NOTICE OF ADOPTION: Fossil Fuel Terminal Zoning Amendments

This is to notify you that the Portland City Council recently adopted the Fossil Fuel Terminal Zoning Amendments ordinance, which included zoning code amendments. The adopting ordinance was passed by the City Council on December 18, 2019 and became effective on December 18, 2019.

Pursuant to ORS 197.615, notice of Adoption of a Post Acknowledgement Plan Amendment for the project was filed with the Oregon Department of Land Conservation and Development on January 6, 2020.

The ordinance, supporting documents, and a summary of the changes are available on the BPS website: https://www.portlandoregon.gov/bps/71118.

To review the adopting ordinances, exhibits and findings, please contact:

Tom Armstrong, Supervising Planner
Bureau of Planning and Sustainability
1900 SW Fourth Ave. Suite 7100
Portland OR 97201
Phone: 503-823-3527
Email: tom.armstrong@portlandoregon.gov

The City Council's decision is the City's final decision. This decision may be appealed to the Oregon Land Use Board of Appeals (LUBA) by filing a Notice of Intent to Appeal with LUBA within 21 days of the date of this notice, as specified in the Oregon Revised Statute (ORS) 197.830(9). Among other things, ORS 197.830 requires that a petitioner at LUBA must have appeared orally or in writing during the City's proceedings on this land review. LUBA's address is: DSL Building, 775 Summer Street NE, Suite 330, Salem, OR 97301-1283. For more information on filing an appeal, call LUBA at 503-373-1265 or visit LUBA's website (www.oregon.gov/LUBA).

Per ORS 197.830(9), copies of the notice of intent to appeal shall be served upon the City. The notice shall be served and filed in the form and manner prescribed by rule of the board and shall be accompanied by a filing fee of $200 and a deposit for costs to be established by the board.

Subject: Notice of Adoption – Fossil Fuels Terminal Zoning Amendments

NOTICE OF ADOPTION: Fossil Fuel Terminal Zoning Amendments

This is to notify you that the Portland City Council recently adopted the Fossil Fuel Terminal Zoning Amendments ordinance, which included zoning code amendments. The adopting ordinance was passed by the City Council on December 18, 2019 and became effective on December 18, 2019.

Pursuant to ORS 197.615, notice of Adoption of a Post Acknowledgement Plan Amendment for the project was filed with the Oregon Department of Land Conservation and Development on January 6, 2020.

The ordinance, supporting documents, and a summary of the changes are available on the BPS website: https://www.portlandoregon.gov/bps/71118.

To review the adopting ordinances, exhibits and findings, please contact:

Tom Armstrong, Supervising Planner
Bureau of Planning and Sustainability
1900 SW Fourth Ave. Suite 7100
Portland OR 97201
Phone: 503-823-3527
Email: tom.armstrong@portlandoregon.gov

The City Council's decision is the City's final decision. This decision may be appealed to the Oregon Land Use Board of Appeals (LUBA) by filing a Notice of Intent to Appeal with LUBA within 21 days of the date of this notice, as specified in the Oregon Revised Statute (ORS) 197.830(9). Among other things, ORS 197.830 requires that a petitioner at LUBA must have appeared orally or in writing during the City's proceedings on this land review. LUBA's address is: DSL Building, 775 Summer Street NE, Suite 330, Salem, OR 97301-1283. For more information on filing an appeal, call LUBA at 503-373-1265 or visit LUBA's website (www.oregon.gov/LUBA).

Per ORS 197.830(9), copies of the notice of intent to appeal shall be served upon the City. The notice shall be served and filed in the form and manner prescribed by rule of the board and shall be accompanied by a filing fee of $200 and a deposit for costs to be established by the board.

Tom Armstrong, Supervising Planner

ORDINANCE NO. 189307 **As Amended**

*Readopt remanded Ordinance No. 188142 to restrict bulk fossil fuel terminals. (Ordinance; Amend Title 33, Planning and Zoning)

The City of Portland ordains:

Section 1. The Council finds:

General Findings

1. The rapid development of fossil fuel resources in the western U.S. and Canada has resulted in numerous facility and infrastructure projects proposed to transport coal, diluted bitumen, natural gas, propane or other fossil fuels through the West Coast.

2. Fossil fuels pose risks to safety, health, and livability, including mobility of people, other freight, and other commercial vehicles.

3. The State of Oregon and the greater Pacific Northwest are vulnerable to powerful subduction zone earthquakes that occur with periodic frequency along the Juan de Fuqua and North American plates.

4. In the past, both the Huu-ay-aht First Nation peoples and the Makah tribe shared similar stories of lost land and peoples as a result of these earthquakes and tsunamis, which scientific research has matched with Japanese tsunami records and on-the-ground geologic field research to reconstruct the Cascadia earthquake of 1700. This research shows that subduction zone earthquakes have occurred along the Pacific Northwest with relative regularity over the last 10,000 years, and if averages from past events are predictive, the region could be overdue for another powerful subduction zone earthquake.

5. Many of the city's buildings and critical infrastructure were built before the city's seismic exposure was widely understood. This infrastructure includes Oregon's primary liquid fuel storage facilities, the Critical Energy Infrastructure (CEI) hub, which is located in northwest Portland and receives 90 percent of the state's liquid fuel supply either via pipeline or marine vessel. Most of the storage tanks within the CEI hub have been built prior to any design and performance lessons learned from the damaging Great Alaskan earthquake of 1964 and the many other documented earthquakes that followed.

6. The CEI hub is vulnerable to failure in the event of subduction zone earthquake. A 2012 Oregon Department of Geology and Mineral Industries (DOGAMI) Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report states that a magnitude 8 or 9 Cascadia Subduction Zone earthquake would impact the CEI Hub with: ground shaking; liquefaction (soil behavior phenomenon in which a saturated sand softens and loses strength during strong earthquake ground shaking); lateral spreading (where surficial soil permanently moves laterally due to earthquake shaking); landslides; co-seismic settlement (where the ground surface is permanently lowered due to seismic

shaking); and bearing capacity failures (when the foundation soil cannot support the structure it is intended to support). The study also notes that, at the time, only three existing storage tanks were known to have addressed liquefaction vulnerabilities.

7. The 2013 Oregon Resilience Plan raised concerns about the sturdiness of CEI facilities constructed on soils susceptible to liquefaction, and infrastructure not built to current standards given the hub's age-range of structures.

8. The Portland Bureau of Emergency Management's Mitigation Action Plan (MAP) identifies how natural hazard events like floods, landslides, and earthquakes might affect the City of Portland. The Portland area has experienced numerous earthquakes in the past, ranging from Magnitude 4.5 to 9.0. Portland is certain to experience seismic events in the future. Many of Portland's fossil fuel storage tanks were built before seismic design requirements in building codes were adopted.

9. Most of Portland's employment and industrial zones are in areas with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. Fossil fuel infrastructure poses considerable risks in the event of a major earthquake.

10. The extraction and combustion of fossil fuels are significant sources of greenhouse gas emissions and major contributors to climate change and pollution.

11. Coal contains toxic heavy metals, including mercury, arsenic and lead, and exposure to these toxic heavy metals is linked to cancer, birth defects and other health problems.

12. A Union Pacific train carrying oil from North Dakota to Tacoma derailed in Mosier, Oregon on June 3, 2016, spilling 42,000 gallons of crude oil, igniting a fire, and leading to the evacuation of one-quarter of the town's residents.

13. Tribal communities in Oregon and Washington have expressed concerns about the safety risks of fossil fuel infrastructure and the related threats to human health, cultural heritage, and environmental quality.

14. The City's 2015 Climate Action Plan (adopted by Resolution 37135) identifies the need to establish a "fossil fuel export policy that considers lifecycle emissions, safety, economics, neighborhood livability and environmental impacts" (Climate Action Plan, action 3G, page 69).

15. The City committed in its 2015 Climate Action Plan to advancing policy and programs to reduce local fossil fuel use both in the City's own operations and through community-wide initiatives.

16. In Resolutions 36959 and 36962 adopted in 2012, the Council expressed opposition to coal trains traveling through Portland until a programmatic, comprehensive and area-

wide Environmental Impact Statement and comprehensive Health Impact Assessment are completed.

17. Resolution 37168, adopted November 12, 2015, expressed the City Council's opposition to the "expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." It also expressed the Council's intent not to restrict improvements in safety, efficiency, or seismic resilience; the provision of service directly to end users; or infrastructure that will accelerate the transition to non-fossil fuel energy sources.

18. The 2035 Comprehensive Plan sets policy direction (Policies 4.75 and 4.76) to encourage disaster-resilient development and specifically to reduce natural hazard risks to critical energy and transportation infrastructure in Portland Harbor.

19. The first step in making the current situation better is to ensure that the situation does not get worse. Continuing to allow the unlimited increase in fossil fuel terminal storage tank capacity in a moderate to high risk area increases the risk to the surrounding industrial district and the Willamette River. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions, which will be an improvement compared to the current regulations that allow for unlimited growth in fossil fuel terminals.

20. These Zoning Code amendments create a new land use category with development standards that limit the size of new terminals and prohibit the expansion of existing terminals.

21. The amendments promote major benefits to human health and safety, environmental health and resilience, with minor impacts to economic prosperity and equity.

22. The amendments will prohibit expansion at existing fuel terminals and limit new terminal development, potentially impacting associated job growth and tax revenue. At the same time, the code restrictions on fossil fuel terminal development will also limit potential financial risks from a major accident involving fossil fuel infrastructure.

23. The amendments will limit the risk of low, but potentially catastrophic, safety risks associated with fossil fuel infrastructure.

24. The amendments will allow for the continued operation, but prohibit expansion of storage capacity, with some exceptions, at existing fuel terminals and limit new terminal development.

25. The amendments will restrict development of fossil fuel terminals consistent with City and State objectives on climate change and public safety. While fossil fuels like natural gas and propane have the potential to replace higher-carbon fuels, substituting these fuels for higher-carbon fuels does not begin to approach the goal of an 80% reduction in

carbon emissions by 2050 established in Portland's Climate Action Plan or the State of Oregon's 75% reduction goal.

26. In Resolution 37168, the City Council expressed support for accelerating the transition to non-fossil fuel energy sources. As part of that transition, the Oregon Department of Environmental Quality (ODEQ) is implementing the Oregon Clean Fuels Program, which requires a 10 percent reduction in average carbon intensity by 2025. Fuels that could be used to achieve the standards include ethanol, biodiesel, electricity, hydrogen, natural gas, propane, and biogas, which may require additional storage capacity. In order to facilitate implementation of the Clean Fuels Program, non-fossil fuel storage tanks are not subject to the capacity limits.

27. Ordinance No. 188142 was appealed to the Oregon Land Use Board of Appeals (LUBA). LUBA issued an order reversing the City's Ordinance in *Columbia Pacific Building Trades Council et al v. City of Portland*, LUBA Case No. 2017-001, July 19 2017).

28. LUBA's decision was appealed to the Oregon Court of Appeals, which overturned LUBA's decision which was affirmed in part and reversed in part in *Columbia Pacific Building Trades Council v. City of Portland*, 289 Or App 739 (2018).

29. The Oregon Court of Appeals decision was appealed to the Oregon Supreme Court, which denied review in *Columbia Pacific Building Trades Council v. City of Portland*, 363 Or 390 (2018).

30. On October 5, 2018, LUBA remanded *Columbia Pacific Building Trades Council et al v. City of Portland*, LUBA Case No. 2017-001 to assignments of error that LUBA sustained and were either affirmed or not challenged on appeal to the Court of Appeals.

31. A general notification of the November 20, 2019, City Council public hearing on the remand of Ordinance No. 188142 was sent to the City's legislative notice list, the fossil fuel terminal property owners, and the parties to the appeal.

32. On November 20, 2019, the Portland City Council held a public hearing and received testimony on the re-adoption of the fossil fuel terminal zoning restrictions.

Conclusion

33. The City Council has considered applicable policies, as described in Exhibit A, to determine that this ordinance on the whole complies with the 2035 Comprehensive Plan and on balance is equally or more supportive of the goals and policies of the 2035 Comprehensive Plan than the current regulations. In reaching this conclusion, City Council has weighed and balanced competing policy directions. In particular, the Council finds that:
    a. Statewide Planning Goal 7 (Natural Hazards) and 2035 Comprehensive Plan Goal 4.D with Policies 4.79 and 4.80, requires reducing risk to people and property from natural hazards. The FFTZ amendments further these goals and policies because by limiting the risks of storing large volumes of hazardous materials in an

area with moderate to high susceptibility to an earthquake. Large fossil fuel terminals represent a risk to people, property and the natural environments that the City Council finds as a compelling reason to limit future risk by limiting the size of new facilities and prohibit the expansion of existing facilities. Continuing to allow an unlimited increase in storage capacity at FFTs in a moderate to high risk area would be less supportive of the 2035 Comprehensive Plan than adopting the FFTZ amendments

b. Policy 6.48 provides direction to limit fossil fuel terminals to what is necessary to serve the regional. The City Council recognizes that Portland's fossil fuel terminals handle 90 percent of the fossil fuel for the State of Oregon and Southwest Washington. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety and meet future needs. In addition, limiting storage capacity to the existing facilities reduces risk from a major earthquake, which outweighs the policy direction to provide capacity to accommodate any potential future increase in fossil fuel consumption, in part, because continuing to consolidate fossil fuel storage capacity in Portland is counter to resiliency principles that emphasize redundancy and distributed facilities.
c. Statewide Planning Goal 9 (Economic Development) and 2035 Comprehensive Plan Goal 6.C with Policies 6.20 and 6.36, among others, provide for the retention and growth of businesses, especially those in the traded sector. The City Council interprets these policies apply to the economy in general, rather than specific types of business. These changes and restrictions only apply to a narrowly defined new land use category, Bulk Fossil Fuel Terminals, and do not have a significant effect on the other allowed uses in industrial and employment zones. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial and employment areas of Portland. These amendments are narrowly constructed to apply to one class of businesses that make up a small portion of the city, regional and state economy. Further, these regulations only limit future expansion of these fossil fuel terminals, with some key exceptions, and designate these businesses as a limited use that allows their continued operation.
d. Guilds Lake Industrial Sanctuary (GLIS) Plan policies provide direction to maintain, protect and enhance businesses in the sanctuary. This plan was adopted in 2001 and does not address the need for resiliency in a high and medium liquefaction susceptibility area. The City Council interprets these policies to apply to the GLIS as a whole and not individual businesses. The City Council interprets the legislative intent of the GLISP is to maintain the area as an industrial sanctuary and to prohibit incompatible land uses. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses that could undermine the viability of the industrial sanctuary. These regulations apply to only one type of business that makes up a minority part of the businesses found in GLIS. The remaining industrial uses to continue to operate under current

regulations. The impact of the limits on fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to continue to operate and make upgrades and supports limited enhancement through exceptions to the storage capacity restrictions.

NOW THEREFORE, The Council directs:

a. Adopt Exhibit A Findings of Fact Report (as amended) December 2019 as additional findings.
b. Amend Title 33, Planning and Zoning, as shown in Exhibit B, Fossil Fuel Terminal Zoning Amendments, Remand Report, dated December 18, 2019.
c. Adopt the commentary in Exhibit B, Fossil Fuel Terminal Zoning Amendments, Remand Report, dated December 18, 2019, as legislative intent and further findings.
d. Adopt Exhibit C. LUBA Record for *Columbia Pacific Building Trades Council et al v. City of Portland*, LUBA Case No. 2017-001, as additional evidence.
e. The Bureau of Planning and Sustainability shall report to City Council no later than December 31, 2021 on the implementation of this ordinance, including:
    - the number and description of any requests by existing terminal operators to upgrade and replace storage capacity at their facilities;
    - the number and description of building permits issued for fossil fuel tanks between 125,000 and 2 million gallons;
    - the trends in fossil fuel energy use and non-fossil energy use in Oregon;
    - the status of local and state regulatory proceedings that may improve seismic resilience of fossil fuel storage infrastructure; and
    - information on compliance with the Oregon Clean Fuels Program.

f. City Bureaus, including BDS, PBEM and Fire, shall work with the State of Oregon to develop policy options to require seismic upgrades of storage tanks within a firm deadline for replacement of older, unsafe tanks.

Section 2.
The Council declares that an emergency exists due to the fact that Portland is currently at risk of a major earthquake; therefore, this ordinance shall be in full force and effect from and after its passage by the Council.

Section 3.
If any section, subsection, sentence, clause, phrase, diagram, designation, or drawing contained in this Ordinance, or the plan, map or code it adopts or amends, is held to be deficient, invalid or unconstitutional, that shall not affect the validity of the remaining portions. The Council declares that it would have adopted the plan, map, or code and each section, subsection, sentence, clause, phrase, diagram, designation, and drawing thereof, regardless of the fact that any one or more sections, subsections, sentences, clauses, phrases, diagrams, designations, or drawings contained in this Ordinance, may be found to be deficient, invalid or unconstitutional.

Exhibit A:
Findings of Fact Report (as amended)
December 2019

Text amendments to the Zoning Code, which is an implementation tool of the Comprehensive Plan, must comply with the Comprehensive Plan. "Comply" means that amendments must be evaluated against the Comprehensive Plan's applicable goals and policies and on balance be equally or more supportive of the Comprehensive Plan as a whole than the existing language or designation. (Policy 1.10)

Text amendments to the zoning code also must be found to be consistent with the Metro's Urban Growth Management Functional Plan and the Statewide Planning Goals. The 2035 Comprehensive Plan defines "consistent with" as the subject meets the requirements of, satisfies, or adheres to the regulations, mandate, or plan listed in the goal or policy. In addition, the amendments must be consistent with the intent or purpose statement for the base zone, overlay zone, and plan district where the amendment is proposed, and any plan associated with the regulations. (33.835.040)

1. Finding: As detailed below, the City Council has identified and addressed all relevant and applicable goals and policies in this document.
2. Finding: Additionally, the Council has considered whether the amendments are consistent with the intent or purpose statement of the Employment and Industrial Zones (33.140) and the Description of Use Categories (33.920) that are directly amended by this ordinance.
3. Finding: The City Council has considered the public testimony on this matter and has weighed all applicable goals and policies has found that the Fossil Fuel Terminal Zoning amendments (the FFTZ amendments) on balance are equally or more supportive of the Comprehensive Plan as a whole and are consistent with Metro's Urban Growth Management Functional Plan, the Statewide Planning Goals, and the applicable purpose statements of the Zoning Code.

As demonstrated by these findings, the FFTZ amendments effectively and efficiently implement the Comprehensive Plan. Specifically:

The City Council has considered applicable policies to determine that this ordinance on the whole complies with the 2035 Comprehensive Plan and on balance is equally or more supportive of the goals and policies of the 2035 Comprehensive Plan than the current regulations. In reaching this conclusion, City Council has weighed and balanced competing policy directions.

In particular, the Council finds that Goal 4.D with Policies 4.79 and 4.80, requires evaluating and reducing risk to people and property from natural hazards. The FFTZ amendments further these goals and policies because by limiting the risks of storing large volumes of hazardous materials in an area with high susceptibility to an earthquake. Large fossil fuel terminals represent a risk to people, property and the natural environments that the City Council finds as a compelling reason to limit future risk by limiting the size of new facilities and prohibit the expansion of existing facilities. Continuing to allow an unlimited increase in storage capacity at FFTs in a high risk area would be less supportive of the 2035 Comprehensive Plan than adopting the FFTZ amendments

The City Council further finds that Policy 6.48 provides direction to limit fossil fuel terminals to what is necessary to serve the region. The City Council recognizes that Portland's fossil fuel terminals handle 90 percent of the fossil fuel for the State of Oregon and Southwest Washington. BPS

presented evidence that national petroleum consumption forecast out to 2050 is essentially flat, which is a continuation of historic trends in Oregon and Washington, during a period of a thriving economy. In addition, ODOT is forecasting a decline in motor fuel consumption over the medium term to 2029. The more recent cargo forecasts project a modest growth in volumes, but those volumes do not exceed the historic peak volumes that were handled by the Portland terminals. No other evidence of future demand for fossil fuels was submitted in testimony. Therefore, the City Council finds that the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety. In addition, limiting storage capacity to the existing facilities reduces risk from a major earthquake, which outweighs the policy direction to provide capacity to accommodate any potential future increase in fossil fuel consumption, in part, because continuing to consolidate fossil fuel storage capacity in Portland is counter to resiliency principles that emphasize redundancy and distributed facilities.

At the same time, the City Council finds that Goal 6.C with Policies 6.20 and 6.36, among others, provide for the retention and growth of businesses, especially those in the traded sector. However, the City Council interprets these policies apply to the economy in general, rather than specific types of business. These changes and restrictions only apply to a narrowly defined new land use category, Bulk Fossil Fuel Terminals, and do not have a significant effect on the other allowed uses in industrial and employment zones. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial and employment areas of Portland. These amendments are narrowly constructed to apply to one class of businesses that make up a small portion of the city, regional and state economy. Further, these regulations only limit future expansion of these fossil fuel terminals, with some key exceptions, and designate these businesses as a limited use that allows their continued operation.

Guilds Lake Industrial Sanctuary (GLIS) Plan policies provide direction to maintain, protect and enhance businesses in the sanctuary. This plan was adopted in 2001 and does not address the need for resiliency in a high and medium liquefaction susceptibility area. The City Council interprets these policies to apply to the GLIS as a whole and not individual businesses. The City Council interprets the legislative intent of the GLISP is to maintain the area as an industrial sanctuary and to prohibit incompatible land uses. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses that could undermine the viability of the industrial sanctuary. These regulations apply to only one type of business that makes up a minority part of the businesses found in GLIS. The remaining industrial uses to continue to operate under current regulations. The impact of the limits on fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to continue to operate and make upgrades and supports limited enhancement through exceptions to the fossil fuel storage capacity restrictions.

Part I. Statewide Planning Goals

State planning statutes require cities to adopt and amend comprehensive plans and land use regulations in compliance with the Statewide Planning Goals.

The Statewide Planning Goals that apply to Portland are:

Goal 1 Citizen Involvement
Goal 2 Land Use Planning
Goal 5 Natural Resources, Scenic and Historic Areas, and Open Spaces
Goal 6 Air, Water and Land Resource Quality
Goal 7 Areas Subject to Natural Hazards
Goal 8 Recreational Needs
Goal 9 Economic Development
Goal 10 Housing
Goal 11 Public Facilities and Services
Goal 12 Transportation
Goal 13 Energy Conservation
Goal 14 Urbanization
Goal 15 Willamette River Greenway

There are approximately 560 acres of land both within Portland's municipal boundaries and beyond the regional urban service boundary that can be classified as rural land. In 1991, as part of Ordinance 164517, the City Council took an exception to Goal 3 and 4 the agriculture and forestry goals. Because of the acknowledged exception, the following goals do not apply:

Goal 3 Agricultural Lands
Goal 4 Forest Lands

Other Statewide Planning Goals apply only within Oregon's coastal zone. Since Portland is not within Oregon's coastal zone, the following goals do not apply to this decision:

Goal 16 Estuarine Resources
Goal 17 Coastal Shorelands
Goal 18 Beaches and Dunes
Goal 19 Ocean Resources

Goal 1. Citizen Involvement. To develop a citizen involvement program that insures the opportunity for citizens to be involved in all phases of the planning process.

4. Finding: The preparation of these amendments has provided numerous opportunities for public involvement, including:

Concept Phase. In 2016, prior to the initiation of the legislative project, BPS conducted four stakeholder focus groups meetings. These meetings included participants with a range of perspectives and experience, including community group representatives, fuel terminal representatives, environmental organizations, and business organizations. These meetings served as a forum for discussing issues and potential approaches, and to help inform project staff develop concepts. In addition to the stakeholder focus groups, BPS staff met with several fuel terminals to explain the proposal, answer questions, and discuss their individual concerns. These meetings were needed because antitrust regulations constrained discussion about certain topics, for example supply chains, in the presence of representatives from other fuel terminals.

Discussion Draft. On June 29, 2016, the Fossil Fuel Terminal Zoning Amendments Discussion Draft was published and posted on the Bureau website.

Proposed Draft. On August 12, 2016, the Fossil Fuel Terminal Zoning *Proposed Draft* was published in preparation for the Planning and Sustainability Commission (PSC) review and recommendation. In support of this process, the BPS website had a project page dedicated to this project, an email address for submitting testimony. As part of the Proposed Draft publication and legislative process requirements, the following legal notices were also sent:

- Form 1 35-day Notice
  Sent to the Department of Land Conservation and Development (DLCD)
- Legislative Notice
  Sent to interested parties, recognized organizations, affected bureaus, TriMet, Metro and ODOT and published in the Daily Journal of Commerce
- Measure 56 Notice
  Required by Ballot Measure 56, this mailed notice was sent to property owners with industrial or employment base zoning.

The PSC held a public hearing on September 13, 2016. On October 11, 2016, the Planning and Sustainability Commission voted to recommend the Fossil Fuel Terminal Zoning Amendments to City Council, including PSC-recommended modifications to the Proposed Draft. All PSC meetings were streamed live and available for viewing on the Bureau website.

Recommended Draft. On October 24, 2016 the Fossil Fuel Terminal Zoning Amendments *Recommended Draft* was published to present the PSC recommendations to City Council. On October 25, 2016, notice of the City Council hearing on the Fossil Fuel Terminal Zoning Amendments was mailed. The City Council held public hearings on November 10 and 16, 2016, to receive testimony on the *Recommended Draft*. On December 8, 2016, the City Council voted to adopt the Fossil Fuel Terminal Zoning Amendments.

Ordinance No. 188142 was appealed to the Oregon Land Use Board of Appeals (LUBA). LUBA reversed the City's decision with a number of assignments of error in *Columbia Pacific Building Trades Council et al v. City of Portland*, LUBA Case No. 2017-001, July 19, 2017. LUBA's decision was appealed to the Oregon Court of Appeals, LUBA's decision was affirmed in part and reversed in part in *Columbia Pacific Building Trades Council v. City of Portland*, 289 Or App 739 (2018). The Oregon Court of Appeals decision was appealed to the Oregon Supreme Court, which denied review, 363 Or 390 (2018). On October 5, 2018, LUBA remanded *Columbia Pacific Building Trades Council et al v. City of Portland*, LUBA Case No. 2017-001. The assignments of error that LUBA sustained and were either affirmed or not challenged on appeal to the Court of Appeals concern insufficient findings or evidence or misconstruction of law that do not support a conclusion that the decision is prohibited as a matter of law.

The City of Portland does not have adopted code or policies to establish a decision-making process for a remand decision. The Council finds that the proposed amendments are a continuation of the initial legislative proceeding. Accordingly, the City Council determined that it was appropriate to bring the ordinance directly back to City Council, given the extensive public process that happened as part of the initial adoption of the ordinance in 2016 and that no substantive changes to the Zoning Code are required to address the remand issues. Notification of the November 20, 2019, City Council public hearing on the remand of Ordinance No. 188142 was sent to the City's legislative notice list, the fossil fuel terminal property owners, and the parties to the appeal.

On November 20, 2019, the Portland City Council held a public hearing and received testimony on the re-adoption of the fossil fuel terminal zoning restrictions. The written record was left open for additional testimony until December 2, 2019. The evidentiary record from the initial decision is incorporated by reference and supplemented by additional evidence provided by BPS staff, the testimony Council received at the November 20 hearing and the written testimony received by December 2.

Testimony by the Portland Business Alliance et al raised concerns that there was no public involvement activities as part of the remand process. As explained above, no specific process is required by City code or policy. The City Council determined that the regular legislative process, with a public hearing and opportunity to submit written testimony, would be sufficient to address the insufficient evidence errors in the remand decision.

Testimony by Zenith Energy raised the concern that there has been two years since Court of Appeals confirmed the evidentiary deficiencies and that there is no justification for treating this decision as an emergency ordinance. The City Council has the discretion to declare an emergency. As evidenced in the oral testimony at the November 20 public hearing, this is an urgent issue that requires immediate action. The City has determined that an emergency is appropriate here due to the fact that Portland is currently at risk of a major earthquake.

As noted below in these findings, the FFTZ amendments are consistent with the goals and policies of Chapter 2 (Community Involvement) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference. The events and outreach strategies summarized here demonstrate consistency with the requirements of Statewide Planning Goal 1.

Goal 2. Land Use Planning. To establish a land use planning process and policy framework as a basis for all decisions and actions related to use of land and to assure an adequate factual base for such decisions and actions.

5. Finding: The City followed procedures for legislative amendments to the Zoning Code, which are found in 33.740 (Legislative Procedure). The amendments support Goal 2 because, as demonstrated by these findings and detailed in this ordinance, the FFTZ amendments were developed consistent with the Statewide Planning Goals, the Metro Urban Growth Management Functional Plan, and 2035 Comprehensive Plan.
6. Finding: On October 16, 2019 BPS filed a 35-day DLCD notice and on October 30, 2019 the City sent a legislative notice, to notify other government agencies and interested parties that the City would be reconsidering the remanded ordinance. Multnomah County and the Columbia River Intertribal Fish Commission testified in support of the ordinance. No other government agencies submitted testimony. In the initial adoption of the ordinance, the City received testimony from the Port of Portland. The City responded to the issues raised by the Port by amending the code to include an exception for the storage of fossil fuels for exclusive use at an airport, surface passenger terminal, marine, truck or air freight terminal, drydock, ship or barge servicing facility, rail yard, or as part of a fleet vehicle servicing facility. The City did not receive any requests from other government agencies to modify the FFTZ amendments.
7. Finding: The City Council's decision is based on the findings in this document, which are based on the factual evidence presented to the Planning and Sustainability Commission and City Council as part of the initial adoption in 2016 as well as the evidence presented as part of the reconsideration of this ordinance that is incorporated in the record that provides the adequate factual base for this decision.

8. Finding: On remand from the Court of Appeals, the remaining assignments of error before LUBA concern insufficient findings or evidence. LUBA held that the City failed to demonstrate consistency with former Comprehensive Plan Policies 5.1, Objective C and 5.4, Objective A. Those policies have since been repealed from the Comprehensive Plan and replaced with *2035 Comprehensive Plan* policies outlined below. Next, LUBA held that the City failed to adopt findings addressing consistency with the Guilds Lake Industrial Sanctuary Plan (GLISP). As detailed below, the City Council finds that the FFT Amendments are consistent with the GLISP. Third, LUBA found that the City's finding that demand for fossil fuels will plateau or decline was not supported by substantial evidence in the record. As described in the findings for Policy 6.48, BPS staff provided a memo in the record to provide evidence that the City Council expects that the existing FFT storage capacity, with the allowed exceptions, is enough to serve the region out to a 2050 planning horizon. The Council finds the BPS staff memo compelling and considered the evidence against other assertions that speculated the demand for fossil fuels would increase. Still, the Council notes that no single finding serves as exclusive support for the Council's decision. Rather, the Council considers all of the evidence in the record and determines whether there is an adequate factual base for the decision.
9. Finding: In addition to understanding the storage capacity necessary to serve the region, the City Council also considered significant seismic risks that FFTs pose because most of Portland's employment and industrial zones are in areas with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. The FFTs have significant seismic risks because most of the tanks have been constructed without any or only limited seismic design criteria, as documented by the Portland Bureau of Emergency Management's 2016 Critical Energy Infrastructure Hub Study and the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report. Continuing to allow the increase in FFTs in a high risk area increases the risk to the surrounding industrial district and the Willamette River. The FFTZ amendments limit future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. Further, by designating existing FFTs as a limited use, as opposed to a prohibited nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which ultimately can make Portland more resilient.

Goal 5. Open Space, Scenic and Historic Areas, and Natural Resources. To protect natural resources and conserve scenic and historic areas and open spaces.

10. Finding:

Open Spaces. The FFTZ amendments do not include Comprehensive Plan map or Zoning Map changes. There are no designated open spaces (OS map designations) on any of the existing fossil fuel terminals (FFTs).

Scenic Resources. In 1991, the City adopted the Scenic Resources Protection Plan and applied a scenic (s) overlay zone to protect significant scenic resources. Two of the FFTs (BP West Coast and NuStar/Shore Terminals) are in a (s) overlay zone. The scenic resource protections (Chapter 33.480) are not amended by this ordinance and the height limits associated with the (s) overlay zone will continue to apply to the two FFT sites.

Historic Resources. Historic resources are located throughout the City, but very few are in the industrial zones. There are no designated Historic Landmarks or Districts in or immediately adjacent to any of the existing FFTs. Existing historic resource protections are not being amended (Chapter 33.445).

Natural Resources. There are significant natural resources in industrial zones, especially along on the Willamette and Columbia Rivers. Six of the existing FFTs have frontage on the Willamette River with designated natural resources that are protected by the Greenway Overlay Zone (Chapters 33.440), which is not amended by this ordinance.

Generally. As noted below in the findings for the 2035 Comprehensive Plan, the FFTZ amendments are consistent with the goals and policies of Chapter 4 (Design and Development, including Historic and Cultural Resources) and Chapter 7 (Environment and Watershed Health) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference. Therefore, FFTZ amendments are consistent with the requirements of Statewide Planning Goal 5.

Goal 6. Air, Water, and Land Resource Quality. To maintain and improve the quality of the air, water and land resources of the state.

11. Finding: Goal 6 requires the maintenance and improvement of the quality of air, water, and land resources. The State has not adopted administrative rules for complying with Statewide Planning Goal 6. The City complies with federal and state environmental standards and statutes, including the federal Clean Water Act and Clean Air Act. Existing City regulations including Title 10 (Erosion Control) and the Stormwater Management Manual will remain in effect and are applicable to future development. As noted below in the findings for the 2035 Comprehensive Plan, the FFTZ amendments are consistent with the goals and policies of Chapter 7 (Environment and Watershed Health) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference. Therefore, FFTZ amendments are consistent with the requirements of Statewide Planning Goal 6.

Goal 7. **Areas Subject to Natural Disasters and Hazards.** To protect people and property from natural hazards.

12. Finding: The State has not adopted administrative rules for complying with Statewide Planning Goal 7. Most of Portland's employment and industrial zones are in areas with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. Fossil fuel infrastructure poses considerable risks in the event of a major earthquake. According to the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report, a magnitude 8 or 9 Cascadia Subduction Zone earthquake would impact the CEI Hub with: ground shaking; liquefaction (soil behavior phenomenon in which a saturated sand softens and loses strength during strong earthquake ground shaking); lateral spreading (where surficial soil permanently moves laterally due to earthquake shaking); landslides; co-seismic settlement (where the ground surface is permanently lowered due to seismic shaking); and bearing capacity failures (when the foundation soil cannot support the structure it is intended to support).

According to the 2012 DOGAMI report, liquefaction and lateral spreading hazards are of primary concern to the fossil fuel terminals. As described in the 2012 Oregon State Energy Assurance Plan, this Critical Energy Infrastructure Hub (CEI Hub) sits on top of very poor soils that are highly susceptible to earthquake-induced permanent ground deformation. The CEI Hub is adjacent to the Willamette River and has extensive deposits of highly liquefiable soils. These soils (made of sands, silts, gravels and clays) have been naturally deposited by river activity as well as been created from man-made activities, such as hydraulically placed material from river dredging or debris placed as landfill.

In 2016, the City Council adopt Resolution #37242 to adopt the 2016 Natural Hazard Mitigation Plan, which identified the Critical Energy Infrastructure Hub as one of two of the City's most serious

vulnerabilities to natural hazards. The 2016 Natural Hazard Mitigation Plan includes Appendix D. Critical Energy Infrastructure Hub Study that is included in the record for this decision.

The FFTs have significant seismic risks because most of the tanks have been constructed without any or only limited seismic design criteria on soils with moderate to high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's 2016 Critical Energy Infrastructure Hub Study and the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report. Continuing to allow the increase in FFTs in a high risk area increases the risk to the surrounding industrial district and the Willamette River. The FFTZ amendments limit future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. Further, by designating existing FFTs as a limited use, as opposed to a prohibited nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which ultimately can make Portland more resilient.

Testimony from the Portland Business Alliance et al., the Working Water Coalition, the Western States Petroleum Association and Zenith Energy called for the ordinance to specifically allow for safety and seismic upgrades in conjunction with expansion of storage capacity, otherwise there will be fewer tank upgrades. The testimony does not define or explain the economics of upgrades; or what is meant by “market-based infrastructure changes”; or what are the “business impacts” of regulating tank capacity; or why FFTs need to expand fossil fuel storage tank capacity in order to make safety upgrades. The FFTZ amendments designate existing FFTs as a limited use specifically to continue to operate to supply fossil fuels and to allow for safety and seismic upgrades. Transloading facilities are a defining characteristic of a Bulk Fossil Fuel Terminal, however, the ordinance the ordinance does not regulate transloading facilities and only limits new fossil fuel storage tank capacity. Existing fossil fuel storage tank capacity can be reconfigured. Other aspects of terminal infrastructure (pipelines, docks, transloading facilities) are not regulated by this ordinance. Renewable fuels and aviation fuels are exempt from these regulations. Only three storage tank upgrades with significant capacity expansion have occurred in the past 10 years under development standards that allowed for the unlimited capacity expansion. Therefore, there is no evidence that allowing for storage tank capacity expansion is an incentive that will encourage safety and seismic upgrades. Nothing in state land use law requires local jurisdictions to allow expansion of a use to make safety upgrades.

Testimony by the Working Waterfront Coalition asserts that it is important for FFTs to invest in facilities as “unforeseen emergencies continue to exist”. The testimony does not define or explain what is meant by the phrase “unforeseen emergencies”. To the contrary, the record contains ample evidence that a major earthquake is a foreseen event that state and local agencies have begun to prepare for. This ordinance specifically addresses that emergency by limiting expansion of storage capacity in an area at high risk for liquefaction. The City Council finds that the FFTZ amendments designate existing FFTs as a limited use specifically to continue to operate to supply fossil fuels and to allow for safety and seismic upgrades.

Testimony by the Western States Petroleum Association claims that the ordinance will lock existing infrastructure in place, which prevents efficiency, environmental, and safety improvements. This assertion is an oversimplification of the ordinance. The testimony does not define or specify what efficiency, environmental, and safety improvements are prevented by the ordinance. The FFTZ amendments only regulates fossil fuel storage capacity. The ordinance allows existing tank capacity to be replaced, and allows, through exceptions, for additional storage capacity for aviation fuel and

renewable fuels. Existing FFTs are designated as a limited use specifically to allow them to continue to operate and make efficiency, environmental, and safety improvements.

Testimony by the Western States Petroleum Association claims that the City is requiring fossil fuel tanks to be located in liquefaction zones by prohibiting relocation of fossil fuel tanks outside of mapped liquefaction areas in Portland. The City Council finds that ordinance does not require locating fossil fuel tanks in liquefaction hazard areas. The ordinance allows existing fossil fuel tank capacity to continue to operate and even be reconfigured into newer, safer tanks. Further, there is a map in the record that shows that there are very few areas in Portland's industrial zones, including no areas that have marine/harbor access, that are outside of the high-risk liquefaction areas. Therefore, the ordinance prohibits new FFTs in all industrial and employment zones in Portland. No evidence has been presented to support the assertion that FFTs have to be located in Portland.

Testimony by Zenith Energy cites previous (2016) testimony that terminal operators are unable to invest in upgrades without incentives. No evidence is provided on the economics of upgrades or what kind of incentives are needed. Current regulations have provided unlimited storage tank capacity expansion and very few upgrades (three tanks in 2012) have been made in the last 10 years, since the seismic vulnerability of the Critical Energy Infrastructure (CEI) hub has become a state and local concern. Nothing in State law requires City to provide incentives as an offset to restrictive land use regulations.

Testimony by Zenith Energy claims that safety upgrades require the construction of new infrastructure without interrupting service to customers – new storage tanks are needed before old tanks can be taken out of service. No evidence is provided on storage tank capacity utilization or available land area at existing FFTs or the length of time that it takes to replace or retrofit a storage tank that indicates that new storage capacity is needed before existing storage capacity can be retrofitted or replaced. Recently, Zenith Energy expanded transloading capacity without expanding storage tank capacity and proposed adding new transloading/intermodal pipeline capacity to utilize existing storage capacity.

As noted below in the findings for the 2035 Comprehensive Plan, the FFTZ amendments are consistent with the goals and policies of Chapter 7 (Environment and Watershed Health) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference. Therefore, FFTZ amendments are consistent with the requirements of Statewide Planning Goal 7.

Goal 8. Recreational Needs. To satisfy the recreational needs of the citizens of the state and visitors and, where appropriate, to provide for the siting of necessary recreational facilities including destination resorts.

13. Finding: Goal 8 focuses on the provision of destination resorts. However, it does impose a general obligation on the City to plan for meeting its residents' recreational needs: "(1) in coordination with private enterprise; (2) in appropriate proportions; and (3) in such quantity, quality and locations as is consistent with the availability of the resources to meet such requirements."

Goal 8 provides that "Recreation Needs -- refers to existing and future demand by citizens and visitors for recreations areas, facilities and opportunities." Goal 8 also provides that "Recreation Areas, Facilities and Opportunities -- provide for human development and enrichment, and include but are not limited to: open space and scenic landscapes; recreational lands; history, archaeology and natural science resources; scenic roads and travelers; sports and cultural events; camping, picnicking and recreational lodging; tourist facilities and accommodations; trails; waterway use

facilities; hunting; angling; winter sports; mineral resources; active and passive games and activities."

The City of Portland has robust and diverse system of parks, recreation areas and open spaces. However, there are no parks adjacent to the existing FFTs. Further, the ordinance limits development for a single type of use, which will reduce negative impacts to parks that are near industrial areas, especially Forest Park, which is located across Highway 30 from the Northwest Industrial District where the existing FFTs are located.

As noted below in the findings for the 2035 Comprehensive Plan, the FFTZ amendments are consistent with the goals and policies of Chapter 8 (Public Facilities and Services) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference. Therefore, FFTZ amendments are consistent with the requirements of Statewide Planning Goal 8.

Goal 9. Economic Development. To provide adequate opportunities throughout the state for a variety of economic activities vital to health, welfare, and prosperity of Oregon's citizens.

14. Finding: Goal 9 requires cities to consider economic activities vital to the health, welfare, and prosperity of Oregon's citizens. Comprehensive plans for urban areas are required to include, among other things: an analysis of economic patterns, potentialities, strengths, and deficiencies; policies concerning economic development; and land use maps that provide for at least an adequate supply of sites for a variety of industrial and commercial uses.

The 2035 Comprehensive Plan demonstrates compliance with Goal 9. Land needs for a variety of industrial and commercial uses are identified in the Economic Opportunities Analysis (EOA), which was adopted (Ordinance 187831) and acknowledged by LCDC on April 25, 2017.

The City's acknowledged EOA analyzed and demonstrated adequate growth capacity for a diverse range of employment uses, which are organized into different geographies that represent business district types with a distinct mix of business sectors and building types. In each of the geographies, the City analyzed the future land demand for employment growth and the developable land supply to accommodate that growth. The EOA analyzed future demand for industrial land in four different broad geographies: Harbor Access Lands (which is includes all or a portion of nine of the existing FFTs); Harbor and Airport Districts (which includes all or a portion of five of the existing FFTs); Columbia East (no existing FFTs) and Dispersed Employment (no existing FFTs). The future demand for industrial land is primarily based on generalized employment growth for the mix of businesses in these geographies without specific demand for FFT capacity. The EOA future land demand also includes an estimate for marine terminals based on future cargo/commodity flow forecasts. FFTs handle "liquid bulks", which are primarily petroleum products. Estimates of existing cargo capacity are difficult to obtain, particularly for privately owned marine terminals, like the fossil fuel terminals. ECONorthwest (2012) prepared an estimate based on historical data for total cargo volumes for the years 2000 and 2010. For private marine terminals, the assumption was that recent historical peaks are a reasonable estimate of maximum existing capacity. Based on that capacity estimate, ECONorthwest found that no additional land is needed for new liquid bulk terminals in Portland through the year 2040. The EOA demand analysis did not distinguish between types of liquid bulks, such as specific land needs associated with expanding aviation fuels or non-fossil mixing fuels. Instead, the EOA analysis addressed overall liquid bulk demand and capacity, aggregating the increase of some bulk types and reduction in others. No testimony was submitted into the record contradicting the EOA analysis.

The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not reduce the employment land base and continue to support a strong and diverse economy.

Testimony by the Portland Business Alliance et al. raises concern that the FFTZ amendments would hurt the local economy. The City Council finds that this is an unsupported assertion that provides no details or explanation as to how this ordinance will hurt the local economy. City Council notes that BPS staff provided evidence in the Council presentation and the written record that demonstrates the ordinance has been narrowly written to minimize impacts to the existing fossil fuel terminals (FFTs), while limiting risk from future natural hazards.

Testimony by the Working Waterfront Coalition asserts that it is important for FFTs to invest in facilities as "demand continues". The testimony does not define or explain what is meant by the phrase "as demand continues". BPS presented evidence that national petroleum consumption forecast out to 2050 is essentially flat, which is a continuation of historic trends in Oregon and Washington, during a period of a thriving economy. In addition, ODOT is forecasting a decline in motor fuel consumption over the medium term to 2029. The more recent cargo forecasts project a modest growth in volumes, but those volumes do not exceed the historic peak volumes that were handled by the Portland terminals. No other evidence of future demand for fossil fuels was submitted in testimony. Therefore, the City Council finds that the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs.

Testimony by the Western States Petroleum Association claims that the FFTZ amendments will inflict negative impacts on the local, state, and regional economy. The City Council finds that "negative impacts" to the economy are not defined or explained. BPS presented evidence that the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs. The ordinance specifically exempts new storage capacity for renewable fuels as a means to support compliance with DEQ's Clean Fuels Program and a transition away from fossil fuels.

Testimony by the Western States Petroleum Association claims that the ordinance will introduce a "host of ambiguities and uncertainties" into the marketplace that is "necessary for a thriving economy". The vague terms "ambiguities and uncertainties" are not defined or explained. The FFTZ amendments designate existing FFTs as a limited use specifically to allow the FFTs to continue to operate to supply fossil fuels and to allow for safety and seismic upgrades. Transloading facilities are a defining characteristic of a Bulk Fossil Fuel Terminal, however, the ordinance the ordinance does not regulate transloading facilities and only limits new fossil fuel storage tank capacity. Existing fossil fuel storage tank capacity can be reconfigured. Other aspects of terminal infrastructure (pipelines, docks, transloading facilities) are not regulated by this ordinance. What is "necessary for a thriving economy" is not defined. BPS staff presented evidence that national petroleum consumption forecast out to 2050 is essentially flat, which is a continuation of historic trends in Oregon and Washington, during a period of a thriving economy. In addition, ODOT is forecasting a decline in motor fuel consumption over the medium term to 2029. Therefore, the City Council finds that the fossil fuel storage capacity at the existing FFTs is sufficient to support the regional economy.

Testimony by the Western States Petroleum Association claims that the regional demand for fossil fuels is an example of a product with inelastic demand. The City Council finds that no evidence is provided to demonstrate that the demand for fuel is inelastic. BPS staff presented information from the Federal Reserve Bank of St. Louis that shows an elastic relationship between fuel prices and vehicle miles travelled. An elastic demand is one in which demand is responsive to changes in price. In this case, vehicle miles travelled in an indirect measure of fossil fuel consumption and the chart

shows that since 2009, as gas prices have increased, vehicle miles traveled decreased and since 2014, when gas prices decreased, vehicle miles traveled increased. The City Council concurs with the statement that the ordinance does not limit the regional demand for fuel. However, the Western States Petroleum Association does not provide any evidence on what the regional demand for fuel is. BPS presented evidence that national petroleum consumption forecast out to 2050 is essentially flat, which is a continuation of historic trends in Oregon and Washington, during a period of a thriving economy. In addition, ODOT is forecasting a decline in motor fuel consumption over the medium term to 2029. Therefore, the City Council concludes that the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs.

As noted below in the findings for the 2035 Comprehensive Plan, the FFTZ amendments are consistent with the goals and policies of Chapter 6 (Economic Development) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference. Therefore, FFTZ amendments are consistent with the requirements of Statewide Planning Goal 9.

Goal 10. Housing. To provide for the housing needs of citizens of the state.

15. Finding: Goal 10 specifies that each city must plan for and accommodate needed housing types. As used in ORS 197.307 "needed housing" means all housing on land zoned for residential use or mixed residential and commercial use that is determined to meet the need shown for housing within an urban growth boundary at price ranges and rent levels that are affordable to households within the county with a variety of incomes, including but not limited to households with low incomes, very low incomes and extremely low incomes, and includes attached and detached single-family housing and multiple family housing for both owner and renter occupancy.

Goal 10 requires each city to inventory its buildable residential lands, forecast future needs, and zone enough buildable land to meet those needs. The FFTZ amendments do not include comprehensive plan map amendments, and, therefore, do not affect the residential development capacity of Portland.

As noted below in the findings for the 2035 Comprehensive Plan, the FFTZ amendments are consistent with the goals and policies of Chapter 5 (Housing) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference. Therefore, FFTZ amendments are consistent with the requirements of Statewide Planning Goal 10.

Goal 11. Public Facilities and Services. To plan and develop a timely, orderly and efficient arrangement of public facilities and services to serve as a framework for urban and rural development.

16. Finding: Statewide Planning Goal 11, Public Facilities, requires cities to adopt and update public facilities plans. Public facilities plans ensure that urban development is guided and supported by types and levels of water, sewer and transportation facilities appropriate for the needs and requirements of the urban areas to be serviced, and that those facilities and services are provided in a timely, orderly and efficient arrangement.

The adopted 2035 Comprehensive Plan includes the Citywide Systems Plan (CSP), which was adopted (Ordinance 185657) and acknowledged by LCDC on April 25, 2017. The CSP includes the Public Facilities Plan with information on current and future transportation, water, sanitary sewer, and stormwater infrastructure needs and projects, consistent with the requirements of Statewide Planning Goal 11.

The FFTZ amendments do not include comprehensive plan map amendments and do not amend the CSP. These regulations apply to only one type of use that makes up a minority part of the uses

found in Portland's industrial districts. The remaining industrial uses continue to be regulated under the current development regulations and do not intensify the development capacity. Therefore, these changes will not adversely impact the City's public facilities.

As noted below in the findings for the 2035 Comprehensive Plan, the FFTZ amendments are consistent with the goals and policies of Chapter 8 (Public Facilities and Services) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference. Therefore, FFTZ amendments are consistent with the requirements of Statewide Planning Goal 11.

Goal 12. Transportation. To provide and encourage a safe, convenient and economic transportation system.

17. Finding: Goal 12 is "to provide and encourage a safe, convenient and economic transportation system."

The FFTZ amendments maintains Portland's role as a multimodal freight hub with enhanced freight access because it does not amend the City's adopted Transportation System Plan, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the industrial areas where the FFTs are located. Also, the ordinance only restricts new fossil fuel storage tank capacity and does not regulate transloading facilities, docks or pipelines – facilities that are key components of the multimodal freight transportation system.

Goal 12 requires local governments to adopt transportation plans. The adopted 2035 Comprehensive Plan includes the Transportation System Plan (TSP), which was adopted in three phases (Ordinance 187832, 188177, and 188957). Phase 1 and 2 was submitted as part Task Four of Periodic Review; and both were approved by LCDC Order 18 – WKTSK – 001897 on August 8, 2018. Phase 3 of the Transportation System Plan was adopted as a post-acknowledgement plan amendment by Ordinance No. 188957, became effective on June 23, 2018. The FFTZ amendments do not amend the TSP.

OAR 660-012-0060 (1) requires: If an amendment to a functional plan, an acknowledged comprehensive plan, or a land use regulation (including a zoning map) would significantly affect an existing or planned transportation facility, then the local government must put in place measures as provided in section (2) of this rule, unless the amendment is allowed under section (3), (9) or (10) of this rule. A plan or land use regulation amendment significantly affects a transportation facility if it would:

(a) Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);
(b) Change standards implementing a functional classification system; or
(c) Result in any of the effects listed in paragraphs (A) through (C) of this subsection based on projected conditions measured at the end of the planning period identified in the adopted TSP. As part of evaluating projected conditions, the amount of traffic projected to be generated within the area of the amendment may be reduced if the amendment includes an enforceable, ongoing requirement that would demonstrably limit traffic generation, including, but not limited to, transportation demand management. This reduction may diminish or completely eliminate the significant effect of the amendment.
    (A) Types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;

(B) Degrade the performance of an existing or planned transportation facility such that it would not meet the performance standards identified in the TSP or comprehensive plan; or
(C) Degrade the performance of an existing or planned transportation facility that is otherwise projected to not meet the performance standards identified in the TSP or comprehensive plan.

The FFTZ amendments do not change the functional classification of any existing or proposed transportation facility, nor do they change the standards implementing a functional classification system. Therefore, the amendments do not have a significant effect under (a) or (b).

The FFTZ amendments limit one type of use allowed in industrial areas. The remaining industrial uses continue to be regulated under the current development regulations and do not intensify the development capacity. Therefore, the amendments do not have a significant effect under (c).

Portland's Air, Rail, Water Pipeline Plan (ARWP) is adopted into the acknowledged TSP in compliance with OAR 660-012-0020(2)(e). The ARWP includes information on the location and extent of existing or planned facilities, as specified by the rule. The ARWP does not have functional classification or performance standards, and the rule does not require them.

Testimony from the Portland Business Alliance et al., the Working Water Coalition, and the Western States Petroleum Association raised the concern that the ordinance would force fuels to be transported by truck and increase vehicle miles travelled and emissions. The City Council finds that this unsupported assertion provides no details or explanation as to how this ordinance will force a change in transportation modes. There is no explanation or evidence on future demand, pipeline capacity utilization, or storage tank utilization or how or why truck traffic would increase. BPS staff provided evidence in the Council presentation and the written record that demonstrates that there is a reasonable expectation that the demand for fossil fuels will be flat and that the existing FFT storage capacity, with the allowed exceptions, will be sufficient to meet the future demand for fossil fuels.

Furthermore, as noted below in the findings for the 2035 Comprehensive Plan, the FFTZ amendments are consistent with the goals and policies of Chapter 9 (Transportation) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference. Therefore, the FFTZ amendments are consistent with the requirements of Statewide Planning Goal 12.

Goal 13. Energy Conservation. To conserve energy.

18. Finding: The State has not adopted specific rules for complying with Statewide Planning Goal 13. Goal 13 generally requires that land use plans contribute to energy conservation. The guidelines refer to land use planning to minimize the depletion of non-renewable sources of energy; to re-use land; and increase density along high capacity transportation corridors. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses that would change the City's development pattern that will have a material impact on energy efficiency.

The City has a few provisions in the Zoning Code to support energy conservation, including energy efficiency or renewable energy improvements do not trigger nonconforming upgrade improvements (PCC 33.258); development standards for small, urban-wind turbines (PCC 33.299); and a requirement that new development in the Central City Plan District must register for green building certification (PCC 33.510). The FFTZ amendments do not amend any of these implementing provisions.

Testimony from the Portland Business Alliance et al., the Working Water Coalition, and the Western States Petroleum Association raised the concern that the ordinance would force fuels to be transported by truck and increase vehicle miles travelled and emissions. The City Council finds that this unsupported assertion provides no details or explanation as to how this ordinance will force a change in transportation modes. There is no explanation or evidence on future demand, pipeline capacity utilization, or storage tank utilization or how or why truck traffic would increase. BPS staff provided evidence in the Council presentation and the written record that demonstrates that there is a reasonable expectation that the demand for fossil fuels will be flat and that the existing FFT storage capacity, with the allowed exceptions, will be sufficient to meet the future demand for fossil fuels.

Therefore, the FFTZ amendments are consistent with the requirements of Statewide Planning Goal 13.

Goal 14. Urbanization. To provide for an orderly and efficient transition from rural to urban land use, to accommodate urban population and urban employment inside urban growth boundaries, to ensure efficient use of land, and to provide for livable communities.

19. Finding: Metro is responsible for Goal 14 compliance on behalf of Portland and other cities within the metropolitan region. Metro has adopted an Urban Growth Management Functional Plan and compliance with this plan by constituent cities assures compliance with Goal 14, which is discussed in Part II of this document and those findings are incorporated by reference.

As discussed above under Goal 9, the FFTZ amendments will not change the employment development capacity inside the urban growth boundary and the City will continue to have adequate capacity to accommodate its allocated forecasted growth. Therefore, FFTZ amendments are consistent with the requirements of Statewide Land Use Goal 14.

Goal 15. Willamette River Greenway. To protect, conserve, enhance and maintain the natural, scenic, historical, agricultural, economic and recreational qualities of lands along the Willamette River as the Willamette River Greenway.

20. Finding: Six of the 11 existing FFTs have frontage on the Willamette River. However, these parcels will continue to be subject to development regulations for flood plains or natural resources. Furthermore, no changes to existing protections afforded through the greenway overlay zones are proposed.

Therefore, FFTZ amendments are consistent with the requirements of Statewide Land Use Goal 15 because they do not change the protections to affected lands within the Willamette River Greenway Overlay Zone.

Part II. Metro

Under ORS 268.380 and its Charter, Metro has the authority to adopt regional plans and require city and county comprehensive plans to comply with regional plan. Metro adopted the Urban Growth Management Functional Plan and the Regional Transportation Functional Plan under this authority.

Urban Growth Management Functional Plan

In its June 2011 update to its 2010 compliance report Metro found, “The City of Portland is in compliance with all Urban Growth Management Functional Plan requirements in effect on December

15, 2010, except for Title 13, Nature in Neighborhoods." On January 16, 2013 the City received a letter from Metro stating that Portland had achieved compliance with Title 13.

Title 1. Housing Capacity. The Regional Framework Plan calls for a compact urban form and a "fair-share" approach to meeting regional housing needs. Title 1 requires each city and county to maintain or increase its housing capacity, especially in centers, corridors, main streets, and station communities, except as provided in section 3.07.120.

21. Finding: The FFTZ amendments do not reduce housing potential in any part of the City because the amendments affect a use of industrial land and does not change the designation of residential lands.

    Therefore, the FFTZ amendments are consistent with the requirements of Title 1.

Title 2. Regional Parking Policy. (repealed in 1997)

Title 3. Water Quality and Flood Management. To protect the beneficial water uses and functions and values of resources within the Water Quality and Flood Management Areas by limiting or mitigating the impact on these areas from development activities and protecting life and property from dangers associated with flooding.

22. Finding: Title 3 calls for the protection of the beneficial uses and functional values of resources within Metro-defined Water Quality and Flood Management Areas by limiting or mitigating the impact of development in these areas. Title 3 establishes performance standards for 1) flood management; 2) erosion and sediment control; and 3) water quality. The City has adopted overlay zones and land use regulations, including Title 10 Erosion Control and the balanced cut-and-fill standards in Title 24 Building Regulations, that, in the June 2011 update to its 2010 compliance report, Metro found sufficient to comply with Title 3. This ordinance does not change any of these overlays or regulations.

    FFTs are located in the 100-year floodplain. In the Zoning Code, the City of Portland's Title 3 program is implemented primarily through the greenway overlay zones, which are unchanged by these amendments and will ensure any new development will be done in a way to protect people and property and the functions and values of the floodplain.

Title 4. Industrial and Other Employment Areas. The Regional Framework Plan calls for a strong regional economy. To improve the economy, Title 4 seeks to provide and protect a supply of sites for employment by limiting the types and scale of non-industrial uses in Regionally Significant Industrial Areas (RSIAs), Industrial and Employment Areas. Title 4 also seeks to provide the benefits of "clustering" to those industries that operate more productively and efficiently in proximity to one another than in dispersed locations. Title 4 further seeks to protect the capacity and efficiency of the region's transportation system for the movement of goods and services and to encourage the location of other types of employment in Centers, Corridors, Main Streets and Station Communities. The Metro Council will evaluate the effectiveness of Title 4 in achieving these purposes as part of its periodic analysis of the capacity of the urban growth boundary.

23. Finding: The purpose of Title 4 is to maintain a regional supply of existing industrial and employment land by limiting competing uses for this land. Metro has not adopted a Statewide Planning Goal 9 economic opportunities analysis for the region, so Title 4 is not based on an assessment of the land needed for various employment types, nor do the Title 4 maps necessarily depict lands most suitable to accommodate future job growth. Rather, Title 4 seeks to protect the manufacturing, warehousing, and distribution of goods within three types of mapped areas by

limiting competing uses. These three areas are Regionally Significant Industrial Areas (RSIAs), Industrial Areas, and Employment Areas.

The existing FFTs are located in the northwest industrial district, which is a designated RSIA. The RSIA regulations do not include special provisions for FFTs. The other RSIAs in Portland do not have existing FFTs and new FFTs are prohibited. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, the FFTZ amendments are consistent with the requirements of Metro Title 4.

Title 5. Neighboring Cities (repealed 1997)

Title 6. Centers, Corridors, Station Communities and Main Streets. The Regional Framework Plan identifies Centers, Corridors, Main Streets and Station Communities throughout the region and recognizes them as the principal centers of urban life in the region. Title 6 calls for actions and investments by cities and counties, complemented by regional investments, to enhance this role. A regional investment is an investment in a new high-capacity transit line or designated a regional investment in a grant or funding program administered by Metro or subject to Metro's approval.

24. Finding: Title 6 establishes eligibility criteria for certain regional investments, and the use of more flexible trip generation assumptions when evaluating transportation impacts. Title 6 also contains aspirational activity level targets for different Metro 2040 place types. This title is incentive-based, so these findings simply serve to document intent. There are no specific mandatory compliance standards in Title 6 that apply to this ordinance.

The existing FFTs are not located in designated Title 6 areas, therefore this title does not apply.

Title 7. Housing Choice. The Regional Framework Plan calls for establishment of voluntary affordable housing production goals to be adopted by local governments and assistance from local governments on reports on progress towards increasing the supply of affordable housing. It is the intent of Title 7 to implement these policies of the Regional Framework Plan.

25. Finding: Title 7 addresses housing choice. Metro adopted voluntary affordable housing goals for each city and county in the region for the years 2001 to 2006, but never updated them. Title 7 does not apply. The FFTZ amendments change the City's industrial zones and do not impact the City of Portland's residential development capacity or affordable housing programs.

Title 8. Compliance Procedures. Title 8 addresses compliance procedures and establishes a process for ensuring city or county compliance with requirements of the Urban Growth Management Functional Plan. A city or county proposing an amendment to a comprehensive plan or land use regulation shall submit the proposed amendment to METRO at least 35 days prior to the first evidentiary hearing on the amendment.

26. Finding: On October 16, 2019 BPS filed a 35-day DLCD notice and on October 30, 2019 the City sent a legislative notice, to notify other government agencies, including Metro, that the City would be reconsidering the remanded ordinance. Metro was provided with the 35-day DLCD notice and the City's standard legislative notice. Title 8 also requires the City to provide findings of compliance with the *Urban Growth Management Functional Plan*, as described here. All applicable requirements of Title 8 have been met.

Title 9. Performance Measures. (repealed in 2010)

Title 10. Functional Plan Definitions. Title 10 contains definitions. When 2035 Comprehensive Plan uses a term found in Title 10 either the term has the same meaning found in Title 10, or the difference is explained.

27. Finding: The FFTZ amendments do not change any definitions in the 2035 Comprehensive Plan that are also found in Title 10. All applicable requirements of Title 10 have been met.

Title 11. Planning for New Urban Areas. (not directly applicable)

Title 12. Protection of Residential Neighborhoods. Existing neighborhoods are essential to the success of the 2040 Growth Concept. The intent of Title 12 of the Urban Growth Management Functional Plan is to protect the region's residential neighborhoods. The purpose of Title 12 is to help implement the policy of the Regional Framework Plan to protect existing residential neighborhoods from air and water pollution, noise, and crime and to provide adequate levels of public services.

28. Finding: Title 12 addresses protection of residential neighborhoods. This title largely restricts Metro's authority to plan and regulate density in single-family neighborhoods. Further, the 2035 Comprehensive Plan does not employ any of the optional provisions of Title 12. The FFTZ amendments were originated by the City's legislative process and do not affect residential neighborhoods. Therefore, this title does not apply to this ordinance.

Title 13. Nature in Neighborhoods. The purposes of this program are to (1) conserve, protect, and restore a continuous ecologically viable streamside corridor system, from the streams' headwaters to their confluence with other streams and rivers, and with their floodplains in a manner that is integrated with upland wildlife habitat and with the surrounding urban landscape; and (2) to control and prevent water pollution for the protection of the public health and safety, and to maintain and improve water quality throughout the region.

29. Finding: Title 13 is expressly intended to provide a minimum baseline level of protection for identified Habitat Conservation Areas. Local jurisdictions may achieve substantial compliance with Title 13 using regulatory and/or non-regulatory tools. The City of Portland implements Title 13 through its adopted Natural Resources Inventory (NRI) and subsequent protection measures through the environmental overlay zones, which Metro has found to be in substantial compliance with Title 13.

    No changes to the environmental or greenway overlay zones are proposed as part of this project. Therefore, FFTZ amendments are consistent with the requirements of Title 13.

Title 14. Urban Growth Management Plan. Title 14 addresses the regional urban growth boundary. Since this ordinance does not require, nor initiate, a boundary change, Title 14 does not apply.

Summary, Urban Growth Management Functional Plan Findings

30. Finding: The Metro Title 10 definition of comply or compliance means "substantial" rather than absolute compliance. "Substantial compliance" means city comprehensive plans and implementing ordinances, on the whole, conform with the purposes of the performance standards in the functional plan and any failure to meet individual performance standard requirements is technical or minor in nature.

    For the facts and reasons stated above this ordinance substantially complies with all Urban Growth Management Functional Plan requirements applicable to the FFTZ amendments.

Regional Transportation Functional Plan

The Regional Transportation Functional Plan (RTFP) implements the goals, objectives and policies of the Regional Transportation Plan (RTP). Local implementation of the RTP by cities and counties are carried out in their comprehensive plans, transportation system plans (TSPs), other land use regulations and transportation project development.

31. Finding: The City Council finds that there is no statutory or code requirement that the Council consider and demonstrate whether the proposed amendments are consistent with the RTFP. However, to the extent the demonstrating compliance is necessary, the Council finds that the proposed amendments are compliant with the RTFP as discussed below.

32. Finding: Titles 1-4 address transportation system design, development of transportation system plans, transportation project development and parking management. These titles concern public transportation projects design and system plans and do not address development on private land. These titles do not apply.

Title 5. Amendment of Comprehensive Plans. Title 5 addresses factors that a city or county needs to consider when amending their comprehensive plan or transportation system plan. Cities are required to consider the transportation strategies, such as transit, bicycle and pedestrian system improvements, as part of the analysis to determine if the change will result in a significant effect on the transportation system.

33. Finding: The FFTZ amendments do not change the functional classification of any existing or proposed transportation facility, nor do they change the standards implementing a functional classification system.

    The FFTZ amendments limit one type of use allowed in industrial areas. The remaining industrial uses continue to be regulated under the current development regulations and do not intensify the development capacity. Therefore, the amendments do not have a significant effect on the transportation system.

    Testimony from the Portland Business Alliance et al., the Working Water Coalition, and the Western States Petroleum Association raised the concern that the ordinance would force fuels to be transported by truck and increase vehicle miles travelled and emissions. The City Council finds that this unsupported assertion provides no details or explanation as to how this ordinance will force a change in transportation modes. There is no explanation or evidence on future demand, pipeline capacity utilization, or storage tank utilization or how or why truck traffic would increase. BPS staff provided evidence in the Council presentation and the written record that demonstrates that there is a reasonable expectation that the demand for fossil fuels will be flat and that the existing FFT storage capacity, with the allowed exceptions, will continue to meet the future demand for fossil fuels. Therefore, the City Council concludes that the existing FFT storage capacity is sufficient, and there is no evidence that the FFTZ amendments will result in an increase in truck traffic, vehicle miles travelled or emissions.

    Furthermore, as noted below in the findings for the 2035 Comprehensive Plan, the FFTZ amendments are consistent with the goals and policies of Chapter 9 (Transportation) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference. Therefore, the FFTZ amendments are consistent with the requirements of Title 5.

Part III. Portland's Comprehensive Plan

Portland's 2035 Comprehensive Plan was adopted as part of Task Four of Periodic Review. Task Four was adopted by Ordinance No. 187832 on June 15, 2016. The 2035 Comprehensive Plan was amended as part of Task Five of Periodic Review, which was adopted by Ordinance No. 188177 on December 21, 2016. Both ordinances were made effective on May 24, 2018 by Ordinance No. 188695, and both Tasks Four and Five were approved by LCDC Order 18 – WKTSK – 001897 on August 8, 2018.

34. **Finding:** The City Council has identified the following guiding principles, goals and policies to be applicable to the FFTZ amendments.

Guiding Principles

The 2035 Comprehensive Plan adopted five "guiding principles" in addition to the goals and policies in a comprehensive plan. These principles recognize that implementation of the plan needs to be balanced, integrated and multi-disciplinary, and the influence of each principle helps to shape the overall all policy framework of the plan.

35. **Finding:** The City Council interprets the requirement in Policy 1.10.a to demonstrate how the FFTZ amendments comply with the Guiding Principles as one that requires a general overview discussion that does not require addressing specific language in specific policies.

The FFTZ amendments further these guiding principles as described below.

Economic Prosperity. Support a low-carbon economy and foster employment growth, competitiveness and equitably distributed household prosperity.

36. **Finding:** The City Council interprets this guiding principle to support a robust and resilient regional economy, thriving local businesses and growth in living-wage jobs and household prosperity. The FFTZ amendments support a low-carbon economy by providing an exception for additional storage capacity for non-fossil, renewable fuels. It fosters employment growth, competitiveness, and contributes to more equitably distributed household prosperity because the regulations are narrowly crafted to apply to one type of use and maintains the development capacity of Portland's industrial areas. Further, the FFTZ amendments preserve existing industrial sites because the ordinance does not include comprehensive plan or zoning map changes. Finally, the ordinance does allow FFTs to grow and intensify their level of use by only regulating fossil fuel storage tank capacity and allowing exceptions for aviation and renewable fuels.

    As noted elsewhere in the findings, the FFTZ amendments are consistent with Statewide Planning Goal 9 (Economic Development) and the goals and policies of Chapter 6 (Economic Development) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference.

Human Health. Avoid or minimize negative health impacts and improve opportunities for Portlanders to lead healthy, active lives.

37. **Finding:** The FFTZ amendments further the objectives to avoid or minimize negative health impacts associated with FFTs by reducing the risks associated with a major earthquake. Continuing to allow the increase in FFTs in a high risk area increases the risk to the surrounding industrial district, the Willamette River and Portland as a whole. The first step in making the current situation better is to ensure that the situation does not get worse by continuing to allow the unlimited increase in fossil fuel terminal storage tank capacity in a moderate to high risk. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will be an improvement compared to the current regulations that allow for unlimited growth in fossil fuel terminals. Further, by designating existing FFTs as a limited use allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which can minimize health impacts in the event of a major earthquake.

Environmental Health. Weave nature into the city and foster a healthy environment that sustains people, neighborhoods, and fish and wildlife. Recognize the intrinsic value of nature and sustain the ecosystem services of Portland's air, water and land.

38. Finding: The FFTZ amendments foster a healthy environment and sustain the ecosystem services of Portland's air, water and land by reducing the risk associated with a major earthquake. The first step in making the current situation better is to ensure that the situation does not get worse by continuing to allow the unlimited increase in fossil fuel terminal storage tank capacity in a high risk area. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will be an improvement compared to the current regulations that allow for unlimited growth in fossil fuel terminals. Further, by designating existing FFTs as a limited use allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which can minimize environmental impacts in the event of a major earthquake. No changes to the environmental or greenway overlay zones are proposed as part of this project, therefore the natural resource values and functions will be sustained.

As noted elsewhere in the findings, the FFTZ amendments are consistent with Statewide Planning Goal 5 (Natural Resources) and the goals and policies of Chapter 4 (Design and Development, including Historic and Cultural Resources) and Chapter 7 (Environment and Watershed Health) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference.

Equity. Promote equity and environmental justice by reducing disparities, minimizing burdens, extending community benefits, increasing the amount of affordable housing, affirmatively furthering fair housing, proactively fighting displacement, and improving socio-economic opportunities for under-served and under-represented populations. Intentionally engage under-served and under-represented populations in decisions that affect them. Specifically recognize, address and prevent repetition of the injustices suffered by communities of color throughout Portland's history.

39. Finding: This guiding principle provides a framework to ensure Portlanders more equitably share in the benefits and burdens of growth and development. A fundamental purpose of the FFTZ amendments is to reduce the risks associated with a major earthquake. Continuing to allow the increase in FFTs in a high risk area increases the risk to Portland's environment, especially the Willamette River. The first step in making the current situation better is to ensure that the situation does not get worse by continuing to allow the unlimited increase in fossil fuel terminal storage tank capacity in a moderate to high risk. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will be an improvement compared to the current regulations that allow for unlimited growth in fossil fuel terminals. Further, by designating existing FFTs as a limited use allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which can minimize environmental impacts in the event of a major earthquake.

The amendments also maintain socio-economic opportunities for under-served and under-represented populations because the regulations are narrowly crafted to apply to one type of use and maintains the development capacity of Portland's industrial areas, which is a good source of middle-wage jobs for people without college degrees.

Resilience. Reduce risk and improve the ability of individuals, communities, economic systems, and the natural and built environments to withstand, recover from, and adapt to changes from natural hazards, human-made disasters, climate change, and economic shifts.

40. Finding: The 2035 Comprehensive Plan describes resilience as "reducing the vulnerability of our neighborhoods, businesses, and built and natural infrastructure to withstand challenges – environmental, economic and social – that may result from major hazardous events." Most of Portland's employment and industrial zones are in areas with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. Fossil fuel infrastructure poses considerable risks in the event of a major earthquake. The FFTZ amendments support this principle by taking the first step in making Portland more resilient is to stop increasing the risk. The FFTs have significant seismic risks because most of the tanks have been constructed without any or only limited seismic design criteria on soils with moderate to high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's 2016 Critical Energy Infrastructure Hub Study and the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report. Continuing to allow the increase in FFTs in a high risk area increases the risk to the surrounding industrial district, the Willamette River and Portland as a whole. The FFTZ amendments limit future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. Further, by designating existing FFTs as a limited use, as opposed to a prohibited nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which ultimately can make Portland more resilient.

Testimony from the Portland Business Alliance et al. raised the concern that the ordinance would hinder the city's climate and safety goals. The City Council finds that this unsupported assertion provides no details or explanation as to how this ordinance will hinder climate or safety goals. BPS staff provided evidence in the Council presentation and the written record that demonstrates the ordinance has been narrowly written to support climate and safety goals. Specifically, the ordinance exempts new storage capacity for non-fossil, renewable fuels and designates the existing FFTs as a limited use to allow those businesses to continue to operate and make safety improvements.

Testimony from the Portland Business Alliance et al. raised the concern that the ordinance needs to explicitly allow the development of infrastructure that is necessary to transition towards lower emission fuel sources such as blending tanks and new intermodal links. No explanation or evidence was provided to support the assertion that additional tanks are needed. New blending tanks that contain more than 5% fossil fuel are not allowed by the ordinance, but new storage tanks for renewable fuels are allowed. New intermodal links are not regulated by this ordinance.

Testimony from the Portland Business Alliance et al. and Zenith Energy raised the concern that the decision to deny a permit application for pipes that would have been used exclusively for clean fuels undermines the ordinance's exemption for renewable fuels, because the infrastructure for renewable fuels is essentially the same for fossil fuels. The City Council finds that the Office of Community Technology decision is in regards to a pipe in the public right-of-way and is based on the City's franchise agreement with Zenith, and is not a land use decision and is not an indicator as to how the City will make future land use decisions that involve this ordinance.

Testimony by the Western States Petroleum Association claims that the ordinance will inflict significant impacts on the ability to supply fuel and change fuel types as the region grows, technology advances, and fuel standards change. "Significant impacts" are not defined or

supported by evidence. The letter does not explain how technology advances and fuel standard changes will create the need for additional fossil fuel storage capacity. The ordinance specifically exempts new storage capacity for renewable fuels as a means to support DEQ's Clean Fuels Program.

Testimony by the Western States Petroleum Association claims that the ordinance will inflict negative impacts on the ability to transition energy sources. The testimony does not define or explain what are the "negative impacts" or what is needed to transition energy resources. The ordinance specifically exempts new storage capacity for renewable fuels as a means to support compliance with DEQ's Clean Fuels Program and a transition away from fossil fuels.

Testimony by Zenith Energy claims that safety upgrades require the construction of new infrastructure without interrupting service to customers – new storage tanks are needed before old tanks can be taken out of service. No evidence is provided on storage tank capacity utilization or available land area at existing FFTs or the length of time that it takes to replace or retrofit a storage tank that indicates that new storage capacity is needed before existing storage capacity can be retrofitted or replaced. Recently, Zenith Energy expanded transloading capacity without expanding storage tank capacity and proposed adding new transloading/intermodal pipeline capacity to utilize existing storage capacity.

Testimony by NW Natural raised concerns that the definition of renewable fuels was not clear. The Remand Report (Exhibit B) has been revised to clarify the legislative intent that renewable fuels are those fuels derived from biomass (plant or animal material), such as recycled cooking oil, soybean oil, or animal fats; renewable natural gas/biogas is fuel captured from the waste stream, such as methane from landfills, waste water treatment plants, and agricultural or food waste, but does not include methane and other hydrocarbons produced from fossil fuels; and renewable hydrogen is hydrogen produced using renewable energy derived from wind power sited in ecologically responsible ways, solar, existing and low-impact hydroelectric, geothermal, biogas (including biogas produced from biomass), and ocean/wave technology sources.

As noted elsewhere in these findings, the FFTZ amendments are consistent with Statewide Planning Goal 7 (Natural Hazards) and the goals and policies of Chapter 7 (Environment and Watershed Health) of the 2035 Comprehensive Plan and the findings in response to those goals and policies are incorporated by reference.

Chapter 1: The Plan

Goal 1.A: Multiple goals
Portland's Comprehensive Plan provides a framework to guide land use, development, and public facility investments. It is based on a set of Guiding Principles that call for integrated approaches, actions, and outcomes that meet multiple goals to ensure Portland is prosperous, healthy, equitable, and resilient.

41. Finding: The FFTZ amendments are an amendment to the Zoning Code and do not amend the 2035 Comprehensive Plan. As noted above, FFTZ amendments are consistent with the guiding principles of the 2035 Comprehensive Plan. As part of an integrated approach to meet multiple goals, the City Council has considered, weighed and balanced applicable policies, as described on page HTU-5 of the 2035 Comprehensive Plan, to determine that this ordinance on the whole complies with the 2035 Comprehensive Plan. As described below, the City Council's decision to adopt the FFTZ amendments have considered the multiple goals of the comprehensive plan, including the guiding principles, to determine that the adoption of this ordinance will ensure that Portland is prosperous, healthy, equitable, and resilient by minimizing the risk posed by fossil fuel terminals.

Goal 1.B: Regional partnership. Portland's Comprehensive Plan acknowledges Portland's role within the region, and it is coordinated with the policies of governmental partners.

42. Finding: The findings show how the amendments are consistent with Metro's Urban Growth Management Functional Plan and the Statewide Planning Goals, including Goal 2 which requires coordination. In 2016, as part of the original adoption process, Metro, TriMet, and other state agencies received notice of the proposed FFTZ amendments from the 35-day DLCD notice and the City's legislative notice. In 2019, as part of the re-adoption of the remanded ordinance, the City posted a new 35-day DLCD notice and sent a legislative notice to government partners for the November 20, 2019 City Council hearing.

Goal 1.C: A well-functioning plan. Portland's Comprehensive Plan is effective, its elements are aligned, and it is updated periodically to be current and to address mandates, community needs, and identified problems.

43. Finding: The City Council defines "effective" as being successful in producing a desired or intended result. The desired or intended result is embodied in the Guiding Principles and goals and policies of the 2035 Comprehensive Plan. These findings demonstrate how the FFTZ amendments are consistent with the 2035 Comprehensive Plan, including advancing multiple goals. These changes represent updating regulatory implementation tools that respond to community needs and identified problems, especially in addressing the considerable risks fossil fuel terminals pose in the event of a major earthquake, as documented by the Portland Bureau of Emergency Management's Critical Energy Infrastructure Hub Study (2016).

Goal 1.D: Implementation tools. Portland's Comprehensive Plan is executed through a variety of implementation tools, both regulatory and non-regulatory. Implementation tools comply with the Comprehensive Plan and are carried out in a coordinated and efficient manner. They protect the public's current and future interests and balance the need for providing certainty for future development with the need for flexibility and the opportunity to promote innovation.

44. Finding: The City Council interprets this goal to mean that the first step in making the current situation better is to ensure that the situation does not get worse. Continuing to allow the increase in storage tank capacity in FFTs in a high risk area increases the risk to the surrounding industrial district and the Willamette River. The FFTZ amendments are changes to the Zoning Code, which is a primary implementation tool. The City Council finds that the public's current and future interests are embodied in the Vision and Guiding Principles that address prosperity, human and environmental health, equity and resilience. In the event of a major earthquake, fossil fuel terminals pose considerable risks to all of those interests, as documented by the Portland Bureau of Emergency Management's Critical Energy Infrastructure Hub Study (2016). Continuing to allow the unlimited increase in storage capacity at FFTs in a high risk area does not protect the public's current or future interests. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will be an improvement compared to the current regulations that allow for unlimited growth in FFTs.

The Zoning Code amendments change development standards and limit future expansion of storage capacity at FFTs, which may create uncertainty for the existing terminals. However, the uncertainty is mitigated by designating the existing FFTs as a limited use, as opposed to a prohibited or non-conforming use, that allows the terminals to continue to operate and invest in upgrades, as well as supporting opportunities for enhancement through exceptions, such as aviation or renewable fuels, to the storage capacity restrictions. If the existing FFTs had been designated as a

prohibited use, as in the Proposed Draft of the amendments, then the existing FFTs would be nonconforming uses, which in some cases has been a barrier to obtaining financing for improvements and upgrades.

The City Council defines "flexibility" as a capability to adapt to new, different, or changing requirements and "innovation" as the introduction of something new. The amendments incorporate flexibility and innovation by designating the existing FFTs as a limited use that allows the terminals to continue to operate and invest in upgrades, as well as supporting opportunities for enhancement for aviation or renewable fuels among other exceptions.

Goal 1.E: Administration. Portland's Comprehensive Plan is administered efficiently and effectively and in ways that forward the intent of the Plan. It is administered in accordance with regional plans and state and federal law.

45. Finding: The 2035 Comprehensive Plan complies with state and federal law and is not amended by this ordinance. The FFTZ amendments add clear and objective regulations to the Zoning Code that can be administered by the City in an efficient and effective way that minimizes future risk and allows FFTs to invest in safety upgrades to decrease risk over time. These findings demonstrate how the FFTZ amendments are consistent with the intent of the 2035 Comprehensive Plan. As noted above, the findings show how the amendments are consistent with Metro's Urban Growth Management Functional Plan and the Statewide Planning Goals. The regulations are focused on what the City has jurisdiction over – land use regulation for public health and safety – and does not exceed its authority into areas covered by state and federal law, such railroads and interstate commerce.

The Comprehensive Plan

Policy 1.1. Comprehensive Plan elements. Maintain a Comprehensive Plan that includes these elements:

- **Vision and Guiding Principles.** The Vision is a statement of where the City aspires to be in 2035. The Guiding Principles call for decisions that meet multiple goals to ensure Portland is prosperous, healthy, equitable, and resilient.
- **Goals and policies.** The goals and policies of the Comprehensive Plan, including the Urban Design Framework, provide the long-range planning direction for the development and redevelopment of the city.
- **Comprehensive Plan Map.** The Comprehensive Plan Map is the official long-range planning guide for spatially defining the desired land uses and development in Portland. The Comprehensive Plan Map is a series of maps, which together show the boundaries of municipal incorporation, the Urban Service Boundary, land use designations, and the recognized boundaries of the Central City, Gateway regional center, town centers, and neighborhood centers.
- **List of Significant Projects.** The List of Significant Projects identifies the public facility projects needed to serve designated land uses through 2035. including expected new housing and jobs. It is based on the framework provided by a supporting Public Facilities Plan (PFP). The Citywide Systems Plan (CSP) is the City's public facilities plan. The Transportation System Plan (TSP) includes the transportation-related list of significant projects. The list element of the TSP is also an element of the Comprehensive Plan.

- **Transportation policies, street classifications, and street plans.** The policies, street classifications, and street plan maps contained in the Transportation System Plan (TSP) are an element of the Comprehensive Plan. Other parts of the TSP function as a supporting document, as described in Policy 1.2.

46. Finding: The FFTZ amendments do not include changes to any of the Comprehensive Plan elements The FFTZ amendments do not change the List of Significant Projects, nor do they change policies, street classifications, or street plan maps contained in the Transportation System Plan (TSP).

Supporting Documents

Policy 1.2. Comprehensive Plan supporting documents. Maintain and periodically update the following Comprehensive Plan supporting documents.

1. **Inventories and analyses**. The following inventories and analyses are supporting documents to the Comprehensive Plan:
   - Economic Opportunities Analysis (EOA)
   - Buildable Lands Inventory (BLI)
   - Natural Resource Inventory (NRI)
   - Housing Needs Analysis (HNA)

47. Finding: The FFTZ amendments were developed consistent with the supporting documents of the adopted 2035 Comprehensive Plan. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not impact the industrial land designated in Portland and do not impact the employment development capacity identified in the EOA and the BLI.

The FFTZ amendments do not change the NRI or the implementing environmental or greenway overlay zones.

The FFTZ amendments do not impact residential land and do not change the Housing Needs Analysis.

2. **Public Facilities Plan**. The Public Facilities Plan (PFP) is a coordinated plan for the provision of urban public facilities and services within Portland's Urban Services Boundary. The Citywide Systems Plan (CSP) is the City's public facilities plan.

48. Finding: As demonstrated in the findings for Statewide Planning Goal 11, the FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not impact the provision of public services and are consistent with the adopted Citywide Systems Plan (CSP). The CSP, which was adopted (Ordinance 185657) and acknowledged by LCDC on April 25, 2017, includes the Public Facilities Plan with information on current and future transportation, water, sanitary sewer, and stormwater infrastructure needs and projects, consistent with the requirements of Statewide Planning Goal 11.

The FFTZ amendments do not amend the Citywide System Plan, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the infrastructure in the northwest industrial area where the FFTs are located. As noted below in the findings for goals and policies of Chapter 8 (Public Facilities and Services), which are incorporated by reference, the FFTZ amendments are consistent with the CSP.

3. **Transportation System Plan (TSP)**. The TSP is the detailed long-range plan to guide transportation system functions and investments. The TSP ensures that new development and allowed land uses are consistent with the identified function and capacity of, and adopted performance measures for, affected transportation facilities. The TSP includes a financial plan to identify revenue sources for planned transportation facilities included on the List of Significant Projects. The TSP is the transportation element of the Public Facilities Plan. Certain components of the TSP are elements of the Comprehensive Plan. S*ee Policy 1.1*.

49. Finding: As demonstrated in the findings for Statewide Planning Goal 12 (Transportation) and the goals and policies of Chapter 9 (Transportation), the FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not impact the transportation system. The FFTZ amendments do not amend the Transportation System Plan, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the northwest industrial area where the FFTs are located.

4. **School Facility Plans.** School facility plans that were developed in consultation with the City, adopted by school districts serving the City, and that meet the requirements of ORS 195 are considered supporting documents to the Comprehensive Plan.

50. Finding: The FFTZ amendments apply to only one type of industrial use that makes up a small part of the businesses found in Portland's industrial districts, therefore, these changes will not impact school facility plans.

Implementation tools

Policy 1.3. Implementation tools subject to the Comprehensive Plan. Maintain Comprehensive Plan implementation tools that are derived from, and comply with, the Comprehensive Plan. *Implementation tools include those identified in policies 1.4 through 1.9.*

Policy 1.4. Zoning Code. Maintain a Zoning Code that establishes the regulations that apply to various zones, districts, uses, and development types.

51. Finding: The FFTZ amendments include Zoning Code amendments that create a new use category (bulk fossil fuel terminals) and applies it to the base zones. The definition of the use limits the size of new fossil fuel terminals and prohibits the expansion of fossil fuel storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. The FFTZ regulations designate existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake. Further, the use limitations (33.140.100.B.17.a) provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety.

Policy 1.5 Zoning Map. Maintain a Zoning Map that identifies the boundaries of various zones, districts, and other special features.

52. Finding: The FFTZ amendments do not include Zoning Map amendments. This policy does not apply.

Policy 1.6 Service coordination agreements. Maintain coordination agreements with local governments of adjoining jurisdictions concerning mutual recognition of urban service boundaries; special service districts concerning public facilities and services within Portland's Urban Services Boundary; and public school districts concerning educational facilities within Portland's Urban Services Boundary.

Policy 1.7 Annexations. Provide a process incorporating urban and urbanizable land within the City's Urban Services Boundary through annexation. See policies 8.11-8.19 for service extension requirements for annexations.

Policy 1.8 Urban renewal plans. Coordinate Comprehensive Plan implementation with urban renewal plans and implementation activities. A decision to adopt a new urban renewal district, adopt or amend goals and objectives that will guide investment priorities within a district, or amend the boundaries of an existing district, must comply with the Comprehensive Plan.

Policy 1.9 Development agreements. Consider development agreements entered into by the City of Portland and pursuant to Oregon Revised Statute 94 a Comprehensive Plan implementation tool.

53. Finding: For policies 1.6 through 1.9, the FFTZ amendments do not include changes or amendments to service coordination agreements, annexation processes, urban renewal plans, or development agreements. Therefore, these policies are not applicable to the FFTZ amendments.

Administration

Policy 1.10. Compliance with the Comprehensive Plan. Ensure that amendments to the Comprehensive Plan's elements, supporting documents, and implementation tools comply with the Comprehensive Plan. "Comply" means that amendments must be evaluated against the Comprehensive Plan's applicable goals and policies and on balance be equally or more supportive of the Comprehensive Plan as a whole than the existing language or designation.

1.10.a Legislative amendments to the Comprehensive Plan's elements and implementation tools must also comply with the Guiding Principles.

1.10.b Legislative amendments to the Comprehensive Plan's elements should be based on the factual basis established in the supporting documents as updated and amended over time.

1.10.c Amendments to the Zoning Map are in compliance with the Comprehensive Plan if they are consistent with the Comprehensive Plan Map.

54. Finding: The City Council finds that this is a fundamental policy of the Comprehensive Plan that guides the manner in which the City Council considers amendments to the Plan itself or any implementing regulations, such as the Zoning Code. The City Council interprets the policy to require the Council to consider whether, after considering all relevant facts, an amendment is equally or more supportive of the Comprehensive Plan. The City Council finds that an amendment is equally supportive when it is on its face directly supported by goals and policies in the Plan. The City Council finds that an amendment is more supportive of the Comprehensive Plan when the amendment will further advance goals and policies, particularly those that are aspirational in nature. The City Council finds that the policy requires consideration as to whether amendments are equally or more supportive of the Plan *as a whole*. The City Council finds that amendments do not need to be equally or more supportive with individual goals and policies, but rather amendments must be equally or more supportive of the entire Comprehensive Plan. Therefore, the City Council finds that there may be instances where specific goals and policies are not supported by the amendments but still the amendment is equally or more supportive of the entire Comprehensive Plan when considered cumulatively. The City Council finds that there is no precise mathematical equation for determining when the Plan as a whole is supported but rather such consideration requires City Council discretion in evaluating the competing interests and objectives of the plan.

The Council notes that the Comprehensive Plan introduction explains that "[t]he Comprehensive Plan contains a broad range of policies Council to consider. Each policy describes a desirable outcome. But it is unlikely that all policies are relevant to a particular decision and that a particular decision could be expected to advance all of the policies in the plan equally well. . . [E]ven the strongest policies do not automatically trump other policies. Every decision is different, with different facts. The particular policies that matter will change from one decision to another. There is no set formula – no particular number of "heavier" polies equals a larger set of "lighter" policies. In cases where there are competing directions embodied by different policies, City Council may choose the direction they believe best embodies the plan as a whole."

The FFTZ amendments are a legislative amendment to the Zoning Code, an implementation tool of the 2035 Comprehensive Plan. These findings identify how the FFTZ amendments comply with the 2035 Comprehensive Plan. That is, the amendments are evaluated against the 2035 Comprehensive Plan's Guiding Principles, goals, and policies, as detailed throughout this set of findings. As described in the finding for Policy 1.2, the factual basis of the supporting documents is not changed by this ordinance. Specifically, the employment capacity, as defined in the EOA, is not impacted by these changes – there are no map amendments, all industrial land use designations remain the same. The other supporting documents have been considered but are not impacted by these changes. The City Council finds that these amendments are equally or more supportive of the Comprehensive Plan than the existing Zoning Code regulations because they limit the considerable risks fossil fuel terminals pose in the event of a major earthquake, while allowing the existing terminals to continue to operate with limited opportunities for expansion, such as aviation fuel or renewable fuels.

The City Council finds that the evaluation to determine if the FFTZ amendments are on balance equally or more supportive than the existing language or designation must consider all of the goals and policies, as demonstrated by these findings. However, these amendments embody a situation where there are competing directions embodied by different policies. There are some policies where the amendments are equally supportive—not more or less so—but there are other policies where the amendments a more supportive and the code changes better embody the direction in the Comprehensive Plan as a whole.

For the reasons stated in these findings, the City Council concludes that the FFTZ amendments are on balance more supportive of the goals and policies of the 2035 Comprehensive Plan than the current regulations. The City Council has considered all applicable goals and policies to achieve an optimum outcome. Goals and policies are considered as factors which must be weighed, balanced and met on the whole, not as criteria that must be individually met. The purposes of the FFTZ amendments are to enhance public safety and protect the environment. The City Council has weighed and balanced the applicable goals and policies and concludes that, on the whole, continuing to allow an unlimited increase in storage capacity at FFTs in a high risk area would be less supportive of the 2035 Comprehensive Plan than adopting the FFTZ amendments.

As demonstrated by these findings, the FFTZ amendments effectively and efficiently implement the Comprehensive Plan. Specifically:

The City Council has considered applicable policies to determine that this ordinance on the whole complies with the 2035 Comprehensive Plan and on balance is equally or more supportive of the goals and policies of the 2035 Comprehensive Plan than the current regulations. In reaching this conclusion, City Council has weighed and balanced competing policy directions.

In particular, the Council finds that Goal 4.D with Policies 4.79 and 4.80, requires evaluating and reducing risk to people and property from natural hazards. The FFTZ amendments further these goals and policies because by limiting the risks of storing large volumes of hazardous materials in an area with high susceptibility to an earthquake. Large fossil fuel terminals represent a risk to people, property and the natural environments that the City Council finds as a compelling reason to limit future risk by limiting the size of new facilities and prohibit the expansion of existing facilities. Continuing to allow an unlimited increase in storage capacity at FFTs in a high risk area would be less supportive of the 2035 Comprehensive Plan than adopting the FFTZ amendments

The City Council further finds that Policy 6.48 provides direction to limit fossil fuel terminals to what is necessary to serve the region. The City Council recognizes that Portland's fossil fuel terminals handle 90 percent of the fossil fuel for the State of Oregon and Southwest Washington. BPS presented evidence that national petroleum consumption forecast out to 2050 is essentially flat, which is a continuation of historic trends in Oregon and Washington, during a period of a thriving economy. In addition, ODOT is forecasting a decline in motor fuel consumption over the medium term to 2029. The more recent cargo forecasts project a modest growth in volumes, but those volumes do not exceed the historic peak volumes that were handled by the Portland terminals. No other evidence of future demand for fossil fuels was submitted in testimony. Therefore, the City Council finds that the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety. In addition, limiting storage capacity to the existing facilities reduces risk from a major earthquake, which outweighs the policy direction to provide capacity to accommodate any potential future increase in fossil fuel consumption, in part, because continuing to consolidate fossil fuel storage capacity in Portland is counter to resiliency principles that emphasize redundancy and distributed facilities.

At the same time, the City Council finds that Goal 6.C with Policies 6.20 and 6.36, among others, provide for the retention and growth of businesses, especially those in the traded sector. However, the City Council interprets these policies apply to the economy in general, rather than specific types of business. These changes and restrictions only apply to a narrowly defined new land use category, Bulk Fossil Fuel Terminals, and do not have a significant effect on the other allowed uses in industrial and employment zones. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial and employment areas of Portland. These amendments are narrowly constructed to apply to one class of businesses that make up a small portion of the city, regional and state economy. Further, these regulations only limit future expansion of these fossil fuel terminals, with some key exceptions, and designate these businesses as a limited use that allows their continued operation.

Guilds Lake Industrial Sanctuary (GLIS) Plan policies provide direction to maintain, protect and enhance businesses in the sanctuary. This plan was adopted in 2001 and does not address the need for resiliency in a high and medium liquefaction susceptibility area. The City Council interprets these policies to apply to the GLIS as a whole and not individual businesses. The City Council interprets the legislative intent of the GLISP is to maintain the area as an industrial sanctuary and to prohibit incompatible land uses. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses that could undermine the viability of the industrial sanctuary. These regulations apply to only one type of business that makes up a minority part of the businesses

found in GLIS. The remaining industrial uses to continue to operate under current regulations. The impact of the limits on fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to continue to operate and make upgrades and supports limited enhancement through exceptions to the fossil fuel storage capacity restrictions.

Testimony by Zenith Energy claims that Resolution 37168 (Opposition to Fossil Fuel Infrastructure) prohibits City from restricting safety improvements and service to end users, and development of backup capacity. The testimony mischaracterizes the requirements of the resolution. The text says that "this resolution does not restrict" safety improvements, service directly to end users, and development of emergency backup capacity. The City Council interprets this phrase as applying to the resolution itself, but not an adopted land use regulation that is applied directly to land use decisions. The resolution provides guidance and direction on future City actions, such as directing BPS to develop proposed code changes to advance the resolution. However, in the context of making a legislative land use decision (amending the Zoning Code), the 2035 Comprehensive Plan and Title 33 (Planning and Zoning) establish the procedures and approval criteria, which do not reference other resolutions that have not been incorporated into the 2035 Comprehensive Plan goals and policies.

Resolution 37168 was adopted as a binding city policy. A "binding city policy" excludes Comprehensive Plan policies. PCC 33.835 requires that when the City amends the Zoning Code it must be found consistent with the Comprehensive Plan. Binding City policies are not approval criteria for amending the Zoning Code.

Even if the City Council were to consider the binding policies as approval criteria for amending the Zoning Code, the FFTZ amendments are consistent with Resolution 37168. The Council interprets the resolution to require the following:

1. Improvements in the safety, or efficiency, seismic resilience, or operations of existing infrastructure;

   The FFTZ amendments designate existing FFTs as a limited use specifically to allow them to continue to operate to supply fossil fuels and to allow for safety and seismic upgrades. Transloading facilities are a defining characteristic of a Bulk Fossil Fuel Terminal, however, the ordinance the ordinance does not regulate transloading facilities and only limits new fossil fuel storage tank capacity. Existing fossil fuel storage tank capacity can be replaced and reconfigured as part of safety or seismic resilience improvements. Other aspects of terminal infrastructure (pipelines, docks, transloading facilities) are not regulated by this ordinance.

2. The provision of service directly to end users;

   The City Council interprets the term "end users" to be those users that consume the fossil fuel, i.e. motor vehicle operators or residential customers that use natural gas to heat their residence. The FFTZ amendments specifically exempt gas stations and other retail sales of fossil fuels.

3. The development of emergency backup capacity;

   The City Council interprets the term "emergency backup capacity" as infrastructure that is needed to restore functions at a facility, such as a diesel generator for electricity to power the facility, and not the wholesale duplication of the facility itself. In this case, existing FFTs are designated as a limited use, which allows them to continue to operate as a limited use, which allows them to make safety and seismic improvements, including facilities that serve as emergency backup capacity.

4. Infrastructure that enables recovery or re-processing of used petroleum products; and

   The FFTZ amendments specifically exempt uses that recover or reprocess used petroleum products.

5. Infrastructure that will accelerate the transition to non-fossil fuel energy sources

   The FFTZ amendments specifically define fossil fuels as fuels that "are made from decayed plants and animals that lived millions of years ago and are a source of energy" as a means to exclude other types of fuels that come from renewable energy, such as ethanol, biodiesel/renewable diesel and renewable hydrogen, as long as that fuel has less than 5 percent fossil fuel content. The ordinance only limits new fossil fuel storage tank capacity. Other aspects of terminal infrastructure (pipelines, docks, transloading facilities) are not regulated by this ordinance.

Therefore, although the Council is not required to consider consistency with the Resolution as it is not approval criteria for a legislative land use decision, the City Council nonetheless finds that the FFTZ amendments are consistent with Resolution 37168.

Policy 1.11. Consistency with Metro Urban Growth Management Functional Plan and Urban Growth Boundary. Ensure that the Comprehensive Plan remains consistent with the Metro Urban Growth Management Functional Plan and supports a tight urban growth boundary for the Portland metropolitan area.

Policy 1.12. Consistency with Statewide Planning Goals. Ensure that the Comprehensive Plan, supporting documents, and implementation tools remain consistent with the Oregon Statewide Planning Goals.

55. Finding: As noted earlier in these findings, the FFTZ amendments are consistent with and designed to further the applicable elements of the Metro Urban Growth Management Functional Plan and Statewide Planning Goals, consistent with the directives of policies 1.11 and 1.12.

Policy 1.13. Consistency with state and federal regulations. Ensure that the Comprehensive Plan remains consistent with all applicable state and federal regulations, and that implementation measures for the Comprehensive Plan are well coordinated with other City activities that respond to state and federal regulations.

56. Finding: The FFTZ amendments were developed to be consistent with applicable state and federal regulations and do not amend any Zoning Code sections that are required by state or federal regulations, including FEMA flood regulations and state building code requirements.

    Testimony by the Western States Petroleum Association claims that the ordinance will prevent and discourage equipment upgrades necessary to comply with federal and state clean fuels law. Compliance with federal and state law is not defined, no specific citations are provided. Only new fossil storage tank capacity is restricted, other equipment upgrades are allowed. The ordinance specifically exempts new storage capacity for renewable fuels as a means to support compliance with DEQ's Clean Fuels Program.

    Testimony by the Western States Petroleum Association claims that the ordinance will prevent and discourage the transition to newer lower-carbon-fuel sources in opposition to Oregon's low-carbon-fuel standards, Oregon's Renewable Fuel Standards, federal Renewable Fuel Standards, and similar laws. The testimony does not define what infrastructure that is required for the "transition to newer lower-carbon-fuel sources". Compliance with federal and state law is not defined, no

specific citations are provided. The ordinance specifically exempts new storage capacity for renewable fuels as a means to support compliance with DEQ's Clean Fuels Program.

Testimony by the Western States Petroleum Association claims that the ordinance is not in alignment with state and federal policy regarding siting energy infrastructure or transportation of fuels. The testimony does not cite any specific state or federal energy siting or transportation policy. The testimony does not acknowledge or address the risks in citing energy infrastructure in an area of high risk of liquefaction.

Policy 1.14. Public facility adequacy. Consider impacts on the existing and future availability and capacity of urban public facilities and services when amending Comprehensive Plan elements and implementation tools. Urban public facilities and services include those provided by the City, neighboring jurisdictions, and partners within Portland's urban services boundaries, as established by Policies 8.2 and 8.6.

57. Finding: As demonstrated in the findings for Statewide Planning Goal 11 and Chapter 8 (Public Facilities and Services) of the 2035 Comprehensive Plan, the FFTZ amendments do not significantly impact the provision of public services.

Policy 1.15. Intergovernmental coordination. Strive to administer the Comprehensive Plan elements and implementation tools in a manner that supports the efforts and fiscal health of the City, county and regional governments, and partner agencies such as school districts and transit agencies.

58. Finding: As demonstrated in the findings for Statewide Planning Goal 2, the City filed the required 35-day notice with Oregon Department of Land Conservation and Development to notify other government agencies of the proposed FFTZ amendments. In addition, the City sent a separate legislative notice to Multnomah County, adjacent cities, Metro and TriMet. The Port of Portland was the only government agency that raised issues or concerns with the original ordinance. The Port of Portland appreciated that the ordinance was amended to address their concerns about the supply of aviation fuel to Portland International Airport (PDX) and marine fuel suppliers.

Policy 1.16. Planning and Sustainability Commission review. Ensure the Planning and Sustainability Commission (PSC) reviews and makes recommendations to the City Council on all proposed legislative amendments to Comprehensive Plan elements, supporting documents, and implementation tools. The PSC advises City Council on the City's long-range goals, policies, and programs for land use, planning, and sustainability. The membership and powers and duties of the PSC are described in the Zoning Code.

59. Finding: The City Council interprets this policy as requiring the PSC to hold at least one public hearing before making a recommendation on a legislative matter as required by PCC 33.740. The PSC reviewed and recommended the original FFTZ amendments in 2016. The City Council finds that this ordinance is a continuation of the initial legislative action that began in 2016 and was remanded to the Council to take additional action. The City Council does not interpret this policy to require the remand go back to PSC because it is a continuation of the same legislative proposal. The City Council did not refer this ordinance back to the PSC for another recommendation because no substantive changes are required by the legal decisions. The assignment of errors are a lack evidence to support the decision, not the code itself. The purpose of this ordinance is to provide additional findings, including findings that address the goals and policies in the 2035 Comprehensive Plan, to support the decision and confirm that the decision is supported by an adequate factual base with minor technical changes to the code to conform to the current zoning code.

Policy 1.17. Community Involvement Committee. Establish a Community Involvement Committee to oversee the Community Involvement Program as recognized by Oregon Statewide Planning Goal 1 – Community Involvement and policies 2.15-2.18 of this Comprehensive Plan.

60. Finding: This policy only requires the establishment of a Citizen Involvement Committee, which was appointed in June 2018 and reviews and advises the way City staff engage with the public in land use and transportation planning. This policy does not apply.

Policy 1.18. **Quasi-judicial amendments to the Comprehensive Plan Map.** Applicants for quasi-judicial amendments to the Comprehensive Plan Map must show that the requested change adheres to Policies 1.10 through 1.15 and:

- Is compatible with the land use pattern established by the Comprehensive Plan Map.
- Is not in conflict with applicable adopted area-specific plans as described in Policy 1.19, or the applicable hearings body determines that the identified conflict represents a circumstance where the area specific plan is in conflict with the Comprehensive Plan and the proposed amendment is consistent with the Comprehensive Plan.

The Hearings Officer must review and make recommendations to the City Council on all quasi-judicial amendments to the Comprehensive Plan Map using procedures outlined in the Zoning Code.

61. Finding: This policy concerns quasi-judicial amendments to the Comprehensive Plan Map and is not applicable to this project, which is a legislative project.

Policy 1.19. Area-specific plans. Use area-specific plans to provide additional detail or refinements applicable at a smaller geographic scale, such as for centers and corridors, within the policy framework provided by the overall Comprehensive Plan.

1.19.a Area-specific plans that are adopted after May 24, 2018, should clearly identify which components amend Comprehensive Plan elements, supporting documents, or implementation tools. Such amendments should be appropriate to the scope of the Comprehensive Plan; be intended to guide land use decisions; and provide geographically-specific detail. Such amendments could include policies specific to the plan area, land use designation changes, zoning map changes, zoning code changes, and public facility projects necessary to serve designated land uses.

1.19.b Area-specific plan components intended as context, general guidance, or directives for future community-driven efforts should not amend the Comprehensive Plan elements or implementation tools but be adopted by resolution as intent. These components include vision statements, historical context, existing conditions, action plans, design preferences, and other background information.

1.19.c Community, area, neighborhood, and other area-specific plans that were adopted by ordinance prior to January 1, 2018 are still in effect. However, the elements of this Comprehensive Plan supersede any goals or policies of a community, area, or neighborhood plan that are inconsistent with this Plan.

62. Finding: Council interprets the policy to require the Council "use" or "consider" area-specific plans as additional detail or refinement of policies as applied to a smaller geographic area. The only area-specific plan that applies to the FFTZ amendments is the Guilds Lake Industrial Sanctuary Plan (GLISP). The additional detail provided in that plan are addressed below. Council finds that the GLISP policies and objectives for preserving and enhancing industrial businesses and employment opportunities are consistent with the goals and policies in Chapter 6 (Economic Development) of

the 2035 Comprehensive Plan. However, the GLISP does not address other relevant policies identified in the 2035 Comprehensive Plan, especially Goal 4.D with Policies 4.79 and 4.80, which require reducing risk to people and property from natural hazards. Therefore, the City Council considers GLISP and the Comprehensive Plan together and finds that on balance, the FFTZ amendments are consistent with the comprehensive plan and GLISP.

Chapter 2: Community Involvement

Goal 2.A: Community involvement as a partnership. The City of Portland works together as a genuine partner with all Portland communities and interests. The City promotes, builds, and maintains relationships, and communicates with individuals, communities, neighborhoods, businesses, organizations, institutions, and other governments to ensure meaningful community involvement in planning and investment decisions.

Goal 2.B: Social justice and equity. The City of Portland seeks social justice by expanding choice and opportunity for all community members, recognizing a special responsibility to identify and engage, as genuine partners, under-served and under-represented communities in planning, investment, implementation, and enforcement processes, particularly those with potential to be adversely affected by the results of decisions. The City actively works to improve its planning and investment-related decisions to achieve equitable distribution of burdens and benefits and address past injustices.

Goal 2.C: Value community wisdom and participation. Portland values and encourages community and civic participation. The City seeks and considers community wisdom and diverse cultural perspectives, and integrates them with technical analysis, to strengthen land use decisions.

Goal 2.D: Transparency and accountability. City planning and investment decision-making processes are clear, open, and documented. Through these processes a diverse range of community interests are heard and balanced. The City makes it clear to the community who is responsible for making decisions and how community input is considered. Accountability includes monitoring and reporting outcomes.

Goal 2.E: Meaningful participation. Community members have meaningful opportunities to participate in and influence all stages of planning and decision making. Public processes engage the full diversity of affected community members, including under-served and under-represented individuals and communities. The City will seek and facilitate the involvement of those potentially affected by planning and decision making.

Goal 2.F: Accessible and effective participation. City planning and investment decision-making processes are designed to be culturally accessible and effective. The City draws from acknowledged best practices and uses a wide variety of tools, including those developed and recommended by under-served and under-represented communities, to promote inclusive, collaborative, culturally-specific, and robust community involvement.

Goal 2.G: Strong civic infrastructure. Civic institutions, organizations, and processes encourage active and meaningful community involvement and strengthen the capacity of individuals and communities to participate in planning processes and civic life.

63. Finding: The City Council interprets these goals and policies as together requiring a robust public process when making a land use decision. This is implemented through the Legislative procedure requirements in PCC 33.740. Neither the Code nor the policies provide explicit direction for responding to a LUBA remand. Council finds that this legislative action is a continuation of the 2016 legislative action and, therefore, it is appropriate and consistent with the applicable policies to bring the ordinance before Council with a notice and a hearing.

64. **Finding:** The 2016 adoption of the ordinance provided opportunities for all interested parties to comment on and influence the Fossil Fuel Terminal Zoning proposal. The preparation of these amendments provided numerous opportunities for public involvement, including:

Concept Phase. In 2016, prior to the initiation of the legislative project, BPS conducted four stakeholder focus groups meetings. These meetings included participants with a range of perspectives and experience, including community group representatives, fuel terminal representatives, environmental organizations, and business organizations. These meetings served as a forum for discussing issues and potential approaches, and to help inform project staff develop concepts. In addition to the stakeholder focus groups, BPS staff met with several fuel terminals to explain the proposal, answer questions, and discuss their individual concerns. These meetings were needed because antitrust regulations constrained discussion about certain topics, for example supply chains, in the presence of representatives from other fuel terminals.

Discussion Draft. On June 29, 2016, the Fossil Fuel Terminal Zoning Amendments Discussion Draft was published and posted on the Bureau website.

Proposed Draft. On August 12, 2016, the Fossil Fuel Terminal Zoning Proposed Draft was published in preparation for the Planning and Sustainability Commission (PSC) review and recommendation. In support of this process, the BPS website had a project page dedicated to this project, an email address for submitting testimony. As part of the Proposed Draft publication and legislative process requirements, the following legal notices were also sent:

Form 1 35-day Notice. Sent to the Department of Land Conservation and Development (DLCD)

Legislative Notice. Sent to interested parties, recognized organizations, affected bureaus, TriMet, Metro and ODOT and published in the Daily Journal of Commerce

Measure 56 Notice. Required by Ballot Measure 56, this mailed notice was sent to property owners with industrial or employment base zoning.

The PSC held a public hearing on September 13, 2016. On October 11, 2016, the Planning and Sustainability Commission voted to recommend the Fossil Fuel Terminal Zoning Amendments to City Council, including PSC-recommended modifications to the Proposed Draft. All PSC meetings were streamed live and available for viewing on the Bureau website.

Recommended Draft. On October 24, 2016. the Fossil Fuel Terminal Zoning Amendments Recommended Draft was published to present the PSC recommendations to City Council. On October 25, 2016, notice of the City Council hearing on the Fossil Fuel Terminal Zoning Amendments was mailed. The City Council held public hearings on November 10 and 16, 2016, to receive testimony on the Recommended Draft. On December 8, 2016, the City Council voted to adopt the Fossil Fuel Terminal Zoning Amendments.

Ordinance No. 188142 was appealed to the Oregon Land Use Board of Appeals (LUBA). LUBA reversed the City's decision with a number of assignments of error in Columbia Pacific Building Trades Council et al v. City of Portland, LUBA Case No. 2017-001, July 19, 2017. LUBA's decision was appealed to the Oregon Court of Appeals, which overturned LUBA's decision which was affirmed in part and reversed in part in Columbia Pacific Building Trades Council v. City of Portland, 289 Or App 739 (2018). The Oregon Court of Appeals decision was appealed to the Oregon Supreme Court, which denied review, 363 Or 390 (2018). On October 5, 2018, LUBA remanded Columbia Pacific Building Trades Council et al v. City of Portland, LUBA Case No. 2017-001. The assignments of error that LUBA sustained and were either affirmed or not challenged on appeal to

the Court of Appeals concern insufficient findings or evidence or misconstruction of law that do not support a conclusion that the decision is prohibited as a matter of law.

The City of Portland does not have adopted code or policies to establish a decision-making process for a remand decision. The City Council determined that it was appropriate to bring the ordinance directly back to City Council, given the extensive public process that happened as part of the initial adoption of the ordinance in 2016 and that no substantive changes to the Zoning Code are required to address the remand issues. Notification of the November 20, 2019, City Council public hearing on the remand of Ordinance No. 188142 was sent to the City's legislative notice list, the fossil fuel terminal property owners, and the parties to the appeal.

On November 20, 2019, the Portland City Council held a public hearing and received testimony on the re-adoption of the fossil fuel terminal zoning restrictions. The written record was left open for additional testimony until December 2, 2019. The evidentiary record from the initial decision is incorporated by reference and supplemented by additional evidence provided by BPS staff, the testimony Council received at the November 20 hearing and the written testimony received by December 2.

Partners in decision making

Policy 2.1. Partnerships and coordination. Maintain partnerships and coordinate land use engagement with:

2.1.a Individual community members.

2.1.b Communities of color, low-income populations, Limited English Proficient (LEP) communities, Native American communities, and other under-served and under-represented communities.

2.1.c District coalitions, neighborhood associations, and business district associations as local experts and communication channels for place-based projects.

2.1.d Businesses, unions, employees, and related organizations that reflect Portland's diversity as the center of regional economic and cultural activity.

2.1.e Community-based, faith-based, artistic and cultural, and interest-based non-profits, organizations, and groups.

2.1.f Institutions, governments, and Sovereign tribes.

65. Finding: The 2035 Comprehensive Plan defines the verb "maintain" to mean keep what you have; conserve; preserve; continue. The City Council interprets these policies as requiring diverse community engagement with district interests represented, however, the policies do not require Council to only accept the opinion, argument, or evidence of any one group. The City Council ultimately will evaluate the information and make a policy determination that is consistent with the goals and policies.

As described in the Statewide Planning Goal 1 findings, the initial adoption of the FFTZ amendments were informed by a broad range of individuals and groups. Prior to the initiation of the legislative project, BPS conducted four stakeholder focus groups meetings. These meetings included participants with a range of perspectives and experience, including community group representatives, fuel terminal representatives, environmental organizations, and business

organizations. These meetings served as a forum for discussing issues and potential approaches, and to help inform project staff develop concepts. In addition to the stakeholder focus groups, BPS staff met with several fuel terminals to explain the proposal, answer questions, and discuss their individual concerns.

Policy 2.2. Broaden partnerships. Work with district coalitions, neighborhood associations, and business district associations to increase participation and to help them reflect the diversity of the people and institutions they serve. Facilitate greater communication and collaboration among district coalitions, neighborhood associations, business district associations, culturally-specific organizations, and community-based organizations.

66. Finding: The City Council interprets this policy to guide how the City works with a broad range of partners over time, beyond the context of a specific land use decision. This policy does not apply.

Environmental justice

Policy 2.3. Extend benefits. Ensure plans and investments promote environmental justice by extending the community benefits associated with environmental assets, land use, and public investments to communities of color, low-income populations, and other under-served or under-represented groups impacted by the decision. Maximize economic, cultural, political, and environmental benefits through ongoing partnerships.

Policy 2.4. Eliminate burdens. Ensure plans and investments eliminate associated disproportionate burdens (e.g. adverse environmental, economic, or community impacts) for communities of color, low-income populations, and other under-served or under-represented groups impacted by the decision.

2.4.a, Minimize or mitigate disproportionate burdens in cases where they cannot be eliminated.

2.4.b, Use plans and investments to address disproportionate burdens of previous decisions.

67. Finding: The City Council finds that Policies 2.3 and 2.4 work together to address the benefits and burdens of planning and investment decisions have on under-served and under-represented groups. The verb "ensure", which is defined in the 2035 Comprehensive Plan, means to make sure that something will happen or be available. In terms of benefits, the City Council finds that the FFTZ amendments seek to reduce the risk of adverse environmental impacts associated with a major earthquake and FFTs, which will be an improvement compared to the current regulations that allow for unlimited growth in FFTs. In terms of burdens, the City Council finds that one of the important factors is the impact on job opportunities across a wide range of wage scales, especially middle wage jobs, which can provide for economic prosperity for under-served or under-represented groups, especially for those people without college degrees. Specifically, those middle-wage opportunities are found in Portland's industrial districts. The City Council finds that the ordinance has been narrowly written to minimize impacts to the existing fossil fuel terminals (FFTs). Further, the FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not reduce the employment land base and continue to support employment opportunities in a strong and diverse economy.

Invest in education and training

Policy 2.5. Community capacity building. Enhance the ability of community members, particularly those in under-served and/or under-represented groups, to develop the relationships, knowledge, and skills to effectively participate in plan and investment processes.

Policy 2.6. **Land use literacy.** Provide training and educational opportunities to build the public's

understanding of land use, transportation, housing, and related topics, and increase capacity for meaningful participation in planning and investment processes.

Policy 2.7. Agency capacity building. Increase City staff's capacity, tools, and skills to design and implement processes that engage a broad diversity of affected and interested communities, including under-served and under-represented communities, in meaningful and appropriate ways.

68. Finding: Policies 2.5 through 2.7 concern broad approaches to educating community members and City staff about planning processes, and are not applicable to these Zoning Code amendments.

Community assessment

Policy 2.8. Channels of communication. Maintain channels of communication among City Council, the Planning and Sustainability Commission (PSC), project advisory committees, City staff, and community members.

69. Finding: The City Council interprets this policy to create the opportunity for the community and advisory committees to have opportunities to communicate their issues and concerns to the PSC and City Council outside of the formal legislative process. These changes are a legislative process with formal opportunities to testify to communicate directly with City Council. Therefore, this policy does not apply.

Policy 2.9. Community analysis. Collect and evaluate data, including community-validated population data and information, to understand the needs, priorities, and trends and historical context affecting different communities in Portland.

Policy 2.10. Community participation in data collection. Provide meaningful opportunities for individuals and communities to be involved in inventories, mapping, data analysis, and the development of alternatives.

Policy 2.11. Open Data. Ensure planning and investment decisions are a collaboration among stakeholders, including those listed in Policy 2.1. Where appropriate, encourage publication, accessibility, and wide-spread sharing of data collected and generated by the City.

70. Finding: Policies 2.9 through 2.11 concern how the City collects and makes available data that supports land use decisions. In this case, the City published data concerning the storage capacity of existing FFTs as part of the discussion draft, proposed draft, and recommendation draft with an opportunity for the community and terminal owners to validate that data.

Transparency and accountability

Policy 2.12. Roles and responsibilities. Establish clear roles, rights, and responsibilities for participants and decision makers in planning and investment processes. Address roles of City bureaus, elected officials, and participants, including community and neighborhood leadership, business, organizations, and individuals.

Policy 2.13. Project scope. Establish clear expectations about land use project sponsorship, purpose, design, and how decision makers will use the process results.

Policy 2.14. Community influence. At each stage of the process, identify which elements of a planning and investment process can be influenced or changed through community involvement. Clarify the extent to which those elements can be influenced or changed.

Policy 2.15. Documentation and feedback. Provide clear documentation for the rationale supporting decisions in planning and investment processes. Communicate to participants about the issues raised in the community involvement process, how public input affected outcomes, and the rationale used to make decisions.

71. Finding: Policies 2.12 Through 2.15 guide the process for making planning and investment decisions. As described in the findings for Statewide Planning Goal 1 (Citizen Involvement), the original legislative process was clearly outlined in notices, documents and on the project website as to how to testify to influence the Proposed Draft at the PSC, which amended the proposal. Then the Recommended Draft was published with the opportunity to testify to the City Council at the 2016 public hearings.

    For the re-adoption of the FFTZ amendments, the notice for the remand explicitly identified what the City Council was considering (the same ordinance) and how to participate in the hearing or submit written testimony. The City Council received public testimony at the November 20, 2019 hearing on the substance of the regulations and the written record was left open for additional testimony until December 2, 2019.

    The findings in this document respond to the public testimony and explain the rationale used to make this decision.

    Testimony by Zenith Energy raised concerns that the additional facts or evidence was not identified or made available for public review. The initial findings were available as part of ordinance filing. BPS staff presented additional evidence as part of November 20, 2019 City Council hearing (and posted to the project website). The written record was left open for 11 days to provide an opportunity for any interested party to respond. In addition, the record of evidence was publicly available, and, as of November 30, no requests were made to review the record.

Community involvement program

Policies 2.16 through 2.23.

72. Finding: These policies concern the City's Community Involvement Program and are not applicable because the FFTZ amendments do not change this program.

Process design and evaluation

Policy 2.24. Representation. Facilitate participation of a cross-section of the full diversity of affected Portlanders during planning and investment processes. This diversity includes individuals, stakeholders, and communities represented by race, color, national origin, English proficiency, gender, age, disability, religion, sexual orientation, gender identity, and source of income.

Policy 2.25. Early involvement. Improve opportunities for interested and affected community members to participate early in planning and investment processes, including identifying and prioritizing issues, needs, and opportunities; participating in process design; and recommending and prioritizing projects and/or other types of implementation.

Policy 2.26. Verifying data. Use data, including community-validated population data, to guide planning and investment processes and priority setting and to shape community involvement and decision-making efforts.

Policy 2.27. Demographics. Identify the demographics of potentially affected communities when initiating a planning or investment project.

Policy 2.28. Historical understanding. To better understand concerns and conditions when initiating a

project, research the history, culture, past plans, and other needs of the affected community, particularly under-represented and under-served groups, and persons with limited English proficiency (LEP). Review preliminary findings with members of the community who have institutional and historical knowledge.

Policy 2.29. Project-specific needs. Customize community involvement processes to meet the needs of those potentially affected by the planning or investment project. Use community involvement techniques that fit the scope, character, and potential impact of the planning or investment decision under consideration.

Policy 2.30. Culturally-appropriate processes. Consult with communities to design culturally-appropriate processes to meet the needs of those affected by a planning or investment project. Evaluate, use, and document creative and culturally-appropriate methods, tools, technologies, and spaces to inform and engage people from under-served and under-represented groups about planning or investment projects.

Policy 2.31. Innovative engagement methods. Develop and document innovative methods, tools, and technologies for community involvement processes for plan and investment projects.

Policy 2.32. Inclusive participation beyond Portland residents. Design public processes for planning and investment projects to engage affected and interested people who may not live in Portland such as property owners, employees, employers, and students, among others, as practicable.

Policy 2.33. Inclusive participation in Central City planning. Design public processes for the Central City that recognize its unique role as the region's center. Engage a wide range of stakeholders from the Central City and throughout the region including employees, employers, social service providers, students, and visitors, as well as regional tourism, institutional, recreation, transportation, and local/regional government representatives, as appropriate.

Policy 2.34. Accessibility. Ensure that community involvement processes for planning and investment projects are broadly accessible in terms of location, time, and language, and that they support the engagement of individuals with a variety of abilities and limitations on participation.

Policy 2.35. Participation monitoring. Evaluate and document participant demographics throughout planning and investment processes to assess whether participation reflects the demographics of affected communities. Adapt involvement practices and activities accordingly to increase effectiveness at reaching targeted audiences.

Policy 2.36. Adaptability. Adapt community involvement processes for planning and investment projects as appropriate to flexibly respond to changes in the scope and priority of the issues, needs, and other factors that may affect the process.

Policy 2.37. Process evaluation. Evaluate each community involvement process for planning or investment projects from both the City staff and participants' perspectives, and consider feedback and lessons learned to enhance future involvement efforts.

73. Finding: Policies 2.24 through 2.37 concern how the community involvement program is designed and developed to support planning and investment projects. The community involvement process conducted in support of initial adoption of the FFTZ amendments engaged a broad range of stakeholders. As part of the concept development of the zoning code changes, BPS held stakeholder focus group meetings with representatives from energy providers (the FFTs, the Western States Petroleum Association, Northwest Natural, and business organizations) and environmental organizations. The Discussion Draft was crafted in response to these discussions. In

turn, comments on the Discussion Draft informed changes that were incorporated in the Proposed Draft. A large number of people testified at both the PSC and City Council public hearings, which resulted in amendments to the regulations.

For this reconsideration of the remanded notice, a legislative notice was sent to the City's legislative notice list as well as the FFT owners and the attorneys that participated in the appeal. People testifies at the November 20, 2019, public hearing.

Information design and development

Policy 2.38. Accommodation. Ensure accommodations to let individuals with disabilities participate in administrative, quasi-judicial, and legislative land use decisions, consistent with federal regulations.

74. Finding: The City Council hearing on November 20, 2019 was held at City Hall, an accessible location.

Policy 2.39. Notification. Notify affected and interested community members and recognized organizations about administrative, quasi-judicial, and legislative land use decisions with enough lead time to enable effective participation. Consider notification to both property owners and renters.

75. Finding: For the original adoption of the FFTZ amendments, the City sent the required Measure 56 notice to all owners of industrial zoned properties when it published the Proposed Draft prior to the PSC hearing. The City also sent a legislative notice to interested parties, including neighborhood associations, business associations, and other affected jurisdictions, that have requested notice of proposed land use changes.

The City Council's action on remand is a continuation of the initial legislative proceeding. Prior to conducting a hearing, the City sent a legislative notice to interested parties, FFT owners and the attorneys that participated in the appeal to inform them of the opportunity to testify at the November 20, 2019, City Council public hearing. Additionally, Council left the written record open until December 2, 2019, to provide additional opportunities to participate.

Policy 2.40. Tools for effective participation. Provide clear and easy access to information about administrative, quasi-judicial, and legislative land use decisions in multiple formats and through technological advancements and other ways.

Policy 2.41. Limited English Proficiency (LEP). Ensure that limited English proficient (LEP) individuals are provided meaningful access to information about administrative, quasi-judicial, and legislative land use decisions, consistent with federal regulations.

76. Finding: Regular communications about the original adoption of the FFTZ project and opportunities to participate and provide input were made available through the project website.

Chapter 3: Urban Form

77. Finding: The City Council interprets that the overall intent of these policies is to foster a compact urban form, make corridors vibrant, enhance public realm. The policies relate to design and the physical structure. The FFTZ amendments limit one type of use and do not impact or change design or physical development requirements. Therefore, the goals and policies of this chapter are generally not applicable. However, to the extent a policy could be deemed applicable, the City Council provides further findings below.

GOAL 3.A: A city designed for people. Portland's built environment is designed to serve the needs and aspirations of all Portlanders, promoting prosperity, health, equity, and resiliency. New development,

redevelopment, and public investments reduce disparities and encourage social interaction to create a healthy connected city.

78. Finding: The City Council interprets this goal to guide the design of new development and the impact it has on Portland's built environment. This goal is not directly applicable to the FFTZ amendments because this ordinance regulates one type of use in Portland's industrial and employment zones. The FFTZ amendments do promote prosperity and equity by preserving the industrial development capacity to support employment growth, which contributes to more equitably distributed household prosperity. Further, the FFTZ amendments promote health and resiliency by limiting future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of fossil fuel storage capacity at existing FFTs, with limited exceptions for aviation and renewable fuels. Further, by designating existing FFTs as a limited use, as opposed to a prohibited nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which ultimately can make Portland more resilient.

GOAL 3.B: A climate and hazard resilient urban form. Portland's compact urban form, sustainable building development practices, green infrastructure, and active transportation system reduce carbon emissions, reduce natural hazard risks and impacts, and improve resilience to the effects of climate change.

79. Finding: This goal does not apply because the FFTZ amendments do not change Portland's compact urban form, sustainable building practices, green infrastructure, or active transportation because this ordinance regulates one type of use in Portland's industrial and employment zones.

The ordinance does reduce natural hazard risks and impacts because most of Portland's employment and industrial zones are in areas with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. The FFTZ amendments are a regulatory approach that improves Portland's ability to withstand and recover from an earthquake by limiting the size of new fossil fuel terminals and prohibiting the expansion of fossil fuel storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which is an improvement over the current regulations that allow for unlimited growth in FFTs. The FFTZ regulations focus on limiting risk by limiting new development (fossil fuel storage capacity), but designate existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety.

GOAL 3.C: Focused growth. Household and employment growth is focused in the Central City and other centers, corridors, and transit station areas, creating compact urban development in areas with a high level of service and amenities, while allowing the relative stability of lower-density single-family residential areas.

80. Finding: The FFTZ amendments are focused on changes to allowed uses in the City's industrial areas and do not affect the City's goal in creating compact urban development. This goal does not apply.

GOAL 3.D: A system of centers and corridors. Portland's interconnected system of centers and corridors provides diverse housing options and employment opportunities, robust multimodal transportation connections, access to local services and amenities, and supports low-carbon complete, healthy, and equitable communities.

81. Finding: The FFTZ amendments are focused on changes to allowed uses in the City's industrial areas and do not affect the City's goal in creating a system of centers and corridors. This goal does not apply.

GOAL 3.E: Connected public realm and open spaces. A network of parks, streets, City Greenways, and other public spaces supports community interaction; connects neighborhoods, districts, and destinations; and improves air, water, land quality, and environmental health.

82. Finding: The FFTZ amendments are focused on changes to the City's industrial areas, which play a limited role in the City's connected network of parks and open spaces. Six of the existing FFTs have frontage on the Willamette River with designated natural resources that are protected by the Greenway Overlay Zone (Chapters 33.440), which is not amended by this ordinance. This goal does not apply.

GOAL 3.F: Employment districts. Portland supports job growth in a variety of employment districts to maintain a diverse economy.

83. Finding: The 2035 Comprehensive Plan defines the verb "maintain" to mean keep what you have; conserve; preserve; continue. As described in the Economic Opportunities Analysis (EOA), Portland has a diverse economy with a wide range of businesses and employment opportunities that are distributed across the Central City, neighborhood commercial areas, campus institutions and industrial areas. The City Council interprets this goal to apply to the City's economy in general and not specific industries. The City Council finds that the policy means that the City will support job growth in all employment districts in order to maintain a diverse economy, but the policy does not require the City to support the job growth of specific industries at all costs. The FFTZ amendments maintain Portland's diverse economy because the changes do not include map changes, nor do they allow for new incompatible land uses in industrial areas. Therefore, these changes will continue to provide the same opportunities for employment in Portland's employment districts. The FFTZ regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's employment districts. The limits on expansion of fossil fuel storage capacity at FFTs are mitigated by designating existing FFTs as a limited use that allows the terminals to maintain, preserve and continue to operate and improve their intermodal facilities and supports opportunities for growth through a number of exceptions, such as aviation or renewable fuels, to the storage capacity restrictions.

GOAL 3.G: Nature in the city. A system of habitat corridors weaves nature into the city, enhances habitat connectivity, and preserves natural resources and the ecosystem services they provide.

84. Finding: The Willamette and Columbia rivers play a major role in the habitat corridors that weave nature into Portland. Six of the existing FFTs have frontage on the Willamette River with designated natural resources that are protected by the Greenway Overlay Zone (Chapters 33.440), which is not amended by this ordinance. In considering the natural hazard risks that the FFTs pose to the ecosystem functions on the river, as identified by the Portland Bureau of Emergency Management's Critical Energy Infrastructure Hub Study (2016), the City Council finds that continuing to allow the unlimited increase in storage capacity at FFTs in a high risk area does not enhance the current or future natural resource functions of the rivers. Therefore, the FFTZ regulations focus on limiting risk by limiting fossil fuel storage capacity, but designate existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety. These regulations will limit the risks to the natural resource habitat functions and ecosystem services provided by the rivers.

Citywide design and development

Policy 3.1. Urban Design Framework. Use the Urban Design Framework (UDF) as a guide to create inclusive and enduring places, while providing flexibility for implementation at the local scale to meet the needs of local communities.

85. Finding: The UDF is a guide at the citywide scale. The UDF identifies the Rivers pattern area, which encompasses most of Portland's industrial and employment areas, including all of the existing FFTs. The FFTZ amendments are focused on changes to allowed uses in the City's industrial areas. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses. Therefore, these changes are consistent with this policy because they do not change the location or character of the Rivers pattern area.

Policy 3.2. Growth and stability. Direct the majority of growth and change to centers, corridors, and transit station areas, allowing the continuation of the scale and characteristics of Portland's residential neighborhoods.

86. Finding: The FFTZ amendments are focused on changes to allowed uses in the City's industrial areas. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The other industrial uses continue to operate under current regulations. These changes will not affect the City's policies to direct most growth to centers and corridors or affect the scale and characteristics of Portland's residential neighborhoods.

Policy 3.3. Equitable development. Guide development, growth, and public facility investment to reduce disparities, ensure equitable access to opportunities, mitigate the impacts of development on income disparity, displacement and produce positive outcomes for all Portlanders.

3.3.a. Anticipate, avoid, reduce, and mitigate negative public facility and development impacts, especially where those impacts inequitably burden communities of color, under-served and under-represented communities, and other vulnerable populations.

3.3.b. Make needed investments in areas that are deficient in public facilities to reduce disparities and increase equity. Accompany these investments with proactive measures to avoid displacement and increase affordable housing.

3.3.c. Encourage use of plans, agreements, incentives, and other tools to promote equitable outcomes from development projects that benefit from public financial assistance.

3.3.d. Incorporate requirements into the Zoning Code to provide public and community benefits as a condition for development projects to receive increased development allowances.

3.3.e. When private property value is increased by public plans and investments, require development to address or mitigate displacement impacts and impacts on housing affordability, in ways that are related and roughly proportional to these impacts.

3.3.f. Coordinate housing, economic development, and public facility plans and investments to create an integrated community development approach to restore communities impacted by past decisions.

3.3.g. Encourage developers to engage directly with a broad range of impacted communities to identify potential impacts of private development projects, develop mitigation measures, and provide community benefits to address adverse impacts.

87. Finding: One of the ways to reduce disparities and produce positive outcomes for all Portlanders is to create more opportunities for middle wage jobs, especially for people without college degrees. Those opportunities can be found in Portland's industrial areas. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not conflict with the intent to encourage growth in Portland's industrial districts. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The remaining industrial uses continue to operate under current regulations. These changes support the retention of existing fossil fuel terminals by designating them as a limited use, as opposed to a non-conforming use, that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels, to the storage capacity restrictions.

The City Council finds that the other types of anti-displacement mitigation measures identified in this policy are not applicable to Zoning Code changes that affect allowed uses in industrial zones.

Policy 3.4. All ages and abilities. Strive for a built environment that provides a safe, healthful, and attractive environment for people of all ages and abilities.

88. Finding: The City Council interprets this policy to be focused on creating a supportive built environment for children, the elderly and people with disabilities. Specifically, the policy is focused on the built environment of centers, corridors and residential areas where children, the elderly and people with disabilities inhabit the city. The FFTZ amendments are limited to changes allowed in industrial zones and do not impact centers, corridors and residential areas. Therefore, Council finds that this policy does not apply.

To the extent the policy does apply to individuals that work in the industrial zones, the FFTZ amendments maintain Portland's diverse employment opportunities because the changes do not include map changes, nor do they allow for new incompatible land uses in industrial areas. Therefore, these changes will continue to provide the same opportunities for employment in Portland's employment districts.

Policy 3.5. Energy and resource efficiency. Support energy-efficient, resource-efficient, and sustainable development and transportation patterns through land use and transportation planning.

89. Findings: The City Council interprets this policy to mean that land use and transportation planning should aid in creating efficient and sustainable development patterns. The City Council finds that this policy applies to the city as whole and does not require the City Council to ensure that individual businesses or industries are more energy-efficient, resource-efficient, or sustainable. Rather, the policy requires City Council to consider how city-wide development and transportation plans can create patterns that are more efficient. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, will not significantly change the development pattern in Portland's industrial districts. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan. Therefore, these changes will continue to support the sustainable development and transportation patterns across the city as a whole.

Policy 3.6. Land efficiency. Provide strategic investments and incentives to leverage infill, redevelopment, and promote intensification of scarce urban land while protecting environmental quality.

90. Findings: The City Council interprets this policy to guide investment and incentive decisions, this ordinance is not that type of decision. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, which guide the City's infrastructure investment decisions. The City's Enterprise Zone program, which provides a property tax exemption to industrial firms, is one of the programs in which the City of Portland provides strategic assistance to businesses. These changes do not affect that program, and FFTs that make new capital investments remain eligible for that program. The FFTZ amendments do not amend the Greenway Overlay Zone standards or review process. Therefore, the City continues to plan for strategic investments and incentives in the industrial districts, while protecting environmental quality.

Policy 3.7. Integrate nature. Integrate nature and use green infrastructure throughout Portland.

91. Findings: No changes to greenway or environmental overlay zones, stormwater requirements, or tree code are a part of this ordinance. This policy does not apply.

Policy 3.8. Leadership and innovation in design. Encourage high-performance design and development that demonstrates Portland's leadership in the design of the built environment, commitment to a more equitable city, and ability to experiment and generate innovative design solutions.

92. Finding: The FFTZ amendments are use limitations for one type of use found in Portland's industrial areas. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Further, the use limitations encourage innovation to FFTs to replace and reconfigure existing storage tank capacity to increase safety.

Policy 3.9. Growth and development. Evaluate the potential impacts of planning and investment decisions, significant new infrastructure, and significant new development on the physical characteristics of neighborhoods and their residents, particularly under-served and under-represented communities, with attention to displacement and affordability impacts. Identify and implement strategies to mitigate the anticipated impacts.

93. Finding: The City Council finds that this policy requires the City Council to assess the impacts of planning decisions on neighborhoods and their residents, particularly those that are under-served and under-represented. The City Council finds that one of the ways that under-served and under-represented communities can be impacted is through access to employment opportunities, especially in industrial areas that can have more jobs with higher wages for people without college degrees. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes maintain employment opportunities in Portland's industrial districts. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The remaining industrial uses continue to operate under current regulations. These changes apply to one type of use in the industrial zones, therefore, these changes will not have a significant impact on industrial areas, including the employment opportunities. These changes will not impact the physical characteristics of neighborhoods or result in increased displacement or affordability impacts, therefore no mitigations strategies have been identified.

Policy 3.10. Rural, urbanizable, and urban land. Preserve the rural character of rural land outside the Regional Urban Growth Boundary. Limit urban development of urbanizable land beyond the City Limits until it is annexed and full urban services are extended.

94. Finding: The FFTZ amendments apply to one type of use in the industrial zones, therefore, these changes will not have a significant impact on rural land outside the UGB. This policy does not apply.

Policy 3.11. Significant places. Enhance and celebrate significant places throughout Portland with symbolic features or iconic structures that reinforce local identity, histories, and cultures and contribute to way-finding throughout the city. Consider these especially at:

- High-visibility intersections
- Attractions
- Schools, libraries, parks, and other civic places
- Bridges
- Rivers
- Viewpoints and view corridor locations
- Historically or culturally significant places
- Connections to volcanic buttes and other geologic and natural landscape features
- Neighborhood boundaries and transitions

95. Finding: The existing FFTs are near significant places, such as the St Johns Bridge and the Willamette River, but are not considered significant places that should be enhanced or celebrated. This policy does not apply.

Centers

Policy 3.12. Role of centers. Enhance centers as anchors of complete neighborhoods that include concentrations of commercial and public services, housing, employment, gathering places, and green spaces.

Policy 3.13. Variety of centers. Plan for a range of centers across the city to enhance local, equitable access to services, and expand housing opportunities.

Policy 3.14. Housing in centers. Provide housing capacity for enough population to support a broad range of commercial services, focusing higher-density housing within a half-mile of the center core.

Policy 3.15. Investments in centers. Encourage public and private investment in infrastructure, economic development, and community services in centers to ensure that all centers will support the populations they serve.

Policy 3.16. Government services. Encourage the placement of services in centers, including schools and colleges, health services, community centers, daycare, parks and plazas, library services, and justice services.

Policy 3.17. Arts and culture. Ensure that land use plans and infrastructure investments allow for and incorporate arts, culture, and performance arts as central components of centers.

Policy 3.18. Accessibility. Design centers to be compact, safe, attractive, and accessible places, where the street environment makes access by transit, walking, biking, and mobility devices such as wheelchairs, safe and attractive for people of all ages and abilities.

Policy 3.19. Center connections. Connect centers to each other and to other key local and regional destinations, such as schools, parks, and employment areas, by frequent and convenient transit, bicycle sharing, bicycle routes, pedestrian trails and sidewalks, and electric vehicle charging stations.

Policy 3.20. Green infrastructure in centers. Integrate nature and green infrastructure into centers and enhance public views and connections to the surrounding natural features.

96. Finding: Policies 3.12 through 3.20 provide direction on the desired characteristics and functions of centers. The FFTZ amendments do not change the center designations on the Urban Design Framework. The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located in centers. These policies do not apply.

Central City

Policy 3.21. Role of the Central City. Encourage continued growth and investment in the Central City, and recognize its unique role as the region's premier center for jobs, services, and civic and cultural institutions that support the entire city and region.

Policy 3.22. Model Urban Center. Promote the Central City as a living laboratory that demonstrates how the design and function of a dense urban center can concurrently provide equitable benefits to human health, the natural environment, and the local economy.

Policy 3.23. Central City employment. Encourage the growth of the Central City's regional share of employment and continue its growth as the region's unique center for innovation and exchange through commerce, employment, arts, culture, entertainment, tourism, education, and government.

Policy 3.24. Central City housing. Encourage the growth of the Central City as Portland's and the region's largest center with the highest concentrations of housing and with a diversity of housing options and services.

Policy 3.25. Transportation hub. Enhance the Central City as the region's multimodal transportation hub and optimize regional access as well as the movement of people and goods among key destinations.

Policy 3.26. Public places. Promote public places and the Willamette River waterfront in the Central City as places of business and social activity and gathering for the people of its districts and the broader region.

97. Finding: Policies 3.21 through 3.26 provide direction on the desired characteristics and functions of the Central City. The FFTZ amendments do not change the Central City boundary on the Urban Design Framework. The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located in the Central City. These policies do not apply.

Gateway Regional Center

Policy 3.27 Role of Gateway. Encourage growth and investment in Gateway to enhance its role as East Portland's center of employment, commercial, and public services.

Policy 3.28 Housing. Encourage housing in Gateway, to create East Portland's largest concentration of high-density housing**.**

Policy 3.29 Transportation. Enhance Gateway's role as a regional high-capacity transit hub that serves as an anchor for East Portland's multimodal transportation system.

Policy 3.30 Public places. Enhance the public realm and public places in Gateway to provide a vibrant and attractive setting for business and social activity that serves East Portland residents and the region.

98. Finding: Policies 3.27 through 3.30 provide direction on the desired characteristics and functions of the Gateway Regional Center. The FFTZ amendments do not change the regional center boundary on the Urban Design Framework. The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located in the Gateway Regional Center. These policies do not apply.

Town Centers

Policy 3.31 Role of Town Centers. Enhance Town Centers as successful places that serve the needs of surrounding neighborhoods as well as a wider area, and contain higher concentrations of employment, institutions, commercial and community services, and a wide range of housing options.

Policy 3.32 Housing. Provide for a wide range of housing types in Town Centers, which are intended to generally be larger in scale than the surrounding residential areas. There should be sufficient zoning capacity within a half-mile walking distance of a Town Center to accommodate 7,000 households.

Policy 3.33 Transportation. Improve Town Centers as multimodal transportation hubs that optimize access from the broad area of the city they serve and are linked to the region's high-capacity transit system.

Policy 3.34 Public places. Provide parks or public squares within or near Town Centers to support their roles as places of focused business and social activity.

99. Finding: Policies 3.31 through 3.34 provide direction on the desired characteristics and functions of the town centers. The FFTZ amendments do not change the boundary any of the Town Centers on the Urban Design Framework. The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located in town centers. These policies do not apply.

Neighborhood Centers

Policy 3.35 Role of Neighborhood Centers. Enhance Neighborhood Centers as successful places that serve the needs of surrounding neighborhoods. In Neighborhood Centers, provide for higher concentrations of development, employment, commercial and community services, and a wider range of housing options than the surrounding neighborhoods.

Policy 3.36 Housing. Provide for a wide range of housing types in Neighborhood Centers, which are intended to generally be larger in scale than the surrounding residential areas, but smaller than Town Centers. There should be sufficient zoning capacity within a half-mile walking distance of a Neighborhood Center to accommodate 3,500 households.

Policy 3.37 Transportation. Design Neighborhood Centers as multimodal transportation hubs that are served by frequent-service transit and optimize pedestrian and bicycle access from adjacent neighborhoods.

Policy 3.38 Public places. Provide small parks or plazas within or near Neighborhood Centers to support their roles as places of local activity and gathering.

100. Finding: Policies 3.35 through 3.38 provide direction on the desired characteristics and functions of neighborhood centers. The FFTZ amendments do not change the neighborhood center boundaries on the Urban Design Framework. The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located in neighborhood centers. These policies do not apply.

Inner Ring Districts

Policy 3.39 Growth. Expand the range of housing and employment opportunities in the Inner Ring Districts. Emphasize growth that replaces gaps in the historic urban fabric, such as redevelopment of surface parking lots and 20th century auto-oriented development.

Policy 3.40 Corridors. Guide growth in corridors to transition to mid-rise scale close to the Central City, especially along Civic Corridors.

Policy 3.41 Distinct identities. Maintain and enhance the distinct identities of the Inner Ring Districts and their corridors. Use and expand existing historic preservation and design review tools to accommodate growth in ways that identify and preserve historic resources and enhance the distinctive characteristics of the Inner Ring Districts, especially in areas experiencing significant development.

Policy 3.42 Diverse residential areas. Provide a diversity of housing opportunities in the Inner Ring Districts' residential areas. Encourage approaches that preserve or are compatible with existing historic properties in these areas. Acknowledge that these areas are historic assets and should retain their established characteristics and development patterns, even as Inner Ring centers and corridors grow. Apply base zones in a manner that takes historic character and adopted design guidelines into account.

Policy 3.43 Active transportation. Enhance the role of the Inner Ring Districts' extensive transit, bicycle, and pedestrian networks in conjunction with land uses that optimize the ability for more people to utilize this network. Improve the safety of pedestrian and bike connections to the Central City. Strengthen transit connections between the Inner Ring Districts and to the Central City.

101. Finding: Policies 3.39 through 3.43 provide direction on the desired characteristics and functions of the Inner Ring Districts. The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located in the Inner Ring Districts. These policies do not apply.

Corridors

Policy 3.44. Growth and mobility. Coordinate transportation and land use strategies along corridors to accommodate growth and mobility needs for people of all ages and abilities.

Policy 3.45. Connections. Improve corridors as multimodal connections providing transit, pedestrian, bicycle, and motor vehicle access and that serve the freight needs of centers and neighborhood business districts.

Policy 3.46. Design. Encourage street design that balances the important transportation functions of corridors with their roles as the setting for commercial activity and residential living.

Policy 3.47. Green infrastructure in corridors. Enhance corridors with distinctive green infrastructure, including landscaped stormwater facilities, extensive tree plantings, and other landscaping that both provide environmental function and contribute to a quality pedestrian environment.

102. Finding: Policies 3.44 through 3.47 provide direction on the desired characteristics and functions of corridors. The FFTZ amendments do not change the boundary of corridors on the Urban Design Framework. The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located in corridors. These policies do not apply.

Civic Corridors

Policy 3.48. Integrated land use and mobility. Enhance Civic Corridors as distinctive places that are models of ecological urban design, with transit-supportive densities of housing and employment, prominent street trees and other green features, and high-quality transit service and pedestrian and bicycle facilities.

Policy 3.49. Design great places. Improve public streets and sidewalks along Civic Corridors to support the vitality of business districts, create distinctive places, provide a safe, healthy, and attractive pedestrian environment, and contribute to quality living environments for residents.

Policy 3.50. Mobility corridors. Improve Civic Corridors as key mobility corridors of citywide importance that accommodate all modes of transportation within their right-of-way or on nearby parallel routes.

Policy 3.51. Freight. Maintain freight mobility and access on Civic Corridors that are also Major or Priority Truck Streets.

103. Finding: The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located in civic corridors. These policies do not apply.

Neighborhood Corridors

Policy 3.52. Neighborhood Corridors. Enhance Neighborhood Corridors as important places that support vibrant neighborhood business districts with quality multi-family housing, while providing transportation connections that link neighborhoods.

104. Finding: Policies 3.48 through 3.51 provide direction on the desired characteristics and functions of civic corridors. The FFTZ amendments do not change the boundary of civic corridors on the Urban Design Framework. The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located in neighborhood corridors. These policies do not apply.

Transit Station Areas

Policy 3.53. Transit-oriented development. Encourage transit-oriented development and transit-supportive concentrations of housing and jobs, and multimodal connections at and adjacent to high-capacity transit stations.

Policy 3.54. Community connections. Integrate transit stations into surrounding communities and enhance pedestrian and bicycle facilities (including bike sharing) to provide safe and accessible connections to key destinations beyond the station area.

Policy 3.55. Transit station area safety. Design transit areas to improve pedestrian, bicycle, and personal safety.

Policy 3.56. Center stations. Encourage transit stations in centers to provide high density concentrations of housing and commercial uses that maximize the ability of residents to live close to both high-quality transit and commercial services.

Policy 3.57. Employment stations. Encourage concentrations of jobs and employment-focused land uses in and around stations in employment-zoned areas.

Policy 3.58. Transit neighborhood stations. Encourage concentrations of mixed-income residential development and supportive commercial services close to transit neighborhood stations. Transit neighborhood stations serve mixed-use areas that are not in major centers.

Policy 3.59. Destination stations. Enhance connections between major destinations and transit facilities and strengthen the role of these station areas as places of focused activity.

105. Finding: Policies 3.53 through 3.59 provide direction on the desired characteristics and functions of transit station areas. The FFTZ amendments do not change the boundary of civic corridors on the Urban Design Framework. The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located in transit station areas. These policies do not apply.

City Greenways

Policy 3.60. Connections. Create a network of distinctive and attractive City Greenways that link centers, parks, schools, rivers, natural areas, and other key community destinations.

Policy 3.61. Integrated system. Create an integrated City Greenways system that includes regional trails through natural areas and along Portland's rivers, connected to neighborhood greenways, and heritage parkways.

Policy 3.62. Multiple benefits. Design City Greenways that provide multiple benefits that contribute to Portland's pedestrian, bicycle, green infrastructure, and parks and open space systems.

Policy 3.63. Design. Use design options such as distinctive street design, motor vehicle diversion, landscaping, tree plantings, scenic views, and other appropriate design options, to create City Greenways that extend the experience of open spaces and nature into neighborhoods, while improving stormwater management and calming traffic.

106. Finding: Policies 3.60 through 3.63 provide direction on the desired characteristics and functions of city greenways. The FFTZ amendments do not change the city greenway designations on the Urban Design Framework. The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located along city greenways. These policies do not apply.

Urban habitat corridors

Policy 3.64. Urban habitat corridors. Establish a system of connected, well-functioning, and diverse habitat corridors that link habitats in Portland and the region, facilitate safe fish and wildlife access and movement through and between habitat areas, enhance the quality and connectivity of existing habitat corridors, and establish new habitat corridors in developed areas.

Policy 3.65. Habitat connection tools. Improve habitat corridors using a mix of tools including natural resource protection, property acquisition, natural resource restoration, tree planting and landscaping with native plants, and ecological design integrated with new development.

Policy 3.66. Connect habitat corridors. Ensure that planned connections between habitat corridors, greenways, and trails are located and designed to support the functions of each element, and create positive interrelationships between the elements, while also protecting habitat functions, fish, and wildlife.

107. Finding: Policies 3.64 through 3.66 provide direction on the desired characteristics and functions of urban habitat corridors. The FFTZ amendments do not change the urban habitat corridor designations on the Urban Design Framework. The Willamette and Columbia Rivers are considered urban habitat corridors. The FFTZ amendments support the urban habitat corridor policies by reducing the risk associated with a major earthquake. The first step in making the current situation better is to ensure that the situation does not get worse by continuing to allow the unlimited increase in fossil fuel terminal storage tank capacity in a high risk area. The FFTZ amendments are a

regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will be an improvement compared to the current regulations that allow for unlimited growth in fossil fuel terminals. Further, by designating existing FFTs as a limited use allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which can minimize environmental impacts in the event of a major earthquake. No changes to the environmental or greenway overlay zones are proposed as part of this project, therefore the natural resource values and functions that contribute the habitat functions will be maintained.

Employment areas

Policy 3.67. Employment area geographies. Consider the land development and transportation needs of Portland's employment geographies when creating and amending land use plans and making infrastructure investments.

108. The City Council interprets this policy to require the City Council to consider the development and transportation needs of Portland's employment geographies when making planning and investment decisions, but the policy does not require the City Council to accommodate all industries and all geographies.

As described in the Economic Opportunities Analysis (EOA), Portland has a diverse economy with a wide range of businesses and employment opportunities that are distributed across the Central City, neighborhood commercial areas, campus institutions and industrial areas. The FFTZ amendments maintain Portland's diverse economy because the changes do not include map changes, nor do they allow for new incompatible land uses in industrial areas. Therefore, these changes will continue to provide the same opportunities for employment in Portland's employment area geographies. The FFTZ regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's employment districts. Further, the City Council considered the unique needs of the FFTs and mitigated the limits on expansion of fossil fuel storage capacity by designating existing fossil fuel terminals as a limited use that allows the terminals to maintain, preserve and continue to operate and improve their intermodal facilities and supports opportunities for growth through a number of exceptions, such as aviation or renewable fuels, to the storage capacity restrictions.

Policy 3.68. Regional Truck Corridors. Enhance designated streets to accommodate forecast freight growth and support intensified industrial use in nearby freight districts. *See Figure 3-7 — Employment Areas.* Designated regional truckways and priority truck streets (Transportation System Plan classifications are shown to illustrate this network).

109. Finding: The City Council interprets the verb "enhance", which is not defined in the 2035 Comprehensive Plan, to mean to intensify or improve. The City Council interprets this policy to acknowledge the role that regional truck corridors play in our transportation system and to take steps to improve those functions. Portland's approach to regional truck corridors is unchanged because the FFTZ amendments change the Zoning Code and do not amend the Citywide System Plan or the Transportation System Plan. This policy does not apply.

Rivers Pattern Area

Policy 3.69. Historic and multi-cultural significance. Recognize, restore, and protect the historic and multi-cultural significance of the Willamette and Columbia Rivers, including current activities such as subsistence fishing of legally-permitted fish species.

110. Finding: The verb "recognize" is defined in the 2035 Comprehensive Plan as to acknowledge and treat as valid. The City Council interprets this policy to acknowledge the multi-cultural significance that the rivers play in our community and to take steps to improve those functions. Most of Portland's employment and industrial zones, including the Portland Harbor, are in areas with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. Fossil fuel infrastructure poses considerable risks in the event of a major earthquake. Continuing to allow the unlimited increase in storage capacity at FFTs in a high risk area increases the risk to the Willamette and Columbia Rivers. The FFTZ amendments are a regulatory approach to help protect the rivers by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which is an improvement over the current regulations that allow for unlimited growth in FFTs.

Policy 3.70. River transportation. Recognize and enhance the roles of the Willamette and Columbia rivers as part of Portland's historic, current, and future transportation infrastructure, including for freight, commerce, commuting, and other public and private transportation functions.

111. Finding: The verb "recognize" is defined in the 2035 Comprehensive Plan as to acknowledge and treat as valid. The City Council interprets the verb "enhance", which is not defined in the 2035 Comprehensive Plan, to mean to intensify or improve. The City Council interprets this policy to acknowledge the role that the rivers play in our transportation system and to take steps to improve those functions. The City Council finds that the policy concerns transportation infrastructure, which is managed through the CSP and TSP. This policy does not apply because the ordinance does not amend the City's adopted CSP or TSP.

Policy 3.71. Recreation. Improve conditions along and within the Willamette and Columbia rivers to accommodate a diverse mix of recreational users and activities. Designate and invest in strategically-located sites along the length of Portland's riverfronts for passive or active recreation activities that are compatible with nearby land uses, historically and culturally important sites, significant habitat areas, restoration sites, and native fish and wildlife usage.

112. Finding: Six of the 11 existing FFTs have frontage on the Willamette River. However, there are no recreation access points near these terminals. These amendments do not change any plans for recreation sites on the Willamette and Columbia rivers, therefore this policy does not apply.

Policy 3.72 Industry and port facilities. Enhance the regionally significant economic infrastructure that includes Oregon's largest seaport and largest airport, unique multimodal freight, rail, and harbor access; the region's critical energy hub; and proximity to anchor manufacturing and distribution facilities.

113. Finding: The City Council interprets the verb "enhance", which is not defined in the 2035 Comprehensive Plan, to mean to intensify or improve. The City Council finds that the policy requires Council to improve the regionally significant infrastructure, which is done through the CSP and TSP. This policy does not apply because the ordinance does not amend the City's adopted CSP or TSP, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the industrial areas where the FFTs are located.

Further, the City Council acknowledges that the FFTs make up a significant portion of the region's critical energy infrastructure hub in the Portland Harbor. The FFTZ amendments support private investment to enhance the unique multimodal freight, rail, and harbor access because the

ordinance only restricts new fossil fuel storage tank capacity and does not regulate transloading facilities, docks or pipelines – facilities that are key components of the multimodal freight transportation system. Existing FFTs and other industrial uses can make investments in multimodal freight facilities.

Policy 3.73. Habitat. Enhance the roles of the Willamette and Columbia rivers and their confluence as an ecological hub that provides locally and regionally significant habitat for fish and wildlife and habitat restoration opportunities.

114. Finding: Six of the 11 existing FFTs have frontage on the Willamette River. These parcels will continue to be subject to development regulations for flood plains and natural resources that protect significant habitat. Furthermore, no changes to existing protections in the greenway overlay zones are proposed. This policy does not apply.

Policy 3.74. Commercial activities. Enhance the roles of the Willamette and Columbia rivers in supporting local and regional business and commerce, including commercial fishing, tourism, recreation, and leisure.

115. Finding: The City Council interprets the verb "enhance", which is not defined in the 2035 Comprehensive Plan, to mean to intensify or improve. The FFTZ regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's employment districts, therefore, the FFTZ amendments support Portland's diverse economy because the changes do not include map changes, nor do they allow for new incompatible land uses in industrial areas, therefore there is no adverse impact to the land supply and economic opportunities along the Willamette and Columbia rivers. The limits on expansion of fossil fuel storage capacity are mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to maintain, preserve and continue to operate and improve their intermodal facilities and supports opportunities for growth through a number of exceptions, such as aviation or renewable fuels, to the storage capacity restrictions. In addition, the ordinance does not regulate transloading facilities, docks or pipelines – facilities that are key components of the multimodal freight transportation system. Existing FFTs and other industrial uses can make investments in multimodal freight facilities.

With respect to fishing, tourism, recreation and leisure, the City Council interprets this policy to require that the first step in making the current situation better is to ensure that the situation does not get worse. Continuing to allow the increase in FFTs in a high risk area increases the risk to other businesses that rely on the rivers. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will be an improvement compared to the current regulations that allow for unlimited growth in FFTs. The FFTZ regulations support other commercial uses of the rivers by designating existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake. Further, the use limitations (33.140.100.B.17.a) provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety.

Policy 3.75. River neighborhoods. Enhance the strong river orientation of residential areas that are located along the Willamette and Columbia Rivers.

116. Finding: The FFTZ amendments regulate the allowed uses in Portland's industrial areas. None of the FFTs are in residential areas. This policy does not apply.

Policy 3.76. River access. Enhance and complete Portland's system of river access points and riverside trails, including the Willamette Greenway Trail, and strengthen active transportation connections between neighborhoods and the rivers.

117. Finding: Six of the 11 existing FFTs have frontage on the Willamette River. However, there are no access points near these terminals. These amendments do not change any plans for recreation sites on the Willamette and Columbia rivers, therefore this policy does not apply.

Policy 3.77. River management and coordination. Coordinate with federal, state, regional, special districts, and other agencies to address issues of mutual interest and concern, including economic development, recreation, water transportation, flood and floodplain management and protection, regulatory compliance, permitting, emergency management, endangered species recovery, climate change preparation, Portland Harbor Superfund, brownfield cleanup, and habitat restoration.

118. Finding: The City Council interprets this policy to guide intergovernmental coordination on the management of the rivers. Other government agencies received notice from the 35-day DLCD notice and the City's legislative notice. In the initial adoption of the ordinance, the City received testimony from the Port of Portland. The City responded to the issues raised by the Port by amending the code to include an exception for the storage of fossil fuels for exclusive use at an airport, surface passenger terminal, marine, truck or air freight terminal, drydock, ship or barge servicing facility, rail yard, or as part of a fleet vehicle servicing facility. The City did not receive any requests from other government agencies to modify the FFTZ amendments.

The City has an established procedure for coordinated review of river-related development, including docks, in areas where city, state and federal agencies all have jurisdiction. The Streamlining Team was established pursuant to a 2003 Intergovernmental Agreement between the City of Portland (City), NOAA Fisheries, Army Corps of Engineers (Corps), and the U.S. Fish and Wildlife Service (USFWS). The FFTZ amendments do not change these procedures and there is no impact to this coordinated process.

Policy 3.78 Columbia River. Enhance the role of the Columbia River for river dependent industry, fish and wildlife habitat, subsistence and commercial fisheries, floating- and land-based neighborhoods, recreational uses, and water transportation.

119. Finding: The City Council interprets the verb "enhance", which is not defined in the 2035 Comprehensive Plan, to mean to intensify or improve. The City Council interprets this policy to acknowledge the role that the Columbia River plays in our city and to take steps to improve those functions. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes will continue to provide the same opportunities on the Columbia River. The City Council interprets this goal to apply to districts as whole and not to individual businesses or sectors of business. These regulations apply to only one type of business that is not found on the Columbia River. The remaining industrial uses continue to operate under current regulations.

Policy 3.79 Willamette River North Reach. Enhance the role of the Willamette River North Reach for river dependent industry, fish and wildlife habitat, and as an amenity for riverfront neighborhoods and recreational users.

120. Finding: The City Council interprets the verb "enhance", which is not defined in the 2035 Comprehensive Plan, to mean to intensify or improve. The FFTZ regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's employment districts, therefore, the FFTZ amendments support Portland's diverse economy because the

changes do not include map changes, nor do they allow for new incompatible land uses in industrial areas, therefore there is no adverse impact to the land supply and economic opportunities along the Willamette and Columbia rivers. The limits on expansion of fossil fuel storage capacity are mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to maintain, preserve and continue to operate and improve their intermodal facilities and supports opportunities for growth through a number of exceptions, such as aviation or renewable fuels, to the storage capacity restrictions. These regulations apply to only one type of river dependent industry. The remaining industrial uses continue to operate under current regulations.

Policy 3.80. Willamette River Central Reach. Enhance the role of the Willamette River Central Reach as the Central City and region's primary riverfront destination for recreation, history and culture, emergency response, water transportation, and as habitat for fish and wildlife.

Policy 3.81 Willamette River South Reach. Enhance the role of the Willamette River South Reach as fish and wildlife habitat, a place to recreate, and as an amenity for riverfront neighborhoods and others.

121. Finding: For policies 3.80 and 3.81, the City Council interprets the verb "enhance", which is not defined in the 2035 Comprehensive Plan, to mean to intensify or improve. The City Council interprets this policy to acknowledge the role that the Willamette River plays in our city and to take steps to improve those functions. These regulations apply to only one type of business that is not found on Central and South reaches of the Willamette River. The remaining industrial uses continue to operate under current regulations. These policies do not apply.

Policy 3.82. Willamette River Greenway. Maintain multi-objective plans and regulations to guide development, infrastructure investments, and natural resource protection and enhancement within and along the Willamette Greenway.

122. Finding: The City Council finds that this policy is implemented through the Greenway Overlay Zones (PCC 33.440), which is not amended by this ordinance. This policy does not apply.

Central City Pattern Area

Policy 3.83. Central City districts. Enhance the distinct identities of the Central City's districts.

Policy 3.84. Central City river orientation. Enhance and strengthen access and orientation to the Willamette River in the Central City and increase river-focused activities.

Policy 3.85. Central City pedestrian system. Maintain and expand the Central City's highly interconnected pedestrian system.

Policy 3.86. Central City bicycle system. Expand and improve the Central City's bicycle system.

123. Finding: Policies 3.83 through 3.86 provide direction on the desired characteristics and functions of the Central City Pattern Area. The FFTZ amendments affect allowed uses in industrial zones outside the Central City. These policies do not apply.

Inner Neighborhoods Pattern Area

Policy 3.87 Inner Neighborhoods main streets. Maintain and enhance the Streetcar Era pattern of street-oriented buildings along Civic and Neighborhood corridors.

Policy 3.88 Inner Neighborhoods street patterns. Preserve the area's urban fabric of compact blocks and its highly interconnected grid of streets.

Policy 3.89 Inner Neighborhoods infill. Fill gaps in the urban fabric through infill development on

vacant and underutilized sites and in the reuse of historic buildings on adopted inventories.

Policy 3.90 Inner Neighborhoods active transportation. Use the extensive street, sidewalk, and bikeway system and multiple connections to the Central City as a key part of Portland's active transportation system

Policy 3.91 Inner Neighborhoods residential areas. Continue the patterns of small, connected blocks, regular lot patterns, and streets lined by planting strips and street trees in Inner Neighborhood residential areas.

124. Finding: Policies 3.87 through 3.91 provide direction on the desired characteristics and functions of the Inner Neighborhoods Pattern Area. The FFTZ amendments affect allowed uses in industrial zones. There are not existing FFTs in the Inner Neighborhoods Pattern Area. These policies do not apply.

Eastern Neighborhoods Pattern Area

Policy 3.92 Eastern Neighborhoods street, block, and lot pattern. Guide the evolving street and block system in the Eastern Neighborhoods in ways that build on positive aspects of the area's large blocks, such as opportunities to continue mid-block open space patterns and create new connections through blocks that make it easier to access community destinations.

Policy 3.93 Eastern Neighborhoods site development. Require that land be aggregated into larger sites before land divisions and other redevelopment occurs. Require site plans which advance design and street connectivity goals.

Policy 3.94 Eastern Neighborhoods trees and natural features. Encourage development and right-of-way design that preserves and incorporates Douglas fir trees and groves, and that protects the area's streams, forests, wetlands, steep slopes, and buttes.

Policy 3.95 Eastern Neighborhoods buttes. Enhance public views of the area's skyline of buttes and stands of tall Douglas fir trees.

Policy 3.96 Eastern Neighborhoods corridor landscaping. Encourage landscaped building setbacks along residential corridors on major streets.

Policy 3.97 Eastern Neighborhoods active transportation. Enhance access to centers, employment areas, and other community destinations in Eastern Neighborhoods by ensuring that corridors have safe and accessible pedestrian and bicycle facilities and creating additional secondary connections that provide low-stress pedestrian and bicycle access.

125. Finding: Policies 3.92 through 3.97 provide direction on the desired characteristics and functions of the Eastern Neighborhoods Pattern Area. The FFTZ amendments affect allowed uses in industrial zones. There are not existing FFTs in the Eastern Neighborhoods Pattern Area. These policies do not apply.

Western Neighborhoods Pattern Area

Policy 3.98 Western Neighborhoods village character. Enhance the village character of the Western Neighborhoods' small commercial districts and increase opportunities for more people to live within walking distance of these neighborhood anchors.

Policy 3.99 Western Neighborhoods active transportation. Provide safe and accessible pedestrian and bicycle connections, as well as off-street trail connections, to and from residential neighborhoods.

Policy 3.100 Western Neighborhoods development. Encourage new development and infrastructure to be designed to minimize impacts on the area's streams, ravines, and forested slopes.

Policy 3.101 Western Neighborhoods habitat corridors. Preserve, enhance, and connect the area's network of habitat areas and corridors, streams, parks, and tree canopy.

Policy 3.102 Western Neighborhoods trails. Develop pedestrian-oriented connections and enhance the Western Neighborhoods' distinctive system of trails to increase safety, expand mobility, access to nature, and active living opportunities in the area.

126. Finding: Policies 3.98 through 3.102 provide direction on the desired characteristics and functions of the Western Neighborhoods Pattern Area. The FFTZ amendments affect allowed uses in industrial zones. There are not existing FFTs in the Western Neighborhoods Pattern Area. These policies do not apply.

Chapter 4: Design and Development

Goal 4.A: Context-sensitive design and development. New development is designed to respond to and enhance the distinctive physical, historic, and cultural qualities of its location, while accommodating growth and change.

127. Finding: The City Council interprets the goals and policies of this chapter to address site design and the relationship between building, site, streets and public realm, historic/ cultural preservation, and the integration of nature. The City Council finds that this chapter is about how Portland looks and functions and how development should respect context. Most importantly, this chapter provides the direction to protect human and environmental health and minimizes risk from natural hazards.

The FFTZ amendments regulate a land use (Bulk Fossil Fuel Terminals), but do not impose new standards that regulate site design, or the relationship to the street or adjacent land uses. Additionally, the changes do not impact how the terminals function beyond limits to fossil fuel storage capacity.

Goal 4.B: Historic and cultural resources. Historic and cultural resources are integral parts of an urban environment that continue to evolve and are preserved.

128. Finding: Historic and cultural resources are located throughout the City, but very few are located in the industrial zones where the FFTZ amendments change the allowed uses. There are no designated Historic Landmarks or Districts in or immediately adjacent to any of the existing FFTs. Existing historic resource protections are not being amended (Chapter 33.445).

Goal 4.C: Human and environmental health. Neighborhoods and development are efficiently designed and built to enhance human and environmental health: they protect safety and livability; support local access to healthy food; limit negative impacts on water, hydrology, and air quality; reduce carbon emissions; encourage active and sustainable design; protect wildlife; address urban heat islands; and integrate nature and the built environment.

129. Finding: As relevant here, the City Council finds that this goal seeks to ensure that development is designed and built in a manner that improves human and environmental health. Human and environmental health are improved by development that results in more safety and minimizes negative impacts on the environment. Portland's FFTs are within a disaster-prone area that is at risk for a catastrophic Cascadia earthquake disaster. Most of Portland's employment and industrial zones are in areas with high to very high levels of liquefaction susceptibility, as documented by the

2018 DOGAMI Earthquake Regional Impact Analysis. Fossil fuel infrastructure poses considerable risks to human and environmental health in the event of a major earthquake.

The City Council interprets this goal to mean that the first step in enhancing human and environmental health is to stop increasing the risk. Continuing to allow the increase in FFTs in a high risk area increases the risk to the surrounding industrial district and Portland as a whole. The FFTZ amendments limit future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. Further, by designating existing FFTs as a limited use, as opposed to a prohibited nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which ultimately can protect human and environmental health.

Goal 4.D: Urban resilience. Buildings, streets, and open spaces are designed to ensure long-term resilience and to adjust to changing demographics, climate, and economy, and withstand and recover from natural disasters.

130. Finding: Portland's FFTs are within a disaster-prone area that is at risk for a catastrophic Cascadia earthquake disaster. Most of Portland's employment and industrial zones are in areas with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. Fossil fuel infrastructure poses considerable risks to human and environmental health in the event of a major earthquake.

The City Council interprets this goal to mean building are designed for long-term resilience and can recover from natural disasters. The City Council finds that the first step in making Portland more resilient is to stop increasing the risk. Continuing to allow the increase in FFTs in a high risk area increases the risk to the surrounding industrial district and the Willamette River. The FFTZ amendments limit future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. Further, by designating existing FFTs as a limited use, as opposed to a prohibited nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which ultimately can make Portland more resilient.

Context

Policy 4.1. Pattern areas. Encourage building and site designs that respect the unique built, natural, historic, and cultural characteristics of Portland's five pattern areas described in Chapter 3: Urban Form.

Policy 4.2. Community identity. Encourage the development of character-giving design features that are responsive to place and the cultures of communities.

Policy 4.3. Site and context. Encourage development that responds to and enhances the positive qualities of site and context — the neighborhood, the block, the public realm, and natural features.

131. Finding: The City Council interprets policies 4.1 through 4.3 as to provide general policy direction on how to consider context for design and development standards. The City Council finds that in the City's industrial areas, the physical design features are less important and are less sensitive to changes from new development. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones.

Policy 4.4. Natural features and green infrastructure. Integrate natural and green infrastructure such as trees, green spaces, ecoroofs, gardens, green walls, and vegetated stormwater management systems, into the urban environment. Encourage stormwater facilities that are designed to be a functional and attractive element of public spaces, especially in centers and corridors.

132. Finding: The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones, including those that apply to natural features and green infrastructure.

Policy 4.5. Pedestrian-oriented design. Enhance the pedestrian experience throughout Portland through public and private development that creates accessible, safe, and attractive places for all those who walk and/or use wheelchairs or other mobility devices.

133. Finding: The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones, including those that apply to pedestrian-oriented design features.

Policy 4.6. Street orientation. Promote building and site designs that enhance the pedestrian experience with windows, entrances, pathways, and other features that provide connections to the street environment.

134. Finding: The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones, including those that apply to street orientation.

Policy 4.7. Development and public spaces. Guide development to help create high-quality public places and street environments while considering the role of adjacent development in framing, shaping, and activating the public space of streets and urban parks.

135. Finding: The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones.

Policy 4.8. Alleys. Encourage the continued use of alleys for parking access, while preserving pedestrian access. Expand the number of alley-facing accessory dwelling units.

136. Finding: The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones, including those that apply to alleys.

Policy 4.9. Transitional urbanism. Encourage temporary activities and structures in places that are transitioning to urban areas to promote job creation, entrepreneurship, active streets, and human interaction.

137. Finding: The City Council interprets this policy to relate to temporary commercial activities and public gathering places outside of industrial areas. This policy does not apply.

Health and safety

Policy 4.10. Design for active living. Encourage development and building and site design that promotes a healthy level of physical activity in daily life.

Policy 4.11. Access to light and air. Provide for public access to light and air by managing and shaping the height and mass of buildings while accommodating urban-scale development.

Policy 4.12. Privacy and solar access. Encourage building and site designs that consider privacy and solar access for residents and neighbors while accommodating urban-scale development.

Policy 4.13. Crime-preventive design. Encourage building, site, and public infrastructure design approaches that help prevent crime.

Policy 4.14. Fire prevention and safety. Encourage building and site design that improves fire prevention, safety, and reduces seismic risks.

138. Finding: The City Council interprets policies 4.10 through 4.14 to relate to development in areas where people live. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones. This policy does not apply.

Residential areas

Policy 4.15. Residential area continuity and adaptability. Encourage more housing choices to accommodate a wider diversity of family sizes, incomes, and ages, and the changing needs of households over time. Allow adaptive reuse of existing buildings, the creation of accessory dwelling units, and other arrangements that bring housing diversity that is compatible with the general scale and patterns of residential areas.

Policy 4.16. Scale and patterns. Encourage design and development that complements the general scale, character, and natural landscape features of neighborhoods. Consider building forms, scale, street frontage relationships, setbacks, open space patterns, and landscaping. Allow for a range of architectural styles and expression.

Policy 4.17. **Demolitions.** Encourage alternatives to the demolition of sound housing, such as rehabilitation and adaptive reuse, especially affordable housing, and when new development would provide no additional housing opportunities beyond replacement.

Policy 4.18. **Compact single-family options**. Encourage development and preservation of small resource-efficient and affordable single-family homes in all areas of the city.

Policy 4.19. Resource efficient and healthy residential design and development. Support resource efficient and healthy residential design and development.

139. Finding: The City Council interprets policies 4.15 through 4.19 to relate to development inside residential areas. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in residential areas. This policy does not apply.

Design and development of centers and corridors

Policy 4.20. Walkable scale. Focus services and higher-density housing in the core of centers to support a critical mass of demand for commercial services and more walkable access for customers.

Policy 4.21. Street environment. Encourage development in centers and corridors to include amenities that create a pedestrian-oriented environment and provide places for people to sit, spend time, and gather.

Policy 4.22. Relationship between building height and street size. Encourage development in centers and corridors that is responsive to street space width, thus allowing taller buildings on wider streets.

Policy 4.23. Design for pedestrian and bicycle access. Provide accessible sidewalks, high-quality bicycle access, and frequent street connections and crossings in centers and corridors.

Policy 4.24. Drive-through facilities. Prohibit drive through facilities in the Central City, and limit new development of new ones in the Inner Ring Districts and centers to support a pedestrian-oriented

environment.

Policy 4.25. Residential uses on busy streets. Improve the livability of places and streets with high motor vehicle volumes. Encourage landscaped front setbacks, street trees, and other design approaches to buffer residents from street traffic.

Policy 4.26. Active gathering places. Locate public squares, plazas, and other gathering places in centers and corridors to provide places for community activity and social connections. Encourage location of businesses, services, and arts adjacent to these spaces that relate to and promote the use of the space.

Policy 4.27. Protect defining features. Protect and enhance defining places and features of centers and corridors, including landmarks, natural features, and historic and cultural resources.

Policy 4.28. Historic buildings in centers and corridors. Protect and encourage the restoration and improvement of historic resources in centers and corridors.

Policy 4.29. Public art. Encourage new development and public places to include design elements and public art that contribute to the distinct identities of centers and corridors, and that highlight the history and diverse cultures of neighborhoods.

140. Finding: Policies 4.20 through 4.29 provide direction regarding design and development in centers and corridors. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in centers and corridors. There are no existing FFTs in centers and corridors. These policies does not apply.

Transitions

Policy 4.30. Scale transitions. Create transitions in building scale in locations where higher-density and higher-intensity development is adjacent to smaller-scale single-dwelling zoning. Ensure that new high-density and large-scale infill development adjacent to single dwelling zones incorporates design elements that soften transitions in scale and limit light and privacy impacts on adjacent residents.

Policy 4.31. Land use transitions. Improve the interface between non-residential uses and residential uses in areas where commercial or employment uses are adjacent to residentially-zoned land.

Policy 4.32. Industrial edge. Protect non-industrially zoned parcels from the adverse impacts of facilities and uses on industrially zoned parcels using a variety of tools, including but not limited to vegetation, physical separation, land acquisition, and insulation to establish buffers between industrial sanctuaries and adjacent residential or mixed-use areas to protect both the viability of long-term industrial operations and the livability of adjacent areas.

141. Finding: Policies 4.30 through 4.32 provide direction regarding transitions between different types of land uses. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones. These policies do not apply.

Off-site impacts

Policy 4.33. Off-site impacts. Limit and mitigate public health impacts, such as odor, noise, glare, light pollution, air pollutants, and vibration that public facilities, land uses, or development may have on adjacent residential or institutional uses, and on significant fish and wildlife habitat areas. Pay attention to limiting and mitigating impacts to under-served and under-represented communities.

142. Finding: The 2035 Comprehensive Plan defines the verb “limit” to mean to minimize or reduce

something or the effects of something relative to the current situation or to a potential future situation. The verb "mitigate", which is not defined in the 2035 Comprehensive Plan, means to make less severe. The City Council finds that this policy relates to impacts that public facilities or land uses may have on neighboring residential or institutional uses and on significant habitats. Further, the City Council interprets this policy to apply to non-residential uses, such as those allowed in commercial and employment zones, that can have negative public health impacts on adjacent residential and institutional uses. The FFTZ amendments do not change any of the development standards that regulate these types of uses. These policies do not apply.

Policy 4.34. Auto-oriented facilities, uses, and exterior displays. Minimize the adverse impacts of highways, auto-oriented uses, vehicle areas, drive-through areas, signage, and exterior display and storage areas on adjacent residential uses.

Policy 4.35. Noise impacts. Encourage building and landscape design and land use patterns that limit and/or mitigate negative noise impacts to building users and residents, particularly in areas near freeways, regional truckways, major city traffic streets, and other sources of noise.

Policy 4.36. Air quality impacts. Encourage building and landscape design and land use patterns that limit and/or mitigate negative air quality impacts to building users and residents, particularly in areas near freeways, regional truckways, high traffic streets, and other sources of air pollution.

Policy 4.37. Diesel emissions. Encourage best practices to reduce diesel emissions and related impacts when considering land use and public facilities that will increase truck or train traffic.

Policy 4.38. Light pollution. Encourage lighting design and practices that reduce the negative impacts of light pollution, including sky glow, glare, energy waste, impacts to public health and safety, disruption of ecosystems, and hazards to wildlife.

Policy 4.39. Airport noise. Partner with the Port of Portland to require compatible land use designations and development within the noise-affected area of Portland International Airport, while providing disclosure of the level of aircraft noise and mitigating the potential impact of noise within the affected area.

Policy 4.40. Telecommunication facility impacts. Mitigate the visual impact of telecommunications and broadcast facilities near residentially-zoned areas through physical design solutions.

143. Finding: Policies 4.34 through 4.40 provide direction regarding transitions between different types of land uses. The City Council interprets these policies to apply to non-residential uses that can have negative impacts on adjacent residential and institutional uses. The FFTZ amendments do not change any of the development standards that regulate these types of uses. These policies do not apply.

Scenic resources

Policy 4.41. Scenic resources**.** Enhance and celebrate Portland's scenic resources to reinforce local identity, histories, and cultures and contribute toward way-finding throughout the city. Consider views of mountains, hills, buttes, rivers, streams, wetlands, parks, bridges, the Central City skyline, buildings, roads, art, landmarks, or other elements valued for their aesthetic appearance or symbolism.

Policy 4.42. Scenic resource protection. Protect and manage designated significant scenic resources by maintaining scenic resource inventories, protection plans, regulations, and other tools.

Policy 4.43. Vegetation management. Maintain regulations and other tools for managing vegetation in a manner that preserves or enhances designated significant scenic resources.

Policy 4.44. Building placement, height, and massing. Maintain regulations and other tools related to building placement, height, and massing to preserve designated significant scenic resources.

Policy 4.45. Future development. Encourage new public and private development to create new public viewpoints providing views of Portland's rivers, bridges, surrounding mountains, hills and buttes, the Central City skyline, and other landmark features.

144. Finding: Policies 4.41 through 4.45 provide direction regarding Portland's designated scenic resources. The FFTZ amendments do not affect management of designated scenic resources. In 1991, the City adopted the Scenic Resources Protection Plan and applied a scenic (s) overlay zone to protect significant scenic resources. Two of the FFTs (BP West Coast and NuStar/Shore Terminals) are in a (s) overlay zone. The scenic resource protections (Chapter 33.480) are not amended by this ordinance and the height limits associated with the (s) overlay zone will continue to apply to the two FFT sites.

Historic and cultural resources

Policy 4.46. Historic and cultural resource protection. Protect and encourage the restoration of historic buildings, places, and districts that contribute to the distinctive character and history of Portland's evolving urban environment.

Policy 4.47. State and federal historic resource support. Advocate for state and federal policies, programs, and legislation that would enable stronger historic resource designations, protections, and rehabilitation programs.

Policy 4.48. Continuity with established patterns. Encourage development that fills in vacant and underutilized gaps within the established urban fabric, while preserving and complementing historic resources.

Policy 4.49. Resolution of conflicts. Adopt and periodically update design guidelines for unique historic districts. Refine base zoning in historic districts to consider the character of the historic resources in the district.

Policy 4.50. Demolition. Protect historic resources from demolition. Provide opportunities for public comment, and encourage pursuit of alternatives to demolition or other actions that mitigate for the loss.

Policy 4.51. City-owned historic resources. Maintain City-owned historic resources with necessary upkeep and repair.

Policy 4.52. Historic Resources Inventory. Maintain and periodically update Portland's Historic Resources Inventory to inform historic and cultural resource preservation strategies.

Policy 4.53. Preservation equity. Expand historic preservation inventories, regulations, and programs to encourage historic preservation in areas and in communities that have not benefited from past historic preservation efforts, especially in areas with high concentrations of under-served and/or under-represented people.

Policy 4.54. Cultural diversity. Work with Portland's diverse communities to identify and preserve places of historic and cultural significance.

Policy 4.55. Cultural and social significance. Encourage awareness and appreciation of cultural diversity and the social significance of historic places and their roles in enhancing community identity and sense of place.

Policy 4.56. Community structures. Encourage the adaptive reuse of historic community structures, such as former schools, meeting halls, and places of worship, for arts, cultural, and community uses that continue their role as anchors for community and culture.

Policy 4.57. Economic viability. Provide options for financial and regulatory incentives to allow for the productive, reasonable, and adaptive reuse of historic resources.

Policy 4.58. Archaeological resources. Protect and preserve archaeological resources, especially those sites and objects associated with Native American cultures. Work in partnership with Sovereign tribes, Native American communities, and the state to protect against disturbance to Native American archaeological resources.

145. Finding: The City Council interprets that policies 4.46 through 4.58 relate to implementation approaches directly related to the preservation of historic and cultural resources, which is not impacted by the FFTZ amendments. Historic and cultural resources are located throughout Portland, but very few are in the industrial zones where the FFTZ amendments change the allowed uses. There are no designated Historic Landmarks or Districts in or immediately adjacent to any of the existing FFTs. Existing historic resource protections are not being amended (Chapter 33.445). Therefore, the policies do not apply.

Public art

Policy 4.59. Public art and development. Create incentives for public art as part of public and private development projects.

146. Finding: The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not create incentives for public art. This policy does not apply.

Resource-efficient design and development

Policy 4.60. Rehabilitation and adaptive reuse. Encourage rehabilitation and adaptive reuse of buildings, especially those of historic or cultural significance, to conserve natural resources, reduce waste, and demonstrate stewardship of the built environment.

147. Finding: The City Council interprets this policy to generally apply to the rehabilitation and adaptive reuse of buildings, particularly those with historic or cultural significance. The Council finds that the FFTs are not buildings with historic or cultural significant. Nonetheless, the FFTZ regulations encourage the rehabilitation of existing FFTs, as a whole, by designating them as a limited use, which allows the terminals to continue to operate and invest in facilities that improve their ability to withstand a major earthquake. Further, the use limitations provide flexibility to FFTs to rehabilitate existing fossil fuel storage tank capacity to increase safety.

Policy 4.61. Compact housing. Promote the development of compact, space- and energy-efficient housing types that minimize use of resources such as smaller detached homes or accessory dwellings and attached homes.

148. Finding: The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to housing. This policy does not apply.

Policy 4.62. Seismic and energy retrofits. Promote seismic and energy-efficiency retrofits of historic buildings and other existing structures to reduce carbon emissions, save money, and improve public safety.

149. Finding: The City Council finds that "promote" means to "further the progress of, advance, or raise." Further, the City Council finds that seismic and energy-efficiency retrofits can be promoted

through incentives or regulatory measures. The purpose of the policy is to reduce carbon emissions, save money and improve public safety. The City Council finds that the policy does not require all three elements are satisfied with every action. Rather, those are three outcomes that may be achieved when the City Council promotes seismic and energy-efficiency retrofits.

Here, the City Council finds that the FFTZ regulations promote seismic retrofits of existing FFTs by designating them as a limited use, which allows the terminals to continue to operate and invest in facilities that improve their ability to withstand a major earthquake. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety.

Policy 4.63. Life cycle efficiency. Encourage use of technologies, techniques, and materials in building design, construction, and removal that result in the least environmental impact over the life cycle of the structure.

Policy 4.64. Deconstruction. Encourage salvage and reuse of building elements when demolition is necessary or appropriate.

Policy 4.65. Materials and practices. Encourage use of natural, resource-efficient, recycled, recycled content, and non-toxic building materials and energy-efficient building practices.

Policy 4.66. Water use efficiency. Encourage site and building designs that use water efficiently and manage stormwater as a resource.

Policy 4.67. Optimizing benefits. Provide mechanisms to evaluate and optimize the range of benefits from solar and renewable resources, tree canopy, ecoroofs, and building design.

Policy 4.68. Energy efficiency. Encourage and promote energy efficiency significantly beyond the Statewide Building Code and the use of solar and other renewable resources in individual buildings and at a district scale.

Policy 4.69. Reduce carbon emissions. Encourage a development pattern that minimizes carbon emissions from building and transportation energy use.

Policy 4.70. District energy systems. Encourage and remove barriers to the development and expansion of low-carbon heating and cooling systems that serve multiple buildings or a broader district.

Policy 4.71. Ecodistricts. Encourage ecodistricts, where multiple partners work together to achieve sustainability and resource efficiency goals at a district scale.

Policy 4.72. Energy-producing development. Encourage and promote development that uses renewable resources, such as solar, wind, and water to generate power on-site and to contribute to the energy grid.

150. Finding: Policies 4.63 through 4.72 provide direction regarding resource-efficient design and development. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones. These policies do not apply.

Designing with nature

Policy 4.73. Design with nature. Encourage design and site development practices that enhance, and avoid the degradation of, watershed health and ecosystem services and that incorporate trees and vegetation.

Policy 4.74. Flexible development options. Encouraging flexibility in the division of land, the siting and design of buildings, and other improvements to reduce the impact of development on environmentally-sensitive areas and to retain healthy native and beneficial vegetation and trees.

Policy 4.75. Low-impact development and best practices. Encourage use of low-impact development, habitat-friendly development, bird-friendly design, and green infrastructure.

Policy 4.76. Impervious surfaces. Limit use of and strive to reduce impervious surfaces and associated impacts on hydrologic function, air and water quality, habitat connectivity, tree canopy, and urban heat island effects.

Policy 4.77. Hazards to wildlife. Encourage building, lighting, site, and infrastructure design and practices that provide safe fish and wildlife passage, and reduce or mitigate hazards to birds, bats, and other wildlife.

Policy 4.78. Access to nature. Promote equitable, safe, and well-designed physical and visual access to nature for all Portlanders, while also maintaining the functions and values of significant natural resources, fish, and wildlife. Provide access to major natural features, including:

- Water bodies such as the Willamette and Columbia rivers, Smith and Bybee Lakes, creeks, streams, and sloughs.
- Major topographic features such as the West Hills, Mt. Tabor, and the East Buttes.
- Natural areas such as Forest Park and Oaks Bottom.

151. Finding: Policies 4.73 through 4.78 provide direction regarding the interface between development and natural features and functions. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones. These policies do not apply.

Hazard-resilient design

Policy 4.79. Natural hazards and climate change risks and impacts. Limit development in or near areas prone to natural hazards, using the most current hazard and climate change-related information and maps.

152. Finding: The 2035 Comprehensive Plan defines "limit" as to minimize or reduce something or the effects of something relative to the current situation or to a potential future situation. Most of Portland's industrial zoning are in areas with high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. Fossil fuel infrastructure poses considerable risks in the event of a major earthquake. The FFTZ amendments will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will minimize the risk from a future major earthquake compared to the current regulations that allow for unlimited growth in FFTs.

Policy 4.80. Geological hazards. Evaluate slope and soil characteristics, including liquefaction potential, landslide hazards, and other geologic hazards.

153. Most of Portland's employment and industrial zones are in areas with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. Fossil fuel infrastructure poses considerable risks in the event of a major earthquake. According to the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report, a magnitude 8 or 9 Cascadia Subduction Zone earthquake would impact the CEI Hub with: ground shaking; liquefaction (soil behavior phenomenon in which a saturated sand softens

and loses strength during strong earthquake ground shaking); lateral spreading (where surficial soil permanently moves laterally due to earthquake shaking); landslides; co-seismic settlement (where the ground surface is permanently lowered due to seismic shaking); and bearing capacity failures (when the foundation soil cannot support the structure it is intended to support).

According to the 2012 DOGAMI report, liquefaction and lateral spreading hazards are of primary concern to the fossil fuel terminals. As described in the 2012 Oregon State Energy Assurance Plan, this Critical Energy Infrastructure Hub (CEI Hub) sits on top of very poor soils that are highly susceptible to earthquake-induced permanent ground deformation. The CEI Hub is adjacent to the Willamette River and has extensive deposits of highly liquefiable soils. These soils (made of sands, silts, gravels and clays) have been naturally deposited by river activity as well as been created from man-made activities, such as hydraulically placed material from river dredging or debris placed as landfill.

The FFTs have significant seismic risks because most of the tanks have been constructed without any or only limited seismic design criteria on soils with moderate to high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's 2016 Critical Energy Infrastructure Hub Study and the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report. Continuing to allow the increase in FFTs in a high risk area increases the risk to the surrounding industrial district and the Willamette River. The FFTZ amendments limit future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. Further, by designating existing FFTs as a limited use, as opposed to a prohibited nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which ultimately can make Portland more resilient.

Policy 4.81. Disaster-resilient development. Encourage development and site-management approaches that reduce the risks and impacts of natural disasters or other major disturbances and that improve the ability of people, wildlife, natural systems, and property to withstand and recover from such events.

154. Finding: The verb “encourage”, which is defined in the 2035 Comprehensive Plan, means to promote or foster using some combination of voluntary approaches, regulations, or incentives. Council finds that development reduces the risks and impacts of natural disasters when the risk is lessened relative to the current situation. Additionally, the ability to withstand and recover from such events is improved when the current situation is made better.

Most of Portland’s employment and industrial zones are in areas with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. Continuing to allow the unlimited increase in storage capacity at FFTs in a high risk area increases the risk to the surrounding industrial district and the Willamette River. The FFTZ amendments are a regulatory approach that improves Portland’s ability to withstand and recover from an earthquake by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which is an improvement over the current regulations that allow for unlimited growth in FFTs. The FFTZ regulations focus on limiting risk by limiting fossil fuel storage capacity, but designate existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety.

Policy 4.82. Portland Harbor facilities. Reduce natural hazard risks to critical public and private energy and transportation facilities in the Portland Harbor.

155. Finding: Critical Energy Infrastructure Hub is located in the Portland Harbor. Most of the Portland Harbor is an area rated with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. Fossil fuel infrastructure poses considerable risks in the event of a major earthquake. The FFTZ amendments support this policy by restricting new fossil fuel storage capacity in order to stop increasing the risk, effectively lessening the risk relative to the current situation. The FFTs have significant seismic risks because most of the tanks have been constructed without any or only limited seismic design criteria on soils with moderate to high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's 2016 Critical Energy Infrastructure Hub Study and the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report. Continuing to allow the increase fossil fuel storage tank capacity in a high risk area increases the risk to the surrounding industrial district, the Willamette River and Portland as a whole. The FFTZ amendments limit future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of fossil fuel storage capacity at existing FFTs, with limited exceptions. Further, by designating existing FFTs as a limited use, as opposed to a prohibited nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which ultimately can reduce the natural hazards risk.

Policy 4.83. Urban heat islands. Encourage development, building, landscaping, and infrastructure design that reduce urban heat island effects.

156. Finding: The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones. This policy does not apply.

Policy 4.84. Planning and disaster recovery. Facilitate effective disaster recovery by providing recommended updates to land use designations and development codes, in preparation for natural disasters.

157. Finding: The City Council finds that it can "facilitate" disaster recovery by evaluating and adopting changes to land use designations and development codes in a manner that better prepares the city for a natural disaster. The FFTZ amendments are an update to the allowed uses in employment and industrial zones. The FFTZ amendments are a regulatory approach that improves Portland's ability to withstand and recover from an earthquake by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which is an improvement over the current regulations that allow for unlimited growth in FFTs. The FFTZ regulations focus on limiting risk by limiting fossil fuel storage capacity, but designate existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake.

Healthy food

Policy 4.85. Grocery stores and markets in centers. Facilitate the retention and development of grocery stores, neighborhood-based markets, and farmer's markets offering fresh produce in centers.

Policy 4.86. Neighborhood food access. Encourage small, neighborhood-based retail food opportunities, such as corner markets, food co-ops, food buying clubs, and community-supported agriculture pickup/drop-off sites, to fill in service gaps in food access across the city.

Policy 4.87. Growing food. Increase opportunities to grow food for personal consumption, donation, sales, and educational purposes.

Policy 4.88. Access to community gardens. Ensure that community gardens are allowed in areas close to or accessible via transit to people living in areas zoned for mixed-use or multi-dwelling development, where residents have few opportunities to grow food in yards.

158. Finding: Policies 4.85 through 4.88 provide direction regarding the role of development in contributing to access to healthy foods. The City Council interprets this policy to relate to development outside of industrial areas. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones. These policies do not apply.

Chapter 5: Housing

Goal 5.A: Housing diversity. Portlanders have access to high-quality affordable housing that accommodates their needs, preferences, and financial capabilities in terms of different types, tenures, density, sizes, costs, and locations.

Goal 5.B: Equitable access to housing. Portland ensures equitable access to housing, making a special effort to remove disparities in housing access for people with disabilities, people of color, low-income households, diverse household types, and older adults.

Goal 5.C: Healthy connected city. Portlanders live in safe, healthy housing that provides convenient access to jobs and to goods and services that meet daily needs. This housing is connected to the rest of the city and region by safe, convenient, and affordable multimodal transportation.

Goal 5.D: Affordable housing. Portland has an adequate supply of affordable housing units to meet the needs of residents vulnerable to increasing housing costs.

Goal 5.E: High-performance housing. Portland residents have access to resource-efficient and high-performance housing for people of all abilities and income levels.

159. Finding: The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not affect housing development. Except for Policies 5.11 to 5.16, which City Council interprets as requiring evaluation and analysis as to who will benefit and who will be burdened by a planning decision, the City Council finds that these goals and policies do not apply.

Diverse and expanding housing supply

Policy 5.1. Housing supply. Maintain sufficient residential development capacity to accommodate Portland's projected share of regional household growth.

Policy 5.2. Housing growth. Strive to capture at least 25 percent of the seven-county region's residential growth (Multnomah, Washington, Clackamas, Yamhill, Columbia, Clark, and Skamania counties).

Policy 5.3. Housing potential. Evaluate plans and investments for their impact on housing capacity, particularly the impact on the supply of housing units that can serve low- and moderate-income households, and identify opportunities to meet future demand.

Policy 5.4. **Housing types.** Encourage new and innovative housing types that meet the evolving needs of Portland households, and expand housing choices in all neighborhoods. These housing types include but are not limited to single-dwelling units; multi-dwelling units; accessory dwelling units;

small units; pre-fabricated homes such as manufactured, modular, and mobile homes; co-housing; and clustered housing/clustered services.

Policy 5.5. Housing in centers. Apply zoning in and around centers that allows for and supports a diversity of housing that can accommodate a broad range of households, including multi-dwelling and family-friendly housing options.

Policy 5.6. Middle housing. Enable and encourage development of middle housing. This includes multi-unit or clustered residential buildings that provide relatively smaller, less expensive units; more units; and a scale transition between the core of the mixed use center and surrounding single family areas. Where appropriate, apply zoning that would allow this within a quarter mile of designated centers, corridors with frequent service transit, high capacity transit stations, and within the Inner Ring around the Central City.

Policy 5.7. Adaptable housing. Encourage adaption of existing housing and the development of new housing that can be adapted in the future to accommodate the changing variety of household types.

Policy 5.8. Physically-accessible housing. Allow and support a robust and diverse supply of affordable, accessible housing to meet the needs of older adults and people with disabilities, especially in centers, station areas, and other places that are proximate to services and transit.

Policy 5.9. Accessible design for all. Encourage new construction and retrofitting to create physically-accessible housing, extending from the individual unit to the community, using Universal Design Principles.

Policy 5.10. Coordinate with fair housing programs. Foster inclusive communities, overcome disparities in access to community assets, and enhance housing choice for people in protected classes throughout the city by coordinating plans and investments to affirmatively further fair housing.

Housing access

Policy 5.11. Remove barriers. Remove potential regulatory barriers to housing choice for people in protected classes to ensure freedom of choice in housing type, tenure, and location.

Policy 5.12. Impact analysis. Evaluate plans and investments, significant new infrastructure, and significant new development to identify potential disparate impacts on housing choice, access, and affordability for protected classes and low-income households. Identify and implement strategies to mitigate the anticipated impacts.

Policy 5.13. Housing stability. Coordinate plans and investments with programs that prevent avoidable, involuntary evictions and foreclosures.

Policy 5.14. Preserve communities. Encourage plans and investments to protect and/or restore the socioeconomic diversity and cultural stability of established communities.

Policy 5.15. Gentrification/displacement risk. Evaluate plans and investments, significant new infrastructure, and significant new development for the potential to increase housing costs for, or cause displacement of communities of color, low- and moderate-income households, and renters. Identify and implement strategies to mitigate the anticipated impacts.

Policy 5.16. Involuntary displacement. When plans and investments are expected to create neighborhood change, limit the involuntary displacement of those who are under-served and under-represented. Use public investments and programs, and coordinate with nonprofit housing organizations (such as land trusts and housing providers) to create permanently-affordable housing

and to mitigate the impacts of market pressures that cause involuntary displacement.

160. Finding: The City Council interprets Policies 5.11 to 5.16 as requiring evaluation and analysis as to who will benefit and who will be burdened by a planning decision, including amendments to the Zoning Code. The City Council finds that one factor in housing stability and displacement is access to job opportunities across a wide range of wage scales, especially middle wage jobs such as those found in Portland's industrial districts. The FFTZ amendments apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not change the land capacity in Portland's industrial districts and continue to support continued growth in those districts.

The regulations are narrowly crafted to support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels.

Policy 5.17. Land banking. Support and coordinate with community organizations to hold land in reserve for affordable housing, as an anti-displacement tool, and for other community development purposes.

Policy 5.18. **Rebuild communities**. Coordinate plans and investments with programs that enable communities impacted by involuntary displacement to maintain social and cultural connections, and re-establish a stable presence and participation in the impacted neighborhoods.

Policy 5.19. **Aging in place.** Encourage a range of housing options and supportive environments to enable older adults to remain in their communities as their needs change.

Housing location

Policy 5.20. Coordinate housing needs in high-poverty areas. Meet the housing needs of under-served and under-represented populations living in high-poverty areas by coordinating plans and investments with housing programs.

Policy 5.21. Access to opportunities. Improve equitable access to active transportation, jobs, open spaces, high-quality schools, and supportive services and amenities in areas with high concentrations of under-served and under-represented populations and an existing supply of affordable housing.

Policy 5.22. New development in opportunity areas. Locate new affordable housing in areas that have high/medium levels of opportunity in terms of access to active transportation, jobs, open spaces, high-quality schools, and supportive services and amenities.

Policy 5.23. Higher-density housing. Locate higher-density housing, including units that are affordable and accessible, in and around centers to take advantage of the access to active transportation, jobs, open spaces, schools, and various services and amenities.

Policy 5.24. Impact of housing on schools. Evaluate plans and investments for the effect of housing development on school enrollment, financial stability, and student mobility. Coordinate with school districts to ensure plans are aligned with school facility plans.

Housing affordability

Policy 5.25. Housing preservation. Preserve and produce affordable housing to meet needs that are not met by the private market by coordinating plans and investments with housing providers and

organizations.

Policy 5.26. Regulated affordable housing target. Strive to produce at least 10,000 new regulated affordable housing units citywide by 2035 that will be affordable to households in the 0-80 percent MFI bracket.

Policy 5.27. Funding plan. Encourage development or financial or regulatory mechanisms to achieve the regulated affordable housing target set forth for 2035.

Policy 5.28. Inventory of regulated affordable housing. Coordinate periodic inventories of the supply of regulated affordable housing in the four-county (Clackamas, Clark, Multnomah and Washington) region with Metro.

Policy 5.29. Permanently-affordable housing. Increase the supply of permanently-affordable housing, including both rental and homeownership opportunities.

Policy 5.30. Housing cost burden. Evaluate plans and investments for their impact on household cost, and consider ways to reduce the combined cost of housing, utilities, and/or transportation. Encourage energy-efficiency investments to reduce overall housing costs.

Policy 5.31. Household prosperity. Facilitate expanding the variety of types and sizes of affordable housing units, and do so in locations that provide low-income households with greater access to convenient transit and transportation, education and training opportunities, the Central City, industrial districts, and other employment areas.

Policy 5.32. **Affordable housing in centers.** Encourage income diversity in and around centers by allowing a mix of housing types and tenures.

Policy 5.33. Central City affordable housing. Encourage the preservation and production of affordable housing in the Central City to take advantage of the area's unique concentration of active transportation access, jobs, open spaces, and supportive services and amenities.

Policy 5.34. Affordable housing resources. Pursue a variety of funding sources and mechanisms including new financial and regulatory tools to preserve and develop housing units and various assistance programs for households whose needs are not met by the private market.

Policy 5.35. Inclusionary housing. Use inclusionary zoning and other regulatory tools to effectively link the production of affordable housing to the production of market-rate housing.

Policy 5.36. Impact of regulations on affordability. Evaluate how existing and new regulations affect private development of affordable housing, and minimize negative impacts where possible. Avoid regulations that facilitate economically-exclusive neighborhoods.

Policy 5.37. Mobile home parks. Encourage preservation of mobile home parks as a low/moderate-income housing option. Evaluate plans and investments for potential redevelopment pressures on existing mobile home parks and impacts on park residents and protect this low/moderate-income housing option. Facilitate replacement and alteration of manufactured homes within an existing mobile home park.

Policy 5.38. Workforce housing. Encourage private development of a robust supply of housing that is affordable to moderate-income households located near convenient multimodal transportation that provides access to education and training opportunities, the Central City, industrial districts, and other employment areas.

Policy 5.39. Compact single-family options. Encourage development and preservation of small resource-efficient and affordable single-family homes in all areas of the city.

Policy 5.40 Employer-assisted housing. Encourage employer-assisted affordable housing in conjunction with major employment development.

Policy 5.41 Affordable homeownership. Align plans and investments to support improving homeownership rates and locational choice for people of color and other groups who have been historically under-served and under-represented.

Policy 5.42 Homeownership retention. Support opportunities for homeownership retention for people of color and other groups who have been historically under-served and under-represented.

Policy 5.43 Variety in homeownership opportunities. Encourage a variety of ownership opportunities and choices by allowing and supporting including but not limited to condominiums, cooperatives, mutual housing associations, limited equity cooperatives, land trusts, and sweat equity.

Policy 5.44 Regional cooperation. Facilitate opportunities for greater regional cooperation in addressing housing needs in the Portland metropolitan area, especially for the homeless, low- and moderate-income households, and historically under-served and under-represented communities.

Policy 5.45 Regional balance. Encourage development of a "regional balance" strategy to secure greater regional participation to address the housing needs of homeless people and communities of color, low- and moderate-income households, and historically under-served and under-represented communities throughout the region.

Homelessness

Policy 5.46. Housing continuum. Prevent homelessness and reduce the time spent being homeless by ensuring that a continuum of safe and affordable housing opportunities and related supportive services are allowed, including but not limited to Permanent Supportive Housing, transitional housing, self-built micro housing communities, emergency shelters, temporary shelters such as warming centers, and transitional campgrounds.

Health, safety, and well-being

Policy 5.47 Healthy housing. Encourage development and maintenance of all housing, especially multi-dwelling housing, that protects the health and safety of residents and encourages healthy lifestyles and active living.

Policy 5.48 Housing safety. Require safe and healthy housing free of hazardous materials such as lead, asbestos, and radon.

Policy 5.49. Housing quality. Encourage housing that provides high indoor air quality, access to sunlight and outdoor spaces, and is protected from excessive noise, pests, and hazardous environmental conditions.

Policy 5.50. High-performance housing. Encourage energy efficiency, green building practices, materials, and design to produce healthy, efficient, durable, and adaptable homes that are affordable or reasonably priced.

Policy 5.51. Healthy and active living. Encourage housing that provides features supportive of healthy eating and active living such as useable open areas, recreation areas, community gardens, crime-preventive design, and community kitchens in multifamily housing.

Policy 5.52. Walkable surroundings. Encourage active transportation in residential areas through the development of pathways, sidewalks, and high-quality onsite amenities such as secure bicycle parking.

Policy 5.53. Responding to social isolation. Encourage site designs and relationship to adjacent developments that reduce social isolation for groups that often experience it, such as older adults, people with disabilities, communities of color, and immigrant communities.

Policy 5.54 Renter protections. Enhance renter health, safety, and stability through education, expansion of enhanced inspections, and support of regulations and incentives that protect tenants and prevent involuntary displacement.

Chapter 6: Economic Development

Goal 6.A: Prosperity. Portland has vigorous economic growth and a healthy, diverse economy that supports prosperity and equitable access to employment opportunities for an increasingly diverse population. A strong economy that is keeping up with population growth and attracting resources and talent can:

- Create opportunity for people to achieve their full potential.
- Improve public health.
- Support a healthy environment.
- Support the fiscal well-being of the city.

161. Finding: The City Council interprets this goal to apply to the city as whole and not to individual businesses or sectors of business. The City Council interprets this goal to mean that Portland has a strong economy with employment opportunities for a diverse population. The City Council finds that an important factor in a diverse economy is to provide access to job opportunities across a wide range of wage scales, especially middle wage jobs such as those found in Portland's industrial districts.

The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes maintain Portland's employment land supply to create opportunities for a growing economy.

These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The remaining industrial uses continue to operate under the current development review system. The FFTZ amendments establish clear definitions for fossil fuels and the Bulk Fossil Fuel Terminal use category. These changes are fair to existing FFTs by designating them as a limited use that allows the terminals to continue to operate and. The limited use designation also allows the FFTs to invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity, such as consolidating smaller tanks into larger tanks.

Goal 6.B: Development. Portland supports an attractive environment for industrial, commercial, and institutional job growth and development by: 1) maintaining an adequate land supply; 2) a local development review system that is nimble, predictable, and fair; and 3) high-quality public facilities and services.

162. Finding: The verb "support", which is defined in the 2035 Comprehensive Plan, means to aid the cause of. The City Council interprets this goal to apply to the city as whole and not to individual businesses or sectors of business. The City Council interprets this goal to mean that an attractive

environment for economic development has three elements: 1) adequate land supply; 2) a predictable development review system; and 3) high-quality public services. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes maintain Portland's employment land supply.

These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The remaining industrial uses continue to operate under the current development review system. The FFTZ amendments establish clear definitions for fossil fuels and the Bulk Fossil Fuel Terminal use category. These changes are fair to existing FFTs by designating them as a limited use that allows the terminals to continue to operate and. The limited use designation also allows the FFTs to invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity, such as consolidating smaller tanks into larger tanks.

The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments in the industrial districts where the FFTs are located.

Goal 6.C: Business district vitality. Portland implements land use policy and investments to:

- Ensure that commercial, institutional, and industrial districts support business retention and expansion.

163. Finding: The verb "ensure", which is defined in the 2035 Comprehensive Plan, means to make sure that something will happen or be available. The City Council interprets this goal to apply to the city as whole and not to individual businesses or sectors of business. Further, the City Council interprets this goal to mean that the City will provide an adequate land base that is supported by public infrastructure investments that are needed to support businesses. The FFTZ amendments are consistent with this goal because they do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not conflict with the intent to support business retention and expansion in Portland's industrial districts. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The other industrial uses continue to operate under current regulations. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for expansion through exceptions, such as aviation or renewable fuels. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments in the industrial districts where the FFTs are located.

- Encourage the growth of districts that support productive and creative synergies among local businesses.

164. Finding: The verb "encourage", which is defined in the 2035 Comprehensive Plan, means to promote or foster using some combination of voluntary approaches, regulations, or incentives. The City Council interprets this goal to apply to the growth of districts in the city as whole and not to individual businesses or sectors of business. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not conflict with the intent to encourage growth in Portland's industrial districts. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial

districts. The remaining industrial uses continue to operate under current regulations. These changes support the retention of existing fossil fuel terminals by designating them as a limited use, as opposed to a non-conforming use, that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels, to the storage capacity restrictions.

- Provide convenient access to goods, services, and markets.

165. **Finding:** The verb "provide", which is defined in the 2035 Comprehensive Plan, means to supply, offer, or make available. The adjective "convenient", which is not defined in the 2035 Comprehensive Plan, means to be situated to allow easy access. The City Council interprets this goal to apply to the city as whole and not to individual businesses or sectors of business. The City Council finds that the goal provides that the City will implement land use policies that will result in easy access to goods, services, and markets. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments to facilitate access to goods, services and markets. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The remaining industrial uses continue to operate under current regulations. These changes support the retention of existing fossil fuel terminals by designating them as a limited use, as opposed to a non-conforming use, that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. The limits and exceptions will enable the FFTs to maintain their ability to provide goods and services to their markets. The ordinance does not restrict the markets that can be served by the existing FFTs.

These regulations allow the existing FFTs to continue to operate as a limited use. The regulations also provide exceptions to the storage capacity limits for aviation and renewable fuels.

BPS presented evidence that national petroleum consumption forecast out to 2050 is essentially flat, which is a continuation of historic trends in Oregon and Washington, during a period of a thriving economy. In addition, ODOT is forecasting a decline in motor fuel consumption over the medium term to 2029. The more recent cargo forecasts project a modest growth in volumes, but those volumes do not exceed the historic peak volumes that were handled by the Portland terminals. No other evidence of future demand for fossil fuels was submitted in testimony. Therefore, the City Council finds that the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs.

Further, the City finds that reducing risk from a major earthquake outweighs the marginal impact to accommodating future demand for fossil fuels. In addition, continuing to locate all of the fossil fuel storage capacity in a high risk area in Portland is counter to 2013 Oregon Resilience Plan that recommends the diversification of locations for the storage of liquid fuels and identification of new liquid fuel energy corridors.

- Take advantage of our location and quality of life advantages as a gateway to world-class natural landscapes in Northwest Oregon, Southwest Washington, and the Columbia River Basin, and a robust interconnected system of natural landscapes within the region's Urban Growth Boundary.

166. **Finding:** The City Council interprets this goal to apply to the city as whole and not to individual businesses or sectors of business. Further, the City Council interprets the intent of this goal is to leverage location, access and quality of life as an advantage to attracting and retaining businesses

and employees to Portland. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, that could undermine business retention and expansion in Portland's industrial districts. Therefore, these changes do not conflict with the intent of this goal to encourage business district vitality in Portland.

Diverse, expanding city economy

Policy 6.1. Diverse and growing community. Expand economic opportunity and improve economic equity for Portland's diverse, growing population through sustained business growth.

167. Finding: The City Council interprets this policy to apply to the city as whole and not to individual businesses or sectors of business. The City Council finds that this policy requires business growth that makes economic opportunity available to a more diverse and growth community. The City Council finds that an important factor in improving economic equity is to provide access to job opportunities across a wide range of wage scales, especially middle wage jobs such as those found in Portland's industrial districts.

The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes maintain Portland's employment land supply to create opportunities for a growing economy.

These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The remaining industrial uses continue to operate under the current development review system. The FFTZ amendments establish clear definitions for fossil fuels and the Bulk Fossil Fuel Terminal use category. These changes are fair to existing FFTs by designating them as a limited use that allows the terminals to continue to operate and. The limited use designation also allows the FFTs to invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity, such as consolidating smaller tanks into larger tanks.

Policy 6.2. Diverse and expanding economy. Align plans and investments to maintain the diversity of Portland's economy and status as Oregon's largest job center with growth across all sectors (commercial, industrial, creative, and institutional) and across all parts of the city.

Policy 6.3. Employment growth. Strive to capture at least 25 percent of the seven-county region's employment growth (Multnomah, Washington, Clackamas, Yamhill, Columbia, Clark, and Skamania counties).

Policy 6.4. Fiscally-stable city. Promote a high citywide jobs-to-households ratio that supports tax revenue growth at pace with residential demand for municipal services.

168. Finding: The City Council interprets Policies 6.2 through 6.3 to apply to the city as whole and not to individual businesses or sectors of business. The City Council interprets these policies to support a growing economy as described in the EOA. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes maintain Portland's employment land supply to create opportunities for a growing economy consistent with the EOA.

Policy 6.5. Economic resilience. Improve Portland's economic resilience to impacts from climate change and natural disasters through a strong local economy and equitable opportunities for prosperity.

169. Finding: The verb "improve", which is defined in the 2035 Comprehensive Plan, means to make the current situation better; increase; enhance. "Resilience" means the "reducing the vulnerability of

our neighborhoods, businesses, and built and natural infrastructure to withstand challenges – environmental, economic and social – that may result from major hazardous events." The City Council finds that "economic resilience" is improved when the local economy is strong and everyone has access to opportunities for prosperity.

The Council finds that the first step in making the current situation better is to ensure that the situation does not get worse. Continuing to allow the increase in FFTs in a high-risk area increases the risk to the surrounding industrial district and the Willamette River. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will be an improvement compared to the current regulations that allow for unlimited growth in FFTs. Continuing to allow the unlimited increase in storage capacity at FFTs in a high-risk area increases the risk to the surrounding industrial district and the Willamette River in the event of a major earthquake. The FFTZ regulations improve resilience by designating existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake. Allowing the FFTs to continue to operate and invest in upgrades will help support a strong local economy by providing for a continuing supply of fossil fuels. Further, the use limitations (33.140.100.B.17.a) provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety.

Policy 6.6. Low-carbon and renewable energy economy. Align plans and investments with efforts to improve energy efficiency and reduce lifecycle carbon emissions from business operations. Promote employment opportunities associated with the production of renewable energy, energy efficiency projects, waste reduction, production of more durable goods, and recycling.

170. Finding: The City Council interprets this policy to support changes to business operations to become more energy efficient and reduce carbon emissions. Further, this policy encourages renewable energy, including renewable fuels as an alternative to fossil fuels. The FFTZ amendments are consistent with this policy by providing an exception that allows for new storage capacity for renewable, non-fossil fuels.

Policy 6.7. Competitive advantages. Maintain and strengthen the city's comparative economic advantages including access to a high-quality workforce, business diversity, competitive business climate, and multimodal transportation infrastructure.

171. Finding: The verb "maintain", which is defined in the 2035 Comprehensive Plan, means to keep what you have; conserve; preserve; continue. The verb "strengthen", which is not defined in the 2035 Comprehensive Plan, means to make stronger, improve. The City Council interprets this policy to apply to the city as whole and not to individual businesses or sectors of business. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland, therefore will not have a significant impact on the workforce. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, that could undermine the business retention and expansion in Portland's industrial districts, which in turn supports Portland's business diversity across the city as a whole.

The regulations maintain a competitive business climate by being narrowly crafted to support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels, to the storage capacity restrictions. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments to maintain and

strengthen the multimodal transportation infrastructure in the northwest industrial area where the FFTs are located.

Policy 6.8. Business environment. Use plans and investments to help create a positive business environment in the city and provide strategic assistance to retain, expand, and attract businesses.

172. Finding: The City Council interprets this policy to apply to districts as whole and not to individual businesses or sectors of business. The City Council also determines that creating a positive business environment does not mean allowing for the unlimited expansion of all business types. These regulations are narrowly crafted to apply to only one type of business that makes up a minority part of the businesses found in Portland.

As outlined in Goal 6.B, the City Council defines a "positive business environment" as providing an adequate land capacity that is supported by high-quality infrastructure, with predictable and fair development review regulations. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not change the land capacity in Portland's industrial districts. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in Portland's industrial districts.

The regulations only limit one type of business (FFTs), due to the moderate to high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's 2016 Critical Energy Infrastructure Hub Study and the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report. However, the regulations maintain a competitive business climate by being narrowly crafted to support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels, to the storage capacity restrictions.

The City's Enterprise Zone program, which provides a property tax exemption to industrial firms, is one of the main ways in which the City of Portland provides strategic assistance to businesses. These changes do not affect that program, and FFTs that make new capital investments remain eligible for that program.

Policy 6.9. Small business development. Facilitate the success and growth of small businesses and coordinate plans and investments with programs that provide technical and financial assistance to promote sustainable operating practices.

173. Finding: The City Council interprets this policy to provide direction to the City to provide technical and financial assistance to small businesses, such as Prosper Portland's Inclusive Business Resource Network or the Thriving Small Business Loan Program. The FFTZ amendments is a land use decision that amends the Zoning Code and does not change programs that provide technical and financial assistance to small businesses. This policy does not apply.

Policy 6.10. Business innovation. Encourage innovation, research, development, and commercialization of new technologies, products, and services through responsive regulations and public sector approaches.

174. Finding: The verb "encourage", which is defined in the 2035 Comprehensive Plan, means to promote or foster using some combination of voluntary approaches, regulations, or incentives. The City Council interprets this policy to apply to districts as whole and not to individual businesses or sectors of business. These regulations apply to only one type of business that makes up a minority

part of the businesses found in Portland's industrial districts. These changes support innovation at existing fossil fuel terminals by designating them as a limited use, as opposed to a non-conforming use, that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels, to the storage capacity restrictions. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety.

Policy 6.11. Sharing economy. Encourage mechanisms that enable individuals, corporations, non-profits, and government to market, distribute, share, and reuse excess capacity in goods and services. This includes peer-to-peer transactions, crowd funding platforms, and a variety of business models to facilitate borrowing and renting unused resources.

175. Finding: The verb "encourage", which is defined in the 2035 Comprehensive Plan, means to promote or foster using some combination of voluntary approaches, regulations, or incentives. The City Council interprets this policy to apply to districts as whole and not to individual businesses or sectors of business. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. This policy does not apply.

Policy 6.12. Economic role of livability and ecosystem services. Conserve and enhance Portland's cultural, historic, recreational, educational, food-related, and ecosystem assets and services for their contribution to the local economy and their importance for retention and attraction of skilled workers and businesses.

176. Finding: The FFTZ map amendments do not affect Portland's cultural, historic, recreational, educational, food-related, and ecosystem assets and services for their contribution to the local economy. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. In considering the natural hazard risks that the FFTs pose to the ecosystem services on the river, as identified by the Portland Bureau of Emergency Management's Critical Energy Infrastructure Hub Study (2016), the City Council finds that continuing to allow the unlimited increase in storage capacity at FFTs in a high risk area does not enhance the current or future ecosystem services of the rivers. Therefore, the FFTZ regulations focus on limiting risk by limiting fossil fuel storage capacity, but designate existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake. These regulations will limit the risks to the natural resource habitat functions and ecosystem services provided by the rivers.

Land development

Policy 6.13. Land supply. Provide supplies of employment land that are sufficient to meet the long-term and short-term employment growth forecasts, adequate in terms of amounts and types of sites, available and practical for development and intended uses. Types of sites are distinguished primarily by employment geographies identified in the Economic Opportunities Analysis, although capacity needs for building types with similar site characteristics can be met in other employment geographies.

177. Finding: The verb "provide", which is defined in the 2035 Comprehensive Plan, means to supply, offer, or make available. The City Council interprets this policy to mean that the City will provide an adequate land base that is supported by public infrastructure investments that are needed to support businesses. The FFTZ amendments are consistent with this policy because they do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not conflict with the intent to provide an adequate land supply in Portland's industrial districts, as defined in the EOA. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The other industrial uses

continue to operate under current regulations. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments in the industrial districts where the FFTs are located.

Policy 6.14. Brownfield redevelopment. Overcome financial-feasibility gaps to cleanup and redevelop 60 percent of brownfield acreage by 2035.

178. Finding: The City Council interprets this policy to mean that the City will create programs to support the brownfield cleanup target. The FFTZ amendments are Zoning Code changes that are not directly related to the cleanup of brownfields. However, the changes designate existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities, including brownfield remediation.

Policy 6.15. Regionally-competitive development sites. Improve the competitiveness of vacant and underutilized sites located in Portland's employment areas using incentives, and regional and state assistance for needed infrastructure and site readiness improvements.

179. Finding: The verb "improve", which is defined in the 2035 Comprehensive Plan, means to make the current situation better; increase; enhance. The City Council interprets this policy to apply to the city as whole and not to individual businesses or sectors of business. The FFTZ amendments are consistent with this policy because they do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes maintain an adequate land supply in Portland's industrial districts. Further, these regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The other industrial uses continue to operate under current regulations. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments in the industrial districts where the FFTs are located. Finally, the City's Enterprise Zone program, which provides a property tax exemption to industrial firms, is one of the key incentives that the City of Portland offers to encourage businesses to invest in sites. These changes do not affect that program.

Policy 6.16. Regulatory climate. Improve development review processes and regulations to encourage predictability and support local and equitable employment growth and encourage business retention, including:

180. Finding: The verb "improve", which is defined in the 2035 Comprehensive Plan, means to make the current situation better; increase; enhance. The City Council interprets this policy to mean that changes to development regulations should consider how those changes affect predictability, equitable employment growth, and business retention. The City Council interprets this policy to apply to the city as whole and not to individual businesses or sectors of business.

In terms of predictability, these development regulations apply to only one type of business that makes up a minority part of the businesses found in Portland. The development regulations are clear and objective, with clearly defined terms, such as what is a fossil fuel, to provide predictability in regulating FFTs.

The City Council defines equitable employment growth as providing for job opportunities across a wide range of wage scales, especially middle wage jobs such as those found in Portland's industrial districts. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not change

the land capacity in Portland's industrial districts and continue to support continued growth in those districts.

The regulations are narrowly crafted to support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels.

6.16.a. Assess and understand cumulative regulatory costs to promote Portland's financial competitiveness with other comparable cities.

181. Finding: The City Council interprets this policy to apply to a consideration of the cost, in terms of the time it takes to go through the development review process, the permit fees, and the system development charges, associated with the development review process. This policy applies to the city as whole and not to individual businesses or sectors of business. These regulations apply to only one type of business that makes up a small part of the businesses found in Portland's industrial districts, therefore the regulatory cost impact is limited. The FFTZ amendments do not change any of the associated permit fees or system development charges, therefore it does not impact Portland's financial competitiveness.

6.16.b. Promote certainty for new development through appropriate allowed uses and "clear and objective" standards to permit typical development types without a discretionary review.

6.16.c. Allow discretionary-review to facilitate flexible and innovative approaches to meet requirements.

182. Finding: The City Council interprets policy 6.16.b and 6.16.c to work in tandem. Under policy 6.16.b, the direction is to promote certainty through appropriate allowed uses and "clear and objective" standards. apply to the city as whole and not to individual businesses or sectors of business. The regulations promote certainty by being narrowly crafted to apply only to fossil fuel terminals. Designating FFTs as a limited use, as opposed to a non-conforming use, allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, through clear and objective standards and definitions.

The City Council did not establish a discretionary conditional use review for the FFT use, due to the moderate to high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's 2016 Critical Energy Infrastructure Hub Study and the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report. The City Council finds that reducing risk from a major earthquake outweighs the policy direction to provide flexible and innovative approaches to accommodating additional storage capacity through a discretionary review process, in part, because continuing to locate all of the fossil fuel storage capacity in a high risk area in Portland is counter to the 2013 Oregon Resilience Plan that recommends the diversification of locations for the storage of liquid fuels and identification of new liquid fuel energy corridors.. The FFTs with access to the river are within the Greenway Overlay Zone (33.440), which establishes a discretionary review process to allow for industrial development, while preserving and enhancing the riparian habitat along the river. The FFTZ amendments do not amend the Greenway Overlay Zone standards or review process.

6.16.d. Design and monitor development review processes to avoid unnecessary delays.

183. Finding: The FFTZ amendments do not modify the development review process for FFTs. Designating the FFTs as a limited use does not subject those uses to new or additional development

reviews. This ordinance includes a directive for BPS to monitor the effectiveness of this regulation and report back to City Council in two years.

6.16.e. Promote cost effective compliance with federal and state mandates, productive intergovernmental coordination, and efficient, well-coordinated development review and permitting procedures.

184. Finding: The City Council interprets this policy to apply to districts as whole and not to individual businesses or sectors of business. The City has an established procedure for coordinated review of river-related development, including docks, in areas where city, state and federal agencies all have jurisdiction. The Streamlining Team was established pursuant to a 2003 Intergovernmental Agreement between the City of Portland (City), NOAA Fisheries, Army Corps of Engineers (Corps), and the U.S. Fish and Wildlife Service (USFWS). The FFTZ amendments do not change these procedures and there is no impact to this coordinated process.

6.16.f. Consider short-term market conditions and how area development patterns will transition over time when creating new development regulations.

185. Finding: The City Council interprets this policy to apply to the city as whole and not to individual businesses or sectors of business. As described in the adopted EOA, Portland has a tight supply of industrial land. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes will not affect Portland's short-term industrial land supply. These regulations are consistent with Policy 6.37 (Industrial Sanctuaries) in that the City does not expect the industrial character and development pattern in these districts to transition over time. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels.

Policy 6.17. Short-term land supply. Provide for a competitive supply of development-ready sites with different site sizes and types, to meet five-year demand for employment growth in the Central City, industrial areas, campus institutions, and neighborhood business districts.

186. Finding: The verb "provide", which is defined in the 2035 Comprehensive Plan, means to supply, offer, or make available. The City Council interprets this policy to mean that the City will provide an adequate land base that is supported by public infrastructure investments that are needed to support businesses. The FFTZ amendments are consistent with this policy because they do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not conflict with the intent to provide an adequate land supply in Portland's industrial districts. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The other industrial uses continue to operate under current regulations. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments in the industrial districts where the FFTs are located.

Policy 6.18. Evaluate land needs. Update the Economic Opportunities Analysis and short-term land supply strategies every five to seven years.

187. Finding: The City Council interprets this policy to provide direction to the city to update the EOA. The EOA was adopted in 2016 and is still within the time range. The FFTZ amendments do not amend the EOA. Therefore, this policy does not apply.

Policy 6.19. Corporate headquarters. Provide land opportunities for development of corporate headquarters campuses in locations with suitable transportation facilities.

188. Finding: The verb "provide", which is defined in the 2035 Comprehensive Plan, means to supply, offer, or make available. The City Council interprets this policy to mean that the City will provide an adequate land base that is supported by public infrastructure investments that are needed for corporate headquarters. The FFTZ amendments are consistent with this policy because they do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not conflict with the intent to provide an adequate land supply in Portland's industrial districts. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The other industrial uses continue to operate under current regulations. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments in the industrial districts where the FFTs are located.

Traded sector competitiveness

Policy 6.20. Traded sector competitiveness. Align plans and investments with efforts to improve the city and regional business environment for traded sector and export growth. Participate in regional and statewide initiatives.

Policy 6.21. Traded sector diversity. Encourage partnerships to foster the growth, small business vitality, and diversity of traded sectors.

Policy 6.22. Clusters. Align plans and investments with efforts that direct strategic business development resources to enhance the competitiveness of businesses in traded sector clusters.

189. Finding: The 2035 Comprehensive Plan defines "traded sector" as a business sector consisting of companies that compete in markets extending beyond the metropolitan region. The City Council interprets policies 6.20 through 6.22 to apply to the city as whole and does not require the City to allow for the unlimited expansion of individual businesses or sectors of business. The City Council finds that fossil fuel energy is not identified as a key traded sector in city, regional or statewide initiatives. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not conflict with the intent to maintain Portland's industrial districts as part of the efforts to support trade sector and export growth over time. These changes support the retention of existing fossil fuel terminals by designating them as a limited use, as opposed to a non-conforming use, that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels, to the storage capacity restrictions. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the northwest industrial area as part of the City's traded sector economic development strategy.

Policy 6.23. Trade and freight hub. Encourage investment in transportation systems and services that will retain and expand Portland's competitive position as a West Coast trade gateway and freight distribution hub.

190. Finding: The verb "encourage", which is defined in the 2035 Comprehensive Plan, means to promote or foster using some combination of voluntary approaches, regulations, or incentives. The City Council interprets this policy to apply to the city as whole and not to individual businesses or sectors of business. The City Council interprets the policy in two ways. First, the City will promote

and encourage public sector investments in the freight transportation system, including those by the City, the Port of Portland, Metro, and the State of Oregon. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the northwest industrial area where the FFTs are located.

Second, these changes support the continuing investment in existing fossil fuel terminals by designating them as a limited use, as opposed to a non-conforming use, that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. In addition, the ordinance does not regulate transloading facilities, docks or pipelines – facilities that are key components of the multimodal freight transportation system. Existing FFTs and other industrial uses can make investments in multimodal freight facilities.

Finally, the City's Enterprise Zone program, which provides a property tax exemption to industrial firms, is one of the key incentives that the City of Portland offers to encourage businesses to invest in their facilities, including private multi-modal transportation systems such as docks, pipelines and transloading facilities. These changes do not affect that program, and FFTs that make new capital investments remain eligible for that program.

Testimony by the Western States Petroleum Association claims that the ordinance will exclude Portland from the national and international energy markets. There is no explanation of what the opportunity is in national and international energy markets and no explanation as to how the ordinance excludes Portland from those markets. Only fossil tank capacity is regulated. Other types of infrastructure are not regulated by this ordinance. Furthermore, local and regional economic development strategies do not identify the energy sector as a key target industry.

Policy 6.24. Traded sector land supply. Foster traded sector retention, growth, and competitive advantages in industrial districts and the Central City. Recognize the concentration of traded-sector businesses in these districts.

191. Finding: The verb "foster", which is defined in the 2035 Comprehensive Plan, means to encourage or guide the incremental development of something over a long period of time. The City Council interprets this policy to apply to districts as whole and not to individual businesses or sectors of business. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, the retention, growth, and competitive advantages of Portland's industrial districts are maintained over time. These regulations are consistent with Policy 6.37 (Industrial Sanctuaries) in that the City does not expect the industrial character and development pattern in these districts to transition over time. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the northwest industrial area where the FFTs are located.

Policy 6.25. Import substitution. Encourage local goods production and service delivery that substitute for imports and help keep the money Portlanders earn in the local economy.

192. Finding: The Council interprets this policy to encourage a strong local manufacturing and service delivery sector. The policy is not intended to and should not be read to discourage imported goods or services or place any burdens on interstate commerce. The FFTZ amendments do not include

map changes, nor do they allow for new incompatible land uses; therefore, these changes do not conflict with the intent to maintain Portland's industrial districts over time, which provides a land supply for local businesses that produce goods and deliver services. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan; therefore, the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the northwest industrial area that can support service delivery.

Policy 6.26. Business opportunities in urban innovation. Strive to have Portland's built environment, businesses, and infrastructure systems showcase examples of best practices of innovation and sustainability.

193. **Finding:** These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The other industrial uses continue to operate under current regulations. This policy does not apply.

Equitable household prosperity

Policy 6.27. Income self-sufficiency. Expand access to self-sufficient wage levels and career ladders for low-income people by maintaining an adequate and viable supply of employment land and public facilities to support and expand opportunities in Portland for middle- and high-wage jobs that do not require a 4-year college degree.

6.27.a. Support the role of industrial districts as a leading source of middle-wage jobs that do not require a 4-year college degree and as a major source of wage-disparity reduction for under-served and under-represented communities.

6.27.b. Evaluate and limit negative impacts of plans and investments on middle and high wage job creation and retention.

194. **Finding:** The 2035 Comprehensive Plan defines "expand" as make something that already exists more extensive. The City Council finds income self-sufficiency is dependent on access to job opportunities across a wide range of wage scales, especially middle wage jobs such as those found in Portland's industrial districts. The City Council interprets this policy to apply to districts as whole and not to individual businesses or sectors of business. The FFTZ amendments apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not change the land capacity in Portland's industrial districts and continue to support continued employment growth in those districts.

The regulations are narrowly crafted to support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels.

The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the northwest industrial area that can support the growth of middle wage jobs.

Policy 6.28. East Portland job growth. Encourage investment in, and alignment of, poverty-reduction efforts that address economic development, land use, transportation, housing, social services, public health, community development, and workforce development.

195. **Finding:** The City Council interprets this policy to apply to districts as whole and not to individual businesses or sectors of business. There are no FFTs in East Portland. The FFTZ amendments apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not change the land capacity in Portland's industrial districts and continue to support continued employment growth in those districts, including the existing industrial and employment land in East Portland.

Policy 6.29. Poverty reduction. Encourage investment in, and alignment of, poverty-reduction efforts that address economic development, land use, transportation, housing, social services, public health, community development, and workforce development.

Policy 6.30. Disparity reduction. Encourage investment in, and alignment of, public efforts to reduce racial, ethnic, and disability-related disparities in income and employment opportunity.

196. **Finding:** For policies 6.29 and 6.30, the City Council finds that access to job opportunities across a wide range of wage scales, especially middle wage jobs such as those found in Portland's industrial districts is a key element of poverty and disparity reduction efforts. The City Council interprets this policy to apply to districts as whole and not to individual businesses or sectors of business. The FFTZ amendments apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not change the land capacity in Portland's industrial districts and continue to support continued employment growth in those districts.

Policy 6.31. Minority-owned, woman-owned and emerging small business (MWESB) assistance. Ensure that plans and investments improve access to contracting opportunities for minority-owned, woman-owned, and emerging small businesses.

197. **Finding:** The City Council interprets this policy to focused on supporting minority-owned, woman-owned, and emerging small businesses through City programs. This policy does not apply.

Policy 6.32. Urban renewal plans. Encourage urban renewal plans to primarily benefit existing residents and businesses within the urban renewal area through:

1. Revitalization of neighborhoods.
2. Expansion of housing choices.
3. Creation of business and job opportunities.
4. Provision of transportation linkages.
5. Protection of residents and businesses from the threats posed by gentrification and displacement.
6. The creation and enhancement of those features which improve the quality of life within the urban renewal area.

198. **Finding:** The City Council interprets this policy to focused on urban renewal plans and not the Zoning Code. There are three urban renewal areas (Central Eastside, Willamette Industrial and Airport Way) that have industrial zoning that is amended by this ordinance. None of the existing FFTs are in the URAs. The FFTZ amendments do not include changes to any urban renewal plans. This policy does not apply.

Central City

Policy 6.33. Central City. Improve the Central City's regional share of employment and continue its growth as the unique center of both the city and the region for innovation and exchange through

commerce, employment, arts, culture, entertainment, tourism, education, and government.

Policy 6.34. Central City industrial districts. Protect and facilitate the long-term success of Central City industrial districts, while supporting their evolution into places with a broad mix of businesses with high employment densities.

Policy 6.35. Innovation districts. Provide for expanding campus institutions in the Central City and Marquam Hill, and encourage business development that builds on their research and development strengths.

199. Finding: The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located in the Central City. These policies do not apply.

Industrial and employment districts

Policy 6.36. Industrial land. Provide industrial land that encourages industrial business retention, growth, and traded sector competitiveness as a West Coast trade and freight hub, a regional center of diverse manufacturing, and a widely-accessible base of family-wage jobs, particularly for under-served and under-represented people.

200. Finding: The verb "provide", which is defined in the 2035 Comprehensive Plan, means to supply, offer, or make available. The City Council interprets this policy to apply to districts as whole and not to individual businesses or sectors of business. The City Council interprets this policy to be satisfied by maintaining an adequate industrial land base as determined by the EOA. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not reduce the industrial land designated in Portland. This ordinance does not amend the EOA. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels, to the storage capacity restrictions.

Policy 6.37. Industrial sanctuaries. Protect industrial land as industrial sanctuaries identified on the Comprehensive Plan Map primarily for manufacturing and distribution uses and to encourage the growth of industrial activities in the city.

201. Finding: The verb "protect", which is defined in the 2035 Comprehensive Plan, means to defend or guard against loss, injury, or destruction. The City Council interprets this policy to apply to the city as whole and does not require the City to allow for the unlimited expansion of individual businesses or sectors of business. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes will maintain Portland's industrial sanctuaries as part of strategy to maintain an adequate industrial land base as determined by the EOA. These regulations are consistent with this policy in that the City does not expect the industrial character and development pattern in these districts to transition over time. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels, to the storage capacity restrictions. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the northwest industrial area where the FFTs are located.

Policy 6.38. Prime industrial land retention. Protect the multimodal freight-hub industrial districts at the Portland Harbor, Columbia Corridor, and Brooklyn Yard as prime industrial land that is prioritized for long-term retention.

202. Finding: The City Council finds that this policy is implemented through the Prime Industrial Overlay Zone. The FFTZ amendments do not include changes to the overlay zone or to the Zoning Map where it is applied. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes will maintain the prime industrial land for long-term retention.

6.38.a. Protect prime industrial lands from quasi-judicial Comprehensive Plan Map amendments that convert prime industrial land to non-industrial uses, and consider the potential for other map amendments to otherwise diminish the economic competitiveness or viability of prime industrial land.

203. Finding: The City Council finds that this policy applies to quasi-judicial decisions. Even if it did apply here, the City Council finds that this policy is implemented through the Prime Industrial Overlay Zone. The FFTZ amendments do not include changes to the overlay zone or to the Zoning Map where it is applied. The FFTZ amendments do not allow for new incompatible land uses or other map amendments, therefore, these changes will maintain the economic competitiveness or viability of prime industrial land.

6.38.b. Limit conversion of prime industrial land through land use plans, regulations, or public land acquisition for non-industrial uses, especially land that can be used by river-dependent and river-related industrial uses.

204. Finding: The City Council finds that this policy is implemented through the Prime Industrial Overlay Zone. The FFTZ amendments do not include changes to the overlay zone or to the Zoning Map where it is applied. The FFTZ amendments apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, that would lead to the conversion of prime industrial land. The ordinance does not authorize public land acquisition.

6.38.c. Limit regulatory impacts on the capacity, affordability, and viability of industrial uses in the prime industrial area while ensuring environmental resources are also protected.

205. Finding: The City Council interprets this policy to require a balance between minimizing regulations on industrial uses while at the same time protecting environmental resources. Council finds that the limits here are storage limitations as it applies to one industrial use. Those limitations are carefully crafted to ensure that the industrial uses remain viable while still protecting the environmental resources.

6.38.d. Strive to offset the reduction of development capacity as needed, with additional prime industrial capacity that includes consideration of comparable site characteristics. Offsets may include but are not limited to additional brownfield remediation, industrial use intensification, strategic investments, and other innovative tools and partnerships that increase industrial utilization of industrial land.

206. Finding: The City Council interprets this policy to apply to districts as whole and not to individual businesses or sectors of business. The FFTZ amendments do not include changes to the overlay zone or to the Zoning Map where it is applied. The FFTZ amendments apply to only one type of use

that makes up a minority part of the uses found in Portland's industrial districts. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, that would lead to the conversion of prime industrial land, therefore, there is no reduction in development capacity.

Further, BPS presented evidence that national petroleum consumption forecast out to 2050 is essentially flat, which is a continuation of historic trends in Oregon and Washington, during a period of a thriving economy. In addition, ODOT is forecasting a decline in motor fuel consumption over the medium term to 2029. The more recent cargo forecasts project a modest growth in volumes, but those volumes do not exceed the historic peak volumes that were handled by the Portland terminals. No other evidence of future demand for fossil fuels was submitted in testimony. Therefore, the City Council finds that the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs. Therefore, no offsets are needed.

6.38.e. Protect prime industrial land for siting of parks, schools, large-format places of assembly, and large-format retail sales.

207. Finding: The City Council finds that this policy is implemented through the Prime Industrial Overlay Zone. The FFTZ amendments do not include changes to the overlay zone or to the Zoning Map where it is applied.

6.38.f. Promote efficient use of freight hub infrastructure and prime industrial land by limiting non-industrial uses that do not need to be in the prime industrial area.

208. Finding: The City Council finds that this policy is implemented through the Prime Industrial Overlay Zone. The FFTZ amendments do not include changes to the overlay zone or to the Zoning Map where it is applied. The FFTZ amendments do not allow for new incompatible land uses. Therefore, non-industrial uses continue to be limited.

Policy 6.39. **Harbor access lands**. Limit use of harbor access lands to river- or rail-dependent or related industrial land uses due to the unique and necessary infrastructure and site characteristics of harbor access lands for river-dependent industrial uses.

209. Finding: The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes will maintain Portland's harbor access lands for river- or rail-dependent or related industrial uses.

Policy 6.40. **Portland Harbor Superfund Site**. Take a leadership role to facilitate a cleanup of the Portland Harbor that moves forward as quickly as possible and that allocates cleanup costs fairly and equitably. Encourage a science-based and cost-effective cleanup solution that facilitates re-use of land for river- or rail-dependent or related industrial uses.

210. Finding: The City Council interprets this policy to mean that the City will take a lead role to facilitate cleanup of the Portland Harbor. The FFTZ amendments are Zoning Code changes that are not directly related to the cleanup of Portland Harbor. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes will maintain Portland's industrial sanctuaries for river- or rail-dependent or related industrial uses. However, the changes designate existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities, including brownfield remediation related to the Portland Harbor cleanup efforts.

Policy 6.41. Multimodal freight corridors. Encourage freight-oriented industrial development to locate where it can maximize the use of and support reinvestment in multimodal freight corridors.

211. Finding: The verb "encourage", which is defined in the 2035 Comprehensive Plan, means to promote or foster using some combination of voluntary approaches, regulations, or incentives. The City Council interprets this policy to apply to districts as whole and not to individual businesses or sectors of business. The City Council finds that the policy requires the City to promote freight-oriented industrial development to locate near existing multimodal freight corridors, which is primarily done through applying industrial zoning. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes continue to support freight-oriented industrial development. These regulations apply to only one type of business that makes up a small part of the businesses found in Portland's industrial districts. Transloading facilities are a defining characteristic of a Bulk Fossil Fuel Terminal, however, the ordinance does not regulate transloading facilities and only limits new fossil fuel storage tank capacity. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades to their intermodal facilities and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Finally, the ordinance does not regulate transloading facilities, docks or pipelines – facilities that are key components of the multimodal freight transportation system. Existing FFTs and other industrial uses can make investments in multimodal freight facilities. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the northwest industrial area where the FFTs are located.

Policy 6.42. Columbia East. Provide a mix of industrial and limited business park development in Columbia East (east of 82nd Avenue) that expand employment opportunities supported by proximity to Portland International Airport and multimodal freight access.

212. Finding: The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes are consistent with the intent to provide a mix of industrial and limited business park development in Columbia East. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones. None of the existing FFTs are located in the Columbia East geography.

Policy 6.43. Dispersed employment areas. Provide small, dispersed employment areas for a flexible and affordable mix of office, creative services, small-scale manufacturing, traded sector and distribution, and other small-format light industrial and commercial uses with access to nearby freeways or truck streets.

213. Finding: The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes are consistent with the intent to provide small, dispersed employment areas across Portland. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones. None of the existing FFTs are located in these dispersed employment areas.

Policy 6.44. Industrial land use intensification. Encourage reinvestment in, and intensification of, industrial land use, as measured by output and throughput per acre.

214. **Finding:** The verb "encourage", which is defined in the 2035 Comprehensive Plan, means to promote or foster using some combination of voluntary approaches, regulations, or incentives. The City Council interprets this policy to apply to industrial districts as whole and not to individual businesses or sectors of business. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes are consistent with the intent to maintain Portland's industrial districts over time. These changes support the reinvestment in existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Further, the use limitations (33.140.100.B.17.a) provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety.

The City's Enterprise Zone program, which provides a property tax exemption to industrial firms, is one of the key incentives that the City of Portland offers to encourage businesses to invest in their facilities, including private multi-modal transportation systems such as docks, pipelines and transloading facilities. These changes do not affect that program, and FFTs that make new capital investments remain eligible for that program.

Policy 6.45. **Industrial brownfield redevelopment**. Provide incentives, investments, technical assistance and other direct support to overcome financial-feasibility gaps to enable remediation and redevelopment of brownfields for industrial growth.

215. **Finding:** The City Council interprets this policy to mean that the City will create programs to support brownfield cleanup in industrial areas. The FFTZ amendments are Zoning Code changes that are not directly related to the cleanup of brownfields. However, the changes designate existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities, including brownfield remediation.

Policy 6.46. Impact analysis. Evaluate and monitor the impacts on industrial land capacity that may result from land use plans, regulations, public land acquisition, public facility development, and other public actions to protect and preserve existing industrial lands.

216. **Finding:** The City Council interprets this policy to provide direction to the city to evaluate and monitor industrial land capacity and development trends that result from plan and zoning changes. The ordinance includes a directive for BPS to monitor the effectiveness of this regulation and report back to City Council in two years.

Policy 6.47. Clean, safe, and green. Encourage improvements to the cleanliness, safety, and ecological performance of industrial development and freight corridors by facilitating adoption of market feasible new technology and design.

217. **Finding**: The verb "encourage", which is defined in the 2035 Comprehensive Plan, means to promote or foster using some combination of voluntary approaches, regulations, or incentives. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones. These changes encourage improvements by designating existing FFTs as a limited use that allows the terminals to continue to operate and invest in upgrades that can improve the cleanliness, safety, and ecological performance of FFTs.

Policy 6.48. Fossil fuel distribution. Limit fossil fuels distribution and storage facilities to those necessary to serve the regional market.

218. **Finding:** The 2035 Comprehensive Plan defines "limit" as to minimize or reduce relative to the current situation or to a potential future situation. The City Council interprets the phrase "regional market" to mean the state of Oregon and Southwest Washington in recognition that Portland's fossil fuel terminals currently handle 90% of the fossil fuels consumed in Oregon and Southwest Washington. BPS presented evidence that national petroleum consumption forecast out to 2050 is essentially flat, which is a continuation of historic trends in Oregon and Washington, during a period of a thriving economy. In addition, ODOT is forecasting a decline in motor fuel consumption over the medium term to 2029. The more recent cargo forecasts project a modest growth in volumes, but those volumes do not exceed the historic peak volumes that were handled by the Portland terminals. No other evidence of future demand for fossil fuels was submitted in testimony. Therefore, the City Council finds that the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs.

These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Further, the use limitations (33.140.100.B.17.a) provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety. In addition, limiting storage capacity to the existing facilities, with some exceptions, reduces risk from a major earthquake, which outweighs the policy direction to provide capacity to accommodate any potential future increase in fossil fuel consumption, in part, because continuing to locate all of the fossil fuel storage capacity in a high risk area in Portland is counter to the 2013 Oregon Resilience Plan that recommends the diversification of locations for the storage of liquid fuels and identification of new liquid fuel energy corridors.

Testimony by the Working Waterfront Coalition asserts that it is important for FFTs to invest in facilities as "demand continues". The testimony does not define or explain what is meant by the phrase "as demand continues". BPS presented evidence that national petroleum consumption forecast out to 2050 is essentially flat. In addition, ODOT is forecasting a decline in motor fuel consumption over the medium term to 2029. No other evidence of future demand for fossil fuels was submitted in testimony. Therefore, the City Council finds that the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs.

Testimony by the Western States Petroleum Association claims that the ordinance will undercut the ability to meet future energy needs; prevent and discourage equipment upgrades necessary to meet market demand; or fail to provide sufficient facilities and tank capacity to serve future energy needs. Only new fossil storage tank capacity is restricted, other equipment upgrades are allowed. "Future energy needs" are not defined. No supporting evidence is provided to define "market demand" or what is needed to meet "future energy needs". Additional testimony by the Western States Petroleum Association claims that the ordinance will freeze current infrastructure in place and would be insufficient for future fuel demand, by both quantity and type of fuel. "Future fuel demand" is not defined. The ordinance will not "freeze current infrastructure in place". The FFTZ amendments designate existing FFTs as a limited use specifically to allow the FFTs to continue to operate to supply fossil fuels and to allow for safety and seismic upgrades. Transloading facilities are a defining characteristic of a Bulk Fossil Fuel Terminal, however, the ordinance only limits new fossil fuel storage tank capacity. Existing fossil fuel storage tank capacity can be reconfigured. Other aspects of terminal infrastructure (pipelines, docks, transloading facilities) are not regulated by this ordinance. BPS presented evidence that national petroleum consumption forecast out to 2050 is essentially flat, which is a continuation of historic trends in Oregon and Washington, during a period of a thriving economy. In addition, ODOT is forecasting a decline in motor fuel consumption

over the medium term to 2029. Therefore, the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs.

Testimony by Zenith Energy claims that the ordinance will inhibit infrastructure upgrades to "meet changing market demands". There is no explanation of what are "changing market demands" or as why to storage capacity expansion is needed in conjunction with other infrastructure upgrades. The ordinance restricts new fossil storage tank capacity, other safety upgrades are allowed. BPS presented evidence that national petroleum consumption forecast out to 2050 is essentially flat, which is a continuation of historic trends in Oregon and Washington. In addition, ODOT is forecasting a decline in motor fuel consumption over the medium term to 2029. Therefore, the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs.

Policy 6.49. Industrial growth and watershed health. Facilitate concurrent strategies to protect and improve industrial capacity and watershed health in the Portland Harbor and Columbia Corridor areas.

219. Finding: The 2035 Comprehensive Plan defines "facilitate" to mean to make something easier, to help bring about or make run more smoothly. The verb "improve", which is defined in the 2035 Comprehensive Plan, means to make the current situation better; increase; enhance. Council interprets the policy to mean that the city should make strategies that both protect and improve industrial capacity will also protect and improve the watershed health easier. The City Council finds that the first step in making the current situation better is to ensure that the situation does not get worse. Continuing to allow the increase in FFTs in a high risk area increases the risk to watershed health. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will be an improvement compared to the current regulations that allow for unlimited growth in FFTs. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes maintain Portland's industrial capacity. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The remaining industrial uses continue to operate under current regulations. The FFTZ regulations designate existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake. Allowing the FFTs to continue to operate and invest in upgrades will help support a strong local economy by providing for a continuing supply of fossil fuels to support a strong local economy. Therefore, the FFT amendments do not impact the industrial capacity but at the same time they do protect and improve the watershed health.

Policy 6.50. **District expansion**. Provide opportunities for expansion of industrial areas based on evaluation of forecasted need and the ability to meet environmental, social, economic, and other goals.

220. Finding: The City Council interprets this policy to apply to Comprehensive Plan Map and Zoning Map amendments to expand industrial land use designations. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes maintain Portland's industrial capacity. This policy does not apply.

Policy 6.51. Golf course reuse and redevelopment. Facilitate a mix of industrial, natural resource, and public open space uses on privately-owned golf course sites in the Columbia Corridor that property

owners make available for reuse.

221. **Finding:** The City Council interprets this policy to apply to Comprehensive Plan Map and Zoning Map amendments. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes maintain Portland's industrial capacity. This policy does not apply.

Policy 6.52. Residential and commercial reuse. Facilitate compatible industrial or employment redevelopment on residential or commercial sites that become available for reuse if the site is in or near prime industrial areas, and near a freeway or on a freight street.

222. **Finding**: The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones. This policy does not apply.

Policy 6.53. Mitigation banks. Facilitate industrial site development by promoting and allowing environmental mitigation banks that serve industrial land uses on prime industrial land.

223. **Finding**: The 2035 Comprehensive Plan defines "facilitate" to mean to make something easier, to help bring about or make run more smoothly. The City Council interprets this policy means to assist, but is not a requirement. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones, including environmental mitigation banks. This policy does not apply.

Policy 6.54. **Neighborhood buffers**. Maintain and enhance major natural areas, open spaces, and constructed features as boundaries and buffers for the Portland Harbor and Columbia Corridor industrial areas.

224. **Finding**: The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones. This policy does not apply.

Policy 6.55. Neighborhood park use. Allow neighborhood park development within industrial zones where needed to provide adequate park service within one-half mile of every resident.

225. **Finding**: This policy addresses park development in industrial zones. The FFTZ amendments affect one type of allowed use in employment and industrial zones and do not change development standards that apply to development in those zones. This policy does not apply.

Campus institutions

Policy 6.56. Campus institutions. Provide for the stability and growth of Portland's major campus institutions as essential service providers, centers of innovation, workforce development resources, and major employers.

Policy 6.57. Campus land use. Provide for major campus institutions as a type of employment land, allowing uses typically associated with health care and higher education institutions. Coordinate with institutions in changing campus zoning to provide land supply that is practical for development and intended uses.

Policy 6.58. Development impacts. Protect the livability of surrounding neighborhoods through adequate infrastructure and campus development standards that foster suitable density and attractive campus design. Minimize off-site impacts in collaboration with institutions and neighbors, especially to

reduce automobile traffic and parking impacts.

Policy 6.59. Community amenities and services. Encourage campus development that provides amenities and services to surrounding neighborhoods, emphasizing the role of campuses as centers of community activity.

Policy 6.60. **Campus edges**. Provide for context-sensitive, transitional uses, and development at the edges of campus institutions to enhance their integration into surrounding neighborhoods, including mixed-use and neighborhood-serving commercial uses where appropriate.

Policy 6.61. Satellite facilities. Encourage opportunities for expansion of uses, not integral to campus functions, to locate in centers and corridors to support their economic vitality.

226. Finding: Policies 6.56 through 6.61 provide direction regarding campus institutions. The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located on campus institutions. These policies do not apply.

Neighborhood business districts

Policy 6.62. Neighborhood business districts. Provide for the growth, economic equity, and vitality of neighborhood business districts.

Policy 6.63. District function. Enhance the function of neighborhood business districts as a foundation of neighborhood livability.

Policy 6.64. Small, independent businesses. Facilitate the retention and growth of small and locally-owned businesses.

Policy 6.65. Home-based businesses. Encourage and expand allowances for small, low-impact home based businesses in residential areas, including office or personal service uses with infrequent or by-appointment customer or client visits to the site. Allow a limited number of employees, within the scale of activity typical in residential areas. Allow home-based businesses on sites with accessory dwelling units.

Policy 6.66. Neighborhood-serving business. Provide for neighborhood business districts and small commercial nodes in areas between centers to expand local access to goods and services. Allow nodes of small-scale neighborhood-serving commercial uses in large planned developments and as a ground floor use in high density residential areas.

Policy 6.67. Retail development. Provide for a competitive supply of retail sites that support the wide range of consumer needs for convenience, affordability, accessibility, and diversity of goods and services, especially in under-served areas of Portland.

Policy 6.68. Investment priority. Prioritize commercial revitalization investments in neighborhoods that serve communities with limited access to goods
and services.

Policy 6.69. Non-conforming neighborhood business uses. Limit non-conforming uses to reduce adverse impacts on nearby residential uses while avoiding displacement of existing neighborhood businesses.

Policy 6.70. Involuntary commercial displacement. Evaluate plans and investments for their impact on existing businesses.

6.70.a. Limit involuntary commercial displacement in areas at risk of gentrification, and incorporate tools to reduce the cost burden of rapid neighborhood change on small business owners vulnerable to displacement.

6.70.b. Encourage the preservation and creation of affordable neighborhood commercial space to support a broad range of small business owners.

Policy 6.71. Temporary and informal markets and structures. Acknowledge and support the role that temporary markets (farmer's markets, craft markets, flea markets, etc.) and other temporary or mobile-vending structures play in enabling startup business activity. Also, acknowledge that temporary uses may ultimately be replaced by more permanent development and uses.

Policy 6.72 Community economic development. Encourage collaborative approaches to align land use and neighborhood economic development for residents and business owners to better connect and compete in the regional economy.

Policy 6.73. Centers. Encourage concentrations of commercial services and employment opportunities in centers.

6.73.a. Encourage a broad range of neighborhood commercial services in centers to help residents and others in the area meet daily needs and/or serve as neighborhood gathering places.

6.73.b. Encourage the retention and further development of grocery stores and local markets as essential elements of centers.

6.73.c. Enhance opportunities for services and activities in centers that are responsive to the needs of the populations and cultural groups of the surrounding area.

6.73.d. Require ground-level building spaces in core areas of centers accommodate commercial or other street-activating uses and services.

6.73.e. Encourage employment opportunities as a key function of centers, including connections between centers, institutions, and other major employers to reinforce their roles as vibrant centers of activity.

227. Finding: Policies 6.62 through 6.73 provide direction regarding neighborhood business districts. The FFTZ amendments change allowed uses in the City's industrial areas. There are no FFTs located in neighborhood business districts. These policies do not apply.

Chapter 7: Environmental and Watershed Health

Goal 7.A: Climate. Carbon emissions are reduced to 50 percent below 1990 levels by 2035.

228. Finding: The City Council finds that in order to achieve this goal, each legislative action should consider whether it can play a role in reducing the carbon emissions The FFTZ amendments will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. The FFTZ amendments help provide a transition to a reliable, low-carbon energy infrastructure by designating existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities to increase safety and reliability. In addition, the definition of fossil fuels explicitly does not include ethanol, biodiesel/renewable diesel other fuel additives that will allows FTTs to

add storage capacity to provide reliable low-carbon fuels to help meet the carbon emissions reduction goals.

Goal 7.B: Healthy watersheds and environment. Ecosystem services and ecosystem functions are maintained and watershed conditions have improved over time, supporting public health and safety, environmental quality, fish and wildlife, cultural values, economic prosperity, and the intrinsic value of nature.

229. Finding: The FFTZ amendments foster a healthy environment and sustain the ecosystem services of Portland's air, water and land by reducing the risk associated with a major earthquake. The first step in making the current situation better is to ensure that the situation does not get worse by continuing to allow the unlimited increase in fossil fuel terminal storage tank capacity in a high risk area. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will be an improvement compared to the current regulations that allow for unlimited growth in fossil fuel terminals. Further, by designating existing FFTs as a limited use allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which can minimize environmental impacts in the event of a major earthquake. No changes to the environmental or greenway overlay zones are proposed as part of this project, therefore the natural resource values and functions will be sustained.

Goal 7.C: Resilience. Portland's built and natural environments function in complementary ways and are resilient in the face of climate change and natural hazards.

230. Finding: The City Council finds that the built and natural environments function in complementary ways when they both function without harming the other. The 2035 Comprehensive Plan defines "resilience" as the capability to anticipate, prepare for, respond to, and recover from significant multi-hazard threats with minimum damage to social well-being, the economy, and the environment. Portland's FFTs are within a disaster-prone area that is at risk for a catastrophic Cascadia earthquake disaster. Most of Portland's employment and industrial zones are in areas with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. Fossil fuel infrastructure poses considerable risks in the event of a major earthquake.

According to the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report, a magnitude 8 or 9 Cascadia Subduction Zone earthquake would impact the CEI Hub with: ground shaking; liquefaction (soil behavior phenomenon in which a saturated sand softens and loses strength during strong earthquake ground shaking); lateral spreading (where surficial soil permanently moves laterally due to earthquake shaking); landslides; co-seismic settlement (where the ground surface is permanently lowered due to seismic shaking); and bearing capacity failures (when the foundation soil cannot support the structure it is intended to support).

According to the 2012 DOGAMI report, liquefaction and lateral spreading hazards are of primary concern to the fossil fuel terminals. The CEI Hub is adjacent to the Willamette River and has extensive deposits of highly liquefiable soils. These soils (made of sands, silts, gravels and clays) have been naturally deposited by river activity as well as been created from man-made activities, such as hydraulically placed material from river dredging or debris placed as landfill.

The FFTs have significant seismic risks because most of the tanks have been constructed without any or only limited seismic design criteria on soils with high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's 2016 Critical Energy

Infrastructure Hub Study and the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report. The City Council interprets this goal to mean that the first step in making Portland more resilient is to stop increasing the risk. Continuing to allow the increase in FFTs in a high risk area increases the risk to the surrounding industrial district and the Willamette River. The FFTZ amendments limit future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. Further, by designating existing FFTs as a limited use, as opposed to a prohibited nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which ultimately can make Portland more resilient.

Goal 7.D: Environmental equity. All Portlanders have access to clean air and water, can experience nature in their daily lives, and benefit from development designed to lessen the impacts of natural hazards and environmental contamination.

231. Finding: The City Council interprets this goal to mean that the first step in lessening the impacts of natural hazards and environmental contamination is to stop increasing the risk. Continuing to allow the increase in FFTs in a high risk area increases the risk to the surrounding neighborhoods and the Willamette River. The FFTZ amendments limit future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. Further, by designating existing FFTs as a limited use, as opposed to a prohibited nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake.

Goal 7.E: Community stewardship. Portlanders actively participate in efforts to maintain and improve the environment, including watershed health.

232. Finding: The City Council interprets this goal to mean that the City should have programs focused on community involvement in improving the environment. The FFTZ amendments change the Zoning Code and do not include other changes to stewardship programs. This goal does not apply.

Improving environmental quality and resilience

Policy 7.1. Environmental quality. Protect or support efforts to protect air, water, and soil quality, and associated benefits to public and ecological health and safety, through plans and investments.

Policy 7.2. Environmental equity. Prevent or reduce adverse environment-related disparities affecting under-served and under-represented communities through plans and investments. This includes addressing disparities relating to air and water quality, natural hazards, contamination, climate change, and access to nature.

233. Finding: The Council interprets policies 7.1 and 7.2 in tandem. The City Council finds that the policies seek to defend and protect environmental quality and equity. Further, the City Council finds that environmental equity is achieved when disparities are prevented or reduced. The City Council finds that that the first step in lessening the impacts of natural hazards and environmental contamination is to stop increasing the risk. Continuing to allow the increase in FFTs in a high risk area increases the risk to the surrounding neighborhoods and the Willamette River. The FFTZ amendments limit future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. Further, by designating existing FFTs as a limited use, as opposed to a

prohibited nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake.

Policy 7.3. Ecosystem services. Consider the benefits provided by healthy ecosystems that contribute to the livability and economic health of the city.

234. **Finding:** The FFTZ amendments foster a healthy environment and sustain the ecosystem services of Portland's air, water and land by reducing the risk associated with a major earthquake. The first step in making the current situation better is to ensure that the situation does not get worse by continuing to allow the unlimited increase in fossil fuel terminal storage tank capacity in a high risk area. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will be an improvement compared to the current regulations that allow for unlimited growth in fossil fuel terminals. Further, by designating existing FFTs as a limited use allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which can minimize environmental impacts in the event of a major earthquake. No changes to the environmental or greenway overlay zones are proposed as part of this project, therefore the natural resource values and functions will be sustained.

Policy 7.4. Climate change. Update and implement strategies to reduce carbon emissions and impacts and increase resilience through plans and investments and public education.

7.4.a. Carbon sequestration. Enhance the capacity of Portland's urban forest, soils, wetlands, and other water bodies to serve as carbon reserves.

7.4.b. Climate adaptation and resilience. Enhance the ability of rivers, streams, wetlands, floodplains, urban forest, habitats, and wildlife to limit and adapt to climate-exacerbated flooding, landslides, wildfire, and urban heat island effects.

235. **Finding:** The FFTZ amendments help reduce carbon emissions by providing for a transition to a reliable, low-carbon energy infrastructure by designating existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities to increase safety and reliability. In addition, the definition of fossil fuels explicitly does not include ethanol, biodiesel/renewable diesel other fuel additives that will allows FTTs to add storage capacity to provide reliable low-carbon fuels to help meet the carbon emissions reduction goals.

The 2035 Comprehensive Plan defines "resilience" as the capability to anticipate, prepare for, respond to, and recover from significant multi-hazard threats with minimum damage to social well-being, the economy, and the environment. Portland's FFTs are within a disaster-prone area that is at risk for a catastrophic Cascadia earthquake disaster. The FFTs have significant seismic risks because most of the tanks have been constructed without any or only limited seismic design criteria on soils with high levels of liquefaction susceptibility. The City Council finds that the first step in making Portland more resilient is to stop increasing the risk. Continuing to allow the increase in FFTs in a high risk area increases the risk to the surrounding to the Willamette River and associated floodplains. The FFTZ amendments limit future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. Further, by designating existing FFTs as a limited use, as opposed to a prohibited nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which ultimately can make Portland more resilient.

Policy 7.5. Air quality. Improve, or support efforts to improve, air quality through plans and investments, including reducing exposure to air toxics, criteria pollutants, and urban heat island effects. Consider the impacts of air quality on the health of all Portlanders.

Policy 7.6. Hydrology. Through plans and investments, improve or support efforts to improve watershed hydrology to achieve more natural flow and enhance conveyance and storage capacity in rivers, streams, floodplains, wetlands, and aquifers. Minimize impacts from development and associated impervious surfaces, especially in areas with poorly-infiltrating soils and limited public stormwater discharge points, and encourage restoration of degraded hydrologic functions.

Policy 7.7. Water quality. Improve, or support efforts to improve, water quality in rivers, streams, floodplains, groundwater, and wetlands through land use plans and investments, to address water quality issues including toxics, bacteria, temperature, metals, and sediment pollution. Consider the impacts of water quality on the health of all Portlanders.

Policy 7.8. Biodiversity. Strive to achieve and maintain self-sustaining populations of native species, including native plants, native resident and migratory fish and wildlife species, at-risk species, and beneficial insects (such as pollinators) through plans and investments.

Policy 7.9. Habitat and biological communities. Ensure that plans and investments are consistent with and advance efforts to improve, or support efforts to improve fish and wildlife habitat and biological communities. Use plans and investments to enhance the diversity, quantity, and quality of habitats habitat corridors, and especially habitats that:

- Are rare or declining.
- Support at-risk plant and animal species and communities.
- Support recovery of species under the Endangered Species Act, and prevent new listings.
- Provide culturally important food sources, including those associated with Native American fishing rights.

Policy 7.10. Habitat connectivity. Improve or support efforts to improve terrestrial and aquatic habitat connectivity for fish and wildlife by using plans and investments, to:

- Prevent and repair habitat fragmentation.
- Improve habitat quality.
- Weave habitat into sites as new development occurs.
- Enhance or create habitat corridors that allow fish and wildlife to safely access and move through and between habitat areas.
- Promote restoration and protection of floodplains.

Policy 7.11. Urban forest. Improve, or support efforts to improve the quantity, quality, and equitable distribution of Portland's urban forest through plans and investments.

7.11.a. Tree preservation. Require or encourage preservation of large healthy trees, native trees and vegetation, tree groves, and forested areas.

7.11.b. Urban forest diversity. Coordinate plans and investments with efforts to improve tree species diversity and age diversity.

7.11.c. Tree canopy. Support progress toward meeting City tree canopy targets.

7.11.d. Tree planting. Invest in tree planting and maintenance, especially in low-canopy areas, neighborhoods with under-served or under-represented communities, and within and near urban habitat corridors.

7.11.e. Vegetation in natural resource areas. Require native trees and vegetation in significant natural resource areas.

7.11.f. Resilient urban forest. Encourage planting of Pacific Northwest hardy and climate change resilient native trees and vegetation generally, and especially in urban habitat corridors.

7.11.g. Trees in land use planning. Identify priority areas for tree preservation and planting in land use plans.

7.11.h. Managing wildfire risk. Address wildfire hazard risks and management priorities through plans and investments.

Policy 7.12. Invasive species. Prevent the spread of invasive plants, and support efforts to reduce the impacts of invasive plants, animals, and insects, through plans, investments, and education.

Policy 7.13. Soils. Coordinate plans and investments with programs that address human-induced soil loss, erosion, contamination, or other impairments to soil quality and function.

236. Finding: The City Council interprets policies 7.5 through 7.13 as providing guidance to foster a healthy environment and sustain the ecosystem services of Portland's air, water and land resources. The FFTZ amendments support these policies by reducing the risk associated with a major earthquake. The first step in making the current situation better is to ensure that the situation does not get worse by continuing to allow the unlimited increase in fossil fuel terminal storage tank capacity in a high risk area. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will be an improvement compared to the current regulations that allow for unlimited growth in fossil fuel terminals. Further, by designating existing FFTs as a limited use allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which can minimize environmental impacts in the event of a major earthquake. No changes to the environmental or greenway overlay zones are proposed as part of this project, therefore the natural resource values and functions will be sustained.

Policy 7.14. Natural hazards. Prevent development-related degradation of natural systems and associated increases in landslide, wildfire, flooding, and earthquake risks.

237. Finding: The 2035 Comprehensive Plan defines "prevent" as proactively avoid or hinder adverse impacts or outcomes. Development-related degradation means development that has adverse impacts on natural systems. For example, development in a floodplain that increases impervious surface can result in increased run-off that increases flooding. Further, Council finds that the policy seeks to avoid increasing risks associated with natural disasters, including earthquakes.

According to the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report, a magnitude 8 or 9 Cascadia Subduction Zone earthquake would impact the CEI Hub with: ground shaking; liquefaction (soil behavior phenomenon in which a saturated sand softens and loses strength during strong earthquake ground shaking); lateral spreading (where surficial soil permanently moves laterally due to earthquake shaking); landslides; co-seismic settlement (where the ground surface is permanently lowered due to seismic shaking); and bearing capacity failures (when the foundation soil cannot support the structure it is intended to support).

According to the 2012 DOGAMI report, liquefaction and lateral spreading hazards are of primary concern to the fossil fuel terminals. As described in the 2012 Oregon State Energy Assurance Plan, this Critical Energy Infrastructure Hub (CEI Hub), where the existing FFTs are located, sits on top of very poor soils that are highly susceptible to earthquake-induced permanent ground deformation. The CEI Hub is adjacent to the Willamette River and has extensive deposits of highly liquefiable soils. These soils (made of sands, silts, gravels and clays) have been naturally deposited by river activity as well as been created from man-made activities, such as hydraulically placed material from river dredging or debris placed as landfill.

Most of Portland's employment and industrial zones are in areas with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. Fossil fuel infrastructure poses considerable risks in the event of a major earthquake. The first step in making the current situation better is to ensure that the situation does not get worse. Continuing to allow the unlimited increase in fossil fuel terminal storage tank capacity in a high risk area increases the risk to the Willamette River. The City Council interprets this policy to mean development regulations should not increase the risk from natural hazards. The current regulations that allow unlimited expansion of storage tank capacity increase the risk from natural hazards. The FFTZ amendments proactively limit future earthquake risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels. Further, by designating existing FFTs as a limited use allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety.

Policy 7.15. Brownfield remediation. Improve environmental quality and watershed health by promoting and facilitating brownfield remediation and redevelopment that incorporates ecological site design and resource enhancement.

238. Finding: The City Council interprets this policy to mean that the City will create programs to support brownfield cleanup. The FFTZ amendments are Zoning Code changes that are not directly related to the cleanup of brownfields. However, the changes designate existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities, including brownfield remediation.

Policy 7.16. Adaptive management. Evaluate trends in watershed and environmental health using current monitoring data and information to guide and support improvements in the effectiveness of City plans and investments.

Policy 7.17. Restoration partnerships. Coordinate plans and investments with other jurisdictions, air and water quality regulators, watershed councils, soil and water conservation districts, Sovereign nations, and community organizations and groups including under-served and under-represented communities, to optimize the benefits, distribution, and cost-effectiveness of watershed restoration and enhancement efforts.

Policy 7.18. Community stewardship. Encourage voluntary cooperation between property owners, community organizations, and public agencies to restore or re-create habitat on their property, including removing invasive plants and planting native species.

239. Finding: The City Council interprets policies 7.16. through 7.18 to mean that the City will create programs to support restoration and community stewardship. The FFTZ amendments are Zoning Code changes that are not directly related to watershed restoration. These policies do not apply.

Planning for natural resource protection

Policy 7.19. Natural resource protection. Protect the quantity, quality, and function of significant natural resources identified in the City's natural resource inventory, including:

- Rivers, streams, sloughs, and drainageways.
- Floodplains.
- Riparian corridors.
- Wetlands.
- Groundwater.
- Native and other beneficial vegetation species and communities.
- Aquatic and terrestrial habitats, including special habitats or habitats of concern, large anchor habitats, habitat complexes and corridors, rare and declining habitats such as wetlands, native oak, bottomland hardwood forest, grassland habitat, shallow water habitat, and habitats that support special-status or at-risk plant and wildlife species.
- Other resources identified in natural resource inventories.

Policy 7.20. Natural resource inventory. Maintain an up-to-date inventory by identifying the location and evaluating the relative quantity and quality of natural resources.

Policy 7.21. Environmental plans and regulations. Maintain up-to-date environmental protection plans and regulations that specify the significant natural resources to be protected and the types of protections to be applied, based on the best data and science available and on an evaluation of cumulative environmental, social, and economic impacts and tradeoffs. *See Figure 7-2 — Adopted Environmental Plans.*

7.21.a. Improve the effectiveness of environmental protection plans and regulations to protect and encourage enhancement of ecological functions and ecosystem services.

Policy 7.22. Land acquisition priorities and coordination. Maintain a land acquisition program as a tool to protect and support natural resources and their functions. Coordinate land acquisition with the programs of City bureaus and other agencies and organizations.

240. Finding: The City Council interprets policies 7.19 through 7.22 as providing guidance to the City as to how to protect significant natural resources. The *2035 Comprehensive Plan* background documents included an updated Natural Resources Inventory (NRI), which was adopted (Ordinance 185657) and acknowledged by LCDC on June 13, 2014. The NRI identified the location, quantity, and quality of all significant natural resources as required by the inventory provisions of Statewide Planning Goal 5. From the set of all significant resources, high and medium quality resources, ranked primarily from riparian corridor and wildlife habitat considerations, were identified to comply with the inventory requirements of Title 13 of Metro's Urban Growth Management Functional Plan.

Environmental zones protect resources and functional values that have been identified by the City as providing benefits to the public. The FFTZ amendments are a regulatory approach that will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will be an improvement compared to the current regulations that allow for unlimited growth in fossil fuel terminals. Further, by designating existing FFTs as a limited use allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major

earthquake, which can minimize environmental impacts in the event of a major earthquake. No changes to the environmental or greenway overlay zones are proposed as part of this project, therefore the natural resource values and functions will continue to be protected.

Protecting natural resources in development situations

Policy 7.23. Impact evaluation. Evaluate the potential adverse impacts of proposed development on significant natural resources, their functions, and the ecosystem services they provide to inform and guide development design and mitigation consistent with policies 7.24-7.26. and other relevant Comprehensive Plan policies.

Policy 7.24. Regulatory hierarchy: avoid, minimize, mitigate. Maintain regulations requiring that the potential adverse impacts of new development on significant natural resources and their functions first be avoided where practicable, then minimized, then lastly, mitigated.

Policy 7.25. Mitigation effectiveness. Require that mitigation approaches compensate fully for adverse impacts on locally and regionally significant natural resources and functions. Require mitigation to be located as close to the impact as possible. Mitigation must also take place within the same watershed or portion of the watershed that is within the Portland Urban Services Boundary, unless mitigating outside of these areas will provide a greater local ecological benefit. Mitigation will be subject to the following preference hierarchy:

- On the site of the resource subject to impact with the same kind of resource; if that is not possible, then
- Off-site with the same kind of resource; if that is not possible, then
- On-site with a different kind of resource; if that is not possible, then
- Off-site with a different kind of resource.

Policy 7.26. Improving environmental conditions through development. Encourage ecological site design, site enhancement, or other tools to improve ecological functions and ecosystem services in conjunction with new development and alterations to existing development.

241. The City Council interprets policies 7.23 through 7.26 as providing guidance to the City as to how to protect significant natural resources. The City's environmental and greenway overlay zones are the regulations that control development in order to protect the resources and functional values while allowing environmentally sensitive urban development. No changes to the environmental or greenway overlay zones are proposed as part of this project, therefore the natural resource values and functions will continue to be protected.

Aggregate resources

Policy 7.27. **Aggregate resource protection.** Protect aggregate resource sites for current and future use where there are no major conflicts with urban needs, or where these conflicts may be resolved**.**

Policy 7.28. **Aggregate resource development**. When aggregate resources are developed, ensure that development minimizes adverse environmental impacts and impacts on adjacent land uses.

Policy 7.29. Mining site reclamation. Ensure that the reclamation of mining sites protects public health and safety, protects fish and wildlife (including at-risk species), enhances or restores habitat (including rare and declining habitat types), restores adequate watershed conditions and functions on the site, and is compatible with the surrounding land uses and conditions of nearby land.

242. Finding: Policies 7.27 through 7.29 provide guidance on aggregate resources. The FFTZ amendments are Zoning Code changes that affect one allowed use in the employment and industrial zones and are not directly related to aggregate. These policies do not apply.

Watershed-specific policies

The policies above guide planning, actions, and investments citywide. The following policies are intended to augment the citywide Watershed Health and Environment policies by providing additional guidance relating and responding to the characteristics within each of Portland's distinctive watersheds. They address watershed-specific habitat types, hydrology, water quality issues, and stormwater management challenges. Together, the citywide and watershed-specific policies support the close coordination of watershed health and land use programs, guiding land use planning-related activities and future infrastructure investments. While these watersheds are not entirely within Portland's urban services boundary, Portland's actions can have significant benefits for the watershed as a whole.

Columbia River Watershed

Policy 7.30. In-water habitat. Enhance in-water habitat for native fish and wildlife, particularly in the Oregon Slough and near-shore environments along the Columbia River.

Policy 7.31. Sensitive habitats. Enhance grassland, beach, riverbanks, wetlands, bottomland forests, shallow water habitats, and other key habitats for wildlife traveling along the Columbia River migratory corridor, while continuing to manage the levees and floodplain for flood control.

Policy 7.32. **River-dependent and river-related uses.** Maintain plans and regulations that recognize the needs of river-dependent and river-related uses while also supporting ecologically-sensitive site design and practices.

243. Finding: None of the existing FFTs have frontage on the Columbia River. The Columbia River plays a major role in the habitat corridors that weave nature into Portland, with designated natural resources that are protected by the Environmental Overlay Zone, which is not amended by this ordinance. In considering the natural hazard risks that the FFTs pose to the ecosystem functions on the river, as identified by the Portland Bureau of Emergency Management's Critical Energy Infrastructure Hub Study (2016), the City Council finds that continuing to allow FFTs in a high risk area does not enhance the current or future natural resource functions of the Columbia River. These regulations apply to only one type of allowed that makes up a minority part of the uses found in Portland's industrial districts. The other industrial uses continue to operate under current regulations, including other river-dependent and river-related uses. Therefore, this ordinance maintains the needs of river-dependent and river-related uses, except for FFTs, while supporting ecologically-sensitive site design.

Willamette River Watershed

Policy 7.33. Fish habitat. Provide adequate intervals of ecologically-functional shallow-water habitat for native fish along the entire length of the Willamette River within the city, and at the confluences of its tributaries.

Policy 7.34. Stream connectivity. Improve stream connectivity between the Willamette River and its tributaries.

Policy 7.35. River bank conditions. Preserve existing river bank habitat and encourage the

rehabilitation of river bank sections that have been significantly altered due to development with more fish and wildlife friendly riverbank conditions.

Policy 7.37. Contaminated sites. Promote and support programs that facilitate the cleanup, reuse, and restoration of the Portland Harbor Superfund site and other contaminated upland sites.

Policy 7.38. Sensitive habitats. Protect and enhance grasslands, beaches, floodplains, wetlands, remnant native oak, bottomland hardwood forest, and other key habitats for native wildlife including shorebirds, waterfowl, and species that migrate along the Pacific Flyway and the Willamette River corridor.

Policy 7.39. Riparian corridors. Increase the width and quality of vegetated Riparian buffers along the Willamette River.

Policy 7.40. Connected upland and river habitats. Enhance habitat quality and connectivity between the Willamette riverfront, the Willamette's floodplain, and upland natural resource areas.

Policy 7.41. River-dependent and river-related uses. Develop and maintain plans and regulations that recognize the needs of river-dependent and river-related uses, while also supporting ecologically-sensitive site design and practices.

244. Finding: Policies 7.33 through 7.41 provide direction regarding the environment and watershed health in the Willamette River Watershed. The eleven existing FFTs have frontage on the Willamette River. The Willamette River plays a major role in the habitat corridors that weave nature into Portland, with designated natural resources that are protected by the Greenway Overlay Zone, which is not amended by this ordinance. In considering the natural hazard risks that the FFTs pose to the ecosystem functions on the river, as identified by the Portland Bureau of Emergency Management's Critical Energy Infrastructure Hub Study (2016), the City Council finds that continuing to allow FFTs in a high risk area does not enhance the current or future natural resource functions of the Willamette River. This ordinance balances environmental and watershed health by narrowly crafting the regulations to apply to only one type of allowed that makes up a minority part of the uses found in Portland's industrial districts. The other industrial uses continue to operate under current regulations, including other river-dependent and river-related uses.

Columbia Slough Watershed

Policy 7.43. Fish passage. Restore in-stream habitat and improve fish passage within the Columbia Slough, including for salmonids in the lower slough.

Policy 7.44. Flow constriction removal. Reduce constriction, such as culverts, in the slough channels, to improve the flow of water and water quality.

Policy 7.45. Riparian corridors. Increase the width, quality, and native plant diversity of vegetated riparian buffers along Columbia Slough channels and other drainageways within the watershed, while also managing the slough for
flood control.

Policy 7.46. Sensitive habitats. Enhance grasslands and wetland habitats in the Columbia Slough, such as those found in the Smith and Bybee Lakes and at the St. Johns Landfill site, to provide habitat for sensitive species, and for wildlife traveling along the Columbia and Willamette river migratory corridors.

Policy 7.47. Connected rivers habitats. Enhance upland habitat connections to the Willamette and Columbia rivers.

Policy 7.48. Contaminated sites. Ensure that plans and investments are consistent with and advance programs that facilitate the cleanup, reuse, and restoration of contaminated sites that are adjacent, or that discharge stormwater, to the Columbia Slough.

Policy 7.49. Portland International Airport. Protect, restore, and enhance natural resources and functions in the Portland International Airport plan district, as identified in Portland International Airport/Middle Columbia Slough Natural Resources Inventory. Accomplish this through regulations, voluntary strategies, and the implementation of special development standards.

245. Finding: Policies 7.43 through 7.49 provide direction regarding the environment and watershed health in the Columbia Slough Watershed. There are no existing FFTs in the Columbia Slough watershed. The Columbia Slough plays a major role in the habitat corridors that weave nature into Portland, with designated natural resources that are protected by the Environmental Overlay Zone, which is not amended by this ordinance. This ordinance helps to advance these policies by prohibiting new FFTs in these watersheds. These regulations apply to only one type of allowed uses that makes up a minority part of the uses found in Portland's industrial districts. The other industrial uses continue to operate under current regulations.

Fanno and Tryon Creek Watersheds

Policy 7.50 **Stream connectivity.** Encourage the daylighting of piped portions of Tryon and Fanno creeks and their tributaries.

Policy 7.51 **Riparian and habitat corridors.** Protect and enhance riparian habitat quality and connectivity along Tryon and Fanno creeks and their tributaries. Enhance connections between riparian areas, parks, anchor habitats, and areas with significant tree canopy. Enhance in-stream and upland habitat connections between Tryon Creek State Natural Area and the Willamette River.

Policy 7.52 **Reduced hazard risks.** Reduce the risks of landslides and streambank erosion by protecting trees and vegetation that absorb stormwater, especially in areas with steep slopes or limited access to stormwater infrastructure.

246. Finding: Policies 7.50 through 7.52 provide direction regarding habitat and river-related uses in the Fanno and Tryon Creek Watersheds. There are no existing FFTs in the Fanno and Tryon Creek watersheds, which play a major role in the habitat corridors that weave nature into Portland, with designated natural resources that are protected by the Environmental Overlay Zone, which is not amended by this ordinance. This ordinance helps to advance these policies by prohibiting new FFTs in these watersheds.

Johnson Creek Watershed

Policy 7.53 **In-stream and riparian habitat.** Enhance in-stream and riparian habitat and improve fish passage for salmonids along Johnson Creek and its tributaries.

Policy 7.54 **Floodplain restoration.** Enhance Johnson Creek floodplain functions to increase flood-storage capacity, improve water quality, and enhance fish and wildlife habitat.

Policy 7.55 **Connected floodplains, springs, and wetlands.** Enhance hydrologic and habitat connectivity between the Johnson Creek floodplain and its springs and wetlands.

Policy 7.56 **Reduced natural hazards.** Reduce the risks of landslides, streambank erosion and

downstream flooding by protecting seeps, springs, trees, vegetation, and soils that absorb stormwater in the East Buttes.

Policy 7.57 **Greenspace network.** Enhance the network of parks, trails, and natural areas near the Springwater Corridor Trail and the East Buttes to enhance habitat connectivity and nature-based recreation in East Portland.

247. Finding: Policies 7.53 through 7.57 provide direction regarding the environment and watershed health in the Johnson Creek Watershed. There are no existing FFTs in the Fanno and Tryon Creek watersheds, which play a major role in the habitat corridors that weave nature into Portland, with designated natural resources that are protected by the Environmental Overlay Zone, which is not amended by this ordinance. These regulations apply to only one type of allowed that makes up a minority part of the uses found in Portland's industrial districts. The other industrial uses continue to operate under current regulations, including other river-dependent and river-related uses. This ordinance helps to advance these policies by prohibiting new FFTs in this watershed.

Chapter 8: Public Facilities and Services

Goal 8.A: Quality public facilities and services. High-quality public facilities and services provide Portlanders with optimal levels of service throughout the city, based on system needs and community goals, and in compliance with regulatory mandates.

Goal 8.B: Multiple benefits. Public facility and service investments improve equitable service provision, support economic prosperity, and enhance human and environmental health.

Goal 8.C: Reliability and resiliency. Public facilities and services are reliable, able to withstand or recover from catastrophic natural and manmade events, and are adaptable and resilient in the face of long-term changes in the climate, economy, and technology.

Goal 8.D: Public rights-of-way. Public rights-of-way enhance the public realm and provide a multi-purpose, connected, safe, and healthy physical space for movement and travel, public and private utilities, and other appropriate public functions and uses.

Goal 8.E: Sanitary and stormwater systems. Wastewater and stormwater are managed, conveyed, and/or treated to protect public health, safety, and the environment, and to meet the needs of the community on an equitable, efficient, and sustainable basis.

Goal 8.F: Flood management. Flood management systems and facilities support watershed health and manage flooding to reduce adverse impacts on Portlanders' health, safety, and property.

Goal 8.G: Water. Reliable and adequate water supply and delivery systems provide sufficient quantities of high-quality water at adequate pressures to meet the needs of the community on an equitable, efficient, and sustainable basis.

Goal 8.H: Parks, natural areas, and recreation. All Portlanders have safe, convenient, and equitable access to high-quality parks, natural areas, trails, and recreational opportunities in their daily lives, which contribute to their health and well-being. The City manages its natural areas and urban forest to protect unique urban habitats and offer Portlanders an opportunity to connect with nature.

Goal 8.I: Public safety and emergency response. Portland is a safe, resilient, and peaceful community where public safety, emergency response, and emergency management facilities and services are coordinated and able to effectively and efficiently meet community needs.

Goal 8.J: Solid waste management. Residents and businesses have access to waste management services and are encouraged to be thoughtful consumers to minimize upstream impacts and avoid generating waste destined for the landfill. Solid waste — including food, yard debris, recyclables, electronics, and construction and demolition debris — is managed, recycled, and composted to ensure the highest and best use of materials.

Goal 8.K: School facilities. Public schools are honored places of learning as well as multifunctional neighborhood anchors serving Portlanders of all ages, abilities, and cultures.

Goal 8.L: Technology and communications. All Portland residences, businesses, and institutions have access to universal, affordable, and reliable state-of-the-art communication and technology services.

Goal 8.M: Energy infrastructure and services. Residents, businesses, and institutions are served by reliable energy infrastructure that provides efficient, low-carbon, affordable energy through decision-making based on integrated resource planning.

248. Finding: The City Council interprets the Chapter 8 goals to provide general guidance to public agencies in how to provide basic services to Portlanders. The adopted 2035 Comprehensive Plan includes the Citywide Systems Plan (CSP), which was adopted (Ordinance 185657) and acknowledged by LCDC on April 25, 2017. The CSP includes the Public Facilities Plan with information on current and future transportation, water, sanitary sewer, and stormwater infrastructure needs and projects, consistent with the requirements of Statewide Planning Goal 11.

The FFTZ amendments do not include comprehensive plan map amendments and do not amend the CSP. These regulations apply to only one type of use that makes up a minority part of the uses found in Portland's industrial districts. The remaining industrial uses continue to be regulated under the current development regulations and do not intensify the development capacity. Therefore, these changes will not adversely impact the City's public facilities or services. Therefore, the City continues to plan for public infrastructure investments in the industrial districts where the FFTs are located.

Goal 8.M (energy infrastructure) is the one goal that is applicable to this ordinance. Oregon Administrative Rules (OAR 860-027-0400) define integrated resource plans (IRP) as investor-owned energy utility's written plan detailing its future long-term resource needs, its analysis of the expected costs and associated risks of the alternatives to meet those needs, and its action plan to select the best portfolio of resources to meet those needs. The NW Natural LNG Storage facility is the only FFT in Portland that is part of an investor-owned utility. NW Natural's 2018 IRP identifies the replacement of mechanical process equipment used for the liquefaction, vaporization, or storage of LNG, but not expansion of storage capacity. The FFTZ amendments only regulate fossil fuel storage tank capacity, therefore these changes are consistent with the NW Natural IRP.

As documented in the 2012 DOGAMI report, the current CEI hub infrastructure is not reliable in the event of a magnitude 8 or 9 Cascadia Subduction Zone earthquake. The FFTZ amendments will limit the size of new fossil fuel terminals and prohibit the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels, which will minimize the risk from a future major earthquake compared to the current regulations that allow for unlimited growth in FFTs. The FFTZ amendments help provide a reliable, low-carbon energy infrastructure by designating existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities to increase safety and reliability. In addition, the definition of fossil fuels (33.910.030) explicitly does not include ethanol, biodiesel/renewable diesel other fuel additives that will allows FTTs to add storage capacity to provide reliable low-carbon fuels.

Service provision and urbanization

Policy 8.1. Urban services boundary. Maintain an Urban Services Boundary for the City of Portland that is consistent with the regional urban growth policy, in cooperation with neighboring jurisdictions. The Urban Services Boundary is shown on the Comprehensive Plan Map.

Policy 8.2. Rural, urbanizable, and urban public facility needs. Recognize the different public facility needs in rural, urbanizable and urban land as defined by the Regional Urban Growth Boundary, the City Urban Services Boundary, and the City Boundaries of Municipal Incorporation. See Figure 8-1 — Urban, Urbanizable, and Rural Lands.

Policy 8.3. Urban service delivery. Provide the following public facilities and services at urban levels of service to urban lands within the City's boundaries of incorporation:

- Public rights-of-way, streets, and public trails
- Sanitary sewers and wastewater treatment
- Stormwater management and conveyance
- Flood management
- Protection of the waterways of the state
- Water supply
- Police, fire, and emergency response
- Parks, natural areas, and recreation
- Solid waste regulation

Policy 8.4. Supporting facilities and systems. Maintain supporting facilities and systems, including public buildings, technology, fleet, and internal service infrastructure, to enable the provision of public facilities and services.

Policy 8.5. Planning service delivery. Provide planning, zoning, building, and subdivision control services within the boundaries of incorporation, and as otherwise provided by intergovernmental agreement within the City's Urban Services Boundary.

249. Finding: The City Council interprets policies 8.1 through 8.5 provide direction on the provision of public facilities and services. The FFTZ amendments do not include new public facility or infrastructure projects. These policies do not apply.

Service coordination

Policy 8.6. Interagency coordination. Maintain interagency coordination agreements with neighboring jurisdictions and partner agencies that provide urban public facilities and services within the City of Portland's Urban Services Boundary to ensure effective and efficient service delivery. See Policy 8.3 for the list of services included. Such jurisdictions and agencies include, but may not be limited to:

- Multnomah County for transportation facilities and public safety.
- State of Oregon for transportation and parks facilities and services.
- TriMet for public transit facilities and services.
- Port of Portland for air and marine facilities and services.
- Metro for regional parks and natural areas, and for solid waste, composting, and recycling

facilities and transfer stations.

- Gresham, Milwaukie, Clackamas County Service District #1, and Clean Water Services for sanitary sewer conveyance and treatment.
- Multnomah County Drainage District No. 1, Peninsula Drainage District No 1, and Peninsula Drainage District No. 2 for stormwater management and conveyance, and for flood mitigation, protection, and control.
- Rockwood People's Utility District; Sunrise Water Authority; and the Burlington, Tualatin Valley, Valley View, West Slope, Palatine Hill, Alto Park, and Clackamas River Water Districts for water distribution.
- Portland Public Schools and the David Douglas, Parkrose, Reynolds, Centennial, and Riverdale school districts for public education, park, trail, and recreational facilities.

Policy 8.7. Outside contracts. Coordinate with jurisdictions and agencies outside of Portland where the City provides services under agreement.

Policy 8.8. Public service coordination. Coordinate with the planning efforts of agencies providing public education, public health services, community centers, urban forest management, library services, justice services, energy, and technology and communications services.

Policy 8.9. Internal coordination. Coordinate planning and provision of public facilities and services, including land acquisition, among City agencies, including internal service bureaus.

Policy 8.10. Co-location. Encourage co-location of public facilities and services across providers where co-location improves service delivery efficiency and access for historically under-represented and under-served communities.

250. Finding: The City Council interprets policies 8.6 through 8.10 provide direction on coordination with neighboring jurisdictions and partner agencies that provide urban public facilities and services within the City of Portland's Urban Services Boundary. The FFTZ amendments do not include new public facility or infrastructure projects or amendments to public service coordination agreements. These policies do not apply.

Service extension

Policy 8.11. Annexation. Require annexation of unincorporated urbanizable areas within the City's Urban Services Boundary as a prerequisite to receive urban services.

Policy 8.12. Feasibility of service. Evaluate the physical feasibility and cost-effectiveness of extending urban public services to candidate annexation areas to ensure sensible investment and to set reasonable expectations.

Policy 8.13. Orderly service extension. Establish or improve urban public services in newly-annexed areas to serve designated land uses at established levels of service, as funds are available and as responsible engineering practice allows.

Policy 8.14. Coordination of service extension. Coordinate provision of urban public services to newly-annexed areas so that provision of any given service does not stimulate development that significantly hinders the City's ability to provide other urban services at uniform levels.

Policy 8.15. Services to unincorporated urban pockets. Plan for future delivery of urban services to urbanizable areas that are within the Urban Services Boundary but outside the city limits.

Policy 8.16. Orderly urbanization. Coordinate with counties, neighboring jurisdictions, and other

special districts to ensure consistent management of annexation requests, and to establish rational and orderly process of urbanization that maximize efficient use of public funds.

Policy 8.17. Services outside the city limits. Prohibit City provision of new urban services, or expansion of the capacity of existing services, in areas outside city limits, except in cases where the City has agreements or contracts in place.

Policy 8.18. Service district expansion. Prohibit service district expansion or creation within the City's Urban Services Boundary without the City's expressed consent.

Policy 8.19. Rural service delivery. Provide the public facilities and services identified in Policy 8.3 in rural areas only at levels necessary to support designated rural residential land uses and protect public health and safety. Prohibit sanitary sewer extensions into rural land and limit other urban services.

251. Finding: The City Council interprets policies 8.11 through 8.19 provide direction on extending public services. The FFTZ amendments do not include new public facility or infrastructure projects or service extensions. These policies do not apply.

Public investment

Policy 8.20. Regulatory compliance. Ensure public facilities and services remain in compliance with state and federal regulations. Work toward cost-effective compliance with federal and state mandates through intergovernmental coordination and problem solving.

Policy 8.21. System capacity. Establish, improve, and maintain public facilities and services at levels appropriate to support land use patterns, densities, and anticipated residential and employment growth, as physically feasible and as sufficient funds are available.

Policy 8.22. Equitable service. Provide public facilities and services to alleviate service deficiencies and meet level-of-service standards for all Portlanders, including individuals, businesses, and property owners.

8.22.a. In places that are not expected to grow significantly but have existing deficiencies, invest to reduce disparity and improve livability.

8.22.b. In places that lack basic public facilities or services and also have significant growth potential, invest to enhance neighborhoods, fill gaps, maintain affordability, and accommodate growth.

8.22.c. In places that are not expected to grow significantly and already have access to complete public facilities and services, invest primarily to maintain existing facilities and retain livability.

8.22.d. In places that already have access to complete public facilities and services, but also have significant growth potential, invest to fill remaining gaps, maintain affordability, and accommodate growth.

Policy 8.23. Asset management. Improve and maintain public facility systems using asset management principles to optimize preventative maintenance, reduce unplanned reactive maintenance, achieve scheduled service delivery, and protect the quality, reliability, and adequacy of City services.

Policy 8.24. Risk management. Maintain and improve Portland's public facilities to minimize or eliminate economic, social, public health and safety, and environmental risks.

Policy 8.25. **Critical infrastructure**. Increase the resilience of high-risk and critical infrastructure

through monitoring, planning, maintenance, investment, adaptive technology, and continuity planning.

Policy 8.26. Capital programming. Maintain long-term capital improvement programs that balance acquisition and construction of new public facilities with maintenance and operations of existing facilities.

252. Finding: The City Council interprets policies 8.20 through 8.26 provide direction on investment priorities for public facilities. The FFTZ amendments do not include new public facility or infrastructure projects. These policies do not apply.

Funding

Policy 8.27. Cost-effectiveness. Establish, improve, and maintain the public facilities necessary to serve designated land uses in ways that cost-effectively provide desired levels of service, consider facilities' lifecycle costs, and maintain the City's long-term financial sustainability.

Policy 8.28. Shared costs. Ensure the costs of constructing and providing public facilities and services are equitably shared by those who benefit from the provision of those facilities and services.

Policy 8.29. System development. Require private or public entities whose prospective development or redevelopment actions contribute to the need for public facility improvements, extensions, or construction to bear a proportional share of the costs.

Policy 8.30. Partnerships. Maintain or establish public and private partnerships for the development, management, or stewardship of public facilities necessary to serve designated land uses, as appropriate.

253. Finding: The City Council interprets policies 8.27 through 8.30 provide direction on funding public facilities and services within the City of Portland's Urban Services Boundary. The FFTZ amendments do not include new public facility or infrastructure projects. These policies do not apply.

Public benefits

Policy 8.31. Application of Guiding Principles. Plan and invest in public facilities in ways that promote and balance the Guiding Principles established in The Vision and Guiding Principles of this Comprehensive Plan.

Policy 8.32. Community benefit agreements. Encourage the use of negotiated community benefit agreements for large public facility projects as appropriate to address environmental justice policies in Chapter 2: Community Involvement.

Policy 8.33. Community knowledge and experience. Encourage public engagement processes and strategies for larger public facility projects to include community members in identifying potential impacts, mitigation measures and community benefits.

Policy 8.34. Resource efficiency. Reduce the energy and resource use, waste, and carbon emissions from facilities necessary to serve designated land uses to meet adopted City goals and targets.

Policy 8.35. Natural systems. Protect, enhance, and restore natural systems and features for their infrastructure service and other values.

Policy 8.36. Context-sensitive infrastructure. Design, improve, and maintain public rights-of-way and facilities in ways that are compatible with, and that minimize negative impacts on, their physical, environmental, and community context.

Policy 8.37. Site- and area-specific needs. Allow for site- and area-specific public facility standards,

requirements, tools, and policies as needed to address distinct topographical, geologic, environmental, and other conditions.

Policy 8.38. Age-friendly public facilities. Promote public facility designs that make Portland more age-friendly.

254. Finding: The City Council interprets policies 8.31 through 8.38 provide direction on the associated public benefits that should be considered in conjunction with investment in public facilities and services within the City of Portland's Urban Services Boundary. The FFTZ amendments do not include new public facility or infrastructure projects. These policies do not apply.

Public rights-of-way

Policy 8.39. Interconnected network. Establish a safe and connected rights-of-way system that equitably provides infrastructure services throughout the city.

Policy 8.40. Transportation function. Improve and maintain the right-of-way to support multimodal transportation mobility and access to goods and services as is consistent with the designated street classification.

Policy 8.41. Utility function. Improve and maintain the right-of-way to support equitable distribution of utilities, including water, sanitary sewer, stormwater management, energy, and communications, as appropriate.

Policy 8.42. Stormwater management function. Improve rights-of-way to integrate green infrastructure and other stormwater management facilities to meet desired levels-of-service and economic, social, and environmental objectives.

Policy 8.43. Trees in rights-of-way. Integrate trees into public rights-of-way to support City canopy goals, transportation functions, and economic, social, and environmental objectives.

Policy 8.44. Community uses. Allow community use of rights-of-way for purposes such as public gathering space, events, or temporary festivals, if the community uses are integrated in ways that balance and minimize conflict with the designated through movement and access roles of rights-of-ways.

Policy 8.45. Pedestrian amenities. Encourage facilities that enhance pedestrian enjoyment, such as transit shelters, garbage containers, benches, etc. in the right-of-way.

Policy 8.46. Commercial uses. Accommodate allowable commercial uses of the rights-of-way for enhancing commercial vitality, if the commercial uses can be integrated in ways that balance and minimize conflict with the other functions of the right-of-way.

Policy 8.47. Flexible design. Allow flexibility in right-of-way design and development standards to appropriately reflect the pattern area and other relevant physical, community, and environmental contexts and local needs.

> **8.47.a.** Use a variety of transportation resources in developing and designing projects for all City streets, such as the City of Portland's Pedestrian Design Guide, Bicycle Master Plan-Appendix A, NACTO Urban Bikeway Design Guide, NACTO Urban Street Design Guide, Portland Parks and Recreation Trail Design Guidelines, Designing for Truck Movements and Other Large Vehicles, and City of Portland Green Street Policy, Stormwater Management Manual, Design Guide for Public Street Improvements, and Neighborhood Greenways. (TSP objective 8.1.e.).

Policy 8.48. Corridors and City Greenways. Ensure public facilities located along Civic Corridors,

Neighborhood Corridors, and City Greenways support the multiple objectives established for these corridors.

Policy 8.49. Coordination. Coordinate the planning, design, development, improvement, and maintenance of public rights-of-way among appropriate public agencies, private providers, and adjacent landowners.

8.49.a. Coordination efforts should include the public facilities necessary to support the uses and functions of rights-of-way, as established in policies 8.40 to 8.46.

8.49.b. Coordinate transportation and stormwater system plans and investments, especially in unimproved or substandard rights-of-way, to improve water quality, public safety, including for pedestrians and bicyclists, and neighborhood livability.

Policy 8.50. Undergrounding. Encourage undergrounding of electrical and telecommunications facilities within public rights-of-way, especially in centers and along Civic Corridors.

Policy 8.51. Right-of-way vacations. Maintain rights-of-way if there is an established existing or future need for them, such as for transportation facilities or for other public functions established in policies 8.40 to 8.46.

Policy 8.52. Rail rights-of-way. Preserve existing and abandoned rail rights-of-way for future rail or public trail uses.

255. Finding: The City Council interprets policies 8.39 through 8.52 to apply to new public facilities or infrastructure projects in the right-of-way. The FFTZ amendments do not include new public facility or infrastructure projects in the right-of-way. These policies do not apply.

Trails

Policy 8.53. Public trails. Establish, improve, and maintain a citywide system of public trails that provide transportation and/or recreation options and are a component of larger network of facilities for bicyclists, pedestrians, and recreational users.

Policy 8.54. Trail system connectivity. Plan, improve, and maintain the citywide trail system so that it connects and improves access to Portland's neighborhoods, commercial areas, employment centers, schools, parks, natural areas, recreational facilities, regional destinations, the regional trail system, and other key places that Portlanders access in their daily lives.

Policy 8.55. Trail coordination. Coordinate planning, design, improvement, and maintenance of the trail system among City agencies, other public agencies, non-governmental partners, and adjacent landowners.

Policy 8.56. Trail diversity. Allow a variety of trail types to reflect a trail's transportation and recreation roles, requirements, and physical context.

Policy 8.57. Public access requirements. Require public access and improvement of public trails along the future public trail alignments shown in Figure 8-2 — Future Public Trail Alignments**.**

Policy 8.58. Trail and City Greenway coordination. Coordinate the planning and improvement of trails as part of the City Greenways system.

Policy 8.59. Trail and Habitat Corridor coordination. Coordinate the planning and improvement of trails with the establishment, enhancement, preservation, and access to habitat corridors.

Policy 8.60. Intertwine coordination. Coordinate with the Intertwine Alliance and its partners, including local and regional parks providers, to integrate Portland's trail and active transportation network with the bi-state regional trail system.

256. Finding: The City Council interprets policies 8.53 through 8.60 to apply to designated trails. While designated trail alignments are included in public rights of way adjacent industrial zones, the FFTZ amendments do not amend the designated trail alignments. These policies do not apply.

Sanitary system

Policy 8.61. Sewer connections. Require all developments within the city limits to be connected to sanitary sewers unless the public sanitary system is not physically or legally available per City Code and state requirements; or the existing onsite septic system is functioning properly without failure or complaints per City Code and state requirements; and the system has all necessary state and county permits.

Policy 8.62. Combined sewer overflows. Provide adequate public facilities to limit combined sewer overflows to frequencies established by regulatory permits.

Policy 8.63. Sanitary sewer overflows. Provide adequate public facilities to prevent sewage releases to surface waters as consistent with regulatory permits.

Policy 8.64. Private sewage treatment systems. Adopt land use regulations that require any proposed private sewage treatment system to demonstrate that all necessary state and county permits are obtained.

Policy 8.65. Sewer extensions. Prioritize sewer system extensions to areas that are already developed at urban densities and where health hazards exist.

Policy 8.66. Pollution prevention. Reduce the need for wastewater treatment capacity through land use programs and public facility investments that manage pollution as close to its source as practical and that reduce the amount of pollution entering the sanitary system.

Policy 8.67. Treatment. Provide adequate wastewater treatment facilities to ensure compliance with effluent standards established in regulatory permits.

257. Finding: The City Council interprets policies 8.61 through 8.67 to apply to the provision of sanitary sewer facilities. The FFTZ amendments do not include comprehensive plan map amendments and do not amend the CSP. These regulations apply to only one type of use that makes up a minority part of the uses found in Portland's industrial districts. The remaining industrial uses continue to be regulated under the current development regulations and do not intensify the development capacity. Therefore, these changes will not adversely impact the City's sanitary sewer system.

Stormwater Systems

Policy 8.68. Stormwater facilities. Provide adequate stormwater facilities for conveyance, flow control, and pollution reduction.

Policy 8.69. Stormwater as a resource. Manage stormwater as a resource for watershed health and public use in ways that protect and restore the natural hydrology, water quality, and habitat of Portland's watersheds.

Policy 8.70 Natural systems. Protect and enhance the stormwater management capacity of natural resources such as rivers, streams, creeks, drainageways, wetlands, and floodplains.

Policy 8.71. Green infrastructure. Promote the use of green infrastructure, such as natural areas, the

urban forest, and landscaped stormwater facilities, to manage stormwater.

Policy 8.72. Stormwater discharge. Avoid or minimize the impact of stormwater discharges on the water and habitat quality of rivers and streams.

Policy 8.73. On-site stormwater management. Encourage on-site stormwater management, or management as close to the source as practical, through land use decisions and public facility investments.

Policy 8.74. Pollution prevention. Coordinate policies, programs, and investments with partners to prevent pollutants from entering the stormwater system by managing point and non-point pollution sources through public and private facilities, local regulations, and education.

Policy 8.75. Stormwater partnerships. Provide stormwater management through coordinated public and private facilities, public-private partnerships, and community stewardship.

258. Finding: The City Council interprets policies 8.68 through 8.75 to apply to the provision of stormwater facilities. The FFTZ amendments do not include comprehensive plan map amendments and do not amend the CSP. These regulations apply to only one type of use that makes up a minority part of the uses found in Portland's industrial districts. The remaining industrial uses continue to be regulated under the current development regulations and do not intensify the development capacity. Therefore, these changes will not adversely impact the City's stormwater systems.

Flood management

Policy 8.76. Flood management. Improve and maintain the functions of natural and managed drainageways, wetlands, and floodplains to protect health, safety, and property, provide water conveyance and storage, improve water quality, and maintain and enhance fish and wildlife habitat.

Policy 8.77. Floodplain management. Manage floodplains to protect and restore associated natural resources and functions and to minimize the risks to life and property from flooding.

Policy 8.78. Flood management facilities. Establish, improve, and maintain flood management facilities to serve designated land uses through planning, investment and regulatory requirements.

Policy 8.79. Drainage district coordination. Coordinate with drainage districts that provide stormwater management, conveyance, and flood mitigation, protection, and control services within the City's Urban Services Boundary.

Policy 8.80. Levee coordination. Coordinate plans and investments with special districts and agencies responsible for managing and maintaining certification of levees along the Columbia River.

259. The City Council interprets policies 8.76 through 8.80 to apply to the management of floodplains. Six of the existing FFTs have frontage on the Willamette River, with portions of the sites in the FEMA designated 100-year floodplain. For sites in flood prone areas, the FFTZ amendments do not amend the environmental overlay maps, nor do they change City programs that regulate development in the floodplain (i.e., Title 33.631 Sites in Flood Hazard Areas; Title 10 Erosion Control, and the balanced cut and fill requirements of Title 24).

Water systems

Policy 8.81. Primary supply source. Protect the Bull Run watershed as the primary water supply source for Portland.

Policy 8.82. Bull Run protection. Maintain a source-protection program and practices to safeguard the

Bull Run watershed as a drinking water supply.

Policy 8.83. Secondary supply sources. Protect, improve, and maintain the Columbia South Shore wellfield groundwater system, the Powell Valley wellfield groundwater system, and any other alternative water sources designated as secondary water supplies.

Policy 8.84. Groundwater wellfield protection. Maintain a groundwater protection program and practices to safeguard the Columbia South Shore wellfield and the Powell Valley wellfield as drinking water supplies.

Policy 8.85. Water quality. Maintain compliance with state and federal drinking water quality regulations.

Policy 8.86. Storage. Provide sufficient in-city water storage capacity to serve designated land uses, meet demand fluctuations, maintain system pressure, and ensure supply reliability.

Policy 8.87. Fire protection. Provide adequate water facilities to serve the fire protection needs of all Portlanders and businesses.

Policy 8.88. Water pressure. Provide adequate water facilities to maintain water pressure in order to protect water quality and provide for the needs
of customers.

Policy 8.89. Water efficiency. Reduce the need for additional water facility capacity and maintain compliance with state water resource regulations by encouraging efficient use of water by customers within the city.

Policy 8.90. Service interruptions. Maintain and improve water facilities to limit interruptions in water service to customers.

Policy 8.91. Outside user contracts. Coordinate long-term water supply planning and delivery with outside-city water purveyors through long-term
wholesale contracts.

260. Finding: The City Council interprets policies 8.81 through 8.91 to apply to the provision of water service. The FFTZ amendments do not include comprehensive plan map amendments and do not amend the CSP. These regulations apply to only one type of use that makes up a minority part of the uses found in Portland's industrial districts. The remaining industrial uses continue to be regulated under the current development regulations and do not intensify the development capacity. Therefore, these changes will not adversely impact the City's water system.

Parks and recreation

Policy 8.92. Acquisition, development, and maintenance. Provide and maintain an adequate supply and variety of parkland and recreational facilities to serve the city's current and future population based on identified level-of-service standards and community needs.

Policy 8.93. Service equity. Invest in acquisition and development of parks and recreation facilities in areas where service-level deficiencies exist.

Policy 8.94. Capital programming. Maintain a long-range park capital improvement program, with criteria that considers acquisition, development, and operations; provides opportunities for public input; and emphasizes creative and flexible financing strategies.

Policy 8.95. Park planning. Improve parks, recreational facilities, natural areas, and the urban forest in accordance with current master plans, management plans, or adopted strategies that reflect user

group needs, development priorities, development and maintenance costs, program opportunities, financing strategies, and community input.

Policy 8.96. Recreational trails. Establish, improve, and maintain a complete and connected system of public recreational trails, consistent with Portland Parks & Recreation's trail strategy.

Policy 8.97. Natural resources. Preserve, enhance, and manage City-owned natural areas and resources to protect and improve their ecological health, in accordance with both the natural area acquisition and restoration strategies, and to provide compatible public access.

Policy 8.98. Urban forest management. Manage urban trees as green infrastructure with associated ecological, community, and economic functions, through planning, planting, and maintenance activities, education, and regulation.

Policy 8.99. Recreational facilities. Provide a variety of recreational facilities and services that contribute to the health and well-being of Portlanders of all ages and abilities.

261. Finding: The City Council interprets policies 8.92 through 8.103 to address City-owned parks and natural areas and not development on private land. These policies do not apply.

Public safety and emergency response

Policy 8.104. Emergency preparedness, response, and recovery coordination. Coordinate land use plans and public facility investments between City bureaus, other public and jurisdictional agencies, businesses, community partners, and other emergency response providers, to ensure coordinated and comprehensive emergency and disaster risk reduction, preparedness, response, and recovery.

Policy 8.105. Emergency management facilities. Provide adequate public facilities – such as emergency coordination centers, communications infrastructure, and dispatch systems – to support emergency management, response, and recovery.

Policy 8.106. Police facilities. Improve and maintain police facilities to allow police personnel to efficiently and effectively respond to public safety needs and serve designated land uses.

Policy 8.107. Community safety centers. Establish, coordinate, and co-locate public safety and other community services in centers.

Policy 8.108. Fire facilities. Improve and maintain fire facilities to serve designated land uses, ensure equitable and reliable response, and provide fire and life safety protection that meets or exceeds minimum established service levels.

Policy 8.109. Mutual aid. Maintain mutual aid coordination with regional emergency response providers as appropriate to protect life and ensure safety.

Policy 8.110. Community preparedness. Enhance community preparedness and capacity to prevent, withstand, and recover from emergencies and natural disasters through land use decisions and public facility investments.

Policy 8.111. Continuity of operations. Maintain and enhance the City's ability to withstand and recover from natural disasters and human-made disruptions in order to minimize disruptions to public services.

262. Finding: The City Council interprets policies 8.104 through 8.111 to address the provision of public safety and emergency response services and not development on private land. These policies do not apply.

Solid waste management

Policy 8.112. Waste management. Ensure land use programs, rights-of-way regulations, and public facility investments allow the City to manage waste effectively and prioritize waste management in the following order: waste reduction, recycling, anaerobic digestion, composting, energy recovery, and then landfill.

263. Finding: The City Council interprets this policy to address the provision of waste management services and not development on private land. These policies do not apply.

School facilities

Policy 8.113. School district capacity. Consider the overall enrollment capacity of a school district – as defined in an adopted school facility plan that meets the requirements of Oregon Revised Statute 195 – as a factor in land use decisions that increase capacity for residential development.

Policy 8.114. Facilities Planning. Facilitate coordinated planning among school districts and City bureaus, including Portland Parks and Recreation, to accommodate school site/facility needs in response to most up-to-date growth forecasts.

Policy 8.115. Co-location. Encourage public school districts, Multnomah County, the City of Portland, and other providers to co-locate facilities and programs in ways that optimize service provision and intergenerational and intercultural use.

Policy 8.116. Community use. Encourage public use of public school grounds for community purposes while meeting educational and student safety needs and balancing impacts on surrounding neighborhoods.

Policy 8.117. Recreational use. Encourage publicly-available recreational amenities (e.g. athletic fields, green spaces, community gardens, and playgrounds) on public school grounds for public recreational use, particularly in neighborhoods with limited access to parks.

Policy 8.118. Schools as emergency aid centers. Encourage the use of seismically-safe school facilities as gathering and aid-distribution locations during natural disasters and other emergencies.

Policy 8.119. Facility adaptability. Ensure that public schools may be upgraded to flexibly accommodate multiple community-serving uses and adapt to changes in educational approaches, technology, and student needs over time.

Policy 8.120. Leverage public investment. Encourage City public facility investments that complement and leverage local public school districts' major capital investments.

Policy 8.121. School access. Encourage public school districts to consider the ability of students to safely walk and bike to school when making decisions about the site locations and attendance boundaries of schools.

Policy 8.122. Private institutions. Encourage collaboration with private schools and educational institutions to support community and recreational use of their facilities.

264. Finding: The City Council interprets policies 8.115 through 8.122 to address school facilities and not development on private land. These policies do not apply.

Technology and communications

Policy 8.123. Technology and communication systems. Maintain and enhance the City's technology and communication facilities to ensure public safety, facilitate access to information, and maintain City operations.

Policy 8.124. Equity, capacity, and reliability. Encourage plans and investments in technology and communication infrastructure to ensure access in all areas of the city, reduce disparities in capacity, and affordability, and to provide innovative high-performance, reliable service for Portland's residents and businesses.

265. Finding: The City Council interprets policies 8.123 and 8.124 to address the provision technology and communication services and not development on private land. This policy does not apply.

Energy infrastructure

Policy 8.125. Energy efficiency. Promote efficient and sustainable production and use of energy resources by residents and businesses, including low-carbon renewable energy sources, district energy systems, and distributed generation, through land use plans, zoning, and other legislative land use decisions.

Policy 8.126. Coordination. Coordinate with energy providers to encourage investments that ensure reliable, equitable, efficient, and affordable energy for Portland residents and businesses.

266. Finding: The City Council finds that "promote" means to "further the progress of, advance, or raise." The 2035 Comprehensive Plan defines "coordinate" as work together with others toward a common goal; collaborate. The verb "encourage", which is defined in the 2035 Comprehensive Plan, means to promote or foster using some combination of voluntary approaches, regulations, or incentives. The City Council finds that these policies work together to promote efficient and sustainable production and use of energy. Also, the City Council finds that this is done by coordinating with energy providers to encourage investments that will result in reliable, equitable, efficient and affordable energy. As part of the concept development of the zoning code changes, in June 2016 BPS held stakeholder focus group meetings with representatives from energy providers - the FFTs, the Western States Petroleum Association and Northwest Natural. The Proposed Draft was crafted in response to these discussions and additional comments on the Discussion Draft. Further, in response to testimony at the Planning and Sustainability Commission, changes were made to the use regulations to designate FFTs as a limited use (rather than a prohibited use) and allow for a ten percent expansion of storage capacity in conjunction with seismic safety upgrades. The City Council received testimony from energy providers that a ten percent capacity increase limit would be a severe limitation and would not justify the private investment needed to replace existing tanks. However, the City Council found that the energy providers' proposed Energy Corridor Overlay zone and definition of "region" as a seven state area (PADD-5) was not consistent with other City goals and policies to reduce seismic risk. Further, the City does not have the administrative authority and capacity to monitor and enforce regulations to control the destination of fossil fuels flowing through Portland to a seven-state region. Also, allowing for unlimited expansion of Portland's FFTs is not consistent with the DOGAMI recommendation to mitigate seismic vulnerability by increasing redundancy and reserve capacity in Oregon's liquid fuel supply by replacing, relocating, or adding redundant systems elsewhere. The FFTZ amendments designate existing FFTs as a limited use, as opposed to a prohibited or nonconforming use, allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake. Further, the use limitations (33.140.100.B.17.a) provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety.

The City has a few provisions in the Zoning Code to support energy conservation, including energy efficiency or renewable energy improvements do not trigger nonconforming upgrade improvements (PCC 33.258); development standards for small, urban-wind turbines (PCC 33.299); and a requirement that new development in the Central City Plan District must register for green

building certification (PCC 33.510). The FFTZ amendments do not amend any of these implementing provisions.

Chapter 9 Transportation

GOAL 9.A: Safety. Transportation safety impacts the livability of a city and the comfort and security of those using City streets. Comprehensive efforts to improve transportation safety through engineering, education, enforcement and evaluation will be used to eliminate traffic-related fatalities and serious injuries from Portland's transportation system.

Goal 9.B: Multiple goals. Portland's transportation system is funded and maintained to achieve multiple goals and measurable outcomes for people and the environment. The transportation system is safe, complete, interconnected, multimodal, and fulfills daily needs for people and businesses.

GOAL 9.C: Great places. Portland's transportation system enhances quality of life for all Portlanders, reinforces existing neighborhoods and great places, and helps make new great places in town centers, neighborhood centers and corridors, and civic corridors.

GOAL 9.D: Environmentally sustainable. The transportation system increasingly uses active transportation, renewable energy, or electricity from renewable sources, achieves adopted carbon reduction targets, and reduces air pollution, water pollution, noise, and Portlanders' reliance on private vehicles.

GOAL 9.E: Equitable transportation. The transportation system provides all Portlanders options to move about the city and meet their daily needs by using a variety of safe, efficient, convenient, and affordable modes of transportation. Transportation investments are responsive to the distinct needs of each community.

GOAL 9.F: Positive health outcomes. The transportation system promotes positive health outcomes and minimizes negative impacts for all Portlanders by supporting active transportation, physical activity, and community and individual health.

GOAL 9.G: Opportunities for prosperity. The transportation system supports a strong and diverse economy, enhances the competitiveness of the city and region, and maintains Portland's role as a West Coast trade gateway and freight hub by providing efficient and reliable goods movement, multimodal access to employment areas and educational institutions, as well as enhanced freight access to industrial areas and intermodal freight facilities. The transportation system helps people and businesses reduce spending and keep money in the local economy by providing affordable alternatives to driving.

GOAL 9.H: Cost effectiveness. The City analyzes and prioritizes capital and operating investments to cost effectively achieve the above goals while responsibly managing and protecting our past investments in existing assets.

GOAL 9.I: Airport Futures. Promote a sustainable airport (Portland International Airport [PDX]) by meeting the region's air transportation needs without compromising livability and quality of life for future generations.

267. Finding: The City Council interprets these goals to address transportation improvements, programming, funding priorities and provide policy guidance for developing and implementing the Transportation System Plan. The adopted 2035 Comprehensive Plan includes the Transportation System Plan (TSP), which was adopted in three phases (Ordinance 187832, 188177, and 188957). Phase 1 and 2 was submitted as part Task Four of Periodic Review; and both were approved by

LCDC Order 18 – WKTSK – 001897 on August 8, 2018. Phase 3 of the Transportation System Plan was adopted as a post-acknowledgement plan amendment by Ordinance No. 188957, became effective on June 23, 2018. The FFTZ amendments do not amend the TSP.

The City Council interprets these goals to apply to the transportation system as whole and not to individual components of the transportation system. The FFTZ amendments limit one type of use allowed in industrial areas. The remaining industrial uses continue to be regulated under the current development regulations and do not intensify the development capacity. Therefore, the amendments do not have a significant effect on the transportation system.

Specifically, the City Council finds that Goal 9.G requires Portland to maintain Portland's role as a multimodal freight hub as part of supporting a strong and diverse economy. The FFTZ amendments maintains Portland's role as a multimodal freight hub with enhanced freight access because they do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the industrial areas where the existing FFTs are located. The regulations are narrowly crafted to support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Finally, even though transloading facilities are a defining characteristic of a Bulk Fossil Fuel Terminal, the ordinance only limits new fossil fuel storage tank capacity. It does not regulate transloading facilities, docks or pipelines – facilities that are key components of the multimodal freight transportation system. Existing FFTs and other industrial uses can make investments in multimodal freight facilities.

Testimony from the Portland Business Alliance et al., the Working Water Coalition, and the Western States Petroleum Association raised the concern that the ordinance would force fuels to be transported by truck and increase vehicle miles travelled and emissions. The City Council finds that this unsupported assertion provides no details or explanation as to how this ordinance will force a change in transportation modes. There is no explanation or evidence on future demand, pipeline capacity utilization, or storage tank utilization or how or why truck traffic would increase. BPS staff provided evidence in the Council presentation and the written record that demonstrates that there is a reasonable expectation that the demand for fossil fuels will be flat and that the existing FFT storage capacity, with the allowed exceptions, will continue to meet the future demand for fossil fuels.

Designing and planning

Policy 9.1. Street design classifications. Maintain and implement street design classifications consistent with land use plans, environmental context, urban design pattern areas, and the Neighborhood Corridor and Civic Corridor Urban Design Framework designations.

Policy 9.2. Street policy classifications. Maintain and implement street policy classifications for pedestrian, bicycle, transit, freight, emergency vehicle, and automotive movement, while considering access for all modes, connectivity, adjacent planned land uses, and state and regional requirements.

9.2.a. Designate district classifications that emphasize freight mobility and access in industrial and employment areas serving high levels of truck traffic and to accommodate the needs of intermodal freight movement.

9.2.b. Designate district classifications that give priority to pedestrian access in areas where high levels of pedestrian activity exist or are planned, including the Central City, Gateway regional

center, town centers, neighborhood centers, and transit station areas.

9.2.c. Designate district classifications that give priority to bicycle access and mobility in areas where high levels of bicycle activity exist or are planned, including Downtown, the River District, Lloyd District, Gateway Regional Center, town centers, neighborhood centers, and transit station areas.

Policy 9.3. Transportation System Plan. Maintain and implement the Transportation System Plan (TSP) as the decision-making tool for transportation-related projects, policies, programs, and street design.

Policy 9.4. Use of classifications. Plan, develop, implement, and manage the transportation system in accordance with street design and policy classifications outlined in the Transportation System Plan.

9.4.a. Classification descriptions are used to describe how streets should function for each mode of travel, not necessarily how they are functioning at present.

268. Finding: The FFTZ amendments do not change the functional classification of any existing or proposed transportation facility, nor do they change the standards implementing a functional classification system.

Policy 9.5. Mode share goals and Vehicle Miles Travelled (VMT) reduction. Increase the share of trips made using active and low-carbon transportation modes. Reduce VMT to achieve targets set in the most current Climate Action Plan and Transportation System Plan, and meet or exceed Metro's mode share and VMT targets.

Policy 9.6. Transportation strategy for people movement. Design the system to accommodate the most vulnerable users, including those that need special accommodation under the Americans with Disabilities Act (ADA). Implement a prioritization of modes for people movement by making transportation system decisions per the following ordered list:

- Walking
- Bicycling
- Transit
- Fleets of electric, fully automated, multiple passenger vehicles
- Other shared vehicles
- Low or no occupancy vehicles, fossil-fueled non-transit vehicles

When implementing this prioritization ensure that:

- The needs and safety of each group of users are considered, and changes do not make existing conditions worse for the most vulnerable users.
- All users' needs are balanced with the intent of optimizing the right of way for multiple modes on the same street.
- When necessary to ensure safety, accommodate some users on parallel streets as part of multi-street corridors.
- Land use and system plans, network functionality for all modes, other street functions, and complete street policies, are maintained.
- Policy-based rationale is provided if modes lower in the ordered list are prioritized.

Policy 9.7. Moving goods and delivering services. In tandem with people movement, maintain efficient and reliable movement of goods and services as a critical transportation system function.

Prioritize freight system reliability improvements over single-occupancy vehicle mobility where there are solutions that distinctly address those different needs.

269. Finding: The City Council interprets policies 9.5 through 9.7 to mean that people movement and freight movement are critical functions of the transportation system that should be prioritized over single-occupancy vehicles. Further, the City Council interprets this policy to apply to transportation system design and investment decisions, and not land use decisions. Portland's role as a multimodal freight hub is maintained because the FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan. Therefore, the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the northwest industrial area where the FFTs are located. The ordinance regulates storage capacity, it does not regulate transloading facilities, docks or pipelines – facilities that are key components of the multimodal freight transportation system.

Testimony from the Portland Business Alliance et al., the Working Water Coalition, and the Western States Petroleum Association raised the concern that the ordinance would force fuels to be transported by truck and increase vehicle miles travelled and emissions. The City Council finds that this unsupported assertion provides no details or explanation as to how this ordinance will force a change in transportation modes. There is no explanation or evidence on future demand, pipeline capacity utilization, or storage tank utilization or how or why truck traffic would increase. BPS staff provided evidence in the Council presentation and the written record that demonstrates that there is a reasonable expectation that the demand for fossil fuels will be flat and that the existing FFT storage capacity, with the allowed exceptions, will continue to meet the future demand for fossil fuels.

Policy 9.8. Affordability. Improve and maintain the transportation system to increase access to convenient and affordable transportation options for all Portlanders, especially those who have traditionally been under-served or under-represented or have historically borne unequal burdens.

Policy 9.9. Accessible and age-friendly transportation system. Ensure that transportation facilities are accessible to people of all ages and abilities, and that all improvements to the transportation system (traffic, transit, bicycle, and pedestrian) in the public right-of-way comply with the Americans with Disabilities Act of 1990. Improve and adapt the transportation system to better meet the needs of the most vulnerable users, including the young, older adults, and people with different abilities.

Policy 9.10. Geographic policies. Adopt geographically-specific policies in the Transportation System Plan to ensure that transportation infrastructure reflects the unique topography, historic character, natural features, system gaps, economic needs, demographics, and land uses of each area. Use the Pattern Areas identified in Chapter 3: Urban Form as the basis for area policies.

9.10.a. Refer to adopted area plans for additional applicable geographic objectives related to transportation. Land use, development, and placemaking

270. Finding: Policies 9.8 through 9.10 address the design and planning of transportation facilities and not development on private land. These policies do not apply.

Land use, development, and placemaking

Policy 9.11. Land use and transportation coordination. Implement the Comprehensive Plan Map and the Urban Design Framework though coordinated long-range transportation and land use planning. Ensure that street policy and design classifications and land uses complement one another.

Policy 9.12. Growth strategy. Use street design and policy classifications to support Goals 3A-3G in

Chapter 3: Urban Form. Consider the different design contexts and transportation functions in Town Centers, Neighborhood Centers, Neighborhood Corridors, Employment Areas, Freight Corridors, Civic Corridors, Transit Station Areas, and Greenways.

Policy 9.13. Development and street design. Evaluate adjacent land uses to help inform street classifications in framing, shaping, and activating the public space of streets. Guide development and land use to create the kinds of places and street environments intended for different types of streets.

271. Finding: For policies 9.11 through 9.13, the City Council interprets these policies as providing direction to ensure that the transportation system, specifically the street classifications, support the Comprehensive Plan Map (and land use designations). The FFTZ amendments do not change the functional classification of any existing or proposed transportation facility, nor do they change the standards implementing a functional classification system. The FFTZ amendments limit one type of use allowed in industrial areas. The remaining industrial uses continue to be regulated under the current development regulations and do not intensify the development capacity. Therefore, the long-range transportation and land use plan continue to be coordinated.

Streets as public spaces

Policy 9.14. Streets for transportation and public spaces. Integrate both placemaking and transportation functions when designing and managing streets by encouraging design, development, and operation of streets to enhance opportunities for them to serve as places for community interaction, environmental function, open space, tree canopy, recreation, and other community purposes.

Policy 9.15. Repurposing street space. Encourage repurposing street segments that are not critical for transportation connectivity to other community purposes.

Policy 9.16. Design with nature. Promote street alignments and designs that respond to topography and natural features, when feasible, and protect streams, wildlife habitat, and native trees.

272. Finding: These policies address the design and use of public streets and not development on private land. These policies do not apply.

Modal policies

Policy 9.17. Pedestrian transportation. Encourage walking as the most attractive mode of transportation for most short trips, within and to centers, corridors, and major destinations, and as a means for accessing transit.

Policy 9.18. Pedestrian networks. Create more complete networks of pedestrian facilities, and improve the quality of the pedestrian environment.

Policy 9.19. Pedestrian safety and accessibility. Improve pedestrian safety, accessibility, and convenience for people of all ages and abilities.

Policy 9.20. Bicycle transportation. Create conditions that make bicycling more attractive than driving for most trips of approximately three miles or less.

Policy 9.21. Accessible bicycle system. Create a bicycle transportation system that is safe, comfortable, and accessible to people of all ages and abilities.

Policy 9.22. Public transportation. Coordinate with public transit agencies to create conditions that make transit the preferred mode of travel for trips that are not made by walking or bicycling.

Policy 9.23. Transportation to job centers. Promote and enhance transit to be more convenient and

economical than the automobile for people travelling more than three miles to and from the Central City and Gateway. Enhance regional access to the Central City and access from Portland to other regional job centers.

Policy 9.24. Transit service. In partnership with TriMet, develop a public transportation system that conveniently, safely, comfortably, and equitably serves residents and workers 24 hours a day, 7 days a week.

Policy 9.25. Transit equity. In partnership with TriMet, maintain and expand high-quality frequent transit service to all Town Centers, Civic Corridors, Neighborhood Centers, Neighborhood Corridors, and other major concentrations of employment, and improve service to areas with high concentrations of poverty and historically under-served and under-represented communities.

> **9.25.a.** Support a public transit system and regional transportation that address the transportation needs of historically marginalized communities and provide increased mobility options and access.

Policy 9.26. Transit funding. Consider funding strategies and partnership opportunities that improve access to and equity in transit service, such as raising metro-wide funding to improve service and decrease user fees/fares.

Policy 9.27. Transit service to centers and corridors. Use transit investments to shape the city's growth and increase transit use. In partnership with TriMet and Metro**,** maintain, expand, and enhance Portland Streetcar, frequent service bus, and high-capacity transit, to better serve centers and corridors with the highest intensity of potential employment and household growth.

> **9.27.a.** Locate major park-and-ride lots only where transit ridership is increased significantly, vehicle miles traveled are reduced, transit-supportive development is not hampered, bus service is not available or is inadequate, and the surrounding area is not negatively impacted.

Policy 9.28. Intercity passenger service. Coordinate planning and project development to expand intercity passenger transportation services in the Willamette Valley, and from Portland to Seattle and Vancouver, BC.

Policy 9.29. Regional trafficways and transitways. Maintain capacity of regional transitways and existing regional trafficways to accommodate through-traffic.

273. Finding: Policies 9.17 through 9.29 address the design and planning of transportation facilities and not development on private land. These policies do not apply.

Policy 9.30. Multimodal goods movement. Develop, maintain, and enhance a multimodal freight transportation system for the safe, reliable, sustainable, and efficient movement of goods within and through the city.

Policy 9.31. Economic development and industrial lands. Ensure that the transportation system supports traded sector economic development plans and full utilization of prime industrial land, including brownfield redevelopment.

Policy 9.32. Multimodal system and hub. Maintain Portland's role as a multimodal hub for global and regional movement of goods. Enhance Portland's network of multimodal freight corridors.

Policy 9.33. Freight network. Develop, manage, and maintain a safe, efficient, and reliable freight street network to provide freight access to and from intermodal freight facilities, industrial and commercial districts, and the regional transportation system. Invest to accommodate forecasted growth of interregional freight volumes and provide access to truck, marine, rail, and air

transportation systems. Ensure designated routes and facilities are adequate for over-dimensional trucks and emergency equipment.

Policy 9.34. Sustainable freight system. Support the efficient delivery of goods and services to businesses and neighborhoods, while also reducing environmental and neighborhood impacts. Encourage the use of energy efficient and clean delivery vehicles, and manage on- and off-street loading spaces to ensure adequate access for deliveries to businesses, while maintaining access to homes and businesses.

Policy 9.35. Freight rail network. Coordinate with stakeholders and regional partners to support continued reinvestment in, and modernization of, the freight rail network.

Policy 9.36. Portland Harbor. Coordinate with the Port of Portland, private stakeholders, and regional partners to improve and maintain access to marine terminals and related river-dependent uses in Portland Harbor.

9.36.a. Support continued reinvestment in, and modernization of, marine terminals in Portland Harbor.

9.36.b. Facilitate continued maintenance of the shipping channels in Portland Harbor and the Columbia River.

9.36.c. Support shifting more long-distance, high-volume movement of goods to river and oceangoing ships and rail.

274. Finding: Policies 9.30 through 9.36 direct the City to develop, maintain, and enhance a multimodal freight transportation system. The City Council interprets these policies to apply to transportation system design and city investment decisions that are embodied in the Freight Master Plan, which is one of the modal plans of the TSP. The Freight Master Plan includes capital projects, programs and activities to improve mobility, reduce community conflicts, and promote a multimodal transportation system to support long-term economic development. The FFTZ amendments maintain Portland's multimodal freight hub because they do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments to maintain and strengthen the multimodal transportation infrastructure in the northwest industrial area where the FFTs are located. Further, the changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Finally, even though transloading facilities are a defining characteristic of a Bulk Fossil Fuel Terminal, the ordinance only limits new fossil fuel storage tank capacity and does not regulate transloading facilities, docks or pipelines – facilities that are key components of the multimodal freight transportation system. Existing FFTs and other industrial uses can make investments in multimodal freight facilities.

Testimony from the Portland Business Alliance et al., the Working Water Coalition, and the Western States Petroleum Association raised the concern that the ordinance would force fuels to be transported by truck and increase vehicle miles travelled and emissions. The City Council finds that this unsupported assertion provides no details or explanation as to how this ordinance will force a change in transportation modes. There is no explanation or evidence on future demand, pipeline capacity utilization, or storage tank utilization or how or why truck traffic would increase. BPS staff provided evidence in the Council presentation and the written record that demonstrates that there

is a reasonable expectation that the demand for fossil fuels will be flat and that the existing FFT storage capacity, with the allowed exceptions, will continue to meet the future demand for fossil fuels.

Policy 9.37. Portland Heliport. Maintain Portland's Heliport functionality in the Central City.

275. Finding: This policy applies to the Central City. There are no FFTs in the Central City. This policy does not apply.

Policy 9.38. Automobile transportation. Maintain acceptable levels of mobility and access for private automobiles while reducing overall vehicle miles traveled (VMT) and negative impacts of private automobiles on the environment and human health.

Policy 9.39. Automobile efficiency. Coordinate land use and transportation plans and programs with other public and private stakeholders to encourage vehicle technology innovation, shifts toward electric and other cleaner, more energy-efficient vehicles and fuels, integration of smart vehicle technology with intelligent transportation systems, and greater use of options such as car-share, carpool, and taxi.

Policy 9.40. Emergency response. Maintain a network of accessible emergency response streets to facilitate safe and expedient emergency response and evacuation. Ensure that police, fire, ambulance, and other emergency providers can reach their destinations in a timely fashion, without negatively impacting traffic calming and other measures intended to reduce crashes and improve safety.

276. Finding: Policies 9.38 through 9.40 address the design and use of public streets and not development on private land. These policies do not apply.

Airport Futures

Policy 9.41. Portland International Airport. Maintain the Portland International Airport as an important regional, national, and international transportation hub serving the bi-state economy.

Policy 9.42. Airport regulations. Implement the Airport Futures Plan through the implementation of the Portland International Airport Plan District.

9.42.a. Prohibit the development of a potential third parallel runway at PDX unless need for its construction is established through a transparent, thorough, and regional planning process.

9.42.b. Support implementation of the Aircraft Landing Zone to provide safer operating conditions for aircraft in the vicinity of Portland International Airport by limiting the height of structures, vegetation, and construction equipment.

9.42.c. Support the Port of Portland's Wildlife Hazard Management Plan by implementing airport-specific landscaping requirements in the Portland International Airport Plan District to reduce conflicts between wildlife and aircraft.

Policy 9.43. Airport partnerships. Partner with the Port of Portland and the regional community to address the critical interconnection between economic development, environmental stewardship, and social responsibility. Support an ongoing public advisory committee for PDX to:

9.43.a. Support meaningful and collaborative public dialogue and engagement on airport related planning and development.

9.43.b. Provide an opportunity for the community to inform the decision-making related to the airport of the Port, the City of Portland, and other jurisdictions/organizations in the region.

9.43.c. Raise public knowledge about PDX and impacted communities.

Policy 9.44. Airport investments. Ensure that new development and redevelopment of airport facilities supports the City's and the Port's sustainability goals and policies, and is in accordance with Figure 9-3 — Portland International Airport. Allow the Port flexibility in configuring airport facilities to preserve future development options, minimize environmental impacts, use land resources efficiently, maximize operational efficiency, ensure development can be effectively phased, and address Federal Aviation Administration's airport design criteria.

277. Finding: Policies 9.41 through 9.44 provide policy direction related to Portland International Airport. The FFTZ amendments include an exemption for fossil fuel storage facilities for the exclusive use at airports to maintain a supply of aviation fuel to Portland International Airport (PDX).

System management

Policy 9.45. System management. Give preference to transportation improvements that use existing roadway capacity efficiently and that improve the safety of the system for all users.

9.45.a. Support regional equity measures for transportation system evaluation.

Policy 9.46. Traffic management. Evaluate and encourage traffic speed and volume to be consistent with street classifications and desired land uses to improve safety, preserve and enhance neighborhood livability, and meet system goals of calming vehicle traffic through a combination of enforcement, engineering, and education efforts.

9.46.a. Use traffic calming tools, traffic diversion and other available tools and methods to create and maintain sufficiently low automotive volumes and speeds on neighborhood greenways to ensure comfortable cycling environment on the street.

Policy 9.47. Connectivity. Establish an interconnected, multimodal transportation system to serve centers and other significant locations. Promote a logical, direct, and connected street system through street spacing guidelines and district-specific street plans found in the Transportation System Plan, and prioritize access to specific places by certain modes in accordance with policies 9.6 and 9.7.

9.47.a. Develop conceptual master street plans for areas of the City that have significant amounts of vacant or underdeveloped land and where the street network does not meet City and Metro connectivity guidelines.

9.47.b. As areas with adopted Street Plans develop, provide connectivity for all modes by developing the streets and accessways as shown on the Master Street Plan Maps in the Comp Plan.

9.47.c. Continue to provide connectivity in areas with adopted Street Plans for all modes of travel by developing public and private streets as shown on the Master Street Plan Maps in the Comp Plan.

9.47.d. Provide street connections with spacing of no more than 530 feet between connections except where prevented by barriers such as topography, railroads, freeways, or environmental constraints. Where streets must cross over protected water features, provide crossings at an average spacing of 800 to 1000 feet, unless exceptional habitat quality of length of crossing prevents a full street connection.

9.47.e Provide bike and pedestrian connections at approximately 330 feet intervals on public easements or rights-of-way when full street connections are not possible, except where

prevented by barriers s such as topography, railroads, freeways, or environmental constraints. Bike and pedestrian connections that cross protected water features should have an average spacing of no more than 530 feet, unless exceptional habitat quality or length of connection prevents a connection.

Policy 9.48 Technology. Encourage the use of emerging vehicle and parking technology to improve real-time management of the transportation network and to manage and allocate parking supply and demand.

Policy 9.49 Performance measures. Establish multimodal performance measures and measures of system completeness to evaluate and monitor the adequacy of transportation services based on performance measures in goals 9.A. through 9.I. Use these measures to evaluate overall system performance, inform corridor and area-specific plans and investments, identify project and program needs, evaluate and prioritize investments, and regulate development, institutional campus growth, zone changes, Comprehensive Plan Map amendments, and conditional uses.

9.49.a. Eliminate deaths and serious injuries for all who share Portland streets by 2025.

9.49.b. Maintain or decrease the number of peak period non-freight motor vehicle trips, system-wide and within each mobility corridor to reduce or manage congestion.

9.49.c. By 2035, reduce the number of miles Portlanders travel by car to 11 miles per day or less, on average.

9.49.d. Establish mode split targets in 2040 Growth Concept areas within the City, consistent with Metro's targets for these areas.

9.49.e. By 2035, increase the mode share of daily non-drive alone trips to 70 percent citywide, and to the following in the five pattern areas:

Pattern Area	2035 daily target mode share
Central City	85%
Inner Neighborhoods	70%
Western Neighborhoods	65%
Eastern Neighborhoods	65%
Industrial and River	55%

9.49.f. By 2035, 70 percent of commuters walk, bike, take transit, carpool, or work from home at approximately the following rates:

Mode	Mode Share
Walk	7.5%
Bicycle	25%

Transit	25%
Carpool	10%
Single Occupant Vehicle (SOV)	30% or less
Work at home	10% below the line (calculated outside of the modal targets above)

9.49.g. By 2035, reduce Portland's transportation-related carbon emissions to 50% below 1990 levels, at approximately 934,000 metric tons.

9.49.h. By 2025, increase the percentage of new mixed use zone building households not owning an automobile from approximately 13% (2014) to 25%, and reduce the percentage of households owning two automobiles from approximately 24% to 10%.

9.49.i. Develop and use alternatives to the level-of-service measure to improve safety, encourage multimodal transportation, and to evaluate and mitigate maintenance and new trip impacts from new development.

9.49.j. Use level-of-service, consistent with Table 9.1*, as one measure to evaluate the adequacy of transportation facilities in the vicinity of sites subject to land use review.

9.49.k. Maintain acceptable levels of performance on state facilities and the regional arterial and throughway network, consistent with the interim standard in Table 9.2*, in the development and adoption of, and amendments to, the Transportation System Plan and in legislative amendments to the Comprehensive Plan Map.

9.49.l. In areas identified by Metro that exceed the level-of-service in Table 9.2* and are planned to, but do not currently meet the alternative performance criteria, establish an action plan that does the following:

- Anticipates growth and future impacts of motor vehicle traffic on multimodal travel in the area
- Establishes strategies for mitigating the future impacts of motor vehicles
- Establishes performance standards for monitoring and implementing the action plan.

*Note: Referenced Tables 9.1 and 9.2 are contained within the Transportation System Plan and should not be confused with tables or figures within the 2035 Comprehensive Plan.

9.49.m. Develop performance measures to track progress in creating and maintaining the transportation system.

Policy 9.50 Regional congestion management. Coordinate with Metro to establish new regional multimodal mobility standards that prioritize transit, freight, and system completeness.

9.50.a. Create a regional congestion management approach, including a market-based system, to price or charge for auto trips and parking, better account for the cost of auto trips, and to more efficiently manage the regional system.

Policy 9.51. Multimodal Mixed-Use Area. Manage Central City Plan amendments in accordance with the designated Central City Multimodal Mixed-Use Area (MMA) in the geography indicated in Figure 9-

2. The MMA renders congestion / mobility standards inapplicable to any proposed plan amendments under OAR 660-0012-0060(10).

278. Finding: Policies 9.45 through 9.51 address the management of the City's transportation system and not development on private land. These policies do not apply.

Transportation Demand Management

Policy 9.52. Outreach. Create and maintain TDM outreach programs that work with Transportation Management Associations (TMA), residents, employers, and employees that increase the modal share of walking, bicycling, and shared vehicle trips while reducing private vehicle ownership, parking demand, and drive-alone trips, especially during peak periods.

Policy 9.53. New development. Create and maintain TDM regulations and services that prevent and reduce traffic and parking impacts from new development and redevelopment. Encourage coordinated area-wide delivery of TDM programs. Monitor and improve the performance of private-sector TDM programs.

Policy 9.54. Projects and programs. Integrate TDM information into transportation project and program development and implementation to increase use of new multimodal transportation projects and services.

279. Finding: Policies 9.52 through 9.54 address TDM programs. The FFTZ amendments affect one type of allowed use in employment and industrial zones. The City Council has not applied the TDM program to industrial development and those changes are not part of this ordinance.

Parking management

Policy 9.55. Parking management. Reduce parking demand and manage supply to improve pedestrian, bicycle and transit mode share, neighborhood livability, safety, business district vitality, vehicle miles traveled (VMT) reduction, and air quality. Implement strategies that reduce demand for new parking and private vehicle ownership, and that help maintain optimal parking occupancy and availability.

Policy 9.56. Curb Zone. Recognize that the Curb Zone is a public space, a physical and spatial asset that has value and cost. Evaluate whether, when, and where parking is the highest and best use of this public space in support of broad City policy goals and local land use context. Establish thresholds to utilize parking management and pricing tools in areas with high parking demand to ensure adequate on-street parking supply during peak periods.

Policy 9.57. On-street parking. Manage parking and loading demand, supply, and operations in the public right of way to achieve mode share objectives, and to encourage safety, economic vitality, and livability. Use transportation demand management and pricing of parking in areas with high parking demand.

Policy 9.58. Off-street parking. Limit the development of new parking spaces to achieve land use, transportation, and environmental goals, especially in locations with frequent transit service. Regulate off-street parking to achieve mode share objectives, promote compact and walkable urban form, encourage lower rates of car ownership, and promote the vitality of commercial and employment areas. Use transportation demand management and pricing of parking in areas with high parking demand.

Policy 9.59. Share space and resources. Encourage the shared use of parking and vehicles to maximize the efficient use of limited urban space.

Policy 9.60. Cost and price. Recognize the high public and private cost of parking by encouraging prices that reflect the cost of providing parking and balance demand and supply. Discourage employee and resident parking subsidies.

Policy 9.61. Bicycle parking. Promote the development of new bicycle parking facilities including dedicated bike parking in the public right-of-way. Provide sufficient bicycle parking at high-capacity transit stations to enhance bicycle connection opportunities. Require provision of adequate off-street bicycle parking for new development and redevelopment. Encourage the provision of parking for different types of bicycles. In establishing the standards for long-term bicycle parking, consider the needs of persons with different levels of ability.

280. Finding: Policies 9.55 through 9.61 address parking. The FFTZ amendments do not change parking requirements or development standards affecting parking or the use of the right-of-way for parking. These policies do not apply.

Finance, programs, and coordination

Policy 9.62. Coordination. Coordinate with state and federal agencies, local and regional governments, special districts, other City bureaus, and providers of transportation services when planning for, developing, and funding transportation facilities and services.

Policy 9.63. New development impacts. Prevent, reduce, and mitigate the impacts of new development and redevelopment on the transportation system. Utilize strategies including transportation and parking demand management, transportation system analysis, and system and local impact mitigation improvements and fees.

Policy 9.64. Education and encouragement. Create, maintain, and coordinate educational and encouragement programs that support multimodal transportation and that emphasize safety for all modes of transportation. Ensure that these programs are accessible to historically under-served and under-represented populations.

Policy 9.65. Telecommuting. Promote telecommuting and the use of communications technology to reduce travel demand.

Policy 9.66. Project and program selection criteria. Establish transportation project and program selection criteria consistent with goals 9A through 9I, to cost-effectively achieve access, placemaking, sustainability, equity, health, prosperity, and safety goals.

Policy 9.67. Funding. Encourage the development of a range of stable transportation funding sources that provide adequate resources to build and maintain an equitable and sustainable transportation system.

281. Finding: Policies 9.62 through 9.67 address the funding and management of the City's transportation system and not development on private land. These policies do not apply.

Connected and Automated Vehicles

Policy 9.68 Connected and Automated Vehicles Priorities and Outcomes. Prioritize connected and automated vehicles that are fleet/shared ownership, fully automated, electric and, for passenger vehicles, shared by multiple passengers (known by the acronym FAVES). Develop and implement strategies for each following topic.

> **9.68.a.** Ensure that all levels of automated vehicles advance Vision Zero by operating safely for all users, especially for vulnerable road users. Require adequate insurance coverage for operators, customers, and the public-at-large by providers of commercial connected and

autonomous vehicle services.

9.68.b. Ensure that connected and automated vehicles improve travel time reliability and system efficiency by:

1. maintaining or reducing the number of vehicle trips during peak congestion periods;
2. reducing low occupancy vehicle trips during peak congestion periods;
3. paying for use of, and impact on, Portland's transportation system including factors such as congestion level, vehicle miles traveled, vehicle occupancy, and vehicle energy efficiency; and
4. supporting and encouraging use of public transportation.

9.68.c. Cut vehicle carbon pollution by reducing low occupancy "empty miles" traveled by passenger vehicles with zero or one passengers. Prioritize electric and other zero direct emission vehicles operated by fleets and carrying multiple passengers.

9.68.d. Make the benefits of automated mobility available on an equitable basis to all segments of the community while ensuring traditionally disadvantaged communities are not disproportionately hurt by connected and autonomous vehicle use. This includes people with disabilities, as well as communities of color, women, and geographically underserved communities.

9.68.e Identify, prevent, and mitigate potential adverse impacts from connected and automated vehicles.

Policy 9.69 Connected and Automated Vehicles Tools. Use a full range of tools to ensure that connected and automated vehicles and private data communications devices installed in the City right of way contribute to achieving Comprehensive Plan and Transportation System Plan goals and policies.

9.69.a. Maintain City authority to identify and develop appropriate data sharing requirements to inform and support safe, efficient, and effective management of the transportation system. Ensure that when connected and automated vehicles use City rights-of-way or when vehicles connect with smart infrastructure within the City they share information including, but not limited to, vehicle type, occupancy, speed, travel routes, and travel times, with appropriate privacy controls. Ensure that private data communications devices installed in the City right of way are required to share anonymized transportation data.

9.69.b. Design and manage the mobility zone, curb zone, and traffic control devices, e.g. to limit speeds to increase safety, to minimize cut-through traffic, evaluate future demand for pick-up and drop-off zones, and to prioritize automated electric vehicles carrying more passengers in congested times and locations;

9.69.c. Evaluate the public cost and benefit of investments in wayside communication systems serving connected and automated vehicles. Develop a criteria-driven automated vehicle wayside infrastructure investment plan.

9.69.d. Develop sustainable user-pays funding mechanisms to support connected and automated vehicle infrastructure and service investments, transportation system maintenance, and efficient system management.

9.69.e. Ensure that automated vehicles and vehicles that connect to smart City infrastructure, and private data communications devices installed in the City right of way, help pay for infrastructure and service investments, and support system reliability and efficiency. Develop a tiered pricing structure that reflects vehicle impacts on the transportation system, including factors such as congestion level, vehicle miles traveled, vehicle occupancy, and vehicle energy efficiency.

282. Finding: Policies 9.68 and 9.69 address the management of automated vehicles and not development on private land. These policies do not apply.

Chapter 10: Land Use Designations and Zoning

Goal 10.A: Land use designations and zoning. Effectively and efficiently carry out the goals and policies of the Comprehensive Plan through the land use designations, Zoning Map, and the Zoning Code.

283. The FFTZ amendments do not change the land use designations, nor do they amend the Comprehensive Plan Map or the Zoning Map. These findings show how the changes carry out the goals and policies of the Comprehensive Plan through the Zoning Code.

Land use designations

Policy 10.1. Land use designations. Apply a land use designation to all land and water within the City's Urban Services Boundary. Apply the designation that best advances the Comprehensive Plan goals and policies. The land use designations are shown on the adopted Land Use Map and on official Zoning Maps.

284. The FFTZ amendments do not change the land use designations, nor do they amend the Comprehensive Plan Map or the Zoning Map. These findings show how the changes carry out the goals and policies of the Comprehensive Plan through the Zoning Code.

The Zoning Map and the Zoning Code

Policy 10.2. Relationship of land use designations to base zones. Apply a base zone to all land and water within the City's urban services boundary. The base zone applied must either be a zone that corresponds to the land use designation or be a zone that does not correspond but is allowed per Figure 10-1 — Corresponding and Less-Intense Zones for Each Plan Map Designation. In some situations, there are long-term or short-term obstacles to achieving the level of development intended by the land use designation (e.g., an infrastructure improvement to serve the higher level of development is planned but not yet funded). In these situations, a less intense zone (listed in Figure 10-1) may be applied. When a land use designation is amended, the zone may also have to be changed to a corresponding zone or a zone that does not correspond but is allowed.

Policy 10.3. Amending the Zoning Map.

10.3.a. Amending a base zone may be done legislatively or quasi-judicially.

10.3.b. When amending a base zone quasi-judicially, the amendment must be to a corresponding zone (*see Figure 10-1 — Corresponding and Allowed Zones for Each Land Use Designation*). When a designation has more than one corresponding zone, the most appropriate

zone, based on the purpose of the zone and the zoning and general land uses of surrounding lands, will be applied.

10.3.c. When amending a base zone legislatively, the amendment may be to a corresponding zone or to a zone that is does not correspond but is allowed (*see Figure 10-1 — Corresponding and Allowed Zones for each Land Use Designation for zones that are allowed*). A legislative Zoning Map amendment may not be to a zone that is not allowed.

10.3.d. An amendment to a base zone consistent with the land use designation must be approved when it is found that current public services can support the uses allowed by the zone, or that public services can be made capable by the time the development is complete. The adequacy of services is based on the proposed use and development. If a specific use and development proposal is not submitted, services must be able to support the range of uses and development allowed by the zone. For the purposes of this requirement, services include water supply, sanitary sewage disposal, stormwater management, transportation, school district capacity (where a school facility plan exists), and police and fire protection.

10.3.e. An amendment to apply or remove an overlay zone or plan district may be done legislatively or quasi-judicially, and must be based on a study or plan document that identifies a specific characteristic, situation, or problem that is not adequately addressed by the base zone or other regulations.

285. Finding: The FFTZ amendments do not amend the Zoning Map. The changes only define the allowed uses in the base zones in the Zoning Code. This policy does not apply.

Policy 10.4. Amending the Zoning Code. Amendments to the zoning regulations must be done legislatively and should be clear, concise, and applicable to a broad range of development situations faced by a growing city. Amendments should:

286. Finding: The FFTZ amendments were initially adopted by a legislative process and the reconsideration on remand is a continuation of the initial legislative procedure at City Council. The regulations are clear and concise in creating one use category with clear definition of terms and is applicable to all employment and industrial zones.

10.4.a. Promote good planning:

- Effectively and efficiently implement the Comprehensive Plan.

287. Finding: As demonstrated by these findings, the FFTZ amendments effectively and efficiently implement the Comprehensive Plan. Specifically:

The City Council has considered applicable policies to determine that this ordinance on the whole complies with the 2035 Comprehensive Plan and on balance is equally or more supportive of the goals and policies of the 2035 Comprehensive Plan than the current regulations. In reaching this conclusion, City Council has weighed and balanced competing policy directions.

In particular, the Council finds that Goal 4.D with Policies 4.79 and 4.80, requires evaluating and reducing risk to people and property from natural hazards. The FFTZ amendments further these goals and policies because by limiting the risks of storing large volumes of hazardous materials in an area with high susceptibility to an earthquake. Large fossil fuel terminals represent a risk to people, property and the natural environments that the City Council finds as a compelling reason to limit future risk by limiting the size of new facilities and prohibit the expansion of existing facilities. Continuing to allow an unlimited increase in storage capacity at FFTs in a high risk area would be less supportive of the 2035 Comprehensive Plan than adopting the FFTZ amendments

The City Council further finds that Policy 6.48 provides direction to limit fossil fuel terminals to what is necessary to serve the region. The City Council recognizes that Portland's fossil fuel terminals handle 90 percent of the fossil fuel for the State of Oregon and Southwest Washington. BPS presented evidence that national petroleum consumption forecast out to 2050 is essentially flat, which is a continuation of historic trends in Oregon and Washington, during a period of a thriving economy. In addition, ODOT is forecasting a decline in motor fuel consumption over the medium term to 2029. The more recent cargo forecasts project a modest growth in volumes, but those volumes do not exceed the historic peak volumes that were handled by the Portland terminals. No other evidence of future demand for fossil fuels was submitted in testimony. Therefore, the City Council finds that the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety. In addition, limiting storage capacity to the existing facilities reduces risk from a major earthquake, which outweighs the policy direction to provide capacity to accommodate any potential future increase in fossil fuel consumption, in part, because continuing to consolidate fossil fuel storage capacity in Portland is counter to resiliency principles that emphasize redundancy and distributed facilities.

At the same time, the City Council finds that Goal 6.C with Policies 6.20 and 6.36, among others, provide for the retention and growth of businesses, especially those in the traded sector. However, the City Council interprets these policies apply to the economy in general, rather than specific types of business. These changes and restrictions only apply to a narrowly defined new land use category, Bulk Fossil Fuel Terminals, and do not have a significant effect on the other allowed uses in industrial and employment zones. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial and employment areas of Portland. These amendments are narrowly constructed to apply to one class of businesses that make up a small portion of the city, regional and state economy. Further, these regulations only limit future expansion of these fossil fuel terminals, with some key exceptions, and designate these businesses as a limited use that allows their continued operation.

Guilds Lake Industrial Sanctuary (GLIS) Plan policies provide direction to maintain, protect and enhance businesses in the sanctuary. This plan was adopted in 2001 and does not address the need for resiliency in a high and medium liquefaction susceptibility area. The City Council interprets these policies to apply to the GLIS as a whole and not individual businesses. The City Council interprets the legislative intent of the GLISP is to maintain the area as an industrial sanctuary and to prohibit incompatible land uses. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses that could undermine the viability of the industrial sanctuary. These regulations apply to only one type of business that makes up a minority part of the businesses found in GLIS. The remaining industrial uses to continue to operate under current regulations. The impact of the limits on fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to continue to operate and make upgrades and supports limited enhancement through exceptions to the fossil fuel storage capacity restrictions.

- Address existing and potential land use problems.

288. **Finding:** Most of Portland's employment and industrial zones are in areas with high to very high levels of liquefaction susceptibility, as documented by the 2018 DOGAMI Earthquake Regional Impact Analysis. Fossil fuel infrastructure poses considerable risks in the event of a major

earthquake. The FFTs have significant seismic risks because most of the tanks have been constructed without any or only limited seismic design criteria on soils with moderate to high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's 2016 Critical Energy Infrastructure Hub Study and the 2012 DOGAMI Earthquake Risk Study for Oregon's Critical Energy Infrastructure Hub report. Continuing to allow the increase in FFTs in a high risk area increases the risk to the surrounding industrial district and the Willamette River. The FFTZ amendments limit future risk by limiting the size of new fossil fuel terminals and prohibiting the expansion of storage capacity at existing fossil fuel terminals, with limited exceptions for aviation and renewable fuels.

- Balance the benefits of regulations against the costs of implementation and compliance.

289. The FFTZ amendments balance the benefits and costs by designating existing FFTs as a limited use, as opposed to a prohibited nonconforming use, which allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake, which ultimately can make Portland more resilient.

Testimony by the Portland Business Alliance, the Working Waterfront Coalition, and others implied that the regulations will not be cost effective because existing FFTs cannot expand to meet market demand. The City Council finds that based on the evidence in the record the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs. There also is testimony that implies that the cost of seismically upgrading is too expensive without expanding storage capacity. The City Council rejects this assertion because no explanation or evidence was provided to support the assertion that additional tanks are needed.

- Maintain Portland's competitiveness with other jurisdictions as a location in which to live, invest, and do business.

290. Finding: The City Council interprets this policy to require the City maintain an adequate supply of employment and housing land, but that it does not require the City to accommodate specific individual businesses or sectors. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes maintain Portland's employment land supply to create opportunities for a growing economy. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The remaining industrial uses continue to operate under the current development review system.

10.4.b. Ensure good administration of land use regulations:

- Keep regulations as simple as possible.

291. Finding: The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes maintain Portland's employment land supply to create opportunities for a growing economy. These regulations apply to only one type of business that makes up a minority part of the businesses found in Portland's industrial districts. The remaining industrial uses continue to operate under the current development review system.

- Use clear and objective standards wherever possible.

292. Finding: The FFTZ amendments establish clear definitions for fossil fuels and the Bulk Fossil Fuel Terminal use category.

- Maintain consistent procedures and limit their number.
- Establish specific approval criteria for land use reviews.
- Establish application requirements that are as reasonable as possible, and ensure they are

directly tied to approval criteria.
- Emphasize administrative procedures for land use reviews.
- Avoid overlapping reviews.

293. **Finding:** The FFTZ amendments do not establish new procedures or land use reviews. The FFTZ amendments establish clear definitions for fossil fuels and the Bulk Fossil Fuel Terminal use category. These regulations apply to only one type of use that makes up a minority part of the uses found in Portland's industrial districts. The other industrial uses continue to operate under current regulations. Designating the existing FFTs as a limited use, as opposed to a prohibited nonconforming or conditional use, allows the terminals to continue to operate and invest in upgrades without additional discretionary land use reviews. tank capacity, such as consolidating smaller tanks into larger tanks.

10.4.c. Strive to improve the code document:

- Use clear language.
- Maintain a clear and logical organization.
- Use a format and layout that enables use of the document by lay people as well as professionals.
- Use tables and drawings to clarify and shorten the document.
- Identify and act on regulatory improvement suggestions.

294. **Finding:** The FFTZ amendments create a new use category consistent with the format used described and regulate other types of uses. The Zoning Code amendments are presented in as clear and objective of a way possible to ensure the intended users will be able understand and utilize the Zoning Code as it applies to their development proposals, land use, and properties, consistent with Comprehensive Plan Policy 10.4.

Part IV. Adopted Area Plans

Pursuant to PCC 33.835.040(A), the City Council considers whether the FFTZ amendments are consistent with any adopted area plan associated with the regulations. The City Council finds that "consistent" means "the ordinance meets the requirements of, satisfies, or adheres to the regulations, mandate, or plan listed in the goal or policy. The City Council finds that Guild's Lake Industrial Sanctuary Plan (GLISP) is the only plan associated with the FFTZ amendments.

Guilds Lake Industrial Sanctuary Plan (2001)
The Guild's Lake Industrial Sanctuary (GLIS) Plan provides a policy framework to protect and promote the area's long-term economic viability as an industrial district for a broad variety of industrial land uses and businesses. The GLIS is an area that runs northwest of NW Vaughn Street along the Willamette River to the St. Johns Bridge. The plan recognizes the unique role of industrial land in Portland's economy and the importance of industrial businesses in providing living-wage jobs. The plan's vision statement, policies and objectives have been adopted as part of Portland's Comprehensive Plan and are implemented through the Zoning Code through the GLIS Plan District (33.531), which adds land use prohibitions and limits that were (at the time) above and beyond the limits in the industrial base zones.

295. **Finding:** The City Council finds that the central the purpose of the GLISP and its policies and objectives is to protect the industrial area from encroachment from the neighboring residential and commercial areas.

Policy 1: Jobs and Economic Development
Maintain and expand industrial business and employment opportunities in the Guild's Lake Industrial Sanctuary. Stimulate investment in the area's public and private infrastructure and industrial facilities.

296. **Finding:** The City Council interprets this policy and objectives to apply to the GLISP area as whole and not to individual businesses or sectors of business. The GLISP seeks to provide a public policy framework and foster a business environment that will create more certainty and encourage continued private sector investment in facilities. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes do not conflict with the policy intent to maintain the area as an industrial sanctuary. These regulations apply to only one type of business that makes up a minority part of the businesses found in GLIS. The remaining industrial uses continue to operate under current regulations. The impact of the limits on fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use, as opposed to a prohibited or non-conforming use, that allows the terminals to continue to operate and invest in upgrades and supports opportunities for enhancement through exceptions, such as aviation or renewable fuels.

The City Council interprets the verb "stimulate" to mean "encourage", which is defined in the 2035 Comprehensive Plan as to promote or foster using some combination of voluntary approaches, regulations, or incentives. The FFTZ amendments apply to only one type of business that makes up a minority part of the businesses found in GLIS. The remaining industrial uses continue to operate under current regulations. The limits on expansion of storage capacity at fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to continue to operate and invest in upgrades. In addition, even though transloading facilities are a defining characteristic of a Bulk Fossil Fuel Terminal, the ordinance only limits new fossil fuel storage tank capacity and does not regulate transloading facilities, docks or pipelines – facilities that are key components of the multimodal freight transportation system. Existing FFTs and other industrial uses can make investments in multimodal freight facilities. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments in the area.

As noted in the findings above, the FFTZ amendments are consistent with the goals and policies of Chapter 6 (Economic Development) of the 2035 Comprehensive Plan and Statewide Planning Goal 9. The findings in response to those goals and policies are incorporated by reference.

Objective 1. Provide new employment opportunities by reusing or redeveloping reclaimed, underutilized and vacant land and buildings in the GLIS.

297. **Finding:** The City Council interprets the GLISP objectives as subpolicies that support the policy. The City Council does not interpret the objectives as mandatory requirements that must be satisfied with every legislative action.

The City Council finds that the objective does not require the City to provide new employment opportunities with every legislative action but instead requires that the City maintain an adequate supply of vacant and underutilized industrial land that can provide for new employment opportunities, as defined in the EOA. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes will continue to provide opportunities for industrial redevelopment in the GLIS. These regulations apply to only one type of business that makes up a minority part of the businesses found in GLIS. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades, which maintains the current employment opportunities at these businesses. The regulations also provide opportunities for growth through

exceptions, such as aviation or renewable fuels, which can provide additional employment opportunities.

Objective 2. Foster a business and public policy environment that promotes continued private and public sector investments in infrastructure, facilities, equipment and jobs.

298. **Finding:** The City Council interprets this objective seeks to encourage an environment that furthers public and private sector investments. The City Council finds that the City's role is through land use regulations, such as industrial zoning protections, maintaining an adequate supply of land; and public infrastructure investments. The FFTZ amendments maintain industrial zoning protections because the ordinance does not include changes to the Prime Industrial Overlay Zone, the GLIS Plan District, or to the Zoning Map where they are applied. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes will continue to provide an adequate industrial land base for employment growth. These regulations apply to only one type of business that makes up a minority part of the businesses found in GLIS. The limits on expansion of storage capacity at fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to continue to operate and invest in other types of upgrades. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments in the area.

Objective 3. Enhance the GLIS as a competitive and forward-thinking industrial area by fostering innovative and environmentally-sensitive industrial projects and practices that improve the operational efficiency of GLIS firms while conserving natural resources and reducing pollution.

299. **Finding:** The City Council interprets the verb "enhance", which is not defined in the 2035 Comprehensive Plan, to mean to intensify or improve. The verb "foster", which is defined in the 2035 Comprehensive Plan, means to encourage or guide the incremental development of something over a long period of time. The City Council interprets this policy to mean that industrial development should incorporate green building practices, such as on-site stormwater management, and natural resource conservation, such as riverbank restoration. The City has achieved this objective through other regulatory programs, such as the Stormwater Management Manual and the Greenway Overlay Zone, that are not amended by this ordinance. The limits on expansion of storage capacity at fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to continue to operate and invest in other types of upgrades that conserve natural resources and reduce pollution.

Policy 2: Transportation

Maintain, preserve and improve the intermodal and multimodal transportation system to provide for the smooth movement of goods and employees into and through the Guild's Lake Industrial Sanctuary.

300. **Finding:** The Council finds that this policy seeks to maintain and improve the intermodal and multimodal transportation system. The City Council interprets this policy and the objectives to apply to the GLISP area as whole and not to individual businesses or sectors of business. The transportation policy discussion and action plan in the GLISP is focused on a street system that accommodates all modes of traffic while preserving operational characteristics that support truck movement. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes will not significantly impact the performance of the transportation system. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure

investments in the area that seeks to accommodate all modes of traffic consistent with the freight classifications for the district's roadways.

The fossil fuel terminals are privately-owned, specialized intermodal facilities that exclusively transport liquid bulk products into and out of the GLISP area via pipeline, barge, rail and truck. There is no evidence that these terminals are used by other businesses to move other types of goods. The limits on expansion of storage capacity at fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to maintain, preserve and continue to operate and improve their intermodal facilities to provide for the continued movement of goods through the GLIS. Finally, the ordinance does not regulate transloading facilities, docks or pipelines – facilities that are key components of the multimodal freight transportation system. Existing FFTs and other industrial uses can make investments in multimodal freight facilities.

As noted in the findings above, the FFTZ amendments are consistent with the goals and policies of Chapter 9 (Transportation) of the 2035 Comprehensive Plan and Statewide Planning Goal 12. The findings in response to those goals and policies are incorporated by reference.

Objective 1. Maintain, protect, and enhance the public and private multimodal transportation investments in the GLIS, including rail and marine terminal facilities, to ensure its continued viability as a major center for the import and export of industrial products in the state of Oregon.

301. **Finding:** The 2035 Comprehensive Plan defines the verb "maintain" to mean keep what you have; conserve; preserve; continue. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes will continue to provide the same opportunities for investment to provide for the continued movement of goods through the GLIS. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments in the area to provide for the continued viability as a major industrial center in Oregon.

The City Council interprets the verb "enhance", which is not defined in the 2035 Comprehensive Plan, to mean to intensify or improve. The FFTZ regulations apply to only one type of business that makes up a minority part of the businesses found in GLIS. The limits on expansion of storage capacity at fossil fuel terminals are mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to maintain, preserve and continue to operate and improve their intermodal facilities to provide for the continued movement of fossil fuels through the GLIS and supports opportunities for enhancement through exceptions, such as aviation or renewable fuels. Finally, even though transloading facilities are a defining characteristic of a Bulk Fossil Fuel Terminal, the ordinance only limits new fossil fuel storage tank capacity and does not regulate transloading facilities, docks or pipelines – facilities that are key components of the multimodal freight transportation system. Existing FFTs and other industrial uses can make investments in multimodal freight facilities.

Objective 2. Maintain operational characteristics on roads and at intersections that support truck movements and industrial economic growth, while accommodating traffic, transit, and emergency access needs.

302. **Finding:** The Council finds that this policy applies to functional classifications as designated in the adopted TSP. The FFTZ amendments do not change the functional classification of any roads in the GLIS. These regulations apply to only one type of business that makes up a minority part of the businesses found in GLIS. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the operational characteristics of the roads and intersections continue to support truck movements and industrial economic growth.

Objective 3. Minimize traffic conflicts between industrial and nonindustrial uses.

303. **Finding:** The City Council interprets the verb "minimize" to mean to reduce something to the smallest possible amount. Minimizing traffic conflicts is a function of transportation policy. The FFTZ amendments do not change any transportation policies, including the functional classification of any roads in the GLIS. The FFTZ amendments do not include map changes, nor do they allow for new incompatible nonindustrial land uses that could be expected increase traffic conflicts.

Objective 4. Manage congestion on highways and roads within the GLIS through regional and area-wide systems planning and maximize the efficiency of transportation facilities for all modes of travel, with the participation of private industry.

304. **Finding:** The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes will continue to provide the same opportunities for investment in the GLIS. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments in the area to manage congestion on highways and roads within the GLIS.

The City Council interprets the verb "maximize", which is not defined in the 2035 Comprehensive Plan, to mean to make the best use of. These regulations apply to only one type of business that makes up a minority part of the businesses found in GLIS. The limits on expansion of storage capacity at fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to continue to operate and invest in other types of upgrades to all modes of travel. The FFTZ regulations allow terminals to maximize the efficiency of their private transportation facilities (docks and pipelines) by providing expanded opportunities through exceptions, such as for aviation or renewable fuels, to the storage capacity restrictions. The ordinance does not regulate transloading facilities, docks or pipelines – facilities that are key components of the multimodal freight transportation system. Existing FFTs and other industrial uses can make investments in multimodal freight facilities.

Testimony from the Portland Business Alliance et al., the Working Water Coalition, and the Western States Petroleum Association raised the concern that the ordinance would force fuels to be transported by truck and increase vehicle miles travelled and emissions. The City Council finds that this unsupported assertion provides no details or explanation as to how this ordinance will force a change in transportation modes. There is no explanation or evidence on future demand, pipeline capacity utilization, or storage tank utilization or how or why truck traffic would increase. BPS staff provided evidence in the Council presentation and the written record that demonstrates that there is a reasonable expectation that the demand for fossil fuels will be flat and that the existing FFT storage capacity, with the allowed exceptions, will continue to meet the future demand for fossil fuels.

Objective 5. Develop alternative transportation options for employees of the GLIS, including transit, carpools, bicycling, and walking to reduce parking needs, vehicle emissions, and congestion levels.

305. **Finding:** The City Council interprets this policy to focus on the commute modes of employees of the GLIS. Developing alternative transportation options is a function of transportation policy. The FFTZ amendments do not change any transportation policies, therefore, this policy does not apply. Further, employment at FFTs is a small share of the overall employment of the GLIS. The limits on expansion of storage capacity at fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to continue to operate, which can maintain these employment levels, which can maintain ridership for the existing transit service. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore the City continues to plan for public infrastructure investments in the area to support this objective.

Objective 6. Locate safe pedestrian and bicycle routes within the GLIS that minimize conflicts with industrial traffic. Improve pedestrian and bicycle connections to nearby residential areas to reduce congestion levels and auto emissions, preserve capacity of the street system, and reduce parking needs.

306. **Finding:** The City Council interprets this policy to focus on the investment in pedestrian and bicycle routes in the GLIS, which is a function of transportation policy. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore this policy does not apply.

Objective 7. Recognize the role of NW Vaughn Street as an important multimodal access route to the Guild's Lake Industrial Sanctuary and Northwest Portland.

307. **Finding:** The City Council interprets this policy to focus on the functional classification of NW Vaughn Street, which is a function of transportation policy. The FFTZ amendments do not amend the Citywide System Plan or the Transportation System Plan, therefore this policy does not apply.

Policy 3: Land Use

Preserve and protect land primarily for industrial uses, and minimize land use conflicts in the Guild's Lake Industrial Sanctuary. Allow compatible nonindustrial uses within the GLIS that provide retail and business services primarily to support industrial employees and businesses.

308. **Finding:** The City Council interprets this policy and the objectives to apply to the GLISP area as whole and not to individual businesses or sectors of business. The City Council interprets this policy to mean that the most effective way to preserve and protect industrial uses is to minimize land use conflicts by limiting nonindustrial uses, which is the reason why the City Council applied the Prime Industrial Overlay Zone to the GLIS as part of the 2035 Comprehensive Plan adoption. The Prime Industrial Overlay Zone restricts non-industrial uses, such as self-service storage and major event entertainment, that are allowed in the industrial base zones. The FFTZ amendments maintain industrial zoning protections because the ordinance does not amend the Prime Industrial Overlay Zone, the GLIS Plan District, or the Zoning Map where they are applied. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, with these changes, the GLIS will continue to be used primarily for industrial uses and land use conflicts will be minimized.

Objective 1. Preserve the overall industrial character of the Guild's Lake Industrial Sanctuary.

309. **Finding:** The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, the overall industrial character of the GLIS will be preserved.

Objective 2. Preserve the physical continuity of the area designated as Industrial Sanctuary within the Guild's Lake Industrial Sanctuary.

310. Finding: The FFTZ amendments do not include map changes, including to the plan district boundaries, therefore, with the physical continuity of the GLIS is preserved.

Objective 3. Minimize conflicts between industrial and nonindustrial land uses.

311. **Finding:** The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, the GLIS will continue to be used primarily for industrial uses and land use conflicts will be minimized.

Objective 4. Prohibit new residential uses within the GLIS.

312. **Finding:** The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, residential uses within the GLIS will continue to be prohibited.

Objective 5. Allow the provision of support services to employees and businesses in the GLIS to reduce trips outside of the GLIS.

313. **Finding:** The FFTZ amendments do not include map changes, nor do they allow for new nonindustrial land uses, therefore, this objective does not apply.

Objective 6. Encourage industrial businesses to locate their accessory offices and showrooms along NW Vaughn Street.

314. **Finding:** The FFTZ amendments do not include map changes, nor do they allow for new nonindustrial land uses. Additionally, there are no FFTs located on NW Vaughn, therefore, this objective does not apply.

Objective 7. Preserve the GLIS's Willamette River waterfront as a location for river-dependent and river-related industrial uses.

315. **Finding:** The existing fossil fuel terminals are designated as a limited use that allows the terminals to continue to operate and invest in upgrades, including their waterfront facilities. The FFTZ amendments do not include map changes, nor do they allow for new nonindustrial land uses, therefore, the Willamette River waterfront is preserved as a location for river-dependent and river-related industrial uses.

Objective 8. Recognize the Willamette River as a valuable economic, transportation, natural and recreational resource for the entire city. Coordinate GLIS Plan policies and implementation measures with ongoing and future citywide planning efforts that address the significance of the river and the city's industrial land supply.

316. **Finding:** The verb "recognize" is defined in the 2035 Comprehensive Plan as to acknowledge and treat as valid. The 2035 Comprehensive Plan defines "coordinate" as work together with others toward a common goal; collaborate. The FFTZ amendments do not include map changes, nor do they allow for new nonindustrial land uses, therefore, the city's industrial land supply is maintained. The FFTZ amendments do not include changes that impact the economic, transportation, natural, and recreational resource function of the Willamette River. The waterfront is preserved as a location for river-dependent and river-related industrial uses. Finally, the ordinance does not regulate transloading facilities, docks or pipelines – facilities that are key components of utilizing the Willamette River as part of the multimodal freight transportation system. As noted in the findings above, the FFTZ amendments are consistent with the policies 3.70, 3.72, 4.82, and 9.36 of the 2035 Comprehensive Plan, and the findings in response to those policies are incorporated by reference.

Objective 9. The industrial character and economic viability of the Guild's Lake Industrial Sanctuary must continue to be the priority when considering the public need for expanded access to the Willamette River. Design and implement any greenway enhancements along the river so as to avoid or minimize negative impacts on industrial operations.

317. Finding: The FFTZ amendments do not include changes to the greenway enhancement requirements in Chapter 33.440, therefore this objective does not apply.

Objective 10. Contribute to the maintenance and enhancement of all of Northwest Portland as a diverse urban environment that includes opportunities for housing, commercial services, and industrial employment in relatively close proximity.

318. **Finding:** The FFTZ amendments do not include map changes, nor do they allow for new nonindustrial land uses, therefore, the diverse urban environment of Northwest Portland is maintained.

The City Council interprets the verb "enhance", which is not defined in the 2035 Comprehensive Plan, to mean to intensify or improve. The FFTZ regulations apply to only one type of business that makes up a minority part of the industrial businesses found in GLIS. The limits on expansion of

storage capacity at fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to maintain, preserve and continue to operate and improve their intermodal facilities to provide for the continued movement of fossil fuels through the GLIS and supports opportunities for enhancement through a number of exceptions, such as aviation or renewable fuels, to the storage capacity restrictions; therefore the FFTZ changes contribute maintain and enhancing the industrial employment in this part of Northwest Portland.

Part V. Zoning Code Amendment Criteria

33.835.040 Approval Criteria

A. Amendments to the zoning code. Text amendments to the zoning code must be found to be consistent with the Comprehensive Plan, Urban Growth Management Functional Plan, and the Statewide Planning Goals. In addition, the amendments must be consistent with the intent or purpose statement for the base zone, overlay zone, plan district, use and development, or land division regulation where the amendment is proposed, and any plan associated with the regulations. The creation of a new plan district is subject to the approval criteria stated in 33.500.050.

319. **Finding:** The findings in this exhibit demonstrate how the FFTZ amendments are consistent with the 2035 Comprehensive Plan, the Urban Growth Management Functional Plan, and the Statewide Planning Goals.

The City Council interprets this criterion to require the FFTZ amendments show consistency. The Council finds that "consistent" means "the subject meets the requirements of, satisfies, or adheres to the regulations, mandate, or plan listed in the goal or policy." The City Council has applied all applicable policies and the findings in this exhibit demonstrate how the FFTZ amendments to the zoning code are, on balance, consistent with the 2035 Comprehensive Plan, the Urban Growth Management Functional Plan, and with the Statewide Planning Goals.

Council finds that this criterion operates in conjunction with Comprehensive Plan Policy 1.10 which requires that amendments to the Comprehensive Plan's supporting documents, such as the Zoning Code, must "comply" with the Comprehensive Plan." "Comply" means "that amendments must be evaluated against the Comprehensive Plan's applicable goals and policies and on balance be equally or more supportive of the Comprehensive Plan as a whole than the existing language or designation."

The City Council finds that a proposed amendment is equally supportive when it is on its face directly supported by goals and policies in the Plan. The City Council finds that an amendment is more supportive of the Comprehensive Plan when the amendment will further advance goals and policies, particularly those that are aspirational in nature. The City Council finds that the policy requires consideration as to whether amendments are equally or more supportive of the Plan *as a whole*. The City Council finds that amendments do not need to be equally or more supportive with individual goals and policies, but rather amendments must be equally or more supportive of the entire Comprehensive Plan. Therefore, the City Council finds that there may be instances where specific goals and policies are not supported by the amendments but still the amendment is equally or more supportive of the entire Comprehensive Plan when considered cumulatively. The City Council finds that there is no precise mathematical equation for determining when the Plan as a

whole is supported but rather such consideration requires City Council discretion in evaluating the competing interests and objectives of the plan.

Applying both the Zoning Code criterion and Policy 1.10 together, as discussed above, the Council finds that the amendments are consistent with the Comprehensive Plan, Urban Growth Management Functional Plan, and Statewide Planning Goals. Additionally, as discussed below, the Council finds that the FFTZ amendments are consistent with the intent or purpose statement for the base zones and the GLISP, the only plan associated with the regulations.

In considering the proposed amendments on balance, the City Council finds that the City Council has considered applicable policies to determine that this ordinance on the whole complies with the 2035 Comprehensive Plan and on balance is equally or more supportive of the goals and policies of the 2035 Comprehensive Plan than the current regulations. In reaching this conclusion, City Council has weighed and balanced competing policy directions.

In particular, the Council finds that Goal 4.D with Policies 4.79 and 4.80, requires evaluating and reducing risk to people and property from natural hazards. The FFTZ amendments further these goals and policies because by limiting the risks of storing large volumes of hazardous materials in an area with high susceptibility to an earthquake. Large fossil fuel terminals represent a risk to people, property and the natural environments that the City Council finds as a compelling reason to limit future risk by limiting the size of new facilities and prohibit the expansion of existing facilities. Continuing to allow an unlimited increase in storage capacity at FFTs in a high risk area would be less supportive of the 2035 Comprehensive Plan than adopting the FFTZ amendments

The City Council further finds that Policy 6.48 provides direction to limit fossil fuel terminals to what is necessary to serve the region. The City Council recognizes that Portland's fossil fuel terminals handle 90 percent of the fossil fuel for the State of Oregon and Southwest Washington. BPS presented evidence that national petroleum consumption forecast out to 2050 is essentially flat, which is a continuation of historic trends in Oregon and Washington, during a period of a thriving economy. In addition, ODOT is forecasting a decline in motor fuel consumption over the medium term to 2029. The more recent cargo forecasts project a modest growth in volumes, but those volumes do not exceed the historic peak volumes that were handled by the Portland terminals. No other evidence of future demand for fossil fuels was submitted in testimony. Therefore, the City Council finds that the fossil fuel storage capacity at the existing FFTs is sufficient to meet future needs. These changes support the retention of existing fossil fuel terminals by designating them as a limited use that allows the terminals to continue to operate and invest in upgrades and supports opportunities for growth through exceptions, such as aviation or renewable fuels. Further, the use limitations provide flexibility to FFTs to replace and reconfigure existing storage tank capacity to increase safety. In addition, limiting storage capacity to the existing facilities reduces risk from a major earthquake, which outweighs the policy direction to provide capacity to accommodate any potential future increase in fossil fuel consumption, in part, because continuing to consolidate fossil fuel storage capacity in Portland is counter to resiliency principles that emphasize redundancy and distributed facilities.

At the same time, the City Council finds that Goal 6.C with Policies 6.20 and 6.36, among others, provide for the retention and growth of businesses, especially those in the traded sector. However, the City Council interprets these policies apply to the economy in general, rather than specific types of business. These changes and restrictions only apply to a narrowly defined new land use category, Bulk Fossil Fuel Terminals, and do not have a significant effect on the other allowed uses in industrial and employment zones. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial and

employment areas of Portland. These amendments are narrowly constructed to apply to one class of businesses that make up a small portion of the city, regional and state economy. Further, these regulations only limit future expansion of these fossil fuel terminals, with some key exceptions, and designate these businesses as a limited use that allows their continued operation.

Guilds Lake Industrial Sanctuary (GLIS) Plan policies provide direction to maintain, protect and enhance businesses in the sanctuary. This plan was adopted in 2001 and does not address the need for resiliency in a high and medium liquefaction susceptibility area. The City Council interprets these policies to apply to the GLIS as a whole and not individual businesses. The City Council interprets the legislative intent of the GLISP is to maintain the area as an industrial sanctuary and to prohibit incompatible land uses. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses that could undermine the viability of the industrial sanctuary. These regulations apply to only one type of business that makes up a minority part of the businesses found in GLIS. The remaining industrial uses to continue to operate under current regulations. The impact of the limits on fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to continue to operate and make upgrades and supports limited enhancement through exceptions to the fossil fuel storage capacity restrictions.

Further, the Council finds that the FFTZ amendments amend the allowed uses in all of the base zones. The City Council finds that because the amendments prohibit FFTs in the open space, residential, commercial/mixed use, and campus institution base zones that these amendments are consistent with the purpose statements of those zones.

The City Council finds that because the FFTZ amendments do not amend overlay zones or plan districts, or land division regulations, and therefore these purpose statements do not apply.

The purpose statements for the Employment and Industrial Zones and the Use Categories that are amended by this ordinance are addressed below.

No new plan district has been proposed, therefore the criteria in 33.500.050 do not apply.

Testimony by Zenith Energy implied that Resolution 37168 should be considered additional approval criteria. The City Council rejects this interpretation. Resolutions provide guidance on future City actions, such as directing BPS to develop proposed code changes to advance the resolution. However, in the context of making a legislative land use decision (amending the Zoning Code), the 2035 Comprehensive Plan and Title 33 (Planning and Zoning) establish the procedures and approval criteria for making these decisions. Neither the 2035 Comprehensive Plan nor Title 33 include references to include other resolutions that have not been incorporated into the 2035 Comprehensive Plan goals and policies.

Part VI. Zoning Code Purpose Statements

33.140 Employment and Industrial Zones
33.140.010 General Purpose of the Zones
The employment and industrial zones are for areas of the City that are reserved for industrial uses and for areas that have a mix of uses with a strong industrial orientation. The zones reflect the diversity of industrial and business areas in the City. The zones differ in the mix of allowed uses, the allowed intensity of development, and the development standards. The regulations promote areas which consist of uses and developments which will support the economic viability of the specific zoning district and of the City. The regulations protect the health, safety and welfare of the public, address area character,

and address environmental concerns. In addition, the regulations provide certainty to property owners, developers, and neighbors about the limits of what is allowed.

320. Finding: The City Council interprets this purpose statement to require that the employment and industrial zones focus on a mix of industrial uses in general, but that it does not require every type of industrial use, especially when considering the protection of health and safety of the public and the environment. The FFTZ amendments do not allow for new incompatible land uses, therefore, these changes are consistent with the intent to allow a mix of uses with a strong industrial orientation in Portland's industrial districts. These regulations apply to only one type of use that makes up a minority part of the uses found in Portland's industrial districts. The remaining industrial uses continue to operate under current regulations. The FFTZ amendments protect the health, safety and welfare of the public and address environmental concerns by reducing the risk associated with a major earthquake by ensuring that the situation does not get worse by continuing to allow the unlimited increase in fossil fuel terminal storage tank capacity in a high risk area. The regulations provide certainty by designating existing FFTs as a limited use, which allows the terminals to continue to operate and invest in facilities that reduce the risks and improve their ability to withstand a major earthquake.

33.920 Description of Use Categories
33.920.010 Purpose
This Chapter classifies land uses and activities into use categories on the basis of common functional, product, or physical characteristics. Characteristics include the type and amount of activity, the type of customers or residents, how goods or services are sold or delivered, and certain site factors. The use categories provide a systematic basis for assignment of present and future uses to zones. The decision to allow or prohibit the use categories in the various zones is based on the goals and policies of the Comprehensive Plan.

321. Finding: The FFTZ amendments create a new use category – Bulk Fossil Fuel Terminals – based on the function, the type of product handled or produced, the type and amount of activity, and how the goods are sold or delivered. The use category has been assigned to the base zones. The designation of a prohibited or limited use is based on the findings in this exhibit that demonstrate how, on balance, the designation is consistent with the goals and policies of 2035 Comprehensive Plan.

33.531 Guild's Lake Industrial Sanctuary Plan District
33.531.010 Purpose
The Guild's Lake Industrial Sanctuary plan district fosters the preservation and growth of this premier industrial area adjacent to Portland's central city. The plan district's large number of well-established industrial firms are dependent on the area's multimodal transportation system, including marine, rail, and trucking facilities, and on the ability of area streets to accommodate truck movements. Because of its proximity to inner-city neighborhoods with high concentrations of commercial and residential uses, the Guild's Lake Industrial Sanctuary is particularly vulnerable to impacts from, and redevelopment to, nonindustrial uses. The provisions of the plan district recognize that the displacement of industrial uses by inappropriate nonindustrial uses potentially threatens the integrity of this district and investments in public and private infrastructure. The provisions of this chapter protect the area from incompatible uses which threaten the district's integrity, stability and vitality and compromise its transportation system. This chapter also includes provisions to ensure a more pedestrian- and transit-oriented streetscape along NW Vaughn Street and an improved interface with the mixed-use neighborhood to the south.

322. Finding: The City Council finds that the Guild's Lake Industrial Sanctuary (GLIS) Plan seeks to protect and promote the area's long-term economic viability as an industrial district for a broad variety of

industrial land uses and businesses. The FFTZ amendments maintain industrial zoning protections because the ordinance does not include changes to the Prime Industrial Overlay Zone, the GLIS Plan District, or to the Zoning Map where they are applied. The FFTZ amendments do not include map changes, nor do they allow for new incompatible land uses, therefore, these changes will continue to provide an adequate industrial land base for employment growth. The City Council finds that the purpose statement does not require that every industrial use is allowed or allowed to have unlimited growth. These regulations apply to only one type of business that makes up a minority part of the businesses found in GLIS. The limits on expansion of storage capacity at fossil fuel terminals is mitigated by designating existing fossil fuel terminals as a limited use that allows the terminals to continue to operate and invest in other types of upgrades.

As noted above, the findings in response to Statewide Planning Goal 9, the goals and policies of Chapter 6 (Economic Development) of the 2035 Comprehensive Plan, and the Guilds Lake Industrial Sanctuary Plan are incorporated by reference. Therefore, FFTZ amendments are consistent with the purpose of the plan district.

Fossil Fuel Terminal Zoning Amendments

Exhibit B
Remand Report
As Amended

City of Portland, Oregon

December 18, 2019

Bureau of Planning and Sustainability
Innovation. Collaboration. Practical Solutions.
City of Portland, Oregon

Proposed Action

The City of Portland is considering the re-adoption of the Fossil Fuel Terminal Zoning Amendments. On December 14, 2016, the Portland City Council adopted Ordinance No. 188142 which amended the Zoning Code to create a new land use category (Bulk Fossil Fuel Terminals) with development standards to regulate the storage tank capacity. The amendments prohibited expansion of storage tank capacity at existing fuel terminals and limited new terminal development to 2 million gallons of storage tank capacity. The storage of coal at Bulk Fossil Fuel Terminals was prohibited.

The amendments allowed for the continued operation of existing terminals as a limited use in the industrial and employment zones. Terminals can continue to operate and invest in seismic and safety upgrades. The prohibition on the expansion of storage capacity included exceptions to the storage capacity limits to address issues identified in previous City Council resolutions, particularly for aviation fuels and renewable fuels.

Ordinance No. 188142 was appealed to the Oregon Land Use Board of Appeals (LUBA). In *Columbia Pacific Building Trades Council v. City of Portland*, LUBA Case No. 2017-001, LUBA reversed the Ordinance holding that the City's decision was unconstitutional; failed to demonstrate compliance with the Guild's Lake Industrial Sanctuary Plan (GLISP) and Statewide Planning Goal 12; and was not supported by an adequate factual base.

LUBA's decision was appealed to the Oregon Court of Appeals. In *Columbia Pacific Building Trades Council v. City of Portland*, 289 Or App 739 (2018), the court reversed LUBA's decision in part and affirmed in part. The Court found that the amendments are constitutional, and the City adequately demonstrated compliance with Goal 12.

The Court of Appeals decision was appealed to the Oregon Supreme Court. The Supreme Court denied review in *Columbia Pacific Building Trades Council v. City of Portland*, 363 Or 390 (2018).

On October 5, 2018, LUBA remanded Ordinance No. 188142 for City Council to demonstrate compliance with GLISP and demonstrate that the decision was supported by an adequate factual base.

The City intends to readopt the Fossil Fuel Terminal Zoning Amendments to comply with LUBA's Order. The Zoning Code amendments are similar to the changes adopted in 2016, except for a few minor adjustments to reconcile the Fossil Fuel Terminal Zoning Amendments with subsequent changes to the Zoning Code that have been adopted since 2016.

On November 20, 2019, the City Council held a public hearing on the consideration of additional evidence to ensure that the amendments are supported by an adequate factual base. Additionally, the findings will demonstrate that the amendments comply with the goals and policies in the 2035 Comprehensive Plan, which was adopted subsequent to the initial adoption of Ordinance No. 188142.

Timeline

In Resolutions 36959 and 36962, adopted in 2012, the City Council expressed opposition to coal trains traveling through Portland until a programmatic, comprehensive and area-wide Environmental Impact Statement and comprehensive Health Impact Assessment are completed.

The City's 2015 Climate Action Plan (adopted by Resolution 37135) identifies the need to establish a "fossil fuel export policy that considers lifecycle emissions, safety, economics, neighborhood livability and environmental impacts" (Climate Action Plan, action 3G, page 69). The City committed in its 2015 Climate Action Plan to advancing policy and programs to reduce local fossil fuel use both in the City's own operations and through community-wide initiatives.

Resolution 37168, adopted November 12, 2015, expressed the City Council's opposition to the "expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." It also expressed the Council's intent not to restrict improvements in safety, efficiency, or seismic resilience; the provision of service directly to end users; or infrastructure that will accelerate the transition to non-fossil fuel energy sources. The City Council also expressed support for accelerating the transition to non-fossil fuel energy sources. As part of that transition, the Oregon Department of Environmental Quality (ODEQ) is implementing the Oregon Clean Fuels Program, which requires a 10 percent reduction in average carbon intensity by 2025. Fuels that could be used to achieve the standards include ethanol, biodiesel, electricity, hydrogen, natural gas, propane, and biogas, which may require additional storage capacity. In order to facilitate implementation of the Clean Fuels Program, non-fossil fuel storage tanks are not subject to the capacity limits.

Portland's existing fossil fuel terminals

Portland's industrial districts are Oregon's largest seaport, rail hub and truck distribution center. The Northwest Industrial District in Portland is also the end of the Olympic Pipeline, which supplies most of Oregon's petroleum fuels from Puget Sound refineries. The ten petroleum terminals located in Northwest Portland are the gateway distribution facilities serving Oregon and Southern Washington markets. Additionally, NW Natural's GasCo terminal provides peak-consumption storage of natural gas for the region. In Northwest Portland, these "tank farm" storage facilities have direct access to pipeline, deep-water port, railroad and truck route infrastructure.

Figure 1. An example of petroleum terminals located in the Willbridge area of NW Portland.

- 33.140.315 Recycling Areas

Commentary

33.140.050 Neighborhood Contact

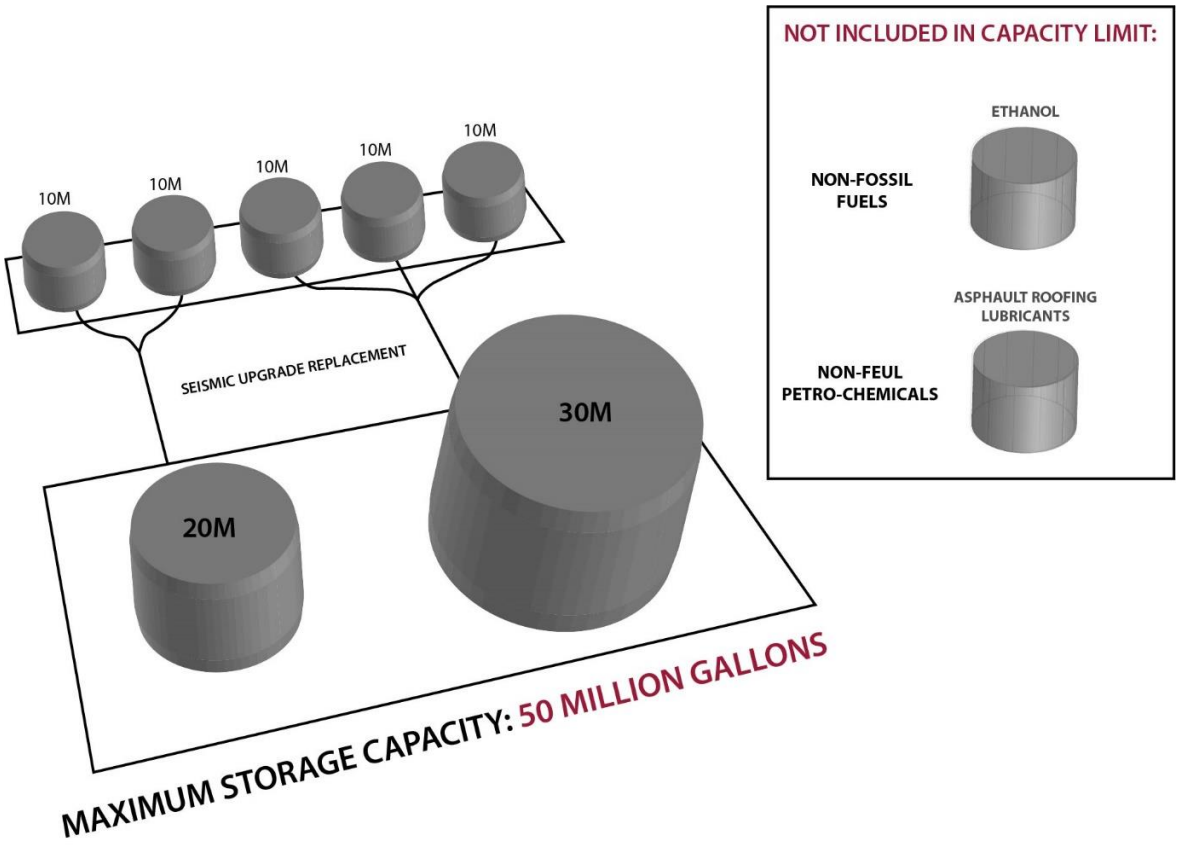
As an alternative to a land use review, a public notice and meeting requirement applies to development of fuel storage structure, such as a new tank, at a Bulk Fossil Fuel Terminal, similar to the requirement for multi-dwelling residential development. This notice and meeting would create public awareness about the project and serve to discuss a proposal in an informal basis.

33.140.050 Neighborhood Contact in EG and I Zones

A. Purpose. Neighborhood contact is required when a new storage structure for any type of fuel will be built on a Bulk Fossil Fuel Terminal because of the impacts that fuel projects can have on the surrounding community.

B. Neighborhood contact requirement. Proposals meeting the following conditions are subject to the neighborhood contact requirement steps of 33.705.020.B., Neighborhood Contact II. All of the steps in 33.705.020.B. must be completed before an application for a building permit can be submitted:

1. The proposed development has not been subject to a land use review; and



2. The proposed development includes at least one new structure for the storage of any type of fuel on a site with a Bulk Fossil Fuel Terminal use.

Commentary

33.140.100 Primary Uses

The amendments to this section reflect changes to prohibit new Bulk Fossil Fuel Terminals in the employment and industrial base zones and reclassify existing terminals as limited uses. Regulation of Bulk Fossil Fuel Terminals implements policy direction in City of Portland Resolution 37168 (adopted November 2015) and, 2035 Comprehensive Plan Policies 4.79, 4.81, 4.82, 6.48, and 7.14 which address reducing natural hazard risks and fossil fuel distribution and storage facilities.

The limited use designation prohibits expansion of fossil fuel tank capacity at existing Bulk Fossil Fuel Terminals, but allows for the replacement and reconfiguration of existing fossil fuel tank capacity as of the date of adoption as a way to facilitate seismic and safety upgrades.

33.140.100 Primary Uses

A. No change

B. Limited uses. Uses allowed that are subject to limitations are listed in Table 140-1 with an "L". These uses are allowed if they comply with the limitations listed below and the development standards and other regulations of this Title. In addition, a use or development listed in the 200s series of chapters is also subject to the regulations of those chapters. The paragraphs listed below contain the limitations and correspond with the footnote numbers from Table 140-1.

1. – 16. No change

17. Bulk Fossil Fuel Terminals. This regulation applies to all parts of Table 140-1 that have a [17].

    a. Existing Bulk Fossil Fuel Terminals. Bulk Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site in storage tanks is limited to the fossil fuel storage tank capacity that existed on [insert effective date]. Total fossil fuel storage tank capacity on the site in excess of the capacity that existed on [insert effective date] is prohibited. Storing coal on the site is prohibited.

    b. New Bulk Fossil Fuel Terminals are prohibited.

Commentary

Table 140-1 Employment and Industrial Zone Primary Uses

The amendments to this section reflect changes to prohibit new Bulk Fossil Fuel Terminals in all employment and industrial base zones and reclassify existing terminals as limited uses.

Commentary

33.730 Quasi-Judicial Procedures

The following amendments correct a mistake that was made as part of the recently adopted Neighborhood Contact Update project. The Neighborhood Contact Update project simplified, clarified and made the existing neighborhood contact requirements more effective. The only existing neighborhood contact requirement in the EG and I zones is a requirement related to development of new fuel storage tanks on fossil fuel terminals. In keeping with the policy direction of the project (clarify the exisiting rules), the Neighborhood Contact Update project did not add neighborhood contact requirements for development other than fuel tanks in the EG or I zones. However, an exemption for development in EG and I zones was inadvertently left out of the code that details the neighborhood contact steps for a land use review. The following amendments add that exemption.

33.730 Quasi-Judicial Procedures

730

33.730.013 Expedited Land Division Procedure

The Expedited Land Division (ELD) procedure provides an alternative to the standard procedures for some land divisions. The applicant may choose to use the ELD process if the land division request meets all of the elements specified in ORS 197.360. The steps of this procedure are in ORS 197.365 through .375. The application requirements are listed in Section 33.730.060, below. Two additional steps are required for land division requests using the ELD Procedure:

A. Neighborhood contact.

1. When the ELD includes four to ten lots, the applicant is required to meet the neighborhood contact requirements specified in 33.705.020.A., Neighborhood contact I. If the proposed expedited land division is in an EG or I zone, it is exempt from the neighborhood contact requirements.

2. When the ELD includes eleven or more lots, the applicant is required to meet the neighborhood contact requirements specified in 33.705.020.B., Neighborhood contact II. If the proposed expedited land division is in the EG1, EG2, or an I zone, it is exempt from the neighborhood contact requirements.

B. Pre-application conference. A pre-application conference is required for all land division requests processed through the ELD procedure. See 33.730.050, Pre-Application Conference. The pre-application conference must be held before applying for an ELD review.

33.730.014 Type I Procedure

The Type I procedure is an administrative process with public notice but no hearing.

A. Pre-application conferences. A pre-application conference is not required.

B. Neighborhood contact.

1. When the proposed development associated with the land use review will result in the addition of at least 10,000 square feet and not more than 25,000 square feet of net building area to the site, the neighborhood contact steps of 33.705.020.A., Neighborhood contact I, are required. If the proposed development is in the EG1, EG2, or an I zone, or it has already met the neighborhood contact requirements as part of a building permit process, it is exempt from the neighborhood contact requirements.

2. When the proposed development associated with the land use review will result in the addition of more than 25,000 square feet of net building area to the site, the neighborhood contact steps of 33.725.020.B., Neighborhood contact II, are required. If the proposed development is in the EG1 , EG2, or an I zone, or it has already met the neighborhood contact requirements as part of a building permit process, it is exempt from the neighborhood contact requirements.

C.-H.[No change]

33.730.015 Type Ix Procedure
The Type Ix procedure is an administrative process with public notice but no hearing.

A. Pre-application conferences. A pre-application conference is optional.

B. Neighborhood contact.

1. When the proposed development associated with the land use review will result in the addition of at least 10,000 square feet and not more than 25,000 square feet of net building area to the site, the neighborhood contact steps of 33.705.020.A., Neighborhood contact I, are required. If the proposed development is in the EG1, EG2, or an I zone, or it has already met the neighborhood contact requirements as part of a building permit process, it is exempt from the neighborhood contact requirements.

2. When the proposed development associated with the land use review will result in the addition of more than 25,000 square feet of net building area to the site, the neighborhood contact steps of 33.705.020.B., Neighborhood contact II, are required. If the proposed development is in the EG1, EG2, or an I zone, or it has already met the neighborhood contact requirements as part of a building permit process, it is exempt from the neighborhood contact requirements.

C.-H.[No change]

33.730.020 Type II Procedure
The Type II procedure is an administrative process, with the opportunity to appeal the Director of BDS's decision to another review body.

A. Pre-application conference. A pre-application conference is optional unless it is a specific requirement of a review. See 33.730.050, Pre-Application Conference.

B. Neighborhood contact.

1. When the proposed development associated with the land use review will result in the addition of at least 10,000 square feet and not more than 25,000 square feet of net building area to the site and no portion of the site is in the Design overlay zone, the neighborhood contact steps of 33.705.020.A., Neighborhood contact I, are required. If the proposed development is in the EG1, EG2, or an I zone, or it has already met the neighborhood contact requirements as part of a building permit process, it is exempt from the neighborhood contact requirements.

2. When the proposed development associated with the land use review will result in the addition of more than 25,000 square feet of net building area to the site and no portion of the site is in the Design overlay zone, the neighborhood contact steps of 33.705.020.B., Neighborhood contact II, are required. If the proposed development is in the EG1, EG2, or an I zone, or it has already met the neighborhood contact requirements as part of a building permit process, it is exempt from the neighborhood contact requirements.

3. When the proposed development associated with the land use review will result in the addition of more than 10,000 square feet of net building area to the site and the site is in the Design overlay zone, the neighborhood contact steps of 33.705.020.C, Neighborhood contact III, are required. If the proposed development is in the EG1, EG2, or an I zone, or it has already met the neighborhood contact requirements as part of a building permit process, it is exempt from the neighborhood contact requirements.

C.-J. [No change]

33.730.025 Type IIx Procedure
The Type IIx procedure is an administrative process, with the opportunity to appeal the Director of BDS's decision to another review body.

A. Pre-application conference. A pre-application conference is optional. See 33.730.050, Pre-Application Conference.

B. Neighborhood contact.

1. The neighborhood contact steps of 33.705.020.A., Neighborhood contact I, are required when:

   a. The application is for a land division that includes four to ten lots; or

   b. The application is for a land use review other than a land division and the proposed development associated with the land use review will result in the addition of at least 10,000 square feet and not more than 25,000 square feet of net building area to the site. If the proposed development is in the EG1, EG2, or an I zone, or it has already met the neighborhood contact requirements as part of a building permit process, it is exempt from the neighborhood contact requirements.

2. When the application is for a land use review other than a land division and the proposed development associated with the land use review will result in the addition of more than 25,000 square feet of net building area to the site, the neighborhood contact steps of 33.705.020.B., Neighborhood contact II, are required. If the proposed development is in the EG1, EG2, or an I zone, or it has already met the neighborhood contact requirements as part of a building permit process, it is exempt from the neighborhood contact requirements.

C.-J. [No change]

33.730.030 Type III Procedure

A Type III procedure requires a public hearing before an assigned review body. Subsections A through E~~D~~ apply to all sites. If the site is within the City of Portland, Subsections F~~E~~ through I~~H~~ also apply. If the site is in the portion of unincorporated Multnomah County that is subject to City zoning, Subsection J~~I~~ also applies.

A. Pre-application conference. A pre-application conference is required for all requests processed through a Type III procedure. See 33.730.050, Pre-Application Conference.

B. Neighborhood contact.

1. The neighborhood contact steps of 33.705.020.A., Neighborhood contact I, are required when:
   a. The application is for a land division that includes four to ten lots and does not include an environmental review; or
   b. The application is for a land use review other than a land division and the proposed development associated with the land use review will result in the addition of at least 10,000 square feet and not more than 25,000 square feet of net building area to the site and no portion of the site is in the Design overlay zone. If the proposed development is in the EG1, EG2, or an I zone, or it has already met the neighborhood contact requirements as part of a building permit process, it is exempt from the neighborhood contact requirements.
2. The neighborhood contact steps of 33.705.020.B., Neighborhood contact II, are required when:
   a. The application is for a land division that includes eleven or more lots and does not include an environmental review; or
   b. The application is for a land use review other than a land division and the proposed development associated with the land use review will result in the addition of more than 25,000 square feet of net building area to the site and no portion of the site is in the Design overlay zone. If the proposed development is in the EG1, EG2, or an I zone, or it was subject to a building permit process, it is exempt from the neighborhood contact requirements.
3. The neighborhood contact steps of 33.705.020.C., Neighborhood contact III, are required when:
   a. The application is for a land division that includes an environmental review; or
   b. The application is for a land use review other than a land division and the proposed development associated with the land use review will result in the addition of more than 10,000 square feet of net building area to the site and the site is in the Design overlay zone. If the proposed development is in the EG1, EG2, or an I zone it is exempt from the neighborhood contact requirements.

Commentary

33.910.030 Definitions

The definition of fossil fuels was added to clarify the land use category Bulk Fossil Fuel Terminals.

Petrochemicals that are used primarily for non-fuel products are excluded, such as asphalt, plastics, lubricants, fertilizer, roofing, and paints. However, methanol is an exception that is included as a fossil fuel, because large methanol storage and distribution facilities tend to have structural similarities to liquid natural gas (LNG) and liquid petroleum gas (LPG) terminals, including large-scale storage and gas pipeline access, and because they can have similar safety and climate impacts.

Some fossil fuels under this definition are also classified as "renewable fuels" in the federal Renewable Fuel Standard and "clean fuels" in Oregon's Clean Fuel Standard, such as liquid natural gas and liquid propane gas. These federal and state standards require transportation fuel sold within their jurisdiction to contain a minimum volume of renewable or clean fuels. Renewable or clean fuels with more than 5 percent fossil fuel volume are defined as fossil fuels.

Renewable fuels are those fuels derived from biomass (plant or animal material), such as recycled cooking oil, soybean oil, or animal fats. Renewable natural gas/biogas is fuel captured from the waste stream, such as methane from landfills, waste water treatment plants, and agricultural or food waste. It does not include methane and other hydrocarbons produced from fossil fuels. Renewable hydrogen is hydrogen produced using renewable energy derived from wind power sited in ecologically responsible ways, solar, existing and low-impact hydroelectric, geothermal, biogas (including biogas produced from biomass), and ocean/wave technology sources.

Fuels containing 5% or less fossil-fuel volume are not considered fossil fuels under this definition. For example, "pure" ethanol made from corn or other non-fossil source is required by the Alcohol and Tobacco Tax and Trade Bureau to be denatured in order to be transported to the site. Denatured ethanol typically contains up to 5% methanol, so that it is toxic and undrinkable.

33.910.030 Definitions
The definition of words with specific meaning in the zoning code are as follows:

Fossil Fuel. Fossil fuels are petroleum products (such as crude oil and gasoline), coal, methanol, and gaseous fuels (such as natural gas and propane) that are made from decayed plants and animals that lived millions of years ago and are used as a source of energy. Denatured ethanol and similar fuel additives with less than 5 percent fossil fuel content, biodiesel/renewable diesel with less than 5 percent fossil fuel content, and petroleum-based products used primarily for non-fuel uses (such as asphalt, plastics, lubricants, fertilizer, roofing, and paints) are not fossil fuels.

Commentary

33.920.300 Bulk Fossil Fuel Terminal

Bulk Fossil Fuel Terminals are added as a new land use category to regulate their development in the Zoning Code. Regulation of Bulk Fossil Fuel Terminals implements policy direction in City of Portland Resolution 37168 and 2035 Comprehensive Plan Policies 4.79, 4.81, 4.82, 6.48, and 7.14 which address reducing natural hazard risks and fossil fuel distribution and storage facilities.

Bulk Fossil Fuel Terminals are characterized by having (1) marine, pipeline or railroad transport access and (2) either trans-loading facilities for transferring a shipment between transport modes (such as from rail to ship) or bulk storage facilities exceeding 2 million gallons of fossil fuels. The 2-million-gallon threshold is sized to include facilities that are large enough to unload unit trains. Functionally, these terminals tend to be regional gateway facilities, where fossil fuels enter and exit the region.

The use description is clarified with criteria that are intended to prevent the aggregation of new facilities smaller than 2 million gallons on adjacent sites into a larger terminal that could effectively circumvent the terminal storage capacity threshold.

Resolution 37168 lists a specific exception to not restrict service directly to end users. At a small scale, services to end users include retail gasoline filling stations, natural gas access lines in street right-of-way to residential and business customers, and heating oil tanks at home sites. Larger scale end users with fossil fuel storage and access infrastructure also include manufacturers, jet fuel facilities for PDX Airport, vessel fuel facilities on Portland Harbor, and others, where fossil fuels are used as an input.

33.920.300 Bulk Fossil Fuel Terminal

A. Characteristics. Bulk Fossil Fuel Terminals are establishments primarily engaged in the transport and bulk storage of fossil fuels. Terminal activities may also include fuel blending, regional distribution, and wholesaling. The firms rely on access by marine, railroad, or regional pipeline to transport fuels to or from the site, and either have transloading facilities for transferring a shipment between transport modes, or have storage capacity exceeding 2 million gallons for fossil fuels. There is minimal on-site sales activity with the customer present.

B. Accessory uses. Accessory uses may include retail sales of petroleum products, offices, food membership distribution, parking, storage, truck fleet parking and maintenance areas, rail spur or lead lines, and docks.

C. Examples. Examples include crude oil terminals, petroleum products terminals, natural gas terminals, propane terminals, and coal terminals.

D. Exceptions.

1. Truck or marine freight terminals that do not store, transport or distribute fossil fuels are classified as Warehouse And Freight Movement uses.
2. Truck or marine freight terminals that do not have transloading facilities and have storage capacity of 2 million gallons or less are classified as Warehouse And Freight Movement uses. However, multiple fossil fuel facilities, each with 2 million gallons of fossil fuel storage capacity or less but cumulatively having a fossil fuel storage capacity in excess of 2 million gallons, located on separate parcels of land will be classified as a Bulk Fossil Fuel Terminal when two or more of the following factors are present:
   a. The facilities are located or will be located on one or more adjacent parcels of land. Adjacent includes separated by a shared right-of-way;
   b. The facilities share or will share operating facilities such as driveways, parking, piping, or storage facilities; or
   c. The facilities are owned or operated by a single parent partnership or corporation.
3. Gasoline stations and other retail sales of fossil fuels are not Bulk Fossil Fuel Terminals.
4. Distributors and wholesalers that receive and deliver fossil fuels exclusively by truck are not Bulk Fossil Fuel Terminals.
5. Industrial, commercial, institutional, and agricultural firms that exclusively store fossil fuel for use as an input are not Bulk Fossil Fuel Terminals.
6. Uses that involve the transfer or storage of solid or liquid wastes are classified as Waste-Related uses.
7. The storage of fossil fuels for exclusive use at an airport, surface passenger terminal, marine, truck or air freight terminal, drydock, ship or barge servicing facility, rail yard, or as part of a fleet vehicle servicing facility are not Bulk Fossil Fuel Terminals.
8. Uses that recover or reprocess used petroleum products are not Bulk Fossil Fuel Terminals.

33.920.310~~300~~ Industrial Service

33.920.320~~310~~ Manufacturing And Production

33.920.330~~320~~ Railroad Yards

33.920.340~~330~~ Warehouse And Freight Movement

A. Characteristics. Warehouse And Freight Movement firms are involved in the storage, or movement of goods for themselves or other firms. Goods are generally delivered to other firms or the final consumer, except for some will-call pickups. There is little on-site sales activity with the customer present.

B. Accessory uses. Accessory uses may include offices, food membership distribution, truck fleet parking and maintenance areas, rail spur or lead lines, docks, and repackaging of goods.

C. Examples. Examples include separate warehouses used by retail stores such as furniture and appliance stores; household moving and general freight storage; cold storage plants, including frozen food lockers; storage of weapons and ammunition; major wholesale distribution centers; truck, marine, or air freight terminals; bus barns and light rail barns; parcel services; major post offices; grain terminals; and the stockpiling of sand, gravel, or other aggregate materials.

D. Exceptions.

1. Uses that involve the transfer or storage of solid or liquid wastes are classified as Waste-Related uses.
2. Miniwarehouses are classified as Self-Service Storage uses.
3. Establishments that engage in the transfer or storage of fossil fuels, rely on access by marine, railroad or regional pipeline to transport fuels to or from the site, and either have transloading facilities or have storage capacity exceeding 2 million gallons for fossil fuels are classified as Bulk Fossil Fuel Terminal uses.

33.920.350~~340~~ Waste-Related

33.920.360~~350~~ Wholesale Sales

A. Characteristics. Wholesale Sales firms are involved in the sale, lease, or rent of products primarily intended for industrial, institutional, or commercial businesses. The uses emphasize on-site sales or order taking and often include display areas. Businesses may or may not be open to the general public, but sales to the general public are limited as a result of the way in which the firm operates. Products may be picked up on site or delivered to the customer.

B. Accessory uses. Accessory uses may include offices, food membership distribution, product repair, warehouses, parking, minor fabrication services, and repackaging of goods.

C. Examples. Examples include sale or rental of machinery, equipment, heavy trucks, building materials, special trade tools, welding supplies, machine parts, electrical supplies, janitorial supplies, restaurant equipment, and store fixtures; mail order houses; and wholesalers of food, clothing, auto parts, building hardware, and office supplies.

D. Exceptions.

1. Firms that engage primarily in sales to the general public are classified as Retail Sales And Service.
2. Firms that engage in sales on a membership basis are classified as either Retail Sales And Service or Wholesale Sales, based on a consideration of the characteristics of the use.
3. Firms that are primarily storing goods with little on-site business activity are classified as Warehouse And Freight Movement.
4. Establishments that engage in the regional wholesaling of fossil fuels, rely on access by marine, railroad or regional pipeline to transport fuels to or from the site, and either have transloading facilities or have storage capacity exceeding 2 million gallons for fossil fuels are classified as Bulk Fossil Fuel Terminal uses.

NOTICE OF ADOPTED CHANGE TO A COMPREHENSIVE PLAN OR LAND USE REGULATION

Date: December 21, 2016
Jurisdiction: City of Portland
Local file no.: Fossil Fuel Terminal
DLCD file no.: 013-16

The Department of Land Conservation and Development (DLCD) received the attached notice of adopted amendment to a comprehensive plan or land use regulation on 12/20/2016. A copy of the adopted amendment is available for review at the DLCD office in Salem and the local government office.

Notice of the proposed amendment was submitted to DLCD 36 days prior to the first evidentiary hearing.

Appeal Procedures

Eligibility to appeal this amendment is governed by ORS 197.612, ORS 197.620, and ORS 197.830. Under ORS 197.830(9), a notice of intent to appeal a land use decision to LUBA must be filed no later than 21 days after the date the decision sought to be reviewed became final. If you have questions about the date the decision became final, please contact the jurisdiction that adopted the amendment.

A notice of intent to appeal must be served upon the local government and others who received written notice of the final decision from the local government. The notice of intent to appeal must be served and filed in the form and manner prescribed by LUBA, (OAR chapter 661, division 10).

If the amendment is not appealed, it will be deemed acknowledged as set forth in ORS 197.625(1)(a). Please call LUBA at 503-373-1265, if you have questions about appeal procedures.

ORDINANCE NO. 188142 As Amended

Restrict bulk fossil fuel terminals. (Ordinance; Amend Title 33, Planning and Zoning)

The City of Portland ordains:

Section 1. The Council finds:

General Findings

1. The rapid development of fossil fuel resources in the western U.S. and Canada has resulted in numerous facility and infrastructure projects proposed to transport coal, diluted bitumen, natural gas, propane or other fossil fuels through the West Coast.

2. Fossil fuels pose risks to safety, health, and livability, including mobility of people, other freight, and other commercial vehicles.

3. The Portland Bureau of Emergency Management's Mitigation Action Plan (MAP) identifies how natural hazard events like floods, landslides, and earthquakes might affect the City of Portland. The Portland area has experienced numerous earthquakes in the past, ranging from Magnitude 4.5 to 9.0. Portland is certain to experience seismic events in the future. Many of Portland's fossil fuel storage tanks were built before seismic design requirements in building codes were adopted.

4. Most of Portland's employment and industrial zones are located in areas with moderate to high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's Critical Energy Infrastructure Hub Study (2016). Fossil fuel infrastructure poses considerable risks in the event of a major earthquake.

5. The extraction and combustion of fossil fuels are significant sources of greenhouse gas emissions and major contributors to climate change and pollution.

6. Coal contains toxic heavy metals, including mercury, arsenic and lead, and exposure to these toxic heavy metals is linked to cancer, birth defects and other health problems.

7. A Union Pacific train carrying oil from North Dakota to Tacoma derailed in Mosier, Oregon on June 3, 2016, spilling 42,000 gallons of crude oil, igniting a fire, and leading to the evacuation of one-quarter of the town's residents.

8. Tribal communities in Oregon and Washington have expressed concerns about the safety risks of fossil fuel infrastructure and the related threats to human health, cultural heritage, and environmental quality.

9. The City's 2015 Climate Action Plan (adopted by Resolution 37135) identifies the need to establish a "fossil fuel export policy that considers lifecycle emissions, safety,

economics, neighborhood livability and environmental impacts" (Climate Action Plan, action 3G, page 69).

10. The City committed in its 2015 Climate Action Plan to advancing policy and programs to reduce local fossil fuel use both in the City's own operations and through community-wide initiatives.

11. In Resolutions 36959 and 36962 adopted in 2012, the Council expressed opposition to coal trains traveling through Portland until a programmatic, comprehensive and area-wide Environmental Impact Statement and comprehensive Health Impact Assessment are completed.

12. Resolution 37168, adopted November 12, 2015, expressed the City Council's opposition to the "expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." It also expressed the Council's intent not to restrict improvements in safety, efficiency, or seismic resilience; the provision of service directly to end users; or infrastructure that will accelerate the transition to non-fossil fuel energy sources.

13. The 2035 Comprehensive Plan sets policy direction (Policies 4.75 and 4.76) to encourage disaster-resilient development and specifically to reduce natural hazard risks to critical energy and transportation infrastructure in Portland Harbor. Most of Portland's employment and industrial zones are located in areas with moderate to high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's Critical Energy Infrastructure Hub Study (2016).

14. The zoning code currently allows Bulk Fossil Fuel Terminals as a Warehouse and Freight Movement use without any limits on the size of terminals, which does not implement the Council's policy actions described in Findings 9 – 13 above

15. As initial implementation of these policies, the proposed amendments create a new land use category and impose prohibitions and limits that restrict the level of development to less than what is allowed under the current standards. The amendments will prohibit new terminals and limit the expansion of existing terminals.

16. The amendments promote major benefits to human health and safety, environmental health and resilience, with minor impacts to economic prosperity and equity.

17. The amendments will restrict expansion at existing fuel terminals and prohibit new terminal development, potentially impacting associated job growth and tax revenue. At the same time, the code restrictions on fossil fuel terminal development will also limit potential financial risks from a major accident involving fossil fuel infrastructure.

18. The amendments will reduce the scale of low, but potentially catastrophic, safety risks associated with fossil fuel infrastructure, including explosive accidents at liquefied

natural gas (LNG) and liquefied petroleum gas (LPG) facilities, and seismic risks of tank farms.

19. The amendments will limit expansion at existing fuel terminals and prohibit new terminal development, which may negatively impact associated middle-wage, industrial job growth that disproportionately benefits workers of color.

20. The amendments will restrict development of fossil fuel terminals consistent with City and State objectives on climate change and public safety. While fossil fuels like natural gas and propane have the potential to replace higher-carbon fuels, substituting these fuels for higher-carbon fuels does not begin to approach the goal of an 80% reduction in carbon emissions by 2050 established in Portland's Climate Action Plan or the State's 75% goal.

21. The potential impacts of the code amendments on constraining the fossil fuel supply to meet regional demand is uncertain. Fossil fuel demand in this growing region has been relatively flat over the last 15 years. At best, the demand for fossil fuel may increase moderately, as indicated by trend-based forecasts, or may plateau and decline with a continued shift to other modes of transportation, more fuel efficient vehicles, electric vehicles, and other carbon reduction strategies.

22. In Resolution 37168, the City Council expressed support for accelerating the transition to non-fossil fuel energy sources. As part of that transition, the Oregon Department of Environmental Quality (ODEQ) is implementing the Oregon Clean Fuels Program, which requires a 10 percent reduction in average carbon intensity by 2025. Fuels that could be used to achieve the standards include ethanol, biodiesel, electricity, hydrogen, natural gas, propane, and biogas, which may require additional storage capacity. In order to facilitate implementation of the Clean Fuels Program, non-fossil fuel storage tanks are not subject to the capacity limits.

Findings on Statewide Planning Goals

23. State planning statutes require cities to adopt and amend comprehensive plans and land use regulations in compliance with state land use goals. Only the stated goals addressed below apply.

24. **Goal 1, Citizen Involvement**, requires provision of opportunities for citizens to be involved in all phases of the planning process. The preparation of these amendments has provided numerous opportunities for public involvement, including:
    a. The Bureau of Planning and Sustainability maintained and updated as needed a project web site that included basic project information, announcements of public events, project documents and staff contact information.
    b. On June 29, 2016, the Fossil Fuel Terminal Zoning Amendments Discussion Draft was published and posted on the Bureau website.
    c. On August 8, 2016, notice of the proposed action was mailed to the Department of Land Conservation and Development (DLCD) in compliance with the post-

acknowledgement review process required by OAR 660-18-020. DLCD received the notice later that day.

d. On August 12, 2016, the Fossil Fuel Terminal Zoning Amendments Proposed Draft was published and posted on the Bureau website.
e. On August 12, 2016, notice of the Planning and Sustainability Commission hearing on the Fossil Fuel Terminal Zoning Amendments was mailed to 367 people, including all neighborhood and business associations, and all those who had requested notice, as required by state law and administrative rules and the City's zoning code. The notice also announced the availability of the Fossil Fuel Terminal Zoning Amendments Proposed Draft.
f. On September 13, 2016, the Planning and Sustainability Commission held a hearing on the proposal. Staff from the Bureau of Planning and Sustainability presented the proposal, and public testimony was received.
g. On September 20, 2016, the City Council held a work session on the Fossil Fuel Terminal Zoning Amendments.
h. On October 11, 2016, the Planning and Sustainability Commission voted to recommend the Fossil Fuel Terminal Zoning Amendments to City Council, including PSC-recommended modifications to the Proposed Draft
i. On October 24, 2016, the Fossil Fuel Terminal Zoning Amendments Recommended Draft was published and posted on the Bureau website.
j. On October 25, 2016, notice of the City Council hearing on the Fossil Fuel Terminal Zoning Amendments was mailed to 1,123 people. The notice also announced the availability of the Fossil Fuel Terminal Zoning Amendments Recommended Draft.
k. On November 10, 2016, City Council held a hearing on the Planning and Sustainability Commission recommendation for the Fossil Fuel Terminal Zoning Amendments. Staff from the Bureau of Planning and Sustainability presented the proposal, and public testimony was received.
l. On November 16, 2016, City Council held a second hearing on the Fossil Fuel Terminal Zoning Amendments.
m. On December 8, 2016, voted to adopt the Zoning Code changes in the Fossil Fuel Terminal Zoning Amendments.

25. **Goal 2, Land Use Planning**, requires the development of a process and policy framework that acts as a basis for all land use decisions and assures that decisions and actions are based on an understanding of the facts relevant to the decision.
    a. The process for adopting the amendments followed the procedures required by Title 33.740, Legislative Procedures, OAR 660-018-0020, ORS 227.186 and ORS 197.610.
    b. The applicable approval criteria for zoning code text amendments (33.835 Goal, Policy, and Regulation Amendments) are satisfied for the reasons explained in the findings below.
    c. The amendments meet relevant goals and policies of the City's adopted Comprehensive Plan as described in the findings below for Portland's Comprehensive Plan Goals and Policies;

d. The amendments are based on an identification of issues and problems as described in the general findings and in the project report and supporting documents contained in Exhibit A.
e. The amendments support this goal because the code changes provide use limitations for Bulk Fossil Fuel Terminals consistent with the City's adopted Comprehensive Plan.
f. The amendments also support this goal because development of the changes followed established city procedures for legislative actions, while also improving the clarity and comprehensibility of the City's codes.

26. **Goal 7, Natural Hazards**, requires reducing risk to people and property from natural hazards. The amendments support this goal because help limit the risks of storing large volumes of hazardous materials in an area with moderate to high susceptibility to an earthquake.

27. **Goal 9, Economic Development**, requires provision of adequate opportunities for a variety of economic activities vital to public health, welfare, and prosperity. The amendments are consistent with this goal because these changes and restrictions only apply to a new land use category, Bulk Fossil Fuel Terminals, and do not have a significant effect on the other allowed uses in industrial and employment zones. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial areas of Portland.

28. **Goal 12, Transportation**, requires provision of a safe, convenient, and economic transportation system. Goal 12 is implemented by the Transportation Planning Rule (TPR), which requires certain findings if a proposed regulation will significantly affect an existing or planned transportation facility. Under OAR 660-012-0060(1), a land use regulation amendment significantly affects a transportation facility if it would:

    (a) Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);
    (b) Change standards implementing a functional classification system; or
    (c) As measured at the end of the planning period identified in the adopted transportation system plan:
        (A) Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;
        (B) Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP or comprehensive plan; or
        (C) Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.

a. These amendments do not change the functional classification of an existing or planned transportation facility, nor change standards that implement a functional classification system.
b. These amendments create a new land use category, but impose prohibitions and limits that restrict the level of development to less than what is allowed under the current standards. The zoning code currently allows Bulk Fossil Fuel Terminals as a Warehouse and Freight Movement use without any limits on the size of terminals. The amendments will prohibit new terminals and limit the expansion of existing terminals.
c. Given the new prohibitions and limits on expansion, the amendments will not reduce or worsen the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP or comprehensive plan.
d. For the same reason, these changes will not have a significant effect on existing or planned transportation facilities because the proposed amendments are minor changes to the allowed uses in industrial uses, and will not increase development intensity in a manner that will be inconsistent with the function or classification of existing transportation facilities or increase automobile traffic.
e. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial areas of Portland.

29. **Goal 15, Willamette River Greenway**, requires protection of the natural, scenic, historical, agricultural, economic and recreational qualities of lands along the Willamette River. The amendments support this goal because they minimize risks to natural, scenic and historic qualities along the river by restricting the storage of large volumes of hazardous materials in liquefaction zones near the river. The amendments prohibit new fossil fuel terminals, which will minimize potential risk to people and the environment by requiring any new terminal to be located outside of the liquefaction zone away from the greenway.

Findings on Metro Urban Growth Management Functional Plan

30. **Title 4, Industrial and other Employment Areas**, seeks to provide and protect a supply of sites for employment by limiting the types and scale of non-industrial uses in Regionally Significant Industrial Areas (RSIAs), Industrial and Employment Areas. The amendments support Title 4 because they do not increase the type or scale of non-industrial uses allowed in RSIAs, Industrial or General Employment zones. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial and employment areas of Portland.

Findings on Portland's Comprehensive Plan Goals

31. Since the adopted 2035 Comprehensive Plan is not yet effective, the proposed amendments are evaluated below for consistency with the City's existing, effective, and acknowledged Comprehensive Plan. Only the Comprehensive Plan goals addressed below are relevant and apply.

32. **Goal 1, Metropolitan Coordination**, calls for the Comprehensive Plan to be coordinated with federal and state law and to support regional goals, objectives and plans. The amendments are consistent with this goal because notification of the proposals, and an opportunity to provide comment at a public hearing before the Planning and Sustainability Commission, was provided to the Oregon Department of Land Conservation and Development consistent with ORS 197.610, and to Metro, Tri-Met, the Port of Portland, and the Oregon Department of Transportation consistent with 33.740.020. Nothing within these amendments changes or affects the Urban Growth Boundary, Urban Planning Area Boundary, or Urban Services Boundary.

33. **Goal 2, Urban Development**, calls for maintaining Portland's role as the major regional employment and population center through public policies that encourage expanded opportunity for housing and jobs, while retaining the character of established residential neighborhoods and business centers. The zoning code amendments will have minimal impact on Portland as the region's major employment center because there are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial and employment areas of Portland.

34. **Policy 2.14, Industrial Sanctuaries**, calls for providing industrial sanctuaries and encouraging the growth of industrial activities by preserving industrial land primarily for manufacturing purposes. The amendments are consistent with this policy because these changes and restrictions only apply to a new land use category, Bulk Fossil Fuel Terminals, and do not significantly affect the other allowed uses in industrial and employment zones. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial areas of Portland.

35. **Goal 5, Economic Development**, calls for fostering a strong and diverse economy that provides a full range of employment and economic choices for individuals and families in all parts of the city. The amendments are consistent with this goal because these changes and restrictions only apply to a new land use category, Bulk Fossil Fuel Terminals, and do not have a significant effect on the other allowed uses in industrial and employment zones.

36. **Policy, 5.1, Urban Development and Revitalization**, encourages investment in the development, redevelopment, rehabilitation and adaptive reuse of urban land and buildings for employment and housing opportunities. Objectives A and C specifically call for ensuring a sufficient supply of commercially and industrially-zoned, buildable

land, and retaining industrial sanctuary zones and maximizing use of infrastructure and intermodal transportation linkages with and within these areas. The zoning code amendments support this policy and objectives and will not affect the City's supply of land for economic development and employment growth because there are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial areas of Portland.

37. **Goal 6, Transportation**, calls for developing a balanced, equitable, and efficient transportation system that provides a range of transportation choices; reinforces the livability of neighborhoods; supports a strong and diverse economy; reduces air, noise, and water pollution; and lessens reliance on the automobile while maintaining accessibility. These amendments support this goal for the following reasons:

    a. These changes will not have a significant effect on existing or planned transportation facilities because the proposed amendments are minor changes to the allowed uses in industrial zones, and will not increase development intensity in a manner that will be inconsistent with the function or classification of existing transportation facilities or increase automobile traffic.
    b. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial areas of Portland, so there is no impact to the city's transportation system.
    c. These amendments create a new land use category, but imposes prohibitions and limits that restrict the level of development to less than what is allowed under the current standards. The zoning code currently allows Bulk Fossil Fuel Terminals as a Warehouse and Freight Movement use without any limits on the size of terminals. The amendments will prohibit new terminals and limit the expansion of existing terminals.
    d. Given the new prohibitions and limits on expansion, the amendments will not reduce or worsen the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP or comprehensive plan.

38. **Policy 6.9, Freight Classification Descriptions**, calls for designating a system of truck streets, railroad lines, and intermodal freight facilities that support local, national, and international distribution of goods and services. The amendments do not change the designation of any element of the city's freight system.

39. **Policy 6.18, Adequacy of Transportation Facilities**, calls for ensuring that amendments to land use regulations that change allowed uses are consistent with the identified function and capacity of, and adopted performance measures for, affected transportation facilities. This ordinance amends the zoning code to create a new land use category, but imposes prohibitions and limits that restrict the level of development to less than what is allowed under the current standards. The zoning code currently allows Bulk Fossil Fuel Terminals as a Warehouse and Freight Movement use without any limits on the size of terminals. The amendments will prohibit new terminals and limit the expansion of

existing terminals. Therefore, consistency with the identified function and capacity of transportation facilities is not impacted.

40. **Policy 6.29, Multimodal Freight System**, calls for developing and maintaining a multimodal freight transportation system for the safe, reliable, and efficient movement of goods within and through the City. The amendments do not change the designation of any element of the city's freight system.

41. **Goal 7, Energy**, calls for promoting a sustainable energy future by increasing energy efficiency in all sectors of the city by ten percent by the year 2000. **Policy 7.8, Energy Supply**, calls for supporting environmentally acceptable, sustainable energy sources, especially renewable resources such as solar, wind, hydroelectric, geothermal, and biomass (wood, farm and municipal waste). These amendments support a transition to non-fossil fuel energy sources by not including non-fossil fuel storage tanks in the storage capacity limits.

42. **Goal 8, Environment,** calls for maintaining and improving the quality of Portland's air, water and land resources and protecting neighborhoods and business centers from detrimental noise pollution. **Policy 8.11, Special Areas, H. Willamette River Greenway** calls for the protection of the natural and economic qualities of lands along the Willamette River through the Willamette Greenway Plan. The amendments support this goal because they minimize or even reduce risks to natural and economic qualities along the river by restricting the storage of large volumes of hazardous materials in liquefaction zones near the river. The amendments prohibit new fossil fuel terminals, which will minimize potential risk to people and the environment by requiring any new terminal to be located outside of the liquefaction zone away from the greenway.

43. **Goal 10, Plan Review and Administration,** calls for the periodic review so that the Comprehensive Plan and implementing ordinances remain an up-to-date and workable framework for land use development. **Policy 10.6, Amendments to the Comprehensive Plan Goals, Policies, and Implementing Measures**, requires that all proposed amendments to implementing ordinances be reviewed by the Planning and Sustainability Commission prior to action by the City Council. These amendments support this policy. The Planning and Sustainability Commission reviewed these amendments at a public hearing on September 13, 2016 and made a recommendation on October 11, 2016, to action by the City Council.

44. **Policy 10.10, Amendments to the Zoning and Subdivision Regulations**, requires that amendments to the zoning and subdivision regulations be clear, concise, and applicable to the broad range of development situations faced by a growing urban city. The amendments are consistent with this policy and its objectives as follows:

    a. The amendments address a present land use and development situation. The zoning code currently allows Bulk Fossil Fuel Terminals as a Warehouse and Freight Movement use without any limits on the size of terminals and without consideration

of liquefaction hazards and public safety. These amendments create a new land use category and impose prohibitions and limits that restrict the level of development to less than what is allowed under the current standards. The amendments will prohibit new terminals and limit the expansion of existing terminals.

b. The amended regulation is simple and concise by using clear and objective standards and not requiring a discretionary land use review for the limited expansion of an existing terminal.

NOW THEREFORE, The Council directs:

a. Adopt Fossil Fuel Terminal Zoning Amendments, *Recommended Draft* dated October 24, 2016, attached as Exhibit A.

b. Adopt the commentary in Exhibit A, Fossil Fuel Terminal Zoning Amendments, *Recommended Draft*, dated October 24, 2016, as legislative intent and further findings.

c. Amend Title 33, Planning and Zoning, as shown in Exhibit A, Fossil Fuel Terminal Zoning Amendments, *Recommended Draft*, dated October 24, 2016.

d. The Bureau of Planning and Sustainability shall report to City Council no later than December 31, 2019 on the implementation of this ordinance, including:
   - the number and description of any requests by existing terminal operators to replace and expand their facilities;
   - the number and description of building permits issued for fossil fuel tanks between 200,000 and 2 million gallons;
   - the trends in fossil fuel energy use and non-fossil energy use in Oregon;
   - the status of local and state regulatory proceedings that may improve seismic resilience of fossil fuel storage infrastructure; and
   - information on compliance with the Oregon Clean Fuels Program.

e. City Bureaus, including BDS, PBEM and Fire, shall work with the State of Oregon to develop policy options to require seismic upgrades of storage tanks within a firm deadline for replacement of older, unsafe tanks.

Section 2. If any section, subsection, sentence, clause, phrase, diagram, designation, or drawing contained in this Ordinance, or the plan, map or code it adopts or amends, is held to be deficient, invalid or unconstitutional, that shall not affect the validity of the remaining portions. The Council declares that it would have adopted the plan, map, or code and each section, subsection, sentence, clause, phrase, diagram, designation, and drawing thereof, regardless of the fact that any one or more sections, subsections, sentences, clauses, phrases, diagrams, designations, or drawings contained in this Ordinance, may be found to be deficient, invalid or unconstitutional.

ORDINANCE NO. 188142 As Amended

Restrict bulk fossil fuel terminals. (Ordinance; Amend Title 33, Planning and Zoning)

The City of Portland ordains:

Section 1. The Council finds:

General Findings

1. The rapid development of fossil fuel resources in the western U.S. and Canada has resulted in numerous facility and infrastructure projects proposed to transport coal, diluted bitumen, natural gas, propane or other fossil fuels through the West Coast.

2. Fossil fuels pose risks to safety, health, and livability, including mobility of people, other freight, and other commercial vehicles.

3. The Portland Bureau of Emergency Management's Mitigation Action Plan (MAP) identifies how natural hazard events like floods, landslides, and earthquakes might affect the City of Portland. The Portland area has experienced numerous earthquakes in the past, ranging from Magnitude 4.5 to 9.0. Portland is certain to experience seismic events in the future. Many of Portland's fossil fuel storage tanks were built before seismic design requirements in building codes were adopted.

4. Most of Portland's employment and industrial zones are located in areas with moderate to high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's Critical Energy Infrastructure Hub Study (2016). Fossil fuel infrastructure poses considerable risks in the event of a major earthquake.

5. The extraction and combustion of fossil fuels are significant sources of greenhouse gas emissions and major contributors to climate change and pollution.

6. Coal contains toxic heavy metals, including mercury, arsenic and lead, and exposure to these toxic heavy metals is linked to cancer, birth defects and other health problems.

7. A Union Pacific train carrying oil from North Dakota to Tacoma derailed in Mosier, Oregon on June 3, 2016, spilling 42,000 gallons of crude oil, igniting a fire, and leading to the evacuation of one-quarter of the town's residents.

8. Tribal communities in Oregon and Washington have expressed concerns about the safety risks of fossil fuel infrastructure and the related threats to human health, cultural heritage, and environmental quality.

9. The City's 2015 Climate Action Plan (adopted by Resolution 37135) identifies the need to establish a "fossil fuel export policy that considers lifecycle emissions, safety,

economics, neighborhood livability and environmental impacts" (Climate Action Plan, action 3G, page 69).

10. The City committed in its 2015 Climate Action Plan to advancing policy and programs to reduce local fossil fuel use both in the City's own operations and through community-wide initiatives.

11. In Resolutions 36959 and 36962 adopted in 2012, the Council expressed opposition to coal trains traveling through Portland until a programmatic, comprehensive and area-wide Environmental Impact Statement and comprehensive Health Impact Assessment are completed.

12. Resolution 37168, adopted November 12, 2015, expressed the City Council's opposition to the "expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." It also expressed the Council's intent not to restrict improvements in safety, efficiency, or seismic resilience; the provision of service directly to end users; or infrastructure that will accelerate the transition to non-fossil fuel energy sources.

13. The 2035 Comprehensive Plan sets policy direction (Policies 4.75 and 4.76) to encourage disaster-resilient development and specifically to reduce natural hazard risks to critical energy and transportation infrastructure in Portland Harbor. Most of Portland's employment and industrial zones are located in areas with moderate to high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's Critical Energy Infrastructure Hub Study (2016).

14. The zoning code currently allows Bulk Fossil Fuel Terminals as a Warehouse and Freight Movement use without any limits on the size of terminals, which does not implement the Council's policy actions described in Findings 9 – 13 above

15. As initial implementation of these policies, the proposed amendments create a new land use category and impose prohibitions and limits that restrict the level of development to less than what is allowed under the current standards. The amendments will prohibit new terminals and limit the expansion of existing terminals.

16. The amendments promote major benefits to human health and safety, environmental health and resilience, with minor impacts to economic prosperity and equity.

17. The amendments will restrict expansion at existing fuel terminals and prohibit new terminal development, potentially impacting associated job growth and tax revenue. At the same time, the code restrictions on fossil fuel terminal development will also limit potential financial risks from a major accident involving fossil fuel infrastructure.

18. The amendments will reduce the scale of low, but potentially catastrophic, safety risks associated with fossil fuel infrastructure, including explosive accidents at liquefied

natural gas (LNG) and liquefied petroleum gas (LPG) facilities, and seismic risks of tank farms.

19. The amendments will limit expansion at existing fuel terminals and prohibit new terminal development, which may negatively impact associated middle-wage, industrial job growth that disproportionately benefits workers of color.

20. The amendments will restrict development of fossil fuel terminals consistent with City and State objectives on climate change and public safety. While fossil fuels like natural gas and propane have the potential to replace higher-carbon fuels, substituting these fuels for higher-carbon fuels does not begin to approach the goal of an 80% reduction in carbon emissions by 2050 established in Portland's Climate Action Plan or the State's 75% goal.

21. The potential impacts of the code amendments on constraining the fossil fuel supply to meet regional demand is uncertain. Fossil fuel demand in this growing region has been relatively flat over the last 15 years. At best, the demand for fossil fuel may increase moderately, as indicated by trend-based forecasts, or may plateau and decline with a continued shift to other modes of transportation, more fuel efficient vehicles, electric vehicles, and other carbon reduction strategies.

22. In Resolution 37168, the City Council expressed support for accelerating the transition to non-fossil fuel energy sources. As part of that transition, the Oregon Department of Environmental Quality (ODEQ) is implementing the Oregon Clean Fuels Program, which requires a 10 percent reduction in average carbon intensity by 2025. Fuels that could be used to achieve the standards include ethanol, biodiesel, electricity, hydrogen, natural gas, propane, and biogas, which may require additional storage capacity. In order to facilitate implementation of the Clean Fuels Program, non-fossil fuel storage tanks are not subject to the capacity limits.

Findings on Statewide Planning Goals

23. State planning statutes require cities to adopt and amend comprehensive plans and land use regulations in compliance with state land use goals. Only the stated goals addressed below apply.

24. **Goal 1, Citizen Involvement**, requires provision of opportunities for citizens to be involved in all phases of the planning process. The preparation of these amendments has provided numerous opportunities for public involvement, including:
    a. The Bureau of Planning and Sustainability maintained and updated as needed a project web site that included basic project information, announcements of public events, project documents and staff contact information.
    b. On June 29, 2016, the Fossil Fuel Terminal Zoning Amendments Discussion Draft was published and posted on the Bureau website.
    c. On August 8, 2016, notice of the proposed action was mailed to the Department of Land Conservation and Development (DLCD) in compliance with the post-

acknowledgement review process required by OAR 660-18-020. DLCD received the notice later that day.

d. On August 12, 2016, the Fossil Fuel Terminal Zoning Amendments Proposed Draft was published and posted on the Bureau website.
e. On August 12, 2016, notice of the Planning and Sustainability Commission hearing on the Fossil Fuel Terminal Zoning Amendments was mailed to 367 people, including all neighborhood and business associations, and all those who had requested notice, as required by state law and administrative rules and the City's zoning code. The notice also announced the availability of the Fossil Fuel Terminal Zoning Amendments Proposed Draft.
f. On September 13, 2016, the Planning and Sustainability Commission held a hearing on the proposal. Staff from the Bureau of Planning and Sustainability presented the proposal, and public testimony was received.
g. On September 20, 2016, the City Council held a work session on the Fossil Fuel Terminal Zoning Amendments.
h. On October 11, 2016, the Planning and Sustainability Commission voted to recommend the Fossil Fuel Terminal Zoning Amendments to City Council, including PSC-recommended modifications to the Proposed Draft
i. On October 24, 2016, the Fossil Fuel Terminal Zoning Amendments Recommended Draft was published and posted on the Bureau website.
j. On October 25, 2016, notice of the City Council hearing on the Fossil Fuel Terminal Zoning Amendments was mailed to 1,123 people. The notice also announced the availability of the Fossil Fuel Terminal Zoning Amendments Recommended Draft.
k. On November 10, 2016, City Council held a hearing on the Planning and Sustainability Commission recommendation for the Fossil Fuel Terminal Zoning Amendments. Staff from the Bureau of Planning and Sustainability presented the proposal, and public testimony was received.
l. On November 16, 2016, City Council held a second hearing on the Fossil Fuel Terminal Zoning Amendments.
m. On December 8, 2016, voted to adopt the Zoning Code changes in the Fossil Fuel Terminal Zoning Amendments.

25. **Goal 2, Land Use Planning**, requires the development of a process and policy framework that acts as a basis for all land use decisions and assures that decisions and actions are based on an understanding of the facts relevant to the decision.
    a. The process for adopting the amendments followed the procedures required by Title 33.740, Legislative Procedures, OAR 660-018-0020, ORS 227.186 and ORS 197.610.
    b. The applicable approval criteria for zoning code text amendments (33.835 Goal, Policy, and Regulation Amendments) are satisfied for the reasons explained in the findings below.
    c. The amendments meet relevant goals and policies of the City's adopted Comprehensive Plan as described in the findings below for Portland's Comprehensive Plan Goals and Policies;

d. The amendments are based on an identification of issues and problems as described in the general findings and in the project report and supporting documents contained in Exhibit A.
e. The amendments support this goal because the code changes provide use limitations for Bulk Fossil Fuel Terminals consistent with the City's adopted Comprehensive Plan.
f. The amendments also support this goal because development of the changes followed established city procedures for legislative actions, while also improving the clarity and comprehensibility of the City's codes.

26. **Goal 7, Natural Hazards**, requires reducing risk to people and property from natural hazards. The amendments support this goal because help limit the risks of storing large volumes of hazardous materials in an area with moderate to high susceptibility to an earthquake.

27. **Goal 9, Economic Development**, requires provision of adequate opportunities for a variety of economic activities vital to public health, welfare, and prosperity. The amendments are consistent with this goal because these changes and restrictions only apply to a new land use category, Bulk Fossil Fuel Terminals, and do not have a significant effect on the other allowed uses in industrial and employment zones. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial areas of Portland.

28. **Goal 12, Transportation**, requires provision of a safe, convenient, and economic transportation system. Goal 12 is implemented by the Transportation Planning Rule (TPR), which requires certain findings if a proposed regulation will significantly affect an existing or planned transportation facility. Under OAR 660-012-0060(1), a land use regulation amendment significantly affects a transportation facility if it would:

    (a) Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);
    (b) Change standards implementing a functional classification system; or
    (c) As measured at the end of the planning period identified in the adopted transportation system plan:
        (A) Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;
        (B) Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP or comprehensive plan; or
        (C) Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.

a. These amendments do not change the functional classification of an existing or planned transportation facility, nor change standards that implement a functional classification system.
b. These amendments create a new land use category, but impose prohibitions and limits that restrict the level of development to less than what is allowed under the current standards. The zoning code currently allows Bulk Fossil Fuel Terminals as a Warehouse and Freight Movement use without any limits on the size of terminals. The amendments will prohibit new terminals and limit the expansion of existing terminals.
c. Given the new prohibitions and limits on expansion, the amendments will not reduce or worsen the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP or comprehensive plan.
d. For the same reason, these changes will not have a significant effect on existing or planned transportation facilities because the proposed amendments are minor changes to the allowed uses in industrial uses, and will not increase development intensity in a manner that will be inconsistent with the function or classification of existing transportation facilities or increase automobile traffic.
e. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial areas of Portland.

29. **Goal 15, Willamette River Greenway**, requires protection of the natural, scenic, historical, agricultural, economic and recreational qualities of lands along the Willamette River. The amendments support this goal because they minimize risks to natural, scenic and historic qualities along the river by restricting the storage of large volumes of hazardous materials in liquefaction zones near the river. The amendments prohibit new fossil fuel terminals, which will minimize potential risk to people and the environment by requiring any new terminal to be located outside of the liquefaction zone away from the greenway.

Findings on Metro Urban Growth Management Functional Plan

30. **Title 4, Industrial and other Employment Areas**, seeks to provide and protect a supply of sites for employment by limiting the types and scale of non-industrial uses in Regionally Significant Industrial Areas (RSIAs), Industrial and Employment Areas. The amendments support Title 4 because they do not increase the type or scale of non-industrial uses allowed in RSIAs, Industrial or General Employment zones. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial and employment areas of Portland.

Findings on Portland's Comprehensive Plan Goals

31. Since the adopted 2035 Comprehensive Plan is not yet effective, the proposed amendments are evaluated below for consistency with the City's existing, effective, and acknowledged Comprehensive Plan. Only the Comprehensive Plan goals addressed below are relevant and apply.

32. **Goal 1, Metropolitan Coordination**, calls for the Comprehensive Plan to be coordinated with federal and state law and to support regional goals, objectives and plans. The amendments are consistent with this goal because notification of the proposals, and an opportunity to provide comment at a public hearing before the Planning and Sustainability Commission, was provided to the Oregon Department of Land Conservation and Development consistent with ORS 197.610, and to Metro, Tri-Met, the Port of Portland, and the Oregon Department of Transportation consistent with 33.740.020. Nothing within these amendments changes or affects the Urban Growth Boundary, Urban Planning Area Boundary, or Urban Services Boundary.

33. **Goal 2, Urban Development**, calls for maintaining Portland's role as the major regional employment and population center through public policies that encourage expanded opportunity for housing and jobs, while retaining the character of established residential neighborhoods and business centers. The zoning code amendments will have minimal impact on Portland as the region's major employment center because there are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial and employment areas of Portland.

34. **Policy 2.14, Industrial Sanctuaries**, calls for providing industrial sanctuaries and encouraging the growth of industrial activities by preserving industrial land primarily for manufacturing purposes. The amendments are consistent with this policy because these changes and restrictions only apply to a new land use category, Bulk Fossil Fuel Terminals, and do not significantly affect the other allowed uses in industrial and employment zones. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial areas of Portland.

35. **Goal 5, Economic Development**, calls for fostering a strong and diverse economy that provides a full range of employment and economic choices for individuals and families in all parts of the city. The amendments are consistent with this goal because these changes and restrictions only apply to a new land use category, Bulk Fossil Fuel Terminals, and do not have a significant effect on the other allowed uses in industrial and employment zones.

36. **Policy, 5.1, Urban Development and Revitalization**, encourages investment in the development, redevelopment, rehabilitation and adaptive reuse of urban land and buildings for employment and housing opportunities. Objectives A and C specifically call for ensuring a sufficient supply of commercially and industrially-zoned, buildable

land, and retaining industrial sanctuary zones and maximizing use of infrastructure and intermodal transportation linkages with and within these areas. The zoning code amendments support this policy and objectives and will not affect the City's supply of land for economic development and employment growth because there are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial areas of Portland.

37. **Goal 6, Transportation**, calls for developing a balanced, equitable, and efficient transportation system that provides a range of transportation choices; reinforces the livability of neighborhoods; supports a strong and diverse economy; reduces air, noise, and water pollution; and lessens reliance on the automobile while maintaining accessibility. These amendments support this goal for the following reasons:

    a. These changes will not have a significant effect on existing or planned transportation facilities because the proposed amendments are minor changes to the allowed uses in industrial zones, and will not increase development intensity in a manner that will be inconsistent with the function or classification of existing transportation facilities or increase automobile traffic.
    b. There are no changes proposed to the Comprehensive Plan or Zoning Map that will impact the overall size or intensity of development in the industrial areas of Portland, so there is no impact to the city's transportation system.
    c. These amendments create a new land use category, but imposes prohibitions and limits that restrict the level of development to less than what is allowed under the current standards. The zoning code currently allows Bulk Fossil Fuel Terminals as a Warehouse and Freight Movement use without any limits on the size of terminals. The amendments will prohibit new terminals and limit the expansion of existing terminals.
    d. Given the new prohibitions and limits on expansion, the amendments will not reduce or worsen the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP or comprehensive plan.

38. **Policy 6.9, Freight Classification Descriptions**, calls for designating a system of truck streets, railroad lines, and intermodal freight facilities that support local, national, and international distribution of goods and services. The amendments do not change the designation of any element of the city's freight system.

39. **Policy 6.18, Adequacy of Transportation Facilities**, calls for ensuring that amendments to land use regulations that change allowed uses are consistent with the identified function and capacity of, and adopted performance measures for, affected transportation facilities. This ordinance amends the zoning code to create a new land use category, but imposes prohibitions and limits that restrict the level of development to less than what is allowed under the current standards. The zoning code currently allows Bulk Fossil Fuel Terminals as a Warehouse and Freight Movement use without any limits on the size of terminals. The amendments will prohibit new terminals and limit the expansion of

existing terminals. Therefore, consistency with the identified function and capacity of transportation facilities is not impacted.

40. **Policy 6.29, Multimodal Freight System**, calls for developing and maintaining a multimodal freight transportation system for the safe, reliable, and efficient movement of goods within and through the City. The amendments do not change the designation of any element of the city's freight system.

41. **Goal 7, Energy**, calls for promoting a sustainable energy future by increasing energy efficiency in all sectors of the city by ten percent by the year 2000. **Policy 7.8, Energy Supply**, calls for supporting environmentally acceptable, sustainable energy sources, especially renewable resources such as solar, wind, hydroelectric, geothermal, and biomass (wood, farm and municipal waste). These amendments support a transition to non-fossil fuel energy sources by not including non-fossil fuel storage tanks in the storage capacity limits.

42. **Goal 8, Environment,** calls for maintaining and improving the quality of Portland's air, water and land resources and protecting neighborhoods and business centers from detrimental noise pollution. **Policy 8.11, Special Areas, H. Willamette River Greenway** calls for the protection of the natural and economic qualities of lands along the Willamette River through the Willamette Greenway Plan. The amendments support this goal because they minimize or even reduce risks to natural and economic qualities along the river by restricting the storage of large volumes of hazardous materials in liquefaction zones near the river. The amendments prohibit new fossil fuel terminals, which will minimize potential risk to people and the environment by requiring any new terminal to be located outside of the liquefaction zone away from the greenway.

43. **Goal 10, Plan Review and Administration,** calls for the periodic review so that the Comprehensive Plan and implementing ordinances remain an up-to-date and workable framework for land use development. **Policy 10.6, Amendments to the Comprehensive Plan Goals, Policies, and Implementing Measures**, requires that all proposed amendments to implementing ordinances be reviewed by the Planning and Sustainability Commission prior to action by the City Council. These amendments support this policy. The Planning and Sustainability Commission reviewed these amendments at a public hearing on September 13, 2016 and made a recommendation on October 11, 2016, to action by the City Council.

44. **Policy 10.10, Amendments to the Zoning and Subdivision Regulations**, requires that amendments to the zoning and subdivision regulations be clear, concise, and applicable to the broad range of development situations faced by a growing urban city. The amendments are consistent with this policy and its objectives as follows:

    a. The amendments address a present land use and development situation. The zoning code currently allows Bulk Fossil Fuel Terminals as a Warehouse and Freight Movement use without any limits on the size of terminals and without consideration

of liquefaction hazards and public safety. These amendments create a new land use category and impose prohibitions and limits that restrict the level of development to less than what is allowed under the current standards. The amendments will prohibit new terminals and limit the expansion of existing terminals.

b. The amended regulation is simple and concise by using clear and objective standards and not requiring a discretionary land use review for the limited expansion of an existing terminal.

NOW THEREFORE, The Council directs:

a. Adopt Fossil Fuel Terminal Zoning Amendments, *Recommended Draft* dated October 24, 2016, attached as Exhibit A.

b. Adopt the commentary in Exhibit A, Fossil Fuel Terminal Zoning Amendments, *Recommended Draft*, dated October 24, 2016, as legislative intent and further findings.

c. Amend Title 33, Planning and Zoning, as shown in Exhibit A, Fossil Fuel Terminal Zoning Amendments, *Recommended Draft*, dated October 24, 2016.

d. The Bureau of Planning and Sustainability shall report to City Council no later than December 31, 2019 on the implementation of this ordinance, including:
   - the number and description of any requests by existing terminal operators to replace and expand their facilities;
   - the number and description of building permits issued for fossil fuel tanks between 200,000 and 2 million gallons;
   - the trends in fossil fuel energy use and non-fossil energy use in Oregon;
   - the status of local and state regulatory proceedings that may improve seismic resilience of fossil fuel storage infrastructure; and
   - information on compliance with the Oregon Clean Fuels Program.

e. City Bureaus, including BDS, PBEM and Fire, shall work with the State of Oregon to develop policy options to require seismic upgrades of storage tanks within a firm deadline for replacement of older, unsafe tanks.

Section 2. If any section, subsection, sentence, clause, phrase, diagram, designation, or drawing contained in this Ordinance, or the plan, map or code it adopts or amends, is held to be deficient, invalid or unconstitutional, that shall not affect the validity of the remaining portions. The Council declares that it would have adopted the plan, map, or code and each section, subsection, sentence, clause, phrase, diagram, designation, and drawing thereof, regardless of the fact that any one or more sections, subsections, sentences, clauses, phrases, diagrams, designations, or drawings contained in this Ordinance, may be found to be deficient, invalid or unconstitutional.

1. Introduction

In recent years, the rapid development of fossil fuel resources in the Western United States and Canada has prompted many proposals in the Pacific Northwest for new large fuel terminals and infrastructure projects. In early 2015, Pembina Pipeline Corporation proposed a propane terminal in Portland that drew substantial public opposition. Mayor Charlie Hales withdrew a proposed zoning code amendment that the development needed to move forward, effectively blocking that proposal. In November 2015, Portland City Council adopted Resolution 37168 calling for opposition to expansion of fossil fuel infrastructure. In June 2016, City Council adopted the 2035 Comprehensive Plan, which included Policy 6.48 to limit fossil fuel distribution and storage facilities to those needed to serve the regional market. This code-change project begins to implement the policy direction in the resolution by restricting development and expansion of bulk fossil fuel terminals.

Project summary

The Fossil Fuel Terminal Zoning Amendments project would restrict the development and expansion of Bulk Fossil Fuel Terminals.

Adopted zoning code amendments:

- Identify "Bulk Fossil Fuel Terminals" as a regulated land use, characterized by (a) marine, railroad, or pipeline transport access and (b) either storage capacity exceeding 2 million gallons or transload facilities (such as rail-to-ship loading).
- Prohibit new Bulk Fossil Fuel Terminals in all base zones.
- Classify existing Bulk Fossil Fuel Terminals in industrial and general employment zones as "limited uses" that can continue to operate. Expansion of fossil fuel storage at these existing terminals would be prohibited.

Why is this important?

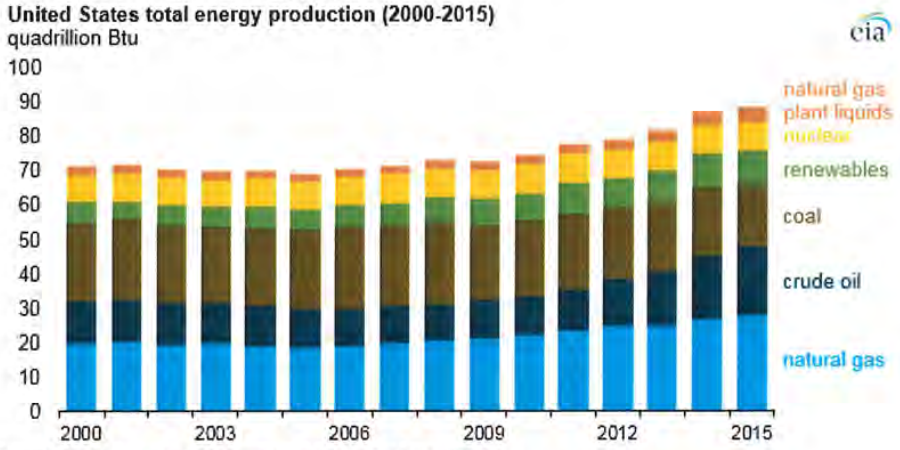
Fossil fuel distribution policy – New policy directions adopted by City Council in November 2015 and in the 2035 Comprehensive Plan would limit fossil fuel distribution and storage facilities to those serving the regional market. City Council adopted these policies after holding public hearings and hearing testimony from hundreds of Portlanders.

Climate action goals – Fossil fuels are major contributors to climate change and pollution. The rapid development of fossil fuel resources in the Western United States and Canada has prompted many recent proposals for new export terminals in the Pacific Northwest. The City's Climate Action Plan seeks to reduce greenhouse gas emissions with fossil fuels being the largest source of emissions.

Public safety and environmental protection – Several recent accidents involving fossil fuel distribution across the nation and in Oregon highlight public safety risks in cities and environmental risks along rivers. Most of Portland's industrial areas have moderate-to-high liquefaction susceptibility in a major earthquake.

Oregon's industrial and distribution center – Portland is Oregon's largest, most diverse distribution hub, and existing Portland petroleum terminals serve more than 90 percent of the statewide market. Adopted code changes would restrict the expansion of these facilities in Portland.

Project scope and timing



The energy distribution market in the Pacific Northwest is changing. Production of crude oil and natural gas, particularly from North Dakota, has substantially increased in the U.S. since 2009, as shown in Figure 1. In turn, several large new fuel distribution terminals have been proposed in the Pacific Northwest to access West Coast and export markets, as shown in Figure 2. Similar trends have occurred in Alberta and British Columbia.

This project is proposing a prompt, focused response to these market changes. The adopted code amendments will restrict development of new fossil fuel terminals and limit the expansion of existing terminals, consistent with City and State objectives on climate change and public safety.

Where are Portland's existing fossil fuel terminals?

Portland's industrial districts are Oregon's largest seaport, rail hub and truck distribution center. The Northwest Industrial District in Portland is also the end of the Olympic Pipeline, which supplies most of Oregon's petroleum fuels from Puget Sound refineries. The ten petroleum terminals located in Northwest Portland are the gateway distribution facilities serving Oregon and Southern Washington markets. Additionally, NW Natural's GasCo terminal provides peak-consumption storage of natural gas for much of the regional market. In Northwest Portland, these "tank farm" storage facilities have direct access to pipeline, deep-water port, railroad and truck route infrastructure. Several other smaller fossil fuel distribution facilities are also located in Portland.

Figure 1. Increasing U.S. energy production

Source: U.S. Energy Information Administration, 2016

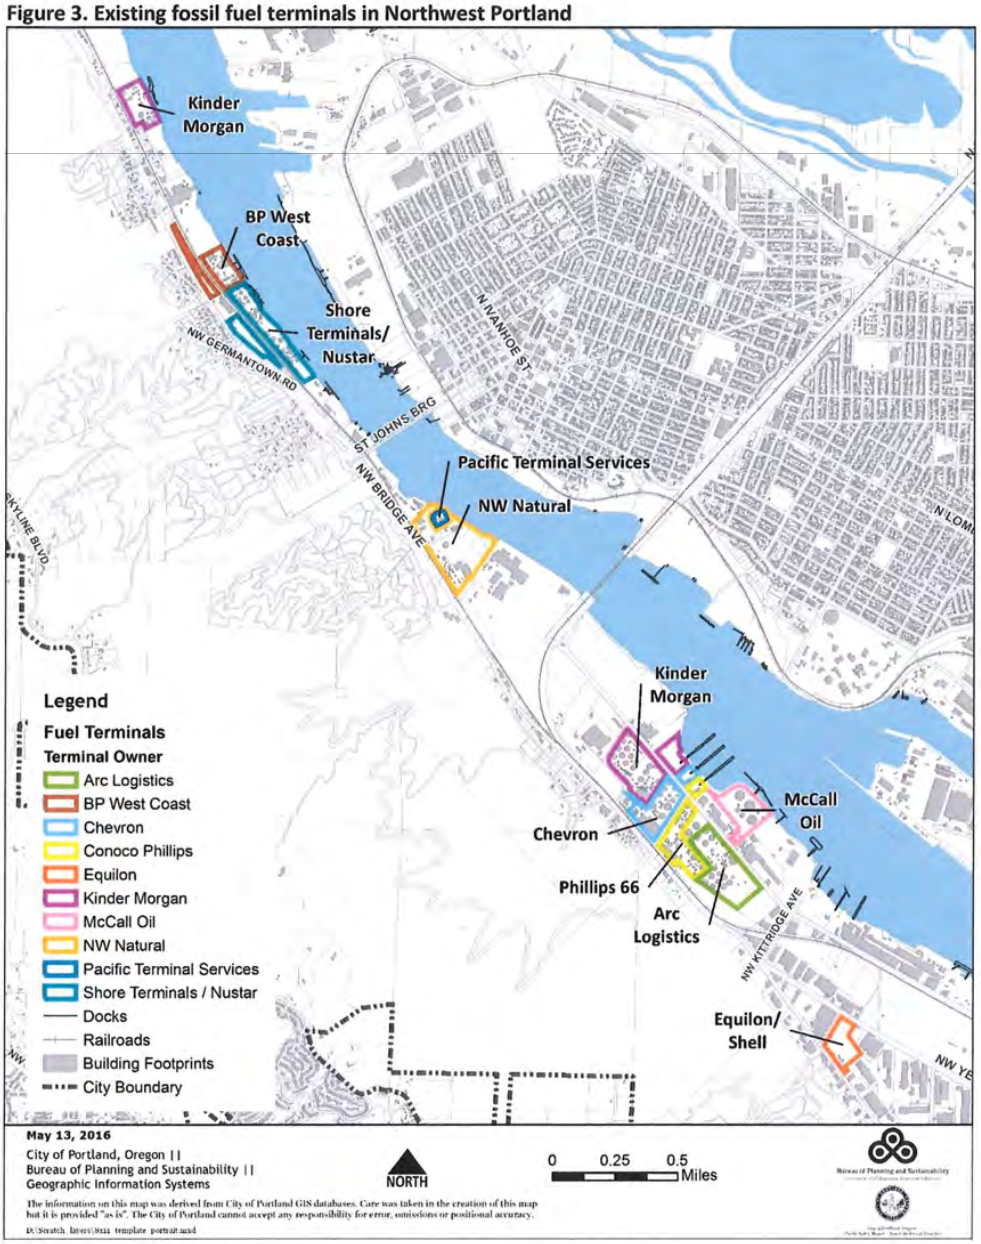


Figure 2. Examples of recent fossil terminal proposals in the Pacific Northwest

Operator	*Facility type*	*Location*	*Proposed new storage capacity*
Petroleum fuels			barrels
Vancouver Energy	Crude oil terminal	Vancouver WA	2,160,000
Imperium Renewables	Biofuels terminal	Grays Harbor WA	720,000
Gaseous fuels			gallons
Oregon LNG terminal	New LNG terminal	Warrenton OR	84,000,000
Jordan Cove LNG	New LNG terminal	Coos Bay OR	84,000,000
Pembina	Propane terminal	Portland	35,000,000
Haven Energy	Propane terminal	Longview WA	23,000,000
Coal			Stockpile acres
Millennium Bulk Terminal	Coal terminal	Longview WA	~20
Ambre Energy	Coal transload facility	St. Helens OR	no storage
Gateway Pacific Terminal	Coal terminal	Bellingham WA	80

Five petroleum terminals are located in the Willbridge area of NW Portland.

Figure 3. Existing fossil fuel terminals in Northwest Portland

City Council review and recommendations

The City Council held a public hearing on November 6, 2016, which was extended to November 13, 2016, and made the following seven changes to the Planning and Sustainability Commission's Recommended Draft in response to issues raised in testimony.

1. Technical correction to clarify that truck only terminals are not Bulk Fossil Fuels Terminals.
2. Changes to clarify that fuel storage for airports, marine servicing facilities and rail yards are not Bulk Fossil Fuel Terminals.
3. Clarification to the definition of Fossil Fuels by specifying that non-fuel petroleum-based products, such asphalt and lubricants, are not fossil fuels.
4. Amendments to the ordinance to provide additional direction for follow-up actions, including reporting back to City Council by 2019 on trends in terminal permitting, fuel consumption, seismic code changes, and Clean Fuels Program compliance.
5. Changes to the description of limited use to include references to storage "tank" capacity and to prohibit the storage of coal (outside of tanks).
6. Deletion of the allowance for up to 10% expansion of existing terminals with seismic-upgrade replacement of older storage tanks.
7. Amendments to the ordinance and findings based on these amendments.

The City Council considered and did not act on a draft amendment to allow 10% expansion of existing terminals for the exclusive storage of fuel that is blended to achieve compliance with the Clean Fuels Program.

Terminal storage capacity threshold – PSC review and recommendations

The Planning and Sustainability Commission (PSC) held a public hearing on September 13, 2016, and made three changes to the Proposed Draft in response to issues raised in testimony.

1. Terminal storage capacity threshold – The size threshold to distinguish Bulk Fossil Fuel Terminals was reduced from 5 million to 2 million gallons of storage, in order to include facilities that are large enough to unload unit trains. This change would also include and restrict smaller existing fuel distributors.
2. Ownership aggregation - Code language was added to prevent the aggregation of new facilities smaller than 2 million gallons into a larger terminal that could effectively circumvent the terminal storage capacity threshold.
3. Expansion of existing terminals - Existing terminals were reclassified from a "nonconforming use" to a "limited use," which accommodates seismic upgrades and limits expansion to (a) include replacement of existing tanks, (b) no more than 10 percent of the capacity of replaced tanks, and (c) no more than 10 percent of the total terminal capacity in 2016. A public notification requirement was also added for new tanks.

The PSC considered and did not act on NW Natural's request to exempt regulated utilities.

What's in this report?

This report describes the content, summary background information, and legislative process of the Fossil Fuel Terminal Zoning Amendments as adopted by the Portland City Council. This report consists of seven parts:

- **Section 1** introduces the code-change project.
- **Section 2** describes how the adopted code changes implement City policies in Resolution 37168 and the 2035 Comprehensive Plan.
- **Section 3** summarizes public and stakeholder involvement activities that have helped shape and inform this project.
- **Section 4** describes background conditions that inform the adopted zoning changes.
- **Section 5** describes the analysis of adopted zoning concepts, including related policy directions, implementation issues and rationale.
- **Section 6** specifies the draft code language, along with code commentary pages that clarify expected implementation.
- **Section 7** recommends future implementation directions for building code amendments to address seismic resilience and periodic monitoring for code effectiveness.

2. Policy direction

Section 2 describes how the adopted code changes implement relevant City policies in Resolution 37168 and the Comprehensive Plan.

City of Portland Fossil Fuel Resolution 37168

> BE IT RESOLVED, that the City Council will actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways; and

The adopted zoning code changes are a key implementation action of Resolution 37168, adopted in November of 2015. Addressing the overall direction of the resolution to oppose expansion of fossil fuel distribution and storage infrastructure, this project proposes to restrict development and expansion of bulk fossil fuel terminals.

> BE IT FURTHER RESOLVED, that this Resolution does not restrict:
> 1. improvements in the safety, or efficiency, seismic resilience, or operations of existing infrastructure;
> 2. the provision of service directly to end users;
> 3. development of emergency backup capacity;
> 4. infrastructure that enables recovery or re-processing of used petroleum products; or
> 5. infrastructure that will accelerate the transition to non-fossil fuel energy sources; and

The adopted code changes address exceptions 2 and 4 in the Resolution through specific exclusions of end-user facilities and recovery or re-processing of used petroleum products from the adopted new land use restrictions on Bulk Fossil Fuel Terminals. Also, storage capacity for non-fossil fuels, such as ethanol, is not subject to these restrictions, which could help with the transition to non-fossil fuel energy sources under the State of Oregon's Clean Fuels Program (exception 5). Responding to testimony and information presented in this project, City Council opted for a more restrictive approach than the exceptions for seismic resilience improvements (1) and development of emergency backup capacity (3) by prohibiting expansion of fossil fuel storage at existing fuel terminals.

> BE IT FURTHER RESOLVED, that City bureaus are directed to examine existing laws, including those related to public health, safety, building, electrical, nuisance, and fire codes, and develop recommendations to address fossil fuels that strengthen public health and safety; and

The resolution broadly addresses fossil fuel infrastructure. The zoning code regulates land use patterns and development of fossil fuel distribution facilities on parcels. Zoning does not regulate the quantity of products handled (throughput) on developed sites or their destination (such as exports). Additional amendments to building, fire and energy codes would need to be addressed in future projects.

> BE IT FURTHER RESOLVED, that the Bureau of Planning and Sustainability is directed to develop proposed code changes for Council consideration to advance the policies set forth in this Resolution; and

The project specifically implemented this provision of the resolution.

> BE IT FURTHER RESOLVED, that prior to any further Council action, the mayor shall schedule (1) a work session to review any proposed code changes and (2) an executive session to review the legal considerations of any proposed code changes; and

The project implemented this process requirement of the resolution.

> BE IT FURTHER RESOLVED, that the Bureau of Planning & Sustainability shall undertake an analysis of the economic impacts of any proposed Code changes to advance the policies set forth in this resolution, with a particular focus on potential impacts to local blue-collar jobs; and

This report includes summary analysis of economic impacts in Section 4, specifically addressing impacts on middle-wage blue collar jobs. Analysis to date is limited on the potential impacts on fuel supply to meet regional demand. Fossil fuel demand in this growing region may increase moderately, as indicated by trend-based forecasts, or may plateau and decline with implementation of climate resilience goals and strategies.

> BE IT FURTHER RESOLVED, that the City and applicable bureaus shall seek and identify opportunities to invest in Portland's 'human infrastructure' by supporting programs to retrain our workforce as the city transitions to a clean energy economy; and

This provision of the resolution is expected to be implemented as a future action.

> BE IT FURTHER RESOLVED, that the City shall consult with its Tribal Government Partners, the State of Oregon, local governments, and other key stakeholder including labor, business, environment, neighborhoods and communities of color in advancing this policy;

The Mayor's Office staff has sought input from the entities identified above to implement this process requirement of the resolution.

Guiding principles of the 2035 Comprehensive Plan

The Comprehensive Plan sets five Guiding Principles, which encourage balanced, integrated multi-disciplinary approaches that must comply with the Plan. This project is consistent with the Guiding Principles because it promotes major benefits to human health and safety, environmental health and resilience, and integrates considerations for economic prosperity and equity.

Economic prosperity

> *Guiding Principle: Support a low-carbon economy and foster employment growth, quality education and training, competitiveness, and equitably-distributed household prosperity.*

The adopted code changes will prohibit fossil fuel storage expansion at existing terminals and prohibit new terminal development, impacting associated job growth and tax revenue. The adopted code

restrictions on fossil fuel terminal development would also limit potential financial risks from a major accident involving fossil fuel infrastructure.

Human health

> *Guiding Principle:* Avoid or minimize negative health impacts and improve opportunities for Portlanders to lead healthy, active lives.

Major benefit – The adopted code changes will reduce the scale of low, but potentially catastrophic, safety risks associated with the growth of fossil fuel infrastructure, including oil train derailments, explosive accidents at liquefied natural gas (LNG) and liquefied petroleum gas (LPG) facilities, and seismic risks of tank farms. Fossil fuel emissions and coal dust are also significant sources of air pollution associated with respiratory disorders.

Environmental health

> *Guiding Principle: Weave nature into the city and foster a healthy environment that sustains people, neighborhoods, and wildlife. Recognize the intrinsic value of nature and sustain the ecosystem services of Portland's air, water, and land.*

Major benefit – The human health benefits described above also extend to environmental health. The adopted code changes will reduce the scale of environmental health risks associated with the growth of fossil fuel infrastructure, including oil train derailments along the Columbia River, LNG and LPG facilities in riparian areas, and seismic risks of tank farms along the Willamette River. Fossil fuel emissions are also a significant source of air pollution.

Equity

> *Guiding Principle: Promote equity and environmental justice by reducing disparities, minimizing burdens, extending community benefits, increasing the amount of affordable housing, affirmatively furthering fair housing, proactively fighting displacement, and improving socio-economic opportunities for under-served and under-represented populations. Intentionally engage under-served and under-represented populations in decisions that affect them. Specifically recognize, address, and prevent repetition of the injustices suffered by communities of color throughout Portland's history.*

The adopted code changes will prohibit expansion at existing fuel terminals and prohibit new terminal development, impacting associated middle-wage, industrial job growth that disproportionately benefits workers of color. Restricting potential increases in regional supply of fossil fuels could also have regressive impacts of increasing fuel costs, disproportionately affecting lower-income people.

Resilience

> *Guiding Principle: Reduce risk and improve the ability of individuals, communities, economic systems, and the natural and built environments to withstand, recover from, and adapt to changes from natural hazards, human-made disasters, climate change, and economic shifts.*

Major benefit – The adopted code changes will restrict development of fossil fuel terminals consistent with City and State objectives on climate change and public safety. While fossil fuels like natural gas and propane have the potential to replace higher-carbon fuels, substituting these fuels for higher-carbon fuels does not begin to approach the goal of an 80% reduction in carbon emissions by 2050 established in Portland's Climate Action Plan or the State's 75% goal.

2035 Comprehensive Plan policies specifically implemented in this project

The adopted zoning changes in the project are implementing the following specific policies.

Overall project direction: Fossil fuel distribution

> *Policy 6.48 Fossil fuel distribution. Limit fossil fuel distribution and storage facilities to those necessary to serve the regional market.*

The adopted code changes will implement Policy 6.48 by restricting development and expansion of fossil fuel distribution terminals. Analysis to date on the potential impacts of code amendments in constraining fossil fuel supply to meet regional demand is limited. Fossil fuel demand in this growing region may increase moderately, as indicated by trend-based forecasts reviewed in Section 4, or may plateau and decline with implementation of climate resilience goals and strategies. The adopted code changes will limit the capacity of Portland fossil fuel terminals to meet any increase in regional demand to new facilities that have less than 2 million gallons of storage capacity and to exempted end-user facilities (such as jet fuel storage for airport expansion).

Related policy directions

> *Policy 4.81 Disaster-resilient development. Encourage development and site-management approaches that reduce the risks and impacts of natural disasters or other major disturbances and that improve the ability of people, wildlife, natural systems, and property to withstand and recover from such events.*
>
> *Policy 4.82 Portland Harbor facilities. Reduce natural hazard risks to critical public and private energy and transportation facilities in the Portland Harbor.*

Policies 4.81 and 4.82 are partly met by prohibiting fuel terminal development in Portland's industrial areas that are predominantly in locations with high susceptibility to soil liquefaction (see Figure 7 in Section 4). Adopted code changes do not allow for incremental expansion at existing terminals, which is one pathway to providing financial returns to cover improvement costs for safety improvements. Instead, a future code-change project is recommended in Section 7 to develop building code amendments that improve seismic resilience and require seismic upgrades comparable to proposed requirements on unreinforced masonry buildings.

> *Policy 6.2 Diverse and expanding economy. Align plans and investments to maintain the diversity of Portland's economy and status as Oregon's largest job center with growth across all sectors (commercial, industrial, creative, and institutional) and across all parts of the city.*
>
> *Policy 6.5 Economic resilience. Improve Portland's economic resilience to impacts from climate change and natural disasters through a strong local economy and equitable opportunities for prosperity.*
>
> *Policy 6.6 Low-carbon and renewable energy economy. Align plans and investments with efforts to improve energy efficiency and reduce lifecycle carbon emissions from business operations. Promote employment opportunities associated with the production of renewable energy, energy*

efficiency projects, waste reduction, production of more durable goods, and recycling.

The adopted code changes are consistent overall with the range of direction in Policies 6.2, 6.5 and 6.6, prohibiting development and expansion of new fossil fuel terminals that conflict with resilience and climate action goals. The adopted code changes will limit the capacity of Portland fossil fuel terminals to meet any increase in regional demand to new facilities that have less than 2 million gallons of storage capacity and to exempted end-user facilities (such as jet fuel storage for airport expansion).

Existing Comprehensive Plan policies specifically implemented in this project

The 2035 Comprehensive Plan was adopted in June 2016 and is not expected to take effect until early 2018. In the meantime, the existing Comprehensive Plan is in effect.

Policy 7.6 Energy Efficient Transportation. Provide opportunities for non-auto transportation including alternative vehicles, buses, light rail, bikeways, and walkways. The City shall promote the reduction of gasoline and diesel use by conventional buses, autos and trucks by increasing fuel efficiency and by promoting the use of alternative fuels.

Policy 7.8 Energy Supply. The City shall promote conservation as the energy resource of first choice. The City shall also support environmentally acceptable, sustainable energy sources, especially renewable resources such as solar, wind, hydroelectric, geothermal, biomass (wood, farm and municipal waste), cogeneration, and district heating and cooling.

The adopted code changes are consistent with Policies 7.6 and 7.8, promoting the use of alternative energy sources by restricting development and expansion of fossil fuel terminals.

2015 Climate Action Plan

Goal: Reduce local carbon emissions 80 percent from 1990 levels by 2050, with an interim goal of 40 percent by 2030.

As described in Section 4, lower-carbon fossil fuels like natural gas and propane have the potential to replace higher-carbon fuels, but they do not approach the goal of an 80% reduction in carbon emissions by 2050 in Portland's Climate Action Plan or the State's 75% goal. Investments in major infrastructure typically take decades to recoup, and the transition to renewables needs to go much faster than that to stabilize global emissions. The adopted code changes are consistent with the 80% goal of the Climate Action Plan by restricting development of fossil fuel terminals.

3. Public and stakeholder involvement

Section 3 summarizes public and stakeholder involvement activities that have helped shape and inform this project. Stakeholder focus group results are further explained in Appendix A of this report.

What have we heard leading up to this project?

Public hearings at the Planning and Sustainability Commission and City Council on the Pembina terminal development proposal in 2014 and Resolution 37168 in 2015 drew testimony from hundreds of people. The overall theme of that testimony was strong objection to the Pembina project and support for the fossil fuel resolution. Primary reasons included the neighborhood safety and health risks and inconsistency with the City's climate action objectives. The Resolution also drew letters with strong opposition from state and regional business associations.

Following adoption of the Resolution in November 2015, City Council added the related Policy 6.48 on fossil fuel distribution to the 2035 Comprehensive Plan, reflecting the recently adopted policy direction in the Resolution. Public involvement in the Comprehensive Plan Update included public hearings in April 2016 on City Council amendments and thousands of comments on the 2035 Comprehensive Plan over the previous 8 years. The adopted code amendments are consistent with several sustainability-related policies in the Plan. Addressing issues with policy tradeoffs, the 2035 Comprehensive Plan calls for a balanced, integrated approach to implement multiple goals. As described in Section 2, the adopted code amendments provide major benefits toward implementing three of the Plan's five guiding principles and integrates consideration of the other two guiding principles.

Public involvement activities in this project

Extensive public comments were received on the Discussion Draft, Proposed Draft, and Recommended Draft, which influenced substantial changes between the adopted code changes and prior draft versions. Two overall themes of the public input include 1) extensive comments from residents, community groups and environmental advocates for a bold change in direction to oppose fossil fuel terminal development and 2) objections to the code changes by business, labor, and fuel industry representatives in order to accommodate regional growth, everyday fuel needs, and transition investments.

The City Council received emailed and verbal testimony from over 300 people who called generally for a "full ban" on new fossil fuel terminals and strengthened restrictions on expansion of existing terminals. Letters and verbal testimony were also provided by representatives of various organizations in support and opposition to the draft code changes, including environmental organizations, community groups, business groups, and fuel terminal operators. Testimony particularly focused on draft allowances for expansion of existing terminals.

The PSC also received emailed and verbal testimony from over 600 people generally calling for a full ban on new fossil fuel terminals and strengthened restrictions on expansion of existing terminals. While comments varied, predominant recommendations included removing the 5-million-gallon terminal size threshold and adding discretionary review criteria on expansion to address climate and safety impacts.

Similar testimony for more stringent restriction on fuel terminal development was submitted by 350PDX, Portland Audubon, Center for Sustainable Economy, Physicians for Social Responsibility, Columbia Riverkeeper, Columbia River Inter-Tribal Fish Commission, Sierra Club, Climate Solutions, League of Women Voters, and others. Additional themes of their comments and recommendations included support for a nonconforming use designation on fossil fuel terminals, new restrictions on ownership aggregation to prevent circumvention of the terminal size threshold, and support for additional building code requirements to improve seismic safety.

In contrast, testimony objecting to the draft restrictions on fuel terminal development were submitted by Portland Business Alliance, Port of Portland, Columbia Pacific Building and Construction Trades Council, NW Natural, Burlington Northern Santa Fe Railroad, Working Waterfront Coalition, Arc Terminals, Western States Petroleum Association, and others. Examples of their concerns included: inconsistency with the Resolution's direction for various exemptions and economic impacts analysis; substantial growth is expected in the use of some fossil fuels (e.g., jet fuel, natural gas, transition fuels); and a request for exemption of public utilities that are already regulated to serve regional end users.

Likewise, comments on the Discussion Draft included extensive emailed comments for a full ban on fossil fuel terminals. Contrasting comments from business and labor organizations included opposition to recommended code changes, requests for more time and analysis, and clarifications to address practical considerations. Letters were received from NW Natural, Port of Portland, Columbia Pacific Building and Construction Trades Council, Kinder Morgan, Arc Terminals, and Western States Petroleum Association (WSPA). Some examples of comments included that growth rates will change over time, that fuels meeting Oregon's Clean Fuel Standard should be excluded, inclusion of non-fuel methanol is inconsistent, and the economic analysis is cursory. WSPA submitted draft code language, including focusing terminal restrictions on extra-regional facilities beyond the West Coast (PADD V) region and a new Energy Corridor Overlay Zone that protects the historic energy cluster for infrastructure growth.

Public involvement in concept development for the project consisted primarily of four stakeholder focus groups, which were held in June 2016 to review preliminary code concepts and help identify and understand potential implementation issues. The focus groups highlighted the range of stakeholder perspectives and interests concerning recommended zoning changes. Figure 4 summarizes the themes of issues raised in the focus groups. Other outreach activities have included meetings with interagency partners, terminal operators, and other interested stakeholders. These activities and what we heard in them are further described in the appendix of this report.

Inter-governmental coordination

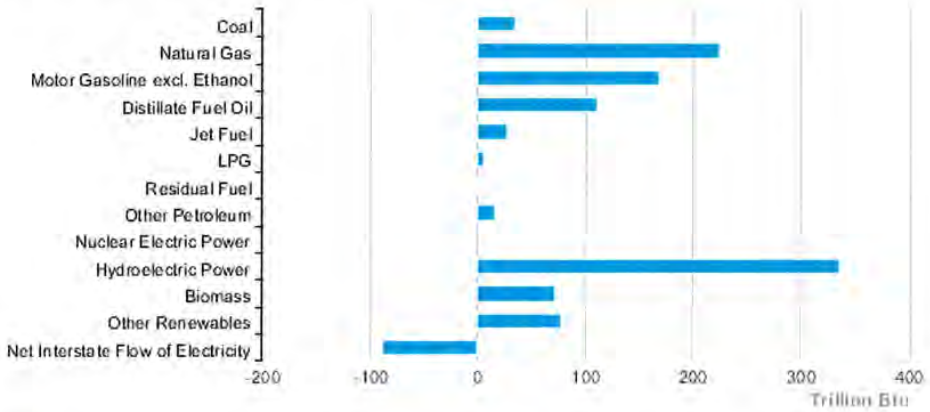
The Mayor's Office staff has sought input from Tribal Government Partners to shape and inform the draft code amendments. An In-House Draft Report was circulated to inter-bureau partners in June 2016. Their comments have helped to shape and inform the Discussion Draft and subsequent drafts, particularly addressing code administration and legal limitations.

Figure 4. Summary themes of stakeholder focus group comments

TOPIC	FUEL TERMINAL REPRESENTATIVES	ENVIRONMENTAL AND HEALTH ORGANIZATIONS	STATE AND REGIONAL BUSINESS ORGANIZATIONS	NEIGHBORHOOD AND EQUITY ORGANIZATIONS
Key issues	▸ We've operated safely for decades. We meet the federal/state low-carbon fuel standards. ▸ Difficult to participate: very quick process; emotionally driven; antitrust restrictions. ▸ Unintended impacts: harder to meet clean fuel standards; more trucks on road; costs to rest of the state.	▸ Looking for strong, model code. Expect community backlash if expectations not met. ▸ Safety needs to be integral with climate - Mosier oil train wreck; terminals in liquefaction soils. ▸ Include disaster risks in economic analysis. Bonding or insurance for worst case.	▸ Resolution requires more research on economic impacts, etc. ▸ How will the code hold up in 5 years? ▸ What is the goal? If climate or safety, zoning tool is not the right fit. ▸ Portland is not an economic island. Statewide impact. ▸ Big political decision. Don't rush it.	▸ Safety and pollution are our priority. Look closely at seismic and explosion risks. ▸ A reasonable expectation for growth is smart. ▸ This is aggressive. Without LNG, won't China burn more coal? ▸ Rail safety in the Gorge is also a key issue that this can't resolve.
New land use category	▸ If unclear, permit staff could be pressured - unpredictable results. ▸ Use federal West Coast PADD 5 "region."	▸ Regulate both existing and new facilities. ▸ New code must effectively implement the policy.	▸ Need clear definitions: region, export, end user. ▸ Do not make terminals non-conforming or an ambiguous limited use.	▸ Why allow it in IG2? ▸ A new export terminal in contaminated harbor is unlikely.
Definition of fossil fuels	▸ Natural gas considered a low carbon fuel by State, so why included here? ▸ Tomorrow's cleaner fuels won't meet today's definitions.	▸ Excluding methanol undermines policy. ▸ If end use is mostly fuel, then limit it. ▸ One new LNG tank is a big risk. So is coal.	▸ Federal and state are going a different direction, requiring cleaner fossil fuels. Why restrict cleaner fuels at cross purposes?	▸ Make way for bio-diesel as a cleaner fuel. ▸ Methanol not a fuel in Oregon - overreaching. ▸ Fuels are okay if they have no emissions.
Terminal development restrictions	▸ Some sites are already built-out. ▸ Our non-contiguous sites are connected by pipelines. ▸ Can't comment on size.	▸ Most prefer Option A. ▸ Caution about Commerce Clause. ▸ 1% annual growth metric is too high.	▸ Don't come at sideways. Unclear rationales will lead to appeals. ▸ Size limits would put region on "import diet." ▸ Dated, low forecast.	▸ Option C preferred. ▸ Allow for modest growth of LNG and oil; not coal. ▸ Review size limits every few years.

18814 2

4. Background conditions



This section of the report describes background conditions that inform the adopted zoning changes. Topics include access to energy, impacts on the economy, climate change impacts, and health and safety impacts of draft zoning code changes. Background information on changing energy markets in the Pacific Northwest and Portland's existing fossil fuel terminals is included in the Section 1. Legal and policy background information is presented in Section 2.

Access to energy

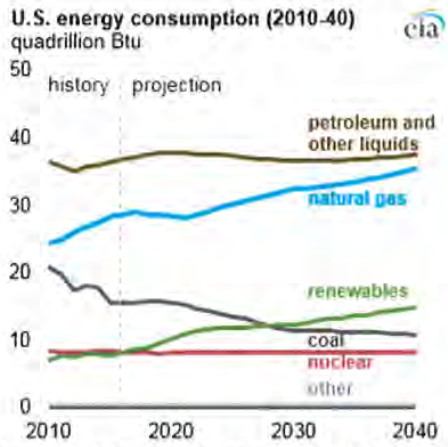
Energy consumption in Oregon

Oregon residents and businesses rely on Portland's fossil fuel distribution and storage facilities as a wholesale distribution hub to meet their energy consumption needs. Estimated state energy consumption by fossil fuels and other sources are shown in Figure 5. Residents and businesses in much of Southern Washington also rely on Portland terminals for access to fuels.

Figure 5. Oregon energy consumption estimates, 2014

eia Source: Energy Information Administration, State Energy Data System

Four refineries in the Puget Sound area supply nearly all of the petroleum fuels consumed in Oregon, delivered primarily through the Olympic Pipeline that terminates at the cluster of 10 petroleum terminals in Northwest Portland. From there, petroleum products are delivered to Oregon and Southern Washington markets via truck, pipeline and barge. NW Natural supplies natural gas to its Western Oregon market area and operates peak-consumption storage terminals in Northwest Portland



and Newport. Thus, fossil fuel terminals in Portland are a primary statewide distribution hub for transportation fuels and natural gas.

Energy consumption forecasts and the demand for additional storage capacity

Analysis to date is limited on the energy consumption forecasts and how the adopted code changes would impact the demand for additional fossil fuel storage capacity. Fossil fuel demand in this growing region may increase moderately, as indicated by trend-based forecasts, or may plateau and decline with implementation of climate resilience goals and strategies. National forecasts of energy consumption by the U.S. Energy Information Administration show varying growth trajectories by energy type, including a relatively flat outlook for petroleum fuels, decline for coal, and moderate growth for natural gas and renewables (see Figure 6).

Liquid bulk cargo in Portland Harbor is projected to expand at a range of 0.5% to 1.0% average annual growth (AAG) to 2040 (BST Associates, 2012), providing an estimate of potential market expansion needs for petroleum fuels, which could mean a need for an additional 10-20% increase in storage capacity. However, based on this forecast, ECONorthwest (2012) estimated that there was no additional land needed for new liquid bulk terminals in Portland. The 1.9% average annual growth forecast to 2034 (NW Natural 2014 Integrated Resource Plan) provides an estimate of market expansion needs for natural gas distribution facilities.

Figure 6. U.S. energy production and consumption projections to 2040

Source: US Energy Information Administration, Annual Energy Outlook 2016

Even if regional fossil fuel demand follows trend-based local forecasts, there is a wide margin between the size of recently proposed crude oil, coal, and LNG terminals in the Pacific Northwest and the scale of expected growth of existing Portland fuel terminals that generally serve the regional market area, as shown in Figure 7.

Contradictory stakeholder comments were received that local growth projections are too high, too low, and could change substantially with market innovations. To address this uncertainty, periodic monitoring for code effectiveness is recommended in Section 7 as a future implementation project,

Figure 7. Estimated storage capacity at existing and proposed fuel terminals

Operator	*Facility type*	*Location*	*Site acres*	*Storage capacity*	*New Storage capacity*
Petroleum fuels

including monitoring for changes in regional fuel demand over time. The adopted code changes will limit the capacity of Portland fossil fuel terminals to meet any increase in regional demand to new facilities that have less than 2 million gallons of storage capacity and to exempted end-user facilities (such as jet fuel storage for airport expansion).

Impacts of draft code changes on the economy

Jobs and wages at Portland's fuel terminals

In 2014, the 11 existing fuel terminals in Portland shown in Figure 3 provided approximately 280 jobs at their sites and supported an estimated 720 total jobs in the metropolitan area. The annual payroll at those terminals was $23 million, which supported total personal income of about $92 million in the metropolitan area.

BPS calculated these supported employment and income estimates from the induced and indirect impacts from metropolitan area purchases by these firms and their employees. For example, the jobs of the Longshore Union workers who unload fuels from tankers at these fuel terminals are not counted as direct jobs at the terminal sites. The multipliers used for these calculations were estimated from the average employment and income effects of marine terminals in Portland (Martin Associates, 2012). The job and wage estimates were calculated from Quarterly Census of Employment and Wages (QCEW) data.

Portland's industrial area jobs also have an important urban equity role in that they consist primarily of middle-wage jobs that do not require 4-year college degrees, which the overall economy has been losing since 2000. In contrast, jobs in commercial districts are concentrated primarily in low- and high-wage quartiles (fourths) of overall city employment. Middle-wage job growth supports the "income self-sufficiency" objectives of the Portland Plan and 2035 Comprehensive Plan (Policy 6.28) to expand access to self-sufficient wage levels.

Long-term job growth to 2035 is estimated at 1.6% average annual growth in the warehousing, transportation and utilities sector in Portland's 2016 Economic Opportunities Analysis and Metro's 2014 Urban Growth Report. Applying this growth rate to Portland's existing fuel terminals, approximately 110 net new permanent jobs are expected between 2014 and 2035, which is the equivalent of about four new terminals at their current average size. The total metropolitan area job impact of this fuel terminal expansion would be approximately 290 new jobs by 2035. If fuel terminal job growth occurred at a slower 1.0% average annual rate, matching the forecast growth of liquid bulk cargo volumes in Portland Harbor, approximately 65 net new terminal jobs would be generated by 2035, supporting a total 170 new jobs in the metro area. Pembina's proposed propane terminal in 2014 was estimated to create 30 to 40 new permanent jobs and 600-800 temporary construction jobs.

The adopted code changes will limit the capacity of Portland fossil fuel terminals to meet any increase in regional demand to new facilities that have less than 2 million gallons of storage capacity and to exempted end-user facilities (such as jet fuel storage for airport expansion).

Tax revenues of new terminals

State and local revenues from income and property taxes vary widely by facility. For example, property taxes on the depreciated improvements value of existing fuel terminals are much lower than new construction. If fuel terminals added 110 net new direct jobs by 2035 and the resulting state and local

tax revenues is typical of businesses and developed facilities in Portland's Working Harbor (Martin Associates, 2016), the estimated new state and local tax revenues in fiscal year 2035 (in 2015 dollars) would be $1.6 million. In contrast, the proposed $500 million Pembina project was estimated to generate approximately $12 million in annual property tax revenue, reflecting the increased improvements value and property taxes of new construction.

The adopted code changes will limit the capacity of Portland fossil fuel terminals to meet any increase in regional demand to new facilities that have less than 2 million gallons of storage capacity and to exempted end-user facilities (such as jet fuel storage for airport expansion). Prohibiting large scale new terminals such as Pembina could result in similar levels of foregone property taxes. However, development of the limited land supply along Portland Harbor for new auto or grain terminals would also result in substantial local and state tax revenues, offsetting foregone taxes on new fossil fuel terminals.

Growth opportunities in fossil fuel distribution

The most recent cargo forecast for Portland Harbor in 2012 projected 1.0% AAG in liquid bulk tonnage to 2040 as a high scenario and 0.5% AAG as a low scenario (BST Associates, 2012). Based on this forecast, ECONorthwest (2012) estimated no additional land need for new liquid bulk terminals. Since 2012, several new fuel terminals have been proposed in the Pacific Northwest, as shown in Figure 2.

Updating the liquid bulk forecast at this point would be challenging for several reasons. Most of the recent fuel terminal proposals have since been abandoned or appear to be dormant. Policy and permitting uncertainty complicate the development feasibility of new terminals and transportation infrastructure. Crude oil prices have fallen sharply in 2015 and 2016, reducing the current market potential for major investments. Expanding global industrial product markets after the Great Recession slowed substantially in 2015. And energy distribution markets could change abruptly with continuing product innovations and location shifts in global production.

In the long term, Portland has competitive advantages for accommodating energy terminal development as a Pacific Rim gateway location to growing Asian markets, the Columbia River's low-gradient railroad access for heavy cargo through the Cascades, and Oregon's freight infrastructure hub. On the other hand, Portland's industrial land supply for continuing growth is limited, and expanding cargo markets for autos, grain and dry bulks are competing for current growth capacity.

Other economic impacts

Energy infrastructure and terminal investments appear to have low but potentially catastrophic risks of major accidents, as described below. Examples include seismic resilience of petroleum terminals in the event of a Cascadia Subduction Zone earthquake, oil train derailments, explosions at LNG (liquefied natural gas) and LPG (liquefied petroleum gas, such as propane) facilities, and others.

Clean Energy is a target industry in the City of Portland. An emerging cluster of Portland area business activity in solar and wind energy manufacturing, green building development, and other fields of sustainable urban innovation present long-term business growth opportunities. Substantial local investment in fossil fuel infrastructure and large new terminals could hinder local growth momentum in Clean Energy industries.

Climate change impacts of draft code changes

Climate impact of fossil fuels

Fossil fuels are major contributors to climate change and pollution, as described in Portland's 2015 Climate Action Plan. Greenhouse gas emissions from the burning of fossil fuels and land use changes, including deforestation, are primary causes of climate change. The Intergovernmental Panel on Climate Change's most recent report documents the overwhelming evidence that human activities have been the major driver of recent warming of the Earth's surface, and that climate change and its consequences will continue into the future (IPCC, 2013).

The magnitude of future climate impacts depends largely on the trajectory of future global greenhouse gas emissions. Greenhouse gas emissions from human activities have continued to rise in recent decades, reaching the highest rates in human history between 2000 and 2010 (IPCC, 2014). About half of all carbon dioxide emissions, the most prevalent greenhouse gas, between 1750 and 2010 occurred in the last 40 years. The energy, industry and transportation sectors have dominated these emissions increases. On the current trajectory, global transportation emissions will double by 2050.

Transition to "renewable" and "clean" fuels

The U.S. Environmental Protection Agency (USEPA) implements the federal Renewable Fuel Standard (RFS) that requires transportation fuel sold in the U.S. to contain a minimum volume of renewable fuels. The RFS originated with the Energy Policy Act of 2005 and was expanded and extended by the Energy Independence and Security Act of 2007 (EISA). Similarly, the Oregon Department of Environmental Quality (ODEQ)implements the Oregon Clean Fuel Program. ODEQ describes "clean fuel" as a fuel with a lower carbon intensity than that of the fuel it replaces.

Examples of "clean fuels" in Oregon's program include most types of ethanol, biodiesel, natural gas, biogas, electricity, propane and hydrogen. The Oregon Clean Fuel Standard sets 2015 as a baseline that represents 10 percent ethanol blended with gasoline and 5 percent biodiesel blended with diesel. The rule also requires a 10 percent reduction in average carbon intensity from 2015 levels by 2025.

Terminal representatives and business stakeholders urged that adopted zoning code changes not create a disincentive or barrier to compliance with these federal and state rules, which may require additional tank capacity to implement. Environmental and public health organization representatives pointed out that City Resolution 37168 addresses fossil fuels generally, including lower-carbon fossil fuels like natural gas and propane. The adopted code changes prohibit expansion of fossil fuel tank storage at existing terminals but allow for additional storage for non-fossil fuels (such as ethanol) that can support compliance with renewable and clean fuel requirements. The adopting ordinance also calls for future tracking of information on compliance with the Clean Fuels Program and reporting back to City Council by 2019, which could prompt code adjustments as needed to avoid hindering program compliance.

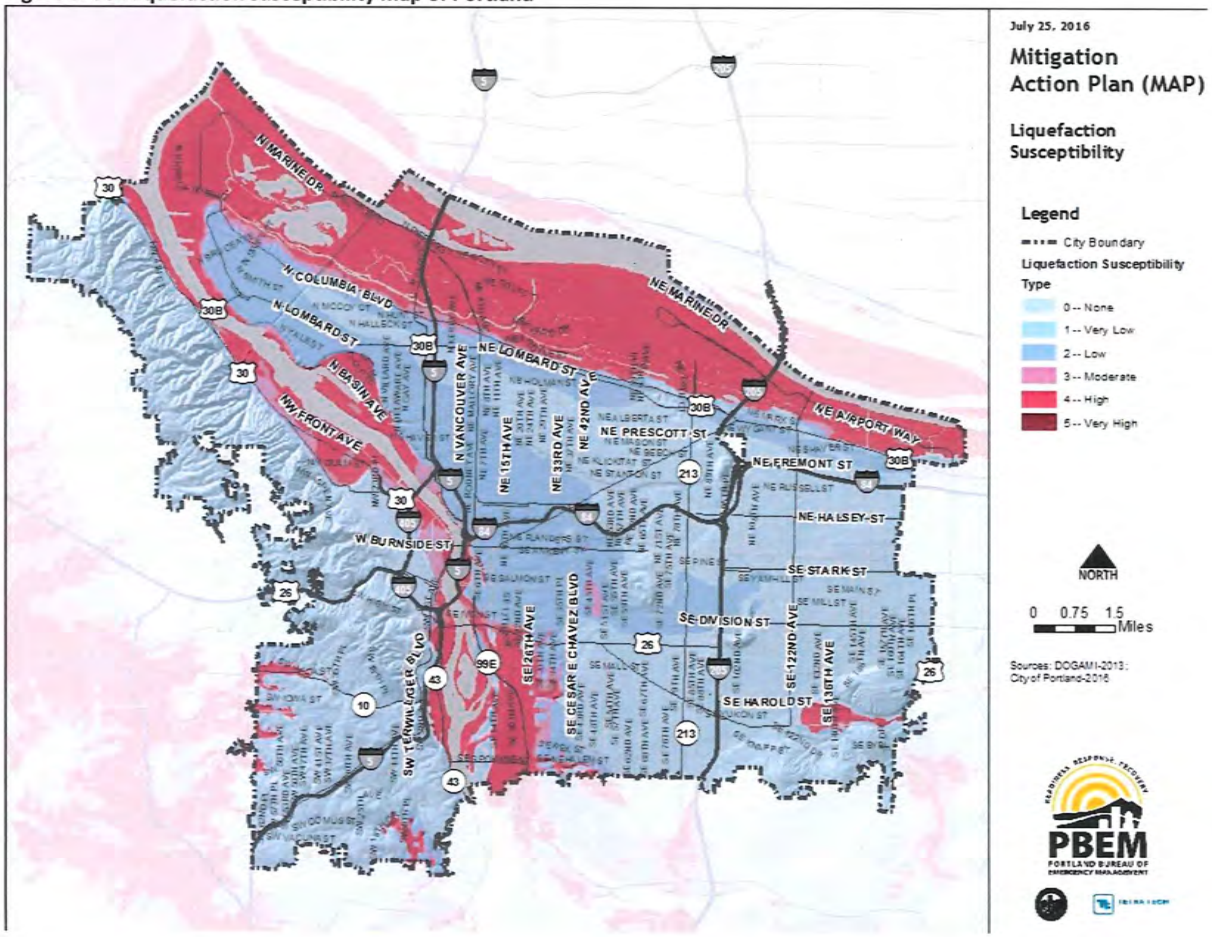
Velocity of transition to non-fossil fuel energy

Portland's Climate Action Plan sets a goal for an 80% reduction in greenhouse gas emissions by 2050. Oregon's climate action goals similarly call for 75% reduction by 2050. While fossil fuels like natural gas and propane have the potential to replace higher-carbon fuels, they don't begin to approach the 80% reduction that the City is striving for or the State's 75% goal. ODEQ estimates that the greenhouse gas emissions reduction from switching from gasoline to compressed natural gas, for example, is 18%; for propane, it is 15%. The lower-carbon fossil fuels do have appeal as a bridge to widespread use of renewable energy, but investments in major infrastructure typically take decades to recoup, and the transition to renewables needs to go much faster than that to stabilize global emissions.

During recent hearings and analysis on Resolution 37168 and the Pembina terminal proposal, the question of whether to differentiate between fossil fuels with different carbon content was widely discussed. In the lead up to the resolution, an option was proposed that would oppose new coal and oil infrastructure but allow for other fossil fuels that could show a likely net decrease in carbon emissions. City Council decided not to apply this option in the resolution.

Health, safety and environmental impacts of draft code changes

Seismic resilience and liquefaction soils



The 2035 Comprehensive Plan sets policy direction (4.75 and 4.76) to encourage disaster-resilient development and specifically to reduce natural hazard risks to critical energy and transportation infrastructure in Portland Harbor.

The 2016 Critical Energy Infrastructure Hub Study underway by the Portland Bureau of Emergency Management includes a literature review and modeled risks of structural damage to critical infrastructure from earthquakes, floods, landslides, volcanic activity, wildfire and other sources. Along with petroleum and natural gas infrastructure, the study is also assessing infrastructure risks to emergency services, transportation, electricity, potable water and waste water. The study area includes the Northwest and Linnton industrial areas. PBEM has identified significant seismic risks at the fuel terminals from a major Cascadia Subduction Zone earthquake because of their location in a filled riverfront plateau area with moderate- to high-susceptibility location for soil liquefaction.

As shown in Figure 7, the Oregon Department of Geology and Mineral Industries (DOGAMI) has mapped most of the riverfront plateau areas, which account for over 90 percent of Portland's industrial zoning, as having high susceptibility for soil liquefaction, along with areas along the Central City riverfront and much of the Brooklyn and Sellwood-Moreland neighborhoods. Most of the existing fuel terminals in the Willbridge area are mapped as having moderate susceptibility for soil liquefaction, and the others are mapped in the high susceptibility areas. The adopted code amendments will improve the seismic resilience of new bulk fossil fuel terminals by precluding their development in areas with high susceptibility to soil liquefaction.

City Council deleted a draft code allowance for up to 10% expansion of existing terminals for seismic replacement of storage tanks, following testimony by some terminal operators that a 10% limitation would not provide an adequate incentive to cover improvement costs of tank replacement. Instead, the City Council directed the Portland Bureau of Emergency Management and the Bureau of Development Services to study future amendments to building and fire codes to improve seismic safety of fossil fuel infrastructure.

Figure 8. Soil liquefaction susceptibility map of Portland

develop building code amendments to improve seismic resilience and require seismic upgrades comparable to proposed requirements on unreinforced masonry buildings.

Safety of liquefied gas terminals

Liquefied natural gas (LNG) and liquefied petroleum gas (LPG), such as propane, facilities pose safety risks from potential explosions and fire. The Pembina propane terminal, which was proposed in 2015 at the Port of Portland Terminal 6, is an apt case study. The Pembina terminal would have required environmental zoning code amendments that did not move forward.

The issue of safety risks was discussed extensively during review of the proposed Pembina terminal, and a quantitative risk assessment study was prepared to inform that review process (Det Norske Veritas (U.S.A.), Inc., 2015). The study estimated the risk from flammable releases, such as jet fires, pool fire, flash fire, vapor cloud explosions, fireball and Boiling Liquid Expanding Vapor Explosion (BLEVE).

The risk was presented as individual risk in the form of location-specific risk contours extending outward from the proposed facilities, and as societal risk in the form of potential loss of life and cumulative frequency of various accidents. The highest offsite risk level was found to be 1 fatality in 1,000 years in areas directly north and south of facility. The nearest residential zones are located beyond the risk level contour of 1 fatality in 100 million years. The cumulative societal risk was estimated at 1 statistical fatality every 38 years. The study also included various facility design and siting recommendations to mitigate identified risks.

Another risk assessment (Northwest Citizen Science Initiative, 2015) on the Pembina project was presented by environmental groups and neighbors including the Hayden Island Neighborhood Association. The analysis identifies additional sources of risk from BLEVE cascades, terrorist events and magnitude 9 earthquakes. The authors recommend not locating a propane terminal within 10 miles of the Portland/Vancouver urban area.

Public safety risks from a new LNG or LPG facility are estimated to be very low relative to other urban hazards, although possible impacts could be catastrophic. The adopted code amendments are expected to reduce public safety risks by prohibiting development of large new LNG or LPG facilities exceeding 2 million gallons of storage capacity.

Oil train accidents

On June 3, 2016 an oil train traveling through the Columbia River Gorge partially derailed in Mosier en route to Tacoma. The 16-car derailment resulted in a 1,000-barrel spill and fires that lasted nearly a day. Small amounts of oil reportedly reached the river, and nearby drinking water and wastewater facilities in Mosier were affected.

An Associated Press analysis of accident records found that 26 oil-train derailments or fires have occurred nationally in the last decade. The national geography of increasing oil extraction in the inland Great Plains states and refineries concentrated on the coasts is contributing to this trend. Risk of how often such derailments are likely to occur in the Columbia Gorge is disputed, with one estimate as high as one every 30 months.

Preliminary reporting on the cause of the Mosier derailment pointed to failed bolts in the track that are difficult to detect. Union Pacific reported that improvements are underway to replace bolts on 530

miles of curved track nationwide. Railroad safety is regulated at the federal level and monitored by the Federal Railroad Administration. A recent Government Accounting Office report has identified challenges and delays in implementing some federal rail safety regulations.

The adopted code amendments could incrementally reduce rail accident risks by restricting development and expansion of fossil fuel terminals in Portland as a West Coast rail hub location. However, restricting the location of new petroleum terminals in the city of Portland is not expected to substantially affect the volume of petroleum cargo transported by rail to Puget Sound refineries.

The Portland/Vancouver area is a rail hub location, where West Coast rail lines running north-south intersect the low gradient east-west rail corridor along both sides of the Columbia River. Roughly half of the east-west rail cargo destined for the Seattle-Tacoma area, in addition to Oregon-bound rail cargo, moves through the Portland metropolitan area. Derailment risk within Portland is reduced by the numerous siding destinations and congestion of the "Portland Triangle" area where UP and BNSF lines come together. However, derailment risks to natural resources, especially along rivers, and to rural communities appear to be significant.

5. Code concepts and analysis

This section of the report describes the adopted zoning change concepts by topic area, including the related policy directions, implementation issues, and rationale for the adopted zoning changes.

1. **Types of distribution and storage facilities to be regulated**

Policy direction:

- City Council Resolution 37168 (adopted November 2015) calls for opposing expansion of infrastructure for transportation and storage of fossil fuels, subject to various exceptions, including safety improvements, service to end users, and infrastructure that accelerates transition to non-fossil fuel energy.
- 2035 Comprehensive Plan Policy 6.48 Fossil Fuel Infrastructure (adopted June 2016, not effective until 2018) also calls for limiting fossil fuel distribution and storage facilities to those necessary to serve the regional market.

Preliminary code concepts:

- Limit development of new Bulk Fossil Fuel Terminals as a regulated land use.
- Bulk Fossil Fuel Terminals are engaged in freight movement or wholesaling of fossil fuels at facilities that are characterized by having (1) marine, pipeline or railroad transport access and (2) either transloading facilities for transferring a shipment between transport modes (such as from rail to ship) or bulk storage facilities exceeding 2 million gallons of fossil fuels. Examples include petroleum terminals, liquid natural gas terminals, and coal terminals. Functionally, these terminals are typically regional gateway facilities, where fossil fuels enter and exit the region, but the use classification is intended to be clearly identifiable and not rely on a definition of region.
- Exceptions that are not Bulk Fossil Fuel Terminals:
    - Retail sales of fossil fuels, such as gasoline or propane filling stations;
    - Distributors, wholesalers, and industrial service uses that receive and deliver fossil fuels exclusively by truck;
    - End-user facilities that store fossil fuels for use as an input (including off-site storage), such as manufacturing, agriculture, and airports;
    - Uses that recover or reprocess used petroleum products;
    - Waste-related uses that transfer or store solid or liquid wastes, such as landfills.

Implementation issues:

- Definition of region – Portland is a regional distribution hub for energy and other products, and this zoning change is not intended to restrict energy access to the growing region. However, the regional market area of Bulk Fossil Fuel Terminals varies by product and is difficult to define. Portland's 10 petroleum terminals generally serve Oregon and Southern Washington. This market area substantially exceeds the Portland metropolitan area, which is often colloquially referred to as the region. Some terminal representatives pointed out that the federal government's 5-state West Coast PADD 5 region is generally their regional market area. Bureau

of Development Services (BDS) staff commented that zoning does not regulate the target market (destination) of wholesale products, and the zoning code does not define region. Business organization representatives commented that the energy markets and related market areas are likely to change over time. Therefore, the adopted land use incorporates the concept of a regional market into the size limits, and a zoning definition of region is not adopted here.

- Storage capacity size threshold - The Bulk Fossil Fuel Terminal use category is intended to apply to regional gateway facilities where fossil fuels are brought into the region. The 2-million-gallon capacity threshold is small compared to the existing petroleum terminals, which range from 11.6 million to 67 million gallons, with most facilities having more than 25 million gallons of storage capacity. In response to testimony, the PSC reduced the terminal size threshold from 5 million to 2 million gallons of storage, in order to include facilities that are large enough to unload unit trains. This change would apply to both new and existing terminal and would extend the terminal restrictions beyond the 11 largest fuel terminals in Willbridge and Linnton areas of NW Portland to also include smaller existing fuel distributors. Staff identified 24 additional petroleum, pipeline, and gaseous fuel distributors that may be affected.

- Site aggregation – A potential loophole to the terminal size threshold was identified in PSC testimony through site aggregation of smaller facilities. The reference to partnerships and corporations in the existing definition of "ownership" is an inclusive term, which includes subsidiaries of a larger corporation and would prevent a larger parent corporation from using different subsidiaries on contiguous lots. To further prevent potential circumvention of the terminal size threshold through site aggregation, the PSC recommended adding criteria in the use description to identify aggregated sites that each have storage smaller than 2 million gallons but effectively function as a larger terminal.

- End users – Resolution 37168 lists a specific exception to not restrict service directly to end users. At a small scale, services to end users include retail gasoline filling stations, natural gas access lines in street right-of-way to residential and business customers, and heating oil tanks at home sites. Larger scale end users with fossil fuel storage and access infrastructure also include manufacturers, jet fuel facilities serving PDX Airport, vessel fuel facilities on Portland Harbor, and others where fossil fuels are used as an input. The City Council added code amendments that exempt storage of aviation fuel serving regional airports and marine vessel fueling at Portland Harbor.

- Inclusion of regulated utilities - NW Natural, the natural gas utility that serves western Oregon and parts of southwest Washington, has recommended that its facilities should not be subject to new zoning restrictions because its distribution facilities provide service to end users, which are exempted in Resolution 37168. NW Natural's service to end users in Oregon is regulated by the Oregon Public Utility Commission. The company periodically prepares an Integrated Resources Plan (IRP) to document its forecast for natural gas use by its customers. The IRP also details how NW Natural proposes to meet changes in natural gas demand and is statutorily obligated to do so in ways that result in the "least cost" to customers, while managing risk and complying with all applicable environmental and workplace regulations. The PUC conducts a public review process of the IRP and ultimately either "acknowledges" the IRP or identifies shortcomings the

company must address in a revised IRP. The PSC considered and did not act on NW Natural's request to exempt regulated utilities. One commissioner expressed concern that a regulated utility could potentially sell fossil fuel from local storage facilities to customers who are not regional end users.

- Interpretation of use category – Terminal and business representatives commented that ambiguity in the use description could result in conflicting expectations, pressured interpretations, appeals, and inconsistent code implementation. While underlying policy accommodates regional access and exceptions that may be difficult to clearly define, the adopted land use designation is defined by clear and objective size thresholds and marine/railroad/pipeline access.

2. **Definition of fossil fuels**

Policy direction: City Council Resolution 37168 applies to fossil fuel infrastructure and storage generally, and does not distinguish among types or carbon intensity of fossil fuels.

Preliminary code concept:

- Definition of fossil fuels: petroleum products (such as crude oil and gasoline), coal, and gaseous fuels (such as natural gas and propane) that are made from decayed plants and animals that lived millions of years ago and are used primarily as a source of energy.
- Exclusion of non-fuel products – Petrochemicals that are used primarily for non-fuel products are excluded, such as asphalt, plastics, lubricants, fertilizer, roofing and paints.
- Methanol is included as a fossil fuel. Development of methanol storage and transportation facilities would be prohibited similarly to LNG and LPG terminals.
- Denatured ethanol and similar fuel additives and biodiesel/renewable diesel with less than 5% fossil fuel content are not fossil fuels.
- Biogas from wastewater treatment plants, anaerobic digesters, landfills and other sources is not a fossil fuel.

Implementation issues:

- Definition of fossil fuels – Definitions of fossil fuels vary by source. Here are some examples.
  - Oregon Department of Environmental Quality (ODEQ) – Fossil fuels: fuels such as oil, natural gas, and coal that are made from decayed plants and animals that lived millions of years ago. These fuels are made of hydrogen and carbon (hydrocarbons).
  - U.S. Environmental Protection Agency (USEPA), 40 C.F.R. § 60.41 - Fossil fuel means natural gas, petroleum, coal, and any form of solid, liquid, or gaseous fuel derived from such materials for the purpose of creating useful heat.
  - Oregon Department of Energy Administrative Rule, OAR 345-001-0010 - "Fossil fuel" means natural gas, petroleum, coal and any form of solid, liquid or gaseous fuel derived from such materials that serves as useful energy.

- Renewable and clean fuel standards – As described in Section 4, USEPA implements the federal Renewable Fuel Standard (RFS) that requires transportation fuel sold in the U.S. to contain a minimum volume of renewable fuels. Similarly, ODEQ implements the Oregon Clean Fuel

Program. ODEQ identifies examples of "clean fuels" in Oregon as most types of ethanol, biodiesel, natural gas, biogas, electricity, propane and hydrogen. Terminal representatives and business stakeholders urged that adopted zoning code changes not create a disincentive or barrier to compliance with these federal and state rules, which may require additional tank capacity to implement. Environmental and public health organization representatives pointed out that City Resolution 37168 addresses fossil fuels generally, including clean fuels.

- *Methanol – Large methanol plants have recently been proposed in Tacoma, Kalama, and St. Helens. Methanol plants tend to have structural similarities to LNG and LPG terminals, including large-scale and gas pipeline access, and they can have similar safety and climate impacts. Stakeholder focus groups were asked whether any* special inclusions, such as methanol, should be considered. Most people commenting noted that methanol is primarily used in the production of plastics and other non-fuel uses. Views differed among environmental organizations commenting. Some noted that excluding it undermines the policy. The adopted code limits development of large methanol plants similarly to LNG or LPG terminals.

- *Denatured ethanol* – A terminal operator pointed out that "pure" ethanol made from corn or other non-fossil source is required by the Alcohol and Tobacco Tax and Trade Bureau to be denatured in order to be transported to the site. Denatured ethanol typically contains up to 5% methanol, so that it is toxic and undrinkable. Storage of denatured ethanol is exempted. In other words, denatured ethanol tanks would not be counted as part of the maximum storage capacity of fossil fuel terminals.

- Biogas products from landfills – Bureau of Environmental Services (BES) staff commented that biogas from landfills and other sources are not fossil fuels and should not be restricted by the adopted zoning changes. The adopted description of fossil fuel terminals specifically excludes waste-related uses, such as landfills, which are regulated as a separate land use in the zoning code. Also, the adopted definition of fossil fuels, described as being made from decayed plants and animals that lived millions of years ago, would not include biogas from a landfill.

3. **Prohibition of new bulk fossil fuel terminals**

Policy direction:

- City Council Resolution 37168 (adopted November 2015) calls for opposing expansion of infrastructure for transportation and storage of fossil fuels, subject to various exceptions, including safety improvements, service to end users, and infrastructure that accelerates transition to non-fossil fuel energy.
- 2035 Comprehensive Plan Policy 6.48 Fossil Fuel Infrastructure (adopted June 2016, not effective until 2018) also calls for limiting fossil fuel distribution and storage facilities to those necessary to serve the regional market.

Preliminary code concept:

- Prohibit new Bulk Fossil Fuel Terminals in all base zones.

Implementation issues:

- Policy implementation – City Resolution 37168 reflected a major change in policy direction on fossil fuel distribution and storage facilities. Prohibition of new Bulk Fossil Fuel Terminals is intended as an unambiguous, assertive approach to implement this policy change, responding to increasingly evident safety risks of fossil fuel infrastructure, aggressive climate change goals, and changing energy markets in the Pacific Northwest.

- Community expectations – Several hundred people provided email and verbal testimony asking for a "full ban" on new and expanded fossil fuel terminals. Climate resilience advocates are widely represented in the Portland community and the Pacific Northwest. Public involvement in Resolution 37168 and this project reveal broad community expectations for a bold approach to restrict fossil fuel distribution facilities in Portland.

- Providing regional market access to fuels – Analysis to date is limited on the potential impacts of the prohibition on constraining regional fuel supply. Fossil fuel demand in this growing region may increase moderately, as indicated by trend-based forecasts, or may plateau and decline with implementation of climate resilience goals and strategies. The fossil fuels consumed in Oregon are generally not extracted or refined in the state. As a result, fossil fuel terminals provide multimodal transportation efficiency and price advantages for distributing fuels to the growing population of the regional market area.

- Option to set size limits on new fossil fuel terminals – The Discussion Draft proposed storage capacity size standards to limit new fossil fuel terminal development. Figure 7 in Section 4 indicates a wide margin between the size of recently proposed crude oil, coal and LNG terminals in the Pacific Northwest and the scale of expected growth by existing Portland fuel terminals that serve the regional market area. Recommended terminal size limitations within that margin would allow for expansion at existing terminals and moderately sized new terminal development to meet potential market area consumption needs. Instead, BPS's Proposed Draft and the PSC's Recommended Draft code changes would prohibit new Bulk Fossil Fuel Terminals, a more restrictive approach to more assertively implement the new policy directions and respond to extensive community comments on the draft code changes. As recommended by the PSC, existing terminals could expand storage facilities up to 10 percent through seismic upgrades that replace existing tanks, providing the opportunity to meet modest growth in potential market area consumption needs.

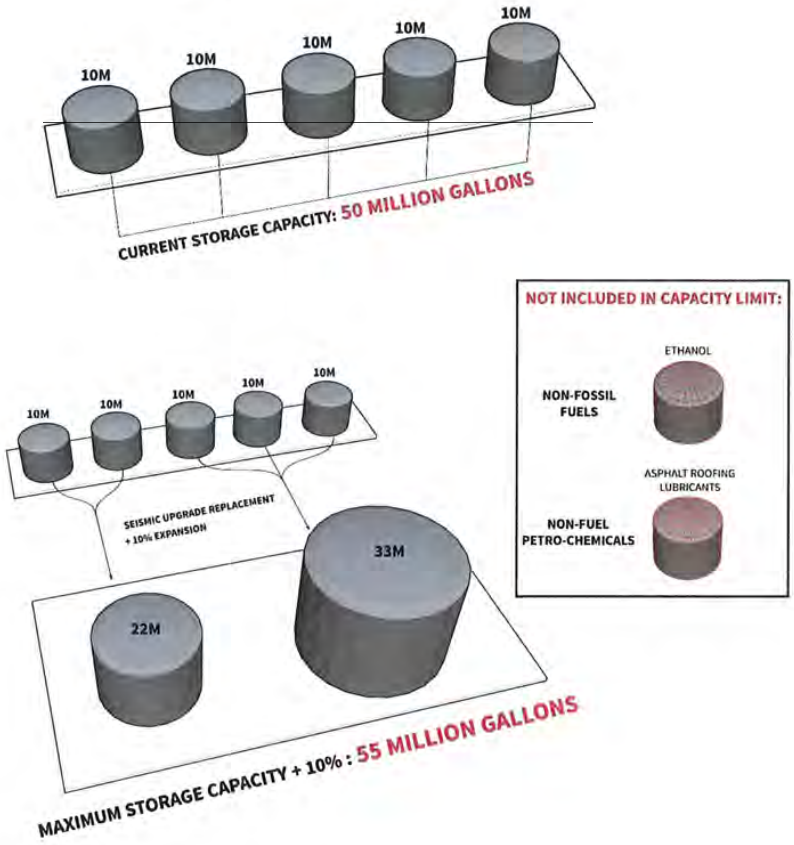
- Balanced, integrated policy approach – The adopted restrictions on fossil fuel distribution facilities entail tradeoffs among public goals for environmental protection, public health and safety, meeting energy needs, and economic prosperity, as described in Section 4. The Comprehensive Plan calls for a balanced, integrated approach in land use regulations to meet these public objectives, as described in Section 2. The adopted code changes provide for significant environmental and safety benefits in restricting development and expansion of fossil fuel terminals and provide for limited expansion of fossil fuel terminals to adequately meet regional energy needs and integrate economic prosperity and equity considerations.

4. "Limited use" classification of existing facilities

Policy direction:

- City Council Resolution 37168 includes various exemptions to not restrict safety or efficiency improvements, service to end users, emergency backup capacity, infrastructure for recovery or re-processing of used petroleum products, or infrastructure that will accelerate the transition to non-fossil fuel energy sources.
- 2035 Comprehensive Plan Policy 6.48 Fossil Fuel Infrastructure (adopted June 2016, not effective until 2018) also calls for limiting fossil fuel distribution and storage facilities to those necessary to serve the regional market.
- 2035 Comprehensive Plan Policies 4.75 and 4.76 call for encouraging disaster-resilient development and reducing natural hazard risks to critical energy and transportation infrastructure in Portland Harbor.

Preliminary code concept:



- Classify existing Bulk Fossil Fuel Terminals in industrial and general employment zones as "limited uses" that can continue to operate. Fossil fuel storage at existing terminals is limited to the existing capacity on the effective date of these regulations, and expansion is prohibited.

Implementation issues:

- Prohibition of expansion at existing terminals - City Council received extensive testimony to prohibit expansion at existing terminals and opted to do so. Similar to the prohibition of new Bulk Fossil Fuel Terminals, prohibition of terminal expansion demonstrates an unambiguous, assertive approach to implement bold policy change, emphasizing fuel infrastructure safety and climate resilience. These adopted code changes are generally more restrictive than the exceptions in the resolution that call for not restricting improvements at existing fuel terminals that improve safety, provide wholesale fuel supply to local or regional end users, add backup capacity, or add mixing tanks for clean/renewable fuels.

- Option to restrict expansion at existing terminals as a legal, non-conforming use – In the Proposed Draft, Bulk Fossil Fuel Terminals were classified as a prohibited use, under which existing terminals would become legal, non-conforming uses. The Proposed Draft assumed some opportunity to approve expansion of existing terminal storage capacity that would allow the existing terminals to add new fuel additive tanks to meet clean and renewable fuel standards, seismic upgrades of existing tanks, and emergency backup capacity, consistent with Resolution 37168. However, comments from BDS clarified that such expansion would be difficult to approve through a non-conforming situation review. BDS recommends considering an alternative approach to set limitations on expansion. In response, BPS and the PSC recommended classifying Bulk Fossil Fuel Terminals as a limited use with clear and objective standards that limit expansion of existing terminals.

Figure 9. Calculation of storage expansion limitations considered

- Option to allow 10% expansion at existing terminals – The PSC recommended code amendments to allow limited expansion of fossil fuel storage at these existing terminals that (a) include "seismic upgrades" which replace existing tanks, (b) add no more than 10 percent of the capacity of replaced tanks, and (c) result in no more than 10 percent cumulative expansion of the total terminal capacity on the effective date of these code changes. See Figure 9 above. City Council deleted this draft code allowance for up to 10% expansion with seismic upgrades of storage tanks, following testimony by some terminal operators that a 10% limitation would not provide an adequate incentive to cover improvement costs of tank replacement. Instead, a future code-change project is recommended in Section 7 to develop building code amendments that improve seismic resilience and require seismic upgrades comparable to proposed requirements on unreinforced masonry buildings.

- Option to restrict expansion at existing terminals as a conditional use – A large number of comments to PSC supported stronger restrictions on expansions at existing terminals through adding binding limits as well as criteria for safety and climate impacts. BDS staff have commented that they do not have staff expertise to implement discretionary land use review criteria addressing greenhouse gas emissions or safety impacts of hazardous material storage and transportation. If new conditional use criteria are added to limit or require no net increase of greenhouse gas emissions or safety impacts of hazardous material storage and transportation facilities, applicants would be required to hire specialized consultants to show compliance of the particular criterion, which would affect the complexity, predictability, and cost of land use reviews in new ways. This change would be inconsistent with 2035 Comprehensive Plan Policy 6.16 Regulatory Climate, which calls for improving development review processes and regulations to encourage predictability and support local and equitable employment growth and encourage business retention. Given the level of community scrutiny about fossil fuel terminal expansion, this discretionary public review process could add significantly to the cost and uncertainty of investments at fossil fuel terminals.

- Option to not restrict expansion at existing terminals - The Discussion Draft recommended code concepts (storage capacity size standards to limits new fossil fuel terminal development) that would not restrict development on existing terminals. This option was intended to be consistent with the exceptions in the resolution (as described in the previous point) and to accommodate potential growth in regional fuel demand. Instead, the Proposed Draft code changes applied a legal, non-conforming use status on existing Bulk Fossil Fuel Terminals, a more restrictive approach to more assertively implement the new policy directions and respond to extensive community comments on the recommended code changes.

- Divergent stakeholder views – Extensive comments on the Recommended Draft, Proposed Draft and Discussion Draft recommended tight limits on expansion of existing fuel terminals. In contrast, stakeholder focus group participants generally urged that existing fuel terminals should not be changed to a non-conforming use for reasons ranging from providing a critical product to not discouraging desired seismic and safety improvements on existing facilities. Stakeholder group comments from environmental and public health organizations generally supported restricting expansion of existing terminals, while some participants cautioned about political and legal tradeoffs of making the existing fuel terminals nonconforming.

6. Zoning code changes

This section of the report specifies the adopted code language, along with code commentary pages that clarify expected implementation. The section is formatted to facilitate readability, showing adopted code changes on the right-hand pages and related code commentary on the facing left-hand pages.

33.140.050 Neighborhood Contact

As an alternative to a land use review, a public notice and meeting requirement applies to development of fuel storage structure, such as a new tank, at a Bulk Fossil Fuel Terminal, similar to the requirement for multi-dwelling residential development. This notice and meeting would create public awareness about the project and serve to discuss a proposal in an informal basis.

33.140.050 Neighborhood Contact

A. **Purpose.** Neighborhood contact is required when a new storage structure for any type of fuel will be built on a Bulk Fossil Fuel Terminal because of the impacts that fuel projects can have on the surrounding community. The neighborhood contact requirement provides an opportunity for community input on the design of the project by providing a setting for the applicant and neighborhood residents to discuss a proposal in an informal manner. Sharing information and concerns early offers the opportunity to identify ways to improve a proposal and to resolve conflicts.

B. **Neighborhood contact requirement.** Proposals meeting the following conditions are subject to the neighborhood contact requirement as specified in Section 33.700.025, Neighborhood Contact. All of the steps in 33.700.025 must be completed before a building permit is requested.

1. The proposed development has not been subject to a land use review; and

2. The proposed development includes at least one new structure for the storage of any type of fuel.

Commentary

33.140.100 Primary Uses

The amendments to this section reflect changes to prohibit new Bulk Fossil Fuel Terminals in all base zones and reclassify existing terminals in industrial and general employment zones as limited uses. Regulation of Bulk Fossil Fuel Terminals implements policy direction in City of Portland Resolution 37168 (adopted November 2015) and 2035 Comprehensive Plan Policy 6.48 (adopted June 2016, expected to take effect in 2018), both of which address fossil fuel distribution and storage facilities.

The limited use designation would prohibit expansion of fossil fuel tank capacity at existing Bulk Fossil Fuel Terminals.

33.140.100 Primary Uses

A. No change

B. Limited uses. Uses allowed that are subject to limitations are listed in Table 140-1 with an "L". These uses are allowed if they comply with the limitations listed below and the development standards and other regulations of this Title. In addition, a use or development listed in the 200s series of chapters is also subject to the regulations of those chapters. The paragraphs listed below contain the limitations and correspond with the footnote numbers from Table 140-1.

1. – 16. No change

17. Bulk Fossil Fuel Terminals. This regulation applies to all parts of Table 140-1 that have a [17].

a. Existing Bulk Fossil Fuel Terminals. Bulk Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site in storage tanks is limited to the fossil fuel storage tank capacity that existed on [insert effective date]. Total fossil fuel storage tank capacity on the site in excess of the capacity that existed on [insert effective date] is prohibited. Storing coal on the site is prohibited.

b. New Bulk Fossil Fuel Terminals are prohibited.

Commentary

33.910.030 Definitions

The definition of fossil fuels was added to clarify the land use category Bulk Fossil Fuel Terminals.

Petrochemicals that are used primarily for non-fuel products are excluded, such as asphalt, plastics, lubricants, fertilizer, roofing, and paints. However, methanol is an exception that is included as a fossil fuel, because large methanol storage and distribution facilities tend to have structural similarities to liquid natural gas (LNG) and liquid petroleum gas (LPG) terminals, including large-scale storage and gas pipeline access, and because they can have similar safety and climate impacts.

Fuels containing 5% or less fossil-fuel volume are not considered fossil fuels under this definition. For example, "pure" ethanol made from corn or other non-fossil source is required by the Alcohol and Tobacco Tax and Trade Bureau to be denatured in order to be transported to the site. Denatured ethanol typically contains up to 5% methanol, so that it is toxic and undrinkable.

Some fossil fuels under this definition are also classified as "renewable fuels" in the federal Renewable Fuel Standard and "clean fuels" in Oregon's Clean Fuel Standard, such as liquid natural gas and liquid propane gas. These federal and state standards require transportation fuel sold within their jurisdiction to contain a minimum volume of renewable or clean fuels.

33.910.030 Definitions

The definition of words with specific meaning in the zoning code are as follows:

Fossil Fuel. Fossil fuels are petroleum products (such as crude oil and gasoline), coal, methanol, and gaseous fuels (such as natural gas and propane) that are made from decayed plants and animals that lived millions of years ago and are used as a source of energy. Denatured ethanol and similar fuel additives with less than 5 percent fossil fuel content, biodiesel/renewable diesel with less than 5 percent fossil fuel content, and petroleum-based products used primarily for non-fuel uses (such as asphalt, plastics, lubricants, fertilizer, roofing, and paints) are not fossil fuels.

Commentary

33.920.300 Bulk Fossil Fuel Terminal

Bulk Fossil Fuel Terminals are added as a new land use category to regulate their development in the Zoning Code. Regulation of Bulk Fossil Fuel Terminals implements policy direction in City of Portland Resolution 37168 (adopted November 2015) and 2035 Comprehensive Plan Policy 6.48 (adopted June 2016, expected to take effect in 2018), both of which address fossil fuel distribution and storage facilities.

Bulk Fossil Fuel Terminals are characterized by having (1) marine, pipeline or railroad transport access and (2) either trans-loading facilities for transferring a shipment between transport modes (such as from rail to ship) or bulk storage facilities exceeding 2 million gallons of fossil fuels. The 2-million-gallon threshold is sized to include facilities that are large enough to unload unit trains. Functionally, these terminals tend to be regional gateway facilities, where fossil fuels enter and exit the region. Additionally, Policy 6.48 calls for limiting fossil fuel distribution and storage facilities to those necessary to serve the regional market. However, the use classification is intended to be clearly identifiable by physical characteristics and not rely on a definition of region.

The regional market area of Bulk Fossil Fuel Terminals varies by product and is difficult to define. Portland's 10 petroleum terminals generally serve Oregon and Southern Washington. This market area substantially exceeds the Portland metropolitan area, which is often colloquially referred to as the region. Some terminal representatives pointed out that the federal government's 5-state West Coast PADD 5 region is generally their regional market area.

The use description is clarified with criteria that are intended to prevent the aggregation of new facilities smaller than 2 million gallons into a larger terminal that could effectively circumvent the terminal storage capacity threshold.

Resolution 37168 lists a specific exception to not restrict service directly to end users. At a small scale, services to end users include retail gasoline filling stations, natural gas access lines in street right-of-way to residential and business customers, and heating oil tanks at home sites. Larger scale end users with fossil fuel storage and access infrastructure also include manufacturers, jet fuel facilities for PDX Airport, vessel fuel facilities on Portland Harbor, and others, where fossil fuels are used as an input.

33.920.300 Bulk Fossil Fuel Terminal

A. Characteristics. Bulk Fossil Fuel Terminals are establishments primarily engaged in the transport and bulk storage of fossil fuels. Terminal activities may also include fuel blending, regional distribution, and wholesaling. The firms rely on access by marine, railroad, or regional pipeline to transport fuels to or from the site, and either have transloading facilities for transferring a shipment between transport modes, or have storage capacity exceeding 2 million gallons for fossil fuels. There is minimal on-site sales activity with the customer present.

B. Accessory uses. Accessory uses may include retail sales of petroleum products, offices, food membership distribution, parking, storage, truck fleet parking and maintenance areas, rail spur or lead lines, and docks.

C. Examples. Examples include crude oil terminals, petroleum products terminals, natural gas terminals, propane terminals, and coal terminals.

D. Exceptions.

1. Truck or marine freight terminals that do not store, transport or distribute fossil fuels are classified as Warehouse And Freight Movement uses.
2. Truck or marine freight terminals that do not have transloading facilities and have storage capacity of 2 million gallons or less are classified as Warehouse And Freight Movement uses. However, multiple fossil fuel facilities, each with 2 million gallons of fossil fuel storage capacity or less but cumulatively having a fossil fuel storage capacity in excess of 2 million gallons, located on separate parcels of land will be classified as a Bulk Fossil Fuel Terminal when two or more of the following factors are present:
   a. The facilities are located or will be located on one or more adjacent parcels of land. Adjacent includes separated by a shared right-of-way;
   b. The facilities share or will share operating facilities such as driveways, parking, piping, or storage facilities; or
   c. The facilities are owned or operated by a single parent partnership or corporation.
3. Gasoline stations and other retail sales of fossil fuels are not Bulk Fossil Fuel Terminals.
4. Distributors and wholesalers that receive and deliver fossil fuels exclusively by truck are not Bulk Fossil Fuel Terminals.
5. Industrial, commercial, institutional, and agricultural firms that exclusively store fossil fuel for use as an input are not Bulk Fossil Fuel Terminals.
6. Uses that involve the transfer or storage of solid or liquid wastes are classified as Waste-Related uses.
7. The storage of fossil fuels for exclusive use at an airport, surface passenger terminal, marine, truck or air freight terminal, drydock, ship or barge servicing facility, rail yard, or as part of a fleet vehicle servicing facility are not Bulk Fossil Fuel Terminals.
8. Uses that recover or reprocess used petroleum products are not Bulk Fossil Fuel Terminals.

Commentary

33.920.310~~300~~ Industrial Service

33.920.320~~310~~ Manufacturing And Production

33.920.330~~320~~ Railroad Yards

33.920.340~~330~~ Warehouse And Freight Movement

A. **Characteristics.** Warehouse And Freight Movement firms are involved in the storage, or movement of goods for themselves or other firms. Goods are generally delivered to other firms or the final consumer, except for some will-call pickups. There is little on-site sales activity with the customer present.

B. **Accessory uses.** Accessory uses may include offices, food membership distribution, truck fleet parking and maintenance areas, rail spur or lead lines, docks, and repackaging of goods.

C. **Examples.** Examples include separate warehouses used by retail stores such as furniture and appliance stores; household moving and general freight storage; cold storage plants, including frozen food lockers; storage of weapons and ammunition; major wholesale distribution centers; truck, marine, or air freight terminals; bus barns and light rail barns; parcel services; major post offices; grain terminals; and the stockpiling of sand, gravel, or other aggregate materials.

D. **Exceptions.**

1. Uses that involve the transfer or storage of solid or liquid wastes are classified as Waste-Related uses.
2. Miniwarehouses are classified as Self-Service Storage uses.
3. Establishments that engage in the transfer or storage of fossil fuels, rely on access by marine, railroad or regional pipeline to transport fuels to or from the site, and either have transloading facilities or have storage capacity exceeding 2 million gallons for fossil fuels are classified as Bulk Fossil Fuel Terminal uses.

33.920.350~~340~~ Waste-Related

33.920.360~~350~~ Wholesale Sales

A. **Characteristics.** Wholesale Sales firms are involved in the sale, lease, or rent of products primarily intended for industrial, institutional, or commercial businesses. The uses emphasize on-site sales or order taking and often include display areas. Businesses may or may not be open to the general public, but sales to the general public are limited as a result of the way in which the firm operates. Products may be picked up on site or delivered to the customer.

B. **Accessory uses.** Accessory uses may include offices, food membership distribution, product repair, warehouses, parking, minor fabrication services, and repackaging of goods.

C. **Examples.** Examples include sale or rental of machinery, equipment, heavy trucks, building materials, special trade tools, welding supplies, machine parts, electrical supplies, janitorial supplies, restaurant equipment, and store fixtures; mail order houses; and wholesalers of food, clothing, auto parts, building hardware, and office supplies.

D. Exceptions.

1. Firms that engage primarily in sales to the general public are classified as Retail Sales And Service.
2. Firms that engage in sales on a membership basis are classified as either Retail Sales And Service or Wholesale Sales, based on a consideration of the characteristics of the use.
3. Firms that are primarily storing goods with little on-site business activity are classified as Warehouse And Freight Movement.
4. Establishments that engage in the regional wholesaling of fossil fuels, rely on access by marine, railroad or regional pipeline to transport fuels to or from the site, and either have transloading facilities or have storage capacity exceeding 2 million gallons for fossil fuels are classified as Bulk Fossil Fuel Terminal uses.

7. Other implementation recommendations

This section of the report recommends future implementation directions for building code amendments to address seismic resilience and periodic monitoring for code effectiveness.

Seismic resilience

The adopting ordinance sets direction to implement this future action:

1. Portland Bureau of Emergency Management (PBEM) and Portland Office of Government Relations are directed to develop proposals for State building code changes to improve seismic resilience and require seismic upgrades comparable to proposed requirements on unreinforced masonry buildings. City Bureaus, including the Bureau of Development Services, PBEM, and Fire Bureau, shall work with the State of Oregon to require seismic upgrades of storage tanks within a firm deadline for replacement of older, unsafe tanks.

Seismic resilience is one of the underlying rationales for fossil fuel distribution policies and the adopted code amendments. Seismic safety requirements of land development are addressed in building codes, which are adopted and amended at the state level.

Monitoring for code effectiveness

The adopting ordinance sets direction to implement this future action:

2. Portland Bureau of Planning and Sustainability (BPS) is directed to periodically monitor the effectiveness of these zoning code amendments to implement underlying policies and consider code adjustments in response to regional fuel demand and market changes, product innovation, safety and climate action considerations, and related regulatory changes. BPS shall report to City Council no later than December 31, 2019 on the implementation of this ordinance, including:

    a. the number and description of any requests by existing terminal operators to replace and expand their facilities;

    b. the number and description of building permits issued for fossil fuel tanks between 200,000 and 2 million gallons;

    c. the trends in fossil fuel energy use and non-fossil energy use in Oregon;

    d. the status of local and state regulatory proceedings that may improve seismic resilience of fossil fuel storage infrastructure; and

    e. information on compliance with the Oregon Clean Fuels Program.

A monitoring and adaptation approach would provide for ongoing code effectiveness within a context of changing energy markets, products, and associated regulations.

Appendix A: Stakeholder focus group results

Public involvement in the concept development for the Fossil Fuel Terminal Zoning Project consisted primarily of four stakeholder focus groups as well as meetings with fuel terminals and other individuals or organizations. The focus groups were held in June 2016. The purpose of the focus groups was to help identify and understand the issues that should help shape the preliminary zoning code being considered by this project. The focus groups also helped to expeditiously reach out to a broad range of stakeholders. While their perspectives and interests are shared on some topics, they diverge on other topics.

In addition to the stakeholder focus groups, BPS staff met with several fuel terminals to explain the proposal, answer questions, and discuss their individual concerns. This was needed because antitrust regulations constrained discussion about certain topics, for example supply chains, in the presence of representatives from other fuel terminals. Primarily, the terminal operators explained their operations and facilities, many of which differed substantially from other terminals.

Who participated?

Figure 9 lists the participants of the four focus groups conducted. Ten to twelve participants were invited to each meeting, although not everyone was able to attend. The first focus group consisted of fuel terminal representatives who have a direct stake in the recommended regulations. The second group was environmental and public health organizations, some of whom advocated for the resolution before City Council and have community safety and sustainability in mind. The third group were state and regional business and government organizations. Their interest was to protect the state economy by testing the proposal against economic realities. The fourth group was neighborhood and equity community organizations whose interests were to protect neighborhoods adjacent to the terminals and underserved communities who may rely on terminals for employment. Additionally, the Mayor's Office invited input from Native communities and tribal governments.

Preliminary code concepts discussed

- Identify "bulk fossil fuel terminals" as a regulated land use, characterized by inter-regional transport access and larger storage facilities.
- Either prohibit new terminals or set storage capacity limits high enough to accommodate regional growth.
- Allow existing terminals to expand for seismic upgrades, access to greener fuels and capacity for regional growth.

What discussion questions were asked?

The focus groups were provided background materials describing the preliminary code change concepts about two weeks before the focus group meetings. BPS staffed prompted the focus group across four topics:

Figure 10. Stakeholder Focus Group Participants, June 2016

1. Issues that should shape the project
2. Types of distribution and storage facilities to be regulated
3. Definition of fossil fuels
4. Zoning approach for limiting new storage facilities

In addition to specific questions within each topic, participants were invited to share any general and wrap-up comments during the focus group.

What we heard

For each topic area, the results of the focus groups are summarized in Figure 4 of Section 3. That table summarizes the main themes and concerns raised during the focus groups.

Key issues

Fuel terminal representatives objected to this policy direction in general. They discussed their safe operating history and commitment to implement the federal and state standards for renewable and clean fuels. There were challenges to participating in the conversation, but they agreed to work cooperatively on this project to get the code right. For example, anti-trust laws precluded the group from engaging in certain conversations because it would involve disclosing information about their supply chains and could be considered collusion in court of law. This group was concerned with the fast timeline and felt the policies should be discussed first.

They also felt the process was emotionally driven, not having considered the unintended consequences. For example, with renewable and clean fuel standards constantly in flux, they felt that zoning rules could make it more difficult to meet these standards. Restricting growth here in Portland at the end of the Olympic Pipeline could put more trucks on the road, instead of more efficient pipeline or rail transportation. The group asserted that there could also be significant economic impacts on the rest of the state, given that 95% of Oregon's fuel passes through Portland first. Lastly, fuel terminal representatives expressed concern for additional administrative burdens that a new land use category would bring. For example, what steps would be necessary for these firms to demonstrate that they were existing operations prior to the new zoning rules? Additionally, they warned that their site configuration may pose a challenge to effective zoning rules, as they are often non-contiguous operations connected by interconnected pipelines.

Environmental and public health organizations felt the policy direction was less aggressive toward fossil fuels than what the City Council resolution had proclaimed. They felt the resolution sought to outright prohibit new development and expansion on existing facilities. Because of this, they cautioned about community backlash if this proposal did not meet expectations. In this vein, they highlighted that Portland will be the first city to fully implement this type of policy, so the project could be an opportunity to set a strong precedent and model code for other cities. This group also felt that resident health and safety was also a top priority. They noted the seismic risks posed by fuel terminal tank farms that lie on liquefaction zones as well as the June 2016 oil train wreck in Mosier. For these reasons, they felt Portland Bureau of Emergency Management (PBEM) and other environmental justice groups should be involved in safety considerations. Lastly, the group felt the economic impact statement should include more than the impact on jobs. It should also consider the risks of economic and financial damages from a natural disaster. Members of this focus group offered to provide technical analysis on the impacts that the proposed options could have on the environment and public health and safety.

Some noted that risks should be accounted for through bonding or insurance requirements under worst-case scenarios.

State and regional business organizations felt that this undertaking requires more research. The resolution set required tasks, including an economic impact analysis and an examination of relevant laws, and they felt these tasks should be completed before laying the groundwork through code development. They felt the marine cargo forecast for liquid bulks of 1% growth is outdated and too low. (Note, an opposite reaction was expressed by environmental and health organization representatives who felt this figure was too high.) Similarly, they feared that the code may not hold up well in five years because of constantly changing energy markets. For example, in five years Portland could be shipping cleaner fuels to the Midwest. Some members expressed concern that the zoning code may not be the right tool to achieve some of the GHG (greenhouse gas) reduction and public safety goals that this resolution aimed to achieve. If the goal is public safety, then the City should require or create incentives for seismic upgrades. They stated that, if the goal is to reduce greenhouse gases, then prohibiting the export of cleaner-burning fuels, such as LNG (liquefied natural gas), may have the opposite intended effect. Lastly, the group asserted the important role that Portland's fuel terminal facilities play in rest of the state economy. They warned of political and economic repercussions that these decisions could have. They shared the view with fuel terminal representatives that this is a big political decision—the timeline is too short and the process should not be rushed.

Neighborhood and equity community organizations communicated that safety, pollution and accidental releases were their top priority when considering zoning for fuel terminals. They wanted a close examination of the seismic and explosion risks associated with fuel terminals. For example, which terminals are in liquefaction zones? Where are the storage tanks located in relation to neighborhoods? They sought honesty about the risks posed to the Linnton neighborhood specifically. Rail safety in the Columbia Gorge was also a key issue. The June 2016 incident in Mosier highlighted the risks. A potential solution they offered would be more pipelines, but they are difficult to get built. This group recognized the difficulty in managing competing values. They felt a reasonable expectation of growth is a smart idea. One participant described the proposal as aggressive, adding that by prohibiting LNG export terminals, global export destinations like China may end up burning dirtier fuels, such as coal. They felt this also meant Portland would forego export profits.

New land use category

Fuel terminal representatives were concerned for the clarity of the rules. They felt that the definition of "bulk terminal" is very important to be clear. If the definition was open to interpretation, then permit staff could be pressured. They warned that creating "bulk fuel terminal" as a specifically regulated use could lead to unpredictable results. This group was also concerned with the definition of "region." They were unsure if off-shore distribution was the issue, advocating for using the federally recognized West Coast region (PADD 5) as the definition of "regional market." PADD 5 includes Oregon, Washington, California, Nevada, Arizona, Alaska and Hawaii.

Environmental and public health organizations wanted to see the regulation go beyond new facilities and also look at limits on expansion at existing facilities. They felt the City Council resolution was clear and unambiguous about opposing expansion of fossil fuel infrastructure, which includes expansions at existing sites. They emphasized the importance for getting the right definition of "bulk terminal" and the associated size limit (or prohibition)—these must be correct in order to effectively implement the policy. Some members questioned whether seismic upgrades at existing facilities could be allowed but

expansions prohibited. This group also urged the inclusion of PBEM's work on hazards in liquefaction zones in this project.

State and regional business organizations echoed the concerns for clear and correct definitions that the fossil fuel representatives posed. "Region," "export," "end user," and "fossil fuel" are all important terms to get right. They also were strongly opposed to making existing facilities non-conforming uses, as well as making them limited uses with unclear exceptions. This would expose projects to discretionary land use actions, which is costly and unpredictable, and hence risky. It would likely make improvements that the community values, such as seismic upgrades, more difficult to attain.

Neighborhood and equity community organizations were skeptical that a new export terminal would be proposed in the Portland area in the wake of Pembina. They felt that Superfund sites were too expensive to acquire and build on. The group also wondered whether a new zone for fossil fuels ought to be created instead of a land use. They questioned why it ought to be allowed in IG2.

Definition of fossil fuels

Fuel terminal representatives were primarily concerned with the long-term applicability of the proposed rules. Energy markets and new technologies are constantly in flux, and it is difficult to know what the size requirements might be for newer—perhaps cleaner—fuels, particularly blended fuels. This group sought clarification for what "green fuels" meant. They noted that the proposed inclusion of LNG among city-regulated fossil fuels is inconsistent with the State of Oregon's inclusion of LNG as a "clean fuel." They called for periodic review of the rules when tomorrow's cleaner fuels become known, as they may not meet today's definitions. They cautioned about unintended consequences of placing restrictions on fossil fuel terminals, such as potentially putting more trucks on the road by restricting growth at facilities with pipeline, marine and rail access. This may result in considerably more GHG emissions. They also felt that methanol should not be included in the list of regulated fuels because it is used more as a value-added commodity than a fuel. They shared this last viewpoint with most other focus groups, except the environmental and health organizations.

Environmental and public health organizations looked to the intent of the City Council resolution and noted that it included propane, methanol, natural gas and other low-carbon fuels. At the same time, they agreed that code changes should provide flexibility to meet Oregon's low carbon fuel standard. They noted that methanol is currently being used as a fuel, so excluding it undermines the policy. The group sought clarification on how to address non-fuels. Some suggested that the GHG emissions of these input commodities should help ground their use. Others thought that the proportions (e.g., in blended fuels) should be considered—if the product is mostly used as a fossil fuel, then it should be regulated and restricted. Lastly, they highlighted how even one new LNG tank in Portland is a major safety issue. Although not explosive, coal also poses a significant risk, especially in transportation. Because of these risks, they believed that the resolution should be implemented through health and safety standards.

State and regional business organizations expressed frustration that while the federal and state government are going one direction requiring cleaner-burning fuels, the City of Portland appears to be choosing to restrict distribution of these cleaner fuels in another policy direction. Some members thought the City could try to incentivize a higher blend of renewables, and others warned of the disincentives that could discourage investment—disincentives should limit GHG emissions, not seismic upgrades.

Neighborhood and equity community organizations thought that restricting methanol exports would be an overreach. They said it is not being used as a fuel in the United States, and instead it is a value-added product used in manufacturing of plastics and other goods. Including methanol would negatively impact the manufacturing sector that requires it as an input, and it could open the door to regulating other non-fuel commodities, such as paints and asphalt. In general, they felt that if we can make certain fuels cleaner burning, then it poses minimal threat. They asserted that, since there is no clear transitional path away from our dependency on fossil fuels, we should make way for cleaner alternatives, such as blended bio-diesel.

Terminal development restrictions

Fuel terminal representatives were concerned with potential restrictions precluding development on certain site configurations, which have some peculiarities. For example, where two existing tank farms are non-contiguous (e.g., at Willbridge) and are connected by facility pipelines, they should be allowed an option for expansion. Additionally, some sites may already be built out and cannot accommodate the new growth that is expected. This group could not comment on facility size and anticipated growth, because of anti-trust laws, but they noted that it is critically important. For this reason, they could not provide feedback on the implementation options presented.

Environmental and public health organizations generally preferred Option A. However, some recognized the legal challenges posed by federal restrictions. They wondered if health and human safety risks may provide a defensible rationale. Some members also noted that while prohibiting all new facilities and making existing facilities non-conforming uses might be more legally defensible, it is much less politically feasible. Finally, some members of this group were skeptical of the 1% annual growth forecast for liquid bulks. They felt this was too high, which is contrary to what the state and regional business organization representatives stated.

State and regional business organizations criticized the approach to implementing the City Council resolution. They felt that zoning to regulate tank size approaches the problem sideways, and the unclear rationale could lead to appeals and legal challenges. One participant advocated to prohibit exports more directly, rather than a sideways approach. They cautioned that tank size limits could essentially put the region on an "import diet," even if the intent of the limit is to reduce throughput. They did not think this proposal accounted for these unintended impacts. Docked ships in the harbor may need an LNG tank to power their facilities and improve air quality, for example. They also noted that there are economic advantages and efficiency gains to being a bigger facility, and placing restrictions on size will have consequences that we don't want—lower wages for example. Lastly, they felt the 1% annual growth forecast for liquid bulks was outdated—an updated forecast would be higher. This was the opposite of what environmental and public health organizations stated.

Neighborhood and equity community organizations generally preferred Option C, calling it a realistic proposal that allows for some growth but doesn't restrict it too much. While the group was fairly resolute that coal is not a good alternative, they recognized that LNG is a cleaner-burning fuel. However, since the facilities in the region are already at capacity, Option C would allow for some wiggle room for the region's growth. They felt it would allow the "invisible hand" to guide the market more easily. They recommended that the City review the size limits every few years as the market changes.

SP

IMPACT STATEMENT

Legislation title: Restrict bulk fossil fuel terminals. (Ordinance; Amend Title 33, Planning and Zoning)

Contact name: Tom Armstrong, Bureau of Planning and Sustainability
Contact phone: 503-823-3527
Presenter name: Tom Armstrong and Michael Armstrong

Purpose of proposed legislation and background information:

The zoning code currently allows Bulk Fossil Fuel Terminals as a Warehouse and Freight Movement use without any limits on the size of terminals. These amendments create a new land use category and impose prohibitions and limits that restrict the level of development to less than what is allowed under the current standards. The amendments will prohibit new terminals and limit the expansion of existing terminals to no more than 10 percent of the current storage capacity.

In 2012, the Council expressed opposition to coal trains traveling through Portland until a programmatic, comprehensive and area-wide Environmental Impact Statement and comprehensive Health Impact Assessment are completed (Resolutions 36959 and 36962). The 2015 Climate Action Plan commits the City to continue to advance policy and programs to reduce local fossil fuel use both in the City's own operations and through community-wide initiatives.

Resolution 37168, adopted November 12, 2015, expressed the City Council's opposition to the "expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways," and also expressing the intent not to restrict improvements in safety, efficiency, or seismic resilience; the provision of service directly to end users; or infrastructure that will accelerate the transition to non-fossil fuel energy sources.

The 2035 Comprehensive Plan sets policy direction (4.75 and 4.76) to encourage disaster-resilient development and specifically to reduce natural hazard risks to critical energy and transportation infrastructure in Portland Harbor. Most of Portland's employment and industrial zones are located in areas with moderate to high levels of liquefaction susceptibility, as documented by the Portland Bureau of Emergency Management's Critical Energy Infrastructure Hub Study (2016).

Financial and budgetary impacts:

The proposed zoning code amendments do not authorize additional spending on a new or existing City project, do not amend the City budget, and do not affect current or future staffing levels.

Community impacts and community involvement:
The amendments promote major benefits to human health and safety, environmental health and resilience, with minor impacts to economic prosperity and equity.

The amendments will restrict development of fossil fuel terminals consistent with City and State objectives on climate change and public safety. While fossil fuels like natural gas and propane have the potential to replace higher-carbon fuels, substituting these fuels for higher-carbon fuels does not begin to approach the goal of an 80% reduction in carbon emissions by 2050 established in Portland's Climate Action Plan or the State's 75% goal.

The amendments will reduce the scale of low, but potentially catastrophic, safety risks associated with the growth of fossil fuel infrastructure, including oil train derailments, explosive accidents at liquefied natural gas (LNG) and liquefied petroleum gas (LPG) facilities, and seismic risks of tank farms.

The amendments will restrict expansion at existing fuel terminals and prohibit new terminal development, potentially impacting associated job growth and tax revenue. However, in 2014, the 11 existing terminals in Portland only accounted for 280 jobs, out of more than 85,000 jobs in Portland's industrial areas. At the same time, the code restrictions on fossil fuel terminal development would also limit potential financial risks from a major accident involving fossil fuel infrastructure.

The potential impact of the code amendments on constraining the fossil fuel supply to meet regional demand is uncertain. Fossil fuel demand in this growing region has been relatively flat over the last 15 years. At best, the demand for fossil fuel may increase moderately, as indicated by forecasts based on long-term historic trends, or may plateau and decline with a continued shift to other modes of transportation, more fuel efficient vehicles, electric vehicles, and other carbon reduction strategies. Restricting potential increases in regional supply of fossil fuels could have a negative economic impact by increasing fuel costs. However, these potential impacts are mitigated by allowing the existing terminals to expand their storage capacity by 10 percent, which provides insurance against any uncertainty in the future demand for fossil fuels.

In Resolution 37168, the City Council expressed support for accelerating the transition to non-fossil fuel energy sources. As part of that transition, the Oregon Department of Environmental Quality (ODEQ) is implementing the Oregon Clean Fuels Program, which requires a 10 percent reduction in average carbon intensity by 2025. Fuels that could be used to achieve the standards include ethanol, biodiesel, electricity, hydrogen, natural gas, propane, and biogas, which may require additional storage capacity. In order to facilitate implementation of the Clean Fuels Program, non-fossil fuel storage tanks are not subject to the capacity limits.

Public involvement in concept development for the project consisted primarily of four stakeholder focus groups, which were held in June 2016 to review preliminary code concepts and help identify and understand potential implementation issues. The focus groups highlighted the range of stakeholder perspectives and interests concerning proposed zoning changes. Figure 4 summarizes the themes of issues raised in the focus groups. Other outreach activities have

included meetings with interagency partners, terminal operators, and other interested stakeholders.

Extensive public comments were received on the Discussion Draft and influenced substantial changes between the Discussion and Proposed Drafts. Over 700 people sent emails asking for a "full ban" on new and expanded fossil fuel terminals. Their comments included three generally consistent recommendations: a ban on new bulk fossil fuel terminals; tight limits on expansion at existing facilities; and provisions to improve the safety and resilience of existing terminals. Similar comments for further restrictions on terminal growth and seismic improvements were also made in letters from 350PDX, Portland Audubon, Center for Sustainable Economy, Columbia Riverkeeper, Oregon Sierra Club, Climate Solutions, members of a City Club seismic safety subcommittee, Linnton Neighborhood Association, League of Women Voters and other residents. Examples of other concerns raised in those letters include that code changes serve as a bold model for other jurisdictions; to partner with Portland Bureau of Emergency Management on seismic safety; and to clarify forecast growth methodologies relative to climate policies.

Themes of comments on the Discussion Draft from business and labor organizations included opposition to proposed code changes, requests for more time and analysis, and clarifications to address practical considerations. Letters were received from NW Natural, Port of Portland, Columbia Pacific Building and Construction Trades Council, Kinder Morgan, Arc Terminals, and Western States Petroleum Association (WSPA). Some examples of comments included that growth rates will change over time, that fuels meeting Oregon's Clean Fuel Standard should be excluded, inclusion of non-fuel methanol is inconsistent, and the economic analysis is cursory.

The PSC held a public hearing on September 13, 2016. Thirty-six people gave oral testimony and another 715 pieces of written and email testimony was submitted. While comments varied, predominant recommendations included removing the 5-million-gallon terminal size threshold; support for a nonconforming use designation on fossil fuel terminals and adding discretionary review criteria for expansions. Other comments focused on preventing ownership aggregation to prevent circumvention of the terminal size threshold, and support for additional building code requirements to improve seismic safety.

Figure 1. Summary themes of stakeholder focus group comments

TOPIC	FUEL TERMINAL REPRESENTATIVES	ENVIRONMENTAL AND HEALTH ORGANIZATIONS	STATE AND REGIONAL BUSINESS ORGANIZATIONS	NEIGHBORHOOD AND EQUITY ORGANIZATIONS
Key issues	▸ We've operated safely for decades. We meet the federal/state low-carbon fuel standards. ▸ Difficult to participate: very quick process; emotionally driven; antitrust restrictions. ▸ Unintended impacts: harder to meet clean fuel standards; more trucks on road; costs to rest of the state.	▸ Looking for strong, model code. Expect community backlash if expectations not met. ▸ Safety needs to be integral with climate - Mosier oil train wreck; terminals in liquefaction soils. ▸ Include disaster risks in economic analysis. Bonding or insurance for worst case.	▸ Resolution requires more research on economic impacts, etc. ▸ How will the code hold up in 5 years? ▸ What is the goal? If climate or safety, zoning tool is not the right fit. ▸ Portland is not an economic island. Statewide impact. ▸ Big political decision. Don't rush it.	▸ Safety and pollution are our priority. Look closely at seismic and explosion risks. ▸ A reasonable expectation for growth is smart. ▸ This is aggressive. Without LNG, won't China burn more coal? ▸ Rail safety in the Gorge is also a key issue that this can't resolve.
New land use category	▸ If unclear, permit staff could be pressured - unpredictable results. ▸ Use federal West Coast PADD 5 "region."	▸ Regulate both existing and new facilities. ▸ New code must effectively implement the policy.	▸ Need clear definitions: region, export, end user. ▸ Do not make terminals non-conforming or an ambiguous limited use.	▸ Why allow it in IG2? ▸ A new export terminal in contaminated harbor is unlikely.
Definition of fossil fuels	▸ Natural gas considered a low carbon fuel by State, so why included here? ▸ Tomorrow's cleaner fuels won't meet today's definitions.	▸ Excluding methanol undermines policy. ▸ If end use is mostly fuel, then limit it. ▸ One new LNG tank is a big risk. So is coal.	▸ Federal and state are going a different direction, requiring cleaner fossil fuels. Why restrict cleaner fuels at cross purposes?	▸ Make way for bio-diesel as a cleaner fuel. ▸ Methanol not a fuel in Oregon - overreaching. ▸ Fuels are okay if they have no emissions.
Terminal development restrictions	▸ Some sites are already built-out. ▸ Our non-contiguous sites are connected by pipelines. ▸ Can't comment on size.	▸ Most prefer Option A. ▸ Caution about Commerce Clause. ▸ 1% annual growth metric is too high.	▸ Don't come at sideways. Unclear rationales will lead to appeals. ▸ Size limits would put region on "import diet." ▸ Dated, low forecast.	▸ Option C preferred. ▸ Allow for modest growth of LNG and oil; not coal. ▸ Review size limits every few years.

CITY OF

PORTLAND, OREGON

OFFICIAL MINUTES

[Excerpt Council Meeting December 13-15, 2016. Item 1385.]

A REGULAR MEETING OF THE COUNCIL OF THE CITY OF PORTLAND, OREGON WAS HELD THIS **14TH DAY OF DECEMBER, 2016** AT 9:30 A.M.

THOSE PRESENT WERE: Mayor Hales, Presiding; Commissioners Fish, Fritz, Novick and Saltzman, 5.

Commissioner Fritz arrived at 9:31 a.m.
Mayor Hales left at 11:55 a.m. and returned at 12:18 p.m.
Commissioner Saltzman left at 1:03 p.m.

OFFICERS IN ATTENDANCE: Karla Moore-Love, Clerk of the Council; Linly Rees, Senior Deputy City Attorney, and at 11:40 a.m., Lauren King, Deputy City Attorney; and Jason King and Mike Cohen, Sergeants at Arms.

On a Y-5 roll call, the Consent Agenda was adopted.

The meeting recessed at 11:32 a.m. and reconvened at 11:33 a.m.

		Disposition:
	COMMUNICATIONS	
1382-A	Request of Mike O'Callaghan to address Council regarding theft (Communication)	**PLACED ON FILE**
1382-B	Request of Matt Smith to address Council regarding declare support for Portland's Muslim community and censure Donald Trump (Communication)	**PLACED ON FILE**
	TIMES CERTAIN	
1383	**TIME CERTAIN: 9:45 AM –** Adopt the 2017 Portland Electric Vehicle Strategy to accelerate the transition to electric vehicles and increase deployment of public charging infrastructure (Resolution introduced by Mayor Hales) 30 minutes requested **Motion to add paragraph designating resolution as binding city policy:** Moved by Fritz and seconded by Hales. (Y-5) (Y-5)	**37255** **AS AMENDED**
1384	**TIME CERTAIN: 10:15 AM** – Accept the 2016 Annual Fire Prevention Report (Report introduced by Commissioner Saltzman) 30 minutes requested **Motion to accept report:** Moved by Saltzman and seconded by Novick. (Y-5)	**ACCEPTED**

1385	**TIME CERTAIN: 10:45 AM –** Restrict bulk fossil fuel terminals (Previous Agenda 1378; Ordinance introduced by Mayor Hales; amend Title 33, Planning and Zoning) 10 minutes requested (Y-5)	**188142** **AS AMENDED**
	CONSENT AGENDA – NO DISCUSSION	
1386	Appoint Thuy Tu and Daniel Newberry to the Urban Forestry Commission (Report introduced by Mayor Hales and Commissioner Fritz) (Y-5)	**CONFIRMED**
	Mayor Charlie Hales	
1387	Extend the terms of Jeff Bachrach, Michelle Rudd, Katherine Schultz, Chris Smith, Mike Houck, Gary Oxman and Maggie Tallmadge of the Planning and Sustainability Commission to expire April 1, 2017 (Report) (Y-5)	**CONFIRMED**
	Office of Management and Finance	
*1388	Ratify a Letter of Agreement between the City and Laborers' Local 483 regarding shift premium pay for certain Portland Bureau of Transportation employees (Ordinance) (Y-5)	**188134**
	Commissioner Steve Novick **Bureau of Transportation**	
*1389	Accept a grant from the Portland Development Commission in an amount of $1,453,956 for construction of Foster Transportation and Streetscape Project, SE 82nd Ave to 90th Ave (Ordinance) (Y-5)	**188135**
*1390	Authorize a contract with the lowest responsible bidder for the Foster Streetscape Project, Phase I (Ordinance) (Y-5)	**188136**
*1391	Amend contract with CH2M Engineers, Inc. for final payment for work completed for the Smart City Challenge grant project in the amount of $5,000 (Ordinance; amend Contract No. 31000660) (Y-5)	**188137**
	Commissioner Amanda Fritz **Portland Parks & Recreation**	
1392	Authorize a competitive solicitation and contract with the lowest responsive and responsible bidder for construction of the Argay Park Tennis Court Improvements Project for an estimated $500,000 (Second Reading Agenda 1352) (Y-5)	**188138**

1393	Authorize a competitive solicitation and contract with the lowest responsive and responsible bidder for construction of the Forest Park Trail Bridges Replacement Project for an estimated $640,000 (Second Reading Agenda 1353) (Y-5)	**188139**
1394	Authorize a competitive solicitation and contract with the lowest responsive and responsible bidder for construction of the Rieke Field Replacement Project for an estimated $968,808 (Second Reading Agenda 1354) (Y-5)	**188140**
1395	Authorize a competitive solicitation and contract with the lowest responsive and responsible bidder for construction of the Whitaker Ponds Entry Improvements Project for an estimated $606,000 (Second Reading Agenda 1355) (Y-5)	**188141**
	REGULAR AGENDA **Mayor Charlie Hales** **Bureau of Planning & Sustainability**	
1396	Require disclosure of energy performance ratings for residential single family buildings when listed for sale to promote transparency in housing costs and reduction in local carbon emissions (Second Reading Agenda 1358; add Code Chapter 17.108) (Y-5)	**188143** **AS AMENDED**
	Bureau of Police	
***1397**	Apply for and accept a grant in the amount of $15,000 and appropriate $10,000 for FY 2016-17 from the Oregon Department of Transportation Traffic Safety Division FY 2017 Speed Enforcement Grant program for sworn personnel overtime reimbursement (Ordinance) (Y-4; Hales absent)	**188144**
***1398**	Authorize an Intergovernmental Agreement with Washington County for sharing tactical team resources in mutual aid (Previous Agenda 1359) 10 minutes requested (Y-4; Hales absent)	**188145**
	City Budget Office	
***1399**	Authorize contract with the World Council on City Data for joining a global network of cities that are improving city services and quality of life with open data (Ordinance) 15 minutes requested (Y-4; Hales absent)	**188146**
	Office of Management and Finance	
1400	Accept bid of Streimer Sheet Metal Works, Inc. for the Mt Scott Community Center Heating, Ventilation and Air Condition Replacement and Direct Digital Control Upgrade Project for $828,585 (Procurement Report – Bid No. 00000428) **Motion to accept report:** Moved by Fish and seconded by Fritz. (Y-4; Hales absent)	**ACCEPTED** **PREPARE CONTRACT**

*1401	Authorize an amendment of the FY 2016-17 appropriation schedule in the amount of $19,255,033 for the Portland Building Reconstruction project (Ordinance) (Y-4; Hales absent)	**188147**
1402	Approve findings to authorize an exemption to the competitive bidding requirements and authorize the use of the alternative contracting method of Construction Manager/General Contractor all in connection with the Tryon Creek Wastewater Treatment Plant Headworks Project for an estimated amount of $54,000,000 (Ordinance) 10 minutes requested	**RESCHEDULED TO DECEMBER 21, 2017 AT 9:30 AM**
1403	Clarify definitions, administrative authority and make housekeeping changes to the Transient Lodgings Tax Code (Ordinance; amend Code Chapter 6.04) 30 minutes requested for items 1403-1404	**PASSED TO SECOND READING DECEMBER 21, 2016 AT 9:30 AM**
1404	Amend Tourism Improvement District code to update definitions and change the due dates and delinquency dates to match those in the Transient Lodging Tax code (Ordinance; amend Code Chapter 6.05)	**PASSED TO SECOND READING DECEMBER 21, 2016 AT 9:30 AM**
*1405	Authorize a lease extension with Oregon Pacific Investment & Development Company for the Bureau of Fire and Police Disability and Retirement office space at 1800 SW First Ave, Suite 450, commonly known as the Harrison Square Building through October 31, 2020 for approximately $205,000 annually (Previous Agenda 1365) (Y-4; Saltzman absent)	**188149**
*1406	Authorize financing not expected to exceed $51 million for an affordable housing project known as the Ellington Apartments (Previous Agenda 1364) 15 minutes requested for items 1406 and 1413 (Y-5)	**188150**
	Commissioner Steve Novick **Bureau of Transportation**	
1407	Authorize the Portland Bureau of Transportation to develop a Transportation System Development Charge methodology based upon the "Person Trip" model to more accurately reflect Portland's Transportation System (Resolution) 15 minutes requested (Y-5)	**37256**
1408	Accept findings of the South Portal Partnership Plan Project pertaining to proposed changes to roadway alignments of SW Bond Ave, SW Moody Ave, SW Hamilton St, SW Hamilton Ct, SW Lowell St, and SW Thomas St, and direct implementation of a plan to fund, design and construct remaining South Waterfront street connections (Previous Agenda 1369) 10 minutes requested **Motion to adopt amendments in staff memo dated December 14, 2016:** Moved by Novick and seconded by Fritz. (Y-5) (Y-5)	**37257** **AS AMENDED**
	Commissioner Amanda Fritz	

S-1409	Adopt the Open and Accountable Elections Policy (Second Reading S-1370; add Code Chapter 2.16) (Y-3 Hales, Fritz, Novick. N-2 Fish, Saltzman)	**SUBSTITUTE 188152**
	Portland Parks & Recreation	
1410	Create a local improvement district to construct park improvements in the Portland Open Space Sequence Local Improvement District in partnership with the Halprin Landscape Conservancy (Previous Agenda 1371; Hearing; Ordinance; C-10054) 10 minutes requested **Motion to adopt amendments in staff memo dated December 13, 2016 as updated December 14:** Moved by Hales and seconded by Fish. (Y-4; Saltzman absent) **Motion to add remaining property at 1700 SW Fourth Avenue:** Moved by Hales and seconded by Fish. (Y-4; Saltzman absent)	**PASSED TO SECOND READING AS AMENDED DECEMBER 21, 2016 AT 9:30 AM**
	Commissioner Nick Fish **Bureau of Environmental Services**	
***1411**	Authorize an application to Oregon Office of Emergency Management for a Hazard Mitigation Grant Program grant in the amount of up to $2,500,000 for Johnson Creek floodplain acquisition (Ordinance) (Y-4; Saltzman absent)	**188153**
	Water Bureau	
1412	Authorize a contract with the lowest responsible bidder for the construction of the Greenleaf Pump Station Project at an estimated cost of $1,275,000 (Second Reading Agenda 1374) (Y-5)	**188148**
	Commissioner Dan Saltzman **Portland Housing Bureau**	
***1413**	Authorize the purchase of certain real property located at 1610 NE 66th Ave at a price not to exceed $47,000,000 for affordable rental housing (Previous Agenda 1376) (Y-5)	**188151**

At 1:17 p.m., Council recessed.

MARY HULL CABALLERO
Auditor of the City of Portland

By Karla Moore-Love
Clerk of the Council

Closed Caption File of Portland City Council Meeting
[Excerpt Item 1385.]

This file was produced through the closed captioning process for the televised City Council broadcast and should not be considered a verbatim transcript.
Key: ***** means unidentified speaker.

DECEMBER 14, 2016 9:30 AM session

11:28 a.m. Meeting continued.
Item 1385.
Hales: Council has done great work on this issue and so has the community nless there is further discussion. I believe we're ready to vote. Roll call.
Novick: Thank you, mayor, for your leadership on this issue. Really proud that Portland is adopting this policy. I do want to add a word of caution, which is that I think we have learned from the war on drugs that interrupting supply of an addictive substance is a strategy of limited usefulness so although this is an important step. We need to focus on strategies to reduce the demands for fossil fuels like transportation policies and investments that create a community where it's easier to bike and walk and take transit. So again, proud of this move. But we can't forget the demand side either. Aye.
Fritz: I'm very grateful for staff and community work on this and mayor hales' for your leadership in going for the most restrictive and careful policy possible so it's really a great honor. So some people may think I'm in festive clothing in fact I've got red for fossil fuels and green for the cannabis this afternoon aye.
Fish: I appreciate the public forums and the testimony and the work that's gone on to get to this day. There actually was a lot of drama that preceded this. Today it's drama free. We are united in taking a step and I think we got it right. Aye.
Saltzman: thank you, mayor, for your leadership on this and I think this is a good policy and I'm pleased to support it. Aye.
Hales: I want to thank the activists in our community that have called us to our conscience on this issue. Some of you are here today. You've worked long and hard to make us a leader. I'm proud that we're a leader. I'm wearing my c40 pin because I was at the conference to accept an award for having the best climate action plan in the world. I didn't expect to deliver the applause line of the conference and my ego didn't require it but I did. That's because as I was accepting that award I looked out over the crowd and pointed out my colleagues, rahm Emanuel from Chicago was there, Eric garcetti from Los Angeles, Ed Murray from Seattle, Greg Stanton from phoenix and Steve Adler from Austin. I said to the group of worried cities around the world who are partners in this work that regardless of what you're reading or hearing about the united states that the cities of our country that are climate action cities are still in this work, and are still committed. What you're doing here by pushing our city to keep adopting the kind of policy three of which we're taking action on today is making those words real, showing that we are climate leaders. Best of all, most of all this is how we're expressing our values about the place we live in. We live here together. We want this to be a sustainable, responsible community. You have helped us be just that. I'm very proud of this day. Aye. [cheers and applause] thank you all very much.
Fritz: Thank you for coming to share this moment with us. I really appreciate it you followed through every time.
Hales: Thank you.

To: BPS Fossil Fuel Zoning
Subject: Re: Fossil Fuel Zoning Amendments – Let's Put Portland's Fossil Fuel Ban Into Practice!
Date: Friday, December 09, 2016 9:49:07 AM

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed and spilled causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Brian Conwell

Subject: Let's Revive Portland's Fossil Fuel Ban!

Dear Mr. Kountz and Portland Bureau of Planning and Sustainability:

In its effort to develop code changes to implement the City's historic November 2015 Fossil Fuel Policy, I am encouraging the Bureau of Planning and Sustainability to return to the initial intent and plain language of the resolution. The resolution stated the City's intent to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways."

In short, I am asking the City to enact a ban of new fossil fuel infrastructure - in particular oil, gas, and coal terminals in Portland.

Unfortunately, the Fossil Fuel Terminal Zoning Amendments discussion draft falls far short of the 2015 Fossil Fuel Resolution that the City Council passed last year. Where the resolution was bold, visionary, and historic, this discussion draft is short-sighted and prioritizes the fossil fuel industry over the health and safety of Portlanders.

Please revise proposed code changes to include:
- A ban on new bulk fossil fuel terminals
- Strong limits on expansions at existing facilities
- Provisions to improve the safety and resilience of existing terminals

Presently, the discussion draft allows new bulk terminals to be built, setting limits that would significantly increase fossil fuel projects in the City, including 21 million gallons of new crude oil storage and a new LNG tank the size of NW Natural's existing facility in NW Portland. New LNG tanks and petroleum storage (enough to hold 7 unit trains worth of oil) would double down on precisely the kind of fossil fuel projects that the City Council intended to ban in November 2015. Please revise the proposed code changes to ban new bulk fossil fuel terminals.

The proposed code changes would also allow existing facilities to expand, which will grow our carbon footprint past the point of being able to meet our local and state carbon reduction goals. Proposed code The City of Portland needs to hold these industries accountable for improving their safety without promising them more room to grow. We need to shrink fossil fuel use, not grow it! Please revise proposed code changes to set limits on existing bulk fossil fuel terminals, and add provisions to encourage existing facilities to improve their safety and resilience in a large seismic event.

As one of thousands who supported the City's Fossil Fuel Policy, I urge you to develop a new, strengthened draft before the Planning and Sustainability's Commission's hearing in September.

Sincerely,

Brian Conwell

Subject: Fossil Fuel Resolution

Dear Mayor Hales and Portland City Commissioners:

I am Councillor Laura Dupont from City of Port Coquitlam, BC . I am also a member of the Safe Energy Leadership Alliance (SELA), a coalition of more than 165 elected local, Tribal, and state leaders from the Pacific Northwest, Montana, Idaho, California, and British Columbia, advocating for full assessment of risks and costs of proposals to dramatically expand fossil fuel transport and export through our region. While we come from diverse communities, both rural and urban, SELA members share core interests of protecting public health and safety, Treaty rights and cultural resources, and the environment. Fossil fuel transport is a particular concern for my community because of climate change.

I want to commend you for your leadership in adopting Portland's Fossil Fuel Resolution in November 2015, which outlines risks and impacts from transport of fossil fuels on public health and safety, air and water quality, and economic development. These impacts are carried to communities across our region by rail and barge lines, and I share the City of Portland's concerns.

I want to thank you for your current efforts to develop and adopt policies and codes to implement the city's Fossil Fuel Resolution. Your action in Portland will benefit communities facing impacts from increased movement of coal and oil by rail and barge, and will stand as a model for other local governments considering policy and code updates to condition fossil fuel infrastructure.

Thank you for your leadership on this important issue.

Sincerely,

Councillor Laura Dupont

Commissioner Nick Fish
Commissioner Amanda Fritz
Commissioner Steve Novick
Commissioner Dan Saltzman
1221 SW 4th Ave., Room 340
Portland, OR 97204

Dear Mayor Hales and Portland City Commissioners:

I am writing to thank you for your leadership in developing local policies and regulations for development of fossil fuel infrastructure in the City of Portland.

I am the elected Executive for King County, Washington, home to more than 2 million residents.

I am also the chair of the Safe Energy Leadership Alliance (SELA), a coalition of more than 165 elected local, Tribal, and state leaders from the Pacific Northwest, Montana, Idaho, California, and British Columbia advocating for full assessment of risks and costs of proposals to dramatically expand fossil fuel transport and export through our region. While we come from diverse communities, both rural and urban, SELA members share core interests of protecting public health and safety, Treaty rights and cultural resources, and the environment. Fossil fuel transport is a particular concern for my community because oil trains come through the heart of King County and the Puget Sound region, bringing risks of spills and explosions to densely populated urban areas like downtown Seattle and to sensitive waterways, and salmon habitat.

I want to commend you for your leadership in adopting Portland's 2015 Fossil Fuel Resolution, which outlines risks and impacts from transport of fossil fuels on public health and safety, air and water quality, and economic development. These impacts are carried to communities across our region by rail and barge lines, and I share the City of Portland's concerns.

I want to thank you for your current efforts to develop and adopt policies and codes to implement the city's Fossil Fuel Resolution. Your action in Portland will benefit communities facing impacts from increased movement of coal and oil by rail and barge, and will stand as a model for other local governments considering policy and code updates to condition fossil fuel infrastructure.

Thank you for your leadership on this important issue.

Sincerely,

Dow Constantine

PORTLAND, OREGON

OFFICIAL MINUTES

[Excerpt Council Meeting November 16, 2016. Item 1281]

A REGULAR MEETING OF THE COUNCIL OF THE CITY OF PORTLAND, OREGON WAS HELD THIS **16TH DAY OF NOVEMBER, 2016** AT 9:30 A.M.

THOSE PRESENT WERE: Mayor Hales, Presiding; Commissioners Fritz and Novick, 3.

OFFICERS IN ATTENDANCE: Susan Parsons, Acting Clerk of the Council; Ben Walters, Chief Deputy City Attorney; and Jason King and Mike Cohen, Sergeants at Arms.

The Consent Agenda was rescheduled to November 17, 2016.

		Disposition:
	COMMUNICATIONS	
1260	Request of Chet Orloff to address Council regarding Forest Park (Communication)	**PLACED ON FILE**
1261	Request of Phyllis Reynolds to address Council regarding Forest Park (Communication)	**PLACED ON FILE**
1262	Request of George Milne to address Council regarding the liability of interfacing hikers and bicycles on the trails in Forest Park (Communication)	**PLACED ON FILE**
1263	Request of Barbara Dugan to address Council regarding dangers to senior citizens if single track cycling is allowed to occur on pedestrian only trails in Forest Park (Communication)	**PLACED ON FILE**
1264	Request of Alex Schay to address Council regarding dangers to people with disabilities if single track cycling is allowed to occur on pedestrian only trails in Forest Park (Communication)	**PLACED ON FILE**
	TIMES CERTAIN	
1265	**TIME CERTAIN: 9:45 AM –** Accept findings of the South Portal Partnership Plan Project pertaining to proposed changes to roadway alignments of SW Bond Ave, SW Moody Ave, SW Hamilton St, SW Hamilton Ct, SW Lowell St, and SW Thomas St, and direct implementation of a plan to fund, design and construct remaining South Waterfront street connections (Resolution introduced by Commissioner Novick) 1 hour requested	[Council Work Session to be held Nov 28 at 11am] **CONTINUED TO DECEMBER 7, 2016 At 9:30 AM**

	CONSENT AGENDA – NO DISCUSSION	
	Mayor Charlie Hales	
	Bureau of Police	
1266	Ratify an amendment to the collective bargaining agreement between the City and the Portland Police Commanding Officers Association to make PPCOA Labor Agreement Article 33 consistent with Human Resources Administrative Rule 8.03 (Ordinance) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM	**PASSED TO SECOND READING NOVEMBER 23, 2016 AT 9:30 AM**
***1267**	Authorize an Intergovernmental Agreement with the Multnomah County District Attorney to partially fund the cost of employing three full-time equivalent District Attorney investigators not to exceed $265,405 (Ordinance) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188087**
1268	Amend an Intergovernmental Agreement with Multnomah County for the Sex Buyers Accountability and Diversion Program (Second Reading 1233; amend Contract No. 30002122) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188088**
	Fire & Police Disability and Retirement	
***1269**	Amend the Fire and Police Disability, Retirement and Death Benefit Plan in order to comply with an arbitration decision regarding final pay calculation for members of Portland Firefighters Association and Portland Police Commanding Officers Association (Ordinance) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188089**
	Office of Management and Finance	
***1270**	Pay claim of Randall Cummings in the sum of $6,554 involving the Portland Police Bureau (Ordinance) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188090**
***1271**	Authorize leasing of commercial office space at non-City owned buildings to temporarily relocate business operations during the Portland Building Reconstruction project (Ordinance) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188098**
***1272**	Authorize a lease extension with Oregon Pacific Investment & Development Company for the Bureau of Fire and Police Disability and Retirement office space at 1800 SW First Ave, Suite 450, commonly known as the Harrison Square Building through October 31, 2020 for approximately $205,000 annually (Ordinance) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM	**CONTINUED TO DECEMBER 7, 2016 AT 9:30 AM**

1273	Extend term of a franchise granted to MCI Metro Access Transmission Services, Inc. to build and operate telecommunication facilities within City streets (Second Reading Agenda 1238; amend Ordinance No. 169230) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188091**
1274	Extend term of a franchise granted to Electric Lightwave, Inc. to build and operate telecommunication facilities within City streets (Second Reading Agenda 1239; amend Ordinance No. 170283) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188092**
1275	Extend term of a franchise granted to McLeodUSA Telecommunications Services, Inc. to build and operate telecommunication facilities within City streets (Second Reading 1240; amend Ordinance No. 175061) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188093**
1276	Extend term of a franchise granted to XO Communications Services, LLC to build and operate telecommunications facilities within City streets (Second Reading Agenda 1241; amend Ordinance No. 175062) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188094**
	Commissioner Steve Novick **Bureau of Transportation**	
***1277**	Authorize the Bureau of Transportation to execute a temporary easement with Oregon Health Science University as part of the SW Bond Avenue Project (Ordinance) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188095**
***1278**	Authorize an Intergovernmental Agreement between the Bureau of Transportation and TriMet for the review and inspection of proposed improvements at the SW Bond Ave and SW Porter St intersection (Ordinance) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188096**
	Commissioner Nick Fish **Bureau of Environmental Services**	
1279	Authorize the Bureau of Environmental Services to execute an easement with TriMet as part of the Portland to Milwaukie Light Rail: SE Powell Boulevard/16th Avenue Storm Sewer Project No. E10060 (Ordinance) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM	**PASSED TO SECOND READING NOVEMBER 23, 2016 AT 9:30 AM**

1280	Authorize an Intergovernmental Agreement with Home Forward to allow the Percent for Green Program to fund the construction of a green street facility as part of Home Forward's construction project at St. Francis Apartments at SE 11th Ave., SE 12th Ave,. SE Stark St. in the amount of $113,936 (Second Reading Agenda 1243) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188097**
	REGULAR AGENDA	
	Mayor Charlie Hales	
	Bureau of Planning & Sustainability	
1281	Restrict bulk fossil fuel terminals (Previous Agenda 1259; amend Title 33, Planning and Zoning) 1 hour requested **Motion to accept amendments 1-6, and 8 as prepared by City staff November 16, 2016 and modify paragraph a of amendment 6 to prohibit the storage of coal:** Moved by Hales and seconded by Novick. (Y-3)	**PASSED TO SECOND READING AS AMENDED DECEMBER 8, 2016 AT 2:00 PM**
	Commissioner Steve Novick	
	Bureau of Emergency Management	
***1282**	Authorize an Intergovernmental Agreement with eligible parties for the Sharing of Emergency Operations Center Personnel within the Greater Portland Metropolitan Region when personnel are unable to get to their normal reporting location (Ordinance) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188099**
	Bureau of Transportation	
1283	Authorize the Bureau of Transportation to allocate $500,000 to the Portland Parks Foundation for construction of the Footbridge Over Burnside (Ordinance)	**PASSED TO SECOND READING NOVEMBER 23, 2016 AT 9:30 AM**
1284	Make administrative changes to Motor Vehicle Fuel Tax Code for more efficient implementation of the Street Repair and Traffic Safety Program (Second Reading Agenda 1254; amend Code Chapter 17.105) (Y-3)	**188086**
	Commissioner Amanda Fritz	
	Portland Parks & Recreation	
1285	Amend provisions relating to possession of cannabis in parks to conform to State law (Ordinance; amend Code Section 20.12.040) 10 minutes requested **Motion to replace "marijuana" with "cannabis":** Moved by Fritz. Housekeeping motion. No vote taken.	**PASSED TO SECOND READING AS AMENDED NOVEMBER 23, 2016 AT 9:30 AM**

*1286	Authorize a competitive solicitation and contract with the lowest responsive and responsible bidder for construction of the Colonel Summers Park Splash Pad and Portland Loo Installation Project (Ordinance) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188100**
*1287	Amend contract with DAO Architecture, LLC in the amount of $3,500 to complete work on the Colonel Summers Park gate design (Ordinance; amend Contract No. 30004821) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188101**
*1288	Designate and assign the Mt. Tabor Annex from Portland Parks & Recreation to the Portland Housing Bureau for development of affordable housing and transfer $1,200,000 to Parks Memorial Fund (Ordinance) RESCHEDULED TO NOVEMBER 17, 2016 AT 2:00 PM (Y-4)	**188102**
	Commissioner Nick Fish **Water Bureau**	
1289	Authorize a contract and provide payment for the construction of the Sandy River Engineered Log Jam Placement Project at an estimated cost of $2,300,000 (Ordinance)	**PASSED TO SECOND READING NOVEMBER 23, 2016 AT 9:30 AM**

At 12:41 p.m., Council recessed.

Excerpt, Item 1281.

This file was produced through the closed captioning process for the televised City Council broadcast and should not be considered a verbatim transcript.
Key: ***** means unidentified speaker.

NOVEMBER 16, 2016 9:30 AM Session

11:15 a.m. Meeting continued:
Hales: We're going to get back to work here and move on to item 1281.
Item 1281.
Hales: Thank you so we had an excellent hearing on this proposal last week, we have people signed up that did not get to speak and we have a lot of interest in the room on continuing this discussion. Let me suggest a way we may move through this fairly quickly. I'm going to call staff up to walk through the amendments and we have a work sheet in front of the council that has those potential -- the amendments put on the table last week plus additional ones based on testimony and we'll identify those by number and content. Thank you.
Tom Armstrong, Bureau of Planning and Sustainability: Tom Armstrong with bps. As you said at last week's hearing there were four amendments put on the table that were corrections and clarifications as well as additional directions to staff for are follow-up in three years to see how things are going as well as following up on the seismic upgrades of storage tanks. Based on the testimony from last week's hearing council expressed an interest in looking at four additional amendments which we have before you today. The first one amendment number 5 was in response to testimony by the working waterfront coalition to add clarify the description of what we meant by storage capacity to make sure it's clear that it's storage tank capacity, so we have prepared a code amendment to make that clarification. Six and seven were sort of the conversation we got into around whether or not to allow for a 10% expansion with seismic replacement of storage tanks or if we did not do that would we want to consider allowing an expansion for fuel blending that is needed to comply with the state clean fuels program. So that's what amendment 6 and 7 are. Based on the outcome of 6 and 7 we have a revised ordinance in finding for you to adopt to support those amendments.
Hales: Want to make sure council questions about any of those but I'm prepared to make a motion to take a group of those as a package. See if we -- an agreement about that. If not, we can unbundle them.
Fritz: I appreciate that I need some clarification on amendment 5.
Armstrong: Yes.
Fritz: It looks like 33.114.100. b1 we're still adding the 10%'.
Armstrong: Yes. It's a sequence of amendments as you go through and so if you look at amendments 6 and 7 you will see the words tank has been included in there because we assume that was a straightforward amendment and would be made. You amended you recommended the draft in 5 to add tank. When you decide 6 and 7, that changes those will change depending on which outcome how the 10% is applied or taken away. So they build on each other.
Fritz: I don't see where we're saying it's not 10% more.
Hales: She's looking at 33.141.007.1 where there's still a mention of 10%.
Armstrong: Under amendment 6 or under amendment 7 --
Fritz: Under 7.
Armstrong: Right. There's two options under 7. One is to option 1 is allow 10% expansion

for seismic and fuel blending. Option 2, to allow it only for fuel blending.
Hales: But if we adopted amendment 6 those words would disappear from that subsection?
Armstrong: Well -- it depends on what you -- which outcome you want. If you want to allow no expansion, you adopt number 6 and reject number 7.
Hales: But then the words she's reading in that subsection, 10% --
Armstrong: Never comes up. You have not adopted amendment 7.
Fritz: So we're not giving any extra for blended we're just saying.
Armstrong: If you say no to amendment 7 there would be no extra expansion for that.
Fritz: That's where I'm confused. Usually when we have amendments I'm ready to say yes to everything so you're just directing me to which ones you want to say no to.
Hales: Here's what I --
Armstrong: At the top of the cheat sheet is which outcome you want.
Hales: This is what -- suppose we keep track of this so the public can I want to make a motion to adopt a package of amendments including the first four, that is amendment 1 that clarifies the truck only terminals are not bulk fossil fuel terminals. Number 2, clarifies that fuel storage for airports and marine servicing facilities and railyards, filling stations for trains, planes and ships are not fossil fuel terminals. 3 clarifies our definition that non fuel petroleum based products like asphalt and lubricants won't get burned and put into the atmosphere those are not fossil fuel, bulk fossil fuel facilities. The fourth, requiring some follow-up actions from council next year. Those have not changed and those are included in my package. Is also want to include amendment 5 that does this clarification about storage tank capacity. Amendment 6, which deletes the 10% expansion and I'm not going to include number 7. It includes number 8 which revises the findings. Here's my rationale. Let me see if there's a second.
Fritz: Second.
Hales: One, we heard very compelling testimony from the advocates for this policy that we should be totally clear that we're not interested in incremental expansion and we also heard testimony from the fossil fuel industry that the hopes for result of that provision which staff was trying to be practical about was not going to happen. That is, it's not a sufficient incentive of itself to cause people to make seismic improvements. We deem to deal with the issue of seismic improvements whether by changing the state building code or by some other means but we're not going to get it done with an incentive. So including an incentive is not a good bargain for anyone and I don't think we should take that approach. That's the rationale behind this approach. If we're comfortable with that we can act on it and then see if any folks are still interested in testifying or ready to go home or whatever they want to do.
Fritz: I think we hear testimony.
Hales: Let's give the people signed up last week a chance to do so then see if we can proceed.
Fritz: Be aware the amendments on the table so if your fine with them then just pass and that continues the vote.
Hales: If you still want to speak, if you think we still don't have it right, don't hold back.
Hales: Got your first three.
Bob Sallinger: Good morning, I'm bob Sallinger, conservation director for the Audubon society. I was going to testify this morning in taking the 10% off the table, keeping it off without any additional changes. I appreciate your comments already this morning. That's huge. It eliminates a real loophole and something you have talked about how you want this to be replicable in other places. It's great that's out of there. That is the kind of thing that gets replicated. It's also a thing that once it's in there becomes an entitlement, hard to get

back out. Congratulations on that decision already. This is truly an historic moment, exciting to Audubon in part because it restores the kinds of progressive visionary leadership which Portland is known for. Sometimes I feel like we have gotten preventing really bad things happening but not necessarily leading the way. This restores that kind of role so it's an exciting moment. I think it's that kind of visionary leadership Portland is known for nationwide. The only thing I'll say is I hope we go to Salem and pass legislation to make fossil fuel companies do the upgrades they should have done decades ago. It's absolutely reprehensible they have been sitting on a ticking time bomb for decades and they have known it. These are some of the most wealthy companies in the city, the state, the country and the world. They have the capacity of fixing these things with or without incentive and should have done it long ago. It's time to go down to Salem. I know a lot of folks would go with you to make sure it happens and happens soon. Thank you.
Marjorie Kirchner: Good morning. Marjorie kirchner from Oregon physicians for social responsibility has asked me to read her comments as she is unable to be here. Thank you, mayor and commissioners, for this opportunity to comment on groundbreaking zoning amendments that will protect our health and climate. Oregon physicians for social responsibility wholeheartedly supports amendment six and the mayors package. Thank you.
Hales: Thank you. Good morning.
Dan Serres: Dan serres, conservation director for Columbia river keeper. Thank you for your leadership on this. On the first issue bob has already said we agree with bob on 10%. Thank you for taking that up. On amendment 5 there's just two issues that lucked out. First is coal is not stored in tanks. So there's a potential problem there with adopting amendment 5, which is just something we might want to consider. Then the second piece of amendment 5 if it's meant to address pipe capacity in all likelihood because pipelines that aren't pertinent to a large fossil fuel facility if they are a big transmission pipeline they are likely already exempt because of federal preemption at least for natural gas pipelines so if that's a major concern amendment 5 may not be as necessary for addressing that piece if that's really where your focus is. So we strongly support amendment 6 and the amendments 1 through 4 as laid out. Thank you.
Hales: Thank you all very much. Others?
Hales: Good morning. We have three.
Hales: Micah, stand by. We'll get you next. Good morning.
Don Steinke: Good morning. I'm don Steinke from Vancouver, Washington. I'm not perfectly sure if all my concerns got addressed. Methane is a main component of natural gas. It has a very potent greenhouse effect. The epa has recently declared that methane concentrations in the air have gone up 30% and this increases coincided with leaks associated with fracking. We get most of our natural gas from frack wells in British Columbia, 12,000 of them. Maybe 100,000 in the Midwest. Fracking endangers the water and endangers our climate more. I believe natural gas is almost as bad as coal in terms of climate. Corporations are required to put shareholder value above the greater good. Once the pension funds and investment banks have built fossil fuel infrastructure they will demand return on investment for a life time. As of this month all gas stations in Russia are required to provide electric car charging stations at their own expense. The upper house in Germany has asked the European union to ban new cars that require diesel or gasoline by 2030 and Norway is planning to do that by 2025 and has already begun the transition with city vehicles, postal delivery trucks and school busses there is no fixed demand for anything. Demand is created by supply. The alternatives are here. The lease payments on my new electric car are only $130 a month. It won't use gasoline, biofuels, low carbon fuels. We don't need increased infrastructure for them or for blending. Keep your

ordinance strong. I support amendment 6. Come back in a month or two and consider having a new construction make charging outlets accessible to all occupants and new infrastructure thank you.
Hales: Good morning.
Paige Spence: Good morning, mayor hales and commissioners. I'm Paige Spence, the Oregon conservation network director at the Oregon league of conservation voters. Thank you for the opportunity to speak. I'm particularly grateful to city council for continuing to work on mitigating climate change in light of recent national elections which have us very fearful of environmental protection roll backs under the administration. Ocn is very grateful to the work that has gone into passing the resolution a year ago. First with regard to allowing for the 10% expansion we appreciate you looking at this to in order to limit the potential expansions and we support your proposed package of amendments mayor hales. Second I will ask that you eliminate the exemption for new facilities less than 10,000 gallons. We urge you not to include a blanket exception for facilities under 2 million gallons' fossil fuel demands should be declining as you all agree and we do not need and the amendments need not allow for new fossil fuel infrastructure. Third, please continue to reject northwest naturals efforts to be exempted. I'm exciting to see the positive results of this process and be a part of this transition away from fossil fuels. Thank you for all your work to make this possible. I want to thank outher groups. 350 Pdx, Portland Audubon, Columbia keeper, climate action coalition, friends of the Columbia gorge, Oregon physicians for social responsibility, the senate for sustainable economy, the Sierra club, oec and elcd. Tons of great work. Thank you.
Hales: Good morning.
Alona Steinke: My name is alona Steinke, a retired Rn from Vancouver I have asthma and I'm concerned that allowing any new terminals to be built would put more dangerous and polluting trains on the track. Increasing the number of unit trains not only would increase the likelihood of derailment, fire and explosion it also increases toxic and cancer causing air pollution from the four diesel locomotives that power each train. Senators Wyden and merkley and congressman Blumenauer have referred to Portland's air pollution as a public health emergency. In Vancouver in Clark county we have failed air quality standards and last year we came within one bad air day of being declared noncompliant. Our Columbia river is the second most endangered in the u.s. The haze in the gorge is the worst in the western united states. The city of Vancouver has an ordinance that only addresses oil. Now you're a real climate leader by adopting a more comprehensive ordinance. You have set an example for the cities of Vancouver, Hoquiam and Wattcom county. You have already captured international attention by your bold action. Canadian members of parliament Elizabeth may has also endorsed your resolution. Cities have to lead and you are leading us to a future where we have clean water and air that doesn't make us sick. A future safe for our children, our grandchildren and generations beyond. Thank you for supporting amendment 6.
Hales: Thank you all.
Hales: Good morning.
Micah Meskel: Thank you, council and mayor. My name is Micah Meskel I'm with the Audubon society of Portland, I was also a steering committee member for the natural hazard mitigation planning process and I looked at the terminals themselves. I appreciate the current set of amendments and would like to expand on pbems what the presentation last week that was given. I would like to make a couple of points. The vulnerability of the current infrastructure is a big deal. Most of that was put in place before building codes and it is a ticking time bomb. We think that bolsters argument to remove the 2-million-gallon threshold for new facilities. We think adding any new infrastructure to the cei hub is a big

mistake. Those new facilities are still vulnerable to explosions from the facilities that have not been upgraded. Because of the close proximity of that area and likelihood that it can all slosh into the river in the event of an earthquake. We think putting any new infrastructure there is only adding to that issue. Then one point jonna as a pbem staffer may have been reluctant to advocate on but I will as a committee member speak up to is the need for bds, fire and pbem to be adequately supported in the process of moving down to Salem to adjust the -- to look into proposals regarding building codes. They need proper staffing for that. They also need the political support of council. We think that's paramount in taking this process to actually looking at how we can really add safety to our community through requiring seismic upgrades.

Hales: Thank you very much. Good morning.

Mary Peveto: Thank you for this opportunity. My name is Mary Peveto and I'm here with neighbors for clean air to support mayor your package of amendments particularly 6 and 1 through 4 with also the consideration considerations for five already spoken to. In 2010 when we started to look at air toxicity it didn't take long to get to the tank farm on highway 30. There are seven companies, they operate eight terminals they include 586 storage tanks and have a total capacity of 300 million. They admit just the storage tanks sitting there emit 1394 tons annually of volatile debris and compounds. For us it's the embodiment of the disconnect between Portland ideals that have brought us to a 19% reduction in carbons emissions for 1990 standards and the state of our regulations which deal with the other 188 air pollutants which have only served to mimic federal regulations, antiquated federal regulations. This has put people in harm's way and are innovative and continue progressive residential infill in our cities and growth is just putting more people in harm's way. I have further testimony as the backdrop of obviously supporting I don't see any reason why we would be doing expansion. I think we have got to use every lever that we have to eliminate, to get rid of this dangerous juxtaposition. For its existing threat and for the future threat and catastrophic earthquake. I would also like this opportunity to put a plug into your group to empower your representatives on the cleaner air Oregon advisory committee Susan Anderson so that she can help us maximize the authority the state has through errors omissions regulatory jurisdiction to modernize, to do what they need to do, to meet the ideals of our 21st century sustainability Portland and growth goals.

Akash Singh: Good morning. I'm a student fellow at the institute of sustainable solutions and also in conjunction with neighbors for clean air. I am strongly in support of this entire proposal especially amendments 1 through 4 and number 6 in regards to coal and number 5. Last weekend an industry representative noted that he felt like he had been invited to a barbecue. It was darkly amusing that a man who is digging into the meat himself he imagined that he was part of the meet. Speaking as someone who is a part of that meat I cannot underscore for every individual who strives to make this world a more equitable place. A good chunk of that is in regards to environmental justice. It means protecting those around us from the effects of climate change we can protect everyone else. I believe today in part we can prove Portland has a reputation of being a liberal icon that is truly a beacon of leadership upon urban America. I choose to believe my elected city officials will stand with the basic scientific truth and existence of this planet for generations to come. I beseech you to listen to the voice of our communities. Our tribes list the critical danger that fossil fuels pose to their existence. We cannot afford to ignore their concerns. As was stated last week governor Barbara Walters is holding her 80th birthday this year. I hope you will make sure that we reduce or possibly eliminate our dependence on fossil fuels. Today I implore you to use your offices to protect the citizens that put you there, to protect the power bestowed upon you with their votes. I implore you to stand with the planet in its greatest time of need. Thank you.

Hales: Thank you all.
Peter Wilcox: Good morning. Thank you, mayor hales, other commissioners. Nice to see you. I'm captain peter Wilcox, president of the Columbia river keeper. I'm also a co-founder and owner of sequential biofuels which for 15 years has made certified biodiesel who for 15 years has made over 8 million gallons a year from recycled food processing oil. Fully reclaimed product. This is a clean and low carbon biodiesel which can turn even Volkswagen tdis into true green vehicles. We and Columbia river keeper and I can see no reasonable justification for the proposed 10% storage tank expansion and I'm glad to hear about amendment 6 and we're glad to support that amendment. Fossil fuel use has been flatter and declined for many years in Oregon and a central point of the policy we passed a while back was to make sure that continues and accelerates. The gradual market penetration of electric vehicles and increasing bio fuel mileage of newer vehicles will ensure this. Furthermore, there's a massive worldwide growth in the clean biofuels industry as well as a dirty biofuels industry that we have to be careful of including cost effective methods to make a biodiesel renewable diesel that can be used in absolutely any diesel engine seamlessly, without any blending. The blending issue is its on its way from technology standpoint and development in the field of bio based fuel and lubricants becoming less and less important as we move towards fuels that can be used without blending. That's already happening in diesel but it's going to happen in the gas arena as well. They are now making bio based fuels and lubricants around the world from cellulosic waste and the big prize is algae. Of course we have a global explosion of algae and a overproduction of algae around the world. Oceans because of warming will create an opportunity to make an awful lot of bio based fuels in the future. One of the most important aspects of the new fossil fuel policy is as the first example anywhere is that it will be utilized as you said as a template around your world, around the country for policy and so we want to make sure the policy is the best one possible. I think you're now on track to do that so I support that. Thank you for your time.
Hales: Thank you very much. Good morning.
*****:** I will defer to Ms. Weber.
Patricia Weber: Well, thank you. Good morning. I'm Patricia weber. I would like to thank you for allowing me to testify. I strongly support amendment 6 and urge you to adopt it. The reason is simple. Seismic upgrades of buildings and other facilities is not under the purview of land use code planning provisioning; they are regulated by building codes therefore it is not appropriate for the zoning code to be amended to incent seismic upgrades. My professional background includes working for over 20 years as a licensed professional engineer in Oregon as well as ten years in the land use planning profession. My experience is working as a private sector consultant though I have sat on both sides of the desk, so to speak. The purpose of land use planning is to develop vibrant and sustainable communities in a way that meets policies of the comprehensive plan. Beyond that regulations that apply are developed to promote capability between properties and their neighbors. Factors such as basic site design, impacts on traffic, parking, odors, so on are to be considered. Land use planning regulations traditionally stop at the exterior of the building or facility. Given the testimony that you received indicating that a 10% incentive would be ineffective testimony that jibes with everything in my professional experience and that the public testimony overwhelmingly rejects the 10% expansion, the appropriate mechanism by which to address seismic resiliency is through pbm and the state building codes division.
Ted Gleichman: Good morning. Ted Gleichman today representing the Oregon sierra club. I gave copies of my testimony to the council staff. Also in collaboration with Gregory Monahan, who spoke with you last week right after the amazing teenagers.

Hales: Tough act to follow.
Gleichman: Exactly. On the other hand, as grandparents, Gregory and I and a huge percentage of the membership of sierra club feel strongly about the opportunities for everybody's grandchildren going forward and we really appreciate all the work you've put in. So what I have provided you with is the three open letters that we prepared, one last week submitted as testimony in writing, then one today focusing on looking into 2017 and beyond. The continuous improvement challenge for these issues. We of course associate ourselves with all the comments you've heard so far. I knew that engineer weber would provide us with an excellent assessment of the fact that there's really no true connection between seismic upgrades and fossil fuels use. It's a difficult and complex issue but you are experts on what's coming with the earthquake. So I know that this is an issue that is going to go well into the future. Beyond the direct really first rate work that you're doing right now. So three quick points from today's proceedings it's standard for agencies, I worked in municipal government for a long time to see things in a policy framework. The word emergency is not used often enough in this situation because it's generally such a slow motion catastrophe in terms of climate change, the earthquake is an emergency the likes of which none of us has ever seen and won't see it until we see it, then the new one that I referenced in my testimony, 2017 federal energy policy which as we know and was commented on at length will be disastrous. I think as you're working with community stakeholders referencing this triple catastrophe set of emergencies is very helpful. Second, business as usual versus responsibility for just transition is very difficult for all of us. We're creatures of habit. I would urge you to think about that systematically going forward, especially with large enterprises and other stakeholders. Finally, bps and psc have done amazing work. I want to make life slightly more difficult for director Anderson by proposing as the third item, amendment 4, the three-year report back, I would suggest should be looked at as a milestone, not a solution. And there's no reason, for example, that every building permit pulled in relationship to fossil fuels could not be posted. In a notification structure I get notifications every time there's a crash on the sunset highway. Once in a great while that matters a great deal to me. Same sort of modern tool structure could be used to improve the basic communication practices. Thank you.
Hales: Good suggestions. Thank you.
Charles Johnson: I want to thank the city for -- for the record Charles Johnson, Oregonians for food and shelter sanity, a very different than organization than Oregonians for food and shelter. I think that we have talked about 10% incentive cap is not going to work. What we have before us is pretty good. If the amendment with the three-year report that passes we don't need to change it here but in general terms I'm addressing only one of you that's going to be here in two months let alone two years, but when we restrict other people we should also talk about doing our best. So we also need to know how well the city is moving from fossil fuel powered vehicles to zero emissions vehicles. So it won't be part of Charlie hales' legacy but the city should look to codify ways that we are working to wean ourselves off the poison is that fossil fuels. People talked about being able to lease an electric car, zero emissions vehicle, for under $140 a month. In Portland we want to make sure the state holds governor brown to the highest standards, better than in regard to nestle bottled water in the gorge that we move to the electricity that's powering these cars is the cleanest possible energy, not coal based. Some concern about hydro, grow wind and solar. When you pass amendment 4 and we report back I hope that everyone will keep in the discussion our own personal responsibility to match what we impose on that stinking fossil fuels industry.
Jonah Majure: I work on sauvie islands. Honestly, you three are going to be dead by the time climate change starts to impact my generation. Even with no new infrastructure even

with the Paris agreements we're still going to face an absolute climate catastrophe, especially in the global south. We'll see a lot of climate refugees coming here because of that. Unfortunately, clean fuels is something we're talking about today and that has actually made it easier for frack sources of fuel like gas and bachin oil to come into our city, our state, and I don't really think that's something we should even be talking about today. I don't really see why we're fooling ourselves about just a 10% expansion if Donald trump is going to be president we're going to see massive amounts of extraction even after the Obama administration has increased extraction across the country. He's president entirely because democrats and liberals weren't progressive enough, not standing up for social justice, for environmental justice. Honestly I'm seeing a pretty different response here today than we saw just a few weeks ago during the police contract vote. I think that really shows the kind of privileges that the environmental community is afforded. Who are the police unions going to listen to when the vast majority supported trump and many police officers supported trump? They have all the military gear built up by not only you all but the Obama administration. Now we're seeing them cracking down on protesters, instead of actually investigating hate crimes and systemic violence. What we need to be doing is focusing on our rights to protest, our rights to fight for a livable future for everybody. Since we're here because of the shell no protest that you all cracked down on a year ago it's really important to recognize there's always a time for protests. We need to be going to actually dismantle all the fossil fuel infrastructure we have as quickly as possible by creating a just transition for workers, for people in our communities who have been disenfranchised by the fossil fuel economy. Making sure they have unionized jobs, safe energy, safe transit and safe agriculture. Most importantly we need to make sure that we're continuing to listen to tribes. Those who are living here on unseeded lands we need to make sure we recognize all of the treaties and needs of the indigenous peoples of this area. I really don't think the city has been doing that. Now is the time for local and state governments to be using all the tools in the tool box whether it's eminent domain or mutual aid to make sure we're able to resist a trump presidency and increased extraction from the systems that created trump. Thanks.

Hales: Thank you. Good morning.

Lightning: Good morning. I'm lightning. I represent lightning watchdog pdx. If we continue to incentivize fossil fuel industry and they are going to continue to make a tremendous amount of profits they are going to continue to do what they are doing, we need to again focus on a carbon tax. We need to have an understanding that they have a hidden subsidy of about 5.3 trillion per year. The incentives to do fossil fuels is so great right now they are going to continue to do it. One of the issues I see along the riverfront we had the superfund cleanup there. We need to remove these storage tanks off the river. We need to understand they don't need to be there. They should have never been placed there. We need to work with these companies and consider somehow, some way to buy them out and get them out of there. We're not doing that. We know if there's a major earthquake we'll have serious problems. We already have a superfund cleanup that in my estimate will go over 10 billion. Everybody wants to talk 800 million. You're in fantasy land. The amount of money it will cost to clean this river is so great we need to remove those storage tanks from the rivers. Plain and simple, another issue that I have is that we need to keep understanding that we all talk about going electric vehicles. Well, elon musk is an intelligent individual. Very smart man, but the reality is he can tell you too it's going to take many, many, many years and he's building his battery storage facility one and he predicts to go out 10, 20, 30, 40 of those facilities. That's going to take many years before you go sustainable. The reality is we need to phase it in. The reality is we need to do a serious carbon tax. Reality is it's going to take tremendous amount of time but there should be

nothing on these rivers if we have a serious disaster that can flow contaminants into this river like we have done for the last 50-plus years that was allowed. We have to stop that now. Discontinue that now. Quit sitting there and going, well, we'll just keep you from expanding. That's not good enough for me. We need to talk to these companies and say what's it going to take for you to remove these tanks off the river? We already have a superfund cleanup in front of us. Now what are you going to do to us? As far as president-elect trump, get ready, Paris agreement, get ready, fracking. He's going to come in here in a whole different direction and you better get ready at this time.
Hales: Thank you all very much. I think that completes our signup sheet. We have a student here who we always make exceptions for students.
Hales: Yes. Come on up, please.
Hales: We began this hearing with students. It's appropriate you get the last word. Thanks for being here this morning.
Liel Voss: Dear mayor and commissioners. My name is liel. As more and more pipelines and trains and barges carry toxic coal, oil and gas to where it gets burned and animals and people are dying of the effects of global warming, you heard a lot of kids speak last time to stop adding more fossil fuels. I know you might think we are just kids who don't understand all the decisions and details that adults have to make, but think about who might be wiser here. Kids who have everything to lose in this world or the adults who got us in this mess in the first place. We waited too long already. We need to stop using fossil fuels as quickly as possible. Please vote for no building new tanks or pipelines or anything that carries fossil fuels for any reason. Please, please listen to us and vote for the strongest law you can. Thank you.
Hales: Thank you. We make exceptions -- [applause] before we take action on the amendments I do want to clarify the issue that came up about amendment 5. That is does it properly cover the potential for a coal terminal here which is obviously something we were trying to make sure we didn't have happen. I understand that existing language may do the job but let's get that on the record and clarify that.
Armstrong: So under the language and we looked at it in response to that testimony, it would be possible for an existing fossil fuel facility to store coal. You could not have a new one come in, but if an existing tank farm wanted to start to remove tanks and have piles of coal on it, they could. Those existing facilities are from two to 40 acres so much smaller in site size than what we see in terms of the proposals for coal terminals elsewhere. But it would be limited -- the opportunity there is limited to the existing terminal under the current language.
Hales: It's not our intent to allow conversion of oil facilities to coal facilities. I'm certain of that. So is the use of the word tank sufficient to ensure that, that won't happen or do we need to add language?
Armstrong: I would recommend that you actually look at amendment 6 which is where you were headed, and that to paragraph a, you just add a phrase at the end there, a new sentence that says storage of coal is prohibited.
Hales: So moved.
Fritz: Second.
Hales: We'll further amend 6 to include that provision.
Fritz: The concern about pipes and if you had a big enough pipe you could essentially be moving more oil through.
Armstrong: In terms of turnover.
Fritz: Yes.
Armstrong: You know, I think they brought up in testimony that the pipeline regulations tend to be more in the federal realm, and at least right now the city and bds, we don't really

regulate the amount of throughput. It's an issue we heard at the psc, and I guess it was beyond what we were looking at through this project in terms of is it a bigger pipe or how much turnover or throughput comes through these facilities. The pipe is -- it would represent a major investment to rebuild and expand the pipeline from Puget sound down to Portland and from Portland to Eugene. There would be a whole bunch of federal permitting involved as part of that process.
Hales: Again in term of there was some good testimony today about this is our zoning code, this is about that piece of land and that piece of land, so it's not the right tool to affect the pipeline issue. We may or may not have adequate state or federal regulation but it wouldn't be in this part of the law.
Fritz: So that's something we may want to look at again thinking of the Pembina proposal. I wouldn't like to just not storage it's just not a big enough pipe and loading stuff directly onto ships maybe we can consider that in our process. Thank you.
Hales: Other questions? Let's take a vote on the amendments package. Sorry as further amended by our last amendment about the coal issue. Sorry.
Novick: Appreciate all the testimony and the mayor's efforts. Aye.
Fritz: Once again I'm very proud of our community, I'm very proud to be one of your commissioners to do this partnership. Thank you for the bureau of planning and sustainability director Anderson and all the folks who worked very hard on this. We're not done. We have to continue looking for ways that we can support our planet, support our community, make sure things are safe and we move as quickly as possible to renewable energy. I was struck by the Leah talking about it's our generation that has passed on many of these big problems and I'm thinking back to where we stopped using hairspray and banned Styrofoam which was at the time thought to be avant-garde and do the trick. Obviously we know that's not the case let's make many more changes in our lifestyles, we expect many more changes in our lifestyles as well as our approaches. Thank you, mayor, for leading this. I'm very appreciative of the amount of time you have put into this work. Aye.
Hales: Let me start with some thank yous. Elected leadership matters and I'm proud of ours but having excellent public administrators and staff matters as well. If it weren't for Susan Anderson and Michael Armstrong and tom Armstrong we wouldn't be where Portland is today. Susan has been an author of many of our path-breaking policies and her team turned it into real work that then become law and shapers of our city. I commend you all. Zach Klonoski on my staff has been a fervent advocate for this and other environmental policies. I know this is a great day for you, Zach. Thank you for your work. Let me say a little bit about democracy and Portland's role. We sometimes have people come to this chamber and say, we don't have a voice. That bothers us because we believe people should. Then we have actions like this one where we put something on the table, we developed it to a point we think is right, then the community comes in and says here's how to make it better. That happens in this discussion last week and this week about the 10% threshold or allowance and it happened just today in this fine point about are we really sure we have outlawed coal facilities. I hope you feel affirmed. I always do when the community comes in and helps do it right. At a time when we're worried about democracy, it's still here in Portland. Thank you for being part of that. Thank you to 350 pdx, river keepers, Audubon, all the others who have brought people here as community members to make the case. Secondly, I'm very proud that in the last part of my work in this city I will go from having been a dark brown haired city commissioner adopting the first climate action plan to being the guy I am today doing this, but also that at a time when we're really worried about will cities still be able to lead we'll be able to show that cities do lead. In fact, I will get to carry the message of this action first to the c40 conference in Mexico City,

where I think our fellow city leaders from around the world are going to be wondering are united states cities still in this. We are still in it. United states cities that are climate action committees are still in this. We will continue and accelerate the work at the local and partnership level even if we don't have a responsible partner at the federal level and they need to hear that. All those cities, rio, sao Paolo, all the other 83 cities of the c40 network need to know that we're still in. We're still responsible, still moving forward. Those are nice words but this will prove that that's true. That's enormously helpful to the credibility of this movement. I started a tradition last year of having all the west coast mayors talk about a couple of issues at the time. We're going to get together in December. I hope mayor wheeler when he takes office continues this tradition. Obviously this issue is going to be on the table because we have cities up and down this coast that share our belief in the critical importance of climate action at the city level and the ability to work together. There has been a lot of talk about walls lately. I hope that those cities work together to build a green wall along this part of the united states' border that changes what we do and how we live but also changes the world. So thank you all. Proud day for Portland, for me personally. A proud day for all of us who advocate for doing the right thing. Aye. Thank you very much. [applause] thank you all very much.
Fritz: Let the record show that was a standing ovation.
Hales: We're going to take a recess. I want to thank this young lady here.
[end of excerpt]

Fossil Fuel Terminal Zoning Amendments

City Council Public Hearing
November 16, 2016

Bureau of Planning and Sustainability
Innovation. Collaboration. Practical Solutions.

Proposed zoning code amendments

- **Define** Bulk Fossil Fuel Terminals as a regulated land use.
- **Prohibit** Bulk Fossil Fuel Terminals in all base zones.
- Existing Bulk Fossil Fuel Terminals would become limited uses that can continue to operate.

Proposed Amendments

Amendment #1 – Technical Correction to Exception #4 to clarify that truck only terminals are not Bulk Fossil Fuels Terminals.

Amendment #2 – Clarification to Exception #7 that fuel storage for airports, marine servicing facilities and rail yards are not Bulk Fossil Fuel Terminals.

Amendment #3 – Clarification of the Fossil Fuel definition by specifying that non-fuel petroleum-based products, such asphalt and lubricants, are not fossil fuels.

Proposed Amendments

Amendment #4 – Additional directions

d. The Bureau of Planning and Sustainability shall report to City Council no later than December 31, 2019 on the implementation of this ordinance.

e. City Bureaus, including BDS, PBEM and Fire, shall work with the State of Oregon to develop policy options to require seismic upgrades of storage tanks within a firm deadline for replacement of older, unsafe tanks.

Proposed Amendments

Amendment #5 – Change description of limited use to include reference to storage tank capacity.

Amendment #6 – Delete provision that allows for up to 10% expansion for seismic replacement of storage tanks.

Amendment #7 – Add provision that allows for up to 10% expansion for the exclusive storage of fuel that is blended to achieve compliance with the Clean Fuels Program.

Amendment #8 – Adopt revised Ordinance and Findings based on amendments.

Defining fossil fuel

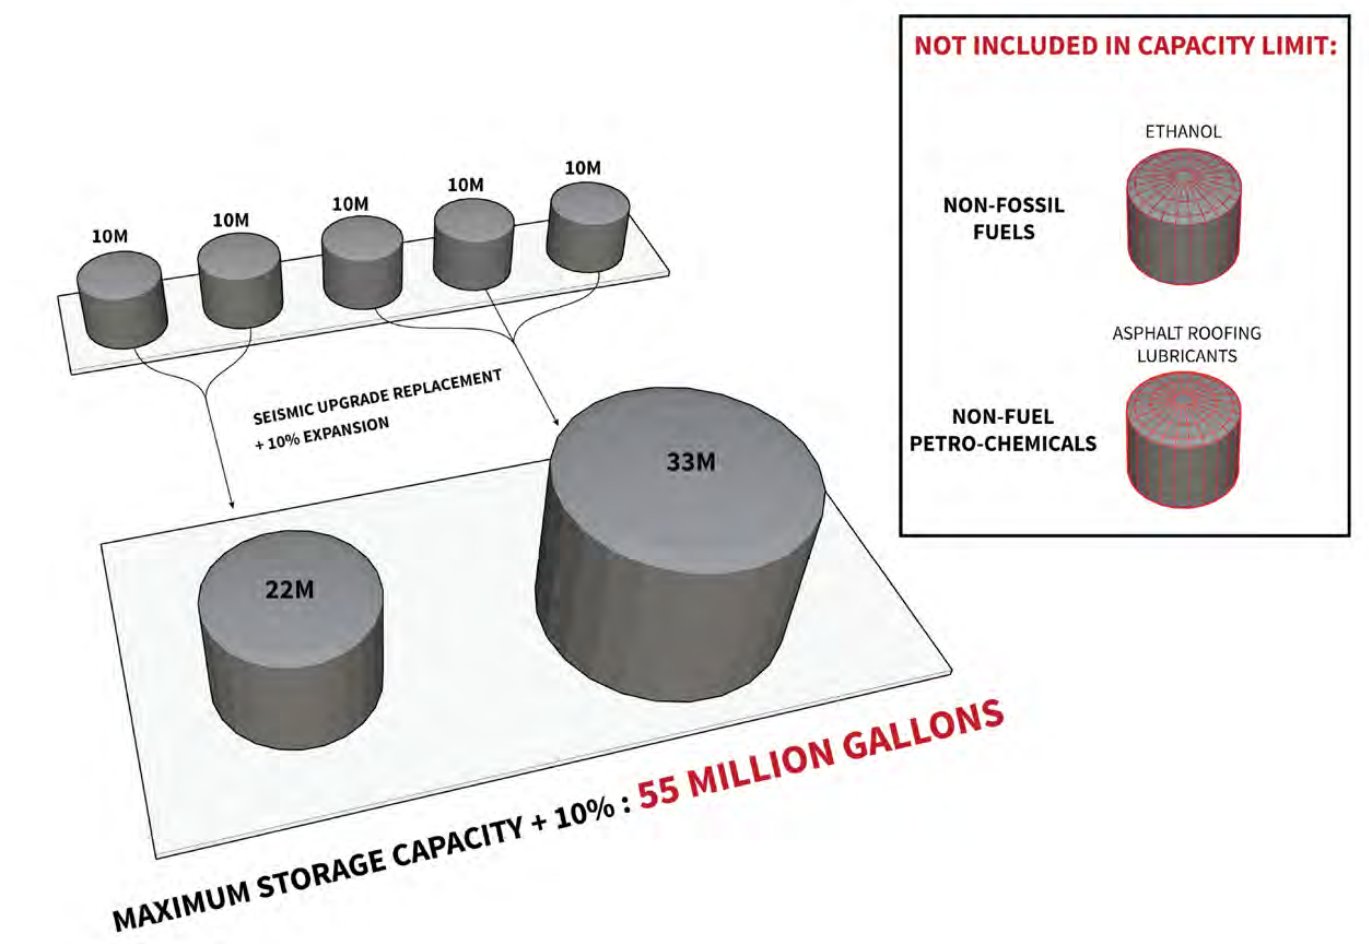
Fossil fuels are petroleum products (such as crude oil and gasoline), coal, methanol, and gaseous fuels (such as natural gas and propane) that are made from decayed plants and animals that lived millions of years ago and are used as a source of energy.

Exclusions: Denatured ethanol and similar fuel additives, biodiesel/renewable diesel with less than 5% fossil fuel content, and petroleum-based products used primarily for non-fuel uses such as asphalt, plastics, lubricants, fertilizer, roofing and paints.

New land use category:
Bulk Fossil Fuel Terminals

Bulk Fossil Fuel Terminals:

- Marine, railroad, or pipeline transport access; and
- Transloading facilities (such as train-to-ship) or storage capacity exceeding 2 million gallons.



Exclusions:

- Distributors with access exclusively by truck;
- End-user facilities, including filling stations and firms that store fossil fuels for use as an input;
- Airports, marine and rail servicing facilities.

Regulating existing terminals

- Limited Use
- Storage capacity expansion limited to 10 percent of current capacity.
- Replacement of existing tanks for seismic upgrade needed to expand
- No land use review for expansion
- Public notice and meeting required

Regulating existing terminals

Future code changes on seismic resilience

PBEM's 2016 Critical Energy Infrastructure Hub Study future actions.

Seismic safety requirements are addressed in state building codes.

Advocate for state-level code changes to improve seismic resilience and require seismic upgrades.

Council Amendments 11/16/16

188142

AMENDMENTS TO FOSSIL FUEL ZONING CODE (Nov 16, 2016)

Four alternatives for existing terminal expansions:

1. Recommendation (no change) – allow 10 percent expansion for seismic upgrades (No on amendments #6 and 7)
2. No expansion of storage tank capacity. (Yes on #6, No on #7)
3. Expansion only for fuel blending (Yes on #6 and #7)
4. Expansion allowed for seismic upgrades and fuel blending (No on #6 and Yes on #7)

Amendments	**Yes/No**
Title 33 code changes (Nov 10)	
Amendment #1 – Technical Correction to Exception #4 to clarify that truck only terminals are not Bulk Fossil Fuels Terminals.	
Amendment #2 – Changes to Exception #7 to clarify that fuel storage for airports, marine servicing facilities and rail yards are not Bulk Fossil Fuel Terminals.	
Amendment #3 – Clarifies the definition of Fossil Fuels by specifying that non-fuel petroleum-based products, such asphalt and lubricants, are not fossil fuels.	
Amendment to Ordinance (Nov 10)	
Amendment #4 – Provide additional direction for follow-up actions.	
Title 33 code changes (new)	
Amendment #5 (new) – Change description of limited use to include reference to storage tank capacity.	
Amendment #6 (new) – Delete provision that allows for up to 10% expansion for seismic replacement of storage tanks. *As amended to prohibit the storage of coal.*	
~~Amendment #7 (new) – Add provision that allows for up to 10% expansion for the exclusive storage of fuel that is blended to achieve compliance with the Clean Fuels Program.~~	
Amendment to Ordinance (new)	
Amendment #8 (new) – Adopt revised ordinance and findings based on amendments.	

Amendments to Recommended Title 33 code changes

Amendment #1 – Technical Correction to Exception #4 to clarify that truck only terminals are not Bulk Fossil Fuels Terminals.

33.920.300 Bulk Fossil Fuel Terminal

D. Exceptions.

1. Truck or marine freight terminals that do not store, transport or distribute fossil fuels are classified as Warehouse And Freight Movement uses.
2. Truck or marine freight terminals that do not have transloading facilities and have storage capacity of 2 million gallons or less are classified as Warehouse And Freight Movement uses. However, multiple fossil fuel facilities, each with 2 million gallons of fossil fuel storage capacity or less but cumulatively having a fossil fuel storage capacity in excess of 2 million gallons, located on separate parcels of land will be classified as a Bulk Fossil Fuel Terminal when two or more of the following factors are present:
   a. The facilities are located or will be located on one or more adjacent parcels of land. Adjacent includes separated by a shared right-of-way;
   b. The facilities share or will share operating facilities such as driveways, parking, piping, or storage facilities; or
   c. The facilities are owned or operated by a single parent partnership or corporation.
3. Gasoline stations and other retail sales of fossil fuels are not Bulk Fossil Fuel Terminals.
4. Distributors and wholesalers that receive and deliver fossil fuels exclusively by truck are not Bulk Fossil Fuel Terminals.
5. Industrial, commercial, institutional, and agricultural firms that exclusively store fossil fuel for use as an input are not Bulk Fossil Fuel Terminals.
6. Uses that involve the transfer or storage of solid or liquid wastes are classified as Waste-Related uses.

Amendment #2 – Changes to Exception #7 to clarify that fuel storage for airports, marine servicing facilities and rail yards are not Bulk Fossil Fuel Terminals.

7. The storage of fossil fuels for exclusive use at an airport, surface passenger terminal, marine, truck or air freight terminal, drydock, ship or barge servicing facility, rail yard, or as part of a fleet vehicle servicing facility are not Bulk Fossil Fuel Terminals.
8. Uses that recover or reprocess used petroleum products are not Bulk Fossil Fuel Terminals.

Amendment #3 – Clarifies the definition of Fossil Fuels by specifying that non-fuel petroleum-based products, such asphalt and lubricants, are not fossil fuels.

33.910.030 Definitions

The definition of words with specific meaning in the zoning code are as follows:

Fossil Fuel. Fossil fuels are petroleum products (such as crude oil and gasoline), coal, methanol, and gaseous fuels (such as natural gas and propane) that are made from decayed plants and animals that lived millions of years ago and are used as a source of energy. Denatured ethanol and similar fuel additives with less than 5 percent fossil fuel content, biodiesel/renewable diesel with less than 5 percent fossil fuel content, and petroleum-based products used primarily for non-fuel uses (such as asphalt, plastics, lubricants, fertilizer, roofing and paints) are not fossil fuels.

Amendment to Ordinance

Amendment #4 – Provide additional direction for follow-up actions.

d. The Bureau of Planning and Sustainability shall report to City Council no later than December 31, 2019 on the implementation of this ordinance, including:
   1. the number and description of any requests by existing terminal operators to replace and expand their facilities;
   2. the number and description of building permits issued for fossil fuel tanks between 200,000 and 2 million gallons;
   3. the trends in fossil fuel energy use and non-fossil energy use in Oregon;
   4. the status of local and state regulatory proceedings that may improve seismic resilience of fossil fuel storage infrastructure; and
   5. information on compliance with the Oregon Clean Fuels Program.

e. City Bureaus, including BDS, PBEM and Fire, shall work with the State of Oregon to develop policy options to require seismic upgrades of storage tanks within a firm deadline for replacement of older, unsafe tanks.

Title 33 code changes (new)

Amendment #5 – Change description of limited use to include reference to storage tank capacity.

33.140.100 Primary Uses

A. No change

B. Limited uses.

17. Bulk Fossil Fuel Terminals. This regulation applies to all parts of Table 140-1 that have a [17].

    a. Existing Bulk Fossil Fuel Terminals. The following use limitations apply to existing Bulk Fossil Fuel Terminals:

       (1) Bulk Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site in storage tanks is limited to the fossil fuel storage tank capacity that existed on [insert effective date] plus 10 percent. Total fossil fuel storage tank capacity on the site in excess of the capacity that existed on [insert effective date] plus 10 percent is prohibited; and

(2) New fossil fuel storage tanks are prohibited unless a new fossil fuel storage tank is replacing an existing fossil fuel storage tank that does not meet current building code standards for seismic safety, and in that case, the capacity of the new fossil fuel storage tank is prohibited from being greater than the storage capacity of the existing tank that is being replaced plus 10 percent.

b. New Bulk Fossil Fuel Terminals are prohibited.

Amendment #6 – Delete provision that allows for up to 10% expansion for seismic replacement of storage tanks.

33.140.100 Primary Uses

A. No change

B. Limited uses.

17. Bulk Fossil Fuel Terminals. This regulation applies to all parts of Table 140-1 that have a [17].

a. Existing Bulk Fossil Fuel Terminals. Bulk Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site in storage tanks is limited to the fossil fuel storage tank capacity that existed on [insert effective date]. Total fossil fuel storage tank capacity on the site in excess of the capacity that existed on [insert effective date] is prohibited. The storage of coal is prohibited.

b. New Bulk Fossil Fuel Terminals are prohibited.

~~**Amendment #7** – Add provision that allows for up to 10% expansion for the exclusive storage of fuel that is blended to achieve compliance with the Clean Fuels Program.~~
~~Option #1 – 10% expansion for seismic replacement and fuel blending.~~
~~Option #2 – 10% expansion only for fuel blending.~~

~~Option #1 – 10% expansion for seismic replacement and fuel blending.~~

~~**33.140.100 Primary Uses**~~

~~**A. No change**~~

~~**B. Limited uses.**~~

~~17. Bulk Fossil Fuel Terminals. This regulation applies to all parts of Table 140-1 that have a [17].~~

~~a. Existing Bulk Fossil Fuel Terminals. The following use limitations apply to existing Bulk Fossil Fuel Terminals:~~

~~(1) Bulk Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site in storage tanks is limited to the fossil fuel storage tank capacity that existed on [insert effective date] plus 10 percent. Total fossil fuel storage tank capacity on the site in excess of the capacity that existed on [insert effective date] plus 10 percent is prohibited; and~~

~~(2) New fossil fuel storage tanks are prohibited unless:~~

- ~~The new fossil fuel storage tank is replacing an existing fossil fuel storage tank that does not meet current building code standards for seismic safety,~~

and in that case, the capacity of the new fossil fuel storage tank is prohibited from being greater than the storage capacity of the existing tank that is being replaced plus 10 percent; or

- The new fossil fuel storage tank is for the exclusive storage of fuel that is blended to achieve compliance with the Clean Fuels Program administered by the Oregon Department of Environmental Quality.

b. New Bulk Fossil Fuel Terminals are prohibited.

Option #2 – 10% expansion only for fuel blending.

33.140.100 Primary Uses

A. No change

B. Limited uses.

17. Bulk Fossil Fuel Terminals. This regulation applies to all parts of Table 140-1 that have a [17].

a. Bulk Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site in storage tanks is limited to the fossil fuel storage tank capacity that existed on [insert effective date]. An additional 10 percent of the total fossil fuel storage tank capacity that existed on [insert effective date] is allowed for the exclusive storage of fuel that is blended to achieve compliance with the Clean Fuels Program administered by the Oregon Department of Environmental Quality. Total fossil fuel storage tank capacity on the site in excess of the capacity that existed on [insert effective date] plus 10 percent is prohibited.

b. New Bulk Fossil Fuel Terminals are prohibited.

Amendment #8 – Adopt revised ordinance and findings based on amendments.

Version 1 – PSC recommendation with no change to 10% for seismic and added Council direction.
Version 2 – no 10% expansion.
Version 3 – 10% expansion for clean fuel blending.
Version 4 – 10% expansion for seismic replacement and clean fuel blending.

Parsons, Susan BUREAU TESTIMONY RECAP

From: Kountz, Steve
Sent: Tuesday, November 15, 2016 1:20 PM
To: Armstrong, Tom; Armstrong, Michael; Klonoski, Zach; Parsons, Susan
Subject: Nov. 15 update on fossil fuel zoning testimony

Since the last update I sent before the hearing last week, City Council has received 30 additional testimony emails on the fossil fuel terminal zoning amendments, including the 3 attached letters received on Thursday afternoon. The other 27 new emails generally followed the form-letter formats described in the examples I attached last week, calling for a "full ban" on new fossil fuel terminals and strengthened restrictions on expansion of existing terminals. Altogether, City Council has received 315 testimony emails on these zoning amendments to date.

TIDEWATER
TRANSPORTATION & TERMINALS

188142

November 10, 2016

Portland City Council
c/o- Council Clerk
1221 SW Fourth Avenue, Room 130
Portland, Oregon 97204

RE: City of Portland - Bureau of Planning and Sustainability
Recommended Draft Fossil Fuel Terminal Zoning Amendments

Thank you for the opportunity for Tidewater Barge Lines ("Tidewater") to provide comments regarding the draft zoning amendments that would restrict development and expansion of bulk fossil fuel terminals.

Tidewater is a marine transportation and terminal company based in the Pacific Northwest that employs approximately 275 people. Tidewater has been in business since 1932 and is the largest inland marine transportation company west of the Mississippi River with 16 tugboats, 170 barges and five marine terminals. Tidewater's vessels help to move millions of tons of freight every year on Pacific Northwest waterways, reducing congestion on the state's highways and railroads while producing far fewer pollutants and carbon emissions than trucks and trains transporting equivalent tonnage. Likewise, our industry's incident statistics and safety record show that the towing industry in the Pacific Northwest has one of the best programs for moving commodities securely and safely in the nation.

We have reviewed the proposed zoning changes and are concerned that these amendments will restrict economic development in the Pacific Northwest. We feel that energy terminals can be built, expanded and operated safely in the City of Portland. Energy terminals have the ability to create a positive economic impact and support new and existing family wage jobs in our region.

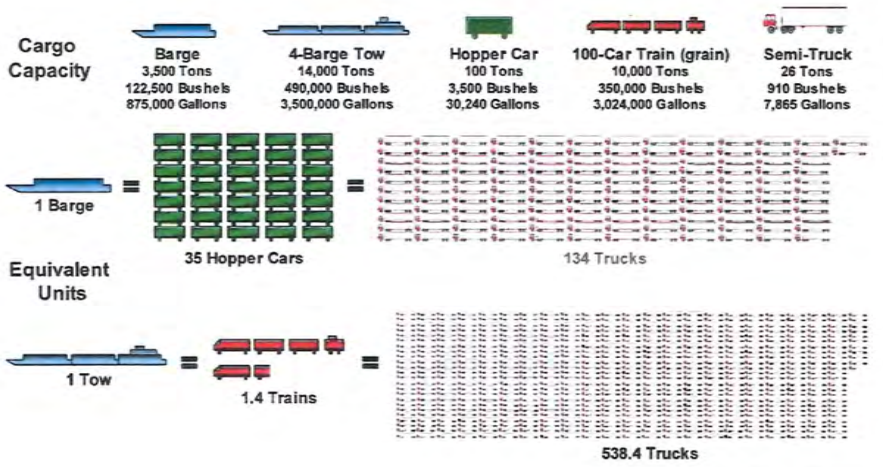
In addition, we have concerns that the proposed zoning changes will have negative environmental consequences to the Pacific Northwest. The proposed zoning changes create uncertainty about the future of energy terminals. These terminals are key to a fuel distribution network that allows Tidewater to supply fuel by barge from Portland to Eastern Oregon and Washington in an efficient and environmentally friendly matter. As noted in the enclosed document, four barges pushed by a tugboat is the equivalent of 538.5 trucks or 140 railcars that travel on the highways and railroads in our region. If these terminals cease operations, fuel will have to be distributed in other modes of transportation such as truck and railcar. Therefore, if barging is no longer a viable option for transporting fuel, then every four barge tow would be potentially replaced with 538.5 trucks or 140 rail cars travelling on the highways and railroads in the Columbia River Gorge.

6600 NW Old Lower River Road, Vancouver, WA 98660 • 360.693.1491 • www.tidewater.com

188142

In conclusion, Tidewater is an advocate for environmental stewardship in the Pacific Northwest and hopes the City of Portland will consider having a constructive dialogue with Tidewater and the other stakeholders to generate an implementable fossil fuel distribution policy that addresses climate change goals, public safety and environmental protection without significantly adversely impacting the viability of Oregon's economy and its waterfront industry. Tidewater urges the Portland City Council not to adopt these proposed fossil fuel terminal zoning amendments.

Thank you for your consideration and the opportunity to comment on this important matter.



Sincerely,

Robert A. Curcio
President & CEO

November 9, 2016

Portland City Council
1221 SW 4th Avenue
Portland, Oregon 97204

Dear Portland City Council:

Thank you for the opportunity to comment on the Fossil Fuel Terminal Zoning Amendments. Throughout this process, we have focused largely on how the City of Portland can move forward with this policy in a manner that avoids unintended consequences for our region and state. To that end, we appreciate that fuel storage for "end users", including Portland International Airport (PDX) and marine fuel suppliers, are specifically exempt from the provisions of the proposed amendments.

In the case of PDX, its important to note that aviation fuel isn't stored exclusively at PDX. Fuel farm facilities at PDX are owned and operated by the Portland Fueling Facilities Corporation (PFFC), a consortium of the airlines operating at PDX. PFFC tanks assume a three-day reserve. The distribution chain for aviation fuel is a long one – beginning at a refinery (where it becomes aviation fuel), then to a distributor (fuel farm in PDX), then to PFFC tanks, and finally to the air craft. Aviation fuel cannot be blended with other fuels, and is stored separate from other fuels handled by the distributor.

With growth in the aviation sector, fuel consumption is expected to increase by more than 50% by 2035 with a corresponding need for tank storage. The code amendments should make it clear that fuel storage for end users is exempt – regardless of where this fuel is stored within city limits. We understand this was the legislative intent, and appreciate Portland City Council considering an amendment that would make this clear for the sake of avoiding confusion in future scenarios.

Thank you again for this opportunity to comment on this clarifying amendment and build on our comments to date.

Sincerely,

Emerald Bogue
Regional Affairs Manager

Mission: To enhance the region's economy and quality of life by providing efficient cargo and air passenger access to national and global markets, and by promoting industrial development.

Comments to the Portland City Council on the Fossil Fuel Terminal Zoning Amendments Recommended by Portland Bureau of Planning and Sustainability - November 10, 2016

I am Dr. Theodora Tsongas, an environmental health scientist, and a member of the Environmental Health Working Group of Oregon Physicians for Social Responsibility and the Multnomah County Local Emergency Planning Committee. The Fossil Fuel Terminal Zoning code changes recommended by the Portland Bureau of Planning and Sustainability are well thought out. I commend PSC's restriction of aggregation of small fossil fuel terminals, and I commend PSC for rejecting a request by NW Natural to exempt its facilities from the fossil fuel code amendments.

But the recommended code changes still raise concerns about public safety and could pose a threat to our community and neighborhoods. We can do better to more fully reflect the city's Resolutions 37168 (the Fossil Fuel Policy Resolution), 37164 (the Oil Train Resolution), and the Climate Action Plan.

Please let me remind you of the fire that resulted from a collision of an oil tanker truck with an oil train. Unfortunately, the truck driver was killed. Fortunately, the train cars burned but did not explode. It was a very close call for nearby industries, workers and residents in NW Portland. In Mosier the derailed train cars burned for days and destroyed or disabled much of the town's water and sewer infrastructure, exposed residents and visitors to noxious smoke from the oil fires as well as causing major disruption in the life of the town. Accidents happen.

Let 's not increase the likelihood of an oil fire. We need to truly "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." This means actively discouraging increases in demand for fossil fuel unit trains in Portland.

If we look at the ten large oil facilities listed in Figure 7 of PSC's recommendation, and apply a 10% across- the-board increase in terminal capacity, that would result in additional storage of 39 million gallons of oil – a volume equivalent to roughly 13 unit trains of explosive Bakken crude oil.

Allowing a 10% increase in capacity will not discourage the development of fossil fuel infrastructure. We must allow for seismic and safety upgrades without increasing capacity, or we defeat the purpose of the resolutions and the Climate Action Plan.

Why take chances with our neighborhoods that are on the rail corridor? And let's not take a chance with the health and safety of our Linnton neighbors who live so close to the tanks.

And, let's truly take the lead in combating climate change by accelerating the decline of fossil fuel use and by redirecting our resources to the development and implementation of sustainable, clean energy sources. Let's continue the great work that you have begun!

Thank you for considering my comments.

Theodora Tsongas, PhD, MS
Portland, OR 97215

188142

From: jeremiah jenkins
To: BPS Fossil Fuel Zoning
Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Wednesday, November 16, 2016 1:00:30 PM

1. Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. We need NO new fossil fuel infrastructure.
2. Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.
3. Prevent NW Natural from getting a carve out. NW Natural wants to be exempted from this policy and we need to make sure the City Council does not add a last minute amendment on NW Natural's behalf.

TERRY PARKER
P.O. BOX 13503
PORTLAND, OREGON 97213-0503

Subject: Comments to the Portland City Council related to restricting the expansion of bulk fossil fuel terminals, November 16, 2016

The ordinance to restrict expansion of bulk fossil fuel terminals in Portland precisely parallels the logic as to why Donald Trump was elected the next President of the United States. The election was far less about drawing racial lines in the sand and far more of a referendum on the economy than progressives are willing to admit. The outcome of the election was a call for a change from status quo politics. The rallying cry came from blue collar workers and rural America against the dictatorial social engineering agenda by white majority elitists that are eliminating family wage industrial and related transportation jobs for people of all races - at the same time increasing taxes and the costs of living. It's no wonder why recent school graduates have trouble finding good paying jobs.

Nearly forty percent of Oregonians voted for Trump. Throwing rocks from within a glass house calling the other side's message one of hate when Portland policy itself proliferates the same tone with car hater policies imbedded in the Comprehensive Plan markedly demonstrates a lack of understanding of the City's own double standard bias.

Portland is a transportation hub for the region, including the Willamette Valley, and a gateway to Asia for Eastern Oregon. Should restricting the expansion of bulk fossil fuel terminals in Portland create a fuel/energy shortage along with the absence of potential blue collar job creation, the City has no leg to stand on or complain should the costs for food, housing and/or manufactured goods significantly increase. Any tax increases for any such ill advised self-induced deficiency that would be paid directly or indirectly by the working class and possibly subsidize even more costly social engineering must be considered as off the table.

Finally, predetermined conclusions by government funded science that take aim at humans as the culprit of climate change must start with a conversation about sustainability in managing human population growth as opposed to implementing social engineering edicts that eliminate employment opportunities, harm the economy and dictate costly downgrades to working class lifestyle choices.

Respectfully,

Terry Parker

November 16, 2016

Looking Into 2017 & Beyond:
The Challenge of Continuous Improvement

"No New Fossil Fuels Infrastructure"
A Third Open Letter to the Portland City Council

Preamble Summary, Resolution 37168, November 12, 2015:
Oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways.

Again, thank you for your ongoing commitment to full implementation of this binding policy resolution. Your leadership is vital.

As you move toward completing these unprecedented and critically important zoning restrictions on new fossil fuel infrastructure (FFI), we wish to highlight three ongoing challenges and potential contradictions:

1) Policy vs. Emergency
2) Business As Usual vs. Responsibility for the Just Transition
3) Agency Reporting vs. Crowd-Sourced Creativity

1) Policy vs. Emergency

On these issues, the superb forensic and analytical work by the Bureau of Planning & Sustainability (BPS), the thoughtful and refined consideration by the Planning & Sustainability Commission (PSC), and the careful public impact assessment that the City Council has conducted all fit within a great Portland municipal tradition of public policy leadership.

However, a word that has not been used often enough is "emergency." In our November 10 second open letter to you, we focused on the agglomeration of the three catastrophes you must juggle in this effort: the climate crisis, our earthquake, and 2017-plus Federal energy policy.

It is very important that you continually emphasize to **all** stakeholders –especially the business community and the other large enterprises who have the most impact – that we are truly living through an ongoing emergency, and will be forever.

2) Business As Usual vs. Responsibility for the Just Transition

Change is hard for humans, and the mitigation and adaptation this Portland process represents is being applied across a spectrum ranging from grassroots enthusiasm to corporate fiscal horror. Too many enterprises see climate crisis and seismic mitigation and adaptation as annoying impositions, rather than core responsibilities.

You have the responsibility to help lead others to the comprehensive insights you yourselves have developed through years of study and hard work. This is especially important, again, for those in the business community and other large enterprises who must shoulder the lion's share – or perhaps the dinosaur's share – of the load in building the just transition.

In our July 13 first open letter to you, I outlined a simple four-part model that defines this complex challenge to our civilization:

1. **Keep It In the Ground**
2. **Do No More Harm**
3. **Reduce the Need**
4. **Build the Just Transition**

Your leadership actions on FFI reverberate across these four summary categories. The good news for those who must change the most is that there is a lot of building to do to build the just transition: there are thousands of jobs in Portland climate and seismic mitigation and adaptation.

3) Agency Reporting vs. Crowd-Sourced Creativity

Finally, in another paradigm shift, we suggest that it may no be longer adequate – in the face of this triple-catastrophe emergency and four-part effort to build the just transition – for you and us to rely simply on standardized agency reporting to keep us on track and help us evolve, no matter how high the competence level with which the agencies perform.

Next year, please consider enhanced public notification of each small and large step along these paths. Although we outside of government who work on these issues are not always a constant joy to policy implementers, there is a growing model of constructive social media outreach and crowd-sourced creativity that can potentially bolster over-stretched public resources.

This is not an easy needle to thread, but the thousands of constituents who have attended hearings and opined to you over the last two years include many people who would be happy to join in when they can make a difference. We should all seek to harness the opportunity there.

Thank you for your consideration – and **thanks again to you, the PSC, and BPS and other City staff** for these efforts! We respect and appreciate your work as our representatives.

Protecting Portland through the Triple Catastrophe: The Climate Crisis || Our Earthquake || Federal Energy Policy

"No New Fossil Fuels Infrastructure"

A Second Open Letter to the Portland City Council

Preamble Summary, Resolution 37168, November 12, 2015: Oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways.

Thank you for your ongoing commitment to full implementation of this binding policy resolution. Your leadership has never been more important to our city, state, region, nation, and the planet than it is today.

Our planned purpose was to join with our many colleagues here to continue to encourage your maximum attention to the complex double catastrophe of the climate crisis and the inevitable Cascadia subduction zone earthquake that will devastate our region. You are intimately familiar with both these unprecedented challenges (please see below for a few comments).

But today I must add **a fresh third catastrophe: imminent changes to Federal energy and climate policy**, which will destroy a huge percentage of the very limited progress made in moving Federal policy beyond the clear and present dangers of the fossil fuel era.

None of us expected that a climate denier would ever occupy the Oval Office. The most brutal components of the fossil fuels energy industry have been deeply engaged in transition planning for President-Elect Trump and are moving quickly to prepare for power. President Obama has taken several steps in recent years to elevate attention to the climate crisis and to move partially away from his prior "All of the Above" energy development strategy. The Trump Administration will maximize reversal of those actions.

With a unified National governmental power structure, the Republican leadership will move at warp speed. That is a procedural approach they have honed to perfection in unified State government control in recent years; Wisconsin is a prominent example, but it is now standard

operating procedure within their governmental playbook, implemented in many states. To be sure, there is the possibility of some limited checks and balances in the current Senate filibuster protocols, and redress of over-reach is sometimes available through the courts. Nonetheless, we must now be prepared to see the most vigorous moves for fossil fuel exploitation and monetization in our nation's history – and that is already a high bar.

For example, we are likely to see immediate concerted efforts to enact **Federal pre-emption** over State and Local efforts against fossil fuels – especially against transport, storage, and export efforts. This risk makes Portland's action *now* to protect your policy resolution – ***our City's*** policy resolution! – especially urgent.

Traditionally, it has been much easier politically to protect established law against reversal assaults than to fight for new efforts that contradict Federal (or State) pre-emption statutes. There is no guarantee that will apply in this arena, but we must proceed urgently to carve out as much local progress as we possibly can.

Simultaneously, the chemistry, physics, and geology of the intersecting catastrophes of our global climate crisis and the Cascadia subduction zone earthquake proceed apace. For the former, the agencies you manage are working to deal with it every day, with vitally important mitigation and adaptation strategies against the effects that we all see and feel now. Complete implementation of the policy resolution is critically important to that.

For the latter, a ticking time bomb in process for almost 317 years, it is the hardest kind of emergency to deal with: like a sudden life-threatening illness or catastrophic accident, it is completely irrelevant to daily life until the moment when it takes over everything one must do.

We now know that placing some 95% of our fossil fuel storage and baseline distribution infrastructure in the Cascadia seismic liquefaction destruction zone on the sands of the Willamette flood plain was the worst possible choice. You have all participated in many briefings and preparedness exercises around our inevitable impending earthquake; you know very well how deadly and destructive it will be, both at the time of fracture and in the multi-year aftermath. That is why it is imperative that the formal implementation of our City's binding policy resolution not permit **any** expansion of catastrophic risk in seismically unsafe zones, with seismically unsafe facilities.

Chemistry, physics, and geology ignore politics – and the new Federal politics just chosen through the ancient Electoral College structure will ignore chemistry, physics, and geology. This perfect storm of triple catastrophic risk requires that everyone recognize that now is not the time for misguided "split the baby" pseudo-compromise. You must resist that fallacy and temptation.

Thank you for your consideration.

"No New Fossil Fuels Infrastructure": First, Do No More Harm

An Open Letter to the Portland City Council

Preamble Summary, Resolution 37168, November 12, 2015:
Oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways.

Portland is at imminent risk of squandering its prior leadership in dealing with the local response to our global climate crisis. The problem is serious bureaucratic back-sliding into a "business as usual" mentality in the implementation of Resolution 37168. Unless you deal promptly and firmly with signals of agency misunderstanding of both the letter and spirit of this resolution, this situation could too easily become a local crisis in its own right.

This binding policy resolution, which you approved unanimously on November 12, 2015, catapulted our city into the forefront of local, regional, national, and international efforts to confront one of the greatest sets of challenges our species has faced since the development of industrial technology.

It is vital that you remember the genesis of this effort, and re-commit to the specific – often difficult! – changes in municipal and stakeholder planning and behavior for your mission.

There is a straightforward but interlocking four-part schematic that outlines precisely where we are as a global and local political economy:

1. **Keep It in the Ground**
2. **Do No More Harm**
3. **Reduce the Need**
4. **Make the Just Transition**

1. Keep It in the Ground

We now know that our combustion of fossil fuels has moved our global atmosphere and temperature structure into such dangerous territory that civilization is genuinely at risk if we do not make radical reversals in behavior.

At least four-fifths of global fossil fuel reserves must be left completely intact, in the ground, and never exploited.

This requirement is completely contrary to modern corporate financial structure, because proven reserves constitute roughly half of the assets (and therefore a major component of share value) of the fossil fuels companies. This is one of the key reasons why business-as-usual policies and procedures are inevitably doomed to failure – for both corporate financial health and planetary social and environmental health. This has been one key factor in the current financial collapse of shareholder equity in coal corporations.

Acceptance of ***Keep It in the Ground*** is a mandatory first step for both the psychological and political economy revisions we must make for survival. This is the foundation for the other three intersecting components of this basic methodology. Resolution 37168 speaks eloquently to many of the issues inherent in our mandatory recognition of our new reality.

2. Do No More Harm

Understanding the compulsory physics and chemistry of ***Keep It in the Ground*** leads inevitably to this second principle: don't make things worse by continuing down the same destructive path. We must begin with our environmental version of the first line of the Hippocratic Oath: ***Do No More Harm.***

This is the required primary set of actions for directly confronting the climate crisis: to get out of this hole, first we have to stop digging. "No New Fossil Fuel Infrastructure" is the easiest way to proceed first. The core of Resolution 37168 – preventing new export and storage infrastructure – falls completely within this principle.

It is imperative that you maintain and defend your policy.

3. Reduce the Need

Simultaneously, demand reduction is vital to permit us to ***Do No More Harm***. Gradual complete elimination of coal for electrical production in Oregon is now state law. The same goal must be applied to oil and natural gas, urgently. As I noted in my testimony to you on November 12, there is no fossil fuel solution to the fossil fuels crisis.

You must align City procedures and economic governance with this need for both conservation and energy efficiency (which are overlapping but distinct sets of tools). Beyond direct City internal control and external economic governance, you must also push the Portland business communities – especially the fossil fuels companies – and the other governments that overlap with and impact your work to both ***Do No More Harm*** and ***Reduce the Need.***

4. Make the Just Transition

Finally, underpinning all these efforts must be the recognition that there is no substantive difference among environmental, economic, and social justice. We are engaged in a transition into a full-renewables energy economy, and that will be impossible unless it is done based on justice for all. The urgency of the effort means that coordination of ***Do No More Harm, Reduce the Need,*** and ***Make the Just Transition*** becomes the essence of this era.

Thank you for your consideration.

Ted Gleichman, on behalf of Oregon Sierra Club

Re: Response to City Questions Emailed to Terminal Operators

Dear City Council Members:

The Western States Petroleum Association (WSPA) appreciates the opportunity to provide comments on the proposed PSC Fossil Fuel Terminal Zoning Amendments. WSPA is a non-profit trade association representing companies that explore for, produce, refine, transport, and market petroleum and petroleum products in five western states including Oregon. WSPA members operate petroleum terminals in Portland. WSPA opposes the Planning and Sustainability Commission's recommended zoning amendments under Resolution No. 37168, Fossil Fuel Terminal Zoning Amendments.

This letter responds to two questions that were posed by City Senior Economic Planner Steve Kountz to terminal operators by email on Monday, November 14, 2016. A copy of Mr. Kountz' email is attached.

Mr. Kountz Question #1: Do you agree that allowing for a 10% expansion is not an adequate incentive that would prompt you to replace and upgrade your storage tanks?

Response: WSPA and other industry members never agreed that 10% expansion is an accurate representation of future demand. We do not know what the future will hold. A more appropriate expansion option is outlined in the Appendix to our November 10, 2016, letter that is in the record.

Mr. Kountz Question #2: Would allowing a 10% expansion for additional new storage tanks for fuel that is blended in compliance with the Clean Fuels Program address your future needs?

1415 L Street, Suite 600, Sacramento, California 95814

cathy@wspa.org • www.wspa.org

Response: We do not know what the future will hold regarding future demand and future regulation. A more appropriate expansion option is outlined in the Appendix to our November 10, 2016, letter that is in the record.

Again, thank you for this opportunity to comment on the Fossil Fuel Terminal Zoning Amendments Proposed Draft. We hope the City reconsiders its push to pass regulations in this area and more narrowly tailors its rules to avoid unintended consequences.

Thank you for your consideration of WSPA's comments. We welcome any questions or comments you might have. Please contact me at this office or my staff, Jessica Spiegel at Jessica@wspa.org or 360-352-4512.

Sincerely,

Subject: Fossil fuel terminal zoning amendments

At the City Council hearing last Thursday, there was testimony that the draft limit on fuel terminal expansion to no more than 10% of the capacity of replaced tanks was not an adequate incentive for replacing old tanks to comply with current seismic codes. The City Council wanted BPS to check-in with the terminal operators before they consider amendments at their hearing on Wednesday, Nov 16, at 10:45 am. Commissioners have asked to consider a new amendment that would limit additional storage capacity (up to 10% of the total existing terminal storage capacity) to fuels that comply with the State of Oregon Clean Fuel Standard only.

Please respond to the following questions:

Do you agree that allowing for a 10% expansion is not an adequate incentive that would prompt you to replace and upgrade your storage tanks?
Would allowing a 10% expansion for additional new storage tanks for fuel that is blended in compliance with the Clean Fuels Program address your future needs?

If possible, please send me an email or give me a call.

Thanks,
Steve

Arc Terminals

November 15, 2016

Steve.Kountz@portlandoregon.gov

Steve,

Below is Arc Terminals response to the two questions you posed yesterday:

Do you agree that allowing for a 10% expansion is not an adequate incentive that would prompt you to replace and upgrade your storage tanks?

The ability to increase capacity by up to 10% would be an important incentive as Arc Terminals considers potential improvements to its Portland terminal that could also improve seismic resiliency. Eliminating this incentive would conflict with the City's policy of not restricting improvements in seismic resiliency at these terminals.

Would allowing a 10% expansion for additional new storage tanks for fuel that is blended in compliance with the Clean Fuels Program address your future needs?

The ability to develop new storage capacity for use in connection with the State of Oregon's Clean Fuels Program would be consistent with City policy and could help with the transition to non-fossil fuel energy sources. However, standing alone, such a limited expansion ability would conflict with the City's fossil fuel policy outlined in Resolution 37168 and does not reflect that these terminals serve regional needs (i.e., greater than Oregon).

Thank you for the opportunity to provide comments. If you have any questions, please contact me at (503) 273-4705.

Nathan Eggers

Dear Mayor Hales and Commissioner Fritz,

Thank you for the opportunity to provide comments last Thursday before Council at your hearing on a Fossil Fuel ordinance. As I stated, thank you for your groundbreaking work on this issue. The rest of us in the Pacific Northwest and beyond look at cities like Portland as a beacon of hope and progress, especially needed given the new political reality in Washington D.C.

I am sorry I was unable to attend your entire meeting but Mayor Burns and I had to leave to attend a Wasco County Commission meeting on the proposed double track expansion by Union Pacific Railroad near Mosier, Oregon. You may be interested to know that the 3 member commission denied the application based on tribal treaty rights. This makes the third time (Boardman, OR coal terminal, Bellingham, WA coal terminal) that tribal treaty rights have prevailed, although its likely this decision will be appealed.

I appreciate that you asked for my thoughts about the proposed use of a 10% increase in capacity of bulk terminals to help secure needed seismic upgrades. I heard reports that, in later testimony, a Kinder Morgan representative was not interested in the 10%. I also heard that terminal operators are now asking that you specifically exclude pipes from the zoning amendments. On the basis of these reports, I'd recommend:

- Prohibition of expansions of existing fossil fuels terminals;
- Encouragement of seismic upgrades through state building codes without expansion of capacity;
- Elimination of the threshed for prohibiting new fossil fuel terminals;
- Inclusion of language to prevent "bait and switch maneuvers" that would allow dirty fossil fuels to be stored in tanks permitted for "Clean Fuels";
- Maintenance of language that does not exempt natural gas and methane from this code;

• No exclusion of pipes and pipe size in this document.

As I understand it, you can create an opportunity to revisit the pipe issue, demand issues, and seismic upgrades in one year.

These are my personal suggestions, as I've not had time to poll members of our Hood River City Council. But I think it likely that you would have their strong support.

In closing I want to share links to two coal news stories: Coal continuously discharged from rail cars and Coal clean water act lawsuit settlement.

Good luck in your deliberations.

Peter Cornelison
Hood River Council Member

Subject: RE: Fossil fuel terminal zoning amendments

Dear Steve,
Sorry for the late last minute reply to the Cities inquiry.
Please find our comments below. I'm available Wednesday AM by cell phone if you require any clarification to our response and will be present at tomorrow's meeting at City Hall.

At the City Council hearing last Thursday, there was testimony that the draft limit on fuel terminal expansion to no more than 10% of the capacity of replaced tanks was not an adequate incentive for replacing old tanks to comply with current seismic codes. The City Council wanted BPS to check-in with the terminal operators before they consider amendments at their hearing on Wednesday, Nov 16, at 10:45 am. Commissioners have asked to consider a new amendment that would limit additional storage capacity (up to 10% of the total existing terminal storage capacity) to fuels that comply with the State of Oregon Clean Fuel Standard only.

Please respond to the following questions:
Do you agree that allowing for a 10% expansion is not an adequate incentive that would prompt you to replace and upgrade your storage tanks?

Yes. In order to economically justify the enormous level of private investment needed to comprehensively upgrade critical energy and transportation infrastructure at existing FFTs, existing FFT's must be allowed to grow and transition from fossil fuels by changing the configuration of their storage facilities. The PSC Recommendation does the opposite as it prohibits existing FFTs from growing, except in one very limited circumstance. The only circumstance an FFT can grow is if it replaces an existing tank with a seismically upgraded tank. However, even if an existing tank is replaced with a seismically upgraded tank, the incremental growth that

can occur is limited to 10 percent of the capacity of the tank being replaced, with an overall increase limited to 10 percent of the storage capacity of the FFT facility on the date the amendments are enacted. This severe limitation on expansion discourages disaster-resilient development because the small amount of growth that is allowed to occur will not justify the massive amount of private investment needed to replace all the existing tanks in Portland. Even if investment does occur, the PSC recommendation will only produce a seismic upgrade of 10 percent, because no additional growth can occur once the 10 percent limit is reached. Without growth, investment in seismic upgrades will simply not occur.

In short, the 10 percent rule creates an economic disincentive to disaster-resilient development and is
counterproductive to meaningful seismic upgrades over time. If the City is serious about bringing fuel storage tanks up to current seismic standards, both the City and industry must work together to create a private/public incentive that advocates for seismic-resiliency and the betterment of the region. One option would be to advocate for a tax credit from the state that would provide the financial incentive to fuel storage facilities to rebuild their tanks to current seismic standards. If the City truly wants to ensure that fuel storage tanks are seismically upgraded, it should not only partner with the industry to advocate for such a tax credit, it should take a leadership role in doing so.

Would allowing a 10% expansion for additional new storage tanks for fuel that is blended in compliance with the Clean Fuels Program address your future needs?

No. We believe limiting FFT expansion to accommodate any new blend stock, renewable or alternative fuel (non-fossil based fuels or additives) to 10% of an existing FFT's total capacity to be in direct conflict with the City's resolution and with the Oregon Clean Fuels program. We strongly recommend no restriction or limitation on the size or volume of newly constructed tanks for this purpose. It is important to note Federal and State Clean Fuel Programs are causing significant change in the industry and renewable and alternative fuels are being developed and introduced into the market that provide clean non-fossil alternatives to blended fossil fuels used today. The transition has begun as municipalities and commercial organizations such as the City of Portland maintenance division, EWEB, PGE, and UPS are using renewable diesel today that is transported into our market by vessel.

Segregation of these fuels is required and will increase tank storage demand while the industry, vehicles and consumers adjust and move away from fossil

fuel. There should be no limit on the expansion of a facility to accommodate these products as doing so would be counterproductive to the City's goal of reducing fossil fuels use. Therefore, we strongly urge the City not to restrict the storage capacity or expansion of a facility for handling alternative and renewable fuels and blend stocks that do not utilize fossil fuels.

I believe the combined efforts of the City and Industry to advocate for seismic upgrade incentives and to encourage growth to accommodate new non-fossil fuels is a better approach and a win/win for all.

Date: Tuesday, November 15, 2016 9:57:17 PM

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

However, the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland to:

Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.

Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.

Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Now more than ever the City of Portland has the opportunity to be a leader in the U.S. climate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time.

Sincerely,
Hannah Machiorlete

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways."

Please do not allow existing terminals to expand.

Prohibit all new fossil fuel infrastructure.

Resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Christine Yun

Now more than ever we need to keep fossil fuel in the ground. I want you to enact a full ban on new terminals and prohibit expansions at existing terminals and require them to make upgrades fro Seismic Safety through State Building Codes. We must also not add a last minute amendment on NW Naturals behalf.

Thank you,
diane

Please vote to ban ALL new fossil fuel infrastructure within the city of Portland and prohibit ANY expansions of existing facilities in the future. It is very important that we as a city send the strongest possible message to our fellow cities of the World that climate change is an emergency that demands immediate and decisive action if we are to save the Earth for ourselves and all other living creatures.

From: Noah Jenkins
To: BPS Fossil Fuel Zoning
Subject: Strengthen proposed ban on fossil fuel infrastructure
Date: Friday, November 11, 2016 2:31:51 PM

Dear Portland City Council Members:

Like so many Portlanders, I was thrilled to hear of your proposal to ban new fossil fuel facilities in the City of Portland; we need to be taking exactly these kinds of bold steps to address the greatest threat currently facing Earth's biosphere: climate change. I urge you to stay true to the original intent of the resolution passed last fall by:

- Enacting a full ban on all new fossil fuel terminals by removing the exception for terminals under 2 million gallons. The proposed 2-million-gallon exception would still allow new fossil fuel facilities to be built in our communities
- Eliminating the provision that allows existing fossil fuel terminals to grow by as much as 10% in exchange for seismic upgrades. These upgrades should be required, not provided in exchange for even bigger facilities.
- Directing Portland Bureau of Emergency Management to develop proposals for State building code changes to require seismic upgrades; and
- Rejecting Northwest Natural's request to be exempted from these regulations.

Let us seize this opportunity to lead the nation toward a future free of fossil fuels and the damage they cause from extraction to transport to end use. The alternatives are already here; we need these kinds of strong measures to accelerate the transition to a clean energy future.

Thank you for your time and attention.

Sincerely yours,
Noah Jenkins

Even before the reality of an anti-climate Trump presidency, it has been absolutely imperative for the people of our planet to do everything possible to reverse the effects of man-made climate change. Every day we have a responsibility to protect our only planet not just for ourselves but for future generations. Failure to do so will make our livelihoods ever more difficult and costly, perhaps even impossible.

Though I have not always lived in Oregon, I have always considered it my home. I am especially honored to live in Portland and be among people who cherish and respect our surrounding natural areas. We have a deep understanding of what is at stake for our planet and our wellbeing.

I believe Portland can and should be a leader for climate responsibility. We should not consider this an option anymore. Now is the time to invest wholeheartedly in our future. Fossil fuels must be our past.

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

However, the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." CITY OF

PORTLAND, OREGON

OFFICIAL MINUTES

[Excerpt Council Meetings November 9-10, 2016; Item 1259.]

A RECESSED MEETING OF THE COUNCIL OF THE CITY OF PORTLAND, OREGON WAS HELD THIS **10TH DAY OF NOVEMBER, 2016** AT 2:00 P.M.

THOSE PRESENT WERE: Mayor Hales, Presiding; Commissioners Fish, Fritz, Novick and Saltzman, 5.

Commissioner Novick left at 3:45 p.m. and returned at 4:50 p.m.

OFFICERS IN ATTENDANCE: Karla Moore-Love, Clerk of the Council; Lauren King, Deputy City Attorney and Jim Wood and Jason King, Sergeants at Arms.

		Disposition
1259	**TIME CERTAIN: 2:00 PM –** Restrict bulk fossil fuel terminals (Ordinance introduced by Mayor Hales; amend Title 33, Planning and Zoning) 3 hours requested	**CONTINUED TO NOVEMBER 16, 2016 AT 9:30 AM**

At 5:00 p.m., Council adjourned.

MARY HULL CABALLERO
Auditor of the City of Portland

By Karla Moore-Love
Clerk of the Council

Closed Caption File of Portland City Council Meeting

This file was produced through the closed captioning process for the televised City Council broadcast and should not be considered a verbatim transcript.
Key: ***** means unidentified speaker.

NOVEMBER 10, 2016 2:00 PM

Hales: Good afternoon, everyone and welcome to the November 10th meeting of the Portland city council. Would you please call the roll?
[roll call]
Hales: welcome, everyone. We'll get the procedural stuff out of the way here in a moment and I'll ask our council clerk to read the item. And then why don't you go ahead and do that because we have a single item on the calendar this afternoon and I'll talk about rest.
Item 1259.
Hales: Thank you. Thank you all for being here today we are citizens of a good place and it is so good to see you all so thank you for being a part of the legitimate exercise of democracy and may that always be true in our city and elsewhere so thank you for coming. Some of you have probably testified at city council before. I'll go through the procedures quickly so we can hear from you. We are going to have a staff presentation and some invited testimony about this item, and then we'll open it up to public testimony. Hopefully, you've signed up. Because of the number of people here we're going to ask you to limit your comments to two minutes apiece because we want to hear from as many people as possible. If you already had your views expressed, you can feel free to say so or yield time to another. We have only a couple of ground rules here in terms of testimony. You need give only your name, you don't have to give us your address when you come up and speak. And if you agree with someone's point of view, feel free to give them a thumbs up or a wave of the hand or twirl something if you have it in your hand and if you disagree with someone, a polite hand gesture to the negative is okay. [laughter] but we ask always in this chamber that we not make demonstrations, applause and verbal displays in favor or against our fellow citizens' points of view so that everyone can be heard. We make exceptions for visiting dignitaries and students and so we might make that exception today because we have some student testimony today and I'm going to have them up early in the process. This isn't a school day, but there's still homework. That's it in terms of procedures. We have some amendments that we'll consider but let me open up with some remarks, and then set this in motion. The rapid development of fossil fuel resources in the western part of our country and Canada has put a lot of pressure on Portland and other cities and has sought to transport and move huge quantities of fossil fuels through and into our communities. As we all experienced with the pembina proposal last year, the zoning code actually allows fossil fuel terminals as a warehouse and freight movement use in our zoning code today without any limit on the size of these terminals. We, of course, passed a resolution saying we're going in a different direction and today is the proposal to put that into city law, into our code. The amendments in front of us as we'll have explained in greater detail by the bureau of planning and sustainability staff will prohibit all types of new fossil fuel terminals and impose limits on the expansions of existing ones. Through our climate action plan and council resolutions, this council has been on record for a long time to advance policies to reduce fossil fuel use and to oppose oil and coal trains traveling through our city. Last year, we took the step of passing that resolution that I mentioned that stated we would oppose the expansion of infrastructure whose primary purpose is transporting or storing fossil fuels. We are also putting a lot of time and effort into becoming disaster resistant or at least more so, to be more resilient as a city and many of

our employment and industrial zones including the critical energy and transportation infrastructure in Portland are located in areas with moderate to high risk of liquefaction so that's a public safety issue that we need to address as a city. Last month we adopted a natural hazard mitigation action plan that includes a critical infrastructure hub study that outlines the next steps in improving seismic safety for these fossil fuel terminals in the northwest industrial areas along highway 30 and in Linton. These amendments before us will prohibit all types of new fossil fuel terminals, 2 million gallons or larger, and impose limits on the expansion of existing ones to no more than 10% of their current storage capacity. The limited expansion has allowed only in conjunction with the replacement of old tanks so there's an improvement in that seismic safety if anybody actually is in the process of replacing a tank, something that is not happening very often now and in terms of that seismic resiliency needs to happen more quickly to avoid disaster. So before we hear from our staff, I want to introduce some amendments that clarify the language, that way you will get to testify on those amendments as well as having them explained. Amendments one through three deal with language in title 33 and amendment four amends the ordinance to provide some additional direction for follow-up actions. Amendment number one is a technical correction to exception number four, to clarify that truck-only terminals the kind of local terminals that we have are not bulk fossil fuel terminals. Amendment number two makes some changes to exception number seven to clarify that fuel storage for airports, marine servicing facilities and railyards are not bulk fossil fuel terminals. These are the filling stations for the airport, the railyards, and the ships, they exist here today. And the number three, amendment number three clarifies the definition of fossil fuels by specifying that nonfuel petroleum based products, such as asphalt are not fossil fuels. Actually, think about it with asphalt we take oil and mix it with gravel and put it on the street and it stays there for 100 years so it's not going into the atmosphere. It's a very different use of petroleum than burning it and releasing hydrocarbons and carbon dioxide. And number four provides additional direction for follow-up actions. I'm going to propose those amendments and see if there's a second and again, those are before us and you can testify on those as we proceed. So now, I want to call on our bureau staff, Susan Anderson, the director of bureau of planning and sustainability, Michael Armstrong and tom Armstrong to explain in greater detail what's in front of us. Good afternoon.

Susan Anderson, Director, Bureau of Planning and Sustainability: Good afternoon. So as the mayor mentioned, I'm Susan Anderson the director of the bureau of planning and sustainability and with me are Michael Armstrong and Tom Armstrong and no their not related, they are sometimes interchangeable. I just want to start off with a little bit of context for the discussion, and then I'll hand it over to Michael and tom. Cities all over the world are talking about climate change and some are making big broad statements and setting up their action plans, but here in Portland we're doing much more and we've been doing it for a long time and we're showing the rest of the world that cities can make a difference. Along with a dozen or so other cities internationally, Portland is seen as a leader on this issue. We've cut carbon emissions by 40% per capita since 1990 and we've cut total emissions by 21% even while our population increased by more than a third and jobs increased by more than 25% so we're headed in the right direction. You know, sometimes, the actions that cities take are broad and sweeping, like land use regulations that impact housing and transportation and environmental issues and other issues and sometimes, there's actions that are very specific and they're very measurable. They are measurable like actions you've taken in the past, things like clean energy works which resulted in energy and money savings for more than 5,000 homes or measurable like cutting city government energy bills which we've done by $6 million just for last year alone, saving more than $50 million in the past 10 years. We've invested in electric vehicles,

we're now buying 100% green power for all city facilities, something that we've been heading towards and are now at for several years, we're requiring energy scores for large commercial buildings which you did and enacted here 18 months ago so that future tenants can compare the energy prices in different spaces and owners can see what's possible and what their competitors are doing so that they can make smart investments and in just a couple of weeks we're going to ask you to do the same for houses so that home buyers will have the benefit of energy scores when they're looking to buy a house much like we have miles per gallon ratings for cars. We know that specific, measurable actions are essential if we're going to reduce the use of fossil fuels so why am I talking about energy efficiency when we're going to talk about fossil fuel storage? Well reducing our demand is essential if we want to meet our climate goals, but it's also essential if we want to limit the size of fossil fuel infrastructure in the future because demand needs to stay stable or go down if storage facilities are going to be limited, but we know we can do this and we've shown that we can do this over the past 20 years. It started back on city council two decades ago, Mike Lindbergh, earl Blumenauer were sitting -- they used to be over there on the other side of the building but you've been doing the right thing for a long time. Mayor hales, you were a part of that with our past record as our proof, we know we can show the rest of the world that this can be done. I encourage you all to keep pushing us in the right direction. We had several more projects and policies that will be coming to you quite soon. We have the residential energy score, we have a new electric vehicle strategy that will be coming out and community solar hopefully by next summer. All these things are going to make a difference and sadly given the election, now more than ever we need local action. We can't rely on the federal government. We can't rely on a future president who doesn't even believe that climate change is real. But we know the science is clear and clean energy costs are falling dramatically since 2008. Wind costs are down 40%. Photovoltaic costs are down 60%, l.e.d. Lighting costs are down 90%, so it's not just a smart move for the environment, it's a smart investment. So I look forward to hearing all the testimony this afternoon and I really, really encourage you to move this ordinance forward. Thank you.

Hales: Thank you, Susan. Okay gentlemen.

Michael Armstrong, Bureau of Planning and Sustainability: Mayor and commissioners, I'm Michael Armstrong with the bureau of planning and sustainability. The ordinance in front of you this afternoon results from several policies that council has adopted over the last months, going back to the resolution you adopted almost exactly a year ago, this fossil fuel infrastructure resolution which had two important pieces. One to actively oppose expansion of infrastructure whose primary purpose is to transport or store fossil fuels and at the same time, ensure that those restrictions don't get in the way of improvements to safety, efficiency, seismic resilience, the routine operations or to get in the way of service to end users. Later, you adopted a comprehensive plan that's generally around fossil fuel distribution to limit that distribution to the facilities necessary to serve the regional market. Those policies are based on considerations of a couple of different concerns, significantly public safety and environmental risks, both from fossil fuels being transported to Portland often by rail, sometimes by barge, by pipeline and also from where those fuels are stored. This map shows the soils that are susceptible to liquefaction with the darker colors being more susceptible the large fossil fuel tanks that this ordinance addresses are located primarily along the river in moderate to high risk of soil liquefaction. So we're trying to address public safety and environmental risks and respond to the mounting urgency of climate change. A lot of the work we have to do here locally to reduce emissions is around improving efficiency, installing renewables. At the same time, the globe is transitioning toward cleaner fuels, lower carbon and overall reductions of emissions. To keep that going in the right direction we need to keep fossil fuels in the ground and as mayor you pointed

out, there are a lot of fossil fuels that are currently coming out of the ground across the western u.s. for us to succeed on climate we can't let those be exported and burned. At the same time, we recognize that the transition away from fossil fuels will take some time. Portland has a key role geographically as the distribution hub that supplies 90% of the fossil fuels that serve the state. It's in southwest Washington, as well. And so we know that we need to accommodate existing infrastructure and we want to encourage it to move towards safer facilities. Portland's been adding population and jobs as Susan referred and at the same time, our fossil fuel use has stayed essentially flat or falling. This slide shows gasoline and diesel use in Oregon over the last 10 years and the trend is flat, slightly down. The next slide shows natural gas use. This is primarily supplied by pipeline. The trend is a little more uneven in part due to different winters. There are higher peaks in there as well and yet the overall trend is flat or falling, despite population growth, despite job growth. It's important to note that even this low to no growth scenario we may need some tanks in order to help the transition to cleaner fuels when we bring in biodiesel, when we bring in some of the other low carbon fuels, we need to be able to store those, to blend those and the ordinance attempts to address that so we've anticipated those needs. At a more global level, we are seeing big changes in global demand for fossil fuels. And so this chart showing, you know, the earlier 2003 global energy forecast, steady increase, that forecast has been moderated very substantially so the 2015 forecast is close to flat. Not a lot is clear about the future right now, I think it's pretty clear that other countries will accelerate their work to reduce carbon emissions so we can expect to see more of this in the future. I'm going to turn it over to tom to describe the amendments in detail.

Tom Armstrong, Bureau of Planning and Sustainability: Tom Armstrong with bps. The mayor in his opening remarks did a good job of providing an overview of what the zoning code amendments do to implement the policy direction in the resolution that you passed last year. Essentially what we're doing is defining a new type of use, a new category of use called bulk fossil fuel terminals and we're characterizing that use. We are essentially prohibiting that use in all of the base zones which primarily applies to the industrial zones, and then we're coming up with some standards to say once we've prohibited that use, what do we do with the existing terminals and the psc recommendation before you is to make them limited uses to allow them to continue to operate, make investments in seismic improvements and limit the expansion of their storage capacity to no more than 10% of what they have today. A couple of key things here, you know, how we define fossil fuels and what's a fuel versus another petroleum product was one of the challenges we had through this process, especially also, when we look at things like natural gas and biogas and how you tell the difference between the two and what that source comes from and so we've settled on a definition that refers to decayed plants and animals that lived millions of years ago and are used as a source of energy and as the mayor has said and proposed in his amendments, we have some exclusions in that definition to make it clear that non-fuels and other renewable fuels, such as ethanol or renewable diesel are not included in that definition so that we provide sort of the opportunity for that transition to the cleaner fuel. As I said we've defined what a bulk fossil fuel terminal is and it is what we call a gateway facility. It has access to a marine dock or railroad spur or a pipeline and it has a significant amount of storage capacity. The recommendation before you from the planning and sustainability commission lowered that threshold capacity from 5 million gallons to 2 million gallons, roughly equivalent to the amount of oil that can be stored in one-unit train. They thought that that was a good benchmark in terms of what represents a large facility that has sort of a wider impact. Based on your resolution last year we again have a number of exclusions or clarifications of who's not included, who doesn't get captured within this definition and as the mayor said, we had some technical amendments to make clear, especially with respect to airports and marine and rail servicing facilities that are

essentially the gas stations for those larger type uses are not included in this definition of what a bulk terminal is. As I said, you know, we have 10 of these petroleum based terminals out in the northwest industrial district and then one on northwest natural Lng facility. So a key thing was what to do with them and the planning and sustainability commission really sort of considered a range of options, whether to make them a nonconforming use or conditional use. In the end, they settled on a recommendation to make them what we call limited use, to limit their expansion of their storage capacity to 10%. And in order to unlock that 10% it has to be a replacement. It's not just new storage capacity, you've got to replace an old tank and that's where we get a bit of a seismic upgrade benefit because the new tanks have to comply with the current seismic codes. At the same time, they recommended that for those types of tank replacement that there should not be a land use review that introduces some uncertainty in the process and potential delays through appeals, that they wanted to provide a clear path to have those seismic replacements happen. In exchange for that, they required a public notice and meeting prior to the filing of a development permit for these tanks. This is similar to what we do with multi-family residential buildings, when a developer comes forward, he needs to notify the surrounding neighborhood, he needs to have a meeting to explain the proposal, and then the neighborhood is at least aware of what's going on, they can make their views known, but it does create some public awareness of what types of activities will be happening out on these existing terminals. Again just a little graphic of how that replacement and storage capacity work. If you have say a facility with 50 million gallons of current capacity, they can decide which combination of tanks they want to replace. They can replace it one for one. They could replace it with a larger one, but the idea is we're removing these older tanks that aren't up to current codes and replacing them with new tanks that are. I think you'll also hear from our bureau partners at pbem and fire about the seismic safety concerns and the slow pace of turnover in terms of the existing tanks that are out there. These zoning codes really address sort of that future growth and expansion. It doesn't really get at the issue of how to improve the safety of what's out there today, absent sort of flat or declining demand. Is there really going to be a need to expand capacity and that's going to require additional steps beyond what we address in these zoning code changes today. Just to reiterate what the mayor's put on the table in terms of the four amendments, there are three amendments to the zoning code to really clarify our intent as to what is a bulk or not a bulk fossil fuel terminal and what is not a fossil fuel in terms of those other products like asphalts and lubricants and an amendment to the ordinance to provide some additional direction to us and to our bureau partners to both report back to you on the effect of what these regulations have, especially as it relates to the issue of sort of the fuel supply for the region and the state in terms of how that fits with our growing economy and population, but also direction, continued direction to the city bureaus to work on this issue with the state of Oregon with respect to seismic upgrades of the existing tanks. And with that that is the end of my remarks. If there's any questions?
Hales: Questions at this point?
Saltzman: I want to clarify. So a 10% expansion of a terminal?
Tom Armstrong: Yes.
Saltzman: Discounts the storage space itself, not any associated piping or pumping that goes with it?
Tom Armstrong: Correct. Piping is the trans loading and the movement of product between the source and the individual tanks and to however it's being conveyed out of the facility and so storage, that's movement. Storage is the tanks themselves.
Saltzman: Okay thank you.
Fritz: So we're putting that 10% in to try to encourage the companies to change their tanks. So am I correct to say we're not allowed to say just do it?

Tom Armstrong: Currently under state law, the seismic upgrades are a building code issue, and it's similar to what we're struggling with, with the unreinforced masonry buildings. So absent a program similar to that urm program that inventories all the tanks out there and comes up with some sort of deadline, you have 10 years, 15 years to replace these, this is an incentive and a hedge. It's an incentive to provide some cost recovery to those seismic upgrade improvements. It's also a hedge against that demand curve that Michael showed, some uncertainty about how much additional storage capacity these facilities might need to comply with the state's clean fuel standards. Because those are going to come on board over the next 10 years, they need additional capacity for fuel additives like ethanol, they need additional blending to comply with those standards. The ethanol tanks themselves aren't subject to these regulations, but the blended fuel capacity would be and so this is a way of providing them a little bit of flexibility to also comply with those clean fuel regulations.
Fritz: And do we know what the life expectancy of a tank it?
Tom Armstrong: A very long time. There are tanks out there that are more than 50 years old.
Fritz: I'm thinking if the water bureau once in a while we have to replace those tanks. So do we think -- do we know how many tanks are going to reach the end of their useful life, anyway?
Tom Armstrong: Not with any precision, but we know there's over 300 tanks out there and we've seen 15 to 20 tank replacements or new tanks come in over the last 10 to 15 years so it's been a very slow replacement period and perhaps Nate takara the fire marshal when he gets up he's more familiar with what's out there today and those risks involved that he may be able to speak to that issue.
Fritz: Thank you.
Hales: Okay. These folks will be standing by for more questions, but let's go ahead and complete our staff presentation by asking Nate Takara our fire marshal and our bureau of emergency management to come up and tell us their perspective, please. I'll embarrass her on the way up to say she's also our northwest 23rd avenue recovery manager and she's doing a great job in helping the community get back on its feet so thank you.
Jonna Papaefthimiou, Portland Bureau of Emergency Management: Thank you mayor Hales, my name is Jonna Papaefthimiou I work for the city's bureau of emergency management and in there at the bureau I'm the lead on the city's natural hazard mitigation plan so we talked about that plan in council last month. As you mentioned in your introduction, natural hazards including flooding, drought, heat waves and severe storms are intensified by global warming so as emergency manager I see very clearly how important it is for the city to do its part to reduce climate impacts, and I think this proposal is very worthwhile for that reason alone. In terms of local vulnerabilities, the critical energy infrastructure hub the tank farms in Linton is an area of significant risk for the entire state of Oregon. The particular issue of earthquake risk in Linton has long been an area of focus for our bureau and as part of the update to that natural hazard plan which council adopted, pbem commissioned a focus study on the Linton area and what our consultants found that the majority of the facilities in the cei hub are constructed to no or low seismic standards and they're mostly located on soft liquefiable soils that are typically associated with increased seismic vulnerability. So the code changes that are proposed today limit the expansion of these facilities and that is another reason to support it. I think there's more work to be done in this regard with respect to building code and getting at the retrofits of existing facilities, but one more thing as you already alluded to, pbem as a small bureau so in addition to being the lead, I am the recovery manager for the northwest 23rd gas explosion. That explosion was incredibly dangerous and disruptive. It also involved a very tiny amount of fuel compared to what is stored in even one small industrial storage tank

and I think this incident reminds us even with a fuel like natural gas, which is generally very safe and a technology that's very well understood, nothing is fool proof so preventing new large terminals inside the city limits is the only approach that is 100% certain to protect residents of Oregon's largest city from a major accident so this is a third reason why the bureau of emergency management supports these changes. Thank you.
Hales: Thank you. Nate thank you for coming.
Nate Takara, Portland Fire and Rescue: Thank you, mayor and commissioners. I would like to thank director Anderson and her team for the work they've put together to get the fossil fuel zoning amendments brought to you this afternoon. I support the concept of finding ways to limit the growth of these facilities. I do have some concerns with the proposal because it primarily focuses on limiting the growth of these facilities. Unless there are additional steps that are being considered to complement this amendment the proposal alone will not make these facilities safer today. In recent years when these facilities constructed larger tanks, they were mandated to install these tanks to current fire life safety standards. The tanks are larger than the ones being replaced there are cumulative benefits with new tanks. When new tanks are installed to current requirements and from the fire life safety perspective, they are considered to be much safer than the ones being replaced. Just as important, during the installation, several key fire life safety components are evaluated, such as containment, spill control and fire safety equipment to ensure that they meet current code. Overall, this has a positive impact on the overall safety of these facilities. Moving forward I believe in order to make these facilities safer, we have to limit the size of these facilities and create initiatives for initiating development of new code requirements for mandatory structural and fire life safety upgrades for existing tanks to meet current code requirements.
Hales: Thank you very much. That's exactly what I want to make sure we report back because there's more work to be done besides a policy and the zoning code itself so thank you. Questions? Thank you, both very much. So we have a couple of panels to call. First involves policy makers that are affected by this. Thanks to our tribal liaison, we have made sure that we always are in good communication with tribal governments, we have the grand ronde here, mayor Arlene burns, the mayor of mosier. We're going to have the hood river city council member. And representative lew frederick from here in Portland and the district that contains all that liquefiable soil you just saw. Senator-elect: Thank you, lew frederick. So welcome, good afternoon, so good to have you all here.
Kathleen George: Thank you very much. Thank you very much. Thank you so much for inviting the grand ronde tribe to speak to this important issue before you today. Our relationship with the city of Portland is of critical importance to us and of great value and we always appreciate you including us when decisions are made that affect our precious Willamette river, upon which Portland depends and many, many Oregonians depend. The confederate tribes of Grande Ronde, of course maintain their relationship with their seated lands and with this river and we return to the river every year to fish and to celebrate our fisheries which travel right through downtown Portland up the Willamette river to the grand ronde reservation. Our salmon and our eels reside in the Willamette and are affected by it and, of course, the lives of our tribal members and all Portlanders are affected by the river and the pollutants that go into it. And, of course, the decision before you today does not occur in a vacuum and is not only considered in light of this particular fossil fuel terminal zoning decision. We know, of course, that our Willamette river is a super fund site and right now, the environmental protection agency, department of environmental quality and many organizations are considering how we can heal this deeply wounded river and so it is in this context that a consideration of expanded opportunities for pollution or safety concerns that could cause future pollution are of the utmost importance. The grand ronde tribe remains deeply committed to healing our fisheries that depend on this river and all the

people who depend on the river. Tribal people and other people who rely on fish to feed their families are at higher risks whenever pollutants are in our river and in our fish and just as Portland harbor has the potential and is affecting our fish and people, pollution from safety threats at fossil fuel terminal zoning issues and facilities have the potential to affect that, as well. Not only do we have the recent tragedy in Portland of the explosion, but we also remember the mosier train derailment of the last year where our rivers were polluted. And we need to remember that the best laid plans can go awry. While we appreciate the opportunity for increased safety measures and the replacement of old tanks, we do need to share our concerns are that continued fossil fuel terminals development or other opportunities for expansion would introduce additional risk of harm to an already damaged and degraded ecosystem and that any continued fossil fuel terminal development would be unacceptable to grand ronde because we feel that right now as a community of Oregonians, our focus needs to be on improving our safety, healing our river, our fisheries to protect our people and the potential benefit of fossil fuel development in our opinion has not been shown to be worth the cost to Oregon's priceless resources. I thank you for the opportunity to talk to you today.

Hales: Thank you very much for being here. Thank you. Mayor burns, welcome.

Arlene Burns: Thank you very much for the invitation and for all the hard work you are doing. I'm Arlene Burns the mayor of mosier. We need to proactively address the threats imposed by the fossil fuel development that will negatively affect not only the city of Portland, but all communities along the tracks. As everyone knows on June 3rd, the city of mosier experienced the derailment of a train of crude on its way to an existing terminal in Tacoma. It was going less than 30 miles an hour on a relatively straight piece of track, only because it was a rare windless day we did not lose our town. We are experiencing four or five of these trains per month, but if the Vancouver facility is built or expansion of existing facilities in Portland is allowed, this could increase to four or five unit trains a day or more. We are fighting for our lives in the Columbia river gorge as infrastructure development is being pushed even in front of mosier where the train derailed to facilitate the proposed terminals even despite the fact that ours is a national scenic area supposedly protected and protecting tribal rights. We need your help. After yesterday's national election, one thing is clear: It's up to us to be the innovators and the leaders in progressive city codes and resolutions to not only protect our future but to be a template for the rest of the country, especially in the light of seismic risks, we need to focus our efforts on industry development that will not increase the hazards during a seismic event. I'm thankful and probably never prouder to be an Oregonian and serve as an elected official because I believe that the future is in the hands of committed individuals who collectively can lead the way to a sustainable future. Mayor hales and this entire council have shown leadership by passing a landmark fossil fuel resolution, by adopting binding rules that take bold action, you will also be helping all of the towns along the tracks, daunted by the possibility of the Columbia river gorge becoming a super highway for fossil fuel transportation. I urge this council to take the strongest stand possible, not only to protect our future but to lead the way. Thank you.

Hales: Thank you very much. Appreciate you being here. Welcome.

Peter Cornelison: Thank you. Thank you, mayor hales and commissioners. My name is Peter Cornelison and I'm a council member from hood river, Oregon. And both the city of hood river and the county of hood river have passed resolutions unanimously opposing fossil fuel by rail in the Columbia river gorge. The oil train fire and spill that happened in mosier this summer was only seven miles away from our city of 7,000 people. So we're quite at risk. In the gorge, we live under the daily threat of another oil train explosion. This summer, when the derailment happened in mosier, i-84 was completely shut down, as well as Washington highway 14. And most local fire departments were responding to the

emergency in mosier. They weren't available for any local emergencies. We see your fossil fuel resolution as the best way for our communities to be protected. We know we can't stop rail traffic, but if the terminal capacity is not there, then they won't be coming through the gorge. We salute your leadership on this issue and the work you have done on a climate action plan. We in hood river look at that as an example as we try to craft our own. Thank you.
Hales: Thank you. Mr. Frederick welcome. Senator-elect frederick, you've got to get used to that new title. Thank you for being here. Push the button on the base of that microphone there.
Lew Fredrick: Thank you very much mayor hales and members of the city council. I'm lew Frederick, state representative from district 43, north and northeast Portland and senator-elect from a district of a larger area that has the same description. My senate district includes import and export facilities that serve the entire state. In fact, just about any goods coming to or leaving Oregon have to pass through the facilities in my district, that's the airport, railroads, Columbia river, Willamette river, it's the port of Portland east of the Willamette river basically. It's a pretty large-scale area. Looking forward to it. Now that represents substantial opportunities for those who live nearby, but it also represents substantial risk when we talk about the movement of fossil fuels. While a major incident would be catastrophic to the state, it could very well be unsurvivable in large areas of northeast Portland. And recovery to the extent even possible could last longer than the market for those fuels. It should also be known we get them back in the form of greenhouse gases and pollution on the prevailing winds. The picture of how unsustainable that is becomes terrifyingly clear every day. Portland's climate action plan sets a goal of 80% reduction in greenhouse gas emissions by 2050. We can't get there without moving faster than we are. This is a global problem. The repercussions, the human costs depend on what happens in china just as much as here. We can't at least in the short term count on effective action at the federal level. I believe Portland should exercise whatever authority it has to limit both local and global use of fossil fuels. This problem belongs to all of us. And after the events of this week, this is a time for us to show what stewardship of the environment and our neighborhood looks like. Maybe we can teach the rest of the nation what a future can be. Thank you for giving me this opportunity.
Hales: Thank you all.
Fritz: May I ask a question. Obviously, the big question here is should we allow the 10% expansion in order to encourage building of tanks that are earthquake safe. So I'm interested to hear your thoughts on that specific question. Is it worth giving a little bit of expansion in order to get some seismic upgrades? We're not allowed by the state yet to just say you must do it by then. So where do each of you come down on yes or no on the 10%?
Fredrick: I think the 10% acts as an incentive if we can get something done. We need to get something done quickly and that's the concern that I have. Not only something in terms of seismic issues, I'm very concerned about the seismic issues. The report that you just heard from your city sustainability person was saying very clearly there's zero to maybe a few percent of those tanks that are, in fact, safe enough in case of an earthquake and we're not talking about the huge earthquake, just an earthquake. And the fault line is right there. The liquefaction issues, I'm reminded of what took place in the world series quake in san Francisco. Where the downtown became jello if it becomes jello under those tanks, we lose north Portland.
Hales: Thank you. Other thoughts on that question?
Burns: I'm not sure exactly what the 10%, that ends up being quite a lot, but I agree that whatever one can do to upgrade the tanks to be more safe, for example, what's happening with the railroad right now, they have these other tanks for shipping crude, but they're not

going to be online for a long time and in the meantime, the ceo of union pacific told us that oh, we're charging them more per tank to use the old ones so the railroad is actually profiting more using the old tanks so they don't have much to get them online, either. I think it's a crucial issue and if that incentive could really manifest itself as a requirement, it seems worth it. But otherwise, it's bringing us a larger burden to the situation.
George: And I would have to agree on behalf of the tribe. Philosophically we would prefer to not have any expansion of capacity. And that being said we understand that as the situation is today there is really no other incentive to encourage that change and being as aware as we are of the seismic issues here on the Willamette river and in the heart of Portland, with our community all around us, it seems that, you know, safety has to be of paramount importance if this serves as that incentive, I think it's necessary at this time, although unfortunately, we really don't want to see more fuel there.
Hales: Thank you. Thank you very much. That helps. Thank you all. Okay a couple more people to call, and then we'll turn to the sign-up sheet. We have a representative of our planning and sustainability commission, the most overworked volunteers in Portland Gary Oxman. And Pam Neil the Portland development commission with an economic analysis.
Gary Oxman: I'm Gary Oxman of the planning and sustainability commission First of all, the commission was extremely enthusiastic in support. We see that as an integral part of the climate action plan and a very important step to be taken. We were also very concerned about safety and specifically the risk of an earthquake and large-scale earthquake. Basically, that kind of earthquake occurring in the high-risk soils where most of the fossil fuel infrastructure is located currently will produce a local and regional environmental catastrophe and will also produce a local human health catastrophe. Surviving without fuels in a post-earthquake environment is going to be a very, very bleak situation. So that imbued a lot of the commission's thinking. We also, while we did not take a formal position on other approaches to seismic improvement, we did have some rich conversation about that and particularly the desirability of a comprehensive approach to seismic stabilization. As has been outlined by others, other panels, basically the planning commission took four changes to what was originally proposed to us as a policy in the zoning code. It reduced the size allowed for new fossil fuel tanks from 5 million down to 2 million gallons and again that was thought that that produced adequate flexibility for people to continue their business and to blend environmentally sustainable fuels, but at the same time, attempting to discourage the use of large unit trains for oil transport. Secondly, we went with the decision to go with a limited use than other options, specifically what we heard from testimony is that the current providers and the current businesses that run fossil fuel need some degree of certainty about what the environment is going to be and so the limited use created a clear pathway to future seismic stabilization. Going along with that, the third recommendation was we decided not to require land use review and again, we wanted to clear a path and it wasn't clear what a land review would really add in terms of value to considering proposals for tank replacements or seismic upgrade and lastly, we added what we thought were some pretty good protections against aggregating multiple small businesses into a larger business that effectively overcomes the limit and so we tried to cut that off. So that was really basically the approach that the commission took. I would be happy to answer any questions.
Hales: Thank you very much. Appreciate your work on this and everything else we've put on your plate. Appreciate your work on this and everything else.
Oxman: On behalf of the commission we thank you.
Hales: Thank you. Welcome.
Pam Neil: Thank you. Hi, Mr. Mayor, commissioners. I'm pam Neil and I am the clean energy liaison for the Portland development commission. I am going to give you testimony about Portland's clean tech economy. Portland's 40 years of progressive policy around

climate and sustainable innovation has made the city's internationally renowned as a place that has found the balance between growth and the quality of life. In the past it's been difficult to quantify the size of our clean tech sector because of the federal government's industrial classification system not adapting to the industry. For example, an employee at Portland's indo windows would be classified under building materials rather than as a manufacturer of highly efficient window materials. Under the leadership of mayor hales, we recently did a pilot with the c-40 climate leadership group that sought to quantify what is called the low carbon economic goods and services sector. While the information hasn't been publicly released, we do have top line analysis to share that can finally demonstrate a link between Portland's climate leadership and the creation of the sizable industry in itself. The data shows that the low carbon economic goods and services sector is a $10 billion industry with an average of 5% growth since 2012. The sector has an employment of almost 47,000 and is composed of 2,450 companies. Portland has been in the position of being a net exporter of low carbon goods and services. This data includes Clackamas and Washington counties in addition to Multnomah, but we believe this is an accurate look at the local sector. Other analysis we've conducted shows that the sector is very rich in middle wage jobs defined as earning higher than 42,000 per year and requiring less than a bachelor's degree. Portland has never been afraid to prioritize sustainability and the health and wellbeing of its people. As we've demonstrated by removing a highway on our waterfront and making a park. We were the first city in the u.s. To have a green infrastructure and a green building policy. We were early to sign up for the Kyoto protocol and we signed onto the historic Paris climate agreement. We brought back the modern street car and last fall celebrated the completion of a multimodal bridge that excludes cars. We've created the thriving and equitable 21st century economy that sees vast potential for growth as the world looks for lowing carbon we've created a Portland brand around sustainability and innovation that recognized around the world, whether it's china, japan, or our sister city in Guadalajara, Mexico, which I recently visited with a team from Portland and the mayor's office. The trajectory of our climate policy has been working. We will continue to embrace the policies and the programs that have fostered a better city for job creation for Portland's residents.

Hales: Thank you very much. Appreciate your work. Questions? Thank you both very much. Okay we're going to turn to public testimony. We're going to give students a chance to come first, that's good news and bad news. It's good news because it's great to hear from students. It's bad news because they're a hard act to follow. If you're here as a student, come on up. Please. Welcome. Good afternoon.

*****: Good afternoon.

*****: Good afternoon.

Tyler Honn: My name is Tyler Honn.

Gaby Lemieux: I'm Gaby Lemieux.

Tucker Holstrum: Tucker Holstrum.

Honn: And we all attend Lincoln high school.

Honn: It is great to once again see the members of the city council after our visit last Thursday. During our time in school and in the first months of our environmental justice and sustainability class at Lincoln, we've learned about the issue of climate change. We've learned how without immediate action; the fate of the world will be imperiled within our lifetimes. The entire world was held hostage by the imminent threat of nuclear annihilation presented by the arms race between the Soviet Union and the united states. However, the issue of climate change is significantly more frightening. Unlike nuclear war if we do nothing and continue down the path we have followed for decades; climate change will wreak havoc on our world.

Lemieux: We have all lived in Portland our entire lives. We have visited other countries and states, but we always long to return to the rich green forests, the staggering snowcapped mountains, the broad powerful rivers and the open hearted people of the northwest. Many times we have driven through the gorge and thought aloud how lucky we are to live in a place of such unparalleled majesty. But now every time we witness the beauty of this corner of the world we cannot escape a certain lingering sorrow. We imagine that so many of the things that we love might soon be gone. We see the trees parched, the mountains defeated and unable to carry snow, the rivers choked and empty of salmon, all ravaged by climate change. And these worries are not just contained to the beautiful pacific northwest. Across the world, it is already happening.
Holstrum: We constantly hear our elders say they shouldn't have left us with such a mess. While these things are true we cannot afford for you to simply pass this issue on to us. We have to stop building new fossil fuel infrastructure now. Yet fossil fuel companies continue to operate unchallenged by the government and intend to extract five times as much carbon as we can safely utilize. We don't have time to wait around. We need to start an aggressive transition to renewable energy now.
Honn: In spite of the challenges ahead, we've found huge sources of inspiration in our own communities. The walkout at Lincoln was a turning point for us. We looked across the Hawthorne bridge. The line of students was so long as the protest spanned the entire bridge back to the west side. Over 1,000 students walked out on September 7th. When we saw that there were people willing to stand up for what they believe in, we knew we didn't have to wait around and hope for a better future. We knew that we could start shaping our own destiny. However, change cannot wait until our generation begins to run for public office and to write our own legislation. The change has to start with you. If we don't begin right now, by the time we are old enough to hold public office, it will already be too late.
Lemieux: We heartily appreciate the city council's support to stop the development of all new fossil fuel terminals and to limit the construction of petroleum storage tanks under 2 million gallons. However, we must stress the need for tighter restrictions. The city of Portland needs to do more than just banning holding tanks over 2 million gallons. We need a full ban on all new storage infrastructure. The 10% expansion would make the city liable for millions of gallons of additional fuel capacity it would increase our future contributions to climate change or devastate the river and surrounding waterfront in the event of a seismic disaster. So if a 10% volume expansion is truly the only way to ensure our safety in the event of a seismic disaster, then I simply express my frustration and hope deeply that the irony is understood by all of us and that our message will not be lost on fossil fuel companies.
Holstrum: We are done waiting. The initiatives already passed in the city should constitute the jumping off point for a better future for all, one that is healthy, just and sustainable. We need a fundamental change in the way that we address our priorities. We must follow an ideal similar to that which was outlined in the Iroquois confederacy. We must consider the impact of our decisions on the next seven generations. This would allow us to stop the acting as if short-term economic growth is more important than all else and favor a cooperation among people, governments and the earth for the greater good of all on this fragile planet. As nasa's voyager one spacecraft was flung out of the solar system at 11 miles per second the onboard cameras were pointed back towards the earth. Encapsulated in the sunlight was a tiny, pale blue dot, a world teeming with life against the back drop of near infinite and hospitable space. This is our world and we stand as a city on one small corner of it. While our world is in a cosmic sense fragile and small this only verifies that as the care takers of this world, we have the chance to begin an aggressive global transition away from fossil fuels right here right now in Portland. We believe that banning all expansion on fossil fuel storage facilities in the city of Portland is the only

logical next step. The only one that can result in a promising future for the city and the world. We need to write the history of the world and be on the leading edge of change. With questionable support for climate action from the federal government for at least the next four years the role of local governments in this movement will become much more important than it has already been. We urge you to do all you possibly can to confront this issue for it is the greatest one our species has ever known and your generation is the last that can put us on the right track in time.
Hales: We do make an exception and applaud for students here. [applause] thank you very much for being here. We do make that exception in part because some of the best moments of being on this council for us is when we do hear from students. We heard from students in our budget hearings about the importance of our parks programs, we hear from students about tough issues like bullying and we hear from students about this issue the most important of our time so it's really for us as policy makers, we get to listen to a lot of adults, but you're a special category and that's why we give you special treatment so welcome.
Mimi Rupert: Thank you. Good afternoon, my name is Mimi Rupert.
Haile Peveto: And I'm Haile Peveto
Rupert: We are a part of the inaugural environmental justice and sustainability class at Lincoln high school. Last week in preparation for this hearing our class marched down to city hall to speak with mayor Charlie hales and city commissioners nick Fish, Amanda Fritz, Steve Novick, and Dan Saltzman we demonstrated our upmost support for the ban on any new fossil fuel infrastructure through the strongest fossil fuel zoning codes up tp date. In return, we were praised for our student advocacy and direct action. When reflecting on the event later in the day, there was one word that seemed to perfectly sum up our morning: Empowering. As students who have been studying climate change in the classroom for two years, we were ecstatic when given the incredible opportunity to take direct action and fight for our future and the future of generations to come.
Peveto: There are a multitude of things you think about when you're young and considering your future. Your hopes, dreams and aspirations, your family and career and your happiness and for the most part, young -- and for most young people those fantasies are filled with optimism and excitement, but for my generation and the generations to follow, our futures are burdened with conditions, limitations and destruction. We can no longer separate our future from the devastating effects of climate change and so many people are already living this heart-breaking reality. We are lucky enough to live in a developed country with good infrastructure and desirable location, but many are shrouded in ignorance. As if this problem is so bad, but climate change doesn't wait for anyone and soon it will be our turn to face the devastation. Sadly, by the time our earth reaches its boiling point, I will be turning around, 46 years old. My potential children will be around my age now and their climate will be completely different than the one I grew up with. They will not have the luxury of experiencing everything our beautiful earth has to offer because it will no longer be the planet that we know now.
Rupert: This ban is more important now than ever with a leader who has no intention of addressing the severity of climate change and actually has the intention of setting us many steps back, it is imperative that Portland be at the forefront of this environmental movement and set an example for the rest of our nation. The city of Portland has already been such a pioneer in advocating for change. And this ban solidifies that by banning all future expansions on fossil fuel storage infrastructure. We are promoting morality, we are promoting justice and we are promoting a better future so please consider our lives as the next generation of leaders, the lives of those already suffering and those yet to be born when making pivotal decisions, such as the one to be made today. Thank you.
Hales: Welcome. [applause]

Peter Sallinger: I'm peter Sallinger, I go to grant high school. Tuesday, November 8th, 2016, we elected our next president. In doing so, we elected a man who believes among many other things that climate change is a hoax created by the Chinese. We elected Donald trump, a man who has refused and will continue to refuse to listen to the science that has been proven over and over again. And in a time like this, we have a tendency to panic, to say what have we come to and to walk away from everything we have been fighting for, but we cannot. For it is in these times that we must stand up and as Hillary Clinton said on Wednesday, never stop believing that fighting for what's right is worth it. We have a historic opportunity to do what's right and to walk the talk. We have the opportunity to show cities around the nation that we can make a difference and that we will continue to fight for our children and our children's children, no matter who stands in our way and that we will live up to the green image that people across our country conjure when they think of Portland. Today, we as Portlanders must take this huge step towards preserving our world for all those who will follow us. We will show everyone that Portland will not back down by leading from example and we are not afraid to make a difference. I hope that after today, we will be able to look back on what we have done and celebrate this as a historical accomplishment and one that shall not be forgotten. That being said I believe there are still things we can do to make this an even stronger victory. Let's fix any loopholes that allow for smaller facilities and take out anything allowing for facilities to get 10% larger in exchange for seismic upgrades. We here in Portland do not have to exchange bigger facilities for safer facilities. We need to lead by telling fossil fuel companies that keeping the people of Portland safe is an obligation, not just something they do merely for the sake of creating larger facilities. I hope that today, we can honor those who will come after us by showing the world who we are in Portland. I would like to thank the mayor as well as the rest of city council for leading the way and voting to ensure that Portland is safer and more environmentally friendly and we will continue to fight for what we know is right.
Hales: Thank you all. [applause] more students to come up? Yes, come on please.
Sophia Smith: My name is Sophia smith I'm 16 years old, I can't vote. I'm scared for my future because for the next two years I have little voice it in. I'm counting on this city council to protect my home and protect my generation and those after me. For we are the people who will have to live through the decisions we make today and in the future. Two days ago, our country elected a president who thinks climate change is a hoax. What does that mean for the future of this earth, as the u.s. is the second largest contributor of fossil fuels and carbon emissions. Having trump elected, I'm not only scared for the basic treatment of all Americans, but I am scared if I will even have a future where I can keep fighting for human equality. We have so much power in our country to shape the future. It starts with local governments who have the ability to take a strong position. We are fortunate in that in the pacific northwest, we don't see immediate extreme impacts of climate change, but by the time we experience the repercussions, it will be too late. We have to stop thinking about profit and think about all the people in this world who are affected by our actions. We are not asking for a lot, but we need to take a stand and stand firm and allow no expansion or creation of fossil fuel terminals. Our window for stopping global warming is slowly closing meaning why would we create this resolution if we are going to do less than we can? Instead of doing a second rate job, which we have done so many countless times in the past we need to do as much as we possibly can so all of us have a future I am proud to live in. All we have time for is to take action and to do it right. If we weaken this resolution, time will run out before we have a chance to fix our mistakes. When you were children, did you think about the health of this planet and worried if you were going to have a future? Did you have to stand in front of your government just so your life would be protected? That is what I have to do because my future is being put

below the wealth of companies. And endangering our planet. As a country we need to realize the only people we want to help with a decision like this is ourselves. That means we can't weaken our actions. We have to do all that is physically possible. Last year when the city council unanimously passed its resolution to create a stronger regulation for fossil fuel companies and no new fossil fuel infrastructure I was so proud to live in Portland and I began to feel hopeful for my future. I want to live in a world where I'm proud of the actions of my government and what they have taken so I can live a happy, healthy life. That can start here in Portland, Oregon, by standing firm on no new fossil fuel infrastructure or expansions. Thank you.
Hales: Thank you. Welcome. Who would like to be next?
Shannon Doyle: I'm Shannon Doyle I'm 12 years old and I'm here today because it is a human right to have clean air and water. I have grown up in this wonderful city, it's a beautiful masterpiece. The Columbia river gorge has in some ways made me who I am. It taught me how to hike, how to fall, it taught me what my place is in the world. And most importantly it taught me how to be myself. The Columbia gorge has shown me how I am connected to every living thing. That is why we must do everything we can to protect all life. I recently read an article published in the guardian about the estimated decrease in the animal population. It states that animal populations plummeted by 58% between 1970 and 2012 with losses on track to reach 67% by 2020. Researchers from world wildlife fund and the zoologic society of London compiled the report. In four years I will be 16 years old. In that time, if we do not decrease our fossil fuel consumption, more than half of our current animal populations will be gone, extinct. Portland, Oregon is leading the nation to clean energy. We have risen together to do so many amazing things. We have dangled from bridges and blockaded shell. We have a Portland climate action plan as well as a Portland public school climate literacy resolution. Last year, when you voted for no fossil fuel infrastructure, it gave me hope that we would soon meet our city's goal to achieve 40% reduction in carbon emissions by 2030. That means we must follow up and stay strong. We cannot be weak. We cannot have any more fossil fuel infrastructure built. We must not let companies make short-term profits and endanger the lives of the residents of Portland and our own blue dot, earth. Together, we can say yes to clean air, clean water and a healthy planet. Thank you for your time and opportunity to speak with you today.
Hales: Thank you. Welcome. [applause]
Jack Strobel: Hi I'm Jack Stroble, fossil fuels are not going to go away on their own. They're like a weed. We need to pull up its roots or it will never go away. We can't take our time and hope they'll leave it's about time that Portland became independent of fossil fuels. We have a golden opportunity and we need to use it to better our lives, to improve our city, to say no to new fossil fuel infrastructure. Ever been to Los Angeles? There's oil rigs everywhere, even in the city and worst of all, there's a giant smog cloud that covers the city from all the fossil fuel emissions. I don't want that to happen to our beautiful city of Portland. I don't want the Willamette river to be lined with fossil fuel infrastructure. We don't want oil pipelines snaking through forest park. And we can't risk it. Just one oil silo could break and flood into the Willamette, killing thousands of fish, and then it would flush into the Columbia, hurting the salmon and finally, flushing into the ocean, blackening our beaches. We don't need another oil spill epidemic. What we need is to say no. We can switch to renewable energy; we can improve our dams. We have to choose to fight. The people of Portland want this, the men, women and children of Portland want this. Together we can cut our fossil fuels. We can say no. Say no to all the fossil fuels. We are saying no and so can you.
Hales: Thank you all very much. [applause] okay any other students besides these? You may be batting cleanup for the student team. So welcome.

Eleanor Wardlaw: My name is Eleanor Wardlaw and I'm 14 years old. As young people in the country currently very divided on such an important topic we are at times voiceless. Without the ability to vote it is easy to be left out of the political process. That said, we are the generation that will be the most impacted by decisions like these. Prohibiting fossil fuel Expansion and standing up to the corporate greed that drives climate change deniers sets a vital precedent for the rest of the country. When many leaders refuse to acknowledge the effects people have on climate change, it's important to take action on this delicate issue. Thank you.
Hales: Thank you, welcome.
Hannah Witscher: My name is Hannah Witscher I'm 15 and a freshman at grant high school. The republican congress and the president elect made it very clear they do not view climate change as an important topic and the threat that it is to today's world. If they will not act, it is our duty to. If we can make a difference, we must. We should not value the life, health and safety of the people in our community as lower than the chance of a company to make a profit. We need to say that oil companies and fossil fuels are a bad thing and that they are a huge risk to our environment, both the actual oil and the carbon dioxide that they produce. Global warming is a huge issue if we can make a difference we must; we have to fight for our future before it is gone. Thank you.
Hales: [applause] good afternoon, and welcome.
Lilly Mason: Hi my name is Lilly Mason.
Olivia Magaret: And I'm Olivia Magaret. we are students from Sunnyside environmental school.
Mason: Last year, three of our fellow friends and students came here to testify against any future fossil fuel infrastructure development in the Portland area. The council unanimously approved this resolution and promised to enforce it. This felt like such a breakthrough and start of a healthier community, but now, we feel cheated. With these proposed rules, new infrastructure with under 2 million gallons of fuel would be accepted. This would allow more greenhouse gases to be emitted into our atmosphere, which is harmful to everyone everywhere and there is no way we can ignore that. We also know that any new fossil fuel infrastructure that would be built no matter what size would be here for 20 years or more and we don't have time for that. The fossil fuel industry has known for decades about global warming and we don't understand why they should be rewarded for destroying our planet.
Magaret: Right now, Portland has a chance to prohibit all new fossil fuel terminals and require existing facilities to make seismic safety improvements without expanding. As 13-year-olds, this really matters to us. Our planet is in serious trouble. Humans are killing the earth and each other. As you know all fossil fuels emit greenhouse gases and other harmful pollutants when burned. These emissions lead to serious, universal and irreversible consequences. We are already beginning to see the impacts climate change has on our way of life. Polar ice sheets and glaciers are melting, resulting in rising seas, temperatures are increasing and many species are at risk of extinction. It is our responsibility to do something to fix this. Building more fossil fuel facilities is not the answer and by-passes all progress our city has made to break free from fossil fuel dependence.
Mason/ Magaret: Our dream is that someday Portland will be able to run on almost all renewable energy. We can only accomplish this if we stand up for what we believe in and protect the place that we call home. Thank you.
Hales: Thank you. [applause] I told you they would be a hard act to follow. I cannot imagine more of a contrast between the disheartening insanity of this week and the hopeful leadership that we see from young people in this community. Let's hear it for our students. [applause]

Fritz: Before you go students, we learned that we're not allowed to just require the tanks to become seismically upgraded. We're going to need your help to go down to the legislature in the new year to get that changed. So in 10 days' time on December 1st we're going to be holding a legislative agenda advocacy training at the city and it's going to be tabors base on SE Belmont it's from 6-8 you would be very welcome to come so that we can help you prepare for making your case to the legislature because I hope you do just what you did now. Thank you very much.
Hales: Thank you.
Novick: The fight against climate change takes many forms and we here at the council are going to take up an issue soon which relates very much to what extent do we require new parking to be built with new residences and when we require new parking spots to be built, that continues to build society around the car, which encourages people to keep on driving and releasing carbon so I hope that you will turn out to encourage this council to reduce parking minimums as part of the effort against climate change.
Hales: All these opportunities for activism.
Fritz: Just one more thing, commissioner Novick calls it climate disruption, which is much clearer than climate change. Climate change is having a 70-degree day on November 10th here in Portland, Oregon. It's nice if you're outside, but it's not right. So we've got to all be very focused on the language that we use and the way that we use it so we're working together in the ways that we can. Thank you very much.
Hales: Thank you all. Okay. It's going to be a hard act to follow so we're going to move to the sign-up sheet and if you are here and you have a disability or if you have some childcare needs and want to get early in the queue, come to our council clerk and we'll scroll you in. Let's go to the sheet and folks can let you know.
Moore: I've got them off the list. I have a remaining 54 total testifiers.
Gregory Monahan: My name is Dr. Gregory Monahan I'm here in my capacity as the chair of the beyond gas and oil team for the Oregon chapter of the sierra club and I'm speaking on behalf of the sierra club. The Oregon chapter of the Sierra club supports an implementation of the fossil fuel policy which does not allow for any expansion of bulk fossil fuel terminals. It's clear to anyone who understands science or who is willing to look dispassionately at the evidence that climate change is real and that its effects are evident today. It is also clear that the consequences of ignoring greenhouse gas emissions will lead to a future in which the lives of our children and grandchildren will be very difficult. The results of the recent elections also make it clear that we cannot rely upon our national leaders to solve this problem for us. Leadership will have to come from the bottom up starting right here in our city. The united nations just released a report on the emissions gap, that is the difference between the amount of greenhouse gas emissions needed to keep the temperature of the world from rising beyond 1.5 degrees Celsius and the amount we are currently emitting. The news is not good. In short, we need to radically reduce the amount of fossil fuels we are using and we need to begin to doing so now. Additionally, the staff report of the planning and sustainability commission makes it clear that overall demand for fossil fuels is already flat. It is reasonable to expect a decline as more electric vehicles are put into service. There is absolutely no rational basis for expanding fossil fuel infrastructure. Nowhere in the language of the resolution that you passed about a year ago does it list exemptions which allow for the expansion of the described infrastructure. In light of what we know about our climate and our national policies, it is imperative that we do not continue to expand fossil fuel infrastructure. Therefore, the sierra club urges you to eliminate the 2 million-gallon minimum and to eliminate the allowed expansion for seismic upgrades.
Hales: Thank you. Good afternoon, welcome.

Marilynn Sewell: Thank you. My name is Marilynn Sewell I'm the minister of the first Unitarian church and I have to say that hearing those young people just broke my heart. This council led by mayor Charlie hales has passed the strongest land use code in the country, prohibiting all new infrastructure for fossil fuel export. Look at this picture. I think you will remember this incident.
Hales: Yes, we do.
Sewell: Tiny activists hanging from the St. John's bridge. They stopped shell's massive ice breaker for 48 hours and pictures like this went around the world, and then through our emissary, once more our witness went around the world to the pope, to president Obama. And now, again, the whole world is watching in light of this election, what will happen to the climate movement? Do not think that what happens in this city council today is unimportant and, of course, on November 17th, we are important to the larger world. We know that the rest of the country watches what Portland does in many arenas and certainly in regard to climate. And so we are here today not just to testify but to witness. I'm using religious language because this is truly the greatest moral issue of our day or one might say of any day. We will all be accountable as moral agents if we fail to keep fossil fuels in the ground, all of it. The temptation always, always is to accommodate to power. But rather we must speak truth to power. In the words of that spike lee movie, do the right thing, it's in your hands, do the right thing.
Hales: Thank you, you're wonderful. Speaking of some people that had something to do with that, welcome.
Mia Reback: Thank you for considering today's amendments to prohibit both fossil fuel terminals. My name is Mia Reback I'm one of the organizers with 350 pdx. Almost exactly a year ago, we came before the city council and when we passed the city's opposition to new fossil fuel infrastructure in our city or adjacent waterways. And when we did that we said no to the long-term investments that lock us into polluting carbon emissions for decades to come, preventing any hope of meeting our carbon goals and our climate goals. When talking about new fossil fuel infrastructure, we're not talking about the next few years of fuel use. We're talking about the next five decades and the long-term course we as a city and a planet will take. Now is our chance to turn that resolution into binding land use law by changing our city code, sending a signal around the world and to our fossil fuel industry here that we're protecting our people, our land, our water and climate. Just last week, the Paris climate agreement went into effect, stating that world leaders are committed to keeping global warming between 1.5 and two degrees Celsius. But a recent study by oil change international aptly titled the sky's limit found that the committed emissions of our existing fossil fuel infrastructure alone will blow us past two degrees Celsius. The principal finding of that study which I think to some is quite depressing to me is very hopeful. They found that in order to keep within these globally agreed upon limits we must build no new fossil fuel infrastructure, not some, none. No coal, no oil, no gas. And that governments who are prepared to move away from existing fossil fuels have to begin that managed decline immediately. Fossil fuels aren't going to go away overnight, but the actions we take today will dictate the future course of where they go. I encourage the city council to pass bolder versions of the fossil fuel terminal amendments. We should not be trading our safety for increased fossil fuel facilities. I encourage you to get rid of the allowance for 10% expansions and to look into further restrictions on small terminals in addition, prohibiting bulk fossil fuel facilities. Thank you.
Hales: Let's take the next three.
Rob Mathers: Good afternoon I am Rob Mathers and I am not a climate disruption denier. I feel like we've been invited to the barbecue and we're on the menu. We are opposed to the amendments and there's two principal reasons. I was going to go into the bottleneck reason first. You know, in order to use renewable fuels, they have to be blended with

conventional fuels, at least in the foreseeable future and if there's a bottleneck created and if volumes have to be trucked into the region or the state from outside the region or state, then that is just the opposite of where you want to go with limiting greenhouse gas emissions and carbon emissions. With respect to the seismic resiliency issue, we feel that this will lead to disinvestment in the bulk fossil fuel terminals which will result in no improvements to seismic resiliency. My company Kinder Morgan and I'm here representing the working waterfront coalition today and Kinder Morgan. Our core values are to operate safely and compliantly and reliable and we rebuilt a tank in Linton. We increased the capacity by 30%, but that's what it took to justify the investment. And in wheel bridge, we increased our capacity, our overall capacity by about 23%, which is seismically resilient now as is the tank in Linton, such that what it took 20% increase in the capacity to justify that investment. So we feel that Portland is not an island. And that instead of being visionary and exemplary, that these land use restrictions and zoning changes are actually short sighted and very self-centered. Thank you.
Fritz: Can I ask you a question? You saw the northwest natural gas explosion in northwest. So wouldn't your tanks that aren't seismically stable, if there was an earthquake, wouldn't they produce an explosion many times more than that?
Mathers: I don't know if there would be an explosion, I don't know if there would be release. It could possibly happen yes.
Fritz: So is your company not worried about liability in that instance?
Mathers: Yes. We are.
Hales: The reason for the -- and we'll talk about this some more, the reason for the 10% allowance was we would hope that people would basically try to take market share from somebody else within the existing capacity by building a seismically resistant tank, our hope would be that companies that are worried about liability or have old tanks could, in effect, take that capacity from their competitors by building a safe one and we're not sure if we calibrated that right. You weren't necessarily taking market share, maybe you were given the demand is flat. You're taking market share from somebody else.
Mathers: But there has been. Last year, gasoline rose 2%, natural gas demand countrywide rose 3%. There probably are going to be more vehicle miles traveled here.
Hales: We're actually going down here and we're happy about that.
Mathers: I don't know maybe we need to check the latest statistics on that.
Hales: Okay well appreciate that.
Fritz: So your saying that the 10% increase isn't going to foster any change?
Mathers: No, that is correct it's going to not foster change and it going to lead to disinvestment and it's going to lead to these facilities being stranded and if that's what your intention is then you will achieve that goal.
Fritz: So mayor I think you put that forward as an incentive, if it's not I think we should have a discussion on if we need it or not.
Mayor: Right thank you, welcome.
David Konz: Thank you mayor hales, commissioners thank you for having me and the opportunity to provide comments on these zoning amendments. My names David konz and I work for tide water barge lines we're a tug and barge company headquartered in the pacific northwest and employ approximately 275 people. Tide water has been in business since 1932 it's the largest inland marine transportation company west of the Mississippi river. With 16 tug boats 170 barges and 5 marine terminals, tide water's vessels help move millions of tons of freight every year on the pacific northwest water ways reducing congestion on the state's highways and railroads while producing far fewer pollutants and carbon emissions than trucks and trains transporting equivalent tonnage. Likewise, our industry statistics and safety record show that the towing industry in the pacific northwest has one of the best programs for moving commodities securely and safely in our region.

We have reviewed the proposed zoning and are concerned this will restrict economic development in the pacific northwest we feel energy terminals can be built expanded and operated safely in the city of Portland. These terminals have the ability to create positive economic impact and support new and existing family wage jobs in our region and the other thing we wanted to bring from our perspective as a water way user is that these may have unintended environmental consequences looking at the big picture. These changes would create uncertainty about these terminal existences and to robs points earlier about them stranded on an island, if they go away their key to the fuel supply network of our region and the sides the eastern sides of Oregon and Washington for example barging supplies about 50% of the fuel consumed in the tri cities area and barging also a for barge configuration is usually how their transported take about 538 trucks off the road and 140 railcars off the road. So if the terminals go away and the demand still is there even if its flatter slightly decreasing there still going to need their fuel and it's going to go through other methods so that's for every barge load that goes that's a potential of 538 trucks or 140 railcars traveling along the Columbia river gorge. So in conclusion tide waters an advocate for environmental stewardship and hopes to the city of Portland will consider a constructive dialogue with us and other stakeholders to generate an implemental fossil fuel distribution policy that addresses climate change. Public safety and environmental protection without significantly adversely impacting the viability of Oregon's economy and water front industry. Thank you for the consideration and the time to share out viewpoint.
Hales: Ellen Welcome.
Ellen Wax: Hi, Ellen Wax with the working waterfront coalition. The working waterfront coalition supports the intent for seismic safety and improvements in emission reduction. We do not believe this is a tool that will achieve the goal, we have concern about the unintended consequences per seismic upgrades resulting in disincentives. The working waterfront coalition has submitted a letter of testimony to the record and for the record the wwc thinks there is a – in the planning commission's recommendations specific to the storage structures definition it's not clear whether the limits on growth relate only to fossil fuel storage tanks or whether the limits on growth relate to pipes and other fossil fuel facilities associated with the existing terminals. It is our understanding during discussions with city staff that the city's intent is to limit growth related to the existing storage tank capacity and it does not intend to limit growth related to pipes and other fossil fuels facilities and infrastructure. We have submitted to the record clarifying amendments that address this issuer by specifically stating fossil fuel storage tanks in the language. Thank you.
Hales: Thank you very much. Ok let's take the next three.
Hales: Welcome.
Nick Caleb: Greetings. I dressed up for you today I think last year I was here in a red t-shirt. I got a new shirt since then that is red. My name is Nicolas Caleb the staff attorney for neighbors for clean air and a professor at Concordia university. Today I'm delivering testimony for the center for sustainable economy, and my boss Mary Peveto I think will give testimony for mca a little bit. Last November after a year of wild action and debate about our role in the regional and global climate action we passed the fossil fuel and infrastructure resolution it was a huge milestone. We did this because fossil fuels posed health and safety risks to Portlanders and pretty much everywhere across the site of extraction through transport and when we combust these fuels. Since this time as has been mentioned far more eloquently by youth today threats have become more severe both political and scientific. Not only have the threats become more severe, but the city of Portland has taken the fight outside its boundaries as well so we have become involved in regulatory processes with regard to oil trains we also submitted resolutions in support of the standing rock blockade of fossil fuel infrastructure so our cards are on the table we're

committed to this as a matter of policy and now it's just time to tie the bow on top of it. I think we can still improve the policy in front of us. I think the dialogue we just heard was very useful and understanding a key point of this whether allowing for a 10% increase and existing capacity will serve as a sweetener for investment representatives of an international fossil fuel company just told you that it won't so I think we shouldn't believe them, but the option isn't to allow 30% upgrades. We're not going to do that. I think what is in front of us, we knock down the cap on existing infrastructure we draw a strong line in the sand and we move forward from there into a renewable energy economy. Thank you very much.

Alan Smith: My name is Alan Smith and I'm a Portland resident natural gas is not a clean fuel saying its clean because burning it is less carbon intensive than the fuel it replaces is like saying smoking tobacco is healthy because it won't kill you as quickly as smoking opiates. Over a 20-year period methane is 84 times more powerful than co2 as a greenhouse gas and fugitive emissions have increased more than 30% above epa's estimate over the last decade. One scientist has said this is almost certainly due to fracking, according to the ipcc 40 to 70% of species would be doomed to extinction by global warming at 3.5 degrees Celsius. Climate change is estimated to kill 400,000 people per year already and the number is projected to exceed 600,000 by 2030. Billions of people migrating to avoid starvation from drought would cause chaos around the world to have a 66% chance of keeping global warming below 2 degrees Celsius 68% over two/thirds of the proven reserves must remain in the ground. The fuel terminal representatives claim these amendments are emotionally driven. This is a false argument and an arrogant one at that. It's also an example of attacking your opponent's character when you can't win a debate with rational arguments. It's true the dire warnings we hear from the scientific community stir emotion, especially when we hear the damage to life on earth is proceeding faster than predicted, but we should all remember that it's not just local jobs or lives that matter and there are no good jobs on a dead planet. I urge you to eliminate the allowance, 10% existing expansion of terminals and support the recommendation of pursuing seismic safety through billing code changes at the state level. Since the recommended draft was written, plans were announced for a $2 million facility --

Hales: Go ahead, finish, please.

Smith: -- in Jacksonville, Florida. The 2 million-gallon threshold should also be limited so that facilities like that can't be built in Portland.

Hales: Thank you. Welcome.

Dick Harmon: Good afternoon. I'm dick Harmon. I live in Portland, I'm 80. I'm here as father, grandfather and great grandfather. I support 350's position on the ordinance and I want to thank the council especially mayor hales for stepping firmly into our new reality. We have run out of time on climate so the small adjustments as incentives is offensive. It is deeply offensively. We don't have time for that kind of stuff. We have in my view just been threatened by disinvestment. My reaction to that is let them disinvest. Let them reinvest by making up for the increase in demand by changing their business plan to invest in renewables and keep conservation. The other question here at root in my view listening to this, we have a liquid fuels catastrophe coming at us, so the mobilization of the people and the institutions of Portland to electrify transportation is critical. It's stupid we're in this argument over the safety of these tanks. Cut the liquid and go to electrification of transportation. We will back you if you lead on this thing. It's going to take big money. We can raise that money as a community to invest in that kind of electricity. We can negotiate with Detroit to speed up the entry of electric vehicles. So we don't have to take this stuff that the fossil fuel guys are saying. The last thing, it's about the children. I can't say it any better than the kids did.

Hales: Thank you.

Bonnie McKinley: Bonnie McKinley. I go to garage sales I set upon my voyages as a garage sailor in the 1970's. One Saturday in that long past decade I was garage sailing through southeast Portland. One sale stood out for its remarkable treasure shelf of cheap, cool stuff. I asked the couple why they were selling their precious belongings for so little. They explained they were being forced to leave their neighborhood. They had to clear out fast. Holding this garage sale was a small piece of the larger preparations to leave their home of 50 years. Why? They had been cancelled out of their long-term neighborhood. Their home and hundreds of others lie in the path of eight lanes of vehicles, the proposed mt. hood freeway. The plan was to have east to west freeways roll out in the southeast powell/division neighborhood. To the north and south additional freeway would plow through Prescott and sellwood neighborhoods. Federal funds were in place. This thing was happening. Except, except, Portland still has those sweet tree blessed neighborhoods. The city of Portland changed course. It used its brain and heart and traded a foul smelling freeway for a planning prize that continues to impress the nation. Light rail our max lines. Things can change for good. Policies, city leadership, economic viabilities and public sentiment can change and make sense for the good of residents and for the environment. We can use our brains. We still have hearts. Let's use them when considering the perpetration perpetuation of fossil fuel infrastructure. No new climate bashing projects we will work for energy conservation and renewable energy and for all the employment they can bring to our city. The city of Portland, commissioners, people impress that nation Again. This time with a glorious robust, visionary fossil fuel infrastructure resolution.
Hales: Thank you so much.
Sarah Taylor: My name is Sarah Taylor. I'm here to talk about the past, current and future materials of fossil fuels on newborns and maternal health in particular to premature babies. I live in a Linton, a place of two rivers of lakes, of wetlands and forest park, I live in the historic Linton community that was annexed by the city of Portland in 1915 for what looks like the sole purpose of turning a river community into a fossil fuel and super fund site. In 1962, the state of Oregon bulldozed Linton to make way for more fossil fuel infrastructure our small community has asked for a river front piece of land so we can rebuild and year after year this city council has denied a small park, a small piece of the river so that the fossil fuel community can continue to take over that river community, but today I am here as a midwife in north Portland. I have delivered over 2,000 babies most of them in your city I am here to share that the impact of the fossil fuel industry on the unborn children in our community is devastating. Right now the united states is 36th in maternal and newborn health. This is largely because of environment factors African-American and Native-American babies are 2.5 times more likely to die in the first year of their life and it is increasingly obvious that this is because of fossil fuels. We live not just downstream, we live up and down a pipeline. I'm from Pennsylvania, where there is fracking john Hopkins university did a study. Babies born where there is fracking where our oil will come from are dying they are costing money they have huge medical bills; they have lifelong challenges that oil is coming through a pipeline at the expense of unborn babies. The fossil fuel fumes destroy women's estrogen read the science I will give you the studies. You are destroying a baby life before it's born, you are destroying its genetic makeup. You know the fish in that river are in trouble. The mothers on the banks of that river in my Portland community are in trouble. It is not because of poverty. It is not that our students in north Portland cannot learn. It's because we have polluted their rivers, their air, their soil, their mothers' uteruses, their wombs so that is down river in Pennsylvania where the fracking is happening. In north Portland, you know that you just failed to agree to clean up the super site, 16 of them and now you are saying that you are going to increase the hazard for north Portland children. I also worked in Haiti.
Hales: I'm going to wrap it up. This is a new point.

Taylor: I want to tell you down pipe, I've worked in Haiti for the last five years, I've watched hundreds of babies die. So what you do here impacts north Portland, the fracking babies and the babies on the other end and I ask you to think about the babies when you make that decision.
Hales: Thank you so much.
Riah Sallee: Thank you for giving us, all of us the opportunity to speak with you today.
Hales: give us your name.
Sallee: Sorry about that. I'm Riah Sallee. Thank you for giving us this opportunity. I support a full ban on all new fossil fuel terminals large and small and ask you to eliminate the projects below 2 million gallons. Additionally, I understand that there are other mechanisms to encourage seismic upgrades and to the extent that those can be employed. I support them over a 10% increase in capacity at existing terminal as is climate disruption was not enough derailments in mosier and elsewhere have given us a multitude of reasons to ask the city of Portland create policy that reduces oil train traffic through our precious Columbia river gorge not increase it. Climate change is the most pressing issue we face globally we cannot allow short-term corporate profit gain to trump the health of our people the safety of our communities and the environmental viability of this region. The city of Portland has the opportunity and I believe responsibility to continue to lead the way for other cities to follow.
Hales: Thank you. Welcome.
Darise Weller: My name is Darise Weller and I'm here as a very concerned citizen and a Linton resident. With our country about to be taken over by a man who vowed to reverse environmental laws and dismantle epa now's the time to stand up boldly to the fossil fuels industry's to stop cow-towing to big oil interests who are trying to make the city back down on this historic ordinance when actually there's a need to expand on this ordinance to insure safety. The Cascadia earthquake along with other fault lines make the locations where the tanks are located the worst possible place. Natural hazards are not only there is not the only problem that result in environmental catastrophes of epic proportions in the last few years we have had three near misses due to accidents that would have achieved the same disastrous results. Do not exempt northwest natural from fossil fuel amendments many small tanks can quickly added up to a large storage facility. Code seven of Oregon land use laws state cities should pass zoning laws where hazards cannot be mitigated circle law requires responsibility make sure the insurance or assurance bond coverage is enough to include not only the environment cost of destruction and cleanup, but also the loss of life and property. If industries will not or cannot acquire that assurance they should move to safer ground. Make the tank farms move if they will not upgrade seismically to the highest standards needed. Do not allow storage railroad cars filled with hazardous materials to be stored in this area sometimes for days on end this amounts to mobile storage of fossil fuels. The dangers are greatly increased by railroad switching that takes place in the Linton area and there are many uncontrolled railroad crossings with tanker trucks loaded with volatile fuels crossing over them. We should not have to bear the consequences of fossil fuel industries that favor profits over people. Don't back down on the original ordinance of no new expansion. Make a bold statement. Protect us.
Hales: Thank you. Thank you very much.
Eileen Fromer: My name is Eileen Fromer. Climate change and greenhouse gas emissions will not stop because president-elect Donald trump is coming to the white house. This city must remain committed to transitioning to clean energy and meet its 2050 carbon reduction goals every step we take as a community to keep fossils fuels in the ground and transition to sustainable energy is essentially to stop global warming and the catastrophes it brings to life on earth. Portland has the opportunity to be the example of how communities can come together and get it done do not accept the 10% expansion of

fossil fuel infrastructure tied to seismic upgrades. That is not necessary to achieve the seismic upgrade and is obviously a sneaky, backdoor way to allow expansion. Seismic resilience and upgrades are important and necessary to achieve as soon as possible for at risk fossil fuel storage tanks. However, there is no reason to tie this to the expansion of current fossil fuel facilities. Specifically, I encourage you to remove the words "plus 10%" from page 49 of the psc's recommendation.
Hales: Thank you, thank you so much.
Rob Lee: My names rob lee. When the gasoline tanker truck crashed into the rail tanks cars last summer just imagine how the first firefighters on the scene when they saw the numbers on the side of the cars indicated asphalt instead of oil or ethanol as it happened the gasoline fire burned it's self out after hours instead of having tank cars exploding right next to a giant liquefied gas tank in a chemical plant with its tanks of liquefied hydrogen. Imagine how city leaders would feel explaining how the city of Portland allows dangerous components to exist so close together and how we can only watch the ensuing catastrophic fire made its way along the river. Can't happen? Let me remind you this was one of recent tank fires in our area. Obviously adding any infrastructure to this dangerous situation is a fool's errand. It's time to start moving the tank farms to safer places, not adding to a situation that might explode even before the earthquake. Thank you.
Hales: Good afternoon.
Debra Romerein: Debra Romerein. Nope, it's not dead yet. Contrary to recent reports, Australia's great barrier reef has not been completely stuffed out, not yet. Only a quarter of the world's reef has been killed off this year and the rest is in mortal danger there have been three mass bleaching events reported on the reef since 1998. This year was unprecedented die off, the worst scientists have of seen. How many dead canaries does that equate to? I recently got back from Hawaii and it's happening there, too. The primary reason this is occurring is warming ocean attentions, the burning 'fossil fuels. Exxon mobile James black 40 years ago knew it, too. He said the likely manner mankind is influencing the global climate is through carbon dioxide side release from the burning of fossil fuels before all of us here know what we have to do. We have to reduce our dependence on all fossil fuel. We already know that you have done something so important, something that really counts when you voted unanimously last year for a full ban on any fossil fuel infrastructure expansion. You were clear, resolute. Now is no time for half measures, watered down inserted clause is, back pedaling concessions, strong arming forces. Now is the time to show what other leader looks like. Let's chart a course for other cities to follow. You make me so proud to be from Portland. I want to leave you with one question. When I do my seismic upgrade to my apartment building will I be allowed through a code or zoning change to build 30% more rentable space to recoup my seismic upgrade cost of course, not. But I still do the right thing. Thank you so much.
Hales: Thank you.
*****:** Yum.
Theodora Tsongas: Good afternoon. I'm dr. Theodora Tsongas I'm a member of the environmental working group of the physicians for social responsibility. And a member of the Multnomah county local emergency planning committee. The fossil fuel zoning code changes recommended by the Portland planning and sustainability commission are well thought out. I commend their restrictions of small fossil fuel terminals and their rejection of a request by northwest natural to exempt its facility's. The recommended code changes still raise concerns about public safety and pose a threat to our community and neighborhoods. You've been reminded of the fire that resulted from a collision of an oil tanker truck with an oil train, unfortunately the truck driver was killed fortunately the train cars burned, but did not explode it was a very close call for nearby industry's workers and residents in northwest Portland. In Mosier the derailed cars burned for days exposing

residents and visitors to smoke as well as causing major disruption in the life of the town. Accident do happen let's not increase the likely hood of an oil fire we need to truly actively oppose expansion of fossil fuel infrastructure this means actively discouraging increases in demand for fossil fuel unit trains in Portland. A 10% across the board increase for the 10 large oil facilities listed by psc would result in additional storage of 39 million gallons of oil, equivalent to roughly 13 trains of crude oil. We must find ways to require seismic and safety upgrades without increasing capacity or we defeat the purpose of council resolution 37168 and 37164 and the climate action plan. Let's truly take the lead in combating climate disruption thank you.

Julie Chapman: I'm Julie chapman with the league of women voters of Portland. Any increase in fossil fuel infrastructure is not consistent with the league of women voter's natural resources and climate change position. Having followed the process of code development I've observed that the recommendations have ranged from unlimited expansion to no increase in capacity in the existing terminals. Last month three of the seven planning and sustainability commissioners voted not to allow an increase. The petroleum industry has exactly rushed to upgrade their tanks even with no size restrictions allowing the 10% increasing in capacity for existing terminals is arbitrary. Any increase is not compatible with state climate goals nor with Portland's climate action plan these goals do not state the exception unless we have an increase in regional population in fact, regional population increases are assumed in the calculations. The goals are a reflection of the important task before us, to leave behind the business as usual paradigm and to adopt clean energy policy. Good news, the cost for developing alternative energy resources are coming down all the time. We live in a state without a petroleum extraction industry and with the wealth of water, sun and wind. If any region in the world is well suited to shift onto renewable energy, it's Portland and Oregon. We urge you to exercise foresight and to stick to the goals you've adopted in resolution 37168. If cities lead, we'd like to be headed in the right direction.

Hales: Thank you. Welcome.

Mary Vogel: Thank you. Nice to see you again today I'm Mary Vogel as you know I'm a planning consultant who usually focuses on central city planning. But today I want to support the general direction of these zoning amendments I do want to question however the need to allow the 10% expansion of tanks in the proposal. I know our planning director Susan Anderson knows that urban design and Urban forum are critical to reducing demands, but Susan didn't mention the residential infill project that we heard yesterday that will allow more people to live in walkable neighborhoods as well as make more neighborhoods walkable. By the way, you can still testify on that or send testimony until November 16. She didn't mention your upcoming hearing on parking reform that commissioner Novick mentioned and she didn't mention the central city 2035 plan that I'm hoping will make it more walkable and bikeable. There are so many other policies that will lead to a decrease in demand. As excellent as the report is, I certainly learned a lot from it. It does not make a good case for the need for the 10% capacity increase. I want to support with so many others and ask you to take the allowance for the 10% expansion out. I also want to support the invitations from commissioner Fritz and novick. Perhaps you could repeat the date, Amanda and the parking reform hearings as well.

Hales: Thank you so much. I want to make a suggestion in terms of process. I'd like to call the staff back up for a little bit of a work session on just some of the questions that have been raised because you and others have raised this 10% issue and we also heard from the industry about that so if that would suit the council, I know we're going to lose a quorum at five and we also had demonstrations that has the police bureau urging people to make travel plans a little differently. I'd like to take a little bit of a pause in testimony and just bear down on a couple of issues we've heard about, so certainly from my perspective,

I think it's the perspective of this council, and I know it is, and I really know it is as you as professionals, there is no one beholden to the fossil fuel industry. My only interest in any mitigating factors in our turning policy into code is to make it work as a practical matter, to avoid getting overturned by some other government, and those are probably the only reasons. If the 10% threshold, which we intended for the reasons of encouraging seismic upgrades apparently isn't going to do that. What's the case for it?
Anderson: Let me toss out something. I think you can recommend 0%, but there is an issue of blending that is very real, in terms of having tanks to be able to do that and whether you'd be able to monitor that is unlikely. I think adding on an amendment that directs my fellow bureau directors at bds, pbem and fire to pursue new codes, so that you can actually require a seismic upgrade is from my perspective something to do. It will take years, though. So whether or not you want to go to zero now, eventually you want to go to zero. If you want to do that after the new code is finally through the state and we get to adopt it or you want to do it now.
Fritz: Why does it take years to get a change at the state?
Anderson: In general building code changes follow practice and at least it's been like a two or three-year process to get a major change in the building code. So you can get Paul Scarlett in here to talk more about that, it's not an overnight thing.
Fritz: I would imagine lots of building code things are kind of inside a baseball or the committees that deal with that. This is obviously a bigger public purpose so surely if the legislature was to direct it that could happen faster right?
Hales: So yes I'm really struggling with not that your arguing for it, you tried to craft good policy and you also have a history of crafting visionary policy. If the 10% threshold and we just heard from Kinder Morgan isn't going to incent them to make the change, and if the rate of change from old dangerous tanks to new seismically resilient ones is glacial. It will take us 300 years at the current rate to have it all taken care of. So in other words, we're not solving the problem or even ameliorating the concern in the industry. I'm starting to wonder if there's any real upside to the 10% threshold.
Anderson: Maybe Michael can talk about blending and whether that's a real issue.
Hales: That I think I need to hear about.
Michael Armstrong: I think blending is the consideration so the state cleans fields programs first came into effective in January of this year. It ratchets up the percent of low carbon fuels that need to be blended in. So the recent new tanks that we've seen have been specifically for blending I thinks it believable that the current infrastructure will need some additional tanks in order to do that blending as the clean fuels.
Hales: Couldn't we specifically address that issue? If there's any exception or carve out here couldn't it be if it's only for that purpose as opposed to some sort of general wiggle room?
Michael Armstrong: I think we can try to define it that way.
Fritz: presumably any new blending process would have to involve new construction so if the companies are feeling like they are being told that they have to move to that they're going to be building new tanks anyways right? So why would they need a bigger tank then currently?
Michael Armstrong: I think that might be a good question for the terminal operators.
Hales: This is when we talked about it before, but based on what we heard from the community and the industry I think it needs work in the sense that we want to make sure we're really in concert with the state, we have a clean fuels policy that say use more and more clean fuels, we want the infrastructure of those fuels to be provided. Granted the fact we're going to be using less and less fossil fuel overall. Those are the scenario's we agree with state government on. We have to get these old dangerous tanks replaced with new ones. Sounds like, frankly, the only way to get to that is a mandate. I'm fine with that. It's

not going to happen with incentives. A few people have built new tanks, but again, we just heard that the 10% threshold isn't going to change their corporate decision making about that, so I'm struggling with what we're getting for the 10% allowance really given the testimony that we heard from the industries like, okay, it isn't going to work, we're not doing anyone any favors, not that we were trying to.
Fritz: Also mayor just thinking through the politics of it sometimes for instance on sick leave when Portland has a very strong ordinance, the legislation sometimes comes back and weakens it. I don't know why we wouldn't go for the strong ordinance in the first place.
Hales: The only reason I would pull my punches on this issue politically was if we had a significant fear that the legislation would overrule our ability to do what we're doing. It's happened. It has not happened lately the legislature been going in the right direction lately they gave us they set us free from a prohibition on inclusionary housing for example rather than tying us down with new ones. For the legislations step in on local zoning would be a pretty big overreach, but I guess They've done that before, too.
Fish: I think we've been pretty consistent in not legislating against the fear that someone will pull the rug out. They have the right, but they then have to make that case. As I listen to the discussion and the incentive plan, I appreciate that Kinder Morgan came in. I don't know who else might take advantage of the incentive and what is as the mayor said the benefit. If we can't mandate it and don't control the timeline towards that process, I'd like to see it. If we're not sure whether the incentive is going to work, a dormant incentive doesn't have much of an impact. If there is someone who might use the intensive to create a public good, I guess I'd like to know beyond just Kinder Morgan and who might take advantage of that and why before we say we're going to take this out and address the mayor's question about can it be tailored so it's adapted to real world situations where we get a clear public benefit and not an invitation to be used willie nilly. Does that make sense?
Anderson: In other issues like this we've done a do this until. So we'd set up an incentive until legislation gets passed at which time times can be regulatory and obviously it ends at the time.
Fritz: That would be a disincentive though to the industry to not oppose the legislation.
Fish: Let me continue this line. I don't want to extrapolate off of one person's testimony about what Kinder Morgan will or will not do and commissioner novick is not here. He would be leading the discussion about moving towards upgrading seismic standards. We don't know if the legislature will or will not take this up in a time manner. We got to get a handle on this because everything we do in the river can be undone if there's a seismic event and we have failure around these tanks. For me to make a decision I'd have to have a better sense about who is impacted, who might take advantage of it, because right now I feel like we're speculating, but it would have to be tailored so at either sunset or there was some clear oversight about how it was used and then we'll have some follow up decision making. I think the mayor hit the nail on the head I don't feel like I have enough information to evaluate whether it would be an incentive someone would take advantage of for the public benefit.
Anderson: One of the things, there's no -- we aren't setting this up right now. They could do it right now, and we're getting one a year maybe, and so whether or not there's no limit, they can go 30% over at this point and it's not an incentive to do it now. So I kind of believe --
Hales: I think making it clear, taking it out,
Fish: do you believe the mayor should withdraw his amendment?
Anderson: No.
Hales: It's already in the base proposal from the planning and sustainability commission. The 10%.
Anderson: The 10%. We put that in there because the planning sustainability commission

felt they thought an incentive would help to move the market. At the same time there were others making the case. They have that right now and it doesn't cause that.
Hales: Natural industrial zone today You can just build a tank.
Fish: You're saying they're playing Russian roulette without making any investment to make them seismically resilient and because you're not required to.
Anderson: There is another issue to, which is maybe they don't see the market expanding. If we're going to reach our 80% reduction in 2050, it's only going be falling so what would be the financial incentive for them to invest in this.
Fish: If we were doing the comp plan right now you would hand us a one pager at a bunch of options and a box we could check because it's getting late, we've been in lots of hearings a little bit, could you walk us through what you think are the options at this point?
Hales: Leave it in as 10%, that is one.
Anderson: You go to zero, you go to something in between. You should also proposal have an amendment that says maybe you've already put this together about having bds and pbem and fire put together the due code I think that's it.
Tom Armstrong: So I will say that --
Saltzman: Couldn't it also go up? -- [overlapping dialogue] -- maybe a 50% incentive is and what is the trade-off.
[Overlapping Dialogue]
Tom Armstrong: I will say the mayors fourth amendment has us reporting back to you for three years, what the fuel demand trends are, the tank replacement is. That's an opportunity to review what are the dynamics. I think, in addition the 10% is in there not only for an incentive for seismic upgrade, but the uncertainty around the fuel blending for the clean fuel standards that is in year one is going to ratchet up over the next 10 years. We don't know what the needs are going to be for a blended tank. We have said it's okay to have a tank of non-fossil fuel of ethanol that you need to blend, but part of that additional expansion capacity is for that fuel blending when you take the ethanol and petroleum and mix it together which happens on this end of the pipe not up in the pungent sound area.
Hales: We're going to lose a quorum in half an hour. I'll restate what I said earlier. There's three reasons I would in any way weaken what we've put in policy in the code. One would be practicalities, work in the present day. We're working towards a lower carbon pollution. That is our incentive, what we have stated in this city. Oil locked up in pavement is not a problem for the climate not as much as oil being burned. We do still need pavement, but I'm okay with that one. That's being practical. Second I want to be political that I don't want to set the city Portland to be overturned in court or at the legislature. And the third would be that we're -- that we're not creating a replicable model because I believe what other people said here is we're going to create a precedent for other cities to follow and I want them to be able to pick up this ordinance and cross out Portland and put in Eugene or Prineville or anywhere else and so that is a concern. Seems to me the 10% threshold isn't pivotal to those questions. Doesn't sound like it's needed in the practical world, but the blending thing might be. I'm going to ask that you prepare an amendment that removes the 10%, and adds a blending amendment. Bring that back to us as an option, because if there's a way to do that, there might be an interest in the council in going that direction. And I think commissioner Fish's question is good as well. How would a blending provision work? You get to build a new tank if you're doing it to follow the state's clean fuel guidelines, tell us how that would work. Seems to me that's a set of conversations that you ought to have with them as an industry and then we use to make adjustments to this code proposal. Is that helpful?
Fritz: I think we should check with government relations and our leaders in the legislature both with whom are Portland politicians so that's great. Could you explain the bit about the 2,000 vs 5,000 is it?

Hales: You mean the 2 million vs the 5 million gallons?
Tom Armstrong: In the amendment or the code?
Fish: While we're looking for that I think we should let the folks know that because of the demonstrations planned around this building we've been advised to give our staff the opportunity to leave early because they may not be able to get to cars. That is not to be alarmist. That is to tell people if they are required to pick up a child at school, get to a medical appointment, get home at a certain time it may be that the transportation system is impacted around this building. I'll say while we're going to continue this hearing if someone has that concern they should make their own judgment.
Hales: We're going to continue this hearing until five and we'll continue it, the hearing because we have people worked on amendments and we won't get to everyone who wants to speak today, so we'll do our best.
Fritz: Your right it was the 2 million in the definition of the capacity exceeding 2 million gallons. So could you explain it used to be 5 million gallons?
Tom Armstrong: When we started this process, we looked at the Pembina facility's which are 30 or 40 million gallons. Through the process, the discussion process and planning commission we got down before the planning commission who was 5 million-gallon. That covers pretty much all of the major distributors in the Portland harbor today. There was concern there would be both some small operators underneath there increasing of fossil fuel structure, so the planning commission recommended and before you to move that threshold down to 2 million gallons. That is roughly the equivalent of one oil train and experience, one-unit train carrying crude oil.
Fritz: What about the testimony we heard saying we should get rid of that? And I don't quite understand that.
Tom Armstrong: I think it has to do with how small do you get and do you when you a pull in the smaller operators does that become a burden on essential local distributors such as propane companies that bring in railcars and then distribute even the small bottles of propane around and do we want to regulate all of those people that may have 100,000 gallons.
Fritz: but it's a threshold. -- [overlapping dialogue] –
Hales: I haven't heard anything yet that would cause me to move it up or down. Certainly wouldn't want to move it up, but one of the things that ought to be in that follow-up plan is what's our intention here. No more bulk fossil fuel terminals in Portland. So we think we know what bulk looks like the planning commission says that's 2 million gallons, that may not be right, where we want to draw the line. It may be smaller than that, but that is something we might not figure out in the first version of the ordinance. So I'm less prepared to try to tinker with that than I am with the 10% provision. Which gives people the appearance that we're watering down the ordinance, but might not do any good. That seems to me the worst of both worlds.
Anderson: On the 2 million to weaken in the next week put together what kinds of companies, real examples of companies in the Portland area that would be affected by that so the propane companies and some of the smaller firms.
Hales: Any other requests for them? We'll continue the hearing until five.
Saltzman: I'd like to say some clarifying language that was suggested by the working waterfront coalition to define what is covered by the 10%, that it applies to tanks only and not to piping and pumps and things like that.
Hales: Thank you so much. Other questions for staff? All right, then let's return to the list and we'll keep going as long as we can.
Rose Christopherson: Hi. Thanks a lot for all the good work you guys are doing. I'm rose Christopherson. I'm going to testify as a representative of the care of creation ministry of Augustan Lutheran church. God gave us an incredibly rainbow Saturday morning, I don't

know if you saw it, but the thing I noticed was that the red is on the outside, the long. The violet is on the inside. What actually falls on the earth, of course, is we call it light because we see it but its electromagnetic radiation that continues into the invisible range of both sides. Heat is the side that goes beyond red, it's a lower wave length and that's infrared. And when we see something, say a red scarf, what's happening is the red is reflected and that's why you're seeing it and all the other wave lengths are absorbed. When you see something like a lump of coal you do see it, so something is being reflected. For the most part being absorbed, it's black. When you burn that coal and you get carbon dioxide and it goes up to the atmosphere, it gathers warmth because the infrared light that hits the earth and comes back out into the atmosphere is captured by that carbon dioxide. And so that is where the warming comes from. The fact it's above us is where they call it greenhouse gas. As we burn the fossil fuels carbon dioxide is released and it warms the earth. So when you see a rainbow again I think you'll notice the red on the outside and you'll remember the carbon dioxide absorbing the heat from the longer wave lengths.
Hales: Wow, thank you, that was a teachable moment.
Christopherson: If a doctor can explain it and a city council can understand it, it's actually simple physics.
Hales: We call that process. Thank you.
Christopherson: It's really simple.
Regna Merritt: Thank you. Today I'm testifying on behalf of power past coal coalition, a huge alliance of health, environmental, business, clean energy, faith and community groups working to stop coal experts off the west coast. We deeply support resolution 37681 and truly want to see full implementation of those protections. This city council has been well ahead of the curve on climate, fossil fuels, coal and oil. You have been awesome. After Tuesdays election this is a new world. President-elect trump is as volatile as bachin oil. Big oil and big coal have a big vision and very detailed plans for exporting fossil fuels from our west coast ports. They are in Bolden now, and becoming more empowered with each passing day. While we'd hope there's be an opportunity of protection it's more obvious to today than ever before that our local and state leadership must protect and sustain us for the next many years all local actions through zoning amendments must be taken to safe guard our lives, health a safety and they must be taken to protect our climate. We rely on you. So please modify this proposal to prohibit all expanse of existing fossil fuel terminals, encourage seismic upgrades to buildings without expansion of capacity eliminate the threshold and also prohibit bait and switch maneuvers that will allow 100% fossil fuels to be stored in tanks that were permitted for clean fuels. Please maintain the part of the proposal that does not exempt natural gas and its methane from this code. We have to stay in the game in this new world, this is where the rubber hits the road. We can protect our own backyard, those most vulnerable and the climate that sustains all earth inhabitants. We thank you and future generations will thank you for taking the right action on this.
Hales: Thank you. Welcome.
Anne Turner: I'm Dr. Anne Turner. I've spend my entire career working for underserved communities first with Multnomah county health department and for the last 20 years at Virginia Garcia memorial health center both as a clinician and as medical director. We all deeply appreciate your leadership on climate, coal trains, oil trains, as the recent fossil fuel resolution. Today I'm here to ask that you give strong consideration to the issue of environment justice as you review the proposed zoning amendments before you. It's important that we fully understand the broad and negative impacts that any increase in fossil fuel capacity in Portland may bring to low-income communities and communities of color. Air quality will be degraded by diesel emissions, emergency response times will be delayed and the loud startling train horns going off 24/7 will disrupt sleep, study and work

for those living in those neighborhoods. Serious health impacts from increased hospitalizations for asthma, heart attacks and cancer may be experienced by those in the neighbors as well expose to that environment pollution. So in order to meet the standards of equity and environmental justice and to protect public health for our most vulnerable please do not permit a 10% expansion in the fossil fuel terminals and find a solution now rather than later on and permit no new fossil fuel terminals of any size.
Hales: Good afternoon. I don't remember who was first, so go ahead, please.
Patricia Bellamy: Good afternoon mayor hale and council members. My name is Patricia bellamy. Thank you to offer support for your fully restricting development expansion of any and all bulk fossil fuel terminals and eliminating the 10% increase in expansion and to give you a nurse's perspective. I've been a Portland resident for 30 years and critical care nurse for over 40. I'm a member of the American nurse's associations ana which serves over 3,600,000 nurses and Oregon nurses Association Ona which represents over 10,000 Oregon Rn's. Ona has passed a resolution support of Oregon's position no to coal exports interested in that letter to Kate brown, I, quote, ona would continue to work opposing projects that would increase coal transportation in Oregon. As a front line member of our healthcare system nurses are concerned about the health and environment impacts caused by coal, end of quote. Nurses are also aware of the danger of climate disruption. Ana resolve that the American nurse's association recognizes and publicly acknowledges that the challenges we face as a result of global climate change are unprecedented in history. Its critical nurses speak out and advocate for the Health and safety hazards from coal, oil, natural gas or ethanol are far too many to list in this brief testimony. The science is clear. Thank you for your groundbreaking work.
Hales: Thank you so much. Welcome.
Diane Winn: Good afternoon. My name is Diane Winn. I'm a retired public health nurse and worked over 25 years conducting injury preventive research. I was here a year ago when you passed the fossil fuel resolution. What a proud moment it was. Today as you consider the zoning amendments I urge you to support the modification recommended by the power pass coal. With my background in public health I'm concerned about explosions and fires that can cause dramatic deaths. In the past couple of years at least 10 oil trains have experienced catastrophic derailments and explosions in north America. You all know about the derailment in Canada that was demolished a city and killed 47 people. One way is reducing the risk for fossil fuel transport. Even to increase the capacity 10% will increase in the number of trains. Oil and other fossil fuel storage tanks are also at risk for fires and explosions. A human error fire in Mississippi in 2006 killed three workers after fire traveled from one oil storage tank to another. Less than one-year ago today the potential hit too close to home a tractor trailer carrying fuel struck several train cars near the St. johns bridge and burst into flames this occurred 400 feet from the lng tanks. Finally, like others, I cannot conclude without mentioning the election results. We cannot expect the federal government to do anything to address climate disruption in fossil fuels. It will be up to cities and states. I ask you to take a very bold stand and take strong aggressive fossil fuel policy. Your leadership will stand as a beacon of hope for the rest of the country.
Hales: Good afternoon.
Andy Harris: Good afternoon. I'm Andy Harris, a resident of the overlook neighborhood of north Portland, my home is above the Union Pacific freight yard within the half mile blast and evacuation zone for oil train derailments. I work at OHSU, but I'm speaking on behalf of Oregon physicians for social responsibility. Portland does need to take bold and prudent action. Building additional fossil fuel terminals capacity, whether it's 10% or otherwise in a seismically active area is not prudent. Allowing more fossil fuel trains, oil and gas to pass through Portland is not prudent. Fossil fuel are inherently unsafe whether being transported or shift. From the Mosier experience in June we know firsthand about the fire

and explosions of bachin oil. Portland is made a commitment to reduce our impact on climate change or climate disruption and to transition to renewable energy to weaken the council's fossil fuel resolution by allowing additional fossil fuel capacity at 10% and/or adding new exemptions is unwise and dangerous. A case in point is natural gas or methane 25% more potent than carbon dioxide as greenhouse gas. It's extracted by fracking. As far as the impact on climate change, I'm glad that an exemption for natural gas has not been present in the current proposal and I would urge you not to create one. Just to conclude as a physician and grandfather I would urge the council to take bold and effective action by putting the health and safety of Portlanders first.
Hales: Welcome.
Mukta Akter: Good afternoon. My name is Mukta Akter and I'm a social and climate activist from Bangladesh. I'm working with 350 pdx as an international fellow on the climate issue. Bangladesh is one of the most climate vulnerable places in the world. Countries like yours are producing the largest amount of greenhouse gases, but contributing countries like Bangladesh are contributing no greenhouse gasses. Bangladesh is a low elevation country and the combination of sea level rise and increasingly powerful storms is already contaminating our freshwater. The effects are dramatic and devastating. It isn't having major impacts on agriculture, food security, and economic performance of Bangladesh. The scenery is almost the same for south Asia we can expect the sea level to rise by 2035 this mean the Bangladesh 35% cultural area will submerge under sea water 15 to 20 million people will turn into climate refugees. It's a huge challenge for our government now how we resettled in. The effects have already started in your country. For instance, the catastrophic flood in Texas and Louisiana last year and hurricane in Florida. Please think what is your contribution to greenhouse gasses, our future and the next generation is in great risk. Climate change is not an isolated issue. It is a global problem and to fight against the corporative approach the policy you are working to is a good start. Still much more needs to be done to secure it. Thank you.
Hales: Welcome.
Ryan Rittenhouse: My name is Ryan Rittenhouse. I work for friends of the Columbia Gorge. We're very much concerned of the fossil fuel in that area. As you heard from the mayor of Mosier there was the disaster earlier this summer where an oil train derailed. As far as oil train disasters would go that was about as good as you could hope for. If we have another oil train disaster in the Gorge, it's much less likely in Mosier. Takes a long time, this is not something that's being exaggerated. Any increase in fossil fuel infrastructure, fossil fuel storage, even 10% increase, maybe that limit on 2 million gallons is too much because it will mean more oil through the gorge and the likely another disaster of going in the gorge goes up. This incentive is more for them to make the upgrades themselves. If we're going to do an incentive let's come up with one that encourages it to make it for their own sake and that reinforces the spirit, which is reducing fossil fuel storage capacity in the city.
Hales: Thank you very much.
Maya Jarrad: My name is Maya Jarrad and I'm on staff with 350 pdx. Frankly, I'm thrilled to be addressing a governing body that is ready to take action on climate change. At this moment we cannot look at federal legislators to do that, so I am that much more appreciative right now of the way Portland has taken the bold and inevitable step to facilitate this transition and ban new bulk fossil fuel terminals. I want to talk about the potential for flat line demand and decrease of fuels in Oregon. The energy administration prediction for Oregon only a .7% increase in total crude oil and consumption by the year 2040. Though that growth is predicted after year 2030. And that's with low incentives for industrial efficiency and high/low prices. The biggest process growth for those fuel need in Oregon predicted by the eia. In other words, the most generous models for fuel expansion

other mode; scenarios predict a decline of .4% on the same timeline again, these increases are predicted after 2030. Given the current status of changes to the climate will fuel increase be called for after 2030? You may not be able to legally demand upgrades under current law for seismic safety. We in this room will demand upgrades of companies for seismic safety. We have made it politically possible for you as our governing body to pass strong climate action and I can assure you people in this room and watching you from all over Portland will demand the corporations to do just that. Thank you so much.
Hales: Thank you. Thank you all very much. So again, let's take a process check here. We appreciate you who testified again.
Fritz: Can I just ask, I'm very much appreciative of our guests from Bangladesh. Did you have people who came a long way to testify today?
Hales: I think not.
Rittenhouse: I believe there might be someone here from Haiti.
Jarrad: I'm not sure he wants to testify
Fritz: That's fine I just want to make sure if you come all that way.
Hales: That's very important. Yes. Thank you so much. It's our normal practice when we have more people than time to continue a hearing and we may want to do that. I know we're going to want to take you discussion of amendments at our next meeting. So what's our window of availability here in terms of upcoming council meetings?
Fish: The good thing is we have so little on our plate.
Hales: We have nothing else going on.
Moore-Love: I don't have a full council until December 7, when everybody is back.
Hales: Hang on a second. So you're saying -- well, what about next week, I'm sorry.
Moore-Love: It's already on the regular agenda on the 16th, but commissioner Fish is gone.
Hales: We might not be taking final action so we should go ahead and do that, but then the question is when do we have a third window for –
Fish: What's December 8th like Karla?
Moore-Love: That is inclusionary zoning for four hours.
Hales: If it's just a vote.
fish: We're all going to be celebrating the governor's Barbara Walters 80th Birthday that day.
Saltzman: It's not just the vote, it's the hearing.
Hales: We're saying I want to continue this hearing to next week because it's on the calendar for next week anyway. Susan you might help us out here if you have any process suggestions. This hearing is back on the council calendar next week, right?
Moore-Love: Yes. It's the first item on the regular agenda.
Hales: So we will discuss amendments, the ones that are in front of us and maybe others, because we've asked staff to prepare additional amendments, we'll take action on the amendments at the beginning of the session, take testimony, see if we got it right and adopt the amendments and then we'll set a date for the final vote. So the final vote could be -- not going to be the 23rd of November, right, because we don't have five of us here.
Fish: Should we do it on the eighth, just before inclusionary zoning?
Hales: We can do it then. All five of us here on the eighth?
Moore-Love: Everybody is here on the seventh if it's just a vote.
Fish: The seventh doesn't work for me, but we could do it just before the inclusionary. We're not cutting into his time we're just casting the vote.
Saltzman: If it's only the vote if there's additional testimony then I would object.
Hales: We'll continue this hearing next week at what time?
Moore-Love: It will the 16th at roughly 10:45.

Hales: If you signed up to speak today and didn't get a chance and want to speak next week you'll be first. What we'll do next week is we'll have a discussion on council amendments, take action on amendments and then let you testify and tell us whether we got it right or not and then the final action on the ordinance itself is on the 8th and that's how it works, that we don't do amendments and final votes on the same day when we're making legislation, because zoning code is around for a really, really long time, which is the whole idea here. Again, I want to thank you all for excellent testimony. Stay in touch with Zach Klonoski in my office for discussions about these issues. Come back next week if you are able. If you can't come back next week and still want to let us know your thoughts on this, obviously email each of our offices as you have been doing already, but I want to thank this community and the excellent testimony we got today. We have a chance in Portland to make a difference and you are why. Thank you so much and we are adjourned until next week. Thank you.

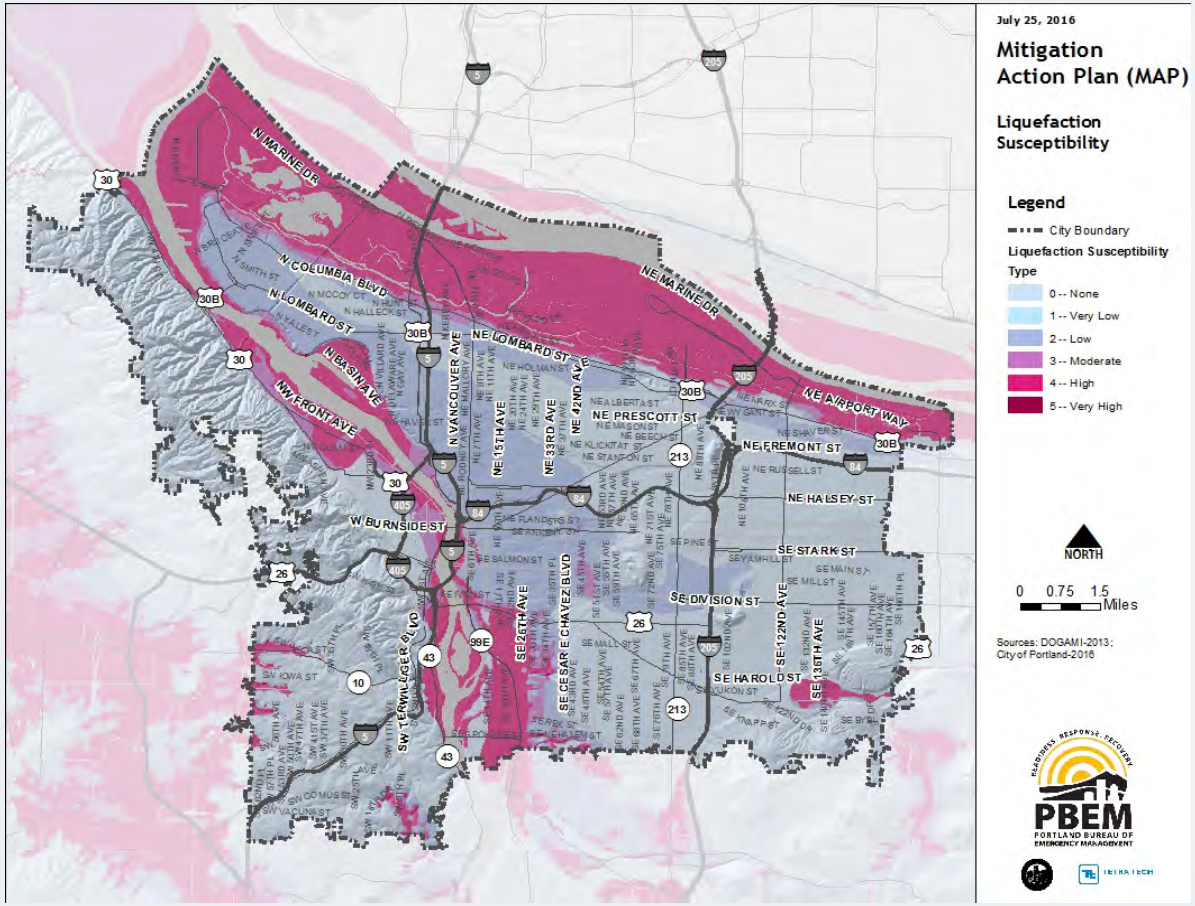
At 5:00 p.m. council adjourned.

Fossil Fuel Terminal Zoning Amendments: Recommended Draft

City Council Public Hearing
November 10, 2016

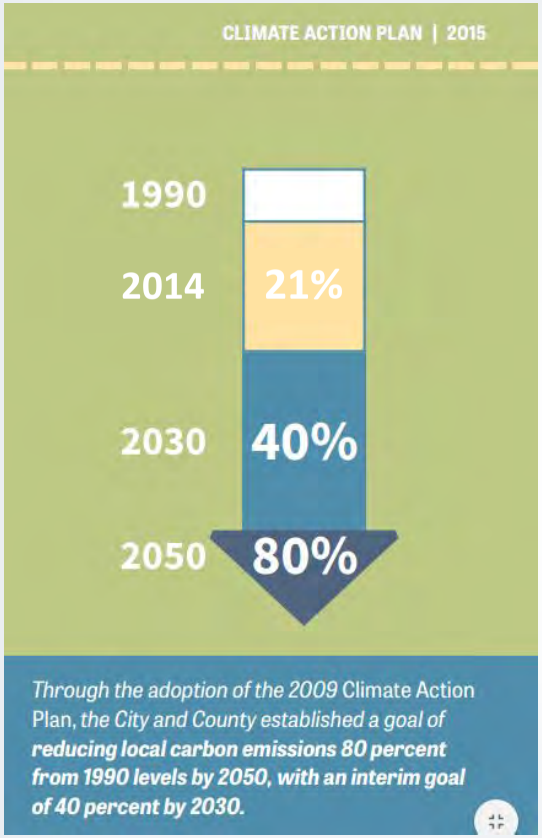
Bureau of Planning and Sustainability
Innovation. Collaboration. Practical Solutions.

New policy direction on fossil fuel infrastructure



Fossil Fuel Infrastructure Resolution, November 2015:

1. Actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways.
2. But do not restrict. . .
   - improvements in the safety, efficiency, seismic resilience, or operations of existing infrastructure
   - service directly to end users
   - infrastructure that will accelerate the transition to non-fossil fuel energy sources



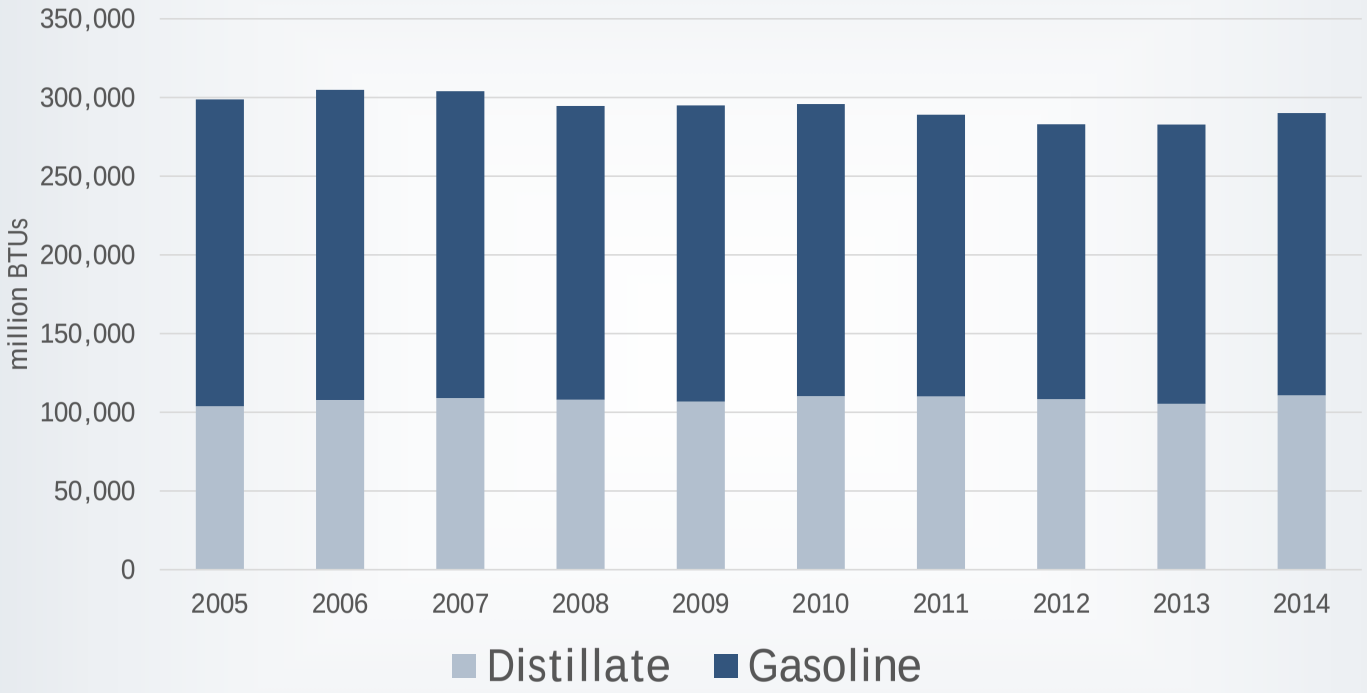
2035 Comprehensive Plan

Policy 6.48 Fossil fuel distribution. Limit fossil fuel distribution and storage facilities to those necessary to serve the regional market.

Public safety and environmental risks

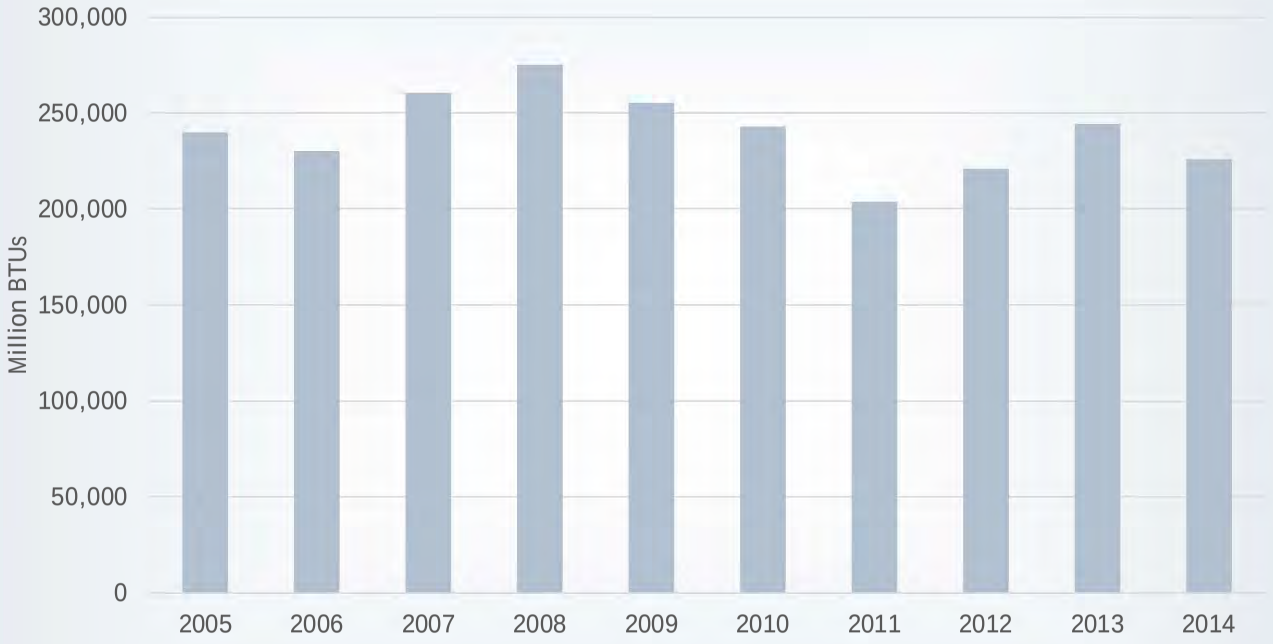
Climate Action Plan implementation

Portland's Climate Action Plan Goal: 80% reduction in greenhouse gas emissions by 2050.



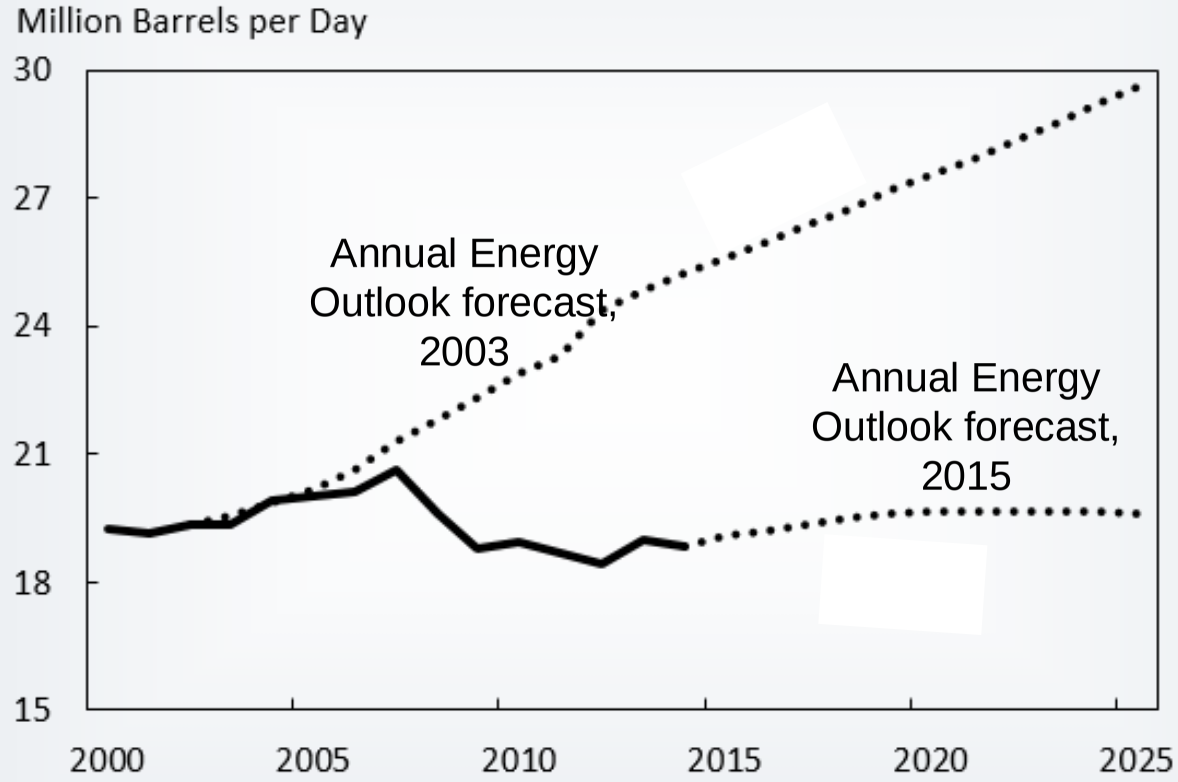
Oregon's climate action goal (HB 3543): 75% reduction in greenhouse gas emissions by 2050.

Statewide fuel distribution hub



- Over 90% of petroleum sold in Oregon is handled at the 10 Portland terminals.
- Hub infrastructure: harbor, pipelines, railroads, truck routes.
- Natural gas storage for regional peak consumption.

Over the past 10 years gasoline and diesel use in Oregon has been flat or falling



Source: U.S. Energy Information Administration, State Energy Data for Oregon
URL: http://www.eia.gov/state/seds/sep_use/total/pdf/use_OR.pdf

Total natural gas usage has also been flat over the past 10 years, though with higher peak needs

Source: U.S. Energy Information Administration, State Energy Data
URL: http://www.eia.gov/state/seds/sep_use/total/pdf/use_OR.pdf

U.S. Energy Information Administration forecasts of total oil use in the U.S. have moderated significantly

247
LUBA No. 2020-009
Page 533

Proposed zoning code amendments

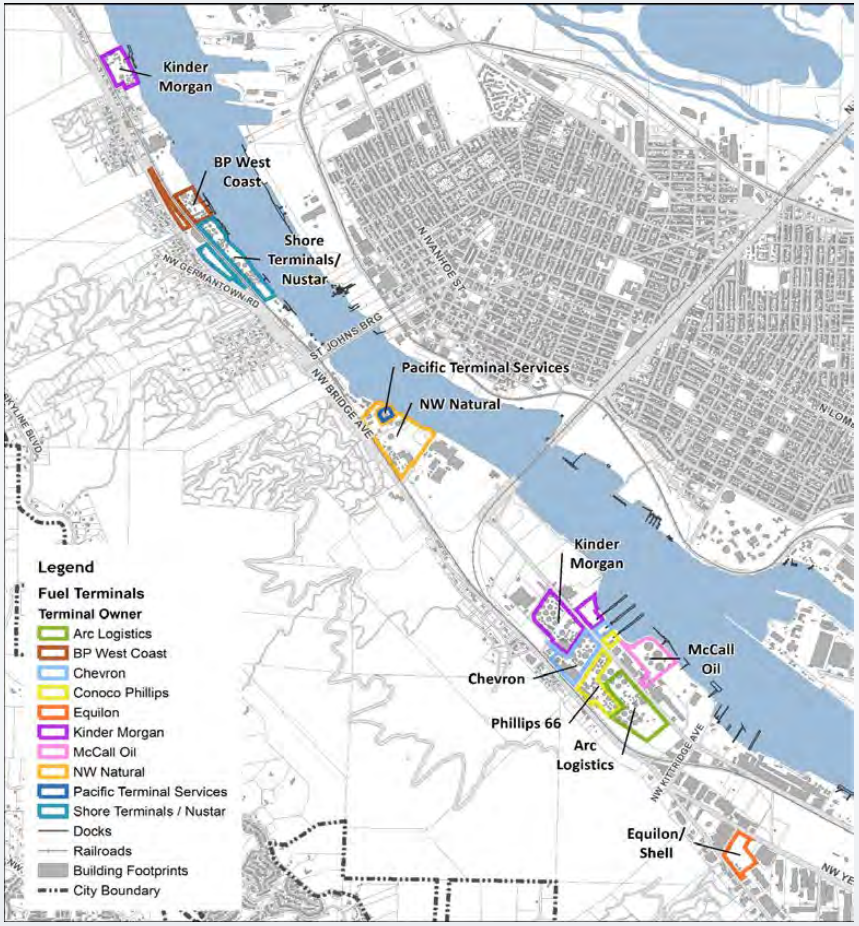
- **Define** Bulk Fossil Fuel Terminals as a regulated land use.
- **Prohibit** Bulk Fossil Fuel Terminals in all base zones.
- Existing Bulk Fossil Fuel Terminals would become limited uses that can continue to operate.

Defining fossil fuel

Fossil fuels are petroleum products (such as crude oil and gasoline), coal, methanol, and gaseous fuels (such as natural gas and propane) that are made from decayed plants and animals that lived millions of years ago and are used as a source of energy.

Exclusions: Denatured ethanol and similar fuel additives, biodiesel/renewable diesel with less than 5% fossil fuel content, and petroleum-based products used primarily for non-fuel uses such as asphalt, plastics, lubricants, fertilizer, roofing and paints.

New land use category:
Bulk Fossil Fuel Terminals

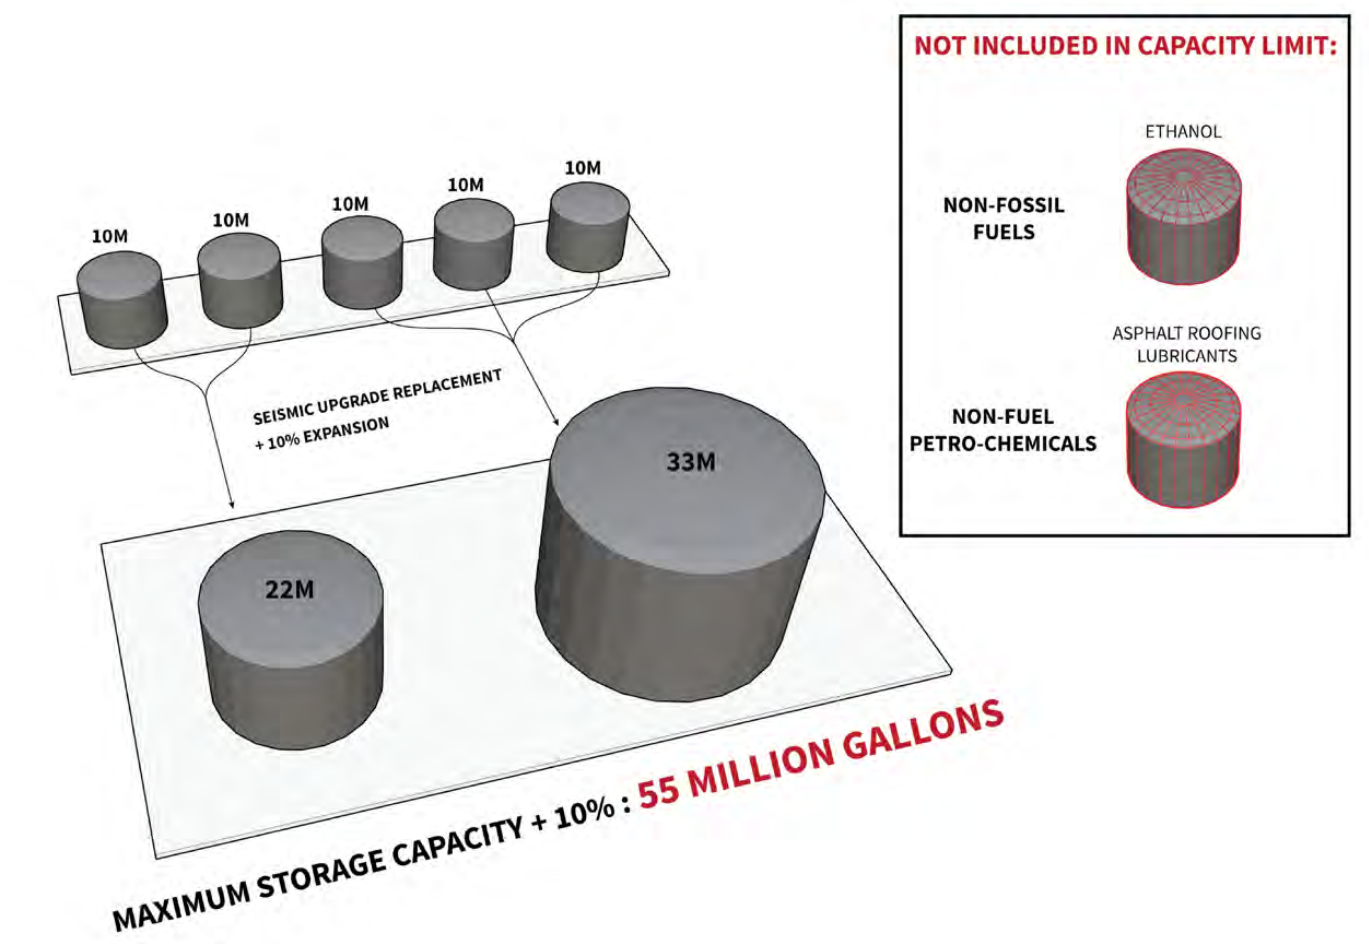


Bulk Fossil Fuel Terminals:

- Marine, railroad, or pipeline transport access; and
- Transloading facilities (such as train-to-ship) or storage capacity exceeding 2 million gallons.

Exclusions:

- Distributors with access exclusively by truck;
- End-user facilities, including filling stations and firms that store fossil fuels for use as an input;
- Airports, marine and rail servicing facilities.



Status of existing terminals

Regulating existing terminals

- Limited Use
- Storage capacity expansion limited to 10 percent of current capacity.
- Replacement of existing tanks for seismic upgrade needed to expand
- No land use review for expansion
- Public notice and meeting required

Regulating existing terminals

Future code changes on seismic resilience

PBEM's 2016 Critical Energy Infrastructure Hub Study future actions.

Seismic safety requirements are addressed in state building codes.

Advocate for state-level code changes to improve seismic resilience and require seismic upgrades.

Proposed Amendments

Amendment #1 – Technical Correction to Exception #4 to clarify that truck only terminals are not Bulk Fossil Fuels Terminals.

Amendment #2 – Clarification to Exception #7 that fuel storage for airports, marine servicing facilities and rail yards are not Bulk Fossil Fuel Terminals.

Amendment #3 – Clarification of the Fossil Fuel definition by specifying that non-fuel petroleum-based products, such asphalt and lubricants, are not fossil fuels.

Proposed Amendments

Amendment #4 – Additional directions

d. The Bureau of Planning and Sustainability shall report to City Council no later than December 31, 2019 on the implementation of this ordinance.

e. City Bureaus, including BDS, PBEM and Fire, shall work with the State of Oregon to develop policy options to require seismic upgrades of storage tanks within a firm deadline for replacement of older, unsafe tanks.

Attachments are also filed with Testimony. Clerk

As of 10:30 this morning, City Council has received emailed testimony from 285 parties. Among these emails, 8 additional letters are attached that were submitted in the last day, most coming from organizations. The other additional testimony in the last day has generally followed the form-letter format with themes described below.

Subject: Update on fossil fuel zoning testimony

As of noon today, City Council has received 232 testimony emails on the Fossil Fuel Terminal Zoning Amendments. All of this testimony generally reflects a common theme, calling for a "full ban" on new fossil fuel terminals and strengthened restrictions on expansion of existing terminals. These emails typically followed a form-letter format or a common header with brief individual comments, and I am attaching 5 examples that loosely represent the full range of what we have received so far. One letter was also submitted jointly by Columbia Riverkeeper, 350 PDX, and others, which is also attached.

Thanks,
Steve

Your Voice Needed to Ensure Portland Enacts Historic Fossil Fuel Terminal Ban

Last fall Portland City Council passed a historic resolution to ban new fossil fuel facilities in the city, putting Portland at the forefront of the climate justice movement. The resolution was the result of massive grassroots advocacy and the leadership of Mayor Hales and City Council. Now, one year later we need to hold the City to their word as they work to implement this resolution into binding city code. Overall, the proposed code is a strong step forward, but it could be made stronger.

Submit Comments and Attend the November 10 Hearing:

When: November 10, 2016 from 2 to 5 p.m.
Where: City Council Chambers - 1221 SW 4th Ave, Portland OR 97204

With the proposed draft, the City is taking steps towards making last year's fossil fuel ban a reality, but they need to hear from the community that we expect the proposal to completely follow through with enacting a full ban of fossil fuel expansion, as last fall's resolution explicitly called for.

Submit Comments:

Email your comments to Portland City Council at fossilfuelzoning@portlandoregon.gov and urge them to strengthen the code proposal by:

- Enacting a full ban on all new fossil fuel terminals by removing the exception for terminals under 2 million gallons. The proposed 2-million-gallon exception would still allow new fossil fuel facilities to be built in our communities
- Eliminating the provision that allows existing fossil fuel terminals to grow by as much as 10% in exchange for seismic upgrades. These upgrades should be required, not provided in exchange for even bigger facilities.
- Directing Portland Bureau of Emergency Management to develop proposals for State building code changes to require seismic upgrades
- Rejecting Northwest Naturals request to be exempted from these regulations.

Please act now to ensure Portland fulfills the promise to its historic fossil fuel resolution!

Those listed above submit the comments below.

Dear Mayor Hales and Commissioners Fritz, Fish, Novick, and Saltzman:

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input into drafts of the Fossil Fuel Terminal Zoning Amendments. The current proposal is much improved, bringing it closer to the original intent of the 2015 Fossil Fuel Policy Resolution #37168. However, it still falls short of the resolution, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland."

Although this proposal prohibits new large bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new and expanded fossil fuel storage tanks.

I want the City of Portland to:

1) Prohibit any expansion of existing terminals. Instead, require upgrades for Seismic Safety through State building codes.

2) Enact a full ban on all new bulk fossil fuel terminals: 2 million gallon facilities are still too large. The language of the City's 2015 Resolution was "to actively oppose" any new fossil fuel infrastructure.

With a few simple improvements to the proposed Fossil Fuel Zoning Amendments, Portland can fully implement our historic resolution and once again be a beacon of light in addressing one of the most pressing concerns of our time.

188142

Thank you for consideration of these comments,

Regna Merritt

Re: Fossil Fuel Terminal Zoning Amendments

November 7th, 2016

Portland City Council
1221 SW 4th Avenue
Portland, OR 97204

Mayor Charlie Hales, mayorcharliehales@portlandoregon.gov
Commissioner Steve Novick, novick@portlandoregon.gov
Commissioner Amanda Fritz, amanda@portlandoregon.gov
Commissioner Nick Fish, nick@portlandoregon.gov
Commissioner Dan Saltzman, dan@portlandoregon.gov

Dear Council Members,

Following the Pembina fuel terminal proposal, we support the City's actions to impose predictable, understandable regulations that will prohibit new large fossil fuel terminals in our city, while supporting our transition to a clean energy economy, and not impede important renovations of existing facilities, including those required to make them safer, replace them as they age out, and seismically upgrade them.

We have reviewed the proposed zone change language, as well as the September 9th, 2016 memo from Tom Armstrong and Steve Kountz to the Planning and Sustainability Commission outlining the proposed Fossil Fuel Terminal Zoning Amendments. Our comments below are specifically in reference to that memo.

Regarding the Fossil Fuel Terminal size threshold, we support Option A: No change to the storage capacity threshold of 5 million gallons.

With regards to regulating existing terminal expansion, we support Option C, to prohibit new Bulk Fossil Fuel Terminals and allow expansion of existing terminals greater than 10% through a conditional use review process with special criteria for emergency backup capacity, seismic upgrades, and tanks for clean and renewable fuels. However, it is critical that these criteria are enforced via inspections, as we would not like to see additional storage capacity approved under the guise of renewable fuels, only to discover that the operator has had a change of heart and decided to store pure fossil fuels after the structure is approved and the final inspector has left the site. There needs to be a regulatory regime to ensure that any structure that is approved for renewable fuels, is actually only used for renewable fuels.

Concerning additional review criteria, we feel strongly that if existing BDS staff does not feel that they have the capacity or expertise to implement discretionary land use review criteria addressing greenhouse gas emissions or safety impacts of hazardous material storage and transportation, that they should acquire this capacity. This capacity could be acquired by hiring new staff, by forming strategic alliances with outside organizations, or by hiring consultants, but it is critical that BPS and BDS figure this out so that it can be properly regulated. This starts with being able to write clear and predictable criteria with which to judge new applications. There are many good options, such as cradle to grave analysis, well to wheel analysis, and other methodologies with which to measure the greenhouse gas emissions of any new proposal; the criteria used to pick a particular methodology should balance ease of regulation with effectiveness at meeting GHG emissions reduction goals. There are similar objective methodologies and criteria available with which to measure safety. We thus support Option B, to add conditional use criteria for expansion of existing terminals to mitigate adverse land use impacts on greenhouse gas emissions and safety impacts of hazardous materials storage and transportation.

These are certainly complicated issues, but we have within Portland some of the best and brightest in their respective fields, and we have access to national expertise as well. If the City needs to add to its capacity in order to regulate fossil fuel terminals in the manner that will be most effective at reducing GHG emissions and meeting our community goals for safety, than the City must acquire the necessary expertise. It's simply not acceptable to claim a lack of staff expertise as an excuse to not propose the most effective possible regulations. Expertise is something that can be acquired, and should be acquired when it is required.

We thank you for your close and careful examination of these critical issues, and for considering our comments as you make your decisions as to how the City will proceed.

Signed,

Isaac Quintero

Fossil Fuel Terminal zoning testimony 11-10-2016
Harriet Cooke MD, MPH
3126 SW Carson St, Port. OR 97219
holisticooke@aol.com

I am writing in full support of restricting development and expansion of bulk fossil fuel terminals, such that NO new Bulk Fossil Fuel Terminals will be allowed. I further support improvement limitations on existing Bulk Fossil fuel terminals, such that only seismic upgrades are allowable which would add no more than 10% of the capacity of replaced tanks. However, I would prefer NO increase in capacity. We need to keep the flow of oil SLOW while we continue to build capacity for and integrate renewable energy systems.

As vital as this project has been to limiting the worst of climate catastrophe, it is ever more essential with a president who is planning to lift restrictions on the production of fossil fuel reserves, and lift federal roadblocks to moving and consuming more fossil fuels.

It is up to our states, cities, and counties to move us forward in creating a more sustainable, equitable, and compassionate world.

Thank you for all the work you do in moving us toward this direction.
Harriet

188142

PORTLAND FREIGHT COMMITTEE

November 8, 2016

The Honorable Mayor Charlie Hales and City Council
City Hall, 1221 SW Fourth Avenue
Portland, OR 97204

RE: Comments on the proposed Fossil Fuel Terminal Zoning Amendments

Dear Mayor Hales & City Commissioners,

On behalf of the Portland Freight Committee (PFC), thank you for the opportunity to comment on the proposed Fossil Fuel Terminal Zoning Amendments (FFTZA) recommended draft.

In general, the PFC supports the goals sought to be addressed by the proposed fossil fuel terminal zoning amendments including reducing carbon emissions and making seismic upgrades to infrastructure that serves our city and beyond. However, the proposed zoning code amendments are deeply flawed and not the appropriate solution. Restricting expansion at existing fuel terminals and prohibiting new terminal development may impact industrial job growth and middle-income jobs. It may also constrain the supply of fossil fuels to serve anticipated population and employment growth, which will lead to increasing fuel costs and disproportionately affect low-income households.

We are also concerned that the city of Portland is unilaterally imposing regulation that will compromise the supply of fuels to other communities throughout the state and Western U.S. Portland is a regional fossil fuel hub, located at the terminus of the Olympic pipeline. Over 90 percent of petroleum used in Oregon is handled through the Bulk Fossil Fuel Terminals in Portland. Fuels handled in and through the Portland Energy Cluster (Energy Hub) are also supplied to the state of Washington, western Idaho, and during fire-season, to locations as far away as Montana and California. The FFTZA will create a bottleneck in the distribution system. Consumers and businesses throughout this broad market area rely on the fuels that are supplied from the energy hub in Portland.

Additionally, limiting the supply of fuels to airports, the maritime industry, railroads and trucking firms, until a viable source of alternative fuels are readily available makes little or no sense. Supplying fuels by alternative means, likely by truck, from outside the city, region and state is the antithesis of smart climate action policy.

The proposed amendments may also have a negative impact on seismic resiliency improvement efforts at the bulk fossil fuel terminals in Portland. The 10 percent overall expansion cap on tank storage capacity is actually a disincentive to rebuilding tanks that meet modern-day seismic standards.

The PFC urges Portland City Council to pursue other ways to achieve climate action plan and seismic resiliency goals. For example, the city may allocate its' own resources for the purchase of electric powered or other low-carbon emitting vehicles for its' city fleet and to demonstrate its' commitment to curbing greenhouse gas emissions. Providing economic incentives and an expedited permitting process may be ways to hasten construction of new, more seismically-resilient storage tanks at the BFFTs.

We are not asking the city to be complacent about the need to address climate change or the risks associated with catastrophic seismic events; we're recommending that the city take actions that are more thoughtfully considered and which are undertaken in a more consistent and open process than that which has taken place. At a minimum, there should be more thought, consideration and analysis including of fuel supply and prices before the proposed amendments are implemented.

Thank you for your consideration of our comments.

Respectfully yours,

Pia Welch Raihana Ansary

November 9, 2016

Re: Fossil Fuel Terminal Zoning Amendments (City Council Hearing, November 10, 2016, 2pm)

Dear Mayor Hales and City Commissioners,

I am writing on behalf of the Working Waterfront Coalition (WWC) in opposition to the Fossil Fuel Terminal Zoning Amendments (FFT Amendments) recommended by the Planning and Sustainability Commission, dated October 11, 2016. (PSC Recommendation). As you know, the WWC represents a wide range of waterfront businesses along the Portland Harbor including several fossil fuel terminals (FFT's).

Background and Position

The WWC has actively participated in the City's FFT amendment process and related efforts, including the enactment of Resolution 37168 and the adoption of the City's 2035 Comprehensive Plan. Throughout the FFT amendment process the WWC has opposed the City's effort to prohibit or limit the growth of multimodal terminals along the working waterfront. These multimodal fuel terminals have safely provided the City, the Region and the State with most of the liquid fuel supply for decades. The energy cluster in Linnton and Willbridge is by far Oregon's largest fuel distribution hub, providing more than 90 percent of the State's fuel supply. Because of the importance of these terminals the WWC has consistently objected to earlier versions of the City's FFT amendments, which sought to ban these multimodal terminals completely. Likewise, the WWC objects to the most recent version of the City's FFT amendments, which ban new multimodal fuel terminals and severely restrict the growth of existing FFTs.

Policy Analysis

From a policy standpoint, it may be helpful for the WWC to explain its' opposition to the PSC Recommendation relative to several of the City's recently enacted goals, including Resolution 37168 and the City's 2035 Comprehensive Plan. In that regard, City Council should reject the FFT amendments recommended by the Planning and Sustainability Commission because the PSC recommendation is inconsistent with several of the City's recently enacted goals:

1) As provided in Policy 4.81 and Policy 4.82 of the 2035 Comprehensive Plan, if the City's goal is to encourage disaster-resilient development and reduce natural-hazard risks to critical energy and transportation infrastructure, then City Council should reject the PSC Recommendation because it discourages firms from investing in disaster-resilient development.

Explanation: In order to economically justify the level of private investment needed to comprehensively upgrade critical energy and transportation infrastructure at existing FFTs, existing FFT's must be allowed to grow. The PSC Recommendation does the opposite. The PSC Recommendation prohibits existing FFTs from growing, except in one very limited circumstance. The only circumstance

Working Waterfront
COALITION

under which an existing FFT can grow is if it replaces an existing tank with a seismically upgraded tank. However, even if an existing tank is replaced with a seismically upgraded tank, the incremental growth that can occur when a tank is replaced is limited to 10 percent of the capacity of the tank being replaced, with an overall increase limited to 10 percent of the storage capacity of the FFT facility on the date the amendments are enacted. This severe limitation on expansion discourages disaster-resilient development because the small amount of growth that is allowed to occur will not justify the massive amount of private investment needed to replace existing tanks in Portland. Even if investment does occur, the PSC recommendation will only produce a seismic upgrade of 10 percent, because no additional growth can occur once the 10 percent limit is reached. Without growth, investment in seismic upgrades will not occur. In short, the 10 percent rule creates an economic disincentive to disaster-resilient development, is shortsighted, and will be counterproductive to meaningful seismic upgrades over time.

2) As provided in Policy 6.48 of the 2035 Comprehensive Plan, if the City's goal is to limit fossil-fuel distribution and storage facilities to those necessary to serve the regional market, then City Council should reject the PSC Recommendation because it restricts the ability of fossil fuel infrastructure that is necessary to serve the regional market.

Explanation: All of the existing FFT's located in Portland's energy cluster are needed to serve the regional market. The PSC recommendation wrongly targets existing FFTs that serve the regional market. The WSPA alternative provides a regulatory concept and draft code language that limits extra-regional FFT's, while protecting FFT's that serve the regional market. The WSPA alternative is consistent with Policy 6.48, but the PSC recommendation is not.

3) As provided in Resolution 37168, if the City's goal is not to restrict the expansion of fossil fuel infrastructure that improves the safety, efficiency and seismic resilience of existing infrastructure, then City Council should reject the PSC Recommendation because it discourages firms from making improvements that increase the safety, efficiency and seismic resilience of fossil fuel facilities that primarily serve the regional market.

Explanation: For the reasons described above, the PSC Recommendation will not improve seismic resilience of existing FFT infrastructure, because it creates a long term disincentive to invest in existing FFTs and any related seismic upgrades. The associated disinvestment in existing FFT facilities that will occur as a result of the PSC recommendation will create a less efficient and potentially less safe regional fossil fuel infrastructure in Portland, as firms focus future capital investments in markets where their return on investment is justified.

4) As provided in the Comprehensive Plan, if the City's goal is to reduce vehicle miles traveled, then City Council should reject the PSC Recommendation because limiting multimodal storage capacity to existing tank capacity will require more trucks to move more fossil fuel into and through Portland, in order to bypass supply constraints at existing fossil fuel facilities that serve the regional market.

Explanation: By prohibiting new FFTs and limiting the capacity of existing FFTs that serve the regional market the PSC Recommendation creates a significant supply constraint for fossil fuels used by customers within the region. Over time and in times of emergency, this supply constraint will create a significant fossil fuel bottleneck in Portland. When it becomes necessary to bypass this supply constraint,

Working Waterfront
COALITION

the only remaining option firms will have is to truck fossil fuels to and through Portland, in order to bypass the constraint. This constraint will therefore increase vehicle miles traveled and will require more fossil fuel to be transferred to and through Portland by truck.

5) As provided in Policy 6.5 of the 2035 Comprehensive Plan, if the City's goal is to create economic resilience, then City Council should reject the PSC recommendation because restrictions on existing fossil fuel facilities that primarily serve the regional market makes the City, the Region and the State more susceptible to impacts from climate change, natural disasters and unforeseen changes in the economy.

Explanation: The proposed ban on new FFTs that serve the regional market, along with a significant limit on growth for existing FFTs, will make the City, the Region and the State less economically resilient because the ban and its related limits creates a significant regulatory constraint that discourages firms from investing in needed infrastructure and technology that will make the Portland region less susceptible to impacts from climate change, natural disasters and unforeseen changes in the economy. For the foreseeable future, fossil fuels will continue to fill an important role in our energy economy. The Portland region and the state as a whole depends on the existing FFT's for roughly 90 percent of its petroleum supply. Even if the demand for fossil fuel in Oregon is only growing ½ percent to 1 percent annually, as estimated by the city, it is critically important for firms to continue to invest in fossil fuel facilities over the next several decades, as significant demand continues and risk of natural disasters and other unforeseen emergencies continues to exist. In short, Portland should not create significant disincentives for FFT's to invest in critical energy facilities that will continue to power Portland and the State of Oregon for decades to come.

Position, Alternative, and Clarifying Amendment

For all of the above reasons, the WWC opposes the PSC Recommendation and requests that it not be adopted by City Council.

The WWC notes that the FFT Amendment process was rushed. This fact is reflected in Appendix A of October 11, 2016, PSC Recommendation. Throughout this rushed process the WWC has supported a better alternative offered by WSPA in July, 2016, which is attached to this letter. The WSPA alternative is not mentioned in the PSC Recommendation, and was unfortunately ignored by the City throughout the rushed review process. The WWC continues to support the WSPA alternative.

If City Council is inclined to move forward with the PSC Recommendation, or something similar, the WWC requests that a significant ambiguity in the PSC recommendation be clarified. Specifically, it is not clear whether the limits on the growth relate only to fossil fuel storage tanks, or whether the limits on growth relate to pipes and other fossil fuel facilities associated with existing FFTs. It is our understanding from discussions with city staff that the City's intent is to limit growth related to existing storage tank capacity, and that it does not intend to limit growth related to pipes and other fossil fuel facilities and infrastructure. Accordingly, we offer the following clarifying amendments:

Section 33.140.100(B)(17)(a), as shown on page 49 of the October 11, 2016 PSC Recommendation, should be amended as follows:

Working Waterfront
COALITION

a. Existing Bulk Fossil Fuel Terminals. The following use limitations apply to existing Bulk Fossil Fuel Terminals:

(1) Bulk Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site in fossil fuel storage tanks, is limited to the fossil fuel storage tank capacity that existed on [insert effective date] plus 10 percent. Total fossil fuel storage tank capacity on the site in excess of the fossil fuel storage tank capacity that existed on [insert effective date] plus 10 percent is prohibited.

(2) New fossil fuel storage tanks are prohibited unless a new fossil fuel storage tank is replacing an existing fossil fuel storage tank that does not meet current building code standards for seismic safety, and in that case, the capacity of the new fossil fuel storage tank is prohibited from being greater than the storage capacity of the existing fossil fuel storage tank that is being replaced, plus 10 percent.

(3) No other use limitations shall be imposed on existing Bulk Fossil Fuel Terminals other than those set forth above.

Section 33.910.030, as shown on page 53 of the October 11, 2016 PSC Recommendation, should be amended as follows:

Fossil Fuel Storage Tank A fossil fuel storage tank is a tank affixed to the ground, within the boundaries of an existing Bulk Fossil Fuel Terminal site, which is used exclusively for fossil fuel storage.

Conclusion

For all of the reasons stated above, the WWC urges City Council to reject the PSC recommendation and reconsider its proposed regulation of multimodal FFTs along the City's working waterfront. The existing concentration of multimodal fuel terminals located along the City's working waterfront handles more than 90 percent of the State's fuel supply, and will continue to do so for the foreseeable future. Given these realities, it is critically important that the City not create a fuel bottleneck that severely affects the entire State of Oregon. Unfortunately, that is precisely what the PSC recommendation does and will do.

Sincerely,

Ellen M. Wax
Executive Director

Established in 2005, the Working Waterfront Coalition, with its extensive knowledge of harbor industry needs and active industry participation, is dedicated to working with its partners to ensure an appropriate balance between environmental concerns and the needs of river-related, river-dependent employers. Portland's Harbor is a vital employment area: home to thousands of valuable high-wage, high-benefit jobs. In addition, WWC members are conscientious stewards of the environment, making significant investments in the harbor consistent with state and federal laws.

Re: WSPA Comments on the City of Portland Discussion Draft

Dear Mr. Steve Kountz:

The Western States Petroleum Association (WSPA) is a non-profit trade association representing companies that explore for, produce, refine, transport, and market petroleum, petroleum products in five western states including Oregon. WSPA appreciates the opportunity to provide comments on the City of Portland Bureau of Planning and Sustainability Fossil Fuel Terminal Zoning Amendments Discussion Draft.

As you know from our June 2, 2016, meeting, several WSPA members operate petroleum terminals in Portland. These members have responsibly operated in the energy corridor along Northwest St. Helens Road for decades. This corridor provides key energy and emergency infrastructure as recognized by various city, state, and federal documents. WSPA opposes the City's push to regulate fossil fuels under Resolution No. 37166, Fossil Fuel Terminal Zoning Amendments, or otherwise, but submits these comments in an attempt to mitigate some of the unintended consequences of the contemplated zoning amendments.

The proposed zoning amendments contradict and misalign with federal and state laws pertaining to energy infrastructure, including but not limited to Oregon's low carbon fuel standards, Oregon's Renewable Fuel Standards, federal Renewable Fuel Standards, and similar laws. The Discussion Draft further appears to not follow policy direction in Resolution No. 37166 and the City's Comprehensive Plan enabling energy infrastructure to serve the region as well as transition to non-fossil fuel sources. Of particular concern to WSPA, the proposed zoning amendments would create a number of substantial unintended consequences. Specifically:

- The Discussion Draft restricts infrastructure that serves the region, in contradiction of the new City Comprehensive Plan provision governing fossil fuel infrastructure;
- The Discussion Draft fails to clearly specify how existing infrastructure can expand on existing sites, to adjacent properties, and to nearby non-adjacent properties;

975 Carpenter Road, N.E., Suite 106, Lacey, Washington 98516
Work: (360) 352-4506 • Fax: (360) 352-4507 • Cell: (360) 789-1435
fholmes@wspa.org • www.wspa.org

188142

- The Discussion Draft restricts infrastructure related to Oregon's low carbon fuel standards, Oregon's Renewable Fuel Standards, federal Renewable Fuel Standards, and similar laws;
- The Discussion Draft terminal size thresholds are too small to enable expansion to serve future energy needs;
- The Discussion Draft stymies potential future technologies that do not fit within the contemplated framework;
- The Discussion Draft provides too narrow of a geographic area (currently, the IH Zone) for siting new terminals;
- The Discussion Draft generally does not align with state and federal policy regarding siting energy infrastructure;
- The Discussion Draft encourages less efficient (and potentially less safe) transportation by truck over more efficient modes of transportation;
- The Discussion Draft fails to provide for the economic impact assessment called for by Resolution No. 37166; and
- The proposed timeline for implementing the Discussion Draft is too fast to allow for thoughtful discussion and tailoring addressing the above and other concerns.

We have enclosed proposed zoning code language that would address some of the issues raised in this comment. While the proposed language does not resolve all the problems with the contemplated amendments, it addresses some of them.

Again, thank you for this opportunity to comment on the Fossil Fuel Terminal Zoning Amendments Discussion Draft. We hope the City reconsiders its push to pass regulations in this area, and if does, that it will more narrowly tailor its rules to not contradict federal and state direction and avoid unintended consequences.

Thank you for your consideration of WSPA's comments. If you have any questions, please contact me at this office at fholmes@wspa.org and (360) 352-4506.

Sincerely,

Frank E Holmes

WSPA

Appendix 1- Proposed Portland Zoning Ordinance

This appendix contains draft zoning code language from WSPA for City of Portland consideration in effectuating the City's fossil fuels policy. WSPA continues its position that the City's effort to regulate fossil fuels is misplaced and opposes those efforts. These proposed code provisions are intended to avoid some of the unintended consequences of the City's proposal and do not indicate WSPA support for City efforts to regulate fossil fuels. WSPA's draft code language contains four components:

1. Three new definitions for Portland Zoning Ordinance Chapter 33.910 (Appendix 1, page 2),
2. A use characteristics description for Bulk Fossil Fuels Terminals in Zoning Ordinance Chapter 33.920 (Appendix 1, page 2),
3. A new Energy Corridor Overlay Zone to protect existing fuel terminals in proposed new Portland Zoning Ordinance Chapter 33.490 (Appendix 1, page 4), and
4. Modifications to base industrial zones in Portland Zoning Ordinance Chapter 33.140 to recognize Bulk Fossil Fuel Terminals as a limited use (Appendix 1, page 7).

[Proposed New Definitions for Portland Zoning Ordinance Chapter 33.910]

Extra-Regional Bulk Fossil Fuel Terminal. A fossil fuel terminal that primarily serves markets outside of the Petroleum Administration for Defense District (PADD) 5 region, an area that includes the western states of California, Arizona, Nevada, Oregon, Washington, Alaska, and Hawaii.

Fossil Fuels. Fossil fuels include coal, petroleum, crude oil, refined oil, natural gas, bitumen, kerosene, propane, and other fuels made from decayed plants and animals that lived millions of years ago and are primarily used as a source of energy. Blended fuels containing a mix of fossil fuels and other fuel sources designed to address Oregon's low carbon fuel standards in Oregon Administrative Rules Chapter 340, Division 253, federal Renewable Fuel Standards, state Renewable Fuel Standards, or similar state or federal laws designed to reduce the carbon footprint of fuels are not fossil fuels.

Regional Bulk Fossil Fuel Terminal. A fossil fuel terminal that primarily serves the Petroleum Administration for Defense District (PADD) 5 region, an area that includes the western states of California, Arizona, Nevada, Oregon, Washington, Alaska, and Hawaii.

ENERGY PROUD

[Proposed New Use Category For Bulk Fossil Fuel Terminals]

33.920.360 Bulk Fossil Fuel Terminal

A. Characteristics. Bulk Fossil Fuel Terminals are characterized by having all of the following (1) marine, pipeline or railroad transport access, (2) transloading facilities for transferring a shipment between transport modes (such as from rail to ship), and (3) storage facilities for fossil fuels exceeding a storage capacity of [ ] million barrels for petroleum, [ ] million gallons for liquefied natural gas (LNG), [ ] million gallons for other liquefied gas fuels.

B. Accessory Uses. Accessory uses may include offices, pipes, industrial processing, shipping terminals, parking, storage, rail spur or lead lines, and docks.

C. Examples. Extra-regional liquefied natural gas (LNG) export facilities, propane export facilities, or coal export facilities.

D. Exceptions.

1. Improvements in the safety, or efficiency, seismic resilience, or operations of existing energy infrastructure.
2. Terminals or firms that are end users of fossil fuels or sell directly to end users of fossil fuels such as airports, manufacturing, agricultural businesses, utilities, gas stations, and power plants.
3. Development of emergency backup capacity.
4. Infrastructure that enables recovery or re-processing of used petroleum products
5. Terminals or firms that are storing, transporting or processing fuels and blended fuels containing a mix of fossil fuels and other fuel sources designed to address Oregon's low carbon fuel standards in Oregon Administrative Rules Chapter 340, Division 253, federal Renewable Fuel Standards, state Renewable Fuel Standards, or similar state or federal laws designed to reduce the carbon footprint of fuels.

[Proposed New Chapter in Zoning Ordinance]

City of Portland Planning and Zoning Ordinance - Title 33, Planning and Zoning

Chapter 33.490 Energy Corridor Overlay Zone

Sections:

33.490.010 Purpose
33.490.020 Map Symbol
33.490.025 Relationship to Portland Zoning Code Chapter 33.140
33.490.030 No Size limits
33.490.040 Expansion of Energy Corridor Terminals

Map 490-1 Energy Corridor Overlay Zone Boundaries

33.490.010 Purpose

The Energy Corridor Overlay Zone recognizes the historic cluster of energy terminals, including fossil fuel terminals that have served as Portland's hub for energy transport for decades. The purpose of this overlay zone is to protect this area for future energy infrastructure growth, including but not limited to expansion of energy terminals.

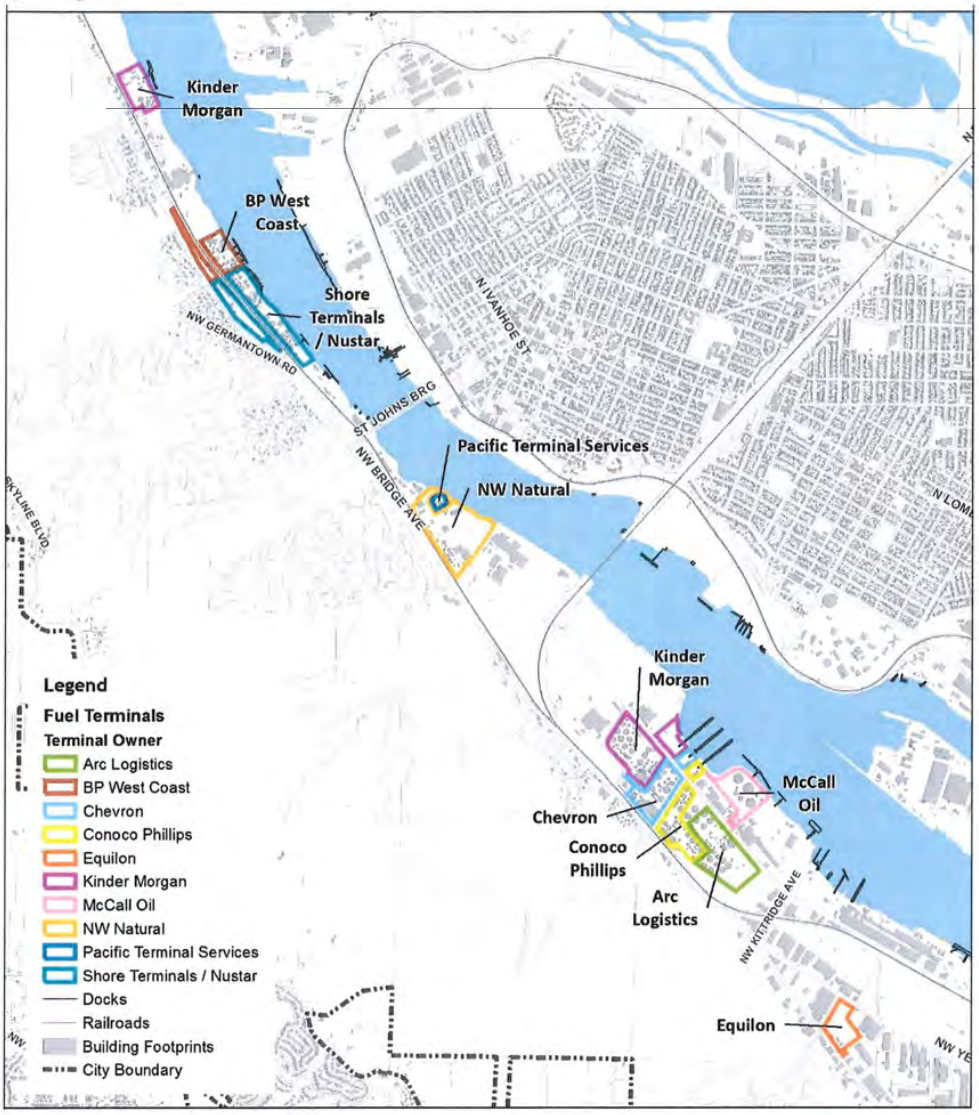
33.490.020 Map Symbol

The Energy Corridor Overlay zone is shown on the Official Zoning Maps with a letter "m" map symbol.

33.490.025 Relationship to Portland Zoning Code Chapter 33.140

The Energy Corridor Overlay zone provides flexibility for the sites subject to this overlay in addition to what are allowed under Portland Zoning Code Chapter 33.140. If there is a conflict between what is allowed under this Chapter 33.490 and what would be allowed Chapter 33.140, this Chapter 33.490 controls.

33.490.030 No Size Limits



ENERGY PROUD

There is no storage or other size limits for Bulk Fossil Fuel Terminals or other energy facilities located in the Energy Corridor Overlay Zone.

33.490.040 Expansion of Energy Corridor Terminals

A Bulk Fossil Fuel Terminal in the Energy Corridor Overlay may expand to new lots and parcels outside of the Energy Corridor Overlay zone as provided in this Section 33.490.040. A Bulk Fossil Fuel Terminal may only expand onto parcels or lots that are all or partially within one half of a mile from a property line of the lot or parcel containing the Bulk Fossil Fuel Terminal. A Bulk Fossil Fuel Terminal that is expanded outside of the Energy Corridor Overlay will be treated as if it were entirely within the Energy Corridor Overlay for purposes of land use and all other city approvals. If an expansion of an energy facility to a new lot or parcel pursuant to this Section 33.490.040 includes proposed development that would qualify the combined energy facility as a Bulk fossil Fuel Terminal, the combined energy facility will be treated as if it were entirely within the Energy Corridor Overlay for purposes of land use and all other city approvals.

Map 490-1 Energy Corridor Overlay Zone Boundaries [*designate noted sites with "m" map symbol*]

General

33.140.010 General Purpose of the Zones

The employment and industrial zones are for areas of the City that are reserved for industrial uses and for areas that have a mix of uses with a strong industrial orientation. The zones reflect the diversity of industrial and business areas in the City. The zones differ in the mix of allowed uses, the allowed intensity of development, and the development standards. The regulations promote areas which consist of uses and developments which will support the economic viability of the specific zoning district and of the City. The regulations protect the health, safety and welfare of the public, address area character, and address environmental concerns. In addition, the regulations provide certainty to property owners, developers, and neighbors about the limits of what is allowed.

33.140.020 List of the Employment and Industrial Zones

The full and short names of the employment and industrial zones and their map symbols are listed below. When this Title refers to the employment or E zones it is referring to the first three listed. When this Title refers to the industrial or I zones, it is referring to the last three listed.

Full Name / Short Name	Map Symbol
General Employment 1	EG1
General Employment 2	EG2
Central Employment	EX
General Industrial 1	IG1
General Industrial 2	IG2
Heavy Industrial	IH

33.140.030 Characteristics of the Zones

A. General Employment. The General Employment zones implement the Mixed Employment map designation of the Comprehensive Plan. The zones allow a wide range of employment

ENERGY PROUD

opportunities without potential conflicts from interspersed residential uses. The emphasis of the zones is on industrial and industrially-related uses. Other commercial uses are allowed to support a wide range of services and employment opportunities. The development standards for each zone are intended to allow new development which is similar in character to existing development. The intent is to promote viable and attractive industrial/commercial areas.

1. General Employment 1. EG1 areas generally have smaller lots and a grid block pattern. The area is mostly developed, with sites having high building coverages and buildings which are usually close to the street. EG1 zoned lands will tend to be on strips or small areas.

2. General Employment 2. EG2 areas have larger lots and an irregular or large block pattern. The area is less developed, with sites having medium and low building coverages and buildings which are usually set back from the street. EG2 zoned lands will generally be on larger areas than those zoned EG1.

B. Central Employment. This zone implements the Central Employment map designation of the Comprehensive Plan. The zone allows mixed-uses and is intended for areas in the center of the City that have predominantly industrial type development. The intent of the zone is to allow industrial and commercial uses which need a central location. Residential uses are allowed, but are not intended to predominate or set development standards for other uses in the area. The development standards are intended to allow new development which is similar in character to existing development.

C. General Industrial. The General Industrial zones are two of the three zones that implement the Industrial Sanctuary map designation of the Comprehensive Plan. The zones provide areas where most industrial uses may locate, while other uses are restricted to prevent potential conflicts and to preserve land for industry. The development standards for each zone are intended to allow new development which is similar in character to existing development. The intent is to promote viable and attractive industrial areas.

1. General Industrial 1. IG1 areas generally have smaller lots and a grid block pattern. The area is mostly developed, with sites having high building coverages and buildings which are usually close to the street. IG1 areas tend to be the City's older industrial areas.

2. General Industrial 2. IG2 areas generally have larger lots and an irregular or large block pattern. The area is less developed, with sites having medium and low building coverages and buildings which are usually set back from the street.

ENERGY PROUD

D. Heavy Industrial. This zone is one of the three zones that implement the Industrial Sanctuary map designation of the Comprehensive Plan. The zone provides areas where all kinds of industries may locate including those not desirable in other zones due to their objectionable impacts or appearance. The development standards are the minimum necessary to assure safe, functional, efficient, and environmentally sound development.

33.140.040 Other Zoning Regulations

The regulations in this chapter state the allowed uses and the development standards for the base zones. Sites in overlay zones or plan districts and designated historical landmarks are subject to additional regulations which supersede those of this Chapter. The Official Zoning Maps indicated which sites are subject to the additional regulations. Specific uses or development types may also be subject to regulations in the 200s series of chapters.

Use Regulations

33.140.100 Primary Uses

A. Allowed uses. Uses allowed in the employment and industrial zones are listed in Table 140-1 with a "Y". These uses are allowed if they comply with the development standards and other regulations of this Title. Being listed as an allowed use does not mean that a proposed development will be granted an adjustment or other exception to the regulations of this Title. In addition, a use or development listed in the 200s series of chapters is also subject to the regulations of those chapters.

B. Limited uses. Uses allowed that are subject to limitations are listed in Table 140-1 with an "L". These uses are allowed if they comply with the limitations listed below and the development standards and other regulations of this Title. In addition, a use or development listed in the 200s series of chapters is also subject to the regulations of those chapters. The paragraphs listed below contain the limitations and correspond with the footnote numbers from Table 140-1.

1. Household Living uses in I zones. This regulation applies to all parts of Table 140-1 that have a [1]. Household Living in houseboats and houseboat moorages in I zones are regulated by Chapter 33.236, Floating Structures. Household Living in other structures is prohibited.

2. Group Living. This regulation applies to all parts of Table 140-1 that have a [2].

ENERGY PROUD

a. General regulations. All Group Living uses except for alternative or post incarceration facilities, are allowed by right subject to the regulations of Chapter 33.239, Group Living.

b. Alternative or post incarceration facilities. Group Living uses which consist of alternative or post incarceration facilities are conditional uses. They are also subject to the regulations of Chapter 33.239, Group Living.

3. EG commercial limitation. This regulation applies to all parts of Table 140-1 that have a [3].

a. Limited uses.

(1) Office uses. Except for sites with historic landmarks, the net building area for Office uses is limited to the square footage of the site area. On sites with historic landmarks, the net building area for Office uses may be up to twice the total square footage of the site area. Exceptions to these size limits are prohibited.

(2) Retail Sales And Service uses. Except for sites with historic landmarks, the net building area plus any exterior display or storage area for Retail Sales And Service uses is limited to 60,000 square feet or the square footage of the site area, whichever is less. On sites with historic landmarks, the net building area plus any exterior display or storage area for Retail Sales And Service uses is limited to 60,000 square feet or twice the total square footage of the site area, whichever is less.

b. Conditional uses.

(1) Retail Sales And Service uses that exceed the area limits in 3.a(2) are a conditional use.

4. IG1 commercial limitation. This regulation applies to all parts of Table 140-1 that have a [4].

a. Limited uses. One Retail Sales And Service or Office use is allowed per site. The square footage of net building area plus the exterior display and storage area may be up to 3,000 square feet.

b. Conditional uses.

ENERGY PROUD

(1) More than one Retail Sales And Service or Office Use on a site is a conditional use.

(2) Any Retail Sales And Service or Office Use where the net building area plus the exterior display and storage area is more than 3,000 square feet is a conditional use.

c. Prohibited uses.

(1) Except for sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 20,000 square feet or the square footage of the site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

(2) For sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 60,000 square feet or twice the square footage of the site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

5. IG2 commercial limitation. This regulation applies to all parts of Table 140-1 that have a [5].

a. Limited uses. Up to four Retail Sales And Service or Office uses are allowed per site. The square footage of the net building area plus the exterior display and storage area may be up to 3,000 square feet per use.

b. Conditional uses.

(1) More than four Retail Sales And Service or Office uses on a site is a conditional use.

(2) Any Retail Sales And Service or Office use where the net building area plus the exterior display and storage area is more than 3,000 square feet is a conditional use.

c. Prohibited uses.

ENERGY PROUD

(1) Except for sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 20,000 square feet or the square footage of the site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

(2) For sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 60,000 square feet or twice the square footage of site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

6. IH commercial limitation. This regulation applies to all parts of Table 140-1 that have a [6].

a. Limited uses. Up to four Retail Sales And Service or Office uses are allowed per site. The square footage of the net building area plus the exterior display and storage area may be up to 3,000 square feet per use.

b. Conditional uses.

(1) More than four Retail Sales And Service or Office use on a site is a conditional use.

(2) Any Retail Sales And Service or Office use where the net building area plus the exterior display and storage area is more than 3,000 square feet is a conditional use.

c. Prohibited uses.

(1) Except for sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 12,000 square feet or the square footage of the site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

(2) For sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 25,000 square feet or twice the square footage of site area, whichever is less. Retail Sales And Service

ENERGY PROUD

and Office uses that exceed these area limits are prohibited.

7. Self-Service Storage limitation. This regulation applies to all parts of Table 140-1 that have a [7]. The limitations are stated with the special regulations for these uses in Chapter 33.284, Self-Service Storage.

8. Waste-Related limitation. This regulation applies to all parts of Table 140-1 that have a [8]. All Waste-Related uses are conditional uses, unless they meet all of the following conditions in which case they are allowed by right.

a. The use must be approved by Metro under their authority as prescribed in ORS 268.317;

b. Metro's approval of the use must include a mitigation plan. The requirements for the mitigation plan must be approved by the City Council through an intergovernmental agreement with Metro, adopted prior to Metro's approval of the use; and

c. The location of the use must be in conformance with Metro's Regional Solid Waste Management Plan.

9. Community Service uses in EG zones. This regulation applies to all parts of Table 140-1 that have a [9]. Most Community Service uses are allowed by right. Short term housing may be allowed by right if it meets certain standards. See Chapter 33.285, Short Term Housing and Mass Shelters. Mass shelters are prohibited.

L = Allowed, But Special Limitations N = No, Prohibited

Notes:

- The use categories are described in Chapter 33.920.
- Regulations that correspond to the bracketed numbers [ ] are stated in 33.140.100.B.

ENERGY PROUD

• Specific uses and developments may also be subject to regulations in the 200s series of chapters.

10. Community Service in the EX zone. This regulation applies to all parts of Table 140-1 that have a [10]. Most Community Service uses are allowed by right. Short term housing and mass shelters may be allowed by right if they meet certain standards, or may be a conditional use. See Chapter 33.285, Short Term Housing and Mass Shelters.

11. Community Service and Daycare limitations in I zones. This regulation applies to all parts of Table 140-1 that have a [11]. Community Service uses or Daycare uses up to 3,000 square feet of net building area are allowed. Community Service uses or Daycare uses larger than 3,000 square feet of net building area are a conditional use. Short term housing and mass shelters of any size are prohibited.

12. Basic Utilities in E zones. This regulation applies to all parts of Table 140-1 that have a [12]. Public safety facilities that include Radio Frequency Transmission Facilities are subject to the regulations of Chapter 33.274. All other Basic Utilities are allowed.

13. Basic Utilities in I zones. This regulation applies to all parts of Table 140-1 that have a [13]. Public safety facilities that include Radio Frequency Transmission Facilities are subject to the regulations of Chapter 33.274. Public safety facilities which have more than 3,000 square feet of floor area are a conditional use. The approval criteria are in Section 33.815.223. All other Basic Utilities are allowed.

14. Radio Frequency Transmission Facilities. This regulation applies to all parts of Table 140-1 that have a [14]. Some Radio Frequency Transmission Facilities are allowed by right. See Chapter 33.274.

15. Commercial Parking. This regulation applies to all parts of Table 140-1 that have a [15]. Except where plan district provisions supersede these regulations, Commercial Parking is a conditional use in the E and I zones. Within plan districts, there may be special regulations.

16. Agriculture. This regulation applies to all parts of Table 140-1 that have a [16]. Agriculture is an allowed use. Where the use and site meet the regulations of Chapter 33.237, Food Production and Distribution, the applicant may choose whether it is allowed as a Market Garden.

17. Bulk Fossil Fuels Terminals. Regional Bulk Fossil Fuel Terminals of any size are allowed. Extra-Regional Bulk Fossil Fuel Terminals may not exceed a storage capacity of [____] million barrels for petroleum, [____] million gallons for liquefied natural gas

ENERGY PROUD

(LNG), [____] million gallons for other liquefied gas fuels, except as may be allowed pursuant to the Portland Energy Corridor Overlay Zone. Coal terminals may not exceed a storage capacity of one ton of coal.

C. Conditional uses. Uses which are allowed if approved through the conditional use review process are listed in Table 140-1 with a "CU". These uses are allowed provided they comply with the conditional use approval criteria for that use, the development standards, and other regulations of this Title. Uses listed with a "CU" that also have a footnote number in the table are subject to the regulations cited in the footnote. In addition, a use or development listed in the 200s series of chapters is also subject to the regulations of those chapters. The conditional use review process and approval criteria are stated in Chapter 33.815, Conditional Uses.

D. Prohibited uses. Uses listed in Table 140-1 with an "N" are prohibited. Existing uses in categories listed as prohibited may be subject to the regulations of Chapter 33.258, Nonconforming Uses and Development.

33.140.110 Accessory Uses. Uses that are accessory to a primary use are allowed if they comply with specific regulations for the accessory uses and all development standards.

33.140.130 Nuisance-Related Impacts

A. Off-site impacts. All nonresidential uses including their accessory uses must comply with the standards of Chapter 33.262, Off-Site Impacts.

B. Other nuisances. Other nuisances are regulated by Title 29, Property and Maintenance Regulations.

33.140.140 On-Site Waste Disposal

On-site disposal of solid wastes generated by a use is subject to the same regulations as for uses in the Waste-Related use category. See Table 140-1.

Development Standards

[NO REVISIONS PROPOSED TO DEVELOPMENT STANDARDS]

188142

Dear City Commissioners,
I wrote the following op-ed which will get carried in papers around the country, urging other cities to follow our lead as the first city in the country to act on the Paris Agreement. I hope my op-ed helps support you in knowing that you are acting on behalf of all of us in Portland in passing the strongest possible ordinance, and, more importantly, future generations in other cities and states around the world. I will be taking the message of your groundbreaking work to COP22 in Marrakech, tomorrow. I hope you won't let us down.
Thank you for your leaderhsip!
Sincerely,
Daphne Wysham

Paris, Follow Portland
by Daphne Wysham

A few days before voters went to the polls in the U.S., the Eiffel Tower and Arc de Triomphe glowed green in Paris.

The reason? France was celebrating the Paris Climate Agreement, which came into force on November 4.

It was a remarkable achievement. Less than a year after 196 countries signed the climate agreement, over two-thirds of the world's countries — including the two biggest greenhouse gas emitters, the U.S. and China — ratified it, agreeing to an upper limit of 2 degrees Celsius in atmospheric warming.

But it might be a bit early to break out the champagne. For starters, the Paris Agreement is toothless.

There are no timetables for ratcheting down consumption of fossil fuels, and no sanctions for countries that fail to meet targets. The deal promises a small amount of assistance to developing countries fighting climate change, but most of that is merely repackaged development aid.

More frighteningly still, the world's existing fossil fuel infrastructure and proven wells and mines will sail us right past the 2 degree upper limit if they're all exploited.

Meanwhile, the clear-eyed citizens of Portland, Oregon, are pioneering a more proactive way forward. A year ago, Portland's city council unanimously voted to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways."

Portland's city leaders took this step as much out of a desire to protect their own health and safety as out of a desire to act on climate change.

Much of Portland's fossil fuel infrastructure lies in an industrial zone that, should an earthquake come to pass, would rapidly turn to jello. And oil train derailments — like the one earlier this year in nearby Mosier, Oregon — can cause out-of-control blazes, bringing near fears to the fore.

Respect for indigenous communities is another factor. The Standing Rock Sioux's protest against the Dakota Access Pipeline encampment is a reminder that Native American treaty rights are routinely flouted by fossil fuel industries wanting to push their export projects on impoverished communities. It happens here in the Northwest, too.

But climate science is the central piece. A recent study found that if we are to maintain a mere 66 percent chance of avoiding surpassing 2 degrees Celsius of warming, no more new major fossil fuel infrastructure can be built.

In fact, we must actually leave many proven reserves untapped and begin to dismantle existing fossil fuel infrastructure.

President Obama did the right thing in signing the Paris Agreement. He also took a bold step in issuing guidelines for federal agencies to disclose greenhouse gas emissions associated with major infrastructure projects, like the Dakota Access Pipeline, and consider alternatives should the impact be significant.

But at this moment in time, neither the Paris Agreement nor Obama's proposed "climate test" is sufficient.

Portland Mayor Charlie Hales is showing the world what a first step toward meaningful action on the Paris Accords might look like. On November 17, Portland's city council will vote on what is likely the strongest land use code language in the country prohibiting all new fossil fuel export infrastructure.

Should it pass and become binding law, we'll know who the real world leaders are. Paris — and the rest of the Paris Agreement signatories — would do well to follow Portland's lead.

And if you do, back home in our evergreen city, we'll raise a glass of microbrew in your honor.

Hi, I'm Tim Norgren, member of Laborers' Local 737. I live in the Gorge and often work in Portland.

Our house is within sight of the railroad when the leaves thin out, which means we're squarely in the "blast zone" and if we should be as unfortunate as Mosier we would have to evacuate our house after being rocked by a cataclysmic explosion and inhaling vast quantities of carcinogens. Next we would have to see if the volunteer fire dept. (even closer to the tracks, near the Port office) was still standing and hope the equipment wasn't destroyed or the volunteers killed so that we'd have some help in stopping the house and forest fires that often accompany such events. There's a good chance the fracking chemicals and oil spilled would end up in rock creek, feeding into the Columbia, or if a train derailed across from the fairgrounds on the thin isthmus between the Columbia and Rock Cove, then it's likely it would end up on both sides, and perhaps claim the lives of those traveling alongside it on Hwy 14 as well. Our water treatment plant sits nestled between town and the fairgrounds and it's pretty much a given our water would be poisoned. So would our fish, otters, waterbirds, raccoons and the others.

Health effects just from the psychological trauma of such events can last for years, especially in children. There's now enough evidence for us to know that traumatic events during childhood often lead to a prolonged "fight, flight or freeze" reaction, affecting ALL of our biological systems and leading to health problems from heart and breathing issues, to digestive issues, to "unexplained" nerve pain. My partner endured a barn fire as a child and though she wasn't burned she was forced to watch helplessly and smell her animal friends being cooked alive while they screamed. To this day she is plagued by night terrors related to it in various ways. She also developed fibromyalgia, a debilitating nerve disease which is directly linked to childhood trauma and sometimes triggers later in life. Trauma can also linger for generations. It's rampant in places like Lac Megantic, and will surely linger with the residents and former residents of Mosier and the other "sacrifice zones" for years as well. I don't want to see more of this in our communities and we are standing at the threshold of an opportunity to turn back the tide on this type of tragedy.

That being said I encourage you to improve on the PSC's recommendation by sticking to the full intentions of the oil train resolution the council adopted last year. That resolution made it clear that no new infrastructure would be built to encourage an increase in oil train traffic through Portland and the Gorge. Allowing a 10% increase in volume to current fuel storage facilities would do just that. There are other ways to encourage seismic upgrades, including simply calling it as it is, a public safety issue, and making upgrades a requirement for staying in business here. If that isn't acceptable to them I guarantee that I and other workers in the building trades will be more than willing to do the demolition work and ready the space for a more sustainable business!

In line with the above I have no wish to build NEW structures either, no matter how "small" they are, which would increase fuel traffic through Portland, by train, truck, or pipeline. Again, we all live here in the area, and no one wants to see their community destroyed. Nor does any worker want to look at such a tragedy and know that we "built" it. Because the fact is we construction folks do tend to look back at projects a few years later and say "I built that". It's always preferable to have some pride in what you're saying, and increasingly the fossil fuel industry brings nothing but shame.

Finally, let there be no exemption for NW Natural. As we find we can meet our needs with sustainable energy there'll likely be LESS demand for fracked gas, (which from extraction to burning is often more carbon intensive than coal) in the Portland area, especially as we become more and more aware of the earthquakes and poIsoned water (including water used to irrigate crops..disgusting!) which are the additional consequence of fracking.

Please let there be no more tragedy and no more trauma caused by our actions or inactions. Let the will of the people be law!

Thanks. Sincerely,

Tim Norgren

As of noon today, City Council has received 232 testimony emails on the Fossil Fuel Terminal Zoning Amendments. All of this testimony generally reflects a common theme, calling for a "full ban" on new fossil fuel terminals and strengthened restrictions on expansion of existing terminals. These emails typically followed a form-letter format or a common header with brief individual comments, and I am attaching 5 examples that loosely represent the full range of what we have received so far. One letter was also submitted jointly by Columbia Riverkeeper, 350 PDX, and others, which is also attached.

Thanks,
Steve

Sent: Thursday, October 27, 2016 3:56 PM
To: BPS Fossil Fuel Zoning
Subject: Fossil Fuels code

I urge you to strengthen the code proposal by:

- Enacting a full ban on all new fossil fuel terminals by removing the exception for terminals under 2 million gallons. The proposed 2-million-gallon exception would still allow new fossil fuel facilities to be built in our communities
- Eliminating the provision that allows existing fossil fuel terminals to grow by as much as 10% in exchange for seismic upgrades. These upgrades should be required, not provided in exchange for even bigger facilities
- Directing Portland Bureau of Emergency Management to develop proposals for State building code changes to require seismic upgrades
- Rejecting Northwest Naturals request to be exempted from these regulations

Liza

November 7, 2016

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Mary Davis

To: BPS Fossil Fuel Zoning
Subject: Pass a full ban on new or expanded fossil fuel terminals!

Thanks for the improved Fossil Fuel Terminal Zoning Amendments. But we need a full ban on new terminals of any size. It is not a matter of balancing financial interests and environmental interests. We must follow the 2015 resolution and actively oppose expansion in any form. This is crucial for the future for my children and grandchildren and for those of all of us!

Do not exempt smaller terminals.
Do not allow expansion of current facilities.
Do not make an exemption for NW Natural.

We must develop a new economy focusing on renewables. That is difficult, but climate chaos is worsening daily. This is our responsibility. Please do the right thing.

Thank you!

To: BPS Fossil Fuel Zoning
Subject: please ban all new fossil fuel terminals

To Portland City Councilors:

Last fall Portland City Council passed a historic resolution to ban new fossil fuel facilities in the city, putting Portland at the forefront of the climate justice movement. The resolution was the result of massive grassroots advocacy and the leadership of Mayor Hales and City Council. Now, one year later we need to hold the City to their word as they work to implement this resolution into binding city code.
Please make this a strong and binding portion of the city code by implementing the following:

- Enacting a full ban on all new fossil fuel terminals by removing the exception for terminals under 2 million gallons. The proposed 2-million-gallon exception would still allow new fossil fuel facilities to be built in our communities
- Eliminating the provision that allows existing fossil fuel terminals to grow by as much as 10% in exchange for seismic upgrades. These upgrades should be required, not provided in exchange for even bigger facilities
- Directing Portland Bureau of Emergency Management to develop proposals for State building code changes to require seismic upgrades
- Rejecting Northwest Naturals request to be exempted from these regulations

Thank you

Dena Turner

Re: Comments in Support of Strong Fossil Fuel Zoning Code Amendments

Dear Mayor Hales and Portland City Council Commissioners,

Thank you for the opportunity to offer our comments on the recommended draft of the City of Portland's Fossil Fuel Terminal Zoning Amendments ("amendments"). We appreciate and support several of the revisions put forward by the Planning and Sustainability Commission (PSC). Still, the City must make further adjustments to the proposed code amendments in order to fully implement Portland's Fossil Fuel Policy Resolution #37168 ("resolution"). The resolution stated that the City would **"actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways."** The bold intent and plain language of the resolution provide clear guidance to the City Council as it considers proposals to further strengthen – or further weaken – the City's proposed fossil fuel zoning code amendments.

The City Council made a landmark statement in November 2015, and it should honor this statement by ensuring existing fossil fuel terminals do not expand; prohibiting all new fossil fuel terminals; and, resisting pressure to exempt certain fossil fuel companies such as NW Natural.

On behalf of Columbia Riverkeeper, 350 PDX, Sierra Club, Friends of the Columbia Gorge, Center for Sustainable Economy, Oregon Physicians for Social Responsibility, Climate Action Coalition and Portland Audubon Society we offer the following suggestions to improve rather than weaken the proposed fossil fuel zoning code amendments.

I. Prohibit Expansion of Existing Fossil Fuel Terminals

Public testimony overwhelmingly supports prohibiting the expansion of existing fossil fuel terminals. In contrast, PSC recommends allowing for a 10 percent expansion of capacity for replaced tanks. The PSC recommendation was driven by a desire to streamline seismic upgrades. Notably, a revision to remove the "plus 10 percent"[1] allowable expansion in the recommended

[1] *See* Recommended Draft Fossil Fuel Zoning Code Amendments. October 2016. P. 49.

draft failed narrowly during the PSC's discussion. The PSC's recommendation conflicts with the City's fossil fuel resolution, and it conflicts with the City's oil train ordinance. We urge the City to improve the proposed fossil fuel code amendments.

- City Council should amend PSC's recommendation by removing the proposed allowance for a 10 percent expansion of existing fossil fuel terminals. City Council should simply remove the words "plus 10 percent" in Sections 33.140.100-B.17.a-(1)-(2), on page 49 of PSC's recommendation. This change would still allow seismic improvements of fossil fuel tanks to move forward in a streamlined fashion without a discretionary land use process.

- The following code concepts are slightly amended from the PSC's recommendation, and they could accomplish the City's goal of allowing seismic safety upgrades in fossil fuel terminals by allowing a straightforward limited review process for existing terminals, while not incentivizing new fossil fuel infrastructure:

    - Identify "Fossil Fuel Terminals" as a regulated land use, characterized by (a) marine, railroad, or pipeline transport access and (b) either transloading facilities for transferring a shipment between transport modes (such as from rail to ship) or facilities that store fossil fuels.

    - Prohibit Fossil Fuel Terminals in all base zones.

    - Classify existing Fossil Fuel Terminals in industrial and general employment zones as "limited uses" that can continue to operate. Expansion of fossil fuel storage at these existing terminals is prohibited.

    - The following use limitations apply to existing Fossil Fuel Terminals:

        1] Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site is limited to the fossil fuel storage capacity that existed on [insert effective date]. Total fossil fuel storage capacity on the site in excess of the capacity that existed on [insert effective date] is prohibited; and

        2] New fossil fuel storage structures are prohibited unless a new fossil fuel storage structure is replacing an existing fossil fuel storage structure that does not meet current building codes standards for seismic safety, and in that case, the capacity of the

new fossil fuel storage structure is prohibited from being greater than the storage capacity of the existing structure that is being replaced.[2]

- Allowing expanded fossil fuel infrastructure could create more demand for unit trains in Portland, conflicting with the City's Oil Train Resolution # 37164. Unfortunately, PSC recommended allowing a 10 percent expansion of existing terminals as a limited use. For the ten facilities capable of handling oil that are listed on p. 17, Figure 7 of PSC's recommended draft, a 10 percent across-the-board increase in terminal capacity would result in additional storage of 38,848,740 gallons of oil – a volume equivalent to 13 unit trains of explosive Bakken crude oil.[3] The City Council should disallow expansions at existing facilities to bring the code language into alignment with the City's original fossil fuel policy and oil train resolution.

- For large terminals such as the Chevron, Kinder Morgan, and NuStar facilities, a 10 percent increase would exceed the volume of a single unit train, 2.5 to 3 million gallons of oil. Portland's Resolution # 37164 called for the City to oppose any project that would increase oil train traffic through Portland, a standard that conflicts with new 10 percent increases in oil terminals with large existing capacities.

Oil train derails, punctures, spills, and burns in Mosier on June 3, 2016.

- The PSC's recommendation is very likely to result in a 10 percent increase in fossil fuel storage in Portland because Portland is beginning a parallel process to increase seismic safety of its fossil fuel tanks. When coupled with a requirement for seismic upgrades, PSC's recommendation to allow a 10 percent increase is very likely to spur additional fossil fuel infrastructure in Portland. Specifically, if the City requires facilities to upgrade (as it should) for seismic safety and simultaneously allows for expansion, the City will likely see expanded fossil fuel infrastructure. As a result, the City Council should amend the resolution to remove the words "plus 10 percent," thereby not promoting over 38 million gallons of new crude oil storage infrastructure.

---

[2] This second use limitation may be redundant, because replacement structures will automatically be required to meet new updated seismic standards. It's included for clarity to parallel the PSC's recommended draft.

[3] Assumes roughly 3 million gallons of oil per unit train. Unit trains typically carry 2.5 to 3 million gallons of crude oil, depending on the length of the train and size of the cars in the train.

- The PSC's recommended amendments correctly acknowledge that "derailment risks to natural resources, especially along rivers, and to rural communities appear to be significant." Oregonians learned first-hand during the June 3, 2016, derailment in Mosier that oil trains are dangerous, and the City Council should use its fossil fuel zoning code amendments to diminish their use rather than create space for many more. The City of Mosier is still dealing with groundwater and surface water pollution from the derailment, evidence that Portland's fossil fuel zoning code amendments should be sculpted to reduce oil train risks however possible.

- A proposal to expand rail traffic through the Columbia River Gorge shows that Portland should make its fossil fuel zoning code amendments as restrictive as possible on future oil or coal unit trains. The Port of Portland recently supported a proposal by Union Pacific to dramatically expand its rail capacity through the town of Mosier – the same location as the oil train derailment, spill, and fire on June 3rd, 2016. In supporting the Mosier rail expansion, the Port of Portland stated that the rail expansion could increase unit train delivery of bulk goods to Portland, which could include the bulk shipment of oil. In November, the Wasco County Commission voted to deny the rail expansion in large part because of the impacts of increased train traffic on treaty-protected tribal fishing resources, a decision that may be appealed by Union Pacific. The Mosier rail expansion controversy shows that the City of Portland should take clear steps to restrict any future developments that could increase oil train traffic through the Columbia River Gorge.

II. Prohibit New Fossil Fuel Facilities

The Planning Commission recommended prohibiting new bulk fossil fuel facilities, consistent with the resolution's direction to **"actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways."** However, the PSC included an exception that would allow new fossil fuel facilities with a storage capacity of up to 2 million gallons. PSC opted for 2 million gallons as a lower threshold for defining a bulk fossil fuel terminal because it was less than the volume of a single unit train of oil. We urge City Council to eliminate or reduce any allowance for new fossil fuel terminals that may create increased use or shipment of polluting, dangerous fossil fuels through Portland.

- Staff explained that fossil fuel use may be flat or declining, negating the need for new or expanded fossil fuel terminals. The City's landmark resolution directs Portland to "actively oppose" fossil fuel expansion and thereby curb demand – not perpetuate it. Portland must accelerate the trend of declining fossil fuel use in order to meet its 2050

carbon reduction goals. Globally, climate science is clear that we must keep fossil fuels in the ground to avoid catastrophe.[4]

- City Council should eliminate or reduce the 2 million gallon threshold for a "bulk fossil fuel terminal." By defining a bulk fossil fuel terminal as a facility with storage capacity greater than 2 million gallons, the amendments leave open the possibility of facilities that can accept additional shipments of crude oil or other dangerous fuels.[5] The amendments should be improved by eliminating or lowering the 2 million gallon threshold and preventing additional risks for Portland and uprail residents.

- City Council should reject the idea that new or expanded fossil fuel infrastructure is necessary to protect the health and safety of Portland residents and downstream communities. In the Council's September 20th work session, BPS staff suggested that the City should offer the possibility of new or expanded infrastructure as a "sweetener" to encourage seismic and safety upgrades. The promise of expanded infrastructure, on its own, has not been adequate to induce the fossil fuel industry to improve the seismic readiness of tank infrastructure in the past. Looking forward, City Council should support other expected and recommended processes that will encourage seismic upgrades rather than weakening the City's proposed amendments.

Encouraging Seismic Safety

PSC's recommended draft works to address how the City of Portland can address seismic safety at existing fossil fuel terminals. We agree with staff that the City should explore options to require seismic safety upgrades through a program similar to the un-reinforced masonry buildings (URMs) program that is in process, or a property maintenance code. The City will more effectively enhance seismic safety through this Portland Bureau of Emergency Management (PBEM) process than through a clumsy, broad-brush incentive to build new fossil fuel infrastructure.

- The City should "develop proposals for State building code changes to improve seismic resilience and require seismic upgrades comparable to proposed requirements on unreinforced masonry buildings," as stated on page 62 of the PSC's recommendation.

- The Council should reject the idea that new or expanded fossil fuel infrastructure is necessary to protect the health and safety of Portland residents and downstream communities. As noted above, the historic availability of opportunities to expand or build

[4] "The Sky Is the Limit: Why the Paris Climate Goals Require a Managed Decline of Fossil Fuel Production." 2016. Oil Change International. http://priceofoil.org/content/uploads/2016/09/OCI_the_skys_limit_2016_FINAL_2.pdf.

[5] Unit trains typically carry 2.5 to 3 million gallons each and are usually 90 cars and 1 mile or more in length.

new fossil fuel infrastructure has not been an adequate inducement for establishing safe, seismically-ready facilities.

- City Council should support Portland Bureau of Emergency Management's (PBEM) expected and recommended process that will encourage seismic upgrades rather than weakening the City's proposed amendments.

III. Include Regulated Utilities and NW Natural in Portland's Fossil Fuel Policy

NW Natural has requested an exemption from Portland's fossil fuel amendments. BPS' October 5, 2016, memo offered potential language for this option, but it did not recommend for or against an exemption for NW Natural and other regulated utilities. Despite receiving additional testimony directly from NW Natural during its hearing in October, not a single member of the PSC recommended altering the fossil fuel zoning code amendments to exempt NW Natural. We urge City Council to adopt PSC's approach to regulated utilities and reject NW Natural's requested exemption.

- NW Natural should not receive special treatment. It is appropriate for large, potentially hazardous energy facilities to be regulated by multiple layers of government. The Planning Commission was comfortable with NW Natural receiving scrutiny from multiple layers of government. NW Natural's role as a public utility should not afford it a special status with respect to meeting the City's goal of prohibiting new fossil fuel infrastructure. Indeed, natural gas is specifically included as a carbon-intensive, dangerous fossil fuel in Portland's 2015 resolution. NW Natural must be included because natural gas - primarily methane - is a powerful greenhouse gas and its combustion releases significant carbon pollution.

- NW Natural already owns and operates adequate storage facilities in the Pacific Northwest to meet its Portland load growth needs.[6] At present, NW Natural is undergoing a seismic review of its existing Portland Gasco LNG facility. The City's proposed amendments would allow NW Natural to improve the seismic readiness of its existing storage through a limited use review.

- New LNG infrastructure could serve non-utility and utility purposes, complicating the impact of NW Natural's requested exemption. NW Natural seeks an exemption for facilities that fall within PUC-regulated operations. Staff's October 5 memo stated, "If

[6] See NW Natural Integrated Resource Plan. September 2016. See Section 7.2 - Gas storage relies on Mist, only new LNG storage considered is in Clark County. P. 3.35.

NW Natural established an unregulated subsidiary to supply wholesale LNG, for example, any infrastructure associated with these operations would still be subject to the Fossil Fuel Code." In reality, gas utilities often mix the utility and non-utility purposes of gas storage facilities. For instance, NW Natural's Mist Storage facility has undergone multiple site certificate changes, and now it is planned to operate both as storage for NW Natural's gas utility customers, as well as a source of firm supplies to PGE's gas-fired power plants at Port Westward.[7] Additionally, Puget Sound Energy proposes a new LNG facility in Tacoma that may be used both as storage for its regulated utility customers and as a fueling station for LNG ships and trucks. Hence, the exemption NW Natural seeks may allow facilities that engage in both PUC-regulated and non-PUC-regulated activities.

- NW Natural's Integrated Resource Plan (IRP) does not specify the need for new major LNG storage in Portland. In its long-range plans, NW Natural's IRP discusses the potential for possible LNG storage to meet load growth in Clark County – not Portland. As a result, NW Natural does not appear to need new LNG storage in Portland to meet its core utility needs, and so the exemption it seeks is unnecessary.

IV. Take Bold Action for a Clean, Safe Energy Economy and a Stable Climate

Portland's City Council will benefit Portland's clean energy economy by undertaking the proposed amendments with the suggestions we have outlined. Just as importantly, the City can make significant strides towards improving the safety of neighborhoods by using the right tools to mandate seismic improvements for fossil fuel storage tanks in highly liquefiable soils near the Willamette and Columbia Rivers. Furthermore, the City's fossil fuel code amendments need not impinge on the expansion of cleaner, non-fossil fuels: facilities handling 95% or greater non-fossil fuels are already exempted. And while the amendments should restrict fossil fuel terminals from expanding or building new facilities, they leave open the potential for Portland to continue to serve as a hub for fuels using existing infrastructure until the region moves further towards a managed decline of fossil fuel use.

Importantly, the PSC's recommendation offers City staff both direction and flexibility in implementing the fossil fuel zoning code amendments. Specifically, Portland Bureau of Planning and Sustainability is directed to periodically monitor the effectiveness of these zoning code amendments "to implement underlying policies and consider code adjustments in response to regional fuel demand and market changes, product innovation, safety and climate action considerations, and related regulatory changes." By directing BPS to evaluate the impacts of the

[7] See recent story from Argus Media highlighting new PGE-NW Natural gas storage collaboration. http://www.argusmedia.com/news/article/?id=1323500.

policy, BPS is given a pathway to recommend new fossil fuel infrastructure on an "as-needed" basis if unforeseen conflicts arise.

A 2016 study from the Labor Network for Sustainability provides more detail on how Portland and the region will benefit from a transition to clean energy.[8] Additionally, there is growing support for a renewable energy agenda in the City of Portland. Indeed, new fossil fuel infrastructure could be stranded assets in the foreseeable future.

Lastly, yet another new study from Oil Change International shows that time is of the essence to address climate change through reducing our use of fossil fuels.[9] The study shows that, if we are to avoid a temperature rise of 2 degrees Celsius, we can build no new fossil fuel infrastructure. Indeed, much of our currently proven oil, gas, and coal reserves must go untapped. The Pacific Northwest – with Portland as its guiding light – can begin a managed decline of fossil fuel use, even as the region continues to grow its economy. Portland earned national praise for its 2015 Fossil Fuel Resolution, and the rest of the world is counting on cities like Portland to show how a managed decline of fossil fuel use can respond to the urgent challenge of reducing our dependence on climate-changing fossil fuels.

We look forward to the City Council voting to establish a code that reflects the bold, practical steps outlined in Portland's landmark fossil fuel policy.

Sincerely,

Dan Serres

RE: Restricting Bulk Fossil Fuel Terminals

Mayor Hales and City Commissioners:

The Portland Planning and Sustainability Commission (PSC) is pleased to forward our unanimous recommendation to amend the Zoning Code to restrict bulk fossil fuel terminals in the City of Portland. This recommendation is consistent with the policy direction in the 2015 Climate Action Plan, City Council Resolution 37168 and the 2035 Comprehensive Plan. As Portland, the state of Oregon, and other public agencies and private firms continue to work to reduce greenhouse gas emissions, we expect statewide demand for fossil fuels to decline. More generally, to stabilize the climate, we anticipate that nations around the world will shift away from fossil fuels.

The recommended amendments will prohibit new fossil fuel terminals and limit the expansion of the existing terminals. One of our primary concerns is the safety risk associated with these facilities because most of Portland's industrial areas are located in areas with moderate to high levels of liquefaction susceptibility.

In our deliberations, the PSC made four key changes to the BPS staff proposal:

1. The storage capacity threshold size for defining a bulk fossil fuel terminal was lowered to 2 million gallons. This level is slightly less than the volume of one unit-train, which is a good benchmark. We also are concerned about the throughput of a facility and the possibility that a relatively small amount of storage could move a large volume of fossil fuel through our community.

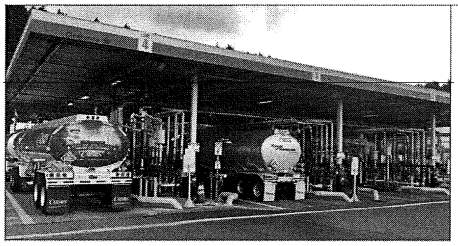
2. The PSC added language to prevent companies from using subsidiaries to aggregate or link smaller facilities as a means to circumvent the storage capacity threshold limits.

Printed on 100% post-consumer waste recycled paper.

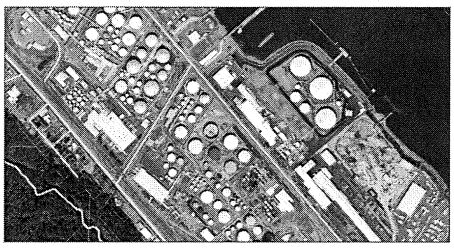
3. Existing terminals are designated as a limited use. Future expansion is limited to 10 percent of the current terminal capacity and must be done in conjunction with the replacement of existing tanks in order to improve seismic safety. The 10 percent expansion is a way to incentivize seismic upgrades and to provide some flexibility with complying with the State of Oregon's Clean Fuel Standards.

4. In a related recommendation, the PSC decided to not require a land use review for the replacement tanks. We wanted to create a clear permitting path for the seismic upgrades. At the same time, we believe it is important that the public know what is going on with these facilities. Therefore, we added a neighborhood notice and meeting requirement that is to take place prior to submitting development permit applications.

While these bulk fossil fuel terminals provide 90 percent of the transportation fuel that supports our economy and mobility, these facilities represent a tremendous risk to community safety. We hope that these zoning code amendments are the first step in a process to replace the old storage tanks and improve our seismic resilience.



Sincerely,



Katherine Schultz

Fossil Fuel Terminal Zoning Amendments

Recommended Draft

City of Portland, Oregon
October 11, 2016

Bureau of Planning and Sustainability
Innovation. Collaboration. Practical Solutions.
City of Portland, Oregon

The Bureau of Planning and Sustainability is committed to providing equal access to information and hearings. If you need special accommodation, please call 503-823-7700, the City's TTY at 503-823-6868, or the Oregon Relay Service at 1-800-735-2900.

How can I provide feedback to decision-makers?

The Fossil Fuel Terminal Zoning Amendments project would begin to implement new policy direction on fossil fuel distribution and storage facilities through changes to the Zoning Code. This proposal would restrict development and expansion of bulk fossil fuel terminals.

You may testify about recommended changes to the Portland City Council through November 10, 2016, in the following ways:

Testify in person at the City Council hearing.

The hearing, on November 10, 2016 at 2:00 P.M., will be in Council Chambers at City Hall, 1221 SW 4th Avenue. To confirm the date and time, please check the City Council calendar at www.portlandoregon.gov/auditor/26997

Write to City Council.

Email written testimony to the Council Clerk at fossilfuelzoning@portlandoregon.gov or send to 1221 SW Fourth Avenue, Room 130, Portland, Oregon 97204. Written testimony must be received by the time of the hearing and must include your name and address.

1. Introduction

In recent years, the rapid development of fossil fuel resources in the Western United States and Canada has prompted many proposals in the Pacific Northwest for new large fuel terminals and infrastructure projects. In early 2015, Pembina Pipeline Corporation proposed a propane terminal in Portland that drew substantial public opposition. Mayor Charlie Hales withdrew a proposed zoning code amendment that the development needed to move forward, effectively blocking that proposal. In November 2015, Portland City Council adopted Resolution 37168 calling for opposition to expansion of fossil fuel infrastructure. In June 2016, City Council adopted the 2035 Comprehensive Plan, which included Policy 6.48 to limit fossil fuel distribution and storage facilities to those needed to serve the regional market. This code-change project begins to implement the policy direction in the resolution by restricting development and expansion of bulk fossil fuel terminals.

Project summary

The Fossil Fuel Terminal Zoning Amendments project would restrict the development and expansion of Bulk Fossil Fuel Terminals.

Recommended zoning code amendments:

- Identify "Bulk Fossil Fuel Terminals" as a regulated land use, characterized by (a) marine, railroad, or pipeline transport access and (b) either storage capacity exceeding 2 million gallons or transload facilities (such as rail-to-ship loading).
- Prohibit new Bulk Fossil Fuel Terminals in all base zones.
- Classify existing Bulk Fossil Fuel Terminals in industrial and general employment zones as "limited uses" that can continue to operate. Expansion of fossil fuel storage at these existing terminals would be limited to improvements that (a) include "seismic upgrades" which replace existing tanks, (b) add no more than 10 percent of the capacity of replaced tanks, and (c) result in no more than 10 percent cumulative expansion of the total terminal capacity on the effective date of these code changes.

Why is this important?

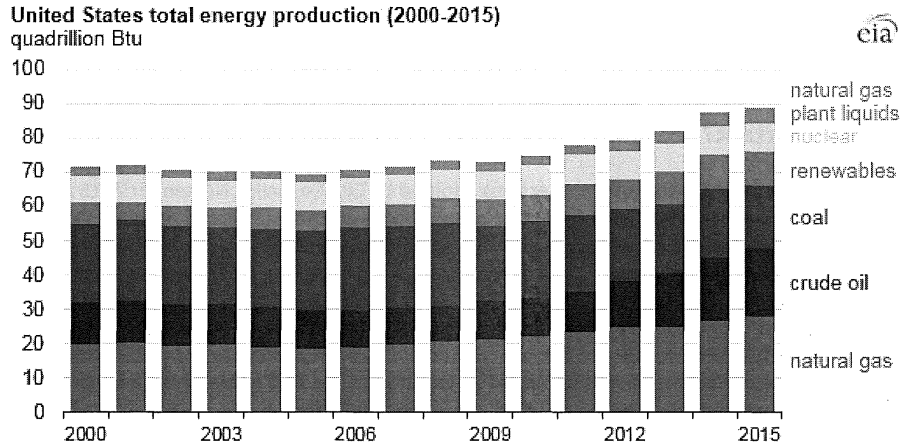
Fossil fuel distribution policy – New policy directions adopted by City Council in November 2015 and in the 2035 Comprehensive Plan would limit fossil fuel distribution and storage facilities to those serving the regional market. City Council adopted these policies after holding public hearings and hearing testimony from hundreds of Portlanders.

Climate action goals – Fossil fuels are major contributors to climate change and pollution. The rapid development of fossil fuel resources in the Western United States and Canada has prompted many recent proposals for new export terminals in the Pacific Northwest. The City's Climate Action Plan seeks to reduce greenhouse gas emissions with fossil fuels being the largest source of emissions.

Public safety and environmental protection – Several recent accidents involving fossil fuel distribution across the nation and in Oregon highlight public safety risks in cities and environmental risks along rivers. Most of Portland's industrial areas have moderate-to-high liquefaction susceptibility in a major earthquake.

Oregon's industrial and distribution center – Portland is Oregon's largest, most diverse distribution hub, and existing Portland petroleum terminals serve more than 90 percent of the statewide market. Recommended code changes would restrict the expansion of these facilities in Portland.

Project scope and timing



The energy distribution market in the Pacific Northwest is changing. Production of crude oil and natural gas, particularly from North Dakota, has substantially increased in the U.S. since 2009, as shown in Figure 1. In turn, several large new fuel distribution terminals have been proposed in the Pacific Northwest to access West Coast and export markets, as shown in Figure 2. Similar trends have occurred in Alberta and British Columbia.

This project is proposing a prompt, focused response to these market changes. The recommended code amendments will restrict development of new fossil fuel terminals and limit the expansion of existing terminals, consistent with City and State objectives on climate change and public safety.

Where are Portland's existing fossil fuel terminals?

Portland's industrial districts are Oregon's largest seaport, rail hub and truck distribution center. The Northwest Industrial District in Portland is also the end of the Olympic Pipeline, which supplies most of Oregon's petroleum fuels from Puget Sound refineries. The ten petroleum terminals located in Northwest Portland are the gateway distribution facilities serving Oregon and Southern Washington markets. Additionally, NW Natural's GasCo terminal provides peak-consumption storage of natural gas for much of the regional market. In Northwest Portland, these "tank farm" storage facilities have direct access to pipeline, deep-water port, railroad and truck route infrastructure. Several other smaller fossil fuel distribution facilities are also located in Portland.

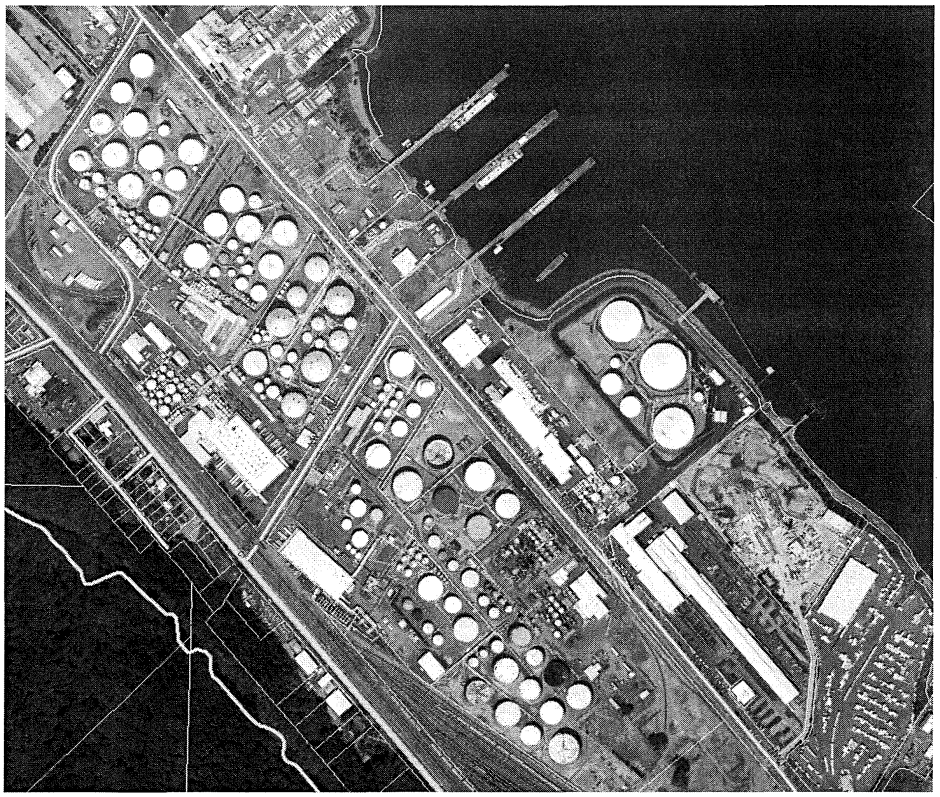


Figure 1. Increasing U.S. energy production

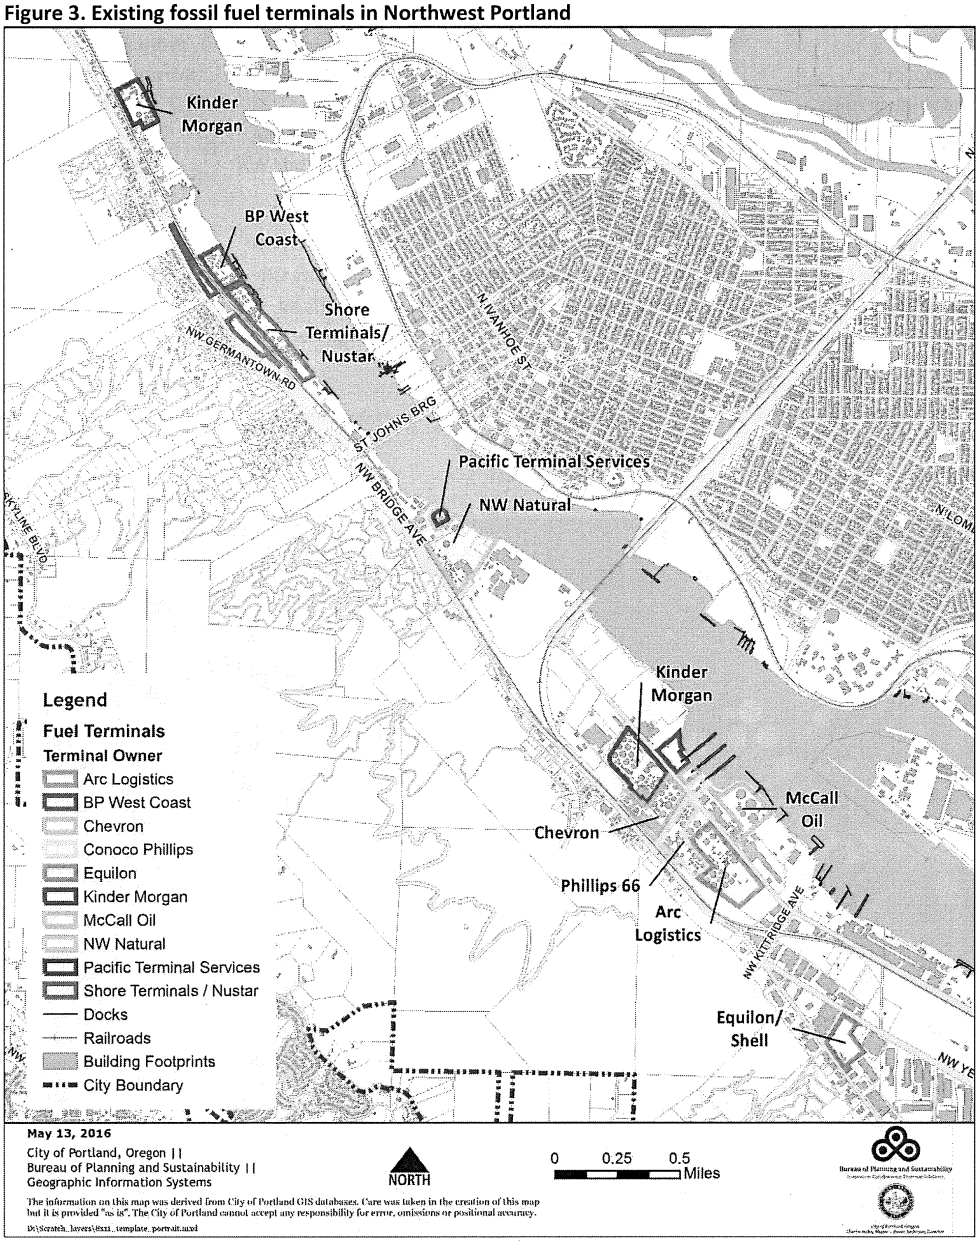

Figure 2. Examples of recent fossil terminal proposals in the Pacific Northwest

Operator	*Facility type*	*Location*	*Proposed new storage capacity*
Petroleum fuels			barrels
Vancouver Energy	Crude oil terminal	Vancouver WA	2,160,000
Imperium Renewables	Biofuels terminal	Grays Harbor WA	720,000
Gaseous fuels			gallons
Oregon LNG terminal	New LNG terminal	Warrenton OR	84,000,000
Jordan Cove LNG	New LNG terminal	Coos Bay OR	84,000,000
Pembina	Propane terminal	Portland	35,000,000
Haven Energy	Propane terminal	Longview WA	23,000,000
Coal			Stockpile acres
Millennium Bulk Terminal	Coal terminal	Longview WA	~20
Ambre Energy	Coal transload facility	St. Helens OR	no storage
Gateway Pacific Terminal	Coal terminal	Bellingham WA	80

Five petroleum terminals are located in the Willbridge area of NW Portland.

Figure 3. Existing fossil fuel terminals in Northwest Portland

PSC review and recommendations

The Planning and Sustainability Commission (PSC) held a public hearing on September 13, 2016, and made three changes to the Proposed Draft in response to issues raised in testimony.

1. Terminal storage capacity threshold – The size threshold to distinguish Bulk Fossil Fuel Terminals was reduced from 5 million to 2 million gallons of storage, in order to include facilities that are large enough to unload unit trains. This change would also include and restrict smaller existing fuel distributors.
2. Ownership aggregation - Code language was added to prevent the aggregation of new facilities smaller than 2 million gallons into a larger terminal that could effectively circumvent the terminal storage capacity threshold.
3. Expansion of existing terminals - Existing terminals were reclassified from a "nonconforming use" to a "limited use," which accommodates seismic upgrades and limits expansion to (a) include replacement of existing tanks, (b) no more than 10 percent of the capacity of replaced tanks, and (c) no more than 10 percent of the total terminal capacity in 2016. A public notification requirement was also added for new tanks.

The PSC considered and did not act on NW Natural's request to exempt regulated utilities.

What's in this report?

This *Recommended Draft* of Fossil Fuel Terminal Zoning Amendments is recommended by the Planning and Sustainability Commission for consideration by the Portland City Council. The audience is the City Council and the general public, including stakeholders, inter-governmental partners, implementers and other interested parties. Project stakeholders include property owners, businesses, employees, residents, neighbors, business district and neighborhood associations, underrepresented and underserved groups, environmental groups and other community groups. Implementers include the real estate industry, development review staff and others who use the zoning code.

Your feedback on the Recommended Draft should be directed to the City Council. You may testify about the recommended changes in person at the City Council hearing on November 10, 2016, or testify in writing before the hearing (see information about how to provide feedback on the inside cover of this report).

This report consists of seven parts:

- **Section 1** introduces the project.
- **Section 2** describes how the recommended code changes implement City policies in Resolution 37168 and the 2035 Comprehensive Plan.
- **Section 3** summarizes public and stakeholder involvement activities that have helped shape and inform this project.
- **Section 4** describes background conditions that inform the recommended zoning changes.
- **Section 5** describes the analysis of recommended zoning concepts, including related policy directions, implementation issues and rationale.
- **Section 6** specifies the draft code language, along with code commentary pages that clarify expected implementation.

- **Section 7** recommends future implementation directions for building code amendments to address seismic resilience and periodic monitoring for code effectiveness.

2. Policy direction

Section 2 describes how the recommended code changes implement relevant City policies in Resolution 37168 and the Comprehensive Plan.

City of Portland Fossil Fuel Resolution 37168

> BE IT RESOLVED, that the City Council will actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways; and

The recommended zoning code changes are a key implementation action of Resolution 37168, adopted in November of 2015. Addressing the overall direction of the resolution to oppose expansion of fossil fuel distribution and storage infrastructure, this project proposes to restrict development and expansion of bulk fossil fuel terminals.

> BE IT FURTHER RESOLVED, that this Resolution does not restrict:
> 1. improvements in the safety, or efficiency, seismic resilience, or operations of existing infrastructure;
> 2. the provision of service directly to end users;
> 3. development of emergency backup capacity;
> 4. infrastructure that enables recovery or re-processing of used petroleum products; or
> 5. infrastructure that will accelerate the transition to non-fossil fuel energy sources; and

The recommended code changes address exceptions 2 and 4 in the Resolution through specific exclusions of end-user facilities and recovery or re-processing of used petroleum products from the recommended new land use restrictions on Bulk Fossil Fuel Terminals. Also, storage capacity for non-fossil fuels, such as ethanol, is not subject to these restrictions, which could help with the transition to non-fossil fuel energy sources under the State of Oregon's Clean Fuels Program (5). Expansion of fossil fuel storage at existing fuel terminals is allowed, but limited and only in conjunction with safety/seismic replacement (1). Development of emergency backup capacity may be restricted, unless that capacity can fit within the 10 percent expansion limit.

> BE IT FURTHER RESOLVED, that City bureaus are directed to examine existing laws, including those related to public health, safety, building, electrical, nuisance, and fire codes, and develop recommendations to address fossil fuels that strengthen public health and safety; and

The resolution broadly addresses fossil fuel infrastructure. The zoning code regulates land use patterns and development of fossil fuel distribution facilities on parcels. Zoning does not regulate the quantity of products handled (throughput) on developed sites or their destination (such as exports). Additional amendments to building, fire and energy codes would need to be addressed in future projects.

> BE IT FURTHER RESOLVED, that the Bureau of Planning and Sustainability is directed to develop proposed code changes for Council consideration to advance the policies set forth in this Resolution; and

The project will specifically implement this provision of the resolution.

> BE IT FURTHER RESOLVED, that prior to any further Council action, the mayor shall schedule (1) a work session to review any proposed code changes and (2) an executive session to review the legal considerations of any proposed code changes; and

The proposed project will implement this process requirement of the resolution.

> BE IT FURTHER RESOLVED, that the Bureau of Planning & Sustainability shall undertake an analysis of the economic impacts of any proposed Code changes to advance the policies set forth in this resolution, with a particular focus on potential impacts to local blue-collar jobs; and

This report includes summary analysis of economic impacts in Section 4, specifically addressing impacts on middle-wage blue collar jobs. Analysis to date is limited on the potential impacts on fuel supply to meet regional demand. Fossil fuel demand in this growing region may increase moderately, as indicated by trend-based forecasts, or may plateau and decline with implementation of climate resilience goals and strategies.

> BE IT FURTHER RESOLVED, that the City and applicable bureaus shall seek and identify opportunities to invest in Portland's 'human infrastructure' by supporting programs to retrain our workforce as the city transitions to a clean energy economy; and

This provision of the resolution is expected to be implemented as a future action.

> BE IT FURTHER RESOLVED, that the City shall consult with its Tribal Government Partners, the State of Oregon, local governments, and other key stakeholder including labor, business, environment, neighborhoods and communities of color in advancing this policy;

The Mayor's Office staff has sought input from and will continue to reach out to the entities identified above to implement this process requirement of the resolution.

Guiding principles of the 2035 Comprehensive Plan

The Comprehensive Plan sets five Guiding Principles, which encourage balanced, integrated multi-disciplinary approaches that must comply with the Plan. This project is consistent with the Guiding Principles because it promotes major benefits to human health and safety, environmental health and resilience, and integrates considerations for economic prosperity and equity.

Economic prosperity

> *Guiding Principle: Support a low-carbon economy and foster employment growth, quality education and training, competitiveness, and equitably-distributed household prosperity.*

The recommended code changes would restrict expansion at existing fuel terminals and prohibit new terminal development, impacting associated job growth and tax revenue. The recommended code

restrictions on fossil fuel terminal development would also limit potential financial risks from a major accident involving fossil fuel infrastructure.

Human health

> *Guiding Principle:* Avoid or minimize negative health impacts and improve opportunities for Portlanders to lead healthy, active lives.

Major benefit – The recommended code changes would reduce the scale of low, but potentially catastrophic, safety risks associated with the growth of fossil fuel infrastructure, including oil train derailments, explosive accidents at liquefied natural gas (LNG) and liquefied petroleum gas (LPG) facilities, and seismic risks of tank farms. Fossil fuel emissions and coal dust are also significant sources of air pollution associated with respiratory disorders.

Environmental health

> *Guiding Principle: Weave nature into the city and foster a healthy environment that sustains people, neighborhoods, and wildlife. Recognize the intrinsic value of nature and sustain the ecosystem services of Portland's air, water, and land.*

Major benefit – The human health benefits described above also extend to environmental health. The recommended code changes would reduce the scale of environmental health risks associated with the growth of fossil fuel infrastructure, including oil train derailments along the Columbia River, LNG and LPG facilities in riparian areas, and seismic risks of tank farms along the Willamette River. Fossil fuel emissions are also a significant source of air pollution.

Equity

> *Guiding Principle: Promote equity and environmental justice by reducing disparities, minimizing burdens, extending community benefits, increasing the amount of affordable housing, affirmatively furthering fair housing, proactively fighting displacement, and improving socio-economic opportunities for under-served and under-represented populations. Intentionally engage under-served and under-represented populations in decisions that affect them. Specifically recognize, address, and prevent repetition of the injustices suffered by communities of color throughout Portland's history.*

The recommended code changes would restrict expansion at existing fuel terminals and prohibit new terminal development, impacting associated middle-wage, industrial job growth that disproportionately benefits workers of color. Restricting potential increases in regional supply of fossil fuels could also have regressive impacts of increasing fuel costs, disproportionately affecting lower-income people.

Resilience

> *Guiding Principle: Reduce risk and improve the ability of individuals, communities, economic systems, and the natural and built environments to withstand, recover from, and adapt to changes from natural hazards, human-made disasters, climate change, and economic shifts.*

Major benefit – The recommended code changes would restrict development of fossil fuel terminals consistent with City and State objectives on climate change and public safety. While fossil fuels like natural gas and propane have the potential to replace higher-carbon fuels, substituting these fuels for higher-carbon fuels does not begin to approach the goal of an 80% reduction in carbon emissions by 2050 established in Portland's Climate Action Plan or the State's 75% goal.

2035 Comprehensive Plan policies specifically implemented in this project

The recommended zoning changes in the project are implementing the following specific policies.

Overall project direction: Fossil fuel distribution

> *Policy 6.48 Fossil fuel distribution. Limit fossil fuel distribution and storage facilities to those necessary to serve the regional market.*

The recommended code changes would implement Policy 6.48 by restricting development and expansion of fossil fuel distribution terminals. Analysis to date on the potential impacts of code amendments in constraining fossil fuel supply to meet regional demand is limited. Fossil fuel demand in this growing region may increase moderately, as indicated by trend-based forecasts reviewed in Section 4, or may plateau and decline with implementation of climate resilience goals and strategies. As recommended, fuel terminal capacity in Portland to meet regional demand would be limited to expansion of existing terminals by no more than 10 percent.

Related policy directions

> *Policy 4.81 Disaster-resilient development. Encourage development and site-management approaches that reduce the risks and impacts of natural disasters or other major disturbances and that improve the ability of people, wildlife, natural systems, and property to withstand and recover from such events.*
>
> *Policy 4.82 Portland Harbor facilities. Reduce natural hazard risks to critical public and private energy and transportation facilities in the Portland Harbor.*

Policies 4.81 and 4.82 are partly met by prohibiting fuel terminal development in Portland's industrial areas that are predominantly in locations with high susceptibility to soil liquefaction (see Figure 7 in Section 4). Incremental expansion at existing terminals also provides a pathway for market-driven safety improvements, providing financial return to cover improvement costs.

> *Policy 6.2 Diverse and expanding economy. Align plans and investments to maintain the diversity of Portland's economy and status as Oregon's largest job center with growth across all sectors (commercial, industrial, creative, and institutional) and across all parts of the city.*
>
> *Policy 6.5 Economic resilience. Improve Portland's economic resilience to impacts from climate change and natural disasters through a strong local economy and equitable opportunities for prosperity.*
>
> *Policy 6.6 Low-carbon and renewable energy economy. Align plans and investments with efforts to improve energy efficiency and reduce lifecycle carbon emissions from business operations. Promote employment opportunities associated with the production of renewable energy, energy efficiency projects, waste reduction, production of more durable goods, and recycling.*

The recommended code changes are consistent overall with the range of direction in Policies 6.2, 6.5 and 6.6, providing for modest expansion of existing terminals as part of a diverse, expanding economy

and prohibiting development of new fossil fuel terminals that conflict with resilience and climate action goals.

Existing Comprehensive Plan policies specifically implemented in this project

The 2035 Comprehensive Plan was adopted in June 2016 and is not expected to take effect until early 2018. In the meantime, the existing Comprehensive Plan is in effect.

> *Policy 7.6 Energy Efficient Transportation. Provide opportunities for non-auto transportation including alternative vehicles, buses, light rail, bikeways, and walkways. The City shall promote the reduction of gasoline and diesel use by conventional buses, autos and trucks by increasing fuel efficiency and by promoting the use of alternative fuels.*
>
> *Policy 7.8 Energy Supply. The City shall promote conservation as the energy resource of first choice. The City shall also support environmentally acceptable, sustainable energy sources, especially renewable resources such as solar, wind, hydroelectric, geothermal, biomass (wood, farm and municipal waste), cogeneration, and district heating and cooling.*

The recommended code changes are consistent with Policies 7.6 and 7.8, promoting the use of alternative energy sources by restricting development and expansion of fossil fuel terminals.

2015 Climate Action Plan

> *Goal: Reduce local carbon emissions 80 percent from 1990 levels by 2050, with an interim goal of 40 percent by 2030.*

As described in Section 4, lower-carbon fossil fuels like natural gas and propane have the potential to replace higher-carbon fuels, but they do not approach the goal of an 80% reduction in carbon emissions by 2050 in Portland's Climate Action Plan or the State's 75% goal. Investments in major infrastructure typically take decades to recoup, and the transition to renewables needs to go much faster than that to stabilize global emissions. The recommended code changes are consistent with the 80% goal of the Climate Action Plan by restricting development of fossil fuel terminals.

3. Public and stakeholder involvement

Section 3 summarizes public and stakeholder involvement activities that have helped shape and inform this project. Stakeholder focus group results are further explained in Appendix A of this report.

What have we heard leading up to this project?

Public hearings at the Planning and Sustainability Commission and City Council on the Pembina terminal development proposal in 2014 and Resolution 37168 in 2015 drew testimony from hundreds of people. The overall theme of that testimony was strong objection to the Pembina project and support for the fossil fuel resolution. Primary reasons included the neighborhood safety and health risks and inconsistency with the City's climate action objectives. The Resolution also drew letters with strong opposition from state and regional business associations.

Following adoption of the Resolution in November 2015, City Council added the related Policy 6.48 on fossil fuel distribution to the 2035 Comprehensive Plan, reflecting the recently adopted policy direction in the Resolution. Public involvement in the Comprehensive Plan Update included public hearings in April 2016 on City Council amendments and thousands of comments on the 2035 Comprehensive Plan over the previous 8 years. The recommended code amendments are consistent with several sustainability-related policies in the Plan. Addressing issues with policy tradeoffs, the 2035 Comprehensive Plan calls for a balanced, integrated approach to implement multiple goals. As described in Section 2, the recommended code amendments provide major benefits toward implementing three of the Plan's five guiding principles and integrates consideration of the other two guiding principles.

Public involvement activities in this project

Extensive public comments were received on the Discussion Draft and Proposed Draft, which influenced substantial changes between the Recommended Draft and prior drafts. Two overall themes of the public input include 1) extensive comments from residents, community groups and environmental advocates for a bold change in direction to oppose fossil fuel terminal development and 2) objections to the draft code changes by business, labor, and fuel industry representatives in order to accommodate regional growth, everyday fuel needs, and transition investments.

The PSC received emailed testimony from about 600 people generally calling for a "full ban" on new fossil fuel terminals and strengthened restrictions on expansion of existing terminals. While comments varied, predominant recommendations included removing the 5-million-gallon terminal size threshold and adding discretionary review criteria on expansion to address climate and safety impacts. Similar testimony for more stringent restriction on fuel terminal development was submitted by 350PDX, Portland Audubon, Center for Sustainable Economy, Physicians for Social Responsibility, Columbia Riverkeeper, Columbia River Inter-Tribal Fish Commission, Sierra Club, Climate Solutions, League of Women Voters, and others. Additional themes of their comments and recommendations included support for a nonconforming use designation on fossil fuel terminals, new restrictions on ownership

aggregation to prevent circumvention of the terminal size threshold, and support for additional building code requirements to improve seismic safety.

In contrast, testimony objecting to the draft restrictions on fuel terminal development were submitted by Portland Business Alliance, Port of Portland, Columbia Pacific Building and Construction Trades Council, NW Natural, Burlington Northern Santa Fe Railroad, Working Waterfront Coalition, Arc Terminals, Western States Petroleum Association, and others. Examples of their concerns included: inconsistency with the Resolution's direction for various exemptions and economic impacts analysis; substantial growth is expected in the use of some fossil fuels (e.g., jet fuel, natural gas, transition fuels); and a request for exemption of public utilities that are already regulated to serve regional end users.

Themes of comments on the Discussion Draft from business and labor organizations included opposition to recommended code changes, requests for more time and analysis, and clarifications to address practical considerations. Letters were received from NW Natural, Port of Portland, Columbia Pacific Building and Construction Trades Council, Kinder Morgan, Arc Terminals, and Western States Petroleum Association (WSPA). Some examples of comments included that growth rates will change over time, that fuels meeting Oregon's Clean Fuel Standard should be excluded, inclusion of non-fuel methanol is inconsistent, and the economic analysis is cursory. WSPA submitted draft code language, including focusing terminal restrictions on extra-regional facilities beyond the West Coast (PADD V) region and a new Energy Corridor Overlay Zone that protects the historic energy cluster for infrastructure growth.

Public involvement in concept development for the project consisted primarily of four stakeholder focus groups, which were held in June 2016 to review preliminary code concepts and help identify and understand potential implementation issues. The focus groups highlighted the range of stakeholder perspectives and interests concerning recommended zoning changes. Figure 4 summarizes the themes of issues raised in the focus groups. Other outreach activities have included meetings with interagency partners, terminal operators, and other interested stakeholders. These activities and what we heard in them are further described in the appendix of this report.

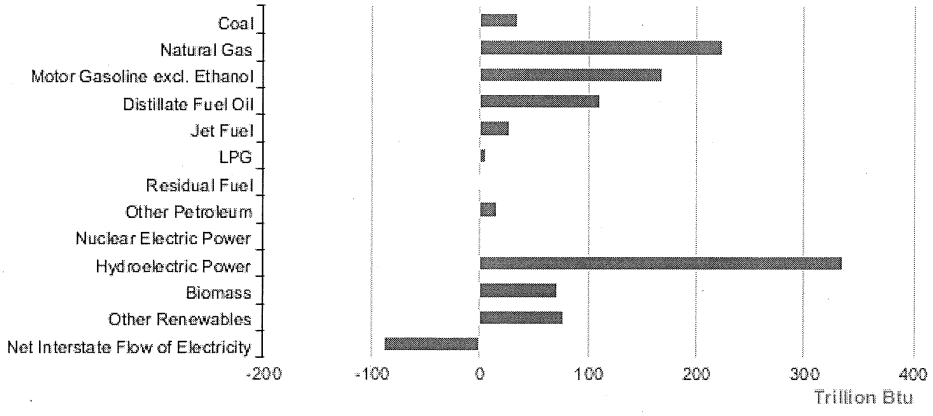
Inter-governmental coordination

The Mayor's Office staff has sought input from and will continue to reach out to Tribal Government Partners to shape and inform the draft code amendments. An In-House Draft Report was circulated to inter-bureau partners in June 2016. Their comments have helped to shape and inform the Discussion Draft and subsequent drafts, particularly addressing code administration and legal limitations.

Figure 4. Summary themes of stakeholder focus group comments

TOPIC	FUEL TERMINAL REPRESENTATIVES	ENVIRONMENTAL AND HEALTH ORGANIZATIONS	STATE AND REGIONAL BUSINESS ORGANIZATIONS	NEIGHBORHOOD AND EQUITY ORGANIZATIONS
Key issues	▸ We've operated safely for decades. We meet the federal/state low-carbon fuel standards. ▸ Difficult to participate: very quick process; emotionally driven; antitrust restrictions. ▸ Unintended impacts: harder to meet clean fuel standards; more trucks on road; costs to rest of the state.	▸ Looking for strong, model code. Expect community backlash if expectations not met. ▸ Safety needs to be integral with climate - Mosier oil train wreck; terminals in liquefaction soils. ▸ Include disaster risks in economic analysis. Bonding or insurance for worst case.	▸ Resolution requires more research on economic impacts, etc. ▸ How will the code hold up in 5 years? ▸ What is the goal? If climate or safety, zoning tool is not the right fit. ▸ Portland is not an economic island. Statewide impact. ▸ Big political decision. Don't rush it.	▸ Safety and pollution are our priority. Look closely at seismic and explosion risks. ▸ A reasonable expectation for growth is smart. ▸ This is aggressive. Without LNG, won't China burn more coal? ▸ Rail safety in the Gorge is also a key issue that this can't resolve.
New land use category	▸ If unclear, permit staff could be pressured - unpredictable results. ▸ Use federal West Coast PADD 5 "region."	▸ Regulate both existing and new facilities. ▸ New code must effectively implement the policy.	▸ Need clear definitions: region, export, end user. ▸ Do not make terminals non-conforming or an ambiguous limited use.	▸ Why allow it in IG2? ▸ A new export terminal in contaminated harbor is unlikely.
Definition of fossil fuels	▸ Natural gas considered a low carbon fuel by State, so why included here? ▸ Tomorrow's cleaner fuels won't meet today's definitions.	▸ Excluding methanol undermines policy. ▸ If end use is mostly fuel, then limit it. ▸ One new LNG tank is a big risk. So is coal.	▸ Federal and state are going a different direction, requiring cleaner fossil fuels. Why restrict cleaner fuels at cross purposes?	▸ Make way for bio-diesel as a cleaner fuel. ▸ Methanol not a fuel in Oregon - overreaching. ▸ Fuels are okay if they have no emissions.
Terminal development restrictions	▸ Some sites are already built-out. ▸ Our non-contiguous sites are connected by pipelines. ▸ Can't comment on size.	▸ Most prefer Option A. ▸ Caution about Commerce Clause. ▸ 1% annual growth metric is too high.	▸ Don't come at sideways. Unclear rationales will lead to appeals. ▸ Size limits would put region on "import diet." ▸ Dated, low forecast.	▸ Option C preferred. ▸ Allow for modest growth of LNG and oil; not coal. ▸ Review size limits every few years.

4. Background conditions



This section of the report describes background conditions that inform the recommended zoning changes. Topics include access to energy, impacts on the economy, climate change impacts, and health and safety impacts of draft zoning code changes. Background information on changing energy markets in the Pacific Northwest and Portland's existing fossil fuel terminals is included in the Section 1. Legal and policy background information is presented in Section 2.

Access to energy

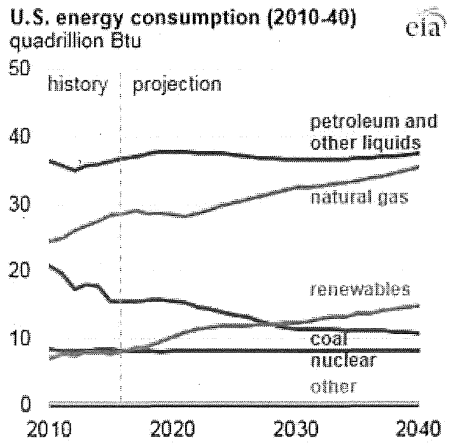
Energy consumption in Oregon

Oregon residents and businesses rely on Portland's fossil fuel distribution and storage facilities as a wholesale distribution hub to meet their energy consumption needs. Estimated state energy consumption by fossil fuels and other sources are shown in Figure 5. Residents and businesses in much of Southern Washington also rely on Portland terminals for access to fuels.

Figure 5. Oregon energy consumption estimates, 2014

eia Source: Energy Information Administration, State Energy Data System

Four refineries in the Puget Sound area supply nearly all of the petroleum fuels consumed in Oregon, delivered primarily through the Olympic Pipeline that terminates at the cluster of 10 petroleum terminals in Northwest Portland. From there, petroleum products are delivered to Oregon and Southern Washington markets via truck, pipeline and barge. NW Natural supplies natural gas to its Western Oregon market area and operates peak-consumption storage terminals in Northwest Portland



and Newport. Thus, fossil fuel terminals in Portland are a primary statewide distribution hub for transportation fuels and natural gas.

Energy consumption forecasts and the demand for additional storage capacity

Analysis to date is limited on the energy consumption forecasts and how the recommended code changes would impact the demand for additional fossil fuel storage capacity. Fossil fuel demand in this growing region may increase moderately, as indicated by trend-based forecasts, or may plateau and decline with implementation of climate resilience goals and strategies. National forecasts of energy consumption by the U.S. Energy Information Administration show varying growth trajectories by energy type, including a relatively flat outlook for petroleum fuels, decline for coal, and moderate growth for natural gas and renewables (see Figure 6).

Liquid bulk cargo in Portland Harbor is projected to expand at a range of 0.5% to 1.0% average annual growth (AAG) to 2040 (BST Associates, 2012), providing an estimate of potential market expansion needs for petroleum fuels, which could mean a need for an additional 10-20% increase in storage capacity. However, based on this forecast, ECONorthwest (2012) estimated that there was no additional land needed for new liquid bulk terminals in Portland. The 1.9% average annual growth forecast to 2034 (NW Natural 2014 Integrated Resource Plan) provides an estimate of market expansion needs for natural gas distribution facilities.

Figure 6. U.S. energy production and consumption projections to 2040

Source: US Energy Information Administration, Annual Energy Outlook 2016

Even if regional fossil fuel demand follows trend-based local forecasts, there is a wide margin between the size of recently proposed crude oil, coal, and LNG terminals in the Pacific Northwest and the scale of expected growth of existing Portland fuel terminals that generally serve the regional market area, as shown in Figure 7.

Contradictory stakeholder comments were received that local growth projections are too high, too low, and could change substantially with market innovations. To address this uncertainty, periodic monitoring for code effectiveness is recommended in Section 7 as a future implementation project,

including monitoring for changes in regional fuel demand over time. As recommended, fuel terminal capacity in Portland to meet regional demand would be limited to expansion of existing terminals by no more than 10 percent.

Terminology: bbls = barrels, Dth = decatherms, LNG = liquified natural gas, LPG = liquified propane gas, Bcf = billion cubic feet, AAG = average annual growth.

Sources: Oregon DEQ for petroleum tank data. NW Natural 2014 Integrated Resource Plan for existing capacity and forecast at 1.9% AAG. BST, Portland Harbor Forecast (2012) for petroleum terminals at 1.0% AAG.

Impacts of draft code changes on the economy

Jobs and wages at Portland's fuel terminals

In 2014, the 11 existing fuel terminals in Portland shown in Figure 3 provided approximately 280 jobs at their sites and supported an estimated 720 total jobs in the metropolitan area. The annual payroll at those terminals was $23 million, which supported total personal income of about $92 million in the metropolitan area.

BPS calculated these supported employment and income estimates from the induced and indirect impacts from metropolitan area purchases by these firms and their employees. For example, the jobs of the Longshore Union workers who unload fuels from tankers at these fuel terminals are not counted as direct jobs at the terminal sites. The multipliers used for these calculations were estimated from the average employment and income effects of marine terminals in Portland (Martin Associates, 2012). The job and wage estimates were calculated from Quarterly Census of Employment and Wages (QCEW) data.

Portland's industrial area jobs also have an important urban equity role in that they consist primarily of middle-wage jobs that do not require 4-year college degrees, which the overall economy has been losing since 2000. In contrast, jobs in commercial districts are concentrated primarily in low- and high-wage quartiles (fourths) of overall city employment. Middle-wage job growth supports the "income self-sufficiency" objectives of the Portland Plan and 2035 Comprehensive Plan (Policy 6.28) to expand access to self-sufficient wage levels.

Long-term job growth to 2035 is estimated at 1.6% average annual growth in the warehousing, transportation and utilities sector in Portland's 2016 Economic Opportunities Analysis and Metro's 2014 Urban Growth Report. Applying this growth rate to Portland's existing fuel terminals, approximately 110 net new permanent jobs are expected between 2014 and 2035, which is the equivalent of about four new terminals at their current average size. The total metropolitan area job impact of this fuel terminal expansion would be approximately 290 new jobs by 2035. If fuel terminal job growth occurred at a slower 1.0% average annual rate, matching the forecast growth of liquid bulk cargo volumes in Portland Harbor, approximately 65 net new terminal jobs would be generated by 2035, supporting a total 170 new jobs in the metro area. Pembina's proposed propane terminal in 2014 was estimated to create 30 to 40 new permanent jobs and 600-800 temporary construction jobs.

The recommended code changes would allow for limited expansion at existing terminals and new fuel distribution facilities smaller than 2 million gallons to accommodate potential increases in regional demand and resulting job growth.

Tax revenues of new terminals

State and local revenues from income and property taxes vary widely by facility. For example, property taxes on the depreciated improvements value of existing fuel terminals are much lower than new construction. If fuel terminals added 110 net new direct jobs by 2035 and the resulting state and local tax revenues is typical of businesses and developed facilities in Portland's Working Harbor (Martin Associates, 2016), the estimated new state and local tax revenues in fiscal year 2035 (in 2015 dollars) would be $1.6 million. In contrast, the proposed $500 million Pembina project was estimated to generate approximately $12 million in annual property tax revenue, reflecting the increased improvements value and property taxes of new construction.

The recommended code changes would allow for code-limited expansion at existing terminals and new fuel distribution facilities smaller than 5 million gallons and resulting state and local tax revenue. However, prohibiting large scale new terminals such as Pembina could result in similar levels of foregone property taxes. Development of the limited land supply along Portland Harbor for new auto or grain terminals would also result in substantial local and state tax revenues, offsetting foregone taxes on new fossil fuel terminals.

Growth opportunities in fossil fuel distribution

The most recent cargo forecast for Portland Harbor in 2012 projected 1.0% AAG in liquid bulk tonnage to 2040 as a high scenario and 0.5% AAG as a low scenario (BST Associates, 2012). Based on this forecast, ECONorthwest (2012) estimated no additional land need for new liquid bulk terminals. Since 2012, several new fuel terminals have been proposed in the Pacific Northwest, as shown in Figure 2.

Updating the liquid bulk forecast at this point would be challenging for several reasons. Most of the recent fuel terminal proposals have since been abandoned or appear to be dormant. Policy and permitting uncertainty complicate the development feasibility of new terminals and transportation infrastructure. Crude oil prices have fallen sharply in 2015 and 2016, reducing the current market potential for major investments. Expanding global industrial product markets after the Great Recession slowed substantially in 2015. And energy distribution markets could change abruptly with continuing product innovations and location shifts in global production.

In the long term, Portland has competitive advantages for accommodating energy terminal development as a Pacific Rim gateway location to growing Asian markets, the Columbia River's low-gradient railroad access for heavy cargo through the Cascades, and Oregon's freight infrastructure hub. On the other hand, Portland's industrial land supply for continuing growth is limited, and expanding cargo markets for autos, grain and dry bulks are competing for current growth capacity.

Other economic impacts

Energy infrastructure and terminal investments appear to have low but potentially catastrophic risks of major accidents, as described below. Examples include seismic resilience of petroleum terminals in the event of a Cascadia Subduction Zone earthquake, oil train derailments, explosions at LNG (liquefied natural gas) and LPG (liquefied petroleum gas, such as propane) facilities, and others.

Clean Energy is a target industry in the City of Portland. An emerging cluster of Portland area business activity in solar and wind energy manufacturing, green building development, and other fields of sustainable urban innovation present long-term business growth opportunities. Substantial local investment in fossil fuel infrastructure and large new terminals could hinder local growth momentum in Clean Energy industries.

Climate change impacts of draft code changes

Climate impact of fossil fuels

Fossil fuels are major contributors to climate change and pollution, as described in Portland's 2015 Climate Action Plan. Greenhouse gas emissions from the burning of fossil fuels and land use changes, including deforestation, are primary causes of climate change. The Intergovernmental Panel on Climate Change's most recent report documents the overwhelming evidence that human activities have been

the major driver of recent warming of the Earth's surface, and that climate change and its consequences will continue into the future (IPCC, 2013).

The magnitude of future climate impacts depends largely on the trajectory of future global greenhouse gas emissions. Greenhouse gas emissions from human activities have continued to rise in recent decades, reaching the highest rates in human history between 2000 and 2010 (IPCC, 2014). About half of all carbon dioxide emissions, the most prevalent greenhouse gas, between 1750 and 2010 occurred in the last 40 years. The energy, industry and transportation sectors have dominated these emissions increases. On the current trajectory, global transportation emissions will double by 2050.

Transition to "renewable" and "clean" fuels

The U.S. Environmental Protection Agency (USEPA) implements the federal Renewable Fuel Standard (RFS) that requires transportation fuel sold in the U.S. to contain a minimum volume of renewable fuels. The RFS originated with the Energy Policy Act of 2005 and was expanded and extended by the Energy Independence and Security Act of 2007 (EISA). Similarly, the Oregon Department of Environmental Quality (ODEQ)implements the Oregon Clean Fuel Program. ODEQ describes "clean fuel" as a fuel with a lower carbon intensity than that of the fuel it replaces.

Examples of "clean fuels" in Oregon's program include most types of ethanol, biodiesel, natural gas, biogas, electricity, propane and hydrogen. The Oregon Clean Fuel Standard sets 2015 as a baseline that represents 10 percent ethanol blended with gasoline and 5 percent biodiesel blended with diesel. The rule also requires a 10 percent reduction in average carbon intensity from 2015 levels by 2025.

Terminal representatives and business stakeholders urged that recommended zoning code changes not create a disincentive or barrier to compliance with these federal and state rules, which may require additional tank capacity to implement. Environmental and public health organization representatives pointed out that City Resolution 37168 addresses fossil fuels generally, including lower-carbon fossil fuels like natural gas and propane. The recommended code changes would allow for limited expansion at existing terminals and are not expected to hinder compliance with the renewable and clean fuel standards, as described in Section 5.

Velocity of transition to non-fossil fuel energy

Portland's Climate Action Plan sets a goal for an 80% reduction in greenhouse gas emissions by 2050. Oregon's climate action goals similarly call for 75% reduction by 2050. While fossil fuels like natural gas and propane have the potential to replace higher-carbon fuels, they don't begin to approach the 80% reduction that the City is striving for or the State's 75% goal. ODEQ estimates that the greenhouse gas emissions reduction from switching from gasoline to compressed natural gas, for example, is 18%; for propane, it is 15%. The lower-carbon fossil fuels do have appeal as a bridge to widespread use of renewable energy, but investments in major infrastructure typically take decades to recoup, and the transition to renewables needs to go much faster than that to stabilize global emissions.

During recent hearings and analysis on Resolution 37168 and the Pembina terminal proposal, the question of whether to differentiate between fossil fuels with different carbon content was widely discussed. In the lead up to the resolution, an option was proposed that would oppose new coal and oil

infrastructure but allow for other fossil fuels that could show a likely net decrease in carbon emissions. City Council decided not to apply this option in the resolution.

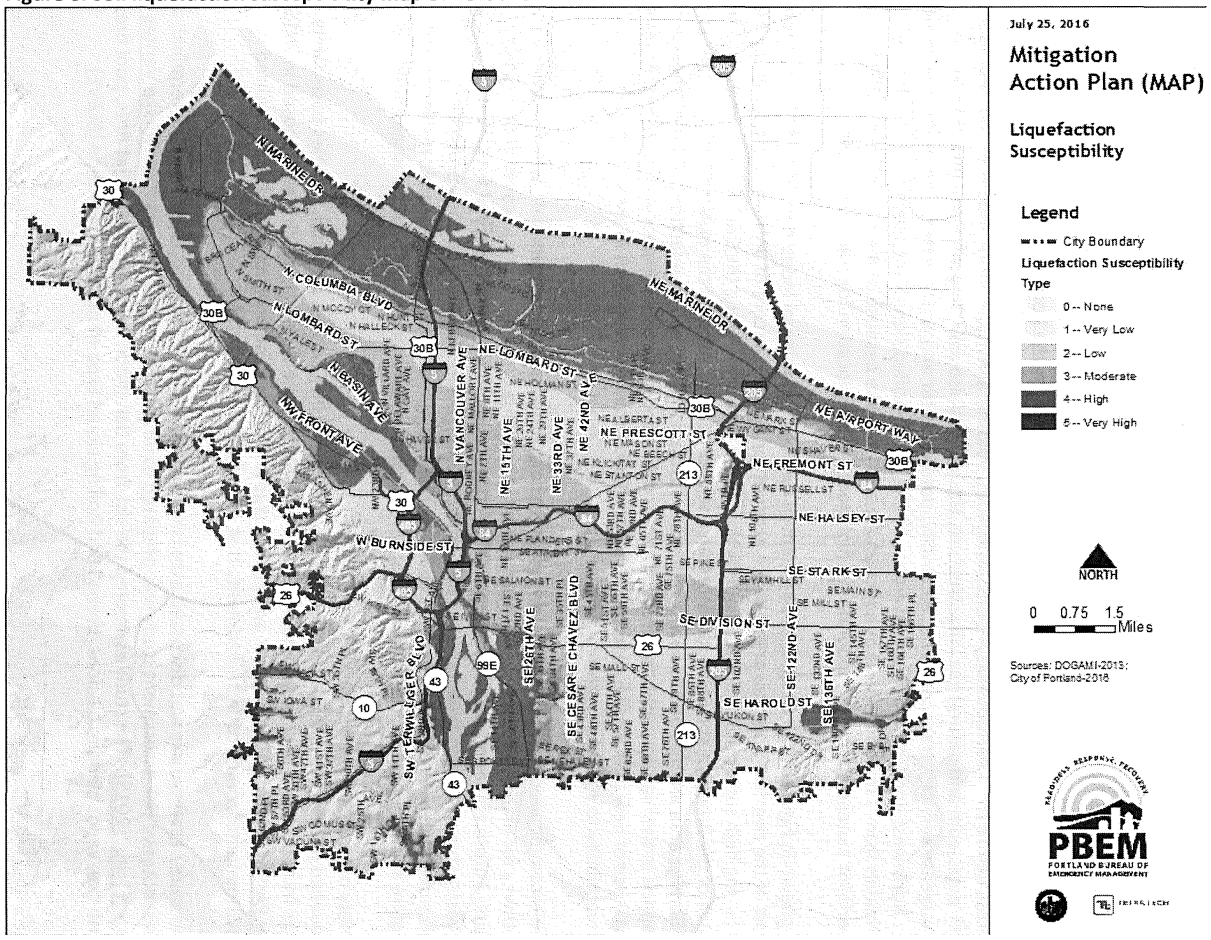
Health, safety and environmental impacts of draft code changes

Seismic resilience and liquefaction soils

The 2035 Comprehensive Plan sets policy direction (4.75 and 4.76) to encourage disaster-resilient development and specifically to reduce natural hazard risks to critical energy and transportation infrastructure in Portland Harbor.

The 2016 Critical Energy Infrastructure Hub Study underway by the Portland Bureau of Emergency Management includes a literature review and modeled risks of structural damage to critical infrastructure from earthquakes, floods, landslides, volcanic activity, wildfire and other sources. Along with petroleum and natural gas infrastructure, the study is also assessing infrastructure risks to emergency services, transportation, electricity, potable water and waste water. The study area includes the Northwest and Linnton industrial areas. PBEM has identified significant seismic risks at the fuel terminals from a major Cascadia Subduction Zone earthquake because of their location in a filled riverfront plateau area with moderate- to high-susceptibility location for soil liquefaction.

As shown in Figure 7, the Oregon Department of Geology and Mineral Industries (DOGAMI) has mapped most of the riverfront plateau areas, which account for over 90 percent of Portland's industrial zoning, as having high susceptibility for soil liquefaction, along with areas along the Central City riverfront and much of the Brooklyn and Sellwood-Moreland neighborhoods. Most of the existing fuel terminals in the Willbridge area are mapped as having moderate susceptibility for soil liquefaction, and the others are mapped in the high susceptibility areas. The recommended code amendments will improve the seismic resilience of new bulk fossil fuel terminals by precluding their development in areas with high susceptibility to soil liquefaction.



The recommended code changes allow for limited expansion at existing terminals, which provides a pathway for market-driven seismic improvements through a financial return to cover improvement costs. Future amendments to building and fire codes to improve seismic safety of fossil fuel infrastructure may also be adopted to implement Resolution 37168. A future code project is recommended in Section 7 to develop building code amendments to improve seismic resilience and require seismic upgrades comparable to proposed requirements on unreinforced masonry buildings.

Safety of liquefied gas terminals

Liquefied natural gas (LNG) and liquefied petroleum gas (LPG), such as propane, facilities pose safety risks from potential explosions and fire. The Pembina propane terminal, which was proposed in 2015 at the Port of Portland Terminal 6, is an apt case study. The Pembina terminal would have required environmental zoning code amendments that did not move forward.

The issue of safety risks was discussed extensively during review of the proposed Pembina terminal, and a quantitative risk assessment study was prepared to inform that review process (Det Norske Veritas (U.S.A.), Inc., 2015). The study estimated the risk from flammable releases, such as jet fires, pool fire, flash fire, vapor cloud explosions, fireball and Boiling Liquid Expanding Vapor Explosion (BLEVE).

Figure 8. Soil liquefaction susceptibility map of Portland

The risk was presented as individual risk in the form of location-specific risk contours extending outward from the proposed facilities, and as societal risk in the form of potential loss of life and cumulative frequency of various accidents. The highest offsite risk level was found to be 1 fatality in 1,000 years in areas directly north and south of facility. The nearest residential zones are located beyond the risk level contour of 1 fatality in 100 million years. The cumulative societal risk was estimated at 1 statistical fatality every 38 years. The study also included various facility design and siting recommendations to mitigate identified risks.

Another risk assessment (Northwest Citizen Science Initiative, 2015) on the Pembina project was presented by environmental groups and neighbors including the Hayden Island Neighborhood Association. The analysis identifies additional sources of risk from BLEVE cascades, terrorist events and magnitude 9 earthquakes. The authors recommend not locating a propane terminal within 10 miles of the Portland/Vancouver urban area.

Public safety risks from a new LNG or LPG facility are estimated to be very low relative to other urban hazards, although possible impacts could be catastrophic. The recommended code amendments are expected to reduce public safety risks by prohibiting development of large new LNG or LPG facilities exceeding 2 million gallons of storage capacity.

Oil train accidents

On June 3, 2016 an oil train traveling through the Columbia River Gorge partially derailed in Mosier en route to Tacoma. The 16-car derailment resulted in a 1,000-barrel spill and fires that lasted nearly a day. Small amounts of oil reportedly reached the river, and nearby drinking water and wastewater facilities in Mosier were affected.

An Associated Press analysis of accident records found that 26 oil-train derailments or fires have occurred nationally in the last decade. The national geography of increasing oil extraction in the inland Great Plains states and refineries concentrated on the coasts is contributing to this trend. Risk of how often such derailments are likely to occur in the Columbia Gorge is disputed, with one estimate as high as one every 30 months.

Preliminary reporting on the cause of the Mosier derailment pointed to failed bolts in the track that are difficult to detect. Union Pacific reported that improvements are underway to replace bolts on 530 miles of curved track nationwide. Railroad safety is regulated at the federal level and monitored by the Federal Railroad Administration. A recent Government Accounting Office report has identified challenges and delays in implementing some federal rail safety regulations.

The recommended code amendments could incrementally reduce rail accident risks by restricting development and expansion of fossil fuel terminals in Portland as a West Coast rail hub location. However, restricting the location of new petroleum terminals in the city of Portland is not expected to substantially affect the volume of petroleum cargo transported by rail to Puget Sound refineries.

The Portland/Vancouver area is a rail hub location, where West Coast rail lines running north-south intersect the low gradient east-west rail corridor along both sides of the Columbia River. Roughly half of the east-west rail cargo destined for the Seattle-Tacoma area, in addition to Oregon-bound rail cargo, moves through the Portland metropolitan area. Derailment risk within Portland is reduced by the numerous siding destinations and congestion of the "Portland Triangle" area where UP and BNSF lines

come together. However, derailment risks to natural resources, especially along rivers, and to rural communities appear to be significant.

5. Code concepts and analysis

This section of the report describes the recommended zoning change concepts by topic area, including the related policy directions, implementation issues, and rationale for the recommended zoning changes.

1. **Types of distribution and storage facilities to be regulated**

Policy direction:

- City Council Resolution 37168 (adopted November 2015) calls for opposing expansion of infrastructure for transportation and storage of fossil fuels, subject to various exceptions, including safety improvements, service to end users, and infrastructure that accelerates transition to non-fossil fuel energy.
- 2035 Comprehensive Plan Policy 6.48 Fossil Fuel Infrastructure (adopted June 2016, not effective until 2018) also calls for limiting fossil fuel distribution and storage facilities to those necessary to serve the regional market.

Preliminary code concepts:

- Limit development of new Bulk Fossil Fuel Terminals as a regulated land use.
- Bulk Fossil Fuel Terminals are engaged in freight movement or wholesaling of fossil fuels at facilities that are characterized by having (1) marine, pipeline or railroad transport access and (2) either transloading facilities for transferring a shipment between transport modes (such as from rail to ship) or bulk storage facilities exceeding 2 million gallons of fossil fuels. Examples include petroleum terminals, liquid natural gas terminals, and coal terminals. Functionally, these terminals are typically regional gateway facilities, where fossil fuels enter and exit the region, but the use classification is intended to be clearly identifiable and not rely on a definition of region.
- Exceptions that are not Bulk Fossil Fuel Terminals:
    - Retail sales of fossil fuels, such as gasoline or propane filling stations;
    - Distributors, wholesalers, and industrial service uses that receive and deliver fossil fuels exclusively by truck;
    - End-user facilities that store fossil fuels for primary use at or near the site, such as manufacturing, agriculture, and airports;
    - Uses that recover or reprocess used petroleum products;
    - Waste-related uses that transfer or store solid or liquid wastes, such as landfills.

Implementation issues:

- Definition of region – Portland is a regional distribution hub for energy and other products, and this zoning change is not intended to restrict energy access to the growing region. However, the regional market area of Bulk Fossil Fuel Terminals varies by product and is difficult to define. Portland's 10 petroleum terminals generally serve Oregon and Southern Washington. This market area substantially exceeds the Portland metropolitan area, which is often colloquially referred to as the region. Some terminal representatives pointed out that the federal

government's 5-state West Coast PADD 5 region is generally their regional market area. Bureau of Development Services (BDS) staff commented that zoning does not regulate the target market (destination) of wholesale products, and the zoning code does not define region. Business organization representatives commented that the energy markets and related market areas are likely to change over time. Therefore, the recommended land use incorporates the concept of a regional market into the size limits, and a zoning definition of region is not recommended here.

- Storage capacity size threshold - The Bulk Fossil Fuel Terminal use category is intended to apply to regional gateway facilities where fossil fuels are brought into the region. The 2-million-gallon capacity threshold is small compared to the existing petroleum terminals, which range from 11.6 million to 67 million gallons, with most facilities having more than 25 million gallons of storage capacity. In response to testimony, the PSC reduced the terminal size threshold from 5 million to 2 million gallons of storage, in order to include facilities that are large enough to unload unit trains. This change would apply to both new and existing terminal and would extend the terminal restrictions beyond the 11 largest fuel terminals in Willbridge and Linnton areas of NW Portland to also include smaller existing fuel distributors. Staff identified 24 additional petroleum, pipeline, and gaseous fuel distributors that may be affected.

- Site aggregation – A potential loophole to the terminal size threshold was identified in PSC testimony through site aggregation of smaller facilities. The reference to partnerships and corporations in the existing definition of "ownership" is an inclusive term, which includes subsidiaries of a larger corporation and would prevent a larger parent corporation from using different subsidiaries on contiguous lots. To further prevent potential circumvention of the terminal size threshold through site aggregation, the PSC recommended adding criteria in the use description to identify aggregated sites that each have storage smaller than 2 million gallons but effectively function as a larger terminal.

- End users – Resolution 37168 lists a specific exception to not restrict service directly to end users. At a small scale, services to end users include retail gasoline filling stations, natural gas access lines in street right-of-way to residential and business customers, and heating oil tanks at home sites. Larger scale end users with fossil fuel storage and access infrastructure also include manufacturers, jet fuel facilities at the PDX Airport, vessel fuel facilities on Portland Harbor, and others where fossil fuels are used as an input. Again, the limits on new facilities are sized to apply only to larger distribution facilities.

- Inclusion of regulated utilities - NW Natural, the natural gas utility that serves western Oregon and parts of southwest Washington, has recommended that its facilities should not be subject to new zoning restrictions because its distribution facilities provide service to end users, which are exempted in Resolution 37168. NW Natural's service to end users in Oregon is regulated by the Oregon Public Utility Commission. The company periodically prepares an Integrated Resources Plan (IRP) to document its forecast for natural gas use by its customers. The IRP also details how NW Natural proposes to meet changes in natural gas demand and is statutorily obligated to do so in ways that result in the "least cost" to customers, while managing risk and complying with all applicable environmental and workplace regulations. The PUC conducts a public review

process of the IRP and ultimately either "acknowledges" the IRP or identifies shortcomings the company must address in a revised IRP. The PSC considered and did not act on NW Natural's request to exempt regulated utilities. One commissioner expressed concern that a regulated utility could potentially sell fossil fuel from local storage facilities to customers who are not regional end users.

- Interpretation of use category – Terminal and business representatives commented that ambiguity in the use description could result in conflicting expectations, pressured interpretations, appeals, and inconsistent code implementation. While underlying policy accommodates regional access and exceptions that may be difficult to clearly define, the land use designation is recommended to be defined by clear and objective size thresholds and marine/railroad/pipeline access.

2. **Definition of fossil fuels**

Policy direction: City Council Resolution 37168 applies to fossil fuel infrastructure and storage generally, and does not distinguish among types or carbon intensity of fossil fuels.

Preliminary code concept:

- Definition of fossil fuels: petroleum products (such as crude oil and gasoline), coal, and gaseous fuels (such as natural gas and propane) that are made from decayed plants and animals that lived millions of years ago and are used primarily as a source of energy.
- Exclusion of non-fuel products – Petrochemicals that are used primarily for non-fuel products are excluded, such as plastics, lubricants, fertilizer, roofing and paints.
- Methanol is included as a fossil fuel. Development of methanol storage and transportation facilities would be prohibited similarly to LNG and LPG terminals.
- Denatured ethanol and similar fuel additives and biodiesel/renewable diesel with less than 5% fossil fuel content are not fossil fuels.
- Biogas from wastewater treatment plants, anaerobic digesters, landfills and other sources is not a fossil fuel.

Implementation issues:

- Definition of fossil fuels – Definitions of fossil fuels vary by source. Here are some examples.
  - Oregon Department of Environmental Quality (ODEQ) – Fossil fuels: fuels such as oil, natural gas, and coal that are made from decayed plants and animals that lived millions of years ago. These fuels are made of hydrogen and carbon (hydrocarbons).
  - U.S. Environmental Protection Agency (USEPA), 40 C.F.R. § 60.41 - Fossil fuel means natural gas, petroleum, coal, and any form of solid, liquid, or gaseous fuel derived from such materials for the purpose of creating useful heat.
  - Oregon Department of Energy Administrative Rule, OAR 345-001-0010 - "Fossil fuel" means natural gas, petroleum, coal and any form of solid, liquid or gaseous fuel derived from such materials that serves as useful energy.

- Renewable and clean fuel standards – As described in Section 4, USEPA implements the federal Renewable Fuel Standard (RFS) that requires transportation fuel sold in the U.S. to contain a

minimum volume of renewable fuels. Similarly, ODEQ implements the Oregon Clean Fuel Program. ODEQ identifies examples of "clean fuels" in Oregon as most types of ethanol, biodiesel, natural gas, biogas, electricity, propane and hydrogen. Terminal representatives and business stakeholders urged that recommended zoning code changes not create a disincentive or barrier to compliance with these federal and state rules, which may require additional tank capacity to implement. Environmental and public health organization representatives pointed out that City Resolution 37168 addresses fossil fuels generally, including clean fuels. The recommended allowance for code-limited expansion of existing terminals will allow enough supply to comply with the renewable and clean fuel standards.

- *Methanol – Large methanol plants have recently been proposed in Tacoma, Kalama, and St. Helens. Methanol plants tend to have structural similarities to LNG and LPG terminals, including large-scale and gas pipeline access, and they can have similar safety and climate impacts. Stakeholder focus groups were asked whether any* special inclusions, such as methanol, should be considered. Most people commenting noted that methanol is primarily used in the production of plastics and other non-fuel uses. Views differed among environmental organizations commenting. Some noted that excluding it undermines the policy. The recommended code limits development of large methanol plants similarly to LNG or LPG terminals.

- *Denatured ethanol* – A terminal operator pointed out that "pure" ethanol made from corn or other non-fossil source is required by the Alcohol and Tobacco Tax and Trade Bureau to be denatured in order to be transported to the site. Denatured ethanol typically contains up to 5% methanol, so that it is toxic and undrinkable. Storage of denatured ethanol is recommended to be exempted. In other words, denatured ethanol tanks would not be counted as part of the maximum storage capacity of fossil fuel terminals.

- Biogas products from landfills – Bureau of Environmental Services (BES) staff commented that biogas from landfills and other sources are not fossil fuels and should not be restricted by the recommended zoning changes. The recommended description of fossil fuel terminals specifically excludes waste-related uses, such as landfills, which are regulated as a separate land use in the zoning code. Also, the recommended definition of fossil fuels, described as being made from decayed plants and animals that lived millions of years ago, would not include biogas from a landfill.

3. **Prohibition of new bulk fossil fuel terminals**

   Policy direction:
   - City Council Resolution 37168 (adopted November 2015) calls for opposing expansion of infrastructure for transportation and storage of fossil fuels, subject to various exceptions, including safety improvements, service to end users, and infrastructure that accelerates transition to non-fossil fuel energy.

- 2035 Comprehensive Plan Policy 6.48 Fossil Fuel Infrastructure (adopted June 2016, not effective until 2018) also calls for limiting fossil fuel distribution and storage facilities to those necessary to serve the regional market.

Preliminary code concept:

- Prohibit new Bulk Fossil Fuel Terminals in all base zones.

Implementation issues:

- Policy implementation – City Resolution 37168 reflected a major change in policy direction on fossil fuel distribution and storage facilities. Prohibition of new Bulk Fossil Fuel Terminals is recommended as an unambiguous, assertive approach to implement this policy change, responding to increasingly evident safety risks of fossil fuel infrastructure, aggressive climate change goals, and changing energy markets in the Pacific Northwest.

- Community expectations – About 600 people sent email testimony in response to the Proposed Draft asking for a "full ban" on new and expanded fossil fuel terminals. Climate resilience advocates are widely represented in the Portland community and the Pacific Northwest. Public involvement in Resolution 37168 and this project reveal broad community expectations for a bold approach to restrict fossil fuel distribution facilities in Portland.

- Providing regional market access to fuels – Analysis to date is limited on the potential impacts of the prohibition on constraining regional fuel supply. Fossil fuel demand in this growing region may increase moderately, as indicated by trend-based forecasts, or may plateau and decline with implementation of climate resilience goals and strategies. The fossil fuels consumed in Oregon are generally not extracted or refined in the state. As a result, fossil fuel terminals provide multimodal transportation efficiency and price advantages for distributing fuels to the growing population of the regional market area.

- Option to set size limits on new fossil fuel terminals – The Discussion Draft proposed storage capacity size standards to limit new fossil fuel terminal development. Figure 7 in Section 4 indicates a wide margin between the size of recently proposed crude oil, coal and LNG terminals in the Pacific Northwest and the scale of expected growth by existing Portland fuel terminals that serve the regional market area. Recommended terminal size limitations within that margin would allow for expansion at existing terminals and moderately sized new terminal development to meet potential market area consumption needs. Instead, BPS's Proposed Draft and the PSC's Recommended Draft code changes would prohibit new Bulk Fossil Fuel Terminals, a more restrictive approach to more assertively implement the new policy directions and respond to extensive community comments on the recommended code changes. As recommended, existing terminals can expand storage facilities up to 10 percent through seismic upgrades that replace existing tanks, providing the opportunity to meet modest growth in potential market area consumption needs.

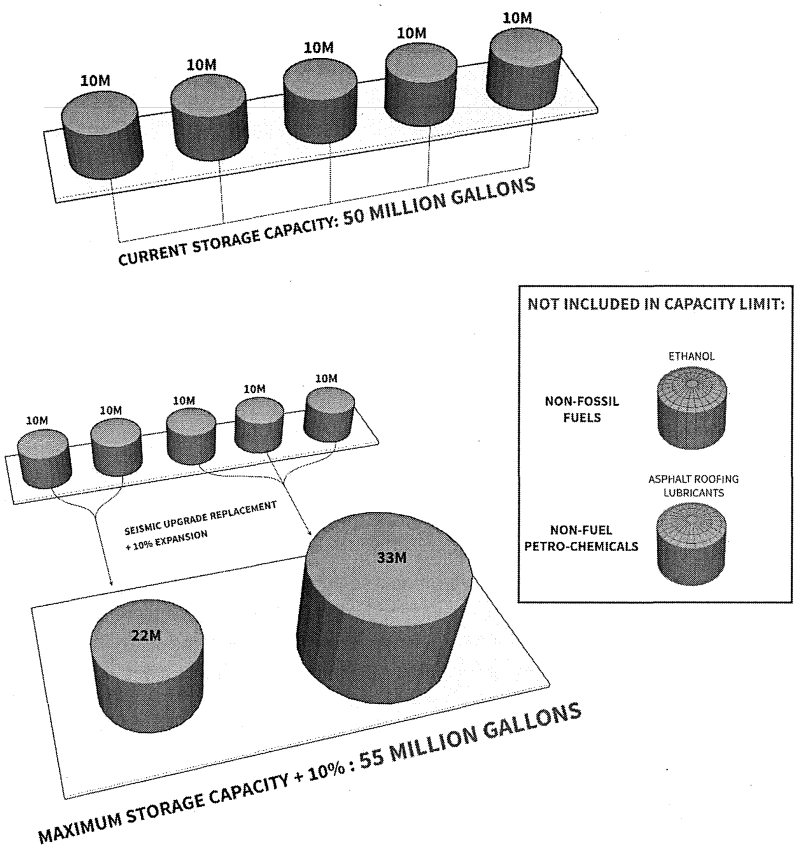
- Balanced, integrated policy approach – The recommended restrictions on fossil fuel distribution facilities entail tradeoffs among public goals for environmental protection, public health and safety, meeting energy needs, and economic prosperity, as described in Section 4. The Comprehensive Plan calls for a balanced, integrated approach in land use regulations to meet these public objectives, as described in Section 2. The recommended code changes provide for significant environmental and safety benefits in restricting development and expansion of fossil fuel terminals and provide for limited expansion of fossil fuel terminals to adequately meet regional energy needs and integrate economic prosperity and equity considerations.

4. "Limited use" classification of existing facilities

Policy direction:

- City Council Resolution 37168 includes various exemptions to not restrict safety or efficiency improvements, service to end users, emergency backup capacity, infrastructure for recovery or re-processing of used petroleum products, or infrastructure that will accelerate the transition to non-fossil fuel energy sources.
- 2035 Comprehensive Plan Policy 6.48 Fossil Fuel Infrastructure (adopted June 2016, not effective until 2018) also calls for limiting fossil fuel distribution and storage facilities to those necessary to serve the regional market.
- 2035 Comprehensive Plan Policies 4.75 and 4.76 call for encouraging disaster-resilient development and reducing natural hazard risks to critical energy and transportation infrastructure in Portland Harbor.

Preliminary code concept:



- Classify existing Bulk Fossil Fuel Terminals in industrial and general employment zones as "limited uses" that can continue to operate. Expansion of fossil fuel storage at these existing terminals would be limited to improvements that (a) include "seismic upgrades" which replace existing tanks, (b) add no more than 10 percent of the capacity of replaced tanks, and (c) result in no more than 10 percent cumulative expansion of the total terminal capacity on the effective date of these code changes. See Figure 9 below.

Implementation issues:

- Flexibility for limited expansion – As recommended, expansion of fossil fuel storage at existing terminals would be limited to "seismic upgrades" that replace existing tanks and would not exceed the current terminal capacity by more than 10 percent. Given these limitations, the draft code changes may be more restrictive than the exceptions in the resolution that call for not restricting improvements at existing fuel terminals that improve safety, provide wholesale fuel supply to local or regional end users, add backup capacity, or add tanks for clean/renewable fuels would require approval through a nonconforming situation review.

- Option to restrict expansion at existing terminals as a legal, non-conforming use – In the Proposed Draft, Bulk Fossil Fuel Terminals were classified as a prohibited use, under which existing terminals would become legal, non-conforming uses. The Proposed Draft assumed some opportunity to approve expansion of existing terminal storage capacity that would allow the existing terminals to add new fuel additive tanks to meet clean and renewable fuel standards, seismic upgrades of existing tanks, and emergency backup capacity, consistent with

Figure 9. Recommended calculation of storage expansion limitations

Resolution 37168. However, comments from BDS clarified that such expansion would be difficult to approve through a non-conforming situation review. BDS recommends considering an alternative approach to set limitations on expansion. In response, BPS and the PSC recommended classifying Bulk Fossil Fuel Terminals as a limited use with clear and objective standards that limit expansion of existing terminals.

- Option to restrict expansion at existing terminals as a conditional use – A large number of comments support stronger restrictions on expansions at existing terminals through adding binding limits as well as criteria for safety and climate impacts. BDS staff have commented that they do not have staff expertise to implement discretionary land use review criteria addressing greenhouse gas emissions or safety impacts of hazardous material storage and transportation. If new conditional use criteria are added to limit or require no net increase of greenhouse gas emissions or safety impacts of hazardous material storage and transportation facilities, applicants would be required to hire specialized consultants to show compliance of the

particular criterion, which would affect the complexity, predictability, and cost of land use reviews in new ways. This change would be inconsistent with 2035 Comprehensive Plan Policy 6.16 Regulatory Climate, which calls for improving development review processes and regulations to encourage predictability and support local and equitable employment growth and encourage business retention. Given the level of community scrutiny about fossil fuel terminal expansion, this discretionary public review process could add significantly to the cost and uncertainty of investments at fossil fuel terminals.

- Option to not restrict expansion at existing terminals - The Discussion Draft recommended code concepts (storage capacity size standards to limits new fossil fuel terminal development) that would not restrict development on existing terminals. This option was intended to be consistent with the exceptions in the resolution (as described in the previous point) and to accommodate potential growth in regional fuel demand. Instead, the Proposed Draft code changes would apply a legal, non-conforming use status on existing Bulk Fossil Fuel Terminals, a more restrictive approach to more assertively implement the new policy directions and respond to extensive community comments on the recommended code changes.

- Divergent stakeholder views – Extensive comments on the Proposed Draft and Discussion Draft recommended tight limits on expansion of existing fuel terminals. In contrast, stakeholder focus group participants generally urged that existing fuel terminals should not be changed to a non-conforming use for reasons ranging from providing a critical product to not discouraging desired seismic and safety improvements on existing facilities. Stakeholder group comments from environmental and public health organizations generally supported restricting expansion of existing terminals, while some participants cautioned about political and legal tradeoffs of making the existing fuel terminals nonconforming.

6. Zoning code changes

This section of the report specifies the draft code language, along with code commentary pages that clarify expected implementation. The section is formatted to facilitate readability, showing recommended code changes on the right-hand pages and related code commentary on the facing left-hand pages.

33.140.050 Neighborhood Contact

As an alternative to a land use review, a public notice and meeting requirement applies to development of fuel storage structure, such as a new tank, at a Bulk Fossil Fuel Terminal, similar to the requirement for multi-dwelling residential development. This notice and meeting would create public awareness about the project and serve to discuss a proposal in an informal basis.

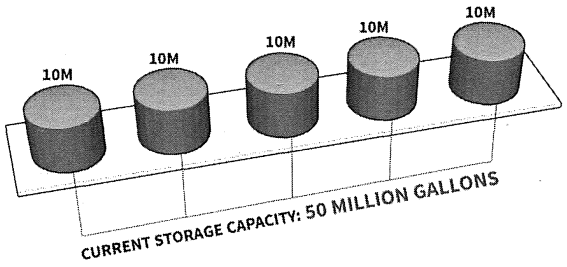
Commentary

33.140.050 Neighborhood Contact

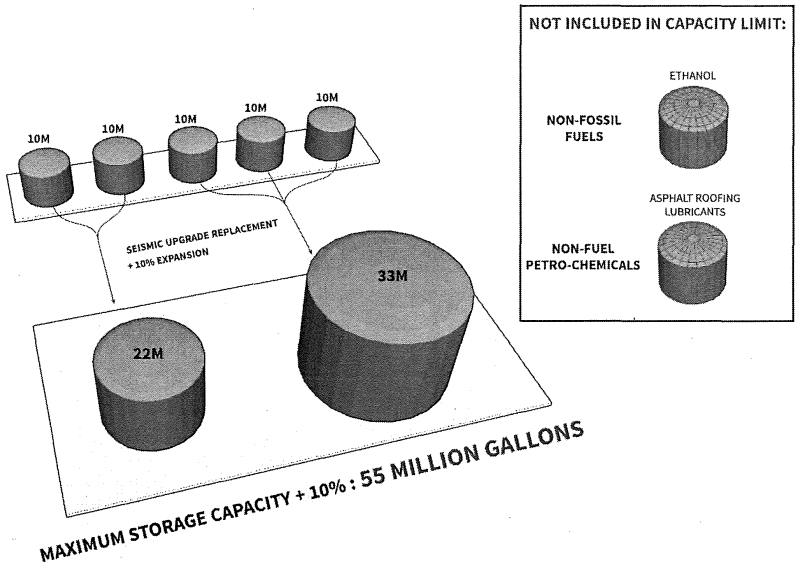
A. **Purpose.** Neighborhood contact is required when a new storage structure for any type of fuel will be built on a Bulk Fossil Fuel Terminal because of the impacts that fuel projects can have on the surrounding community. The neighborhood contact requirement provides an opportunity for community input on the design of the project by providing a setting for the applicant and neighborhood residents to discuss a proposal in an informal manner. Sharing information and concerns early offers the opportunity to identify ways to improve a proposal and to resolve conflicts.

B. **Neighborhood contact requirement.** Proposals meeting the following conditions are subject to the neighborhood contact requirement as specified in Section 33.700.025, Neighborhood Contact. All of the steps in 33.700.025 must be completed before a building permit is requested.

1. The proposed development has not been subject to a land use review; and



2. The proposed development includes at least one new structure for the storage of any type of fuel.



Commentary

33.140.100 Primary Uses

The amendments to this section reflect changes to prohibit new Bulk Fossil Fuel Terminals in all base zones and reclassify existing terminals in industrial and general employment zones as limited uses. Regulation of Bulk Fossil Fuel Terminals implements policy direction in City of Portland Resolution 37168 (adopted November 2015) and 2035 Comprehensive Plan Policy 6.48 (adopted June 2016, expected to take effect in 2018), both of which address fossil fuel distribution and storage facilities.

The limited use designation would accommodate seismic upgrades of existing tanks and would allow for limited expansion consistent with Resolution 37168. Expansion of "fossil fuel" storage at these existing terminals would be limited to improvements that (a) include "seismic upgrades" which replace existing tanks, (b) add no more than 10 percent of the capacity of replaced tanks, and (c) result in no more than 10 percent cumulative expansion of the total terminal capacity on the effective date of these code changes. See the graphics below on calculation of storage expansion limitations.

33.140.100 Primary Uses

A. No change

B. Limited uses. Uses allowed that are subject to limitations are listed in Table 140-1 with an "L". These uses are allowed if they comply with the limitations listed below and the development standards and other regulations of this Title. In addition, a use or development listed in the 200s series of chapters is also subject to the regulations of those chapters. The paragraphs listed below contain the limitations and correspond with the footnote numbers from Table 140-1.

1. – 16. No change

17. Bulk Fossil Fuel Terminals. This regulation applies to all parts of Table 140-1 that have a [17].

a. Existing Bulk Fossil Fuel Terminals. The following use limitations apply to existing Bulk Fossil Fuel Terminals:

(1) Bulk Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site is limited to the fossil fuel storage capacity that existed on [insert effective date] plus 10 percent. Total fossil fuel storage capacity on the site in excess of the capacity that existed on [insert effective date] plus 10 percent is prohibited; and

(2) New fossil fuel storage structures are prohibited unless a new fossil fuel storage structure is replacing an existing fossil fuel storage structure that does not meet current building code standards for seismic safety, and in that case, the capacity of the new fossil fuel storage structure is prohibited from being greater than the storage capacity of the existing structure that is being replaced plus 10 percent.

b. New Bulk Fossil Fuel Terminals are prohibited.

Commentary

33.910.030 Definitions

The definition of fossil fuels was added to clarify the land use category Bulk Fossil Fuel Terminals.

Petrochemicals that are used primarily for non-fuel products are excluded, such as plastics, lubricants, fertilizer, roofing, and paints. However, methanol is an exception that is included as a fossil fuel, because large methanol storage and distribution facilities tend to have structural similarities to liquid natural gas (LNG) and liquid petroleum gas (LPG) terminals, including large-scale storage and gas pipeline access, and because they can have similar safety and climate impacts.

Fuels containing 5% or less fossil-fuel volume are not considered fossil fuels under this definition. For example, "pure" ethanol made from corn or other non-fossil source is required by the Alcohol and Tobacco Tax and Trade Bureau to be denatured in order to be transported to the site. Denatured ethanol typically contains up to 5% methanol, so that it is toxic and undrinkable.

Some fossil fuels under this definition are also classified as "renewable fuels" in the federal Renewable Fuel Standard and "clean fuels" in Oregon's Clean Fuel Standard, such as liquid natural gas and liquid propane gas. These federal and state standards require transportation fuel sold within their jurisdiction to contain a minimum volume of renewable or clean fuels.

33.910.030 Definitions

The definition of words with specific meaning in the zoning code are as follows:

Fossil Fuel. Fossil fuels are petroleum products (such as crude oil and gasoline), coal, methanol, and gaseous fuels (such as natural gas and propane) that are made from decayed plants and animals that lived millions of years ago and are used as a source of energy. Denatured ethanol and similar fuel additives, and biodiesel/renewable diesel with less than 5 percent fossil fuel content are not fossil fuels.

Commentary

33.920.300 Bulk Fossil Fuel Terminal

Bulk Fossil Fuel Terminals are added as a new land use category to regulate their development in the Zoning Code. Regulation of Bulk Fossil Fuel Terminals implements policy direction in City of Portland Resolution 37168 (adopted November 2015) and 2035 Comprehensive Plan Policy 6.48 (adopted June 2016, expected to take effect in 2018), both of which address fossil fuel distribution and storage facilities.

Bulk Fossil Fuel Terminals are characterized by having (1) marine, pipeline or railroad transport access and (2) either trans-loading facilities for transferring a shipment between transport modes (such as from rail to ship) or bulk storage facilities exceeding 2 million gallons of fossil fuels. The 2-million-gallon threshold is sized to include facilities that are large enough to unload unit trains. Functionally, these terminals tend to be regional gateway facilities, where fossil fuels enter and exit the region. Additionally, Policy 6.48 calls for limiting fossil fuel distribution and storage facilities to those necessary to serve the regional market. However, the use classification is intended to be clearly identifiable by physical characteristics and not rely on a definition of region.

The regional market area of Bulk Fossil Fuel Ter+minals varies by product and is difficult to define. Portland's 10 petroleum terminals generally serve Oregon and Southern Washington. This market area substantially exceeds the Portland metropolitan area, which is often colloquially referred to as the region. Some terminal representatives pointed out that the federal government's 5-state West Coast PADD 5 region is generally their regional market area.

The use description is clarified with criteria that are intended to prevent the aggregation of new facilities smaller than 2 million gallons into a larger terminal that could effectively circumvent the terminal storage capacity threshold.

Resolution 37168 lists a specific exception to not restrict service directly to end users. At a small scale, services to end users include retail gasoline filling stations, natural gas access lines in street right-of-way to residential and business customers, and heating oil tanks at home sites. Larger scale end users with fossil fuel storage and access infrastructure also include manufacturers, jet fuel facilities at the PDX Airport, vessel fuel facilities on Portland Harbor, and others, where fossil fuels are used as an input.

33.920.300 Bulk Fossil Fuel Terminal

A. Characteristics. Bulk Fossil Fuel Terminals are establishments primarily engaged in the transport and bulk storage of fossil fuels. Terminal activities may also include fuel blending, regional distribution, and wholesaling. The firms rely on access by marine, railroad, or regional pipeline to transport fuels to or from the site, and either have transloading facilities for transferring a shipment between transport modes, or have storage capacity exceeding 2 million gallons for fossil fuels. There is minimal on-site sales activity with the customer present.

B. Accessory uses. Accessory uses may include retail sales of petroleum products, offices, food membership distribution, parking, storage, truck fleet parking and maintenance areas, rail spur or lead lines, and docks.

C. Examples. Examples include crude oil terminals, petroleum products terminals, natural gas terminals, propane terminals, and coal terminals.

D. Exceptions.

1. Truck or marine freight terminals that do not store, transport or distribute fossil fuels are classified as Warehouse And Freight Movement uses.
2. Truck or marine freight terminals that do not have transloading facilities and have storage capacity of 2 million gallons or less are classified as Warehouse And Freight Movement uses. However, multiple fossil fuel facilities, each with 2 million gallons of fossil fuel storage capacity or less but cumulatively having a fossil fuel storage capacity in excess of 2 million gallons, located on separate parcels of land will be classified as a Bulk Fossil Fuel Terminal when two or more of the following factors are present:
   a. The facilities are located or will be located on one or more adjacent parcels of land. Adjacent includes separated by a shared right-of-way;
   b. The facilities share or will share operating facilities such as driveways, parking, piping, or storage facilities; or
   c. The facilities are owned or operated by a single parent partnership or corporation.
3. Gasoline stations and other retail sales of fossil fuels are not Bulk Fossil Fuel Terminals.
4. Distributors and wholesalers that receive and deliver fossil fuels exclusively by truck are classified as Warehouse And Freight Movement uses.
5. Industrial, commercial, institutional, and agricultural firms that exclusively store fossil fuel for use as an input are not Bulk Fossil Fuel Terminals.
6. Uses that involve the transfer or storage of solid or liquid wastes are classified as Waste-Related uses.
7. The storage of fossil fuels for exclusive use at an airport, surface passenger terminal, marine, truck or air freight terminal, rail yard, or as part of a fleet vehicle servicing facility are accessory to their use.
8. Uses that recover or reprocess used petroleum products are not Bulk Fossil Fuel Terminals.

Commentary

33.920.310~~300~~ Industrial Service

33.920.320~~310~~ Manufacturing And Production

33.920.330~~320~~ Railroad Yards

33.920.340~~330~~ Warehouse And Freight Movement

A. **Characteristics.** Warehouse And Freight Movement firms are involved in the storage, or movement of goods for themselves or other firms. Goods are generally delivered to other firms or the final consumer, except for some will-call pickups. There is little on-site sales activity with the customer present.

B. **Accessory uses.** Accessory uses may include offices, food membership distribution, truck fleet parking and maintenance areas, rail spur or lead lines, docks, and repackaging of goods.

C. **Examples.** Examples include separate warehouses used by retail stores such as furniture and appliance stores; household moving and general freight storage; cold storage plants, including frozen food lockers; storage of weapons and ammunition; major wholesale distribution centers; truck, marine, or air freight terminals; bus barns and light rail barns; parcel services; major post offices; grain terminals; and the stockpiling of sand, gravel, or other aggregate materials.

D. **Exceptions.**

1. Uses that involve the transfer or storage of solid or liquid wastes are classified as Waste-Related uses.

2. Miniwarehouses are classified as Self-Service Storage uses.

3. Establishments that engage in the transfer or storage of fossil fuels, rely on access by marine, railroad or regional pipeline to transport fuels to or from the site, and either have transloading facilities or have storage capacity exceeding 2 million gallons for fossil fuels are classified as Bulk Fossil Fuel Terminal uses.

33.920.350~~340~~ Waste-Related

33.920.360~~350~~ Wholesale Sales

A. **Characteristics.** Wholesale Sales firms are involved in the sale, lease, or rent of products primarily intended for industrial, institutional, or commercial businesses. The uses emphasize on-site sales or order taking and often include display areas. Businesses may or may not be open to the general public, but sales to the general public are limited as a result of the way in which the firm operates. Products may be picked up on site or delivered to the customer.

B. **Accessory uses.** Accessory uses may include offices, food membership distribution, product repair, warehouses, parking, minor fabrication services, and repackaging of goods.

C. **Examples.** Examples include sale or rental of machinery, equipment, heavy trucks, building materials, special trade tools, welding supplies, machine parts, electrical supplies, janitorial supplies, restaurant equipment, and store fixtures; mail order houses; and wholesalers of food, clothing, auto parts, building hardware, and office supplies.

Commentary

D. Exceptions.

1. Firms that engage primarily in sales to the general public are classified as Retail Sales And Service.
2. Firms that engage in sales on a membership basis are classified as either Retail Sales And Service or Wholesale Sales, based on a consideration of the characteristics of the use.
3. Firms that are primarily storing goods with little on-site business activity are classified as Warehouse And Freight Movement.
4. Establishments that engage in the regional wholesaling of fossil fuels, rely on access by marine, railroad or regional pipeline to transport fuels to or from the site, and either have transloading facilities or have storage capacity exceeding 2 million gallons for fossil fuels are classified as Bulk Fossil Fuel Terminal uses.

7. Other implementation recommendations

This section of the report recommends future implementation directions for building code amendments to address seismic resilience and periodic monitoring for code effectiveness.

Seismic resilience

Considering setting direction to implement this future action within the adopting ordinance:

- Portland Bureau of Emergency Management and Portland Office of Government Relations are directed to develop proposals for State building code changes to improve seismic resilience and require seismic upgrades comparable to proposed requirements on unreinforced masonry buildings.

Seismic resilience is one of the underlying rationales for fossil fuel distribution policies and the recommended code amendments. Seismic safety requirements of land development are addressed in building codes, which are adopted and amended at the state level.

Monitoring for code effectiveness

Considering setting direction to implement this future action within the adopting ordinance:

- Portland Bureau of Planning and Sustainability is directed to periodically monitor the effectiveness of these zoning code amendments to implement underlying policies and consider code adjustments in response to regional fuel demand and market changes, product innovation, safety and climate action considerations, and related regulatory changes.

A monitoring and adaptation approach would provide for ongoing code effectiveness within a context of changing energy markets, products, and associate regulations.

Appendix A: Stakeholder focus group results

Public involvement in the concept development for the Fossil Fuel Terminal Zoning Project consisted primarily of four stakeholder focus groups as well as meetings with fuel terminals and other individuals or organizations. The focus groups were held in June 2016. The purpose of the focus groups was to help identify and understand the issues that should help shape the preliminary zoning code being considered by this project. The focus groups also helped to expeditiously reach out to a broad range of stakeholders. While their perspectives and interests are shared on some topics, they diverge on other topics.

In addition to the stakeholder focus groups, BPS staff met with several fuel terminals to explain the proposal, answer questions, and discuss their individual concerns. This was needed because antitrust regulations constrained discussion about certain topics, for example supply chains, in the presence of representatives from other fuel terminals. Primarily, the terminal operators explained their operations and facilities, many of which differed substantially from other terminals.

Who participated?

Figure 9 lists the participants of the four focus groups conducted. Ten to twelve participants were invited to each meeting, although not everyone was able to attend. The first focus group consisted of fuel terminal representatives who have a direct stake in the recommended regulations. The second group was environmental and public health organizations, some of whom advocated for the resolution before City Council and have community safety and sustainability in mind. The third group were state and regional business and government organizations. Their interest was to protect the state economy by testing the proposal against economic realities. The fourth group was neighborhood and equity community organizations whose interests were to protect neighborhoods adjacent to the terminals and underserved communities who may rely on terminals for employment. Additionally, the Mayor's Office invited input from Native communities and tribal governments.

Preliminary code concepts discussed

- Identify "bulk fossil fuel terminals" as a regulated land use, characterized by inter-regional transport access and larger storage facilities.
- Either prohibit new terminals or set storage capacity limits high enough to accommodate regional growth.
- Allow existing terminals to expand for seismic upgrades, access to greener fuels and capacity for regional growth.

What discussion questions were asked?

The focus groups were provided background materials describing the preliminary code change concepts about two weeks before the focus group meetings. BPS staffed prompted the focus group across four topics:

Figure 10. Stakeholder Focus Group Participants, June 2016

STAKEHOLDER	DATE	ATTENDEES
Fuel terminal representatives	Thursday, June 02, 2016	Gilbert Betancourt, Phillips 66 Nick Giotta, Phillips 66 Stephanie Williams, Phillip 66 Andrew Holbrook, Kinder Morgan Shanna Brownstein, Northwest Natural Kevin Jones, McCall Oil Pamela Brady, BP West Coast Jerry Henderson, Chevron Kevin Buffum, Pacific Terminal Services Steve Kober, NuStar Will Rassmussen, WSPA Frank Holmes, WSPA Chris West, Pac/West and Arc Terminals Nathan Eggers, Arc Terminals Jerome Jackson, NuStar Rob Hill, NuStar

1. Issues that should shape the project
2. Types of distribution and storage facilities to be regulated
3. Definition of fossil fuels
4. Zoning approach for limiting new storage facilities

In addition to specific questions within each topic, participants were invited to share any general and wrap-up comments during the focus group.

What we heard

For each topic area, the results of the focus groups are summarized in Figure 4 of Section 3. That table summarizes the main themes and concerns raised during the focus groups.

Key issues

Fuel terminal representatives objected to this policy direction in general. They discussed their safe operating history and commitment to implement the federal and state standards for renewable and clean fuels. There were challenges to participating in the conversation, but they agreed to work cooperatively on this project to get the code right. For example, anti-trust laws precluded the group from engaging in certain conversations because it would involve disclosing information about their supply chains and could be considered collusion in court of law. This group was concerned with the fast timeline and felt the policies should be discussed first.

They also felt the process was emotionally driven, not having considered the unintended consequences. For example, with renewable and clean fuel standards constantly in flux, they felt that zoning rules could make it more difficult to meet these standards. Restricting growth here in Portland at the end of the Olympic Pipeline could put more trucks on the road, instead of more efficient pipeline or rail transportation. The group asserted that there could also be significant economic impacts on the rest of the state, given that 95% of Oregon's fuel passes through Portland first. Lastly, fuel terminal representatives expressed concern for additional administrative burdens that a new land use category would bring. For example, what steps would be necessary for these firms to demonstrate that they were existing operations prior to the new zoning rules? Additionally, they warned that their site configuration may pose a challenge to effective zoning rules, as they are often non-contiguous operations connected by interconnected pipelines.

Environmental and public health organizations felt the policy direction was less aggressive toward fossil fuels than what the City Council resolution had proclaimed. They felt the resolution sought to outright prohibit new development and expansion on existing facilities. Because of this, they cautioned about community backlash if this proposal did not meet expectations. In this vein, they highlighted that Portland will be the first city to fully implement this type of policy, so the project could be an opportunity to set a strong precedent and model code for other cities. This group also felt that resident health and safety was also a top priority. They noted the seismic risks posed by fuel terminal tank farms that lie on liquefaction zones as well as the June 2016 oil train wreck in Mosier. For these reasons, they felt Portland Bureau of Emergency Management (PBEM) and other environmental justice groups should be involved in safety considerations. Lastly, the group felt the economic impact statement should include more than the impact on jobs. It should also consider the risks of economic and financial damages from a natural disaster. Members of this focus group offered to provide technical analysis on the impacts that the proposed options could have on the environment and public health and safety.

Some noted that risks should be accounted for through bonding or insurance requirements under worst-case scenarios.

State and regional business organizations felt that this undertaking requires more research. The resolution set required tasks, including an economic impact analysis and an examination of relevant laws, and they felt these tasks should be completed before laying the groundwork through code development. They felt the marine cargo forecast for liquid bulks of 1% growth is outdated and too low. (Note, an opposite reaction was expressed by environmental and health organization representatives who felt this figure was too high.) Similarly, they feared that the code may not hold up well in five years because of constantly changing energy markets. For example, in five years Portland could be shipping cleaner fuels to the Midwest. Some members expressed concern that the zoning code may not be the right tool to achieve some of the GHG (greenhouse gas) reduction and public safety goals that this resolution aimed to achieve. If the goal is public safety, then the City should require or create incentives for seismic upgrades. They stated that, if the goal is to reduce greenhouse gases, then prohibiting the export of cleaner-burning fuels, such as LNG (liquefied natural gas), may have the opposite intended effect. Lastly, the group asserted the important role that Portland's fuel terminal facilities play in rest of the state economy. They warned of political and economic repercussions that these decisions could have. They shared the view with fuel terminal representatives that this is a big political decision—the timeline is too short and the process should not be rushed.

Neighborhood and equity community organizations communicated that safety, pollution and accidental releases were their top priority when considering zoning for fuel terminals. They wanted a close examination of the seismic and explosion risks associated with fuel terminals. For example, which terminals are in liquefaction zones? Where are the storage tanks located in relation to neighborhoods? They sought honesty about the risks posed to the Linnton neighborhood specifically. Rail safety in the Columbia Gorge was also a key issue. The June 2016 incident in Mosier highlighted the risks. A potential solution they offered would be more pipelines, but they are difficult to get built. This group recognized the difficulty in managing competing values. They felt a reasonable expectation of growth is a smart idea. One participant described the proposal as aggressive, adding that by prohibiting LNG export terminals, global export destinations like China may end up burning dirtier fuels, such as coal. They felt this also meant Portland would forego export profits.

New land use category

Fuel terminal representatives were concerned for the clarity of the rules. They felt that the definition of "bulk terminal" is very important to be clear. If the definition was open to interpretation, then permit staff could be pressured. They warned that creating "bulk fuel terminal" as a specifically regulated use could lead to unpredictable results. This group was also concerned with the definition of "region." They were unsure if off-shore distribution was the issue, advocating for using the federally recognized West Coast region (PADD 5) as the definition of "regional market." PADD 5 includes Oregon, Washington, California, Nevada, Arizona, Alaska and Hawaii.

Environmental and public health organizations wanted to see the regulation go beyond new facilities and also look at limits on expansion at existing facilities. They felt the City Council resolution was clear and unambiguous about opposing expansion of fossil fuel infrastructure, which includes expansions at existing sites. They emphasized the importance for getting the right definition of "bulk terminal" and the associated size limit (or prohibition)—these must be correct in order to effectively implement the policy. Some members questioned whether seismic upgrades at existing facilities could be allowed but

expansions prohibited. This group also urged the inclusion of PBEM's work on hazards in liquefaction zones in this project.

State and regional business organizations echoed the concerns for clear and correct definitions that the fossil fuel representatives posed. "Region," "export," "end user," and "fossil fuel" are all important terms to get right. They also were strongly opposed to making existing facilities non-conforming uses, as well as making them limited uses with unclear exceptions. This would expose projects to discretionary land use actions, which is costly and unpredictable, and hence risky. It would likely make improvements that the community values, such as seismic upgrades, more difficult to attain.

Neighborhood and equity community organizations were skeptical that a new export terminal would be proposed in the Portland area in the wake of Pembina. They felt that Superfund sites were too expensive to acquire and build on. The group also wondered whether a new zone for fossil fuels ought to be created instead of a land use. They questioned why it ought to be allowed in IG2.

Definition of fossil fuels

Fuel terminal representatives were primarily concerned with the long-term applicability of the proposed rules. Energy markets and new technologies are constantly in flux, and it is difficult to know what the size requirements might be for newer—perhaps cleaner—fuels, particularly blended fuels. This group sought clarification for what "green fuels" meant. They noted that the proposed inclusion of LNG among city-regulated fossil fuels is inconsistent with the State of Oregon's inclusion of LNG as a "clean fuel." They called for periodic review of the rules when tomorrow's cleaner fuels become known, as they may not meet today's definitions. They cautioned about unintended consequences of placing restrictions on fossil fuel terminals, such as potentially putting more trucks on the road by restricting growth at facilities with pipeline, marine and rail access. This may result in considerably more GHG emissions. They also felt that methanol should not be included in the list of regulated fuels because it is used more as a value-added commodity than a fuel. They shared this last viewpoint with most other focus groups, except the environmental and health organizations.

Environmental and public health organizations looked to the intent of the City Council resolution and noted that it included propane, methanol, natural gas and other low-carbon fuels. At the same time, they agreed that code changes should provide flexibility to meet Oregon's low carbon fuel standard. They noted that methanol is currently being used as a fuel, so excluding it undermines the policy. The group sought clarification on how to address non-fuels. Some suggested that the GHG emissions of these input commodities should help ground their use. Others thought that the proportions (e.g., in blended fuels) should be considered—if the product is mostly used as a fossil fuel, then it should be regulated and restricted. Lastly, they highlighted how even one new LNG tank in Portland is a major safety issue. Although not explosive, coal also poses a significant risk, especially in transportation. Because of these risks, they believed that the resolution should be implemented through health and safety standards.

State and regional business organizations expressed frustration that while the federal and state government are going one direction requiring cleaner-burning fuels, the City of Portland appears to be choosing to restrict distribution of these cleaner fuels in another policy direction. Some members thought the City could try to incentivize a higher blend of renewables, and others warned of the disincentives that could discourage investment—disincentives should limit GHG emissions, not seismic upgrades.

Neighborhood and equity community organizations thought that restricting methanol exports would be an overreach. They said it is not being used as a fuel in the United States, and instead it is a value-added product used in manufacturing of plastics and other goods. Including methanol would negatively impact the manufacturing sector that requires it as an input, and it could open the door to regulating other non-fuel commodities, such as paints and asphalt. In general, they felt that if we can make certain fuels cleaner burning, then it poses minimal threat. They asserted that, since there is no clear transitional path away from our dependency on fossil fuels, we should make way for cleaner alternatives, such as blended bio-diesel.

Terminal development restrictions

Fuel terminal representatives were concerned with potential restrictions precluding development on certain site configurations, which have some peculiarities. For example, where two existing tank farms are non-contiguous (e.g., at Willbridge) and are connected by facility pipelines, they should be allowed an option for expansion. Additionally, some sites may already be built out and cannot accommodate the new growth that is expected. This group could not comment on facility size and anticipated growth, because of anti-trust laws, but they noted that it is critically important. For this reason, they could not provide feedback on the implementation options presented.

Environmental and public health organizations generally preferred Option A. However, some recognized the legal challenges posed by federal restrictions. They wondered if health and human safety risks may provide a defensible rationale. Some members also noted that while prohibiting all new facilities and making existing facilities non-conforming uses might be more legally defensible, it is much less politically feasible. Finally, some members of this group were skeptical of the 1% annual growth forecast for liquid bulks. They felt this was too high, which is contrary to what the state and regional business organization representatives stated.

State and regional business organizations criticized the approach to implementing the City Council resolution. They felt that zoning to regulate tank size approaches the problem sideways, and the unclear rationale could lead to appeals and legal challenges. One participant advocated to prohibit exports more directly, rather than a sideways approach. They cautioned that tank size limits could essentially put the region on an "import diet," even if the intent of the limit is to reduce throughput. They did not think this proposal accounted for these unintended impacts. Docked ships in the harbor may need an LNG tank to power their facilities and improve air quality, for example. They also noted that there are economic advantages and efficiency gains to being a bigger facility, and placing restrictions on size will have consequences that we don't want—lower wages for example. Lastly, they felt the 1% annual growth forecast for liquid bulks was outdated—an updated forecast would be higher. This was the opposite of what environmental and public health organizations stated.

Neighborhood and equity community organizations generally preferred Option C, calling it a realistic proposal that allows for some growth but doesn't restrict it too much. While the group was fairly resolute that coal is not a good alternative, they recognized that LNG is a cleaner-burning fuel. However, since the facilities in the region are already at capacity, Option C would allow for some wiggle room for the region's growth. They felt it would allow the "invisible hand" to guide the market more easily. They recommended that the City review the size limits every few years as the market changes.

Hello everyone, Good Afternoon!

My name is Mukta Akter and I'm a social and climate activist from Bangladesh.

Bangladesh is one of the most climate vulnerable countries in the world. The developed countries like US are producing the largest amount of Green House Gases, but countries like Bangladesh who are contributing almost no GHG, are the ones paying a lot.

Bangladesh is mainly a low elevation country and the combination of sea level rise and increasingly powerful storms is already contaminating our fresh water with salinity. The effects are dramatic and devastating. Extreme weather events are having major impacts on the agriculture, food security and economic performance of Bangladesh. The scenario is almost the same for the entire South Asia.

According to the latest NOAA data, we can expect a 1 meter sea level rise by 2035. This means 35% of Bangladesh's coastal area will submerge under seawater and 15-20 million people will turn into climate refugees. It is a huge challenge for our government how to resettle them.

The effects have already started in your country. For instance, the catastrophic flood in Texas & Louisiana last year and the coastal erosion in Florida. Please think, what is the race for development, when it becomes risk for lives and livelihood? Due to your contribution to GHG, our future and the next generation is in great risk.

Climate change is not an isolated issue. It is a global problem and to fight against, it needs collaborative approach. The policy you are working towards - no new fossil fuel infrastructures is a good start, still much more needs to be done to secure our mother globe from the devastating climate calamities.

Subject: final zoning code for Resolution #37168
Date: Thursday, November 10, 2016 10:09:43 AM

Dear City Council,

I am proud of the city of Portland for the November 2015 resolution #37168 regarding fossil fuels. Now it is time to create strong code to implement this vision.

Please close any loopholes in the final zoning code which would allow fuel companies to increase infrastructure development for oil and coal! It is especially important given the results of the national election. Let's show what Blue cities can accomplish!

Thank you,

Heidi J Alford

Subject: Close the loopholes on Fossil Fuel Ban
Date: Thursday, November 10, 2016 4:25:04 PM

Dear City Council,

In light of the recent election, your decision today on banning fossil fuel infrastructure in Portland is more important than ever. Our new administration wants to cut all our national climate change work, making the choices we make locally critical in the fight against climate change. Cities MUST lead. I am urging you to do the following to ensure the ban is as powerful as possible. Let's do this, all the way, and make real change. **Close the loopholes.** Be the leaders our city and our world needs.

I ask that Portland:

Enacts a full ban on all new fossil fuel terminals by removing the exception for terminals under 2 million gallons. The proposed 2-million-gallon exception would still allow new fossil fuel facilities to be built in our communities
Eliminates the provision that allows existing fossil fuel terminals to grow by as much as 10% in exchange for seismic upgrades. These upgrades should be required, not provided in exchange for even bigger facilities.
Directs Portland Bureau of Emergency Management to develop proposals for State building code changes to require seismic upgrades
Rejects Northwest Naturals request to be exempted from these regulations.

Thank you! #CitiesLead

Subject: Opposition to expansion of Portland"s fossil fuel infrastructure
Date: Thursday, November 10, 2016 7:59:37 AM

Let's continue to lead the country in our protection of the environment, force the transition to sustainable energy sources that do not contribute to global climate change, and not let corporate interests sway these goals.

Please prohibit expansion of fossil fuel terminals, eliminate or reduce the thresholds for prohibiting new fossil fuel storage terminals, and use the right tools to make seismic upgrades. this does NOT mean expansion of existing terminals!

Sincerely,

Mary Blankevoort
Troutdale, Oregon

Subject: Re: Fossil Fuel Zoning Amendments – Let's Put Portland's Fossil Fuel Ban Into Practice!
Date: Thursday, November 10, 2016 12:22:03 PM

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed and spilled causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Linda Cargill

Attached and below is my testimony for today's hearing. I plan to be there but need to leave early.
Thank you.

Fossil Fuel Terminal zoning testimony 11-10-2016
Harriet Cooke MD, MPH
3126 SW Carson St, Port. OR 97219
holisticooke@aol.com

I am writing in full support of restricting development and expansion of bulk fossil fuel terminals, such that NO new Bulk Fossil Fuel Terminals will be allowed. I further support improvement limitations on existing Bulk Fossil fuel terminals, such that only seismic upgrades are allowable which would add no more than 10% of the capacity of replaced tanks. However, I would prefer NO increase in capacity. We need to keep the flow of oil SLOW while we continue to build capacity for and integrate renewable energy systems.

As vital as this project has been to limiting the worst of climate catastrophe, it is ever more essential with a president who is planning to lift restrictions on the production of fossil fuel reserves, and lift federal roadblocks to moving and consuming more fossil fuels.

It is up to our states, cities, and counties to move us forward in creating a more sustainable, equitable, and compassionate world.

Thank you for all the work you do in moving us toward this direction.

Harriet

From: Deborah Garman
To: BPS Fossil Fuel Zoning
Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Thursday, November 10, 2016 9:42:04 AM

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

However, the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland continue in a proactive way to:
Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.
Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.

Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.
Now more than ever the City of Portland has the opportunity to be a leader in the U.S. climate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time.

Thank you in advance for bold leadership to protect Oregonians and our planet.

Sincerely,

Deborah Garman

Testimony For Portland City Council

Fossil Fuel Facilities

November 10, 2016

Dick Harmon

—Text

—Notes

I'm Dick Harmon, I live in Portland, I'm 80, I'm here as father, grandfather and great grandfather.

I support 350's position on the ordinance, and I want to thank the Council Members, especially Mayor Hales, for stepping firmly into our new reality.

The fossil fuel industry is pushing back, so we're here to help you keep those firm steps in place, and advance them.

We're not here as protesters. Like the people at Standing Rock, and the people all around the country rising up on these questions, we are here to *protect* our children and their children, by protecting our— and their— air, water, soil, life and energy.

Regardless of what the national election results might lead some to think, we're in a climate emergency.

We've run out of time on climate. This decade is our final window to cut emissions deeply—that's all there is.

The fossil fuel industry—including the methane retailers— proffers the claim that the ordinance as proposed will curtail their ability to meet new demand, as new people move to Oregon.

Our response?

First a clear, firm NO.

Second, an alternative for the industry: meet that new demand with renewables and deep energy conservation.

Change your business plans toward the real-world future.

You say the fossil firms serving Portland cannot change their business plans?

We offer you a model: PG&E, in Northern California, deals in both natural gas and electricity. It is the largest investor-owned utility in the US.

In June, PG&E announced an agreement to *replace* the nuclear plant at San Diablo with renewables and deep efficiency, because they are cheaper than nuclear.

In our case, renewables and deep efficiency are cheaper than carbon and methane—especially when you include safety and human and non-human health risks.

To create the deal, PG&E *began* by inviting labor, community, and two major environmental organizations to the table.

They emerged with a trade-off: over nine years, shutting the nuke, and providing $350 million for transitioning 1,000 well-paid employees and $50 million for replacing lost property taxes to the county.

This model offers sticks *and* carrots; it can help us *realign interests*, and *incent conversion* to the clean Portland economy.

It's a way to say *yes* to community, labor, environment, and a converting industry.

It's a model for the other cities of America while Washington burns.

It's a way to say both no and yes: *no* to business as usual, *yes* to *protecting* our children, grand children, and great grandchildren.

Thank you.

Notes

1. Methane: "While methane doesn't linger as long n the atmosphere as carbon dioxide, it is initially {first 20 years} far more devastating to the climate because of how effectively it absorbs heat. In the first two decades after its release, methane is 84 times more potent than carbon dioxide. *Both* types of emissions must be addressed if we want to effectively reduce the impact of climate change. Steve Hamburg (EDF Chief Scientist), "Methane: the other important greenhouse gas." Environmental Defense Fund (www.edf.org.methane-othe-important-greenhouse-gase.)

2. PG&E Diablo Canyon agreement:

Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Thursday, November 10, 2016 8:23:01 PM

I support reducing fossil fuel consumption through the following means. These are all a good first step to a sustainable future. Please, be a leader we can stand with and that shares our views. Thank you. (1) a full ban on new fossil fuel terminals. (2) prohibit expansions at existing terminals. (3) preventing any exceptions to the current proposal. For example, no exemptions for NW Naturals.

Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Thursday, November 10, 2016 9:09:11 AM

Thank you Portland City Council for passing the ban on new fossil infrastructure in November 2015 and to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. I testified in support of creating new zoning rules last year, but I know that the devil is in the details. Portland needs to have strong Fossil Fuel Zoning Amendments and those in the recommended draft are inadequate. Portland can play a an important leadership role and create an identify for sustainability through this policy that makes it an attractive place to live and do business.

The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution. Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland to:

Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.
Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.
Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Thank you for considering these comments. With a President-elect who does not believe that climate change exists, strong local policies are more important than ever.
Sincerely,

RE: Fossil Fuel Terminal Zoning Amendments

Since the 1950s the League of Women Voters has worked at federal and state levels to protect air, land and water resources. More recently, the League has lobbied vigorously for comprehensive legislation to control global climate change. Any increase in fossil fuel infrastructure is not consistent with the current League of Women Voters natural resources and climate change positions, nor with Portland's Climate Action Plan.

We want to thank the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for their work to develop the zoning code recommendations for City Council Resolution 37168. Several drafts were submitted to industry stakeholders and to the community for feedback before the Commission recommendations were incorporated. The resulting draft now before the City Council is closer to the Resolution's intention to reduce fossil fuel use in our region.

We would like to discuss the proposed increased capacity in new and existing terminals, and the climate goals adopted by Oregon, Portland and Multnomah County.

The current zoning code recommendations allow for new terminals, with a maximum capacity of 2 million gallons, and restrict new tank construction in the existing 10 bulk petroleum terminals to a 10% increase above current capacity. This has been suggested as an incentive for the fossil fuel companies to replace old tanks with those complying with current seismic guidelines.[1]

Having followed the process of code development, we observe that the recommendation for allowing 10% increases in capacity for existing terminals is arbitrary. If you are looking for coherence in policy, we suggest that a 5% increase in capacity would be consistent with the maximum capacity of 2 million gallons allowed for new terminals.[2]

However, we find that any increase in fossil fuel terminal development is not compatible with the state climate goals, nor with Portland's Climate Action Plan. These goals do not state the exception "unless we have an increase in regional population." In fact, regional population increases are assumed in the calculations.[3] The goals are a reflection of the important task before us to leave behind the "business as usual" paradigm and to adopt a clean energy policy.

Climate impacts on Oregon's economy have been analyzed in many spheres: forest fires and timber loss, extreme weather events, public health, sea level rise and storm surge flooding, Pacific ocean acidification with severe impacts for the shellfish industry, and drought impacts on fisheries and agriculture. Remediation costs and loss of revenue for the state (and by extension, for Portlanders) will increase as weather extremes intensify and water resources become less predictable.

The good news is that costs for developing alternative energy resources are coming down all the time and in much of the world are actually lower than the costs for constructing new fossil fuel infrastructure.[4] We live in a state without a petroleum extraction industry, and with a wealth of water, sun and wind. If any region in the world is well-suited to shift to renewable energy, it is Portland and Oregon.

We urge you to exercise foresight and to stick to the goals you have adopted in Resolution 37168. If "cities lead," we'd like to head in the right direction.

1. Portland Planning and Sustainability Commission, October 11, 2016.
2. The total capacity for petroleum in the 10 existing terminals is 386 million gallons, giving an average capacity of 39 million gallons per terminal. A 5% increase in size would give each terminal an average increase of 1.95 million gallons, consistent with the 2 million gallon new terminals allowed.
3. 2015 Climate Action Plan, p. 20, www.portlandoregon.gov/bps/climate

Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Thursday, November 10, 2016 1:18:02 PM

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

However, the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland to:

Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.
Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.
Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Now more than ever the City of Portland has the opportunity to be a leader in the U.S. climate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time.

Sincerely,
Nina Macdonald

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Sarah McKenzie

In the light of our national directions, we must stand strong as a city in our need to move away from fossil fuels. We have the unique opportunity for deep transformation. We can both meet and exceed our climate goals - as we must do now to avoid the loss of civilization as we know it.

We are ready for a new way. Not only do we have technologies like wind and solar within our reach, we also have the potential of net zero or passive housing which could deeply transform the amount of energy we need. Just as the economics of renewables have become attainable, so have both the economics and technology for passive house building. Look no further than Orenco Orchids for an example.

We don't need more gas. We need transformation. The time is right. Please do the right thing and help us get there.

Thank you,

A huge thanks to all in our city who have worked to incorporate public good into the Fossil Fuel Terminal Zoning Amendments. In the light of our national direction, it is more important than ever that all cities and states take a stand on moving us away from fossil fuels and into the new age of renewable fuels and reductions in our emissions. Please be willing to take strong stand necessary to move us into the 21st Century. Please return to your strong and visionary resolution in the fall of 2015 prohibiting ALL new fossil fuel infrastructure.

Dear City Council

If there is one thing I am proud of today, it is of being a Portlander. Now more than ever, the revolution must begin at home. Please please please ensure that a STRONG fossil fuel ban is enacted in Portland, as an example to the rest of the country and the world. As the Audubon Society calls for, I urge you to work for the following points -

- Enacting a full ban on all new fossil fuel terminals by removing the exception for terminals under 2 million gallons. The proposed 2-million-gallon exception would still allow new fossil fuel facilities to be built in our communities.
- Eliminating the provision that allows existing fossil fuel terminals to grow by as much as 10% in exchange for seismic upgrades. These upgrades should be required, not provided in exchange for even bigger facilities.
- Directing Portland Bureau of Emergency Management to develop proposals for State building code changes to require seismic upgrades.
- Rejecting Northwest Naturals request to be exempted from these regulations.

Thank you

Dana Mozer

Now with Trump heading to the oval office he promises to ditch any efforts to reduce fossil fuel burning in the atmosphere and return to business as usual. We need to take it upon ourselves now and be a progressive model for others to follow. I wholeheartedly support the issues put forth by 350PDX. I will reiterate those concerns below.

Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. We need NO new fossil fuel infrastructure.

Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.

Prevent NW Natural from getting a carve out. NW Natural wants to be exempted from this policy and we need to make sure the City Council does not add a last minute amendment on NW Natural's behalf.

Good day.

I will be unable to attend today's hearing and want to share some thoughts on why the current language need to be strengthened to protect the environment and the people of Portland.

Here are some of the improvements that I believe should be put in place before the language is finalized; especially due to the recent news that the leading anti-climate change voice will be appointed by the president elect. Portland needs to stand strong and protect that which provides for us. If we don't do it we cannot hope for protections from the federal government.

- Exceptions to the rule will not benefit Portland. Enact a full ban on all new fossil fuel terminals by removing the exception for terminals under 2 million gallons. The proposed 2-million-gallon exception would still allow new fossil fuel facilities to be built in our communities.

- First, expansion should not be permitted. Secondly, seismic upgrades should be required, full stop. Eliminate the provision that allows existing fossil fuel terminals to grow by as much as 10% in exchange for seismic upgrades. These upgrades should be required, not provided in exchange for even bigger facilities.

- If the big one comes it is imperative that we be ready. Direct Portland Bureau of Emergency Management to develop proposals for State building code changes to require seismic upgrades.

- No single entity should be able to be exempted. Reject Northwest Naturals request to be exempted from these regulations.

Thank you for your time and service.

Good afternoon. My name is Marilyn Sewell, and I am the Minister Emerita of the First Unitarian church.

This Council, led by Mayor Charlie Hales, has passed the strongest land use code in the country, prohibiting all new infrastructure for fossil fuel export. (*Hold up picture*.) Look at this picture—tiny kyaktivists and Greenpeace activists hanging from the St. John's bridge stopped Exxon's massive icebreaker for 48 hours, and pictures like this went around the world. Then through our emissary, Mayor Hales, once more our witness went around the world, to the Pope, to President Obama.

Now again, the whole world is watching—in light of this election, what will happen to the climate movement? Do not think what happens in this City Council today and on Nov. 17 is not important to the larger world—we know that the rest of the country watches what Portland does, in many arenas, and certainly in regard to climate. So we are here today not just to testify, but to witness. I'm using religious language because this is truly the greatest moral issue of our time. We will all be accountable as moral agents if we fail to keep fossil fuel in the ground.

The temptation, always, is to accommodate to power, but rather we must speak truth to power. In the words of that wonderful Spike Lee movie, "Do the right thing." It's in your hands. So do the right thing.

Protecting Portland through the Triple Catastrophe: The Climate Crisis || Our Earthquake || Federal Energy Policy

"No New Fossil Fuels Infrastructure"

A Second Open Letter to the Portland City Council

Preamble Summary, Resolution 37168, November 12, 2015: Oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways.

Thank you for your ongoing commitment to full implementation of this binding policy resolution. Your leadership has never been more important to our city, state, region, nation, and the planet than it is today.

Our planned purpose was to join with our many colleagues here to continue to encourage your maximum attention to the complex double catastrophe of the climate crisis and the inevitable Cascadia subduction zone earthquake that will devastate our region. You are intimately familiar with both these unprecedented challenges (please see below for a few comments).

But today I must add **a fresh third catastrophe: imminent changes to Federal energy and climate policy**, which will destroy a huge percentage of the very limited progress made in moving Federal policy beyond the clear and present dangers of the fossil fuel era.

None of us expected that a climate denier would ever occupy the Oval Office. The most brutal components of the fossil fuels energy industry have been deeply engaged in transition planning for President-Elect Trump and are moving quickly to prepare for power. President Obama has taken several steps in recent years to elevate attention to the climate crisis and to move partially away from his prior "All of the Above" energy development strategy. The Trump Administration will maximize reversal of those actions.

With a unified National governmental power structure, the Republican leadership will move at warp speed. That is a procedural approach they have honed to perfection in unified State government control in recent years; Wisconsin is a prominent example, but it is now standard

operating procedure within their governmental playbook, implemented in many states. To be sure, there is the possibility of some limited checks and balances in the current Senate filibuster protocols, and redress of over-reach is sometimes available through the courts. Nonetheless, we must now be prepared to see the most vigorous moves for fossil fuel exploitation and monetization in our nation's history – and that is already a high bar.

For example, we are likely to see immediate concerted efforts to enact **Federal pre-emption** over State and Local efforts against fossil fuels – especially against transport, storage, and export efforts. This risk makes Portland's action *now* to protect your policy resolution – ***our City's*** policy resolution! – especially urgent.

Traditionally, it has been much easier politically to protect established law against reversal assaults than to fight for new efforts that contradict Federal (or State) pre-emption statutes. There is no guarantee that will apply in this arena, but we must proceed urgently to carve out as much local progress as we possibly can.

Simultaneously, the chemistry, physics, and geology of the intersecting catastrophes of our global climate crisis and the Cascadia subduction zone earthquake proceed apace. For the former, the agencies you manage are working to deal with it every day, with vitally important mitigation and adaptation strategies against the effects that we all see and feel now. Complete implementation of the policy resolution is critically important to that.

For the latter, a ticking time bomb in process for almost 317 years, it is the hardest kind of emergency to deal with: like a sudden life-threatening illness or catastrophic accident, it is completely irrelevant to daily life until the moment when it takes over everything one must do.

We now know that placing some 95% of our fossil fuel storage and baseline distribution infrastructure in the Cascadia seismic liquefaction destruction zone on the sands of the Willamette flood plain was the worst possible choice. You have all participated in many briefings and preparedness exercises around our inevitable impending earthquake; you know very well how deadly and destructive it will be, both at the time of fracture and in the multi-year aftermath. That is why it is imperative that the formal implementation of our City's binding policy resolution not permit **any** expansion of catastrophic risk in seismically unsafe zones, with seismically unsafe facilities.

Chemistry, physics, and geology ignore politics – and the new Federal politics just chosen through the ancient Electoral College structure will ignore chemistry, physics, and geology. This perfect storm of triple catastrophic risk requires that everyone recognize that now is not the time for misguided "split the baby" pseudo-compromise. You must resist that fallacy and temptation.

Thank you for your consideration.

"No New Fossil Fuels Infrastructure": First, Do No More Harm

An Open Letter to the Portland City Council

Preamble Summary, Resolution 37168, November 12, 2015:
Oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways.

Portland is at imminent risk of squandering its prior leadership in dealing with the local response to our global climate crisis. The problem is serious bureaucratic back-sliding into a "business as usual" mentality in the implementation of Resolution 37168. Unless you deal promptly and firmly with signals of agency misunderstanding of both the letter and spirit of this resolution, this situation could too easily become a local crisis in its own right.

This binding policy resolution, which you approved unanimously on November 12, 2015, catapulted our city into the forefront of local, regional, national, and international efforts to confront one of the greatest sets of challenges our species has faced since the development of industrial technology.

It is vital that you remember the genesis of this effort, and re-commit to the specific – often difficult! – changes in municipal and stakeholder planning and behavior for your mission.

There is a straightforward but interlocking four-part schematic that outlines precisely where we are as a global and local political economy:

1. **Keep It in the Ground**
2. **Do No More Harm**
3. **Reduce the Need**
4. **Make the Just Transition**

1. Keep It in the Ground

We now know that our combustion of fossil fuels has moved our global atmosphere and temperature structure into such dangerous territory that civilization is genuinely at risk if we do not make radical reversals in behavior.

At least four-fifths of global fossil fuel reserves must be left completely intact, in the ground, and never exploited.

This requirement is completely contrary to modern corporate financial structure, because proven reserves constitute roughly half of the assets (and therefore a major component of share value) of the fossil fuels companies. This is one of the key reasons why business-as-usual policies and procedures are inevitably doomed to failure – for both corporate financial health and planetary social and environmental health. This has been one key factor in the current financial collapse of shareholder equity in coal corporations.

Acceptance of ***Keep It in the Ground*** is a mandatory first step for both the psychological and political economy revisions we must make for survival. This is the foundation for the other three intersecting components of this basic methodology. Resolution 37168 speaks eloquently to many of the issues inherent in our mandatory recognition of our new reality.

2. Do No More Harm

Understanding the compulsory physics and chemistry of ***Keep It in the Ground*** leads inevitably to this second principle: don't make things worse by continuing down the same destructive path. We must begin with our environmental version of the first line of the Hippocratic Oath: ***Do No More Harm***.

This is the required primary set of actions for directly confronting the climate crisis: to get out of this hole, first we have to stop digging. "No New Fossil Fuel Infrastructure" is the easiest way to proceed first. The core of Resolution 37168 – preventing new export and storage infrastructure – falls completely within this principle.

It is imperative that you maintain and defend your policy.

3. Reduce the Need

Simultaneously, demand reduction is vital to permit us to ***Do No More Harm***. Gradual complete elimination of coal for electrical production in Oregon is now state law. The same goal must be applied to oil and natural gas, urgently. As I noted in my testimony to you on November 12, there is no fossil fuel solution to the fossil fuels crisis.

You must align City procedures and economic governance with this need for both conservation and energy efficiency (which are overlapping but distinct sets of tools). Beyond direct City internal control and external economic governance, you must also push the Portland business communities – especially the fossil fuels companies – and the other governments that overlap with and impact your work to both ***Do No More Harm*** and ***Reduce the Need.***

4. Make the Just Transition

Finally, underpinning all these efforts must be the recognition that there is no substantive difference among environmental, economic, and social justice. We are engaged in a transition into a full-renewables energy economy, and that will be impossible unless it is done based on justice for all. The urgency of the effort means that coordination of ***Do No More Harm, Reduce the Need,*** and ***Make the Just Transition*** becomes the essence of this era.

Thank you for your consideration.

Ted Gleichman, on behalf of Oregon Sierra Club

SIERRA CLUB
OREGON CHAPTER

November 10, 2016

Mayor Hales
Commissioner Saltzman
Commissioner Fritz
Commissioner Fish
Commissioner Novick
Auditor Caballero

Re: Agenda Item 1259 for Portland City Council Meeting, November 10, 2015
Restrict bulk fossil fuel terminals (Ordinance introduced by Mayor Hales; amend Title 33, Planning and Zoning)

The Oregon Chapter of the Sierra Club supports an implementation of the Fossil Fuel Infrastructure Policy which does not allow for any expansion of Bulk Fossil Fuel Terminals.

It is clear to anyone who understands science or who is willing to look dispassionately at the evidence, that climate change is real and that its effects are evident today. It is also clear that the consequences of ignoring greenhouse gas emissions will lead to a future in which the lives of our children and grandchildren will be very difficult.

The results of the recent elections also make it clear that we cannot rely on our national leaders to solve this problem for us. Leadership will have to come from the bottom up, starting here in our city.

The United Nations just released a report on the emissions gap[1]: the difference between the amount of greenhouse gas emissions needed to keep the temperature of the world from rising beyond 1.5 degrees Celsius and the amount we are currently emitting. The news is not good. In short, we need to radically reduce the amount of fossil fuels we are using and we need to begin doing so now.

Additionally the staff report of the Planning and Sustainability Commission makes it clear that overall demand for fossil fuels is already flat. It is reasonable to expect a decline as more electric vehicles are put into service.

There is absolutely no rational basis for expanding fossil fuel infrastructure.

You, the members of Portland's City Council took a courageous, visionary action when you adopted the Fossil Fuel Infrastructure Policy on November 12, 2015, in which it states in part:

"NOW, THEREFORE, BE IT RESOLVED, that the City Council will actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuel in or through Portland or adjacent waterways ..."

Nowhere in the language of the resolution does it list exceptions which allow for the expansion of the described infrastructure. In light of what we know about our climate and our national politics, it is imperative that we do not continue to expand fossil fuel infrastructure.

Therefore, the Sierra Club urges you to modify the language of the proposed ordinance to eliminate:

1. The 2 million gallon minimum as part of the definition of "Bulk Fossil Fuel Terminals". and
2. The allowed expansion of Bulk Fossil Fuel Terminals when replacing existing facilities during a seismic upgrade.

No expansion of existing facilities should be allowed.

TESTIMONY ON FOSSIL FUEL TERMINAL ZONING CODE AMMENDMENTS

My name is Alan Smith and I am a Portland resident.

Natural gas is not a clean fuel. Saying it's clean because burning it is less carbon intensive than the fuel it replaces is like saying smoking tobacco is healthy, because it won't kill you as quickly as smoking opiates.

Over a 20 year period methane is 84 times more powerful than CO2 as a greenhouse gas and fugitive emissions have increased more than 30% above the EPA's estimate over the last decade.[1] One scientist has said this is almost certainly due to fracking. There should be no exemption for NW Natural.

According to the IPCC 40-70% of species would be doomed to extinction by global warming of 3.5 degrees Celsius.[2]

Climate change is estimated to kill 400,000 people per year already, and the number is projected to exceed 600,000 by 2030.[3] Billions of people migrating to avoid starvation from drought would cause chaos around the world.

To have a 66% chance of keeping global warming below 2 degrees Celsius, 68% of the proven reserves must remain in the ground.[4]

The Fuel Terminal Representatives claim these amendments are emotionally driven. This is a false argument, and an arrogant one at that. It's also an example of attacking your opponent's character when you can't win the debate with rational arguments.

It's true the dire warnings we hear from the scientific community stir emotion, especially when we hear that the damage to life on earth is proceeding faster than predicted, but we should all remember that it's not just local jobs or lives that matter, and there are no good jobs on a dead planet.

---

[4] "The Sky's Limit: Why the Paris Climate Goals Require a Managed Decline of Fossil Fuel Production", by Greg Muttitt, September 22, 2016, Oil Change International

I urge you to eliminate the allowance of a 10% expansion of existing terminals, and support the recommendation of pursuing seismic safety thru building code changes at the state level.

Since the Recommended Draft was written, JAX LNG announced plans for a 2 million gallon facility in Jacksonville, Fla., intended to supply bunker barges for distribution on the east coast. The 2 million gallon threshold should also be eliminated, so such facilities will not be built in Portland.

Thank you for your attention to these comments.

Alan Smith

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Pamela smith

To: BPS Fossil Fuel Zoning
Subject: Enact a Full Ban on All New Fossil Fuel Terminals & Prohibit Expansions of Existing Terminals
Date: Thursday, November 10, 2016 11:26:02 AM

Dear Portland City Council,

The policy set by City Council advanced our transition away from dirty, dangerous fossil fuels, and the City received worldwide praise for its leadership. Portland must continue to take bold action for a clean energy economy. **On behalf of future Portland generations, please prohibit expansions of existing fossil fuel terminals.**

Please enacting a full ban on all new fossil fuel terminals by removing the exception for terminals under 2 million gallons. The proposed 2-million-gallon exception would still allow new fossil fuel facilities to be built in our communities. We learned first-hand during the June 3, 2016 derailment in Mosier that oil trains are dangerous, and the City should use its fossil fuel zoning code amendments to diminish their use rather than creating space for many more. Fossil fuel demand should be declining: the amendments need not allow for new fossil fuel infrastructure. Staff explained that fossil fuel use may be flat or declining, negating the need for new or expanded fossil fuel terminals.

City Council should allow existing terminals to operate or upgrade for seismic readiness, but not to expand. Allowing fossil fuel terminals to expand is a clumsy and unnecessary way to push seismic upgrades at dangerous fossil fuel storage tanks near rivers and neighborhoods. The City has other, more effective means of encouraging seismic upgrades than an imprecise, open-ended incentive to build more fossil fuel infrastructure. We agree that the City should "develop proposals for State building code changes to improve seismic resilience and require seismic upgrades comparable to proposed requirements on unreinforced masonry buildings," as stated on page 62 of the PSC's recommendation. Let's use the right tools to make seismic upgrades. We don't need to expand fossil fuel terminals in order to make them safer.

Climate science is clear that we must keep fossil fuels in the ground to avoid catastrophe. Additionally, there is growing support for renewable energy in the City of Portland. Portland must accelerate the trend of declining fossil fuel use in order to meet its 2050 carbon reduction goals.

Make Portland Proud!

TIDEWATER
TRANSPORTATION & TERMINALS

November 10, 2016

Portland City Council
c/o- Council Clerk
1221 SW Fourth Avenue, Room 130
Portland, Oregon 97204

RE: City of Portland - Bureau of Planning and Sustainability
Recommended Draft Fossil Fuel Terminal Zoning Amendments

Thank you for the opportunity for Tidewater Barge Lines ("Tidewater") to provide comments regarding the draft zoning amendments that would restrict development and expansion of bulk fossil fuel terminals.

Tidewater is a marine transportation and terminal company based in the Pacific Northwest that employs approximately 275 people. Tidewater has been in business since 1932 and is the largest inland marine transportation company west of the Mississippi River with 16 tugboats, 170 barges and five marine terminals. Tidewater's vessels help to move millions of tons of freight every year on Pacific Northwest waterways, reducing congestion on the state's highways and railroads while producing far fewer pollutants and carbon emissions than trucks and trains transporting equivalent tonnage. Likewise, our industry's incident statistics and safety record show that the towing industry in the Pacific Northwest has one of the best programs for moving commodities securely and safely in the nation.

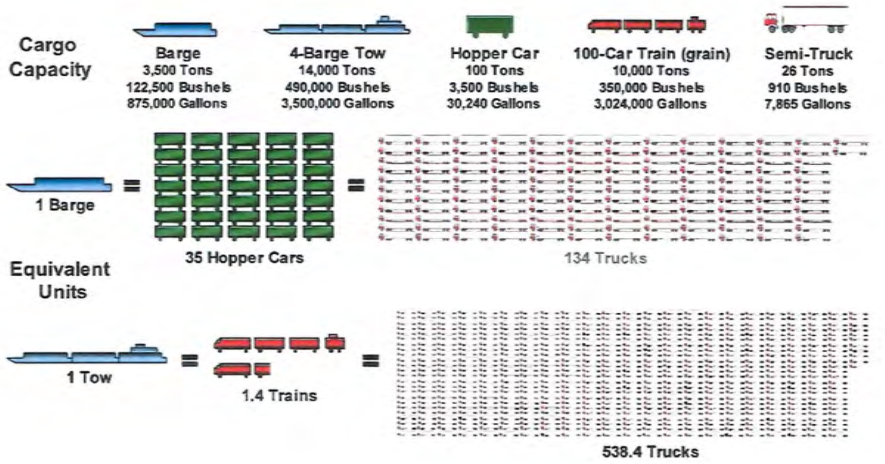
We have reviewed the proposed zoning changes and are concerned that these amendments will restrict economic development in the Pacific Northwest. We feel that energy terminals can be built, expanded and operated safely in the City of Portland. Energy terminals have the ability to create a positive economic impact and support new and existing family wage jobs in our region.

In addition, we have concerns that the proposed zoning changes will have negative environmental consequences to the Pacific Northwest. The proposed zoning changes create uncertainty about the future of energy terminals. These terminals are key to a fuel distribution network that allows Tidewater to supply fuel by barge from Portland to Eastern Oregon and Washington in an efficient and environmentally friendly matter. As noted in the enclosed document, four barges pushed by a tugboat is the equivalent of 538.5 trucks or 140 railcars that travel on the highways and railroads in our region. If these terminals cease operations, fuel will have to be distributed in other modes of transportation such as truck and railcar. Therefore, if barging is no longer a viable option for transporting fuel, then every four barge tow would be potentially replaced with 538.5 trucks or 140 rail cars travelling on the highways and railroads in the Columbia River Gorge.

6305 NW Old Lower River Road, Vancouver, WA 98660 • 360.693.1491 • www.tidewater.com

In conclusion, Tidewater is an advocate for environmental stewardship in the Pacific Northwest and hopes the City of Portland will consider having a constructive dialogue with Tidewater and the other stakeholders to generate an implementable fossil fuel distribution policy that addresses climate change goals, public safety and environmental protection without significantly adversely impacting the viability of Oregon's economy and its waterfront industry. Tidewater urges the Portland City Council not to adopt these proposed fossil fuel terminal zoning amendments.

Thank you for your consideration and the opportunity to comment on this important matter.



Sincerely,

Robert A. Curcio
President & CEO

Comments to the Portland City Council on the Fossil Fuel Terminal Zoning Amendments Recommended by Portland Bureau of Planning and Sustainability - November 10, 2016

I am Dr. Theodora Tsongas, an environmental health scientist, and a member of the Environmental Health Working Group of Oregon Physicians for Social Responsibility and the Multnomah County Local Emergency Planning Committee. The Fossil Fuel Terminal Zoning code changes recommended by the Portland Bureau of Planning and Sustainability are well thought out. I commend PSC's restriction of aggregation of small fossil fuel terminals, and I commend PSC for rejecting a request by NW Natural to exempt its facilities from the fossil fuel code amendments.

But the recommended code changes still raise concerns about public safety and could pose a threat to our community and neighborhoods. We can do better to more fully reflect the city's Resolutions 37168 (the Fossil Fuel Policy Resolution), 37164 (the Oil Train Resolution), and the Climate Action Plan.

Please let me remind you of the fire that resulted from a collision of an oil tanker truck with an oil train. Unfortunately, the truck driver was killed. Fortunately, the train cars burned but did not explode. It was a very close call for nearby industries, workers and residents in NW Portland. In Mosier the derailed train cars burned for days and destroyed or disabled much of the town's water and sewer infrastructure, exposed residents and visitors to noxious smoke from the oil fires as well as causing major disruption in the life of the town. Accidents happen.

Let 's not increase the likelihood of an oil fire. We need to truly "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." This means actively discouraging increases in demand for fossil fuel unit trains in Portland.

If we look at the ten large oil facilities listed in Figure 7 of PSC's recommendation, and apply a 10% across- the-board increase in terminal capacity, that would result in additional storage of 39 million gallons of oil – a volume equivalent to roughly 13 unit trains of explosive Bakken crude oil.

Allowing a 10% increase in capacity will not discourage the development of fossil fuel infrastructure. We must allow for seismic and safety upgrades without increasing capacity, or we defeat the purpose of the resolutions and the Climate Action Plan.
Why take chances with our neighborhoods that are on the rail corridor? And let's not take a chance with the health and safety of our Linnton neighbors who live so close to the tanks.
And, let's truly take the lead in combating climate change by accelerating the decline of fossil fuel use and by redirecting our resources to the development and implementation of sustainable, clean energy sources. Let's continue the great work that you have begun!

Thank you for considering my comments.

From: Anais Tuepker
To: BPS Fossil Fuel Zoning
Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Thursday, November 10, 2016 12:22:14 PM

Dear City Council,

I have written to you in support of a strong fossil fuel infrastructure ban before, but today, in the aftermath of our presidential election, I write with an even greater sense of urgency than before. Like many Portlanders, I am deeply concerned for the direction of our country in the next four years.

But I also have hope that this election will serve as a wake-up call to all of us that we are the ones who must take decisive action on climate change. We, right here, must be the leaders in moving away from a fossil fuel economy, as quickly as is humanly possible.

That means, in precise and immediate terms, that we cannot allow any new terminals. The draft recommendations still allow for new terminals up to 2 million gallons. Any new terminal is s shortsighted investment and sends entirely the wrong message to businesses and other stakeholders that we will allow the norms of a fossil-fuel dependent economy to continue.

Similarly, expansions at existing terminals should not be allowed, nor should they be linked to calls for seismic safety upgrades. Safety upgrades are absolutely needed, and plans should be reviewed and recommended through the state's existing channels for improving seismic safety. But if facility owners see upgrades as linking to a one-time opportunity to expand facility capacity, they will take it, and that again sends the wrong message and goes against the spirit of the infrastructure ban that the Council passed last year. Allowing a 10% expansion of existing facilities could translate into 39 million gallons of additional oil being shipped, burned, and added to the already overstretched "budget" of fossil fuels we can burn before being guaranteed of disastrous rises in global temperatures.

I urge you to please make this a true ban on new fossil fuel infrastructure, with no exceptions. We are running out of time to protect so much of what we hold dear in our natural world; we are putting our social fabric in jeopardy. Portland needs to be brave and step up for a sustainable, inclusive, clean-energy future that works for all of us.

Sincerely,

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

As a young Catholic inspired by Pope Francis, I believe that we have a moral imperative to care for our planet in a way that protects all people, especially the poor and for the benefit of future generations. With that in mind, the current Fossil Fuel Zoning Amendments recommended draft falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland to:

Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.

Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.

Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Now more than ever the City of Portland has the opportunity to be a leader in the U.S. climate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time.

Sincerely,
Tyler Wagner

Mayor Hales and Commissioners,

With our country about to be taken over by a man who has vowed to reverse environmental laws and dismantle EPA. Now is the time to stand up boldly to the fossil fuel industry, stop kowtowing to big oil interests who are trying to make the city back down on this historic ordinance. There is a need to expand on this ordinance to assure safety.

The Cascadia earthquake: It's not if it is going to happen,but when. If it doesn't happen in the next 50 years we have dodged an 85% chance that it will. Two other adjacent fault lines and one under the tank farms, along with liquefiable soils and lateral movement, make the location for these fossil fuel tanks the worse place possible to locate them.

Natural hazards are not the only problem that could result in an environmental catastrophe of epic proportions. In the last few years we have had 3 near misses due to accidents that could have achieved the same disastrous results.

Do not exempt NW Natural from fossil fuel code amendments. Storage of such fuels near the fuel storage tanks and Siltronics liquid hydrogen tank are extremely dangerous. Many small tanks can quickly add up to a large storage facility.

Goal 7 of Oregon Land Use Law states that cities should pass zoning laws where hazards cannot be mitigated.

Cercla law requires responsibility. Make sure insurance or assurance bond coverage is enough to include not only the environmental costs of destruction and cleanup, but also loss of life, property loss- private, industrial, and public. Which would include Linnton, St Johns, Industries, Forest Hills Park, the Willamette River and the Columbia River, wildlife and aquatic life adjacent to the fossil fuel industries. If Fossil Fuel industries will not or cannot acquire such insurance, than they should be required to move to safer ground.

Make the tanks move if they will not upgrade seismically to the highest standards needed.

Can you imagine the amount of carbon a fire from that area would create? You can't extinguish a fire particularly of that magnitude, millions and millions of gallons, you have to let it burn out.

Do not allow storage of RR tank cars filled with hazardous materials to be stored in this area, sometimes for days on end. That amounts to mobile storage of fossil fuels. Some stored as close as 25 feet from Linnton's Day Care Center. The dangers are greatly increased by RR switching that takes place in the Linnton/ Willbrige area. There are many uncontrolled railroad crossings in Linnton with tanker trucks loaded with volatile fuel crossing over them.

Kinder Morgan's leaking, legacy Columbia pipe line and Gasco's pipe line should not be adjacent and should be relocated or replaced.

Taxpayers, neighborhoods, families, the environment should not have to bear the consequences and costs of fossil fuel industries that favor profits over people.

For all your constituents don't back down on this ordinance, make a bold statement. PROTECT US.

Thank you for your time and consideration on this matter,

Darise Weller : Linnton resident and LNA board member, Portland Harbor Community Advisory Group member, North West Toxic Communities Coalition for EPA Region 10 board member, and very concerned citizen.

Re: Western States Petroleum Association Comment for PSC Fossil Fuel Terminal Zoning Amendments

Dear City Council Members:

The Western States Petroleum Association (WSPA) appreciates the opportunity to provide comments on the proposed PSC Fossil Fuel Terminal Zoning Amendments. WSPA is a non-profit trade association representing companies that explore for, produce, refine, transport, and market petroleum and petroleum products in five western states including Oregon. WSPA members operate petroleum terminals in Portland. WSPA opposes the Planning and Sustainability Commission's recommended zoning amendments under Resolution No. 37168, Fossil Fuel Terminal Zoning Amendments.

WSPA members have operated in the energy corridor along Northwest St. Helens Road for decades. This corridor provides key energy and emergency infrastructure as recognized by various city, state, and federal documents. WSPA members have grown concerned that the amendments go beyond the original City Council adopted resolution No. 37168 to constrain existing operations and projects for current and near-future regional needs for energy.

The recommended zoning amendments would create a number of substantial unintended consequences. Specifically, the recommended amendments would:

- Prevent and discourage terminal upgrades, including tank seismic upgrades, due to the business impacts of capping capacity and operational sequencing for upgrading tanks, resulting in *fewer* upgraded tanks;

1415 L Street, Suite 600, Sacramento, California 95814
(916) 498-7752 • Fax: (916) 444-5745 • Cell: (916) 835-0450
cathy@wspa.org • www.wspa.org

- Prevent and discourage replacing equipment that has reached end of life;
- Prevent and discourage equipment upgrades necessary to meet market demand or comply with federal and state law;
- Prevent and discourage safety and efficiency upgrades;
- Restrict infrastructure that serves the region as described above, in contradiction of the new City Comprehensive Plan provision governing fossil fuel infrastructure in the City's adopted 2035 Comprehensive Plan Policy 6.48;
- Fail to clearly specify how existing infrastructure can expand on existing sites, to adjacent properties, and to nearby non-adjacent properties;
- Restrict new infrastructure related to Oregon's low carbon fuel standards, Oregon's Renewable Fuel Standards, federal Renewable Fuel Standards, and similar laws;
- Fail to provide for sufficient facilities to serve future energy needs;
- Stymy [that's quite the word! How about Thwart?] potential future technologies that do not fit within the contemplated framework;
- Attempt to exclude Portland from the national and regional energy market;
- Introduce a host of ambiguities and uncertainties to the marketplace that are necessary for a thriving economy;
- Not align with state and federal policy regarding siting energy infrastructure or transportation of fuels;
- Encourage less efficient (and potentially less safe) transportation by truck over more efficient modes of transportation;
- Fail to provide for the economic impact assessment called for by Resolution No. 37168;

1415 L Street, Suite 600, Sacramento, California 95814
(916) 498-7752 ▪ Fax: (916) 444-5745 ▪ Cell: (916) 835-0450
cathy@wspa.org ▪ www.wspa.org

- Fail to adequately engage Oregon and Metro residents and businesses outside Portland that will be impacted by the bottleneck in energy distribution created by the proposal.

State and federal laws govern state and regional energy and transportation policy, including through the U.S. Constitution, federal law, and state land use law. The unintended consequences described in this letter would create a bottleneck in energy supply for the state and region through these zoning provisions that violate the above federal and state policies. The proposal is inconsistent with Oregon's coordinated land use planning system, Metro's regional plan, the City's Comprehensive plan, and the City's land use regulations. We respectfully ask that the City slow down and take the time to develop an approach that takes into account all of the local and regional laws and policies impacted by this proposed amendment.

The City serves as a distribution hub for the region and state. Terminals in the City serve more than 90 percent of the statewide market. The proposal may result in reduced energy options available in other jurisdictions in Metro, Oregon, and other nearby states, without appropriately coordinating with those jurisdictions. The policy decisions that the City is trying to force through affect the region and state, and seem to exclude impacted parties in smaller cities and rural areas of the state.

We have enclosed proposed zoning code language in Appendix 1 that would address some of the issues raised in this comment. While the proposed language does not resolve all the concerns with the contemplated amendments, it addresses some of them.

Again, thank you for this opportunity to comment on the Fossil Fuel Terminal Zoning Amendments Proposed Draft. We hope the City reconsiders its push to pass regulations in this area and more narrowly tailors its rules to avoid unintended consequences.

Thank you for your consideration of WSPA's comments. If you have any questions or comments please contact me or my staff, Jessica Spiegel at Jessica@wspa.org or 360-352-4512.

Thank you,

1415 L Street, Suite 600, Sacramento, California 95814
(916) 498-7752 • Fax: (916) 444-5745 • Cell: (916) 835-0450
cathy@wspa.org • www.wspa.org

Appendix 1- Proposed Portland Zoning Ordinance

This appendix contains draft zoning code language from WSPA for City of Portland consideration in effectuating the City's fossil fuels policy. WSPA continues its position that the City's effort to regulate fossil fuels is misplaced and opposes those efforts. These proposed code provisions are intended to avoid some of the unintended consequences of the City's proposal and do not indicate WSPA support for City efforts to regulate fossil fuels. WSPA's draft code language contains four components:

1. Three new definitions for Portland Zoning Ordinance Chapter 33.910 (Appendix 1, page 2),
2. A use characteristics description for Bulk Fossil Fuels Terminals in Zoning Ordinance Chapter 33.920 (Appendix 1, page 2),
3. A new Energy Corridor Overlay Zone to protect existing fuel terminals in proposed new Portland Zoning Ordinance Chapter 33.490 (Appendix 1, page 4), and
4. Modifications to base industrial zones in Portland Zoning Ordinance Chapter 33.140 to recognize Bulk Fossil Fuel Terminals as a limited use (Appendix 1, page 7).

[Proposed New Definitions for Portland Zoning Ordinance Chapter 33.910]

Extra-Regional Bulk Fossil Fuel Terminal. A fossil fuel terminal that primarily serves markets outside of the Petroleum Administration for Defense District (PADD) 5 region, an area that includes the western states of California, Arizona, Nevada, Oregon, Washington, Alaska, and Hawaii.

Fossil Fuels. Fossil fuels include coal, petroleum, crude oil, refined oil, natural gas, bitumen, kerosene, propane, and other fuels made from decayed plants and animals that lived millions of years ago and are primarily used as a source of energy. Blended fuels containing a mix of fossil fuels and other fuel sources designed to address Oregon's low carbon fuel standards in Oregon Administrative Rules Chapter 340, Division 253, federal Renewable Fuel Standards, state Renewable Fuel Standards, or similar state or federal laws designed to reduce the carbon footprint of fuels are not fossil fuels.

Regional Bulk Fossil Fuel Terminal. A fossil fuel terminal that primarily serves the Petroleum Administration for Defense District (PADD) 5 region, an area that includes the western states of California, Arizona, Nevada, Oregon, Washington, Alaska, and Hawaii.

ENERGY PROUD

[Proposed New Use Category For Bulk Fossil Fuel Terminals]

33.920.360 Bulk Fossil Fuel Terminal

A. Characteristics. Bulk Fossil Fuel Terminals are characterized by having all of the following (1) marine, pipeline or railroad transport access, (2) transloading facilities for transferring a shipment between transport modes (such as from rail to ship), and (3) storage facilities for fossil fuels exceeding a storage capacity of [____] million barrels for petroleum, [____] million gallons for liquefied natural gas (LNG), [____] million gallons for other liquefied gas fuels.

B. Accessory Uses. Accessory uses may include offices, pipes, industrial processing, shipping terminals, parking, storage, rail spur or lead lines, and docks.

C. Examples. Extra-regional liquefied natural gas (LNG) export facilities, propane export facilities, or coal export facilities.

D. Exceptions.

1. Improvements in the safety, or efficiency, seismic resilience, or operations of existing energy infrastructure.
2. Terminals or firms that are end users of fossil fuels or sell directly to end users of fossil fuels such as airports, manufacturing, agricultural businesses, utilities, gas stations, and power plants.
3. Development of emergency backup capacity.
4. Infrastructure that enables recovery or re-processing of used petroleum products
5. Terminals or firms that are storing, transporting or processing fuels and blended fuels containing a mix of fossil fuels and other fuel sources designed to address Oregon's low carbon fuel standards in Oregon Administrative Rules Chapter 340, Division 253, federal Renewable Fuel Standards, state Renewable Fuel Standards, or similar state or federal laws designed to reduce the carbon footprint of fuels.

[Proposed New Chapter in Zoning Ordinance]

City of Portland Planning and Zoning Ordinance - Title 33, Planning and Zoning

Chapter 33.490 Energy Corridor Overlay Zone

Sections:

33.490.010 Purpose
33.490.020 Map Symbol
33.490.025 Relationship to Portland Zoning Code Chapter 33.140
33.490.030 No Size limits
33.490.040 Expansion of Energy Corridor Terminals

Map 490-1 Energy Corridor Overlay Zone Boundaries

33.490.010 Purpose

The Energy Corridor Overlay Zone recognizes the historic cluster of energy terminals, including fossil fuel terminals that have served as Portland's hub for energy transport for decades. The purpose of this overlay zone is to protect this area for future energy infrastructure growth, including but not limited to expansion of energy terminals.

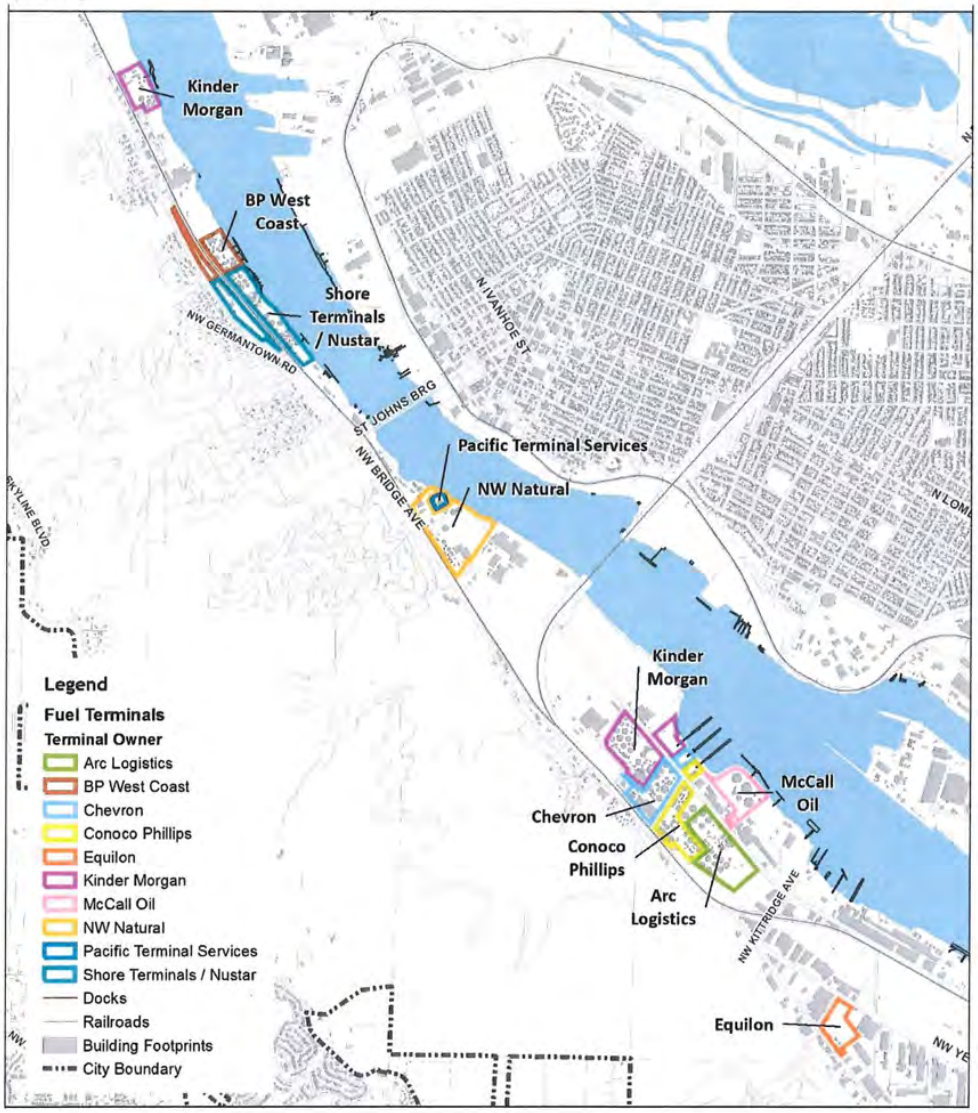
33.490.020 Map Symbol

The Energy Corridor Overlay zone is shown on the Official Zoning Maps with a letter "m" map symbol.

33.490.025 Relationship to Portland Zoning Code Chapter 33.140

The Energy Corridor Overlay zone provides flexibility for the sites subject to this overlay in addition to what are allowed under Portland Zoning Code Chapter 33.140. If there is a conflict between what is allowed under this Chapter 33.490 and what would be allowed Chapter 33.140, this Chapter 33.490 controls.

33.490.030 No Size Limits



ENERGY PROUD

There is no storage or other size limits for Bulk Fossil Fuel Terminals or other energy facilities located in the Energy Corridor Overlay Zone.

33.490.040 Expansion of Energy Corridor Terminals

A Bulk Fossil Fuel Terminal in the Energy Corridor Overlay may expand to new lots and parcels outside of the Energy Corridor Overlay zone as provided in this Section 33.490.040. A Bulk Fossil Fuel Terminal may only expand onto parcels or lots that are all or partially within one half of a mile from a property line of the lot or parcel containing the Bulk Fossil Fuel Terminal. A Bulk Fossil Fuel Terminal that is expanded outside of the Energy Corridor Overlay will be treated as if it were entirely within the Energy Corridor Overlay for purposes of land use and all other city approvals. If an expansion of an energy facility to a new lot or parcel pursuant to this Section 33.490.040 includes proposed development that would qualify the combined energy facility as a Bulk fossil Fuel Terminal, the combined energy facility will be treated as if it were entirely within the Energy Corridor Overlay for purposes of land use and all other city approvals.

General

33.140.010 General Purpose of the Zones

The employment and industrial zones are for areas of the City that are reserved for industrial uses and for areas that have a mix of uses with a strong industrial orientation. The zones reflect the diversity of industrial and business areas in the City. The zones differ in the mix of allowed uses, the allowed intensity of development, and the development standards. The regulations promote areas which consist of uses and developments which will support the economic viability of the specific zoning district and of the City. The regulations protect the health, safety and welfare of the public, address area character, and address environmental concerns. In addition, the regulations provide certainty to property owners, developers, and neighbors about the limits of what is allowed.

33.140.020 List of the Employment and Industrial Zones

The full and short names of the employment and industrial zones and their map symbols are listed below. When this Title refers to the employment or E zones it is referring to the first three listed. When this Title refers to the industrial or I zones, it is referring to the last three listed.

Full Name Short Name /	**Map Symbol**
General Employment 1	EG1
General Employment 2	EG2
Central Employment	EX
General Industrial 1	IG1
General Industrial 2	IG2
Heavy Industrial	IH

33.140.030 Characteristics of the Zones

A. General Employment. The General Employment zones implement the Mixed Employment map designation of the Comprehensive Plan. The zones allow a wide range of employment

ENERGY PROUD

opportunities without potential conflicts from interspersed residential uses. The emphasis of the zones is on industrial and industrially-related uses. Other commercial uses are allowed to support a wide range of services and employment opportunities. The development standards for each zone are intended to allow new development which is similar in character to existing development. The intent is to promote viable and attractive industrial/commercial areas.

1. General Employment 1. EG1 areas generally have smaller lots and a grid block pattern. The area is mostly developed, with sites having high building coverages and buildings which are usually close to the street. EG1 zoned lands will tend to be on strips or small areas.

2. General Employment 2. EG2 areas have larger lots and an irregular or large block pattern. The area is less developed, with sites having medium and low building coverages and buildings which are usually set back from the street. EG2 zoned lands will generally be on larger areas than those zoned EG1.

B. Central Employment. This zone implements the Central Employment map designation of the Comprehensive Plan. The zone allows mixed-uses and is intended for areas in the center of the City that have predominantly industrial type development. The intent of the zone is to allow industrial and commercial uses which need a central location. Residential uses are allowed, but are not intended to predominate or set development standards for other uses in the area. The development standards are intended to allow new development which is similar in character to existing development.

C. General Industrial. The General Industrial zones are two of the three zones that implement the Industrial Sanctuary map designation of the Comprehensive Plan. The zones provide areas where most industrial uses may locate, while other uses are restricted to prevent potential conflicts and to preserve land for industry. The development standards for each zone are intended to allow new development which is similar in character to existing development. The intent is to promote viable and attractive industrial areas.

1. General Industrial 1. IG1 areas generally have smaller lots and a grid block pattern. The area is mostly developed, with sites having high building coverages and buildings which are usually close to the street. IG1 areas tend to be the City's older industrial areas.

2. General Industrial 2. IG2 areas generally have larger lots and an irregular or large block pattern. The area is less developed, with sites having medium and low building coverages and buildings which are usually set back from the street.

ENERGY PROUD

D. Heavy Industrial. This zone is one of the three zones that implement the Industrial Sanctuary map designation of the Comprehensive Plan. The zone provides areas where all kinds of industries may locate including those not desirable in other zones due to their objectionable impacts or appearance. The development standards are the minimum necessary to assure safe, functional, efficient, and environmentally sound development.

33.140.040 Other Zoning Regulations

The regulations in this chapter state the allowed uses and the development standards for the base zones. Sites in overlay zones or plan districts and designated historical landmarks are subject to additional regulations which supersede those of this Chapter. The Official Zoning Maps indicated which sites are subject to the additional regulations. Specific uses or development types may also be subject to regulations in the 200s series of chapters.

Use Regulations

33.140.100 Primary Uses

A. Allowed uses. Uses allowed in the employment and industrial zones are listed in Table 140-1 with a "Y". These uses are allowed if they comply with the development standards and other regulations of this Title. Being listed as an allowed use does not mean that a proposed development will be granted an adjustment or other exception to the regulations of this Title. In addition, a use or development listed in the 200s series of chapters is also subject to the regulations of those chapters.

B. Limited uses. Uses allowed that are subject to limitations are listed in Table 140-1 with an "L". These uses are allowed if they comply with the limitations listed below and the development standards and other regulations of this Title. In addition, a use or development listed in the 200s series of chapters is also subject to the regulations of those chapters. The paragraphs listed below contain the limitations and correspond with the footnote numbers from Table 140-1.

1. Household Living uses in I zones. This regulation applies to all parts of Table 140-1 that have a [1]. Household Living in houseboats and houseboat moorages in I zones are regulated by Chapter 33.236, Floating Structures. Household Living in other structures is prohibited.

2. Group Living. This regulation applies to all parts of Table 140-1 that have a [2].

ENERGY PROUD

a. General regulations. All Group Living uses except for alternative or post incarceration facilities, are allowed by right subject to the regulations of Chapter 33.239, Group Living.

b. Alternative or post incarceration facilities. Group Living uses which consist of alternative or post incarceration facilities are conditional uses. They are also subject to the regulations of Chapter 33.239, Group Living.

3. EG commercial limitation. This regulation applies to all parts of Table 140-1 that have a [3].

a. Limited uses.

(1) Office uses. Except for sites with historic landmarks, the net building area for Office uses is limited to the square footage of the site area. On sites with historic landmarks, the net building area for Office uses may be up to twice the total square footage of the site area. Exceptions to these size limits are prohibited.

(2) Retail Sales And Service uses. Except for sites with historic landmarks, the net building area plus any exterior display or storage area for Retail Sales And Service uses is limited to 60,000 square feet or the square footage of the site area, whichever is less. On sites with historic landmarks, the net building area plus any exterior display or storage area for Retail Sales And Service uses is limited to 60,000 square feet or twice the total square footage of the site area, whichever is less.

b. Conditional uses.

(1) Retail Sales And Service uses that exceed the area limits in 3.a(2) are a conditional use.

4. IG1 commercial limitation. This regulation applies to all parts of Table 140-1 that have a [4].

a. Limited uses. One Retail Sales And Service or Office use is allowed per site. The square footage of net building area plus the exterior display and storage area may be up to 3,000 square feet.

b. Conditional uses.

ENERGY PROUD

(1) More than one Retail Sales And Service or Office Use on a site is a conditional use.

(2) Any Retail Sales And Service or Office Use where the net building area plus the exterior display and storage area is more than 3,000 square feet is a conditional use.

c. Prohibited uses.

(1) Except for sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 20,000 square feet or the square footage of the site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

(2) For sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 60,000 square feet or twice the square footage of the site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

5. IG2 commercial limitation. This regulation applies to all parts of Table 140-1 that have a [5].

a. Limited uses. Up to four Retail Sales And Service or Office uses are allowed per site. The square footage of the net building area plus the exterior display and storage area may be up to 3,000 square feet per use.

b. Conditional uses.

(1) More than four Retail Sales And Service or Office uses on a site is a conditional use.

(2) Any Retail Sales And Service or Office use where the net building area plus the exterior display and storage area is more than 3,000 square feet is a conditional use.

c. Prohibited uses.

ENERGY PROUD

(1) Except for sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 20,000 square feet or the square footage of the site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

(2) For sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 60,000 square feet or twice the square footage of site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

6. IH commercial limitation. This regulation applies to all parts of Table 140-1 that have a [6].

a. Limited uses. Up to four Retail Sales And Service or Office uses are allowed per site. The square footage of the net building area plus the exterior display and storage area may be up to 3,000 square feet per use.

b. Conditional uses.

(1) More than four Retail Sales And Service or Office use on a site is a conditional use.

(2) Any Retail Sales And Service or Office use where the net building area plus the exterior display and storage area is more than 3,000 square feet is a conditional use.

c. Prohibited uses.

(1) Except for sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 12,000 square feet or the square footage of the site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

(2) For sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 25,000 square feet or twice the square footage of site area, whichever is less. Retail Sales And Service

ENERGY PROUD

and Office uses that exceed these area limits are prohibited.

7. Self-Service Storage limitation. This regulation applies to all parts of Table 140-1 that have a [7]. The limitations are stated with the special regulations for these uses in Chapter 33.284, Self-Service Storage.

8. Waste-Related limitation. This regulation applies to all parts of Table 140-1 that have a [8]. All Waste-Related uses are conditional uses, unless they meet all of the following conditions in which case they are allowed by right.

a. The use must be approved by Metro under their authority as prescribed in ORS 268.317;

b. Metro's approval of the use must include a mitigation plan. The requirements for the mitigation plan must be approved by the City Council through an intergovernmental agreement with Metro, adopted prior to Metro's approval of the use; and

c. The location of the use must be in conformance with Metro's Regional Solid Waste Management Plan.

9. Community Service uses in EG zones. This regulation applies to all parts of Table 140-1 that have a [9]. Most Community Service uses are allowed by right. Short term housing may be allowed by right if it meets certain standards. See Chapter 33.285, Short Term Housing and Mass Shelters. Mass shelters are prohibited.

Y = Yes, Allowed — CU = Conditional Use Review Required

L = Allowed, But Special Limitations — N = No, Prohibited

Notes:

- The use categories are described in Chapter 33.920.
- Regulations that correspond to the bracketed numbers [ ] are stated in 33.140.100.B.

• Specific uses and developments may also be subject to regulations in the 200s series of chapters.

10. Community Service in the EX zone. This regulation applies to all parts of Table 140-1 that have a [10]. Most Community Service uses are allowed by right. Short term housing and mass shelters may be allowed by right if they meet certain standards, or may be a conditional use. See Chapter 33.285, Short Term Housing and Mass Shelters.

11. Community Service and Daycare limitations in I zones. This regulation applies to all parts of Table 140-1 that have a [11]. Community Service uses or Daycare uses up to 3,000 square feet of net building area are allowed. Community Service uses or Daycare uses larger than 3,000 square feet of net building area are a conditional use. Short term housing and mass shelters of any size are prohibited.

12. Basic Utilities in E zones. This regulation applies to all parts of Table 140-1 that have a [12]. Public safety facilities that include Radio Frequency Transmission Facilities are subject to the regulations of Chapter 33.274. All other Basic Utilities are allowed.

13. Basic Utilities in I zones. This regulation applies to all parts of Table 140-1 that have a [13]. Public safety facilities that include Radio Frequency Transmission Facilities are subject to the regulations of Chapter 33.274. Public safety facilities which have more than 3,000 square feet of floor area are a conditional use. The approval criteria are in Section 33.815.223. All other Basic Utilities are allowed.

14. Radio Frequency Transmission Facilities. This regulation applies to all parts of Table 140-1 that have a [14]. Some Radio Frequency Transmission Facilities are allowed by right. See Chapter 33.274.

15. Commercial Parking. This regulation applies to all parts of Table 140-1 that have a [15]. Except where plan district provisions supersede these regulations, Commercial Parking is a conditional use in the E and I zones. Within plan districts, there may be special regulations.

16. Agriculture. This regulation applies to all parts of Table 140-1 that have a [16]. Agriculture is an allowed use. Where the use and site meet the regulations of Chapter 33.237, Food Production and Distribution, the applicant may choose whether it is allowed as a Market Garden.

17. Bulk Fossil Fuels Terminals. Regional Bulk Fossil Fuel Terminals of any size are allowed. Extra-Regional Bulk Fossil Fuel Terminals may not exceed a storage capacity of [____] million barrels for petroleum, [____] million gallons for liquefied natural gas

ENERGY PROUD

(LNG), [____] million gallons for other liquefied gas fuels, except as may be allowed pursuant to the Portland Energy Corridor Overlay Zone. Coal terminals may not exceed a storage capacity of one ton of coal.

C. Conditional uses. Uses which are allowed if approved through the conditional use review process are listed in Table 140-1 with a "CU". These uses are allowed provided they comply with the conditional use approval criteria for that use, the development standards, and other regulations of this Title. Uses listed with a "CU" that also have a footnote number in the table are subject to the regulations cited in the footnote. In addition, a use or development listed in the 200s series of chapters is also subject to the regulations of those chapters. The conditional use review process and approval criteria are stated in Chapter 33.815, Conditional Uses.

D. Prohibited uses. Uses listed in Table 140-1 with an "N" are prohibited. Existing uses in categories listed as prohibited may be subject to the regulations of Chapter 33.258, Nonconforming Uses and Development.

33.140.110 Accessory Uses. Uses that are accessory to a primary use are allowed if they comply with specific regulations for the accessory uses and all development standards.

33.140.130 Nuisance-Related Impacts

A. Off-site impacts. All nonresidential uses including their accessory uses must comply with the standards of Chapter 33.262, Off-Site Impacts.

B. Other nuisances. Other nuisances are regulated by Title 29, Property and Maintenance Regulations.

33.140.140 On-Site Waste Disposal

On-site disposal of solid wastes generated by a use is subject to the same regulations as for uses in the Waste-Related use category. See Table 140-1.

Development Standards

[NO REVISIONS PROPOSED TO DEVELOPMENT STANDARDS]

ENERGY PROUD

My name is Diane Winn. I live at 1500 SW 11th Ave. I am a retired public health nurse and worked over 25 years conducting injury prevention research.

I was in these Chambers a year ago when you passed the Fossil Fuel resolution. What a proud moment it was. Our city leaders had taken an historic and bold step in addressing climate change! Portland was lauded throughout the country for approving the strongest fossil fuel ban in the US!!

Today, as you consider the zoning code amendments to implement the policy, I urge you to support the modifications recommended by PSR. With my background in public health, I am aware of the many threats to health and safety that fossil fuel transport and storage present. One relates to explosions and fires that can cause traumatic injuries and death and the release of toxins into the air.

An obvious fire risk is the transport of fossil fuels. In the past couple of years, at least 10 oil trains have experienced catastrophic derailments and explosions in North America. We all know about the derailment in Canada that demolished a city and killed 47 people. Thankfully Oregon escaped such a tragedy just 6 months ago when a train loaded with Bakken crude derailed and caught fire in Mosier. One way to reduce these risks is to reduce the need for fossil fuel transport. However, even a 10% increase in the capacity of one or all of our existing large fossil fuel terminals will result in more trains. This would conflict with the City's Oil Train Resolution.

Another major fire risk relates to storage. Oil and other fossil fuel storage tanks are at risk of fires and explosions from both man-made and natural causes. For example, a human-error fire in Mississippi in 2006 killed three workers after the fire traveled from one oil storage tank to another. Storage tanks located in liquefaction areas are at increased risk of spills, fires, and explosions during an earthquake.

Less than one year ago today, the potential for a fossil fuel tank fire hit too close to home. A tractor-trailer carrying fuel struck several train cars near the St. John's Bridge. Fuel from the big rig ignited, causing a fire with 70 foot flames. This occurred approximately 400 feet from a LNG storage tank.

Finally, I cannot conclude without mentioning the election results of two days ago. We **can not** expect the Federal government to do anything to address climate change and fossil fuels. It will be up to cities and states. I again ask you to take a very bold stand and pass a strong Fossil Fuel Policy that includes all fossil fuels and prohibits all new fossil fuel terminals and the expansion of existing terminals. Your leadership will serve as a beacon of hope to the rest of the country. I thank you for your service in making Portland a better place to live.

The mapping of fuels for the Clean Fuels Program would seem like the only reasonable way to allow a 10% increase in capacity.

Portland, OR 97231

November 9, 2016

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Rose Christopherson

Subject: Re: Fossil Fuel Zoning Amendments – Let's Put Portland's Fossil Fuel Ban Into Practice!
Date: Wednesday, November 09, 2016 6:09:21 PM

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed and spilled causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Austin Cory

Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Wednesday, November 09, 2016 1:20:35 PM

Honorable Members of Portland City Council:

Portland is known as a Progressive city, and we are proud of that! "Keep Portland weird" is dear to hearts here, since it means we are not afraid to be different and bold, unique in good ways.

In view of this devastating Presidential election result, where a person has been elected President of the United States who does not believe in Climate Change, much less Climate Justice, we need to stand up and be loud and proud as we set a direction, a model, for other cities. Cities still have rights and responsibilities, and let's take this opportunity to use these to move our city, our country, our world in a direction of survival. It seems so obvious, but heads are down and minds are closed.

This would be a wake-up and an example. Not that this is an easy road, but there is science and will and know-how and ideas, so let's go for it.

Do the most, not the least.* Be strong and bold in the implementation of this measure, for which we have so heartily applauded you.

Thank you sincerely,

*Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. We need NO new fossil fuel infrastructure.

Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.

Prevent NW Natural from getting "a carve out." NW Natural wants to be exempted from this policy and we need to make sure the City Council does not add a last minute amendment on NW Natural's behalf.

To: BPS Fossil Fuel Zoning
Subject: fossil fuel code
Date: Wednesday, November 09, 2016 4:54:08 PM

Please strengthen the code proposal by:

Enacting a full ban on all new fossil fuel terminals by removing the exception for terminals under 2 million gallons. The proposed 2-million-gallon exception would still allow new fossil fuel facilities to be built in our communities.

Eliminating the provision that allows existing fossil fuel terminals to grow by as much as 10% in exchange for seismic upgrades. These upgrades should be required, not provided in exchange for even bigger facilities.

Directing Portland Bureau of Emergency Management to develop proposals for State building code changes to require seismic upgrades.

Rejecting Northwest Naturals request to be exempted from these regulations.

Please act now to ensure Portland fulfills the promise to its historic fossil fuel resolution.

Thank you!

Barb Greene

From: Jana Griffin
To: BPS Fossil Fuel Zoning
Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Wednesday, November 09, 2016 2:28:18 AM

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

However, the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland to:

Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.

Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.

Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Now more than ever the City of Portland has the opportunity to be a leader in the U.S. climate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time.

Sincerely,
Jana

First of all, a special thanks to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. Listening to many different interest groups in order to craft legislation is often a thankless and difficult task. The current draft is much improved, offering changes that bring it close to the original intent of the 2015 Resolution.

But, the current Fossil Fuel Zoning Amendments draft falls short of the bold and visionary resolution that Portland should striving to achieve. This draft will allow construction of new port facilities that can handle 2 million gallons per day and expand the existing terminal capacity by 10%.

Unlike most Republicans, I believe that climate change is real. However, this is not why I am writing to you. The recovery of, transportation of and consumption of fossil fuels create serious negative externalities that the market fails to price correctly. The ecological, human and carbon costs of a fossil fuel based economy seem excessive when compared to a 0 emission society.

I am commenting to ask that the city of Portland; enact a full ban on construction of new export terminals, require existing terminals and pipelines to meet the State's Seismic Safety guidelines and prevent NW Natural from receiving preferential treatment.

Sincerely yours,
Ben Hamati

Subject: The City Council should approve the Portland Sustainability Commission"s Recommended Fossil Fuel Amendments
Date: Wednesday, November 09, 2016 9:37:09 AM

Dear Commissioners Fish, Fritz, Novick, Saltzman, and Mayor Hales;

I am writing to you all to urge each of you to approve the Portland Sustainability Commission's Recommended Fossil Fuel Amendments and stop any new fossil fuel facilities (including building new terminals and traveling on the rail lines and roadways) in our City by voting to actively oppose new fossil fuel infrastructure in Portland. It is critical that we move away from our dependence on fossil fuels as quickly as possible to stave off the worst impacts of climate chaos.

I can well imagine that you are receiving enormous pressure from fossil fuel companies to weaken the rules by allowing exceptions for new and expanded fossil fuel infrastructure. These big corporations want to expand fossil fuel terminals for their own continued profit, despite the risks to our climate and the dangers posed by oil, coal, and other fossil fuel trains that could travel through Portland neighborhoods and the Columbia River Gorge. There are thousands of people in Portland who live, work and worship within the blast zones along existing rail lines.

Fossil fuels are unsafe throughout their lifecycle from extraction through to combustion. In order to prevent catastrophic climate change, we need to prohibit ALL NEW FOSSIL FUEL PROJECTS and begin a rapid, managed transition to clean energy. I urge you to use your vote to make Portland a leader in standing up to the fossil fuel corporations and protecting the health and safety of our community--and that of people throughout the world. Please vote for the strongest prohibition possible on new fossil fuel infrastructure.

Thank you on behalf of all of the people of Portland, who will come after us. This is an important legacy to give to our future citizens and descendants.

Thank you,

Michael

Date: Wednesday, November 09, 2016 9:08:43 PM

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015.

I urge you to reconcile remaining differences between this amendment and the original resolution which obligates the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland."

To do so, it is very important to enact a comprehensive ban on new terminals, regardless of size. Only a firm stance to abstain from new fossil fuel infrastructure will stop the hole from becoming deeper, and allow us to concentrate on lifting ourselves out of climate chaos.

Similarly, expansions at existing terminals should be prohibited and and required to make upgrades for Seismic Safety through State Building Codes.

These rules should apply to everyone without exception, including Northwest Natural, who seeks to portray their product as an environmental solution--but as we know, investing in new natural gas infrastructure leads us away from creating the renewable energy future we seek.

I was very proud to be a Portland resident at the passing of this historic resolution last year. Please demonstrate your commitment to confronting catastrophic climate change and ensuring public safety by honoring the original intent of this amendment.

Thank you for your consideration and leadership.

To the members of the Portland City Council.
I grew up in PDX and love it, I will continue to love and live in (or at a minimum visit and hold it high as a standard for decent quality of life and a place that values the environment) for the rest of my life. As Portland grows, and as the nation moves forward with a very conservative federal government that neither understands nor appreciates the dangers of anthropologically caused climate change associated with fossil fuel dependence, I am asking you to fight for not only Portland values, but Portland (and global) resilience in the face of a changing world.
I understand that there are potential economic issues associated with a complete ban on fuel terminals in Portland, but at this point I don't care. Corporations and the general public can take a hit, and need to learn that there are consequences associated with the massive economic growth that has been come with industrialization. We can figure it out, treat people well and make things fair again all while paying more for luxury items like gas.
I stand with Portland Audubon in hoping that you will help Portland move the nation forward in clean energy and away from fossil fuel transportation/use, fracking is not a "bridge" and other fossil fuels need to be reduced and eliminated quickly. A complete ban would help fuel this movement.
Below are a list of things that a ban would support, which I am behind 100%
Best - Monika

- Enacting a full ban on all new fossil fuel terminals by removing the exception for terminals under 2 million gallons. The proposed 2-million-gallon exception would still allow new fossil fuel facilities to be built in our communities
- Eliminating the provision that allows existing fossil fuel terminals to grow by as much as 10% in exchange for seismic upgrades. These upgrades should be required, not provided in exchange for even bigger facilities.
- Directing Portland Bureau of Emergency Management to develop proposals for State building code changes to require seismic upgrades
- Rejecting Northwest Naturals request to be exempted from these regulations.

Subject: support for fossil fuel infrastructure restrictions- opportunity to go further
Date: Wednesday, November 09, 2016 4:09:46 PM

Mayor Hales and Council members.

As we know, cities such as Portland have taken the lead on climate action in our country. In the wake of the recent elections, it is more important than ever for Portland to set an example for responsible transition to a clean energy future. So heartfelt thanks to you, the elected officials who took the initiative to pass the 2015 resolution outlawing additional fossil fuel infrastructure and a Climate Action Plan and Comprehensive Plan that call for a transition from fossil fuels. Thanks also to the staff and Planning and Sustainability Commission members whose efforts have turned this into implementable regulation.

I'm here today to urge the Council to pass the strongest possible restrictions on fossil fuel infrastructure. Clearly we cannot rely on federal action to ensure our future in the face of climate change; we need to again take the lead. Please consider amendments to restrict all new fossil fuel infrastructure in the City, in keeping with the Council's brave resolution

As there is currently no documented need for additional storage facilities to meet the regional need, allowing these additions does not meet the spirit of the resolution. Why allow new facilities of up to two million gallons? New facilities of any size will come with a need for more transport of dangerous cargoes along our streets, rails, and waterways. These expansions bring additional risk to Portlanders already disproportionately burdened. To meet climate goals, we will need to over time rely less on fossil fuels, not more. If it is necessary to contemplate a future need for expansion in spite of this need, a ban of all new facilities could contain provisions that allow for periodic review of the need.

Likewise, it seems unnecessary to allow for 10% expansion of capacity of existing facilities. Again, with no demonstrated need for additional capacity, allowing these expansions is not in keeping with the goal of holding the line on new fossil fuel infrastructure. Am I concerned about seismic stability of these facilities? I live in Northwest Portland; you bet I am. Let's figure out the best way to require and incentivize these upgrades or relocations, not assume that expansion is the real price of risk reduction.

In summary, I'd like to applaud the Council for your action so far on this important issue, and urge you to hold the line on no new fossil fuel infrastructure in Portland.

Dear Portland City Council,
I am a Washington resident and was at the first hearing regarding this zoning issue. I applaud your efforts and ask that you enact a full ban on new terminals large or small. Further, I would ask that the new policy prohibit expansion at existing terminals and require them to make upgrades for safety and environmental protection. Once upon a time, natural gas was promoted as just that, natural. However, it is just another dirty fossil fuel and a product of the fracking industry we are trying so hard to shut down. It is time to stop giving handouts to the fossil fuel industry and holding them to high standards of safety and environmental impacts.

Please pass a tough policy.

Your friend across the river,
Therese Livella

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Shawn Looney

Subject: Fossil Fuel Hearing
Date: Wednesday, November 09, 2016 2:50:08 PM

To the Portland City Council,
I commend you on passing the historic resolution to ban new fossil fuel facilities in the city last year. As you work to implement this resolution into binding city code, I expect you to completely follow through with enacting a full ban of fossil fuel expansion, as last fall's resolution explicitly called for.

I urge you to strengthen the code proposal by:

- Enacting a full ban on all new fossil fuel terminals by removing the exception for terminals under 2 million gallons
- Eliminating the provision that allows existing fossil fuel terminals to grow by as much as 10% in exchange for seismic upgrades. These upgrades should be required, not provided in exchange for even bigger facilities.
- Directing Portland Bureau of Emergency Management to develop proposals for State building code changes to require seismic upgrades.
- Rejecting Northwest Natural's request to be exempted from these regulations.

Now more than ever our state, country, and world need strong leadership in combatting climate change. I urge you to step up and provide that leadership. The people of Portland support you and your efforts.

Thank you,
Alice McKee

Hi, I'm Tim Norgren, member of Laborers' Local 737. I live in the Gorge and often work in Portland.

Our house is within sight of the railroad when the leaves thin out, which means we're squarely in the "blast zone" and if we should be as unfortunate as Mosier we would have to evacuate our house after being rocked by a cataclysmic explosion and inhaling vast quantities of carcinogens. Next we would have to see if the volunteer fire dept. (even closer to the tracks, near the Port office) was still standing and hope the equipment wasn't destroyed or the volunteers killed so that we'd have some help in stopping the house and forest fires that often accompany such events. There's a good chance the fracking chemicals and oil spilled would end up in rock creek, feeding into the Columbia, or if a train derailed across from the fairgrounds on the thin isthmus between the Columbia and Rock Cove, then it's likely it would end up on both sides, and perhaps claim the lives of those traveling alongside it on Hwy 14 as well. Our water treatment plant sits nestled between town and the fairgrounds and it's pretty much a given our water would be poisoned. So would our fish, otters, waterbirds, raccoons and the others.

Health effects just from the psychological trauma of such events can last for years, especially in children. There's now enough evidence for us to know that traumatic events during childhood often lead to a prolonged "fight, flight or freeze" reaction, affecting ALL of our biological systems and leading to health problems from heart and breathing issues, to digestive issues, to "unexplained" nerve pain. My partner endured a barn fire as a child and though she wasn't burned she was forced to watch helplessly and smell her animal friends being cooked alive while they screamed. To this day she is plagued by night terrors related to it in various ways. She also developed fibromyalgia, a debilitating nerve disease which is directly linked to childhood trauma and sometimes triggers later in life. Trauma can also linger for generations. It's rampant in places like Lac Megantic, and will surely linger with the residents and former residents of Mosier and the other "sacrifice zones" for years as well. I don't want to see more of this in our communities and we are standing at the threshold of an opportunity to turn back the tide on this type of tragedy.

That being said I encourage you to improve on the PSC's recommendation by sticking to the full intentions of the oil train resolution the council adopted last year. That resolution made it clear that no new infrastructure would be built to encourage an increase in oil train traffic through Portland and the Gorge. Allowing a 10% increase in volume to current fuel storage facilities would do just that. There are other ways to encourage seismic upgrades, including simply calling it as it is, a public safety issue, and making upgrades a requirement for staying in business here. If that isn't acceptable to them I guarantee that I and other workers in the building trades will be more than willing to do the demolition work and ready the space for a more sustainable business!

In line with the above I have no wish to build NEW structures either,

no matter how "small" they are, which would increase fuel traffic through Portland, by train, truck, or pipeline. Again, we all live here in the area, and no one wants to see their community destroyed. Nor does any worker want to look at such a tragedy and know that we "built" it. Because the fact is we construction folks do tend to look back at projects a few years later and say "I built that". It's always preferable to have some pride in what you're saying, and increasingly the fossil fuel industry brings nothing but shame.

Finally, let there be no exemption for NW Natural. As we find we can meet our needs with sustainable energy there'll likely be LESS demand for fracked gas, (which from extraction to burning is often more carbon intensive than coal) in the Portland area, especially as we become more and more aware of the earthquakes and poIsoned water (including water used to irrigate crops..disgusting!) which are the additional consequence of fracking.

Please let there be no more tragedy and no more trauma caused by our actions or inactions. Let the will of the people be law!

Thanks. Sincerely,

Tim Norgren

There's a good chance the fracking chemicals and oil spilled would end up in rock creek, feeding into the Columbia, or if a train derailed across from the fairgrounds on the thin isthmus between the Columbia and Rock Cove, then it's likely it would end up on both sides, and perhaps claim the lives of those traveling alongside it on Hwy 14 as well. Our water treatment plant sits nestled between town and the fairgrounds and it's pretty much a given our water would be poisoned. So would our fish, otters, waterbirds, raccoons and the others.

Health effects just from the psychological trauma of such events can last for years, especially in children. There's now enough evidence for us to know that traumatic events during childhood often lead to a prolonged "fight, flight or freeze" reaction, affecting ALL of our biological systems and leading to health problems from heart and breathing issues, to digestive issues, to "unexplained" nerve pain. My partner endured a barn fire as a child and though she wasn't burned she was forced to watch helplessly and smell her animal friends being cooked alive while they screamed. To this day she is plagued by night terrors related to it in various ways. She also developed fibromyalgia, a debilitating nerve disease which is directly linked to childhood trauma and sometimes triggers later in life. Trauma can also linger for generations. It's rampant in places like Lac Megantic, and will surely linger with the residents and former residents of Mosier and the other "sacrifice zones" for years as well. I don't want to see more of this in our communities and we are standing at the threshold of an opportunity to turn back the tide on this type of tragedy.

That being said I encourage you to improve on the PSC's recommendation by sticking to the full intentions of the oil train resolution the council adopted last year. That resolution made it clear that no new infrastructure would be built to encourage an increase in oil train traffic through Portland and the Gorge. Allowing a 10% increase in volume to current fuel storage facilities would do just that. There are other ways to encourage seismic upgrades, including simply calling it as it is, a public safety issue, and making upgrades a requirement for staying in business here. If that isn't acceptable to them I guarantee that I and other workers in the building trades will be more than willing to do the demolition work and ready the space for a more sustainable business!

In line with the above I have no wish to build NEW structures either, no matter how "small" they are, which would increase fuel traffic through Portland, by train, truck, or pipeline. Again, we all live here in the area, and no one wants to see their community destroyed. Nor does any worker want to look at such a tragedy and know that we "built" it. Because the fact is we construction folks do tend to look back at projects a few years later and say "I built that". It's always preferable to have some pride in what you're saying, and increasingly the fossil fuel industry brings nothing but shame.

Finally, let there be no exemption for NW Natural. As we find we can meet our needs with sustainable energy there'll likely be LESS demand for fracked gas, (which from extraction to burning is often more carbon intensive than coal) in the Portland area, especially as we become more and more aware of the earthquakes and poIsoned water (including water used to irrigate crops..disgusting!) which are the additional consequence of fracking.

Please let there be no more tragedy and no more trauma caused by our actions or inactions. Let the will of the people be law!

Thanks. Sincerely,

Tim Norgren

Subject: Proposed fossil fuel terminal ban
Date: Wednesday, November 09, 2016 4:26:59 PM

Dear City Council:

I am writing to urge you to enact this historic ban on fossil fuel terminals, and would like to comment on some of the provisions:

-Please remove the exception for terminals under 2 million gallons. It is too late for piecemeal progress on this issue. Let's have Portland lead the way into a green energy future!

-Please reject Northwest Naturals request to be exempted. Allowing exemptions would degrade the ban to a symbolic gesture.

-Please eliminate the provision to allow existing fossil fuel terminals to grow in exchange for seismic upgrades. These upgrades should be required for public safety as a cost of doing dangerous business in our community, and can be addressed outside of the scope of this ban.

Thank you for your work on this important issue.

Sincerely,
Rob Oberdorfer

Those listed above submit the comments below.

Dear Mayor Hales and Commissioners Fritz, Fish, Novick, and Saltzman:

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input into drafts of the Fossil Fuel Terminal Zoning Amendments. The current proposal is much improved, bringing it closer to the original intent of the 2015 Fossil Fuel Policy Resolution #37168. However, it still falls short of the resolution, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland."

Although this proposal prohibits new large bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new and expanded fossil fuel storage tanks.

I want the City of Portland to:

1) Prohibit any expansion of existing terminals. Instead, require upgrades for Seismic Safety through

State building codes.

2) Enact a full ban on all new bulk fossil fuel terminals: 2 million gallon facilities are still too large. The language of the City's 2015 Resolution was "to actively oppose" any new fossil fuel infrastructure.

With a few simple improvements to the proposed Fossil Fuel Zoning Amendments, Portland can fully implement our historic resolution and once again be a beacon of light in addressing one of the most pressing concerns of our time.

Thank you for consideration of these comments,

Regna Merritt

Dear City Council Members,
Please take a stand for our future and oppose: fossil fuel terminals- new or expanded, and oil trains screeching through our beautiful city. Portland has an opportunity to create policy that will set into motion a real change for green energy to take place if we can just say no to fossil fuel. Our future depends on this.

From: Emily Platt
To: BPS Fossil Fuel Zoning
Subject: Portland's Fossil Fuel Policy Resolution
Date: Wednesday, November 09, 2016 7:00:10 PM

Dear Members of Portland City Council,

I am writing to express my strong support of a final fossil fuel code that limits the expansion of existing fossil fuel infrastructure, even potential facilities that handle relatively small amounts of fossil fuels -- all bulk fossil fuels facilities should be banned outright (as the City of Vancouver has done). In addition, any seismic upgrades should not be used as an excuse to expand existing fossil fuel infrastructure. Lastly, limitations in fossil fuel infrastructure should also apply to NW Natural with respect to methane and existing LNG terminals.

We are at critical juncture in the fight to combat fossil fuel driven global climate change. Our president-elect is an anti-environment global climate change denier. Thus, multiple local actions such as Portland's fossil fuel resolution will be key to limit and eventually end fossil fuel use. It is our duty as citizens of Portland and of the world to combat this existential threat with every tool we have.

Sincerely,

Emily Platt

Portland City Council
1221 SW 4th Avenue
Portland, Oregon 97204

Dear Portland City Council:

Thank you for the opportunity to comment on the Fossil Fuel Terminal Zoning Amendments. Throughout this process, we have focused largely on how the City of Portland can move forward with this policy in a manner that avoids unintended consequences for our region and state. To that end, we appreciate that fuel storage for "end users", including Portland International Airport (PDX) and marine fuel suppliers, are specifically exempt from the provisions of the proposed amendments.

In the case of PDX, its important to note that aviation fuel isn't stored exclusively at PDX. Fuel farm facilities at PDX are owned and operated by the Portland Fueling Facilities Corporation (PFFC), a consortium of the airlines operating at PDX. PFFC tanks assume a three-day reserve. The distribution chain for aviation fuel is a long one – beginning at a refinery (where it becomes aviation fuel), then to a distributor (fuel farm in PDX), then to PFFC tanks, and finally to the air craft. Aviation fuel cannot be blended with other fuels, and is stored separate from other fuels handled by the distributor.

With growth in the aviation sector, fuel consumption is expected to increase by more than 50% by 2035 with a corresponding need for tank storage. The code amendments should make it clear that fuel storage for end users is exempt – regardless of where this fuel is stored within city limits. We understand this was the legislative intent, and appreciate Portland City Council considering an amendment that would make this clear for the sake of avoiding confusion in future scenarios.

Thank you again for this opportunity to comment on this clarifying amendment and build on our comments to date.

Sincerely,

PORTLAND FREIGHT COMMITTEE

The Honorable Mayor Charlie Hales and City Council
City Hall, 1221 SW Fourth Avenue
Portland, OR 97204

RE: Comments on the proposed Fossil Fuel Terminal Zoning Amendments

Dear Mayor Hales & City Commissioners,

On behalf of the Portland Freight Committee (PFC), thank you for the opportunity to comment on the proposed Fossil Fuel Terminal Zoning Amendments (FFTZA) recommended draft.

In general, the PFC supports the goals sought to be addressed by the proposed fossil fuel terminal zoning amendments including reducing carbon emissions and making seismic upgrades to infrastructure that serves our city and beyond. However, the proposed zoning code amendments are deeply flawed and not the appropriate solution. Restricting expansion at existing fuel terminals and prohibiting new terminal development may impact industrial job growth and middle-income jobs. It may also constrain the supply of fossil fuels to serve anticipated population and employment growth, which will lead to increasing fuel costs and disproportionately affect low-income households.

We are also concerned that the city of Portland is unilaterally imposing regulation that will compromise the supply of fuels to other communities throughout the state and Western U.S. Portland is a regional fossil fuel hub, located at the terminus of the Olympic pipeline. Over 90 percent of petroleum used in Oregon is handled through the Bulk Fossil Fuel Terminals in Portland. Fuels handled in and through the Portland Energy Cluster (Energy Hub) are also supplied to the state of Washington, western Idaho, and during fire-season, to locations as far away as Montana and California. The FFTZA will create a bottleneck in the distribution system. Consumers and businesses throughout this broad market area rely on the fuels that are supplied from the energy hub in Portland.

Additionally, limiting the supply of fuels to airports, the maritime industry, railroads and trucking firms, until a viable source of alternative fuels are readily available makes little or no sense. Supplying fuels by alternative means, likely by truck, from outside the city, region and state is the antithesis of smart climate action policy.

The proposed amendments may also have a negative impact on seismic resiliency improvement efforts at the bulk fossil fuel terminals in Portland. The 10 percent overall expansion cap on tank storage capacity is actually a disincentive to rebuilding tanks that meet modern-day seismic standards.

The PFC urges Portland City Council to pursue other ways to achieve climate action plan and seismic resiliency goals. For example, the city may allocate its' own resources for the purchase of electric powered or other low-carbon emitting vehicles for its' city fleet and to demonstrate its' commitment to curbing greenhouse gas emissions. Providing economic incentives and an expedited permitting process may be ways to hasten construction of new, more seismically-resilient storage tanks at the BFFTs.

We are not asking the city to be complacent about the need to address climate change or the risks associated with catastrophic seismic events; we're recommending that the city take actions that are more thoughtfully considered and which are undertaken in a more consistent and open process than that which has taken place. At a minimum, there should be more thought, consideration and analysis including of fuel supply and prices before the proposed amendments are implemented.

Thank you for your consideration of our comments.

Respectfully yours,

Pia Welch — Chair

Raihana Ansary — Vice Chair

I am writing in regards to the Fossil Fuel Terminal Zoning Amendments.

It's more important now than ever that we act locally to do what's right. Barring extreme action on the national level, federal regulations on the fossil fuel industry have become unlikely. We must do what we can to show that there are still citizens of the U.S. that believe in facts and will fight to uphold the promises we made in at the UNFCCC in Paris. Portland has the chance to be a leader on this front. As a former educator, I'm begging for the future of my students. The world has already exceeded the levels of CO2 acceptable to prevent destructive climate change. We cannot keep exacerbating this problem. We need to enact a full ban on new fossil fuel infrastructure, with no exceptions. Current facilities need a ban on expansion and need to be made Seismic Safe through State Building Codes.

Please uphold promises to actively oppose new fossil fuel infrastructure by any means possible.
Sincerely,
Danielle Replogle

To the City of Portland,

I am too young to vote, too young to run for office, too young to drive. But I'm not too young to want to continue living on this planet, and I'm not too young to write letters. Do not condemn me and my peers to a future where earth is unlivable.

I want the City of Portland to:

Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.
Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.
Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators

Thank you,

Amalia Silverheart

Subject: Fossil Fuel Terminal Zoning Amendments

Dear Council Members,

Following the Pembina fuel terminal proposal, we support the City's actions to impose predictable, understandable regulations that will prohibit new large fossil fuel terminals in our city, while supporting our transition to a clean energy economy, and not impede important renovations of existing facilities, including those required to make them safer, replace them as they age out, and seismically upgrade them.

We have reviewed the proposed zone change language, as well as the September 9th, 2016 memo from Tom Armstrong and Steve Kountz to the Planning and Sustainability Commission outlining the proposed Fossil Fuel Terminal Zoning Amendments. Our comments below are specifically in reference to that memo.

Regarding the Fossil Fuel Terminal size threshold, we support Option A: No change to the storage capacity threshold of 5 million gallons.

With regards to regulating existing terminal expansion, we support Option C, to prohibit new Bulk Fossil Fuel Terminals and allow expansion of existing terminals greater than 10% through a conditional use review process with special criteria for emergency backup capacity, seismic upgrades, and tanks for clean and renewable fuels. However, it is critical that these criteria are enforced via inspections, as we would not like to see additional storage capacity approved under the guise of renewable fuels, only to discover that the operator has had a change of heart and decided to store pure fossil fuels after the structure is approved and the final inspector has left the site. There needs to be a regulatory regime to ensure that any structure that is approved for renewable fuels, is actually only used for renewable fuels.

Concerning additional review criteria, we feel strongly that if existing BDS staff do not feel that they have the capacity or expertise to implement discretionary land use review criteria addressing greenhouse gas emissions or safety impacts of hazardous material storage and transportation, that they should acquire this capacity. This capacity could be acquired by hiring new staff, by forming strategic alliances with outside organizations, or by hiring consultants, but it is critical that BPS and BDS figure this out so that it can be properly regulated. This starts with being able to write clear and predictable criteria with which to judge new applications. There are many good options, such as cradle to grave analysis, well

to wheel analysis, and other methodologies with which to measure the greenhouse gas emissions of any new proposal; the criteria used to pick a particular methodology should balance ease of regulation with effectiveness at meeting GHG emissions reduction goals. There are similar objective methodologies and criteria available with which to measure safety. We thus support Option B, to add conditional use criteria for expansion of existing terminals to mitigate adverse land use impacts on greenhouse gas emissions and safety impacts of hazardous materials storage and transportation.

These are certainly complicated issues, but we have within Portland some of the best and brightest in their respective fields, and we have access to national expertise as well. If the City needs to add to its capacity in order to regulate fossil fuel terminals in the manner that will be most effective at reducing GHG emissions and meeting our community goals for safety, than the City must acquire the necessary expertise. It's simply not acceptable to claim a lack of staff expertise as an excuse to not propose the most effective possible regulations. Expertise is something that can be acquired, and should be acquired when it is required.

We thank you for your close and careful examination of these critical issues, and for considering our comments as you make your decisions as to how the City will proceed.

Signed,

Working Waterfront
COALITION

Mayor Charlie Hales and
Portland City Commissioners
Portland City Hall
1221 SW 4th Avenue
Portland, OR 97204

November 9, 2016

Re: Fossil Fuel Terminal Zoning Amendments (City Council Hearing, November 10, 2016, 2pm)

Dear Mayor Hales and City Commissioners,

I am writing on behalf of the Working Waterfront Coalition (WWC) in opposition to the Fossil Fuel Terminal Zoning Amendments (FFT Amendments) recommended by the Planning and Sustainability Commission, dated October 11, 2016. (PSC Recommendation). As you know, the WWC represents a wide range of waterfront businesses along the Portland Harbor including several fossil fuel terminals (FFT's).

Background and Position

The WWC has actively participated in the City's FFT amendment process and related efforts, including the enactment of Resolution 37168 and the adoption of the City's 2035 Comprehensive Plan. Throughout the FFT amendment process the WWC has opposed the City's effort to prohibit or limit the growth of multimodal terminals along the working waterfront. These multimodal fuel terminals have safely provided the City, the Region and the State with most of the liquid fuel supply for decades. The energy cluster in Linnton and Willbridge is by far Oregon's largest fuel distribution hub, providing more than 90 percent of the State's fuel supply. Because of the importance of these terminals the WWC has consistently objected to earlier versions of the City's FFT amendments, which sought to ban these multimodal terminals completely. Likewise, the WWC objects to the most recent version of the City's FFT amendments, which ban new multimodal fuel terminals and severely restrict the growth of existing FFTs.

Policy Analysis

From a policy standpoint, it may be helpful for the WWC to explain its' opposition to the PSC Recommendation relative to several of the City's recently enacted goals, including Resolution 37168 and the City's 2035 Comprehensive Plan. In that regard, City Council should reject the FFT amendments recommended by the Planning and Sustainability Commission because the PSC recommendation is inconsistent with several of the City's recently enacted goals:

1) As provided in Policy 4.81 and Policy 4.82 of the 2035 Comprehensive Plan, if the City's goal is to encourage disaster-resilient development and reduce natural-hazard risks to critical energy and transportation infrastructure, then City Council should reject the PSC Recommendation because it discourages firms from investing in disaster-resilient development.

Explanation: In order to economically justify the level of private investment needed to comprehensively upgrade critical energy and transportation infrastructure at existing FFTs, existing FFT's must be allowed to grow. The PSC Recommendation does the opposite. The PSC Recommendation prohibits existing FFTs from growing, except in one very limited circumstance. The only circumstance

Working Waterfront
COALITION

under which an existing FFT can grow is if it replaces an existing tank with a seismically upgraded tank. However, even if an existing tank is replaced with a seismically upgraded tank, the incremental growth that can occur when a tank is replaced is limited to 10 percent of the capacity of the tank being replaced, with an overall increase limited to 10 percent of the storage capacity of the FFT facility on the date the amendments are enacted. This severe limitation on expansion discourages disaster-resilient development because the small amount of growth that is allowed to occur will not justify the massive amount of private investment needed to replace existing tanks in Portland. Even if investment does occur, the PSC recommendation will only produce a seismic upgrade of 10 percent, because no additional growth can occur once the 10 percent limit is reached. Without growth, investment in seismic upgrades will not occur. In short, the 10 percent rule creates an economic disincentive to disaster-resilient development, is shortsighted, and will be counterproductive to meaningful seismic upgrades over time.

2) As provided in Policy 6.48 of the 2035 Comprehensive Plan, if the City's goal is to limit fossil-fuel distribution and storage facilities to those necessary to serve the regional market, then City Council should reject the PSC Recommendation because it restricts the ability of fossil fuel infrastructure that is necessary to serve the regional market.

Explanation: All of the existing FFT's located in Portland's energy cluster are needed to serve the regional market. The PSC recommendation wrongly targets existing FFTs that serve the regional market. The WSPA alternative provides a regulatory concept and draft code language that limits extra-regional FFT's, while protecting FFT's that serve the regional market. The WSPA alternative is consistent with Policy 6.48, but the PSC recommendation is not.

3) As provided in Resolution 37168, if the City's goal is not to restrict the expansion of fossil fuel infrastructure that improves the safety, efficiency and seismic resilience of existing infrastructure, then City Council should reject the PSC Recommendation because it discourages firms from making improvements that increase the safety, efficiency and seismic resilience of fossil fuel facilities that primarily serve the regional market.

Explanation: For the reasons described above, the PSC Recommendation will not improve seismic resilience of existing FFT infrastructure, because it creates a long term disincentive to invest in existing FFTs and any related seismic upgrades. The associated disinvestment in existing FFT facilities that will occur as a result of the PSC recommendation will create a less efficient and potentially less safe regional fossil fuel infrastructure in Portland, as firms focus future capital investments in markets where their return on investment is justified.

4) As provided in the Comprehensive Plan, if the City's goal is to reduce vehicle miles traveled, then City Council should reject the PSC Recommendation because limiting multimodal storage capacity to existing tank capacity will require more trucks to move more fossil fuel into and through Portland, in order to bypass supply constraints at existing fossil fuel facilities that serve the regional market.

Explanation: By prohibiting new FFTs and limiting the capacity of existing FFTs that serve the regional market the PSC Recommendation creates a significant supply constraint for fossil fuels used by customers within the region. Over time and in times of emergency, this supply constraint will create a significant fossil fuel bottleneck in Portland. When it becomes necessary to bypass this supply constraint,

Working Waterfront
COALITION

the only remaining option firms will have is to truck fossil fuels to and through Portland, in order to bypass the constraint. This constraint will therefore increase vehicle miles traveled and will require more fossil fuel to be transferred to and through Portland by truck.

5) As provided in Policy 6.5 of the 2035 Comprehensive Plan, if the City's goal is to create economic resilience, then City Council should reject the PSC recommendation because restrictions on existing fossil fuel facilities that primarily serve the regional market makes the City, the Region and the State more susceptible to impacts from climate change, natural disasters and unforeseen changes in the economy.

Explanation: The proposed ban on new FFTs that serve the regional market, along with a significant limit on growth for existing FFTs, will make the City, the Region and the State less economically resilient because the ban and its related limits creates a significant regulatory constraint that discourages firms from investing in needed infrastructure and technology that will make the Portland region less susceptible to impacts from climate change, natural disasters and unforeseen changes in the economy. For the foreseeable future, fossil fuels will continue to fill an important role in our energy economy. The Portland region and the state as a whole depends on the existing FFT's for roughly 90 percent of its petroleum supply. Even if the demand for fossil fuel in Oregon is only growing ½ percent to 1 percent annually, as estimated by the city, it is critically important for firms to continue to invest in fossil fuel facilities over the next several decades, as significant demand continues and risk of natural disasters and other unforeseen emergencies continues to exist. In short, Portland should not create significant disincentives for FFT's to invest in critical energy facilities that will continue to power Portland and the State of Oregon for decades to come.

Position, Alternative, and Clarifying Amendment

For all of the above reasons, the WWC opposes the PSC Recommendation and requests that it not be adopted by City Council.

The WWC notes that the FFT Amendment process was rushed. This fact is reflected in Appendix A of October 11, 2016, PSC Recommendation. Throughout this rushed process the WWC has supported a better alternative offered by WSPA in July, 2016, which is attached to this letter. The WSPA alternative is not mentioned in the PSC Recommendation, and was unfortunately ignored by the City throughout the rushed review process. The WWC continues to support the WSPA alternative.

If City Council is inclined to move forward with the PSC Recommendation, or something similar, the WWC requests that a significant ambiguity in the PSC recommendation be clarified. Specifically, it is not clear whether the limits on the growth relate only to fossil fuel storage tanks, or whether the limits on growth relate to pipes and other fossil fuel facilities associated with existing FFTs. It is our understanding from discussions with city staff that the City's intent is to limit growth related to existing storage tank capacity, and that it does not intend to limit growth related to pipes and other fossil fuel facilities and infrastructure. Accordingly, we offer the following clarifying amendments:

Section 33.140.100(B)(17)(a), as shown on page 49 of the October 11, 2016 PSC Recommendation, should be amended as follows:

Working Waterfront
COALITION

a. Existing Bulk Fossil Fuel Terminals. The following use limitations apply to existing Bulk Fossil Fuel Terminals:

(1) Bulk Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site in fossil fuel storage tanks, is limited to the fossil fuel storage tank capacity that existed on [insert effective date] plus 10 percent. Total fossil fuel storage tank capacity on the site in excess of the fossil fuel storage tank capacity that existed on [insert effective date] plus 10 percent is prohibited.

(2) New fossil fuel storage tanks are prohibited unless a new fossil fuel storage tank is replacing an existing fossil fuel storage tank that does not meet current building code standards for seismic safety, and in that case, the capacity of the new fossil fuel storage tank is prohibited from being greater than the storage capacity of the existing fossil fuel storage tank that is being replaced, plus 10 percent.

(3) No other use limitations shall be imposed on existing Bulk Fossil Fuel Terminals other than those set forth above.

Section 33.910.030, as shown on page 53 of the October 11, 2016 PSC Recommendation, should be amended as follows:

Fossil Fuel Storage Tank A fossil fuel storage tank is a tank affixed to the ground, within the boundaries of an existing Bulk Fossil Fuel Terminal site, which is used exclusively for fossil fuel storage.

Conclusion

For all of the reasons stated above, the WWC urges City Council to reject the PSC recommendation and reconsider its proposed regulation of multimodal FFTs along the City's working waterfront. The existing concentration of multimodal fuel terminals located along the City's working waterfront handles more than 90 percent of the State's fuel supply, and will continue to do so for the foreseeable future. Given these realities, it is critically important that the City not create a fuel bottleneck that severely affects the entire State of Oregon. Unfortunately, that is precisely what the PSC recommendation does and will do.

Sincerely,

Ellen M. Wax
Executive Director

Established in 2005, the Working Waterfront Coalition, with its extensive knowledge of harbor industry needs and active industry participation, is dedicated to working with its partners to ensure an appropriate balance between environmental concerns and the needs of river-related, river-dependent employers. Portland's Harbor is a vital employment area: home to thousands of valuable high-wage, high-benefit jobs. In addition, WWC members are conscientious stewards of the environment, making significant investments in the harbor consistent with state and federal laws.

Subject: WWC clarifying amendments to PSC Recommended Draft Fossil Fuel Terminal zoning amendments
Importance: High

Dear Zach,

Below in this email are the WWC's requested clarifying amendments to the PSC's Fossil Fuel Terminal Zoning Amendments: Recommended Draft.

As we discussed in our recent meeting with you the WWC does not support the PSC Recommendation for fossil fuel terminals and requests that it is not adopted by City Council. However, if City Council members decide to support the PSC Recommendation then we respectfully request the clarifying amendments as outlined below.

The WWC notes that the FFT Amendment process was rushed. This fact is reflected in Appendix A of October 11, 2016, PSC Recommendation. Throughout this rushed process the WWC has supported a better alternative offered by WSPA in July, 2016, which is attached to this email (*WSPA Appendix 1. Proposed Portland Zoning Ordinance*). The WSPA alternative is not mentioned in the PSC Recommendation, and was unfortunately ignored by the City throughout the rushed review process. The WWC continues to support the WSPA alternative.

If City Council is inclined to move forward with the PSC Recommendation, or something similar, the WWC requests that a significant ambiguity in the PSC recommendation be clarified. Specifically, it is not clear whether the limits on the growth relate only to fossil fuel storage tanks, or whether the limits on growth relate to pipes and other fossil fuel facilities associated with existing FFTs. It is our understanding from discussions with city staff that the City's intent is to limit growth related to existing storage tank capacity, and that it does not intend to limit growth related to pipes and other fossil fuel facilities and infrastructure. Accordingly, we offer the following clarifying amendments:

Section 33.140.100(B)(17)(a), as shown on page 49 of the October 11, 2016 PSC Recommendation, should be amended as follows:

a. Existing Bulk Fossil Fuel Terminals. The following use limitations apply to existing Bulk Fossil Fuel Terminals:

(1) Bulk Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site in fossil fuel storage tanks, is limited to the fossil fuel storage tank capacity that existed on [insert effective date] plus 10 percent. Total fossil fuel storage tank capacity on the site in excess of the fossil fuel storage tank capacity that existed on [insert effective date] plus 10 percent is prohibited.

(2) New fossil fuel storage tanks are prohibited unless a new fossil fuel storage tank is replacing an existing fossil fuel storage tank that does not meet current building code standards for seismic safety, and in that case, the capacity of the new fossil fuel storage tank is prohibited from being greater than the storage capacity of the existing fossil fuel storage tank that is being replaced, plus 10 percent.

(3) No other use limitations shall be imposed on existing Bulk Fossil Fuel Terminals other than those set forth above.

Section 33.910.030, as shown on page 53 of the October 11, 2016 PSC Recommendation, should be amended as follows:

Fossil Fuel Storage Tank A fossil fuel storage tank is a tank affixed to the ground, within the boundaries of an existing Bulk Fossil Fuel Terminal site, which is used exclusively for fossil fuel storage.

Please call or email with any questions. Thank you. Ellen

Re: Fossil Fuel Terminal Zoning Amendments (City Council Hearing, November 10, 2016, 2pm)

Dear Mayor Hales and City Commissioners,

I am writing on behalf of the Working Waterfront Coalition (WWC) in opposition to the Fossil Fuel Terminal Zoning Amendments (FFT Amendments) recommended by the Planning and Sustainability Commission, dated October 11, 2016. (PSC Recommendation). As you know, the WWC represents a wide range of waterfront businesses along the Portland Harbor including several fossil fuel terminals (FFT's).

Background and Position

The WWC has actively participated in the City's FFT amendment process and related efforts, including the enactment of Resolution 37168 and the adoption of the City's 2035 Comprehensive Plan. Throughout the FFT amendment process the WWC has opposed the City's effort to prohibit or limit the growth of multimodal terminals along the working waterfront. These multimodal fuel terminals have safely provided the City, the Region and the State with most of the liquid fuel supply for decades. The energy cluster in Linnton and Willbridge is by far Oregon's largest fuel distribution hub, providing more than 90 percent of the State's fuel supply. Because of the importance of these terminals the WWC has consistently objected to earlier versions of the City's FFT amendments, which sought to ban these multimodal terminals completely. Likewise, the WWC objects to the most recent version of the City's FFT amendments, which ban new multimodal fuel terminals and severely restrict the growth of existing FFTs.

Policy Analysis

From a policy standpoint, it may be helpful for the WWC to explain its' opposition to the PSC Recommendation relative to several of the City's recently enacted goals, including Resolution 37168 and the City's 2035 Comprehensive Plan. In that regard, City Council should reject the FFT amendments recommended by the Planning and Sustainability Commission because the PSC recommendation is inconsistent with several of the City's recently enacted goals:

1) As provided in Policy 4.81 and Policy 4.82 of the 2035 Comprehensive Plan, if the City's goal is to encourage disaster-resilient development and reduce natural-hazard risks to critical energy and transportation infrastructure, then City Council should reject the PSC Recommendation because it discourages firms from investing in disaster-resilient development.

Explanation: In order to economically justify the level of private investment needed to comprehensively upgrade critical energy and transportation infrastructure at existing FFTs, existing FFT's must be allowed to grow. The PSC Recommendation does the opposite. The PSC Recommendation prohibits existing FFTs from growing, except in one very limited circumstance. The only circumstance

Working Waterfront
COALITION

under which an existing FFT can grow is if it replaces an existing tank with a seismically upgraded tank. However, even if an existing tank is replaced with a seismically upgraded tank, the incremental growth that can occur when a tank is replaced is limited to 10 percent of the capacity of the tank being replaced, with an overall increase limited to 10 percent of the storage capacity of the FFT facility on the date the amendments are enacted. This severe limitation on expansion discourages disaster-resilient development because the small amount of growth that is allowed to occur will not justify the massive amount of private investment needed to replace existing tanks in Portland. Even if investment does occur, the PSC recommendation will only produce a seismic upgrade of 10 percent, because no additional growth can occur once the 10 percent limit is reached. Without growth, investment in seismic upgrades will not occur. In short, the 10 percent rule creates an economic disincentive to disaster-resilient development, is shortsighted, and will be counterproductive to meaningful seismic upgrades over time.

2) As provided in Policy 6.48 of the 2035 Comprehensive Plan, if the City's goal is to limit fossil-fuel distribution and storage facilities to those necessary to serve the regional market, then City Council should reject the PSC Recommendation because it restricts the ability of fossil fuel infrastructure that is necessary to serve the regional market.

Explanation: All of the existing FFT's located in Portland's energy cluster are needed to serve the regional market. The PSC recommendation wrongly targets existing FFTs that serve the regional market. The WSPA alternative provides a regulatory concept and draft code language that limits extra-regional FFT's, while protecting FFT's that serve the regional market. The WSPA alternative is consistent with Policy 6.48, but the PSC recommendation is not.

3) As provided in Resolution 37168, if the City's goal is not to restrict the expansion of fossil fuel infrastructure that improves the safety, efficiency and seismic resilience of existing infrastructure, then City Council should reject the PSC Recommendation because it discourages firms from making improvements that increase the safety, efficiency and seismic resilience of fossil fuel facilities that primarily serve the regional market.

Explanation: For the reasons described above, the PSC Recommendation will not improve seismic resilience of existing FFT infrastructure, because it creates a long term disincentive to invest in existing FFTs and any related seismic upgrades. The associated disinvestment in existing FFT facilities that will occur as a result of the PSC recommendation will create a less efficient and potentially less safe regional fossil fuel infrastructure in Portland, as firms focus future capital investments in markets where their return on investment is justified.

4) As provided in the Comprehensive Plan, if the City's goal is to reduce vehicle miles traveled, then City Council should reject the PSC Recommendation because limiting multimodal storage capacity to existing tank capacity will require more trucks to move more fossil fuel into and through Portland, in order to bypass supply constraints at existing fossil fuel facilities that serve the regional market.

Explanation: By prohibiting new FFTs and limiting the capacity of existing FFTs that serve the regional market the PSC Recommendation creates a significant supply constraint for fossil fuels used by customers within the region. Over time and in times of emergency, this supply constraint will create a significant fossil fuel bottleneck in Portland. When it becomes necessary to bypass this supply constraint,

Working Waterfront
COALITION

the only remaining option firms will have is to truck fossil fuels to and through Portland, in order to bypass the constraint. This constraint will therefore increase vehicle miles traveled and will require more fossil fuel to be transferred to and through Portland by truck.

5) As provided in Policy 6.5 of the 2035 Comprehensive Plan, if the City's goal is to create economic resilience, then City Council should reject the PSC recommendation because restrictions on existing fossil fuel facilities that primarily serve the regional market makes the City, the Region and the State more susceptible to impacts from climate change, natural disasters and unforeseen changes in the economy.

Explanation: The proposed ban on new FFTs that serve the regional market, along with a significant limit on growth for existing FFTs, will make the City, the Region and the State less economically resilient because the ban and its related limits creates a significant regulatory constraint that discourages firms from investing in needed infrastructure and technology that will make the Portland region less susceptible to impacts from climate change, natural disasters and unforeseen changes in the economy. For the foreseeable future, fossil fuels will continue to fill an important role in our energy economy. The Portland region and the state as a whole depends on the existing FFT's for roughly 90 percent of its petroleum supply. Even if the demand for fossil fuel in Oregon is only growing ½ percent to 1 percent annually, as estimated by the city, it is critically important for firms to continue to invest in fossil fuel facilities over the next several decades, as significant demand continues and risk of natural disasters and other unforeseen emergencies continues to exist. In short, Portland should not create significant disincentives for FFT's to invest in critical energy facilities that will continue to power Portland and the State of Oregon for decades to come.

Position, Alternative, and Clarifying Amendment

For all of the above reasons, the WWC opposes the PSC Recommendation and requests that it not be adopted by City Council.

The WWC notes that the FFT Amendment process was rushed. This fact is reflected in Appendix A of October 11, 2016, PSC Recommendation. Throughout this rushed process the WWC has supported a better alternative offered by WSPA in July, 2016, which is attached to this letter. The WSPA alternative is not mentioned in the PSC Recommendation, and was unfortunately ignored by the City throughout the rushed review process. The WWC continues to support the WSPA alternative.

If City Council is inclined to move forward with the PSC Recommendation, or something similar, the WWC requests that a significant ambiguity in the PSC recommendation be clarified. Specifically, it is not clear whether the limits on the growth relate only to fossil fuel storage tanks, or whether the limits on growth relate to pipes and other fossil fuel facilities associated with existing FFTs. It is our understanding from discussions with city staff that the City's intent is to limit growth related to existing storage tank capacity, and that it does not intend to limit growth related to pipes and other fossil fuel facilities and infrastructure. Accordingly, we offer the following clarifying amendments:

Section 33.140.100(B)(17)(a), as shown on page 49 of the October 11, 2016 PSC Recommendation, should be amended as follows:

Working Waterfront
COALITION

a. Existing Bulk Fossil Fuel Terminals. The following use limitations apply to existing Bulk Fossil Fuel Terminals:

(1) Bulk Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site in fossil fuel storage tanks, is limited to the fossil fuel storage tank capacity that existed on [insert effective date] plus 10 percent. Total fossil fuel storage tank capacity on the site in excess of the fossil fuel storage tank capacity that existed on [insert effective date] plus 10 percent is prohibited.

(2) New fossil fuel storage tanks are prohibited unless a new fossil fuel storage tank is replacing an existing fossil fuel storage tank that does not meet current building code standards for seismic safety, and in that case, the capacity of the new fossil fuel storage tank is prohibited from being greater than the storage capacity of the existing fossil fuel storage tank that is being replaced, plus 10 percent.

(3) No other use limitations shall be imposed on existing Bulk Fossil Fuel Terminals other than those set forth above.

Section 33.910.030, as shown on page 53 of the October 11, 2016 PSC Recommendation, should be amended as follows:

Fossil Fuel Storage Tank A fossil fuel storage tank is a tank affixed to the ground, within the boundaries of an existing Bulk Fossil Fuel Terminal site, which is used exclusively for fossil fuel storage.

Conclusion

For all of the reasons stated above, the WWC urges City Council to reject the PSC recommendation and reconsider its proposed regulation of multimodal FFTs along the City's working waterfront. The existing concentration of multimodal fuel terminals located along the City's working waterfront handles more than 90 percent of the State's fuel supply, and will continue to do so for the foreseeable future. Given these realities, it is critically important that the City not create a fuel bottleneck that severely affects the entire State of Oregon. Unfortunately, that is precisely what the PSC recommendation does and will do.

Re: WSPA Comments on the City of Portland Discussion Draft

Dear Mr. Steve Kountz:

The Western States Petroleum Association (WSPA) is a non-profit trade association representing companies that explore for, produce, refine, transport, and market petroleum, petroleum products in five western states including Oregon. WSPA appreciates the opportunity to provide comments on the City of Portland Bureau of Planning and Sustainability Fossil Fuel Terminal Zoning Amendments Discussion Draft.

As you know from our June 2, 2016, meeting, several WSPA members operate petroleum terminals in Portland. These members have responsibly operated in the energy corridor along Northwest St. Helens Road for decades. This corridor provides key energy and emergency infrastructure as recognized by various city, state, and federal documents. WSPA opposes the City's push to regulate fossil fuels under Resolution No. 37166, Fossil Fuel Terminal Zoning Amendments, or otherwise, but submits these comments in an attempt to mitigate some of the unintended consequences of the contemplated zoning amendments.

The proposed zoning amendments contradict and misalign with federal and state laws pertaining to energy infrastructure, including but not limited to Oregon's low carbon fuel standards, Oregon's Renewable Fuel Standards, federal Renewable Fuel Standards, and similar laws. The Discussion Draft further appears to not follow policy direction in Resolution No. 37166 and the City's Comprehensive Plan enabling energy infrastructure to serve the region as well as transition to non-fossil fuel sources. Of particular concern to WSPA, the proposed zoning amendments would create a number of substantial unintended consequences. Specifically:

- The Discussion Draft restricts infrastructure that serves the region, in contradiction of the new City Comprehensive Plan provision governing fossil fuel infrastructure;
- The Discussion Draft fails to clearly specify how existing infrastructure can expand on existing sites, to adjacent properties, and to nearby non-adjacent properties;

975 Carpenter Road, N.E., Suite 106, Lacey, Washington 98516
Work: (360) 352-4506 • Fax: (360) 352-4507 • Cell: (360) 789-1435
fholmes@wspa.org • www.wspa.org

- The Discussion Draft restricts infrastructure related to Oregon's low carbon fuel standards, Oregon's Renewable Fuel Standards, federal Renewable Fuel Standards, and similar laws;
- The Discussion Draft terminal size thresholds are too small to enable expansion to serve future energy needs;
- The Discussion Draft stymies potential future technologies that do not fit within the contemplated framework;
- The Discussion Draft provides too narrow of a geographic area (currently, the IH Zone) for siting new terminals;
- The Discussion Draft generally does not align with state and federal policy regarding siting energy infrastructure;
- The Discussion Draft encourages less efficient (and potentially less safe) transportation by truck over more efficient modes of transportation;
- The Discussion Draft fails to provide for the economic impact assessment called for by Resolution No. 37166; and
- The proposed timeline for implementing the Discussion Draft is too fast to allow for thoughtful discussion and tailoring addressing the above and other concerns.

We have enclosed proposed zoning code language that would address some of the issues raised in this comment. While the proposed language does not resolve all the problems with the contemplated amendments, it addresses some of them.

Again, thank you for this opportunity to comment on the Fossil Fuel Terminal Zoning Amendments Discussion Draft. We hope the City reconsiders its push to pass regulations in this area, and if does, that it will more narrowly tailor its rules to not contradict federal and state direction and avoid unintended consequences.

Thank you for your consideration of WSPA's comments. If you have any questions, please contact me at this office at fholmes@wspa.org and (360) 352-4506.

Sincerely,

Frank E. Holmes

WSPA

Appendix 1- Proposed Portland Zoning Ordinance

This appendix contains draft zoning code language from WSPA for City of Portland consideration in effectuating the City's fossil fuels policy. WSPA continues its position that the City's effort to regulate fossil fuels is misplaced and opposes those efforts. These proposed code provisions are intended to avoid some of the unintended consequences of the City's proposal and do not indicate WSPA support for City efforts to regulate fossil fuels. WSPA's draft code language contains four components:

1. Three new definitions for Portland Zoning Ordinance Chapter 33.910 (Appendix 1, page 2),
2. A use characteristics description for Bulk Fossil Fuels Terminals in Zoning Ordinance Chapter 33.920 (Appendix 1, page 2),
3. A new Energy Corridor Overlay Zone to protect existing fuel terminals in proposed new Portland Zoning Ordinance Chapter 33.490 (Appendix 1, page 4), and
4. Modifications to base industrial zones in Portland Zoning Ordinance Chapter 33.140 to recognize Bulk Fossil Fuel Terminals as a limited use (Appendix 1, page 7).

Extra-Regional Bulk Fossil Fuel Terminal. A fossil fuel terminal that primarily serves markets outside of the Petroleum Administration for Defense District (PADD) 5 region, an area that includes the western states of California, Arizona, Nevada, Oregon, Washington, Alaska, and Hawaii.

Fossil Fuels. Fossil fuels include coal, petroleum, crude oil, refined oil, natural gas, bitumen, kerosene, propane, and other fuels made from decayed plants and animals that lived millions of years ago and are primarily used as a source of energy. Blended fuels containing a mix of fossil fuels and other fuel sources designed to address Oregon's low carbon fuel standards in Oregon Administrative Rules Chapter 340, Division 253, federal Renewable Fuel Standards, state Renewable Fuel Standards, or similar state or federal laws designed to reduce the carbon footprint of fuels are not fossil fuels.

Regional Bulk Fossil Fuel Terminal. A fossil fuel terminal that primarily serves the Petroleum Administration for Defense District (PADD) 5 region, an area that includes the western states of California, Arizona, Nevada, Oregon, Washington, Alaska, and Hawaii.

[Proposed New Use Category For Bulk Fossil Fuel Terminals]

33.920.360 Bulk Fossil Fuel Terminal

A. Characteristics. Bulk Fossil Fuel Terminals are characterized by having all of the following (1) marine, pipeline or railroad transport access, (2) transloading facilities for transferring a shipment between transport modes (such as from rail to ship), and (3) storage facilities for fossil fuels exceeding a storage capacity of [____] million barrels for petroleum, [____] million gallons for liquefied natural gas (LNG), [____] million gallons for other liquefied gas fuels.

B. Accessory Uses. Accessory uses may include offices, pipes, industrial processing, shipping terminals, parking, storage, rail spur or lead lines, and docks.

C. Examples. Extra-regional liquefied natural gas (LNG) export facilities, propane export facilities, or coal export facilities.

D. Exceptions.

1. Improvements in the safety, or efficiency, seismic resilience, or operations of existing energy infrastructure.
2. Terminals or firms that are end users of fossil fuels or sell directly to end users of fossil fuels such as airports, manufacturing, agricultural businesses, utilities, gas stations, and power plants.
3. Development of emergency backup capacity.
4. Infrastructure that enables recovery or re-processing of used petroleum products
5. Terminals or firms that are storing, transporting or processing fuels and blended fuels containing a mix of fossil fuels and other fuel sources designed to address Oregon's low carbon fuel standards in Oregon Administrative Rules Chapter 340, Division 253, federal Renewable Fuel Standards, state Renewable Fuel Standards, or similar state or federal laws designed to reduce the carbon footprint of fuels.

[Proposed New Chapter in Zoning Ordinance]

City of Portland Planning and Zoning Ordinance - Title 33, Planning and Zoning

Chapter 33.490 Energy Corridor Overlay Zone

Sections:

33.490.010 Purpose
33.490.020 Map Symbol
33.490.025 Relationship to Portland Zoning Code Chapter 33.140
33.490.030 No Size limits
33.490.040 Expansion of Energy Corridor Terminals

Map 490-1 Energy Corridor Overlay Zone Boundaries

33.490.010 Purpose

The Energy Corridor Overlay Zone recognizes the historic cluster of energy terminals, including fossil fuel terminals that have served as Portland's hub for energy transport for decades. The purpose of this overlay zone is to protect this area for future energy infrastructure growth, including but not limited to expansion of energy terminals.

33.490.020 Map Symbol

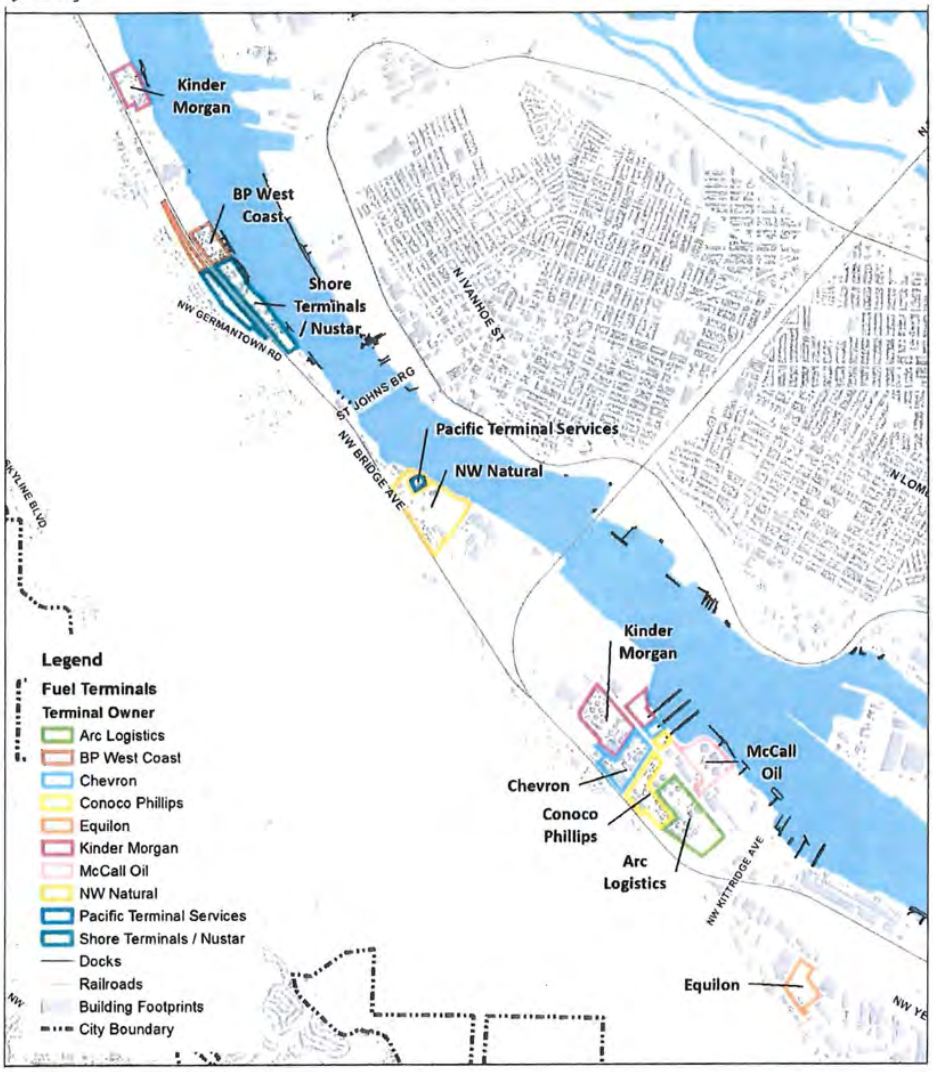
The Energy Corridor Overlay zone is shown on the Official Zoning Maps with a letter "m" map symbol.

33.490.025 Relationship to Portland Zoning Code Chapter 33.140

The Energy Corridor Overlay zone provides flexibility for the sites subject to this overlay in addition to what are allowed under Portland Zoning Code Chapter 33.140. If there is a conflict between what is allowed under this Chapter 33.490 and what would be allowed Chapter 33.140, this Chapter 33.490 controls.

33.490.030 No Size Limits

ENERGY PROUD



There is no storage or other size limits for Bulk Fossil Fuel Terminals or other energy facilities located in the Energy Corridor Overlay Zone.

33.490.040 Expansion of Energy Corridor Terminals

A Bulk Fossil Fuel Terminal in the Energy Corridor Overlay may expand to new lots and parcels outside of the Energy Corridor Overlay zone as provided in this Section 33.490.040. A Bulk Fossil Fuel Terminal may only expand onto parcels or lots that are all or partially within one half of a mile from a property line of the lot or parcel containing the Bulk Fossil Fuel Terminal. A Bulk Fossil Fuel Terminal that is expanded outside of the Energy Corridor Overlay will be treated as if it were entirely within the Energy Corridor Overlay for purposes of land use and all other city approvals. If an expansion of an energy facility to a new lot or parcel pursuant to this Section 33.490.040 includes proposed development that would qualify the combined energy facility as a Bulk fossil Fuel Terminal, the combined energy facility will be treated as if it were entirely within the Energy Corridor Overlay for purposes of land use and all other city approvals.

General

33.140.010 General Purpose of the Zones

The employment and industrial zones are for areas of the City that are reserved for industrial uses and for areas that have a mix of uses with a strong industrial orientation. The zones reflect the diversity of industrial and business areas in the City. The zones differ in the mix of allowed uses, the allowed intensity of development, and the development standards. The regulations promote areas which consist of uses and developments which will support the economic viability of the specific zoning district and of the City. The regulations protect the health, safety and welfare of the public, address area character, and address environmental concerns. In addition, the regulations provide certainty to property owners, developers, and neighbors about the limits of what is allowed.

33.140.020 List of the Employment and Industrial Zones

The full and short names of the employment and industrial zones and their map symbols are listed below. When this Title refers to the employment or E zones it is referring to the first three listed. When this Title refers to the industrial or I zones, it is referring to the last three listed.

Full Name / Short Name	Map Symbol
General Employment 1	EG1
General Employment 2	EG2
Central Employment	EX
General Industrial 1	IG1
General Industrial 2	IG2
Heavy Industrial	IH

33.140.030 Characteristics of the Zones

A. General Employment. The General Employment zones implement the Mixed Employment map designation of the Comprehensive Plan. The zones allow a wide range of employment

ENERGY PROUD

opportunities without potential conflicts from interspersed residential uses. The emphasis of the zones is on industrial and industrially-related uses. Other commercial uses are allowed to support a wide range of services and employment opportunities. The development standards for each zone are intended to allow new development which is similar in character to existing development. The intent is to promote viable and attractive industrial/commercial areas.

1. General Employment 1. EG1 areas generally have smaller lots and a grid block pattern. The area is mostly developed, with sites having high building coverages and buildings which are usually close to the street. EG1 zoned lands will tend to be on strips or small areas.

2. General Employment 2. EG2 areas have larger lots and an irregular or large block pattern. The area is less developed, with sites having medium and low building coverages and buildings which are usually set back from the street. EG2 zoned lands will generally be on larger areas than those zoned EG1.

B. Central Employment. This zone implements the Central Employment map designation of the Comprehensive Plan. The zone allows mixed-uses and is intended for areas in the center of the City that have predominantly industrial type development. The intent of the zone is to allow industrial and commercial uses which need a central location. Residential uses are allowed, but are not intended to predominate or set development standards for other uses in the area. The development standards are intended to allow new development which is similar in character to existing development.

C. General Industrial. The General Industrial zones are two of the three zones that implement the Industrial Sanctuary map designation of the Comprehensive Plan. The zones provide areas where most industrial uses may locate, while other uses are restricted to prevent potential conflicts and to preserve land for industry. The development standards for each zone are intended to allow new development which is similar in character to existing development. The intent is to promote viable and attractive industrial areas.

1. General Industrial 1. IG1 areas generally have smaller lots and a grid block pattern. The area is mostly developed, with sites having high building coverages and buildings which are usually close to the street. IG1 areas tend to be the City's older industrial areas.

2. General Industrial 2. IG2 areas generally have larger lots and an irregular or large block pattern. The area is less developed, with sites having medium and low building coverages and buildings which are usually set back from the street.

ENERGY PROUD

D. Heavy Industrial. This zone is one of the three zones that implement the Industrial Sanctuary map designation of the Comprehensive Plan. The zone provides areas where all kinds of industries may locate including those not desirable in other zones due to their objectionable impacts or appearance. The development standards are the minimum necessary to assure safe, functional, efficient, and environmentally sound development.

33.140.040 Other Zoning Regulations

The regulations in this chapter state the allowed uses and the development standards for the base zones. Sites in overlay zones or plan districts and designated historical landmarks are subject to additional regulations which supersede those of this Chapter. The Official Zoning Maps indicated which sites are subject to the additional regulations. Specific uses or development types may also be subject to regulations in the 200s series of chapters.

Use Regulations

33.140.100 Primary Uses

A. Allowed uses. Uses allowed in the employment and industrial zones are listed in Table 140-1 with a "Y". These uses are allowed if they comply with the development standards and other regulations of this Title. Being listed as an allowed use does not mean that a proposed development will be granted an adjustment or other exception to the regulations of this Title. In addition, a use or development listed in the 200s series of chapters is also subject to the regulations of those chapters.

B. Limited uses. Uses allowed that are subject to limitations are listed in Table 140-1 with an "L". These uses are allowed if they comply with the limitations listed below and the development standards and other regulations of this Title. In addition, a use or development listed in the 200s series of chapters is also subject to the regulations of those chapters. The paragraphs listed below contain the limitations and correspond with the footnote numbers from Table 140-1.

1. Household Living uses in I zones. This regulation applies to all parts of Table 140-1 that have a [1]. Household Living in houseboats and houseboat moorages in I zones are regulated by Chapter 33.236, Floating Structures. Household Living in other structures is prohibited.

2. Group Living. This regulation applies to all parts of Table 140-1 that have a [2].

ENERGY PROUD

a. General regulations. All Group Living uses except for alternative or post incarceration facilities, are allowed by right subject to the regulations of Chapter 33.239, Group Living.

b. Alternative or post incarceration facilities. Group Living uses which consist of alternative or post incarceration facilities are conditional uses. They are also subject to the regulations of Chapter 33.239, Group Living.

3. EG commercial limitation. This regulation applies to all parts of Table 140-1 that have a [3].

a. Limited uses.

(1) Office uses. Except for sites with historic landmarks, the net building area for Office uses is limited to the square footage of the site area. On sites with historic landmarks, the net building area for Office uses may be up to twice the total square footage of the site area. Exceptions to these size limits are prohibited.

(2) Retail Sales And Service uses. Except for sites with historic landmarks, the net building area plus any exterior display or storage area for Retail Sales And Service uses is limited to 60,000 square feet or the square footage of the site area, whichever is less. On sites with historic landmarks, the net building area plus any exterior display or storage area for Retail Sales And Service uses is limited to 60,000 square feet or twice the total square footage of the site area, whichever is less.

b. Conditional uses.

(1) Retail Sales And Service uses that exceed the area limits in 3.a(2) are a conditional use.

4. IG1 commercial limitation. This regulation applies to all parts of Table 140-1 that have a [4].

a. Limited uses. One Retail Sales And Service or Office use is allowed per site. The square footage of net building area plus the exterior display and storage area may be up to 3,000 square feet.

b. Conditional uses.

ENERGY PROUD

(1) More than one Retail Sales And Service or Office Use on a site is a conditional use.

(2) Any Retail Sales And Service or Office Use where the net building area plus the exterior display and storage area is more than 3,000 square feet is a conditional use.

c. Prohibited uses.

(1) Except for sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 20,000 square feet or the square footage of the site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

(2) For sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 60,000 square feet or twice the square footage of the site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

5. IG2 commercial limitation. This regulation applies to all parts of Table 140-1 that have a [5].

a. Limited uses. Up to four Retail Sales And Service or Office uses are allowed per site. The square footage of the net building area plus the exterior display and storage area may be up to 3,000 square feet per use.

b. Conditional uses.

(1) More than four Retail Sales And Service or Office uses on a site is a conditional use.

(2) Any Retail Sales And Service or Office use where the net building area plus the exterior display and storage area is more than 3,000 square feet is a conditional use.

c. Prohibited uses.

ENERGY PROUD

(1) Except for sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 20,000 square feet or the square footage of the site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

(2) For sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 60,000 square feet or twice the square footage of site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

6. IH commercial limitation. This regulation applies to all parts of Table 140-1 that have a [6].

a. Limited uses. Up to four Retail Sales And Service or Office uses are allowed per site. The square footage of the net building area plus the exterior display and storage area may be up to 3,000 square feet per use.

b. Conditional uses.

(1) More than four Retail Sales And Service or Office use on a site is a conditional use.

(2) Any Retail Sales And Service or Office use where the net building area plus the exterior display and storage area is more than 3,000 square feet is a conditional use.

c. Prohibited uses.

(1) Except for sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 12,000 square feet or the square footage of the site area, whichever is less. Retail Sales And Service and Office uses that exceed these area limits are prohibited.

(2) For sites with a historic landmark, the net building area of all the Retail Sales And Service and Office uses on a site plus the exterior display and storage area, taken together, may not exceed 25,000 square feet or twice the square footage of site area, whichever is less. Retail Sales And Service

ENERGY PROUD

and Office uses that exceed these area limits are prohibited.

7. Self-Service Storage limitation. This regulation applies to all parts of Table 140-1 that have a [7]. The limitations are stated with the special regulations for these uses in Chapter 33.284, Self-Service Storage.

8. Waste-Related limitation. This regulation applies to all parts of Table 140-1 that have a [8]. All Waste-Related uses are conditional uses, unless they meet all of the following conditions in which case they are allowed by right.

a. The use must be approved by Metro under their authority as prescribed in ORS 268.317;

b. Metro's approval of the use must include a mitigation plan. The requirements for the mitigation plan must be approved by the City Council through an intergovernmental agreement with Metro, adopted prior to Metro's approval of the use; and

c. The location of the use must be in conformance with Metro's Regional Solid Waste Management Plan.

9. Community Service uses in EG zones. This regulation applies to all parts of Table 140-1 that have a [9]. Most Community Service uses are allowed by right. Short term housing may be allowed by right if it meets certain standards. See Chapter 33.285, Short Term Housing and Mass Shelters. Mass shelters are prohibited.

Notes:

- The use categories are described in Chapter 33.920.
- Regulations that correspond to the bracketed numbers [ ] are stated in 33.140.100.B.

ENERGY PROUD

• Specific uses and developments may also be subject to regulations in the 200s series of chapters.

10. Community Service in the EX zone. This regulation applies to all parts of Table 140-1 that have a [10]. Most Community Service uses are allowed by right. Short term housing and mass shelters may be allowed by right if they meet certain standards, or may be a conditional use. See Chapter 33.285, Short Term Housing and Mass Shelters.

11. Community Service and Daycare limitations in I zones. This regulation applies to all parts of Table 140-1 that have a [11]. Community Service uses or Daycare uses up to 3,000 square feet of net building area are allowed. Community Service uses or Daycare uses larger than 3,000 square feet of net building area are a conditional use. Short term housing and mass shelters of any size are prohibited.

12. Basic Utilities in E zones. This regulation applies to all parts of Table 140-1 that have a [12]. Public safety facilities that include Radio Frequency Transmission Facilities are subject to the regulations of Chapter 33.274. All other Basic Utilities are allowed.

13. Basic Utilities in I zones. This regulation applies to all parts of Table 140-1 that have a [13]. Public safety facilities that include Radio Frequency Transmission Facilities are subject to the regulations of Chapter 33.274. Public safety facilities which have more than 3,000 square feet of floor area are a conditional use. The approval criteria are in Section 33.815.223. All other Basic Utilities are allowed.

14. Radio Frequency Transmission Facilities. This regulation applies to all parts of Table 140-1 that have a [14]. Some Radio Frequency Transmission Facilities are allowed by right. See Chapter 33.274.

15. Commercial Parking. This regulation applies to all parts of Table 140-1 that have a [15]. Except where plan district provisions supersede these regulations, Commercial Parking is a conditional use in the E and I zones. Within plan districts, there may be special regulations.

16. Agriculture. This regulation applies to all parts of Table 140-1 that have a [16]. Agriculture is an allowed use. Where the use and site meet the regulations of Chapter 33.237, Food Production and Distribution, the applicant may choose whether it is allowed as a Market Garden.

17. Bulk Fossil Fuels Terminals. Regional Bulk Fossil Fuel Terminals of any size are allowed. Extra-Regional Bulk Fossil Fuel Terminals may not exceed a storage capacity of [ ] million barrels for petroleum, [ ] million gallons for liquefied natural gas

ENERGY PROUD

(LNG), [ ] million gallons for other liquefied gas fuels, except as may be allowed pursuant to the Portland Energy Corridor Overlay Zone. Coal terminals may not exceed a storage capacity of one ton of coal.

C. Conditional uses. Uses which are allowed if approved through the conditional use review process are listed in Table 140-1 with a "CU". These uses are allowed provided they comply with the conditional use approval criteria for that use, the development standards, and other regulations of this Title. Uses listed with a "CU" that also have a footnote number in the table are subject to the regulations cited in the footnote. In addition, a use or development listed in the 200s series of chapters is also subject to the regulations of those chapters. The conditional use review process and approval criteria are stated in Chapter 33.815, Conditional Uses.

D. Prohibited uses. Uses listed in Table 140-1 with an "N" are prohibited. Existing uses in categories listed as prohibited may be subject to the regulations of Chapter 33.258, Nonconforming Uses and Development.

33.140.110 Accessory Uses. Uses that are accessory to a primary use are allowed if they comply with specific regulations for the accessory uses and all development standards.

33.140.130 Nuisance-Related Impacts

A. Off-site impacts. All nonresidential uses including their accessory uses must comply with the standards of Chapter 33.262, Off-Site Impacts.

B. Other nuisances. Other nuisances are regulated by Title 29, Property and Maintenance Regulations.

33.140.140 On-Site Waste Disposal

On-site disposal of solid wastes generated by a use is subject to the same regulations as for uses in the Waste-Related use category. See Table 140-1.

From: Beata Alexander
To: BPS Fossil Fuel Zoning
Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Tuesday, November 08, 2016 7:52:19 AM

Dear City Council Members,

As a resident of this city and a supporter of 350PDX, I urge you to vote in favor of strict building codes enforcing a ban on fossil fuel and promoting green alternatives. We want clean air, water and soil. Take measures to curb climate change--have PDX lead the way. Do not allow loop holes to get around this issue.

We all have this responsibility--make it happen--we have the technology.

Sincerely,

Beata Alexander

Subject: Let's Put Portland's Fossil Fuel Ban Into Practice!
Date: Tuesday, November 08, 2016 2:16:47 PM

Faye Bennett
3965 SE Oak St
Portland, OR 97214

November 8, 2016

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
M. Faye Bennett

From: David Betts
To: BPS Fossil Fuel Zoning
Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Tuesday, November 08, 2016 6:21:28 PM

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

However, the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland to:

1. Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.
2. Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.
3. Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Now more than ever the City of Portland has the opportunity to be a leader in the U.S. climate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time. Keep it in the ground!

Sincerely,

Date: Tuesday, November 08, 2016 5:32:22 PM

Honorable City Council Members,

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

However, the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland to:

1) Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.
2)Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.
3)) Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Now more than ever the City of Portland has the opportunity to be a leader in the U.S. climate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time.

Sincerely,
Lyla Boyajian

Thanks so much for helping us restrict new fossil fuel terminals. I agree with 350 PDX...
But haven't figured out how to cut & paste...
but i am especially worried about the huge tanks near Linton on ground that will liquify in a big earthquake. Please don't let them simply upgrade these tanks. They should be moved onto safer ground.
And don't make a special case for NW Natural, and don't let them make their upgrades larger than the ones they have.
Thanks!!

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Dianne Ensign

Date: Tuesday, November 08, 2016 1:24:36 PM

Dear Council Members,

I don't know if you are aware, but the latest science is clear--we must cease to develop new fossil fuel reserves. Current existing sources of fossil fuel, if used, will put us over the 2 degree threshold. Furthermore, the more information we get from scientists, the more we see that changes due to the warming of the planet are accelerating and coming sooner than expected. The reality is that we need to rapidly phase out the use of fossil fuels if we are to have a planet remotely like the one we have now.

New infrastructure is simply making long term investments in projects that we cannot allow to exist in the long term. I hope to see the city of Portland lead the way in stopping all new fossil fuel infrastructure. From there we can look forward to the state following your lead. Doing this puts us in a position of leadership. When the needed factories in renewable energy, we will have a good argument for locating them here as leaders in the movement away from fossil fuels.

Thanks for your work

Tom Kane

From: Teresa McFarland
To: BPS Fossil Fuel Zoning
Subject: Fossil Fuel Policy Resolution #37168
Date: Tuesday, November 08, 2016 7:55:36 AM

Dear City Council members,

On November 2015, you passed a resolution that stated that the City would

"actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways."

Please stand firm and enshrine this decision in regulation.

I urge you to prohibit all expansions of existing fossil fuel terminals. It's unnecessary for the City to allow new terminals up to 2 million gallons. And we don't need to expand fossil fuel terminals in order to make them safer. Also, please reject NW Natural's request to be exempted from the proposed amendments.

Thank you,

Teresa McFarland

From: Bill Michtom
To: BPS Fossil Fuel Zoning
Subject: Fossil fuel terminal zoning
Date: Tuesday, November 08, 2016 3:10:46 PM

While the City Council has proposed a restriction on fossil fuel terminals, it is still contrary to what is required to combat the crisis conditions of climate change under which we live.

It still allows expansion of fossil fuel storage at existing terminals.

The only action necessary and sufficient to the global emergency of climate change is ending ALL fossil fuel use. Any expansion is too much.

I urge the council to amend the resolution so that it eliminates ALL expansion and starts reducing such facilities immediately.

There is no other safe option.

Thank you.

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Amanda

"The City's intent was clear: to use the City's policy to hasten our transition away from dirty, dangerous fossil fuels. The City received worldwide praise for its leadership. Now it's time for to put the policy into binding code. The Planning and Sustainability Commission (PSC) made its recommendation in October. **On Nov. 10**, the City Council must resolve key issues to ensure that the final zoning code amendments reflect the ambitious goals of the Council's 2015 resolution."

Happy Trails

Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Tuesday, November 08, 2016 4:54:39 PM

Dear City Council:
I am sending this message because Portland is poised to make history in the international climate justice movement. We can become a pioneer, a model city in the United States to enact a full ban on new fossil fuel terminals and infrastructure. Also, existing terminals should not be expanded, and they certainly need seismic upgrades. (I just saved enough money to seismically upgrade the foundation and connection to our old family home, and installed a gas shut-off valve.) Also, NW Natural should be included in all policies.

Please make the needed improvements to the Fossil Fuel Zoning Amendments. Our children and grandchildren depend on your forward thinking and will be thanking you.

Sincerely,
Barbara Scharff

Subject: Re: Fossil Fuel Zoning Amendments – Let's Put Portland's Fossil Fuel Ban Into Practice!
Date: Tuesday, November 08, 2016 7:33:50 AM

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed and spilled causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Jane Stackhouse

Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Tuesday, November 08, 2016 6:30:22 AM

Thanks for the improved Fossil Fuel Terminal Zoning Amendments. But we need a full ban on new terminals of any size. It is not a matter of balancing financial interests and environmental interests. We must follow the 2015 resolution and actively oppose expansion in any form. This is crucial for the future for my children and grandchildren and for those of all of us!

Do not exempt smaller terminals.
Do not allow expansion of current facilities.
Do not make an exemption for NW Natural.

We must develop a new economy focusing on renewables. That is difficult, but climate chaos is worsening daily. This is our responsibility. Please do the right thing.

Thank you!

From: Gene Stubbs
To: BPS Fossil Fuel Zoning
Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Tuesday, November 08, 2016 9:22:56 AM

I want the City of Portland to:
1) Enact a full ban on new terminals, large and small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose' new fossil fuel infrastructure.

2) Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.

3) Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Now more than ever the City of Portland has the opportunity to be a leader in the U.S clmate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time meaning Climate Change.

Sincerely,

Gene Stubbs

Dear City Commissioners,
I wrote the following op-ed which will get carried in papers around the country, urging other cities to follow our lead as the first city in the country to act on the Paris Agreement. I hope my op-ed helps support you in knowing that you are acting on behalf of all of us in Portland in passing the strongest possible ordinance, and, more importantly, future generations in other cities and states around the world. I will be taking the message of your groundbreaking work to COP22 in Marrakech, tomorrow. I hope you won't let us down.
Thank you for your leaderhsip!
Sincerely,
Daphne Wysham

Paris, Follow Portland
by Daphne Wysham

A few days before voters went to the polls in the U.S., the Eiffel Tower and Arc de Triomphe glowed green in Paris.

The reason? France was celebrating the Paris Climate Agreement, which came into force on November 4.

It was a remarkable achievement. Less than a year after 196 countries signed the climate agreement, over two-thirds of the world's countries — including the two biggest greenhouse gas emitters, the U.S. and China — ratified it, agreeing to an upper limit of 2 degrees Celsius in atmospheric warming.

But it might be a bit early to break out the champagne. For starters, the Paris Agreement is toothless.

There are no timetables for ratcheting down consumption of fossil fuels, and no sanctions for countries that fail to meet targets. The deal promises a small amount of assistance to developing countries fighting climate change, but most of that is merely repackaged development aid.

More frighteningly still, the world's existing fossil fuel infrastructure and proven wells and mines will sail us right past the 2 degree upper limit if they're all exploited.

Meanwhile, the clear-eyed citizens of Portland, Oregon, are pioneering a more proactive way forward. A year ago, Portland's city council unanimously voted to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways."

Portland's city leaders took this step as much out of a desire to protect their own health and safety as out of a desire to act on climate change.

Much of Portland's fossil fuel infrastructure lies in an industrial zone that, should an

earthquake come to pass, would rapidly turn to jello. And oil train derailments — like the one earlier this year in nearby Mosier, Oregon — can cause out-of-control blazes, bringing near fears to the fore.

Respect for indigenous communities is another factor. The Standing Rock Sioux's protest against the Dakota Access Pipeline encampment is a reminder that Native American treaty rights are routinely flouted by fossil fuel industries wanting to push their export projects on impoverished communities. It happens here in the Northwest, too.

But climate science is the central piece. A recent study found that if we are to maintain a mere 66 percent chance of avoiding surpassing 2 degrees Celsius of warming, no more new major fossil fuel infrastructure can be built.

In fact, we must actually leave many proven reserves untapped and begin to dismantle existing fossil fuel infrastructure.

President Obama did the right thing in signing the Paris Agreement. He also took a bold step in issuing guidelines for federal agencies to disclose greenhouse gas emissions associated with major infrastructure projects, like the Dakota Access Pipeline, and consider alternatives should the impact be significant.

But at this moment in time, neither the Paris Agreement nor Obama's proposed "climate test" is sufficient.

Portland Mayor Charlie Hales is showing the world what a first step toward meaningful action on the Paris Accords might look like. On November 17, Portland's city council will vote on what is likely the strongest land use code language in the country prohibiting all new fossil fuel export infrastructure.

Should it pass and become binding law, we'll know who the real world leaders are. Paris — and the rest of the Paris Agreement signatories — would do well to follow Portland's lead.

And if you do, back home in our evergreen city, we'll raise a glass of microbrew in your honor.

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Claire Alexander

Dear Commissioners,
Thank you for your strong opposition to fossil fuel infrastructure in Portland. I understand you are getting enormous pressure from energy companies to weaken rules that will protect our safety and livability.

It's clear that citizens of the region want less, not more, fossil fuel storage and transport in and through Portland. Will you have the courage to stand up to these giants and show the country and the world another way forward?

We don't need these fuels; we can't afford their climate and environmental costs. Enough is enough.
Please draw the line here on fossil fuel infrastructure.

Thank you,
Your neighbor and supporter,

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Trish Claffey

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
George Cummings

Portland Mayor and City Council:

We are so proud of your work to date to reduce our use of fossil fuels. Please remain strong and pass a ban or any new terminals, large or small, as well as any expansions - no exceptions for anyone. Someone must lead us out of this dangerous fossil fuel swamp and I think you - and Portland - are the ones. If we don't lave a livable planet for future generations (and us) all other issues don't matter. This is by far the most important issue for you to deal decisively with.

Thank you for courage, foresight and determination.
Sincerely,

Date: Monday, November 07, 2016 1:48:08 PM

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

However, the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland to:

Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.

Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.

Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Now more than ever the City of Portland has the opportunity to be a leader in the U.S. climate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time.

Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Sandra Joos

From: Jack Lenehan
To: BPS Fossil Fuel Zoning
Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Monday, November 07, 2016 3:22:15 PM

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

However, the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland to:

1. Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.

2. Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.

3. Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Now more than ever the City of Portland has the opportunity to be a leader in the U.S. climate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time.
Sincerely,
Jack

From: meyer4842@comcast.net
To: BPS Fossil Fuel Zoning
Subject: Portland's Fossil Fuel Policy Resolution #37168
Date: Monday, November 07, 2016 3:19:59 PM

The Planning and Sustainability Commission (PSC) got it right in October when they: Restricted aggregation of small fossil fuel terminals. Rejected a request by NW Natural to exempt its facilities from the fossil fuel code amendments. The City should improve the PSC's Recommended Fossil Fuel Amendments. 1. Prohibit expansions of existing fossil fuel terminals. City Council should allow existing terminals to operate or upgrade for seismic readiness, but not to expand. We don't expect all terminals to go away overnight, but the City's 2015 vote clearly hoped to stop "new infrastructure." The Council should simply remove the words "plus 10 percent" from p. 49 of the PSC's recommendation. This simple fix will prevent unnecessary fossil fuel expansion. Adopting the PSC's recommendation could create more demand for unit trains in Portland, conflicting with the City's November 2015 Oil Train Resolution # 37164. For the ten large oil facilities listed on Figure 7 of PSC's recommendation, a 10% acrossthe-board increase in terminal capacity would result in additional storage of 39,124,920 gallons of oil – a volume equivalent to 13 or more unit trains of explosive Bakken crude oil.1 A single 10% increase in one of several large existing terminals would exceed the volume of a unit train, potentially encouraging new oil unit trains. Yet, Portland's Oil 1 Assumes roughly 3 million gallons of oil per unit train. Unit trains typically carry 2.5 to 3 million gallons of crude oil, depending on the length of the train and size of the cars in the train. Train Resolution # 37164 called for the City to oppose any project that would increase oil train traffic through Portland. The 10% increase would conflict with City policy. We learned first-hand during the June 3, 2016 derailment in Mosier that oil trains are dangerous, and the City should use its fossil fuel zoning code amendments to diminish their use rather than creating space for many more. Already, the Port of Portland has advocated for expanding train lines through Mosier that could increase oil trains. 2. City Council should eliminate or reduce the threshold for prohibiting new fossil fuel terminals. It's unnecessary for the City to allow new terminals up to 2 million gallons. The City of Vancouver banned bulk crude oil facilities outright. Fossil fuel demand should be declining: the amendments need not allow for new fossil fuel infrastructure. To mix renewable and fossil forms of diesel and oil, we should be using existing tank infrastructure. There is no need to expand fossil fuel tanks in order to reduce fossil fuel dependence. The code already exempts fuels that are 95 percent non-fossil. 3. Let's use the right tools to make seismic upgrades. We don't need to expand fossil fuel terminals in order to make them safer. We agree that the City should "develop proposals for State building code changes to improve seismic resilience and require seismic upgrades comparable to proposed requirements on unreinforced masonry buildings," as stated on page 62 of the PSC's recommendation.. The potential for expansion has existed for years, yet thus far it has not been an adequate inducement for establishing safe, seismically-ready facilities. PSC and Council should support Portland Bureau of Emergency Management's (PBEM) expected and recommended process that will encourage seismic upgrades rather than weakening the City's proposed amendments. Council shouldn't cave to NW Natural and exempt methane gas from Portland's fossil fuel

code. NW Natural has requested an exemption from Portland's fossil fuel amendments. We urge City Council to consider the following approach to regulated utilities: • Reject NW Natural's request to be exempted from the proposed amendments. Despite a direct plea from NW Natural, not a single PSC member recommended exempting NW Natural. One PSC member explained that it was normal for multiple layers of government to regulate industries. • Natural gas, primarily comprised of methane, is exactly the type of highly polluting fossil fuel that the City intended to address in its November 2015 resolution. Natural gas is specifically included as a carbon-intensive, dangerous fossil fuel in Portland's 2015 resolution. Portland must take bold action for a clean energy economy. Climate science is clear that we must keep fossil fuels in the ground to avoid catastrophe. And a 2016 study from the Labor Network For Sustainability provides more detail on how Portland and the region will benefit from a transition to clean energy. Additionally, there is growing support for renewable energy in the City of Portland. Portland must accelerate the trend of declining fossil fuel use in order to meet its 2050 carbon reduction goals.

In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its up-rail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
John and Brenda Morris

Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Monday, November 07, 2016 10:02:40 PM

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

However, the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland to:

Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.

Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.

Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Now more than ever the City of Portland has the opportunity to be a leader in the U.S. climate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time.

Sincerely, Don Myers

Thank you for being courageous and forward-thinking in trying to protect our earth from further climate change. I urge you to be strong and resist weakening your initial resolution! Specifically:

1. Do not allow ANY new fossil fuel terminals.

2. Do not allow ANY expansions at existing facilities.

3. Do not allow an exception for NW Natural. I am one of their customers and realize this may lead to increased costs of natural gas. But given the effects of global climate change, it is worth it! And I would hope this would encourage them and other companies to invest more in renewable energy.

I am proud to live in such a beautiful and thinking city! Thank you for your leadership, and please make the hard but RIGHT decision to protect our world.

Re: Comments in Support of Strong Fossil Fuel Zoning Code Amendments

Dear Mayor Hales and Portland City Council Commissioners,

Thank you for the opportunity to offer our comments on the recommended draft of the City of Portland's Fossil Fuel Terminal Zoning Amendments ("amendments"). We appreciate and support several of the revisions put forward by the Planning and Sustainability Commission (PSC). Still, the City must make further adjustments to the proposed code amendments in order to fully implement Portland's Fossil Fuel Policy Resolution #37168 ("resolution"). The resolution stated that the City would **"actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways."** The bold intent and plain language of the resolution provide clear guidance to the City Council as it considers proposals to further strengthen – or further weaken – the City's proposed fossil fuel zoning code amendments.

The City Council made a landmark statement in November 2015, and it should honor this statement by ensuring existing fossil fuel terminals do not expand; prohibiting all new fossil fuel terminals; and, resisting pressure to exempt certain fossil fuel companies such as NW Natural.

On behalf of Columbia Riverkeeper, 350 PDX, Sierra Club, Friends of the Columbia Gorge, Center for Sustainable Economy, Oregon Physicians for Social Responsibility, Climate Action Coalition and Portland Audubon Society we offer the following suggestions to improve rather than weaken the proposed fossil fuel zoning code amendments.

I. Prohibit Expansion of Existing Fossil Fuel Terminals

Public testimony overwhelmingly supports prohibiting the expansion of existing fossil fuel terminals. In contrast, PSC recommends allowing for a 10 percent expansion of capacity for replaced tanks. The PSC recommendation was driven by a desire to streamline seismic upgrades. Notably, a revision to remove the "plus 10 percent"[1] allowable expansion in the recommended

[1] *See* Recommended Draft Fossil Fuel Zoning Code Amendments. October 2016. P. 49.

draft failed narrowly during the PSC's discussion. The PSC's recommendation conflicts with the City's fossil fuel resolution, and it conflicts with the City's oil train ordinance. We urge the City to improve the proposed fossil fuel code amendments.

- City Council should amend PSC's recommendation by removing the proposed allowance for a 10 percent expansion of existing fossil fuel terminals. City Council should simply remove the words "plus 10 percent" in Sections 33.140.100-B.17.a-(1)-(2), on page 49 of PSC's recommendation. This change would still allow seismic improvements of fossil fuel tanks to move forward in a streamlined fashion without a discretionary land use process.

- The following code concepts are slightly amended from the PSC's recommendation, and they could accomplish the City's goal of allowing seismic safety upgrades in fossil fuel terminals by allowing a straightforward limited review process for existing terminals, while not incentivizing new fossil fuel infrastructure:

    - Identify "Fossil Fuel Terminals" as a regulated land use, characterized by (a) marine, railroad, or pipeline transport access and (b) either transloading facilities for transferring a shipment between transport modes (such as from rail to ship) or facilities that store fossil fuels.

    - Prohibit Fossil Fuel Terminals in all base zones.

    - Classify existing Fossil Fuel Terminals in industrial and general employment zones as "limited uses" that can continue to operate. Expansion of fossil fuel storage at these existing terminals is prohibited.

    - The following use limitations apply to existing Fossil Fuel Terminals:

        1] Fossil Fuel Terminals that existed on [insert effective date] are allowed, but the total amount of fossil fuel that can be stored on the site is limited to the fossil fuel storage capacity that existed on [insert effective date]. Total fossil fuel storage capacity on the site in excess of the capacity that existed on [insert effective date] is prohibited; and

        2] New fossil fuel storage structures are prohibited unless a new fossil fuel storage structure is replacing an existing fossil fuel storage structure that does not meet current building codes standards for seismic safety, and in that case, the capacity of the

new fossil fuel storage structure is prohibited from being greater than the storage capacity of the existing structure that is being replaced.[2]

- Allowing expanded fossil fuel infrastructure could create more demand for unit trains in Portland, conflicting with the City's Oil Train Resolution # 37164. Unfortunately, PSC recommended allowing a 10 percent expansion of existing terminals as a limited use. For the ten facilities capable of handling oil that are listed on p. 17, Figure 7 of PSC's recommended draft, a 10 percent across-the-board increase in terminal capacity would result in additional storage of 38,848,740 gallons of oil – a volume equivalent to 13 unit trains of explosive Bakken crude oil.[3] The City Council should disallow expansions at existing facilities to bring the code language into alignment with the City's original fossil fuel policy and oil train resolution.

- For large terminals such as the Chevron, Kinder Morgan, and NuStar facilities, a 10 percent increase would exceed the volume of a single unit train, 2.5 to 3 million gallons of oil. Portland's Resolution # 37164 called for the City to oppose any project that would increase oil train traffic through Portland, a standard that conflicts with new 10 percent increases in oil terminals with large existing capacities.

Oil train derails, punctures, spills, and burns in Mosier on June 3, 2016.

- The PSC's recommendation is very likely to result in a 10 percent increase in fossil fuel storage in Portland because Portland is beginning a parallel process to increase seismic safety of its fossil fuel tanks. When coupled with a requirement for seismic upgrades, PSC's recommendation to allow a 10 percent increase is very likely to spur additional fossil fuel infrastructure in Portland. Specifically, if the City requires facilities to upgrade (as it should) for seismic safety and simultaneously allows for expansion, the City will likely see expanded fossil fuel infrastructure. As a result, the City Council should amend the resolution to remove the words "plus 10 percent," thereby not promoting over 38 million gallons of new crude oil storage infrastructure.

---

[2] This second use limitation may be redundant, because replacement structures will automatically be required to meet new updated seismic standards. It's included for clarity to parallel the PSC's recommended draft.

[3] Assumes roughly 3 million gallons of oil per unit train. Unit trains typically carry 2.5 to 3 million gallons of crude oil, depending on the length of the train and size of the cars in the train.

- The PSC's recommended amendments correctly acknowledge that "derailment risks to natural resources, especially along rivers, and to rural communities appear to be significant." Oregonians learned first-hand during the June 3, 2016, derailment in Mosier that oil trains are dangerous, and the City Council should use its fossil fuel zoning code amendments to diminish their use rather than create space for many more. The City of Mosier is still dealing with groundwater and surface water pollution from the derailment, evidence that Portland's fossil fuel zoning code amendments should be sculpted to reduce oil train risks however possible.

- A proposal to expand rail traffic through the Columbia River Gorge shows that Portland should make its fossil fuel zoning code amendments as restrictive as possible on future oil or coal unit trains. The Port of Portland recently supported a proposal by Union Pacific to dramatically expand its rail capacity through the town of Mosier – the same location as the oil train derailment, spill, and fire on June 3rd, 2016. In supporting the Mosier rail expansion, the Port of Portland stated that the rail expansion could increase unit train delivery of bulk goods to Portland, which could include the bulk shipment of oil. In November, the Wasco County Commission voted to deny the rail expansion in large part because of the impacts of increased train traffic on treaty-protected tribal fishing resources, a decision that may be appealed by Union Pacific. The Mosier rail expansion controversy shows that the City of Portland should take clear steps to restrict any future developments that could increase oil train traffic through the Columbia River Gorge.

II. Prohibit New Fossil Fuel Facilities

The Planning Commission recommended prohibiting new bulk fossil fuel facilities, consistent with the resolution's direction to **"actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways."** However, the PSC included an exception that would allow new fossil fuel facilities with a storage capacity of up to 2 million gallons. PSC opted for 2 million gallons as a lower threshold for defining a bulk fossil fuel terminal because it was less than the volume of a single unit train of oil. We urge City Council to eliminate or reduce any allowance for new fossil fuel terminals that may create increased use or shipment of polluting, dangerous fossil fuels through Portland.

- Staff explained that fossil fuel use may be flat or declining, negating the need for new or expanded fossil fuel terminals. The City's landmark resolution directs Portland to "actively oppose" fossil fuel expansion and thereby curb demand – not perpetuate it. Portland must accelerate the trend of declining fossil fuel use in order to meet its 2050

carbon reduction goals. Globally, climate science is clear that we must keep fossil fuels in the ground to avoid catastrophe.[4]

- City Council should eliminate or reduce the 2 million gallon threshold for a "bulk fossil fuel terminal." By defining a bulk fossil fuel terminal as a facility with storage capacity greater than 2 million gallons, the amendments leave open the possibility of facilities that can accept additional shipments of crude oil or other dangerous fuels.[5] The amendments should be improved by eliminating or lowering the 2 million gallon threshold and preventing additional risks for Portland and uprail residents.

- City Council should reject the idea that new or expanded fossil fuel infrastructure is necessary to protect the health and safety of Portland residents and downstream communities. In the Council's September 20th work session, BPS staff suggested that the City should offer the possibility of new or expanded infrastructure as a "sweetener" to encourage seismic and safety upgrades. The promise of expanded infrastructure, on its own, has not been adequate to induce the fossil fuel industry to improve the seismic readiness of tank infrastructure in the past. Looking forward, City Council should support other expected and recommended processes that will encourage seismic upgrades rather than weakening the City's proposed amendments.

Encouraging Seismic Safety

PSC's recommended draft works to address how the City of Portland can address seismic safety at existing fossil fuel terminals. We agree with staff that the City should explore options to require seismic safety upgrades through a program similar to the un-reinforced masonry buildings (URMs) program that is in process, or a property maintenance code. The City will more effectively enhance seismic safety through this Portland Bureau of Emergency Management (PBEM) process than through a clumsy, broad-brush incentive to build new fossil fuel infrastructure.

- The City should "develop proposals for State building code changes to improve seismic resilience and require seismic upgrades comparable to proposed requirements on unreinforced masonry buildings," as stated on page 62 of the PSC's recommendation.

- The Council should reject the idea that new or expanded fossil fuel infrastructure is necessary to protect the health and safety of Portland residents and downstream communities. As noted above, the historic availability of opportunities to expand or build

[4] "The Sky Is the Limit: Why the Paris Climate Goals Require a Managed Decline of Fossil Fuel Production." 2016. Oil Change International. http://priceofoil.org/content/uploads/2016/09/OCI_the_skys_limit_2016_FINAL_2.pdf.

[5] Unit trains typically carry 2.5 to 3 million gallons each and are usually 90 cars and 1 mile or more in length.

new fossil fuel infrastructure has not been an adequate inducement for establishing safe, seismically-ready facilities.

- City Council should support Portland Bureau of Emergency Management's (PBEM) expected and recommended process that will encourage seismic upgrades rather than weakening the City's proposed amendments.

III. Include Regulated Utilities and NW Natural in Portland's Fossil Fuel Policy

NW Natural has requested an exemption from Portland's fossil fuel amendments. BPS' October 5, 2016, memo offered potential language for this option, but it did not recommend for or against an exemption for NW Natural and other regulated utilities. Despite receiving additional testimony directly from NW Natural during its hearing in October, not a single member of the PSC recommended altering the fossil fuel zoning code amendments to exempt NW Natural. We urge City Council to adopt PSC's approach to regulated utilities and reject NW Natural's requested exemption.

- NW Natural should not receive special treatment. It is appropriate for large, potentially hazardous energy facilities to be regulated by multiple layers of government. The Planning Commission was comfortable with NW Natural receiving scrutiny from multiple layers of government. NW Natural's role as a public utility should not afford it a special status with respect to meeting the City's goal of prohibiting new fossil fuel infrastructure. Indeed, natural gas is specifically included as a carbon-intensive, dangerous fossil fuel in Portland's 2015 resolution. NW Natural must be included because natural gas - primarily methane - is a powerful greenhouse gas and its combustion releases significant carbon pollution.

- NW Natural already owns and operates adequate storage facilities in the Pacific Northwest to meet its Portland load growth needs.[6] At present, NW Natural is undergoing a seismic review of its existing Portland Gasco LNG facility. The City's proposed amendments would allow NW Natural to improve the seismic readiness of its existing storage through a limited use review.

- New LNG infrastructure could serve non-utility and utility purposes, complicating the impact of NW Natural's requested exemption. NW Natural seeks an exemption for facilities that fall within PUC-regulated operations. Staff's October 5 memo stated, "If

[6] See NW Natural Integrated Resource Plan. September 2016. See Section 7.2 - Gas storage relies on Mist, only new LNG storage considered is in Clark County. P. 3.35.

NW Natural established an unregulated subsidiary to supply wholesale LNG, for example, any infrastructure associated with these operations would still be subject to the Fossil Fuel Code." In reality, gas utilities often mix the utility and non-utility purposes of gas storage facilities. For instance, NW Natural's Mist Storage facility has undergone multiple site certificate changes, and now it is planned to operate both as storage for NW Natural's gas utility customers, as well as a source of firm supplies to PGE's gas-fired power plants at Port Westward.[7] Additionally, Puget Sound Energy proposes a new LNG facility in Tacoma that may be used both as storage for its regulated utility customers and as a fueling station for LNG ships and trucks. Hence, the exemption NW Natural seeks may allow facilities that engage in both PUC-regulated and non-PUC-regulated activities.

- NW Natural's Integrated Resource Plan (IRP) does not specify the need for new major LNG storage in Portland. In its long-range plans, NW Natural's IRP discusses the potential for possible LNG storage to meet load growth in Clark County – not Portland. As a result, NW Natural does not appear to need new LNG storage in Portland to meet its core utility needs, and so the exemption it seeks is unnecessary.

IV. Take Bold Action for a Clean, Safe Energy Economy and a Stable Climate

Portland's City Council will benefit Portland's clean energy economy by undertaking the proposed amendments with the suggestions we have outlined. Just as importantly, the City can make significant strides towards improving the safety of neighborhoods by using the right tools to mandate seismic improvements for fossil fuel storage tanks in highly liquefiable soils near the Willamette and Columbia Rivers. Furthermore, the City's fossil fuel code amendments need not impinge on the expansion of cleaner, non-fossil fuels: facilities handling 95% or greater non-fossil fuels are already exempted. And while the amendments should restrict fossil fuel terminals from expanding or building new facilities, they leave open the potential for Portland to continue to serve as a hub for fuels using existing infrastructure until the region moves further towards a managed decline of fossil fuel use.

Importantly, the PSC's recommendation offers City staff both direction and flexibility in implementing the fossil fuel zoning code amendments. Specifically, Portland Bureau of Planning and Sustainability is directed to periodically monitor the effectiveness of these zoning code amendments "to implement underlying policies and consider code adjustments in response to regional fuel demand and market changes, product innovation, safety and climate action considerations, and related regulatory changes." By directing BPS to evaluate the impacts of the

[7] See recent story from Argus Media highlighting new PGE-NW Natural gas storage collaboration. http://www.argusmedia.com/news/article/?id=1323500.

policy, BPS is given a pathway to recommend new fossil fuel infrastructure on an "as-needed" basis if unforeseen conflicts arise.

A 2016 study from the Labor Network for Sustainability provides more detail on how Portland and the region will benefit from a transition to clean energy.[8] Additionally, there is growing support for a renewable energy agenda in the City of Portland. Indeed, new fossil fuel infrastructure could be stranded assets in the foreseeable future.

Lastly, yet another new study from Oil Change International shows that time is of the essence to address climate change through reducing our use of fossil fuels.[9] The study shows that, if we are to avoid a temperature rise of 2 degrees Celsius, we can build no new fossil fuel infrastructure. Indeed, much of our currently proven oil, gas, and coal reserves must go untapped. The Pacific Northwest – with Portland as its guiding light – can begin a managed decline of fossil fuel use, even as the region continues to grow its economy. Portland earned national praise for its 2015 Fossil Fuel Resolution, and the rest of the world is counting on cities like Portland to show how a managed decline of fossil fuel use can respond to the urgent challenge of reducing our dependence on climate-changing fossil fuels.

We look forward to the City Council voting to establish a code that reflects the bold, practical steps outlined in Portland's landmark fossil fuel policy.

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Rio Shayne

From: Eleanor Solomon
To: BPS Fossil Fuel Zoning
Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Monday, November 07, 2016 5:27:48 PM

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

However, the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland to:

Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.

Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.

Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Now more than ever the City of Portland has the opportunity to be a leader in the U.S. climate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time.

We are surrounded by cities, states, our nation and others who seem addicted to business as usual, while our planet deteriorates.

The great work we need to do as a world community begins with individual steps.

Portland has a chance to signal this beginning by passing a full ban--no limitations--on new or expanded fossil fuel terminals.

Our children will be glad we had the courage to take this step.

Thank you and be well,

Dear Staff City of Portland,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed, spilled, causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Sincerely,
Kathy Tonegawa

To: BPS Fossil Fuel Zoning
Subject: please ban all new fossil fuel terminals
Date: Monday, November 07, 2016 7:30:35 AM

To Portland City Councilors:

Last fall Portland City Council passed a historic resolution to ban new fossil fuel facilities in the city, putting Portland at the forefront of the climate justice movement. The resolution was the result of massive grassroots advocacy and the leadership of Mayor Hales and City Council. Now, one year later we need to hold the City to their word as they work to implement this resolution into binding city code.
Please make this a strong and binding portion of the city code by implementing the following:

- Enacting a full ban on all new fossil fuel terminals by removing the exception for terminals under 2 million gallons. The proposed 2-million-gallon exception would still allow new fossil fuel facilities to be built in our communities
- Eliminating the provision that allows existing fossil fuel terminals to grow by as much as 10% in exchange for seismic upgrades. These upgrades should be required, not provided in exchange for even bigger facilities
- Directing Portland Bureau of Emergency Management to develop proposals for State building code changes to require seismic upgrades
- Rejecting Northwest Naturals request to be exempted from these regulations

Thank you

Dena Turner

Honorable P&S Commission and Bureau of P&S members,
It makes no sense to build a larger, more expensive fossil fuel infrastructure in Portland. And it appears that much of this would be for the purpose of exporting fossil fuels. We know that we need to cut back on our use of carbon based fuels because of global warming.
In support of that the US just signed on to the Paris Climate Change Accords and committed the nation to lowering it's carbon footprint. So let's start with that premise and very carefully scrutinize and regulate any projects that will make our committment to do that less strong and less likely to happen.
Thank you for your hard work on this issue.

Please enact a full ban on the construction of ANY new or expanded fossil fuel supporting infrastructure.
Any new such infrastructure allowed to move forward puts us that much further behind in the pursuit of clean, renewable energy and the infrastructure it requires to become viable.
NW Natural should NOT be granted exemption, and needs to be included in the policy of no new fossil fuel infrastructure.
We are already losing ground in the global race for leadership in clean renewables. I urge you to focus your attention and support on tightening that race, and helping bring America the greatness we all know it can achieve by becoming a leader in the efforts to keep our one and only planet livable. It will benefit everyone--economically, politically, and in the life and health of each and every living thing.

Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Sunday, November 06, 2016 12:24:00 AM

Thank you to the Planning and Sustainability Commission and the Bureau of Planning and Sustainability for its work in incorporating public input on its initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.

However, the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it still allows new terminals up to 2 million gallons and allows existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

I want the City of Portland to:

Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.

Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.

Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

Now more than ever the City of Portland has the opportunity to be a leader in the U.S. climate justice movement. With just a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time.

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed and spilled causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Nora Polk

Subject: Pass a full ban on new or expanded fossil fuel terminals!
Date: Sunday, November 06, 2016 10:56:59 AM

Please Pass a FULL BAN on new and expanded fossil fuel terminals.

Many thanks to the Planning and Sustainability Commission and the Bureau of Planning & Sustainability for the work in incorporating public input on initial drafts of the Fossil Fuel Terminal Zoning Amendments. The current draft is much improved, bringing the proposed changes closer to the original intent of the 2015 Resolution.
Unfortunately the current Fossil Fuel Zoning Amendments recommended draft still falls short of the bold and visionary resolution that Portland supported in the fall of 2015, which called for the city to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland." Although this draft prohibits new larger bulk terminals, it continues to allow new terminals up to 2 million gallons storage and existing terminals to expand by 10%. In order to protect our immediate health and safety and play our part in stopping catastrophic climate change, we must pass an ordinance that fully prohibits new fossil fuel storage tanks.

We want the City of Portland to:
1.Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. After all, this was the plain language of the City's 2015 Resolution, "to actively oppose" new fossil fuel infrastructure.
2.Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes.
3.Prevent NW Natural from getting a carve out. Allowing new LNG storage in Portland is unnecessary and bad for our safety and climate. NW Natural has no current plans for more LNG storage in Portland and should be included in this policy just like the other fossil fuel terminal operators.

The City of Portland has the opportunity to be a leader in the U.S. climate justice movement and with a few more improvements to the Fossil Fuel Zoning Amendments, Portland could once again be on the forefront addressing the most pressing concern of our time.

Sincerely,

To: City Council Members

I have read the report and offer the following testimony.

Page 5: Review and Recommendations, last sentence, "The PSC considered and did not act on NW Natural's request to exempt utilities." If that means you are NOT exempting them from these proposed regs., okay. I support REJECTING NW Natural's request to be exempted from these proposed regs.

Page 10: Overall Project Direction: Fossil fuel distribution policy 6.48
I support ELIMINATING the provision that allows expansion of existing terminals by 10%.

Page 10: Related Policy Directions: Policy 4.81, Disaster resilient development
I support REQUIRING upgrades rather than "encouraging" them. Develop proposals for state building code changes to require seismic upgrades.

Page 26: Storage Capacity Size Threshold
I support enacting a FULL BAN on all new fossil fuel terminals, whether 2-million-gallons or less. No new terminals.

Thank you for the work you have done so far to ban new fossil fuel facilities in Portland, and thank you for considering my testimony.

Sincerely yours,
Maurine Canarsky

Fossil fuels are not only old carbon, they are also old technology.

The future clearly points to electric vehicles, with electricity from renewable sources like wind, solar, and even tidal energy.. Although these energy sources are till being developed, they represent an increased ability for localities, and families, to generate their own energy.

There is no safe way to extract, transport, refine, or burn fossil fuels. The petrochemicals pose health problems everywhere they are processed, and can have destructive impacts that last for decades, DECADES!, after a spill or fire. We are riding a tectonic plate here- how large will the firestorms be when "The Big One' happens? What will survive?

Ban any hew petrochemical infrastructure developments, whether they are new terminals or capacity upgrades.

It's simple. We cannot abate climate change while we continue to expand the use of fossil fuels. We must aggressively pursue renewable resources for energy. One step in that direction is a full ban on new fossil fuel terminals and storage facilities. I urge you to prevent the expansion of infrastructure that supports continued use of fossil fuels through rigorous regulation, land use planning, zoning, building codes, and whatever other means are available.

This is not only an environmental issue due to climate change, but a public safety and community livability issue. The recent Mosier oil train wreck, explosion, spill, and fire was fortunately not much worse in impact (bad as it was), but imagine if that had happened within Portland. Every week there is news of another spill, pipeline explosion, or other disaster from the transport and distribution of fossil fuels. The apparent gas line displacement that resulted in the explosion last week on NW 24th is a wakeup call. If a piece of construction equipment can cause that much damage, imagine the effects of several minutes of severe ground shaking. The probability of a subduction earthquake with likely impacts on the fuel infrastructure as well as on the ability of first responders to get to and contain a major ensuing fire makes us especially vulnerable. The ongoing health impacts from exposure to combustion products and leaking hydrocarbons is unacceptable.

Keep it in the ground. Vote "no" on new fossil fuel infrastructure and provide strong incentives for renewable energy development and conservation. Let's take the City's Climate Action Plan seriously.

I want to thank the Council and the PSC for the work that has been done to bring the Fossil Fuel Terminal Zoning Amendments draft closer to the original intent of the 2015.

My input on this current draft is as follows:
We should enact a full ban on new terminals, large or small. This was the plain language of the 2015 resolution.
Prohibit all expansions at existing terminals and require them to make upgrades for seismic safety through State building codes.
No exceptions for NW Natural! Storage of Liquid Natural Gas should be included in this policy just like any other fossil fuel terminal operators.

These improvements to the policy will position Portland to move forward to a clean energy future and provide the leadership needed so that Portland can once again be on the forefront addressing climate change, the most pressing issue of our time.

Sincerely,

Dear Mayor Hales, Members of the Council, and Staff:

Thank you for your diligent work in bringing forward a new set of land use rules that could establish Portland as a global leader in transitioning away from fossil fuels. In November 2015, you voted unanimously to "actively oppose expansion of infrastructure whose primary purpose is transporting or storing fossil fuels in or through Portland or adjacent waterways." Portland's resolution was an important step towards reducing the climate, safety, and environmental risks of oil trains, coal trains, and fossil fuel storage.

In translating Portland's landmark resolution into binding city rules, I ask that you take the strongest stand possible for our climate and safety. First, I ask that you do not allow existing terminals to expand. Allowing a 10% or greater expansion at existing terminals could increase the number of dangerous oil and coal trains coming through Portland and its uprail neighbors like Mosier, OR, where an oil train derailed and spilled causing a dramatic fire in the Gorge.

Secondly, I ask that you prohibit all new fossil fuel infrastructure. The language of your resolution was clear: "to actively oppose new fossil fuel infrastructure." Terminals of two million gallons or less are an unnecessary give-away to the fossil fuel industry. The proposed zoning code already has an exception for fuels that contain non-fossil energy.

Third, I ask that you resist pressure from the fossil fuel industry to exempt any fossil fuels or to weaken the proposed code language. Portland is poised to lead on climate, but we need you to stand firm and make sure the final fossil fuel code reflects the intent of your November 2015 vote.

Thank you for your effort, and I look forward to living in a city and a region that is determined to reduce its reliance on dangerous, polluting fossil fuels like oil and coal.

Sincerely,

Dear Counselors,
First, let me say I deeply appreciate all you do and have done to move our city to sustainability and more than that, livability.
Surely you are aware that the perilous state of our climate on earth is threatening everything we stand for in community. Already the poor and marginalized are being pushed out of house and home because of migration to the North West. The thoughtful and monied are coming here for the same reason I did eight years ago, a better chance of a livable future than in many parts of the country. AND Portland can be a beacon in the darkness for moving to a livable future. You've made a courageous careful start banning Pembina and crafting this policy. Yet the profiteers are pounding at your doors, offering half-truths and promising riches if you only let them continue the fossil fuel path to destruction. Yet we must change, we have to for the children.
As a former smoker, I was heavily addicted, one of the best things I did to stop was to get all the cigarettes out of the house and swear off ever buying more. That is the step we red shirts urge you to take today as our planet is burning up. No new fossil fuel infrastructure, none nada, zip. Your courage to stand up to the powerful utilities and industries will be a beacon to the rest of the country. For the children please.

Portland needs to be a leader in the PNW and the rest of the country and stop new fossil fuel terminals from being built and stop the expansion of the existing ones. We will never move forward in a meaningful way towards alternative energy, if we keep allowing the dirty energy industry to expand their ability to destroy our environment as they use the PNW to export their fracked gas, tar sands and oil. And don't allow NW Natural an exemption to these anti-expansion policies. Stopping expansion but yet allowing one company their very own loophole pretty much renders the regulations useless.

Dear City Councilors;
I am an Oregon resident though not in Portland; however your decision is extremely important to all of us. Enacting a full ban on new terminals or expansions of any fossil fuel infrastructure must happen. If you feel that a citywide ban is too much a drop in the pan, please think again.
One city after another is now banning Crude Oil from passing through its area. When an example of what we need to do is available people see it can be done and will push forward.
We know we need to stop any more funds going towards the fossil fuel industry and create the mandate to grow the safe electric grid that is absolutely possible if we just decide to make it happen. The first step is to stop further fossil fuel infrastructure. Please for the sake of us all, pass this resolution.
Thank You,

Only a full ban on new fossil fuel infrastructure will protect our city and natural region. We need to prepare for a healthier future and invest in renewable resources. To further protect our local interests, there should be no expansions of current facilities and current facililies should be required to make.seismic upgrades. No companies should.be given special privileges to avoid these policies. Thank you for considering our future!

Enact a full ban on new terminals, large or small. A 2 million gallon facility is still too large. We need NO new fossil fuel infrastructure. Prohibit expansions at existing terminals and require them to make upgrades for Seismic Safety through State Building Codes. Prevent NW Natural from getting a carve out. NW Natural wants to be exempted from this policy and we need to make sure the City Council does not add a last minute amendment on NW Natural's behalf.
