INNOVATION/OTHER PROJECT FORM

This information helps application reviewers understand the energy and greenhouse gas (GHG) impacts of the proposed project. Please answer all questions that apply to your project. Narrative boxes will expand so please use as much space as needed to provide the information requested.

1. Describe how the project will reduce or sequester GHG emissions.

2. What type(s) of fuel will be displaced/saved, if applicable?

3. Provide an estimate of how much of each type fuel will be displaced/saved on an average annual basis including unit (e.g. 500 kWhs per year, 100 gallons of gas per year).

4. What is the estimated life of the project? How many years are the GHG emissions savings expected to last?

5. Describe the baseline assumptions about consumption of fuel(s) that will be displaced/saved. Use the same units as used in Question 3 above, e.g., if the answer to question 3 was that the project is estimated to save 1,000 gallons of gas per year, you should answer question 5 by reporting the number of gallons of gas per year that are currently used (the baseline).
