Report Background

- November 1, 2019, City Council passed Ordinance No. 189778 to enter a design contract with Stantec Consulting Services Inc. for the Filtration Facility.
- City has a 5-yr contract length requirement.
- Request is to extend the contract an additional five years to support construction.
- This timeframe, scope, and cost were included in the existing contract.
- No cost extension, all costs for extension are included in current project budget.
- Current COBID participation: 22.42%, \$6.4M so far.

Council Action Request

Approve the Report to Council to extend the Contract with Stantec Consulting Services, Inc. for the On-site Design Services for the Bull Run Filtration Project (Report; Contract No. 30007028)

Bull Run TREATMENT PROJECTS | *Our water: Safe and abundant for generations to come*

The Water Bureau is making long-term investments with the Bull Run Treatment Projects to help keep Bull Run water safe and abundant for nearly one million people who rely on it today and for future generations. The new facilities are needed to protect public health and comply with safe drinking water regulations.

For our health
Making sure our water is safe for everyone.

- In 2023, the Oregon Health Authority confirmed our Improved Corrosion Control Treatment for lead is "optimized," bringing the Water Bureau into full compliance with the federal Lead and Copper Rule.
- With these treatment upgrades, we have taken a big step to further reduce the risk of lead in water for homes with lead plumbing materials.

For our economy
Creating jobs and investing in infrastructure to help our community thrive.

- The generational investments the Water Bureau is making in the Bull Run system are creating thousands of construction jobs.
- The Bull Run Treatment Projects are estimated to generate \$1.59B economic activity through construction and \$14.5M annually when complete.

For our future
Providing a more resilient water system and greater protection.

- The filtration facility we are building will remove contaminants and sediment from our water, making our supply more resilient to water quality in the Bull Run Watershed.
- Filtration will greatly reduce the threat of the Bull Run supply being disrupted following a wildfire or extreme weather event and is one of the ways we are preparing for a changing climate.
