Testimony to **the Planning and Sustainability Commission** on the **Floodplain Resilience Plan, Proposed Draft**

The PSC should adopt the entire Floodplain Resilience Plan which will protect our communities against the impacts of climate change and extreme weather events, protect water quality, and provide fish and wildlife habitat. The City must adopt the whole plan. Removal of Title 24 Amendments which require that when developers fill floodplains, they also create an equal amount of new floodplain nearby is not acceptable. It guts one of the most important parts of the plan. Title 24 protections must be restored.

Testimony is presented without formatting.
