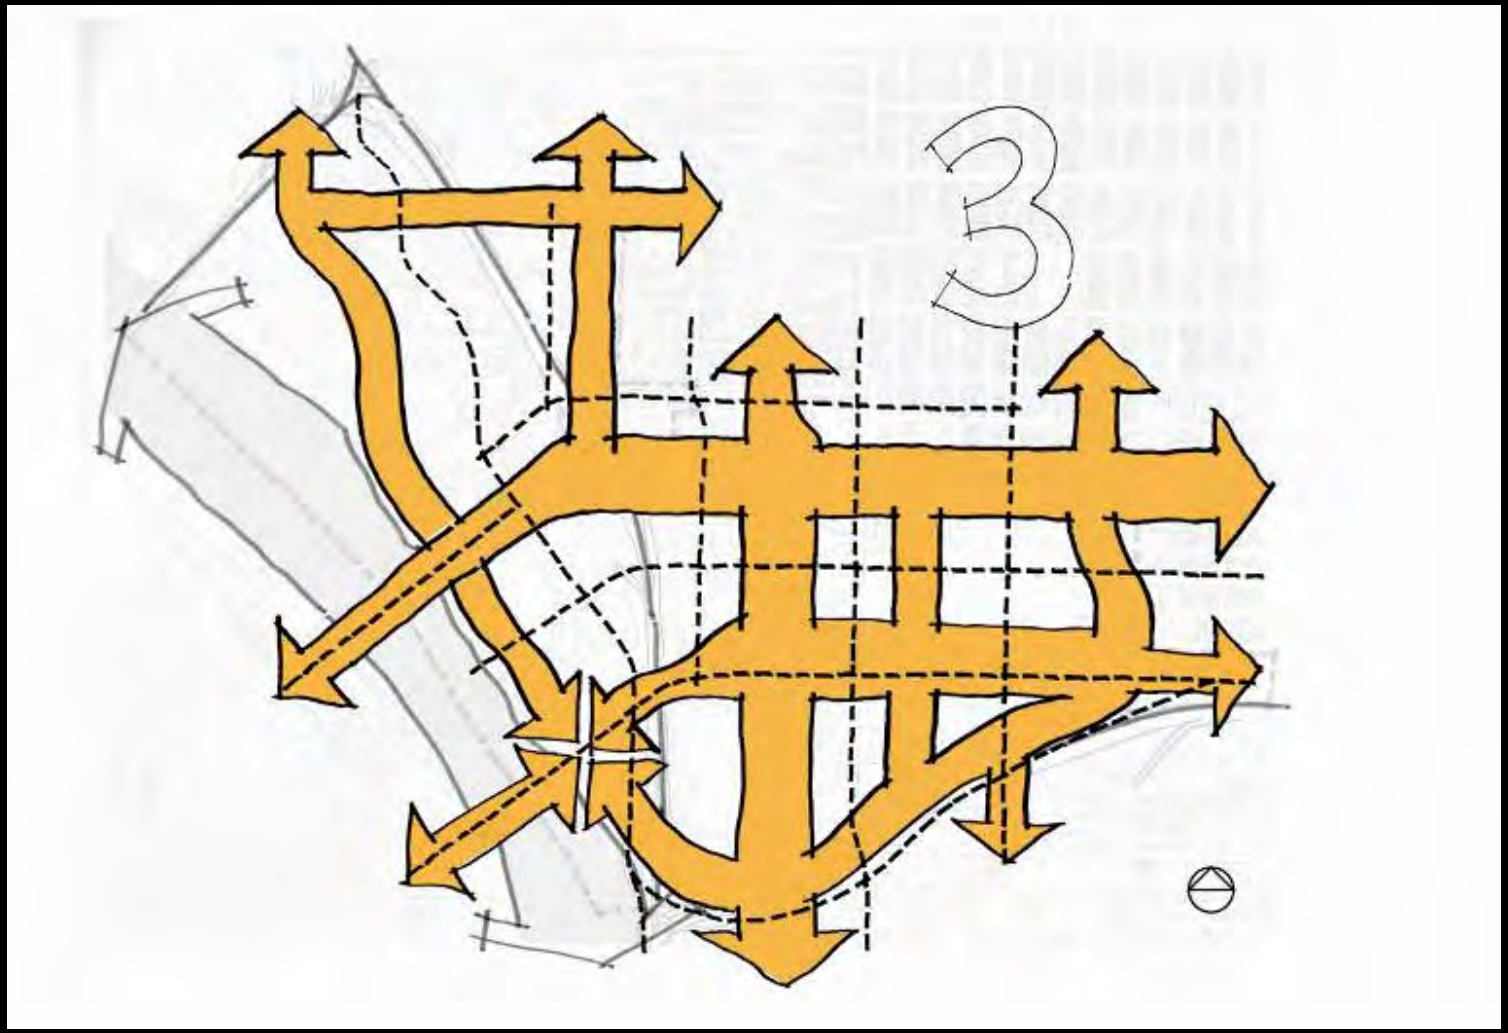
- **Urban vibrancy and vitality**
  - –Desire for more housing, improved amenities like open space and pedestrian friendly urban form
- **Economic prosperity**
  - –Employment and business growth
- **Human and Environmental Health**
  - –Air quality, green infrastructure, opportunities to improve habitat
- **Balance and Equity**
  - –Respect cultural heritage; grow while retaining existing residents and businesses and culturally significant buildings
- **Connectivity and access**
  - –Address transportation barriers
  - –Freeway safety and operational issues

PROJECT GOALS

1. A diverse mix of land uses and development types
2. Economic development that supports existing and new business
3. Enhanced habitat, access to nature, and a sustainable built environment
4. Infrastructure for healthy, livable, safe and vibrant communities that respects adjacent neighborhoods
5. A full multimodal transportation system
6. Improve the local circulation system
7. Equitable access to amenities and economic opportunities
8. Protection and enhancement of cultural heritage

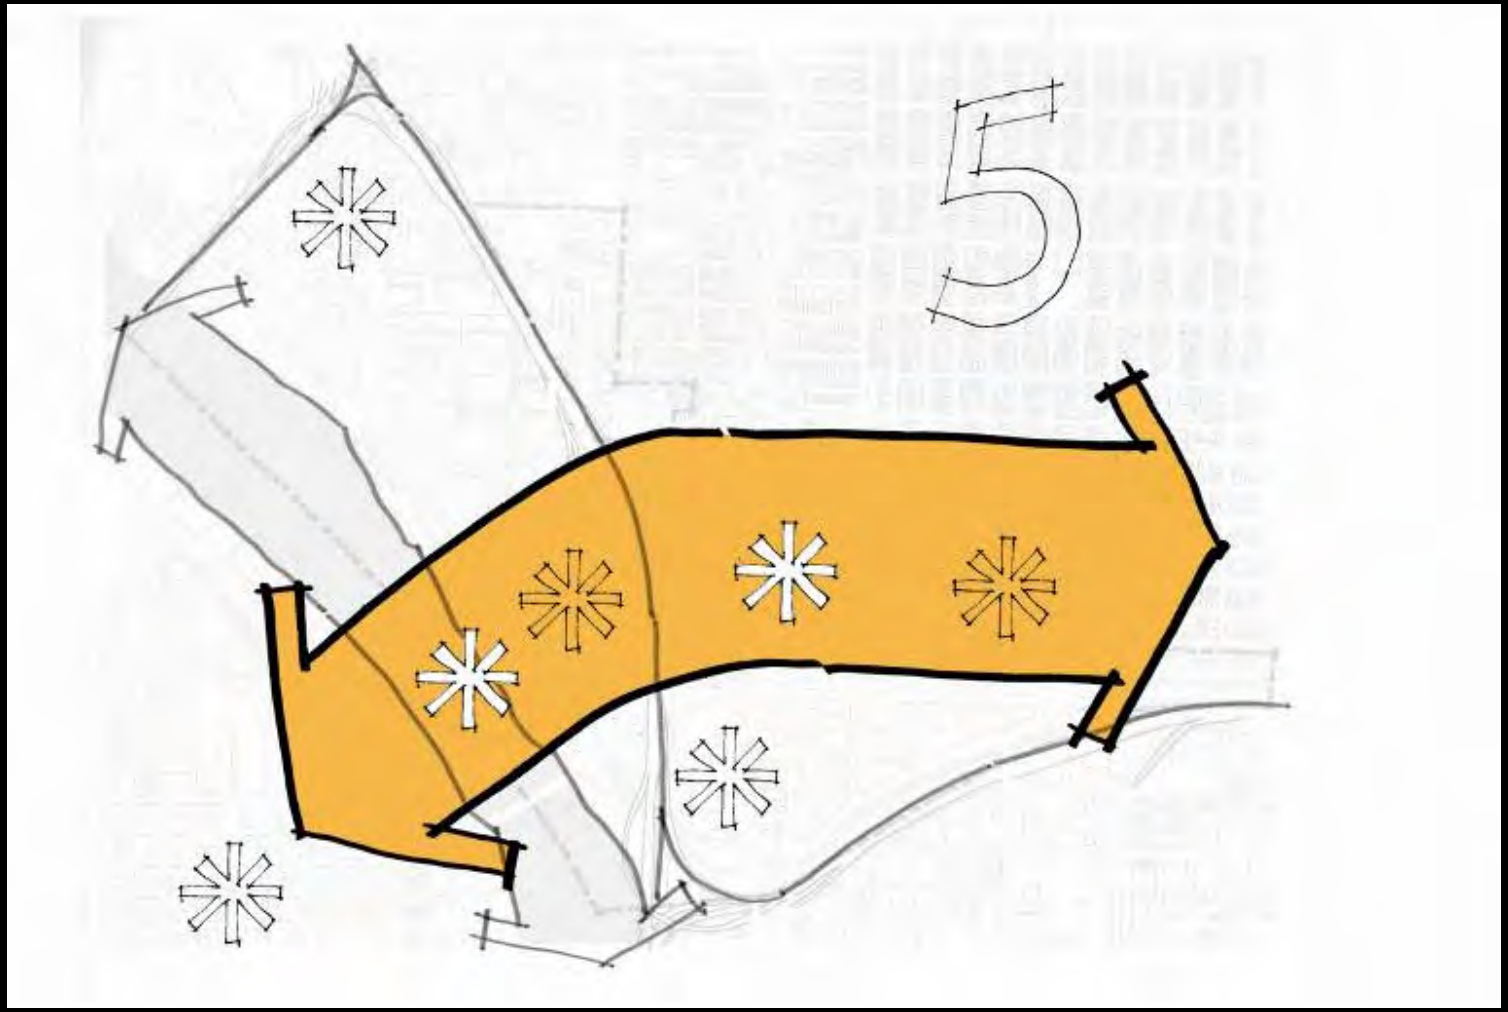


URBAN DESIGN PRINCIPLES



TWO DISTINCT PLACES

FILL IN THE CENTRAL CORE

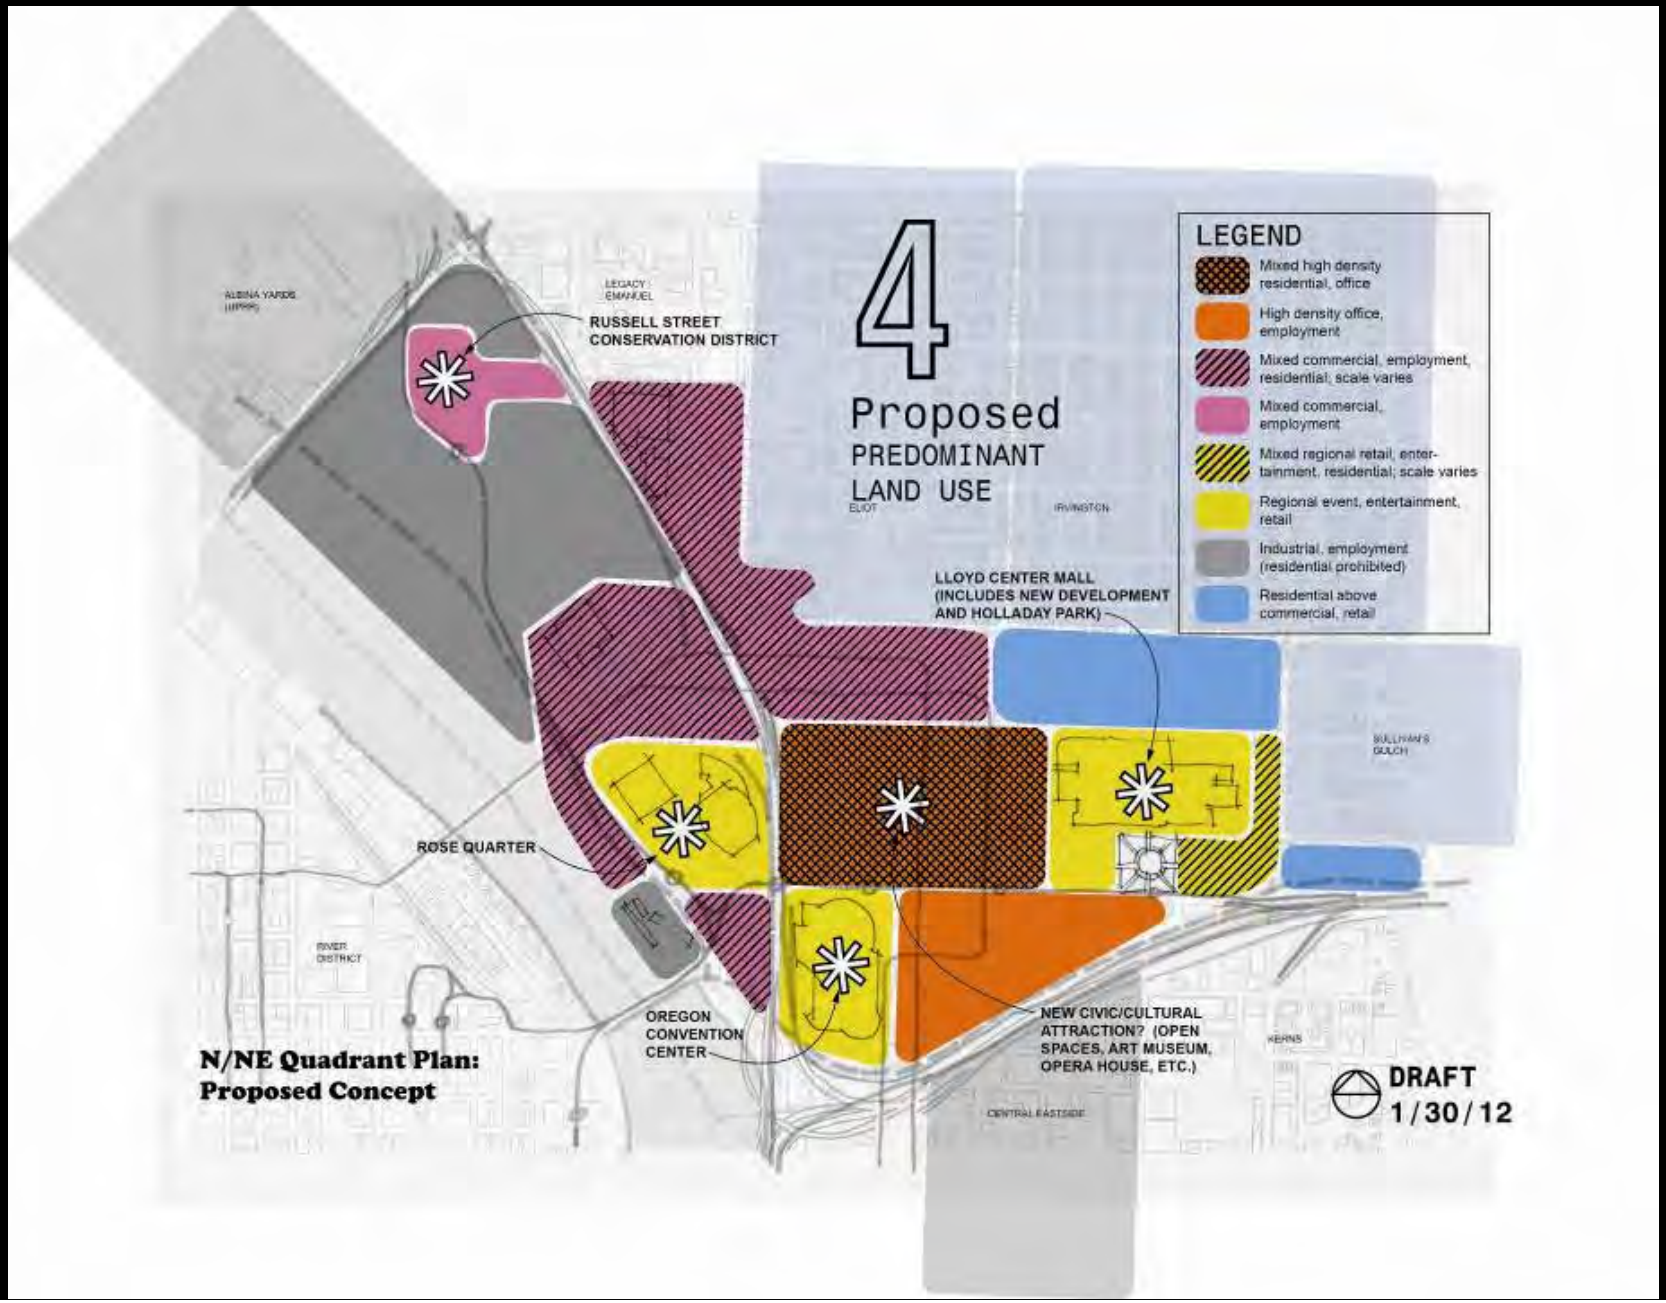


STRENGTHEN CONNECTIVITY

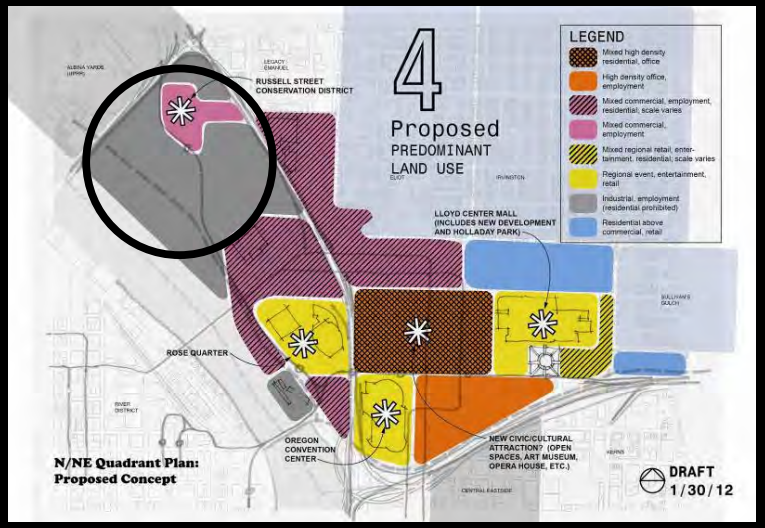
TAKE ADVANTAGE OF URBAN FORM

CELEBRATE THE CROSSROADS

55447



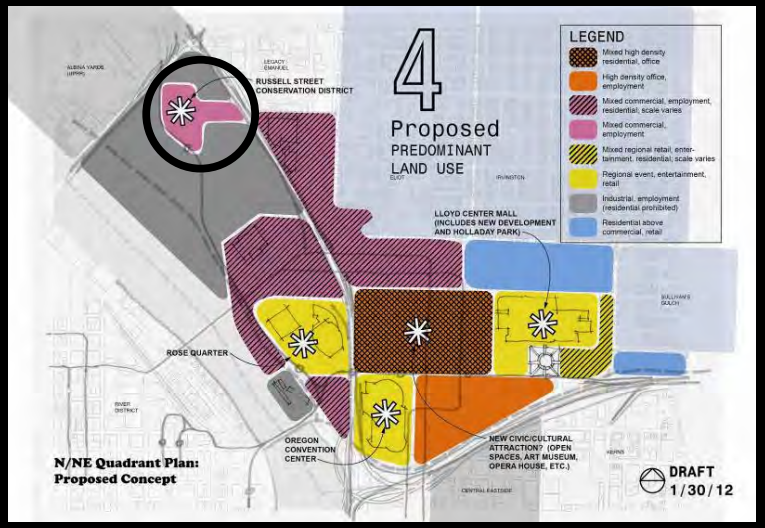
QUADRANT PLAN CONCEPT DEVELOPMENT



Concept Refinement:

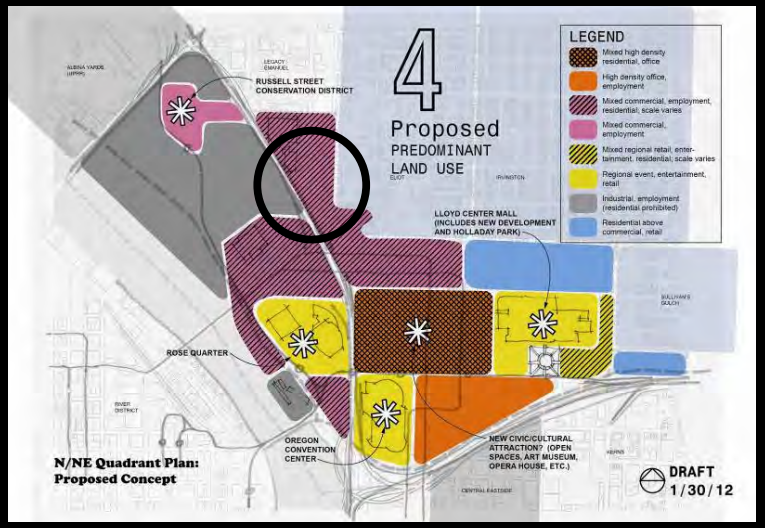
Sept. 2011	70% Draft
Nov. 2011	95% Draft
Jan. 2012	new street character types
Feb. 2012	revised proposal – SAC endorsed

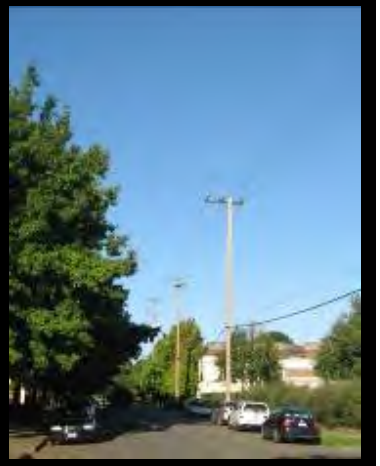
QUADRANT PLAN CONCEPT



LOWER ALBINA

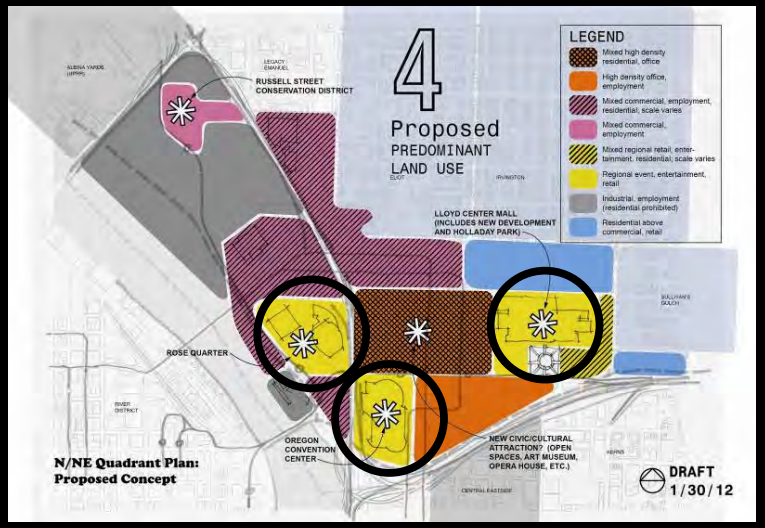
- Support continued success of industrial district
- Additional flexibility for compatible employment uses east of Union Pacific rail line

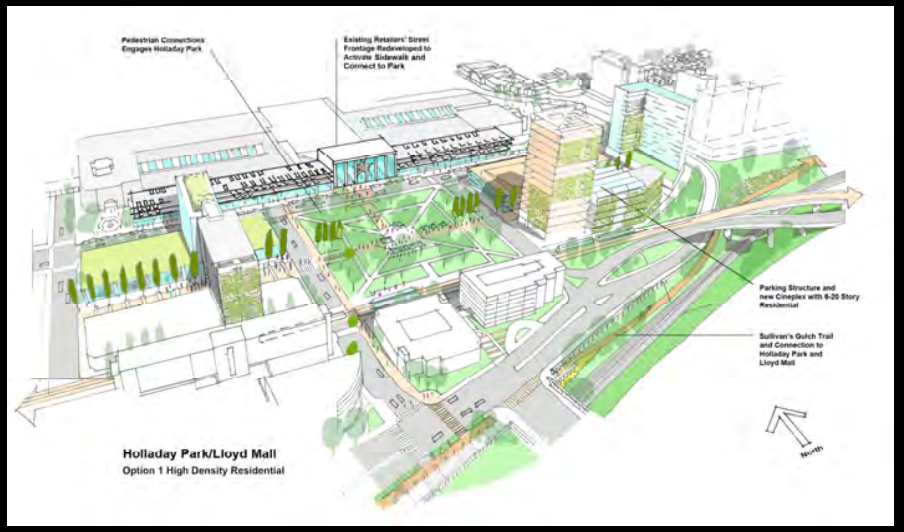




RUSSELL STREET

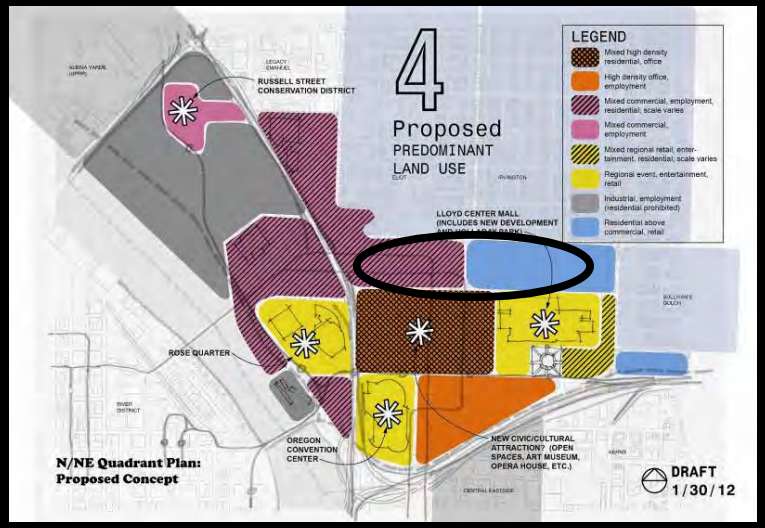
- Continue to preserve and celebrate the conservation district
- Expand mixed use area east along Russell
- No expansion of residential area





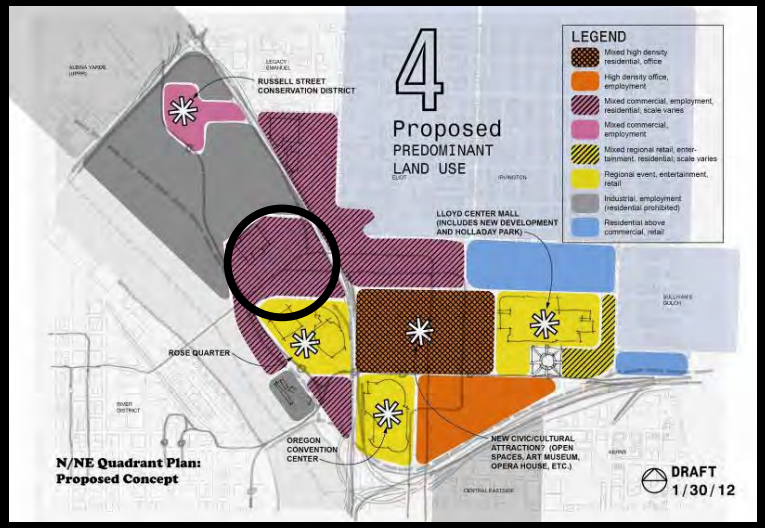
LOWER VANCOUVER / WILLIAMS

- Increase flexibility to allow more commercial, employment uses in current RH-zoned areas
- Celebrate Russell and Williams as neighborhood main streets
- Integrate and enhance cultural and historic resources in the area



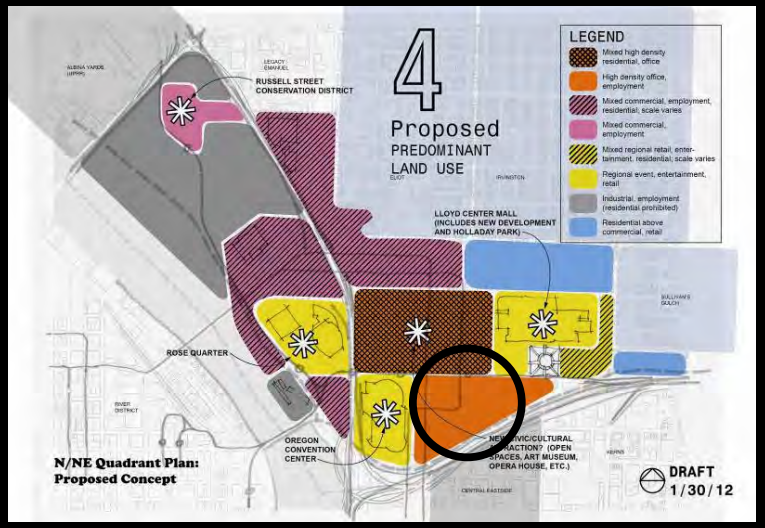
REGIONAL ATTRACTIONS

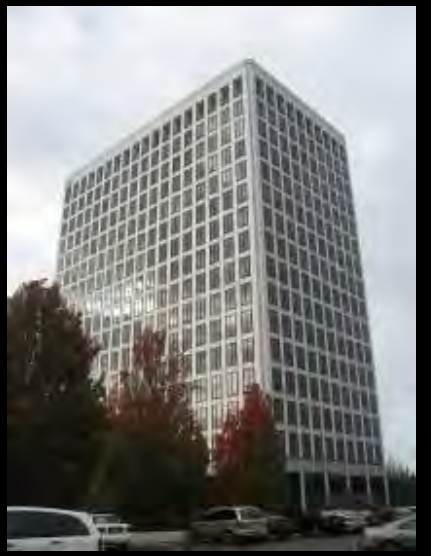
- Unique in the Central City
- Potential for new attraction in Central Lloyd area
- Encourage new uses, places at edges to improve balance of activity



BROADWAY / WEIDLER CORRIDOR

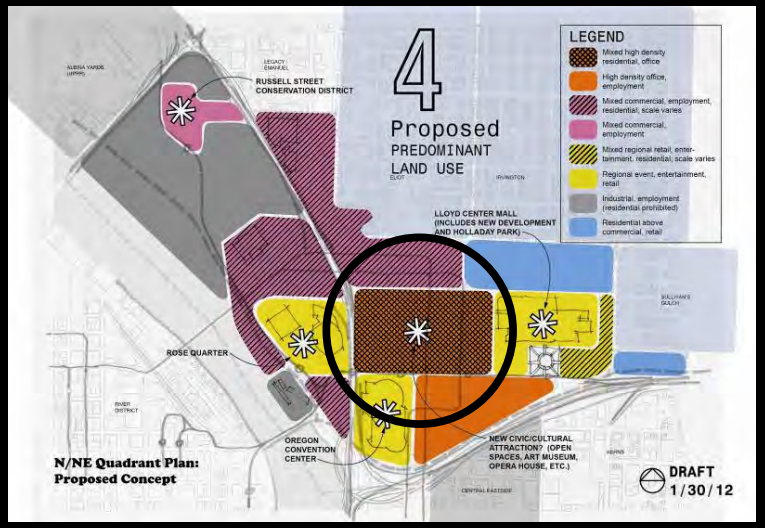
- Extend and expand existing main street development to the west
- Typically 2 to 6 story development north of Broadway, taller to the south.
- Emphasis on housing over ground floor commercial, retail uses





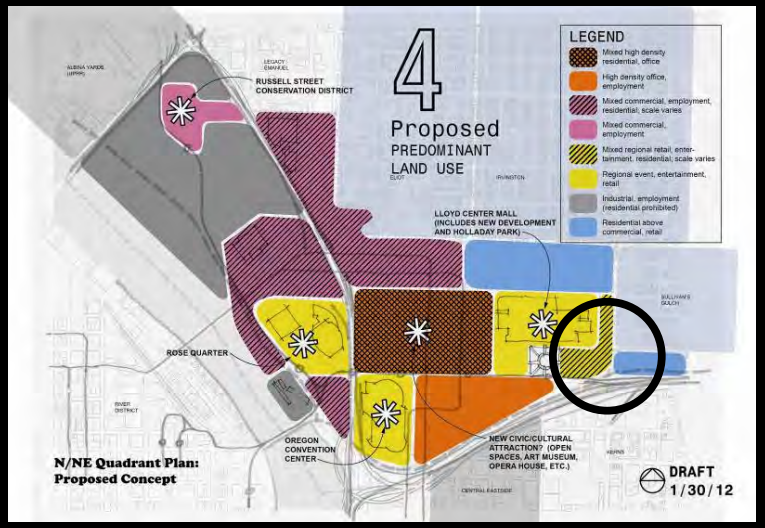
NORTHWEST ROSE QUARTER

- Increased land use flexibility at the PPS Blanchard site, residential possible – sensitive transition to industrial area needed
- Larger scale, active, urban development along N. Broadway
- New riverfront open space



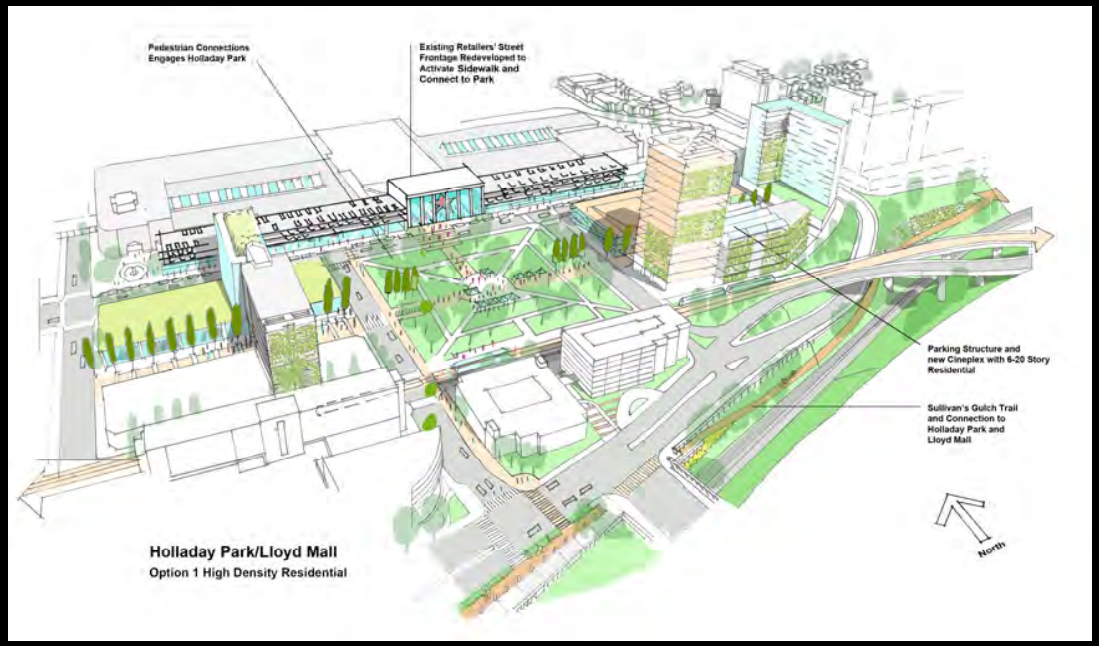
OFFICE CORE

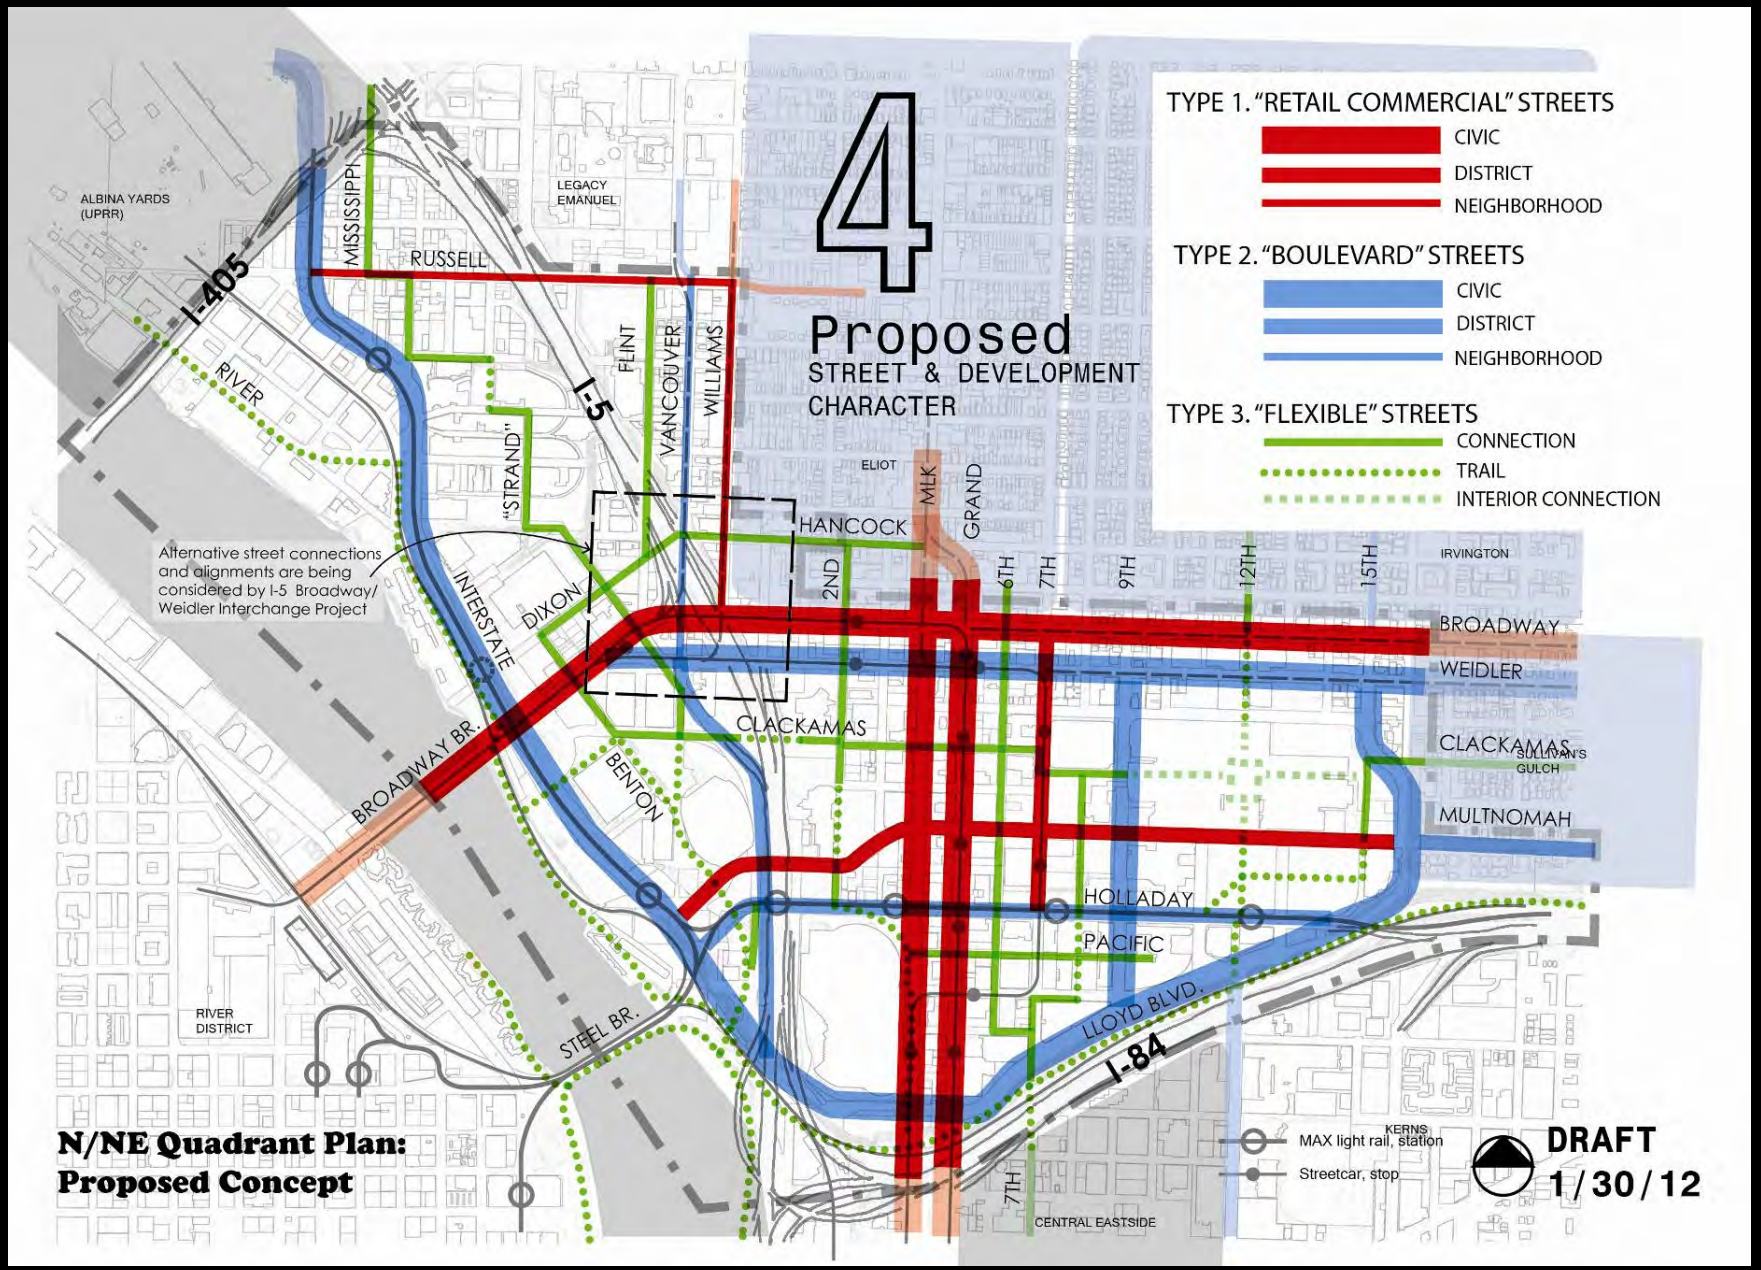
- Continue as active, expanding office district
- Residential possible, but not emphasized



CENTRAL CORE

- Mix of high density residential and office development organized around new, signature open space and pedestrian system
- NE 7th at NE Multnomah as potential new urban "center" for the area





EASTERN EDGE / MULTNOMAH

- Focus on residential development, commercial allowed
- Potential expansion of mall-related regional retail
- 2 to 6 story development east of 16th, taller allowed around Holladay Park

STREET AND DEVELOPMENT CHARACTER

“Retail Commercial” Streets

1. Busy, continuous, active streets by day and night with high volumes of vehicles, transit, bicycles and pedestrians
2. Stormwater management less visible or at intersections with side streets
3. Retail uses required/strongly encouraged, specialized retail encouraged

Scales:
Civic: *Broadway, MLK and Grand*
District: *Multnomah and 7th*
Neighborhood: *Russell and Williams*

“Boulevard” Streets

1. Busy, continuous streets with nodal activity and emphasis on access, movement and flow. High volumes of vehicles, transit, bicycles and pedestrians
2. Visible “green” and stormwater management features allowed/encouraged, including landscaped building setbacks
3. Retail uses allowed, encouraged at key locations

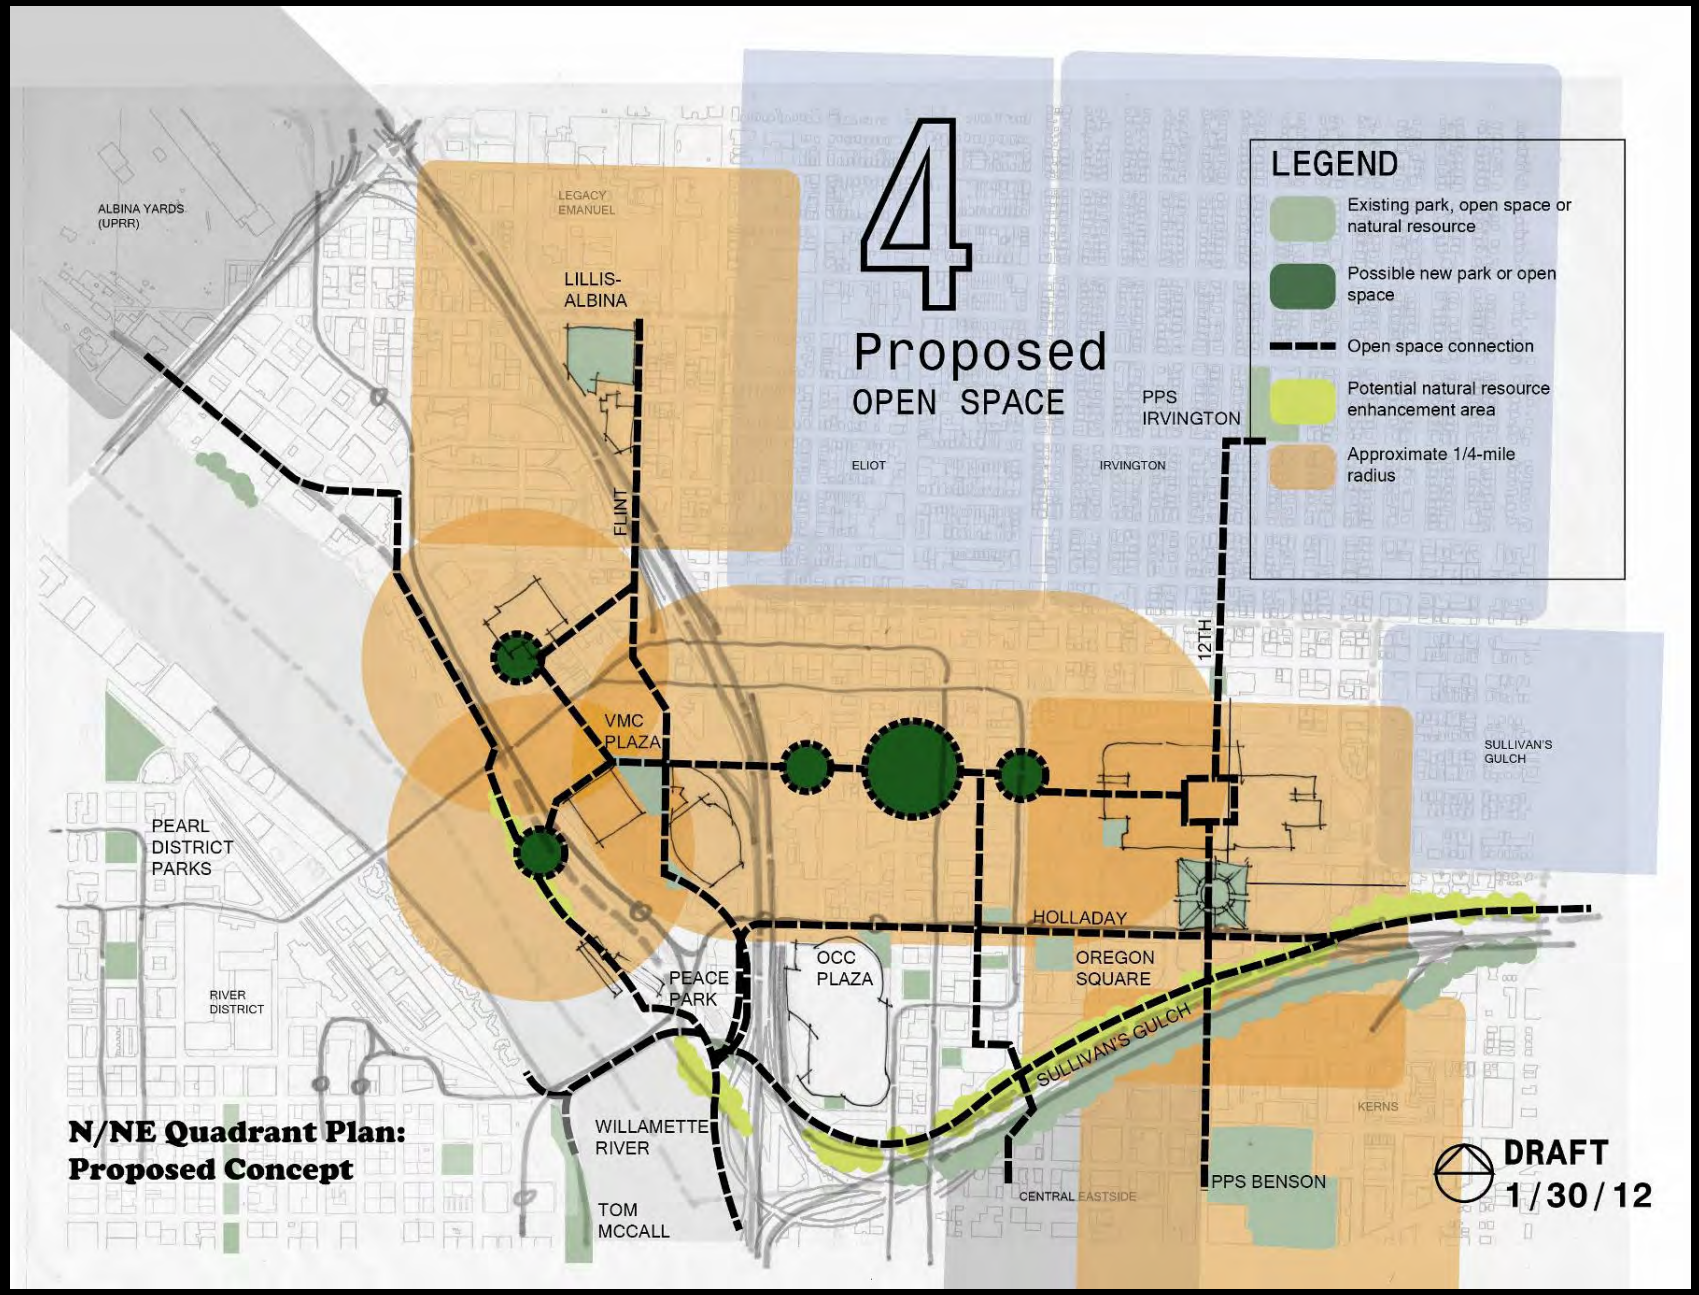
Scales:

Civic: *Weidler, 15th/16th, 9th, Lloyd Blvd. and Interstate*

Neighborhood: *Vancouver and Wheeler*

“Flexible” Streets

1. Quieter low volume streets, alternative routes for pedestrians and bicyclists
2. Visible “green” and stormwater management features allowed/encouraged, including landscaped building setbacks
3. Retail uses limited or discouraged, except at key locations
4. Highly specialized/localized designs responsive to adjacent land uses/development
5. Linked together as part of a system that reaches the river



Some potential variations:

Woonerf, Festival Street, Pathway, Alley

- Implementation Actions

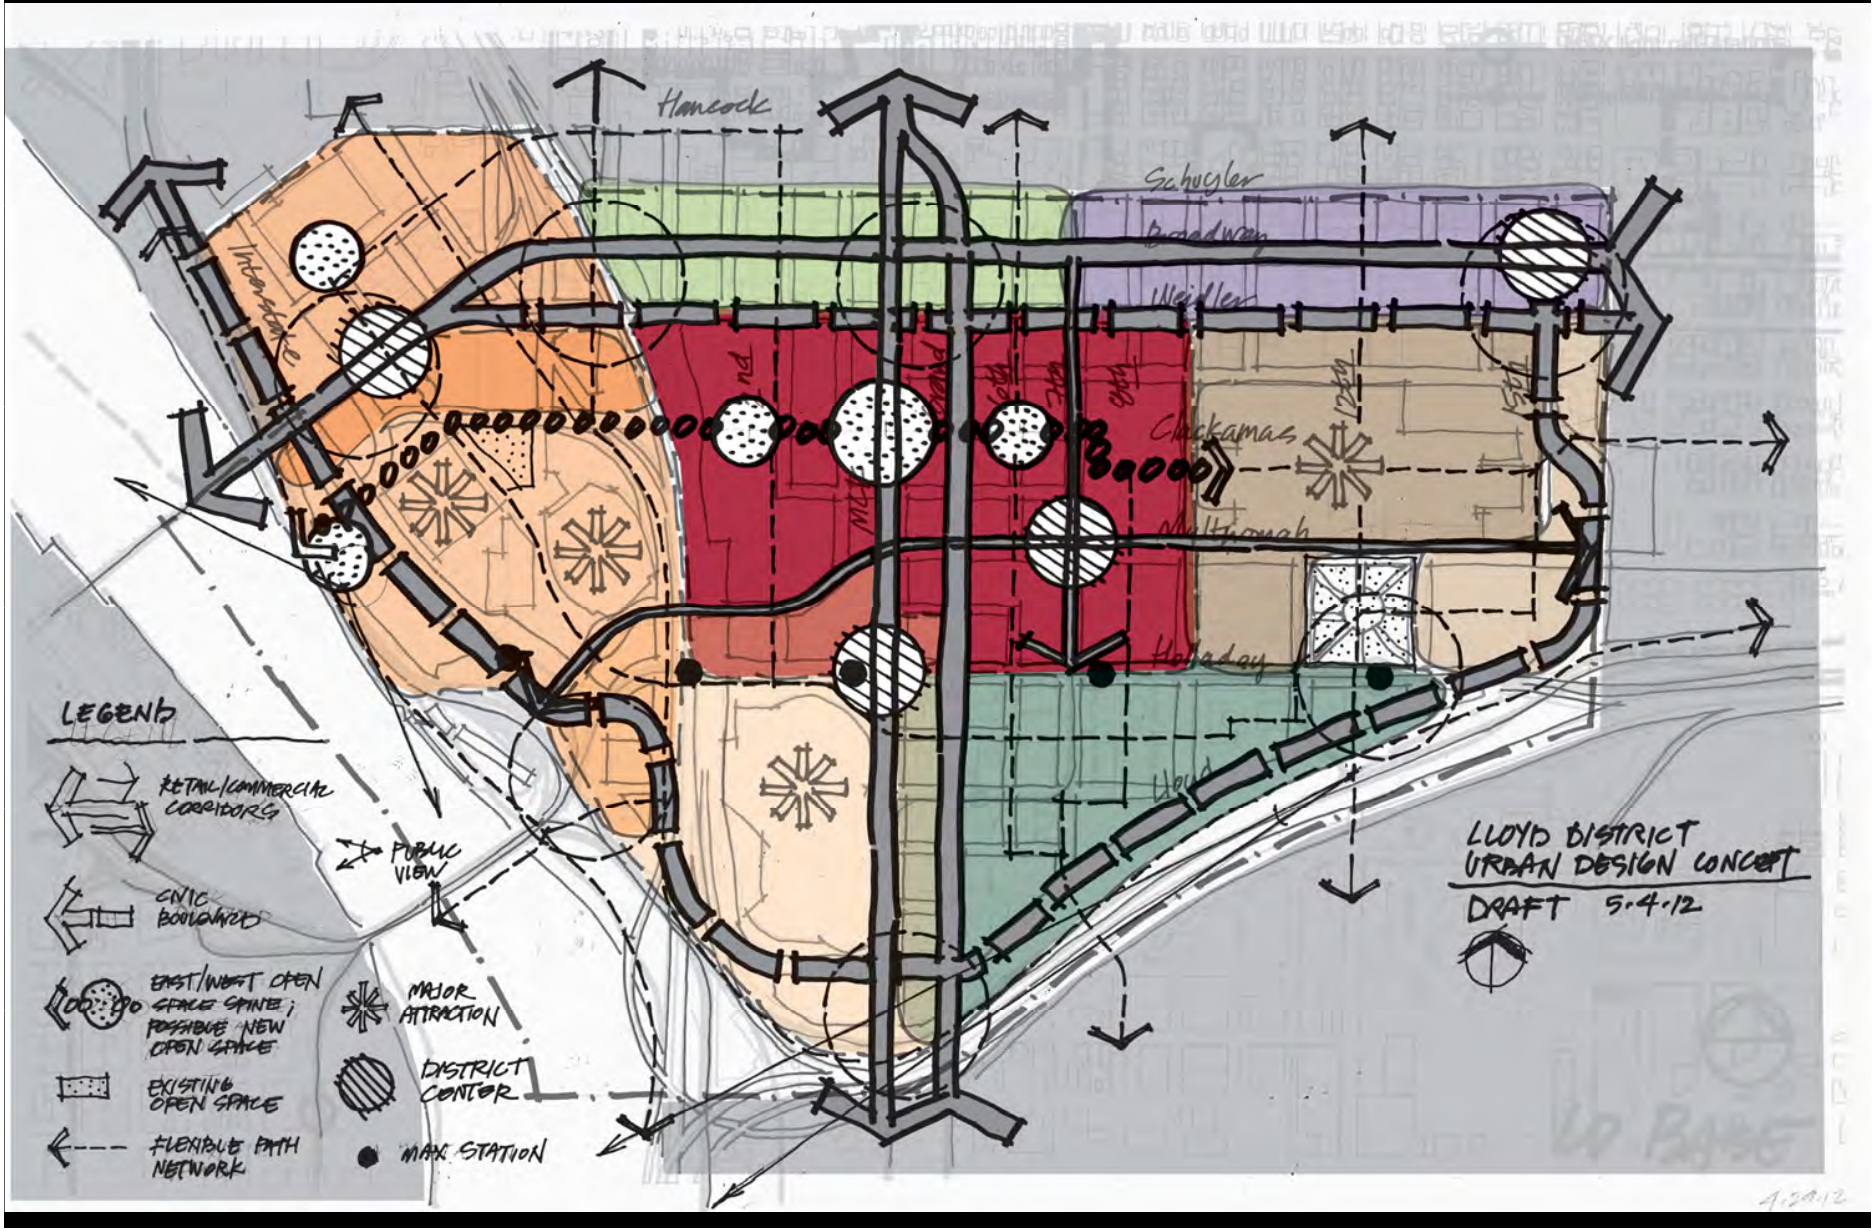
Lloyd District Goal (pg. 26)

Foster the growth of the Lloyd District into the intensely urban eastside center of the Central City.



Capitalize on the district's regional attractions, high quality transit and connections to create one of the most vital and livable districts in the Central City, with a strong employment base, successful residential community and a variety of urban amenities.

Develop the district as a complete and sustainable community with well-designed open space, streets, and high-performance green buildings and infrastructure.

Lloyd District Subarea Character

Lloyd District Concept

Lloyd District
Policy and Action Examples

Regional Center: Economy and Innovation (pg. 28)

Policies

- Support employment growth, regional attractions and tourism
- Encourage high density development
- Promote area as sustainable district

Target: Add 10,000 new jobs by 2035 (55% growth)

Actions

- Zoning and height changes to encourage development
- Develop Convention Center hotel strategy and regulatory incentives for convention center supportive uses

Lloyd District
Policy and Action Examples

Housing and Neighborhoods (pg. 31)

Policies

- Encourage significant new housing development meeting needs of a diverse population
- Develop a complete neighborhood

Target: Add 5,000 new housing units by 2035 (5x more than today)

Actions

- Develop regulatory tools to encourage housing development
- Improve function and safety of Holladay Park

Lloyd District
Policy and Action Examples

Transportation (pg. 35)

Policies

- Invest in and manage the system for better safety and operations
- Support the use of non-auto modes
- Strengthen the role of parking management; preserve on-street parking in retail areas

Target: Achieve 70% non-SOV commute mode split (44% today)

Actions

- I-5 Broadway/Weidler Improvements
- Develop parking management strategies, including event parking
- Make pedestrian safety and parking improvements on MLK/Grand and Broadway/Weidler

Lloyd District
Policy and Action Examples

Urban Design (pg. 39)

Policies

- Improve vibrancy, connectivity and street character
- Develop a signature open space system
- Activate the riverfront and improve access to the river
- Provide sensitive transitions to adjacent neighborhoods

Actions

- Update 1991 design guidelines
- Develop public open space strategy (acquisition, improvement)
- Revise height regulations to “step down” to adjacent neighborhoods

Lloyd District
Policy and Action Examples

Environment (pg. 43)

Policies

- Encourage leadership and innovation in sustainability
- Increase tree canopy and use of green infrastructure (i.e. eco-roofs, vegetated stormwater facilities)
- Enhance natural resources – river banks and Sullivan's Gulch

Target: Achieve 15% tree canopy (10% today)

Actions

- Update natural resource and greenway regulations
- Coordinate capital investments to support EcoDistrict and district energy
- Develop a tree planting strategy

Lower Albina District Goal (pg.47)

Strengthen Lower Albina as an industrial and employment area by reinforcing the working harbor and providing for diverse employment and development opportunities.

Enliven historic Russell Street with mixed-use and commercial activities that are compatible with industrial and employment uses.

Lower Albina Concept

Lower Albina
Policy and Action Examples

Regional Center: Industrial and Employment Sanctuary (pg. 48)

Policies

- Protect the working harbor
- Increase employment densities and range of activities allowed
- Foster role as small business incubator

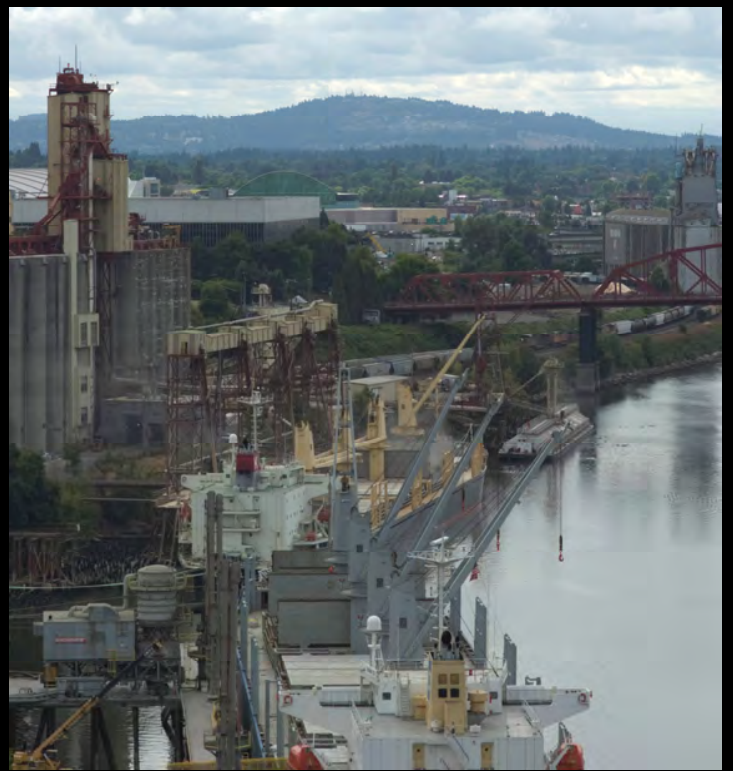
Target: Add 1,000 new jobs by 2035 (50% growth)

Actions

- Zoning changes to increase flexibility for commercial uses on Russell Street and for compatible office uses east of UP railroad
- Develop parking strategy (new)

Lower Albina
Policy and Action Examples

Transportation (pg. 50)



Policies

- Prioritize freight movement to support industrial activity
- Improve multi-modal connectivity through area and to other districts

Target: Achieve 40% non-SOV commute mode split (18% today)

Actions

- Study options for rebuilding/reuse of Larrabee Street ramp
- Develop street design plan for “the strand”; consider alternative routes
- Rebuild River Street

Lower Albina
Policy and Action Examples

Urban Design (pg. 52)

Policies

- Preserve historic structures and culturally significant resources
- Strengthen the character of Russell Street
- Preserve and enhance industrial character

Actions

- Prepare and assist in documenting historic properties
- Improve character under freeway at Russell and Fremont Bridge
- Improve appearance of publically-owned storage yards

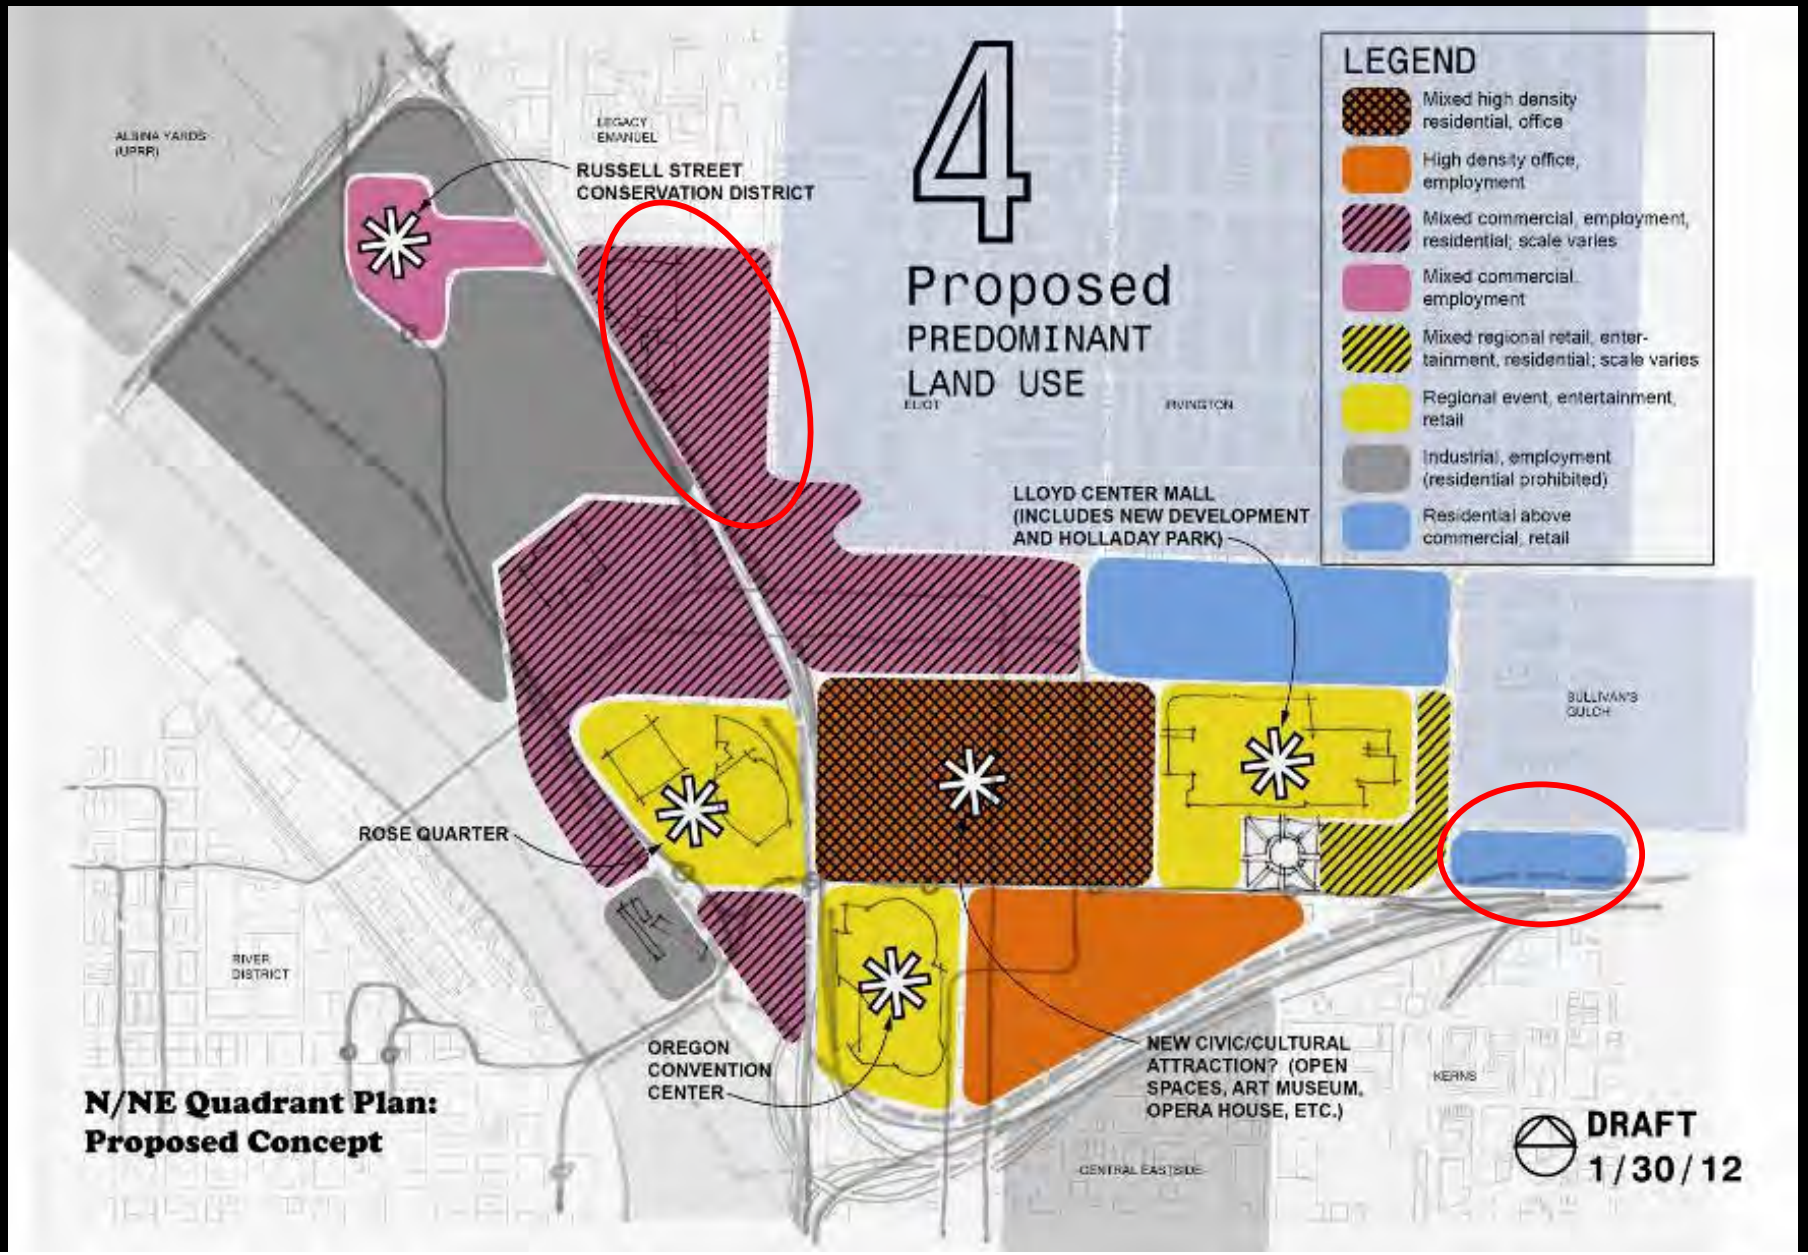
Lower Albina
Policy and Action Examples

Environment (pg. 54)

Policies

- Support natural resource objectives of River Plan / North Reach
- Encourage sustainable design in infrastructure and buildings

Target: Achieve 10% tree canopy (6% today)



Actions

- Update greenway regulations as part of River Plan / North Reach process (pending final court decision)
- Develop strategy to add trees and sustainable stormwater approaches

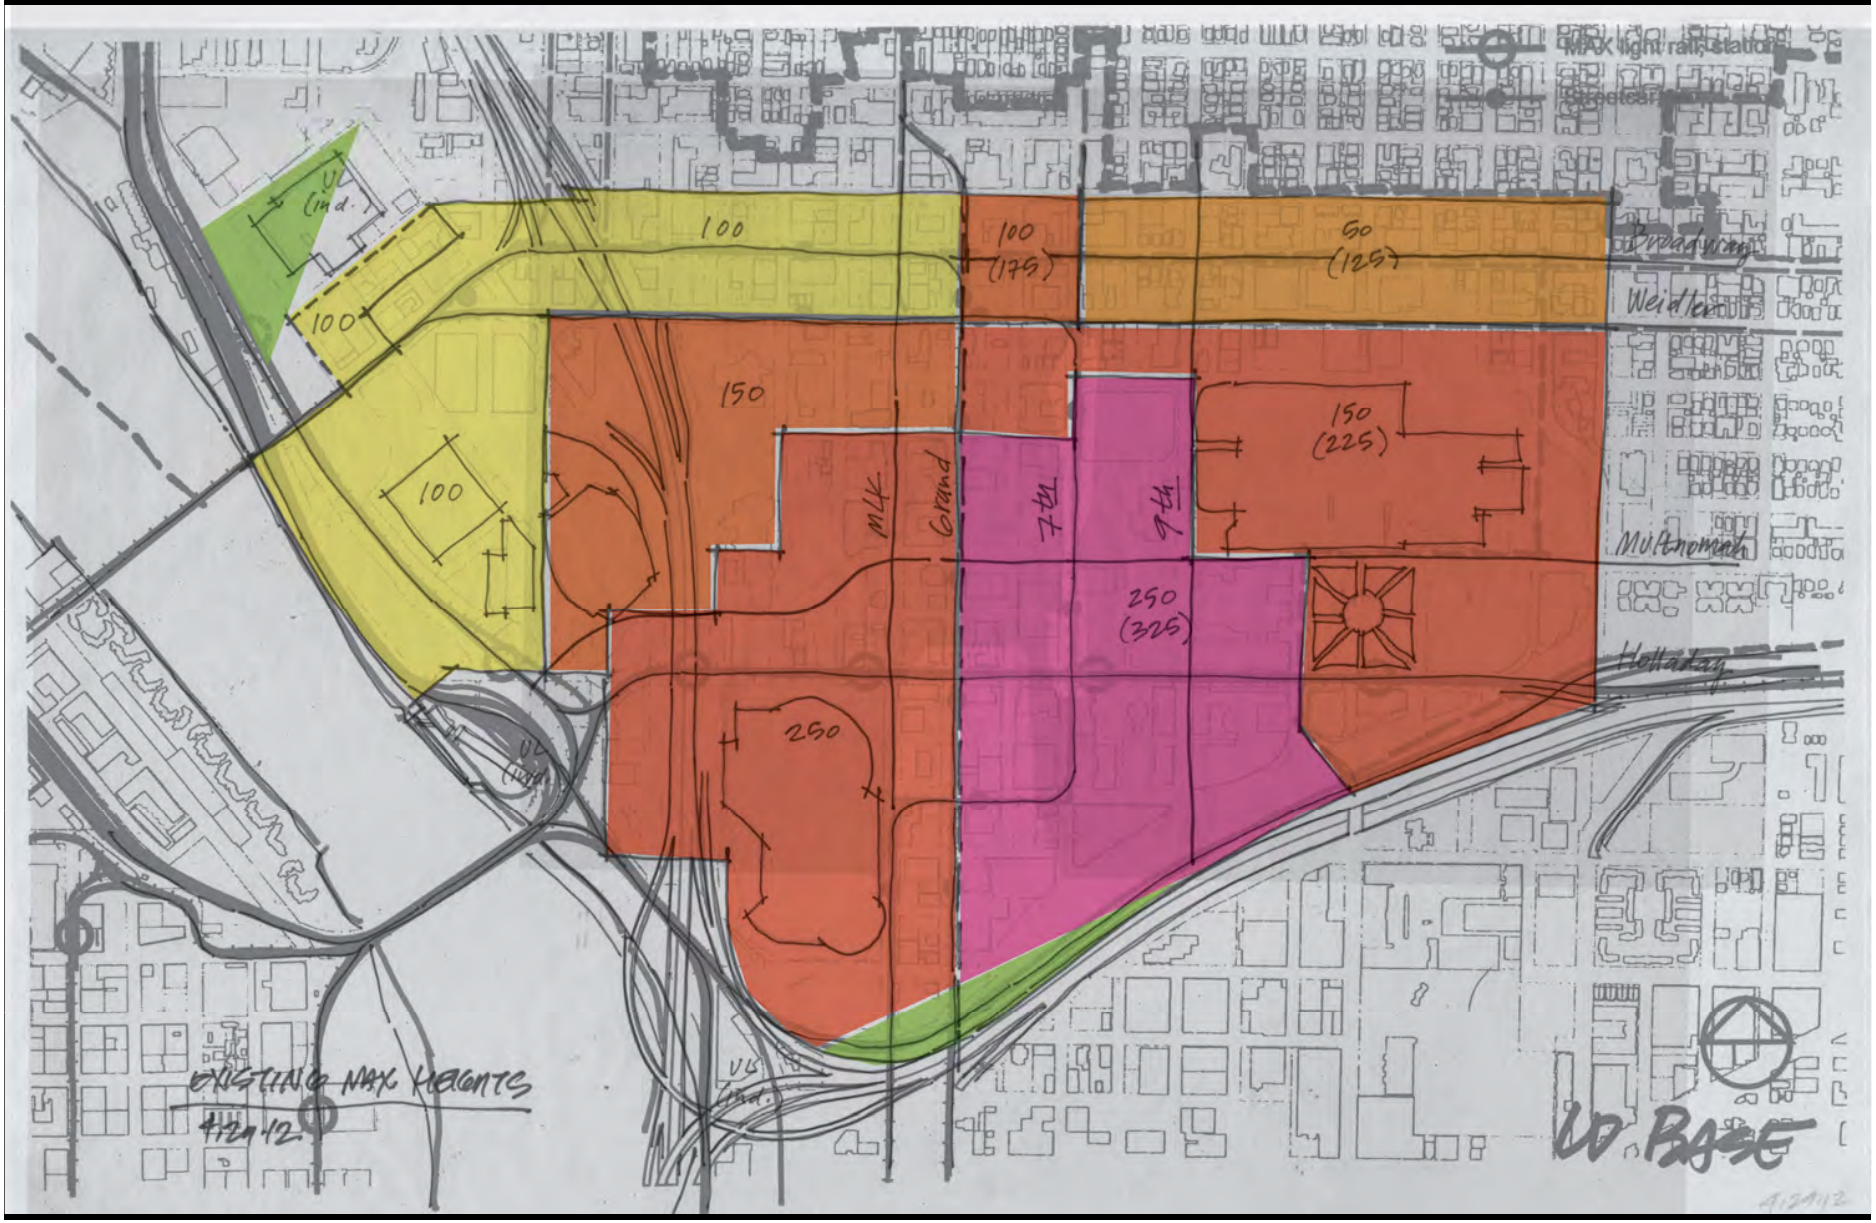
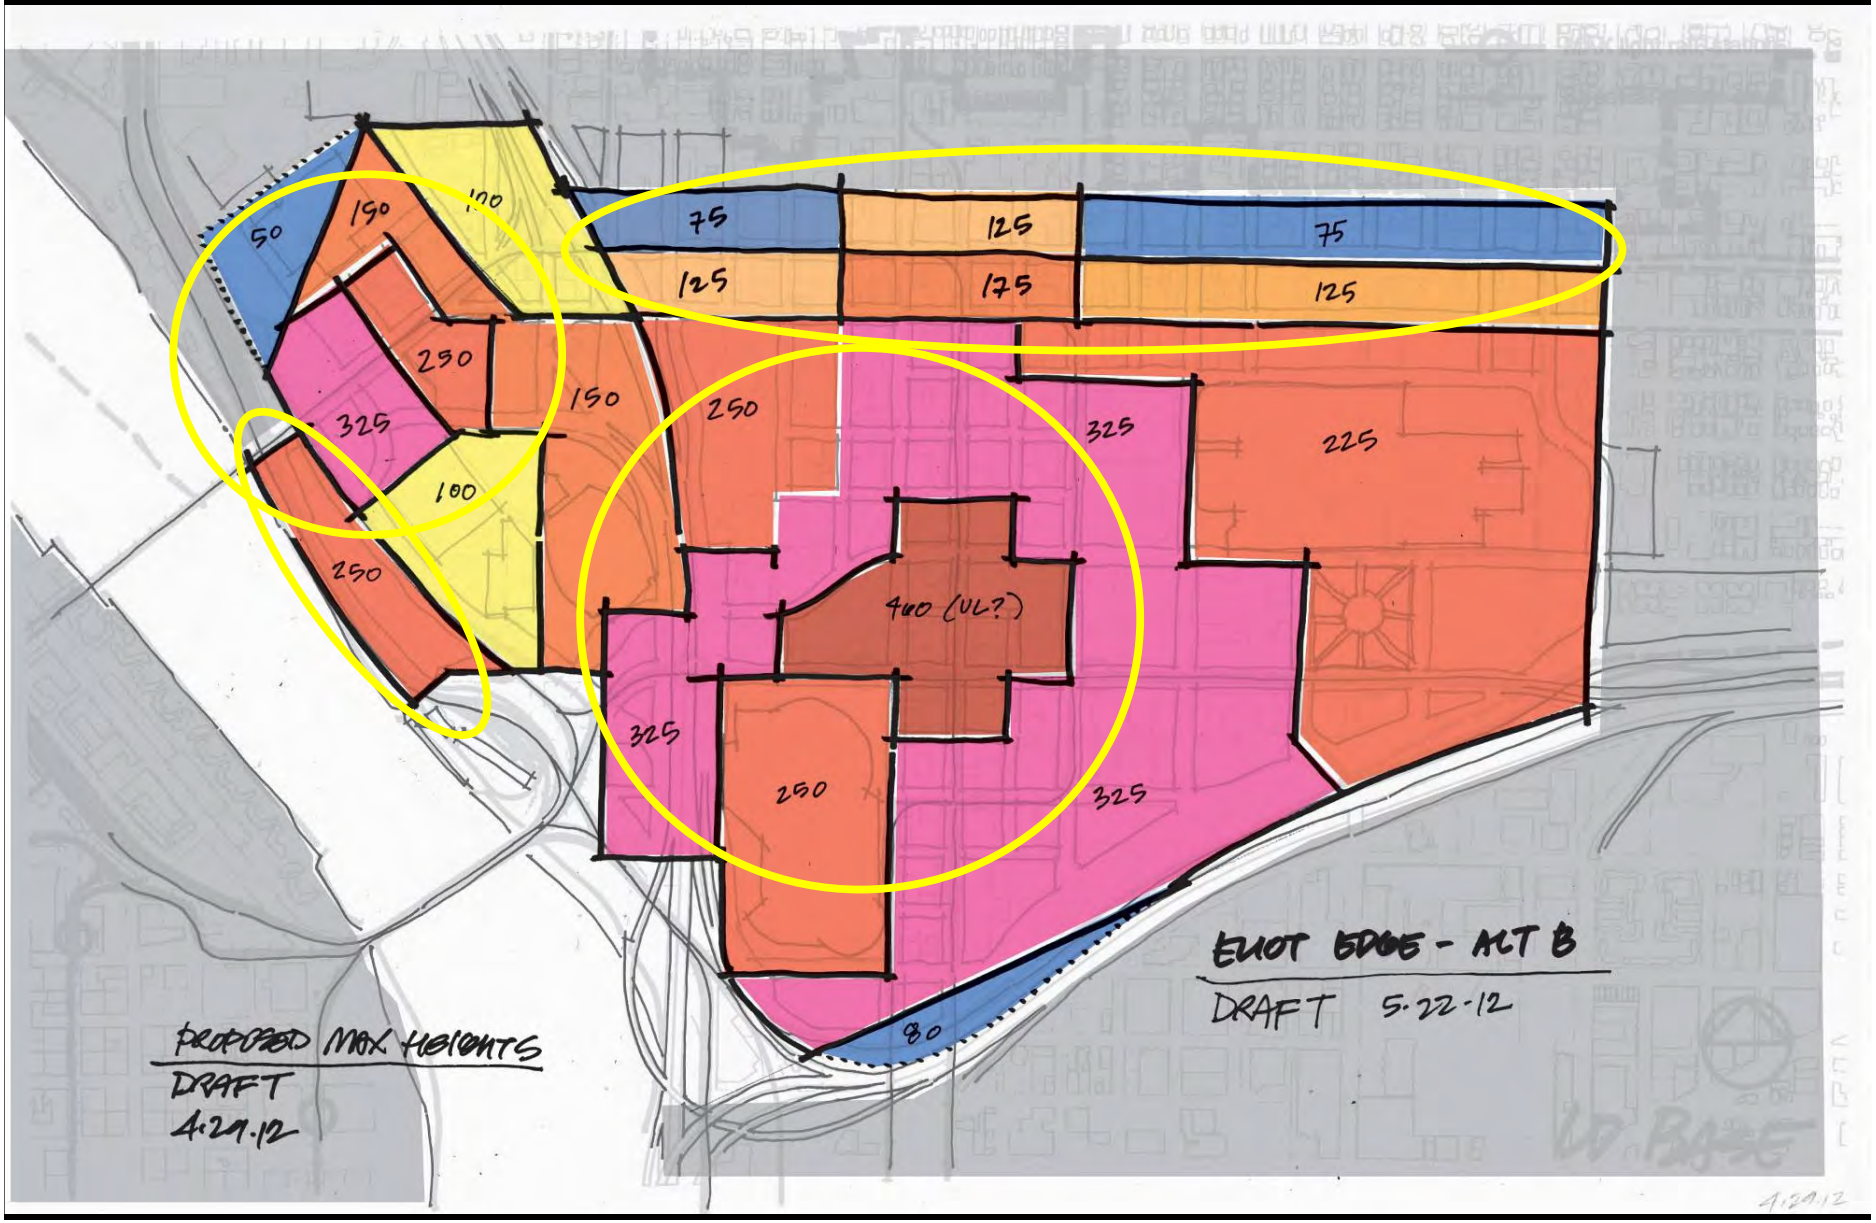
Revised Lower Albina Zoning Proposal



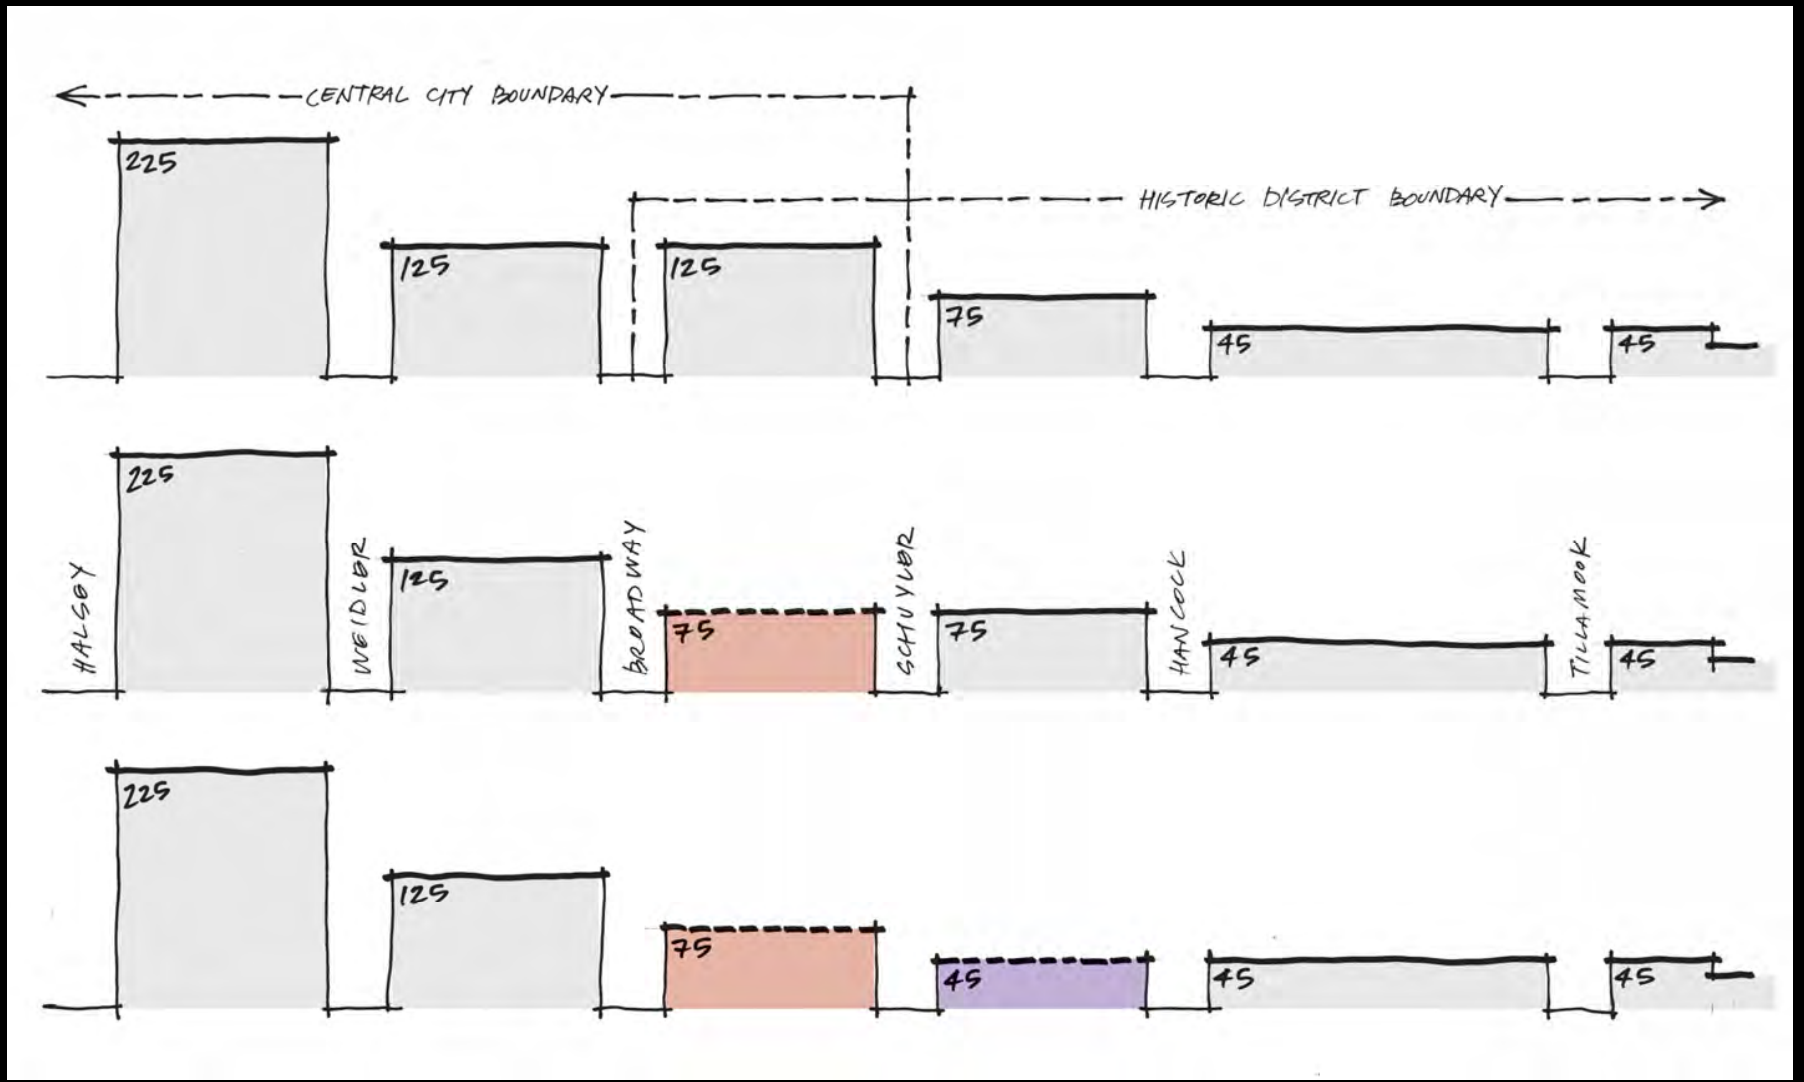
Amend action RC3 (pg. 49) to make Employment Opportunity Subarea regulations contingent on a parking strategy.

Proposed language to be added:



"Implementation of the Employment Opportunity Subarea regulations is contingent on developing a Lower Albina parking strategy that explores off-street parking facilities for workers and visitors and on-street parking strategies."

Implementers: BPS, PDC, PBOT, private



Existing Height Limits

Proposed Height Limits (including bonuses)

Revised Irvington Edge Height Proposal

Revised Irvington Edge Height Proposal

New Lloyd action, UD10 (pg. 42):

"Recommend that the existing 75' height limit between NE Schuyler and NE Hancock and NE 7th and NE 16th in the Irvington Historic District be reduced to 45' as part of the Comprehensive Plan update process. The height limit change is in response to the creation of the Irvington Historic District in 2010 and the policy need to retain multi-family housing potential in this corridor."

Implementer: BPS

Next Steps

- Additional comments due by July 9
- Revised plan published in mid-July
- Aug 2 SAC Meeting: final SAC recommendations and report

Public comments received between June 7th and June 28th, 2012.

Ron Swaren (via email, 6/9/12)
I think the proposal from ODOT to rearrange the interchanges at 1-5 in the Rose Quarter is a very good project. It benefits all parties. Adding a lane each way on I-5 will significantly reduce congestion. And there are provisions for other users as well. But the added lanes are critical for this to be a worthwhile project. I hope you proceed.

Debbie Peterson (via email, 6/9/12)
I am requesting that you widen I-5 at the designated choke points. I often drive I-5, and am concerned about the parking lot that is known as I-5. The pollution, loss of dollars is a concern and is a problem that can be solved - should have been solved decades ago.

Thank you for interest in this long-standing problem. I am hopeful that it will be solved in an expedient manner (unlike the faulty CRC Project).

Phone-in comment received by Dave Davis, Ask ODOT (6/11/12)
A gentleman called this morning to voice his support of the North/Northeast Quadrant Project on I-5 in Portland. He said he felt the project is a good one and will eliminate a choke-point for traffic that should increase the efficiency of the traffic flow exponentially. "It's a good project."

Margaret Tweet (via voicemail message to BPS staff, 6/13/12)
I live in Washington State and travel to Portland to visit relatives and to go to OHSU medical facilities. I like the idea of the freeway project because it will improve conditions for traveling through the area. I am not aware of investments in the freeway for a long time and think it is needed.

Susan (via voicemail message to BPS staff, 6/25/12)
I wanted to leave comments related to issues about sustainability - I understand Portland is leading the effort, but I think we could do more to use up empty buildings in the downtown area for businesses rather than having to build out in other communities especially like the proposal with the Lloyd Center. We cannot keep using more land and leaving other buildings vacated, and that is not going to make it [downtown] catch up in the future since it's only going to deteriorate or be abandoned with vandalism.

The other thing in terms of livability is building thicker walls. I know there is a huge push with trimet to have transportation closer to where people live. But instead of building thicker walls, thinner walls are used in a very enclosed and much more dense space. In terms of livability that is a huge issue since you can always hear your neighbors and are affected by smoke and other issues. Thank you.

Subject: NE Quadrant Meeting

Sam,

I don't have time to go through the NE Quadrant information right now due to the insanity with WHI. I won't be there tonight since I am heading to Goldendale...already a day late. However I wanted to flag a couple of things that are of concern.

1) The tree targets are in my opinion too low. I think the document should reference the tree targets that are in the urban forestry plan for certain land use types as the ultimate objective for each part of the landscape in question and also set interim targets for the time period covered by the plan. The numbers I have seen in recent documents seem very low even for interim targets.

2) The documents should encourage bird friendly building design. Audubon, the City and USFWS just produced Bird friendly Building Design Guidelines. The includes building buildings that reduce strike risk and also reducing light polution.

3) The plan should include specific targets for ecoroofs and other green infrastructure from the watershed plan.

4) There should be strong language to protect undeveloped river banks and riparian buffers (very little in this area of the city I know) and also strong language to restore developed banks when redevelopment occurs. This should apply on all riverbank regardless of whether they are ranked high, medium or low.

Subject: Tonight's N/NE Q meeting

Hi Karl –
I have a major schedule conflict with tonight's meeting & can't attend. The comments I submitted for the last meeting remain the same - - especially regarding the heights at the Eliot and Irvington edges - - they should be the same for both neighborhoods, to better transition to the residential properties north of Broadway.

I read through the packet; there are a couple of differing statements regarding African American resources in the Vancouver/Williams Rezone discussion (6/18 Draft report), page 83. It says "There are also several structures that are part of the Cornerstones inventory…"; on the very next page it says "There are a number of properties…" In fact - - every house on N Williams, Vancouver and Flint Avenues, and N Page Street within the boundary was determined in the original inventory to have significant associations over time; the Billy Webb Elks Lodge and Urban League building on N Williams are also significant, as you know. (The Cornerstones map does not show this very clearly, given its scale.) There are also some African American historic resources in the Russell Street Conservation District, as noted.

I continue to question what actual measures and steps will be taken to minimize and avoid gentrification - - this arises multiple times in the draft document. There simply is no substance in any of the discussions.

I also share the continuing concerns of the owners of the Paramount Apartments and the Left Bank. I don't think enough consideration has been given to the likely "unintended consequences" of the transportation plans at these locations.

Thanks very much –
Cathy

June 27, 2012

Dear SAC Members,

On behalf of the Oregon Trucking Associations' members, I would like to provide the following comments regarding the N/NE Quadrant and I-5 Broadway Weilder Plan. The Oregon Trucking Associations, Inc (OTA)., the only association representing trucking in Oregon and has members with many different types of operations, including general commodities, sand and gravel, forest products, household goods, bulk, heavy haulers, warehouse, and local cartage. OTA members are part of a network of carriers that drive Oregon's highways to deliver freight and the project area is a critical corridor where the reliability has significantly deteriorated.

Over the last six months I have discussed with OTA members in every corner of the state that the end product of this two year process is the possibility of a future addition of a north and south bound auxiliary lane in this section of the corridor. A corridor that according to the American Transportation Research Institute Bottleneck Report is ranked 35th out of the top 250 bottlenecks in the country. They expressed the same fundamental concerns that OTA outlined in our comments on March 13, 2013. OTA members put safety first, investing in improved driver training programs and advanced safety technologies. They actively participate in industry safety initiatives at the local, state and national levels and the direction the committee has taken to address our mutual safety goals in the project area are disappointing.

Today I want to reiterate OTA's concerns by reminding the committee that the project team's research (presented on December 8, 2011) indicated that the crash rate in the project area is three times what it is in the Terwilliger curves. From 2005 - 2009, there were 472 crashes reported in the study area and the crashes are due to short weaving sections, conflicting movements and friction from through movements, problems which are only minimally being addressed through the current plan. On page 2 of the June 7, 2012 - Facility Plan the data presented describes the problems in the project area and again confirms our safety concerns. Unfortunately the safety and reliability needs of the freight community and the motorists that travel the corridor have been seriously discounted throughout this process.

OTA has long supported a balanced transportation system throughout Oregon and has been actively involved in discussions in the Portland region where significant investments have been made in alternative transportation. While we applaud these efforts, we believe it's time to balance the investments in our transportation system and invest in improving safety in the I-5 Broadway Weidler/N/NE Quadrant.

The trucking industry in Oregon plays a significant role in the economy. There are over 6,190 trucking companies based in Oregon, most of which are small and locally owned. These companies provide one out of 16 jobs (85,050) in Oregon, paying wages totaling over $3.8 billion. The trucking industry also 'invests' over $486 million in federal and state roadway taxes and fees each year. For OTA and its members, the facts are clear: We need to invest in the asset. It's time to relieve the pressure this quadrant is under by improving safety and reliability in the project area. This will ultimately enhance the economic strength of the region.

Sincerely,

Debra Dunn

PORTLAND PUBLIC SCHOOLS
Office of School Modernization

June 28, 2012

Central City North/Northeast Quadrant Plan Stakeholder Advisory Committee and project staff,

Thank you for the opportunity to comment on the N/NE Quadrant Plan Review Draft. Congratulations on your efforts to date as they reflect the significant time, effort, and interest you and community members have in this area of Portland.

As you know Portland Public Schools' (PPS) central office and warehouse facilities (Blanchard Educational Services Center – aka "Blanchard site") are located within the planning area of the North/Northeast Quadrant Plan as is the Harriet Tubman School. The comments below relate to policies and implementation actions of the Draft Plan that would affect the current and future operations of these facilities.

Transportation: I-5 Broadway/Weidler Interchange Improvements Report
The N/NE Quadrant Plan needs to consider the operational and safety impacts to N. Dixon St. from the connection of N. Dixon St. with NE Hancock St. The I-5 Broadway/Weidler Interchange Improvements Report identifies (page 53) identifies "Option 3 Vancouver + Hancock/Dixon" as the preferred street configuration for the local street improvements to be made in conjunction the I-5 interchange improvements identified in the same report. While the N. Dixon St. connection with NE Hancock St. would provide an east-west, non-arterial street connection that avoids the I-5 interchange area, **making such a street connection without corresponding improvements to streets receiving additional traffic from the street connection is unacceptable.**

PPS's operations at the Blanchard site require the existing on-street parking N. Dixon St. provides for employees and the numerous other PPS employees and visitors to the Blanchard site coming from elsewhere in the city on a daily basis. Neither the Draft I-5 Broadway/Weidler Interchange Improvement Report or the N/NE Quadrant Draft Plan identify how the additional traffic from a NE Hancock St. connection would be accommodated with the existing street improvements in the existing right-of-way.

The "Proposed Street & Development Character" graphic on page 19 of the Draft Plan shows the N. Dixon and NE Hancock street connection as a "flexible" street "connection". "Connection" is later defined as "pedestrian and bicycle connections on existing public streets to open spaces, key destinations within and beyond the N/NE Quadrant". The preferred Vancouver + Hancock/Dixon connection would divert a significant portion of the north/south bicycle traffic currently using NE/N Broadway on to N. Dixon St. creating potential conflicts between vehicular traffic using N. Dixon and the four local street connections with N. Dixon (N. Wheeler Ave., N. Ross Ave., N. Benton Ave., N. Larabee Ave.). Vehicular traffic seeking to bypass N. Broadway will also use this connection to make their way to N. Interstate Ave.

While the PPS has previously stated that central office and warehouse operations no longer need to be performed from a central location such as the Blanchard site, there are no immediate plans to move

from the Blanchard site until there is a revenue neutral solution that would allow central office/warehouse functions to be moved from the site.

Street improvements to N. Dixon St. will likely be evaluated as part of any future redevelopment of the Blanchard site. However, we must entertain the prospect of existing PPS operations continuing at the Blanchard site for the foreseeable future, possibly beyond the time of the proposed "North of Broadway Options" have been implemented.

We believe "Option 4. Flint" identified (Figure 28, page 47 of the Draft I-5 Broadway/Weidler Interchange Improvements Report) would better support short and long term operation of the PPS Blanchard site. The proposed connection of N. Dixon St. to N. Vancouver Ave. would occur through a couple of intersections providing traffic slowing opportunities and providing greater sight distance opportunities of traffic south bound on N. Wheeler Ave. The straight alignment between NE Hancock St. shown in Option 3 and N. Vancouver St. shown in Option 5 would increase traffic sped on N. Dixon St. as traffic makes its way to N. Interstate Ave. and would pose operational challenges to the current use of the site through the straight alignment of the streets especially if done without improvements in the N. Dixon right of way to accommodate additional bicycle traffic.

The "Flint" option provides this connection with an offset alignment thereby slowing traffic. The grade difference between N. Flint St. and N. Wheeler St. is substantial. The intersection of N. Wheeler with the proposed N. Vancouver Avenue realignment in the "Flint" option should be mindful of this grade difference and identify adequate speed control for this intersection.

Even with lower traffic speeds and volume of the "Flint" alternative, improvements to N. Dixon St. would be needed for reasons noted with the Vancouver + Hancock/Dixon.

Transportation: Draft Plan Policies & Implementation Actions
We support investment into transportation infrastructure for the reasons noted in the transportation policies identified on pages 35 and 36 of the Draft Plan and presume the investments identified in the Recommended Elements of the I-5 Broadway/Weidler Interchange Plan Improvements would primarily be investments by PBOT and ODOT and improvements triggered by the Zoning Code of new development be the responsibility of private property owners.

It is unclear (and understandably beyond the scope of a quadrant plan) who might be responsible for the local street improvements being contemplated to compliment the I-5 interchange plan improvements. It would also be useful to have some general sense of how the proposed improvements would impact the development potential of properties proposed for rezoning in the implementation actions.

As the proposed improvements of the I-5 Broadway-Weidler Interchange Improvement Plan further develop, it will also be useful to keep interested property owners informed of any right-of-way implications from this effort and any impact of available traffic trips these improvements would affect.

We support the implementation action TR12 to study the feasibility of adding a new light rail station on the Yellow line near Dixon to serve the N. Broadway area and PPS Blanchard site.

District Boundaries
PPS supports of the Draft Plan's proposal to include the Blanchard site in the Lloyd District, removing it from the Lower Albina District (Implementation action RC1 of both the Lloyd and Lower Albina Districts).

As Appendix B on page 63 notes, the current office use of the Blanchard site is non-industrial and is separated from industrial uses to the north be a steep slope. Additionally, future redevelopment of the Blanchard site is better supported by the proposed predominant land uses of the N/NE Quadrant Plan that more closely aligns with the Lloyd District.

Proposed Zoning
Blanchard Site
PPS is in support of the proposed zone change from the current General Industrial (IG1) of the Blanchard site (and associated properties) to Central Employment (EX) and from General Employment (EG1) to Central Commercial (CX) for properties south of the Blanchard building (as identified in Map B1). We presume the designation of the design "d" overlay to the Blanchard site would be to require design review to the Design Zone of the Lloyd District.

We are also supportive of the master planning process for the redevelopment of the Blanchard site as part of redevelopment to address street and pedestrian connectivity, open space, scenic views, and transition to adjacent industrial uses. A master plan would allow greater flexibility in the design for redevelopment of the Blanchard site and the establishment of development parameters for phased development.

The explanation of Implementation Action RC2 in Appendix B (page 64) characterizes the Blanchard building as "structurally challenged due to deferred maintenance". We are not aware of any study that characterizes the BESC in this way. The same paragraph characterizes the Blanchard building as "functionally obsolete due to downsizing of headquarter functions by PPS". The operations conducted by PPS in the Blanchard building are not obsolete. Rather, the departments that operate from the BESC can do so effectively without being in same building.

Scenic Overlay Zone
As you know, a portion of the Blanchard site is within a scenic overlay zone. We agree with implementation measure UD4's recommendation to evaluate the quality and uniqueness of existing view corridors in light of their potential impact on redevelopment through due to height restrictions. It seems likely that redevelopment of the Blanchard and adjacent sites will provide a number of opportunities for the designation of new view corridors. This evaluation should happen concurrently with and inform the rezoning process identified in Implementation Action RC2. We presume the conditional use master plan process that allows the creation of site specific development standards could be used to allow a variation of building heights above the proposed 100-foot height limit especially if the height restrictions of the scenic overlay remain on the Blanchard site.

Harriet Tubman School
We support the proposed rezoning of portions of 4 blocks between I-5 and N. Williams from RH to EXd as identified in the Vancouver/Williams Corridor Study Area of the Draft Plan. This area includes Harriet Tubman School. EX zoning would allow school use outright and greater options for future uses of the property.

Housing Implementation Actions
We are supportive of Implementation Action HN7 (monitor residential population growth and the related school needs of the district). We've begun work with the Bureau of Planning and Sustainability to look at the longer term housing development potential of the district overall. This in combination with PPS's enrollment forecasting conducted by Portland State University's Population Research Center and the addition of Metro household forecasts later this year will improve enrollment forecasting throughout the District including the Lloyd District area.

Lloyd District - Environment
We support implementation action GC4, investigate opportunities for serving PPS Blanchard site with district energy. Would inclusion of PPS Blanchard site in Lloyd District bring the site into the Green systems concept map (page 22)?

Thank you again for the continued opportunity to comment on the progress of the N/NE Quadrant Draft Plan. Please let me know if you have any questions regarding the comments above.

Sincerely,

Paul Cathcart

Subject: Testimony to SAC on North/Northeast Quadrant Planning, June 26, 2012

The North/Northeast quadrant planning seems to be one step forward towards the future, and two steps backwards in providing green space and transportation planning. It is more about implementing a social engineering agenda than planning to protect our inherent freedom of choice. While building up with multiple stories makes some sense to meet the demands of unrestricted population growth; a minimum of 10 percent of the buildable land in the quadrant needs to be protected and set aside as green, permeable and open spaces where people can gather, play and enjoy recreational activities. The ultimate location for the largest expanse of this type of open space is along the river bank of the Willamette, but grassy open areas also need to be woven within the fabric of any new housing being constructed.

Several days ago I attended the re-streets presentation sponsored by PBOT. The examples depicted by representatives from MIG Inc. emphasized many times over that beautifying a street and making it truly multi-modal/multi-purpose didn't compel a negative impact to the automobile. Yet, with exceptions of the minimal improvements planned for I-5, transportation planning in this area, specifically on the surface streets, is totally obsolete and deficient as if the traffic planning being done is for the early 20th century rather than the mid-21st century or beyond. The changes planned for Multnomah Street are an example of this back pedaling.

Increased density coupled regional growth must include increased capacity for motor vehicles. Not doing so is short-sighted. The resulting increase in congestion will have a detrimental effect on the quality of life. Building up with more density must also come with required off-street parking provided by the developers. There must be some measure of height that requires a certain number of parking spaces. How a person uses their car is not the issue as it applies to residential parking. The facts are most people own a car, likewise will have one in the foreseeable future, and they need an off-street parking place when that car is not in use.

Since this area has received a new designation as the first Multi Modal Area, the term MMA must also signify Multi Modal Assessment whereby bicyclists pay the lion's share of the costs for the bicycle specific infrastructure such as the Clackamas overcrossing and the separated bikeway between Broadway and Weidler. Transit passengers too must accept more responsibility and pay a greater share of the cost of providing the service, including a portion of the capital costs. Equity requires alternative transport modes become more self-sustainable.

Finally, the citizen involvement process in Portland is broken, Using this committee as an example, there is plenty of neighborhood representation at the table, representation for the bicycle community, from the pedestrian coalition, for transit and a wealth of representation for freight interests along with some the other usual always present subjects; but the primary stakeholders that currently bankroll the majority of surface transportation projects - the motorists - do not even have a single motorist specific seat at the table. The excuses from the administration are that motorists are represented by ODOT (as if the other modes are not heavily represented by input from PBOT), and/or almost everybody drives. Nevertheless, more people walk than drive, and there is pedestrian specific representation on the committee. I find this lack of official representation for motorists a bias attempt to stifle the freedom of speech for motorist interests, needs and concerns, therefore a form of administrative discrimination.

Respectfully submitted,

Terry Parker

Subject: Comments on the SAC draft NE Quadrant Plan

Sam,
Please enter my written testimony--to compliment my verbal testimony--into the record. . . Thanks!

I'm testifying to endorse **and expand upon** Bob Sallinger's comments on the SAC draft NE Quadrant Plan. I have several relevant affiliations, but I'm testifying only on behalf of myself and my WBE, PlanGreen. I'm also an Audubon member who once played a role on its Conservation Committee.

I'm starting in reverse order:
1. Protect undeveloped river banks and riparian buffers and add strong language to restore developed banks when redevelopment occurs. When I was writing an article for Urban Land on Porltland as a model for waterfront redevelopment, one of the most impressive tools I downloaded was the ***Willamette Riverbank Design Notebook*** (done by a team chaired by Mike Abbaté, now Director of Portland Parks). I was thrilled to see a city trying to make room for other species--even in its most urban and urbanizing areas. This is a mark of true wisdom. **Please reference and utilize this unique document during implementation phase.**

2. Include specific targets for ecoroofs and other green infrastructure from the watershed plan. To this I would add that to truly follow through on Portland's world class Watershed Management Plan, any ecoroofs, bioswales, raingardens, green walls,, parks, etc., need to use the landscape to provide far greater ecosystem services than those extant today. If we use NATIVE plant communities rather than the incipient invasive species, such as Nandina, that are so greatly overused in bioswales on Portland's green streets today, we will provide habitat for the base of the food chain, our native insects. Insects are so important, not only for all the jobs they do--like pollination and detritus decomposition--but as food for the birds that provide us with additional services in keeping a balanced urban ecosystem--in addition to the beauty and delight that they provide us.

3. Reference the tree targets in the Urban Forestry Plan. Again, I believe that much more effort should be put to planting NATIVE trees. If sidewalk uplift is a potential problem, then utilize a technology such as Deep Root that will prevent it. As a Tree Crew Leader for Friends of Trees, I always compliment a homeowner who has chosen a native tree. Invariably, the other homeowners on my crew say "We would have chosen native too, if we had known." Recent Oregon Community Trees keynote speaker, Doug Tallamy, told the Chicago Tribune that while Portland is lush and beautiful, it is DEAD. That's because the overwhelming majority of our vegetation is non-native and the larvae of our native insects need native plants to complete their cycle into adults.

4. Encourage bird-friendly building design utilizing the "Resource *Guide* for *Bird-friendly Building Design*" recently published by Audubon, along with the City and USFWS.

Thank you so much for your time. And by the way, I want to say that as someone who lives downtown and walks and bikes nearly everywhere I go, I couldn't disagree more with the last speaker (Terry Parker) who called for increasing auto capacity to the level that you increase the density. That is definitely not needed and, in fact, counterproductive.
Sincerely,
Mary Vogel

N/NE Quadrant and I-5 Broadway/Weidler Plans

N/NE Quadrant and I-5 Broadway/Weidler Stakeholder Advisory Committee Final Report

6-28-12 Draft - Outline

This is a working draft based upon the assumption that the SAC will make recommendations in the future. It is a work in progress. The SAC has not yet voted on all of the issues. As a result, the contents are subject to change between now and the end of the process. Ultimately, the contents will conform to the SAC's recommendations, whatever they may be.

Text highlighted in yellow is for facilitator/staff follow-up

We are committed to providing equal access to information and hearings. If you need special accommodation, call the Bureau of Planning and Sustainability at 503-823-7700 (TTY 503-823-6868).

August X, 2012

Portland City Council Oregon Transportation Commission Planning and Sustainability Commission

LETTER FROM SAC Co-CHAIRS

Greetings:

N/NE Quadrant and I-5 Broadway/Weidler Plans process was a collaborative effort between the City of Portland Bureau of Planning and Sustainability, Portland Bureau of Transportation, and the Oregon Department of Transportation. From the fall of 2010 to the summer of 2012, we chaired the diverse, regional, 30-member Stakeholder Advisory Committee (SAC) as it developed its recommendations

This Report provides a summary of the process and the recommendations.

TBD

DRAFT

I. Executive Summary

This Report provides an overview of the N/NE Quadrant I-5 Broadway-Weidler Plans process and key recommendations. The process utilized a collaborative approach between ODOT, the City of Portland Bureau of Planning and Sustainability, the Portland Bureau of Transportation, and the North/Northeast Portland community. The Project Team and stakeholders examined transportation and land use solutions concurrently over the course of a five-phase process. In the end, it resulted in land use and transportation changes in the quadrant that are mutually agreeable to both the City of Portland and to ODOT. The land use changes and urban design strategies for the City are documented in the North/Northeast Quadrant Plan (as part of the 2035 Central City Plan) and the transportation changes are documented in this report and ODOT's Facility Plan. Though developed within the same process, the land use and transportation improvements would result in two different groups of documents for the two partnering agencies as shown in Figure 1.

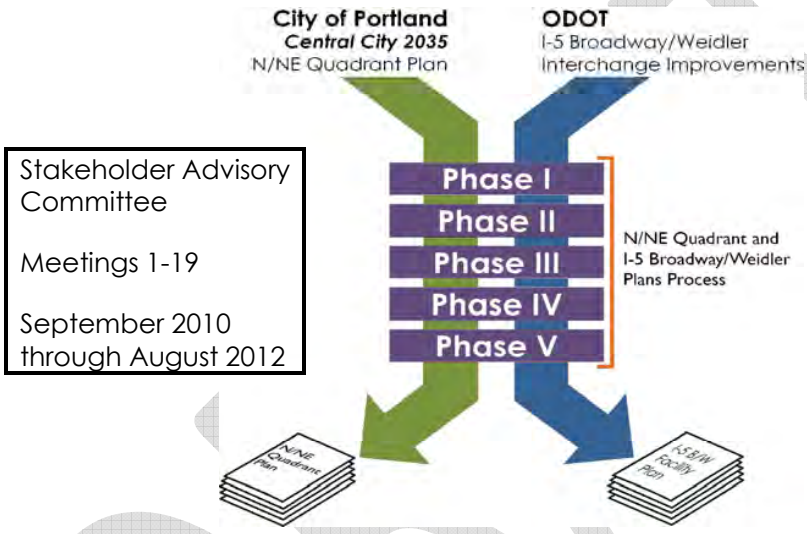

Figure 1: **Joint Effort for the N/NE Quadrant and I-5 Broadway/Weidler Plans Project: Examining Land Use and Transportation Elements Concurrently**

INSERT SUMMARY OF VOTES, MAJORITY/MINORTY REPORTS & RECOMMENDATIONS

II. Introduction and Process Overview

A) Background, Context, and Study Area Boundaries: Combining Land Use and Transportation Planning

In the summer of 2010, ODOT, PBOT and BPS (henceforth, "the Project Team") initiated a partnership to begin co-developing land use and transportation concepts for the North/Northeast quadrant of the central city (N/NE Quadrant) through an iterative process involving the public and area stakeholders. The project includes identifying specific improvements to the I-5 freeway within the overall project study area (see Figure 2), between I-84 and I-405 (at the Fremont Bridge), and improvements to the I-5 Broadway/Weidler Interchange area.

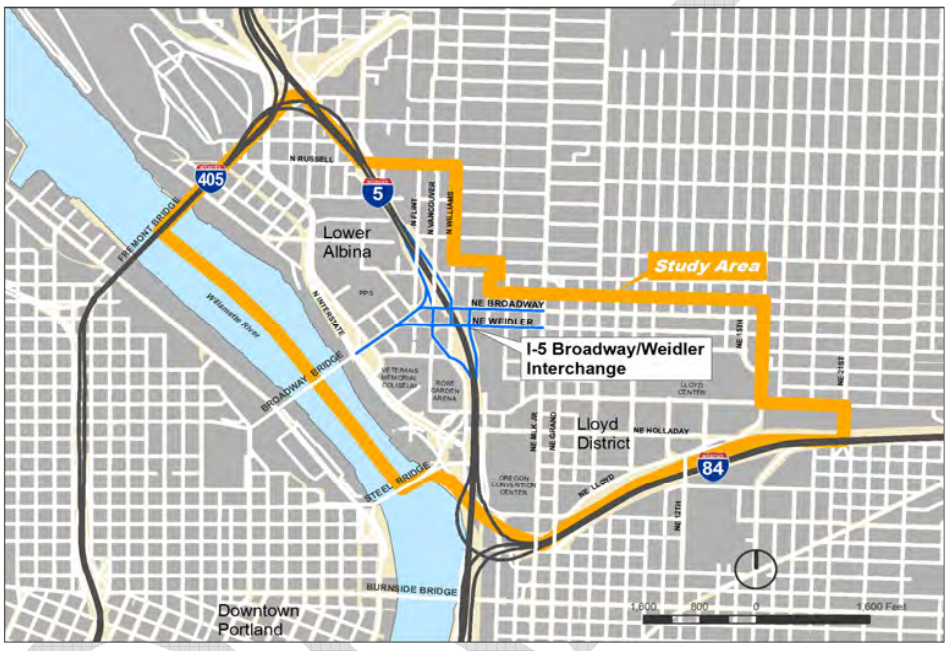

Figure 2: Study Area for the N/NE Quadrant and I-5 Broadway/Weidler Plans Project

Previous studies by ODOT and the City of Portland have attempted to address the considerable safety and operational issues of the I-5 freeway between I-84 and I-405 (Fremont Bridge). This segment of I-5 has not been improved since it was built in the 1960s and it remains one of the few sections of freeway in the region where there are only two through lanes in each direction. The safety and operational issues here derive largely from the close spacing of the I-84, Broadway/Weidler, I-405 and Greeley interchanges that occur within this short segment of I-5 and the high proportion of traffic volume entering onto and exiting from I-5 that create "weave" maneuvers between motorists entering and exiting the freeway.

This joint effort represents a new land use-transportation approach in planning improvements to urban freeway interchanges. This approach combines the planning of local strategies for land use, urban design and local transportation improvements, typically a City responsibility, with the planning of interstate freeway improvements, which is an ODOT responsibility. The project's approach for freeway improvements was to address long-demonstrated safety and operational issues that, if scaled according to community aspirations, would contribute to the continued vitality of the Central City and the mobility needs of the region and state. Due to multiple constraints, freeway improvements were to focus on existing safety and reliability issues and not necessarily increase capacity to meet future travel demands.

B) Project Goals

The following are the overall project goals were developed and adopted by the Stakeholder Advisory Committee (SAC) in January 2011. The goals guided development of the plan and provided general criteria for periodic evaluation of draft concepts, policies and action items.

> **"**This planning effort will result in integrated land use, urban design, and transportation strategies, policies and plans for the N/NE Quadrant and the I-5 Broadway/Weidler interchange that balance, complement, enhance, protect, respect, revitalize, support, and sustain economic, environmental, and social interests. The implementable plans will be consistent with the overall goals and policies of the city, region, and state.
>
> Our recommendations will be guided by our desire for:
>
> - A diverse mix of commercial, cultural, entertainment, industrial, recreational, and residential uses, including affordable housing;
> - A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system;
> - Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages;
> - Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment;
> - Equitable access to community amenities and economic opportunities;
> - Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods;
> - Protection and enhancement of the cultural heritage of the area and its sub-districts; and
> - Safe traffic operations and freight mobility on I-5 and locally, with improved interface between the freeways and the local street system, and increased local connectivity to adjacent areas and land uses."

C) Stakeholder Advisory Committee

The Project Team involved a variety of stakeholders and interested parties in the N/NE Quadrant planning process. These stakeholders had varying levels of interest in the planning process, ranging from property owners who will be directly impacted by the plan outcomes to members of the general public who wanted to stay informed about what is happening in the Central City.

The Stakeholder Advisory Committee (SAC) was one of the primary means of ensuring that the public had opportunities to provide meaningful input into the planning process. SAC members (see table F1) were selected to represent key stakeholder interests and to create a balanced committee to guide the planning effort. All SAC members were appointed by the directors of the Portland Bureau of Planning and Sustainability, the Portland Bureau of Transportation and the Oregon Department of Transportation Region

DRAFT

1 Office. The SAC was made up of 30 voting members, representing area stakeholders, including business and neighborhood associations and property owners, as well as community interests such as affordable housing, cultural heritage, the environment, economic equity, labor, urban design and transportation. Local, regional and state public agencies were also represented on the committee as non-voting members.

The role of the SAC was to advise and direct project staff throughout the planning process and to make recommendations about the project to the Portland Planning and Sustainability Commission and the Oregon Transportation Commission. SAC members were expected to report back to and solicit input from their stakeholder groups and constituencies, represent the broader interests of those groups at meetings and promote public involvement in project events.

Subcommittees of the SAC met periodically to address specific issues, such as transportation, land use and urban design. Members of the public were invited to join the subcommittee to have more in-depth participation in the process.

In all, 19 full SAC meetings and 13 subcommittee meetings were held. All meetings were open to the public and included opportunities for public comment.

Paul Smith		Portland Bureau of Transportation	John Gillam
Lew Bowers/ Peter Englander		Portland Development Commission	Sara King
Alan Lehto		TriMet	Jessica Engelmann

D) Collaboration Principles

Early in the process SAC members developed and adopted collaboration principles that governed decision making for the committee. It can be found in Appendix X. It contains the agreements of the participants in the North/Northeast Quadrant I-5 Broadway Weidler Plans process.

The SAC made decisions by "consensus." Consensus decision-making allows SAC members to distinguish underlying values, interests, and concerns with a goal of developing widely accepted solutions. Consensus does not mean 100% agreement on each part of every issue, but rather support for a decision, *"taken as a whole."* This means that a member may vote to support a consensus proposal even though they would prefer to have it modified in some manner in order to give it their full support. Consensus is a process of *"give and take*," of finding common ground and developing creative solutions in a way that all interests can support. Consensus is reached if all members at the table support an idea or say, *"I can live with that."*

E) Technical Advisory Committee

A Technical Advisory Committee (TAC) representing public agencies with specialized expertise related to the plan and implementation served as a resource for the planning process. TAC members were responsible for reviewing project proposals, providing comments to project staff and reporting back to their agencies throughout the planning process. The TAC met six times, in addition to individual coordination meetings with City bureaus and other public agencies that occurred during the process.

Portland Water Bureau	Stan VandeBergh, Cheri Warnke, Mike Saling, Tom Carter
Portland Public Schools	Paul Cathcart
Portland Development Commission	Kia Selley, Sara King, Kevin Brake, Irene Bowers, Denyse McGriff
Portland Streetcar	Vicky Diede
TriMet	Alan Lehto, Jessica Tump

F) Public Involvement

There is a long history of large redevelopment and infrastructure project that have had adverse impacts on the communities in Lower Albina and the Lloyd District. The public involvement process was designed to be inclusive and responsive to public concerns, and allow for active participation and meaningful public input.

The public involvement efforts for the N/NE Quadrant Project were guided by the public involvement goals developed by the Community Involvement Committee (CIC) for the Portland Plan, the long-range planning effort for the City as a whole, which was taking place when the quadrant plan process began. Incorporating these public involvement goals provided for consistent public involvement efforts:

- Build on existing relationships
- Engage broader and diverse groups with education and information and provide all interested with enough education so they can meaningfully participate
- Provide multiple venues and means for community involvement and engagement
- Involve as many people as possible
- With feedback and continuous engagement throughout Portland Plan development and implementation, ensure community members are being heard

In addition, the N/NE Quadrant project strove to:

- Provide a process that is open and transparent, with a special emphasis on early involvement in providing policy-setting input
- Clearly define opportunities where the public can provide timely input so that there is an opportunity to inform policy-making and otherwise affect change
- Wherever possible, design interactive formats for meetings and ensure a balanced and fair discussion of issues

III. Stakeholder Advisory Committee and Public Involvement Overview

Describe.

The SAC recommendations were developed in careful consideration of the following outreach:

IV. City of Portland Central City N/NE Quadrant Plan Highlights

INSERT HIGHLIGHTS, FINDINGS WHEN REPORT FINALIZED

The N/NE Quadrant Plan is the first of the more detailed district plans, addressing land use, urban design, transportation, public infrastructure and development entitlements in the Lloyd District and Lower Albina subdistricts of the Central City.

V. I-5 Broadway/Weidler Interchange Improvements and Facility Plan Highlights

INSERT HIGHLIGHTS, FINDINGS WHEN REPORT FINALIZED

This section provides an overview of this nearly two-year process as the project team, the SAC and numerous area stakeholders have contributed, shaped and narrowed the many improvement concepts.

The Facility Plan for the I-5 Broadway/Weidler Interchange is a technical and state-required document that specifically outlines ODOT's intentions relative to this segment of the I-5 facility and the interchange. The State of Oregon agencies are required to prepare facility plans for state-owned infrastructure so that they and decision-makers may effectively manage, maintain and prioritize potential additions to or expansion of this infrastructure. The Facility Plan for the I-5 Broadway/Weidler Interchange represents a discussion draft of a facility plan that ODOT staff will present to the Oregon Transportation Commission (OTC) in the Fall of 2012 regarding recommended improvements to I-5 in the area around the I-5 Broadway/Weidler Interchange between Interstate 84 (I-84) and Interstate 405 (I-405) at the Fremont Bridge. This Facility Plan will represent and confirm, if adopted by the OTC, the state's long-range intent relative to this section of I-5 and the I-5 Broadway/Weidler Interchange.

VI. Recommendations

A) Summary of Final Vote

At the SAC's last meeting on August 2, 2012, the members were polled as to the contents of this report, the N/NE Quadrant Plan and the Facilities Plan. The question asked was, "taken as a whole, do you support …"

The SAC's collaboration Principles defines the 1-2-3 voting protocol as follows:

- **"One"** indicates **full support** for the proposal as stated.
- **"Two"** indicates that the participant **agrees with the proposal as stated, but would prefer to have it modified in some manner in order to give it full support.** Nevertheless, the member will support the consensus even if his/her suggested modifications are not supported by the rest of the group because the proposal is worthy of general support, as written.
- **"Three"** indicates **refusal to support** the proposal as stated.

The results follow:

TOPIC	VOTE	"3" VOTES	COMMENTS

B) Majority and Minority Reports

A complete summary of SAC votes can be found at Appendix X Where there was not a "consensus," members had the opportunity to submit additional information if a member voted "1" or "2," or a "minority report" if they voted a "3."

C) SAC Recommendations

As a result, the SAC recommends to the Portland City Council, Planning and Sustainability Commission, and the Oregon Transportation Commission that they accept its conclusions and recommendations. They include:

INSERT

VII. Process Evaluation Results and Lessons Learned

INSERT

VIII. Conclusion

The SAC encourages the Portland City Council, Planning and Sustainability Commission, and the Oregon Transportation Commission to implement these conclusions and recommendations as a package.

INFORMAL DISCUSSION AND MEAL

WELCOME, MEETING PURPOSE, APPROVAL OF MINUTES, AND STANDING BUSINESS

Sam Imperati, ICM, welcomed the group and reviewed the agenda.

Introduction of New Alternate SAC Member

Steve Cole is a member of the Board of Irvington Community Association. He is here tonight for Dean Gisvold.

Approval of Notes

The April N/NEQ SAC Meeting Notes were approved as written.

Process Overview/Timeline Reminder

Sam said that if we don't "land the plane" tonight, items which require further discussion will be addressed at the Subcommittee Meeting on 5/23, then brought back to the SAC for consideration. Sam reminded the SAC of the upcoming, final three SAC meetings in this process, which are as follows:

- SAC Meeting #17 on 6/7 – Preliminary SAC Action on I-5 Broadway/Weidler Interchange Facility Plan
- SAC Meeting #18 on 6/28 – SAC direction on complete draft Quadrant Plan
- SAC Meeting #19 on 8/2 – Final SAC recommendations

N/NE QUADRANT PLAN DEVELOPMENT

Sam explained the process for presentations, discussion, and triage for voting. He will take the pulse of the group, see how many "3s" we have, then will be able to figure out how much time each item will need for discussion. Sam reviewed the meeting packet, in particular explaining the "Polling Sheet" and how it will be used during the presentation.

Building Maximum Height Recommendations (presented at SAC #15)

Karl Lisle, BPS, presented a PowerPoint on heights in the district. Much of this was reviewed at the last SAC meeting, but there was not sufficient time for discussion. Karl noted that the City of Portland has other projects in progress, such as the Comprehensive Plan review. The SAC will make recommendations in this process, but they will not likely be implemented for a couple of years. Based upon months of work, numerous conversations and SAC feedback, the staff has drafted a proposal map, included in the packet. Karl reviewed the following sites, noting some areas of special concern.

Slide 2: Draft Recommendations for Potential Maximum Height Limits

1. Thunderbird Site - allow height (up to 250') in exchange for public open space.
2. N Broadway - allow taller buildings at bridgehead (up to 325', step down to east).
3. Eliot Edge - keep 100' maximum; expand area of 175' max at MLK and Broadway/Weidler.
4. Irvington Edge - reduce maximum height north of Broadway to 75'.
5. Central Lloyd - increase maximum potential heights in the Central Lloyd with the tallest heights (460' or limited only by FAR) around the intersections of MLK/Grand and Multnomah/Holladay.

Slide 3: Proposed Changes to Maximum Building Heights

- Proposals were presented at SAC #15 (April 12, 2012)
- Not necessarily "by right", but available through bonuses for meeting certain expectations or providing amenities
- Changes would be recommended in the N/NE Quadrant Plan, but not enacted until after the completion of the Comprehensive Plan Update and Central City 2035 (likely 2014)

Slide 8: Thunderbird Site

- Broad support for open space
- Interest in increasing amounts of office, commercial, or other less episodic uses
- Relationship of new buildings with the river
- Public view enhancement to both Willamette River and Memorial Coliseum
- Ideas that move around the same amount of development potential

Slide 14: N. Broadway

- Lots of redevelopment potential
- Interest in increasing amounts of office, commercial, other less episodic uses
- Coordination with rejuvenated Rose Quarter district
- Broadway Bridgehead redevelopment opportunity
- Link between Rose Quarter and future PPS Blanchard redevelopment

Slide 22: Eliot/Irvington Edge

- Irvington Historic District overlap with Central City boundary
- Sensitive transitions to north
- Supporting retail cluster along NE Broadway
- Focus on block between NE Broadway and Schuyler
- Recognize major crossroads at intersections of MLK/Grand and Broadway/Weidler by allowing slightly taller buildings.

Pauline Bradford: expressed concern about the proposed height for the MLK and Broadway intersection. She is not sure if she has heard this before. She thinks too much height would ruin the neighborhood, and she is also concerned about the gateway that is to be built at that intersection.

Slide 29: Central Lloyd

- Apply incentives for residential development and open space in Central Lloyd area
- Consider increased or unlimited height (regulated by FAR/design review) in some areas.
- Strengthen/support future investments in public amenities
- Recent residential development proposal at 325 feet

Sam asked for questions for clarification.

Tracy Whalen: question regarding the Thunderbird Site, is it based upon a requirement for open space?

Karl Lisle: yes, it would be a requirement.

Peter Englander: Floor Area Ratio (FAR) at Thunderbird – is it 4:1?

Staff: Yes.

Wayne Kingsley: is it cheaper to go higher?

Joe Zehnder: per square foot costs are not necessarily higher, but your rents are more. The big floor plate is still an attractive type of building. The City has been approached on height flexibility in this area in the past.

Jodi Parker: comment regarding the proposal for a Convention Center hotel, plus multi-family developments in the superblock in Lloyd District; were those possible developments taken into consideration in the City's proposal?

Karl Lisle: yes, we have been told that a major hotel would want to be tall. As for the current Langley/AAT superblock project, they will go with existing regulations, as they are entering the design review process now.

Eric Lovell: do you split height limits on blocks?

Karl Lisle: We have, but generally we try to not do that. We have discretionary design review, and he thinks that is the best place to address tower placement, materials, etc.

Eric Lovell: 175 feet seems pretty high at the Broadway/MLK intersection.

Mark Raggett: In some places, the City does have more specific step down requirements.

Wanda Rosenbarger: question regarding the superblock; does the building requirement cover the area or by block?

Karl Lisle: it can be block by block, but it is usually done considering larger areas.

Wanda Rosenbarger: what if you want all your FAR in one area?

Karl Lisle: FAR is established site by site.

Wanda Rosenbarger: would development be phased?

Joe Zehnder: there are rules for superblocks, they have to be broken up with streets, but you can shift FAR around on a superblock.

Phil Selinger: where does trip generation impact play into this?

Karl Lisle: right now we are just talking about heights, not allowing for any more floor space (FAR). So, actions proposed in the zoning piece are more related to trip generations.

Andy Johnson: also, we will be integrating this into our Facility Plan.

Tracy Whalen: North of Broadway, the 325 foot option - we have a grain elevator down there, and do she wonders if we want to attract more people down there from a safety standpoint.

Peter Englander: design guidelines, when would those be completed?

Karl Lisle: it would be follow up on Central City 2035. He estimates 2-3 years.

Damien Hall: there was some subcommittee discussion regarding view corridors. Does the City proposal cut the view corridors?

Karl Lisle: the existing proposal keeps them as they are, but we do need to do the view corridor work for the whole city. We'd like to do it before implementing height changes.

Owen Ronchelli: what was the rational for proposal for 460 height limit? Also, why not all the way to 7th Avenue?

Mark Raggett: 460 is the current maximum height limit in Portland's Downtown core. We are trying to highlight the MLK and Broadway corner as the 100% corner in the Lloyd District.

Pauline Bradford: comment regarding the 100 foot height limit going to Schuyler. It could have a negative impact on Mt. Olivet church. They are trying to save it, it is a historically significant building and very important to the neighborhood.

Karl Lisle: good point. 100 feet is the current zoning, and it is a known issue. The City is trying to work on creating certainty for historic buildings, as we know it is key to their preservation.

Wayne Kingsley: we have not talked about permitted uses.

Karl Lisle: that will be in the zoning conversation.

Chris Deffenbach: question for clarification regarding the #s in parentheses indicating height with bonuses. Does FAR change with bonuses?

Karl Lisle: there are FAR bonuses and height bonuses. We want to restructure the code for the whole central city. We need to figure out the priorities and update the system.

Chris Deffenbach: wants to know about FAR changes, and wonders if you think you will see more development on with the height increases.

Karl Lisle: there is a lot of FAR in the core Lloyd, increasing allowed height limits provides more flexibility in building form and could be beneficial to encouraging certain types of development, but most new development isn't likely to reach the height or FAR limits in the Lloyd.

DRAFT ZONING PROPOSALS

Karl continued the presentation, reviewing the draft zoning proposals on the following areas.

1. Lower Albina (change to EXd (no housing) on Russell, Employment Opportunity Subarea east of Union Pacific RR)
2. N of Broadway/Blanchard (change to EXd and CXd zoning)

3. Vancouver/Williams Study Area (change RHd to EXd)
4. North Banfield Portal (change RH and CO2 to CXd)
5. Central Lloyd (change RXd pocket to CXd, apply enhanced housing incentives to entire Central Lloyd, apply incentives for hotels, restaurants fronting convention center).

Slide 34: Lower Albina – Proposed Changes to Zoning

- B1a) Change IG1d on Russell east of existing conservation district to EXd (with housing prohibited).
- B1b) Apply Employment Opportunity Subarea provisions east of Union Pacific rail line.

Karl said they have heard from a number of people that there are concerns about the Lower Albina proposals. He knows it is not quite ready and the City has to meet with stakeholders, particularly Kurt Widmer and Eric Lovell.

Slide 39: North of Broadway/Blanchard Area – Proposed Changes to Zoning

- B2a) Change zoning on PPS properties (and 3 adjacent properties) from IG1 to EXd with a master plan requirement.
- B2b) Change EG1 area to CXd (change consistent with existing Comprehensive Plan designation).

Slide 42: Vancouver/Williams Study Area – Proposed Changes to Zoning

- B3) Change RHd area to EXd.

Regarding the Vancouver/Williams study area, based upon Mike Warwick's request, they looked at the zoning in this area and trying to accommodate the business and residential uses.

Slide 49: Central Lloyd – Proposed Changes to Zoning

- B5a) Change RXd pocket to CXd, apply housing (and open space) incentives to entire Central Lloyd.
- B5b) Apply incentives for hotels, restaurants and other convention center-supportive uses on blocks fronting the OCC.

Slide 55: Central Lloyd – Potential Housing Incentives

- FAR Bonuses – earn more FAR for housing development, or certain types of housing.
- Height Bonuses – earn additional height for housing development.
- Required Residential Development Areas – require minimum amount of residential in new development projects.
- Limited Tax Exemption Program – property tax abatement for development of housing or certain types of housing.
- Tax Increment Financing – OCCURA is expiring, but resources remain for one affordable housing project.
- System Development Charge Exemption Program – reduces SDCs for affordable projects. *(Not a complete list…)*

Sam asked if there were any questions for clarification.

Pauline Bradford: comment regarding the Lower Albina industrial district and that there is no housing. She wonders if artists still live/work there like they used to years ago? She would want artists to be able to live in their work spaces if they cannot afford housing.

Karl Lisle: they could not legally live there.

Mark Raggett: noted the small historic conservation district nearby, at Mississippi and Russell. Housing is allowed in that area.

Wayne Kingsley: requested clarification about the EX zoning in the conservation district.

Nicholas Starin: it is an array of historic buildings. He believes that is where that zoning comes from.

Joe Zehnder: it is similar to what we are proposing on Vancouver/Williams.

Tracy Whalen: one point brought up a while ago was, "why not just leave it alone." She would rather see the "d" taken off and leave it as an IG1. Also, question about the proposed zoning on the Calaroga and what Gary Warren thinks about it.

Karl Lisle: It's felt that the historic mainstreet character on Russell Street could extend to the east up to the freeway, and that the EXd zoning would help support that notion. Regarding Gary Warren, staff discussed this proposal with him at a recent meeting of the Lloyd District Community Association and are trying to address his ongoing concerns. Others at the LDCA meeting were open to this proposal, as are other major property owners in the area (Legacy Health Systems and Holy Rosary Church).

Tracy Whalen: are there tax implications to zoning changes?

Joe Zehnder: it goes to appraised value of the land. There may be subtle differences, but probably marginal for most places. The change on Russell will likely experience a more significant change in value.

Karl Lisle: for the developed parcels, they are not likely to see much change. For undeveloped parcels, a zoning change could have more impact,

Carl Gossett: comment on the NE 21st and Multnomah; Sullivan's Gulch Neighborhood Association supports the zoning and appreciates all the time ODOT and the City has spent on it.

Eric Lovell: regarding Lower Albina, that change was driven by the desire to make the connection better and more consistent. He does not see a reason to resist IG1 changes on Russell Street. There will be a meeting next week to discuss zoning, and he is concerned about going from 5,000 square feet to 60,000 square feet for office uses allowed. Where did this jump come from? They need time to discuss these things and what the difference would mean.

Jenny Lyman: comment regarding the Blanchard Site; would it require a master plan? Are there multiple lots? Could they sell part and keep part?

Karl Lisle: the Blanchard Site would be subject to master planning. The mechanism to do thati is to be determined but we can specify clearly where we want specific requirements to apply.

Joe Zehnder: the closest thing to this is the Conway property in Northwest. We said you have to do a master plan, then you can sell. There are many different ways it could go, so you just set the outside boundaries and try to set zoning to match that. Doing a master plan helps people think through a whole area, rather than just breaking it into pieces.

Mike Warwick: thinks that a small parcel off Gantenbein near the Blanchard site should be included in the zoning change. In Lower Albina, he described the area between Paige and Mississippi, all sloping up, which impacts what kind of development you can do. Most of the area is City shops, but there is a lot of vacant property. Regarding the EX zoning on Russell, he suggests doing something that would truly allow live-work.

Phil Selinger: thinks there are good "bones" on Russell. You might want to add residential.

Damien Hall: agrees, there is some possibility for residential there, but knows property owners do not want a lot of it. Requested clarification regarding FAR transfers with the EX zoning, and what is possible in the area.

Joe Zehnder: transfers are one of the issues that we know we need to tighten up.

Damien Hall: comments about development potential in the area, below the freeways.

Karl Lisle: we have an action in the policy document for ODOT to look at that with others in the future.

Eric Lovell: (to Damien) on residential in the industrial area, there are a lot of residential opportunities in Lloyd and other nearby areas. He described the incompatibilities of industrial and residential uses, noting that there is almost universal opposition to residential development in the area.

Sam said that next he is going to take a quick pulse about the City proposal. It will not be binding, but he wants to see where people are to help determine the rest of the agenda.

Proposal	# of SAC Members Voting 3
1. Thunderbird Site (allow height in exchange for public open space)	1
2. N Broadway (allow taller buildings at bridgehead, step down to east)	1
3. Eliot Edge (keep 100' maximum, expand area of 175' max at MLK and Broadway/Weidler)	3
4. Irvington Edge (reduce maximum height north of Broadway to 75')	1
5. Central Lloyd (increase maximum potential heights in the Central Lloyd with the tallest buildings around the intersections of MLK/Grand and Multnomah/Holladay)	1

Proposal	# of SAC Members Voting 3
1. Lower Albina (change to EXd (no housing) on Russell, Employment Opportunity Subarea east of Union Pacific RR)	3
2. N of Broadway/Blanchard (change to EXd and CXd zoning)	1

3. Vancouver/Williams Study Area (change RHd to EXd)	0
4. North Banfield Portal (change RH and CO2 to CXd)	0
5. Central Lloyd (change RXd pocket to CXd, apply enhanced housing incentives to entire Central Lloyd, apply incentives for hotels, restaurants fronting convention center).	3

BREAK

Sam said that on the height proposals, we have at least one 3-vote on all of them. This means they would pass, but not by consensus. On zoning, we are moving the Lower Albina discussion to the Subcommittee, so no further comments needed on that tonight. Sam suggests that, unless you disagree with the consensus, we do not need any further public comment on Vancouver/Williams or the North Banfield Portal. After public comment, we will take vote on height. If SAC members are voting 2, he reminded folks to provide explanation on the polling sheet, and turn it into staff at the end of the meeting.

PUBLIC COMMENT

Alan Rudwick, Eliot Neighborhood Association LU Committee, commented that the view from Memorial Coliseum should be protected, and he thinks there should be a half block on Schuyler step down requirement. He is generally supportive of the height proposals.

Lee Perlman, Eliot Neighborhood Association LU Committee, commented on the subject of Lower Albina rezoning. He seconds Eric Lovell's statements. He is concerned about incompatible uses and the impact to economics. It is harder to maintain viable land with competing uses. Once you start, it is a slippery slope down. There is a need for housing in Eliot, particularly. He would like to see more opportunities for blue collar jobs, a resource of which the City is short in short supply.

Cathy Galbraith, Bosco Milligan Foundation. *(Comments submitted in writing via email after the meeting)* I'm opposed to any currently allowed height bonuses being formalized into outright height standards. This is in reference to MLK and Grand, where the height limit is now 100', with up to 175' by bonus. There is a big difference between 100' and 175' – it should be maintained as a potential bonus, not warranted as an outright new height standard.

I'm especially concerned about the Eliot transition issues – at Schuyler, Hancock, NE First, NE 2nd, and NE Victoria. Mount Olivet Baptist Church (at NE First & Schuyler) is the most significant African American historic resource in the Northwest – both Oregon & Washington. It needs to be called out somewhere, along with the three pioneer-era Flowers family, et al, houses across the street.

The conceptual height and zoning plans in the draft documents are conceptual, and brush broadly across swaths of neighborhoods. The Eliot "edge" needs to be viewed much more surgically – especially given the loss of 1300+ housing units in Eliot, from 1958-1972, as a result of "public projects", many of them transportation projects.

I'm especially concerned that the end results of this entire project supports existing land uses – otherwise the plan will intentionally result in displacement.

I don't understand the enthusiasm for using the EX zone. As written, *"housing is not intended to dominate the uses",* but that is exactly what is dominating new development in the EXd zone along Williams Avenue, starting with the Albert apartments at Williams & Beech, and upcoming additional apartment projects. How is this zone being interpreted to allow big box apartment buildings in this zone, specifically not intended for dominant housing?

Historic Buildings, if they are to survive, need two things:

(1) a Designation process that provides protections -- hopefully, the N/NE Q Plan will pursue an African American Multiple properties District, because currently, the City's $3,000+ application fee to designate one single landmark building does not work;
(2) Zoning that does not increase the value of the land on which these buildings sit - - so that there's an economic disincentive to preserve them. Hence, my caution about taking a surgical approach to zoning and heights in the Eliot neighborhoods. I must call out – again – the two houses at the NE corner of NE Second and Weidler, and all of the houses south of Russell Street, on Williams, Vancouver, and Flint Avenues, and Page Street.

There are also a number of surviving vintage houses in the Lloyd area, that add variety, character, architectural significance, and should be viewed as an asset.

Finally, especially at Williams and Vancouver, do NOT venture north beyond the boundaries of the plan study area to speculate on zoning. That is best left for the upcoming Comprehensive Plan update work.

Mr. Rumpakis, Sullivan's Gulch property owner, supports the staff proposal. He has spent many hours deliberating with Carol and Britt, and thanks the Sullivan's Gulch Neighborhood Association for endorsing what they have been working on. He bought a parcel on 19th and NE Multnomah 1965. Moving this plan forward is an important accomplishment tonight. These properties will be more flexible and marketable.

Brad Perkins, commented about current politics, noting there are two candidates for mayor who do not support the CRC. Regarding the proposal maps he has seen tonight, the Dreyfus site is not colored any way. Why is it being left out? He wants to move the tracks closer to Interstate. Why are we not studying an increase in heights? He has talked to the CEOs of the Dreyfus and both say they are open to a proposal. If we are talking about West Hayden Island as a place for them to be moving to, this a large piece of land is an eyesore. It needs to be talked about for 2035.

Joe Zehnder: the current situation the city faces is a deficit of industrial land. Right now there is no reason to consider a unilateral change of the zoning of this operating industrial concern.

Sam added there was additional public comment submitted for SAC consideration, some of which is included in the meeting packet - an email from Kurt Widmer and a Craft Brew Alliance letter, comments from the Trailblazers, Bicycle Advisory Committee, and SAC Co-Chair Lloyd Lindley.

Sam asked for the folks voting 3 to provide comments and explanation for their vote.

Steve Cole: Dean's concern is that there are other areas in the city for buildings of the heights we see in the proposals. On the other hand, he is not sure if Dean would change his mind seeing the presentation and how the open space is factored in.

Tracy Whalen: voted a 3 on Broadway because in her view there are safety issues.

Pauline Bradford: voted a 3 on the Eliot edge; 100 feet is too high by 2nd due to impacts on Mt. Olivet Church. 175 feet at MLK and Weidler is not so bad, but for Williams through MLK along Broadway, allowable building heights should not be that high, should be balanced down. Need to work with the short blocks that are there.

Tracy Whalen: supports what Pauline said.

Steve Cole: Irvington edge heights: Irvington would like the maximum heights north of Broadway to be limited to 65 feet instead of 75 feet. On the north ½ of the blocks facing Schuyler, they request a 45 foot height limit. Regarding Central Lloyd, the concern is about possibly discouraging development. We do not need to raise heights.

Sam said that unless anyone would change their vote to 3, or move from a 3 to a 2, the formal polling is as stands. SAC members will provide comments on the polling sheet regarding their 2-votes.

Revised draft goals, policies and implementation actions – Discussion Item

Sam explained that due to limited time left in the meeting, we will skip this topic for tonight. Much of the of work, especially on the policy section, has been presented to the SAC already. As for the second piece, the strategic plans, policies and action items. Those are new and we will send a word version out that you will be able to edit. Sam requested that folks focus their efforts on the implementation actions. Please submit track change responses by next Friday, 5-18-12. You can also write comments on the polling sheet, page 3.

I-5 BROADWAY WEIDLER INTERCHANGE ELEMENTS

Mauricio Leclerc, PBOT, presented a PowerPoint on the North of Broadway Street Configuration Recommendation. He quickly reviewed the five options and tonight will only present the staff proposal, along with the pros and cons. Staff is recommending Option 3.

Slides 6 and 8: Recommended Option 3: Vancouver + Hancock/Dixon

- Retains 5-leg intersection @ Vancouver/Broadway
- Eliminates Flint at Broadway, potential new signal at Wheeler & Broadway and Ross & Broadway
- New east-west local connection at Hancock & Dixon

PROS

- Could accommodate optional freeway lid concepts
- Highest street connectivity and directness of travel for all modes
- Provides opportunities to travel "around the box"
- Maintains current access to Lower Albina via Wheeler

CONS

- Risk of some neighborhood traffic diversion (to be mitigated)
- Wait time on Vancouver at Broadway remains
- Queuing on off ramp (to be mitigated)

Mauricio noted that with Option 3, one of the cons is potential queuing on the freeway ramp, but working with traffic engineers, feels we can handle that.

Andy Johnson: agrees. While it is a drawback, we feel like we can deal with it. ODOT and the City have had numerous meetings with stakeholders, and he estimates there is an approximately 90% preference for Option 3.

Tracy Whalen: is concerned about folks heading north on Williams, being able to make a turn into that street that area.

Mike Warwick: that is exactly what we don't want – more neighborhood traffic.

Tracy Whalen: but sometimes you need to get there.

Mauricio Leclerc: there is a way (described how one would drive).

Tracy Whalen: comment on left turn in front of Left Bank.

Andy Johnson: yes that has been eliminated. Described how movement is intended to go.

Tracy Whalen: suggested a right turn lane.

Eric Lovell: wants easy vehicle access to get to Weidler east bound, noting a place for a wide turn radius.

Andy Johnson: agrees; he spoke with Betsy Reese of the Paramount Apartments the other day and heard the same thing. Additionally, he noted there is a two-way street by the Paramount, which could turn to one-way. Betsy is ok with this.

Eric Lovell: he had an "ah-ha" moment recently, that if the Blanchard site was redeveloped, it could require a Ross to Kerby connection, then Wheeler would no longer need to go through.

Mauricio Leclerc: interesting idea, and one that could be studied as part of the master planning of the Blanchard site.

Joanna Agee: wants to confirm her understanding that when one is on Wheeler between Broadway and Weidler, is it left turn only?

Mauricio Leclerc: At this point in the process we are proposing signalizing that intersection. But we're not at that level of design and there are many circulation options that we can study.

Joanna Agee: what use of Flint do you imagine would occur normally?

Mauricio Leclerc: described; we are also proposing updating the event management for the area, and want to increase ways to get traffic out quickly with the new interchange configuration.

Wayne Kingsley: picking up on Eric's comment; want to try to meet the needs of 18-wheelers in any changes we make.

Andy Johnson: agreed.

Mike Warwick: wants the Flint connection preserved somehow. Also a number of folks have looked at Dixon/Hancock connection, there is quite a grade. He described another idea about how to extend Tillamook.

Andy Johnson: ODOT has not looked at that idea.

Phil Selinger: pedestrians like it. He noted one place to extend sidewalk access across Broadway.

PUBLIC COMMENT

Mr. Rumpakis, Sullivan's Gulch property owner, observed that he feels like this areas looks challenging and wonders how user-friendly this is for seniors. He knows our planners have a heck of a time working these things out, and he would like to see speed limits on the maps. He is concerned about fast traffic.

Lee Perlman, Eliot Neighborhood Association LU Committee, said a Hancock overcrossing is an unacceptable intrusion into a neighborhood. If you insist on doing it, we need protection for the neighborhood that goes beyond, "we will provide mitigation." They need something more. He noted an

east coast activist named Bob Conradt, who commented that our society has had an objective to improve "mobility" for the last 50 years, and in service to that, we have destroyed much of the built and natural environment. There is also value in promoting *stability*.

Betsy Reese, Paramount Apartments, following on Joann's comments, she is opposed to signalization with a through street to access Blanchard site and cut through traffic it would create. If they agree to a ROW through their property, then need mitigation for traffic on the other sides. This is why they put out the suggestion of north-bound only. She wants to brainstorm to work this out. Mauricio said there was other ways and you were going to draft something?

Mauricio Leclerc: we will work out the specific details in later phases, and we can draft the intent of the policies in this phase.

Betsy Reese: described her thoughts that this plan, and that it is made into a low-traffic street. As to Tracy's comment, you could allow a U-turn at Ross.

Paul Smith: to Betsy, see page 2 of the Draft Joint Staff Report from this week's meeting packet. It addresses your concerns. He read this section:

> The following issues will require further examination as part of Preliminary Engineering and community involvement:
>
> 2. Develop specific measures to mitigate property and parking impacts to the Paramount Apartments and the Portland Public School's Blanchard site due to the proposed Hancock/Dixon connection (via the Hancock/Vancouver Lid).

Alan Rudwick, Eliot LU Committee, commented that if we do not get $400M in federal funding, there are still pieces that can be done.

Brad Perkins said the primary goals are somewhat met, as far as efficiently, flow and safety. But it has not gone far enough. Thinks the concept of "box around box" should be eliminated and just say "expanded box." Wonders why would we push bikes into Broadway and Weidler, instead of taking advantage of an opportunity to have exclusive ROW, which will draw more bicyclists.

Jim Howell, AORTA, sees $1-2B being spent on what? This whole thing is based upon the assumption that the freeway will be widened. That is not a foregone conclusion, as that is based on the CRC getting done. This basically is a bad idea. The only option that works is no-build. All transportation efforts have been done by traffic engineers. What changes are you proposing about public transportation? What are you proposing for 25 years from now? Nothing! Traffic engineers' jobs in the next 25 years will be to figure out how to downsize freeways. This is a solution of the past, not the future.

Lloyd Lindley, SAC Co-Chair (comments submitted via email, read by Sam)

Dear SAC and Staff
In that I am absent from our May 10, 2012 SAC meeting I have provided my comments and vote for the N/NE Quadrant Plan Policy and Action items. I am guessing at the voting topics but they are as follows.

IV. North of Broadway Options #3: Vancouver + Hancock/Dixon
Recognizing that there a numerous urban design and engineering details to be worked out in the next phase I am requesting one modification as follows.

Under "The following are issues that will require further examination as part of Preliminary Engineering:"
I would prefer to:

- Delete: "Explore the feasibility of a single lid"
- Add: "Seek a viable single lid solution by further exploring lid design" over I-5 between Weidler and Hancock, including…..

Vote:1 (With the above language modification, otherwise vote 2)

Recognizing that refinements to the urban design and land use work will follow I am providing the following votes:
Lloyd District

REGIONAL CENTER: ECONOMY AND INNOVATION
IMPLEMENTATION ACTIONS

Comments:
6. Work with the Lloyd TMA to develop shared parking strategies. There are existing cases such as shared parking with the Lloyd Tower parking structure and the Lloyd Athletic Club that provides a successful example.

URBAN DESIGN

Comments:
1. Add: "building orientation" after "heights,"
Vote:1

Lower Albina

REGIONAL CENTER: ECONOMY AND INNOVATION
IMPLEMENTATION ACTIONS

Comments:

Under Policies
After 1. Add: "**Freight Rail.** Support operation of freight facilities and enable rail access by local industries."
Vote:1

Study Areas
NORTH BANFIELD PORTAL
Vote:1

Vancouver/Williams Corridor
Vote:1

I would like to commend all of the SAC members for their commitment to this essential planning and design work and express my appreciation of staff's diligence in responding to our questions and concerns. I would also like to thank the consultant team for their innovations and creative solutions in finding balance to a complex interconnect system that is our community.
Lloyd

Paul Smith: that has been done.

Sam read Justin Zeulner's statement sent on 5/10/12 via email:

Portland Arena Management/Trail Blazer/Rose Quarter Response: "1" vote for all the following draft proposals.

A. Draft Recommendations for Potential Maximum Height Limits (see map in packet)

1. Thunderbird Site - allow height (up to 250') in exchange for public open space.
2. N Broadway - allow taller buildings at bridgehead (up to 325', step down to east).
3. Eliot Edge - keep 100' maximum; expand area of 175' max at MLK and Broadway/Weidler.

4. Irvington Edge - reduce maximum height north of Broadway to 75'.
5. Central Lloyd - increase maximum potential heights in the Central Lloyd with the tallest heights (460' or limited only by FAR) around the intersections of MLK/Grand and Multnomah/Holladay.

B. Draft Zoning Proposals (see proposal descriptions in packet)

1. Lower Albina – change IG1d on Russell east of existing conservation district to EXd (no housing), apply Employment Opportunity Subarea provisions east of Union Pacific rail line.
2. North of Broadway/Blanchard Area - change to IG1 to EXd with master plan requirement and EG1 to CXd zoning.
3. Vancouver/Williams Study Area - change RHd to EXd.
4. North Banfield Portal - change RH and CO2 to CXd.
5. Central Lloyd - change RXd pocket to CXd, apply enhanced housing incentives to entire Central Lloyd, apply incentives for hotels, restaurants fronting convention center.

I-5 Broadway/Weidler Interchange Improvements May 10th SAC Action Item: Recommended North of

Broadway Option: Do you agree with the joint staff recommendation on the North of Broadway Option described in this report?

Portland Arena Management/Trail Blazer/Rose Quarter Response: "2" vote on the above. We are in full-support of the joint staff recommendation, as described. However, the relocation of the I-5 southbound ramp will require additional studies and planning to determine applicable mitigation resolution and required capital investments, related specifically to the Rose Quarter campus. We need assurance that the transportation systems related to Rose Quarter event operations and general business affairs will remain as optimal as current design or enhanced by the I-5 Broadway/Weidler Interchange Improvement projects. Furthermore we believe that this mitigation should be focused on the streets and area encompassed by Vancouver and Center Court Drive, between Weidler and Winning Way.

Sam read the Bicycle Advisory Committee's statement from Executive Director Heather McCarey:

"The Portland Bicycle Advisory Committee appreciates the opportunity to provide feedback on the North of Broadway Plans for the N/NE Quadrant and I-5 Broadway/Weidler project. The Committee generally supports Option 3 (Vancouver + Hancock/Dixon) although we feel that certain intersections will require a finer level of detail to ensure safe bicycle and pedestrian circulation. The Committee feels that enhancing the local network is an integral aspect of this project. With this in mind, the Committee wants to ensure that the aspects of the project that improve the local network are maintained in the plans. These include the improvements and build-out of Dixon, as well as the Clackamas pedestrian and bike bridge."

Sam took a poll on the following question, asking who would vote a 3 or 2, and why.

Action: Do you agree with the staff recommendation to include the refined North of Broadway Conceptual Design Option 3 in the project?

Damien Hall: is voting 3. He does not understand the "box within the box." He does not understand why we have to give people so many opportunities and options and thinks it could be simplified. Look at the west side, there are not so many option. This proposal made it a little bit better, but did not take into account rebuilding infrastructure. It seems like a whole lot of decisions flowed from the box-with-a-box concept.

Joanna Agee: is voting 2 because she needs clarification on event ingress/egress, Wheeler, and North of Broadway issues.

Tracy Whalen: also votes 2. She wants to preserve Flint and wants staff to look at Option 2, which still provides connectivity if we end up with "no build."

The refined North of Broadway Conceptual Design Option 3 passes by majority-minority as indicated.

Tracy Whalen: commented that as the alternate Co-Chair, she wants to say how pleased she is with ODOT and the City's work, and feels that at least we have a clear sense of the remaining outstanding issues. She feels the document has been put together very well.

FACILITY PLAN

Andy Johnson, ODOT, provided a brief introduction to the ODOT Facility Plan which will be developed over the next two months. He provided an overview of the structure of the document. The table of contents is the basic outline for what goes to the Oregon Transportation Commission and the City Council. At some point, everything we have discussed will be in the report.

Over the next three weeks, they would like comments and suggestions on how to do their draft. Andy explained the Facility Plan, Chapter 6, and requested that folks focus on this section for edits. They hope to receive all edits and comments by May 23, and then will bring it back to the SAC in June for a vote. There will be a public review period this summer.

Chris Deffenbach: this has been a great process, looking at land use and transportation at the same time. She hopes this will be designated an MMA (Multi-Modal Area) to provide assurance that the land use can go forward.

Andy Johnson: yes, exactly. This looks to be the state's first MMA area.

Steve Iwata: for potential developers, this would minimize costs, because then you do not have to make any additional TPR findings.

MEETING WRAP UP AND NEXT STEPS

In closing, Sam asked everyone to fill out the meeting evaluation form. He thanked everyone for a good meeting.

Upcoming meetings:

- Subcommittee Meeting on 5/23 - draft Quadrant Plan
- SAC Meeting #17 on 6/7 – Preliminary SAC Action on I-5 Broadway/Weidler Interchange Facility Plan
- SAC Meeting #18 on 6/28 – SAC direction on complete draft Quadrant Plan
- SAC Meeting #19 on 8/2 – Final SAC recommendations

The meeting was adjourned at 8:45.

N/NEQ SAC #16 MEETING EVALUATION SUMMARY
MAY 10, 2012

12 Evaluation Forms

	Poor	Fair	Good	Very Good	Excellent
1) OVERALL MTG QUALITY			2	4	3
2) PACING	Too Slow		Just right		Too Fast
		1	5	3	1
3) CLARITY PRESENTATIONS			2	6	4
4) DOCUMENTS			3	6	3
5) DISCUSSION		1	4	4	3

6. MOST USEFUL?

- Breaks to talk to staff, others
- Facilitation continues to be good and essential to a complex process.
- Focused discussion
- I like the new voting handouts for reasons for #2 votes.
- Review of options and future process

7. LEAST USEFUL?

- Arguing with Lee
- Too long on Broadway/Weidler box box
- Policy presentation – but OK

8. COMMENTS, SUGGESTIONS, OR QUESTIONS?

- Copies
- Found this SAC most informative, and provided answers by staff
- Good work!
- How does the proposed Multnomah Blvd improvements I read about in the paper this week fit in?
- Would be nice to see a picture with streets, freeway, land use, heights, zoning together

N/NE Quadrant and I-5 Broadway/Weidler Plans

Facility Plan

I-5 Broadway/Weidler Interchange Improvements

June 7, 2012

Informational/Discussion
DRAFT

CENTRAL CITY 2035
N/NE QUADRANT

CITY OF PORTLAND OREGON 1851

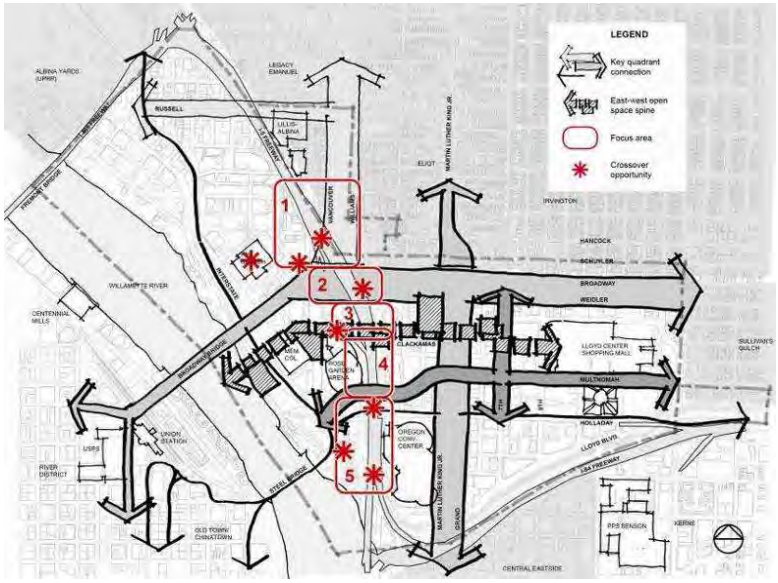
Oregon Department of Transportation

55547

Facility Plan:
I-5 Broadway/Weidler Interchange Improvements

The overall project purpose is to...
Improve safety and operations on I-5 in the vicinity of the Broadway/Weidler interchange.

OBJECTIVES:



ODOT and the City, through the Stakeholder Advisory Committee (SAC) and extensive public outreach, explored and found solutions to meet the following objectives:

EASE CONGESTION LEVELS AND IMPROVE SAFETY:

ENHANCE PEDESTRIAN AND BICYCLE ROUTES:

IMPROVE FREIGHT MOVEMENT:

Integration of Transportation and Land Use Concepts in the N/NE Quadrant Plan

The Facility Plan

Study Area

The project study area is at the crossroads of the Portland freeway system, as shown in Figure 1. I-5 is the north-south freeway facility and extends through the metropolitan area, and it runs the full length of the west coast of the United States from Canada to Mexico. Within the project area, I-84 intersects I-5 and extends east across the U.S. a mile and a quarter north of I-84 and I-405 connects to I-5 at the Fremont Bridge interchange. This interchange is the northerly connection of the I-405 loop around the west side of downtown Portland, with the southerly connection at the west end of the Marquam Bridge. Within the overlap section, I-5 serves through traffic as well as connecting traffic between I-84 and I-405.

Figure 1: Study Area and Vicinity Map

Informational/Discussion DRAFT

Facility Function

- I-5 is classified as an Interstate facility and is both a Freight Route and a Truck Route.
- I-84 is classified as an Interstate facility and is both a Freight Route and a Truck Route.
- I-405 is classified as an Interstate facility and is both a Freight Route and a Truck Route.

Interchange Function

The I-5 Broadway/Weidler Interchange is located on I-5, in between I-405 to the north and I-84 to the south. The function of the I-5 Broadway/Weidler Interchange is to serve the Portland central city, which includes the industrial area of Lower Albina and the commercial activity along the Broadway/Weidler corridor, regional attractions, such as the Rose Garden Arena and the Lloyd Center mall, and the surrounding community.

Interchange Purpose

The purpose of the I-5 Broadway/Weidler Interchange Improvement Plan is to improve the safety and operations on I-5 in the vicinity of the I-5 Broadway/Weidler Interchange.

Project Problem/Issues

Congestion and Bottleneck

In the context of the regional freeway network, the city's N/NE Quadrant sits at a crossroads of three regionally significant freight and commuter routes. As a result, the freeway interchanges experience some of the highest traffic volumes in the state. Table 1 shows the average daily traffic volumes entering and exiting I-5 over the two mile segment within the N/NE Quadrant.

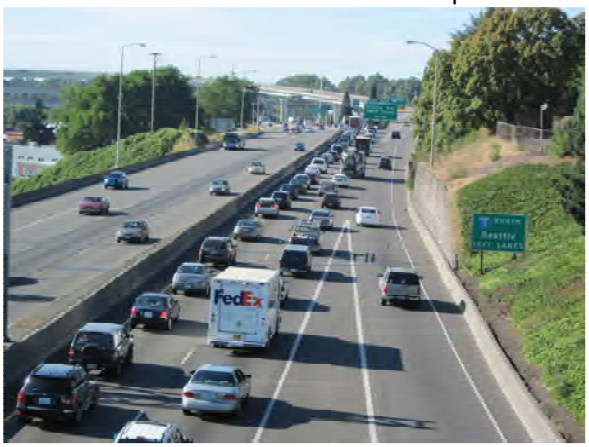
Table 1: Average Daily Traffic Volumes Entering and Existing I-5 in the Study Area

I-5 Direction	Entering	Exiting
Northbound	24,660	37,530
Southbound	34,000	47,200

Highest Accident Rate in the State of Oregon

An analysis of the reported crashes on I-5 in the study area was performed for the five-year period from 2005 through 2009. Both frequency (number of crashes) and crash rate (number of crashes per million vehicle miles) were calculated per 1/10 mile segments.

- I-5 S direction has more frequency of crashes than I-5 N
- The top three locations with highest frequency of crashes and crash rates are:
    1) I-5 S at N Holladay Street (weave between the Wheeler On-ramp and the I-84 E Off-ramp)
    2) I-5 N at Multnomah (weave between the I-84 W On-ramp and Weidler Off-ramp)
    3) I-5 S at Thompson Street (weave between the I-405 on-ramp and the Broadway St off-ramp)
- I-5 within the study area has the highest crash rate within the entire state
- Three times the crash rates at I-5 Terwilliger curves
- The type of crashes in order of ranking from highest are: rear-end, sideswipe, fixed and other.



The attributing factors to the high number of crashes and safety problems in the study area are:

- Heavy congestion
- Short weaving distances
- Lack of shoulders for accident/incident recovery

Operational Friction and Congestion Caused by Heavy Weaving

Weaving analysis and field observations were performed for the four weaving sections on I-5 within the study area:

- I-5 N between I-84 W and Weidler Off-ramp
- I-5 N between Broadway On-ramp and I-405 Off-ramp
- I-5 S between I-405 On-ramp and Broadway Off-ramp
- I-5 S between Wheeler On-ramp and I-84 E Off-ramp

Two weaving sections currently perform at a failing level-of-service during the AM and PM Peak periods:

- I-5 S between Wheeler On-ramp I-84 E Off-ramp
- I-5 N between I-84 W to Broadway Off-ramp

The failing operations will be worsened in the future, with the most critical failure being the weave being the I-5 S weave from the Wheeler On-ramp to I-84 E Off-ramp. This bottleneck will cause queuing that extends across the weaving section to the north and onto Fremont Bridge.

The Land Use-Transportation Connection

Land use and transportation are in balance. Proposed changes to land use designations will reduce auto demand and provide for a more mixed-use multimodal environment.

The N/NE Quadrant of the central city includes considerable multimodal infrastructure to support all types of travelers on all modes. In addition to the I-5 freeway and the local street network, four light rail transit (LRT) lines run through the area, converging on the Rose Quarter Transit Center next to the Rose Garden Arena. The City of Portland is constructing streetcar lines on Broadway/Weidler to connect with the Pearl District and the central east side of Portland. Eight TriMet bus lines also connect at the transit center.

The I-5 Broadway/Weidler Plan proposes many new crosswalks that will improve pedestrian safety and connections to and from these major transit amenities. Two major bicycle commute routes run through the area: 1) the major east-west route along Broadway and Weidler, and 2) the major north-south route along Williams and Vancouver. The plan also proposes a new east/west bicycle/pedestrian overcrossing at Clackamas to connect the Lloyd District with the Rose Quarter.

The Lloyd Transportation Management Area (TMA) is one of the most successful in the Portland metropolitan region. The area is currently predominantly commercial and industrial however, the proposed changes to land use designations in the city's N/NE Quadrant Plan will encourage a much greater mix of uses, especially in the central Lloyd District where significant density and mix of uses are anticipated.

The City of Portland and ODOT have jointly developed this freeway and local transportation plan, and have integrated the transportation and land use components. The transportation components were developed assuming existing zoning, except for changes at the Portland Public Schools (PPS) Blanchard site and some changes to allow more diverse uses in the central Lloyd District. The overall trip vehicle trip generation for the district is expected to be the same or lower than under previous zoning entitlements. The changes related to land use and the transportation improvements recommended by this plan have been analyzed and queues are not anticipated on the I-5 exit ramp deceleration areas (see Table 2).

Table 2: Available Storage and Predicted Queues for Exit Ramps at I-5 Broadway/Weidler Interchange

Direction	Storage Available	Predicted Queue
Southbound	955 feet	500 feet
Northbound	1130 feet	350 feet

Multimodal Mixed-Use Area

The Broadway/Weidler interchange is within ¼-mile of an existing interchange. ODOT staff concurs that the Multimodal Mixed-use (MMA) designation is appropriate for the city's companion NNE Quadrant Plan and ODOT must be consulted prior to any future plan amendments within the MMA boundary.

Summary of the Recommended Concept and Elements

Informational/Discussion DRAFT

The Recommended Concept (supported by a consensus/ majority of the SAC) and elements are based on technical assessments of bicycle and pedestrian operations, urban design/land use potential, traffic operations, and safety. Figures 2 and Figure 3 illustrate the Recommended Concept and Table 3 describes the facility plan elements and their outcomes.

Transportation Demand Management (TDM) strategies are most effective in areas with high concentrations of employment and where a robust transit system exists. Generally, the strategies are easiest to implement where there are large employers or where a transportation management association (TMA) has been established to pool the efforts of many smaller employers. The Facility Plan Element 1*, Transportation Demand Management (TDM)* measures are designed to reduce vehicle demand, especially for commuter trips in the peak periods. TDM measures include strategies that: 1) shift modes for carpooling, vanpooling, transit, bicycling, and walking programs, 2) shift trips to non-peak periods, such as flexible work schedules and off peak shifts and 3) include telecommuting, which eliminates trips.

Transportation System Management (TSM) measures are designed to make maximum use of existing transportation facilities, and include:

- Traffic engineering measures (eg. signal timing changes, provision of turn lanes, turn restrictions, and restriction of on-street parking to increase the number of travel lanes without road widening) that improve the operations and efficiency of streets and intersections;
- System monitoring and traveler information systems (e.g., Intelligent Transportation Systems (ITS), variable message signs, etc.);
- Facility management systems (e.g., ramp meters, special use lanes, signal priority for special users such as transit); and
- Incident management systems (e.g., incident response and recovery teams).

Components of these TDM and TSM measures are in use today. The City of Portland and ODOT will continue to monitor, adjust, and implement the strategies as needed.

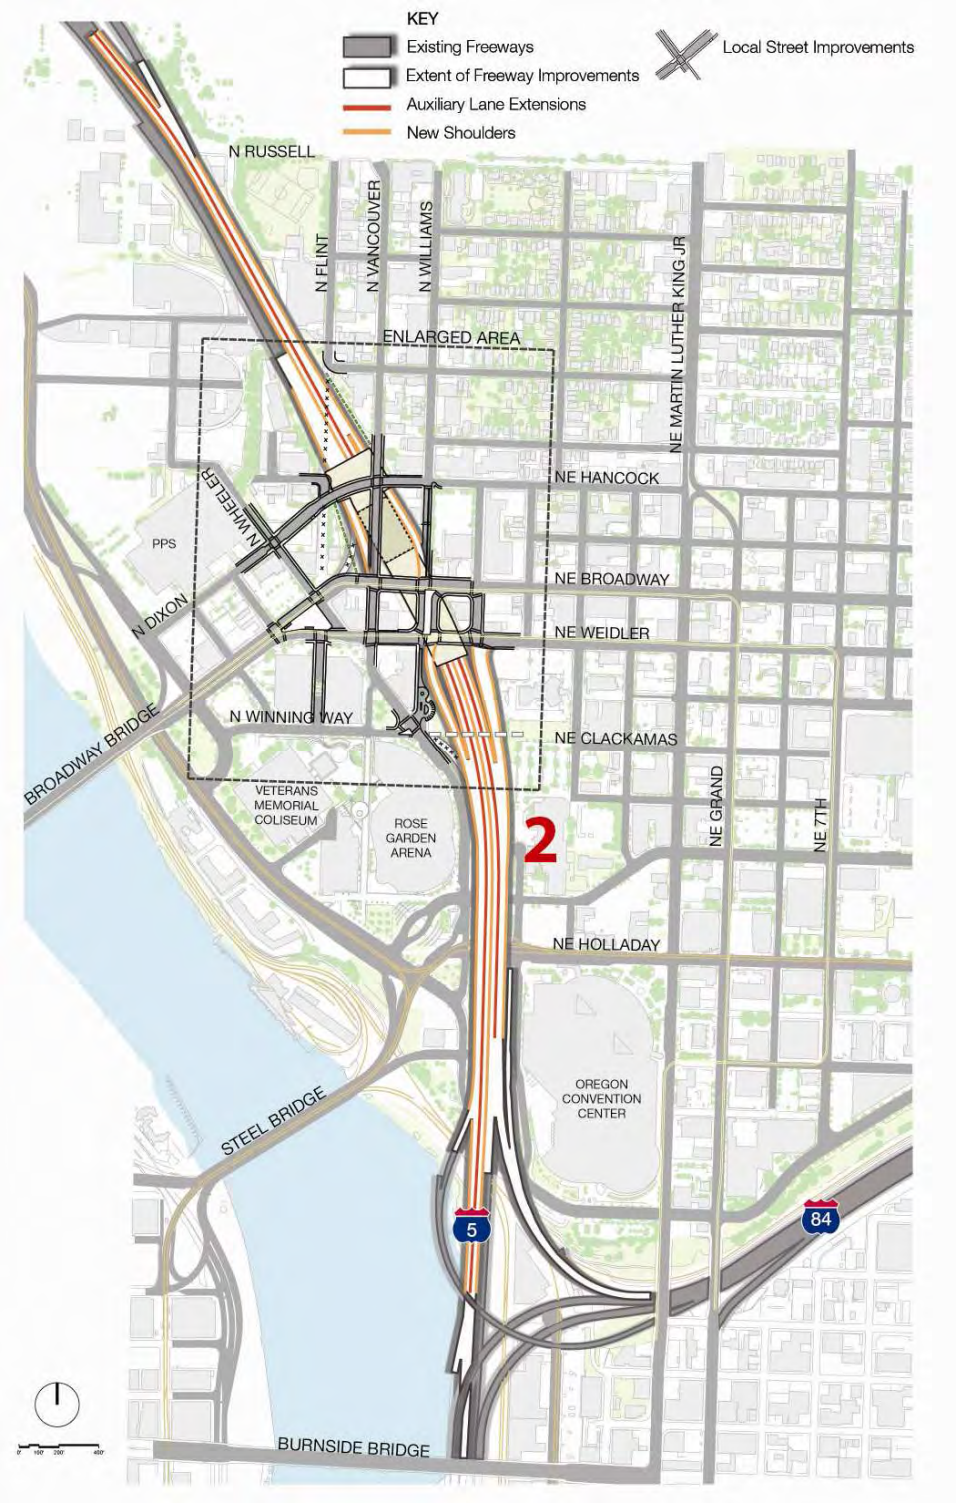


Figure 2: Overall Project Extent of the Recommended Concept

Table 3: I-5 Broadway/Weidler Interchange Recommended Alternative

Facility Plan Elements

Facility Plan Elements	Outcome
1. Implement Transportation System Management (TSM) and **Transportation Demand Management (TDM) Strategies**	Improve freeway operations and reduce automobile trips.
2. Construct Mainline Freeway Safety Elements	Improve freeway operations and reduce accidents 30-50 percent.
a. Extend auxiliary lanes in both directions.	
b. Add full-width shoulders in both directions.	
3. Reconstruct Three Freeway Structures and Lid The Mainline Freeway Safety Elements require rebuilding the Weidler, Broadway, and Williams structures over I-5; the new structures will be designed to meet seismic and clearance standards.	The new structures improve facilities for all modes; the lid allows for more effective construction staging, improves the urban design of the interchange area and improves the areas development potential.
4. Relocate Southbound I-5 On-Ramp to Weidler/Williams (from current location at Wheeler/Winning Way/Williams)	Increases weave distance, removes ramp traffic from local streets, Wheeler and Winning Way. Allows bike-ped only overcrossing at Clackamas.
5. Convert Williams to a Reverse Traffic-Flow Connection between Broadway and Weidler Includes a barrier-separated bike-pedestrian path in the middle.	Allows more efficient signal timing, improves bike and pedestrian connections through interchange and simplifies vehicular movements.
6. Construct Clackamas Bike-Pedestrian Overcrossing Establishes connection over I-5 from Winning Way to Clackamas.	Increases multi-modal connectivity across I-5, links central Lloyd District to the Rose Quarter and forms the south side of "box-around-the-box."
7. Re-construct the Vancouver Structure; Remove the Flint Structure; Reconfigure Streets North of Broadway to Include Hancock/Dixon Structure and Lid	Vancouver structure must be replaced to accommodate mainline freeway improvements. The Hancock and freeway lid allow for effective construction staging, improve viability of Blanchard site and form the north side of "box-around-the-box."
North of Broadway elements (Figure 3) include:	
1. Rebuild Vancouver	
2. Implement traffic calming at Williams/Hancock	
3. Remove Flint between Tillamook and Broadway	
4. Maintain Wheeler as a two-way street north of Broadway	
5. Maintain Wheeler in front of Left Bank as one-way	
6. Connect Flint as a two-way street south of Weidler	
7. Add signals at Broadway/Wheeler and Broadway/Ross	

Informational/Discussion DRAFT

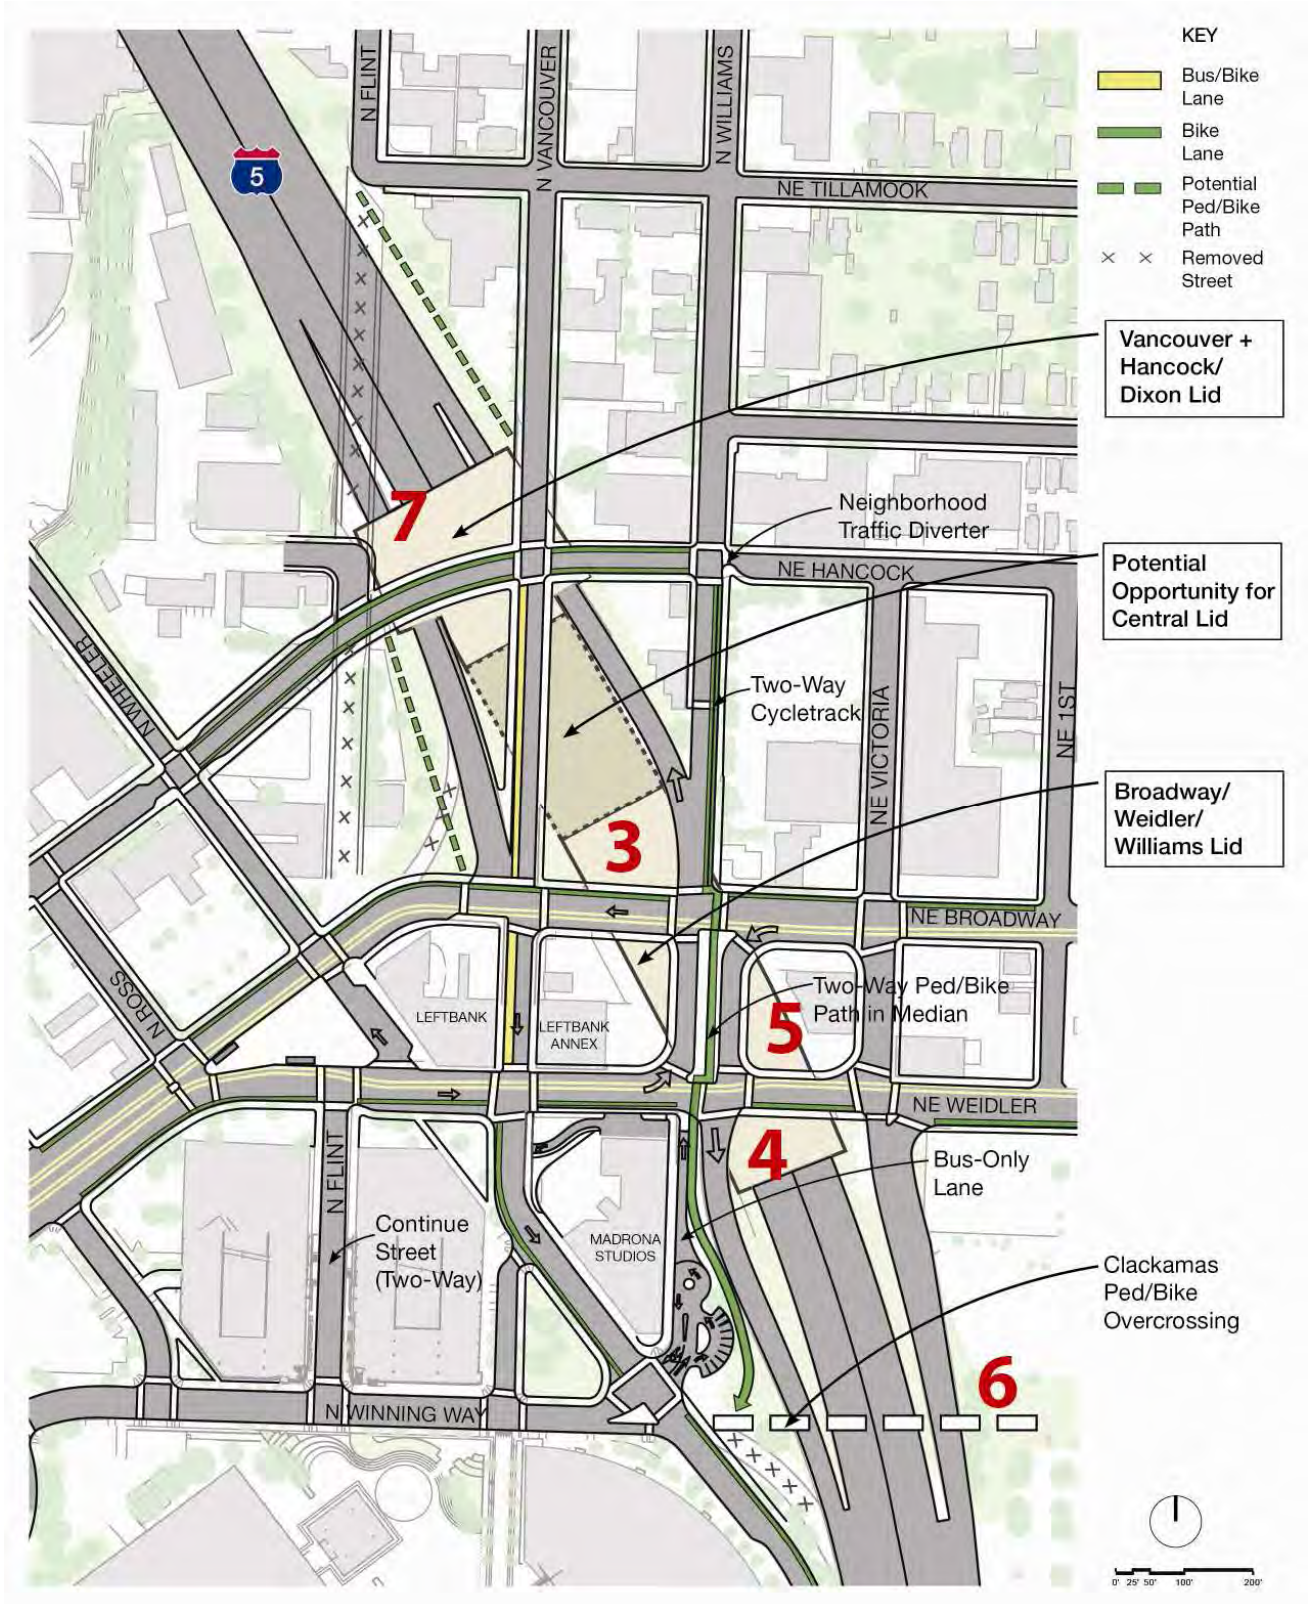

Figure 3: Enlarged "Box" Area of the Recommended Concept

Project Monitors and Future Project Development

The Facility Plan elements of the recommended alternative (Table 3) are expected to significantly improve I-5 mainline operations and safety as well as improve interchange operations at Broadway/Weidler. Once the Facility Plan elements are completed, ODOT and City of Portland will continue to monitor the freeway operations in the I-5 Broadway/Weidler Interchange area (Table 4).

Table 4: Project Monitors and Future Project Development

Project Monitors	Notes
1. Safety and Operational Performance **- Southbound Braided Ramp or other freeway safety improvement**	Upon completion of the recommended alternative Facility Plan elements, ODOT and the City of Portland will monitor the performance of the completed project to address achievement of the safety and operational goals. If safety and operational issues remain on the freeway after construction of the recommended alternative Facility Plan elements, ODOT will work with the City of Portland to initiate a public process to consider additional measures such as a southbound braided ramp from Broadway to I-84 or other options developed through a public process. A southbound braided ramp should not be precluded by the construction of the recommended alternative Facility Plan elements.

Implementation Actions

Informational/Discussion DRAFT

Project Development and Project Management

1. Proceed with next phase of project development and complete Preliminary Engineering and environmental phases for federal funding.
2. Continue project management partnership between the City of Portland and ODOT.
   - Develop work scope and schedule.
   - Define environmental process
   - Develop inter-governmental agreement for completion of PE/Environmental Studies.
3. Develop public involvement process for PE/Environmental phase and actions to resolve remaining issues identified in the I-5: Broadway-Weidler Interchange Improvement Plan.
4. Special considerations will be discussed and identified during Preliminary Engineering and recommended as part of the Final Design/Engineering.
   - Construction management strategies that can provide incentives to minimize construction periods, impacts and costs;
   - Incentives for minority hiring and
   - Strategies to support local businesses

Preliminary Engineering (PE)

The following are key products at the completion of Preliminary Engineering:

1. Complete PE level of engineering:
   - Develop project cost estimates
   - Complete environmental documentation
   - Identify potential construction phasing
   - If phasing is required, the City and ODOT will work together to match phases to the funding sources available

2. Project agreements at the completion of PE:
   - Signals will continue to be timed so as to avoid queues backing up into the deceleration area of the I-5 SB exit ramp at Broadway.
   - Crosswalks will be provided at all signalized locations and should be provided at all safe and feasible locations.
   - The Rose Quarter Traffic Management Plan (TMP) should be updated with the participation of ODOT, City of Portland, and the Rose Garden Arena prior to construction.
   - Develop preliminary construction mitigation plan that would include efforts to minimize impacts, support local businesses, and support minority hiring.

Specific Design Coordination

Property impacts are of great concern to the neighborhoods, businesses and agencies working in the study area. The following issues will require further examination by ODOT and the City of Portland, with community involvement as part of Preliminary Engineering:

1. Seek a viable single lid design solution over I-5 between Weidler and Hancock by exploring mitigation measure for freeway noise and vehicle emissions, and address the need for open space and economic development.

2. Develop specific measures to address property and parking impacts to the Paramount and Portland Public School, and other sites related to the proposed Hancock to Dixon connections. The number of parking spaces should be the same or more than current conditions at Paramount Apartments, Left Bank, Left Bank Annex and Madrona.
3. Develop alternative safe and convenient bicycle/pedestrian connections to include:
    a. Enhanced facilities (bicycle lanes, two way cycle track, sidewalks, protected marked crossings) along Broadway, Weidler, Vancouver, and Williams with a wide, grade separated, multi-use path for Williams between Broadway and Weidler.
    b. The development of a new pedestrian/bicycle connection between the Flint/Tillamook intersection to the proposed Vancouver/Hancock overcrossing.
    c. The development of a new bike/pedestrian connection from N. Hancock St. to N. Broadway, while providing for potential parking mitigation , open space, and redevelopment opportunities
4. Define Eliot neighborhood traffic mitigation measures for the recommended N. Hancock St. connection between N. Vancouver Ave. and N. Dixon St to discourage cut-through traffic.
5. Refine a street design and circulation plan for the area in the vicinity of the Broadway-Weidler interchange. The refined street design and circulation plan should address the following issues:
    a. Develop design elements that provide for safe and convenient access to the Left Bank and Left Bank Annex.
    b. Develop and evaluate circulation alternatives and design elements for the area north of Broadway, south of N. Wheeler Place and West of I-5 to:
        1. Address the changes to access and circulation around the Paramount Apartments by investigating treatments for the N. Wheeler Ave, between Broadway and Hancock, in order to minimize cut-through traffic at the west side of the Paramount , but maintain access to the Lower Albina industrial district;
        2. Enhance bicycle access and safety to the proposed Hancock/Dixon connection over I-5 to the Broadway Bridge; and
        3. Determine appropriate multimodal access and circulation to this area and Lower Albina.
    c. Develop and evaluate circulation alternatives for N. Wheeler Avenue, N Winning Way, N Center Ct, N Flint and N Williams to:
        1. Enhance circulation in the area for all modes
        2. Provide flexibility to manage event ingress and egress; and
        3. Open up opportunities for redevelopment and placemaking
    d. Develop design elements that address the changes to access and circulation to the Madrona:
        1. Refine street design for N. Williams Avenue between N. Weidler and N. Wheeler to address access, circulation and on-street parking needs for the Madrona while also providing for bus, bike and pedestrian circulation.
        2. Provide for sufficient pedestrian and vehicle access to the N Williams entrance to Madrona; and
        3. Prepare design treatment for the Weidler /Williams intersection for safe pedestrian and bicycle crossing.
6. Develop design plans with TriMet for safe transit operation through the I-5 interchange.
7. Refine and finalize design for Clackamas Overcrossing Structure.
    a. Coordinate design with future access connections east of I-5.
    b. Coordinate design with future changes to traffic circulation west of I-5 and the relocation of the southbound on-ramp.
8. Evaluate visual and environmental impacts of the proposed widening of the elevated segment of I-5 freeway, including the segment over the Rose Quarter Transit Center and Peace Park, and identify mitigation measures as needed.

N/NE Quadrant and I-5 Broadway/Weidler Plans

I-5 Broadway/Weidler Interchange Improvements Report

June 7, 2012

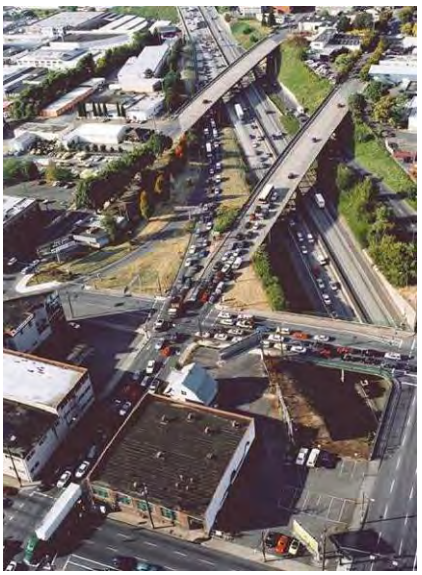
Informational/Discussion DRAFT

The N/NE Quadrant and I-5 Broadway/Weidler Plans Project is a collaborative effort by the City of Portland and the Oregon Department of Transportation to integrate urban design and land use planning with freeway planning and concept-level engineering in the North/Northeast portion of the Central City, which includes Lower Albina and the Lloyd District.

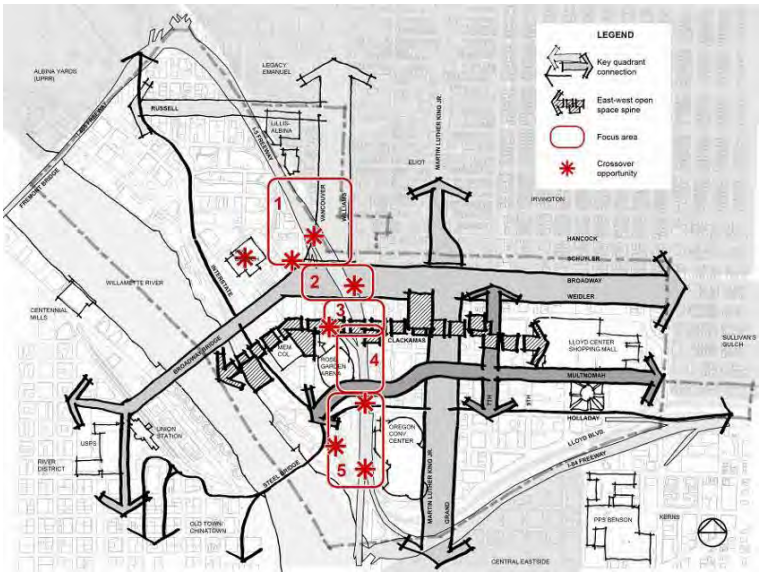
I-5 Broadway/Weidler Interchange Improvements Report

The overall project purpose is to...
Improve safety and operations on I-5 in the vicinity of the Broadway/Weidler interchange.

OBJECTIVES



ODOT and the City, through the Stakeholder Advisory Committee (SAC) and extensive public outreach, explored and found solutions to meet the following objectives:



EASE CONGESTION LEVELS AND IMPROVE SAFETY

ENHANCE PEDESTRIAN AND BICYCLE ROUTES

IMPROVE FREIGHT MOVEMENT

Integration of Transportation and Land Use Concepts in the N/NE Quadrant Plan

Glossary of Related Planning Efforts

Central City 2035	Central City 2035 (CC2035) is an update to the 1988 Central City Plan, which is the existing plan and policy for downtown and the central areas of Portland, Oregon. In coordination with the Portland Plan, this plan will address challenges and opportunities in the Central City to ensure that this unique economic, transportation, cultural and educational hub will be a vibrant resource for all Portlanders over the next 25 years. This effort will examine issues and opportunities within each of the Central City's quadrants.
Facility Plan	A planning statement that Oregon state agencies prepare in order to better plan state facility needs and to comply with state law. The Oregon Department of Transportation (ODOT) prepares this type of document to inform decision makers, including the Oregon Transportation Commission, of its intent relative to the future development of its transportation infrastructure.
I-5 Broadway/Weidler Interchange Improvements Report	This overall document, which has been prepared to document the recommendations of the project's SAC relative to transportation improvements that have been developed, analyzed and narrowed to the Recommended Concept described in Section 5.
N/NE Quadrant and I-5 Broadway/Weidler Plans	The combined efforts of ODOT and the City of Portland's Bureau of Planning and Sustainability and Bureau of Transportation to plan land use, urban design and transportation improvements within the North/Northeast Quadrant of Portland's Central City. The transportation improvements are planned for both the I-5 freeway and the local street network near the I-5 Broadway/Weidler Interchange.
N/NE Quadrant Plan	The North/Northeast Quadrant Plan (N/NE Quadrant Plan) is the first of the quadrant-level planning efforts associated with Central City 2035. This planning effort addressed challenges and opportunities related to land use, urban design, the Willamette River and multimodal transportation infrastructure.
Portland Plan	The Portland Plan is a strategic plan for the City of Portland that sets broad goals for improving equity, prosperity, educational outcomes and human and environmental health in Portland. The Comprehensive Plan will implement the Portland Plan policies that relate to state-mandated long-range planning that guide land use, transportation, conservation, and capital projects. CC2035 will be adopted as a district plan of the Comprehensive Plan. The North/Northeast Quadrant Plan will be part of the CC2035 Plan.

V/C	Volume-to-Capacity ratio

I-5 Broadway/Weidler Interchange Improvements

Purpose of this Report — Relation to the Facility Plan

This report summarizes the process and steps that the Oregon Department of Transportation (ODOT) and two bureaus of the City of Portland, the Portland Bureau of Transportation (PBOT) and the Portland Bureau of Planning and Sustainability (BPS), have taken to date to address long-standing transportation issues in the North/Northeast Quadrant of Portland's Central City. In conjunction with the project's Stakeholder Advisory Committee (SAC) and an extensive public process that also examined potential land use changes and related opportunities in the North/Northeast Quadrant study area, the project team solicited, developed and evaluated a wide range of ideas and improvement concepts for both the Interstate 5 (I-5) freeway and local transportation issues in and around the I-5 Broadway/Weidler Interchange area.

This report provides an overview of this nearly two-year process as the project team, the SAC and numerous area stakeholders have contributed, shaped and narrowed the many improvement concepts. The result of this process, the project team's Recommended Concept, is described in Section 5 of this report. This document introduces and provides the background for a related document, called the ***Facility Plan for the I-5 Broadway/Weidler Interchange***. This plan is a technical and state-required document that specifically outlines ODOT's intentions relative to this segment of the I-5 facility and the interchange.

Purpose of the Facility Plan for the I-5 Broadway/Weidler Interchange

State of Oregon agencies prepare facility plans for state-owned infrastructure so that they and decision-makers may effectively manage, maintain and prioritize potential additions to or expansion of this infrastructure. The Facility Plan for the I-5 Broadway/Weidler Interchange represents a discussion draft of a facility plan that ODOT staff will present to the Oregon Transportation Commission (OTC) later this year regarding recommended improvements to I-5 in the area around the I-5 Broadway/Weidler Interchange between Interstate 84 (I-84) and Interstate 405 (I-405) at the Fremont Bridge. This Facility Plan will represent and confirm, if adopted by the OTC, the state's long-range intent relative to this section of I-5 and the I-5 Broadway/Weidler Interchange.

1. Introduction (The Story)

Combining Land Use and Transportation Planning

Portland is nationally recognized for innovations linking land use and transportation planning. Portland's Downtown Plan, adopted in 1972, and the Central City Plan, adopted in 1987, established a framework for land use and transportation within the central city.

In the summer of 2010, ODOT, PBOT and BPS initiated a partnership to begin co-developing land use and transportation concepts for the North/Northeast quadrant of the central city (N/NE Quadrant) through an iterative process involving the public and area stakeholders. The project includes identifying specific improvements to the I-5 freeway within the overall project study area (see Figure 1), between I-84 and I-405 (at the Fremont Bridge), and improvements to the I-5 Broadway/Weidler Interchange area.

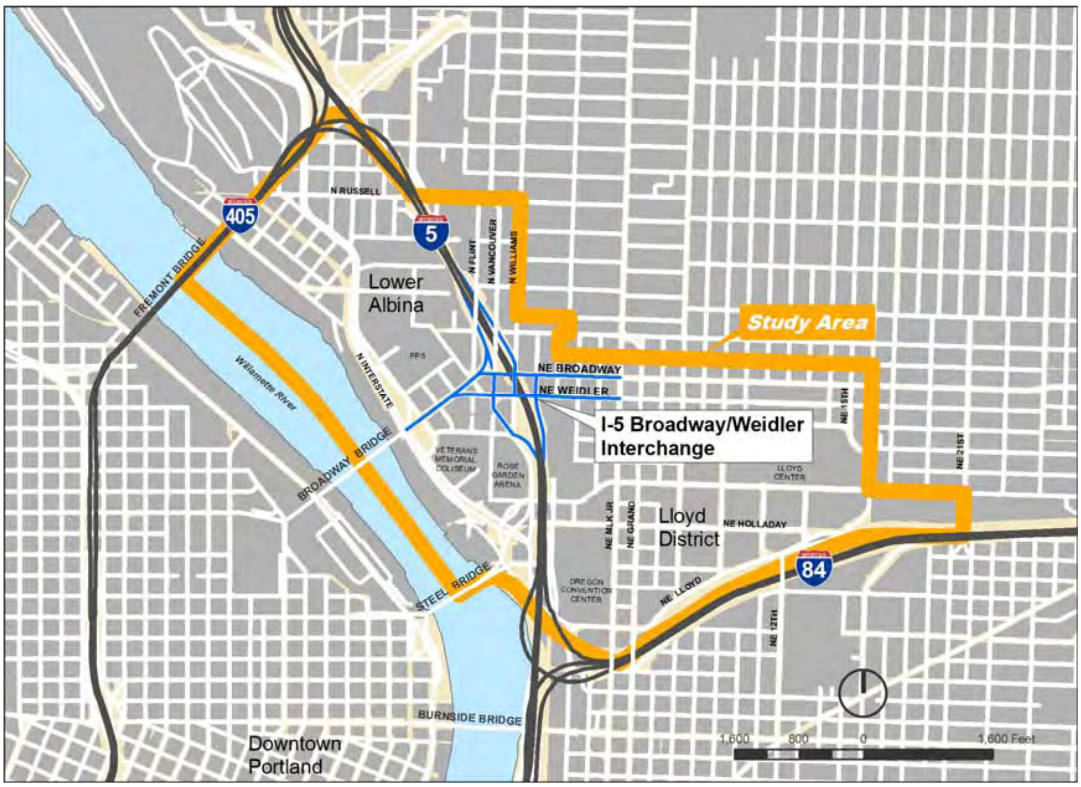

Figure 1: Study Area for the N/NE Quadrant and I-5 Broadway/Weidler Plans Project

This joint effort represents a new land use-transportation approach in planning improvements to urban freeway interchanges. This approach combines the planning of local strategies for land use, urban design and local transportation improvements, typically a City responsibility, with the planning of interstate freeway improvements, which is an ODOT responsibility. The project's approach for freeway improvements was to address long-demonstrated safety and operational issues that, if scaled according to community aspirations, would contribute to the continued vitality of the Central City and the mobility needs of the region and state. Due to multiple constraints, freeway improvements were to focus on existing safety and reliability issues and not necessarily increase capacity to meet future travel demands.

This collaborative approach between ODOT, the City and the North/Northeast Portland community, examined transportation and land use solutions concurrently over the course of a five-phase process. In the end, it resulted in land use and transportation changes in the quadrant that are mutually agreeable to both the City of Portland and to ODOT. The land use changes and urban design strategies for the City are documented in the North/Northeast Quadrant Plan (as part of the 2035 Central City Plan) and the transportation changes are documented in this report and ODOT's Facility Plan. Though developed within the same process, the land use and transportation improvements would result in two different groups of documents for the two partnering agencies as shown in Figure 2.

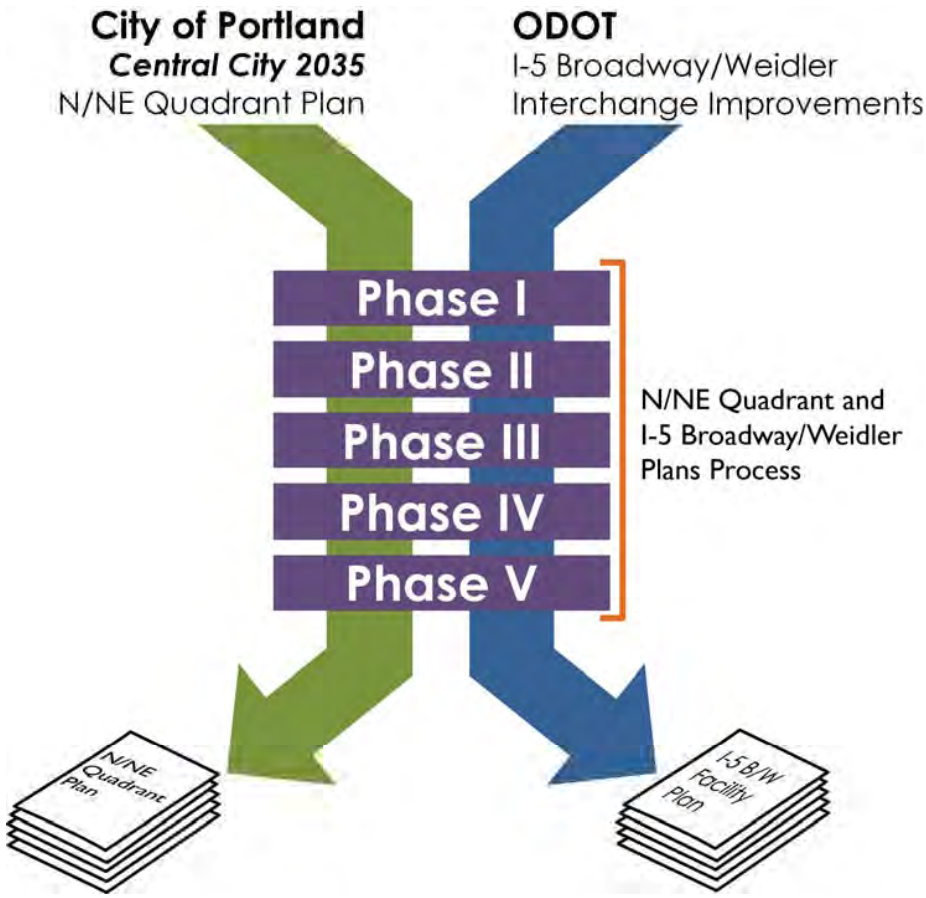

Figure 2: Joint Effort for the N/NE Quadrant and I-5 Broadway/Weidler Plans Project: Examining Land Use and Transportation Elements Concurrently

Previous Studies of I-5 Freeway Issues between I-84 and I-405

Previous studies by ODOT and the City of Portland have attempted to address the considerable safety and operational issues of the I-5 freeway between I-84 and I-405 (Fremont Bridge). This segment of I-5 has not been improved since it was built in the 1960s and it remains one of the few sections of freeway in the region where there are only two through lanes in each direction. The safety and operational issues here derive largely from the close spacing of the I-84, Broadway/Weidler, I-405 and Greeley interchanges that occur within this short segment of I-5 and the high proportion of traffic volume entering onto and exiting from I-5 that create "weave" maneuvers between motorists entering and exiting the freeway.

As these studies were conducted and concept plans developed over the past 25 years, both ODOT and the City of Portland recognized that, although they addressed the safety and operational issues of the I-5 freeway between I-84 and I-405, the physical impacts of the solutions were greater than anyone desired. These previous efforts relied on the use of braided ramps to eliminate the weave conditions. While the traffic benefits of these solutions were demonstrated, concerns over their cost, the widened freeway footprint and the visual impacts of multiple new structures prevented their implementation. Figure 3 shows the I-5: Greeley – N. Banfield Modified Concept from 1990-1996.

Figure 3: I-5: Greeley – N. Banfield Modified Concept (1990-1996)

As additional studies were undertaken, the extent of proposed freeway improvements, and the financial costs and community impacts associated with them, began to narrow. Yet even with the last major look at potential improvements to I-5 in the study area in 2007, the project costs, right-of-way (ROW) needs and the associated community impacts were found to be too great to move forward with implementation. These three factors resulted in improvement proposals that had little community support beyond the operational benefits to the freeway. See Appendix X -- Building the System: I-5 between I-84 and I-405, History of Freeway Improvement Plans, for a summary of improvement plans for this segment of freeway over the last 25 years.

With the Recommended Concept as described in Section 5, the extent (or scope) of the freeway improvements, and the financial costs and community impacts associated with the concept, has been narrowed considerably. Freeway safety and operations have been demonstrated to improve and the project costs appear relatively manageable. The greatest proportional decrease in scale occurred by reducing the amount of additional ROW needed and the community impacts associated with the Recommended Concept. This narrowing of the scope of the project, and its related costs and impacts, is illustrated in Figure 4.

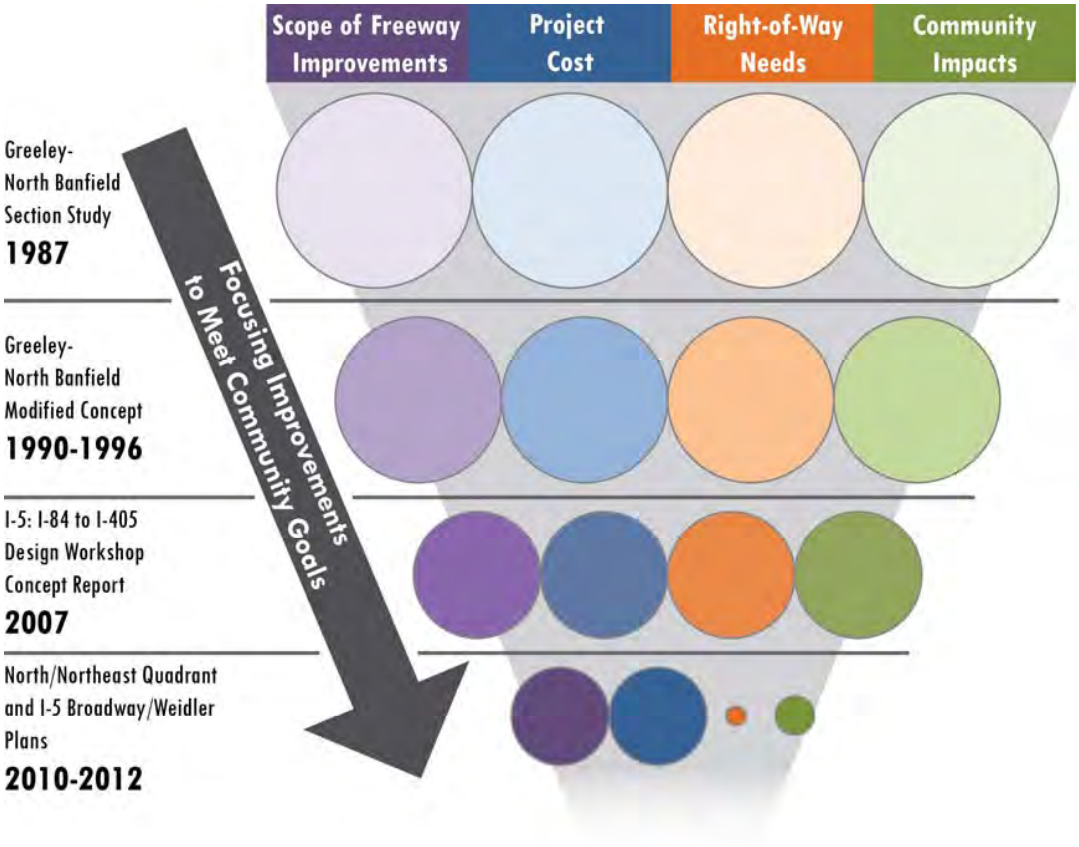

Figure 4: Extent of Freeway Improvements, Costs and Community Impacts from Studied Improvements to I-5 between I-84 and I-405 over Time

The result of the close collaboration between ODOT, the City, the project's SAC and the public is that an appropriately-scaled set of improvements has been developed and evaluated that benefits the project partners and the community. This considerable narrowing, or focusing, of the extent of freeway improvements is critical for several reasons summarized below.

For the community and neighborhoods immediately surrounding the freeway, the reduction in community impacts means that the displacements experienced during the original construction of I-5 freeway in the area will not be repeated or exasperated.

For the project's SAC, the reduction in impacts and the additional benefits of enhanced connectivity in the study area demonstrates that their work on project goals and objectives are now reflected in the resulting Recommended Concept (as described in Section 5).

For the City of Portland, the scale and nature of the project's Recommended Concept can be seen to improve transportation elements in the North/Northeast Quadrant that facilitate the continued growth and evolution of the quadrant as a vital Central City district and to support the land use and urban design goals and elements of the City's North/Northeast Quadrant Plan.

And for ODOT, the reduced scale of the project's Recommended Concept demonstrates safety and operational improvements to the mainline of the I-5 freeway and yet the reduced costs, the greatly reduced ROW needs and greatly reduced community impacts mean that an implementable project is achievable for this critical segment of freeway.

2. The Plan Development and Public Involvement Process

The Process: The Stakeholder Advisory Committee and Public Outreach

ODOT and the City undertook a comprehensive public process, complete with a professional process facilitator, that included numerous outreach events in the community, study area tours and many briefings with potentially affected stakeholders and property owners.

An integral component of the process was a 30-member SAC with broad-ranging perspectives in the study area to advise the partner agencies at each step of the process. The SAC included members representing neighborhood, business, bicycle, pedestrian, transit, freight, rail, events facility and property owner interests. The five step project process is shown in Figure 5 and includes each of the significant project milestones as supported by the SAC.

This section will be expanded in later June 2012 to describe the full extent of the project's process, a synopsis of the collaborative and consensus-based meeting process and the full complement of public involvement efforts.

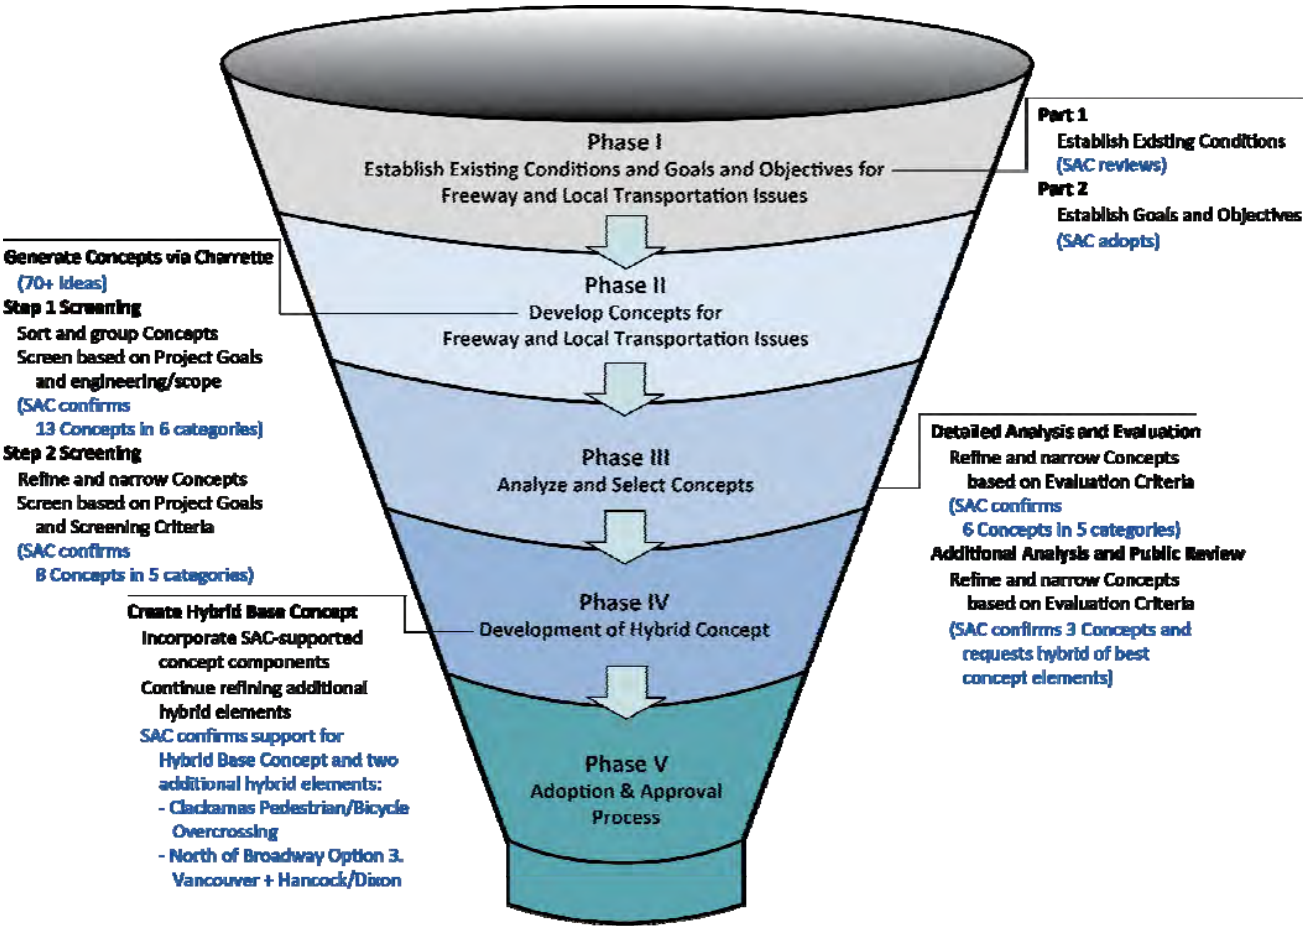

Figure 5: The Five-Phase Project Process (Transportation Focus)

3. Existing Conditions: What We Started With

Phase I, Part 1: Establish Existing Conditions for Freeway and Local Transportation Issues

In order to understand, inventory and document the nature of transportation issues in the N/NE Quadrant during Phase I of the project, the project team undertook analysis of transportation facilities and conditions in the project area. This documentation included findings relative to all transportation modes using the I-5 freeway and local transportation network. This effort allowed the project team and the SAC to develop and evaluate potential solutions to address the issues and opportunities that were present. The findings of this effort were compiled in Appendix X – The Transportation Existing Conditions Report. A summary of the findings is presented in this section.

Transportation Background: The Community

The varied landscape that today comprises the N/NE Quadrant is rooted in a vibrant history that spans over 150 years. Early development in this area focused on access to the Willamette River and included a river ferry linking downtown to Lower Albina at the foot of Russell Street as well as the extensive Albina railroad yards. What is now Lower Albina was incorporated as part of the City of Albina in 1887. That year also marked the opening of the original Morrison Bridge as the first Willamette River bridge crossing. The bridge spurred additional development along the east side of the river as a streetcar line was built running up Mississippi Avenue from the City of East Portland (incorporated in 1891). The riverfront in Lower Albina remains part of Portland's deep water port and remains industrial in character. Commercial development was located primarily along Russell Street and Williams Avenue. The southern portion of Albina was home to a vibrant jazz music scene focused along Williams Avenue.

Many of the fundamental characteristics of today's Lloyd District/Rose Quarter area came with the opening of the Lloyd Center mall and the Veterans Memorial Coliseum in 1960. The 1960s also brought the construction of the I-5 freeway cutting mostly north-south through the study area. The Lloyd Center mall and the redevelopment surrounding it has essentially created a second commercial and activity core within the Central City that was built at a more auto-oriented scale than downtown Portland.

The profound changes that construction of the Veterans Memorial Coliseum and I-5 freeway brought to the surrounding neighborhoods in the early 1960s understandably remain a sensitive issue. While the coliseum and freeway construction benefitted the desire for regional civic facilities and improved regional and state mobility, these improvements came with the displacement of residents and a commercial district that were the heart of Portland's African-American community. The impacts of these displacements continue to resonate with members of the community to this day and set an important context for any future improvements within the North/Northeast Quadrant.

Land-Use Context

Within the N/NE Quadrant, a number of broad primary use categories have been identified:

- Employment, office: 6-20 story development
- Mixed, commercial/residential: scale varies
- Residential: 2-6 story development
- Regional attraction: scale varies
- Employment, industrial: 1-3 story development

While the permissive Central Commercial (CX) zone pervades much of the N/NE Quadrant, roughly 32 acres of vacant or underutilized land currently exist. Figure 6 shows a considerable amount of underutilized land within the central Lloyd District area of the quadrant. Despite the relatively slow pace of development in the quadrant, some recent projects have leveraged the unique historic character of the quadrant and repurposed buildings that existed before freeway construction in the area. Figure 7 shows the Left Bank building where considerable private investment has rejuvenated one of the more significant buildings remaining from the period prior to construction of the coliseum and the freeway.

Figure 6: Underutilized Land Remains Available for Development in the N/NE Quadrant

Figure 7: Recent Investment in the Quadrant Exemplified by the Leftbank Building Renovation

Transportation Background

The N/NE Quadrant includes a range of existing transportation facilities including three Willamette River bridges, four light rail transit lines, the Eastside Esplanade pedestrian/bicycle path and three major freeway interchanges along I-5.

Transportation – The Role and Function of I-5

I-5 provides the main north-south through-route serving the west coast of the United States from Mexico to Canada and links population centers from Southern California, eastern portions of the Bay Area in Northern California, the Rogue Valley in Southern Oregon, the Willamette Valley, the Portland-Vancouver metropolitan area and the Puget Sound region. Within the N/NE Quadrant, I-5 connects with the western terminus of I-84, which is the east-west freeway for the state of Oregon. On the northern edge of the project study area, I-5 intersects with I-405 and the Fremont Bridge; I-405 acts as part of the downtown freeway loop on the western edge of downtown Portland.

I-5 is identified as part of the National Truck Network which designates highways (including most of the Interstate Highway System) for use by large trucks. In the Portland-Vancouver area, I-5 is the most critical component of this national network as it provides access to the transcontinental rail system, deep water shipping and barge traffic on the Columbia River, connections to the ports of Vancouver and Portland as well as the majority of the area's freight consolidation facilities and distribution terminals.

Freight volumes moved by truck to and from the region are projected to more than double over the next 25 years. Vehicle-hours of delay on truck routes in the Portland-Vancouver area are projected to increase by more than 90 percent over the next 20 years. Growing demand and congestion will result in increasing delay, costs and uncertainty for all businesses that rely on this corridor for freight movement.

Historic Traffic Volumes on I-5

Figure 8 shows historic traffic volumes on I-5 through central Portland spanning the time from when I-5 opened in 1966 through 2009. When I-5 opened in 1966 it carried an average of 60,000 vehicles per day in both directions. By the mid-1970s typical weekday traffic had increased to over 100,000 vehicles per day and to over 140,000 per day by the mid-1990s through the mid-2000s. Average daily volumes have been relatively flat for the past 15 years, with a recent decline to below 140,000 for 2008 and 2009. The decline in the past two years is likely attributable to reduced trips resulting from reduced economic activity. A similar reduction in average daily volumes can be seen during the recession years in the early- to mid-1980s.

Figure 9 shows that truck traffic on I-5 in Portland's Central City has increased at a higher rate than overall traffic. Daily truck volumes on I-5 at the Marquam Bridge averaged less than 6,000 per day from the late 1960s through the mid-1970s. During the 1990s truck volumes grew to nearly 10,000 per day and growth in the 2000s has increased average daily truck volumes to over 12,000 per day. The existing conditions analysis also revealed that a significant portion of I-5 and some local streets connecting with freeway ramp terminals were near capacity as indicated by volume-to-capacity ratios (V/C) between 0.81 and 0.99. A V/C ratio of 1.0 indicates that a transportation facility is at capacity for motor vehicles. Significant congestion typically occurs with the V/C ratios found on the freeway and local streets near the I-5 Broadway/Weidler Interchange.

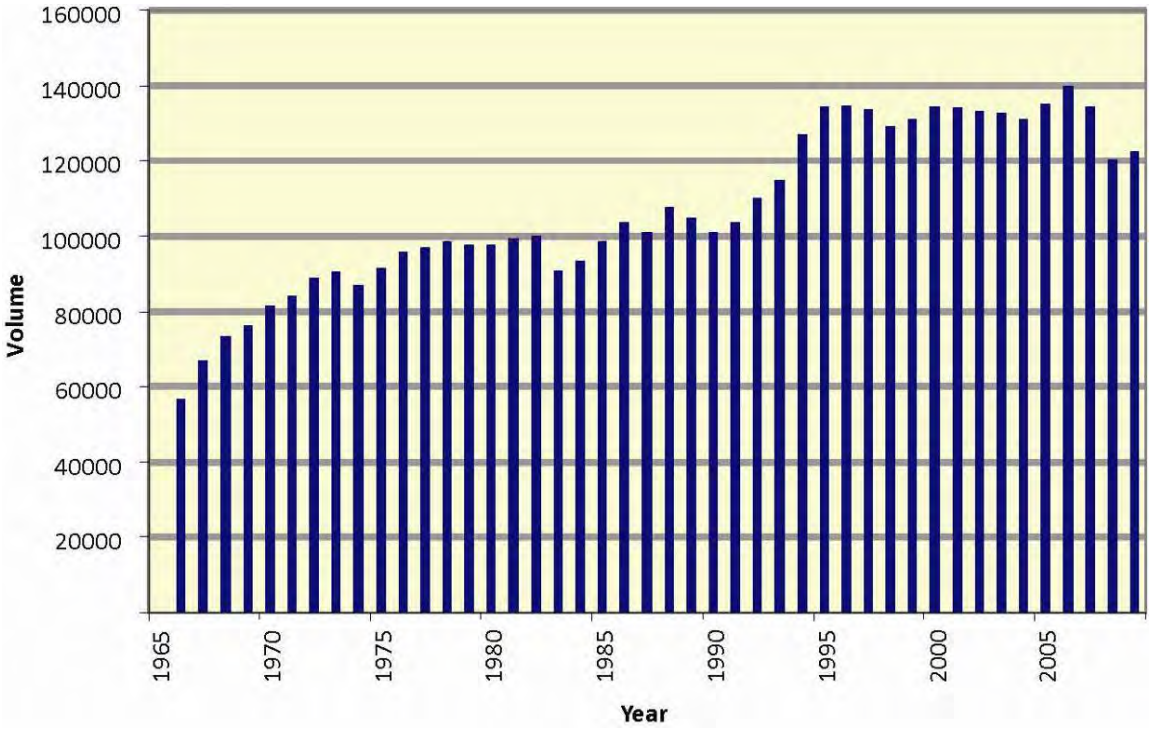

Figure 8: Historic Traffic Volumes on I-5 at Holladay Street (Average Daily Two-Way Traffic)

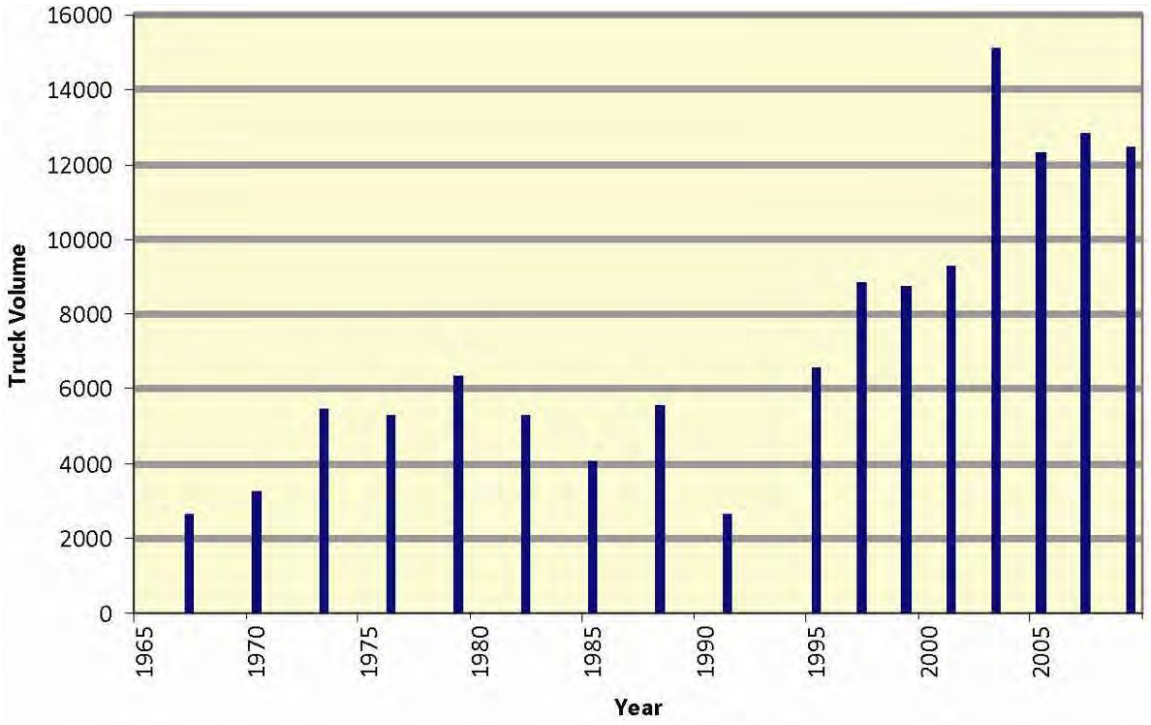

Figure 9: Historic Truck Volumes on I-5 at Marquam Bridge (Average Daily Two-Way Traffic)

I-5 Traffic Bottleneck and the Spreading of Peak Hour Congestion

In the context of the regional freeway network, the N/NE Quadrant sits at a crossroads of three regionally significant freight and commuter routes: I-5, I-84 to the south and I-405 to the north. As a result, the freeway interchanges within the N/NE Quadrant experience some of the highest traffic volumes found in the state. Table 1 shows the average daily traffic volumes entering and exiting I-5 over the two-mile segment within the N/NE Quadrant study area.

Table 1: Average Daily Traffic Volumes Entering and Exiting I-5 in the Study Area

I-5 Direction	Total Ramp Volumes Entering I-5	Total Ramp Volumes Exiting I-5
Northbound	29,970	37,530
	Includes entrance ramps from: • I-84 • Broadway/Williams Avenue	Includes exit ramps to: • Weidler Street/Victoria Avenue • I-405 • Greeley Avenue
Southbound	34,020	47,200
	Includes entrance ramps from: • Greeley Avenue • I-405 • Wheeler/Winning/Williams	Includes exit ramps to: • Broadway/Vancouver Avenue • I-84 • Morrison Bridge/Hwy 99E

Recent trends for I-5 traffic (no growth in daily traffic volumes and increasing truck traffic) are consistent with the volume data which indicate that the two through lanes for I-5 through central Portland are operating at capacity during peak hours. The congested conditions lead some users whose trips have flexibility to choose to travel earlier or later (which spreads congestion to both before and after typical peak traffic hours) or to use different travel routes. To the extent possible, major freight haulers in the area attempt to avoid operating on congested facilities in peak hours. Growth in peak period truck traffic on I-5 indicates that freight operations on I-5 during peak periods is required for various business reasons. Figure 10 represents traffic analysis that has shown that peak period congestion for I-5 in the N/NE Quadrant has been spreading beyond the typical peak traffic hours.

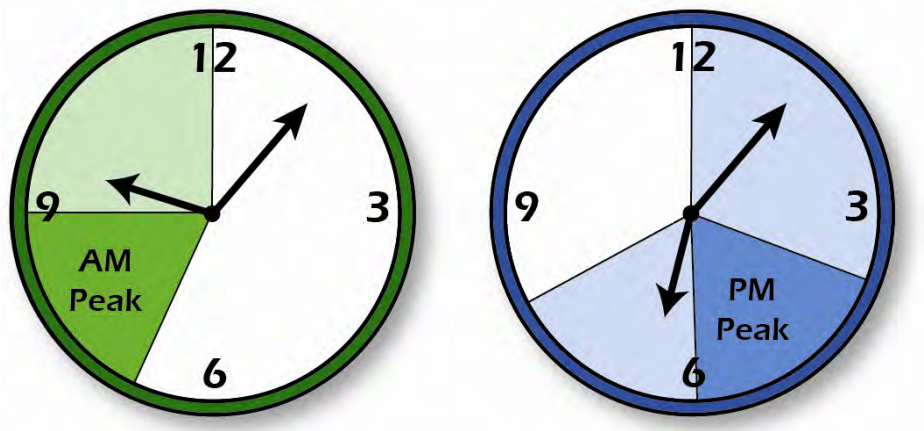

Figure 10: Peak Period Congestion on I-5 Spreading beyond Typical Peak Hours

Freeway Safety and High Frequency of Collisions

Freeway vehicle collisions within the N/NE Quadrant continue to be a major safety concern. Rear end collisions make up nearly three-quarters of all incidents on I-5, while sideswipe collisions comprise nearly one-fifth of incidents. While the severity of crashes, as indicated by the number of fatal accidents, is relatively low, incidents involving property damage and injury occur frequently within the quadrant and contribute to congestion on this segment of the freeway. This condition is exacerbated by the lack of emergency shoulders on this stretch of I-5.

Figure 11 shows the number of collisions on I-5 in the project study area and the rate of collisions per one-tenth mile segments. The figure shows that the highest frequency of collisions occurred in the southbound direction south of the I-5 Broadway/Weidler Interchange (156 collisions). The highest frequency of accidents northbound also occurred south of the I-5 Broadway/Weidler Interchange (122 collisions). Overall the southbound direction had a higher level of collisions over this five-year time period with 292, compared to northbound with 180 collisions. I-5 in the project area experiences the highest crash rate in the state of Oregon.

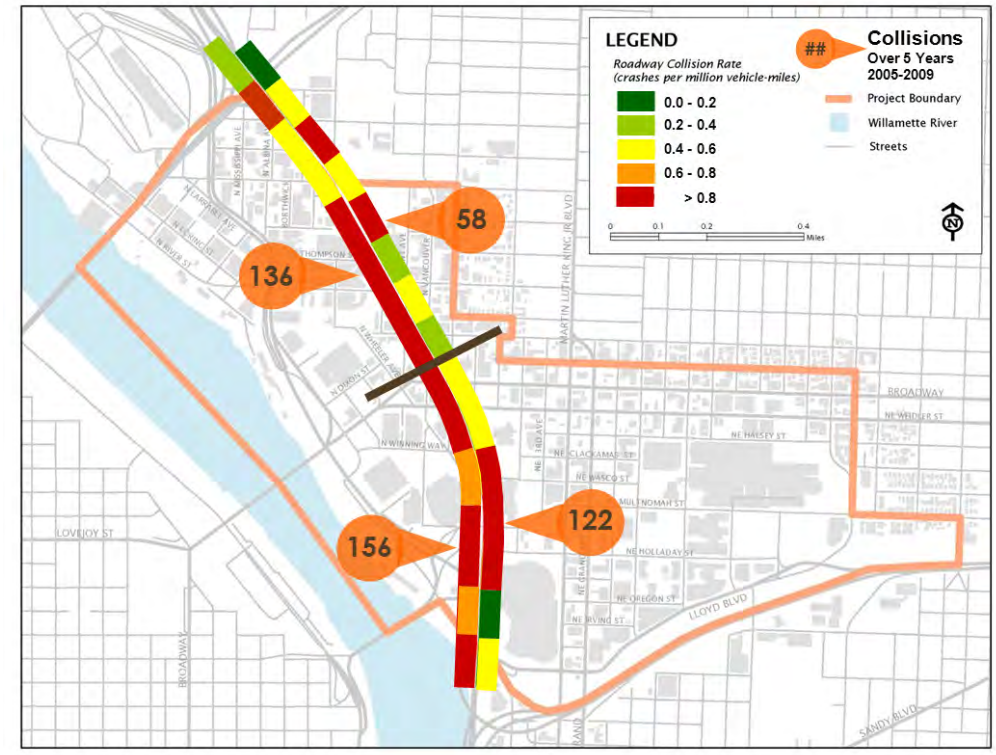

Figure 11: Freeway Collision Rate and Frequency

Weave Movements and Operational Issues

Over its nearly two-mile course through the N/NE Quadrant study area, I-5 connects with five entrance and exit ramps northbound and six entrance and exit ramps southbound. As drivers enter and exit I-5 at these closely-spaced intervals and weave with each other in lane-changing maneuvers, "turbulence" or "friction" occurs and slows overall traffic. Figure 12 illustrates the weave movements for vehicles entering and exiting the freeway.

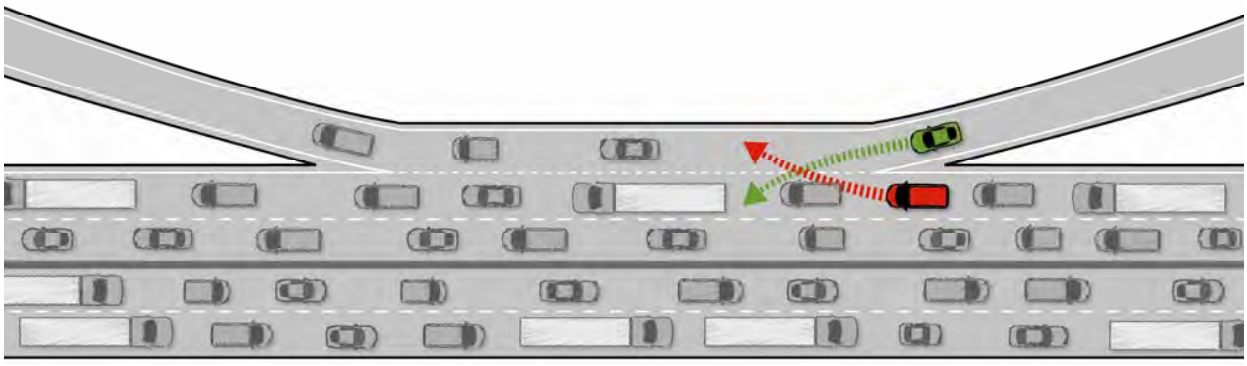

Figure 12: Weave Maneuvers from Entering and Exiting Traffic in Close Proximity

The turbulence in traffic flow caused by these weave maneuvers is especially acute in the N/NE Quadrant as drivers coming from entrance ramps or bound for exit ramps must make these lane changes within very short distances. This is especially true for the segment between the I-84 and I-405 interchanges as motorists use I-5 for overall through trips along I-5, for traveling between I-84 and I-405 and to access use the Broadway/Weidler Interchange for regional destinations like the Rose Garden Arena, the Veterans Memorial Coliseum, the Oregon Convention Center and the Lloyd Center mall.

Table 2 shows the distances between entrance and exit ramps on I-5 between interchanges where these weaves occur. Each of the distances noted for these weave transitions is well below current freeway design standards. In the shortest weave section, only 1,075 feet is available for drivers to merge onto I-5 from Broadway northbound in the same area where drivers are exiting from I-5 onto I-405 and the Fremont Bridge.

While the northbound Broadway to I-405 weave section is the shortest, it has the fewest accidents of the four weave sections associated with the interchange. This is due in part to this weave section having lower volumes and allowing two lanes the opportunity to access the I-405 exit ramp. The southbound Wheeler/Winning Way to I-84 weave section is somewhat longer at 1,300 feet, but it has the highest rate of crashes. This is due to higher overall volumes, higher volumes of vehicles making the conflicting weave movements and that all I-5 southbound traffic destined for I-84 must weave over into the single, outermost auxiliary lane.

Table 2: Weave Distances between Entrance and Exit Ramps in the Study Area

I-5 Direction	Weave Section	Weave Distance
Northbound		
	I-84 to Weidler	1,360 feet
	Broadway to I-405	1,075 feet
Southbound		
	I-405 to Broadway	2,060 feet
	Wheeler/Winning to I-84	1,300 feet

The slowing not only impacts the outer through traffic lane, where the weave movements are occurring for vehicles entering and exiting the freeway in this short section. As other drivers attempt to avoid the slowing in the outer through lane, they often attempt to move over to the second (and only other) through traffic lane. Drivers attempting to access the second lane to avoid the weave-related congestion, they encounter higher speed traffic. This significantly contributes to the high collision rates noted earlier and shown in Figure 11.

Transportation – The Local Street Network

The N/NE Quadrant contains a number of auto, transit, bicycle, pedestrian and freight connections of local and regional significance. The major city traffic streets serving the N/NE Quadrant include Broadway, Weidler Street, Grand Avenue, Martin Luther King Jr. Boulevard, Lloyd Boulevard and Interstate Avenue.

Bicycle Network Cross-Roads

As a major crossroads for bicycle traffic, the N/NE Quadrant was found to include some of the highest bicycle ridership in the city. Both the Broadway Bridge and the Steel Bridge provide critical routes for bicyclists into and out of the north downtown area. These bridge approaches concentrate traffic for all modes crossing the Willamette River including bicycle trips. Major east-west bicycle facilities extend east of the Broadway Bridge via Broadway and Weidler and east of the Steel Bridge via Multnomah and Lloyd Boulevard. Major north-south bicycle facilities extend north of the bridges via Wheeler, Flint, Vancouver and Williams. In 2011, the two highest-volume bicycle count locations in Portland were at the intersections of Vancouver and Russell (4,105) and Interstate Avenue and Lloyd Boulevard just east of the Steel Bridge (3,995).

Bicycle facilities within the N/NE Quadrant fall into the following City of Portland functional classifications:

- City Bikeways – Serve the Central City, regional and town centers, station communities, and other employment commercial, institutional, recreational destinations
- Off-Street Paths – Serve as transportation corridors and recreational routes
- Local Service Bikeways – Serve local circulation needs and access to adjacent properties

The designated City Bikeways within the study area include Interstate Avenue, Broadway, Weidler Street, Vancouver Avenue, Williams Avenue, Martin Luther King Jr. Boulevard, Grand Avenue, Multnomah Street and Lloyd Boulevard. Off-Street Paths are provided on the Eastside Esplanade along the east side of the Willamette River and across the Broadway and Steel Bridges; two planned trail projects were noted along the north side of I-84 and along the eastern edge of the Willamette River extending north of Veterans Memorial Coliseum area. The remaining streets are designated as Local Service Bikeways.

Bicycle-Vehicle Collisions

The data for bicycle-vehicle collisions in the study area showed that they occurred at multiple locations but at a relatively low frequency for the three years surveyed. The frequency of these collisions was found to be generally three or fewer incidents at any one location. The four locations with the highest frequency all occurred along Broadway, and the two highest-frequency locations were west of I-5 where bicycle activity was typically the highest. The two locations with the highest frequency bicycle-vehicle collisions were at Broadway/Wheeler and at Broadway/Williams (at the intersection with the I-5 northbound entrance ramp). There were no identified fatalities for bicycle-vehicle collisions in the study area during the three years surveyed. Figure 13 shows the major bicycle corridor movements nearest the I-5 Broadway/Weidler Interchange area.

Figure 13: Major Bicycle Movements near I-5 Broadway/Weidler Interchange

Pedestrian Network and Safety

As an urban Central City area with multiple commercial and regional facilities, the N/NE Quadrant has a significant amount of pedestrian activity and yet it also faces a number of existing pedestrian mobility issues. Streets with high volumes of both vehicles and pedestrians, especially before and after events at the Rose Garden Arena, the Veterans Memorial Coliseum and the Oregon Convention Center, provide only minimal accommodations for pedestrians. Barriers, both physical and perceptual, created by the constrained or infrequent crossings of the freeway and high-traffic local streets, largely impede walking activity except when large events dictate no other choices for pedestrians.

A large volume of spectators accessing Rose Quarter events on the west side of I-5 park on the east side of the freeway and walk to the Rose Garden Arena and the Veterans Memorial Coliseum. The combination of large volumes of pedestrians, accessing and exiting the venues over a compressed time period, and the minimal pedestrian facilities available to them at the existing freeway crossings constitutes a significant safety hazard. These conditions are most acute on the Broadway and Weidler Street overcrossing structures built in the 1960s.

Pedestrian-Vehicle Collisions

The highest rates of pedestrian-vehicle collisions were found to occur east of I-5 focused along Multnomah Street, Grand Avenue and the Broadway/Weidler Street/15th Avenue area. The majority of the incidents occurred east of Martin Luther King Jr. Boulevard in the vicinity of the Lloyd Center mall.

Of the two pedestrian fatalities within the study area during the study period, the one in closest proximity to the interchange area was located at the high pedestrian activity intersection of Multnomah Street/Wheeler Street. Pedestrian use is heavy here due to its proximity to the Rose Garden Transit Center, the Rose Garden Arena, the Veterans Memorial Coliseum, and close access to the Steel Bridge and the Eastbank Esplanade.

Figure 14: Major Pedestrian Movements

Pedestrian facilities within the N/NE Quadrant included the following functional classifications:

- Pedestrian Districts – Give priority to pedestrian access in areas of high pedestrian activity
- Pedestrian-Transit Streets – Create a strong and visible relationship between pedestrians and transit
- City Walkways – Provide safe, convenient, and attractive pedestrian access to activities along major streets; provide connections between neighborhoods; and provide access to transit
- Off-Street Paths – Serve recreational and other walking trips
- Local service Walkways – Serve local circulation needs for pedestrians

The majority of the streets within the study area are within designated Pedestrian Districts. The Steel Bridge, Interstate Avenue, and Holladay Street are designated as Pedestrian-Transit Streets; the Broadway Bridge, Broadway, Weidler Street, Martin Luther King Jr. Boulevard, Multnomah Street, 7th Avenue and 9th Avenue are designated as City Walkways. Finally, the Eastbank Esplanade along the east side of the Willamette River is designated as an Off-Street Path. Figure 14 shows the major pedestrian movements nearest the interchange area.

Access to Lower Albina and Freight Uses

Within the N/NE Quadrant, Lower Albina is a designated Freight District bounded by River Street, Knott Street, Interstate Avenue, and Albina Avenue. Mainly zoned for industrial uses, Lower Albina supports a wide range of both new and older industrial businesses.

Freight facilities within the N/NE Quadrant fall within the following functional classifications:

- Freight Districts – Provide safe and convenient truck mobility and access in industrial and employment areas
- Regional Truckways – Facilitate interregional movement of freight
- Priority Truck Streets – Serve as the primary route for access and circulation in Freight Districts, and between Freight Districts and Regional Truckways
- Major Truck Streets – Serve as principle routes for trucks in a Transportation District
- Truck Access Streets – Serve as access and circulation routes for delivery of goods and services to commercial and employment neighborhoods
- Local Service Truck Streets – Serve local truck circulation and access
- Railroad Main Lines – Transport freight cargo and passengers over long distances
- Railroad Branch Lines – Transport freight cargo over short distances on local rail lines

Regional Truckways are designated along the Fremont Bridge, I-405, I-5, and I-84. Priority Truck Streets are designated along Interstate Avenue and Tillamook Street near the Lower Albina Freight District. Major Truck Streets include Interstate Avenue and Larrabee Avenue between Tillamook Street and the Steel Bridge; along Broadway and Weidler from the Steel Bridge to Grand Avenue; and along Martin Luther King Jr Boulevard and Grand Avenue. The majority of the remaining street network is designated as Truck Access Streets and Local Service Truck Streets.

Local Street Conditions for Motor Vehicles

Similar to the freeway data collection, daily volumes were collected on specific corridors within the study area to get a better understanding of the flow of motor vehicles over the course of a day. This helped to identify the more heavily utilized corridors in the study area, as well as when peak periods might occur on those corridors.

The Broadway/Weidler street couplet in the study area serves multiple functions to connect east-west with the Broadway Bridge, to provide access to the Broadway/Weidler commercial corridor near the Lloyd Center, to provide access to multiple regional destinations in the study area and to distribute vehicles to and from the I-5 Broadway/Weidler Interchange. It is not surprising then that analysis of traffic volumes found that the highest level of activity on study area corridors occurred at Broadway and near I-5 with approximately 30,800 daily trips. Though smaller in volumes, the Vancouver/Williams couplet forms a critical north-south link within the study area. And both of these couplets converge at the I-5 Broadway/Weidler Interchange.

The intersection of these high traffic streets occurs within the interchange area at six intersections known to transportation engineers and planners as "the Box" (shown in Figure 15). The top three ranked collision intersections in the N/NE Quadrant are all located in the Box. They are:

- Weidler Street at Vancouver Avenue
- Broadway at Vancouver Avenue
- Broadway at Williams Avenue

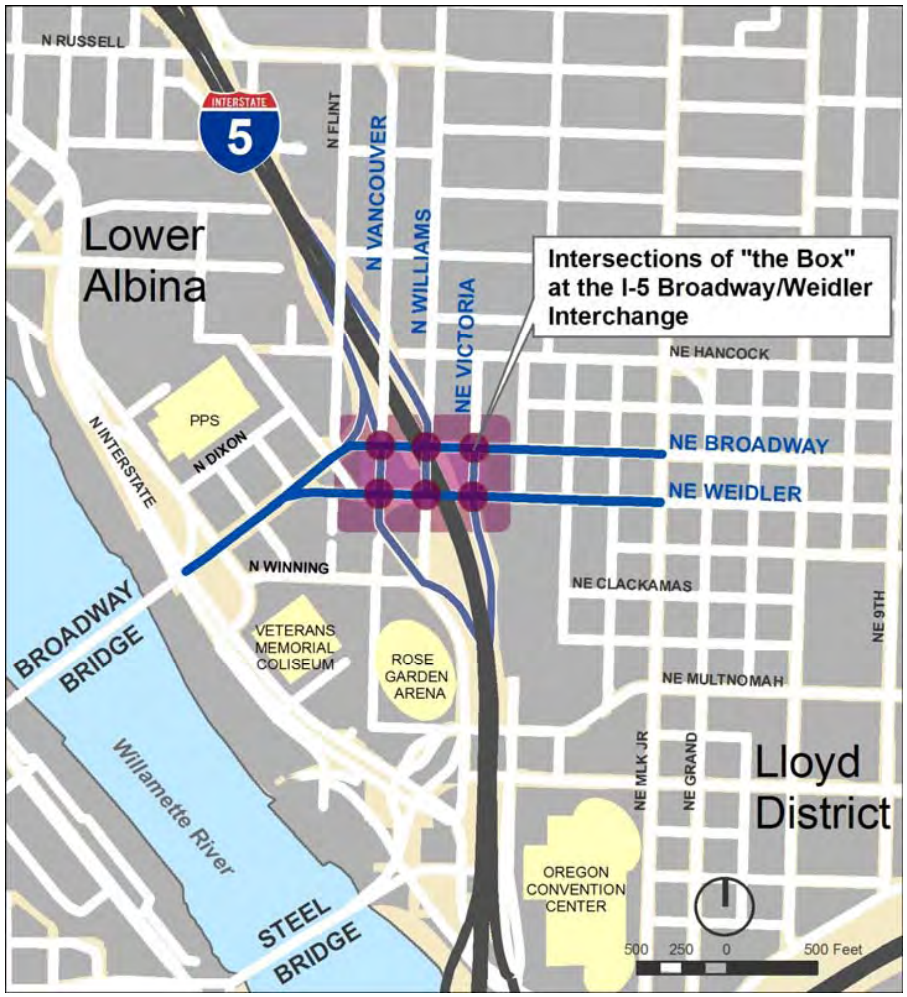

Figure 15: Constrained Intersections in the Area Known as "the Box"

Regional Destinations

The N/NE Quadrant with its mix of residential, industrial, office, and event space, draws visitors from around the Portland region. Regional destinations in the N/NE Quadrant include the Rose Garden Arena and the Veterans Memorial Coliseum, the Oregon Convention Center, the Lloyd Center mall, the Lower Albina Industrial District, government centers along Lloyd Boulevard (Metro, State of Oregon and Bonneville Power Administration offices) and commercial office towers along 7th and 9th Avenues. Figure 16 highlights the regional destinations within the study area.

Figure 16: Major Regional Destinations

Transit
The N/NE Quadrant is well-served by transit and the distribution of the routes provides sufficient geographic coverage so that many users in the quadrant walk relatively short distances (typically less than 500 feet) to access a transit line.

Transit service is provided in the N/NE Quadrant via ten bus routes and four MAX light rail lines: the Red, Blue, Green and Yellow lines. Transit is focused along the major corridors serving Broadway, Weidler Street, Martin Luther King Jr. Boulevard, Multnomah Street, Interstate Avenue, Vancouver Avenue, Williams Avenue, 9th Avenue and 15th Avenue. Within this immediate area, the following bus lines access the study area:

- Route 4 – Division/Fessenden
- Route 6 – Martin Luther King Jr Blvd
- Route 8 – Jackson Park/NE 15th
- Route 9 – Powell/Broadway
- Route 35 – Macadam/Greeley
- Route 44 – Capitol Hwy/Mocks Crest
- Route 70 – 12th Ave
- Route 73 – NE 33rd Ave
- Route 77 – Broadway/Halsey
- Route 85 – Swan Island

Corridors with the heaviest transit on/off patronage are along the MAX lines with the east/west corridor along Holladay Street (due to three MAX routes serving this corridor). Bus on/off patronage is highest in the study area along the Martin Luther King Jr. Boulevard/Grand Avenue couplet, the Broadway/Weidler couplet, and on Multnomah Street near the Lloyd Center.

In the area around the Box, existing bus routes use Broadway and Weidler Street for east-west operations and use Vancouver Avenue and Williams Avenue for north-south operations. The extension of the Portland Streetcar from northwest Portland across the Broadway Bridge to the Lloyd District, the Oregon Convention Center and down to the Oregon Museum of Science and Industry will operate along Broadway and Weidler Street beginning in September 2012. For the community, the City and other key stakeholders like TriMet, direct access to and from the Rose Quarter Transit Center (Rose Quarter TC) added emphasis on ensuring that north-south connectivity on the Vancouver/Williams couplet was maintained.

Connectivity
Although the City and the community wish to see additional development and improved urban design characteristics in the study area as it evolves toward becoming a more vibrant Central City complement to downtown Portland, it lacks frequent and welcoming connections across the I-5 freeway. For nearly a mile (0.8 mile) between Multnomah Street and Russell Street, the only connections across the freeway, in a critical area of the Rose Quarter and the Lloyd District, are the streets of the Box area (via Broadway, Weidler Street and Williams Avenue). In addition to the constrained sidewalks and bicycle facilities, these streets, especially Broadway and Weidler Street, further discourage non-vehicular travel due to their heavy traffic volumes associated with both arterial traffic and freeway interchange traffic. Figure 17 notes the limited opportunities to cross the freeway between Multnomah Street and Russell Street except within the constrained Box area.

Figure 17: Limited Number of Existing Crossings of the I-5 Freeway

The Environment and Cultural Resources

An Environmental Baseline Report (Appendix X) was prepared to provide an inventory of physical and cultural environmental features that should be considered during the development of interchange improvement concepts. This assessment did not consider the potential for site specific impacts but rather it identified the environmental conditions and constraints to consider when developing and evaluating the improvement concepts. The report also identified certain environmental elements that should be pursued further during the next study phase which will include completing an analysis that addresses compliance with the National Environmental Policy Act (NEPA).

The following summarizes the findings from the Environmental Baseline Report and describes issues to be considered during subsequent analyses.

- **Air Quality** – The traffic analysis prepared for both the freeway mainline and the local street system indicates that queuing is likely to be reduced compared with existing conditions and would likely not have a negative air quality impact. Some intersections will likely require a "hot spot" analysis during the NEPA phase to measure potential CO impacts.
- **Archaeology** – Background research found limited information on archaeological resources in the project area. However, the project location near the Willamette River indicates that a cultural resources investigation would likely be required during the NEPA phase.
- **Biology** – The assessment did not identify any biological resources directly at risk. However, construction noise and vibration could be a source of disturbance for certain bird species in the general area and should be addressed during the NEPA phase.
- **Hazardous Materials** – There are potentially hazardous sites in the vicinity of the reconfigured I-5 Broadway/Weidler Interchange that may require soil testing prior to excavation.
- **Historic** – The Bekins Building (407 N Broadway) and the Veterans Memorial Coliseum are on the Federal Register of Historic Places. Two other buildings in the immediate interchange study area (the Leftbank Building and the Paramount Apartments) have previously been determined to be eligible for the Federal Register. Additional historic analysis will be required during the NEPA phase. In addition to the assessment of the Federal Register status, the Environmental Baseline Report included structures identified in the Bosco-Milligan Foundation's *Cornerstones of Community: Building of Portland's African American History*.
- **Noise** – The Environmental Baseline Report included an inventory of potential noise sensitive facilities. A noise analysis will be conducted during the NEPA phase and the potential for noise mitigation through design will be considered.
- **Water Quality and Hydrology** – The majority of the I-5 facility in this area drains to a separated storm sewer, while the local streets in the area drain to a combined sewer overflow. Stormwater improvements associated with a project in this area would represent an improvement over existing conditions and would comply with current regulatory standards.
- **Wetlands** – No wetlands were identified in the immediate area of the interchange improvements.
- **Geology** – No specific geological issues were identified in the study area.
- **Socio-Economic and Environmental Justice** – The study area has a slightly higher percentage of individuals below the poverty level than the city as a whole and has a median income slightly lower than the city overall. I-5 currently bisects neighborhoods in this area and provides only a limited number of existing crossing facilities. The Broadway/Weidler couplet provides the only east-west crossing of the freeway between Multnomah Street and Russell Street.

The Environmental Baseline Report did not identify any environmental issues that would clearly limit the ability to design and implement interchange improvement concepts. However, there are several issues that merit the additional, detailed analysis that will be completed as part of the NEPA phase.

4. Developing and Narrowing the Concepts

Phase I, Part 2: Establish Project Goals and Objectives

Phase II: Develop Concepts for Freeway and Local Transportation Issues

The Concepts: from Project Goals and 70+ Ideas to a Recommended Concept

In order to address the freeway and local transportation issues in the Rose Quarter, the project team undertook establishing the existing conditions and issues for the freeway and local transportation network in the Rose Quarter as noted in Section 3. Based on these understandings, the project team and the SAC established the project purpose and goals for the project at the SAC meeting in January 2011. The project purpose, the transportation needs for the project and the project goals are documented below.

Project Purpose

The purpose of the transportation elements of this project is to address the need to improve safety and operations on I-5 in the vicinity of the I-5 Broadway/Weidler Interchange, support the goals of the N/NE Quadrant and serve the mobility needs of the region and state in a manner consistent with the overall goals and policies of the city, region and state.

The aim of the overall project is to integrate land use, urban design, and transportation strategies, policies and plans for the N/NE Quadrant and the I-5 Broadway/Weidler Interchange that balance, complement, enhance, protect, respect, revitalize, support, and sustain economic, environmental, and social interests.

Transportation Issues to Address

The identified transportation issues for the project to address and improve, specifically from the freeway and local transportation improvements perspective, are demonstrated by the following deficiencies.

Safety Issues on I-5 Freeway

- I-5 in the project area experiences the highest crash rate in the state of Oregon.
- In the project area, I-5 lacks standard safety shoulders in both northbound and southbound directions.
- In the project area, the distances between interchanges are far below standards.
- In the project area, the distances provided for weave movements are far below standards.

Congestion on I-5 Freeway

- In the project area, congestion and delays to motorists and freight commerce occur on the most critical north-south link in the region and the state.
- In the project area, the effects of congestion are spreading from morning and afternoon peak hours to off-peak hours throughout the day

Substandard Interface between I-5 Freeway and Local Streets

- The I-5 Broadway/Weidler Interchange configuration is not typical interchange layout and therefore can be difficult to navigate for motorists unfamiliar with the interchange area.
- The congested and substandard Broadway/Weidler overcrossings of the I-5 freeway currently provide the only east-west multimodal connections for 4,150 feet (0.8 mile) from Multnomah Boulevard to the south and Russell Street to the north within a growing urban district of the central city.

Substandard Local Street Network Connecting near the Freeway Interchange Area

- All transportation users, regardless of mode, along Broadway/Weidler and the surrounding interchange area suffer from the concentration of traffic in the area often referred to as “the Box” (i.e., the six intersections along Broadway and Weidler where all the primary east-west traffic they carry in the district intersect with the significant north-south traffic of Vancouver and Williams and all the traffic coming from or accessing the I-5 Broadway/Weidler Interchange).

Significant Additional Benefits of the Project

Several significant additional benefits are expected to be gained as a result of the project but were not necessarily considered the primary rationale for it. The following significant additional benefits are expected to be realized from the I-5 Broadway/Weidler Interchange Plan as noted below.

Seismic Upgrades to the Overcrossing Structures of I-5

- Reconstruction of the crossing structures over I-5 in the Rose Quarter (i.e., the Broadway, Weidler, Williams and Vancouver structures) would bring these overcrossings up to current seismic design standards. These structures provide access to two major bridges (the Broadway and Steel Bridges) and to the regional freeway network of I-5, I-405 and I-84.

Multimodal Upgrades to Broadway/Weidler/Williams/Vancouver

- Reconstruction of the crossing structures over I-5 in the Rose Quarter (i.e., the Broadway, Weidler, Williams and Vancouver structures) would facilitate upgrading the pedestrian and bicycle facilities on these critical overcrossings. These structures provide the primary north-south and east-west circulation for pedestrians, bicyclists and transit to traverse the freeway and the primary multimodal connection between the Lloyd District to the east and the Rose Quarter to the west.

Improved Freeway Facilities and Local Transportation Improvements Support the Land Use and Urban Design Elements of the N/NE Quadrant Plan

- In addition to facilitating rerouting of existing traffic movements during project construction, the incorporation of a "lid" structure over the freeway in the Broadway/Weidler/Williams area would provide opportunities for development or open space once construction concluded. These opportunities were identified as part of the land use/urban design analysis.
- By moving some of the freeway-bound traffic from existing bottlenecks in the "box" area, traffic volumes could be better balanced on the local street network.
- Reconstruction of the crossing structures over I-5, and the resulting improvements to pedestrian and bicycle facilities, also better facilitate the land uses and urban design characteristics envisioned by the City's N/NE Quadrant Plan. This plan, with its aspirations for a greater mix of land uses, greater intensity of development and fewer per capita auto trips, relies on the improved connectivity that the Recommended Concept provides.
- New overcrossings at Hancock/Dixon (pedestrians, bicycles and autos) and at Clackamas (pedestrians and bicycles only) would provide greater access and route alternatives to the now-congested "box" area of Broadway/Weidler between Flint Avenue and Victoria Avenue.

Goals and Objectives

In part because the I-5 Broadway/Weidler Interchange Plan is part of a larger, joint effort with City of Portland to also develop a land use and urban design plan for the N/NE Quadrant (the N/NE Quadrant Plan of the 2035 Central City), the goals and objectives for the overall project go beyond those typical for a transportation project. The overall project goals and objectives, as developed and approved by the SAC, that were used to develop, analyze and prioritize elements of the plan are described below.

1. A diverse mix of commercial, cultural, entertainment, industrial, recreational and residential uses, including affordable housing:

a. Provide opportunities for a variety of desired land uses in the quadrant and its subdistricts.
b. Foster distinct and complementary subarea identities within the quadrant.
c. Encourage uses that complement regional facilities including the Rose Garden, the Veterans Memorial Coliseum, the Oregon Convention Center and the Lloyd Center, while seeking to balance the episodic nature of these attractions with additional activities.
d. Increase residential density and improve jobs to housing ratio in the quadrant.
e. Increase affordable housing close to multimodal transportation systems and other appropriate locations.
f. Preserve existing housing in the quadrant.
   - Consider the impacts of proposed freeway interchange improvements on nearby residential dwelling-including land use and zoning impacts.
g. Provide open space, parks and recreation opportunities.
h. Provide access and highlight the quadrant's relationship to the Willamette River

2. Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages:

a. Create opportunities for new employment and a variety of employment types and levels.
b. Maintain or increase development potential where appropriate, e.g. through zoning, infrastructure and creation of new parcels.
c. Foster increase in future high density commercial development in appropriate locations while supporting and encouraging industrial activities in current industrial areas.
d. Retain and support existing and local businesses in the quadrant.
e. Support and strengthen the retail environment.

3. Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment:

a. Create opportunities for new strategically located parks and open space.
b. Maintain and create new access points to the river.
c. Enhance and create new fish and wildlife habitat, tree canopy, and green infrastructure in appropriate locations.
d. Support sustainable development goals and practices, including understanding and impacts of the Lloyd Eco-District.

4. Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods:

a. Create sensitive transitions between the more highly urban Central City and adjacent residential neighborhoods.
b. Foster concepts that support high-density development in the Lloyd District in appropriate locations and minimize their impacts on adjacent neighborhoods-Eliot, Irvington, and Sullivan's Gulch.
c. Provide for amenities and services, such as parks, schools and connections, at a level appropriate to support the type and intensity of development proposed.

5. A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system:

a. Improve multi-modal transportation accessibility and connectivity within and through the quadrant (e.g. via new or improved connections across freeway and in the district)
b. Encourage the use of transportation modes other than single occupancy vehicles to reduce auto emissions and vehicle miles traveled.
c. Improve circulation for all modes in the Rose Quarter Transit Center.
d. Accommodate present and future multimodal access needs of the quadrant
e. Improve freight access from freeway and railroads to industrial areas and major destinations.
f. Increase safety within the quadrant for all modes.
g. Provide a street hierarchy system that supports the quadrant's desired urban form, land use and livability goals.
h. Provide parking and transportation demand management strategies that better support the needs of the quadrant.
i. Support the ODOT High Speed Rail study, including analysis of alternative routes and station locations from existing rail facilities.

6. Improve the local circulation system for safe access for all transportation modes within the quadrant and at freeway interchanges:

a. Provide affordable, reliable, time saving and effective range of multimodal transportation solutions.
b. Connect regional trail system via local pedestrian and bicycle network.
c. Improve freeway operations for transit (C-TRAN), freight and auto.
d. Improve local access across freeways and rail crossings via improved, safer crossings and additional separated facilities for cars, pedestrians and cyclists.
e. Improve access to transit for residents, employees and visitors.
f. Seek to significantly reduce accident potential.
g. Minimize local land use impacts of transportation infrastructure.
h. Improve rail operations for freight and passengers.

7. Equitable access to community amenities and economic opportunities:

a. Avoid/minimize/mitigate involuntary displacement of quadrant residents, businesses and jobs.
b. Provide for a broad array of employment types and encourage living-wage jobs.
c. Provide for diversity of housing types that meets the needs of all income-levels and a variety of household types and lifestyles.
d. Provide for amenities and services, such as parks, natural areas, schools and connections, at a level appropriate to support the type and intensity of development proposed.
e. Increase the capacity of existing residents and business owners to share in the benefits from growth in the quadrant.
f. Ensure that the plan compliments economic development and housing strategies to build capacity for existing area residents and businesses.
g. Ensure that infrastructure improvement do not have disproportionate public health impacts.
h. Ensure that plan proposals address the needs of local residents and businesses while recognizing the importance of the quadrant's region-serving facilities and infrastructure.
i. Ensure the plan broadly supports the equity objectives established through the Portland Plan process.

8. Protection and enhancement of the cultural heritage of the area and its sub-districts:

a. Preserve, enhance and celebrate historic and cultural resources.
b. Avoid/minimize/mitigate demolition of historic and cultural resources.
c. Avoid or minimize adverse impacts on cultural or high priority community sites.

9. Develop an implementable improvement plan:

a. Ensure plan proposals are reasonable and implementable.
b. Ensure capital costs are within project limits.
c. Ensure plan proposals are consistent with relevant adopted local, regional and state land use and transportation goals and policies.
d. Ensure plan concepts and proposals are consistent with relevant goals and objectives of the Portland Plan and Central City 2035 processes.

10. Improve urban design conditions:

a. Ensure that the freeway and local street improvements support the urban design objectives of the overall N/NE Quadrant Plan.

The project considered how each of the transportation concepts developed and analyzed would accomplish the above goals. Specific freeway and local transportation evaluation criteria and measures were developed where applicable and are listed in the following subsection, Evaluation Criteria.

Evaluation Criteria

After the goals and objectives were established, project staff and the SAC worked to develop corresponding evaluation criteria to measure how well various concepts were addressing the goals. The following evaluation criteria were considered by the SAC at its meeting on July 28, 2011. The SAC largely supported the staff-recommended evaluation criteria at this meeting but additional fine tuning on the criteria occurred via additional correspondence with SAC members in August 2011. Table 3 summarizes the final evaluation criteria that were used in Phase III for evaluating the transportation concepts.

The column on the right contains evaluation criteria specific to the freeway interchange and related local transportation interface elements of the project. Each evaluation criterion is tied to one or more goal or objective. They are generally more specific or quantitative than the objectives and are tailored to the infrastructure project characteristics of the freeway planning elements.

Please see Appendix X – Phase III Evaluation Criteria for a detailed list of the corresponding evaluation measures that were used to analyze the concepts in Phase III. The results of this analysis are shown in Appendix X – Phase III Evaluation Worksheet.

Table 3: Evaluation Criteria for Evaluating Interchange Improvement Concepts in Phase III

Project Goals	Evaluation Criteria for Interchange Improvements
1. A diverse mix of commercial, cultural, entertainment, industrial, recreational and residential uses, including affordable housing.	• Minimize the need to purchase property for right-of-way. • Minimize residential units displaced and impacts to existing residential development
2. Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages.	• Minimize businesses displaced and impacts to existing businesses.
3. Enhanced fish and wildlife habitat, increased access to nature, and a sustainable built environment.	• Improve local connectivity. • Enhance the street tree canopy. • Reduce storm water run-off and energy use.
4. Infrastructure for healthy, livable, safe and vibrant communities (e.g. open space and parks, river access, schools, etc.) that respects and complements adjacent neighborhoods.	(Covered by other criteria relative to Goals 5 and 6.)
5. A full multimodal transportation system that addresses present and future transportation access and needs, both locally and on the freeway system	• Improve pedestrian and bicycle infrastructure and minimize pedestrian and bicycle conflicts with motor vehicles. • Identify and address system-wide transportation impacts of proposed interchange improvements on traffic diversion, local access and circulation, transit operations, freight movement and on land uses. • Reduce auto use and emissions. • Improve freeway safety.
6. Improve the local circulation system for safe access for all transportation modes within the quadrant and at freeway interchanges.	• Improve local circulation and freeway crossing opportunities. • Improve weaving conditions and through-traffic performance on the freeway near the I-5 Broadway/Weidler Interchange. • Lower likelihood of collisions on I-5 between Broadway and I-84. • Minimize construction impacts on land uses and transportation network and transit operations.
7. Equitable access to community amenities and economic opportunities.	• Minimize negative impacts to access, circulation and parking for major destinations/facilities and events.
8. Protection and enhancement of the cultural heritage of the area and its sub-districts.	• Minimize impacts to existing historic and culturally significant structures and high-priority community sites. • Minimize negative traffic pattern changes in residential neighborhoods.
9. Develop an implementable improvement plan.	• Estimate costs of improvements to the I-5 Broadway/Weidler Interchange and related local transportation improvements.
10. Improve urban design conditions.	• Improve connections between complementary land uses and major destinations. • Optimize development and open space opportunities.

70+ Concepts and Ideas – Identifying Concepts

In conjunction with the project's Stakeholder Advisory Committee (SAC), the city hosted a land use, local transportation and urban design charrette in February 2011. This charrette process resulted in ideas for an evolving land use, urban design vision for the N/NE Quadrant.

In April 2011, ODOT hosted a charrette that focused on transportation improvements to I-5 and the surrounding local transportation system. Since this charrette was focused on specific ideas for improving freeway operations and safety and the local street network, it had a more technical tone than the prior land use/urban design charrette which had resulted in ideas for a broad vision. Similar to the earlier charrette, the transportation charrette was implemented in conjunction with the SAC and included the following steps:

- March 30, 2011 – SAC worksession that provided context and elicited ideas on freeway operations, ramp locations, interchange function, overcrossings and a range of other local and freeway transportation improvements.
- April 11, 2011 – Public worksession, similar to the March 30th SAC worksession, which generated additional ideas on a range of improvements.
- April 12, 2011 – Staff worksession which processed ideas received from the earlier sessions. Included a midday public check-in period.
- April 13, 2011 – Additional staff worksession which further refined 6 specific concepts for freeway improvements and reported to a public open house that evening.

Phase II

Develop Concepts

70+
Ideas Generated

Freeway/Local Transportation Interface Charrette

More than 70 overall concepts and concept elements (individual components of an overall concept) were received from the SAC and the public during the transportation charrette process. Each of these concepts and elements were compiled and organized in a master matrix so that they could be grouped and sorted according to similar elements and so their characteristics could be noted. See Appendix X – Freeway Charrette Concepts Matrix for the details of the concepts generated. Figure 18 shows charrette participants sorting through the transportation issues and developing concepts while Figure 19 shows some of the early charrette sketches.

Concepts and Elements

In order to manage and describe the various components included in the wide range of ideas received during the transportation charrette, terminology was developed to provide consistency. Two key terms used were "concepts" and "elements." *Concepts* referred to ideas that included a group of ideas that defined all of the key elements that were needed to make an idea work for the freeway and local transportation system. *Elements* referred to the individual building block ideas that comprised overall or complete concepts. Elements included things such as specific ramp and crossing locations, interchange location, interchange type, braided ramps, etc. One concept would have likely included several different elements.

Concepts for Further Study

Since many of the more than 70 concepts and ideas included common or very similar elements, the concepts were grouped and sorted by major common elements so that they could be evaluated for addressing the project goals and objectives and by their performance, costs, impacts, etc.

Range of Concepts

The broad array of concepts ranged from doing nothing (2035 No-Build) to operational improvements on the freeway (such as adding safety shoulders, braiding exit and entrance ramps, and extending auxiliary lanes) to new interchange types that would be new to the Portland area (such as a roundabout-controlled diamond interchange or a diverging-diamond interchange). Some concepts also included de-coupling either the Broadway/Weidler or Vancouver/Williams couplets in order to simplify the interchange configuration.

Figure 18: Participants Developing Improvement Concepts at the Freeway/Local Transportation Interface Charrette (April 2011)

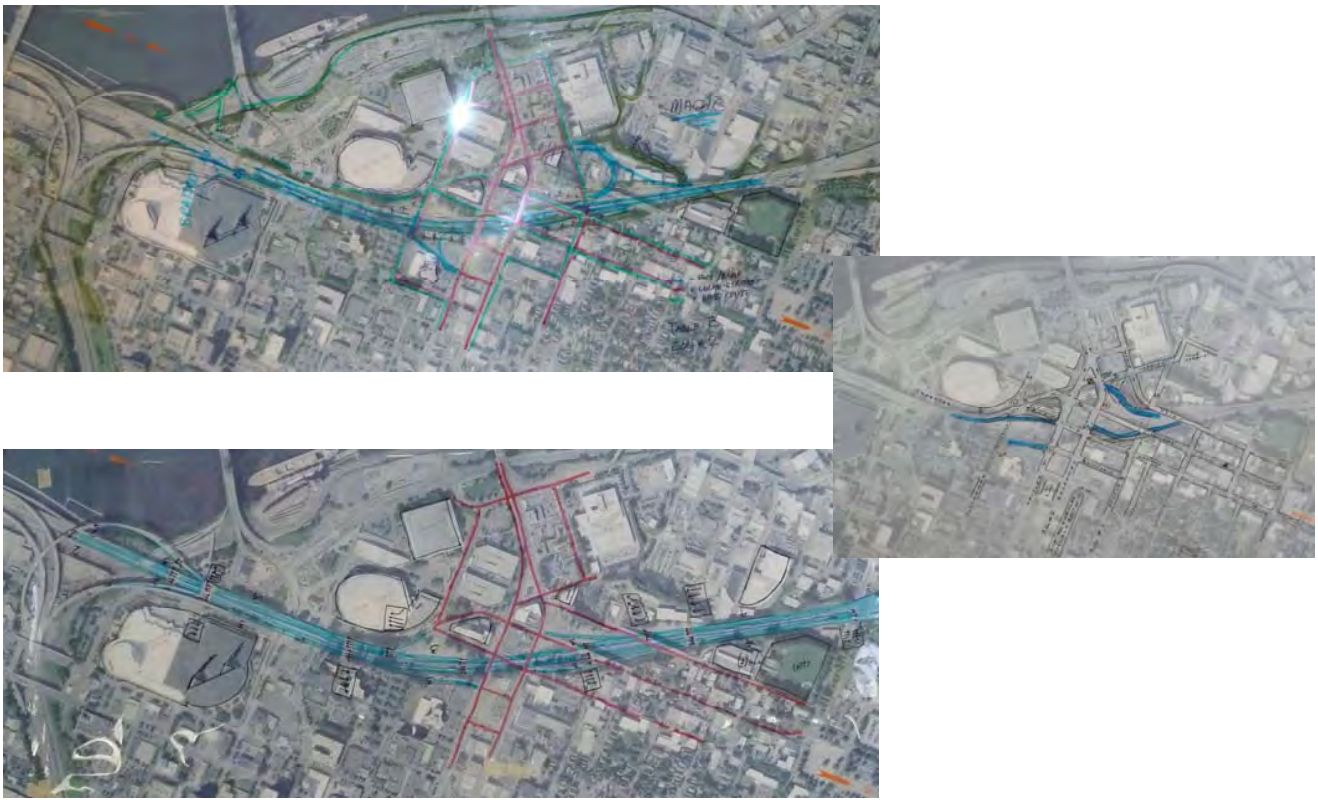

Figure 19: Early Concept Sketches from the Freeway/Local Transportation Interface Charrette

Table 4 shows how the concepts were grouped into categories with similar concepts and elements so that they could be analyzed for addressing the project goals and objectives and by their performance, costs and impacts. This process and the concept categories were supported by the SAC at its meeting on May 26, 2011. After the May SAC meeting, project staff recommended including a sixth category of Concepts for Further Study: Transportation System Management (TSM)/Transportation Demand Management (TDM)/Operations Management. The SAC supported adding the TSM/TDM/Operations Management category in June.

Table 4: Concept Categories for Further Study from the Freeway/Local Transportation Interface Charrette (April - June 2011)

Concept Categories	Attributes or Notes
1. 2035 No-Build	Allows for a baseline comparison
2. Mainline Operational Improvements to Freeway	This category of operational improvements was intended to avoid replacing the five main structures over the freeway
3. Rebuild Structures over the Freeway	This category would include operational improvements that would require replacing the five main structures over the freeway
4. Enhance the Broadway/Weidler Interchange	
5. New Concepts for the Broadway/Weidler Interchange	
6. Transportation System Management/ Transportation Demand Management	The TSM/TDM/Operations Management category was added by the project team and approved by the SAC in June 2011

There were many consistent improvement elements that were generated by or submitted subsequent to the charrette work sessions. Table 5 summarizes the major individual elements recommended to be considered for inclusion in the complete concepts.

Table 5: Major Elements for Further Study from the Freeway/Local Transportation Interface Charrette (April 2011)

Area	Major Elements for Further Study	Element Options
Freeway	**1. Add Freeway Crossings**	
		• Pedestrian/bicycle only • Pedestrian/bicycle/vehicle
	2. Remove Freeway Crossings	
	3. Add Collection/Distributor (C/D) Roads	
	4. Add Braided Ramps	
	5. Change Ramp Layouts or Locations	
Local Transportation	**6. De-Couple Existing Couplets**	
		• Broadway/Weidler • Vancouver/Williams
	7. Local Street Changes	
	8. Pedestrian/Bicycle Changes	

Elements Not Recommended for Further Analysis in Phase II, Step 1 Screen

Certain elements that were included in the submitted concepts were not recommended to be studied further because they were either out of the adopted project scope and purpose, would reduce the lengths of the weaving sections on I-5 or they required heroic engineering that would not be feasible or would be very costly. Table 6 provides a summary of the elements that were not recommended to be studied further.

Table 6: Elements Dropped from Further Study after Phase II Screening, Step 1 (May 2011)

Element Dropped from Further Study	Rationale for Not Studying Further
1. Remove I-5	• Beyond the scope of this project
2. Move Interchange North	• Beyond the scope of this project • Would significantly reduce lengths of weaving distances on I-5
3. Move Interchange South	• Beyond scope of this project • Would significantly reduce lengths of weaving distances on I-5
4. Double Deck I-5 through Quadrant	• Beyond the scope of this project
5. Initiate New Water Taxi/Ferry Service	• Beyond the scope of this project
6. Build New Bridge over Willamette River	• Beyond the scope of this project
7. Build Braided Ramps North of Broadway/Weidler Interchange	• Not suggested in charrette
8. Widen I-405 Freeway	• Beyond the scope of this project
9. Make Changes to I-5/I-405 Freeway Loop	• Beyond the scope of this project

Appendix X – Freeway/Local Transportation Interface: Charrette Summary includes a summary of the outcomes of the charrette. The charrette summary also included one-page descriptions of the proposed concepts that included transportation elements that were dropped from further consideration. The concepts or elements that were dropped in this screening did not address the project goals and objectives adopted by the SAC, were beyond the scope of this project or were not feasible due to significant engineering or cost constraints.

Table 7 expands on concept categories from Table 4 to show specific complete concepts within the categories. A total of 13 full concepts were developed and analyzed using the project goals and objectives. Narrowing the complete concepts to 13 (with additional sub-options) within the six categories was supported by the SAC at its meeting on June 16, 2011. The concepts were illustrated and described in Appendix X – Freeway/Local Transportation Interface: Concepts for Further Study. One example concept, Concept 4b – Folded Diamond, is shown in Figure 20.

Figure 20: Example Concept (4b. Folded Diamond) for Phase II Analysis

Table 7: 13 Concepts for Further Study, Phase II Step 1 Screening (June 2011)

Concepts by Category	Overall Concept Count
1. 2035 No-Build	1
2. Mainline Operational Improvements (which eliminate or shift weave movements off mainline of freeway)	
2a. Braided Ramps	2
2b. Collector/Distributor (C/D) Roads	3
3. Rebuild the Structures with Mainline Operational Improvements (which may include extending auxiliary lanes and adding shoulders but may not necessarily include eliminating or shifting weaves off mainline)	4
4. Enhance the Broadway/Weidler Interchange with Mainline Operational Improvements (including extending auxiliary lanes and adding shoulders in all options)	
4a. Split Diamond Interchange	5
4b. Folded Diamond Interchange	6
4c. Three-Point Interchange (maintain Broadway/Weidler couplet)	7
5. New Concepts for the Broadway/Weidler Interchange with Mainline Operational Improvements (including extending auxiliary lanes and adding shoulders in all options)	
5a. Standard-Diamond Interchange (de-couple Broadway/Weidler)	8
5b. Single-Point Urban Interchange (SPUI; de-couple)	9
5c. Diverging Diamond Interchange (DDI)	10
5d. Roundabout-Controlled Diamond Interchange	11
5e. Three-Point Interchange (de-couple Broadway/Weidler)	12
6. TSM/TDM/Operations Management	13

Phase II Step 2 Narrowing: from 13 to 8 Concepts

At the July 28, 2011, SAC meeting, the project team recommended that of the 13 concepts, Concepts 5b, 5c, 5d and 5e be dropped from further consideration based on the Phase II screening factors (see Table 8: Phase II Screening Factors Summary Evaluation Table). This recommendation was based on the following findings for each of the concepts:

Concept 5b – Single-Point Urban Interchange (SPUI; de-couple)

- Pedestrian and bicycle safety concerns
- Poor north/south connectivity
- Large overall project footprint
- Limited developable parcels

Concept 5c – Diverging Diamond Interchange (DDI)

- Poor north/south connectivity
- Large overall project footprint
- Limited developable parcels

Concept 5d – Roundabout-Controlled Diamond Interchange

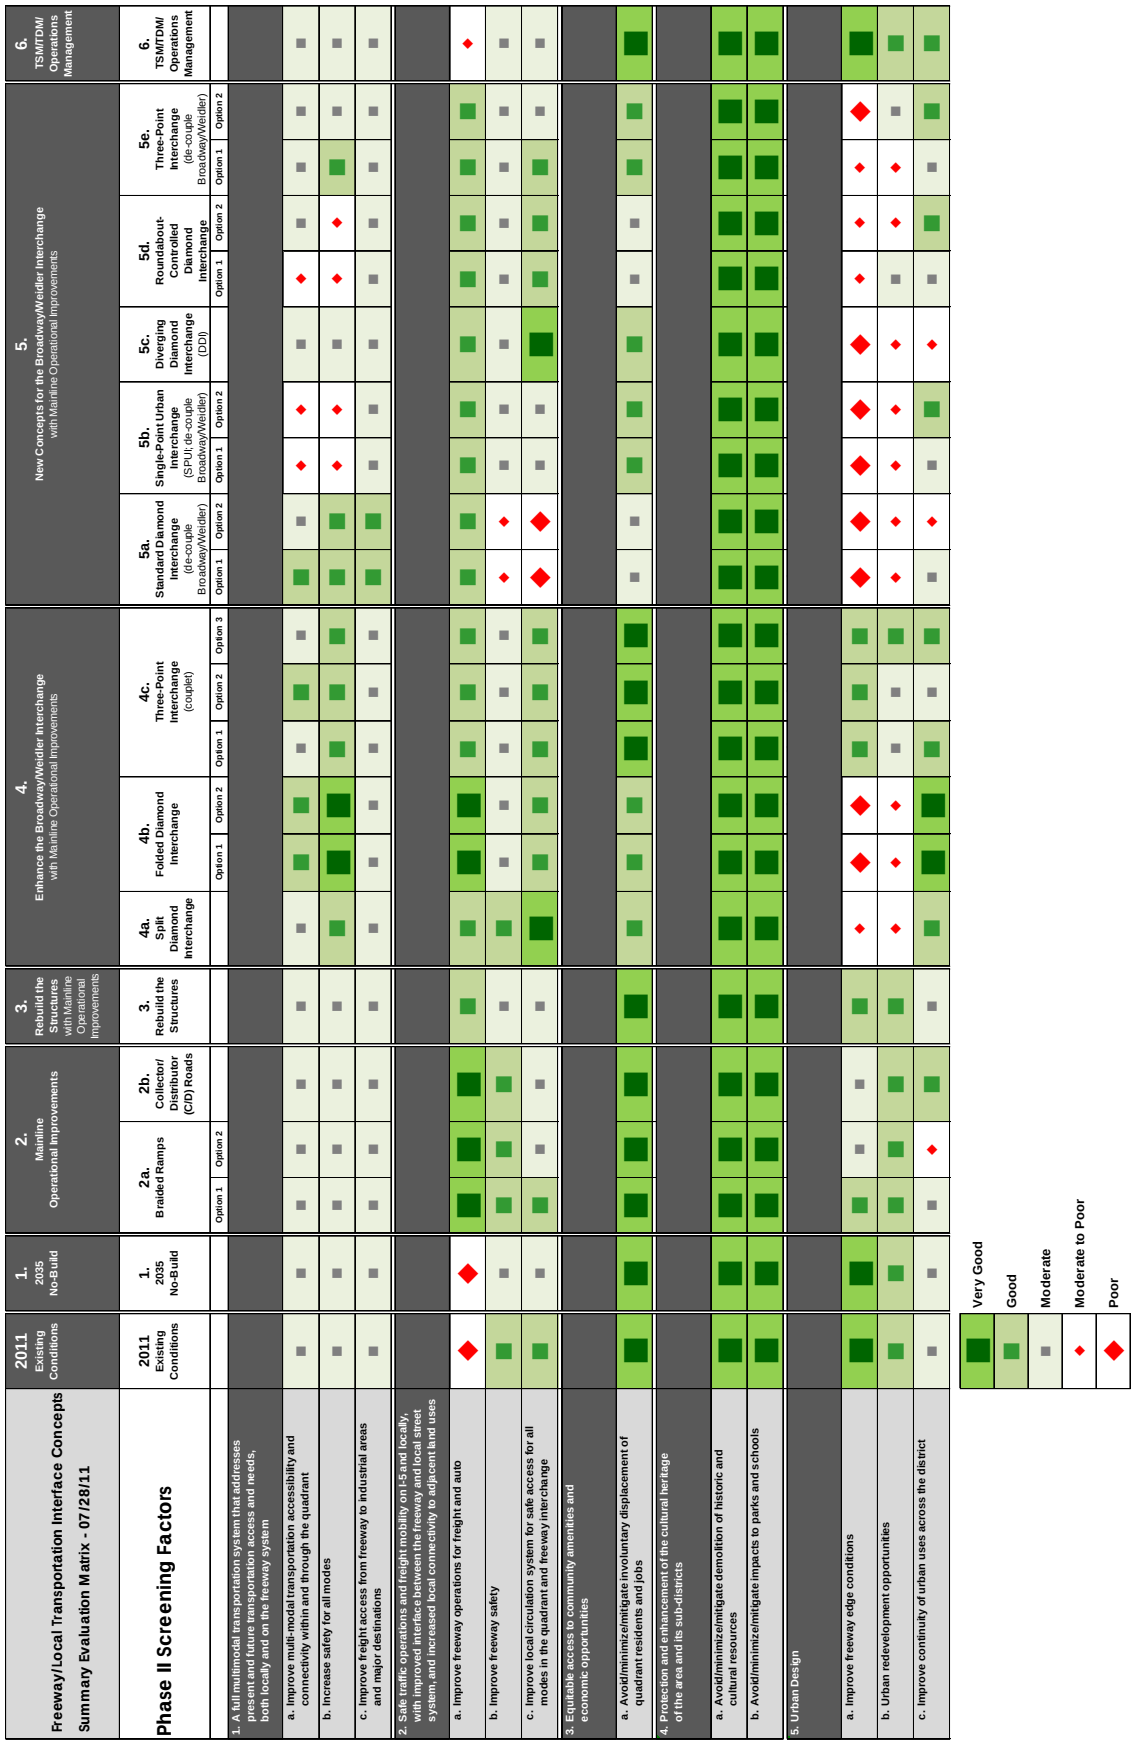
- Pedestrian and bicycle safety concerns
- Poor north/south connectivity
- Large overall project footprint
- Limited developable parcels

Concept 5e – Three-Point Interchange (de-couple)

- Pedestrian and bicycle safety concerns
- Poor north/south connectivity
- Large overall project footprint
- Limited developable parcels

The project team recommended these concepts be dropped from further consideration:
5b, 5c, 5d and 5e

The SAC agreed and also recommended that Concept 5a be dropped from further consideration.



After discussion of the evaluation results at the July meeting, the SAC supported dropping those four concepts from further study. Additionally, the SAC found that Concept 5a – Standard-Diamond Interchange (de-couple Broadway/Weidler), had performed similarly to the other concepts within Category 5 (New Concepts for the Broadway/Weidler Interchange) and should be dropped from further study for the following reasons:

Concept 5a – Standard-Diamond Interchange (de-couple Broadway/Weidler)

- Risk of exit ramp queues spilling back onto freeway
- Created wide (7 lane) combined arterial with degradation of operations occurring at multiple intersections
- North/south connectivity shifted mostly to Wheeler and Flint
- Would impact private properties due to acquisition or access or parking changes

This action left eight concepts for further evaluation in Phase III of the study. See also Appendix X – The 8 Concepts. In addition to narrowing the remaining concepts and approving the Phase III evaluation criteria, the SAC also supported allowing project staff to optimize and potentially combine design elements of the remaining concepts as performance evaluations in Phase III warranted.

Table 8: Summary Evaluation Matrix for Phase II Screening, Step 2 (July 2011)

Phase III Analysis: from 8 Concepts to 6

The evaluation of the eight remaining concepts in Phase III proceeded from the summer 2011 through December. During the analysis, the project team discovered several items. First, in addressing the two weave conditions south of the I-5 Broadway/Weidler Interchange, the team found that:

- braided exit and entrance ramps southbound between Weidler and I-84 had the greatest improvement to freeway operations
- a C/D road northbound between I-84 and Weidler had the best chance of improving freeway operations

Therefore, the project team recommended to the SAC transportation subcommittee meeting on October 12, 2011, to combine Concepts 2a – Braided Ramps, and 2b – C/D Roads, into one concept, 2 – Braided Ramp/CD Road. This combined concept featured the braided ramps southbound and the C/D road northbound between the I-5 Broadway/Weidler Interchange and I-84. As project engineers more closely examined the physical layout requirements of this option, they found that, with the braided ramp/CD road concept, freeway improvements would affect three structures over the freeway at Broadway, Weidler and Williams. Therefore these structures would need to be replaced in this concept. .

The project team also found that a stand-alone TSM/TDM concept (Concept 6), which included even more aggressive TSM/TDM measures than those already contained in regional transportation plans, would not be enough to address the existing safety and operational issues found on the freeway and the connecting surface streets. Therefore the project team recommended that the more aggressive TSM/TDM measures found in Concept 6 be added to each of the remaining five "build" concepts. This recommendation was also supported by the SAC transportation subcommittee at its October meeting. This resulted in five "build" concepts and the 2035 No-Build concept (six total) left to analyze in the remainder of Phase III.

See Appendix X – The 6 Concepts

Results of Phase III Analysis: Narrowing the 6 Concepts to 3 and Moving toward a Hybrid

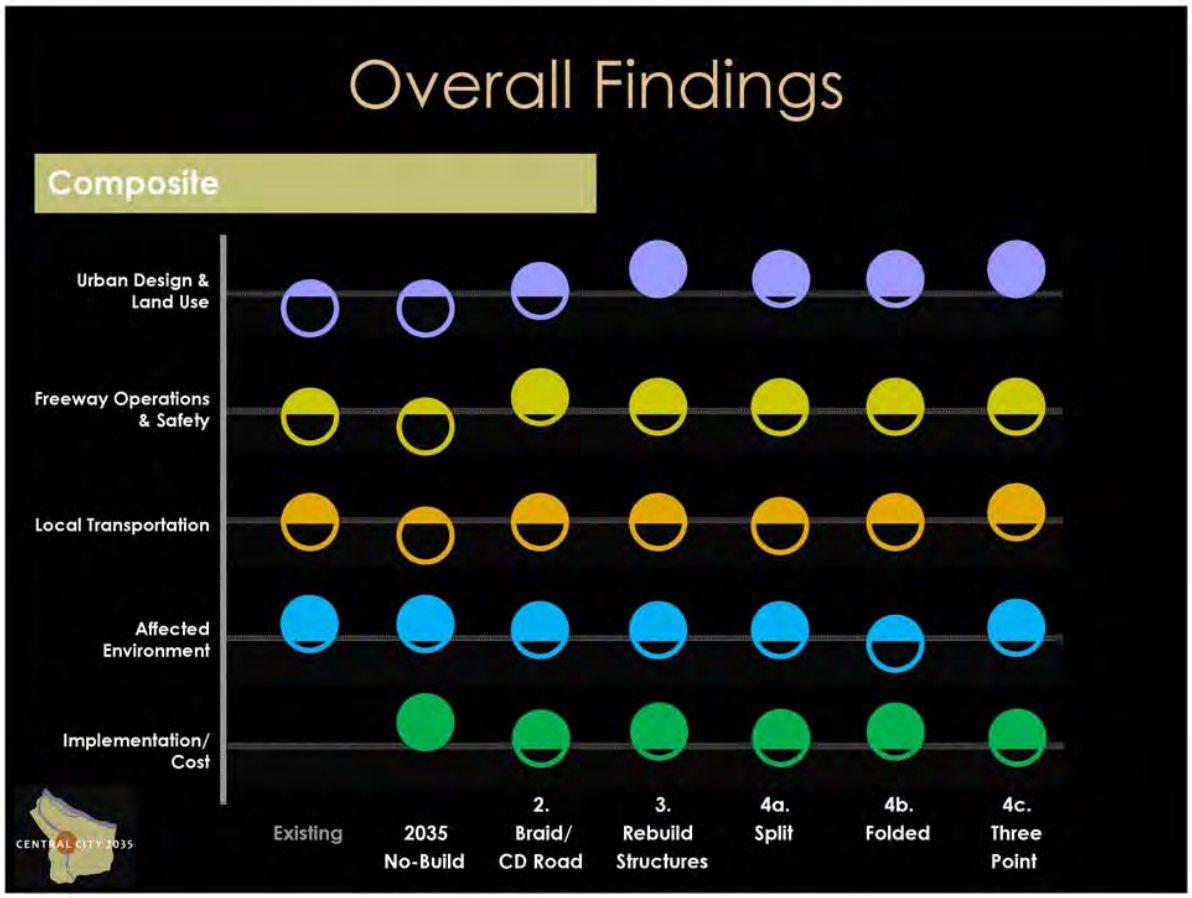
The results of the Phase III analysis were presented to the SAC transportation subcommittee on December 8, 2011. The project team presented these results via a summary table of overall findings (see Figure 21: Overall Findings of Phase III Analysis). This figure represents a composite of the scoring from the Phase III analysis found in Appendix X – Phase III Freeway Interchange/Local Transportation Interface Worksheet.

From these results, the subcommittee recommended the following:

- Discontinue work on Concept 4a – Split Diamond, and Concept 4b – Folded Diamond.
- Work to identify the best elements of each of the remaining concepts:
  - 2 – Braided Ramp/CD Road,
  - 3 – Rebuild the Structures, and
  - 4c – Three-Point Interchange

  and include the identified elements in a hybrid concept.

The subcommittee's recommendation to drop concepts 4a and 4b was based on the following findings for each of the concepts:



Concept 4a – Split Diamond

- Similar in many ways to 4c – Three-Point Interchange but not as good for urban design or local transportation
- Increased traffic volumes adjacent to important community properties (e.g., Leftbank Building, Paramount Apartments)
- Traffic queuing issues and increase in "box" area average intersection delay
- Impacts to bike, transit and freight connections, including increased out-of-direction travel

Concept 4b – Folded Diamond

- Largest overall project footprint relative to other concepts
- Most impacts to businesses and residences near the loop ramps, including the Leftbank Building, the Paramount Apartments and the Crowne Plaza Hotel

This subcommittee recommendation was unanimously supported by the SAC at its meeting on January 19, 2011. The SAC also directed project staff to weigh SAC-identified benefits and concerns regarding proposed hybrid concept elements the remaining three concepts as discussed at the January meeting.

Note: Concepts that scored higher in the Phase III analysis have circles that are higher respective to the five baselines.

Figure 21: Overall Findings of the Phase III Analysis

Forming a Hybrid Base Concept

At its February 2012 meeting, the SAC was presented with a Hybrid Base Concept that incorporated elements of the three concepts that remained after the Phase III analysis. At the time, the Hybrid Base Concept (illustrated in Figure 22) included:

1. Transportation System Management (TSM) and Transportation Demand Management (TDM) strategies.
2. Mainline Freeway Safety Elements including:
    a. Extending auxiliary lanes in both directions.
    b. Adding full-width shoulders in both directions.
3. Re-building of the five structures over I-5 (Weidler, Broadway, Williams, Vancouver and Flint) to provide the clearance necessary for the Mainline Freeway Safety Elements. The Weidler, Broadway and Williams structures would be rebuilt to include a lid over portions of the freeway. Opportunities to reconfigure the Vancouver and Flint structures to improve neighborhood connectivity were to be considered. All enhanced structures over I-5 would include improved facilities (wider sidewalks, bicycle lanes, etc.) for all modes.
4. A move the southbound on-ramp from Wheeler/Winning Way to Weidler (at Williams).
5. Reverse traffic flow on Williams between Broadway and Weidler with a two-way bicycle/pedestrian facility in the median.

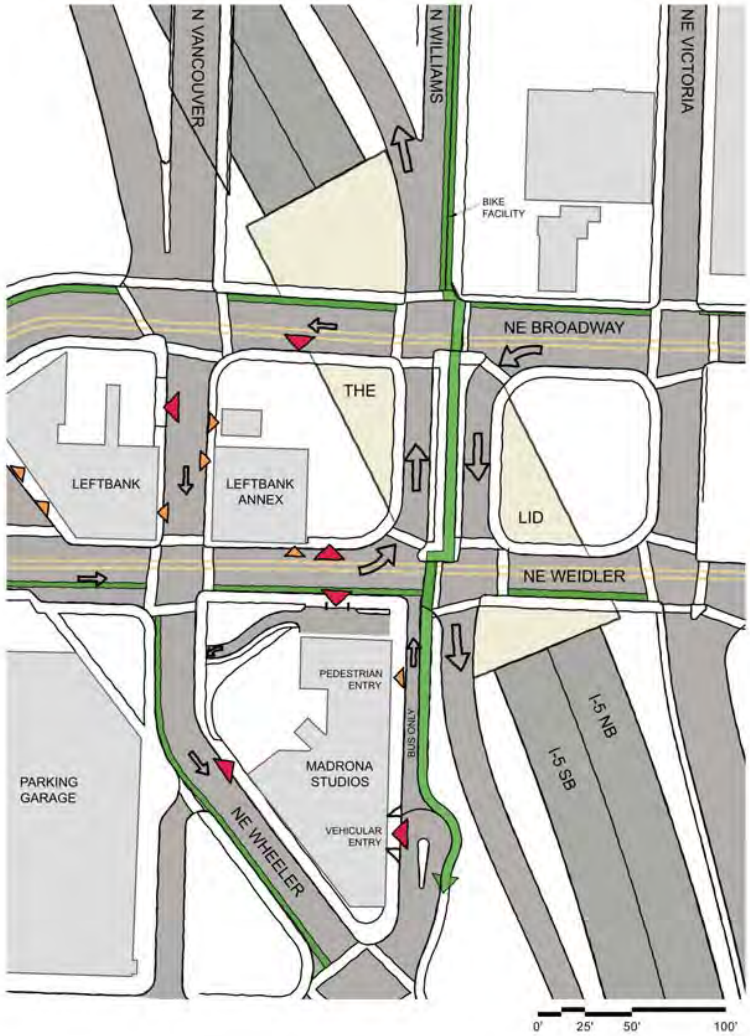


Figure 22: Hybrid Base Concept (illustrative concept drawing, February 2012)

The rationale for the specific elements of the Hybrid Base Concept was noted as follows:

1. TSM and TDM measures represent low cost strategies for managing traffic operations and minimizing demand. While local, regional and state policies call for extensive use of these strategies, this recommendation will help to ensure that ODOT and the City of Portland fully commit to maximizing TSM and TDM strategies in the N/NE Quadrant and on I-5.
2. An auxiliary lane with widened shoulders will improve traffic operations and safety.
3. Rebuilding structures would be required to add the auxiliary lane and would provide improved bicycle and pedestrian facilities. The rebuilding of these structures would provide an opportunity to build a lid over the freeway that would facilitate traffic movements during construction and could include usable public space or development opportunities afterward.
4. Moving the I-5 southbound entrance ramp from Wheeler/Williams/Winning Way to Weidler (at Williams) would reduce traffic on Wheeler south of Weidler.
5. Operating Williams with reverse traffic flow and a two-way bicycle/pedestrian facility in the median for the block between Broadway and Weidler would allow westbound traffic destined for I-5 south to turn south one block to the east of where they currently turn. It would therefore reduce traffic on Vancouver. In addition the two-way bicycle/pedestrian facility in the median would allow for bicycles and pedestrians to continue north from the Eastbank Esplanade and Rose Quarter to Williams Avenue.

The Hybrid Base Concept also included four elements that required further refinement based on technical assessments of bicycle and pedestrian operations, urban design/land use potential, traffic operations and safety. These additional four elements were:

1. I-5/I-84 Southbound Braided Ramp
2. A multi-use path (MUP) connecting the Eastbank Esplanade to NE Broadway along the east side of I-5
3. Clackamas Pedestrian/Bicycle Overcrossing
4. Two “North of Broadway” options for rebuilding the Vancouver and Flint overpasses:
    a. Keep Vancouver and Flint at their current locations
    b. Realign Vancouver west to align with Flint or Dixon

    Include a freeway lid where feasible when rebuilding Vancouver and Flint overpasses

The SAC supported the joint staff recommendation to move forward with the Hybrid Base Concept and directed staff to continue to analyze the four elements that required additional study.

Opportunity to Create Supplementary Crossings

As early as the Freeway and Local Transportation Charrette in April 2011, a number of concepts and ideas had identified opportunities for and benefits of adding east-west crossings of the freeway. The potential for adding a Clackamas Pedestrian/Bicycle Overcrossing and the options for rebuilding the Vancouver and Flint overpasses (items three and four in the list above) were seen as chances to create a supplementary freeway crossing both south and north of the Box. Such a scenario would provide alternative routes for transportation users so they could avoid the Box area, and its interchange traffic, entirely. The supplementary route locations are shown in Figure 23.

Figure 23: Potential Supplementary Routes for Crossing I-5

Phase IV: Final Development of the Hybrid Concept

Two Refinement Elements Dropped

At the March 15, 2012, SAC meeting, project staff presented the following joint staff recommendations regarding the four hybrid concept elements that required additional assessment:

- Discontinue refinement of the Southbound Braided Ramps.
- Discontinue refinement of a multi-use path (MUP) immediately east of I-5 between Multnomah and Weidler was not recommended to be included in the project.
- Continue work to ensure that a Clackamas Pedestrian/Bicycle Overcrossing could be integrated with a proposed development plan on the east side of the freeway.
- Continue to refine and evaluate the North of Broadway options.

The SAC supported these joint staff recommendations, supported the project team to move forward with the Hybrid Base Concept and directed staff to continue to analyze and refine the North of Broadway options. The rationale for each of these joint staff recommendations is summarized below.

Rationale for Dropping Southbound Braided Ramps from the Hybrid Base Concept

Braided ramps, which eliminate weave movements, have been shown to be an effective strategy to improve the safety and operations of an urban freeway. However, the Southbound Braided Ramps were not recommended for further refinement as part of the Hybrid Base Concept for the following reasons:

- Many of the safety and operational benefits could be achieved with the auxiliary lane extensions included in the Hybrid Base Concept.
- Concerns about potential visual impacts of the braided ramp structures, which would be located beyond the existing footprint of I-5 and would require new support columns along Wheeler Avenue in the vicinity of the Rose Garden Arena and the Rose Quarter TC, remained.
- Braided ramps were estimated to add an additional $150 million to the capital cost of the Hybrid Base Concept.

If after base improvements are implemented and safety and operational issues remain, the Southbound Braided Ramps would receive additional consideration since they show promise for further improving safety and operations within the project area. Project staff further recommended that other elements of the Hybrid Base Concept should not preclude the ability to implement the Southbound Braided Ramps, if needed, at some point in the future. Figures 24 and 25 are illustrations that were developed to show how the braided ramp structures might have looked from below. Opportunities were identified to utilize landscaping, walls, water, lighting and other techniques to enhance the look and feel of areas near the freeway.

Southbound Braided Ramps (plan view)	Southbound Braided Ramps (section view)

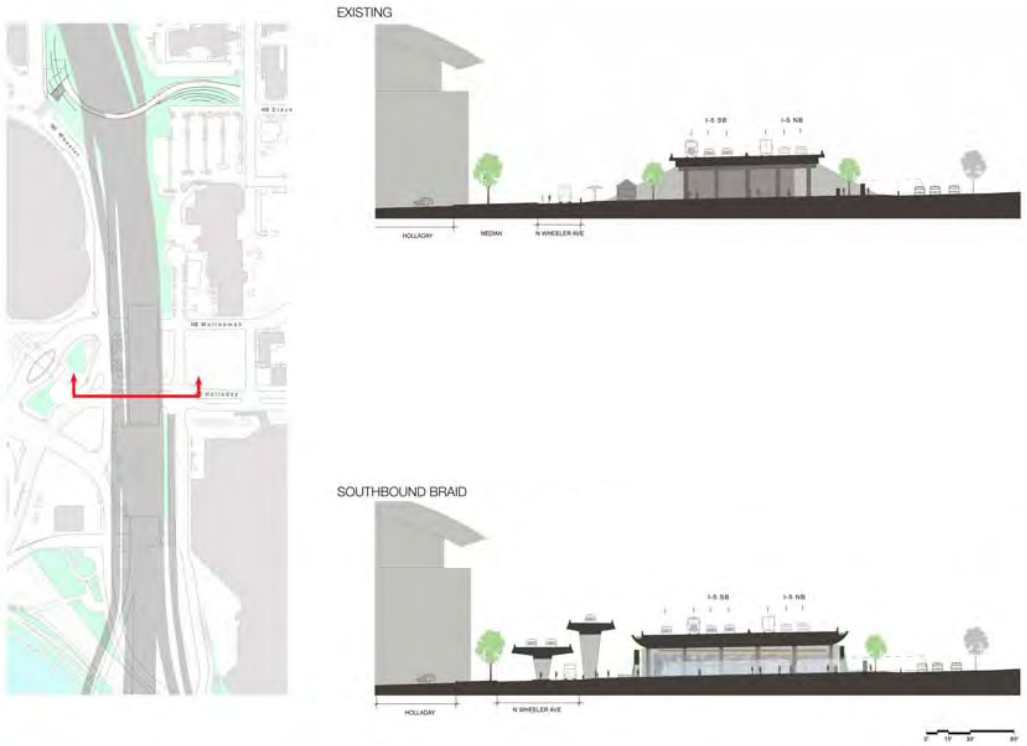

Figure 24: Southbound Braided Ramps (illustrative concept drawings, March 2012)

Existing

With Southbound Braided Ramps

Figure 25: Southbound Braided Ramps (illustrative concept drawings, March 2012)

Rationale for Dropping the Eastside Multi-Use Path (MUP) from the Hybrid Base Concept

The analysis in Phase III had identified a range of potential benefits and impacts associated with creating a multi-use path (MUP) along the east side of I-5. However, the MUP was not recommended for inclusion as part of the Hybrid Base Concept for the following reasons:

- The mitigation for impaired north-south pedestrian and bicycle access, associated with earlier interchange concepts, was no longer necessary. The Hybrid Base Concept provided for reasonable north-south bicycle and pedestrian connections west of I-5 using Wheeler, Williams and Vancouver Avenues.
- The east side multi-use path would create a difficult crossing at the eastern edge of the I-5 northbound exit-ramp to Weidler.
- The east side MUP would require additional property acquisition and would displace approximately 25 off-street parking spaces.
- The MUP was estimated to add an additional $2 - $4 million to the capital cost of the Hybrid Base Concept.

Clackamas Pedestrian/Bicycle Overcrossing

Throughout the concept development and analysis phases, project staff and the SAC had thought it highly desirable to provide a pedestrian and bicycle crossing of I-5 connecting from the vicinity of Winning Way, Wheeler Avenue and Williams Avenue (on the west side of I-5) to the vicinity of Clackamas Street at 2nd Avenue (on the east side of the freeway). This overcrossing would improve pedestrian and bicycle access to the Rose Garden Arena, the Veterans Memorial Coliseum and potential future Rose Quarter development.

Concepts were prepared that depicted a potential overcrossing and described some of the challenges of providing good physical connections on both sides of the freeway (see Figure 26).

Benefits

- Would improve pedestrian and bicycle access to the Rose Quarter.
- Would support redevelopment opportunities at the Rose Quarter and on the east side of I-5.
- Would improve pedestrian safety by shifting some event-based pedestrian activity from Weidler Street and the Box area to the new overcrossing.
- Could be designed to allow for southbound braided ramps if those are desired in the future.

Issues

- Potential development on the east side of I-5
- Capital cost estimated at $15 - $20 million.

The Clackamas Pedestrian/Bicycle Overcrossing was recommended to be included as part of the Hybrid Base Concept. The City and ODOT agreed to continue to work with the proposed development on the east side of the freeway to ensure that the overcrossing could be accommodated with the proposed development.

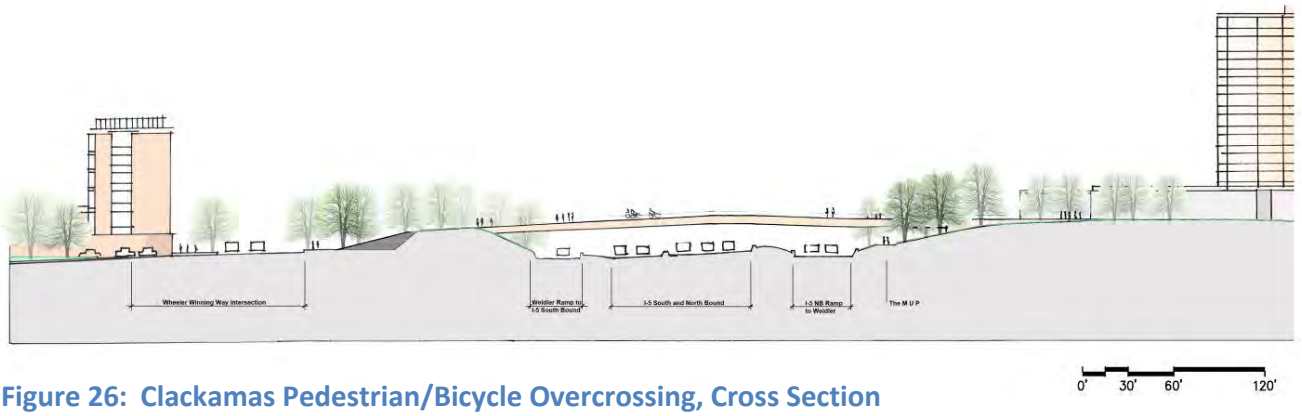

Figure 26: Clackamas Pedestrian/Bicycle Overcrossing, Cross Section (illustrative concept drawing, March 2012)

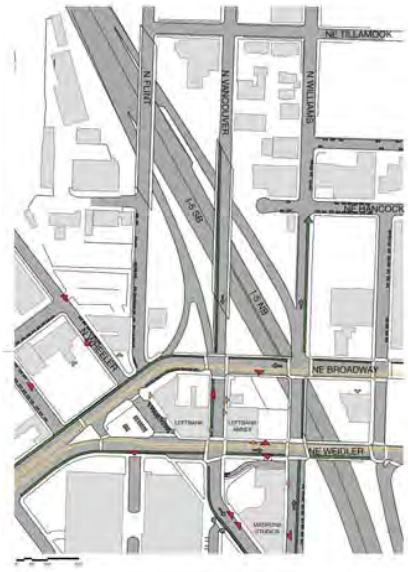

North of Broadway Options

The I-5 Broadway/Weidler Interchange project presented a unique opportunity to improve the local street system just north of Broadway in addition to overall operational improvements to the transportation network. Because the existing Flint and Vancouver structures over the freeway must be rebuilt as part of the Hybrid Base Concept, they could be built in a configuration different than their current layout. This opportunity also presented a number of challenges since no option was without impacts. Several concepts were developed and deemed worthy of serious consideration, in addition to the option of rebuilding the structures in their current locations. All options considered would work with the other major elements of the Hybrid Base Concept. All new structures would meet current design standards for seismic safety, sidewalks and bike lanes where applicable.

Initial North of Broadway Options Considered through March 8, 2012 (see Figure 27):

1. **Rebuild**
   This option would have removed and rebuilt the existing freeway overcrossings in their current locations. Although the replacement structures would meet current design standards, this option would not have eliminated the five-legged intersection at Vancouver & Broadway. Removing the Vancouver leg from the intersection would have reduced accident potential and improved driver expectations within the interchange area.
2. **Align Vancouver with Flint (Flint)**
   This option would have replaced the existing Flint and Vancouver freeway overcrossings with a single, new overcrossing connecting Vancouver to Flint. The new Vancouver/Flint overcrossing would have provided for a local street connection with Hancock to the east and a local street connection to the west. The intersection of Flint and Broadway would have been signalized, the existing access to Wheeler from Broadway would have been closed and access to Wheeler would have been provided via Dixon. Flint would have been connected south of Broadway, across Weidler, and continue as a through-street connection to Winning Way between the two city parking structures.
3. **Align Vancouver with Dixon (Dixon)**
   This option would have replaced the existing and Vancouver freeway overcrossings with a single, new overcrossing connecting Vancouver to Dixon at Wheeler. The new Vancouver/Dixon overcrossing would have provided for a local street connection with Hancock to the east and a local street connection to the west. Wheeler would have been connected as a two-way street to a signalized intersection at Broadway and Flint would have been closed at Broadway. The south leg of the Wheeler /Broadway intersection would have been a new, north/south through-street connection across Weidler to Winning Way between the two city parking structures.
4. **Align Vancouver with Dixon and Form Couplet (Dixon Couplet)**
   This option would have replaced the existing and Vancouver freeway overcrossings with a single, new overcrossing connecting Vancouver to Dixon at Wheeler. The new Vancouver/Dixon overcrossing would have provided for a local street connection with Hancock to the east and a local street connection to the west. Wheeler would have been paired with Ross as a one-way couplet with northbound traffic on Wheeler and southbound traffic on Ross.

Existing Conditions

Option 1. Rebuild

Option 2. Align Vancouver with Flint

Option 3. Align Vancouver with Dixon

Option 4. Align Vancouver with Dixon and Form Couplet

Figure 27: Initial Options North of Broadway, (illustrative concept drawings, March 2012)

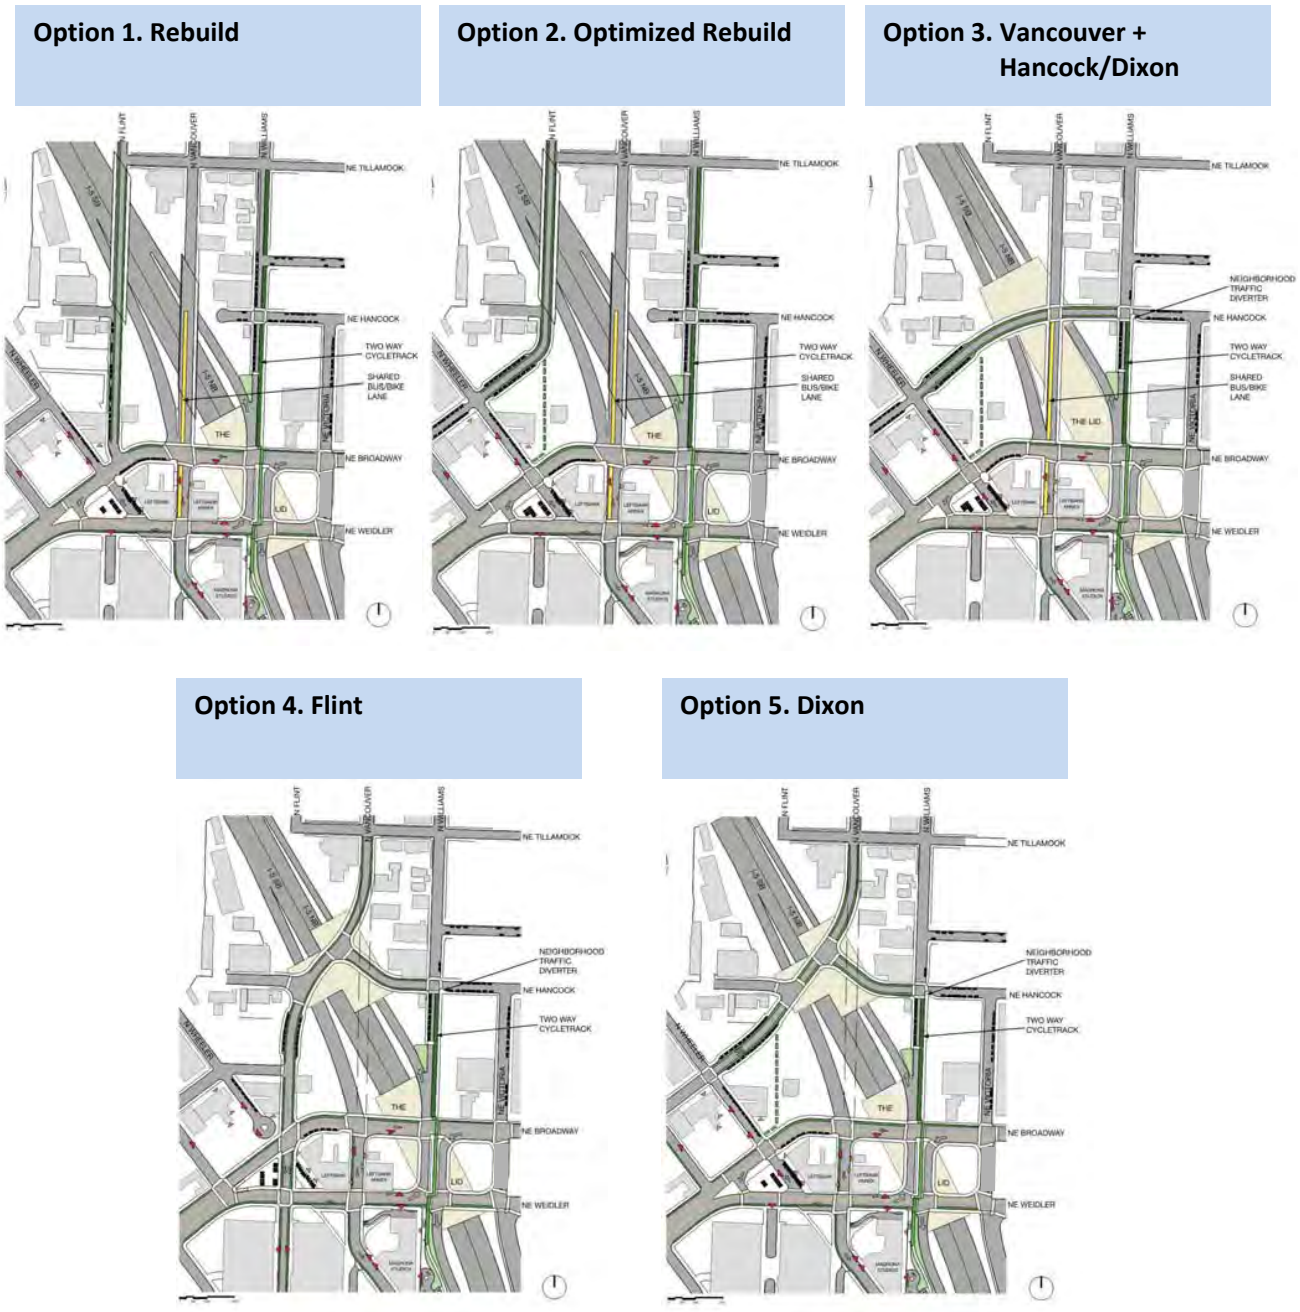

Figure 28: Refined Options North of Broadway, (illustrative concept drawings, April 2012)

After an SAC work session on March 20, 2012, where the four North of Broadway options of early March were examined in greater detail, project staff presented additional refinements on a total of five modified options to the SAC on April 10, 2012. The SAC discussed the pros and cons related to each of the then five options, shown in Figure 28, in order to prepare for their May recommendation.

The North of Broadway Recommendation

The SAC recommended Option 3 Vancouver + Hancock/Dixon that included replacing the existing Vancouver structure in its current location and replacing the existing Flint structure with a new east-west structure connecting Hancock Street on the east side of the freeway with Dixon Street on the west side. The recommendation also included extending Flint Avenue as a through-street between the two parking structures on Weidler Street near the Veterans Memorial Coliseum and adding two short bicycle/pedestrian pathways (one connecting Flint Avenue/Tillamook Street to Williams Avenue and one connecting the Hancock /Dixon overcrossing to Broadway).

The rationale for this recommendation included:

- Providing improved an improved east-west connection
- Maximizing street connectivity for all modes
- Maintaining a direct north-south route for transit, pedestrians and bicycles
- Supporting redevelopment of the area west of I-5 and north of Broadway
- Providing a greater opportunity for an additional freeway lid

5. Description of the Recommended Concept

Previous sections describe the collaborative study process that provided an opportunity for local neighborhoods, local businesses, the SAC, ODOT, and the City of Portland to understand each other's goals, objectives and concerns and to prepare together a consensus recommendation for freeway operations and safety improvements and improved multi-modal safety, access and mobility on the local street system. Section 4 describes range of ideas and options that were collected and evaluated and it presents a brief summary of the technical analysis and rationale that led to narrowing over 70 general concepts to a consensus recommended concept that includes both freeway and local street improvements.

The Recommended Concept represents a true consensus, in that each party did not get everything they wanted, yet they recognized the need to compromise in order to significantly improve operations and safety for all transportation modes, to narrow the impacts to the surrounding community and to support the goals of the complementary land use plans. This section provides a description of the recommended freeway and local street concept elements.

In addition to the physical description included in this chapter, ODOT's Facility Plan for the I-5 Broadway/Weidler Interchange Improvements, a separate but related document, provides a summary of key elements of this report including the project purpose, the land use/transportation connection and the recommended plan elements.

Elements of the Recommended Concept

The consensus elements included in the Recommended Concept are organized into four subsections of the study area:

- I-5 Broadway/Weidler Interchange area
  (including the freeway mainline and shown in Figure 29: Overall Project Extent)
- North of Broadway area (shown in Figure 30: Enlarged "Box" Area)
- South of Weidler Street area (also shown in Figure 30: Enlarged "Box" Area)
- Freeway Mainline Improvements near the Rose Quarter TC (shown in Figure 31)

The following describes the consensus elements included in the Recommended Concept.

The I-5 Broadway/Weidler Interchange Area

The I-5 Broadway/Weidler Interchange Area refers to project elements related to the freeway mainline, exit and entrance ramps and other traffic operations elements in the vicinity of the freeway ramps.

Transportation System Management (TSM) and Transportation Demand Management (TDM) Strategies

- Major freeway projects in the metropolitan area typically utilize TSM techniques to manage freeway traffic using methods such as ramp meters and variable message signs. ODOT will explore the role that emerging, state-of-the-art TSM techniques such as variable speed limits could have in improving traffic operations.
- TDM refers to strategies aimed at reducing the number of motor vehicle trips using roadway and highway facilities. Trip reductions are typically achieved by incentives that make carpooling or alternative modes (e.g. walking, bikes, transit) more attractive. TDM strategies and policies are identified in Portland's Transportation System Plan (TSP), the Regional Transportation Plan (RTP), the Oregon Transportation Plan (OTP) and the Oregon Highway Plan (OHP). ODOT and the City of Portland will explore ways to cost-effectively maximize the ability of TDM measures to reduce motor vehicle trips in the vicinity of the interchange.

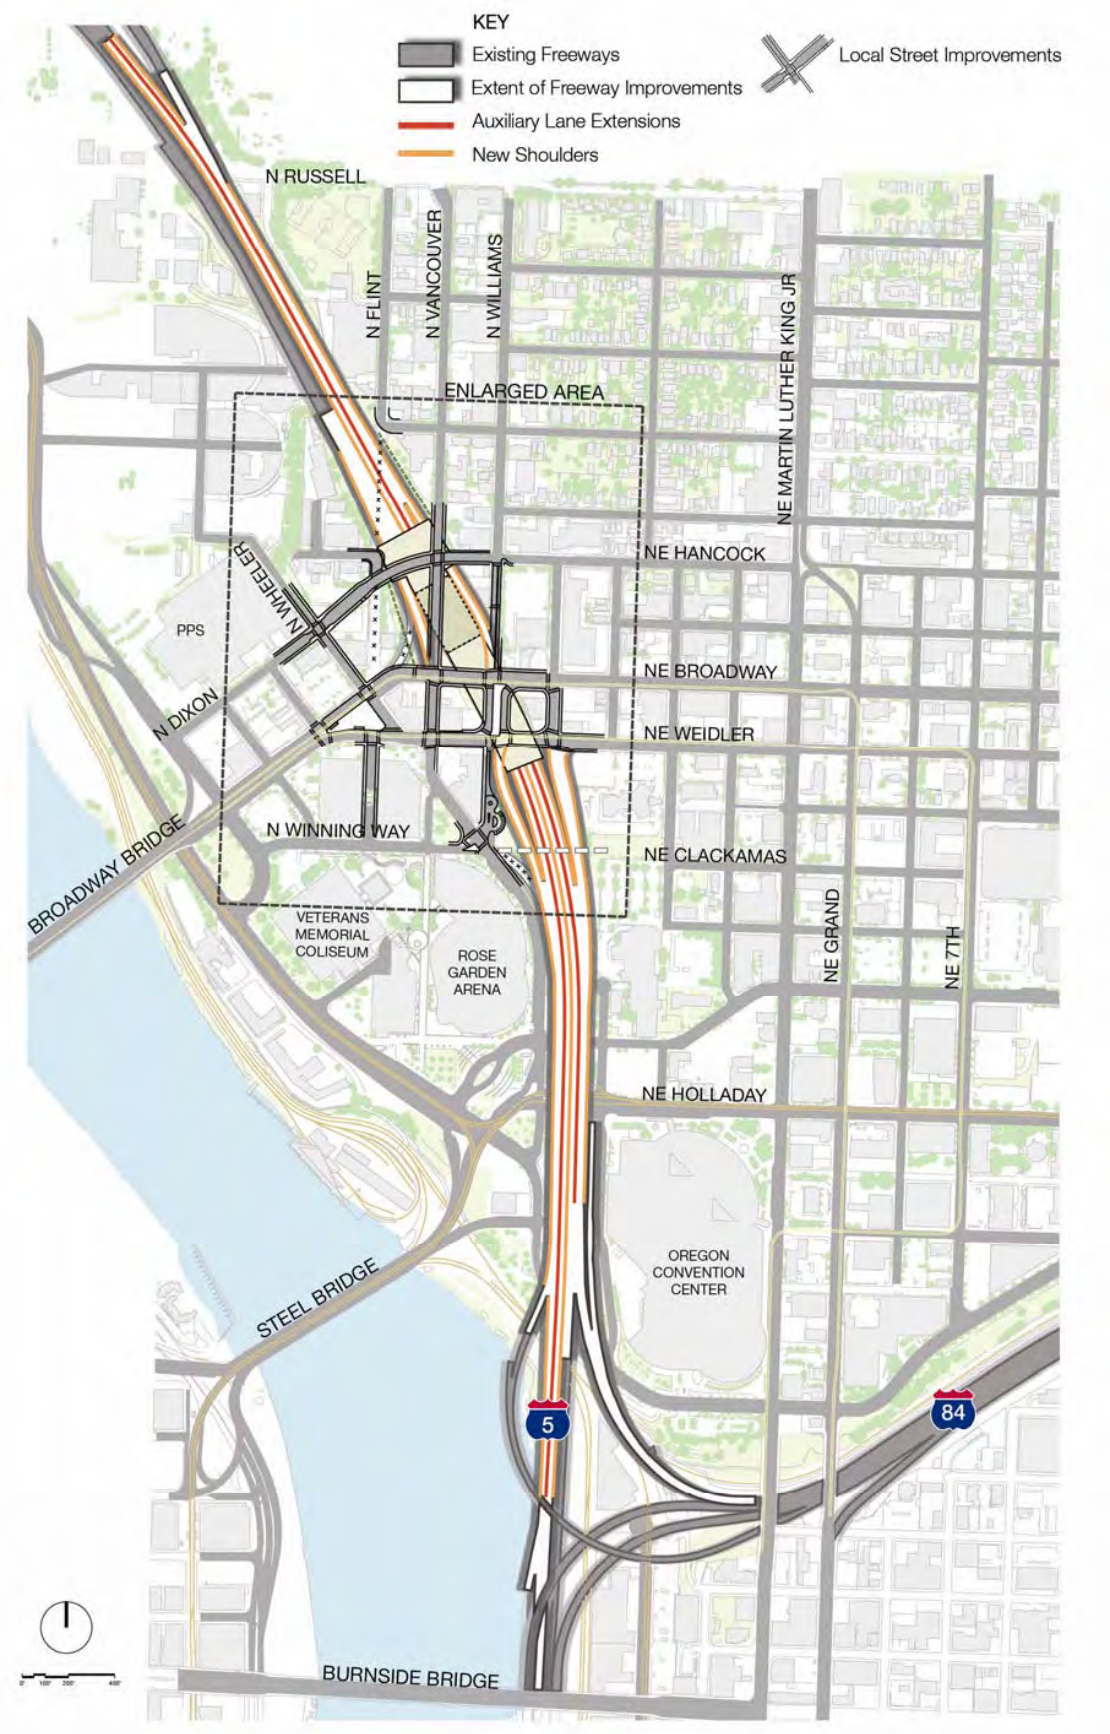

Figure 29: Overall Project Extent of the Recommended Concept

Mainline Freeway Safety Elements
The Recommended Concept would modify the mainline of I-5 by adding several key safety and operational improvements (see Figure 29). It would extend the existing auxiliary lanes approximately 4,300 feet in both northbound southbound directions and add full-width shoulders (both inside and outside) in both directions in most of the areas where the auxiliary lane would be extended. The northbound auxiliary lane would extend the existing auxiliary lane that enters I-5 northbound from the I-84 westbound entrance ramp. This lane currently ends at the exit ramp to Weidler Street, but with the project, the lane would be extended as a continuous lane to the Greeley Avenue exit ramp.

The southbound auxiliary lane would extend the existing auxiliary lane that enters I-5 southbound from the Greeley Avenue entrance ramp. This lane currently ends in the vicinity of the Broadway overcrossing structure. With the project, the lane would be extended as a continuous lane to the exit ramp to the Morrison Bridge and southeast Portland/OMSI.

The addition of full-width shoulders between the Greeley Avenue entrance ramp and the Morrison Bridge would increase safety and reduce traffic congestion related to vehicle breakdowns and crashes in this constrained portion of I-5.

Three Rebuilt Freeway Structures and the Broadway/Weidler/Williams Lid
The existing Broadway, Weidler and Williams structures over I-5 would be replaced in order to accommodate the auxiliary lane extension and widened shoulders. In addition, a lid over the freeway would be included from immediately south of Weidler to immediately north of Broadway. The lid would connect with uses on both sides of the freeway and would provide a complete cover of the freeway in this vicinity. No specific uses have been proposed for the lid, but uses could include public space (park or plaza) or commercial development or a combination of both.

I-5 Broadway/Weidler Interchange Improvements
The replacement structures will include widened sidewalks, bicycle lanes, improved lighting, improved stormwater treatment and opportunities for landscaping improvements.

- **Relocation of Southbound I-5 Entrance Ramp to Weidler/Williams**
  The southbound I-5 entrance ramp is currently located one block south of Weidler near where Williams, Winning Way and Wheeler come together at the north end of the Rose Garden Arena. The recommended alternative would move the entrance-ramp north to Weidler. This would require limiting through travel northbound on Williams. Some motor vehicle access would be permitted on Williams north of Winning Way in order to maintain access to facilities at the Madrona Studios, but through-travel on Williams Avenue between Winning Way and Weidler Street would only be permitted for bicycles, pedestrians and buses.

  - **Reverse Traffic Flow on Williams**
    Williams Avenue between Weidler Street and Broadway would be a non-traditional street that would have three distinct features.
    - Two northbound lanes along the western edge of the block. The westernmost lane would have the option of heading straight to the I-5 northbound entrance ramp or turning west onto Broadway. The adjacent lane would provide a choice between the I-5 northbound ramp or northbound on Williams Avenue.
    - A wide center median that would include a two-directional, multi-use path and landscaping on both the east and west sides that would dense enough to limit the visual connection between the northbound and southbound traffic lanes.
    - Two southbound lanes along the eastern edge of the block. The easternmost lane would have the option of heading straight to the I-5 southbound entrance ramp or turning east onto Weidler Street. The adjacent lane would travel directly onto the I-5 southbound ramp.

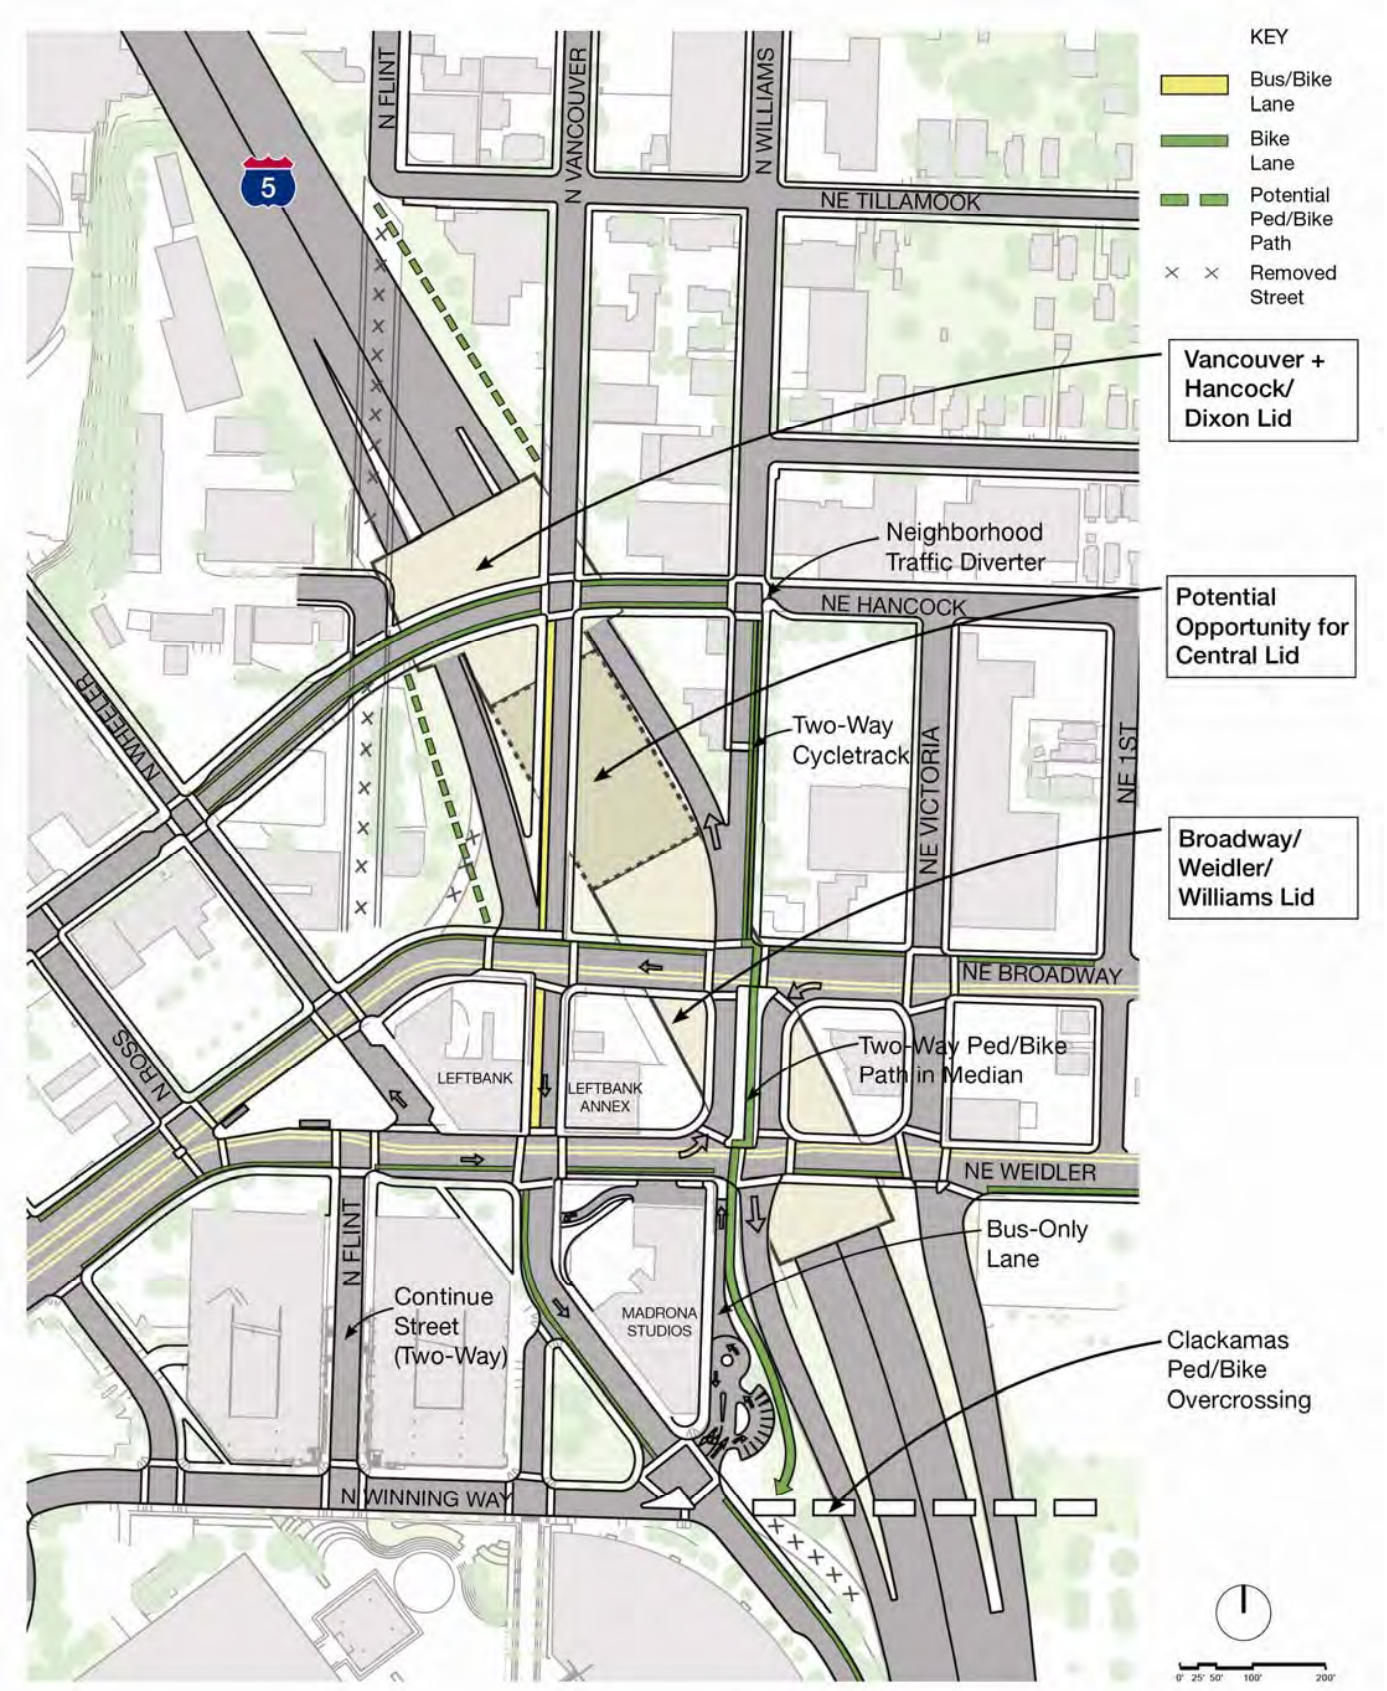

Figure 30: Enlarged "Box" Area of the Recommended Concept

North of Broadway Area - North of Broadway Option 3. Vancouver + Hancock/Dixon

The North of Broadway area refers to the local street system north of Broadway and connections between the local street system and Broadway and Weidler Street. Several local street configurations were considered to improve connectivity and facilitate transit, bicycle and pedestrian movements. Option 3. Vancouver + Hancock/Dixon was selected as the preferred street configuration due to its ability to maintain important existing connections and enhance east-west accessibility across the freeway (see Figure 30).

Major elements in the north of Broadway area include:

- **Rebuild Vancouver in current location**
  - The Vancouver Avenue overcrossing would be removed and replaced in its current location in order to provide adequate width for the auxiliary lane extension and widened shoulders. This would maintain the existing 5-legged intersection at Broadway where Vancouver Avenue alternates the southbound traffic signal with the southbound exit ramp from I-5.
- **Remove Flint south of Tillamook and replace with new pedestrian/bike paths**
  - The existing Flint Avenue overcrossing would be removed and Flint Avenue south of Russell Street would terminate at Tillamook Street. The portion of Flint Avenue between the existing overcrossing and Broadway would be closed as a through street but access would be maintained to provide local access.
- **Add Hancock/Dixon Overcrossing and Hancock/Vancouver Lid**
  - A new overcrossing would be constructed extending Hancock Street west across I-5 connecting with Dixon Street. Traffic calming or diversion measures would be included on the eastern leg of the intersection of Hancock Street and Williams Avenue to ensure that Hancock Street is not used by through traffic. A freeway lid would be included that would encompass the area immediately north and immediately south of the overcrossing.
- **Possible Freeway Lid Connecting Hancock Overcrossing to the Broadway/Weidler Structures**
  - In addition to the freeway lids at Hancock and at the Broadway/Weidler structures, the project will study an additional section of freeway lid that could connect the Hancock Lid with the Broadway/Weidler Lid which could then operate as a single large lid covering the freeway from immediately south of Weidler Street to immediately north of Hancock Street. The assessment of a connecting lid will consider costs, right-of-way impacts, constructability and other elements.

South of Weidler Street Area

The South of Weidler Street area refers to the local street system south of Weidler Street (shown in Figure 30). Two elements south of Weidler Street were included in the recommended concept as described below.

- **Clackamas Pedestrian/Bike Overcrossing**
  - A new pedestrian and bicycle overcrossing would be included connecting from approximately the intersection of Williams Avenue, Winning Way and Wheeler Avenue to Clackamas Street in the vicinity of 2nd Avenue. The overcrossing would be designed to meet Americans with Disability Act (ADA) requirements and provide for smooth bicycle connections at both ends.
- **Continue Flint between Parking Structures**
  - The two city-owned parking structures at the north end of the Rose Quarter front onto Weidler Street. There are currently two separated parking accesses between the two structures: one is accessed from Weidler Street and the other is accessed from Winning Way. The project would include reconstructing the existing accesses into a single roadway that would allow for through travel between the parking structures. This would provide for direct circulation between Weidler Street and Winning Way.

Freeway Mainline Improvements near the Rose Quarter TC

As shown in the plan view of the mainline improvements to I-5 in Figure 29, extension of the auxiliary lanes both northbound and southbound and provision of full safety shoulders extend to the area adjacent to and above the Rose Quarter TC. Figure 31 provides several early illustrations of how the mainline improvements to I-5 could appear adjacent to and above the transit center. The changes to I-5 provide an opportunity to enhance the aesthetic appearance of the freeway structures by wrapping them with new materials designed to maximize natural light and to provide a more cohesive environment for the transit center.

View of Extended Auxiliary Lanes shown at Rose Quarter TC

View of Extended Auxiliary Lanes shown at MAX platform

Figure 31: Mainline Freeway Improvements near Rose Quarter TC (illustrative concept drawings, March 2012)

Elements Not Included in the Recommended Concept

Several potential project elements were considered and dismissed (see Chapter 4). These include interchange, roadway and freeway lane configurations. The concept for a southbound braided ramp was not included in the recommended project due to cost and visual impacts. However, if the recommended project does not improve freeway safety and operations, the southbound braided ramp could be evaluated further to determine if it could address safety and operations problems and if the impacts that were noted could be mitigated.

The Facility Plan

An accompanying document to this *I-5 Broadway/Weidler Interchange Improvements Report* is the Facility Plan. ODOT has prepared the *Facility Plan for the I-5 Broadway/Weidler Interchange* to further summarize the transportation needs associated with the freeway and the I-5 Broadway/Weidler Interchange in the project study area, the technical justification for the improvement elements of the Recommended Concept and other factors that ODOT needs to present to decision-makers to confirm the agency's intent relative to this facility in the future.

May 31, 2012

TO: N/NE Quadrant Stakeholder Advisory Committee

FROM: Project Team

SUBJECT: June 7 SAC Meeting #17, Quadrant Plan Discussion (7:25 agenda item)

The following is a summary of the 7:25 agenda item and materials included in the packet:

A) Subcommittee Update: Plan Development – discussion item

Subcommittee meetings were held on 5/23 and 5/29 to discuss the draft Goals, Policies and Implementation Actions. A summary of feedback received at these meetings and in written correspondence since the May 10 SAC meeting is included in the packet. The SAC will be asked to provide any additional feedback to be incorporated into the revised draft issued later this month.

New urban design diagrams were presented at the 5/29 Subcommittee Meeting and are included in the packet. They are based on the Proposed Quadrant Concept endorsed by the SAC in February, and will be included in the draft plan. They include urban design concepts for Lower Albina and the Lloyd District, which display the major elements of the proposed concept. There are also three supporting diagrams for the Lloyd District that display the future character and degree of anticipated change for district subareas, district "portals" or gateways, and the street and development character for the district.

B) Lower Albina Zoning – discussion item

At the June 7 meeting, staff will update the SAC on Subcommittee input and ongoing discussions regarding the Lower Albina zoning proposals. A description of the proposals is included in the packet (also provided in 5/10 SAC meeting packet).

C) Revised Building Height Recommendations on the Broadway Edge – action item

Two Lloyd District maps are included in the packet that display existing height limits and **revised** proposed potential maximum heights. The revised proposal was discussed at the May 23 Subcommittee meeting and the SAC will be asked to take action on the revised proposal at the June 7 meeting.

Draft N/NE Quadrant Plan
Summary of Feedback on Draft Goals, Polices and Implementation Actions

Two Subcommittee meetings were held on May 23 and May 29 to discuss the draft N/NE Quadrant Plan Goals, Policies and Implementation Actions. At those meetings, each of the plan sections was briefly described and participants were given the opportunity to ask questions, raise concerns and suggest revisions.

New urban design diagrams that will be included in the draft plan were also presented at the May 29 Subcommittee Meeting. They are based on the Proposed Quadrant Concept diagrams endorsed by the SAC in February.

A summary of feedback received at the two May Subcommittee meetings and in written correspondence since the May 10 SAC meeting, is provided below. This input will be used to develop a revised draft that will be issued later this month.

Summary of Feedback

Lloyd District

District Goal
- Prefer the term "sustainable" to "green". Applies to the whole plan.
- Need to define "high-quality transit".

Regional Center: Economy and Innovation
- Need to recognize the NE Broadway Business District in policies and actions on retail and neighborhood business districts (also applies to Housing and Neighborhoods Section).
- Concern about rezoning PPS Blanchard site because it will reduce the supply of industrial land.
- Need to ensure redevelopment of Blanchard site does not include residential on the rear portion that overlooks the industrial area.
- Consider including area to north (storage building) to the Blanchard rezone. Clarify what area will be subject to the master plan requirement (Action RC2).
- Add transportation facilities to Action RC6, which calls for pursuing development on publically owned sites.

Housing and Neighborhoods
- General support for addressing housing affordability in targets. However, it was recognized that an affordability target would largely be aspirational because there are currently very limited public resources to fund housing.
- Concern that affordable housing would be developed later than needed.
- Preservation of existing affordable housing should be addressed in actions.
- Explain what you mean by "involuntary displacement".
- Concern that Action HN2, proposed rezoning in Central Lloyd of approximately 5 blocks from residential (RXd) to commercial (CXd), would introduce commercial uses that would negatively impact the residential area (conversation with staff after meeting).

Transportation

- Concern about placing burden on TriMet, which has significant budget issues, by calling for expanded transit service.
- Mixed opinions on whether high-speed rail should be addressed in the plan. Most agreed that the plan should not preclude high speed rail from serving the district and there is not a need to address it further in the Quadrant Plan because it is the subject of another state-run process. It may be appropriate to address high speed rail in other plans that apply to a larger geography, such as Central City 2035 and/or the Comprehensive Plan.
- Suggestion to list "ODOT/Amtrak" as a service provider in addition to TriMet in transit policy #4. This would broaden the scope to potentially include high speed rail.
- Need to accommodate vehicles and parking, not just transit, pedestrians and bikes, particularly for Retail/Commercial Streets.
- Too focused on core of Lloyd District, needs more attention on Broadway/Weidler Corridor which relies on customers traveling by vehicle and access to convenient parking.
- Action TR2 on parking management should address existing business areas like Broadway/Weidler and their needs.
- Action TR6 should be revised to review and update the 1996 Broadway/Weidler Corridor Plan, not just implement as written. Request to look at the whole corridor out to 33rd.
- Action TR9 regarding the 7th Avenue overcrossing on I-84 is too specific. We should study different options.
- Action TR11 regarding the North Portland Greenway and Sullivan's Gulch trail should be a higher priority for implementation.
- Look at moving bikes off of Broadway. They are getting in the way of other uses like streetcar.
- Explain what is included in commute trip mode split target.

Urban Design

- Revise open space policy #4 to make it clear that the plan calls for a sequence of spaces, linked through a wayfinding system, as opposed to a continuous open space system like the park blocks.
- Explain what is meant by "river access" (in riverfront development policy #5 and throughout the plan). Could conflict with current industrial use of area.
- Call out the proposed Clackamas open space system in action UD5.
- Use plain language to describe what you are trying to achieve in UD6.
- Mention the MLK gateway currently under construction, which is just outside the study area.

Height Options for Broadway Edge (relates to Action UD2)

- Most preferred Alternative "B", with 75' maximum north of Broadway for entire length, with the exception of a "bump-up" between 3rd and 7th to 125' north of Broadway and 175' south of Broadway.
- The Eliot Neighborhood edge should get the same treatment as the Irvington edge. Streetcar should not be used justification for higher heights along Eliot edge – long term it is planned to extend up the Broadway/Weidler corridor.

- Don't use broad brush regulations. Need to determine what is appropriate on a case-by-case basis. Is there a way to allow "height swaps" along Broadway?
- Mixed opinions on the "bump-up" in height between 3rd and 7th. There were questions about the need for additional height and concerns about potential impacts on the pedestrian environment with the taller buildings. Others emphasized the need for flexibility to encourage new development and the importance of marking the MLK/Grand gateway into the Central City.
- The Irvington Neighborhood requests a 65' height limit north of Broadway, which steps down at ½ block to 45' fronting on Schuyler (see letter submitted for 5/10 SAC meeting for more details).

Green Central City
- Make sure you select appropriate tree species for street trees to avoid conflicts with trucks.

Lower Albina

Regional Center: Economy and Innovation
- Consider renaming "Regional Center: Sanctuary for Manufacturing and Employment".
- Concern that job target could be too high, but general agreement that it was reasonable considering the 25-year period for growth (2010-2035). Need to make sure that increased traffic related to new jobs can be accommodated with local streets, parking, transit and freeway access.
- Those who oppose PPS Blanchard site rezone also oppose RC1, which would change the district boundaries so the Blanchard site is located within the Lloyd District.

Lower Albina Zoning Proposals (relates to Actions RC2 and RC3)
- General support for proposal to extend mixed use (EXd) zoning east on Russell to the freeway. Some expressed interested in expanding the area included in the proposal but acknowledged the concerns expressed by industrial businesses about potential impact in terms of cost and conflicts with industrial business operations.
- General support for applying Employment Opportunity Subarea (EOS) provisions, but agreement that the proposal should be fine-tuned for Lower Albina. Businesses do not want this change to be the first in a "slippery slope" of transitions away from industrial uses.
- General agreement that, at minimum, the EOS should be applied to the area north of Russell, and perhaps to the area around the MAX station.

Transportation
- There are limited exits from Lower Albina, which could be an issue in an emergency. Need to ensure that Wheeler remains open to serve as an exit.
- Most of the actions focus on pedestrian and bicycle improvements. Could more be done for freight access?
- Timeframe of all actions is 6-20 years. Can anything be moved forward? Perhaps TR3, addressing the Larrabee Street ramp?
- Need more explanation of what the "strand" is about. Concern about directing pedestrians and bikes through the industrial area. Look at other alternatives, such as pedestrian improvements on Interstate.

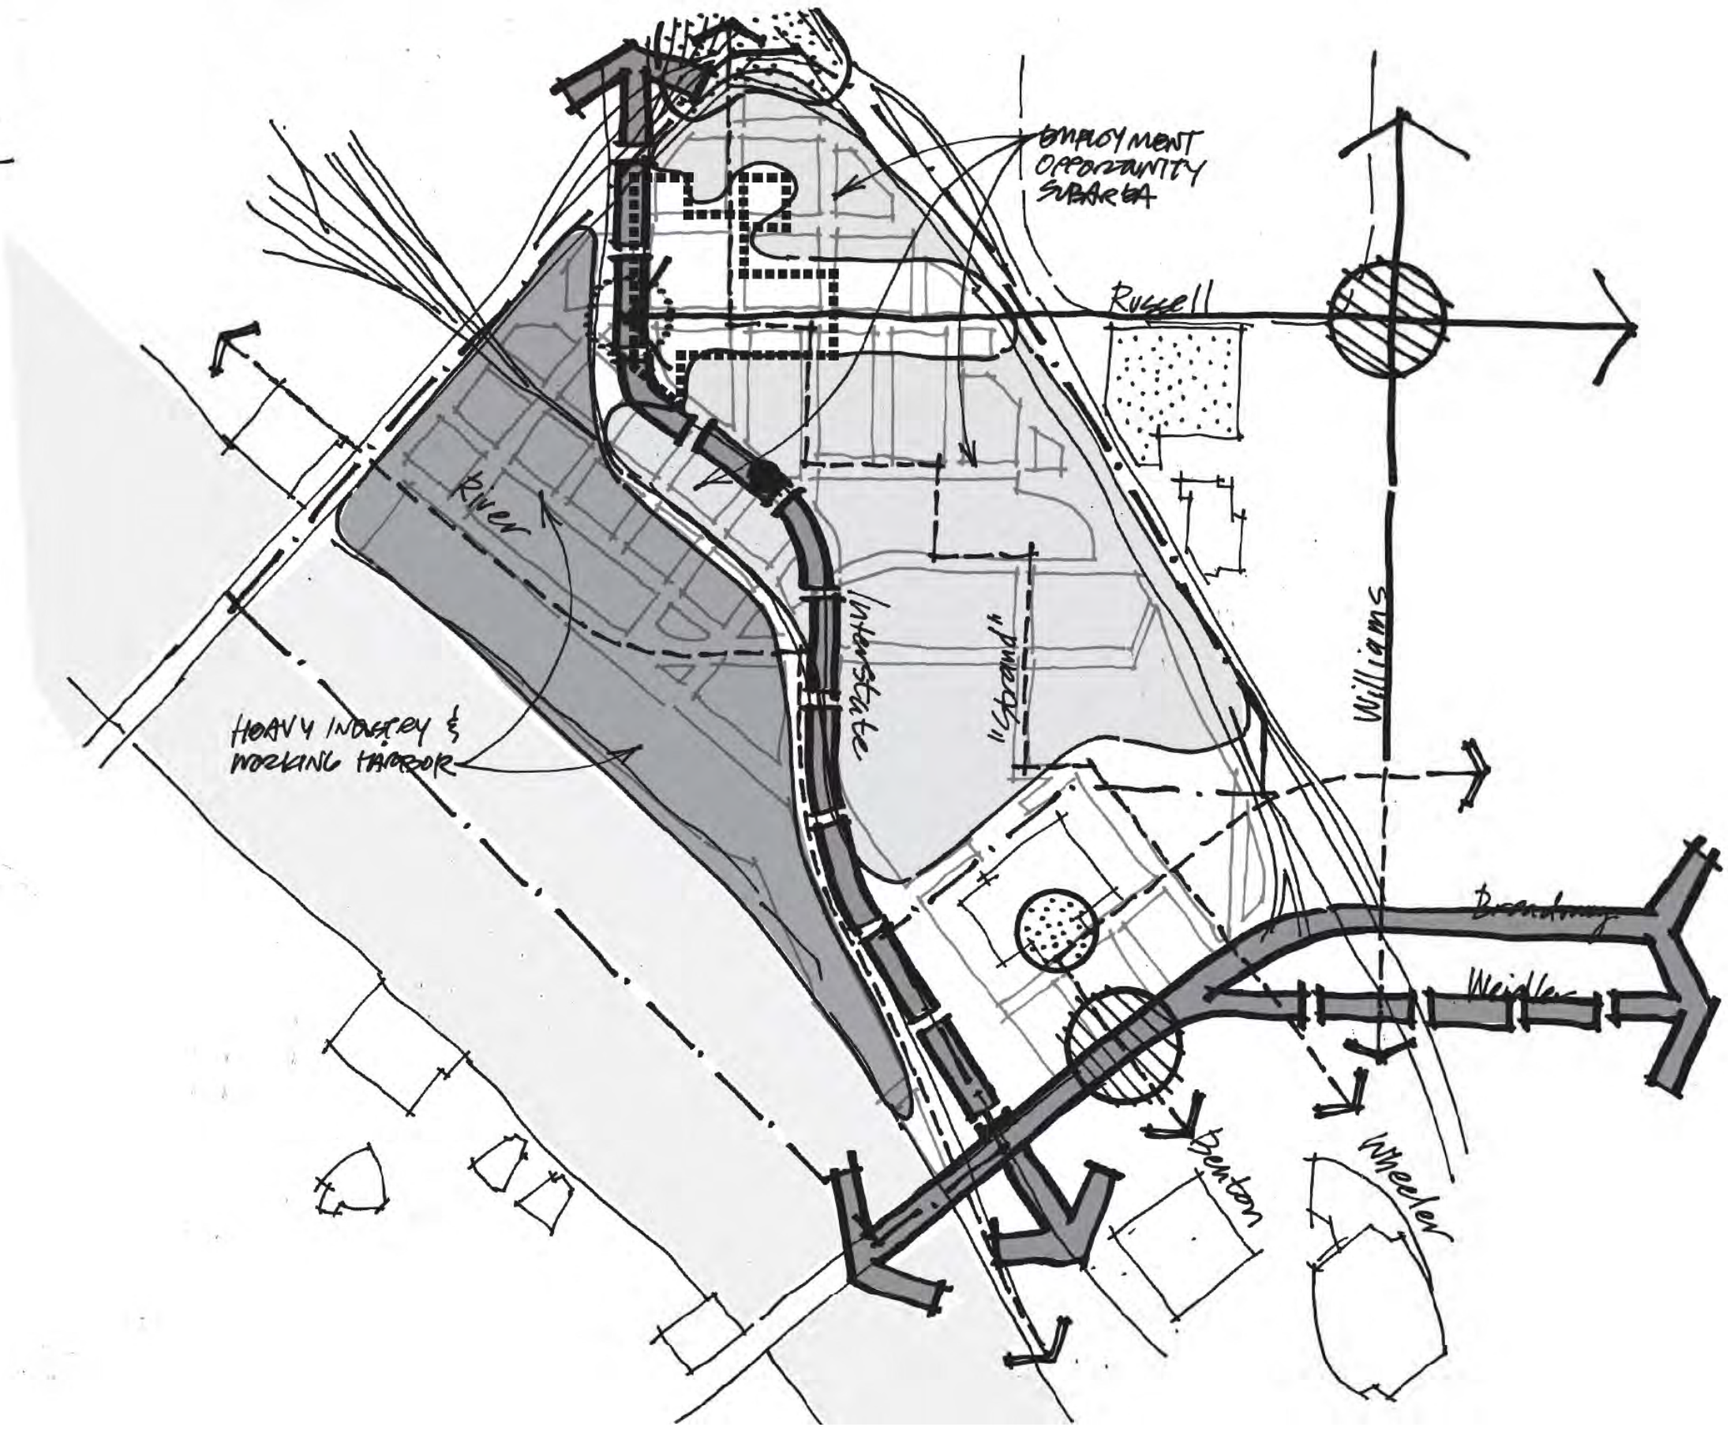
- Street character concepts in Lower Albina need to be geared toward the needs of the industrial area.
- Mixed opinions on whether passenger rail, in addition to freight rail, should be addressed in Lower Albina. Most agreed that adding policy or actions regarding high speed rail was not necessary in this plan.

Urban Design
- There is too much focus on the area under the freeway, Russell and the strand. This section should also address the rest of Lower Albina.
- Add a new action that addresses historic designation of properties in Lower Albina (in addition to those in the Cornerstones of Community Inventory).
- Strengthen UD4 to specifically call out the need to clean up and improve the aesthetics of the City storage yard. Look into the status of the storage yard master plan. This should happen soon.

Green Central City
- Green initiatives have the potential to increase costs for industrial businesses. Must not burden property owners with unfunded requirements.

North Banfield Portal
- Proposed zone change is a good move to encourage redevelopment.
- Mention the proposed new crossing of I-84 in this section.

Vancouver/Williams Corridor
- Emphasis in this area needs to be on employment and preservation of existing houses on the Cornerstones Inventory. Add language to the plan that makes this intent more clear.
- Concern about the possibility of new multi-family development displacing current employment uses and single family homes in the area.
- Concern that zone changes could increase taxes and force people out (applies to all zone changes).



Urban Design Diagrams (Lower Albina and Lloyd District)
- Add a "portal" or gateway at Broadway and 15th to the District Portals diagram.
- Address the Dreyfus site in the plan in some way.

N/NE Quadrant Plan Draft Zoning Proposals — *Lower Albina*

Background

The majority of the Lower Albina district is zoned for industrial uses. It serves as a critical incubator for emerging and innovative businesses and provides an important living-wage job base near inner North and Northeast neighborhoods. The district's mix of industrial businesses, working waterfront and multimodal freight facilities are complemented by a small mixed-use historic area along lower Russell Street, where retail activity is especially active in the evening.

Increasing zoning flexibility to allow a wider range of employment uses that are compatible with industrial activities has the potential to increase job density, capture growing industry sectors, and foster the continued vitality of Lower Albina as an employment center and business incubator.

Stakeholder Feedback

Survey responses and discussions with Lower Albina stakeholders and the Eliot Neighborhood Association indicate general support for increasing zoning flexibility. Most stakeholders support allowing additional employment types, with some concerns about the potential for conflicts with existing and future industrial activities. Most felt strongly that residential uses should continue to be prohibited in the IG1 zone. The Land Use Subcommittee of the N/NE Quadrant Stakeholder Advisory Committee (SAC) generally supported the idea of an Employment Opportunity Subarea (EOS) approach, used in the Central Eastside. The EOS allows additional flexibility in the IG1 zone for certain kinds of "Industrial Office" uses, while prohibiting residential development, which creates conflicts with industrial activities.

The proposed N/NE Quadrant Concept endorsed by the SAC suggests modest expansion of mixed-use zoning near the Russell St. Conservation District by extending EX zoning east along N Russell and south to the MAX station. However, further discussions with property owners and stakeholders have indicated that the area adjacent to the MAX station should retain industrial base zoning with application of the EOS, and that housing should not be allowed in the area along Russell where a change to EX zoning is proposed.

Existing Zoning

The area fronting NE Russell from N Albina to the I-5 overpass, where EXd zoning is proposed, contains 17 tax lots covering approximately two acres (see Map 1). It is currently zoned General Industrial 1 (IG1) with a design (d) overlay zone and has several additional development standards, such as a 50 foot height limit, a maximum 3:1 FAR, and ground floor active use and residential bonus target designations. Many of these requirements are inconsistent with the underlying industrial zoning, make the economic use of these properties difficult, and complicate potential redevelopment. Immediately to the east of this area is the Russell Street Conservation District, which is zoned EXd, allowing a mix of industrial, commercial and residential uses. No zoning changes are proposed in the conservation district.

The area generally east of the Union Pacific railroad and west of I-5, where additional flexibility for employment uses is proposed (hatched area on Map 1), contains 136 tax lots, covering approximately 46 acres. It is currently zoned IG1, with a Scenic Resource (s) overlay on a portion of the area, which limits building heights to 50 feet. The area to the west is zoned IG1, with Heavy Industrial (IH) zoning along the waterfront. No zoning changes are proposed west of the Union Pacific rail line.

Proposed Zoning

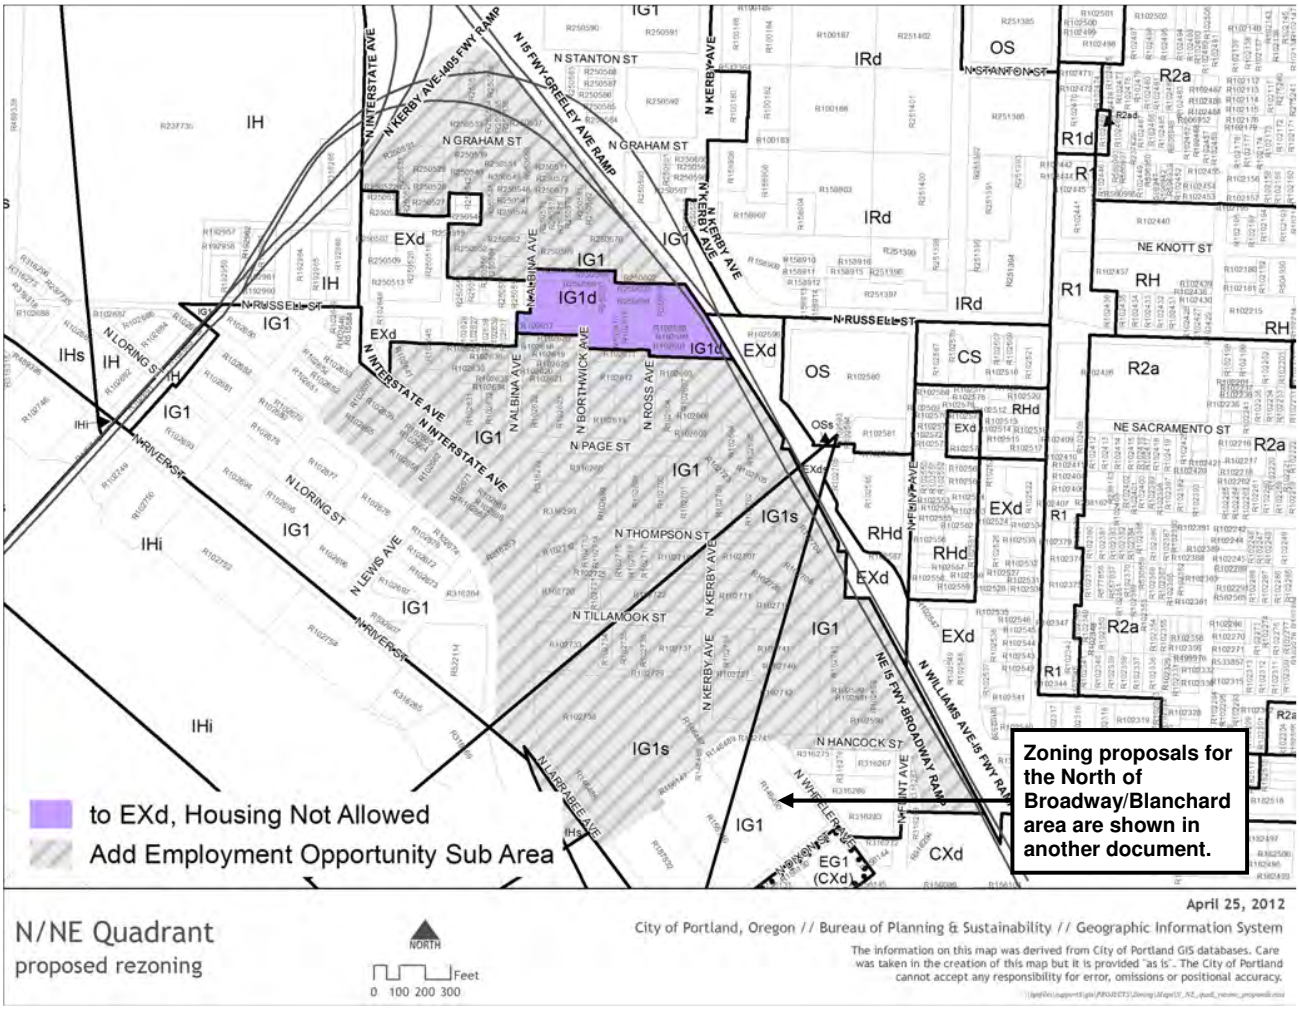
Staff proposes rezoning the properties fronting N Russell between the Russell Street Conservation District and the I-5 overpass from IG1d to EXd, with a new provision that would prohibit residential development (see Map 1). This would continue to allow industrial uses, while also allowing office and retail uses (see Table 1). The existing 50 foot height limit and 3:1 maximum FAR would be retained. No changes are proposed in the existing EXd zoned area, where housing would continue to be allowed.

Staff proposes applying Employment Opportunity Subarea (EOS) provisions to the IG1 area generally east of the Union Pacific rail line and west of the freeway (hatched area on Map 1). This would allow some additional flexibility for commercial and employment uses. Table 1 and the summary of land use classifications below provide an overview of the EOS provisions. Staff believes this targeted approach is less likely to result in land use conflicts with industrial activities than applying an employment base zone, which would have broader allowances for office and retail uses and the potential for residential development. The existing Scenic Resource (s) overlay would remain on a portion of the area.

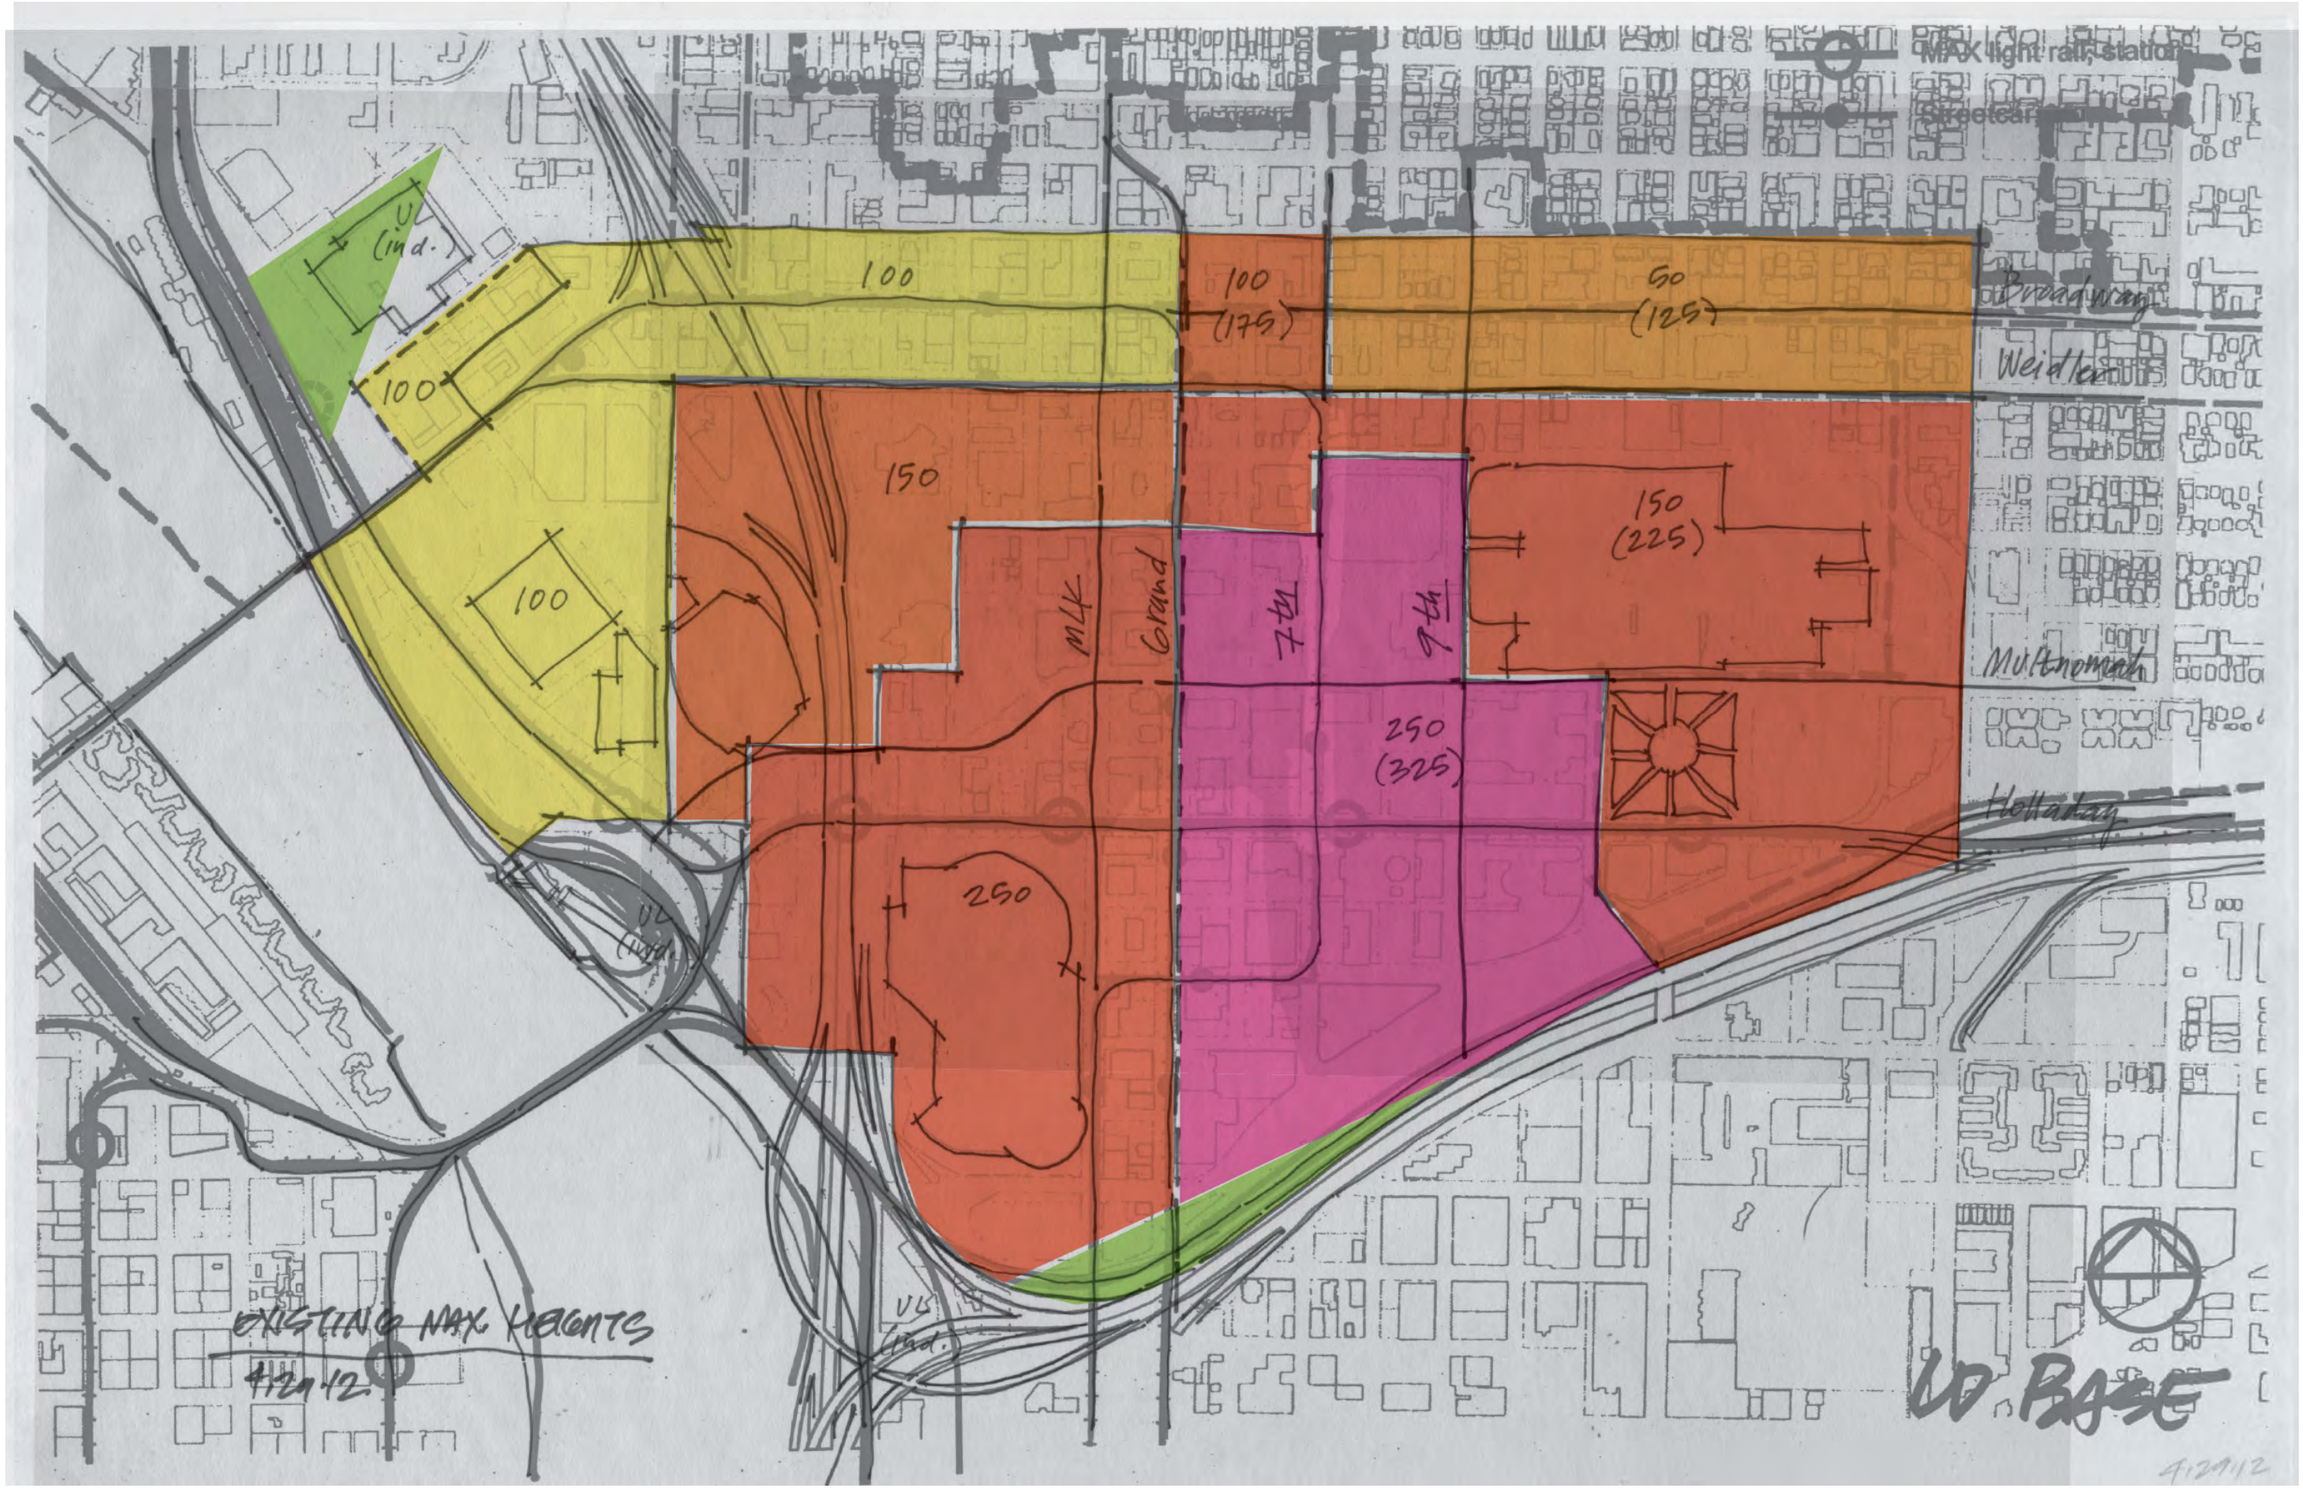
Table 1: Summary of Existing and Proposed Zoning Provisions

Provision	Existing IG1	Proposed IG1 with Employment Opportunity Subarea (EOS)	Proposed EXd (no residential)
Traditional Office: Allowed	1 Office (or Retail) use per site, up to 3,000 SF	5,000 SF per site	Allowed, limited by FAR (3:1 proposed)
Traditional Office: Conditional Use	More than 3,000 SF, max of 60,000 SF or 1:1 FAR	More than 5,000 SF, max of 60,000 SF	NA
Industrial Office: Allowed	NA	60,000 SF per site	NA
Industrial Office: Conditional Use	NA	More than 60,000 SF	NA
Retail: Allowed	1 Retail (or Office) use per site, up to 3,000 SF	5,000 SF per site	Allowed, limited by FAR (3:1 proposed)
Retail: Conditional Use	More than 3,000 SF, max of 25,000 SF or 1:1 FAR	None	NA
Residential	Generally not allowed	Generally not allowed	Not allowed (proposed)

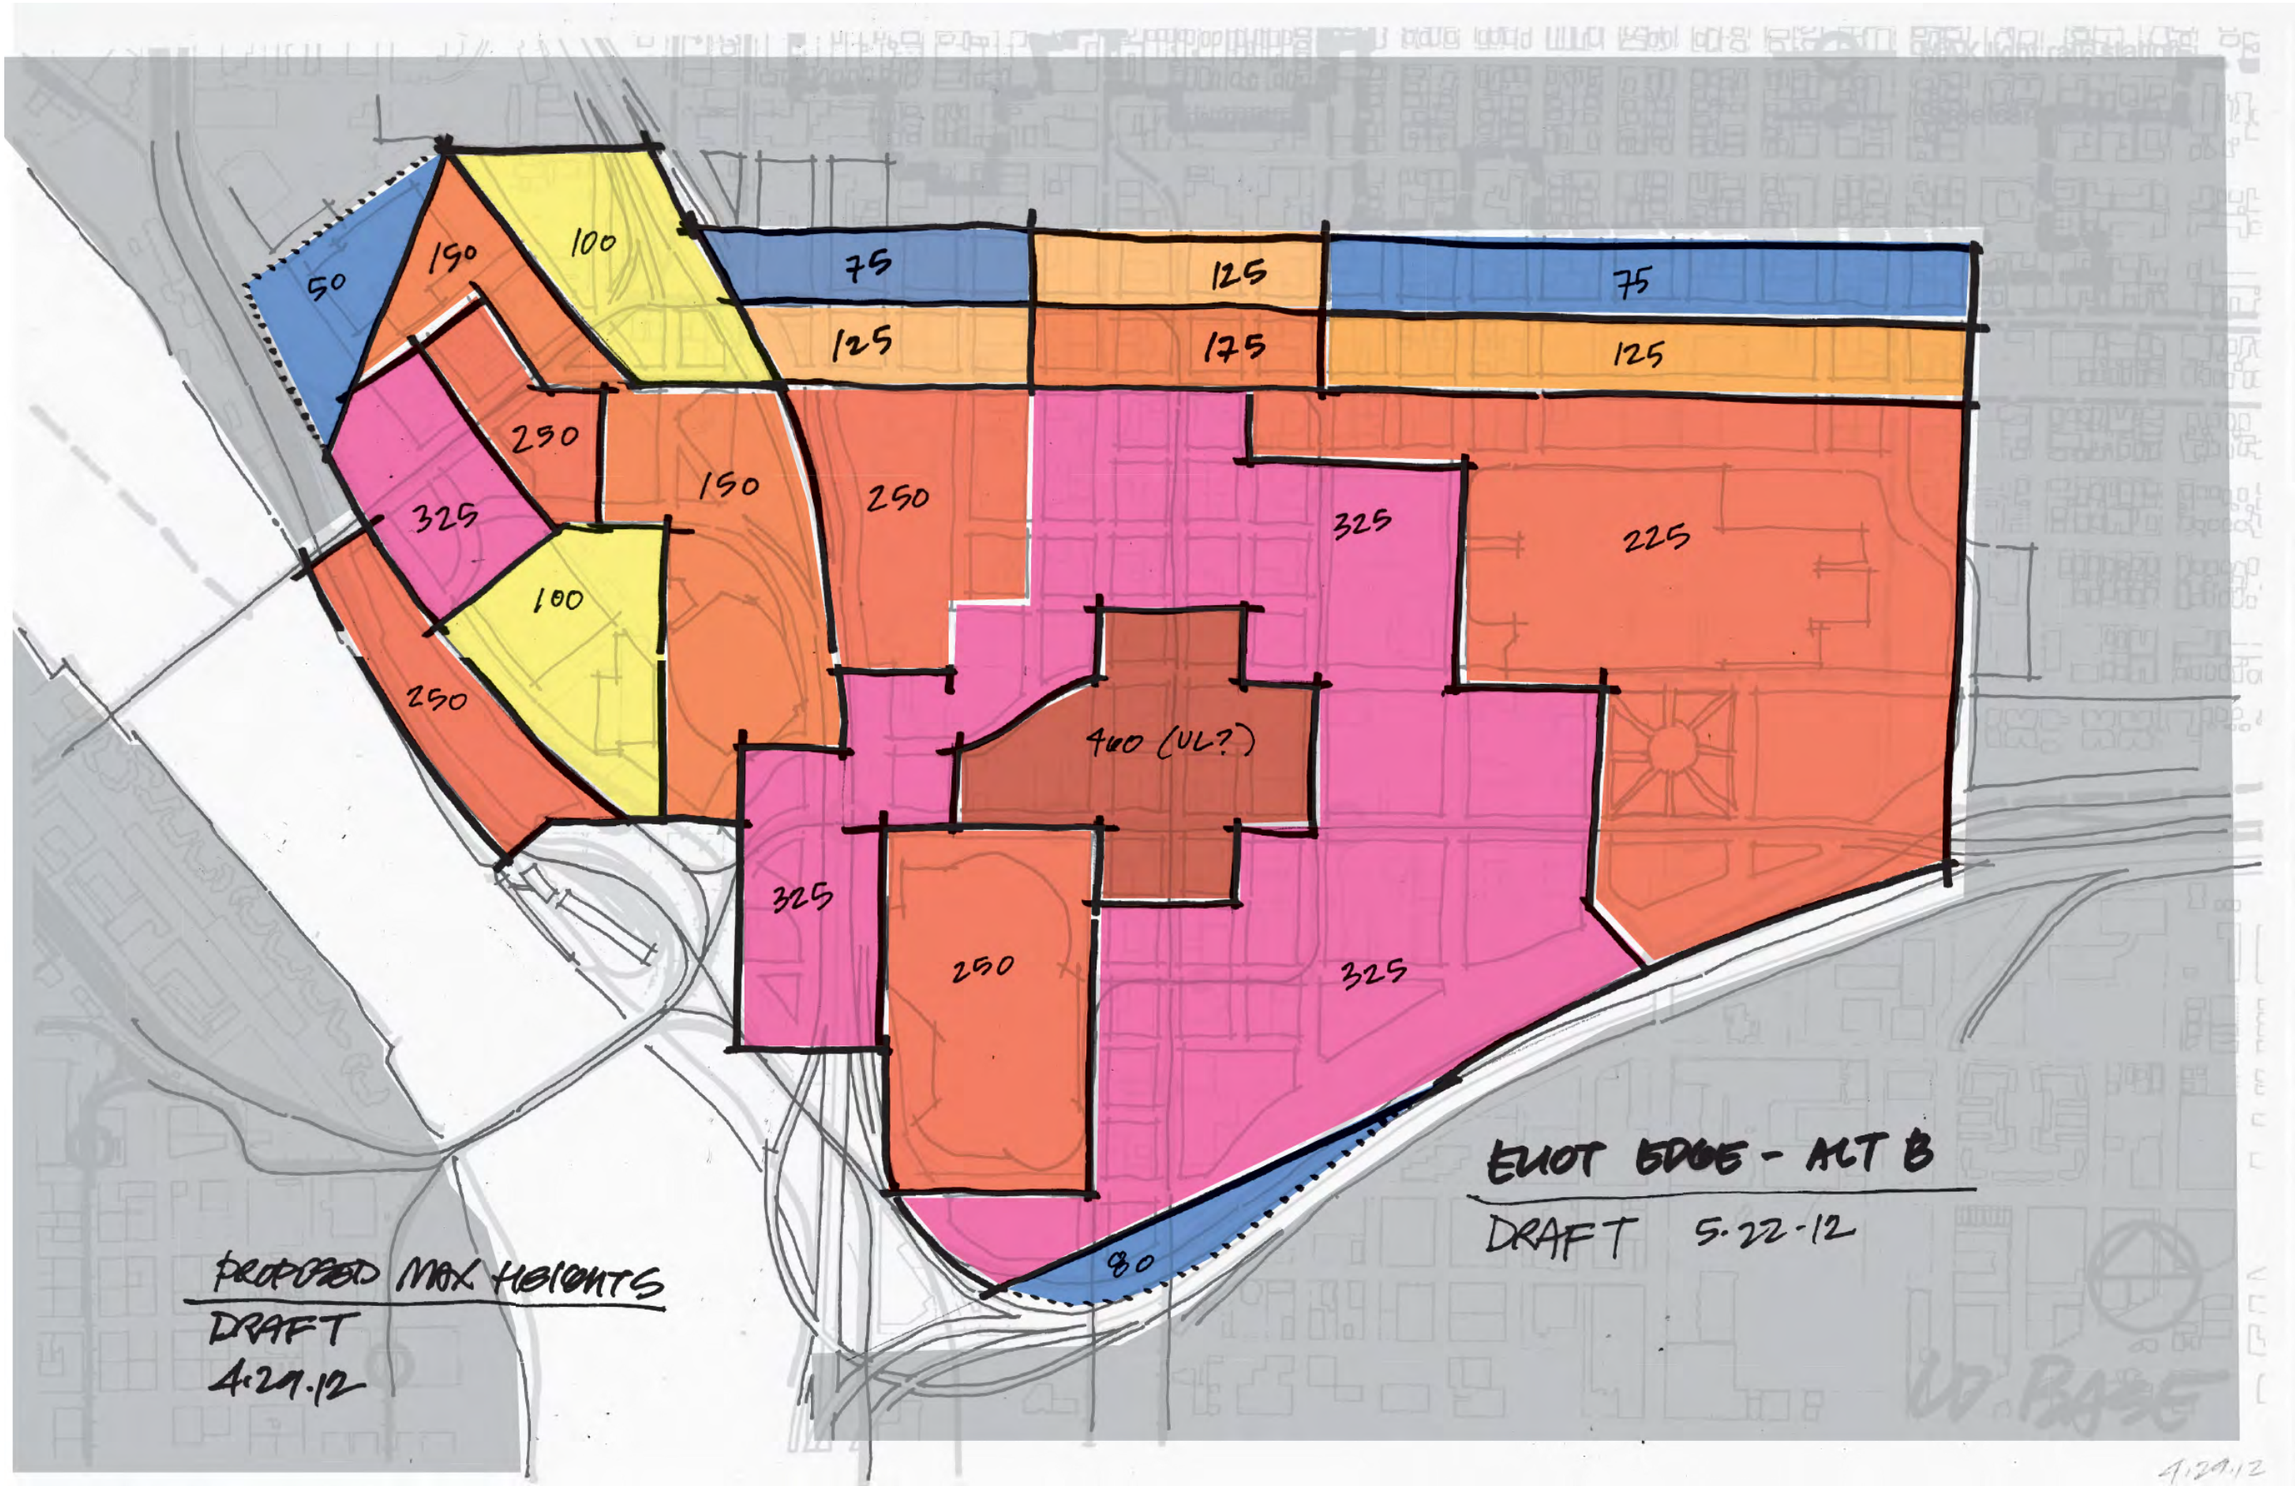
Land Use Classification Definitions



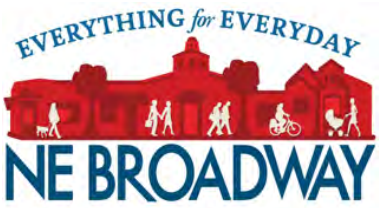
Traditional Office:



- Focus on business, government, professional, medical, or financial services.
- *Examples:* Professional services, lawyers, accountants, real estate agents; financial, bank HQs, brokerage houses; sales offices; government offices; medical and dental clinics.



Industrial Office:



- Conducted in an office-like setting but more compatible with industrial activities & districts.
- Less service-oriented with focus on development, production, processing of products, including digital products, e.g. internet & media content, designs & specifications, software, advertising materials.
- Primarily provide products to other businesses.
- Do not require customers or clients to visit the site.
- *Examples:* Software and internet content development & publishing; computer design & programming; graphic & industrial design; engineers & architects; telecommunication providers & data processing; TV, video, radio, internet studios & broadcasting; scientific & technical services; medical & dental labs.

May 20, 2012

To the N/NE Quadrant/I-5 Broadway-Weidler Plan Staff and SAC,

The Northeast Broadway Business District runs along NE Broadway and Weidler from MLK/Grand up to NE 33d Ave. Our streetscape and feel is unique and forms a transition from the higher-density Central City Lloyd District sub-district, to the primarily residential neighborhoods to the north and east, including a large piece of the Irvington Historic District's southern border along NE Broadway. The City of Portland recognizes two overlapping business districts here: Northeast Broadway and the Lloyd District.

We are concerned that the draft version of the "Lloyd District Goals, Policies and Actions" document primarily reflects the Lloyd District core-focused future goals (high density, tall buildings, new district retail, minimal auto usage, etc.) and not enough of the current Main Street, small business existence of the Northeast Broadway Business District. Much of the emphasis and detail developed in the "Retail/Commercial Street Character" document is missing or boiled down to a few sentences. The Northeast Broadway Business District is not named at all, even under "Successful Neighborhood Business Districts" Item 5 in the "Housing and Neighborhood Policies" section. As a major stakeholder, that omission should be remedied.

Main SAC Goal 2 is: "Economic development that supports existing and new business opportunities and more job creation, especially those paying family wages." On one hand the draft document calls for supporting retail development, and in Transportation Policy Item 5 recommends preserving and enhancing on-street parking to support ground floor retail and other businesses. But that is dwarfed by the many, many mentions throughout the document of promoting multi-modal transportation, while discouraging single-occupancy vehicle trips, new automobile use, and pushing parking management and a reduction in parking spaces.

We cannot say it enough: a successful and diverse business district needs customers of all types to survive. The majority of our customers arrive in cars, many patronizing multiple businesses on a visit. The number one complaint at NE Broadway businesses is a lack of parking – and businesses regularly lose customers because of it. Whether true or not,

NORTHEAST BROADWAY
BUSINESS ASSOCIATION
1631 NE Broadway #449
Portland, OR 97232
WWW.NE BROADWAY.COM

perception is reality, and lost revenue is already badly damaging our small businesses dealing with the brutal economy.

Supporting customers in the future with ample on and off-street parking and reasonable traffic flow will be an economic necessity to keep businesses open and thriving. That's not new: the Broadway Weidler Corridor Plan in 1996 noted that for "Economically Viable Corridor Business… Access, parking and development are integrated…"

SAC stakeholders from the neighborhoods bordering NE Broadway have commented at meetings on the need to support customer-friendly parking and auto access as part of a healthy business district. As regular patrons of area businesses they understand that:
• Bulky items and bags from multiple shopping stops can't easily go on the back of a bike, on the bus or walked home eight blocks. A few may try it, but most people will not.
• Neighborhood residents' jobs stretch across the metro region, so Dad may be leaving work at Nike in a car, driving over the hill to Northeast, grabbing a coffee at Peet's, a bottle of wine at Great Wine Buys, picking up dinner at Pastini Pastaria, then getting a son from football practice. All in under an hour.
• Our business district is diverse: while Mom can grab jeans at Soho Boutique, a book at Broadway Books, and the three-year-old at daycare on her bike one day, she'll need the car and close-by parking to grab that new ottoman at Sofa Table Chair, the framed picture at Brian Marki Fine Art, and the six-year-old at ballet class on another day.

It seems that in a rush to emphasize "new" multi-modal and active transportation, transit-oriented development, and the like, the draft fails to acknowledge NE Broadway and Weidler's status as Major City Traffic Streets (with 30,000+ cars a day), much less the heavy auto usage associated with the regional attractions like the Rose Quarter, Convention Center and Lloyd Center. The reality is that while the goal is for Portland Central City residents to reduce auto usage in the future, the majority of trips will remain in that mode for years.

The flip side is that NE Broadway is (and was before it was trendy) the core of a true 20-minute neighborhood. We have a high Walk Score and lots of pedestrian-oriented business traffic; many bicyclists who take advantage of shopping, dining and services in the area; and bus commuters who stop to shop after work. The Northeast Broadway Business Association strongly supports a balanced approach to transportation – where integrating cars, bikes, pedestrians, busses and possibly future streetcars on NE Broadway and Weidler is doable and economically crucial to attract both existing customers and new ones as more customers move into the area.

Looking into the future, we would like to see more mention in the draft document of planning for the Broadway Weidler Corridor beyond 16th Ave., understanding that the success of the entire business district and the N/NE Quadrant is directly affected by the entire sweep out to Hollywood – not just the half-section the Plan is dealing with. An

item should be added under Transportation, Policies to call for this. Under Implementation Actions, item TR6 should call for further study of the Broadway-Weidler Corridor, especially east of 16th Ave., while updating the 1996 Broadway Weidler Corridor Plan. Pedestrian crosswalks and needed traffic signal projects east of 16th would still be mentioned, but creating a stronger and more vibrant Main Street-focused commercial corridor should be a major focus as well.

Turning to the zoning questions and height allowances for the north side of NE Broadway, we support Irvington's desire for a 65-foot height limit with no bonuses to help transition to and maintain the historic neighborhood feel and a Main Street character for NE Broadway itself. We are also concerned with divergent height allowances between the north and south side of NE Broadway, which could create a scale and design problem if intense high-density development occurs.

Further west on NE Broadway and Weidler, we recognize that the Lloyd District core will be moving northward and the Corridor area up to NE Broadway will be in transition. That seems reasonable as long as ground floor retail and street-level setbacks and pedestrian-oriented space is maintained at taller buildings to soften the street and create a transition to the Main Street area to the east. Ditto for taller buildings around the MLK and Grand interchanges as scale moves higher down Broadway and Weidler towards I-5.

We also want to thank all of the staff and SAC members for their hard work on the N/NE Quadrant Plan. Many of our concerns and areas of interest have been dealt with in a professional manner and the Plan has evolved and improved nicely over time.

Murray Koodish
President, Northeast Broadway Business Association

Mike Warwick's Homework from the May 10th meeting

Clarifications of prior written comments

Based on comments at the May 10th meeting I would like to clarify or emphasize some of the written comments submitted at the meeting.

Re-zoning Lower Albina – Eliot very much supports the concerns of Eric and other Lower Albina business owners regarding potential residential encroachment from any zone changes in the areas already in intensive industrial uses. My comments for more "flexibility" in zoning in that area was intended to legitimize current office and retail uses, not displace current industrial ones. The discussion at the meeting seemed to indicate that the proposed changes may have the effect of displacing current industrial uses/users and potentially increasing their property tax rates. Neither of these outcomes are supported by Eliot.
That said, Lower Albina is NOT homogenous in either its use and users or in its potential for future similar industrial use. The area along Russell and north towards Fremont slopes, steeply in places. This area has remained undeveloped despite the existing zoning for decades. The lack of development and the presence of vacant lots and blighted buildings is a testimonial to inappropriate zoning. Accordingly this area SHOULD be rezoned and my opinion of the most appropriate zone would be EX to allow for live/work uses. The mix of light industrial with owners quarters is successful in Eliot along Flint. This could be replicated in this small are of Lower Albina IF the EX zone includes the "employment" overlay I suggested at the meeting. Concerns were express that this could be implemented without it being subverted for "artist lofts" instead of industrial craft spaces and I was challenged to draft language for an "employment" overlay that could prevent that outcome. While nothing can stop someone determined to subvert laws and regulations, I think the following or something like it would accomplish the purpose I suggest. Proposed "Employment" overlay language: The "e" overlay is intended to restrict allowed uses in the EX zone to ensure that the employment purpose of the zone is realized. Accordingly, the ratio of floor area dedicated to commercial and/or residential uses shall not exceed 1 to 10." That ration could be higher if 1:10 seems too low still. The purpose of providing such a ratio is to make the cost of the non-employment floor area so great that development for residential use would be unattractive.

Re-zoning the "Blanchard" site – My comments didn't properly reference the map of the area. The rezoning of this area should include the peninsula of industrial properties north of the Paramount Apartments between Wheeler and Flint. About half of this land is associated with the Blanchard Building (PPS property) and the rest is in storage facilities as a land bank for future development. Leaving it with the current industrial zoning makes no sense as it is physically isolated from industrial uses in Lower Albina by an inaccessible bluff. Increased connectivity from a future overpass would facilitate redevelopment for higher and better uses if it was rezoned.

Broadway Corridor Heights – I made two mistakes in my description of where historic properties intrude into the proposed 2-block wide "step down" area for building heights

in Eliot between Broadway and Hancock. The step down is designed to protect the Eliot Historic District on the north side of Hancock by limiting heights on the south side of Hancock to 45 feet. That provides a natural transition across the width of Hancock to a residential height of 30 feet. This is valid in concept, however as characterized, the step down is uniform between Broadway and Hancock, whereas the Eliot Historic District extends half a block SOUTH of Hancock between NE 1st and 3rd. Unfortunately, the zone does not include the church on the corner of 1st and Schuyler, which is both historic and holds special significance to the black community. Accordingly, my previous comments should be amended to indicate that the proposed "step down" should provide a uniform buffer for the ENTIRE perimeter of the Eliot Historic District. This change would require application of the "step down" to the north/south streets of NE 1st, 2nd, and 3rd as well as along the east/west streets of Broadway, Schuyler and Hancock. Further, to provide the same protection in this area, the "step back" distance needs to incorporate the additional distance provided by the "street buffer" where historic properties abut non-historic properties in the Corridor. Finally, we want this protection extended to ALL historic properties, including those not in the Eliot Historic District, such as the previous noted church.

Although I am hesitant to oppose Irvington's request for a significantly lower height in the Broadway Corridor in Irvington than it Eliot, I want to point out their justification for a higher height in Eliot and even higher at the MLK/Grand intersection is to capitalize on the new streetcar alignment. In that regard, I want to note that the Streetcar Plan includes a route through Irvington and Sullivan's Gulch on Broadway/Weidler; therefore, a similar logic, and proposed heights, should apply to this area as well.

Comments on Performance Targets

Page 3 - Dividing the Quadrant into two parts; Lloyd and Lower Albina doesn't provide an appropriate focus on development in the Rose Quarter area, which is distinctly different than the Lloyd District proper and industrial Lower Albina. Although it would require a significant effort to do this, I think it is both warranted and will be rewarded.

Page 4 Targets – More context should be provided for reference. What are Central City Employment Goals/Actuals? What are they for the NE Quadrant as a whole? Now we have something to compare Lloyd District goals to.

RC1 – Should be expanded to include PPS and adjacent properties north of the Paramount Apartments also.
RC2 – See above. Clarify which properties would require the Master Plan and what would be the trigger.
RC7 – Not clear if this is inclusive or exclusive of the Blanchard area or if it should be, but it is worth asking.

Page 6 Diversity – City housing policies for low income housing have had the effect of concentrating low-income residents in Inner N/NE limiting diversity of choices outside of N/NE. Moreover, these policies (coupled with poor zoning) have displaced poor and

minority populations living in single family homes to make way for mid-rise "affordable" units that are primarily occupied by young, white residents (poor artists). How will "diversity" be measured? If average incomes are lower than the city average, will there be programs to stimulate housing options for middle income residents?
Complete Neighborhood – I suggest the Blanchard be specifically mentioned here.

Page 7 Displacement – Clarify what "involuntary displacement" means and how it is measured and what the purpose of countering is vis a vis the economic development process that typically "causes" it. Average tenancy in rental units is under 2 years according to Census data for the past several decades. Is the metric something "less than" the long run average or simply anyone who doesn't want to leave, despite the fact the long run average includes many people who would fall into that category? What is meant by "support?" Do you anticipate increased subsidies to freeze populations in place? Rent control? Neighborhoods and cities constantly "evolve" and that includes changes in the income, family structure, and race of residents and kinds of businesses that serve them. Are you proposing to turn freeze residents and businesses in place and turning areas into museums?
Page 7 – Targets
Same comment as for Page 4 above regarding the need for more context.
HN? – Last meeting there was mention of ways to "swap" height allowances. Similar programs existed (I think) for housing density too. In any case, is that a mechanism that could be used here and if so, should it be mentioned?

Page 10 – River access keeps getting mentioned however what kind of access is not clear, moreover there is an inconsistency between the discussion in Lloyd and Lower Albina. The Albina discussion acknowledges the river is a working harbor and not a recreational destination. The same is true for the waterfront by the Rose Quarter, but there is not acknowledgement of that limitation on recreational access. Views of the river are one thing, beach front access and uses are another.

Page 11 – Targets
"70% of commute trips" From where to where? I presume you mean trips TO the Lloyd District, but that needs to be much clearer as does what you mean by "commuter." I presume people working there, not shoppers/visitors. Should there be an "action" to encourage employees to live in the district through incentives or similar mechanisms?

Page 14 – The "gateways" noted should include the Albina gateway at San Rafael and MLK even though it is outside the plan area for reasons noted at the meeting; namely very tall buildings at MLK and Broadway would overshadow this particular gateway which would be an affront to the residents of NE Portland who advocated for it. Further, in our initial discussions of "placemaking," this same area (MLK and Broadway) was highlighted as the location of a potential pedestrian plaza where the Loop streetcar would intersect with planned extensions east on Broadway/Weidler and north on MLK. That option isn't mentioned here and, obviously, is contradicted by the discussion of even greater height allowances for this location.

UD2 – This needs to be expanded to include similar provisions for "transitions" (per Policy 7) for the Eliot Historic District. If the concept behind taller buildings along transit corridors is sound in general, then it should be sound along all transit routes, built and planned, including the planned extension of streetcar east on Broadway. An automatic limit on allowed heights seems crude. Instead suggest the uniform application of the "transition" or "step down" concept that bases the maximum height on proximity to historic buildings and extends towards Broadway rather than starting with a maximum height at Broadway and stepping down towards historic buildings. That approach should provide both Eliot and Irvington with greater protection of historic resources (which are really CITY resources) and allow for greater flexibility for developers. We also discussed the potential for allowing "height swaps" along the Broadway corridor. That should be included either here or somewhere in the UD section.

Page 18 – The Sullivan's Gulch Trail will be complicated to plan due to potential proximity to railroad property in some segments. Nevertheless, those sections in Lloyd that are NOT proximate to the railroad should be a HIGH priority for immediate development to enhance circulation around the area and facilitate recreational use for area workers.

Page 21 – Rezoning of Lower Albina land CURRENTLY in industrial use should not be considered if, in the opinion of current owners/users it will displace current industrial uses or increase assessed value in ways that threaten future industrial uses. Area that are NOT in currently in active industrial use, primarily along North Russell and north of Russell, should be rezoned to allow for more flexible, but primarily industrial use, but allowing for live-work. A new "employment" overlay should be applied that allows non-industrial commercial and residential use but only in support of the underlying industrial use. Some kind of floor area ratio could be used to implement this new overlay, such as a requirement that non-industrial uses consist of no more than 10% of total floor area.

One of the Policies should be to "Reestablish the historic connection between Lower and Upper Albina along Russell Street."

RC1 – The area north of the Paramount Apartments between Flint and Wheeler should be included in the rezoning.
RC2 – Eliminate the housing prohibition and replace it with the "e" overlay suggested above.

COMMENTS TO: N/NE Quadrant SAC & Staff, for June 7, 2012 Meeting

FROM: Cathy Galbraith, Bosco-Milligan Foundation/Architectural Heritage Center

RE: Transportation & Land Use Issues & Options

Since I'm unable to attend the June 7th meeting, I am providing some written comments for distribution, for consideration in your discussion and deliberations. Since 1993, I and my organization have continued to document and advocate for the protection of historic buildings throughout the city; our ongoing "Cornerstones" initiative continues to focus on buildings associated with Portland's African American community. These buildings stand throughout the city, with an understandable concentration in inner North and Northeast Portland - - based on the 1919 public policy of restricting African American residency to this area of the city. That policy was not formally acknowledged until 1949, and it continued until new housing legislation of 1957 was adopted. The result of that long-standing policy is that thousands of buildings were demolished (1,337 documented in Eliot alone) between 1958 and 1972 - - as public projects took the path of least resistance, plundering neighborhoods with significant minority property owners, residents, and business owners, with little political influence. The flip-side of this loss is that there is a strong concentration of buildings that managed to survive demolition and displacement.

Within the boundaries of the North/Northeast Quadrant area, there is a substantial collection of historically significant buildings associated with the African American community over time. They include the homes of Oregon's first African American dentist, first female funeral employee, church pastors and deacons, Spanish American War veterans, Portland Hotel waiters, photographers, NAACP officers, and other significant achievements - especially for African Americans of earlier eras of rampant discrimination. These houses and buildings line N Williams, N Vancouver, N Flint, and N Page, and also include buildings in the Russell Street Conservation District, and along N Broadway, NE Weidler, NE Schuyler, and NE First Avenue.

My attention to the N/NE Quadrant plan has been based on our long-standing interest in promoting the preservation of these resources, along with others beyond the Central City Plan boundary. As in earlier plans with their many "unintended consequences" , current transportation and land use planning efforts must recognize, acknowledge, and avoid negative consequences on surviving historic buildings and their community.

TRANSPORTATION – It might be easy to simply approve one or another of the I-5 Options, based on wanting to have something to show for the substantial work invested in this effort to date. It is also relatively easy to see that not much will happen as a result of adopting one of the Options. Transportation planning and preliminary engineering will proceed - - meaning more "study", more planning for 'public involvement', and attention to "mitigating impacts of construction" (along with a long list of *other* needed mitigation measures.)

For the "north of Broadway" overpass options, we support the position of the Eliot Neighborhood – Option 2. This is the one option that allows some 'improvements' to proceed, and avoids the years/decades of uncertainty with little or no funding, and subsequent years of construction disruptions. Other options promise little in actual improvements to the I-5 traffic congestion and safety concerns that precipitated this planning effort. The exorbitant costs and construction impacts do not outweigh the slight benefits.

We oppose the Hancock overcrossing connection, given the likelihood of traffic impacts in the Eliot neighborhood. Again, the costs and impacts do not outweigh any benefit – for others outside the neighborhood. Eliot cannot endure one more major impact of more well-intentioned transportation "improvements."

We remain concerned about property and parking impacts to the Paramount Apartments, the Left Bank, and access concerns raised by business owners in Lower Albina.

LAND USE – We remained concerned about the designation of areas in Eliot and Irvington for substantial additional allowed heights for new developments; the inconsistencies and conflicts of additional height with *existing* development are obvious - - and will only increase the speculation and uncertainties that result from those conflicts. **We are particularly opposed to the proposed heights in Eliot "north of Broadway."** The allowed heights need to 'step down" to protect historic districts *and* historic resources. **The allowed height at the edges North of Broadway should be the same for *both* Eliot and Irvington – 50'.** Any additional height should ne permitted only by a bonus process that might justify more height – a bonus that needs to be earned. In particular, the area of NE First at Schuyler needs to acknowledge the historic Mt. Olivet Baptist Church, the most significant African American historic resource in the northwest. **Note:** the meeting notes from the May 23rd and May 29th sub-committee meetings cite *"Mixed opinions on the bump-up in height between 3rd and 7th…"* My observation is that the differences in opinion were SAC and the general public opposition to the heights, versus those of staff (favoring the heights.)

We oppose the greater height proposed for NE Grand and Martin Luther King Blvd. As the "gateway' into the area (both north and south), the plan needs to be much more prescriptive and imaginative than simply encouraging greater height.

We support the concerns of industrial property owners and businesses in Lower Albina. However, we question the dominance of issues expressed on behalf of other business owners on N Russell "uphill." Long-term neglect of buildings in this area has not enhanced development in this area; nor have industrial operational activities in the streets right-of-way (which can be acceptable but is not an outright right of any business operation.) **The tremendous potential of this stretch of "upper Russell" has yet to be realized, and doing so should be an important goal.** High quality development in this area can go hand-in-hand with deliberate and restorative efforts in the Russell Street Conservation District, enhancing both areas and not generating major conflicts with current business owners. The historic connection between Lower and Upper Albina along N Russell needs to be re-established.

Eliot Neighborhood Association Position

on the I-5 Freeway Project and Associated Surface Street Improvements

Submitted by Mike Warwick, Eliot Neighborhood Land Use Committee Chair and Official Representative to the NE Quadrant Stakeholder Advisory Committee (SAC) June 1, 2012

Premise – I wear two hats on the SAC; one as a representative *from* Eliot based on my residence another as a representative *of* Eliot as Land Use Chair. The SAC process is to the point where Eliot wants to take a position using my position on the SAC. That position was taken after consultation with neighborhood residents and businesses and considerable discussion and deliberation by the Eliot Neighborhood Association Land Use and Transportation Committee. It is presented at this time as the NE Quadrant SAC nears the end of its process. That process appears to be resulting in a list of options for further study by the State and City Transportation agencies that will result in Plans from those agencies rather than a specific plan from the SAC. Because "studies" do not provide sufficient assurance of outcomes favorable to neighborhood stakeholders we have taken the following positions (our reasoning is in the next section).

Eliot's Positions -

With respect to the "north of Broadway" overpass options:

- We FAVOR Option 2, connecting North Flint to North Dixon. This provides improved "connectedness" between Eliot and prospective redevelopment at and around the Blanchard Building as well as improving access by pedestrians and bikes to the river. Moreover, this connection and associated improvements at the current Flint/Broadway intersection can be completed independent of the I-5 freeway project.
- We OPPOSE Option 3 and all other options except that noted above. At the outset I indicated approving for study the "least bad" option was not the same as favoring it. Option 3 was the least bad of the proposed Hancock overcrossing options. I have consistently stated Eliot's opposition to prospects for increased cut-through traffic on Hancock or through the neighborhood that could result. Approval to "study" does not provide the guarantees that Eliot requires. Rather than tempt fate and leave Eliot at the mercy of future funding to implement traffic control measures, we have decided it is more appropriate to oppose any and all proposals for any new east-west I-5 overcrossings in Eliot.

We OPPOSE widening I-5. It isn't clear the SAC will be provided with an opportunity for an up/down vote on ODOT's proposed freeway widening project. Accordingly, we are taking this opportunity to state our position. This proposal promises far more damage to inner city neighborhoods than the benefits it is purported to provide. The associated surface street improvements that may accompany the project, while attractive, do not offset the obvious negative consequences of the freeway proposal and are overly dependent on the generosity of

future federal transportation budgets, faith in sincere participants in the SAC process who will not be in similar positions when the project is constructed, and trust in assurances by the City of Portland that does not deserve that trust *based on actions it has taken against our community over the past 70 years*.

Our Rationale

There are merits in improving access across I-5, especially if it will spark redevelopment in and around the Blanchard Building and provide better access for Eliot (and other) residents to the river across I-5. There are also risks. The plans resulting from our efforts have a primary goal to improve freeway traffic, including access via surface streets. All other objectives are secondary. In our view, it is more likely freeway and ramp improvements will be made than funding provided for improvements to pedestrians, bikes, and local neighborhoods. The Albina community has witnessed this process play out over seven decades, *never to its benefit*. The stark reality is that over 90% of the homes and businesses of this community were eagerly sacrificed by the City and State in the name of civic progress such that all that is left is the Eliot Historic District. Eliot cannot place its future in our trust that City officials will live up to objectives in "plans." We must have guarantees! Absent those, we are compelled to oppose plans that pose a threat without immediate benefit.

Why we favor Option 2. It is not clear that this improved access is necessary for vehicles, and if so, why it can't be accommodated simply by establishing a connection between North Flint and Dixon (Option 2). For that reason, we favor Option 2, as it could be implemented within the 5 year time frame necessary just to engineer and fund the I-5 widening project, assuming even that engineering and planning gets funded. The benefits to Eliot and other neighborhood pedestrians and bike riders would be more immediate than waiting on the freeway project. City staff has claimed such a connection is necessary to stimulate interest in redevelopment of the Blanchard Building. If true, implementing this connection to Dixon in the near term would accelerate that redevelopment. Doing so would also be a demonstration of the City's commitment to objectives discussed by the SAC and a step towards rebuilding trust between it and Eliot.

Why we oppose all other overcrossing proposals. As has been noted, the Eliot Historic District is a remnant of a much larger community. Holding what is left harmless from future civic "do gooding" is a bare minimum expectation. Establishing new, direct connections through Eliot between MLK and Lower Albina will quickly destroy the character and livability of what is little is left of the City of Albina. The Hancock overcrossing is offered as a "box around the box" solution to divert mostly local traffic away from the Broadway/Weidler "box." In point of fact, there is no "box" there is only a "Broadway Bypass" through Eliot. If there was a southern leg to the "box" such as Winning Way/Clackamas, coupled to north/south legs at Benton and MLK/Grand, then maybe there would be an actual "box" around the box that would function as the secondary circulator the name implies. There would also be a whole lot more opposition.

Our primary concern with all I-5 overcrossings is with increased cut-through traffic that would result from implementing a "Broadway Bypass." This concern is uniformly shared by both residents and businesses along Hancock who believe that current traffic levels and speeds are excessive. Our concern could be minimized or eliminated with appropriate traffic control measures. Unfortunately, those measures are at the mercy of both available funds and the good faith of future transportation planners when the time comes. Our fear is that either funding won't be available or that other interests will prevail and those traffic measures will not be erected. For that reason, we feel it is best to oppose Option 3. All other options are also opposed by the SAC, but it is important to restate Eliot's opposition here, for this and other reasons.

Why we oppose the I-5 freeway widening proposal. There are multiple reasons to oppose this project. From discussions in Eliot disruption of residents and businesses during construction, waste of taxpayer funds, and poor investment of public resources top the list.

Progress Delayed. The project will take multiple years to plan, engineer, fund and construct. Construction will require demolition of five freeway overpasses including the primary connection between North/Northeast Portland and the Central City. It will disrupt service on the soon to open Loop Streetcar and probably delay plans to extend service from it east along Broadway and north along MLK. In the interim, would-be developers will delay planned projects in the area that are expected to accompany the Loop Streetcar and our pending NE Quadrant plan for the Central City. Construction impacts will result in business losses to the Rose Quarter, Paramount Apartments, and Left Bank; loss of at least two buildings with businesses in them; and reduced sales at businesses in the Broadway Corridor and Lloyd District. Those losses aren't "theoretical," they always accompany major construction projects.

What benefits? The initial justification for freeway widening is safety improvements. We do not believe that case has been made or that any improvements will be sustained as faster speeds attract more traffic eroding any congestion savings as well as increasing the severity of whatever accidents still occur. The proposed improvements are limited to a section of freeway less than two miles long where average delays can't average more than a few minutes at most (without modification of the I-84 and Morrison Bridge ramps and sections of the freeway north and south of the study area). All freeway "improvement" projects provide only short term congestion relief. These minimal benefits are difficult to balance against the range of estimates of project costs, $250 to 400 million dollars. Of course, these cost estimates aren't based on complete engineering studies or realistic estimates of the cost of future construction; the cost is likely to be higher. Covering higher costs assumes state and federal transportation budgets will increase accordingly. This is, of course, why Eliot is skeptical the City can or will actually follow through with traffic mitigation measures with a Hancock overpass and that the longed for surface street improvements will materialize.

Reality check. We are entering the end of the petroleum era. Less because of peak oil (although that will return as a concern in another 20 years), but because the appetite for oil in Asia and

elsewhere will continue to drive domestic oil prices higher and higher; ignoring this reality while planning long lived transportation projects is simply foolish. At the outset of this project we were told there was a long term planning process that would look at the region's transportation needs 30 years out and this project would be an interim improvement. I agree that motor vehicles and freeways will continue to be a major element of the region's and nation's transportation future. However, *what kind of vehicles* and *what role* freeways may play in the future may be very different than today. It is much more likely personal mobility will be provided by Smart cars than SUVs. Further, the new generation of drivers favors other transit modes over even obtaining a driver's license, let alone owning a car. Finally, average miles driven have been on decline for almost a decade. These trends challenge the assumptions used for this project and suggest we should be planning and investing in a different future, not one rooted in the past.

Regaining our Trust

I and other Eliot representatives and neighborhood members have participated in this process with the needs of the larger community as well as our own in mind. I have consistently indicated that this has been one of the best collaborations between neighborhood and other interests that I have seen. The options the SAC has proposed, evaluated, and adopted for study all make contributions to the "civic good." Very few of these improve the quality of life for Eliot, while they pose significant risks to established neighborhood, resident, and business interests. These risks that loom large in Eliot given the shoddy record the City has in honoring its promises to this community. That legacy cannot be ignored, but it may be possible to overcome.

A stronger partnership between Eliot and the City to address the objectives identified through this process would be required. In my view, that would require at least a two-pronged effort. One, based on the goal of this SAC to both widen the freeway and implement surface street improvements *on an accelerated schedule* and another, based on a Plan B, that incrementally implements recommended surface street improvements in case freeway funding is not forthcoming. That would include implementing Option 2 and associated changes. It could include advance deployment of traffic calming measures on Hancock and other streets to address current concerns in preparation for the barriers necessary to divert traffic from a future overcrossing. It should also include deference to Eliot on building forms along the south and west edges of the historic district to explicitly honor and protect historic buildings that have survived (irrespective of their present status as "historic" on the National Register of Historic Buildings) as well as cultural elements associated with the Albina community, such as the MLK gateway. That partnership should also extend outside this Central City Plan effort to the broader Comprehensive Plan to address Eliot's long standing complaints about incompatible in-fill development, substitution of "community design" standards for the "10 Principles of Design" noted in the Albina Plan, and conversion of EX zoned property to purely residential/religious use.

Allan Rudwick

INFORMAL DISCUSSION AND MEAL

WELCOME, MEETING PURPOSE, APPROVAL OF MINUTES, AND STANDING BUSINESS

Sam Imperati, ICM, welcomed the group and reviewed the agenda.

Sam explained that he added a post-meeting summary on pages 12-13 of the March 2012 Draft SAC Meeting Notes. He does not intend to revisit votes, but wanted to give folks a chance to review, since there was a lot of real-time editing to the voting questions. Sam read the summary of his comments:

> The March meeting explored the "braid" issue and the SAC voted on it by dividing it into three parts, which for simplicity sake can be summarized as follows:
>
> 1) Should the braids move forward (No by Majority-Minority vote)
>
> 2) Should the braids, along with other solutions, be consider down the road if issues remain, (Yes by Majority-Minority vote) and
>
> 3) Should the project design the build elements so as not to preclude the braids from being built in the future, but only if that can be done while accommodating the hybrid base project elements. (E.g. preserving right of way.) (Yes, by Majority-Minority vote.)

There were no comments or edits suggested by the SAC. The March 2012 Draft SAC Meeting Notes were approved as written.

ANNOUNCEMENTS

Clackamas Crossing Update

Karl Lisle, BPS, said they have been in contact with Legacy and are in talks about a pedestrian easement to see how it could work. He will update the SAC with new information as it becomes available.

MUP Alternative Update

Mauricio Leclerc, PBOT, noted that since the Multi-Use Path (MUP) concept has been dropped, staff is looking at alternatives. There is not going to be a bike lane on 2nd or 3rd Avenues, rather aim is to simply provide for better access across the quadrant. There will be more information next month.

Todd Juhasz, ODOT, announced that they have some information on crash savings and delay savings in response to Mike Warwick's request. ODOT asked DKS to conduct a user benefit analysis. Three categories of user benefit (savings) were quantified:

- User (traveler) time savings (delay savings in vehicle hours, and in dollars)
- User fuel savings (in gallons of fuel, and in dollars)
- Emission savings (in tons of CO_2, and in dollars)
- Crash savings (in dollars)

The assumptions, data sources, and estimation methodologies are discussed in the memo, which were made available at the meeting.

PROCESS OVERVIEW/TIMELINE REMINDER

Karl provided a brief overview of the rest of the process. Staff concluded that they needed to add one more meeting this summer. The process cannot stretch out into the fall because the Quadrant Plan and I-5 Facility Plan need to be presented to the Portland Planning and Sustainability Commission, the Portland City Council, and the Oregon Transportation Commission in the fall.

Tracy Whalen: what about the Joint Policy Advisory Committee on Transportation (JPACT)?

Chris Deffenbach: the plan would need to go to JPACT only if there were proposed changes to the Regional Transportation Plan (RTP).

Paul Smith: one of the changes in the plan is to recommend changes to RTP, so that could happen later.

Karl continued, noting that the work on the interchange is well on its way, and we still have have quite a lot of work to do by July on land use. There will be an additional subcommittee meeting, and we may need to add another. It all depends upon what comes up. The project team will keep the SAC posted on developments and schedule changes. The May SAC meeting will be at ODOT, with dinner at 5:30 and meeting start time at 5:45.

Sam passed around the schedule poll for SAC members to fill in when they are available for the additional SAC meeting this summer.

New Alternate SAC Member Announcement

Sam announced there was a new alternate in attendance, Lindsay Walker, who was sitting in for Owen Ronchelli of the Lloyd TMA.

I-5 Broadway Weidler Interchange Elements (Discussion Item)

Karl Lisle, BPS, presented a PPT on the North of Broadway Options. He said that the goal is to address the issues tonight, so by the next meeting folks feel ready to respond and decide. There will be no recommendations tonight. Staff realizes they have a unique opportunity to re-build bridges, and want to be sure they make the right decision.

Karl said one of the big choices to make is whether to keep Vancouver in its current configuration or to realign it. This was a significant topic at the 3/20/12 session facilitated by co-chair Lloyd Lindley. Karl reviewed the PPT, described each of the options, along with their primary features, impacts, some possible mitigations, and opportunities.

Slide 7: North of Broadway Options

1. Rebuild
2. Optimized Rebuild
3. Vancouver + Hancock/Dixon
   - With Wheeler sub-option
   - With Lid sub-options
4. Flint
   - With Lid sub-options
5. Dixon
   - With Wheeler sub-option
   - With Lid sub-options

Discussion Items

- Vancouver Options to keep or move:
  - Unique Opportunity to change local street system safer operations.
  - Box around the "The Box"-opportunity to provide for alternative and less stressful routes.
  - Economic development opportunities
- Options with Freeway Lid to provide opportunities for neighborhood amenities and improved ped/bike facilities.

In explaining the options, Karl noted that there are many possible permutations within each, and staff wants to preserve flexibility. He also explained some "Leftbank Triangle Suboptions," noting that the suboption that continues Flint through the triangle is opposed by the Leftbank.

Sam Imperati asked the SAC if there were any questions for clarification. He noted that some attended the 3/20 session, some attended the 4/5 walking tour and others are less familiar with the options.

Phil Selinger: question about Option 5, the Dixon street alignment. Does it go all the way to Larabee?

Karl Lisle: Yes. There are many ways you could configure that part of the grid. We know that roughly two thirds of the traffic southbound on Vancouver is trying to get onto I-5 or head east on Weidler.

Phil Selinger: it is important to know where the bus routes go.

Karl Lisle: agreed. We have a meeting with TriMet in 2-3 weeks to examine that.

Alan Lehto: reiterated that he will not be asking a lot of questions tonight because TriMet will be meeting with the City soon to have detailed discussions. For clarification, he asked about the number of lanes and what some of the turns might look like.

Mauricio Leclerc: we do not know at this time; much of it will depend upon the traffic.

Alan Lehto: any new turns or stops are of concern for buses. Turns can compromise the ability to service an area.

Paul Smith: question about the lid. Were they put there because they were needed to re-construct the box? What can a lid support, given the cost? Can it support a building?

Todd Juhasz: in this case, it makes just as much sense to build a lid at Broadway/Weidler for construction staging, but we have not determined whether we would build to support substantial retail on these lids. This will need to be explored with the Federal Highway Administration (FHWA).

Paul Smith: we know it will support traffic.

Todd Juhasz: yes. And in other places, lids support significant development.

Lloyd Lindley: in Columbus, we looked at an example of a lid there that supports street-fronting retail. It is an interesting example of linking two areas.

Joanna Agee: regarding Option 5, if you are not taking the alternative route, what is the anticipated route for south Vancouver travel heading to the freeway?

Karl Lisle: (he demonstrated possible traffic patterns on the map) we have to figure out specifics. Alan Rudwick made an interesting suggestion about NE Hancock that we will be looking at.

Paul Smith: The movement you described, you cannot do that?

Karl Lisle: it would require some re-building and re-configuring.

Chris Deffenbach: you spent time trying to preserve the surface parking at Leftbank. She wonders if there is a way to mitigate the parking, for example with a parking structure, as this is a major public investment.

Steve Iwata: we have thought about that. Charles from ZGF has done some sketches looking at parking lost and new parking opportunities created in some of these options.

Sam framed up the discussion, reiterating that a threshold issue is do we rebuild these two streets where they are, or not. If not, then you have a series of options to consider. We want to take your pulse of where you are at regarding the re-build or not question, to tee up next month's conversation. Karl will go over these again, noting the staff-generated pros and cons. Not to decide if they are right or wrong, but to see if we have a complete list.

Slide 24: North of Broadway: Pros & Cons: Option 1 - Rebuild

- No change to traffic patterns north of Broadway
- Retains 5-leg intersection @ Vancouver/Broadway (Queuing issues on I-5 off ramp and Vancouver)
- One Lid for Broadway-Weidler-Williams
- Missed opportunity?

Tracy Whalen: comment regarding the traffic south-bound on Vancouver. Some are trying to get on the freeway, and they would have to make a left turn on Weidler, adding a lot of congestion.

Heather McCarey: is here tonight filling in for Matt Arnold, representing the Bike Advisory Committee. Comment: coming off the freeway, they are concerned about right hooks. Can you move the stop bar north? Also, east-bound on Weidler, when you cross Vancouver, the bike lane is on the bus side, which would be an area of potential conflict for cyclists.

Mauricio Leclerc: agrees with Heather's comments. He described what they thought as the fix for this problem. It is a concern they are aware of, and that is also at a level of refinement you are not seeing here.

Alan Lehto: for the record, Options 1, 2, and 3 allow for the 4, 33, and 44 bus lines to operate as they do today, which carry thousands of people every day. He will have concerns over anything that creates a ride time impact, because it will become a ridership impact.

Sean Hubert: comment regarding Madrona, and channeling Justin, what about traffic exiting events? He cannot really decide north of Broadway without knowing what the south of Broadway options are.

Todd Juhasz: would be happy to meet with you and discuss options in greater detail.

Sean Hubert: ok. He has been in contact with Justin and knows the Rose Garden is not solid on any of these options, and would hate to get too far down the road and have them not like it.

Slide 25: North of Broadway: Pros & Cons: Option 2 – Optimized Rebuild

- Retains 5-leg intersection @ Vancouver/Broadway (Queuing issues on I-5 off ramp and Vancouver)
- Connects Flint with Dixon
- Eliminates Flint at Broadway, potential new signal at Wheeler & Broadway
- One Lid for Broadway-Weidler-Williams
- Increased traffic on Flint north of freeway
- Missed opportunity?

Eric Lovell: had not realized this before, but if you are a driver, and want to get to Broadway Bridge, they now just go to Flint. You cannot divert them to Vancouver. He described the options and comparisons, and his concerns about getting to the Broadway Bridge.

Mike Warwick: in the overall scheme of things, this is not the preferred option, but he wants to keep it in. If Congress never passes another transportation budget, you could still do this option. It has some affordable fixes, keep it.

Phil Selinger: very long bridges, from a land use perspective, are kind of a waste, as the street front property is in the air.

Slide 26: North of Broadway: Pros & Cons: Option 3: Vancouver & Hancock/Dixon

- Retains 5-leg intersection @ Vancouver/Broadway (Queuing issues on I-5 off ramp and Vancouver)
- Eliminates Flint at Broadway, potential new signal at Wheeler & Broadway
- New east-west local connection at Hancock & Dixon
- Could accommodate optional freeway lid concepts
- Risk of some neighborhood traffic diversion if not mitigated

Mauricio Leclerc: Options 1, 2, and 3 have a direct route for bikes and pedestrians.

Todd described the Hancock-E-W connection and other features of this option.

Alan Lehto: question for clarification about the south-bound off-ramp.

Tracy Whalen: with this option we still have the 5-legged intersection. Do we know what the truck traffic is like and how businesses will be served and impacted?

Steve Iwata: met with Broadway Toyota and they did not have problem with the traffic diverter.

There was further discussion about the traffic diverter.

Mike Warwick: this is probably our most preferred option, but he has concerns about losing Flint. One reason we would like to see the northern part of Flint maintained, while he knows it costs more money, but he sees it becoming a commercial zone eventually. Tubman has been put up for closure again by PPS. So it is about not precluding future economic vitality. He has gotten a lot of heat about traffic on Hancock. Have to keep the traffic diverter.

Eric Lovell: this option will probably be an improved route to Broadway Bridge.

Alan Lehto: comment regarding Flint to Dixon connection; he had some conversation about the strand. Flint to Russell is somewhat of a neighborhood option to serve that function.

Sam read an email from Justin Zeulner:

1. Freeway Changes and North of Broadway Street Re-Configuration All of these options look interesting and it appears staff is listening to and attempting to make accommodations for all neighborhood and business partners in the conversation. I would lean towards options 1-3 at this time. That said, I would not be able to officially vote on any of these options prior to a comprehensive understanding of the street configuration that will be needed for the areas South of Broadway. Particularly, street configuration needed to ensure event traffic demands are mitigated and circulation patterns around the Rose Quarter and Madrona.

2. Land-Use and FAR/Building Heights
In review of these documents, it appears to me that staff is moving forward with clear and appropriate direction. Specific to the immediate and adjacent land masses around the Rose Quarter (Thunderbird Site and N Broadway), we feel the options presented should continue to be explored further. We would like to suggest ultimate flexibility for both of these areas, related to future development.

Lloyd Lindley: question about Madrona in Option 3. Does it work for TriMet?

Alan Lehto: that area would turn into a bus and bike throughway.

Mauricio described this area and related traffic issues.

Heather McCarey: this is the preferred option for BAC. She described some features they prefer, noting there are more choices for cyclists in this option.

Joanna Agee: echoing Sean and Justin's concerns; this is one of the preferred options from the Leftbank. They have given Karl an earful already on traffic around Leftbank.

Eric Lovell: question about bike connections.

Charles Kelley: we have looked at it and think it is a great option for bikes and peds.

Peter Englander: when you think about the lids, is there a reason you have not thought about diverting bike/ped traffic to the lids?

Charles Kelley: we looked at it, and Option 5 has the most possibility for that. It is one of the benefits of Option 5. Can we make the big lid more pedestrian oriented? Yes.

Pauline Bradford: with this option, will there be many houses or historic buildings moved?

Karl Lisle: no; some buildings will be impacted with each option, but they are not historic buildings.

Pauline Bradford: Tubman School might be closing? Her understanding was the school district was not to sell their buildings. If we are going to get the number of people they say, we are going to get kids.

Mike Warwick: agrees, but just wanted to report that he is aware that the District has a real estate committee looking at it now.

Tracy Whalen: potential constraint, regarding the super lid, is that fundability might be in question.

Karl Lisle: yes, the bigger lid is more expensive. Todd has a slide about costs later in the agenda.

Slide 27: North of Broadway: Pros & Cons: Option 4: Flint

- Eliminates 5-leg intersection @ Vancouver/Broadway (improves queuing issues on I-5 off ramp and Vancouver)
- Closes Wheeler at Broadway, new signal at Flint & Broadway
- New east-west local connection at Hancock with Dixon-Flint connector
- Could accommodate optional freeway lid concepts
- Risk of neighborhood traffic diversion if not mitigated
- Significant opposition from area property owners

Karl Lisle: no one seems to like it, except maybe Tracy. They have talked to folks for months and have not gotten positive feedback.

Tracy Whalen: on this design where Hancock comes into Flint/Vancouver intersection, Hancock could go straight, and you would not allow a left turn onto Vancouver. She described her idea.

Karl Lisle: described the 2-way cycletrack throughout the district, noting it is in all the drawings now.

Wayne Kingsley: when the options are narrowed, might be a good idea to run it by the Portland Freight Committee.

Ed Abrahamson: comment regarding the connection at Dixon. If this were to move forward, he would like to see something like Option 5.

Charles Kelley: we can show that as an option.

Eric Lovell: he is set against this one, but likes Tracy's suggestions and keeping Dixon straight. It could give the Paramount some relief. As a Lower Albina representative, he thinks that the bullet point in the slide which states, "Closes Wheeler at Broadway, now signal at Flint & Broadway" does not quite capture the severity of impacts.

Mike Warwick: agrees with Eric. Hate it!

Joann Agee: inspired by Eric's comment, the last bullet does not capture the level of opposition.

Slide 28: North of Broadway: Pros & Cons: Option 5: Dixon

- Eliminates 5-leg intersection @ Vancouver/Broadway (improves queuing issues on I-5 off ramp and Vancouver)
- Eliminates Flint at Broadway, potential new signal at Wheeler & Broadway
- New east-west connection at Hancock & Dixon
- Could accommodate optional freeway lid concepts
- Risk of some neighborhood traffic diversion if not mitigated
- Would introduce more traffic into Dixon area, could require one-way Ross/Wheeler options

Karl remarked that this is the slightly less unpopular re-configure Vancouver option.

Phil Selinger: the bus route is most problematic. For pedestrians, pulling Vancouver away from the off-ramp is helpful. He commented on some other areas where pedestrians get stranded. An important point for pedestrians is breaking up that off-ramp.

Eric Lovell: comments about Dixon and potential traffic; Dixon does not seem to be able to handle it. It would be too much traffic onto a small street. He would put a stake in this option.

Alan Lehto: comment regarding the bus route. He described the option, noting two left turns, increasing potential for accidents, possibility of mixing buses with Blazers traffic in a way we have never had to do before. In the past, we have had to re-route around entire neighborhoods. Not saying we have to do that here, but he is concerned about what he sees in this option.

Carol Gossett: have police and fire had a say?

Staff: Not yet.

Mike Warwick: to echo Justin's comment, the whole issue of south of Broadway traffic is unknown. He has circulation concerns, in addition to Justin's concerns. His biggest concern is that Eliot is open to this idea as a re-development opportunity. This option takes 5,000 cars and puts them in the area. He described other traffic issues, problems for bus service, saying it makes no sense to him. Put a stake in it.

Tracy Whalen: agree with what everyone has said, but this does eliminate the 5-legged intersection. This design should be DOA.

Alan Lehto: given the overall negativity of the comments, he is not sure he wants to encourage any more work, but he challenges staff to help the SAC understand why this option should be considered.

Lloyd Lindley: if we keep the 5-leg in there, but put Hancock and Dixon together, it could potentially reduce some traffic.

Mauricio Leclerc: we are looking at all this, and he does not have answers today.

Paul Smith: DKS is doing a thorough traffic analysis.

Slide 29: North of Broadway: Options Evaluation Criteria

- Connectivity
- Developability/Opportunities
- Open Space
- Safety & Mobility
- Cost

Karl noted that in the discussion we just had, we basically covered the criteria. Currently, options 3 and 5 rise to the top. That is basically where we are, and we now have a better sense of what the SAC is thinking.

Todd then showed a slide with lid cost estimates, showing examples of varying size and location, as have been noted in the five options.

Slide 32: Lid Cost Estimates

1. North of Broadway, Small Lid: $70-$80m
   - Minimum Cost to Rebuild Vancouver/Flint (No Lid): $45-$50m
   - N. of Bwy Lid is an additional $25m-$30m over Flint/Vancouver rebuild

2. Span to Create "Mega" Lid: $50-60m

3. Previously Endorsed: Broadway/Weidler Lid: $100-$110m

Summary
- Broadway-Weidler Lid with rebuilt Flint/Vancouver: $145-$160 (Options 1 and 2)
- Broadway-Weidler Lid with Small N. of Broadway Lid: $170M-$190M
- Broadway-Weidler Lid with Full Lid: $220m-$250m

Alan Lehto: is there any savings you get out of not having to do a temporary bridge?

Todd Juhasz: yes.

Alan Lehto: so, for example, the $45-50 million includes the estimated actual cost plus estimated savings.

Todd Juhasz: yes.

Mike Warwick: does that include sound barriers?

Todd Juhasz: no. Top lid and bottom lid costs can be bore because they are part of the freeway re-build. The center section cannot be paid for with those funds.

Carol Gossett: are lids in the existing ROW?

Staff: yes, over the freeway.

David Zagel, URS, from the audience: exceptions are the paint store and realty office, they are not in the ROW.

Carol Gossett: is there a premium for the lids if we decide to do anything with them?

Todd Juhasz: there would be additional costs, but with development, we would want to see how it pencils out. It could work.

Carol Gossett: are enhancements under the lid included in your numbers?

Todd Juhasz: it is a separate cost from what we are looking at in terms of lids.

Ed Abrahamson: clarification on costs. Full lid is $220-250; does that include structures?

Todd Juhasz: yes.

Paul Smith: questions about lid costs and span 2. The $50-60m does not include the structure?

Todd Juhasz: right.

Andy Johnson: it is very difficult to figure out full costs. He listed a broad spectrum of related costs that could go into this number.

Paul Smith: a logical way to do it is to note the full cost of the project with the lid.

Todd Juhasz: we talked about that, but did not do it that way.

There was further discussion about costs and lid options. Todd said they could provide additional cost information.

Paul Smith: what about leasing the land on which the building sits?

Chris Deffenbach: that is what she was thinking as well.

Todd Juhasz: we agree with you, but does FHWA agree?

Chris Deffenbach: there are good examples of lids, as well as “no man’s land” lids. For that amount of money, could we instead get more potential development out of other areas in the district? Help us understand. Unless the lid does something to reduce the tangle, or makes the district so attractive and amenable, she is not sure it is worth it.

Todd Juhasz: agrees. They are all on board with this being a good idea, the question is can we make it work?

Mike Warwick: do the lids speed the construction process?

Todd Juhasz: yes, it is part of staging; it is a way to keep traffic flowing.

Brock Nelson: clarifying - costs of I-5 improvements are in addition to these costs.

Todd Juhasz: yes, they are separate.

Carol Gossett: it might be help to understand how far FHWA will go toward building the lid; then break out the rest of the costs.

BREAK

PUBLIC COMMENT:

Doug Klotz comment about lids. He referred to the staff report, page 4 and pointed out how the design has put 10 foot ventilation ducts along the sidewalk. He hopes that will not be repeated in this quadrant plan.

Allan Rudwick said it is quite expensive to create new land. He just wants to put the notion of Option 2 back in your heads. Erase lids, reduce to 10 foot streets – it can be built for less.

Cathy Galbraith worked on a history program on this area years ago. Hat's off to those of you working on this project. Regarding the earlier comment about historic buildings, she appreciates there is no demolition planned but we need certainty around the historic buildings. She listed several properties on Vancouver and Flint, noting this area is really the last remaining segment of a thriving African American community, most of which was demolished for the Memorial Coliseum. Many people own and live in houses, own and operate buildings, and have interest in staying.

N/NE QUADRANT PLAN DEVELOPMENT

Sam said given the time constraints, we will adjust the order of the remaining topics on the agenda.

OVERVIEW OF DRAFT POLICIES AND IMPLEMENTATION ACTIONS

Stephanie Beckman, BPS, referred to a document that was emailed this afternoon and not included in the meeting packet, "SAC 15 Meeting Quadrant Plan Discussion." She said that at the last meeting, staff handed out a draft outline of for the quadrant plan. This document is the first draft of chapter 4 in the outline and includes district goals, policies and selected implementation actions focusing land use and zoning issues. Please review and provide comments by April 27th. General comments or track change are welcome. We are meeting with our Technical Advisory Committee, will get feedback from them, and bring back full list of actions for the May 10th meeting.

Slide 2: N/NE Quadrant Plan Structure

Lloyd District

- District Goal
- Policies

Regional Center: Economy & Innovation

- Housing and Neighborhoods
- Transportation
- Urban Design
- Green Central City

- Implementation Actions

Lower Albina

- District Goal
- Policies

Regional Center: Economy & Innovation
Transportation
Urban Design
Green Central City

- Implementation Actions

Slide 3: How were the district goals, policies and actions developed?

- SAC goals and objectives
- Quadrant Concept diagrams
- SAC and public input
- Other planning efforts
- Organized around CC2035 policy framework

Stephanie said this plan needs to focus on what is unique and important about this district; other processes, such as CC2035 or the Comprehensive Plan update focus on city-wide issues.

Slide 15: Quadrant Plan Review Schedule

Meeting Date	Plan Component
4/12, SAC #15	SAC direction on height regulations Draft Goals, Policies and Selected Implementation Actions **(comments via email)**
5/10, SAC #16	Revised Draft Goals, Policies and Implementation Actions
5/23, LU Subcommittee	Follow-up on Implementation Actions
6/7 SAC #17	Focus on I-5 Broadway/Weidler Interchange only
6/28, SAC #18	Complete Draft Quadrant Plan, public comment
Late July/Early Aug: SAC #19	Revised Draft Quadrant Plan Final review and approval

Tracy Whalen: on implementation actions, page 4; regarding the rezoning of the Blanchard site, do the codes preclude the PPS staying there?

Stephanie Beckman: no; both zoning options offer a broad range of uses.

Sam added if we are to land this plane between now and the end of July and early august, it would be very helpful for SAC members to please use track-change when providing edits. General policy comments are welcome, too. Sam can provide assistance with the track change feature, if needed.

HEIGHT AND FAR ISSUES

Karl introduced the presentation, saying the focus is on questions of building height. They had a detailed conversation about this topic at the subcommittee on March 21, and this presentation will explain FAR and provide an overview of the information and feedback from the subcommittee. This is a very specific topic, which will feed into what Stephanie just presented.

Mark Raggett, BPS, continued the presentation, reviewing a PowerPoint (PPT) with diagrams of proposed height designations and related issues or concerns.

Slides 5 and 6: Floor Area Ration (FAR) and Height

Reasons for allowing building height:
- Encouraging high density, taller buildings in the Central City
- "Sculpting" the city's skyline
- Emphasize/highlight key locations
- Allowing for more light and air penetration, visual "permeability"

Reasons for regulating building heights:
- Preserving solar access to open spaces
- Enhancing and/or protecting public views
- Transitioning to historic districts or lower density areas

Floor Area Ratio (FAR). The amount of floor area in relation to the amount of site area, expressed in square feet. For example, a floor area ratio of 2 to 1 means two square feet of floor area for every one square foot of site area.

Site = 40,000 square feet; @ 4:1 FAR 40,000 X 4 = 160,000 buildable square feet

Mark described heights in the Lloyd District, noting they are not looking at Lower Albina. He reviewed several slides, showing Portland buildings and heights, and today's height map of the area.

Tracy Whalen: we talk stories, you talk feet. Please clarify.

Mark Raggett: thanks, good catch. In a typical office building, stories are 14 feet. Residential buildings are 10 feet.

Alan Lehto: clarification on diagram; you are showing FAR not actual development?

Mark Raggett: yes, thanks. He will note that on future slides.

Mark continued the presentation, discussing the Thunderbird Site and possible future conceptual developments. He said that at the subcommittee, there was general comfort in exploring taller heights to allow for more open space.

1. Thunderbird Site – current conditions, issues and opportunities

1. Broad support for open space
2. Interest in increasing amounts of office, commercial, or other less episodic uses
3. Relationship of new buildings with the river
4. Public view enhancement to both Willamette River and Memorial Coliseum

Q AND A/DISCUSSION

Eric Lovell: great graphics. He likes taller heights to allow for more open space. Trying to have a variety of building shapes is a good thing.

Carol Gossett: do you know the history in Portland for high-rises and offices space? Is this market-driven?

Mark Raggett: Office development typically likes larger floorplans, roughly 15,000-20,000 square feet per floor- this would result in lower, wider buildings With residential and sometimes hotel development, floorplans can be much smaller allowing taller, thinner buildings.

Peter Englander: likelihood that you would get office down here (Thunderbird site) is pretty unlikely. Office likes to be around other offices.

Carol Gossett: the other question is highway and lid configuration; do you feel they function well with this kind of development you mentioned?

Mark Raggett: yes.

Ed Abrahamson: comment on views; views are both ways. Convention Center spires, and Mount Hood. Request staff makes an effort to not block views.

Mark Raggett: agrees.

Brock Nelson: good job reflecting the fact there a railroad track. Its challenging to re-develop around the railroad.

Lindsey Walker: in her discussions with Owen, the TMA supports any tool we can use to provide for open space.

Peter Englander: when you guys show these things, you show the tall buildings on the south side of the site. He sees opportunity in the north.

Karl Lisle: Yes, development could be on the north, but the site is pinched toward north by the railroad and Interstate.

Peter Englander: struggling to understand where the pressure is to do this.

Karl Lisle: to avoid building a wall of low buildings without any significant open space which is seen as undesirable. We are looking for some parks and some development.

Steve Iwata: we are testing these ideas looking for incentives to partner with private developers.

Lloyd Lindley: suggest you look to Battery Park, he worked with the area. There could be some guidelines to help us. We have three urban design principles: connectivity-scale-place; maybe in this one, we are struggling with scale. There could be some scaling principles to apply.

Karl Lisle: Open space would be better activated and utilized if there is also some development. Residential could make sense. At the same time, this must be balanced with Brock's comments, there are trains to consider.

Tracy Whalen: also grain elevators. There have been two fires lately. Be considerate about what you place near the grain elevators.

Gary Warren: comment on importance of views; don't forget Mt. Hood.

Mark continued the presentation, going through the rest of the PPT. Comments were held until the end due to the lack of time. SAC members will send in comments via email.

The areas he reviewed were:

2. N. Broadway – current conditions, issues and opportunities

- Lots of redevelopment potential
- Interest in increasing amounts of office, commercial, other less episodic uses
- Coordination with rejuvenated Rose Quarter district
- Broadway Bridgehead redevelopment opportunity
- Link between Rose Quarter and future PPS Blanchard redevelopment

3. Eliot Edge – current conditions, issues and opportunities

- Existing heights generally consistent with concept
- Eliot Conservation District boundary a couple of blocks to north
- More commercial, industrial uses along segment of Broadway/Weidler
- Sensitive transitions to Cornerstone properties

4. Irvington Edge – current conditions, issues and opportunities

- Historic District overlap with Central City boundary
- Sensitive transitions to north
- Supporting retail cluster along NE Broadway
- Further exploration needed on development stepdowns
- Focus on block between NE Broadway and Schuyler

5. Central Lloyd– current conditions, issues and opportunities

- Height bonus only allowed east of NE Grand
- Reducing incentives for residential south of NE Holladay
- New incentives for residential west of MLK/Grand, in Central Lloyd area
- Possible areas to allow unlimited height (FAR to regulate)
- Strengthen/support future investments in public amenities, such as open space
- Recent development proposal at 325 feet

Pauline Bradford: comment on 6-10 stories; she thinks it should be 2-10 stories. She thinks two stories should be allowed.

Karl Lisle: apologizes for confusion. Two story buildings would be allowed. They meant the maximum height is 6-10. So the range is 0 – 6-10.

Sam said staff hopes to get SAC comments by April 27th. It is not our intent to take every one of your comments and do a point by point response; we are looking for overall comments and feedback.

PUBLIC COMMENT

There was no additional public comment.

MEETING WRAP UP AND NEXT STEPS

Sam thanked everyone for a good meeting. Staff will let folks know the date as soon as the additional SAC meeting is scheduled.

Upcoming meetings:
