

ECONOMIC DEVELOPMENT STRATEGY

A **Five-Year Plan** for Promoting Job Creation and Economic Growth

THE OPPORTUNITY

The city of Portland stands at the threshold of a new economic era, facing opportunity and challenge in equal measure.

Farsighted investments in transit, land use planning and energy efficiency anticipated the evolution away from carbon-based technologies, and now position Portland as the greenest city in the U.S.

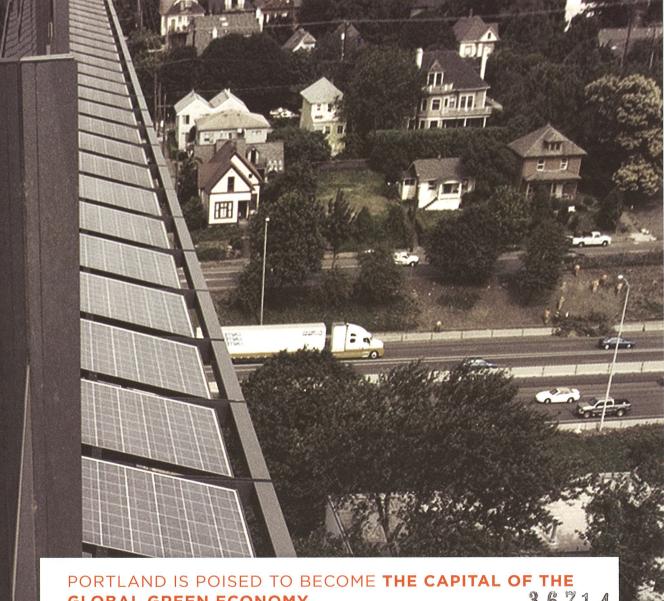

Portland is poised to become the capital of the global green economy, with a growing concentration of firms in clean technology and green building,

and a diverse, stable base of leading employers in key industry sectors like apparel and creative services, electronics, advanced manufacturing and health care.

Investments in a universally praised quality of life continue to attract creative class and entrepreneurial talent, the people who maintain a dynamic local economy even in the face of recessionary pressures.

Portland is consistently at or near the top of lists of the greenest cities in the U.S.

THE CHALLENGE

Despite the city's leadership in sustainable living, Portland lags in creating jobs. With the region's workforce expected to grow at 2.4% annually – about six times faster than in the nation as a whole, even in the face of job declines – the need for job growth will become even more pressing.

Between 1998 and 2006, the percentage of regional jobs located more than 10 miles from downtown increased from 23.8% to 29.4%.

Job growth requires explicit investments in the fundamentals of economic development: retaining and growing

firms, training workers, funding innovation, developing catalytic projects. While Portland's legacy investments in lifestyle will pay economic dividends, creating prosperity for all residents necessitates investment in economic development. And making such an investment requires a fundamental rethinking of how the city funds economic development,

moving from a thin, unreliable stream of inadequate year-to-year funding that fails to measure up to competitor cities, to more generous, long-haul revenue sources, flexible tools and strategies.

Portland lags Seattle and San Francisco in median family income by a wide margin.

Portland's economic future lies in its greatest strength, the sustainable way of life that has been meticulously cultivated over the past 40 years. With an existing concentration of firms in clean technology and sustainable industries, years of recognized leadership in all facets of sustainable

living, supportive state and local policy environments, and the solid foundation of a trade-focused economy, few cities, if any, are as well positioned as Portland to lead the global green economy.

In a sustainable economy, people live and do business in ways that are good

BY BUILDING THE MOST SUSTAINABLE ECONOMY IN THE WORLD, **PORTLAND WILL CREATE 10,000 JOBS IN FIVE YEARS.**

for the economy, the environment, and for communities. Businesses are more efficient, innovative and competitive internationally. The local talent pool is deeper. The social and environmental vitality produced by a sustainable economy creates healthy communities and opportunities for residents to prosper.

Portland resides on the Pacific Rim, which accounts for 54% of world GDP and 44% of world trade.

Building a sustainable economy requires equal focus on:

- Generating robust job growth by maximizing the opportunities to produce and sell products and services for existing, emerging and relocating businesses;
- Maintaining a leadership position in sustainability by constantly striving to produce an innovative urban setting that fosters creativity and invention;
- Achieving equality of opportunity by stimulating economic activity in neighborhoods throughout the city.

The three components of the strategy overlap in many ways: effective workforce development increases employment opportunities for neighborhood residents; innovation from local projects morphs into expertise that can be sold abroad by Portland businesses; successful neighborhood-based businesses can access national and international markets and drive traded sector job growth.

BUILDING A SUSTAINABLE ECONOMY REQUIRES A **BALANCED FOCUS** ON JOB GROWTH, INNOVATION IN SUSTAINABILITY AND EQUALITY OF ECONOMIC OPPORTUNITY.

COMPETITIVENESS

Traded sector firms produce quality jobs. Portland intends to maximize the opportunities for these firms by expanding exports, supporting the innovation efforts of higher education institutions, and aligning workforce development to match the skill needs.

Portland will focus its resources on enhancing the competitiveness of firms in the Clean Tech and Sustainable Industries, Activewear, Software, and Advanced Manufacturing sectors and seeks to grow the share of employment in these sectors from 13% to 18% of all city jobs in five years.

URBAN INNOVATION

Portland will embark on the next generation of innovation and investment in green building, including the construction of the first commercial living building in the U.S., and will complement those investments with equal attention to the quality of the downtown experience for arts, culture and retail.

NEIGHBORHOOD BUSINESS VITALITY

By equalizing opportunity and stimulating economic activity in neighborhoods throughout the city, Portland hopes to increase median household income, when adjusted for inflation, by 10% in five years. Customized assistance will be targeted to small businesses with particular promise to create jobs and expand into new markets. Portland will focus on strengthening neighborhood commercial districts with the potential to create 20-minute neighborhoods, where residents have reliable access to goods and services.

The success of this ambitious strategy requires alignment of goals and funding priorities between organizations and across jurisdictions, as well as a reinvention of the way Portland funds economic development. The city will collaborate with public and private

sector partners throughout the region to implement the actions recommended by the strategy.

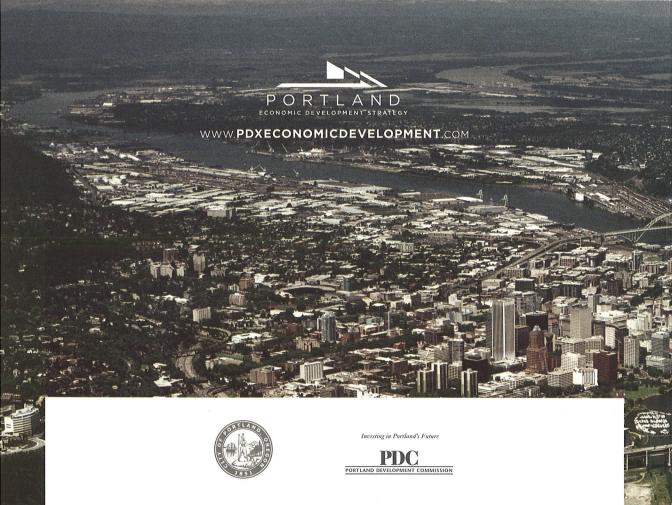

Effective funding for the strategy should provide multi-year operating support for key initiatives, debt products to

THE SUCCESS OF THIS STRATEGY **CALLS FOR A REINVENTION** OF PORTLAND'S APPROACH TO ECONOMIC DEVELOPMENT.

finance the growth of existing businesses, investment capital for startup and emerging businesses, strategic investment funds to jump-start new programs and facilitate collaboration, and regulations and policies that provide financial incentives to businesses.

Only 2.2% of all public expenditures in Portland are allocated to economic development. Portland lags its peer cities in economic development spending.
